Commentaires supplémentaires:

This item is filmed at the reduction ratio checked belcw/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Universit' de Sherbrooke

The images appearing here are the best quality posaible considering the condition and legibility of the original copy and in keeping with the filming contract apecifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or lllustrated impreesion, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illuatrated impreeslon, and ending on the last page with a printed or illustrated impreasion.

The leat recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"), whichever applies.

Maps, plates, charts. etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'oxemplaire filmé fut reproduit grâce à la genderosité de:

Université de Sherbrooke

Les images suivantes ont dté reproduites avec le plus grand soin, compte tenu de la condition ot de le netteté de l'exemplaire filma. ot on conformité avec les conditions du contrat de filmage.

Lee exemplaires originaux dont la couverture en papier est imprimde sont filmds en commençant par le premier plat ot on terminant soit par la dernidre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont fiimés en commençant par la premidere page qui comporte une empreinte d'impression ou d'illustration at en terminant par la dernidre page qui comporte une telle ompreinte.

Un des symboles suivants apparaitra sur la derniàre image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., pauvent étre filmds à des taux de reduction différents. Lorsque le document est trop grand pour être reproduit on un seul cliche, il est filme a partir de l'angle supdrieur gauche, de gauche à droite. ot do haut on bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

```
A TOUR IN SCOTLAND, 176g.
    BY THOMAS PENNANT, ESQ.
```

DEDICATION,
TO SIR ROOER MOSTYN, BART OF MOSTYN, FLINTSEIRE.
Dear Sir,

A
GENTLEMAN well known to the political world in the beginning of the prefent century made the tour of Europe, and before he reached Abbeville difcovered that in order to fee a country to beft advantage it was infinitely preferable to cravel by day than by night.
I cannot help making this applicable to myfelf, who, after publifhing three volumes of the Zoology of Great Britain, found out that to be able to fpeak with more precifion of the fubjects I treated of, it was far more prudent to vifit the whole than part of my country : ftruck therefore with the reflection of having never feen Scotland, I inftantly ordered my baggage to be got ready, and in a reafonable time found myfelf on the banks of the Tweed.

As foon as I communicated to you my refolution, with your accuftomed friendinip you wihhed to hear from me: I could give but a partial performance of my promife, the attention of a traveller being fo much taken up as to leave very little room for epiftolary duties; and I flatter myfelf you will find this tardy execution of my engagement more fatisfactory than the hafty accounts I could fend you on my road. But this is far from being the fole motive of this addrefs.

I have irrefifitible inducements of public and of a private nature: to you I owe a moft free enjoyment of the little territories Providence had beftowed on me; for by a liberal and equal ceffion of fields, and meads and woods, you connected all the divided parts, and gave a full fcope to all my improvements. Every view I take from vol. 1 II.

8
my window reminds me of my debt, and forbids my filence, caufing the pleafing glow of gratitude to diffufe itfelf over the whole frame, inftead of forcing up the imbittering figh of Ofi angulus ille! Now every feene I enjoy receives new charms, for I mingle with the vifible beauties, the more pleafing idea of owing them to you, the worthy neighbour and firm friend, who are happy in the calm and domeflic paths of life with abilities fuperior to oftentation, and goodnefy content with its own reward: with a found judgment and honeft heart you worthily difcharge the fenatorial truft repofed in you, whofe unprejudiced voteaids to ftill the madnefs of the people, or ains to check the prefumption of the minifter. My happinefs in being from your earlich life your neighbour, makes me confident in my obfervation; your increafing and difcerning band of friends difcovers and confirms the juftice of it : may the reffons that attract and lind us to you ever remain, is the moft grateful with that can be thought of, by,

Dear Sir, \&c.
THOMAS PENNANT.
Downing, Ottwber 20th, 1771.

ON Monday the 26 th of June, take my departure from Chefter, a city without parallel for the fingular ftructure of the four principal Itreets, which are as if exca. vated out of the earth, and funk many feet beneath the furface; the carriages drive far beneath the level of the kitchens, on a line with ranges of fhops, over which on each fide of the fireets paffengers walk from end to end, in galleries open in front, fecure from wet or heat. The back courts of all thele houfes are level with the ground, bu: to go into any of thefe four ftreets it is neceffary to defcend a flight of feveral fteps.

The Cathedral is an ancient Aructure, very ragged on the outfide, from the nature of the red friable ftone* with which it is built: the tabernacle work in the choir is very neat ; but the beauty and elegant fimplicity of a very antique gothic chapter-houfe, is what merits 2 vifit from every traveller.

The Hypocauft near the Feathers Inn, is one of the remains of the Romanst, it being well known that this place was a principal ftation. Among many antiquities found here, none is more fingular than the rude fculpture of the Dea Armigera Minerva, with her bird and her altar, on the face of a rock in a fmall field near the Welch end of the bridge.

The caifle is a decaying pile. The walls of the city, the only complete fecimens of ancient fortifications, are kept in excellent order, being the principal walk of the inhabitants: the views from the feveral parts are very fine; the mountains of Flintfhire, the hills of Broxton, and the infulated rock of Beefton, form the ruder part of the fcenery; a rich flat forms the fofter view, and the profpect up the river towards Boughton recalls in fome degree the idea of the Thames and Richmond hill.

Paffed through Tarvin, a fmall village; in the church-yard is an epitaph in memory of Mr. John Thomafen, an excellent penman, but particularly famous for his exact and elegant initation of the Greek character.

Delamere, which Leland calls a faire and large foreft, with plenty of redde deere and falow, is now a black and dreary watte; it feeds a few rabbets, and a few black Terns $\ddagger$ fim over the fplafhes that water fome part of it.

[^0]- This Perkin ferved king Edward the third and the black Prince his fonnc in all their warres in France and was at the battel of Creffie and had Lyme given him for that fervice; and after their deathes ferved king Richard the fecond, and left him not in his troubles, but was taken with him, and beheaded at Chefter by king Henrie the fourthe. And the fayd Sir Pecrs his fonne ferved king Henrie and was faine at the battel of Agencourt.

[^1]$\dagger$ King's Vale Royal 86.

1. T'anuer, Notitia Monalt. 1744. 66.

- In their memoric Sir Peter Legh of Lyme knight befcended from them finding the fayd ould verfes written upon a flone in this Chappel did reedifie this place $A n^{*}$ Dni 16:0.'.
After leaving this town, the country almoft inflantly changes and becomes very mountainous and barren, at leaft on the furface; but the bowels compenfate for the external fierility, by yielding fufficiently quantity of coal for the ufe of the neighbouring parts of Chellire, and for the burning of lime: valt quantity is made near Buxton, and being carried to all parts for the purpofes of agriculture, is become a confiderable article of commerce.

The celebrated warm bath of Buxton * is feated in a bottom, amidtt thefe hills, in a moft cheerlefs fpot, and would be little frequented, did not Hygeia often refide here, and difpenfe to her votaries the chief bleflings of life, eafe, and health. With joy and gratitude I this moment reflect on the efficacious qualities of the waters; I recolled with rapture the return of fpirits, the flight of pain, and re-animation of my long, longcrippled rheumatic limbs. But how unfortunate is it, that what Providence defigned for the general good, fhould be rendered only a partial one, and denied to all, excepe the opulent ; or I may fay to the (comparatively) few that can get admittance into the houfe where thefe waters are imprifoned ? There are other fprings (Camden fays nine) very near that in the Hall, and in all probability of equal virtue. I was informed that the late Duke of Devon@hire, not long before his death, had ordered fome of thefe to be inclofed and formed into baths. It is to be hoped that his fucceffor will not fail adopting fo ufeful and humane a plan; that he will form it on the molt enlarged fyllem, that they may open not folely to thofe whom mifufed wealth hath rendered invalids, but to the poor cripple, whom honeft labour hath made a burthen to himfelf and his country; and to the foldier and failor, who by hard fervice have loft the ufe of thofe very limbs which once were active in our defence. The honour refulting from fuch a foundation would be as great, as the fatisfaction arifing from a confcioufnefs of fo benevolent a work, would be unfpeakable. The charms of diffipation would then lofe their force; and every human luxury would appear to him infipid, who had it in his power thus to lay open thefe fountains of health, and to be able to exult in fuch pathetic and comfortable ftrains as thefe: "When the ear heard me, then it bleffed me; and when the eye faw me it gave witnefs to me;
"Becaufe I had delivered the poor that cried, and the fatherlefs, and him that had none to help him.
" The bleffing of him that was ready to perifh came upon me, and I caufed the widow's heart to fing for joy.
"I was eyes to the blind, and feet was I to the lame."
After leaving Buxton, paffed through Middleton dale, a deep narrow chafm between two vaft cliffs, which extend on each fide near a mile in length: this road is very fingular, but the rocks are in general too naked to be beautiful. At the end is the fmall village of Stoney Middleton ; here the profpect opens, and at Barney-bridge exhibits a pretty view of a fmall but fertile vale, watered by the Derwent, and terminated by Chatfworth and its plantations. Arrived and lay at

Chefterfield, an ugly town. In this place is a great manufacture of worfted fockings, and another of a brown earthen-ware, much of which is fent into Holland, the country which, within lefs than half a century ago, fupplied not only thefe kingdoms but half of

[^2]Europe with that commodity. The clay is found near the town; over the bafs or * cherty fratum, above the coal.' The feeple of Chefterfield church is a fpire covered with lead, but by a violent wind frangely bent, in which flate it remains. In the church are fone fine inonuments of the Foljambes of Walton.

At this place may be faid to have expired the war of the barons in the reign of Henry III. After the battle of Evefham, Robert Earl Ferrers, and Baldwin Wake Baron of Chefterfield, attempted once more to make head againी the royal power. They rendevoufed here; but were fuddenly furprifed by the royalifts; Ferrers was taken, and Wake fled. The eflate of the firf was forfeited : the fortunes of the laft were reftored, after certain mulcts. By the marriage of a fifter of one of his defcendants with Edmund of Woodflock, this place and Bakewell became the property of his daughter, the fair maid of Kent, widow of the Black Prince, and were part of her jointure on his deceafe.

June 27. On the road fide, about three miles from the town, are feveral pits of ironftone about nine or ten feet deep. The fratum lies above the coal, and is two feet thick. I was informed that the adventurers pay ten pounds per annum to the lord of the foil for liberty of raifing it; that the labourers have fix fhillings per load for getting it : each load is about twenty ftrikes or bufhels, which yields a ton of metal. Coal in thefe parts is very cheap, a ton and a half being fold for five fhillings.

Changed horfes at Workfop and Tuxford. In the fouth aife of the church at Tuxford, beneath a flowery arch, is a very rude relief of St. Lawrence placed on the gridiron. By him is a fellow with a bellows blowing the fire, and the executioner going to turn him. The zealous Fox in his Martyrology has this very thought, and makes the martyr fay in the midft of his fufferings, "This fide is now roafted; turn me, $\mathbf{O}$ tyrant great!" Croffed the Trent at Dunham-ferry, where it is broad, but flallow: the fpring tides flow here, and rife about two feet, but the common tides never reach this place. Dunham had been a manor belonging to Edward $\dagger$ the Confeffor, and yielded him thirty pounds, and fix fectaries of honey, valuable when mead was the delicious beverage of the times. From hence pafs along the Fofs-Dyke, or the canal opened by Henry I. 1 , to form a communication between the Trent and the Witham. It was opened $\S$ in the year 1121, and extends from Lincoln to Torkefey; its length is eleven miles three quarters, the breadth between dike and dike at the top is about fixty feet, at bottom twenty-two: veffels from fifteen to thirty-five tons navigate this canal, and by its means a confiderable trade in coals, timber, corn, and wool, is carried on. In former times, the perfons who had landed property on either fide were obliged to fcower it whenever it was choaked up, and accordingly we find prefentments were made by juries in feveral fucceeding reigns for that purpofe. Reach

Lincoln, an anciem dut ill-built city, much fallen away from its former extent. It lies partly on a plain, partly on a very fteep hill, on whofe fummit are the cathedral and the ruins of the caftle. The firlt is a valt pile of Gothic architecture; within of matchlefs beauty and magnificence : the ornaments are exceffively rich, and in the fineft Gothic tafte ; the pillars light, the centre lofty, and of a furprifing grandeur. The windows at the N. and S. ends are very ancient, but very elegant; one reprefents a leaf

[^3]with its fibres, the other confifts of a number of fmall circles. There are two other ancient windows on each fide the great ine : the others, as 1 recollect, are modern, This church was, till of late years, much out of repair, but has juft been reflored in a manner that does credit to the chapter.

The profpeck from this eminence is very extenfive, but very barren of objects; a valt flat as far as the eye can reach, confifting of plains not the moft fertile, or of fens and moors: the laft are far lefs extenfive than they were, many being drained, and will foon become the beft land in the country; but much fill remaine to be done. The fens near Reveßby Abby $t$, eight miles bcyond Horncafle, are of vaft extent; but ferve for little other purpofe than the rearing great numbers of geefe, which are the wealth of the fenmen.

During the breeding feafon, thefe birds are lodged in the fame houfes with the inhabitants, and even in their very bed-chambers: in every apartment are three rows of coarfe wicker pens placed one above another ; each bird has its feparate lodge divided from the other, which it keeps poffeffion of during the time of fitting. A perfon, called a Gozzard $\ddagger$, attends the flock, and twice a day drives the whole to water; then brings them back to their habitations, helping thofe that live in the upper fories to their nelts, without ever mifplacing a fingle bird.

The geefe are plucked five times in the year; the firft plucking is at Lady-Day, for feathers and quills, and the fame is renewed, for feathers only, four times more between that and Michaelmas. The old geefe fubmit quietly to the operation, but the young ones are very noify and unruly. I once faw this performed, and obferved that goflings of fix weeks old were not fpared; for their tails were plucked, as I was told, to habituate them carly to what they were to come to. If the feafon proves cold, numbers of geefe dic by this barbarous cuftom $\$$.

Vaft numbers are driven annually to London, to fupply the markets; among them, an the fuperannuated geefe and ganders (called here Cagmags) which ferve to fatigue the jaws of the good citizens, who are fo unfortunate as to meet with them.

The fen called the Weft Fen, is the place where the ruffs and reeves refort to in the greateft numbers $\cap$; and many other forts of water-fowl, which do not require the Thelter of reeds or rufhes, migrate here to breed; for this fen is very bare, having been imperfectly drained by narrow canals, which interfect it for great numbers of miles. Thefe the inhabitants navigate in moft diminutive fhallow boats; they are, in fack, the roads of the country.

The Eaft Fen is quite in a fate of nature, and gives a fpecimen of the country before the introduction of drainage : it is a vaft tratit of morafs, intermixed with numbers of lakes from half a mile to two or three miles in circuit, communicating with each other by narrow reedy fraits: they are very flallow, none are above four or five feet in depth ; but abound with fifh, fuch as pike, perch, ruff, bream, tench, rul, dace, roach, burbot, fticklebacks, and eels.

[^4]It is obfervable, that once in feven or eight years, immenfe fhoals of ficklebacks appear in the Welland below Spalding, and attempt coming up the river in form of a valt column. They are fuppofed to be the collected multitudes wafhed out of the fens by the floods of feveral years, and carried into fome deep hole; when over-charged with numbers, they are obliged to attempt a change of place. They move up the river in fuch quantities as to enable a man, who was employed in taking them, to earn, for a confiderable time, four fhillings a day, by felling them at a halfpenny per bufhel. They were ufed to manure land, and attempts have been made to get oil from them. The fen is covered with reeds, the harveft of the neighbouring inhabitants, who mow them annually; for they prove a much better thatch than ftraw, and not only cottages, but many very good houfes are covered with them. Stares, which during winter refort in myriads to rooft in the reeds, are very deftructive, by breaking them down, by the vaft numbers that perch on them. The people are therefore very diligent in their attempts to drive them away, and are at great expence in powder to free themfeives of thefe troublefome guefts. I have feen a flock of reeds harvefted and flacked worth two or three hundred pounds, which was the property of a fingle farmer.

The birds which inhabit the different fens are very numerous: I never met with a finer field for the zooligitt to range in. Befides the common wild-duck, of which an account is given in another place ", wild geefe, garganies, pochards, fhovelers, and teals breed here. I have feen in the eaft fen a fmall flock of the tufted ducks; but they feemed to make it only a baiting-place. The pewit gulls and black terns abound; the laft in vaft fiocks almoft deafen one with their clamors : a few of the great terns, or tickets, are feen among them. I faw feveral of the great crefted grebes on the Eaft Fen, called there gaunts, and met with one of their floating netts with eggs in it. The leffer crefted grebe, the black and duiky grebe, and the little grebe, are alfo in. habitants of the fens; together with coots, water-hens, fpotted water-hens, water-rails, ruffs, redihanks, lapwings or wipes, red breafted godwits and whimbrels. The godwits breed near Wafhenbrough; the whimbrels only appear about a fortnight in May near Spalding, and then quit the country. Oppofite to Fofldyke Wafh, during fummer, are great numbers of avofettas, called there yelpers, from their cry. They hover over the fportfman's head like the lapwing, and fy with their necks and legs extended.
Knots are taken in nets along the Mores near Fofldyke in great numbers during winter; but they difappear in the fpring.

The fhort.eared owl, Br. Zool. I. No. 66. vifits the neighbourhood of Wathenbrough along with the woodco:ks, and probably performs its migrations with thofe birds, for it is obferved to quit the country at the fame time: I have alfo received fpecimens of them from the Danif dominions, one of the retreats of the woodcock. This owl is not obferved in this country to perch on trees, but conceals itfelf in long old grafs ; if difturbed, takes a thort flight, lights again, and keeps ftaring about, during which time its horns are very vifible. The farmers are fond of the arrival of thefe birds, as they clear the fields of mice, and will even fly in fearch of prey during day, provided the weather is cloudy and mifty.
But the greateft curiofity in thefe parts is the vaft heronry at Creff-hall, fix miles from Spalding. The herons refort there in February to repair their nefts, fettle there in the fpring to breed, and quit the place during winter. They are numerous as rooks, and their nefts fo crouded together, that myfelf, and the company that was with me,

[^5]counted not lefs than eighty in one fpreading oak. I here had an opportunity of detecting my own miftake, and that of other ornithologift, in making two fpecies of herons; for I found that the crefted heron was only the male of the other: it made a moft beautiful appearance with its fnowy neck and long creft freaming with the wind. The family who owned this place was of the fame name with thefe birds, which feems to be the principal inducement for preferving them.

In the time of Michael Drayton,

## Here falked the fately crane, as though he march'd in war.

But at prefent this bird is quite unknown in our ifland; but every other fpecies enumerated by that obfervant poet fill are found in this fenny tract, or its neighbourhood.

June 28. Vifited Spalding, a place very much refembling, in form, neatnefs, and fituation, a Dutch town : the river Welland paffes through one of the ftreets, a canal is cut through another, and trees are planted on each fide. The church is large, and the fteeple a spire. The churches in general, throughout this low tract, are very handfome; all are built of fone, which muft have been brought from places very remote, along temporary canals; for, in many infances, the quarries lie at leaft twenty miles diftant. But the edifices were built in zealous ages, when the benediations or maledietions of the church made the people conquer every difficulty that might obftruct thefe pious foundations. The abby of Crowland, feated in the middt of a Chaking fen *, is a curious monument of the infuperable zeal of the times it was erected in; as the beautiful tower of Bofton church, vifible from all parts, is a magnificent fpecimen of a fine gothic tafte.

June 29. Paffed near the fite of Swinefhead abby, of which there are not the lealt remains. In the walls of a farm-houfe built out of the ruins, you are fhewn the figure of a knight Templar, and told it was the monk who poifoned King John; a fact denied by our beft hiftorians. This abby was founded in 1134 , by Robert de Grellei, and filled with Ciftertian monks.

Returned through Lincoln; went out of town under the Newport-gate, a curious Roman work ; pafied over part of the heath ; changed horfes at Spittle, and at Glanford bridge; dined at the ferry-houfe on the banks of the Humber; and, after a paflage of about five miles, with a brifk gale, landed at Hull, and reached that night Burton-Conftable, the feat of Mr. Conftable, in that part of Yorkßhire called Holdernefs; a rich flat country, but excellent for producing large cattle, and a good breed of horfes, whofe prices are near doubled fince the French have grown fo fond of the Englifh kind.

Made an excurfion to Hornfea, a fmall town on the coaft, remarkable only for its mere, a picce of water about two miles long, and one broad, famous for its pike and eels; it is divided from the fea by a very narrow bank, fo is in much danger of being fome time or other loft.

The cliffs on the coaft of Holdernefs are high, and compofed of clay which falls down in valt fragments. Quantity of amber is walhed out of it by the tides, which the country people pick up and fell: it is found fometimes in large mafles, but I never

[^6]fasw any fo pure and clear as that from the Baltic. It is ufually of a pale yellow colour within, and pretily clouded ; the outfide covered with a thin coarfe coat.

July 2. After riding fome miles over a flat grazing country, paffed through the village of Skipfey, once under the protection of a calfle founded by Drugon or Drtgan, a valiant Flandrian, who came over at the time of the conqueft. The Conqueror gave him :a marriage one of his near relations; and as a portion made him lord of Holdernets. Drugon by fone unlucky accident killed his fpoufe ; but, having his wits about him, haftened to the King, and informing his Majefty, that his lady and he hat a great defire to vilt their native country, requelled a fim of money for that purpofe: the Conqueror immediately fupplied the wants of Drugon; who had faredy embarked, when advice was brought from Skipley of the death of the lady : purfuit was inftantly made but in vain ; the artful Flandrian cvaded all attempts to bring him to juftice ".

Near this village is a confiderable camp; but I paffed too haftily to determine of what nation.

A few miles farther is Burlington Quay, a fmall town clofe to the fea. There is a defign of building a pier, for the protection of fhipping; at prefent there is only a large wooden quay, which projects into the water, from which the place takes its name. In February $16 .+2$, Henrictta, the fpirited confort of Charles I. landed here with arms and ammunition from Holland. Batten, a parliament admiral, had in vain tried to intercept Hor Majefty; but coming foon after into the bay, brutally fired for two hours at the houfe where fle lay, torcing her to take fhelter, half-drefled, in the fields. Nor parliament nor admiral were affamed of this unmanly deed; but their hiltorian, the moderate Whitelock; feems to blufh for both, by omitting all mention of the affair. From hence is a fine view of the white cliffs of Flamborough-head, which extends far to the eaft, and forms one fide of the Gabrantvicorum finus portucfus of Ptoleny, a name derived from the Britifh Gyfr, on account of the number of goats found there, according to the conjecture of Camden. Perhaps, Evai $\mu s$ (O), the epithet which Ptolemy adds to the bay, is fill preferved in Sureby, or Sure-bay $\dagger$, a village a little north of Burlington Quay. That the Romans had a naval ftation here, is more ftrongly confirmed by the road called the Roman-ridge, and the dikes which go by Malton to York, are vifible in many places, and ended here $\ddagger$.

A mile from hence is the town of Burlington. The body of tre church is large, but the fteeple, by fome accident, has been deftroyed; near it is a large gateway, with a noble Gothic arch, the remains of a priory of black canons, founded by Walter de Gant, in the begiming of the reign of Henry I. In that of Richard II. in the year 1388, the canons got liberty of inclofing their houle with flrong walls, to defend them from the attacks of pirates. I camnot help mentioning a proof of the manners of the clergy in early times, by relating a complaint of the prior to Immecent III. againtt the archdeacon of Richmond, who calling at his houle wi:n ninety-feven horles, tweaty-one dogs, and three hawks, devoured in one hour, more provifon than would have lafted the monks a long time. The grievance was redrefed. William Wode, the laft prior, was executed for rebellion in 1537. At that time, according to Speed, the revenue was

This coalt of the kingdom is very unfavourable to itees, for, eseept fome woods in the neighbourlood of Burton-Conitable, there is a valt nakednefs from the Humber,

[^7]as far as the extremity of Caithnefs, with a very few exceptions, which fhall be noted in their proper places.

July 3. Went to Flamborough head. This was the Fleamburg of the Saxone, poffibly from the lights made on it to direct the landing of Ida, who, in 547 , jcined his countrymen in thefe parts with a large reinforcement from Germany; and founded the kingdom of Northumberland. In the tiune of Fdward the Confeffor, Flamborough was one of the manors of Harold*, Earl of the weft Saxons, afterwards King of England. On his death, the Conqueror gave it to Hugh Lupus, who, in perpetual alms, beflowed it on the monaltery of Whitby $\dagger$.

The town is on the north fide; confifts of about one hundred and fifty fmall houfes, entirely inhabited by fifhermen, few of whom, as is faid, die in their beds, but meet their fate in the element they are fo converfant in. Put myfelf under the direation of Williain Camidge, Cicerone of the place, who conducted me to a little creek at that time covered with fifh, a flect of cobles having juft put in. Went in one of thofe little boats to view the Head, coafting it for upwards of two miles. The cliffs are of a tremendous height, and amazing grandeur ; beneath are feveral vaft caverns, fome clofed at the end, othe es are pervious, formed with a natural arch, giving a romantic paffage to the boat, different from that we entered. In fome places the rocks are infulated, are of a pyramidal figure, and foar up to a valt height: the bafes of moft are folid, but in fome pierced through, and arched; the colour of all thefe rocks is white, from the dung of the innumerable flocks of migratory birds, which quite cover the face of them, filling every little projection, every hole that will give them leave to reft; multitudes were fwimming about, others fwarmed in the air, and almoft ftunned us with the variety of their croaks and fcreams. I obferved among them corvorants, fhags in fmall flocks, guillemots, a few black guillemots very hy and wild, auks, puffins, kittiwakes $\downarrow$, and herring gulls. Landed at the fame place, but before our return to Flamborough, vifited Robin Leith's hole, a vaft cavern, to which there is a narrow paffage from the land fide; it fuddenly rifes to a great height; the roof is finely arched, and the bottom is for a confiderable way, formed in broad fteps, refembling a great but eafy ftaircafe ; the mouth opens to the fea, and gives light to the whole.

Lay at Hunmandby, a fmall village above Filey Bay, round which are fome plantations that thrive tolerably well, and ought to be an encouragement to gentlemen to attempt covering thefe naked hills.

Filey-brig is a ledge of rocks running far into the fea, and often fatal to 贝hipping. The bay is fandy, and affords vaft quantities of fine fifh, fuch as turbot, foles, \&c. which during fummer approach the fhore, and are eafily taken in a common feine or draggingnet.

July 4. Set out for Scarborough; paffed near the fite of Flixton, a hofpital founded in the time of Athelftan, to give fhelter to travellers from the wolves, that they fhould not be devoured by them $\boldsymbol{\delta}$; fo that in thofe days this bare tract muft have been covered with wood, for thofe ravenous animals ever inhabit large forefts. Thefe hofpitia are not unfreçuent among the Alps; are either appendages to religious houfes, or fupported by voluntary fubfcriptions. On the fpot where Flixton ftood is a firmhoufe, to this day called the Spital-houfe. Reach

Scarborough, a town once Atrongly guarded by a caftle, built on the top of a valt cliff, by William le Gros, Earl of Yorkfhire, Albemarle, and Hordernefs, in the rcign

[^8]of Stan ? $\because$ After the refumption of this, as well as other crown lands alienated by that pi., Henry II. rebuilt the fortrefs, then grown ruinous, with greater ftrength and manaificence, inclofing a vaft area. From this time it was confidered as the key of this important county, and none but perfons of the firft rank were entrufted with the cuftody. Its confequence may be evinced from this circumftance; that when King John had granted to his fubjects the magna charta, and placed the government in the hands of twenty.five barons, the governor of this caftle was to be approved by them, and to receive his orders from them.

In $\mathrm{I}_{3}$ 12, Edvard II. in his retreat out of the north before his rebellious nobility, left here, as in a place of the greateft fecurity, his minion Peers Gavefton. It was inftantly befieged, and taken by Aymer de Valence, Earl of Pembroke; and the infolent favourite, in a fhort time after, fell a victim to the refentment of the Earl of Warwick.

In the reign of Richard II. in 1378 , its trade received great injury from a combined fleet of Scots, French, and Spaniards, under the conduct of one Mercer, who entered the harbour, and carried off feveral fhips. The infult was inftantly revenged by Philpot, a gallant alderman of London, who fitted out a fleet at his own charge, purfued the enemy, and not only retook their prizes, but made himfelf mafter of the whole fleet.

Richard III. added frength to the place by building a bulwark near the fhore at the fouth-ealt end of the town; and he alfo began to wall in the town *.

In the religious rebellion, ftyled the pilgrimage of grace, in the time of Henry VIII. the leader, Robert Afk, in 1536 , layed clofe fiege to the cafte; but was obliged to defift, after its governor Sir Ralph Ewers and his garrilon were reduced for twenty days to live on bread and water $\dagger$.

In 1557, Thomas Stafford, fecond fon of Lord Stafford, with only thirty-two perfons, came from France, and furprized the fortrefs. It appears that they were encouraged to the attempt by Henry II. It was, probably, only the prelude to an invafion. Stafford publifhed a manifefto againft the Queen; and fyled himfelf Protector of England: but the Earl of Weftmoreland, collecting fome forces, (in two days) put an end to his dignity $\ddagger$.

At the beginning of the civil wars, the parliament committed this cafte to the care of Sir Hugh Cholmley, who foon after revolted to the King. He maintained the place with great fpirit for two years. In 1644, he was vigorounly befieged by Sir John Meldrum, from February till the middle of May, when Sir John, in attempting to repel a fally, received a mortal wound. Sir Hugh kept poffeffion of it till July 1645, when he furrendered it on terms to Sir Matthew Boynton $\oint$. It is at prefent a large ruin. In the caftle yard are barracks for about a hundred and fifty men, at prefent untenanted by foldiery.

In this town were three religious houfes and a hofpital. The grey friers, or Francifcans, began a houfe here about 1240, which was enlarged by Edward II.' and Roger Molendarius. The black friers, or Dominicans, had another before the $13^{\text {th }}$ of Edward 1. whether founded by Sir Adam Say, or Henry Earl of Northumberland, is doubtful. The white friers, or Carmelites, were eftablifhed here in 1319 , by Edward II. and the Ciftertians had in the reign of King John a cell in this town dependent on a houfe in France, to which was given the church of St. Mary, and certain lands, till the fuppreffion of the alien priories in the reign of Edward IV.

[^9]Leland* deferibes this church as very magnificent; with two towers at the weft end, and a great one in the centre. It was probably demolifhed in the civil wars, when Sir John Meldrum forced the royalilts in:o the caltle; for it lay too near that fortrefs to be fuffered to remain entire, to give flelter to the enemy. The preient church (the only one in the town) rofe fiom the ruins of the former.

The town is large, built in form of a crefeent, on the fides of a neep hill; from whence the name, which thews it to have exitted in Saxon times, Scareburg, or the Burg on a fear or cliff. Bencath the fouth fide of the cafte, is a large ftone pier (another is now building) which fhelters the hipping belonging to the place. It is abfolutely without trade, yet has above ten thoufand inhabitants, motly lailors, and owns above three hundted fail of flips, which are hired out for freight. In time of war government feldom has lefs than a hundred in pay.

In 1359 , the flipping of this place was very inconfiderable; for to the naval armament of that year made by Edward III. Scarborough contributed only one fhip and fixteen mariners; when the following northern ports fent the numbers here recited :

| Newcaftle |  |  |  |
| :---: | :---: | :---: | :---: |
| Barton on the | Humber | 3 | 30 |
| Grimiby | - - | 1 | 171 |
| Bofton | - | 17 | 361 |
| Hull. |  | 16 | $382 \dagger$ |

The range of buildings on the cliff commands a fine view of the cafte, town, and of innumerable flipping that are perpetually paffing backward and forward on their voyages. The fpawt lies at the foot of one the hills, S . of the town; this and the great conveniency of fea-bathing, occafion a valt refort of company during fummer ; it is at that time a place of great gaiety, for with numbers health is the pretence, but diffipation the end.

The fhore is a fine hard fand, and during low water is the place where the company amufe themfelves with riding. 'This is alfo the filh market; for every day the cobles, or little fifhing boats, are drawn on fhore here, and lie in rows, often quite loaden with variety of the beft fifh. It is fuperfuous to repeat what has been before mentioned of the methods of filhing, being amply deferibed, Vol. III. of the Britih Zoology; yet it will be far from impertinent to point out the peculiar advantages of thefe feas, and the additional benefit this town might experience, by the augmentation of its filheries. For this account, and for numberlefs civilities I think nyfelf much indebted to Mr. Travis, furgeon, who communicated to me the following remarks:
"Scarborough is fituated at the bottom of a bay, formed by Whitby rock on the North, and Flamborough Head on the South : the t wa is feated dircetiy oppofite to the centre of the W. end of the Dogger bank; which end (according to Hammond's chart of the North Sea) lies S. and by W., and N. and by E.; but by a line drawn from Tinmeuth caltle, would lead about N. W. and S. E. Though the Dogger bank is therefore but twelve leagues from Hlamborough Head, yet it is fixteen and a half from Scartorough, twenty-three from Whitby, and thirty-fix from 'Tinmouth caftle. The N. fide of the bank ftretches off E. N. F. between thirty and forty leagues, until it almoft joins to the Long-Bank, and Jutt's Ritt.

[^10]"It is to be remarked, that the fifhermen feldom find any cod, ling, or other round fifh upon the Dogger bank itfelf, but upon the floping edges and hollows contiguous to it. The top of the bank is covered with a barren fhifting fand, which affords them no fubfiftence; and the water on it, from its fallownefs, is continually fo agitated and broken, as to allow them no time to reft. The flat fifh do not fuffer the fame inconvenience there; for when difturbed by the motion of the fea, they flecter the uffelves in the fand, and find variety of fuitable food. It is true, the Dutch finh upon the Dogger bank; but it is alfo true they take little except foles, fiates, thornbacks, plaife, \&c. It is in the hollows between the Dogger and the Wcll-bank, that the cod are taken which fupply London market.
" The fhore, except at the entrance of Scarborough pier, and fome few other places, is compofed of covered rocks, which abound with lobtters and crabs, and nany other fhell fill, (no oyflers; ) thence, after a face covered with clean fand, extending in different places from one to five or fix miles, the bottom, all the way to the edge of the Dogger bank, is a fcar; in fome places very rugged, rocky, and cavernous; in others linooth, and overgrown with a variety of fubmarine plants, moffes, corallines, \&c. * Some parts again are fpread with fand and fhells; others, for nany leagues in length, with foft mud and ooz, furnifhed by the difcharge of the Tees and Humber.
" Upon an attentive review of the whole, it may be clearly inferred, that the fhore along the coaft en the one hand, with the edges of the Dogger bank on the other, like the fides of a decoy, give a direction towards our fifhing grounds to the mighty foals of cod, and other fifh, which are well known to come annually from the Northern Ocean into our feas; and fecondly, that the great variety of filhing grounds near Scarborough, extending upwards of fixteen leagues from the fhore, afford fecure retreats and plenty of proper food for all the various kinds of fifh, and alfo fuitable places for eachkind to depofit their fpawn in.
"'The fifhery at Scarborough only employs 105 men, and brings in about 5250 l . per annum, a trifle to what it would produce, was there a canal from thence to Leeds and Manchefter; it is probable it would then produce above ten times that fuan, employ fome thoufands of men, give a comfortable and cheap fubfiftence to our manufaturers, keep the markets moderately reafonable, enable our manufacturing towns to underfell our rivals, and prevent the hands, as is too often the cafe, raifing infurrections, in every year of fcarcity, natural or arificial."

In addition to the above I add an extract of a letter from Mr. Travis, dated Dec. 21, 1734 , which flings more light on this interefting fubject. The fillery is now on its decline. The profits of fmuggling having tempted moft of the owners of cobles to quit their bufinefs, the number here is reduced from thirty five cobles to feven. At Robin Hood's bay from forty-five to feventeen, and in the fame proportion along the coaft. At Scarborough are only fifhermen to the number mentioned; thofe ferve a regularapprenticefhip, for it is a particular trade, and the ableft failors will not venture in a coble in the ftream of the tide, where the beft fifh only are taken.

The clame to the tithe of filh is a great difcouragement; the prefent worthy owner, Sir Charles Hotham Thomplon, does not demand it, but as the right has been confirmed by the courts of law, no one dare venture to truft to what a fucceffor may do. The cobles are not owned by the filhers, but hired from the ale-houle keepers at one fhilling and fix-pence per week, for the fear of the tithes prevents people of fubftance from

[^11]engaging and fitting out large veffels, with which alone a national fiffery can be carried on.

At prefent the Dutch engrofs all our lampreys for baits, and once a fortnight a veffel fails from the Humber with a cargo to Holland. Thus the Dutch fupply Holland, Germany, and even London itfelf, with cargoes of excellent fif. I refer the readers to my Arctic Zoology, Suppl. p. 20,, or Introduction, Ed. 2d. p. Ixxix. for an account of this valuable filhery; and of a very unjuit attempt made by a felfifh few to exclude the Dutch from fupplying our markets from their own coalts.

On difcourfing with fome very intelligent filhermen, I was informed of a very fingular phenomenon they annually oblerve about the fpawning of fifh *. At the diltance of four or five leagues from fhore, during the month of July and Auguft, it is remarked, that at the depth of fix or feven fathom from the furface, the water appears to be fatturated with a thick jelly, filled with the ova of fifh, which reaches ten or twelve fathoms deeper : this is known by its adhering to the ropes the cobles anchor with, when they are filling; for they find the firf fix or feven fathom of rope free from fpawn, the next ten or twelve covered with flimy matter, the remainder again free to the botton. They fuppofe this gelatinous ftuff to fupply the new-born fry with food, and that it is alfo a protection to the fpawn, as being difagreeable to the larger fifh to fivim in.

There is great variety of fifh brought on Thore. Befides thofe deferibed as Britih filh, were two fpecies of rays: the whip-ray has alfo been taken here, and another fpecies of weever; but thefe are fubjects, more proper to be referred to a fauna, than an itincrary, for a minute defcription.

The following is a proof of the vait quantity of firh that may be taken on this coaft. On April 11, 1776, were taken in one tide, by one coble, 37 cods, 36 lings, 45 holibuts, 3 turbots, befides a large quantity of ikates and fmall fifh; which were fold for feven pounds.
July roth left Scarborough, and paffed over large moors to Robin Hood's bay. On my road, obferved the vaft mountains of alum ftone, from which that falt is thus extracted: It is firft calcined in great heaps, which continue burning by its own phlogifton, after being well fet on fire by coals, for fix, ten, or fourteen months, according to the fize of the heap, fome being equal to $a$ fmall hill. It is then thrown into pits and fteeped in water, to extract all the faline particles. The liquor is then run into other pits, where the vitriolic falts are precipitated by the addition of a folution of the fal fodx, prepared from kelp; or by the volatile alkali of ftale urine. The fuperflous water being then evaporated duly by boiling in large furnaces, the liquor is fet to cool; and laftly, is poured into large caiks, to cryftallize.

The alum works in this country are of fome antiquity : they were firft difcovered by Sir Thomas Chaloner, in the reign of Queen Elizabeth, who obferving the trees tinged with an unufual colour, made him fufpicious of its being owing to fome mineral in the neighbourhood. He found out that the frata abounded with an aluminous falt.

At that time the Englifh being ftrangers to the method of managing it, there is a tradition that Sir Thomas was obliged to feduce fome workmen from the Pope's alumworks near Rome, then the greateft in Europe. If one may judge from the curfe which his holinefs thundered out againft Sir Thomas and the fugitives, he certainly was not a little enraged; for he curfed by the very form that Ernulphus $\dagger$ has left us, and not varied a titte from that moft comprehenfive of imprecations.

[^12]The firf pits were near Giborough, the feat of the Chaloners, who ftill flourih there, notwithttanding his holinefs's anathema. 'The works were fo valuable as to be deemed a royal mine. Sir Paul Pindar, who rented them, payed annually to the King 12,5001., to the Earl of Mulgrave 16401., to Sir William Pennyman 6001.; kept 800 workmen in pay, and fold his alum at 261. per ton. But this monopoly was deftroyed on the death of Charles I. and the right reftored to the proprietors.

In thefe alum rocks are frequently found cornua ammonis, and other foffils, lodged in a \{ony nodule. Jet is fometimes met with in thin flat pieces, externalIy of the appearance of wood. According to Solinus, Britain was famous for this foffil *.

The fands near Robin Hood's village, were covered with fifh of feveral kinds, and with people who met the cobles in order to purchafe their cargo: the place feemed as if a great fifh fair had been held there; fome were carrying off their bargains, others bufied in curing the fifh: and a little out at fea was a fleet of cobles and five-men boats, and others, arriving to difcharge the capture of the preceding tides $\dagger$. There are 36 of the firf beloning to this little place. The houfes here make a grotefque appearance, are fcattered over the face of a fteep cliff in a very ftrange manner, and fill every projecting ledge, one above another, in the fame manner as thofe of the peafants in the rocky parts of China. Sand's End, Runwick, and Staithes, three other fifhing towns on this coaft, are (as I am told) built in the fame manner.

The country through this day's journey was hilly, the coaft high. Reach
Whitby, called by the Saxons, Streanefhalch, or the bay of the light-houfe, a large town oddly fituated between two hills, with a narrow channel running through the middle, extending about a mile farther up the vale, where it widens, and forms a bay. The two parts of the town are joined by a good draw-bridge, for the conveniency of letting the fhipping pafs. From this are often taken the viviparous Blenny, whofe back-bone is as green as that of the fea needle. The river that forms this harbour is the Eik, but its waters are very inconfiderable when the tide is out. Here is a pretty brikk trade in fhip-building; but except that, a fmall manufacture of fail-cloth, and the hiring of fhips, as at Scarborough, like that town, it has fcarce any commerce. It is computed, there are about 270 flips belonging to this place. Of late, an attempt has been made to have a fhare in the Greenland fifhery; four fhips were fent out, and had very gond fuccefs. There are very good dry docks towards the end of the harbour; and at the mouth a moft beautiful pier. At this place is the firf falmon-fifhery on the coaft

In 1394 prodigious fhoals of herrings appeared off this port, which occafioned a vaft refort of foreigners, who bought up, cured the fifh, and exporied them to the great injury of the natives. To prevent which, the King iffued a proclamation, directed to the bailiffs of St. Hilda's church, requiring them to put a fop to thofe practices $\ddagger$.

On the hill above the $S$. fide of the town is a fine ruin of St. Hilda's church. The fite was given to that faint by Ofwy, King of Northumberland, about A. D. 657 ; poffibly in confequence of a vow he made to found half a dozen monafteries, and make his daughter a nun, fhould heaven favour his arms. At this place was held, before King Ofwy, the celebrated controverfy about the proper feafon for keeping of Eaft: Archbihop Colman fupported one opinion from the traditions, which the Britons had of the example of St. John the Evangelift; and Wilfrid, on the contrary, drew his ar-

[^13]guments from the practice of St. Peter, on whom the catholic church was founded, and to whom were committed the keys of heaven. Ofwy demanded of Colman, whether this was true? who confeffed it was. "Then," fays His Majefly, "I will never contradict the porter of heaven, left I fuffer by his refentment, when I apply for admiffion "." St. Hilda founded a convent here for men and women; dedicated it to St. Peter, and became the firft abbefs $\dagger$. This eftablifmment was ruined by the excurfions of the Danes; but after the conqueft, was rebuilt, and filled with Benedictines, by Willian de l'ercy, to whom the lordfhip was given by Hugh Lupus, Earl of Chefter, nephew to the conqueror. In lefs enlightened times it was believed that not a wild goofe dared to fly over this holy ground, and if it ventured, was fure to fall precipitate, and perifh in the attempt.

Went about two miles along the flore, then turned up into- the country, a black and dreary moor ; obferved on the right a vaft artificial mount, or tumulus, called Frecburgh Hill.

At the end of this moor, about three niles from Gifborough, is a beautiful view over the remaining part of Yorkhire, towards Dutham, Hartlepool, and the mouth of the Tees, which meanders through a very rich tract. The country inftantly aflumes a new face; the road lies between mont delightful bills, finely wooded, and the little vales between them very fertile: on fome of the hills are the marks of the firft alum works, which were difcovered by Sir Thomas Chaloner.

Gifborough, a finall town, pleafantly fituated in a vale furrounded at fome diftance hills, and open on the eaft to the fea, which is about five miles diftant. It is certainly a delightful fpot; but I cannot fee the reafon why Camden compares it to Puteoli. Here was once a priory of the canons of the order of St . Aultin, founded by Robert de Brus, 1129 , alter the diffolution granted by E.dward VI. to the Chaloners: a very beautiful eaft window of the church is nill remaining. This priory was alfo embatted or forrified in 1375 , by perniffion of Edward III. Its revenue, according to Speed, was 7121.6 s. 6d.; according to Dugdale, 6281. 3s. 4d. The town has at prefent a good manufacture of fail-cloth.

The country continues very fine quite to the banks of the Tees, a confiderable river, which divides York flire from the bifhoprick of Durham. After travelling 109 miles in a fraight line through the firft, enter Durham, crofling the river on a very handfome bridge of five arches, the battlements neatly pannelled with fone; and reach

Stockton, lying on the Tees in form of a crefcent: a handfome town; a corporation by prefeription, governed by a mayor, recorder, and fix aldermen; and is one of the four ward towns of the county. The principal flrect is remarkably fine, being 165 fect broad; and feveral leffer flreets run into it at right angles. In the middle of the great flreet are neat fhambles, a town-houfe, and large affembly-room. There is befides a large fquare, in which is a handfome Doric column thirty-three feet high. About a contury ago, according to Anderfon, it had icarce a houfe that was not made of clay and thatch; but is now a fourining place, having rofe on the decay of trade at Yam. It manufacture is a finall one of fail cloth; and great quantities of corn, and lead (from the mineral pats of the country) are fent off from hence by commifion. As the river does not admit of large veffels as high as the town, thofe commodities are fent down to be finpped alout three miles lower. The port is a member of that of Newcafte, and has its cuftom houle and proper officers. The town lies at the diftance of fix miles from the bar; and the thite flows above eight miles above the bridge.
$\dagger$ Degumin acgj, by biflop Willam de Carilepho.
vos. 111.
with a white flime: they are called here rack-riders, becaufe they appear in winter, or bad weather: rack, in the Englih of Shakefpeare's days, fignifying the driving of the clouds by tempetts, a word nill retained here.

> That which is now a horfe, even with a thought
> The rack dillinhs, and makes it indillinet As water is in water.

## Antony and Cleopatan, Aet IV.

There is no inconfiderable manufacture-at Durham of fhalloons, tammies, ftripes, and callemancoes. I had heard on my road many complaints of the ecclefiantical go. vernment this country is fubject to; but from the general face of the country, it feems to thrive wonderfully under it.

July 21. Saw Coken, the feat of Mr. Car ; a moft romantic fituation, layed out with. great judgment : the walks are very extenfive, principally along the fides or at the hottom of deep dells, bounded with vaft precipices, finely wooded; and many parts of the rocks are planted with vincs, which I was told bore well, but late. The river Were winds along the hollows, and forms two very fine reaches at the place where you enter thefe walks. Its waters are very clear, and its bottom a folid rock. The view towards the ruins of Finchal-abby is remarkably great ; and the walk benceath the cliff has a magnificent folemnity, a fit retreat for its monaftic inhabitants. This was once called the Defert, and was the rude fcene of the aufterities of St. Godric, who carried them to the mof fenfelefs extravagance *. A fober miod may even at prefent be affected with horror, at the profpects from the fummits of the cliffs into a darkfone and fupendous chafm, rendered fill more tremendous by the roaring of the waters over its diftant botton.

Paffed through Chefter-le-Street, a fmall town, near which is Lumley-cafte, the feat of the Earl of Scarborough. The tract from Durham to Newcaftle was very beautiful; the rifings gentle, and prettily wooded, and the views agrecable; that on the borders remarkably fine, there being, from an eminence not far from the capital of Northumberland, an extenfive view of a rich country, watered by the coaly Tyue. Go through Gatefhead, crofs the bridge, and enter

Newcafte, a large town, divided from the former by the river, and both fides very fteep: the lower parts very dirty and difagreeable. The fides of the river are inhabited by keelmen and their fanilies, a mutinous race; for which reafon this town is always garrifoned: in the upper parts are feveral handfome well-built ftreets.

The great bufinefs of the place is the coal trade. The collieries lie at different diftances, from five to eighteen miles from the river; and the coal is brought down in waggons along rail roads, and difcharged from covered buildings at the edge of the

[^14]water into the keels or boate that are to convey it on \$hipboard. Thefe boats are flrong, clumfy, and round, will carry about 25 tons each; fometincs are navigated with a fquare fail, but generally are worked with two vaft oars. No \$hips of large burthen come up as high as Newcaftle, but are obliged to lie at Shields, a few miles down the river, where ftage coaches go thrice every day for the conveniency of paflengers. 'this country is moft remarkably populous ; Newcaftle with Gatefhead contains nea: 30,000 inhabitants; and there are at leaft 400 fail of fhips belonging to that town and its port. The effect of the valt commerce of this place is very apparent for many miles round; the country is finely cultivated, and bears a molt thriving and opulent afpect.

July 13. Left Newcaftle; the country in general flat ; paffed by a large fone column with three dials on the capital, with feveral fcripture texts on the fides, here called ligg's Folly, from the founder.

A few miles further is Stannington-bridge, a pleafant village. Morpoth, a fmall town with a neat town houfe, and a tower for the bell near it. Some attempt was made a few years ago to introduce the Manchefter manufacture, but without fuccefs. Canden informs us, that the inhabitants reduced their town to afhes, on the approach of King John, A. D. 1216 , out of pure hatred to their monarch, in order that he might not find any Thelter there. But the Chronicle of Melros, p. 190, afligns a more rational caufe, by faying that the barons of the country deftroyed both their own towns and the ftanding corn, in order to diflrefs the king then on his march to punifh their revolt.

The cafle was feated on 2 fmall eminence. The remains are little more than the gateway tower. This fortrefs was built by William Lord Grayfock, in the year 1358. It appears to have been entire in the days of Leland, and at that time in the poffelfion of Lord Dacres *, who derived his right from his marriage with Elizabeth Baronefs of Grayftock; and in the time of Queen Elizabeth, was conveyed into the family of the prefent Earl of Carlife, by the marriage of a daughter of Thomas Lord Dacres with Lord William Howard of Naworth $\dagger$.

Between Morpeth and Felton, on the right fide of the road, ftands Cockle Tower, an ancient border-houfe of the larger fize, fortified as the fad neceflity of the times required. Mr. Grofe tells us, that in the time of Edward I. ir belonged to the Bertrams of Mitford, perfons of much property in this county.

This place gave birth to Willian Turner, as Dr. Fuller expreffes it, an excellent Latinif, Gracian, orator, and poet ; he inight have added polemic divine, champion and fufferer in the proteftant caufe, phyfician and naturalift. His botanic writings are among the firft we had, and certainly the beft of them; and his criticifms on the birds of A riftotle and Pliny are very judicious. He was the firt who flung any light on thofe fabjects in our ifland; therefore clames from a naturalift this tribute to his memory $q$.

Felton, a pleafant village on the Coquet, which, fome few miles lower, difcharges itfelf into the fea, oppofite to a fmall ifle of the fame name, remarkable for the multitudes of water-fowl that refort there to breed. At Felton, the barons of Northumberland did homage to Alexander II. King of Scotland, in 1216, in the reign of King John §. Coquet ifland was a place of arms for the royal party in the time of Charles l., but was taken by the Scots, in 1643, with much booty of ammunition and cattle.

Near Felton, I had a diftant view of Warkworth caftle, in old times the feat of the Claverings, by defent from Roger Fitz-Richard, to whom it was granted by Henry II. || Mr. Grofe's elegant defign of it makes me regret I did not take a nearer view.

> - L.eland Itin. vii. 62. + Wallis, ii. 299.
> $\ddagger$ He was boru in the reign of Henry VIII. died in 1568. \% Wallis, ii. 356 . H Idem, 35 .

At Alnwick, a fimall town, the traveller is difappointed with the fituation of the environs of the cafte, the refidence of the Percies, the ancient Earis of Northumberland. You look in vain for any marks of the grandeur of the feudal age; for trophies won by a family eminent in our annals for military prowefs and deeds of chivalry; for halls hung with helms and hauberks, or with the fpoits of the chace; for extenfive forells and venerable oaks. You look in vain for the helmet on the tower, the ancient fignal of hofpitality to the traveller, or the grey-headed porter to conduct him to the hall of entertainment. The numerous train, whofe countenances gave welcome to him on his way, are now no more; and inftead of the difinterefled ufher of the old times, he is attended by a valet eager to receive the fees of admittance.

There is a vait grandeur in the appearance of the outlide of the cafle; the towers magnificent, but injured by the numbers of rude flatues crovded on the battiments. The apartments are large, and lately finithed in the Gothic ftyle with a moft incompatible elegance. The gardens are equally inconfiftent; trim to the highett degree, and more adapted to a villa near London, than the ancient feat of a great baron. In a word, nothing, excepting the numbers of uninduttrious poor that fwarm at the gate, excitcs any one idea of is former circumftances.

William Tyfon, a noble Saxon, baron of Alnwick, fell on the fide of Harold at the battle of Haftings. The conqueror beftowed his daughter and fortune on Ivo de Velci. In 1310, a natural fon of one of his defeendants was left under the guardianflip of Antony Beke, bifhop of Durham, who betrayed his truft, and fold this barony to Henry Lord Percy. The caftle underwent two memorable fieges. In iog., hy Malcola lli. of Scotland, who, with his fon Edward, lof their lives before it ; and in 1174, William I., after a fruitefs fiege, was defeated and taken prifoner near the fame place.

The abby lay a little north of the town : nothing is left but the fine fquare gateway. It was founded by Lullace litz.John, in 1147, for Premonltratenfian canons ", and it the diflolution fupported thirteen, whole revenues were about 190l. a year.

A thage further is Belford, the feat of Abraham Dixon, Efq, a modern houfe; the front has a moft beautiful fimplicity in it : the grounds iutroved as far as the art of hutbandry can reach; the plantations large and thmifhing: a new and neat town, inftead of the former wretched cottages ; and an induftrous race, inftead of an idle poor, at prefent fill the eftate.

On an eminence on the fea-coaft, about four miles from Befford, is the very ancient cafte of Bamborough, founded ty lda, firft king of the Northumbrians, A. i). 548. It was called by the Saxons, Bebbanburh $\dagger$, in honour of Bebba, Ida's queen. It was at firf furrounded with a wooden fence, and afterwards with a wall. It had been of great thength; the hill it is founded on is exceflively fteep on all fides, and accellible only by flights of Iteps on the fouth.eaft. The ruins are fill confiderable, but many of then now filled with find, caught up by the winds which rage here with great violence, and carried to very diftant phaces. The remains of a great hall are very fingular; it had been warmed by two fire-places of a valt fize, and from the top of ever win wan a flue, like that of a chimney, which reached the fummits of the batulemen . fines feem defigned as fo many fupernumerary chimneys, to give vent to in, whe then the imurerfe fires of thofe hofpitabie times filled the rooms with: halls fimos, but filled with good cheer, were in thole days thought no inconvenience. 'ilhus my brave countryman Howel ap Rys, when his enemies had fired his houfe about his ears, tull his people to rife and afted themfelves like men: "For thame, for he had knowne there as greate a fmoake in , tha! upon a Chrillmas even $\ddagger$."

Oppofite to Bamborough lie the Farn iflands, which form two roupes of little illes and rocks to the number of feventeen, but at low water the points of others appear above the furface ; they are all diftinguithed by particular names. The nemeft ine to the thore is that called the Iloule Ifand, which lies exactly one mile fixty-eight chains from the coait : the molt diflant is about feven or cight miles. They are rented for , 6l. per

[^15]> The firf of them, that eldef was and beft. Of all the boufe had charge and government, As gurdian and theward of the rett:
> His office was to give entertainement
> And todging unto ull that came and went:
> Not unto fueh as could him fentl againe.
> And doubly quite for that he on them fpent;
> But luek as want of harbour did contrainc ;
> Thofe, for Got's fake, his dewty was to entet taine f.
annum: their produce is kelp, fome few feathers, and a few feals, which the tenant watches and fhoots for the fake of the oil and fkins. Some of theun yield a little grafs, and ferve to feed a cow or two, which the people are defperate enough to tranlport over in their little boats.

July 15 . Vifited thefe iflands in a coble, a fafe but feemingly hazardous fpecies of boat, long, narrow, and flat-bottomed, which is capable of going through a high fea, danciug like a orrk on the fummits of the waves.

Touched at the rock called the Meg, whitened with the dung of corvorants which almoft covered it; their neits were large, made of tang, and exceffively fretid.

Rowed next to the Pinnacles, an ifland in the farthett groupe; fo called from fome vaft columnar rocks at the fouth end, even at their fides, and flat at their tops, and entirely covered with guillemots and flags: the fowlers pafs from one to the other of thefe columns by means of a narrow board, which they place from top to top, forming a narrow bridge, over fuch a horrid gap that the very fight of it ftrikes one with horror.

Landed at a fimall ifland, where we found the female eider ducks" at that time fitting: the lower part of their nefts was made of fea-plants; the upper part was formed of the down which they pull off their own breafts, in which the eggs were furrounded and warmly bedded: in fome were three, in others five egss, of a large fize, and pale olive colour, as fmooth and glofly as if varnifhed over. The nefts are built on the beach, among the loofe pebbles, not far from the water. The ducks fit very clofe, nor will they rife till you almoft tread on them. The drakes feparate themfelves from the femalce during the brecding feafon. We robbed a few of their nefts of the down, and after carefully feparating it from the tang, found that the down of one neft weighed only three quarters of an ounce, but was fo elaflic as to fill the crown of the largeft hat. The people of this country call thefe St. Cuthbert's ducks, from the faint of the iflands $\dagger$.

Befides thefe birds, I obferved the following : puffins, here called tom noddies, auks, here fkouts, fuillemots, black guillemots, little auks, fhiel ducks, fhags, corvorants, black and white gulls, brown and white gulls, herring gulls, which I was told fed fometimes on eggs of other birds, common gulls, here amets, kittiwakes or tarrocks, pewit gulls, great terns, fea pies, fea larks, here brokets, jackdaws which breed in rabbet-holes, rock pidgeons, rock larks.

The terns were fo numerous, that in fome places it was difficult to tread without crufhing fome of the eggs.

The latt ine I vifited was the Houfe Ifland, the fequeftered fpot where St. Cuthbert paffed the two laft years of his life. Here was afterwards eftablifhed a priory of Benedictines for fix or cight monks fubordinate to Durham. A fquare tower, the remains of a church, and fome other buildings, are to be feen there ftill; and a fone coffin, which, it is pretended, was that of St. Cuthbert. At the north end of the ifle is a deep chafm, from the top to the bottom of the rock, communicating to the fea, through which, in tempefluous weather, the water is forced with valt violence and noife, and forms a fine jet d'cau of fixty feet high : it is called by the inhabitants of the oppofite coaft the Churn.

Reached fhore through a mof turbulent rippling, occafioned by the fierce current of the tides between the iflands and the coalt.

- Vide Br. Zool. ii No. 271. I have been informed that they alto breed on Inth-Colm, in the Firth of Furih.
+1 mull here ach nowledge my obligations to Jofeph Banks, Efq. who, previous to his circumnavigation, berally permited niy artill to toke copies of his valuable collcition of Zoologic drawings; amongit others, thu fe of the cider ducks.

July 17. Purfued my journey northward. Saw at a diftance the Cheviot hills; on which, I was informed, the green plovers breed; and that, during winter, flocks in. numerable of the great bramblings, or fnow-flakes, appear; the moft fouthern place of their migration in large companies.

The country almoft woodlefs, there being but one wood of any confequence between Bedford and Berwick. Saw on the left another antient tower, which fhewed the character of the times, when it was unhappily ncceflary, on thefe borders, for evcry houfe to be a fortrefs.

On the right, had a view of the fea, and, not remote from the land of Lindesfarn, or Holy Ifland, once an epifcopal feat, afterwards tranfated to Durham. On it are the ruins of a cafte and a church. Mr. Grofe has given an entertaining and ample hiftory of the place: and has informed me, that the ruins are fine remains of the Saxon mally architecture. Its firft bilhop was Aidan in 635. In fome parts of the ifland are abundance of entrochi, which are called by the country people St. Cuthbert's beads.

After a few miles riding, have a full view of Berwick, and the river Tweed winding weftward for a confiderable way up the country; but its banks are without aly particular charms ", being almoft woodlefs. The river is broad, and has over it a bridge of fixteen very handfome arches, efpecially two next the town.

Berwick is fortified in the modern way; but is much contracted in its extent to what it was formerly; the old cafte and works now lying at fome diftance beyond the prefent ramparts. The barracks are large, and confift of a center and two wings. On the ceflion of this place, as one of the fecurities for the payment of the ranfom of William I. of Scotland, (according to the Polychronicon of Durham, quoted by Camden) the calle (now a ruin) was built by Henry II. That politic prince knew the importance of this key to the two kingdoms. I imagine it had been little underftood before the reign of his illuftrious prifoner: for about feventy years preceding, Edgar, one of his predeceffors, had prefented this place, with the lands of Coldingham, to the abby of Durhant $\dagger$. From the time of its ceflion to the Scots by Richard I. it for near three centuries became an object of contention between the two nations : but in 1482 , the laft year of Edward IV., was finally wrefted from Scotland. By a convention between Edward VI. and the Queen Regent $\ddagger$, it was declared a free town, if fo it could be called, while the garrifon and caftle remained in the power of the Englifh. James I. of England confirmed to it the privileges granted to it by Edward IV. It remained a place independent of both kingdoms, under its proper jurifliction, till 1747, when the legiflature annexed it to England. The lands belonging to it, or what are called Berwick Bounds, are about 8000 acres.

The religious had five convents, all founded by the Scottif1 monarchs. Here were Mathurines, Dominicans, and Francifcans, and two nunneries, one of Benedictines, another of Ciftertians §. The church was built by Cromwell, and, according to the firit of the builder, without a feeple. Even in Northumberland, (towards the borders) the fteeples grow lefs and lefs, and as it were forewarned the traveller that he was fpeedily to take leave of epifcopacy. The town-houfe has a large and handfome modern tower to it : the flreets in general are narrow and bad, except that in which the town-houfe ftands.

Abundance of wool is exported from this town: eggs in vaft abundance collected through all the country, almoft as far as Carlifle: they are packed up in

[^16]boses; with the thick ond downwards, and are fent to London for the ufe of fugar refiners.

The falmon finheries here are very confiderable, and likewife bring in valt fums; they lie on each fide the river, and are all private property, except thofe belonging to the dean and chapter of Durham, which, in rent and tythe of fifh, bring in $45 \circ$. per an : for all the other tifheries are liable to tythe. The common rents of thofe are 5ol. a ycar, for which tenants have as much flore as ferves to launch out and d we fheir ncts on fhore : the limits of each are ftaked; and I obfervel that the fifhers never failed going as near as polfible to their neighbour's limits. One man goes off in a fimall ilat-bottomed boat, fquare at one end, and taking as large a circuit as his net admits, brings it on fhore at the extremity of his boundary, where others affift in landing it. The beft fifhery is on the fouth fide ": very fine falmon trout are often taken tere, which come up to fawn from the fea, and return in the fame mamer as the falmon do. The chicf import is timber from Norway and the Baltic.
Almoft immediately on leaving Berwick, enter

## SCOTLAND,

in the flire of Merch, or Mers $\dagger$. A little way from Berwick, on the weft, is Halydonhiiil, fannous for the overthrow of the Scots under the regent Douglas by Edward II. on the attempt of the former to raife the fiege of the town. A cruct action blafted the haurels of the conqueror: Seton, the deputy governor $\ddagger$, Alipulated to furrender in fifteen days, if not relieved in that time, and gave his fon as hottage for the performance. The time elapled; Seton refufed to execute the agrecment, and with a Roman unfeclingnefs behedt the unhappy youth hung before the walls.

The entrance into Scotiand has a very unpromifing look; for it wanted, for fome miles, the cultivation of the parts more diflant from England: but the borders were anceflarily neglected; for, till the acceffion of James VI. and even long after, the natimal enmity waskept up, and the borders of both countrics difouraged from innprovements by the barbarous inroads of each nation. This inattention to agriculture continued till lately ; but on raching the fimall village of Eytown, the fene was greatly aitered ; the wetched cotrayce, or rather hovels of the country, were vanifling; good comfortable thoufes arife in their fead; the lands are inclofing, and yield very good barley, oats, and clover; the banks are planting: I feak in the prefent tenfe; for there is fill a misture of the old negligence oft anidt the recent improvenents, which fork like the works of a new colony, in a wretched impoverifled country.

Soon alter the counary relaptes; no amble land is leen; but for four or five miles fucceeds the black joytis heathy moor of Coldingham: happily, this is the whole fpecimen that remains of the many miles, which, not many y cars ago, were in the fame dreary mpolitahe flate. Near this was the convent of that name immoralized by the heroifin of its nuns; who, to prefre themfelves inviolate from the Danes, cut atl their lips and notes; and thus rembing thenfelses objects of horror, were, in 870, with their abbefs bla, burat in the motatery by the difipponted favages. In 1216, it was bumt again by King John, in an inruad little lefs cruel.

[^17]This nunnery was the oldeft in Scotland. For in this place the virgin-wife Etheldreda took the veil in 670 : but by the antient name, Coludum *, it fhould feem that it had before been inhabited by the religious called Culdees. After its deftruction by the Danes, it lay deferted till the year 1098, when Edgar founded on its fite a priory of Benedictines, in honour of St. Cuthbert; and beftowed it on the monks of Durham, with all lands, waters, wrecks, \&c. $\dagger$.

At the end of the moor came at once in fight of the Firth of Forth, the Boderia of Ptolemy $\ddagger$; a moft extenfive profpect of the great arm of the fea, of the rich country of Eaft Lothian, the Bafs Ifle ; and at a diftance the ifle of May, the coaft of the county of Fife, and the country as far as Montrofe.

After going down a long defcent, dine at Old Cambus, at a mean houfe in a poor village; where I believe the lord of the foil is often execrated by the weary traveller, for not enabling the tenant to furnih more comfortable accommodations in fo confiderabie a thoroughfare. I have been told by an anonymous correfpondent 9 , that the proper name of this place is Alt Camus, or the place where a rivulet falls into a bay. He alfo added, that a good imn has, of late years, been built about a mile eaftward of the place.

The country becomes now extremely fine; bounded at a diftance, on one fide, by hills, on the other, by the fea : the intervening fpace is as rich a tract of corn land as I ever faw; for Eaft Lothian is the Northamptonflire of North Britain: the land is in many places manured with fea tang; but I was informed, that the barley produced from it is much lighter than barley from other manure.

On the fide of the hills, on the left, is Sir John Hall's, of Dunglas ; a fine fituati, with beautiful plantations. Pafs by Broxmouth, a large houfe of the Duke of Roxburgh, in a low fpot, with great woods furrounding it. Reach

Dunbar : the chief freet broad and handfome; the houfes built of fone; as is the cafe with moft of the towns in Scotland. There are fome fhips fent anually from this place to Greenland, and the exports of corn are pretty confiderable. The harbour is fafe but fmall; its entrance narrow, and bounded by two rocks. Between the harbour and the caftle is a very furprifing ftratum of fone, in fome refpects refembling that of the Giant's Caufeway in Ireland : it confifts of great columns of a red grit ftone, cither triangular, quadrangular, pentangular, or hexangular; their diameter from one to two feet, their length at low water thirty, dipping or inclining a little to the fouth.
'They are jointed, but not fo regularly, or fo plainly, as thofe that form the Ciant's Caufeway. The furface of feveral that had been torn off, appear as a pavement of numbers of convex ends, probably anfwering to the concave bottoms of other joints once incumbent on them. The fpace between the columns was filled with thin fepta of red and white fparry matter, and veins of the fame pervaded the columns trantverfely. This range of columns faces the north, with a point to the eaft, and extends in front about two hundred yards. The breadth is inconfiderable: the reft of the rock degenerates into flapelefs mafles of the fame fort of fone, irregularly divided by thick fepta. This rock is called by the people of Dunbar, the Ife.

[^18]Oppofite are the ruins of the caftle, feated on a rock above the fea; underneath one part is a valt cavern, compofed of a black and red ftone, which gives it 2 moft infernal appearance; a fit reprefentation of the pit of Acheron, and wanted only to be peopled with witches to make the fcene complete; it appears to have been the dungeon, there being a formed paffage from above, where the poor prifoners might have been let down, according to the barbarous cuftom of war in early days. There are in fome parts, where the rock did not clofe, the remains of walls, for the openings are only natural fiffures; but the founders of the cafte taking advantage of this cavity, adding a little art to it, rendered it a moft complete and fecure prifon.

On the other fide are two natural arches, through which the tide flowed; under one was a fragment of wall, where there feems to have been a portal for the admifion of men or provifions from fea: through which it is probable that Alexander Ramfay, in a ftormy night, reinforced the garrifon, in fpite of the fleet which lay before the place, when clofely befieged by the Englifh, in 1337, and gallantly defended for nineteen weeks by that heroine Black Agnes, Countefs of March *.
Through one of thefe arches was a moft picturefque view of the Bafs Ine, with the fun fetting in full fplendor; through the other, of the May ifland, gilt by its beams.

Over the ruins of a window were the three legs, or arms of the Ile of Man, a lion rampant, and a St. Andrew's crofs.

In the church is the magnificent monument of Sir George Hume, Earl of Dunbar, the worthieft and beft Scotch minitter of James VI. till he chofe his favourites'for their perfonal, inftead of their intellectual accomplifhments : moderate, prudent, and fucceffful in the management of the Scotch affairs: and, as Spotfwood remarks, " a man of deep wit, few words, and in His Majeft's fervice no lefs faithfull than fortunate: the moft difficile affairs he compaffed without any noife; and never returned when he was employed without the work performed that he was fent to do:" to his honor, he recommended the temperate, firm, and honeft Abbot to the fee of Canterbury, and by his alfiffance gave peace to the church of Scotland, too foon interrupted by their deaths. Dunbar's merit is evident ; for the weakneffes and the infamy of his mafter's reign did not commence during the period of his power.

The monument is a large and beautiful ftructure of marble, decorated with arms, figures, and fluted pillars. The Farl is reprefented in armour, knceling, with a cloak hanging loofely on him. The infcription imports no more than his titles and the day of his death, January 29th, 1610 .

Near this town were fought two battles fatal to the Scots. The firft in 1296; when the Earts of Surrey and Warwick, generals of Edward I. defeated the army of Baliol, took the cafte, and delivered the nobility they found in it to the Englifh monarch, who with his ufual cruelty, devoted them all to death.
'The other was the celebrated victory of Cromwell, in 1650 ; when the covenanting army chofe rather to fight under the direction of the minitters than the command of their generals : and the event was correfpondent. Thefe' falle prophets gave the troops affurance of victory; and many of them fell in the fight with the lying finit in their 4ouths. Cromwell had the appearance of enthufiafin; they the reality; for when the

[^19]artful ufurper faw their troops defcend from the heights from whence they might with. out a blow have ftarved the whole Englifh arny, he, with a well-founded confidence, exclaimed, The Lord hath delivered tiem into our hands. Cromwell at that inftant was in the fituation of Hannibal before the battle of Canne. The exultation of the Carthaginian was the fame, delivered indeed by his hiforian with greater eloquence *.
But the caftle has been the fcene of very different tranfactions. In 1567 it was in poffeffion of the infanous Larl Bothwell, who here committed the fimulated outrage on the perfon of the fair Mary Stuart; the certainly feems to have had foreknowledge of the violence; and the affront fhe fuftained was but a pignus direptum male pertinaci. Here alfo the Earl retreated, after being given up by his miftrefs at the capitulation of Carberry-hill; and from hence he took his departure for his long, but merited milery.
In this town was a convent of Mathurines, founded by Patrick Earl of Dunbar and M.arch, in 1218 ; and another of Carmelites or white friers, in 1263.

July 18. Rode within fight of Tantallon cafte, now a wretched ruin; once the feat of the powerful Archibald Douglas, Earl of Angus, which for fome time refifted all the efforts of James V. to fubdue it.
A little further, about a mile from the fhore, lies the Bafs Inind, or rather rock, of a inoft flupendous height; on the fouth fide the top appears of a conic fhape, but the other overhangs the fea in a moft tremendous manner. The caftle, which was once the ftate prifon of Scotland, is now neglected: it lies clofe to the edge of the precipice, facing the little village of Cafteton; where I took boat, in order to vifit this fungular fpot; but the weather proved unfavourable; the wind blew fo frefh, and the waves ran fo high, that it was impoffible to attempt landing; for even in calmer weather it cannot be done without hazard, there being a feep rock to afcend, and commonly a great fwell, which often removes the boat, while you are fcaling the precipice; fo, in cafe of a falfe ftep, there is the chance of falling into a water almoft unfathomable.

My anonymous friend tells me that this rock has the appearance of being volcanic, and that it confifts of two maffes caft up together, but fo irregularly joined, that he knew a perfon who fome years ago had actually crept through the paffige which ran from north to fouth.

Various forts of water fowl repair annually to this rock to breed; but none in greater numbers than the gannets, or Soland geefe, multitudes of which were then fitting on their nefts. ncar the floping part of the ifle, and others flying over our boat : it is not permitted to thoot at them, the place being farmed principally on account of the profit arifing from the fale of the young of thefe birds, and of the kittiwake, a fpecies of gull, fo called from its cry. The firft are fold at Edinburgh $\dagger$ for twenty-pence apiece, and ferved up roafted a little before dinner. This is the only kind of provifion whofe price has not been advanced; for we learn from Mr. Ray, that it was equally dear above a century ago $\pm$. It is unneceffay to fay more of this fingular bird, as it has beem very fully treated of in the fecond volume of the Britilh Zoology.

With much difficulty landed at North Berwick, three miles diftant from Cafletor, the place we intended to return to. The firft is a fmall town pleafantly feated near a

[^20]high conic hill, partly planted with trees: it is feen at a great diftance, and is called North Berwick Law : a name given to feveral other high hills in this part of the ifland.

Pafs through Abberladie and Prefton Pans : the laft takes its name from its falt pans, there being a confiderable work of that article; alfo another of vitriol. Saw at a tmall diftance the field ofbattle, or rather of carnage, known by the name of the battle of Prefton Pans, where the rebels gave a leffon of feverity, which was more than retaliated the following fpring at Culloden. Obferved, in this day's ride (I forget the fpot) Scaton, the once princely feat of the Earl of Wintoun, now a ruin ; judiciounly left in that ftate, as a proper remenbrance of the fad fate of thofe who engage in rebellious politics.

Hinkic and Carberry-hill lie a little weft of the road, a few miles from E.dinburgh; each of them famed in hiftory. The firt noted for the fatal overthrow of the Scots under their Regent, the Earl of Arran, on September the 10th, 1547, by the Protector, Duke of Somerfet. Ten thoufand Scots fell that day : and by this rough courthip, Mary Stuart, then in her minority, was frightened into the arms of the Dauphin of France, inftead of Mharing the crown of England with her amiable coufin Edward VI. Twenty years after, Carberry-hill proved a fpot fill more pregnant with misfortunes to this imprudent princefs. Her army, in 1567 , occupied the very camp poffeffed by the Englifh before the battle of Pinkic. Here, with the profligate Bothwell, fhe hoped to make a ftand againft her infurgent nobles. Her forces, terrified with the badnefs of the caufe, declined the fight. She furrendered to the confederates; while her hufband, by the connivance of Morton and others, partakers of his crimes, retired, and efcaped his merited punifhment.

At Muffelburgh, crofs the Efk near its mouth. There are great marks of improvement on approaching the capital ; the roads good, the country very populous, nuinbers of manufactures carried on, and the profpect embellifhed with gentlemen's feats. Reach

Edinburgh *-A city that poffefles a boldnefs and grandeur of fituation beyond any that I had ever feen. It is built on the edges and fides of a valt floping rock, of a great and precipitous height at the upper extremity, and the fides declining very quick and fteep into the plain. The view of the houfes at a diftance ftrikes the traveller with wonder; their own loftinefs, improved by their almoft aerial fituation, gives them a look of magnificence not to be found in any other part of Great Britain. All thefe confpicuous buildings form the upper part of the great ftreet, are of fone, and make a handfome appearance: they are generally fix or feven ftories high in front; but by reafon of the declivity of the hill, much higher backward; one in particular, called Babel, had about twelve or thirteen fories, before the fire in 1700 , but is now reduced to ten or eleven. Every houfe has a common ftaircafe, and every fory is the habitation of a feparate family. The inconvenience of this particular fructure need not be mentioned; notwithflanding the utmof attention, in the article of cleanlinefs, is in gencral obferved. The common complaint of the ftreets of Edinburgh is now taken away, by the viligance of the magiftrates $\dagger$, and their feverity againt any that offend in any grofs degree $\ddagger$. It mult be obferved, that this unfortunate fpecies of architecture arofe from the turbulence of the times in which it was in yogue: every body was defirous of getting as near

[^21]as poffible to the protection of the cafle ; the houfes were crouded together; and I may fay, piled one upon another, merely on the principle of fecurity.

The cafte is ancient, but ftrong, placed on the fummit of the hill, at the edge of a very deep precipice. Strangers are fhewn a very fmall room in which Mary Queen of Scots was delivered of James VI.

From this fortrefs is a full view of the city and its environs; a Arange profpect of rich country, with vaft rocks and mountains intermixed. On the fouth and eaft are the meadows, or the public walks, Herriot's Hofpital, part of the town overfhadowed by the ftupendous rocks of Arthur's Seat and Salufbury Craigs, the Pentland hills at a few miles diftance, and at a till greater, thofe of Muirfoot, whofe fides are covered with verdant turf.

To the north is a full view of the Firth of Forth, from Queen's Ferry to its mouth, with its fouthern banks covered with towns and villages. On the whole the profpect is: fingular, various, and fine.

The refervoir of water * for fupplying the city lies in the Caftle-ftreet, and is well worth feeing : the great ciltern contains near two hundred and thirty tons of water, which is conveyed to the feveral conduits, that are difpofed at proper diftances in the principal freets; thefe are conveniencies that few towns in North Britain are without.

On the fouth fide of the High-ftreet, is the Parliament Clofe, a fmall fquare, in which is the Parliament Houfe, where the courts of juftice are held. Below ftairs is the Advocates' library founded by Sir George Mackenzie, and now contains above thirty thoufand volumes, and feveral manufcripts: among the more curious are the four Evangelifs, very legible, notwithltanding it is faid to be feveral hundred years old.

St . Jerome's bible, wrote about the year 1100.
A Malabar book, written on leaves of plants.
A Turkilh manufcript, illuminated in fome parts like a miffal. Elogium in fultan Morad flium fili: Soliman Turcici. Script. Confantinopoli. Anno Hegira, 992.

Cartularies, or records of the monafteries, fome very ancient.
A very large Bible, bound in four volumes; illuftrated with fcripture prints, by the firt engravers, pafted in, and collected at a valt expence. There are befides great' numbers of antiquities, not commonly fhewn, except inquired after.
'The Luckenbooth row, which contains the Tolbooth, or city prifon ; and the weigh-ing-houfe, which brings in a revenue of 500 l . per annum, flands in the middle of the High-ftreet, and with the guard-houfe, contributes to fpoil as fine a ftreet as moft in Europe, being in fome parts eighty feet wide and fincly built.

The exchange is a handfome modern building, in which is the cuftom-houfe: the firft is of no ufe in its proper character; for the nerchants always chufe ftanding in the open ftreet, expofed to all kinds of weather.

The old cathedral is now called the New Church, and is divided into four places of worfhip; in one the Lords of the Seffions attend: there is alfo a throne and a canopy for his majefty fhould he vifit this capital, and another for the Lord Gommifioner. There is no mulic either in this or any other of the Scotch churches, for Peg fill faints at the found of an organ. 'This is the more furpriling, as the Dutch, who have the: fame eftablifhed religion, are extremely fond of that folemn inftrument; and even in the great church of Geneva the plalmody is accompanied with an organ.

The part of the fame called St. Giles's church has a large tower, oddly terminated with a fort of crown.

[^22]On the front of a houfe in the Nether Bow, are two fine profile heads of a man and a woman, of Roman fculpture, fuppofed to be thofe of Severus and Julia: but, as appears from an infcription * made by the perfon who put them into the wall, were miftaken for Adam and Eve.

Near the Trone church are the remains of the houfe, (now a tavern) where Mary Stuart was confined the night after the battle of Carberry.

- At the end of the Cannongate-ftreet ftands Holy Rood palace, originally an abbey founded by David I. in 1128 . The towers on the N. W. fide were erected by James V. together with other buildings, for a royal refidence: according to the editor of Camden, great part, except the towers above mentioned, were burnt by Cromwell; but the other towers, with the reft of this magnificent palace, as it now flands, were executed by Sir William Bruce, by the directions of Charles II. ; within is a beautiful fquare, with piazzas on every fide. It contains great numbers of fine apartments; fome, that are called the King's, are in great diforder, the reft are granted to feveral of the nobility.

In the Earl of Breadalbane's, are fome good portraits,
William Duke of Newcattle by Vandyck;
And by Sir Peter Lely, the Duke and Dutchefs of Lauderdale, and Edward Earl of Jerfey. There is befides a very good head of a boy by Morriltio, and fome views of the fine feenes near his lordfhip's feat at Taymouth.

At Lord Dunmore's lodgings is a very large piece of Charles I. and his Queen going to ride, with the iky flowering rofes on them; a black holds a grey horfe; the celebrated Jeffery Hudfon t the dwarf with a fpaniel in a flring, and feveral other dogs fporting round: the queen is painted with a love-lock, and with browner hair and complection, and younger, than I ever faw her drawn. It is a good piece, and was the work of Mytens, predeceffor in fame to Vandyck. In the fame place are two other good portraits of Charles II. and James VII.

The gallery of this palace takes up one fide, and is filled with coloffal portraits of the Kings of Scotland.
In the old towers are flewn the apartments where the murther of David Rizzo was committed.

That beautiful piece of Gothic architecture, the church, or chapel, of Holy-Rood Abbey, is now a ruin, the roof having fallen in, by a moft feandalous neglect, notwithftanding money had been granted by government to preferve it entire. Beneath the ruins lie the bodies of James II. and James V. Henry Darnly, and feveral other perfons of rank : and the infcriptions on feveral of their tombs are preferved by Maitland. A gentleman informed me, that fome years ago he had feen the remains of the bodies, but in a very decayed ftate: the beards remained on fome; and that the bones of Henry Darnly proved their owner by their great fize, for he was faid to be feven feet high.

Near this palace is the Park, firft inclofed by James V. ; within are the valt rocks $\downarrow$, known by the names of Arthur's Seat and Salußbury's Craigs; their fronts exhibit a romantic and wild feene of broken rocks iand valt precipices, which from fome points feem to over-hang the lower parts of the city. Great columns of flone, from forty to fifty feet in length, and about three feet in diancter, regularly pentagonal, or hexagonal, hang down the face of fome of thefe rocks almoft perpendicularly, or with a

[^23]very תight dip, and form a frange appearance. Beneath this ftratum is a quarry of free-ftone. Confiderable quantities of ftone from the quarries have been cut and fent to London for paving the freets,-its great hardnefs rend git excellent for that purpofe. Bencath thefe hills are fome of the moof beautiful walks about Edinburgh, commanding a fine profpect over feveral parts of the country.

On one fide of the Park are the ruins of St. Anthony's chapel, once the refort of numberlefs votaries; and near it is a very plentiful fpring.
The fouth part of the city has feveral things worth vifiting. Herriot's Hofpital is a: fine old building, much too magnificent for the end propofed, that of educating poor children. It was founded by George Herriot, jeweller to James VI. who followed that monarch to London, and made a large fortune. There is a fine view of the cafle, and the floping part of the city, from the front: the gardens were once the refort of the gay ; and there the Scotch poets often laid, in their comedies, the feenes of intrigue.

In the church-yard of the Grey Friers, is the monument of Sir George Mackenzie, a rotunda; with a multitude of other tombs. This is one of the few cemeteries to this populous city; and from it is a very fine view of the cafte, and the lofty ftrect that leads to that fortrefs.
The college is a mean building; it contains the houfes of the Principal and a few of the Profeffors: the Principal's houfe is fuppofed to be on the fite of that in which Henry Darnly was murdered, then belonging to the provof of the kirk of Field. The ftudents of the univerfity are difperfed over the town, and are about fix hundred in number; but wear no academic habit. The fudents are liable to be called before the profeffiors, who have power of rebuking or expelling them: I cannot learn that either is ever exerted; but, as they are for the moft part volunteers for knowledge, few of themdefert her ftandards. There are twenty-two profeffors of different fciences, moft of whom read lecturcs: all the chairs are very ably filled; thofe in particular which relate to the ftudy of medicine, as is evident from the number of ingenious phyficians, eleves of this univerfity, who prove the abilities of their mafters. The Mufæum has for many years been neglected.

The royal infirmary is a fpacious and handfome edifice, capable of containing two hundred patients. The operation room is particularly convenient, the council-room elegant, with a good picture in it of Provof Drummond. From the cupola of this building is a fine profpect, and a full view of the city.

Not far from hence are about three acres of ground defigned for a fquare, calledi Gcorge Square : a fmall portion is at prefent built, confining of fmall but commodious houfes, in the Englifh faffion. Such is the fpirit of improvement, that within thefe three years fixty thoufand pounds have been expended in houfes of the modern tafte, and twenty thoufand in the old.

Watfon's hofpital fhould not be forgot : a large good building, behind the Grey Friers church ; an excellent inftitution for the educating and apprenticing the children of decayed merchants; who, after having ferved their time with credit, receive fifty pounds to fet up with.

The meadows, or public walks, are well planted, and are very extenfive: thefe are the mall of Edinburgh, as Comely Gardens are its Vauxhall.

The Cowgate is a long freet, running parallel with the Iligh-ftreet, beneath the fteep fouthern declivity of the city, and terminates in the Grals-market, where cattle arefold, and criminals executed. On feveral of the houfes are linall iron crofles, which, I was informed, denoted that they once belonged to the knights of St. John.

On the north fide of the city lies the new town, which is planned with great judgment, and will prove a magnificent addition to Edinburgh ; the houfes in St. Andrew's Square cofl from 18001 . to 20001 . each, and one or two 4000 or 50001 . They are all built in the modern fyle, and are free from the inconveniences attending the old city.

Thefe improvements are connected to the city by a very beautiful bridge, whofe higheft arch is ninety five fect high.

In the walk of this evening, I paffed by a deep and wide hollow beneath Calton Hill, the place where thofe imaginary criminals, witches and forcerers, in lefs enlightened times, were burnt; and where, at fellive feafons, the gay and gallant held their tilts and tournaments. At one of thefe, it is faid that the Earl of Bothwell made the firft im. preffion on the fufceptible heart of Mary Stuart, having galloped into the ring down the dangerous fteeps of the adjacent hill; for he feemed to think that

> Women horn to be control'd Stoop to the forward and the bold.

The defperate feats were the humour of the times of chivalry : Brantome relates, that the Duc de Nemours galloped down the feps of the Sainte Chappel at Paris, to the aftonifhment of the beholders. The men cultivated every exercife that could preferve or improve their bodily flrength; the ladies, every art that tended to exalt cheir charms. Mary is reported to have ufed a bath of white wine; a cuftom ftrange, but not without precedent. Jaques du Fouilloux enraptured with a country girl, enumerating the arts which fhe fcorned to ufe to improve her perfon, mentions this:

> Point ne portoit de ce linge femelle
> Pour amoindrir fon feing et fa mammelle.
> Vafquine nulle, ou aucun peliçon
> Elle ne portoit, ce n’eltoit fa facon,
> Point ne prenoit vin blanc pour fe baigner,
> Ne droguc encore pour four fon corpa alleger *.

At a fmall walk's diftance from Calton Hill, lies the new botanic garden $\dagger$, confifting of five acres of ground, a green-houfe fifty feet long, two temperate rooms, each twelve fect, and two floves, each twenty-eight fect: the ground rifes to the north, and defends the plants from the cold winds: the foil a light fand, with a black earth on the furface. It is finely focked with plants, whofe arrangement and cultivation do much credit to my worthy friend Dr. Hope, profeffor of botany, who planned and executed the whole. It was begun in 1764 , being founded by the munificence of His prefent Majelly, who granted fifteen hundred pounds for that purpofe.

During this week's ftay at Edinburgh, the prices of provifions were as follow :
Beef, from 5 d . to $3 \frac{1}{2} \mathrm{~d}$. ; Mutton, from 4 d . to $3 \frac{1}{2} \mathrm{~d}$. ; Veal, from 5 d . to 3 d . ; Lamb, $2 \frac{1}{2}$ d. ; Bacon, 7 d. ; Butter, in fummer, 8d. in winter, is. ; Pigeons, per dozen, from 3d. to 5s. ; Criickens, per pair, 8d. to 1s.; A fowl, 1s. 2d. ; Green goofe, 3s.; Fat goofe, 2s. 6d. ; Large turkey, 4s. or 5s. ; Pig, 2s. ; Coals, 5 d . or Cd. per hundred delivered.

Many fine excurfions may be made at a fmall diftance from this city. Leith, a large tnwn, about two miles north, lies on the Firth, is a flourihing place, and the port of Edinburgh. The town is dirty and ill built, and chiefly inhabited by failors; but the

[^24]pier is very fine, and is a much frequented walk. The races were at this time a the fands, near low-water mark: confidering their vicinity to a great city and pop ulous country, the company was far from numerous; a proof that diffipation has not generally infected the manners of the North Britons.
Craigmillar caftle is feated on a rocky eminence, about two miles fouth of E.dinburgh; is fquare, and has towers at each corner. Some few apartments are yet inhabited ; but the reft of this great pile is in ruins. Mary Stuart fometimes made this place her refidence.

Newbottle, the feat of the Marquifs of Lothian, is a pleafant ride of a few miles from the capital. It was once a Ciftercian abbey, founded by David I. in 1140 ; but, in 1591, was erecled into a lordhip, in favour of Sir Mark Ker, Ion of Sir Walter Ker, of Ceffford. The houfe lies in a warm bottom, and, like moft other of the houfes of the Scotch nobility, refembles a lrench chateau, by having a village or little paltry town adjacent. The fituation is very favourable to trees, as appears by the vaft fize of thofe near the houfe; and I was informed, that fruit ripens here within ten days as early as at Chelfea.
The Marquifs poffeffes a moft valuable collection of portraits, many of them very fine, and almoft all very inftructive. A large half-length of Henry Daraly reprefents him tall, aukward and gauky, with a ftupid, infipid countenance; moft likely drawn after he had loft by intemperance and debauchery, thofe charms which captivated the heart of the amorous Mary.

A head of her mother, Marie de Guife; not lefs beautiful than her daughter.
A head of Madame Monpenficr, and of feveral other illuftrious perfons, who graced the court of Lewis XIII.

Prince Rupert and Prince Maurice, in one piece.
Some fimall portraits, fudies of Vandyck; among which is one of William Earl of Pembroke, of whom Lord Clarendon gives fo advantageous a character.

A beautiful half-length of Henrietta, Queen of Charles I. Her charms almoft apologize for the compliances of the uxorious monarch.

His daughter, the Dutchefs of Orleans.
The wife of Philip the Bold, infcribed Marga Mala, Lodo Malo.
Head of Robert Car, Earl of Somerfet ; the countenance effeminate, fmall features, light flaxen or yellowifh hair, and a very fmall beard: is an original of that worthlefs favourite, and proves that the figure given as his among the illuftrious heads is erroneous, the latt being reprefented as a robuft black man. A print I have of him by Simon Pafs is authentic : the plate is of octavo fize, reprefents him in hair curled to the top; and in his robes, with the George pendent.

His father, Sir Robert Car of Fernihurlt.
An Earl of Somerfet; of whom I could get no account ; handfome; with long light hair inclining to yellow: a head.

A full length of James I. by Jamefon. Another of Charles I. when young, in ric'? armour, black and gold: a capital piece.

Lady Tufton; a fine half length.
Earl Morton, regent : half-length; a yellow beard.
A head of General Ruthven, Sir Patrick Ruthven, a favourite of Guftavus Adolphus; knighted in his majeely's tent in prefence of the whole army at Darfaw in Pruflia, on the 23 d of Septenber 1627. As potent in the campaigns of Bacchus as of Mars, and ferviceable to his great mater in both. He vanquifhed his enemics in the field; and by the frength of his head, and goodnefs of underitanding, could in convol. III.
vivial hours extratt from the minifters of unfriendly powers, fecrets of the firt import. ance. He paffed afterwards into the fervice of Charlcs I. and behaved with the firit and.integrity that procured hin the honours of Earl of Forth in Scotland, and afterwards Earl of Brentford in England. He died in a very advanced age in 1651 .
'Two very curious half-lengths on wood: one of a man with a long forked black beard ; his jacket flafhed down in narrow Aripes from top to bottom, and the fripes loofe: the other with a black full beard; the fame fort of ftripes, but drawn tight by a girdle.
The Doge of Venice, by Titian.
Three by Morillio; boys and girls in low life.
A remarkable fine piece of our three firt circum-navigators, Drake, Hawkins, and Candifh; half-length.
The heads of Mark Earl of I.othian, and his lady, by Sir Antonio More.
Mark Ker, prior of Newbottle, who, at the reformation, complied with the times, and got the eftate of the abbey.

In the woods adjacent to this feat are fome fubterraneous apartments and paffages cut out of the live rock: they feem to have been excavated by the ancient inhabitants of the country, either as receptacles for their provifions, or a retreat for thenselves and families in time of war, in the fame manner, as Tacitus relates, was cuftomary with the old Germans ${ }^{*}$.

Two or three miles diftant from Newbottle is Dalkeith, a fmall town, adjoining to Dalkeith Houfe, the feat of the Duke of Buceleugh : originally the property of the Douglafles; and, when in form of a caftle, of great ftrength; and during the time of the regent Morton's retreat, fyled the Lion's Den.

The portraits at Dalkeith are numerous, and fome good; among others, the
Firt Duke of Richmond and his Dutchefs.
The Dutchefs of Cleveland.
Countefs of Buccleugh, mother to the Dutchefs of Monmouth, and Lady Eglington, her fifter.

The Dutchefs and her two fons: the Dutchefs of York; her hand remarkably fine: the Dutchefs of Lenox.
Mrs. Lucy Waters, mother of the Duke of Monmouth, with his picture in her hand.

Dutchefs of Cleveland and her fon, an infant ; the in character of a Madonna: fine.

The Duke of Monmouth, in character of a young St. John.
Lord Strafford and his fecretary; a fmall ftudy of Vandyck.
Henry VIII. and Queen Catherine, with the divorce in her hand ; two fmall pieces by Holbein. Auna Bullen, by the fame, dreffed in a black gown, large yellow netted neeves, in a black cap, peaked behind.

Lady Jane Gray, with long hair, black and very thick; not handfome; but the virtues and the intellectual perfections of that fuffering irnocent, more than fupplied the abfence of perfonal charms.

A large firited picture of the Duke of Monmouth on horfeback. The fame in armour. All his pictures have a handfome likenefs of his father.

[^25] the fpirit nd after ed black te Atripcs tight by itants of :lves and with the
ining to $y$ of the time of

Dutchefs of Richmond, with a bow in her hand, by Sir l'eter Lely.
A fine head of the late Duke of Ormond.
A beautiful head of Mary Stuart; the face Gharp, thin and young; yet has a likenefs to fome others of her pictures, done before misfortunes had altered her; her drefs a frait gown, open at the top and reaching to her ears, a fmall cap, and frall ruff, with a red rofe in her hand.

In this palace is a room entirely furnihed by Charles II. on occafion of the marriage of Moimouth, with the heirets of the houfe.

At Smeton, another feat of the Duke of Buccleugh, a mile diftant from the firf, is a fine half.length of General Monk looking over his floulder, with his back towards you; he refided long at Dalkeith, when he commanded in Scotland.

Nell $\mathbf{G}$ winne loofély attired.
A fine marriage of St. Catherine, by Vandyck.
July 24. Left Edinburgh, and paffed beneath the caftle, whofe height and frength, in my then fituation, appeared to great advantage. The country I paffed through was well cultivated, the fields large, but moflly inclofed with fone walls; for hedges are not yet become univerfal in this part of the kingdons: it is not a century fince they were known here. Reach the

South-ferry, a fmall village on the banks of the Firth, which fuddenly is contracted to the breadth of two miles by the jutting out of the land on the north fhore; but almoft inftantly widens towards the weft into a fine and extenfive bay. The profpect on each fide is very beautiful; a rich country, frequently diverfified with towns, villages, caftles, and gentlemen's feats ". There is befide a valt view up and down the Firth, from its extremity, not remote from Stirling, to its mouth near May ifle ; in all, about fixty miles. To particularize the objects of this rich view : from the middle of the paflage are feen the coafts of Lothian and Fife; the illes of Garvie and Inch-Colm ; the town of Dumfermline ; fouth and north Queen's-ferries ; and Burrowfonefs fmoking at a diftance from its numerous falt-pans and fire-engines. On the iouth fide are Hope-ton-houfe, Dundafs caftle, and many other gentlemen's feats; with Blacknefs caftle. On the north fide, Rofythe cafte, Dunibryffel, and at a diftance, the caftle and town of Brunt-ifland; with the road of Leith, often filled with thips, and a magnificent diftant view of the caftle of Edinburgh on the fouth.

This ferry is alfo called Queen's-ferry, being the paffage much ufed $\dagger$ by Margaret, queen to Malcolm III., and fifter to Edgar Etheling, her refidence being at Dumfermline. Crofs over in an excellent boat; obferve midway the little ifle called Infh.Garvey, with the ruin of a fmall caltle. An arttic gull flew near the boat, purfued by other gulls, as birds of prey are : this is the fpecies that perfecutes and purfues the leffer kinds, till they mute through fear, when it catches up their excrements ere they reach the water : the boatmen, on that account, fyled it the dirty aulin.

Landed in the hhire of Fife $\ddagger$, at North-ferry, near which are the great granite quarrics, which help to fupply the ftreets of London with paving fones; many fhips then waiting near in order to take their lading. The granite lies in great perpendicular facks; above which is a reddifh earth filled with friable micaceous nodules. The granite iffelf is very hard, and is all blafted with gun-powder: the cutting into flape for

[^26]paving cofts two fhillings and eight-pence per ton, and the fieight to London feven fhillings.

The country, as far as Kiinrofs, is very fine, confilling of gentle rifings; much corn, efpecially bear; but few trees, except about a gentleman's feat called Blair, where there are great and flourifhing plantations. Near the road are the latt collieries in Scoland, except the inconfiderable works in the county of Sutherland.

Kinrofs is a fimall town, feated in a large plain, bounded by mountains; the houfes and trees are fo intermixed, as to give it an agrecable appearance. It has fome manufactures of linen and cutlery ware. At this time was a meeting of junfices, on a fingular occafion: a vagrant had been, not long before, ordered to be whipped; but fuch was the point of honour anong the common people, that no one could be perfuaded to go to Perth for the executioner, who lived there: to prefs, I may fay, two men for that fervice was the caufe of the meeting ; fo Mr. Bufwell may rejoice to find the notion of honour prevail in as exalted a degree among his own countrymen, as among the virtuous Corficans *.

Not far from the town is the houfe of Kinrofs, built by the famous architect Sir William Bruce, for his own refidence, and was the firft good houfe of regular architecture in North Britain. It is a large, elegant, but plain building: the hall is fifty-two feet long ; the grounds about it well planted ; the fine lake adjacent; fo that it is capable of being made as delightful a fpot as any in North Britain.

Loch-Leven, a magnificent picce of water, very broad, but irregularly indented, is about twelve miles in circumference, and its greatcll depth about twenty four fathoms: is finely bounded by mountains on one fide; on the other by the plain of Kinrofs; and prettily embellifhed with feveral groves, moft fortunately difpofed. Some illands are difperfed in this great expanfe of water; one of which is large enough to feed feveral head of cattle : but the moft remarkable is that diftinguifhed by the captivity of Mary Stuart, which fands almoft in the middle of the lake. The caftle fill remains; confifts of a fquare tower, a imall yard with two round towers, a chapel, and the ruins of a building where, it is faid, the unfortunate princefs was lodged. In the fquare tower is a dungeon, with a vaulted room above, over which had been three other flories. Some trees are yet remaining on this little foot ; probably coeval with Mary, under whofe thade fhe may have fat, expecting her efcape at length effected by the enamoured Douglas $\dagger$. This cattle had before becn a royal refidence, but not for captive monarchs; having been granted from the crown by Robert III. to Douglas, laird of Loch-Leven.

This caftle underwent a fiege in the year 1335 , and the method attempted to reduce it was of the moll fingular kind. John of Sterling, with his army of Anglicifed Scots, fat down before it; but finding from the fituation that it was impoffible to fucceed in the common forms, he thought of this expedient. He flopped up the water of Leven, at its difcharge from the lake, with a great dam, with fores, and every thing that would obftruct its courfe, hoping by that means to raile the waters fo high as to drown the whole garrifon. But the watchful governor, Alan de Vipont, took an opportunity of fallying out in boats when the befiegers were off their guard, being intoxicated with celebrating St. Gcorge's day, and piercing the dam, releafed the pent-up waters, and formed a moft deftructive deluge on all the plain below ; fruck ia panic into the enc-

[^27]nch corn, cre there Scotland,
". houfes ic manua fingubut fuch uilded to men for the nohong the itecture two feet capable
ented, is athoms : ofs; and ands are 1 Several of Mary ; con. ruins of 2 tower ftories. , under noured larchs; deven. reduce Scots, ceed in L.even, would vn the nity of d witl s, and kenc. of the
my's army, put them to night, and returned to his cafte laden with the fpoils of the camp *.

St. Serf's ine is noted for laving been granted by Brudo, laft king of the Piets, to St. Servan and the Culdees; a kind of priets among the firtt Chriftians of North Britain, who led a fort of monaflic life in cells, and for a confiderable time preferved a pure and uncorrupt religion: at length, in the reign of David I . were fuppreffed in favour of the church of Rome. The priory of Port-moak was on this infe, of which fome fmall remains yet exift.

The fifh of this lake are pike, fmall perch, fine eels, and moft excellent trouts, the beft and the reddeft I cver fiw ; the largeft about fix pounds in weight. The fifhermen gave me an account of a fipecies they called the gally trout, which are only caught from October to January, are fplit, falted, and dried, for winter provifion : by the deficription, they certainly were our char, only of a larger fize than any we have in England or Wales, fome being two feet and a half long. The birds that breed on the ifles are herring gulls, pewit gulls, and great terns, called here pictarnes.

Lay at a good inn, a fingle houfe, about half a mile north of Kinrofs.
July 25. Made an excurfion about feven miles weft, to fee the Rumbling Brig at Glen-Devon, in the parifh of Muchart, a bridge of one arch, flung over a chafn worn by the river Devon, about eighty feet deep, very narrow, and horrible to look down ; the bottom in many parts is covered with fragments; in others the waters are vifible, gufhin between the ftones with great violence : the fides in many places project, and almoft lock in each other; trees hoot out in various fpots, and contribute to increafe the gloom of the glen, while the ear is filled with the cawing of daws, the cooing of wood-pigeons, and the impetuous noife of the waters.

A mile lower down is the Cawdron Lin. Here the river, after a fhort fall, drops on recks hollowed in a ftrange manner into large and deep cylindric cavities, open on one fide, or formed into great circular cavities, like cauldronst; from whence the name of the place. One in particular has the appearance of a vaft brewing-veffel ; and the water, by its great agitation, has acquired a yellow fcum, exactly refembling the yefty working of malt liquor. Juft beneath this the water darts down about thirty feet in form of a great white fheet: the rocks below widen confiderably, and their clifty fides are fringed with wood. Beyond is a view of a fine meadowy vale, and the diftant mountains near Stirling.

Two miles north is Caftle Campbel, feated on a fteep peninfulated rock between vaL mountains, having to the fouth a boundlefs view through a deep glen fhagged with bruflwood; for the forefts that once covered the country are now entirely deftroyed. Formerly, from its darkfome fituation, this pile wass called the caltle of Gloom; and all the names of the adjacent places were fuitable: it was feated in the parifh of Dolor, was bounded by the glens of Care, and wahned by the birus of Sorrow. The lordthip was purchafed by the firtt Earl of Argyle. 'This caftle, with the whole territory belonging to the whole family of Argyle, underwent all the calamities of civil war in 1645 ; for its rival, the Marquis of Montrofe, carried fire and fiword through the whole eftate. The callle was ruined, and its magnificent reliques exilt, as a monument of the horror of the times. No wonder then that the marquis experienced fo woeful and ignominious a fate, when he fell into the power of fo exalperated a chieltain.

[^28]Returned to my inn along the foot of the Ochil hills, whofe fides were covered with a fine verdure, and fed great numbers of cattle and fheep. The country below full of oats, and in a very improving fate : the houfes of the common people decent, but mofty covered with fods; fome were covered both with fraw and fod. The inhabitants extremely civil, and never failed offering brandy or whey, when I fopt to make inquiries at any of their houfes.

In the afternoon croffed a branch of the fame hills, which yielded plenty of oats; defcended into Strath-Earn, a beautiful vale, about thirty miles in length, full of rich meadows and corn-fields, divided by the river Earn, which ferpentines finely through she middle, falling into the Tay, of which there is a fight at the eaft end of the vale. It is prettily diverfified with groves of trees and gentiemen's houfes; among which, towards the welt end, is Caftle Drummond, the forfeited feat of the Earl of Perth.

Dupplin *, the refidence of the Earl of Kinnoul, feated on the north fide of the vale, on the edge of a fteep glen. Only a fingle tower remains of the old cafte, the reft being modernized. The fouth front commands a pleafing view of the vale: behind are plantations extending feveral miles in length; all flourifh greatly, except thofe of afh. I remarked in the woods fome very large chefnuts, horfe-chefnuts, fpruce and filver firs, cedar and arbo: vitx. Broad-leaved laburnum thrives in this country greatly, grows to a great fize, and the wood is ufed in fineering.

Fruits fucceed here very indifferently; even nonpareils require a wall : grapes, figs, and late peaches, will not ripen : the winters begin early, and end late, and are attended with very high winds. I was informed that labour is dear here, notwithftanding it is only eight-pence a day ; the common people not being yet got into a method of working, fo do very little for their wages. Notwithftanding this, improvements are carried on in thefe parts with great fpirit both in planting and in agriculture. Lord Kinnoul planted laft year not fewer than cighty thoufand trees, befides Scotch firs; fo provides future forefts for the benefit of his fucceffors, and the embellifhment of his country. In refpect to agriculture, there are difficulties to ftruggle with, for the country is without cither coal or lime-ftone; fo that the lime is brought from the eftate of the Earl of Lilgin, near Dumfermline, who, I was told, drew a confiderable revenue from the kilns.

In Dupplin are fome very good pictures; a remarkable one of Luther, Bucer, and Catherine the nun, in the characters of muficians, by Giorgiani di Caftel franco.

A fine head of a fecular prieft, by Titian. St. Nicholas bleffing three children. Two of cattle, by Rofa di Tivoli. A head of Spenfer. Rubens's head, by himfelf. A fine head of Butler, by Sir Peter Lely. Mrs. Tofts, in the character of St. Catherine, by Sir Godfrey Kneller. Sir George Haye, of Maginnis, in armour, 1640 ; done at Rome, by L. Ferdinand. Haye, Earl of Carlife, in Charles I.'s time, young and very handfome. The fecond Earl of Kinnoul, by Vandyck. Chancellor Haye, by Mytens. A grood portrait of lord treafurer Oxford, by Richardfon; and a beautiful miniature of Sir John Earnly.

But the moit remarkable is a head of the celcbrated Countefs of Defmond, whom the apologifts for the ufurper Richard III. bring in as an evidence againft the received opinion of his deformity : She was daughter of the Fitzgeralds of Drumana $\dagger$, in the county of Waterford, and married, in the reign of Edward IV., James fourteenth Earl of Defmond: was in England in the fame reign, and danced at court with his brother Richard,

[^29]ered with w full of ut mofly itants exinquiries
then Duke of Gloucefter. She was then a widow, for Sir Walter Raleigh fays fhe held her jointure from all the Earls of Defmond fiuce that time.*. She lived to the age of fome years above a hundred and forty, and died in the reign of James I. It appears that fhe retained her full vigour in a very advanced time of life; for the ruin of the houfe of Definond reduced her to poverty, and obliged her to take a journey from Briftol to London, to folicit relief from the court, at a time the was above a hundred and forty $\dagger$. She alfo twice or thrice renewed her teeth; for Lord Bacon affures us, in his Hitt. of Life and Death, ter per vices dentilfe; and in his Natural Hiltory mentions that fhe did dentire twice or thrice, cafting her old teeth, and others coming in their place $\ddagger$.

July 27. Afcended the hill of Moncrief; the profpect from thence is the glory of Scotland, and well merits the eulogia given it for the variety and richnefs of its views. On the fouth and weft appear Strath-Earn, embellifhed with the feats of Lord Kinnoul, Lord Rollo, and of feveral other gentlemen ; the Carfe, or rich plain of Gowrie; Stormont hills and the hill of Kinnoul, whofe vaft cliff is remarkable for its beautiful pebbles. 'The meanders of the Earn, which winds more than any river I at this time had feen, are moft enlivening additions to the fcene. The laft turn it takes forms a fine peninfula prettily planted; and juft beyond it joins the Tay $£$, whofe æftuary lies full in view, the fea clofing the profpect on this fide.

T, the north lies the town of Perth, with a view of part of its magnificent bridge; which, with the fine woods called Perth Parks, the vaft plain of Strath-Tay, the winding of that noble river, its iflands, and the grand boundary formed by the diftant highlands, finifh this matchlefs fcene. The inhabitants of Perth are far from being blind to the beauties of their river; for with fingular pleafure they relate the tradition of the Roman army, when it came in fight of the Tay, burfing into the exclamation of Ecce Tiberim.

On approaching the town are fome pretty walks handfomely planted, and at a fimall diftance, the remains of fome works of Cromwell's, called Oliver's Mount.

Perth is large, and in general well-built; two of the ftreets are remarkably fine; in fome of the leffer are yet a few wooden houfes in the old ftyle; but as they decay, the magiftrates prohibit the rebuilding them in the old way. There is but one parifh, which has three churches, befides meetings for feparatifts, who are very numerous. One church, which belonged to a monaftery, is very ancient: not a veftige of the laft is now to be feen; for the difciples of that rough apoftle Knox made a general defolation of every edifice that had given fhelter to the worfhippers of the church of Rome; it being one of his maxims to pull down the nefts, and then the rooks would fly away.

The flourifhing ftai: of Perth is owing to two accidents: the firt, that of numbers of Cromwell's wounded officers and foldiers chufing to refide here, after he left the kingdom, who introduced a fpirit of induftry among the people; the other caufe was the long continuance of the Earl of Mar's army here in 1715, which occafioned vaft fums of money being fpent in the place. But this town, as well as all Scotland, dates its profperity from the year 1745, the government of this part of Great Britain having never been fettled till a little after that time. The rebellion was a diforder violent in its operation, but falutary in its effects.

[^30]The trade of Perth is confiderable. It exports annually one hundred and fifty thoufand pounds worth of linen to different places; from twenty four to thirty thoufand bolls of wheat and barley to London and Fdinburgh, and about twelve or fourtecn thoufand pounds worth of cured falmon. That fifh is taken there in vatt abundance; three thoufand have been caught in one morning, weighing one with another fixteen pounds; the whole capture, forty-eight thoufand pounds. The fifhery begins at St. Andrew's day, and ends Auguft 26th, old fyle. The rents of the fifhcries amount to three thoufand pounds per annum.

I was informed that fmelts come up this river in May and June.
There has been in thefe parts a very great fifhery of pearl got out of the frefl-water mufcles. From the year 1761 to $1 ; 64,10,0001$. worth were fent to London, and fold from ios. to 1l. 16s. per ounce. I was told that a pearl had been taken there that weighed 33 grains. But this fifhery is at prefent exhaufted, from the avarice of the undertakers: it once extended as far as Loch-Tay.
Gowrie-houfe is thewn to all ftrangers; formerly the property and refidence of the Earl of Gowrie, whofe tragical end and myfterious confpiracy (if confpiracy there was) are fill frefh in the minds of the people of Perth. At prefent the houfe is occupied by fome companies of artiliery. I was thewn the flaircafe where the unhappy nobleinan was killed, the window the frighted monarch James roared out of, and that he efcaped through, when he was faved from the fury of the populace, by baily Roy, a friend of Gowrie's, who was extremely beloved in the town.

From the little traditions preferved in the place, it feems as if Gowrie had not the leaft intent of murdering the king : on the day his majefly came to Perth, the carl was engaged to a wedding-dinner with the dean of guild : when the account of the king's defign reached him he changed colour, on being taken fo unprovided; but the dean forced him to accept the nuptial feaf, which was fent over to the cari's houfe.

When the king fled, he paffed by the feat of Sir William Moncrief, near Jarn-bridge, who happening to be walking out at that time, hard from the mouth of his terrified majefty the whole relation ; but the knight found it fo marvellous and fo disjointed, as plainly to tell the king, "that if it was a true fory, it was a very frange one."

Gowrie was a moft accomplified gentleman. After he had finifhed his fludies, he held the profeffor of philofophy's chair for two years in one of the Italian univerfities.

Crofs the Tay on a temporary bridge; the fone bridge, which is to confift of nine arches, being at this time unfinifhed: the largeft arch is feventy-fix feet wide; when complete, it promifes to be a molt magnificent ftructure. The river here is very vioIent, and admits of fcarce any navigation above; but hips of one bundred and twenty tons burthen come up as high as the town; and if ilat-bottomed, of even two hundred tons.

Scone lies aboút a mile and half higher up, on the eaft bank of the river. Here was once an abbey of great antiquity*, which was burnt ly the reforming zealos of Dundee. The pre'ent palace was begun by Earl Gowric ; but, on his death, being cranted be Janues VI. to his favourite Sir David Murray of Gofpatric, was completed by him ; who, in gratitude to the King, has, in fevcral parts of the houfe put up the royal arms. The houfe is built reund wo courts; the dining-room is large and handfome, has an ancient but magnilicent chimney-piece, the king's arms, with this moto,

Nobis lize inviCha miferunt centum ícx proavi.

- Founded by Alexander I. 1144, fors canon reguler of St. Augufin.
fifty thouy thoufand or fourteen bundance; her fixteen begins at ies amount

ift of nine le; when very viodd twenty hundred

Here was I)undec. ranted hy by him; yal arms. $e$, has an

Beneath are the Murray arms. In the drawing-room is fome good old tapettry, with an excellent figure of Mercury. In a fmall bed-chamber is a medley fcripture-piece in needle-work, with a border of animals, pretty well done; the work of Mary Stuart, during her confinement in Loch-Leven caftle : but the houfe in general is in a manner unfurnifhed.

The gallery is about a hundred and fifty-five feet long; the top arched, divided into compartments, filled with paintings, in water-colours, of different forts of huntings; and that Nimrod, James VI. and his train, appear in every piece.
Till the deftruction of the abby, the Kings of Scotland were crowned here, fitting in the famous wooden chair, which Edward I. tranfported to Weftminfter Abby, much to the mortificaion of the Scots, who efteemed it as their palladium. Charles II. before the battle of Worcefter, was crowned in the prefent chapel. The old Pretender refided at Scone for a confiderable time in 1715, and his fon made it a vifit in 1745.

Re-paffed the Tay at Bullion's boat; vifited the field of Loncarty, celebrated for the great vietory * obtained by the Scots over the Danes, by means of the gallant peafant Hay, and his two fons, who, with no other weapons than the yokes which they fnatched from their oxen then at plough, firlt put a ftop to the flight of their countrymen, and afterwards led them on to conquef. The noble families of Hay defcend from this ruftic hero, and, in memory of the action, bear for their arms the inftrument of their victory, with the allufive motto of Subjugo. There are on the fpot feveral tumuli, in which are frequently found bones depofited in loofe ftones, difpofed in form of a coffin. Not remote is a fpot which fupplied me with far more agreeable ideas; a tract of ground, which in 1732 was a mere bog, but now converted into good meadows, and about fifty acres covered with linen; feveral other parts with building, and all the ap. paratus of the linen manufacture, extremely curious and worth feeing, carried on-by the induftrious family of the Sandimans: and in the bleachery are annually whitened four hundred thoufand yards of linen, the manufacture of this family, and of Mr . Marfhall and others from Perth.

The country is good, full of barley, oats, and flax in abundance; but, after a few miles travelling, is fucceeded by a black heath. Ride through a beautiful plantation of pines, and, after defcending an eafy flope, the plain beneath fuddenly contracts itfelf into a narrow glen. The profpect before me ftrongly marked the entrance into the Highlands, the hills.that bounded it on each fide being lofty and rude On the left was Birnam wood, which feems never to have recovered the murch which its anceftors made to Dunfinane: I was fhewn at a great ditance a high ridge of hills, where fome remains of that famous fortrefs (Macbeth's caltle) are faid yet to exift.

The pais into the Highlands is awfully magnificent ; high, craggy, and often naked mountains prefent themfelves to view; approach very near each other, and in many parts are fringed with wood, overhanging and darkening the Tay, that rolls with great rapidity bencath. After fome advance in this hollow, a molt beautiful knowl, covered with pines, appears full in view; and foon after the town of Dunkeld, feated under and environed by crags, partly naked, partly wooded, with fummits of a vaft height. Lay at Inver $\dagger$, a good inn on the welt fide of the river.

July 28. Croffed it in a boat, attended by a tame fivan, which was perpetually foliciting our favors, by putting its neck over the fides of the ferry-boat. Land in the

[^31]Duke of Athol's gardens, which are extremely pleafing, wafhed by the river, and commanding from different parts of the walks, the mont beautiful and picturefque views of wild and gloomy nature that can be conceived. Trees of all kinds grow here extremely well; and even fo fouthern a fhrub as Portugal laurel flourifhes greatly. In the garden are the ruins of the cathedral, once a magnificent edifice, as appears by the beautiful round pillars ftill ftanding ; but the choir is preferved, and at prefent ufed as a church. In the burial-place of the fanily is a large monument of the Marquis of Athol, hung with the arms of the numerous connections of the family.

On the other fide of the river is a pleafing walk along the banks of the water of Bran ", a great and rapid torrent, full of immenfe fones. On a rock at the end of the walk, is a neat building, impending over a moft horrible chafm, into which the river precipitates itfelf with great noife and fury from a confiderable height. The windows of the pavilion are formed of painted glafs; fome of the panes are red, which makes the water refemble a fiery cataract. About a mile further is another, Rumbling Brig, like, but inferior in grandeur, to that near Kinrofs.

The town of Dunkeld is fmall, and has a finall linen manufacture. Much company reforts here in the fummer months, for the ben fit of drinking goats' nilk and whey: I was informed here, that thofe animals will eat ferpents; as it is well known that ftags do.

After a ride of two miles along a narrow frair, amidft trees, and often in fight of the Tay, was driven by rain into a fifhernan's hut, who entertainced me with an account of his bufinefs : faid he paid ten pounds per ann. for the liberty of two or thrce miles of the river ; fold the firft fifl of the featon at three-pence a pound; after that, got three fhillings per fifh. The houfes in thefe parts began to be covered with broom, which lafts three or four years : their infides mean, and very fcantily furnifhed; bus the owners civil, fenfible, and of the quickeft apprehemfions.

The ftrait now widens into a vale pleniful in oats, barley and flax, and well peopled. On the right is the junction of the Tay and the Tumel: the channels of thefe rivers are wide, full of gravel, the mark of their devaftation during floods. Due north is the road to Blair and Fort Auguftus, through the noted pafs of Killicrankie: turn to the left; ride oppofite to Cafle Menzies: reach 'Iaynouth, the feat of the Earl of Breadalbane.

July 29, \&c. Taymouth $\dagger$ lies in 2 vale fcarce a mile broad, very fertile, bounded on each fide by mountains fincly planted. Thofe on the fouth are covered with trees, or with corn-fields far up their fides. The hills on the north are planted with pines and other trees, and vaftly feep, and have a very Alpine look; but particularly refemble the great flope, oppofite the Grande Chartreufe in Dauphine. His lordflip's policy $\ddagger$ furrounds the houfe, which fands in the park, and is one of the few in which fallow deer are feen.

The ground is in remarkable fine order, owing to his Lordflip's affiduity in clearing it from fones, with which it was once covered. A blafter was in conftant employ to blaft the great ftones with gun-powder; for, by reafon of their fize, there was no other method of removing them.

The Berceau walk is very magnificent, compofed of great trees, forming a fine gothic arch; and probably that fecies of architecture owed its origin to fuch vaulted

[^32]nd com. views of here ex. tily. In pears by lent ufed urquis of water of d of the he river windows makes g Brig,

hades.
flades. The walk on the bank of the Tay is fifty fect wide, and two-and-twenty hundred yards long; but is to be continued as far as the junction of the Tay and the Lion, which is about as far more. The firft runs on the fides of the walk with great rapidity, is clear, but not colourlefs, for its pellucidnefs is like that of brown cryftal; as is the cafe with moft of the rivers in Scotland, which receive their tinge from the bogs. The Tay has here a wooden bridge two hundred feet long, leading to a white feat on the fide of the oppofite hill, commanding a fine view up and down Strath-Tay. The rich meadows beneath, the winding of the river, the beginning of Loch-Tay, the dif. charge of the river out of it, the neat village and church of Kinmore, form a moft pleafing and magnificent propect.

The view from the temple of Venus is that of the lake, with a nearer fight of the church and village, and the difcharge of the river. The lake is about one mile broad, and fitteen long, bounded on each fide by lofty mountains; makcs three great bends, which add to its beauty. Thofe on the fouth are well planted, and finely cultivated high up; interfperfed with the habitations of the Highlanders, not fingly, but in fmall groupes, as if they ived fociety or clanflip: they are very fmall, mean, and without windows or chimnies, and are the difgrace of North Britain, as its lakes and rivers are its glory. Loch-Tay is in many places a hundred fathoms deep, and within as many yards of the fhore, fifty four.

Till of late, this lake was fuppofed to be as incapable of freezing as Loch-Nefs, Loch-Earn, and Loch-Each; though Loch-Rannoch, and even Loch-Fine, an arm of the fea, often does. But in March 1771, fo rigorous and uncommon was the cold, that about the twentieth of that month this valt body of water was frozen over in one part from fide to fide, in the fpace of a fingle night; and fo ftrong was the ice, as greatly to damage a boat which was caught in it.
Loch.Tay abounds with pike, perch, eels, falmon, char, and trout; of the laft, fome have been taken that weighed above thirty pounds. Of thefe fpecies, the Highlanders abhor eels, and alfo lampreys, fancying, from the form, that they are too nearly related to ferpents.

The north fide is lefs wooded, but more cultivated. The valt hill of Laurs, with beds of frow on it, through great part of the year, rifes above the reft, and the fill loftier mou:tain of Benmor clofes the view far beyond the end of the lake. All this country abounds with game, fuch as Grous, ptarmigans *, ftags, and a peculiar fpecies of hare, which is found only on the fummits of the higheft hills, and never mixes with the common kind, which is frequent enough in the vales $\dagger$ : is lefs than the common hare; its limbs more flender; its Hefh more delicate: is very agile, and full of frolick when kept tame; is fond of honey and carraway comfits, and prognofticates a form by eating its own dung: in a wild ftate does not run an end, but feeks thelter under ftones as foon as poffible. During fummer its predominaur colour is grey: about Septeaber it begins to affume a fnowy whitenefs, the alteration of colour appearing about the neck and rump, and becomes entirely white, except the edges and tips of the ears: in April it again refumes its grey coat.

The ptarmigans inhabit the very fummits of the higheft mountains, amidft the rocks, perching among the grey ftones, and during funmer are fcarcely to be diftinguifhed from them, by reafon of their colour. They feldom take long flights, but fly about like pigeons; are filly birds, and fo tame as to fuffer a fone to be flung at them without rifing. It is not neceffary to have a dog to find them. They talle fo like a grous,

[^33]as to be fcarce diftinguifhable. During winter, their plumage, except a few feathers on the tail, are of a pure white, the colour of the fnow, in which they bury themfelves in heaps, as a protection from the rigorous air.

Roytton crows, called here hooded crows, and in the Erfe, feannag, are very common, and refide here the whole year. They. breed in all forts of trees, not only in the Highlands, but even in the plains of Murray: lay fix eggs; have a fhriller note than the common fort ; are much nore mifchievous; pick out the cyes of lambs, and even of horfes, when engaged in bogs; but for want of other food, will eat cranberries, and other mountain berries.

Ring ouzels breed among the hills, and in autumn defcend in flocks to feed on the berries of the wicken trees.

Sea eagles breed in ruined towers, but quit the country in winter. The black eagles continue there the whole year.

It is very difficult to leave the environs of this delightful place. Before I go within doors, mult recal to mind the fine winding walks on the fouth fide of the hills, the great beech fixteen feet in girth, the pifturefque birch with its long Itreaming branches, the hermitage, the great cataracts adjacent, and the darkfome chafm beneath. I mult enjoy over again the view of the fine reach of the Tay, and its union with the broad water of the Lion: I muft fep down to view the druidical circles of fones; and, laftly, I muft vifit Tay-bridge, and, as far as my pen can contribute, extend the fame of our military countrymen, who, among orher works worthy of the Romans, founded this bridge, and left its hiftory infcribed in thefe terms:

Mirare<br>Viam hane militarem<br>Ulira Romanos terminos<br>M. paffuram cer. hac illae<br>Lixtenfam;<br>Tefquis et paludibus infultantem<br>Per montes rupefque patefactam<br>Et indignanti Tavo Ut cernis intratam ; Opus hoc arduum fuà folertia,<br>Et decennali militum operà,<br>A AEr. Xive 1733. Pofuit G. Wade<br>Copiarman in Scotia Prefectus.<br>Eece quantum valeant<br>Regis Georgit II, aufpicia.

Taymouth is a large houfe, a cafte modernized. The moft remarkable part of its furniture is the works of the famous Jamefon *, the Scotch Vandyck, an eleve of this family. That fingular performance of his, the genealogical picture, is in good prefervation. The chief of the Argyle family is placed secumbent at the foot of a tree with a branch; on the right is a fingle head of his eldeft fon, Sir Duncan Camphell, laird of Lochou; but on the various ramifications, are the names of his defcendants, and along the body of the tree are nine fmall heads, in oval frames, with the names on the margins, all done with great neatnefs: the fecond fon was the firit of the houfe of Breadalbane, which branched from the other about four hundred years

[^34]ago. In a corner is infcribed, "The Genalogie of the houfe of Glenorqu.hic quhairof is defcendit fundric nobil and worthie houfes. Jamefon faciebat 1635 ." Its fize is eight feet by five. In the fame room are about twenty heads of perfons of the family; among others, that of a lady, fo very ugly, that a wag, on feeing it, with lifted hands pronounced, that the was fearfully and wonderfully made. There are in the fame houfe, feveral heads by :....efon, but many of them unfortunately fpoiled in the repairing.

In the library is a fmall book, called from the binding, the Black Book, with fome bcautiful drawings in it, on vellum, of the Breadalbane family, in water colours. In the firlt page is old Sir Duncan between two other figures, then follow feveral chiefs of the family, among whom is Sir Colin, Knight of Rhodes, who died 1480, aged 80. At the end is a manufcript hiftory of the family, ending, I think, in 1633.

July 30. Went to divine fervice at Kinmore * church, which, with the village, was re-built, in the neateft manner by the prefent Lord Breadalbane : they fland beautitully on a finall headland, projecting into the lake. His lordfhip permits the iuhabitants to live rent-free, on condition they exercife fome trade, and keep their houfes clean: fo that, by thefe terms, he not only faves the expence of fending, on every trifling occiafion, to Perth or Crief, but has got fome as good workmen, in common trades, as any in his Majefty's dominions.
'The church is a remarkably neat plain building, with a very handfome tower fteeple. The congregation was numerous, decent, attentive, till ; well and neatly clad, and not a ragged or flovenly perfon among them. There were two fervices, one in Englifh, the other in Erfe. After the firft, numbers of people, of both fexes, went out of the church, and, feating themfelves in the church-yard, made, in their motley habits, a gay and picturefque appearance. The devotion of the common people of Scotland on the ufual days of worfhip, is as much to be admired, as their conduct at the facrament in certain places is to be cenfured. It is celebrated but once in a year $\dagger$, when there are fometimes three thoufand communicants, and as many idle fpectators. Of the firt, as many as poflible crowd on each fide of a long table, and the elements fometimes are rudcly thoven from one to another; and in certain places, before the day is at an end, fighting and other indecencies enfue. It has often been made a feafon for detauchery; and to this day, Jack cannot always be perfuaded to eat his meat like a Chriftian $\ddagger$.

Every Sunday a collection is made for the fick or necelfitous; for poor's rates are unknown in every parifh in Scotland. Notwithfanding the common people are but juft rouzed from their native indolence, very few beggars are feen in North Britain : either they are full mafters of the leffon of being content with a very little; or, what is more probable, they are poffeffed of a fpirit that will ftruggle hard with neceffity before it will bend to the ofking of alms.

Vifited a pretty ifland in Loch-Tay, tuffed with trees, and not far from the flore. On it are the ruins of a priory dependent on that at Scoune; founded in 1122 , by Alexander the Firlt ; in which were depofited the remains of his Quecn Sybilla, natural daughter to Henry I.: it was founded by Alexander in order for the priyers of the Monks for the repofe of his foul and that of his royal confort §. To this ifland theCampbells retreated, during the fuccefles of the Marquifs of Montrofe, where they defended themfelves againft that hero, which was one caufe of his violent refentment againft the whole name.

[^35]July 3 ift, Rode to Glen-Lion ; went by the fide of the river * that gives name to it. It has now loft its ancient title of Duie, or Black, given it on account of a great battle between the Mackays and the Macgregors; after which, the conquerors are faid to have ftained the waters with red, by wafhing in it their bloody fwords and fpears. On the right is a rocky hill, called Shi-ballen, or the Paps. Eiter Glen-Lion through a Itrait pafs: the vale is narrow, b:t fertile; the bainks of the river fteep, rocky, and wooded; through which appears the rapid water of the lion. Ont the north is a round fortrets, on the top of a hill : to which in old times, the natives retreated on any invafion. $A$ little farther, on a plain, is a fmall Roman camp $\dagger$, called by the Highlanders Fortingal, or the fort of the Strangers : themfelves they ftile Na fian, or defcendants of Fingal. In Fortingal church-yard are the remains of a prodigious jew-tree, whofe ruins meafured fifty-fix feet and a half in circumference.
Saw at the houfe of Colonel Campbell of Glen-Lion, a curious walking-faff, belonging to one of his ancefors: it was iron cafed in leather, five feet long; at the top a neat pair of extended wings, like a caduceus; but, on being haken, a poniard, two feet nine inches long, darted out.
He alfo favoured me with the fight of a very ancient brotche, which the Highlands ufe, like the fibula of the Ronans, to faften their veft : it is made of filver, is round, with a bar crofs the middle, from whence are two tongues to faften the folds of the garments : one fide is ftudded with pearl, or coarfe gems, in a very rude manner; on the other, the names of the three kings of Cologne, Cafpar, Melchior, Baltazar; with the word confummation. It was probably a confecrated brotche, and worn not only for ufe, but as an amulet. Keyfler's account of the virtues attributed to their names confirms my opinion. He fays that they were written on flips of paper in this form, and worn as prefervatives againtt the falling-ficknefs:
Gafpar fert Myrrham, Thus Melchior, Balthazar, Aurum;
Solvitur a morbo Chrifti pietate caduco.
Return South, and come at once in fight of Loch-Tay. The day very fine and calm, the whole fcene was moft beautifuliy repeated in the water. I muft not omit that on the north fide of this lake is a moft excellent road, which runs the whole length of it, leading to Tiendrum and Inverary, in Argylefhire, and is the route which travellers. muft take, who make what I call the petit tour $\ddagger$ of Scotland. This whole road was made at the fole expence of the prefent Lord Breadalbane; who, to facilitate the tra. velling, alfo erected thirty-two flone bridges over the torrents that rufh from the mountains into the lake. They will find the whole country excell in roads, partly military, partly done by fatute labour, and much by the munificence of the great men.

I was informed, that Lord Breadalbane's eftate was fo extenfive that he could ride a hundred miles an end on it, even as far as the Weit Sea, twhere he has alfo fome iflands. Thefe great properties are divided into diftricts, called Officiaries: a ground officer prefides over each, and has threc, four, or five hundred men under his care. He fuperintends the duties due from each to their Lord, fuch as fetching peat, bringing coal from Crief, \&c. which they do, at their own expence, on horfes backs, traveling in

[^36]ftrings,

Arings, the tail of one horfe being faftenel by a cord, which reaches to the head of the next: the horfes are little, and generally white or grey; and as the farms are very finall, it is common for four to keep a plough between them, each furnifhing a horfe, and this called a horfe-gang.

The north fide of Loch-Tay is very populous; for in fixteen fquare miles are feventeen hundred and eighty fix fou's : on the other fide, above twelve hundred. The country, within thefe thirty years, manufactures a great deal of thread. They tpin with rocks", which they do while they attend their cattle on the hills; and, at the four fairs in the year, held at Kinmore, above fixteen hundred pounds worth of yarn is fold out of Breadalbane only: which fhews the increafe of induftry in thefe parts, for lefs than forty years ago there was not the leaft trade in this article. The yarn is bought by perfons who attend the fairs for that purpofe, and fell it again at Perth, Glafgow, and other places, where it is manufactured into cloth.

Much of this may be owing to the grood fenfe and humanity of the chieftan; but much again is owing to the abolition of the feudal tenures, or vaffalage; for before that was effected, (which was done by the influence of a chancellort, whole inemory Scotland gratefully adores for that fervice) the ftrong oppreffed the weak, the rich the poor. Courts indeed were held, and juries called; but juries of vaffals, too dependent and too timid to be relied on for the execution of true jultice.

Augult 1. Leave Taymouth; ford the lion, and ride above it through fome woods. On the left burfls out a fine cafcade, in a deep hollow, covered with trees: at a fmall diffance to the weft is Caltle Garth; or, more properly, Garbh, i. e. The rough place, a fmall cafte feated like Cafte Campbell, between two deep glens. Keep afeending a fleep hill, but the corn country continues for a while : the fcene then changes for a wild, black, and mountainous heath. Defcend into Rannoch, a meadowy plain, tolerably fertile : the lake of the fame name extends from eaft to weft; is about eleven miles long, and one broad; the northern bank appears very barren: part of the fouthern finely covered with a foreft of pine and birch, the firft natural woods I had feen of pines; rode a good way in it, but obferved no trees of any fize, except, a birch fixteen feet in circumference: the ground beneath the trees is covered with heath bilberries, and dwarf arbutus, whofe gloffy leaves make a pretty appearance. This place gives fhelter to black game, and Roes. Thefe animals are found from the banks of Loch-Lomond, as far north as the entrance.into Caithnefs: in fummer their hair is fhort, fmooth, gloffy, and red; at approach of winter grows long and hoary, and proves an excellent defence againft the rigour of the High'and :ir. The weight of a full grown roc is 60 lb . The horns of the fecond year are ftrait, tlender, and without any branch: in the third become bifurcated: in the fourth, trifurcated, and grow more fcabrous and Itronger, in proportion to their longevity. They feed during fummer on grafs, and are remarkably fond of the Rubus Saxatilis, called in the Highlands, on that account, the Roebuck Berry. When the ground is covered with fnow, they browze on the extreme branches of the pine and juniper. They bring two young at a time: the fawns clegantly fpotted with white. It is extremely difficult to rear them ; commonly cight out of ten dying in the attempt. The flefh of the Roe is by fome ccounted a delicacy: to me it feemed very dry. They keep in fmall families of five or fix.

[^37]Nenr thefe woods is a faw-mill, which is rented from the Government : and the renant is obliged to work igo tons of timber anmally, paying eighteen thillings and fixpence per ton. 'The deal, which is the red fort, is fold in plank to different parts of the country, carried on horfes backs, for the trees are now grown fo dearee as not to ad.nit of exportation *.

The lake affords no other fifh than trouts, fmall chars, and bull trouts: the laft, as I was informed, are fometimes taken of the length of four feet and a half. Many water fowl breed in the birus or little freams that trickle into the lake ; among others, different forts of grebes and divers: I was told of one which the inhabitants call Par. bhuachaille, or the Herd-man's Watchoman, that makes a great noife before forms, and by their defcription find it to be the northern diver. Br. Zool. ith Ed. Vol. II, $^{\text {the }}$ No. 237. No rats have Bitherto been obfirved in this country.

This country was once the property of Robertion of Struan, and was granted to an anceftor of his, as a reward for taking Robert Graham, the ruffian who murdered James I. It was then valued at a Irundred marks. He was likewife permitted to bear in his coat of arms a Graham bound in chains. A defeendant of his, ftyled MacRobert, was the moft potent plunderer of his days, and, at the head of cight hundred men, for a long time ravaged sthol and the adjoiuing countris, in the begiuming of the reign of James V. but at leugth was furprized and flaint. The late Struan feemed to inherit his turbulent difpofition. He had been in the rebelion of 1715 ; had his eftate reflored, but in $17+5$ rebelling a fecond time, the country was burnt, and the eftate annexed to the crown. He returned a few years alter, and died as he lived, a mofabandoned fot; notwithfanding which, he had a genius for poctry, and left behind him a volume of elegies and wher pieces, in fome of which he elegantly laments the ravages of war among his valfals, and the lofs of his favorite feenes, and in particular his fountain Argentinc.

The country is perfealy highland; and in fpite of the intercourfe this and the neighbouring parts have of late years had with the reft of the world, it ftill retains fome of its ancient cuftoms and fuperftitions : they decline daily, but left their memory fhould be loft, 1 hall mention feveral that are ftill practifed, or but very lately difufed in the track I had palfed ovcr. Such a record will have this advantage, when the follies are extinct, in teaching the unfhackled and enlightened mind the difference between the pure ceremonies of religion, and the wild and anile flights of fuperfition.

The belief in fpectres ftill exitts; of which I had a remarkable proof while I was in the county of Breadalbanc. A poor vifionary, who had been working in his cabbage garden, imagined that he was raifed fuddenly into the air, and conveyed over a wall into an adjucent corn field $\dagger$; that he found himfelf furrounded by a crowd of men and women, many of whom he knew to have been dead fome years, and who appeared to him fkimming over the tops of the unbended corn, and mingling together like bees going to hive: that they fpoke an unknown language, and with a hollow found: that they very roughly pufhed him to and fro; but on his uttering the name of God, all vanifhed but a female fprite, who feizing him by the fhoulder, obliged him to promife an aflignation, at that very hour, that day fevennight : that he then found that his hair was all tied in double knots, and that he had almoft loft the ufe of his feech; that he kept his word with the fpeitre, whom he foon faw come floating through the

[^38]and the tengs and fixrent parts of ce as not to : the laft, as Many water others, difts call Far. diore forms, Ed. Vol. Il. ranted to an o nurdered itted to bear Ityled Mac. ghe hundred mining of the in feemed to rad his eftate 1 the eftate red, a moft. bchind him nts the rav. articular his
is and the retains fome eir meinory ntely difufed , when the fierence beerflition. vile I was in his cabbage over a wall of mien and appeared to or like bees ound : that of God, all to promife hat his hair eech; that rough the
air towards him: that he fpoke to her, but fle told him at that time fhe was in too much batte to attend to him, but bid him go away, and no harm flould befiall him; and fo the affair refled when licft the country, But it is incredible the mifchief thefe Figri Sommia did in the neighbourhood: the friends and relations of the deceafed, whom the old Dreamer had named, were in the utmoft anxiety at linding thein in fuch bad com. pany in the other world: the almoft extinct belief of the old idle tales began again to gain ground, and the good minitter will have many a weary difcourfe and exhortation before he can eradicate the ablurd ideas this idle flory has revived.

In this part of the country the notion of witchcratt is quite loft: it was obferve. to ceale aluout inmodiately on the repeal of the witch act "; a proof what a dangerous initrument it was on the hands of the viadictive, or of the credulous.
Among the fupertitious cuftoms thefe are the moft lingular. A Highlander never begins any thing of confequence on the day of the week on which the third of May falls, which he ftyles La Sheachanna na bleanagh, or the difnual day.

On the it of May, the herdfimen of every village hold their Bel-tien $t$, a rural facrifice. They cut a fiuare trench on the ground, leaving the turf in the middle; on that they make a fire of wood, on which they drefs a large caudle of eggs, butter, oatmeat and milk; and briag befides the ingredients of the caudle, plenty of beer and whifky; for each of the company mutt contribute fomething. The rites begin with fpilling fome of the caudle on the ground, by way of libation: on that every one takes a cake of oatmeal, upon which are raifed nine fquare knobs, each dedicated to fome particular being, the fuppofed preferver of their flocks and herds, or to fome particular animal, the real deftroyer of them : each perfon then turns his face to the fire, breaks off a knob, and flinging it over his fhoulders, fays, "This I give to thee, preferve thou iny horfes; this to thee, preferve thou my fheep; and fo on." After that, they ufe the fame ceremony to the noxious animals; "This I give to thee, O fox! fpare thou my lambs; this to thee, $O$ hooded crow! this to thee, 0 eagle !"

When the ceremony is over, they dine on the caudle; and after the feaft is finifhed, what is left is hid by two perfons deputed for that purpofe; but on the next Sunday they re-affemble, and finith the reliques of the firf entertainment $t$.

On the death of a Highlander, the corpfe being ftretched on a board, and covered with a coarfe linen wrapper, the friends lay on the breaft of the deceafed a wooden platter, containing a finall quantity of falt and earth, feparate and unmixed; the earth, an emblem of the corruptible boly; the falt, an emblem of the immortal fpirit. All fire is extinguithed where a corpfe is kept; and it is reckoned fo ominous fur a dog or cat to pafs over it, that the poor animal is killed without mercy.

The late-wake is a cerenuony uled at funerals. The evening after the death of any perfon, the relations and friends of the deceafed meet at the houfe, attended by bagpipe

[^39]vol.
or fiddle; the nearelt of kin, be it wife, fon, or daughter, opens a melancholy bail, dancing and greeting, i. e. crying, violently at the fame time; and this continues till daylight, but with fuch gambols and frolics anong the younger part of the company, that the lofs which occafioned them is often more than fupplied by the confequences of that night ". If the corpfe remains unburied for two nights, the fame rites are renewed. Thus, Scythian-like, they rejoice at the deliverance of their friends out of this life of milery.

This cuftom is an ancient Englifh one, perhaps a Saxon. Chaucer mentions it in his Knight's Tale.

> Ne how the liche-wake was yhuld All chilke night.

It was not alone in Scotland that thefe watchings degenerated into excefs. Such indecencies we find long ago forbidden by the church. In vigiliis circa corpora mortuorunn vetantur chorece et cantilena, feculares ludi et alii turpes छึ fatui $\dagger$.

The coranich, or finging at funerals, is fill in ufe in fome places: the fongs are generally in praife of the deceafed, or a recital of the valiant deeds of him or his anceftors. I had not the fortune to be prefent at any in North Britain, but formerly affifted at one in the fouth of Ireland, where it was performed in the fullnefs of horror. The cries are called by the Irith the 'ulogohne and Juillulu, two words extremely expreffive of the found uttered on thefe occafions, and being of Celric flock, etymologifts would fivear to be the origin of the onoovywv of the Greeks, and ulmatus of the Latins. Virgil is very fond of ufing the laft, whenever any of his females are diftreffed ; as are others of the Roman poets, and generally on occafions fimilar to this.
It was my fortune to arrive at a certain town in Kerry, at the time that a perfon of fome diftinction departed this life: my curiofity led me to the houfe, where the funeral feemed conducted in the pure? claffical form.

> Qundcunque afpiecrem luftus gemitufque funabant,
> Formaque non taciti funeris intưs erat.

In fiort, the conclamatio was fet up by the friends in the fame manner as Virgil defcribcs that confequential of Dido's death.

Lamentis gemituque et famineo ululatu Tecta fremunt.
Immediately after this followed another ceremony, fully defcribed by Camden in his account of the manners of the ancient Irih; the earneft expoflulations and reproaches given to the deceafed for quitting this world, where fhe enjoyed fo many bleffings, fo grood a hubland, fuch finc children. This cuftom is alfo of great antiquity, for Euryalus's mother makes the fane pathetic addrel's to her dead fon.

> Tune illa fenedix
> Scra mex requies : potuilti relinquere folam Crudelis?

But whon the time approached for carrying out the corpfe, the cry was redoubled, Tremulis ululatibus ethera complent ;

[^40]a numerous band of females waiting in the outer court to attend the hearfe, and to pay (in chorus) the laft tribute of their voices. The habit of this forrowing train, and the neglect of their perfons, were admirably fuited to the occafion: their robes were black and flowing, refembling the ancient Palla; their fect naked, their hair long and difhevelled: I might truly fay,

> Vidi egomet nigrâ fuccinctam vadere pallà
> Canidiam; pedibus nudie, palfoque capillo,
> Cum Sagana majore ululantem.

Among thefe mourners were difperfed the females who fung the praifes of the deceafed, and were in the place of the mulieres prafica of the Romans, and like them, a mercenary tribe. I could not but obferve that they over-did their parts, as Horace acquaints us the hireling mourners of his auys did.

> Ut qui conducti plorant in funere, dicunt
> Et faciunt prope plura dolentibus ex animo.

The corpfe was carried flowly along the verge of a mof beautiful lake, the ululatus was continued, and the whole proceffion ended among the venerable ruins of an old abbey. But to return to North Britain.

Midwives give new-born babes a fmall fpoonful of earth and whifky, as the firft food they tafte.

Before women bake their bannocks, or oatmeal cakes, they form a crofs on the laft they make.

The notion of fecond-fight ftill prevails in a few places: as does the belief of fairies; and children are watched till the chriftening is over, left they fhould be ftole, or changed.

Ell-fhots, i. e. the fone arrow-heads of the old inhabitants of this ifland, are fuppofed to be weapons fhot by fairies at cattle, to which are attributed any diforders they have: in order to effect a cure, the cow is to be touched by an elf-hot, or made to drink the water in which one has been dipped. The fame virtue is faid to be found in the cryftal gems*, and in the adder-ftone, our glein naidr; and it is alfo believed that good tortune muft attend the owner; fo, for that reafon, the firt is called Clach Bhuai, or the powerful fone. Captain Archibald Campbell thewed me one, a fpheroid fet in filver, for the ufe of which, people came above a hundred miles, and brought the water it was to be dipt in with them; for without that, in human cales, it was believed to have no effect.

Thefe have been fuppofed to be magical fones or gems ufed by the Druids, to bc infpected by a chafte boy, who was to fee in them an apparition informing him of future events. This impofture, as we are told by Dr. Woodward, was revived in the laft century by the famous Doctor Dee, who called it his thew ftone and holy ftone, and pretended, by its means, to foretell events. I find in Montfaucon $\dagger$, that it was cultomary in early times to depofite balls of this kind in uras or fepulchres: thus twenty were found at Kome in an alabaltrine urn: and one was dificovered in 2653 , in the tomb of Childeric at Tournai ; he was King of France, and died A. 1). 480.

Augult 2d, left Carrie, the houfe of Mr. Campbell, factor for the Struan eftate, where I had a very hofpitable reception the preceding night. Went due eaft; paffed over a bridge crofs the Tumel, which difcharges itfelf out of Loch-Rannoch. Not far

[^41]off were fome neat fmall houfes, inhabited by veteran foldiers, who were fettled here after the peace of 1748 ; had land, and three pounds in money given, and nine pounds lent to begin the world with. In fome few places this plan fucceeded; but in general was fruftrated by the diffipation of thefe new colonifts, who could by no means relifh an induftrious life; but as foon as the money was fpent, which feldom lafted long, left their tenements to be poffeffed by the next comer.

Satv next a famping-mill, calculated to reduce lime-ftone to a fine powder, in order to fave the expence of burning, for manure. The ftampers beat it into finall pieces in a trough, which altream of water paffed through, carrying off the finer parts into a proper receptacle, the grofs ones being fopped by a grate. I did not find that this project anfwered ; but was told, that the benefit the land was to receive from it, would not appear till the third year.

On going up a fteep hill, have a fine view of the lake. Where the mountains almof clofe, is Mount Alexander, where Struan once refided, and which he called his herr tage; it is a moft romantic fituation, prettily wooded, impending over a fine batin, formed by the Tunel, in a deep hollow beneeth. At the bottom of this hill is Argentine, a little fountain; to which he gave that name from the filvery micer it flings up: near this are feveral rude but beautiful walks amidtt the rocks and trees, amons which, in clefts and clafins, I was thewn the hard bed of the poor poet, when his difPoyalty had made it penal for him to fhew his head. Near this the rocks almoft neet, and the river rufhes with vaft violence between. Some outlawed M•Gregors were once furprized on the precipice, and all killed ; one, who made a defperate leap upon a fone in the middle of the water, and another to the oppofite fide, had the hard faic to be fhot in climbling the rocky fteeps.

A mile lower are the falls of the Tumel: I have feen higher; but except that of the Rhine, never faw one with more water.

Afcend a very fteep and high hill, through a great birch wood; a moft picturefque fcene, from the pendant form of the boughs waving with the wind from the bottom to the utmoft fummits of the mountain. On attaining the top, had a view of the beautiful little Straith, fertile and prettily wooded, with the river in the middle, forming numbers of quick meanders, then fuddenly fwelling into a lake, that fills the vale from fide to fide; is about three miles long, and retains the name of the river. After riding along a black moor, in fight of valt mountains, arrive at

Blair ${ }^{\text {a }}$, or Athol Houfe, feated on an eminence above a plain, watered by the Gary, an outrageous ftream, whofe ravages have greatly deformed the valley, by the valt beds of gravel which it has left behind. The houfe was once fortified, and held a fiege againtt the rebels in 1746; but at prefent is much reduced in height, and the infide highly finifhed by the noble owner. The moft fingular piece of furniture is a cheft of drawers made of brocm, moft elegantly Atriped in veins of white and brown. .This plant grows to a great fize in Scotland, and furnifhes pieces of the breadth of fix inches.

Near the houfe is a fine walk, furrounding a very deep glen finely wooded, but in dry weather deficient in water at the bottom; but on the fide of the walk on the rock is a fmall cryftalline fountain, inhabited at that time by a pair of Naiads, in form of golden fifh. In a fprucefir was a hang-neft of fome unknown bird, fufpended at the four corners to the boughs; it was open at top, an inch and a half in diameter, and two deep; the fides and bottom thick, the materials mots, worfted, and birch bark, lined with

[^42]hair and feathers. The freams afford the parr, a fmall fpecies of trout, feldom excceding eight inches in length, marked on the fides with ninc large bluilh fpots, and on the lateral line with fmall red ones *.

No traveller fhould omit vifiting Yorke Cafcade, a magnificent cataract, amidft moft fuitable fcenery, about a mile diftant from the houfe.

This country is very mountainous, hàs no matural woods, except of birch; but the vaft plantations that begin to cloath the hills will amply fupply thefe defects. There is. a great quantity of oats raifed in this neighbourhood, and numbers of black cattle reared, the refources of the exhaufted parts of South Britain.

Vifit the pafs of Killicrankie, about five miles fouth of Blair: near the northern entrance was fought the battle between the Vifcount Dundee and General Mackny, in which the firft was killed in the moment of victory. The pafs is extremply narrow between high mountains, with the Gary running beneath in a deep, darkfome, and rocky channel, over-hung with trees, forming a fecne of horrible grandeur. The road through this flrait is very fine, formed by the foldiery lent by the government, who have fixpence per day from the country, befides their pay. About a mile beyond the pafs, Mr. Robertfon's, of Fafkally, appears like fairy ground, amidft thefe wild rucks, feated in a mof beautiful meadow, watered by the river Tumel, furrounded with pretty hills, fincly wooded.

The Duke of Athol's eftate is very extenfive, and the country populous: while vaffalage exitted, the chieftain could raife two or three thoufand fighting men, and leave fufficient at home to take care of the ground. The forefts, or rather chafes, (for they. aris quite naked) are very extenfive, and feed vaft numbers of ftags, which range . - ertain times of the year, in herds of five hundred. Some grow to a great fize :
:ave heard of one that weighed eighteen fone, Scots, or three hundred and fourteen pounds, exclufive of head, entrails, and fkin. The hunting of thefe animals was formeriy after the manner of an eaftern monarch. Thoufands of vaffals furrounded a great tract of country, and drove the deer to the fpo. where the chieftains were ftationed, who fhot them at their leifure. The magnificent hunt, made by an Earl of Athol, near this place, for the amufement of James V. and the Queen mother, is too remarizaíle to be omitted; the relation is therefore given as defcribed by Sir David Lindfay of the Mount $\dagger$, who, in all probability, affifted at it.
" The Earl of Athole, hearing of the King's coming, made great provifion for him. in all things pertaining to a prince, that he was as well ferved and eafed, with all things neceffary to his eftate, as he had been in his own palace of Edinburgh. For I heard fay, this noble Earl gart make a curious palace to the King, to his Mother, and to the Embaflador, where they were fo honourably eafed and lodged as they had been in England, France, Italy, or Spain, concerning the time and equivalent, for their luunting and pattime; which was builded in the midit of a fair meadow, a fair palace of green timber, wind with green birks, that were green both under and above, which was fafhioned in four quarters, and in every quarter and nuik thereof a great round, as it had been a block-houfe, which was lofted and gefted the fpace of three houfe height; the floors laid with green icarcts, fpreats, medwarts and flowers, that no man knew whereon he zeid, but as he had been in a garden. Further, there were two great rounds in ilk fide of the gate, and a great portculleis of tree, falling down with the mauner of a barrace, with a draw-bridge, and a great ftank of water of fixteen foot deep, and thirty foot of breadth. And alfo this palace within was hung with fine tapeftry and

[^43]arraffes
arrafles of filk, and lighted with fine glafs windows in all airths; that this palace was as pleafantly decored, with all neceffaries pertaining to a prince, as it had been his own palace-royal at home. Further, this Farl gart make fuch provifion for the King, and his Mother, and the Embaflador, that they jad all manner of meats, drinks, and delicates that were to be gotten, at that time, in all Scotland, either in burgh or land; that is to fay, all kind of drink, as ale, beer, wine, both white and claret, malvery, mufkadel, hippocras, aquavitre. Further, there was of meats, wheat-bread, main-bread and gingebread; with flefles, beef, mutton, lamb, veal, venifon, goofe, grice, capon, coney, cran, fivan, partridge, plover, duck, drake, briffel cock and pawnes, black-cock, and muir-fowl, capper s:llics : and alfo the farks, that were round aboat the palace, were full of all delicate uhes, as falmonds, trouts, pearches, pikes, cels, and all other kind of delicate fifhes, that could be gotten in frefl waters; and all ready for the banket. Syne were there proper ftewards, cunning baxters, excellent cooks and potingars, with confections and drugs for their deferts; and the halls and chambers were prepared with cottly bedding, veffel and napery, according for a king, fo that he wanted none of his orders more than he had been at home in his own palace. The King rema:aded in this wilde nefs, at the hunting, the fpace of three days and three nights, and his company, as I have fhewn. "I heard men fay, it coft the Earl of Athole, every day, in expences, a thoufand pounds."

But hunting reectings, among the great men, were often the preludes to rebellion; for under that pretence they collected great bodies of men without fufpicion, which at length occafioned an act of parliament prohibiting fuch dangerous affemblies.

Aug. 3. Set out for the county of Aberdeen; ride eaftward over a hill into GlenTilt, famous in old times for producing the mof hardy warriors, is a narrow glen, feveral miles i: kngth, tounded on each fide by mountains of an amazing teight; on the fouth is the great hill of Ben y glo, whofe bafe is thirty-five miles in circumference, and whofe fummit towers far above the others. .The fices of many of thefe mountains are covered with fine verdure, and are excellent fheep-walks: but entirely woodlefs. The road is the moft dangerous and the moft horrible I ever traselled : a narrow path, So rugged, that our hories often were obliged to crofs their legs, in order to pick a fecure place for thcir feet; while, at a confiderable and precipitous depth beneath, roared a black torrent, rolling through a bed of rock, folid in every part, but where the Tilt had worn its antient way. Saluon force their paflage even as high as this dreary ftream, in fite of the diftance from the fea, and the difficulties they have to ancounter.

Afcend a fteep hill, and find ourfelves on an arrie, or tract of mountain, which the families of one or two hamlets retire to with their flocks for pafture in fummer. Here we refrelled ourfelves with fome goats' whey, at a Sheelin, or Bothay, a cottage made of turf, the dairy-houfe, where the Highland fhepherds, or graziers, live with their herds and flocks, and during the fine feafon make butter and cheefe. Their whole furniture confifts of a few horn-fyoons, thar milking utenfils, a couch formed of fods to l:e on, and a rug to cover them. 'I heir food oat-cakes, butter or cherfe, and often the coagulated blood of their cattle fpread on their bannocs. Their wank milk, whey, and fonnctimes, by way of indulgence, whifky. Such dairy-houfes are common to mon mountainous countries; thive in Wales are called Hafodtai, or fummer-houfes; thofe on the Swifs Alps, Semmes.

Dined on the fide of Loch-Tilt, a fmall piece of water, fwarming with trouts. Continued our journey over a wild, black, moory, melancholy tract. Reached Brac-
:alace was n his own King, and and deliand; that mufkadel, ad gingen, coney, ack-cock, te palace, all other e banket. zotingars, vere pree wanted King re. ghts, and very day,
bellion; which at

Brac-
mar;
mar *; the country almoft inftantly changed, and in lieu of drear"; waftes, a rich vale, plenteous in corn and grafs, fucceeded. Crofs the Dee near its head, which, from an infignificant flream, in the courfe of a very few miles, increafes to the fize of a great river, from the influx of numbers of other waters; and is remarkable for continuing near fifty miles of its courfe, from Invercauld to within fix miles of Aberdeen, without any fenfible augmentation. The rocks of Brae-mar, on the eaft, are exceedingly romantic, finely wooded with pine. The cliffs are very lofty, and their front moit rugged and broken, with vaft-pines growing out of their fiffures.

On the north fide of the river lies Dalmore, diftinguifhed by the fineft natural pines in Europe, both in refpett to the fize of the trees, and the quality of the timber. Single trees have been fold out of it for fix guineas: they were from eighty to ninety feet high, without a lateral branch, and four feet and a half in diameter at the lower end. The wood is very refinous, of a dark red cclour, and very weighty. It is preferable to any brought from Norway, and being fawn into plank on the fpot, brings annually to the proprietor a large revenue. On the oppofite fide of the river is the eftate of Inverey, noted alfo for its pines, but of a fize inferior to thofe of Dalmore. When the river is fwelled with rains, great floats of timber from both thefe eftates, are fent down into the Low Countries.

This tract, abounding with game, was, in old times, the annual refort of numbers of nobility, who affembled here to pafs a month or two in the amufements of the chace. Their huntings refembled campaigns; they lived in temporary cottages, called Lonquhards, were all dreffed in an uniform habit conturmable to that of the country, and paffed their time with jollity and good cheer, moft admirably defcribed by John Taylor, the water poet, who, in 1618, made there his Pennileffe Pilgrimage, and defcribes, in page 135, the rural luxury with all the glee of a Sancho Pança. .
"I thank my good Lord Erkin," (fays the poet) " hee commandeci that I fhould alwayes bee lodged in his lodring, the kitchen being alwayes on the fide of a banke, many kettles and pots boyling, and many fpits turning and winding, with great variety of cheere: as venifon bak'd, fodden, roft and ftu'de beefe, mutton, goates, kid, hares, frefl falmon, pidgeons, hens, capons, chickens, partridge, moorecoots, heath-cocks, caperkellies, and termagants : good ale, facke, white and claret, tent or (Allegant) and moft potent aquavitæ $\dagger$."

[^44]" All thefe, and more than thefe, we had had continually, in fuperfluous abundance, caught by faulconers, fowlers, filhers, and brought by my Lord's (Mar) tenants and purveyors, to victual our campe, which confifted of fourteen or fifteen hundred men and horfes. The manner of the hunting is this : five or fix hundred men doe rife carly in the morning, and they doe difperfe themfelves divers wayes, and feven, eight, or ten miles compaffe, they doe bring or rhace in the deer in many lieards (two, three, or four hundred in a heard) to fuch or fuch a place, as the noblemen thall appoint them; then when day is come, the lords and gentlemen of their companies dos ride or goc to the faid places, fometimes wading up to the midales through bournes and rivers; and then they being come to the place, doe lie down on the ground till thofe forefaid foouts, which are called the Tinckhell, doe bring down the: deer; but, as the proverb fays of a bad cooke, fo thefe Tinckhell men doe lick their own fingers; for, befides their buwes and arrows which they carry with them, wee can heare now and then a harguebufe, or a mufquet, goe off, which doe feldom difcharge in vaine: then after we had flayed three houres, or thereabouts, we might perceive the deer appeare on the hills round about us, (their heads making a flew like a wood) which ocing followed clofe by the Tinckhell, are chafed down the valley where we lay; then all the valley on each fide being way-laid with a hundred coaple of flrong lrifh greyhounds, they are let loole, as occation ferves, upon the heard of deere, that with dogs, gunnes, arrows, durkes and daggers, in the fpace of two houres, fourfore fat deere wcre flaine, which after are difpofed of fome one way and forme another, twenty or thirty miles, and more than enough left for us to make merry with all at our renderouze. Being come to our lodgings, there was fuch baking, boyling, roalling and ftewing, as if Cook Ruffian had been there to have fealded the Devil in his feathers." But to proceed.

Pafs by the cafle of Brae-mar, a fquare tower, the feat of the antient Earls of Mar : in later times a garrifon to curb the difcontented chieftains; but at prefent unnecelfarily occupied by a company of foot, being rented by the Government from Mr. Farquharfon, of Invercauld, whofe noufe 1 reach in lefs than half an hour.

Invercauld is feated in the centre of the Grampian hills, in a fertile vale, wathed by the Dee, a large and rapid river; nothing can be more beautiful than the different views from the feveral parts of it. On the northern entrance, immenfe ragged and broken craggs bound one fide of the profpect; over whofe grey fides and fummits is deattered the melancholy green of the picturefque pine, which grows out of the naked rock, where one would think nature would have denied vegetation.

A little lower down is the caftle abovementioned; formerly a neceflary curb on the little kings of the country; but at prefent ferves farce any purpofe, but to adorn the landfcape.

The views from the fkirts of the plain near Invercauld, are very great; the hills that immediately bound it are cloathed with trees, particularly with bireh, whofe long and pendent boughs, waving a valt height above the head, furpafs the beauties of the weeping willow.

[^45]The fouthern extremity is pre-eminently magnificent ; the mountains form there a raft theatre, the bofom of which is covered with extenfive forefts of pines: above, the trees grow fcarcer and fcarcer, and then feem only to fprinkle the furface; after which vegetation ceafes, and naked fummits* of a furprifing height fucceed, many of them topped with perpetcal fnow; and, as a fine contraft to the ficene, the great cataract of Garval-bourn, which feems at a diftance to divide the whole, foams amidft the dark forent, rufhing from rock to rock to a valt diftance.

Some of thefe hills are fuppofed to be the higheft part of Great Britain : their height has not yet been taken, but the conjecture is made from the defcent of the Dee, which ru:s from Brae-mart to the fea, above feventy miles, with a moft rapid courfe.

In this vale the Earl of Mar firft fet up the Pretender's ftandard on the fixth of September 1715 ; and in confequence drew to deftruction his own, and fevera: of the moft noble families of North Britain.
Rode to taike a nearer view of the environs; croffed the Dee on a good ftone-bridge buitt by the Government, and entered on excellent roads into a magnificent foreft of pines of many miles extent. Some of the trees are of a vaft fize; 1 meafured feveral that were ten, cleven, and even twelve feet in circumference, and near fixty feet high, forming a moft beautiful column, with a fine verdant capital. Thefe trees are of great age, having, as is fuppofed, feen two centuries. Their value is confiderable; Mr. Farquharfon informed me, that by fawing and retailing them, he has got for eight hun. dred trees five-and-twenty thillings each : they are fawed in an adjacent faw-mill, into plank ten fect long, eleven inches broad and three thick, and fold for two fhillinge a-piece.
Near this antient foreft is another, confifting of fmaller trees, almoft as high, but very Iender; one grows in a fingular manner out of the top of a great ftone; and notwithftanding it feems to have no other nourihment than what it gets from the dews, is above thirty feet high.
The profpect above thefe forefts is very extraordinary, a diftant view of hills over a furface of verdant pyramids of pines.

I muft not omit, that there are in the moors of thefe parts, what I may call fubterraneous forefts, of the fame fpecies of trees, overthrown by the rage of tempefts, and covered with vegetable mould. The are dug up, and ufed for feveral mechanical purpoies. The finer and more refinuus parts are fplit into flender pieces, and ferve the: uapoles of torches. Ceres made ufe of no other in her fearch after her loft daughter

> Illa duabus
> Flammifera pinus manibus fuecendit ab Etna.
> OvID. Met. lib. y. 7 .
> At Ftwa's flaming mouth two pitchy pines
> To light her in lier feareh at length he tines.

This whole tract abounds with game : the flags at this time were ranging in the mountains; but the little rocbucks $\ddagger$ vere perpetually bounding before us; and the black game often fprung under our feet. The tops of the hills fwarmed with grous and ptarmigans. Green plovers, whimbrels, and fnow-flakes $\mathfrak{\xi}$, breed here : the laft affemble in

[^46]great flocks during winter, and collect fo clofely in their eddying fight, as to give the fportfinan opportunity of killing numbers at a hot. Lagles*, peregrine fal.ons, and gollawks brecd here : the falcons in rocks, the gothawks in trees: the laft purfues its prey an end, and dalhes through every thing in purfuit; but if it mifes its quarry, defilts from following it after two or three hundred yards flight. Shefe birds are profcribed; half a crown is given for an eagle, a flitling for a hawk, or hooded crow.

Foxes are in thefe parts very ravenous, fecting on roes, fleep, and even the egoats.
Rooks vifit thefe sales in autum, to feed on the different fort of berries; but neither winter nor breed heve.

I faw flying in the forefts, the greater bulfinch of Mr. Edwards, tab. 123, 124. the Loxia enucleator of limneus, whofe food is the feed of pine-cones; a bird common to the north of Europe and America.

On our return patled under fome high cliffs, with lar re woods of birch intermixed. This tree is ufed for all forts of implements of hubbadry, roofing of fmall houfes, wheels, fuel; the Highlanders allo tan their own leather with the bark; and a great deal of excellont wine is extracted from the live trec. Obferved among thefe rocis a fort of projecting fhelf on which had been a hut, acceflible only by the help of fome thongs, faftencd by fome very expert climbers, to which the family got, in time of danger, in former days, with their moft valuable moveables.

The houfes of the common people in thefe parts are fhocking to humanity, formed with loofe fones, and covered with clods, which they call devots, or with heath, broom, or branches of fir: they look, at a diltance, like fo many black mole-hills. The inhabitants live very poorly, on oatmeal, tarley-cakes and poratocs; their drink whiky fweetened with honey. The men are thin, but ftrong; idle and lazy, except enployed in the chace, or any thing that looks like amufenent; are content with their hard fare, and will not exert themlelves farther than to get what they deem neceffarics. The women are more induftrious, fpin their own hufbands' cloaths, and get money by knitting ftockings, the great trade of the country. The common women are in general moft remarkably plain, and foon aequire an old look, and by being much expoled to the weather without hats, fuch a grin, and contration of mucles, as heightens greatly their natural hardnefs of features: I never faw fo much phamefs among the lower rank of females: but the ne plus ultra of hard features is not lound till you arrive amons the fifh women of Aberdeen.

Tenants pay their rent gencrally in this country in moner, except what they pay in poultry, which is done to promote be bred, as the gentry are foremote from any market. Thofe that rent a mill pay a hog or two ; an animal fo detefted by the lighlanders, that very few can be prevaited on to tafte it in any thape. labour is here very cheap, the ufual pay being fifty fillings a year, and two peeks of oatmeal a week.

Purfued my journey ealt, along a beautiful road by the river-fide, in fight of the pine forefts. The vale now grows narrow, and is frled with woods of birch and alder. Saw on the road-fide the feats of gentlemen, high built, and once defentible. The peafants culivate their little land with great care to the very adge of the ftoney hilhs. All the way are valt maffes of granite, the fame which is cabled in Cornwall, Muorftone.

The glen contracts, and the mountains approach each other. (2uit the II thlands, paffing between two great rocks, called the lafs of Bulliir, a very harrow hrait, whofe

- The ring-tail eagle, called here the Black Fighe. I fufpert, from th: deleviption, that the cotrel breds here. I hear alfo of a bird, called hete Smath ma cuim, but conh nut :hvere it.

Gotecl breeds
bottom
bottom is coverci with the tremendous ruins of the precipices that bound the road. I was informed, that here the wind rages with great fury during winter, and catching up the fnow in eddies, whirls it about with fuch impetuofity, as makes it dangerous for man or bealt to be out at that time. Rain alfo pours down fonctimes in deluges, and carrics with it ftone and growcl from the hills in fuch quantity, that I have feen the effects of thefe fpates, as they we called, lie c:ofs the roads, as the avalanches, or fuow-falls, do thofe of the Aps. In many parts of the Highlands were hofpitia for the reception of utwellers, called by the Scotch, Spittles, or hofpitals: the fame were ufual in Wales, where they are Hyled Ylpyty; and, in both places, were mantained by the religious houfes: as fimilar arylums are to this day fupported, in many parts of the Alps.

This pafs is the caftern entrance into the Highlands. The country now aflumes a now face: the hills grow lefs, but the land more barren, and is chiefly covered with heath and rock. The colges of the Dee are cultivated, but the reft only in patches, among which is generally a groupe of fimall houfes. There is alfo a change of trees, oak being the principal wood, but even that is fcarce.
2.

On the fouth lide of the river is Glen-Muik, remarkable for a fine cataract formed by the river Muik, which, after running for a confiderable way along a level moor, at once falls down a perpendicular rock of a femicircular form, called the Lin of Muik, into a hole of fo great a depth worn by the weight of water, as to be fuppofed by the vulgar to be bottomlefs.

Refrefhed my horfes at a hamlet called Tullich, and looking weft, faw the great mountain Laghin y gair, which is always covered with fnow.
Almof oppofite to the village of Tullich is Pananich, noted for the mineral water difcovered a few years ago, and found to be very beneficial in rheumatic and fcrophu. lous cafes, and complaints of the gravel. During fummer great numbers of people afficted with thofe diforders refort there to drink the waters; and for their reception feveral commodious houfes have already been built.

A little below Tullich ride over the fouth corner of the hill of Culbleen, where foon after the Revolution, a bloodlef's batle was fought between King Willian's forces, under the command of General Mackay, and fome gentlemen of the country, with their dependents. The laft made fuch an expeditious retreat, that, in derifion, it was called the race of Tullich.

The hill of Culbleen is the fouth-weft extremity of a range of mountains which form a deep femicircle, and enclofe on all fides, except the fouth, a very fruitful botion, and five parifhes, called Cromar. The foil, excepting fome moors and little hills, is good to the foot of the mountains, and produces the beft barley in the county of aberdeen. Cromar is the entrance into the low countrics; the Erfe language has been difufed in it for many ages, yet is fpoken at this time fix miles weft in Glen-gairn.

One of the mountains to the welt is flyled the Hill of Morven, of a ftupendous height, and on the fide next to Cromar, alnolt perpendicular. From the top, the whole country as far as Aberdeen, thirty computed nilcs, feems from this height as a plain; and the prolpect terminates in the German ocean. The other great mountains appear to fink to a common fize; and even Laghin $y$ gair abates of its grandeur. About four miles below Culbleen, at Charles-Town, ride on a line with the hill of Coul, the fouth-eaft extrenity of the Cromar mountains.

A litte north of Charles. Town thands Aboyne cafte, the feat of the Earl of Aboyne, amidit large plantations; but his Lordihip's pincs in the foreft of Glen Tanner, yicld to none in Scotland, excepting thofe of Dalmore.

Obferved feveral vaft plantations of pines, planted by gentlemen near their feats; fuch a laudable fpirit prevails in this refpect, that in another half century, it never fhall be faid, that to fpy the nakednefs of the land you are come.

Dine at the little village of Kincairn Oncil. Hereabouts the common people cultivate a great deal of cabbage. The oat-fields are inclofed with rude low mounds of fone.

It gives me real concern to find any hiflorical authority for overthrowing the beautiful relation that the powerful genius of Shakefpear has formed out of Boethius's tale of Macbeth. If we may credit Fordun, that ufurper was nain in his retreat at Lunfanan, two miles north-weft of this place. To Sir David Dalrymple's * accurate inveltigation of a dark period of the Scottifh hiftory, I am obliged for this difcovery. "Near the church of Lunfanan," adds that gentleman, "is the veftige of an ancient fortrefs once furrounded by "a brook that runs by." This he conjectures to have been the retreat of Macbeth.
Lay at a mean houfe at Banchoric. The country, from Bollitir to this place, dull, unlefs where varied by the windings of the river, or with the plantations.
Auguft 7 th, the nearer to $A$ berdeen, the lower the country grows, and the greater the quantity of corn : in general, oats and barley; for there is very little wheat fuwn in thofe parts. Reach

Aberdeen, a fine city, lying on a fmall bay, formed by the Dec, deep enough for fhips of two hundred tons. The town is abour two miles in circumference, and contains thirteen thoufand fouls, and about three thoufand in the fuburbs; but the whole number of inhabitants between the bridges Dee and 1)on, which includes both the Aberdeens, and the interjacent houfes or hamlets, is eflimated at twenty thoufand. It once enjoyed a good Share of the tobacco trade, but was at length forced to refign it to Glafgow, which was fo much more conveniently fituated for it. At prefent, its imports are from the Baltic, and a few merchants trade to the Weft Indies and North America. Its exports are, fockings, thread, falmon, and oatmeal : the firft is a moft important article, as appears by the foliowing ftate of it. For this manufacture 20,800 pounds worth of wool is annually imported, and 1600 pounds worth of oil. Of this wool is annually made 69,333 dozen pairs of flockings, worth, at an average 11. sos. per dozen. Thefe are made by the country people, in almoft all parts of this great county, who get 4s. per dozen for fpinning, and 14s. per dozen for knitting, fo that there is annually paid them $62,3=91.14$ s. And befides, there is about 2000l. value of ftockings manufactured from the wool of the county, which encourages the breed of Theep much; for even as high as Invercauld, the farmer fells his fheep at twelve fhillings a-piece, and keeps them till they are four or five years old, for the fake of the wool. About 200 combers are alfo entployed conttantly. The thread manufucture is another confiderable article, though trifling in comparifon of the woollen.
The falmon fifheries on the Dee and the Don, are a good branch of trade: about 46 boats, and 130 men are employed on the firt ; and in fume years $167,000 \mathrm{lb}$. of filh have been fent pickled to Iondon, and about 930 barrels of falted fill exported to France, Italy, \&c. The fifhery on the Don is far lefs confiderable. About the time of Henry VIII. this place was noted for a confiderable trade in dried cod-fing, at that period known by the name of Habberdyn $\boldsymbol{f i f h}$.

The town of Aberdeen is in general well built, with granite from the neighbouring quarrics. The beft freet, or rather place, is the Cafle-freet: in the middle is an

[^47]oclagon building, with neat bas relievos of the Kings of Scotland, from James $\mathbf{I}$, to James VII. The town-houfe makes a good figure, and has a handfome fpire in the centre.
The eaft and weft churches are under the fante roof; for the North Britions obferve aconomy, even in their religion : in one I obferved a fmall fhip hung up; a votive offering frequent enough in Popifh churches, but appeared very unexpectedly here. But I am now fatisfied that the fhip only denotes the right the mariners have to a fitting place beneath.

In the church-yard lies Andrew Cant, minifter of Aberdeen, from whom the Spectator derives the word to cant: but in all probability, Andrew canted no more than the reft of his brethren, for he lived in a whining, age *; the word therefore feems to be derived from canto, from their finging out their difcourfes. The infcription on his monument fpeaks of him in very high terms, fyles him vir fuo feculo fummus, qui orbi huib et urbi ecclefiaftes, voce et vita inclinatam religionem fuftinuit, degeneres inundi mores refinxit, ardens et amans, Boanerges et Barnabas, Magnes et Adamus, \&cc. \&cc.

In the fame place are multitudes of long-winded epitaphs; but the following, though fhort, has a moft elegant turn:

> Si fides, fil humanitas, multoque gratus lepore candor ;
> Si fuorum amor, amicorum charias, omniumque Benevolentia fpiritum reducere poffent,
> Haud hicic fitus effet Johannes Buruet a Elrick, 1747.

The college is a large old building, founded by George Earl of Marechal, 1593. On one fide is this frange infription; probably alluding to fome fcoffers at that time:

> They have feid, Qulhat fay thay ? Let Yame fay.

In the great room are feveral good pidures. A head of the founder. The prefent Lord Marechal when young, and General Keith, his brother. Bifhop Burnet in his robes, as Chancellor of the Garter. A head of Mary Stuart, in black, with a crown in one hand, a crucifix in the other. Arthur Jonfton, a fine head by Jamefon. Andrew Cant, by the fame. Gordon of Strachloch, publifher of the maps; Doetor Gregory, author of the reflecting telefcope; and feveral others, by Jamefon.

In the library is the alcoran on vellum, finely illuminated.
A Hebrew bible, manufcript, with Rabbinical notes on vellum.
Ifidori excerpta ex libro: a great curiofity, being a complete natural hiftory, with figures, richly illuninated on fquares of plated gold, on vellum.

A paraphrafe on the Revelation, by James VI. with notes, in the King's own hand.
A fine millal.
'There are about a hundred and forty ftudents belonging to this college.
The convents in Aberdecn were; one of Mathurines, or of the order of the Trinity, founded by William the Lion, who died in 1214: another of Dominicans, by Alexander II.: a third of Obfervantines, a building of great length in the middle of the city, founded by the citizens, and Mr. Richard Vaus, \&sc. : and a fourth of Carmelies, or White Friers, founded by Philip de Arbuthnot, in 1350. In the ruins of this was difcovered a very curious filver chain, fix feet long, with a round plate at one end, and at the other a pear-fhaped appendage; which is ftill preferved in the library.

The grammar-fchool is a low but neat building. Gordon's hofpital is handfome; in front is a sood thatue of the founder: it mainains forty boys, children of the inhabiants of Aberdeen, who are apprenticed at proper ages.

The infirmary is a large plain building, and fends out between cight or nine hundred cured paticuts annually.

On the fide of the great bleachery, which is common to the town, are the public walks. Over a road, between the Canle-flreet and the harhour, is a very handfome arch, which muft attract the attention of the traveller.

On the ealt of the town is a work begun by Cromucll, from whence is a fine view of the fea: bencath is a fmall patch of ground, noted for producing very carly barley, which was the reaping.
l'rices - provifions in this town were thefe: Beef, ( 16 nunces to the pound) 2 (d. to 5 d.; mutton the fame; butter, ( 28 ounces to the pound) id. to 8d.; checfe, ditto, 4d to 4 dil. ; a large pullet, 6d. or tod.; duck, the fame; yoofe, 2s. 3 d.

Crofs the harbour to the granite quarries that coutribute to fupply London with paving flones. The flones lie either in large mosulas or in thattery beds; are cut into fhape, and the fmall pieces for the middle of the flreets are put on board for feven fhillings per ton, the long fones at ten-pence per fiot.

The bridge of Dee lies about two miles S. of the town, and confils of feven neat arches: before the building of that of Perth, it was efteemed the findt flructure of the kind in North Britain. It was founded, and is thill fupported hy fimsts dettined for that purpofe by Bithop Filphinfon. The following infeription on the buttrefs of a ruinous ifle in the cathedral of Old Aberdeen, informs us of the architect :- 'Thomas, the fon of Thomas Frencl, matter mafon, who built the bridge of the Dee and this ifle, is enterred at the fiov hereof, who died anno 1530.'

Augult 8th, vifited Old Aberdeen, about a mile north of the new; a poor town feated not far from the Don. The college is built round a fquare, with cleifters on the fouth fide. The chapel is very ruinous within ;-but there fill remains fome wood-work of exquifite workmanhip. This was preferved by the firit of the principal at the time of the reformation, who armed his people and checked the blind zeal of the barons of the Means, who after fripping the Cathedral of its roof, and robbing it of the bells, were going to violate this feat of learning. They fhipped their facrilegious booty with an intention to expofing it to fale in Holland *; but the veffel had farcely gone out of port, but it perihhed in a florm with all its ill gained lading.

The collere was founded in $1.29+$ by William Elphintlon, bifhop of this place, and 1 ord Chancellor of Scotand in the reign of James III.; and Lord Privy Seal in that of James IV. He was a perfion of fuch eminence, that his cotemporarie: firmly belicved that his death was prefaged by varions prodigies, and that fupernatural voices were heard a his interment, as if heaven more peculiarly interefted itfelf in the departure of fo great a character $\dagger$.
'The library is large. The moft remarkable things are; John 'Trevifa's tranflation of Higden's l'olychronicon, in $13^{87}$; the manulcript excellently wrote, and the language very good, for that time. $\Lambda$ very neat Dutch mullal, with elegant paintings on the margin. Another, of the angels appearing to the thepherds, with one of the men playing on the bagpipes. 1 mannicript catalogue of the old treafury of the college.

Hector Boethins was the firtt principal of the college, and fent for from Paris fur that purpute, on an annual falary of forty marks Scots, at thirteen-pence each. The fyuare

[^48]handfome; en of the inmine hundred e the public ry handfome s a fine view carly barley,

poor town flers on the wood-work cipal at the 1 of the baing it of the gious booty weely gone
place, and ical in that firmly beural voices the deparmflation of : languge rigs on the $f$ the men college. is for that The lytuare
tower
tower on the fide of the college was built by contributions from General Monk and the oflicers under him, then quartered at Aberdeen, for the reception of fludents; of which there are about a humdred belonging to the college, who lie in it.

In Bithop Elphinton's hatl is a picture of Bihhop Dunbar, who finifhed the bridge of Dee, and completed every thing elfe that the other worthy prelate had begun. Befides this are portraits of Forbes, Bifhop of Aherden, and Proleflors Sandiland and Gordon, by Jamefon. The Sybils: faid to be done by the fame hand, but feemed to me in too different a flyle to be his; but the Sybilla Asyptiaca and lirythrea are in good attitudes.
The cathedral is very ancient ; no mose than the two vriy antique fpires and one ifc, which is ufed as a church, are now remainiug. This bifhoprick was founded in the time of David I. who tramfated it from Mortlick in Banflihire to this place.
From a tumulus, called 'lille drom, now covered with trees, is a fine view of an extenfive and sich country; once a molt barren fpot, but by the indultry of the inhabitants brought to its prefent flate. A pretty vale boriered with wod, the cathedral foaring above the trees, and the river Don, form all together a molt agrecable profpect. Thefe are comprehended in the pleafure grounds of Scaton, the houfe of George Middleton, Efiq. ; which lies well flettered in the north-welt corner of the valley, and was probably the firlt villa built in the north of Scotand according to the prefent idea of elegance:

Beneath are fome cruives, or wears, to take falmon in. 'ahe owne are obliged by law to make the rails of the cruives " of a certain width, to permit fift: " a certain fize to pafs up the river; but as that is neglected, they pay an anmual fuil is the owners of the filleries which lie above to compenfate the lofs.

In the Regiam Majeftatem are preferved feveral ancien. ta..s relating to the Calmon fifheries, couched in terms expreflive of the fumplicity of $t$ : tines.

From Saturday night till Monday morning, they were obliged to leave a free palfage for the fifh, which is fyled the Saturdayes floppe $\%$.

Alexander I. enacted, 'That the freame of the water fal be in all parts fiva free, that ane fwine of the age of three zeares, well fed, may turne himfelf within the Itreane round about, fiva that his frowt nor taill fall not truch the bank of the water.'

- Shayers of reide fifior fimolts of falmond, the third time are punithed with death. And lie like le quala commands the fimine to be done.' Jac. IV. parl: 6. fatr. Rob. Ill.

Augult gth, coninne my journey: pafs over the bridge of Don; a fine Gorhic arch flugg over that fine river, from one rock to the other ; the height from the top of the arch to the water is fixty feet; its widh feventy-two. It was buitt by Henry de Cheyn, Billwp of Aberdeon and nephew to John Cummin Lord of Baderioch, who fuffering exile for his athachment to the daction of th. Commins on bis being refored to his fee, applied all the protis that had accumblated :3ng his ablence, cowards this mage iflcent work t. Ride for fome miles on the fea fands; pats through Newbuegh, a fimall village, and al low water ford the Y'hen, a river productive of the peal mutice: , go through the parish of Furvie, now emir ly overwhelmed with fand, (except two farmis) and about 500 l . per annum I il to the Lrrol family, as appars by the: wath of the factor, nawle before the court of fetlions in $\mathbf{1 6 0 0}$, to affertan the minithers salary. It wat at than mat anable land, mow covered with fhifting fands, like the delerts of Arabin, and no veltiges semain of any buildings, except a fmall fragment of the church.

* Cruives, \&c, A.all have their hacke two inches wide, that the fy may pars. Ro!). !.

ther

The country now grows very flat ; produces oats; but the crops are confiderably worfe than in the preceding country. Reach

Bownefs, or Buchanefs, the feat of the Earl of Errol, perched, like a falcon's neft, on the edge of a valt cliff above the fea. The drawing room, a large and very elegant apartment, hangs over it ; the waves run in wild eddies round the rocks beneath, and the fea fowl clamour above and below, forming a ftrange profpeet and fingular chorus. The place was once defenfible, there having been a ditch and draw-bridge on the acceflible fide; but now both are deftroyed.

Above five miles fouth is Slains, the remains of the old family cafte, feated flrongly on a peninfulated rock; out demolifhed in 1594 , by James VI. on the rebellion of the Earl of Huntly. Near this place are fome vaft caverns, once filled with curious ftalactical incruftations, now deftroyed, in order to be burnt into lime; for there is none in this country, that ufeful commodity being imported from the Liarl of Elgin's works on the Frith of Forth.
Here the fhore begins to grow bold and rocky, and indented in a ftrange manner with fmall and deep creeks, or rather immenfe and horrible chafins. The famous Bul' rs of Buchan iie about a mile north of Bownefs, are a vaft hollow in a rock, projecting into the fea, opera at top, with a communication to the fea through a noble natural arch, through which boats can pafs, and lie fecure in this natural harbour. There is a path rcund the top, but in fome parts too narrew to walk on with fatisfaction, as the depth is about thirty fathom, with water on both fides, being bounded on the north and fouth by finall creeks.
Near this is a great infulated rock, divided by a narrow and very deep chafin from the land. This rock is pierced through midway between the water and the top, and in violent forms the waves rufh through it with great noife and impetuofity. On the fides, as well as thofe of the adjacent cliffs, breed nultitudes of kittiwakes *. The young are a favourite difh in North Britain, being ferved up a little before dinner, as a whet for the appetite; but, from the rank finell and tafte, feem as if they were more likely to have a contrary effect. I was told of an honeft gentleman who was fet down for the firft time to this kind of whet, as he fuppofed; but atter demolifhing half a dozen, with much impatience declared, that he had eaten fax, and did not find himfelf a bit more hungry than before he had began.

On this coaft is a great fiftery of fea dogst, which begins the lant week of July, and ends the firft in September. The livers are boiled for oil ; the bodies fplit, dried, and fold to the common people, who come from great diftances for them. Very fine turbots are taken on this coalt; and towards Peterhead are good filheries of cod and ling. The lord of the manor has g . 6 s . Sd. per annum from every boat, (a fix man boat) but if a new crew fets up, the lord, by way of encouragement, linds them a boat. Befides thefe, they have little yawls for catching bait at the foot of the rocks. Mulcles are alfo inich ufed for bait, and many boats loads are brought for that purpofe from the mouth of the Ythen. Of late years, a very fucceffful falmon fifhery has been fet up in the fandy bays below Slains. This is performed by long nets, carried out to fea by boats, a great compais taken, and then hawled on hore. It is remarked, thefe filh fwim againf the wind, and are much better tafted than thole taken in frefl waters.

Mcit of the labour on fhore is performed here by the women: they will carry as much ath as two men can lift on their thoulders, and when they have fold their cargo and emptied their bafket, wiil re-place part of it with fones: they go fixteen miles to

- Br. Zool. No. 250.
$\dagger$ The piched Shark, Br. Zool. III. No ${ }_{4} \mathrm{c}$.
Id
fell or barter their fifh; are very fond of finery, and will load their fingers with trumpery rings, when they want both floes and fockings. The fleet was the laft war fupplied with great numbers of men from this and others parts of Scotland, as well as the army : I think near 70,000 engaged in the general caufe, and affifted in carrying our glory through all parts of the globe: of the former, numbers returned; of the latter, very few.
The tooufes in this country are built with clay, tempered in the fame manner as the Ifraelites made their bricks in the land of Ngypt: after dreffing the clay, and working it up with water, the labourers place on it a large fratum of flraw, which is trampled into it and made fimall by horfes: then more is added, till it arrives at a proper confiftency, when it is ufed as a plaifter, and makes the houfes very warm. The roofs are farked, $\mathbf{i}$. e. covered with inch-and-half deal, fawed into three planks, and then nailed to the joifts, on which the flates are pinned.

The land profpect is extremely unpleafant ; for no trees will grow here, in fpite of all the pains that have been taken: not but in forner times it muft have been well wooded, as is evident from the number of trees dug up in all the bogs. The fame nakednefs prevails over great part of this coaft, even far beyond Banif, except in a few warm bottoms.
The corn of this tract is oats and barley; of the laft I have feen very good clofe to the edges of the cliffs. Rents are paid here partly in cafh, partly in kind; the laft is commonly fold to a contractor. The land here being poor, is fet cheap. The people live hardly: a common food with them is fowens, or the groffer part of the oatneal with the hufks, firt put into a barrel with water, in order to grow four, and then boiled into a fort of pudding, or flummery.

Auguft 1ith, crofled the country towards Banff, over Oatlands, a coarfe fort of downs, and feveral black heathy moors, without a fingle tree for numbers of miles. Sce Craigfon caftle, a good houfe, once defenfible, feated in a fnug bottom, where the plantations thrive greatly. Saw here a head of David Lefly, an eleve of Guftavus Adolphus: a fucceisful general againf the royal caufe: unfortunate when he attempted to fupport it; loft the battle of Dunbar, being forced to engage contrary to his judgment by the enthufiafm of the preachers : marched with an unwilling army to the fatal battle of Worcefter ; confcious of its difaffection or its fears, he funk beneath his apprehenfions; was difpirited and confounded : after the fight, lof his liberty and reputation; but was reftored to both at the reftoration by Charles II. who created him Baron of Newark. Another head, Sir Alexander Frazer, the Knight of Dores ; both by Jamefon. Paffed by a fmall ruined caftle, in the parifh of Kinedward, feated on a round hill in a deep glen, and fcarce acceffible; the ancient name of this cafle was Kin, or KynEden, and faid to have been one of the feats of the Cummins, Earl of Buchan. Ford the Devron, a fine river, over which had been a beautiful bridge, now wafhed away by the floods. Enter Banffihire, and reach its capital

Banff, pleafantly feated on the fide of a hill, has feveral Arcets; but that with the town-houfe in it, adorned with a new fpire, is very handfome. This place was erected into a borough by virtue of a charter from Robert II. dated October 7 th, 1372, endowing it with the fame privileges, and putting it on the fame footing with the burgh of Aberdeen; buttradition fays it was founded in the reign of Malcoln Canmore. The harbour is very bad, as the entrance at the mouth of the Devron is very uncertain, being often ftopped by the flifting of the fands, which are continually changing in great forms: the pier is therefore placed on the outfide. Much falmon is exported
vol. 111 .
from hence. About Tivop-head, fome kelp is made; and the adventurers pay the lord of the manor 501 . per annum for the liberty of colleating the materials.

Banff had only one monaftery, that of the Carmelites, dedicated to the Virgin Mary : whofe rents, place and lands were befowed on King's College in Aberdeen in 1617 by James VI.

The Earl of Finlater has a houfe, prettily feated on an eminence near the town, with fome plantations of fhrubs and finall trees, which have a grood effect in fo bare a country. The profpet is very fine, commanding the rich meadows near the town, Down a fimall but well-built fifhing town, the great promontory of 'Troop-head, and to the north the hills of Rofshhire, Sutherland, and Caithnefs.

The houfe once belonged to the Sharps; and the violent archbifhop of that name was born here. In one of the apartments is a picture of Jamefon by himfelf, fitting in his painting-room, dreffed like Rubens, and with his hat on, and his pallet in his hand. On the walls are reprefented hung up, the pictures of Charles I. and his Queen; a head of his own wife ; another head; two fea views, and Perfeus and Andromeda, the productions of his various pencil.

Duff Houfe, a vaft pile of building, a little way from the town, is a fquare, with a fquare tower at each end ; the front richly ornamented with carving, but, for want of wings, has a naked look: the rooms within are very fmall, and by no means anfwer the magnificence of the cafe.

In the apartments are thefe pictures: Frances, Dutchefs of Richmond, full length, in black, with a little pidure at her breat, Nit. 57, 1633, by Vandyck : was granddaughter by the fatber to 'lhomas Duke of Norfolk; to Edward Stafford Duke of Buckingham, by the mother. A lady who attempted the very climax of matrimony: firt married the fon of a rich vintner: gave hopes after his death to a knight, Sir G. Rodnes, who on being jilted by her for an earl, Edward Earl of Hertford, wrote to her in his own blood a weli compofed copy of veries, and then fell on his fword; having buried the Earl, gave her hand to Ludovic Duke of Richmond and Lenox, and on lis deceafe fpread her nets for the old monarch James I. Her avarice kept pace with her vasity : when vifited by the great, the had all the parade of officers, and gentlemen who attended : tables were fpread, as if there had been ample provifion; but the moment her vifitors were gone, the cloths were taken off, and her train fed with a moft fcanty fare. Her pride indaced her to draw up an inventory of mott magnificent prefents, fhe withed the world to believe the had given to the Queen of Bohemia; prefents of mafly plate that exitted only on a paper*. Befides this fingular character, are two fine heads of Charles I. and his Queen. A head of a Duff of Corfenday, with fhort grey hair, by Cofmo Alexander, defcendant of the famous Jamefon. Near the houle is a fhrubbery, with a walk two miles long, leading to the river.

I muft nor be filent refpecting the Reverend Mr. Charles Cordincr, miniffer at the cpifcopal chapel at Banff. He has made his abilities fufficiently known by his feveral ingenious publications : and I muft exprefs my happinefs in having been the caufe of bringing them to the view of the public, much to its entertainment, and Iflatter myfolf not a lietle to his own benefit, and that of his numerous family. When I had publifhed the laft volume of my tours in Scotland, I reflected that there were certain parts which I had not been able to vifit. I prevailed on Mr. Cordiner to undertake the tour which appeared in 1780, under the title of Antiquities and Scencry of the North of Scotland,

[^49]illuftrated by twenty-one plates taken from his own beautiful drawings. He afterwards publifhed, and continues to publifh, in numbers, the moft remarkable ruins, and fubjects of natural hiltory he met with in his journies through the northern parts of his country. Thefe, I hope, will mect the encouragement they merit, and his labours receive their due reward.

Aug. 12. About two miles weft of Banff, not far from the fea, is a great ftratum of fand and fhells, ufed with fuccefs as a manure. Sea tang is alfo much ufed for corn lands, fometinies by itfelf, fometimes mixed with earth, and left to rot; it is befides often laid frefl on grals, and anfwers very well. Paffed by the houle of Buyne, a ruined cafte on the edge of a deep glen, filled with fome good afl and maples.
Near Portfoy, a fmall town in the parifh of Fordyce, is a large ftratum of marble, inwhich afbeftos has been fometimes found: it is a coarfe fort of verd di Corfica, and ufed in fome houfes for chimney-pieces. Portloy is the principal place in this parifh, and contains about fix hundred intabitants, who carry on a confiderable thread mamufacture, and one of fnuff: there alfo belong to the town twelve fhips, from ferty to a hundred tons burthen; and there ale in the parifh fix fifhing boats, each of whofe crew cunfilts of fix men and a boy. Reach
Cullen-houfe, feated at the edge of a deep glen full of very large trees, which, being out of the reach of the fea winds, profper greatly. This fput is very prettily laid out in walks, and over the entrance is a magnificent arch fixty feet high, and eighty-two in width. The houfe is large, but irregular. The moft remarkable pictures are, a full length of James VI. by Mytens : at the time of the Revolution, the mob had taken it out of Holy-rood Houfe, and were kicking it about the ftreets, when the Chan. cellor, the Earl of Finlater, happening to pafs by, redeemed it out of their hands. A portrait of James Duke of Hamilton, beheaded in 1649, in a large black cloak, with a itar, by Vandyck. A half length of his brother; by the fame, killed at the battle of Worcefter. William Duke of Hamilton, prefident of the Revolution Parliament, by Kneller. Old Lord Banff, aged 90, with a long white fquare beard, who is faid to have incurred the cenfure of the church, at that age, for his gallantries *.
Not far from Cuilen-houfe are the ruins of the caftle of Finlater, fituated on a high rock, projecting into the fea. It was frengthened in 1455 by Sir Walter Ogilvie, who had licence fro:a James II. to build a tower and fortalice at his cafte of Finlater. It continued in poffeffion of the family till it was ufurped by the family of the Gordons; but was reftored to the right heirs about the year 1562, by Queen Mary, who for that jurpofe caufed it to be invefted both by fea and land.

The country round Cullen has all the marks of improvement, owing to the $\dagger$ indefatigable pains of the late noble owner, in advancing the art of agriculture and planting, and every cther ufeful bufinefs, as far as the nature of the foil would admit. His fuccefs in the firlt was very great; the crops of beans, peas, oats, and barley were excellent; the wheat very good, but through the fault of the climate, will not ripen till it is late, the harveft in thefe parts bcing in October. The plantations are very ex-

[^50]tenfive, and reach to the top of Binn-hill, but the farther they extend from the bottoms, the worfe they fucceed.

The town of Cullen is mean, yet has about a hundred looms in it ; there being a flourifhing manufacture of linen and thread, of which near fifty thoufand pounds worth is annually made there and in the neighbourhood. Upwards of two thoufand bolls of wheat, barley, oats, and meal are paid annually by the tenants to their landlords, and by them fold to the merchant and exported: and befides, the upper parts of the parifh yield peas, and great quantaies of oats, which are fold by thofe tenants who pay their rents in cafl.

Near this town the Duke of Cumberland, after his march from Banff, joined the reft of his forces from Strath-Bogie, and encamped at Cullen.

In a fmall fandy bay are three lofty fpiring rocks, formed of flinty maffes, cemented together very differently from any fratum in the country. Thefe are called the Three Kings of Cullen. A little farther is another vaft rock, pierced quite through formed of pebbly concretions lodged in clay, which had fubfided in thick but reguiar layers.
In this country are feveral cairns or barrows, the places of interment of the antient Caledonians, or of the Danes, for the method was common to both mations. At Craig-mills near Glaffaugh was a very remarkable one demolifhed about fourteen years ago. The diameter was fixty feet, the height fixteen; formed entirely of fones brought from the fhore, as appears by the limpets, mufcles, and other fhells mixed with them. The whole was covered with a layer of earth four feet chick, and that finifhed with a very nice coat of green fod, inclofing thie whole. It feems to have been originally formed by making a deep trench rourd the fpot, and flinging the earth inwards: then other materials brought to complete the work, which muit have been that of an whole army. On breaking open this cairn, on the fummit of the fony heap beneath the integument of earth was found a ftone coffin formed of long flags, and it the complete fkeleton of a human body, lain at full length, with every bone in its proper place; and with them a decr's horn, the fymbol of the favourite a:nufement of the deceafed.
About five years ago another cairn was broke open at Kil-hillock, or the hill of burial, and in it was found another coffin about fix feet long, with a fkelcton, an urn, and fome charcoal: a confiderable deal of charcoal was alfo met with internixed every where among the fones of the cairn. By this it appears that the mode of interment was various at the fame period; for one of thefe bodies mult have been placed entirely in its cemetry, the other burnt, and the afhes collected in the urn.

A third cairn on the farm of Brankanentim near Kil-hillock, was opened very lately; and in the middle was found a coffin only two feet fquire, made of flag. Itones fet on their edge, and anoiher by way of cover. The urn was feated on the ground, filied with afhes, and was furrounded in the coffin with charcoal and bones, probably bo: es belonging to the fame body, which had not been reduced to afhes like the contents of the urn.

A fourth urn was difcovered in a cairn on the hill of Down, overlooking the river itw, and town of Bauff. This was alfo placed in a coffin of flat ftones, with the mouth downwards, flanding on another fone. The urn was ornamented, but round it were placel three others, fmalicr and quite plain. The conten sof each were the Carae ; afhes, burnt bones, fiint arruw heads with almoft vitrified furfaces, and a piece of flint o an oval thape flatted, two inches long, and an inch and a half thick. There was alfo in the larger ura, and one of the leffer, a finall flender bone four inches
long, and fomewhat incurvated and perforated at the thicker end: it is apparently not human; but the animal it belonged to, and the ufe are unknown.

The materials of the urns appear tc have been found in the neighbourhood; and confift of a coarfe clay mixed with fmall fones and fand, and evidently have been only dried, and not burnt. By the appearance of the infide of the larger urn, it is probable that it was placed over the bones while they were hot and full of oil; the whole infide being blackened with the feam ${ }_{\text {; }}$ and where it may have been fuppofed to have been in contact with then, the flain pervades the entire thicknefs. The urn was thirteen incies high.

Befides is a numerous affemblage of cairns on the Cotton-hill, a mile fouth of Birkenbor, probably in memory of the flain in the victory obtained in 998, by Indulphus, over the Danes. The battle chiefly raged on a moor near Cui'en, where there are fimilar barrows; but as it extended far by reafon of the * retreat of the vanquilhed, thefe feem to be flung together with the fame defign.
Not far from thefe are two circles of long fones, called Gael crofs: perhaps they might have been erected after that battle ; and as gaul is the Erfe word for a ftranger or enemy $\dagger$, as the Danes were, I am the more inclined to fuppofe that to have been the fact.
Nor is there wanting a retreat for the inhabitants in time of war; for round the top of the hill of Durn is a triple entrenchment fill very diftinct ; the middle of fone, and very ftrong in the moft acceffible place; and fuch faftneffes were far from being. unneceflary in a tract continually expofed to the ravages of the Danes.
The vault of the family of the Abercrombies in this parih muft not be paffed over in filence: it is lodged in the wall of the church, and is only the repofitory of the fculls. The bodies are depofited in the earth beneath; and when the Luird dies, the fcull of his predeceffor is taken up and flung into this Golgotha, which at prefent is in poffeffion of nineteen.

Some fuperftitions ftill lurk even in this cultivated country. The farmers carefully preferve their cattle againft witchcraft by placing boughs of the mountain afh and honcyfuckle in their cow-houfes on the 2d of May. They hope to preferve the milk of their cows, and their wives from mifcarriage by tying red threads about them: they bleed the fuppofed witch to preferve themfelves from her charms: they vifit the well of Spey for many diftempers, and the well of Drachaldy for as many, offering fmall pieces of money and bits of rags. The young people determine the figure and fize of their hufbands by drawing cabbages blindfold on All-Hallows even; and, like the Englifh, fling nuts into the fire ; and in Fcbruary draw valentines, and from them colleat their future forture in the nuptial ftate.

Every great family had in former times its dæmon, ar genius, with its peculiar attributes. Thus the family of Rothemurchus had the Bodach an dun, or ghof of the hill. Kiachardine's, the fpectre of the bloody hand. Gartinbeg-houfe was haunted by Bodach Gartin; and Tulloch Gorms by Maug Moulach, or the girl with the hairy left hand. The fynod gave frequent orders that inquiry thould be made into the truth of this apparition : and one or two declared that they had feen one that anfwered the defcription $\ddagger$.

The little fpectres called Tarans $\boldsymbol{S}$, or the fols of unbaptized infan*s, were often feen flitting among the woods and fecret places, bewailing in foft voi weir hard fate.

[^51]Cuuld not fuperfition have likewife linited their fuferings; and, like the wandering ghofts of the unburied, at length giver them an Elyfium?

> Centum errant annos, volnant hxe litora circum: Tum demum adnifi ftagna exoptata sevifurt.

Paffed through a fine open country, full of gentle rifings, and rieh in corn, with a few chump of trees faringly fattered over it. Great ufe is made here of thate anarle, a grity indurated marle, found in valt frata, dipping pretty much: it is of different colours, blue, pale brown, and reddith; is cut out of the quarry, and had wory thick on the ground in lumps, but will not whelly diffolve under three er four yous. In the quarry is a great deal of farry matter, which is liid apart, and bu:nt for lime. A-, rive at

Cafte Gordon, a large old houfe, the feat of the Dute of cordon, fing in a low wet country, near fone large well-grown woods, an! a ronfideravie one of great hollies. It was founded by George fecond Earl of Mumbly, who dict in igot, and was originally called the caftle of the bog of Gight. It inherited, till of late, very little of is antient fplendor: but the prefent Duke has made confiderable additions in a vary elegant inve. By accident 1 met with an old print that hews it in all thenagrificence deferibed by a fingular taveler of the midale of the laft century. "Bogagiet!," fays he," the Marguis of huently's polace, all bralt of fone facing the oceat, whofe fair front get prejledice afide) worthil defurves en Englifhman's applaufe for her lofty and majeftic towers and tu:ret, tha: Rom ine air; and feeningly make dents in the very clouds. At firl fight, 1 mult coniete, it wock me with admiration to gaze on fo gaudy and regular a frontifpiece, more en, micitly 0 confider it in the nook of a nation "."

The primeipal pitures in cifte Gorlon are, the firt Marquis of Huntly, who, on his firt artival at court, forgetting the atual obeifance, was afked why he did not bow: he begge! His Majefy's pardon, and excufed his want of refpect, by faying he was juft come from a place wherc every body bowed to him. Second Marquis of Huntly, beheaded by the Covenanters. ILis fon, the gallant Lord Gurdon, Montroofe's friend, killed at the batti= of Auldfurd. Lord Lewis Gordon, a lefs generous warrior, the plague $f$ of the peopic of Murray, (then the feat of the Covenanters) whofe character, wite that of the brave Montrofe, is well contrafted in thefe old lines:

> If ye with Montrofe gac, ye'l get fic and wae enough;
> If ye vith Lord Lewis gae, ye'l get rob and rave enough.

The her of the fecend Countefs of Iluntly, daughter of James I. Sir Peter Frafer, a full langth in armour. A fine îmall portrati of the Abbé de Aubigné, fitting in his fludy. A very fine head of St. John receiving the Revelation; a beautiful expreffion of attention and devorion.

The Duke of Corton fill keeps up the diverfion of falconry, and had feveral fine hawks of the peregrine and genile falcon fpecies, which breed in the rocks of Glenmore. ! faw alfo here a true Highland grey-hound, which is now become very farce :

[^52]it was oi a very large fize, ftrong, deep chefted, and covered with very long and rough hair. Thiskind was in great vogue in former days, and ufed in valt numbers at the magnificent flag-chafes, by the powerful chieftains.
I allo faw here a dog the offspring of a wolf and Pomeranian bitch. It had much the appearance of the firft, was very good-natured and fportive; but being nipped at a weak deer, it inftantly brought the animal down and tore out its throat. This dog was bred by Mr. Brook, animal-merchant in London, who told me that the congrefs between the wolf and the bitch was immediate, and the produce at the litter was ten.
The Spey is a dangerous neighbour to Caftle Gordon; a large and furious river, overflowing very frequently in a dreadful manner, as appears by its ravages far beyond its banks. The bed of the river is wide and full of gravel, and the channel very fhiftiug.

The Duke of Cumberland paffed this water at Belly church, near this place, when the chamel was lo deep as to take an officer, from whom I had the relation, and who was fix feet four inches high, up to the brealt. The banks are very high and fleep; fo that, had not the rebels been providentially fo infatuated as to neglect oppofition, the paffage muft have been attended with confiderable lors.

The falmon fifhery on this river is very great: about feventeen hundred barrels full are caught in the feafon, and the fhore is rented for about 12001 . per annum.

Auguft 14th, paffed through Fochabers, a wretched town, clofe to the caftle: Croffed the Spey in a boat, and landed in the county of Murray.
The peafants' houfes, which, throughout the fhire of Banff were very decent, were now become very miferable, being entirely made of turf: the country partly moor, partly cultivated, but in a very flovenly manner.

Between Fochabers and Elgin on the right lies Innes, once the feat of the very an. ciont family of that name, whofe amals are marked with great calamities. I fhall recite two which Arongly paint the manners of the times, and one of them alfo the manners of that abandoned ftatefman the Regent Earl of Morton. I fhall deliver the tales in the fimple manmer they are told by the hiftorian of the houfe.
"This min Alexander Innes 2oth heir of the houfe (though very gallant) had fomething of particularyty in his temper, was proud and pofitive in his deportment, and had his lawfuits with feverall of his friends, amongit the reft with Innes of Pethnock, which had brought them both to Edinburgh in the yeir 1576, as I take it, $\mathrm{q}^{\text {n }}$ the laird haveing met his kinfman at the crofs, fell in words with him for dareing to give him a citation; in choller either ftabed the gentleman with a degger or piftoled him (for it was varioufly reported). When he had done, his fomach would not let him fly but he walkel up and doun on the fpott as if he had done nothing that could be quareled, his friends lyfe being a thing that he could difpofe of without being bound to count for it to any ovn. and $y^{n}$ flayed till the larle of Mortune who was Regent fent a guard and caried him away to the caftell, but $q^{n}$ he found truely the danger of his circumftance and $y^{\prime}$ his proud rath action behooved to coft him his lyfe, he was then free to redeens that at any rate and made ane agreement for a remifione with the regent at the pryce of the barreny of Kilmalemnock which this day extends to 24 thoufand marks rent giriv, The evening after the agrecment was made and writt, being antry; ith ber friends at a collatione and talking anent the deinefs of the ranfome the res nade mack hiw pay for his lyfe, he waunted that hade his foot once loofs he
nd faine fee q' the ! wile of Mortune durt come and pofiefs his lands: $q^{\text {cl }}$ being wid to the regent that night, he r folved to play fuir game with him, and therefore mough $\mathrm{q}^{\prime}$ he fipoke was in drink, the very nest day he put the fentence of death in exc-
cutione ag' him by caufing his head to beftruck of in the cafte and $q^{\prime}$ poffent his eftate."

The other rela:ion, ftill more extraordmar;, is given in the appendix.
Dine at Elgin ", a good town, with many, or the houfes built over piazzas: excepting its greht cattle fairs, has little trade, hut is cmarkable for its ceclefantical antiquities. The cathedral had been a magnificent pile, but is now in ruins : it was deItroycd by reafon of the fale of the lead that covered the roof, which was done in $15^{67}$, by order of council, to fupport the foldiery of the regent Murray. Johnfton, in his Encomia Urbium, celebrates the beauty of EIgin, and laments the fate of this noble building.

Arcihus heroum nitidis uths cingitur, intus
Plehei radiant, nobiliumque I.ares:
Omnia deleêant, veteris fed rudera rempli
Dum \{peđas, lachrymis, Scotia, tinge genas.
The weft door is very elegant, and richly ornamented. The choir very beautiful, and has a fine and light gallery running round it ; and at the caft end are two rows of narrow windows in an excellent Gothic tafte. The chapter houfe is an octagon, the roof fupported by a fine fingle column, with neat carvings of coats of arms round the capital. There is fill a great tower on each fide of this cathedral ; but that in the centre, with the fpire and whole roof, are fallen in, and form moft awful fragments, mixed with the battered monuments of knights and prelates. Boethius fays that Duncan, who was killed by Macbeth at Invernefs, lies buried here. Numbers of modern tumb-f ones aifo crowd the place ; a proof how difficult it is to eradicate the opinion of local fanatity, even in a religion that affeets to defpife it.

The cathedral was founded by Andrew de Moray $\dagger$ in 1224, on a piece of land granted by Alexander the II.: and his remains were depofited in the choir under a tomb of blue marble in 1244. The great tower was built principally by John Innes, bifhop of this fee, as appears by the infcription cut on one of the great pillars: Hic jacet in Xto Pater et Dominus, Dominus Johannes de Innes hujus ecclefix epifcopusqui hoc notabile oppus incepit et per feptennium edificavit $\uparrow$.

This town had two convents; one of Dominicans, founded in 1233 or 1244 , by Alexander II. ; another of Obfervantines, in 1479, by John Innes.

About a mile from hence is the cafle of Spinie; a large fquare tower, and a valt quantity of other suined buildings, fill remain, which Thews its ancient magnificence whilt the refidence of the bifhops of Murray: the lake of Spinie almort wathes the walls; is about five miles long, and a half mile broad, fituated in a flat country. During winter, great numbers of wild fwans migrate hither ; and I have been told that fome bave bred here. Boethius $\$$ fays they refort here for the fake of a certain herb called after their name.

Not far from Flgin is a ruined chapel and preceptory, called Maifon Dicu. Near it is a large gravelly cliff, from whenec is a beautiful view of the town, cathedral, a round hill with the remains of a cafle, and beneath is the gentle ftream of the Laflie, the Loxia of Ptolemy.

Near it 1 , a round caffic, the
ut of feveral ind eminerit

Three
' l hree miles fouth is the Priory of Plufcairdin, in a moft fequeftered place; a beautiful ruin, the arches elegant, the pillars well turned, and the capitals rich*.

Crofs the Loffie, ride along the edge of a vale, which has a frange mixture of good corn, and black turbories : on the road-fide is a mill-ftone quarry.
Arrive in the rich plain of Murray, fertile in corn. The upper parts of the country produce great numbers of cattle. The view of the Firth of Murray, with a full protpect of the high mountains of Rofsflaire and Sutherland, and the magnificent entrance into the bay of Cromartie between two lofty hills, form a fine piece of fcenery.

Turn about half a mile out of the road to the north, to fee Kinlofs an abbey of Ciftercians, founded by David I. In 1igo. Near this place was murdered by thieves Duffus, King of Scotland : on the difcovery of his concealed 'Jody it was removed to Jona, and interred there with the refpect due to his merit. The Prior's chamber, two femicircular arches, the pillars, the couples of feveral of the roofs afford fpecimens of. the molt beautiful Gothic architecture, in all the elegance of fimplicity, without any of its fantaftic ornaments. Near the abbey is an orchard of apple and pear trees, at leaf coeval with the laft Monks; numbers lie proftrate; their venerable branches feem to have taken frefl roots, and were loaden with fruit, bayond what could be expected from their antique look.
Near Forres, on the roadfide, is a vaft column, three feet ten inches broad, and one foot three inches thick: the height above ground is twenty-three feet; below, as it is faid twelve or fiftecn. On one fide are numbers of rude figures of animals, and armed men, with colours flying: fome of the men feemed bound like captives. On the oppofite fide was a crofs, included in a circle, and raifed a little above the furface of the ftone. At the foot of the crofs are two gigantic figures, and on one of the fides is fome clegant $f$ ist-work.

This is called King Sueno's ftone; and feems to be as Mr. Gordon $\dagger$ conjectures, erected by the Scots, in memory of the final retreat of the Danes: it is evidently not Danifh, as fome have afferted; the crofs difproves the opinion, for that nation had not then received the light of chriftianity.

On a moor not far from Forres, Boethius, and Shakefpear front him, places the rencountre of Macbeth and the three wayward fifters or witches. It wats my fortune to meet with but one, which was fomewhere not remote from the ruias Kyn-Eden : the was of a fpecies far more dangerous than thefe, but neither withered, nor wild in her attire, but fo fair,

> She look'd not like an inhabitant o' th' earth !

Boethius tells his fory admirably well : but entirely confines it to the predictions of the three fatal fifters, which Shakefpear has fo finely copied in the IVth fcene of the ift act. The poet, in conformity to the beliff of the times, calls them witches; in fact they were the Fates, the Valkyrix $\ddagger$ of the northern nations, Gunna, Rota, and Skulda, the handmaids of Odin, the arctic Mars, and fyled the chufers of the flain, it being their office in battle to mark thofe devoted to death.

[^54]We the reine to flaughter give,
Oura to kill, and oura to (pare: Spite of danger he fhall live, (Weave the crimfon web of war)".
Boethius, fenfible of part of their bufinefs, calls them Parce: and Shakefpear introduces them juft going upon their employ,

> When thall we three meet again
> In thunder. I: in or in rain?
> When the tow
> Wher the barte

But all the fine incantations that fucceed, are borrowed from the fanciful Diableries of old times, but fublimed, and jurged from all that is ridiculous by the creative genius of the inimitable poet, of whom Dryden fo jufly fpeaks :

> But Shakefyear's magic cou'd not copied be, Within that circle nune durft walk hut tor

We laugh at the magic of others; but Shakefpear's makes us tremble. The windy caps $\dagger$ of King Eric, and the vendible knots of wind of the Finland $\ddagger$ magicians appear infinitely ridiculous; but when our poet dreffes up the fame idea, how horrible is the form he creates!

> Though you untie the winds, and let them fight Againtl the churches; though the yelty waves
> Coufound and fwallow navigation up:
> Though bladed corn be lodged and trees blown down ;
> Though caftea topple on their warder'a heada :
> Thnugh palaces and pyramide do nope
> Their heads in their foundations; though the treafure
> Of nature's germins tumble all logether,
> Fiven till dellruetion ficken, antwer me
> To what I afk.

Lay at Forres, a very neat town, feated under fome little hills, which are prettily divided. In the great ftreet is a town-houfe with a handfome cupola, and at the end is in arched gateway, which has a good effect. On a hill weft of the town are the poor remains of the caftle, from whence is a fine view of a rich country, interfperfed with groves, the bay of Findorn, a fine bafon, almoft round, with a narrow frait into it from the fea, and a melancholy profpect of the eftate of Cowbin, in the parih of Dyke, now nearly overwhelmed with fand. This ftrange inundation is ftill in motion, but moftly in the time of a weft wind. It moves along the furface with an even progreffion, but is fopped by water, after which :t forms litt'e hills: its motion is fo quick, that a gentleman affured me he had feen an apple-tree fo covered with it, in one feafon, as to leave only a few of the green leaves of the upper branches appearing above the furface. An eftate of about 300 l . per annum has been thus overwhelmed; and it is not long fince the chimnies of the principal houfes were to be feen: it began abc ut eighty years ago, occafioned by the cutting down the trees, and pulling up the bent, or ftarwort, which

[^55]gave occafion at laft to the act g th G. II. to prevent its farther ravages, by prohibiting the deftruction of that plant.

A little N.E. of the bay of Findorn is a piece of land projecting into the fea, called Brugh or Burgh. It appears to have been the landing-place of the Danes in their deftructive defcents on the rich plains of Murray: it is fortified with foffies; and was well adapted to fecure either their landing or their retreat.

Aug. 15. Crofs the Findorn; land near a friable rock of whitifh ftone, much tinged with green, an indication of copper. The ftone is burnt for lime. From an aljacent eminence is a pieturefque view of Forres. About three miles farther is 'Tarnaway caftle, the ancient feat of the Earls of Murray. The hall, called Randolph's-hall, from its founder Earl Randolph, one of the great lupporters of Robert Bruce, is timbered at top like Weftminfter-hall: its dimenfions are 79 feet by 35 , 10 inches, and feems a fit refort for barons and their vaflals. In the rooms are foure good heads: one of a youth, with a ribband of fome order hanging from his neck. Sir William Balfour, with a black body to his veft, and brown neeves, a gallant commander on the parliament's fide in the civil wars, celebrated for his retreat with the body of horfe from Leftwithicl in face of the king's army ; but juftly branded with ingratitude to his mafter, who by his favour to Sir William in the beginning of his reign, added to the popular difcontents then arifing. The Fair, or Bonny Earl of Murray, as he is commonly called, who was murdered, as fuppofed, on account of a jealoufy Janes VI. entertained of a paifion the queen bad for him; at leaft fuch was the popular opinion, as appears from the old ballad on the occafion:

> He was a braw gallant, And he playca at the gluve*; And the bonny Earl of Murray, Oh! he was the queen's love.

There are befides, the heads of his lady and daughter, all on wood, except that of the karl. To the fouth fide of the caftle are large birch woods, abounding with ftags and rocs.

Continued my journey wett of Auldearne : am now arrived again in the country where the Erfe fervice is performed. Jult beneath the church is the place where Montrofe obtained a fignal vitory over the Covenanters, many of whole bodies lie in the church, with an infcription, importing, according to the cant of the time, that they died fighting for their religion and their king. I was told this anecdote of that hero: that he always carried with him a Cæffar's Commentarics, on whofe margins were written, in Montrofe's own hand, the gencrous fentiments of his heart, verfes out of the Italian poets, expreffing his contempt for every thing but glory.
Having a diltant view of Nairn, a finall town near the fea, on a river of the fame name, the fuppofed tuaefis of Ptolemy. Ride through a tich corn country, mixed with deep and black Turberies, which fhew the original thate of the land, before the recent introduction of the improved method of agriculture. Reach Calder caftle, or Cawdor, as Shakefpear calls it, long the property of its thanes. The ancient part is a great

[^56]Hardiknute
fquare tower; but there is a large and more modern building annexed, wila driwbridge.

The thancdom was transferred into the houfe of the Campbells by the theft of the heirels of Calder, when Sle was an infint, by the fecond Earl of Argyle. The Calders raifed their clan, and endeavoured to bring back the cliid, but were defeated with great lofs. The Earl carried off his prize, and married her to Sir Johnc Campbell, his fecond fon, fometime before the year 1510 .

All the houfes in thefe parts are cafles, or at leaft defenfible; for till the year 1745, the Dighbanders made their inroads, and drove away the cattle of their defencele is neighours. There are faid to exift fome very old marriage articles of the daughter of a chictain, in which the daughter promiles for her portion two hundred Scots marks, and the half of a Michaclmas moon, i. a half the plunder, when the nights grew dark enough to make their excurfons. There is likewife in being a letter from Sir Ewin Cameron to a chief in the neighbourhood of the county of Murray, wherein he regrets the milchicf that had happened between their people (many having been killed on both fides), as his clan had no intention of falling on the Grants when it left Lochaber, but only to make an incurfion into Murray-land, where every man was free to take his prey. This llrange notion feems to have arilen from the county having been for fo many ages a Pielifh country, and alter that under the dominion of the Danes, and during both periods in a late of perpetual warfare with the Scots and weftern Highlanders, who (long after the change of circumflances) feem quite to have forgot that it was any crime to rob their neighbours of Murray.

Rode into the woods of Calder, in which were very fine birch trees and alders, fome oak, great broom, and juniper, which gave thelter to the roes. Deep rocky glens, darkened with trees, bound each fide of the wood: one has a great torrent roaring at its diftant bottom, called the brook of Achneem : it well merits the name of Acheron, being a moft fit feene for witches to celebrate their nocturnal rites in.

Obferved on a pillar of the door of Calder church a joug, i. e. an iron yoke, or ring, faftened to a chain, which was in former times put round the necks of delinquents againft the rules of the church, who were left there expofed to fhame during the time of divine fervice, and was alfo ufed as a punifhment for defamation, fmall thefts, \&sc. ; but thefe penalties are now happily abolithed. The clergy of Scotland, the moft decent and confiftent in their conduct of any fet of men I ever met with of their order, are at prefent much changed from the furious, illiterate, and enthufiallic teachers of the old times, and have taken up the mild method of perfuafion, inftead of the cruel difcipline of corporal punifhments. Science almoft univerfally flourifhes among them; and their difcourfe is not lefs improving than the table they cntertain the franger at is decent and hofpitable. Few, very few of them permit the bewitchery of diffipation to lay hold of then, notwithftanding they allow all the innocent pleafures of others, which, though not criminal in the layman, they know muft bring the taint of levity on the churchman. They never link their characters by midnight brawls, by mixing with the ganing world, either in cards, cocking, or horfe-races, but preferve with a uarrow income a dignity too often loft among their brethren fouth of the Tweed ${ }^{\bullet}$.

- The APOLOGY.

Friend.-" Yon, you in fiery purgat'ry mutt fay,
"Till gall and mok and dirt of fcribliig day
"In purifying flames are purg'd away.

The Scotch livings are from 40l. per annum to 1501 . per annum ; a decent houfe is buitt for the minifter on the glebe, and about fix acres of land annexed. The church allows no curate, except in cale of ficknefs or age, when one, under the title of helper, is appointed; or, where the livings are very extenfive, a mifitionary or affiftant is allotted; but fine-cures, or fine-cured preferments, never difgrace the church of our fifter kingdom. The widows and children are of late provided for out of a fund eftablifhed by two acts, 17th and 22d Geo. II. * This fund, amounting now to 66,0001 . was formed by the contributions of the clergy, whofe widows receive annuities from 101. to 251. according to what their hufbands had advanced.

Crofs the Nairn ; the fream inconfiderable, except in floods. On the weft is Kilravocts Caftle, and that of Dalcrofs. Keep due north, along the military road from Perth; pals along a narrow piece of land, projecting far into the Firth, called Arderfier, forming a flrait Icarce a mile over, between this county and that of Cromartie $\dagger$. At the end of this point is Fort George, a fmall but ftrong and regular fortrefs, built fince 1745, as a place d'armes: it is kept in excellent order, but, by realon of the happy change of the times, leemed almoit deferted : the officers' apartments and barracks are very handfome, and form feveral regular and good ftreets. According to a fketch I

> Tanysleza. - " O truft me, dear D -, I ne'er would offend

- An account of the government of the church of Scotland was communicated to me by the Revered Mr. trutie, the late worthy minifter of Calder. Vide Appendix.
$\dagger$ Between which plies a ferry-boat.
obtained to refref my memory, it appears to be of an octagonal form; to have an ample efplanade ; cafemates on cach fide bomb-proof, the parade in the centre, and a chapel in the rear.

Lay at Campbeltown, a place confifting of numbers of vel:y mean houfes, owing its rife and fupport to the neighbouring fort.

Aug. 16. Paffed over Colloden rnoor, the place that North Britain owes its prefent profperity to, by the viftory of April 10, 1746. On the fide of the moor, are the great plantations of Culloden-houfe, the feat of the late Duncan Forbes, a warm and active friend to the Houfe of Hanover, who fpent great fums in its fervice, and by his influence, and by his perfuafions, diverted numbers from joining in rebellion; at length he met with a cool return, for his attempt to theath after viktory, the unfatiated fword. But let a veil be flung over a few exceffes confequential of a day, productive of to much benefit to the united kingdoms.

The young adventurer lodged here the evening preceding the battle; ditracted with the averfion of the common men to difcipline, and the dillentions among his officers, even when they were at the brink of deftruction, he feemed incapable of acting, could be fcarcely perfuaded to mount his horfe, never came into the action, as might have been expected from a prince who had his laft fake to play, but fled ingloriounly to the old trator Lovat *, who, I was told, did execrate him to the perfon who informed him that he was approaching as a fugitive: forefeeing his own ruin as the confequence $t$.

The Duke of Cumberland, when he found that the barges of the fleet attended near the fhore for the fafety of his perfon, in cafe of a defeat, immediately ordered them away, to convince his men of the refolution he had taken of either conquering or perifhing with them.

The battle was fought contrary to the advice of fome of the moft fenfible men in the rebel army, who adviled the retiring into the faftneffes beyond the Nefs, the breaking down the bridge of Invernefs, and defending themfelves amidft the mountains. They politically urged that England was engaged in bloody wars foreign and domeftic, that it could at that time ill fpare its troops; and that the Government might, from that confideration, be induced to grant to the infurgents their lives and fortunes, on condition they laid down their arme. They were fenfible that their caufe was defperate, and that their ally was faithlefs; yet knew it might be long before they could be entirely fubdued; therefore drew hopes from the fad neceffity of our affairs at that feafon: but this rational plan was fuperfeded by the favourite faction of the army, to whole guidance the unfortunate Adrenturer had refigned himfelf.

After deffending from the moor, got into a well cuitivated country; and, after riding lome time under low tut pleafint hills, not far from the fea, reach

Invernefs, finely feated on a plain, between the Firth of Murray, and the river Nefs: the firt, from the narrow atrait of Arderier, inftantly widens into a fine bay, and

[^57]
## PRNNANT'S TOYR IN SCOTLAND.

and informed
itated to me,
a corps de re. urdctis. His ofe great teat was from the 1 known have prscipitation,
again as fuddenly contracts oppofite Invernefs, at the ferry of Keffock, the pafs into Rofshire. The town is large and well built, very populous, and contains about eleven thoufand inhabitants. This being the laft of any note in North Britain, is the winter refidence of many of the neighbouring gentry : and the prefent emporium, as, it was the antient, of the north of Scotland. Ships of five or fix hundred tons can ride at the loweft ebb within a mile of the town; and at high tides, veffels of two hundred tons can come up to the quay. The prefent imports are chiefly groceries, haberdanieries, hardware, and other neceffaries from London: and of late from fix to eight hundred hogheads of porter are annually brought in. The exports are chiefly falmon, thofe of the Nefs being efteemed of more exquifite flavour than any other. Herrings, of an inferior kind, taken in the Firth from Augult to March. The manufactured e:-ports are confiderable in cordage and facking. Of late years, the linen manufacture c. .te place faves it above three thoufand pounds a year, which ufed to go into Holland for that article. The commerce of this place was at its height a century or two ago, when it engroffed the exports of corn, falmon, and herrings, and had befides a great trade in cured codfilh, now loft; and in thofe times very large fortunes were made here.

The opulence of this town has often made it the object of plunder to the Lords of the Illes and their dependents. It fuffered in particular in 1222, from one Gillifipie; in 1429, from Alexander Lord of the Ifies; and even fo late did the antient manners praviil, that a head of a weftern clan, in the latter end of the laft century, threatened the place with fire and fword, if they did not pay a large contribution, and prefent him with a fcarlet fuit laced; all which was complied with.

On the north food Oliver's fort, a pentagon, whofe form remains to be traced only by the ditches and banks. He formed it with flones purloined from the neighbouring religious houfes. At prefent there is a very confiderable rope-walk near it.

On an eminence, fouth of the town, is old Fort St. George, which was taken and blown up by the rebels in 1746. It had been the antient cafte converted by General Wade into barracks. According to Boethius, Duncan was murdered here by Macbeth : but according to Fordun, near Elgin *. This caftic ufed to be the refidence of the Court, whenever the Scottifh Princes were called to quell the infurrections of the turbulent clans. Old people ftill remember magnificent apartments embellifhed with ftucco bufts and paintings. The view from hence is charming of the Firth, the pallage of Keffock, the river Nefs, the ftrange fbaped hill of Tomman heurich, and various groupes of diftant mountains.

The Tomman is of an oblong form, broad at the bafe, and floping on all fides towards the top; fo that it looks like a thip with its keel upwards. Its fides, and part of the neighbouring plains, are planted, fo it is both an agreeable walk and a fine object. It is perfectly detached from any other hill; and if it was not for its grat fize, might pafs $\dagger$ for a work of art. The view from it is fuch, that no traveller will think his labour loft, after gaining the fummit.

At Invernefs, and I believe at other towns in Scotland, is an officer, called Dean of the Guild, who, affifted by a council, fuperintends the markets, regulates the $\ddagger$ price

* Annals of scotland. i.
$\dagger$ Its length astep about 300 yarda; I neglected meafuring the bafe or the height, which are both confiderable: the breadih of the top only 20 yards.
$\ddagger$ Beef, ( 22 ounces to the pound) 2 d to 4 d . Mutton, ad. to 3 d. Veal, 3 d . to $; \mathrm{d}$. Pork, 2 d. to ;d. Chickens, 3 d . to +d a couple. Fowl, 4 d. to 6 d a a picce. Goote, 12 d . to 14 d . Ducks, 15 a a couple. Egge, feven a penny. Salmon, of which there are feveral greac fifherics, id. and id halipenuy per pound.
of provifions; and if any houfe falls down, and the owner lets it lie in ruins for three years, the Dean can abfolutely difipofe of the ground to the beft bidder.
In this town was a houfe of Dominicans, founded in 1233 by Alexander II.; and in Dalrymple's Collection there is mention of a nunnery.

In the Church-freet is a hofpital with a capital of 30001 . the intereft of which is ditributed among the indigent inhabitants of the town. In this houfe is a library of 1400 volumes of both antient and modern books. The founder was Mr. Robert Baillie, a minifter in this town ; but the principal benefuctor was Dr. James Frafer, fecretary to the Chelfea Hofpital.

Crols the Nefs on a bridge of feven arches, above which the tide flows for about a mile. A finall toll is collected here, which brings to the town about 601 a year,

Proceed north; have a fine siew of the Firth, which now widens again from Keffock into a large bay fone miles in length. The hills flope down to the water-fide, and are finely cultivated; but the diftant profpect is of rugged mountains of a flupendous height, as if created as guards to the reft of the inland from the fury of the boifterous north.

Ride clofe to the water-edge through woods of alder; pafs near feveral houfes of the the Frafers, and reach

Calle Dume, the fite of the houfe of their chieftain I.ord Lovat. The barony from which he took his title came into the family by the marriage of Sir Simon Fraler, a little before the year 1300 , with the heirefs of Lord Bifiet, a nobleman of great poffeflion in thefe parts.

The old houle, which was very mean, was burnt down in 1746; but a neat box, the refidence of the hofpitable factor, is built in its flead on a high bank well wooded, over the pretty river lewley, or Beaulieu. The country for a certain circuit, is fertile, well cultivated and fmiling. The bulk of Lord Lovat's eftate was in thefe parts ; the reft, to the amount of sool. per annum, in Stratherick. He was a potent chieftain, and could raife about 1000 neen: but 1 found his neighbours fpoke as mifirourably of him, as his enemies did in the mof diftant parts of the kingdom. leegillature has given the moft honourable teftimony to the merit of the fon, by reftoring, in 1774 , the forfeited fortunes of the father. No patent for mobility conveyed greater glory to any one, than the preamble of the act has done to this gemleman. Ilis father's property had been one of the armexed eftates, i, c. fettled unalienably on the Crown, as all the forfeited fortunes in the Highlands are: the whole value of which brought in at that time about 6000 . per annum, and thofe in the Lowlands about the fame fum; fo that the power and intereft of a poor twelve thoufand per annum, terrified and nearly fubverted the conftitution of thefe powerful kingdoms.

The profits of thefe eftates are lodged in the hands of truftees, who apply their revenue for the founding of fchools for the inftruction of children in fpinning; whecls are given away to poor families, and flax-feed to farmers. Some money is given in aid of the roads, and towards building bridges over the torrents; by which means a readv intercourfe is made to parts before inaccelfible to trangers*. And in 1753, a large fum was fpent on an Utopian project of eftablifhing colonies (on the forteitid ettates) of diabanded foldiers and lailors: comfortable houles were built for them, land and money given, and fome lent; but the fuccefs by no means anfwered the intentions of the projectors.

Aun. 17. Ford the Bewley, where a falmon fiflery, belonging to the lowat eftate, rents at 120 per annum. The Lerfe name of this river is laror, and the vale it runs

[^58]through, Glen-ftrath farar. It is probable that this was its antient name, and that the Varar Eftuariun of Prolemy was derived from it, the $\mathbf{F}$ being changed into V . The country on this fide the river is called Leirnamonach *, or the monk's land, having formerly been the property of the priory of Bewley; and the oppofite fide bears the name of Airds, or the heights. Pafs by fome excellent farms, well inclofed, improved, and planted : the land produces wheat and other corn. Much cattle are bred in thefe parts, and there are feveral linen manufactures.

Ford the Conan to Caftle Braan, the feat of the Earl of Seaforth; a good houfe, pleafantly fituated on the fide of a hill; commands a view of a large plain, and to the weft, a wild profpect of broken and lofty mountains.

There is here a fine full length of Mary Stuart, with this infeription : Maria D. G. Scstice piilfima Rcgina. Francia Dotaria. Amo Etatis Regni 38. 1580. Her drefs is black, with a ruff, cap, handkerchief, and a white veil down to the ground, beads, and prayer-book, and a crofs hanging from her neck; her hair dark brown, her face handfome, and, confidering the difference of years, fo much refembling lier portrait by Zucchero, in Chifwick-houfe, as to leave little doubt as to the originality of the laft.

A fmall half-length on wood of Henry Darnly, infcribed Henricus Stuardus Dominus Darnly, Ait. IX. M. D. LV. dreffed in black, with a fword. It is the figure of a pretty boy.
$\Lambda$ fine portrait of Cardinal Richlieu. General Monk, in a buff coat. Head of Sir George Mackenzie. The Earl of Seaforth, called from his fize, Kenneth More. Frances Countefs of Seaforth, daughter of William Marquis of Powis, in her robes, with a tawny moor offering her a coronet. Roger Palmer Earl of Caftlemaine, diftinguifhed by his lady, Barbara Duchefs of Cleveland ; and by his fimple embaffy to a difcerning Pope from that bigotted Prince James II.
Near the houfe are fome very fine oaks, and horfe-chefnuts; in the garden, Turkey apricots, orange nectarines, and a fmall foft peach, ripe; other peaches, nectarines, and green gages, far from ripe.

Pafs through Dingwall, a fmall town, the capital of Rofshire, fituated near the head of the Firth of Cromartic: the Highlanders call it Inner-Feorain, Feoran being the name of the river that runs near it into the Firth. An antient crofs, and an obelifk over the burying-place of the Earls of Cromartie's family, were all I faw remarkable in it. In the year 1400, Dingwall had its caftle, fubject to Donald, Lord of the Ines, and Earl of Rofs. After that Regulus was weakened by the battle of Harlaw, his territories were invaded; and this caftle reduced to the power of the crown of Scotland, by the Duke of Albany.

Ride along a very good road cut on the fide of a hiil, with the country very well cultivated above and below, with feverai faall woods interfperfed near the water's edge. There is a fine view of almoft the whole bay, the moft capacious and fecure of any in Great Britain; its whole navy might lay there with eafe, and fips of 200 tons may fail up above two thirds of irs length, which excnds near thirty Englifl miles from the Sutters $\dagger$ of Cromartic to a fmall diftance beyond Dingwall: the entrance is narrow; the projeging hills defend this fine bay from all winds, fo it jufly merits the name given it of Portus failutis.

Foules, the feat of Sir Henry Monro, lies about a mile from the Firth, near vaft plantaions on the flats, as well as on the bills. Thofe on the hills are fix miles in

[^59]lengeh, and in a very flourihing fate. On the back of thefe are extenfive vallics full of oats bounded by mountains, which here, as well as in the Highiands in general, run from eaft to weft. Sir Henry holds a foreft from the crown by a very whimfical tenure, that of delivering a fnow-ball on any day of the year that it is demanded; and he feems to be in no da:ger of forfeting his right by failure of the quit-rent: for finow lies in form of a glaciere in the chatins of Benwewih, a neighbouring mountain, throughout the year.

Aug. 18. Continue my joumey along the low country, which is rich and w-ll cultisated.

Pafs near Invergordon *, a handfone houfe, amidh fine plantations. Near it is the narroweft part of the Firth, and a ferry into the thire of Cromartic, now a country almolt deflitute of trees; yet, in the time of James $V$. was covered with timber, and overyun with wolves $\dagger$.

Near the fummit of the hill, between the Firths of Cromartie and Iornoch, is Ballinagouan, the feat of a genteman, who has moft fuccelsfilly converted his fword into a ploughfhare; who, after a fe:ies of difinterefted fervices to his country, by clearing the leas of privateers, the moft unprofitable of captures, has applied himfelf to arts net lefs deferving of its thanks. He is the beft farner and the greatet planter in the country: his wheat and his turneps fhew the one, his plantatious of a million of pines each yaar the other $\ddagger$. It was with great fatisfation that I obierved characters of this kind vory frequent in North Britain; for, during the interval of peace, every officer of any patrineny was fond of retiring to it, affumed the farmor without flinging off the the gentleman, enjoyed ru:al quiet; yct ready to undergo the fatigues of war the moment his country claimed his fervices.

About two miles beow Ballinagouan is a welancholy infance of a reverfe of conduet: the ruins of New Tarbat, once the magnificent feat of an unhappy nobleman, who plunged into a moft ungrateful rebellion, deftructive to himfelf and family. The tenants, who feem to inhabit gratis, are forsed to fhelter themfelves from the weather in the very loweft apartments, while fiwallows make their nefls in the bold fluceo of fome of the upper.

While I was in this county, I heard a fingular but well-atteited relution of a woman difordered in her health, who fafted for a fupernatural fpace of time; but the length of the narrative obliges ine to fling it into the Appendix.

Ride along a tedious black moor to 'Tain, a fmall town on the Firth of Dornoch, di?inguifhed for nothing but its large ؟quare tower, decorated with five funall fpirss. Here was alfo a collegiate church, founded in $1_{4} \$_{1}$ by Thomas bifhop of Rofs. Captain Richard Franks, an honeft cavalicr, who dur:ng the ufurpation made an angling peregrination from the banks of the 'lient to John a Groat's houfe, calls 'Tain "as exemplary as any place for juftice, that never ufes gibbet or halter to hang a man, but

facks all their malefactors, fo fwims them to their graves*. This method of punifh ment was not peculiar to this, for in old times women convicted of capital offences were drowned in the river Gefling, near Sandwich $\dagger$. The place appeared very gay at this time; for all the gaudy finery of a little fair was difplayed in the fhew of hardiware, printed linens, and ribbands. Kept along the fhore for about two miles through an open corn country; and croffing the great ferry, in breadth near two miles, through a rapid tide, and in a bad boat, land in the county of Sutherland, Cattu of the Highlanders, and in lefs than an hour reach its capital.
Dornoch, a fuall town, half in ruins, once the refidence of the bifhops of Caithuefs, and, like Durham, the feat of ecclefialtics: many of the houfes filit are called after the titles of thofe that inhabited them: the bilhop lodged in the caitle: the dean's houfe is at prefent the inn. The cathedral was in form of a crofs, built by Gilbert Moray, who died bifhop of Caithnefs in 1245 : it is now a ruin, except part, which is the prefent church $\ddagger$. On the doors and window-fhutters were painted (as is common in many parts of North Britain) white tadpole-like figures on a black ground, defigned to exprefs the tears of the country for the lofs of any perfon of diftinctinn. Thefe were occafioned by the affecting end of that amiable pair, the young Earl and Countefs of Sutherland, who were lovely in their lives, and in their deaths they were not divided, for their happinefs was interrupted by a very fhort feparation: fane ubi idem et maximus ct bonefiffinus amor cf, aliquando praftat morte jungi, quam vita diftrabi 5 .

Ride on a plain not far from the fea; pafs by a fmall crofs, called the Thane's, erected in memory of the battle of Embo in 1259, between William Earl of Sutherland and the Danes, who were overthrown, and their general lain, at this place; and not far from thence the fpot where an unhappy creature had been burnt, if I miftake not, in June 1727, for the imaginary crime of witchcraft $\|$.

Crofs a very narrow inlet to a fmall bay at Portheg, or the little ferry, in a boat as dangerous as the laft; for horfes can neither get in or out without grear rifque, from the vaft height of the fides and their want of flips. Keep along the fhore, pafs by the finall village of Golfpie, and reach

Dunrobin caftle, the ancient feat of the earls of Sutherland, founded about the year 1100 by Robert, or Robin, fecond Earl of Sutherland, fituated uear the fea, and as the word dun imports, on a round hill. The few paintings here are, an Earl of Murray,

[^61]an old man, on wood. His fon and two daughters, by Co. G. 162S. A fine fult length of Charles I. Angus Williamfon, a hero of the clan Chattan, who refeued the Sutherlands in the time of diftrefs. A very fingular pi Zure of the Duke of Alva in council, with a cardinal by his fide, who puts a pair of bellows blown by the devil into his ear: the duke has a chain in one hand fixed to the necks of the kneeling Flemings, in the other he thews them a paper of recantation for them to fign; behind whom are the reformed elergy. The eardinal is the noted Anthony Perrenot, cardinal de Granville, fecretary to Margaret of Auftria, duchefs dowager of Savoy, governefs of the Netherlands, and who was held to be the author, i.dvancer, and nourifher * of the trouble: of thofe countries; and who, on his recall into Spain, was fuppofed to be the great promoter of the cruclties excrcifed afterwards by the Duke of Alva, the fucceffor of his miftrefs.

The demefne is kept in cxcellent order; and I faw here (lat. 58.) a very fine field of wheat, which would be ripe about the middle of next month.

This was the moft northern wheat which had been fown this year in North Britain.
Sutherland is a country abounding in cattle, and fends out amually 2500 head, which foici about this time (lean) from 2l. tos. to 3l. per head. Thefe are very frequently without horns, and both they and the horfes are very fmall. Stags abound in the hilis, there being reckoned not lefs than 1600 on the Sutherland eftate, which, in fant, is, the greateft part of the county. Befides thefe are roes, grous, black game, and "armizans in plenty, and during winter multitudes of water-fowl on the coath.

Not tar from Dunrobin is a very entive piece of antiquity, of the kind known in S.utland by the name of the Pictifh caftles, and called here Cairn Yia', or a grey tower: that I $K$ vas about 130 yards in circur.erence, round, and raifed fo high above the ground as to form a confiderable mount : on the top was an extenfive but fhallow hollow: within were thre low concentri= galleries, at fmall dilances from each other, covered with large fones; and the fide-walls were about four or five feet thick, rudely made. There are generally three of thefe places near each other, fo that each may be feen from any one. Buildings of this kind are very frequent along this coalt, that of v. Caithnefs, and of Strablenavern. Others agreeing in external form are common in the Yebrides, but differ in their internal conftruction. In the iflands they are attributed to the Danes $\dagger$; here to the Picts. Poffibly each nation might have the fame mode of building with fome variation, for I am told that fome are to be feen in places where the Danes never penctrated: they were probably the defencible habitations of the times. I muft withdraw my opinion of their having been the fuffugia biemi, out receptacula frue gibus, like thofe of the ancient Germans. Such are not uncommon in Scotland, but of a form very diflerent from thefe.

Kept along the thore northward. About a mile from the caftic are fome fmall clifis of free-ftone; in one is Strath-Leven Cove, an artificial cave, with feats, and feveral fiallow circular hollows cut within-íde, once the retreat of a devout hermit. At fome diflance, and near the fea, are finall frata of coal three feet thick, dipping to the eaft, and found at the depth of about 14 to 24 yards. Sometimes it takes fire on the bank, which has given it fo ill a name, that nennle are very fearfin! of taking it aboard their fhips. I an furprifed that they will not run the rilk, confidering the miraculous quality it poffefles of driving away rats wherever it is uled. This is believed by the good

[^62]1 fine full efcued the of Alva in devil into Flemings, whom are I de Granefs of the r* of the 1 to be the, e fuccelfor inc ficld of h Britain. 500 head, e very freabeund in which, in game, and known in rey tower: above the rallow holach other, ck, rudely th may be all, that of non in the tributed to mode of where the the times. acula fruad, but of
mall cliffs id feveral At fome 0 the ealt, the bank, bard their lous quathe good
er auy fuch ill he given pople
people of Stutherland, who affured me ferioufly of its virtues; and they farther attributed the fame to the earth and very heath of their county. They add too, that not a rat will live with them, notwithftanding they fwarm in the adjacent fhires of Rofs and Caithnefs*.
In Affynt, a part of this county, far weft of Dunrobin, are large ftrata of a beautiful white marble, equal, as I was told, to the Parian. I afterwards faw fome of the fame kind found at Glen-avon, in Badenoch.
Crofs the water of Brora, which runs along a deep chafm, over which is a handfome bridge of a fingle arch. Near is a cave, where the falmon-fifhers lie during the feafon: the roof is pierced through to the furface, which ferves for a natural chimney. They take annually about ten or twelve lafts of fifh. In a bank not far from the bridge are found abundance of belemnita.
The country is very fandy, and the arable, or cultivated part, very narrow, confined on the ealt oy the fea, on the weft by lofty black mountains, which approach nearer and nearer to the water, till at length they project into it at the great promontory, the Ord of Caithnefs, the boundary between that county and Sutherland; after which the coalt is bold and rocky, except a fmall bay or two.
Ford the very dangerous water of Helmifdale, rapid and full of great fones. Very large lampries are found here, fifh detelted by the Highlanders. Beneath the ftones on the fea-lhore are abundance of fipotted and viviparous blennies, father-lafhers, and whiftefifh. . Whackarel appear here in this month, but without their roes. I thought them far inferior in goodnefs to thole of our country. Much falmon taken here.

The grey water wagteil quits this country in winter; with us it refides.
Dined at the little village of Helmfdale; near which are the ruins of a fquare tower built by Margaret Countefs of Sutherland, in the fifteenth century.
Paffed through a rich vale full of good barley and oats, between the hill of Helmfdale and the Ord. Afcend that vaft promontory on a good road, winding up its ftecp fides, and impending in many parts over the fea, infinitely more high and horrible than our Penmaen Mawr. Beneath were numbers of feals floating on the waves, with fea-fowl fiwmming among them with great fecurity. Obferved projecting from one part of the Ord, far below, a fmall and verdant hill, on which, tradition fays, was fought a fingle combat between an Earl of Caithnefs and a fon of the Earl of Sutherland, while their two armics looked on from above: the firt was killed on the fpot, the laft died of his wounds.

The Ord was the ancient divifion of Caithnefs, when Sutherland was reckoned part. The diftinction at that time was Catbenefia cis et ultra montem. Sutherland was ftyled. then Catau, as being more movatainous: the modern Caithnefs Guaelav, as being, more plain $\dagger$.

[^63]Bencath this cape are immenfe caves, the refort of feals* and fea-fowls: the fides and top are chiefly covered with heath and moraffy earth, which give it a black and melancholy louk. Ride over fome boggy and dreary moors. l'afs through Aufdale, a litte highland village. Defeend into a deep bottom covered with alders, willows, birch, and wicken trees, to langwall, the feat of Mr. Sutherland, who gave me a very hofpitable reception. The country abounds with ftags and roes, and all forts of feathered game, while the adjacent river brings falmon almoot up to his door.

I enquired here after the Lavellan $\dagger$, which, from defcription, I fufpect to be the water Arew-moufe. 'ihe country people have a notion that it is moxious to cattle: they preferve the fkin, and, as a cure for their fick beaft, give them the water in which it has been dipt. I believe it to be the fane ammal which in Sutherland is called the water-mole.

Aug.20. Proceed on my journey. Pals ne: rBerridale. On a peninfula jutting into the fea is the ruin of the cafte; between it and the liad is a deep chafm, where there had been a draw-bridge. On this caftle are ftationed, in the falmon feafon, perfons who are to obferve the approach of the filh to the frefh waters.

Near Clathron is a druidical flone fet an end, and of a moft ftupendous fize.
Saw Dunbeth $\ddagger$, the feat of Mr. Sinclair, fituated on a narrow neck of land; on one fide impending over the fea, on the other, over a deep chafm, into which the tide flows: a fmall narrow garden, with billows beating on three fides, fills the reft of the land between the houfe and the water. Numbers of old caitles in this county have the fame tremendous fituation. On the weft fide of this houfe are a few rows of tolerable trees; the only trees that I faw from Berridale to the extremity of Caithnefs $\$$. On the right inland are the finall remains of Knackeman Caftle, built by an Earl of Caithnefs. From thefe parts is a full view of the lofty naked mountain of Scaraban and Morven. The laft ptarmigans in Scotland are on the firft ; the laft roes about Langwall, there being neither high hills nor woods beyond. All the county on this fide, from Dnnbeth to the extremity, is flar, or at leaft very feldom interrupted with hills, and thofe low, but the coafts rocky, and compofed of ftupendous cliffs.

Refrelled our horfes at a little inn at the hamlet of Clythe, not for from the headland, called Clythenefs. Reach Thrumfter, a feat of Mr. Sinclair's. It is oblervable, that the names of places in this comnty often terminate in ter and dale, which favors of Danih origm.

The Sinclairs are very numerous, and poffefs confiderable fortuncs in rhefe parts; but Boethius fays, that they, the Fraziers, Campbells, Bofwells, and many others, came originally from Frauce.

Augult 21 ft, pafs through Wick, a fmall borough town with fome good houfes, feated on a river within reach of the tide; and at a diftance lies an old tower, called Lord Oliphant's caltle. In this town lives a weaver who weaves a fhirt, with buttons arnd buiton holes entire without any feam, or the leaft ufe of the needle: but it is feared that he will fcarce find any bencfit from his ingenuity, as he cannot afford his labour under five pounds a fhirt. Sonewhat farther, clofe to the fea, is Achringal tower, the

'icts caftle,
feat
fear of Sir Willian Jumbar. Ride over the Links of Keith, on the fide of Sinclar bay. Thefe were once a morats, now covered with fand, finely turfed over; fo in this inflance the land has been obliged by the inttability of the fand. The old cafte of Keifs is feated on a rock, with a good houfe of the fame name near it.

Near Frefwick calle the cliffs are very lofty: the ftrata that compole them lie quite ionizontally in fuch thin and regular layers, and fo often interfected by fiffures, as to appar like mafons. Beneath are great infulated olumns, called here Stacks, compoidu of the fame for on matural maty as the clifs; many of them are hollowed quite through, fo as to form molt magnificent arches, which tue fea rufhes through with valt noile and impetuofity, aftording a moft augult piece of fecnery to fuch who are fteady cnough to furvey it from the narrow and almolt impending paths.

Frofwick cafle is feated on a narrow rock projecting into the fea, with juft room cuough for it to ftand on : the accefs to it while the draw-bridge was in being, was over a decp chefm cut through the little "hmus that connected it to the main land. Thefe dreadful fituations are ftrongly expre ifive of the jcalous and wretched c.ndition of the tyrant owners. It is fuid that a nobleman of the name of Suenus Afteilf inhabited this cafle about the year 1155 .

Alter wing near Frefwick bay, tue fecond fandy bay in the county, pafs over a very bad moras, and after a few miles travel arrive at Dunghby bay * a low tract, confifting of $\therefore$..lands and grazing land: the ultama thule of Sir Robert Sibbald, whefe defcription it fully anfwers in this particular.

> Quam juxta infames feopuli, et petrefa vorago
> Afperat undifouis faxa pudenda vadis $\dagger$.

The beach is a collection of fragments of fhells; beneath which are vaft broken rocks, fome funk, others apparent, running into the fea never pacific. The contrary tides and currents form here a moft tremendous conteft ; yet, by the fkilfuinefs of the people, are paffed with great fafety in the narrow little boats I faw lying on the fhore.

The foints of this bay are Dungfby head and St. John's head, ftretching out into the fea to the eaft and weft, forming a pair of horns; from the refemblance to which it fhould feem that this country was antiently fyled Cornana.

From hence is a full view of feveral of the Orkncy iflands, fuch as Flota, Waes, Ronaldfa, Swanna, to the welt the Skerion, and within two miles of land Stroma, famous for its natural mummies, or the entire and uncorrupted bodies of perfons who had been dead fixty years. I was informed the! they were very light, had a fexibility in their limbe, and were of a dulky colour $\ddagger$. This ifle is fertile in corn, is inhabited by above thirty fanilies, who know not the ufe of a plough, but dig every part of their corn land.

Dine at the good minifter's of Cannefby. On my return faw at a diftance the Stacks of Dungfoy, a vaft infulated rock, over topping the land, and appearing like a great tower.

Paffed near the feat of a gentleman not long deceafed; the lat who was believed to be poffefled of the fecond fight. Originally he made ufe of the pretence, in order to render himfelf more refpectable with his clan ; but at length, in $\int$ p: of fine abilities,

[^65]was made a dupe to his own artifices, became poffeffed with a ferious belief of the faculty, and for a confiderable number of years before his death was made truly unhappy by this ftrange opinion, which originally arofe from the following accident. A boat of his was on a very tempertuous night at fea; his mind filled with anxiety at the daner. his people were in, furmbed him with every idea of the misfortune that really belein them: he fuddenly farting up, pronounced that his men would be drowned, for he had feell them pals betore him with wet garments and dropping locks. The event was correfpondent, and he from that time grew confirmed in the reality of fpectral predictions.

There is another fort of divination, called Sleinanachd, or reading the fpeal-bone, or the blade-bone of a thoulder of mutton well fcraped. When Lord Loudon was obliged to retreat before the rebels to the ifle of Sky, a common foldier, on the very moment the battle of Culloden was decided, proclaimed the vietory at that diftance, pretending to have difoovered the event by looking through the bone.

I heard of one inflance of fecond fight, or rather of forefight, which was well attefted, and made much noife about the time the predicion was fulfilled. A little after the battle of Prefton Pans, the prefident, Duncan lorbes, being at his houfe of Culloden with a nobleman, from whom I had the relation, fell into difoourfe on the pa nable confcquences of the ation : after a long converfation, and after revolving all that wight happen, Mr. Forbes, fuddenly turning to a window, faid, "all thefe things may zall out; but depend on it, all thefe difturbances will be terminated on this fpot?"

Returned the fame road. Saw multitudes of gannets, or Soland geefe, on their paffage northward: they went in fmall flocks from five to fifteen in each, and continued palling for hours: it was a formy day; they kept low, and near the fhere; but never paffed over the land, even when a bay intervened, but followed (preferving an equal diftance from the fhore) the form of the bay, and then regularly doubled the capes. I faw many parties make a fort of halt for the fake of fifhing; they foared to a great heigit, then dartine, down headlong into the fea, made the water foam and fpring up with the violence their defeent; after which they purfued their route.

Swans refort in Octriver to, the lochs of Hemprigs and Wafter, and continue there till Morch. Abunderne as inid-rails are found throughour the county. Multitudes of fea fowl breed in the clits: ansong others, the lyre; but the feafon being paft, ineither faw it, nor could under and what fpecies it was ".

Went along a fine hard fand on the edge of Sinclair bay. On the fouth point, near Nofs-head, on the fanr rock, are Sinclair and Gernigo calles; but as if the joint temants, like beafts of prey, lad been in fcar of each other, there was between them a draw bridge; the firlt too had an iron door, which dropped from above through grooves fill vifible: this was inhabited in the year 1603 by a Sinclair Earl of Caithnefs.

Should the chapel of St. Tayre near this caftle exilt, I overlooked that feene of cruelyy in 1478. The Keiths and the clan Gun had in that year a feud; but a meeting was fixed at this place for a reconciliation: twelve horle were to convene on each fide. The Cruner, or chicf of the clan Gun, and his fons and neareft kinfinen arrived firft, and were at their prayers in the chapel: when their antagonift arrived with twelve horfes, but with two men on each horfe, thinking that to bring no more than the ftipulated number of horfes was no breach of agreement. Thefe attacked the people in the chapel, and put them all to death, but with grea: lofs to their own party, for the

[^66]oelief of the de truly unaccident. A nxicty at the e that really be drowned, locks. The the reality of

Cruner

Cruner and his friends fold their lives dear. I mention this tale to oppofe the manners of the old Cathuefians to thofe of the prefent hofpitable and worthy race.

Cathnefs may be called an immenfe morafs, mixed with fome fruitful fpots of oats and barley, much coarfe grafs, and here and there fome fine, alinoft all natural, there being as yet very little artificiai. At this time was the hay harveft both here and about Dunrobin: the hay on this rough land is eut with flort fcythes, and with a brik and firong ftroke. The country produces and exports great quantisies of oatureal, and much whifky is diftiled from the barley: the great thinnefs of inhabitants throughout Cathrefs enables them to fend abroad much of its productions. No wheat had been raifed this ycar in the county; and I was informed that this grain is fown here in the epring, by reafon of the wet and fury of the winters.

The county is fuppofed to fend $r$ Fome years, 2200 head of cattle; but in bad feafons, the farmer kills and falts $n$ m fale. Great numbers of fwine are reared here : they are fhort, high-back $1 \quad$, fharp, tlender, and long nofed; hav long erect ears, and moft favage are feen tethered in alinoft every field. The reft of the commodities of Ca in
butter, cluecfe, tallow, hides, the oil and fkins of feals, and the feathers of geef

Itere are neither barns nor granaries: the corn is thrafhed out and preferved in the chaff in bykes, which are ftacks in Chape of bee-hives, thatched quite round, where it will keep good for two years.

Much falmon is taken at Caftle-hill, Dunet, Wick, and Thurfo. The miraculous draught at the laft place is ftill talked of ; not lefs than 2500 being taken at one tide, within the memory of man. At a fmall diftance from Sinclair caltle, near Staxigo creck, is a fmall herring fifhery, the only one on the coaft : cod and other white fifh abound here; but the want of ports on this formy coaft is an obftacle to the eftablifhment of fifheries on this fide the country.

In the month of November, numbers of feals* are taken in the vatt caverns that open into the fea and run fome hundred yards under ground. Their entrance is narrow, their infide lofty and fpacious. The feal-hunters enter thefe in fimall boats with torches, which they light as foon as they land, and then with loud fhouts alarm the animals, which they kill with clubs as they attempt to pafs. This is a hazardous employ; for flould the wind blow hard from fea, thefe adventurers are inevitably loft $\dagger$.

Much lime-fone is found in this country, which when burnt is made into a compoft with turf and fea plants. The tender fex (l blufh for the Cathnefians) are the only animals of burden: they turn their patient backs to the dunghills, and receive in their keifes, or balkets, as much as their lords and mafters think fit to fling in with their pitchforks, and then trudge to the fields in droves of fixty or feventy. The common people are kept here in great fervitude, and moft of their time is given to their Lairds, an invincible impediment to the profperity of the county.

Of the ten parihhes in Cathnefs, only the four that lie S. E. fpeak Erfe; all the others fpeak Englifh, and that in greater purity than moft part of North Britain $\ddagger$. Latheron, Reay, Thurfo, and Halkirk, fpeak Erfe and Englifh; Bower, Cannelby, Dunnet, Watters, Obrick, and Wick, fpeak Englifh only.

Inoculation is much practifed by an ingenious phyfician (Dr. Mackenzie of Wick) in this county, and alfo the Orkneys *, with great fuccefs, without any previous preparation. The fuccefs was equally great at Sanda, a poor ine, where there was no fort of fuel but what was got froin dried cow-dung: but in all thefe places, the fmall-pox is very fatal in the natural way. Other difeafes in Cathnefs are colds, coughs, and very frequently palfies.

The laft private war in Scotland was occafioned by a difpute relating to this county. The prefent Earl of Breadalbane's grandfather married an heirefs of Cathnefs: the inhabitants would not admit her title; but fet up another perfon in oppofition. The Farl, according to the cuftom of thofe ill-governed times, was to affert his right by force of arms: he raifed an army of fifteen hundred men; but the numbers, like thofe under the conduct of Gideon, were thought to be too great : his lordihip firt difmiffed five hundred; after that, another five hundred; and with the remainder marched to the borders of Cathnefs. Here he thought proper to add ftratagem to force. He knew that the enemy's army waited for him on the other fide of the Ord. He knew alfo that in thofe days whifky was the nectar of Cathnefs: and in confequence ordered a thip laden with that precious liquor to pafs round, and willfully frand itfelf on the fhore. The directions were punctually obeyed; and the crew in a feeming fright efcaped in the boats to the invading army. The Cathnefians made a prize of the fhip, and indulging themfelves too freely with the freight, became an eafy prey to the Earl, who attacked them during their intoxication, and gained the country, which he difpofed of very foon after his conquef.

I came here too late $\dagger$ to have any benefit from the great length of days; but from June to the middle of July, there is fcarce any night; for even at what is called midnight the fmalleft print may be read, fo truly did Juvenal ftyle thefe people,

## Minima contentos nocte Britar:sos.

Auguft 23d, on my way between Thrumfter and Dunbeth, again faw numbers of flocks of Gannets keeping due north; and the weather being very calm, they flew high. It has not been obferved that they ever return this way in the fpring; but feem to make a circuit of the illand, till they again arrive at the Bafs, their only breedingplace on the eaftern coaft.
On defcending a fleep hill, is a romantic view of the two bridges over the waters of Berridale and Langwall, and their wooded glens; and of the cafte of Berridale + , over the fea, where the falmon-fifhers ftation themfelves to obferve the approach of thofe fifh out of the ocean. After a tedious afcent up the King's road of four miles, gain the top of the Ord, defcend, and lie at Helmidale.

Auguft 24th to 29th, revifit the fame places, till I pafs Dingwall. Crofs the Conan in a boat, a very beautiful river, not remote from Caftle Braan. Was in the neighbourhood informed of other fingular cuftoms of the Highlanders.

On New year's day they burn juniper before their cattle, and on the firf Monday in cvery quarter fprinkle them with urine.
In fome parts of the country, is a rural facrifice, different from that before mentioned. A crofs is cut on fome flicks, which is dipped in pottage, and the Thurfay

[^68]rick) in reparafort of 1-pox is nd very county. the inThe ight by ke thole lifmiffed ched to Ie knew ew alfo rdered a te fhore. aped in indulgwho atpofed of

## ut from

 ed ınid-bers of ey flew ut feem eeding-
before Eafter, one of each placed over the fheep-cot, the ftable, or the cow-houfe. On the ift of May, they are carried to the hill where the rites are celebrated, all decked with wild flowers, and after the feaft is over, re-placed over the fpots they were taken from; and this was originally ftyled Clou-än-Beltien *, or the fplit branch of the fire of the rock. Thefe follies are now feldom practifed, and that with the utmoft fecrecy; for the clergy are indefatigable in difcouraging every feecies of fuperftition.
In certain places the death of people is fuppofed to be foretold by the cries and flrieks of Benihi, or the Fairies wife, uttered along the very path where the funeral is. to pafs; and what in Wales are called corps candles, are often imagined to appear, and foretell mortality.

The courthip of the Highlander has thefe remarkable circumftances attending it : after privately obtaining the confent of the fair, he formally demands her of the father. The lover and his friends affemble on a hill allotted for that purpofe in every parif, and one of them is difpatched to obtain permiffion to wait on the daughter: if he is fucceffful, he is again fent to invite the father and his friends to afcend the hill and partake of a whilky cafk, which is never forgot: the lover advances, takes his future father-in-law by the hand, and then plights his troth, and the fair-one is furrendered up to him. During the marriage ceremony, great care is taken that dogs do not pals between them, and particular attention is paid to the leaving the bridcgroom's left-fhoe without buckle or latchet, to prevent witches $\dagger$ from depriving him, on the nuptial night, of the power of loofening the virgin zone. As a teft, not many years ago a fingular cuf, tom prevailed in the weftern Highlands the morning after a wedding : a bafket was faftened with a cord round the neck of the bridegroom by the female part of the company, who immediately filled it with ftones, till the poor man was in great danger of being frangled, if his bride did not take compaffion on him, and cut the cord with a knife given her to ufe at difcretion. But fuch was the tendernefs of the Caledonian fpoufes, that never was an inflance of their neglecting an immediate relief of their good man.

Pafs near the Prior $\ddagger$ of Beaulieu, a large ruin : crofs the ferry, and again reach Invernefs.

Made an excurfion ten miles fouth of Invernefs to May-hall, pleafantly feated at the end of a fmall but beautiful lake of the fame name, full of trout and char, called in the Erfe, Tarrdheargnaich, and in the Scotch, Red Weems. This water is about two miles and a half long, and half a mile broad, adorned with two or three intes prettily wooded. Each fide is bounded by hills cloathed at the bottom with trees; and in front, at the diftance of thirty miles, is the great mountain of Karn-gorm, patched with fnow.

This place is called Starfhnach-nan-gai'l, or the threfhold of the Highlands, being a very natural and ftrongly marked entrance from the north. This is the feat of the Clan Chattan, or the M'Intofhes, once a powerful people: in the year 1715 , fifteen hundred took the field ; but in 1745, fcarce half that number: like another Abfalom, their fair miltrefs was in that year fuppofed to have folen their hearts from her Laird their chieftain : but the fevereft loyalift muft admit fome extenuation of their error, in yielding to the infinuations of fo charming a feducer.

[^69]Here is preferved the fword of James V. given by that monarch to the captain of Clan Chattan, with the privilege of holding the King's fword at all coronations; on the blade is the word Jefins. That of the gallant Vifcount Dundee is alfo kept here. The firft was a confecrated fword prefented to James in 1514, by Leo X. by the hands of his Legate *. The ancient family was as refpectable as it was powerful; and that from very old times. Of this the following relation is fufficient evidence. In 13412 Monro of Foulis $\dagger$ having met with fome affront from the inhabitants of Strathardule, between Perth and Athol, deternined on revenge, collected his clan, marched, made his inroad, and returned with a large booty of cattle. As he paffed by May-hall, this threfhold of the Highlands, the Mackintoih of 1454 fent to demand the ftike creich or road collop, being a certain part of the booty, challenged according to an ancient cuftom by the chieftains for liberty of paffing with it through their territories. Monro acquiefced in the demand, and offered a reafonable thare; but not lefs than half would content the chieftain of Clan Chattan : this was refufed; a battle enfued noar Keffock; Mackintofh was killed; Monro loft his hand, but from that accident acquired the name of back-lawighe : and thus ended the conflit of Clagh-ne-herey.

Boethius relates, that in his time Invernefs was greatly frequented by merchants from Germany, who purchafed here the furs of feveral forts of wild beafts $\ddagger$; and that wild horfes were found in great abundance in that neighbourhood: that the country yielded a great deal of wheat and other corn, and quantities of nuts and apples. At prefent there is a trade in the fkins of deer, roes, and other beafts, which the Highlanders bring down to the fairs. There happened to be one at this time: the commodities were fkins, various neceffaries brought in by the pedlars, coarfe country cloths, cheefe, butter, and meal: the laft in goat-fkin bags; the butter lapped in cawls, or leaves of the broad alga or tang; and great quantities of birch-wood and hazel cut into lengths for carts, \&c. which had been floated down the river from Loch-Nefs.

The fair was a very agreeable circumitance, and aforded a moft fingular groupe of Highlanders in all their motly dreffes. Their brechan, or plaid, confifts of twelve or thirteen yards of a narrow ftuff, wrapt round the middle, and reaches to the knees: is often faftened round the middle with a belt, and is then called brechan-feill; but in cold weather is large enough to wrap round the whole body from head to feet; and this often is their only cover, not only within doors, but on the nem hills during the whole night. It is frequently faftened on the fhoulders with : often of filver, and before with a brotche (like the fibula of the Romans) which . .metimes of filver, and both large and extenfive; the old ones have very frequently mottos.

The ftockings are fhort, and are tied below the knee. The cuaran is a fort of laced fhoe made of a kin with the hairy fide out, but now feldom worn. The truis were worn by the gentry, and were breeches and fockings made of one piece.

The colour of their drefs was various, ais the word breaccan implies, being dyed with ftripes of the moft vivid hues: but they fonetimes affected the duller colours, fuch as imitated thofe of the heath in which they often repofed; probably from a principle of fecurity in time of war, as one of the Scotch poets feems to infinuate.

Andzea Melyini Topogr. Scotire.

The feil-beg, i. e. little plaid, alfo called kelt, is a fort of fhort petticoat reaching only to the knees, and is a modern fubftitute for the lower part of the plaid, being found to be lefs cumberfome, efpecially in time of action, when the Highlanders ufed to tuck their brechcan into their girdle. Almoft all have a great pouch of badger and other fkins, with taffels dangling before $:$-in this they keep their tobacco and money.
Their ancient arms were the Lochaber ax, now ufed by none but the town-guard of Edinburgh; a tremendous weapon, better to be exprefled by a figure than words *.

The broad-fword and target; with the laft they covered themfelves, with the firft reached their enemy at a great diffance. Thefe were their ancient weapons, as appears by Tacitus $\dagger$; but, fince the difarming act, are fcarcely to be met with: partly owing to that, partly to the fpirit of induftry now rifing among them, the Highlanders in a few years will fcarce know the ufe of any weapon.
Bows and arrows were ufed in war as late as the middle of the laft century, as I find: in a manufript life of Sir Ewen Cameron.
The dirk was a fort of dagger fuck in the belt. I frequently faw this weapon in thefhambles of Invernefs, converted into a butcher's knife, being, like Hudibras's dagger,

> A ferviceable dudgeon,
> Either for fighting or for drudging.

The dirk was a weapon ufed by the ancient Caledonians; for Dio Caffius, in his ac* count of the expedition of Severus, mentions it under the name of Euxpecion $\ddagger$, pugio or little dagger.

The mattucafhlafh, or arm-pit dagger, was worn there ready to be ufed on coming. to clofe quarters. Thefe, with the piftol ftuck in the girdle, completely armed the Highlander $\mathbb{£}$.
It will be fit to mention here the method the chieftains took formerly to affemble the clans for any military expedition. In every clan there is a known-place of rendezvous, fyled Carn-a-whin, to which they muft refort on this fignal. A perfon is fent out full fpeed with a pole burnt at one end and bloody at the other, and with a crofs at the top, which is called Crofh-tàrie, the crofs of thame $\|$, or the fiery crofs; the firft from the difgrace they would undergo if they declined appearing; the fecond from the penalty

[^71]of having fire and fiword carried through their country, in cafe of refufal. The firt bearer delivers it to the next perfon he meets, he running full fpeed to the third, and fo on. In every clan the bearer had a peculiar cry of war; that of the Macdonald's was freich, or heath; that of the Grants, craig-elachie; of the Mackenzies, tullickard*. In the late rebellion, it was fent by fome unknown difaffected hand through the county of Breadalbane, and paffied through a tract of thirty-two miles in three hours, but without effect.

The women's drefs is the kirch, or a white piece of linen, pinned over the foreheads of thofe that are married, and round the hind part of the head, falling behind over their necks. The fingle women wear only a ribband round their head, whiel they call a fnood. The tonnag, or plaid, hangs over their fhoulders, and is faftened before with a brotche; but in bad weather is drawn over their heads: I have alfo obferved during divine fervice, that they keep drawing it forward in proportion as their attention increafes ; infomuch as to conceal at laft their whole face, as if it was to exclude every. external object that might interrupt their devotion. In the county of Breadalbane many wear, when in high drefs, a great pleated focking of an enormous length, called offan preaffach : in other refpects, their drefs refembles that of women of the fame rank in England; but their condition is very different, being little better than flaves to our fex.

This cuftom of covering the face was in old times abufed, and made fubfervient to the purpofe of intriguc. By the fumptuary law of James II. in 1457, it was exprefsly prohibited. It directs that "na woman cum to kirk, nor to mercat, with hir face muf. falled or covered, that fcho may not be kend, under the pane of efcheit of the courchie." Ifurpect much, that the head-dreffes of the ladies were at that time of the prefent fafhionable altitude; for the fame ftatute even prefcribes the mode of that part of apparel as well as others : for, after directions given to regulate the drefs of the men, they are told " to make their wives and dauchters in like manner be abuilzed, ganand and correfpondant for their eftate, that is to fay, on their head fhort curches with little hudes, as ar wfed in Flanders, England, and other countries; and as to their gownes, that na woman weare mertrickes $t$, nor letteis, nor tailes unfitt in length, nor furred under, but on a halieday."

The manners of the native Highlanders may jufly be expreffed in thefe words: indolent to a high degree, unlefs roufed to war, or to any animating amufement ; or I may fay, from experience, to lend any difinterefted affiftance to the diftreffed traveller, either on directing him on his way, or affording their aid in paffing the dangerous torrents of the Highlands : hofpitable to the higheft degree, and full of generofity: are much affected with the civility of frangers, and have in themfelves a natural politenefs and addrefs, which often flows from the meaneft when leaft expected. Through my whole tour I never met with a fingle infance of national reflection! their forbeafance proves them to be fuperior to the meannefs of retaliation: I fear they pity us; but I hope not indifcriminately. Are exceffively inquifitive after your bufinefs, your name, and other particulars of little confequence to them: moft curious after the politics of the world, and when they can procure an old news-paper, will liften to it with all the avidity of Shakfpeare's blackfmith. Have much pride, and confequently are impatient of affronts, and revengeful of injuries. Are decent in their general behaviour; inclined to fuperfition, yet attentive to the duties of religion, and are capable of giving a moft diftinct account of the principles of their faith. But in many parts of the High-

[^72]lands, their character begins to be more faintly marked; they mix more with the world, and become daily lefs attached to their chiefs: the clans begin to diliperfe themfelves through different parts of the country, finding that their induftry and good conduct afford them better protection (fince the due execution of the laws) than any their chieftain can afford; and the chieftain, tafting the fweets of advanced rents, and the benefits of induftry, difmiffes from his table the crowd of retainers, the former inftruments of his oppreffion and freakifh tyranny.
Moft of the antient fports of the Highlanders, fuch as archery, hunting, fowling, and fifhing, are now difufed ; thofe retained are, throwing the putting.ftone, or fone of ftrength *, as they call it, which occafions an emulation who can throw a weighty one the farthell. Throwing the penny-ftone, which anfwers to our coits. The fhinty, or ftriking of a ball of wood or of hair; this game is played between two parties in a large plain, and furnifhed with clubs; whichever fide ftrikes it firft to their own goal wins the match.

The amufements by their fire-fides were the telling of tales, the wildeft and moft extravagant poffible; mufic was another: in former times the harp was the favourite inftrument, covered with leather, and hung with wire $t$, but at prefent is quite loft. Bagpipes are fuppofed to have been introduced by the Danes; this is yery doubtful, but thall be taken notice of in the next volume ; the oldeft are played with the mouth, the loudeft and moft ear-piercing of any wind mufic ; the others, played with the fingers only, are of Irifh origin : the firf fuited the genius of this warlike people, roufed their courage to battle, alarmed them when fecure, and collected them when fcattered. This inftrument is become fcarce fince the abolition of the power of the chieftains, and the more induftrious turn of the common people.

The trum, or Jew's harp $\ddagger$, would not merit the mention among the Highland inftruments of mufic, if it was not to prove its origin and antiquity : cne made of gilt brafs having been found in Norway $\delta$, depofited in an urn.

Vocal mufic was much in vogue amongft them, and their fongs were chiefly in praife of their antient heroes. I was told that they ftill have fragments of the fory of Fingal and others, which they carrol as they go along: thefe yocal traditions are the foundation of the works of Offian.

Aug. 31. Leave Invernefs, and continue my journey weft for fome time by the river.fide; have a fine view of the plain, the Tomman, the town, and the diltant hills. After the ride of about fix miles reached Loch-Nefs $H$, and enjoyed along its banks a moft romantic and beautiful fcenery, generally in woods of birch, or hazel, mixed a few holly, white-thorn, afpin, afh and oak, but open enough in all parts to admit a fight of the water. Sometimes the road was ftraight for a confiderable diftance, and refembled a fine and regular avenue; in others, it wound about the fides of the hills which overhung the lake; the road was frequently cut through the rock, which, on one fide, formed a folid wall, on the other, a fteep precipice. In many parts, we were immerfed in woods, in others, they opened and gave a view of the fides and tops of the vaft mountains foaring above; fome of thefe were naked, but in general covered with

[^73]wood, except on the nere precipices, or where the grey rocks denied vegetation, or where the heath, now glowing with purple blofloms, covered the furface. The forn of thefe hills was very various and irregular, either broken into frequent precipices, or towering into rounded fummits cloathed with trees; but not fo clofe but to adnit a fight of the Kk between then. Thus, for many miles, there was no pofibility of cultivation ; yet this tract was occupied by diminutive cattle, by theep, or by goats: the laft were pied, and lived molt luxurioully on the tender branches of the trees. The wild animals that polfeffed this picturefque feene were ftags and roes, black game, and gous; and, on the fummits, white hares and ptarmigans. Foxes are fo numerous and voracious, that the farmers are fometimes forced to houfe their fheep, as is done in France for fear of the wolves.

It is to me matter of furprife that no mention is made, in the Poems of Offian, of our great beafts of prey, which mutt have abounded in his days; for the wolf was a peft to the country fo late as the reign of Queen Flizabeth, and the bear exifted there at leaft till the year 1057 , when a Gordon, for killing a fierce bear, was directed by King Malcolm III. to carry three bear's heads in his banner ${ }^{\text {* }}$. Other native aninials are often mentioned in feveral parts of the work; and in the five little poems on Night, compofitions of as many Bards, every modern Britifh beaft of chace is enumerated, the howling dog and the howling fox defcribed; yet the howling wolf omitted, which would have made the bard's night much more hideous.

Dr. Johnfon, in his journal to the Weftern Illes, P. 297, in a fricture on a paffage in one of my Tours, infinuates my belief in the writings of Offian; but the laft paragraph might have evinced my fcepticifm. In the five firf lines of p. 275 of the fame work, by that good and learned man, is collected the fum of my belief.

The north fide of Loch-Nefs is far lefs beautiful than the fouth. In general, the hills are lefs high, but very fteep; in a very few places covered with brufh-wood, but in general very naked, from the fliding of the ftrata down their lloping fides. About the middle is Cafle Urquhart, a fortrefs founded on a rock projecting into the lake, and was faid to have been the feat of the once powerful Cummins, and to have been defroyed by Edward I. Near it is the broadeft part of the Loch, occafioned by a bay near the cafle.

Above is Glen-Morifton, and eaft of that Straith-Glas, the Chifolm's country; in both of which are forefts of pines, where the rare bird, the cock of the wood, is ftill to be met with; perhaps in thofe near Cafle Grant. Formerly was common throughout the Highlands, and was called Capercalze, and Auercalze, and in the old law.books, Capercally. The variety of the black game, mentioned by M. Briffon, under the name of Coq. de Bruycre piquete, was a mixed breed between thefe two birds; but 1 could not hear that any at prefent were to be found in North Britain. Linnacus has met with them in Sweden, and defcribes them under the title of Tetrao cauda bifurca fubtus albo punclata. At Glen-Morifton is a manufacture of linen, where forty girls at a time are taught for three months to fin, and then another forty taken in: there are befides fix lonms, and all fupported out of the forfeited lands.

Above is the great mountain Meal Fourvounich; the firft land failors make from the eaft fea.

I was informed that in that neighbourhood are glens and cafcades of furprifing beauty, but my time did not permit me to vifit them.

Dined at a poor inn near the General's Hut, or the place where General Wade re. sided when he infpected the great work of the roads, and gave oae rare example of

[^74]retation, or The form ecipices, or to admit a lity of cul. goats: the rees. The game, and numerous $s$ is done in wolf was a xifted there directed by ther native e five little aft of chace wling wolf
a a paffage e laft paraof the fame
eneral, the -wood, but s. About ie lake, and e been ded by a bay ountry ; in ood, is ftill n throughlaw books, or the name I could not s met with - fubtus albo a time are befides fix make from ing beauty,
Wade re. example of
making the foldiery ufeful in time of peace. Near is a finc glen covered at the bottoon with wood, through which runs a torrent rifing fouthward. The country alfo is prettily varied with woods and corn-fields.

About a mile farther is the fall of Fyers, a vaft cataract in a darkfome glen of a ftupendous depth; the water darts far beneath the top through a narrow gap between two rocks, then precipitates above forty fect lower into the bottom of the chafm, and the foam, like a great cloud of fmoke, rifes and fills the air. The fides of this glen are vaft precipices mixed with trees over-hanging the water, tirrough which, after a fhort fpace, the waters difcharge themfelves into the lake.
About half a mile fouth of the firf fall is another paffing through a narrow chafin, whofe fides it has undermined for a confiderable way; over the gap is a true Alpine bridge of the bodies of trees covered with fods, from whofe middle is an aweful view of the water roaring beneath.
At the fall of Foher the road quits the fide of the lake, and is carried for fome fpace through a fmall vale on the fide of the river Fyers, where is a misture of fmall plains of corn and rocky hills.
Then fucceeds a long and dreary moor, a tedious afcent up the mountain See-chui$\min$, or Cummin's feat, whofe fummit is of a great height and very craggy. Defcend a feep road, leave on the right Loch-T'aarf, a fmall irregular piece of water, decked with litcle wooded ines, and abounding with char. After a fecond fteep defcent, reach
Fort Auguftus ", a fmall fortrefs, feated on a plain at the head of Lock-Nefs, between the rivers Taarf and Oich ; the laft is confiderable, and has over it a bridge of three arches. The fort confifts of four baftions; within is the governor's houfe, apd barracks for 400 men : it was taken by the rebels in 1746, who imnediately deferted it, after demolifhing what they could.

Loch-Nefs is twenty-two miles in length, the breadth from one to two miles, except near Cafle Urquhart, where it fwells out to three. The depth is very great; oppofite to the rock called the horfe-fhoe, near the weft end, it has been found to be 140 fathoms. From an eminence near the fort is a full view of its whole extent, for it is perfeclly ftraight, running from ealt to weft; with a point to the fouth. The baundary from the fall of Fyers is very fteep and rocky, which obliged General Wade to make that detour from its banks, partly on account of the expence in cutting through fo much folid rock, partly through an apprehenfion that, in cafe of a rebellion, the troops might be deftroyed in their narch, by the tumbling down of fones by the enemy from above: befides this, a prodigi n: arch muft have been flung over the Glen of Fyers.
This lake, by reafon of its great deptn, never freezes, and, during cold weather, a violent ftcam rifes from it as from a furnace. Ice brought from other parts, and put into Loch-Nef., inftantly thaws; but no water freezes fooner than that of the lake when brought iuto a houfe. Its water is efteemed very falubrious, fo that people come or fend thirty miles for it : old Lord Lovat in particular made conftant ule of it. But it is certain, whether it be owing to the water, or to the air of that neighbourhood, that for feven years the garifon of Fort Auguftus had not loft a fingle man.
The fifh of this lake are falmon, which are in fealon from Chrittmas to Midfummer ; trouts of about two pound weight, pikes and eels. During winter, it is frequented by fwans and other wild fowls.

[^75]The greateft rife of water in loch. Nefs is fourteen feet. The lakes from whence it receives its fupplies are Loch-Oich, Loch-Garrie, and Loch-Quich. There is but very little navigation on it; the only veffel is a gatly belonging to the fort, to bring the flores from the call end, the river Nefs being too fhallow for navigation.

It is violently agitated by the winds, and at times the waves are quite mountainous. November ift, $\mathbf{1 7 5 5}$, at the fame time as the carthquake at Lifbon, thefe waters were affeted in a veiy extraordinary manner: they rofe and flowed up the lake from eaft to weft with vaft impetuofity, and were cartied above 200 yards up the river Oich, breaking on its bauks in a wave near three feet high ; then continued ebbing and flowing for the fpace of an hour ; but at eleven o'clock, a wave greater than any of the reft came up the river, broke on the north fide, and overflowed the bank for the extent of thirty feet. A boat near the General's Hut, loaden with brufh-wood, was thrice driven afhore, and twice carried back again; but the laft time, the rudder was broken, the wood forced out, and the toat filled with water and left on thore. At the farne time, a little ine, in a fmall loch in Badenoch, was totally reverfed and flung on the beach. But at both thefe places no agitation was felt on land.

Sept. 1. Rode to the calle of Tor-down, a rock two miles wen of Fort Auguftus: on the fummit is an antient fortrefs. The face of this rock is a precipice; on the acceffible fide is a ftrong dyke of loofe ftones, above that a ditch, and a little higher a terrafs fupported by fones; on the top, a fmall oval area hollow in the middle; round this area, for the depth of near tirelve feet, are a quantity of fones ftrangely cemented with almont vitrified matter, and in fome places quite turned into black icoria; the ftones were generally granite, mixed with a few grit-ftones of a kind not found nearer the place than forty miles. Whether this was the antient fite of fome forge, or whether the ftones which form this fortrefs " had been collected from the frata of fome volcano, (for the veftigos of fuch are faid to have been found in the Highlands) 1 fubmit to farther inquiry.

From this rock is a view of Ben-ki, a vaft craggy mountain above Glen.Garrie's country. Towards the fouth is the high mountain Coryarich: the afcent from this fide is nine miles, but on the other the defcent into Badenoch is very rapid, and not above one, the road being, for the eafe of the traveller, cut into a zig-zag faftion. People often perifh on the fummit of this hill, which is frequently vifited during winter with dreadful ftorms of fnow.

Sept. 2. After a fhort ride weftward along the plain, reach Loch.Oich, a narrow lake; the fides prettily indented, and the water adorned with fmall wooded ifles. On the thore is Glen Garrie, the feat of Mr. M•Donald, alnoft furrounded with wood, and not far diftant is the ruin of the old caftle. 'This lake is about four miles long; the road on the fouth fide is excellent, and often carried through very pleafiant woods.

After a fmall interval, arrive on the banks of Loch-Lochy, a fine piece of water fourteen miles long, and from one to two broad. The diftant mountains on the north were of an immenfe height; thofe on the fouth had the appearance of neep-walks. The road is continued on the fide of the lake about cight miles. On the oppofite fhore was Achnacarrie, once the feat of Cameron of Lochiel, but burnt in 1746. He was efteemed by all parties the honefteft and mof fenfible man of any that embarked in the pernicious and abfurd attempt of that and the preceding year, and was a melancholy inftance of a fine underttauding and a well intending heart, over-powered by the unhappy prejudices of education. By his influence, he prevented the Rebels

 from this , and not g fafhion. ing wintera narrow lies. On ith wood, les long ; t woods. of water the north ep-walks. oppofite 46. He mbarked as a mepowered Rebels
from committing feveral excefles, and even faved the city of Glafgow from being plundered, when their army returned out of England, irritated with their difappointment, and enraged at the loyalty that city had fhewn. The Pretender cains to him as foon as ever he landed. Lochiel feeing him arrive in fo wild a manner, and fo unfupported, entreated him to defilt from an enterprize from which nothing but certain ruin could refult to him and his partizans. The adventurer grew warn, and reproached Lochiel with a breach of promife. This affected him fo deeply, that he intlantly wnt and took a tender and moving leave of his lady and family, imagining he was on the point of parting with them for ever. The income of his eftate wis at that time, as I was told, not above 7ool. per annum, yet he brought fourteen hundred inen into the feld.

The waters of this lake form the river Lochy, and difcharge themfelves into the weftern fea, as thofe of Loch-Oich do through Loch-Nefs into the eaftern. About the beginning of this lake enter Lochaber *; ftop at low-bridge, a posr houfe; travel over a black moor for fome miles; fee abundance of cattle, but fcarce any corn. Crofs

High-bridge, a fine bridge of three arches flung over the torrent Spean, founded on rocks ; two of the arches are ninety-five feet high. This bridge was built by General Wade, in order to form a communication with the country. Thefe public works were at firft very difagrecable to the old chieftains, and leffened their influence greatly; for, by adinitting ftrangers among them, their clans were tanght that the Lairds were not the firft of men. But they had another reafon much more folid; Lochaber had been a den of thieves; and, as long as they had their waters, their torrents and thair bogs, in a ftate of nature, they made their excurfions, could plunder and retreat with their booty in full fecurity. So weak were the laws in many parts of North Britain, till after the late rebellion, that no ftop could be put to this infannous practice. A contribution, called the Black-mail, was raifed by feveral of thefe plundering chieftains over a valt extent of country: whoever paid it had their cattle enfured, but thofe who dared to refufe were fure to fuffer. Many of thefe freebooters were wont to infert an article, by which they were to be releafed from their agreement, in cafe of any civil comino. tion: thus, at the breaking out of the laft rebellion, a M'Gregor $t$, who had with the fricteft honour (till that event) preferved his friends' cattle, immediately fent them word, that from that time they were out of his protection, and muft now take care of themfelves. Barrifcale was another of this clafs, chief of a band of robbers, who fpread terror over the whole country : but the Highlanders at that time efteemed the open theft of cattle, or the making a creach, (as they call it,) by no means difhonourable; and the young men confidered it a piece of gallantry, by which they recommended themfelves to their miftreffes. On the other fide, there was often as much bravery in the purfuers; for frequent battles enfurd, and much blood has been fpilt on thete accafions. They alfo fhewed great dexterity in tracing the robbers, not only through the boggy land, but over the firmeft ground, and cven over places where other cattle had paffed, knowing well how to diftinguilh the feps of thofe that were wandering about from thofe that were driven haftily away by the frecbooters.

From the road had a diftant view of the mountains of Arifaig, bcyond which were Moydart, Kinloch, \&c. At the end of Loch-fhiel the Pretender firlt fet up his ftandard in the wildeft place that imagination can frame : and in this fequeftered fpot, amidft antient prejudices, and prevailing ignorance of the bleffings of our happy conlti. tution, the frength of the rebellion lay.

[^77]Pafs by the river Lochy, now confiderable. See Inverlochy cafte, with large round towers, which, by the mode of building, feems to have been the work of the Englifh, in the time of Edward I. who laid large fines on the Scotch barons for the purpole of erecting new caftles. The largeft of thefe towers is called Cummin's. But long prior to thefe ruins Inverlochy had been a place of great note, a molt opulent city, remarkable for the valt refort of French and Spaniards ", probably on account of trade. It was alfo a feat of the Kings of Scotland, for here Achaius in the year 790 figned (as is reported) the league offenfive and defenfive between himfelf and Charlemagne. In after-tines it was utterly deftroyed by the Danes, and never again reftored.

In the neighbourhood of this place were fought two tierce battles, one between Donald Balloch, brother to Alexander Lord of the iffes, who with a great power invaded Lochaber in the year 1427 : he was met by the Earls of Mar and Caithnefs, the laft was flain, and their forces totally defeated $t$. Balloch returned to the infes with valt booty, the object of thofe plundering chieftains. Here alfo the Campbells, under the Maquis of Argyle in February 1645, received from Montrofe, an overthrow fatat to numbers of that gallant name. Fifteen hundred fell in the action, and in the purfuit, with the lofs only of three to the royalits. Sir Thomas Oglevie, the friend of Montrofe, died of his wounds. His death fupprefied all joy for the viChory.

At Inverlochy is Fort William, built in King William's reign; as was a fmall town near it called Maryborough, in honour of his Queen; but, prior to that, had been a fmall fortrefs, erected by General Monk, with whofe people the fimous Sir Eiven Cameron $\ddagger$ had numerous contefts. The prefent fort is a triangle, has two baltions, and is capable of admitting a garrifon of Soo men. It was well defended againft theRebels in 1746, who raifed the fiege with much difirace. It was alfo attempted by thofe of 1715 , but without fuccefs. The fort lies on a narrow arm of the fea, called Lochiel, which extends fone miles higher up the country, making a bend to the north, and extends likewife weflward towards the ifle of Mull, near twenty-four Scotch miles.
This fort on the weft, and Fort Augulus in the centre, and Fort George on the eaft, form what is called the chain, from fea to fea. This fpace is called Glen-more, or the great glen, which, including water and hand, is almolt a level of feventy miles. There is, in fact but little land, but what is divided by firth, loch, or river; except the two miles which lie between Loch-Oich and Loch-Lochy, called Lagan-achadrom. By means of Fort Gcorge, all entrance up the firth towards Invernefs is prevented. Wert Auguftus curbs the inhabitants midway, and Fort Willian is a check to any attenpts in the welt. Detachments are made from all thefe gariifons to Invernefs Bernera barrack oppofite to the lle of Skie, and Caftle Duart in the Ine of Mull g . Other finall partics are alfo fentered in huts throughout the country, to prevent the ftealing of cattle.

Fort Willians is furrounded by va't momtains, which oceafion almoft perpetual rain: the loftieft are on the fouth fide; I nevilh foars above the reft, and ends, as I was told, in a point, (at this time concealed in mift) whofe height from the fea is faid to be 1450 yards. As an antient Briton, I lament the difgrace of Snowdon, once efteemed the highent hill in the ifland, but no:\% mult yield the palm to a Caledonian mountain.

But

But I have my doubts whether this might not be rivalled, or perhaps furpaffed, by others in the fame country; for examples Ben y bourd, a central hill, from whence to the fea there is a continued and rapid defient of feventy miles, as may be feen by the violent courfe of the Dee to Aberdecn. But their height has not yet been taken, which to be done fairly muft be from the fea. Benevilh, as well as many others, harbours Tnow throughout the year.
The bad weather which reigned during ny flay in thefe parte, prevented me from vifiting the celebrated parallel roads in Glen-Roy. As I am unable to fatisfy the curiofity of the reader from my own obfervation, I fhall deliver in the Appendix the information I could collect relating to thefe amazing works.

The great produce of Lochaber is cattle : that diftrict alone fends out annually 3000 head; but if a portion of Inverncfsflire is included, of which this properly is part, the number is 10,000 . There are alfo $a$ few horfes bred here, and a very few theep; but of late feveral bave been imported. Scarce any arable land, for the exceffive wet which reigns here almoft totally prevents the growth of corn, and what little there is fit for tillage lets at ten flillings an acre. The inhabitants of this diftrict are therefore obliged, for their fupport, tuimport 6000 bolls of oatineal annually, which coft about 40001 .; the rents are about 30001 . per annum; the return for their cattle is about 75001 . ; the horfes may produce fome trifle; fo that the tenants mult content themfelves with a very feanty fubfiftence, without the profpect of faving the lealt ngainft unforefeenaccidents. The rage of raifing rents has reached this diftant country: in Eugland there may be reafon for it, (in a certain degree) where the value of lands is increafed by acceflion of commerce, and by the rife of provifions: but here (contrary to all policy the great men begin at the wrong end, with fqueezing the bag, before they have hilped the poor tenant to fill it, by the introduction of manufactures. In many of the ines this already fhews its unhappy effect, and begins to depopulate the country; for numbers of fanilies have been obliged to give up the ftrong attachment the Scots in general have for their country, and to exchange it for the wilds of America.

The houfes of the peafants in Lochaber are the moft wretched that can be imagined; framed of upright poles, which are wattled; the roof is formed of boughs like a wigwam, and the whole is covered with fods; fo that in this moit climate their cottages. have a perpetual and much finer verdue than the reft of the country.

Salmons are taken in thefe parts as late as May; about 50 tons are caught in the feafon. Thefe filh never appear fo carly on this coalt as on the caftern.

Ihinocs are taken here in great numbers, 1500 having been taken at a draught. They conse in Auguf, and difappear in November. They are about a foot long, their colour grey, fpotted with black, their flefh red; rife eagerly to a fly. The filhermene fuppole them to be the young of what they call a great trout, weighing 3olb. which I fippofe is the grey *.

September 4th, left Fort William, and proceeded fouth along the military road on the fide of a hill, an awful height above Loch-Leven $\dagger$, a branch of the fea, fo narrow as to have only the appearance of a river, bounded on both fides with vaft mountains, among whofe winding bottons the tide rolled in with folemn majelly. The fcenery begins to grow very romantic ; on the welt fide are fome woods of birch and piries:: the hills are very lofty, many of them taper to a point; and my old friend, the 'late-

[^79]worthy bifhop Pocock, eompared the fhape of one to mount Tabor. Beneath them is Glen-Co, infamous for the maffacre of its inhabitants in 1691, and celebrated for having (as fome affert) given birth to Ollian ; towards the north is Morven, the country of his hero Fingal.
"The fcenery * of this valley is far the moft picturefque of any in the Highlands, being fo wild and uncommon that it never fails to attract the eye of every franger of the leaft degree of talte or fcufibility. The entrance to it is ftrongly marked by the craggy mountain of Buachal-ety, a little weft of the King's houfe. All the others mountains of Glen-Co refemble it, and are evidently but naked and folid rocks, rifing on each fide porpendicularly to a great height from a fat narrow bottom, fo that in many places they feem to hang over, and make approaches, as they afpire, towards each other. The tops of the ridge of hills on one fide are irregularly ferrated for three or four niles, and hot in places into fpires, which form the mot magnificent part of the feenery above Ken Lock-Leven. In the middle of the valley is a fmall lake, and from it runs the river Coän, or Cona, celebrated in the works of Offian. Indeed no place could be more happily calculated than this for forming the tafte and infpiring the genius of fuch a poct.
"The principal native animals on the mountains of Glen. Co are red deer, Alpine hares, foxes, eagles, ptarmigans, and a few noor-fowl. It is remarkable that the com. mon hare was never feen eithes here, in Glen-Creran, or Glen-Ety, till the military roads were made. The partridge is a bird but lately known here, and is ftill rare. There are neither rats nor vipers.
"In Glen-Co are fix farms, forming a rent of 2411 . per annum : the only crops are oats, bear and potatoes. The increafe of oats is three bolls and a half from one; of bear four or five. But the inhabitants cannot fubfift upon their harveft : about three hundred pounds worth of meal is annually imported. They fell about feven hundred pounds worth of black cattle; but keep only fheep and goats for the ufe of private fanilies : neither butter or cheefe is made for fale. The men fervants are paid in kind ; and commonly married.
"Glen-Co lics in the united parifhes of Lifmore and Appin, and contains " abou tfour hundred inhabitants, who are vifited occafionally by a preacher from Appin."
Leave on the left a vaft cataract, precipitatinc: itfelf in a great foarming fhect between two lofty perpendicular rocks, with tiees growing out of the fiffures, forming a large fream, called the water of Buan.

Breakfalt at the little village of Kinloch-Leven on moft excellent minced fag, the only form I thought that animal good in.

Near this village is a fingle farm fourteen miles long, which lets for only 351 per annum; ; and from the nature of the foil, perhaps not very cheap.
Saw here a quern, a fort of portable mill, made of two fones about two feet broad, thin at the edges, and a little thicker in the middle. In the centre of the upper fone is a hole to pour in the corn, and a peg by way of handle. The whole is placed on a cloth; the grinder pours the corn into the hole with one hand, and wilh the other turns round the upper ftone with a very rapid motion, while the meal runs out at the fides on the cloth. This is rather preferved as a curiofity, being much out of ufe at prefent. Such are fuppofed to be the fame with what are common among the Moors, being the fimple fubfitute of a mill.

[^80]Immediately after leaving Kinloch-Leven the mountains foar to a far greater height than before; the fides are covered with wood, and the bottoms of the glens filled with torrents that roar amidt the loofe ftones. After a ride of two miles begin to afcend the black mountain, in Argylenire, on a fteep road, which continues about three miles almoft to the fummit, and is certainly the higheft public road in Great Britain. On the other fide the defcent is fcarce a mile, but is very rapid down a zig-zag way. Reach the King's houfe, feated in a plain : it was built for the accommodation of His Majefty's troops, in their march through this defolate country, but is in a manner unfurnifhed.

Pafs near Loch-Talla, a long narrow piece of water, with a fmall pine wood on its fide. A few weather-beaten pincs and birch appear fcattered up and down, and in all the bogs great numbers of roots, that evince the foreft that covered the country within this half century. Thefe wer the laft pines which I faw growing fpontaneounty in North Britain. The pine forefts are becounc very rare: I can enumerate only thole on the banks of Loch Rannoch, at Invercauld, and Brae-Mar; at Coygach and DirryMonach: the firft in Straithnavern, the laft in Sutherland. Thofe about Loch-Loyn, Glen-Morrifton, and Straith-Glas; a fmall one near Loch-Garrie; another near LochArkig, and a few feattered trees above Kinloch-Leven, all in Invernefshire; and I was alfo informed that there are very confiderable woods about Caftle-Grant. I faw only one fpecies of pine in thofe I vifited: nor could I learn whether there was any other than what is vulgarly called the Scotch Fir, whofe fynonyms are thefe:

Pinus fyl? fris foliis brevibus glaucis, conis parvis albentibus. Raii hift. pl. 1401. Syn. ftirp. Br. 442.
Pinus fylvefris. Gerard's herb. 1356. Lin. fp. pl. 1418. Flora Angl. 36 r.
Pin d'Ecoffe, ou de Geneve. Du Hamel Traité des Arbrcs. II. 125. No. 5.
Fyrre. Strom. Sondmor. 12.
Moft of this long day's jou'ney from the black mountain was truly melancholy, almoft one continued fcene of dufky moors, without arable land, trees, houles, or living creatures, for numbers of miles. The names of the wild tracts I paffed through were, Buachil-ety Corricha-ba, and Bendoran.
The roads are excellent ; but from Fort-William to Kinioch-I even, very injudicioufly planned, often carried far about, and often fo fteep as to be fcarce furnountable; whereas had the engineer followed the track ufed by the inhabitants, thofe inconveniencies would have been avoided.
Thefe roads, by rendering the Highlands acceffible, contributed much to their prefent improvement, and were owing to the induftry of our foldiery; they were begun in $17 \cdot 3^{*}$, under the directions of General Wade, who, like another Hannibal, forced his way through rocks fuppofed to have been unconquerable: many of them hang over the mighty lakes of the country, and formerly afforded no other road to the natives than the paths of fheep or goats, where even the Hightander crawled with difficulty, and kept himfelf from tumbling into the far-fubjacent water by clinging to the plants and bulles of the rock. Many of thele rocks were too hard to yield to the pick-ax, and the miner was obliged to fubdue their obftinacy with gunpowder, and often in places where bature had denied him footing, and where he was forced to begin his labours, fufpended From above by ropes on the face of the horrible precipice. The bogs and moors had likewife their difficulties to overcome; but all were at length conftrained to yield to the perleverance of our troops.

[^81]In fome places, I obferved, that, after the manner of the Romans, they left engraven on the rocks the names of the regiment each party belonged to, who were employed in thefe works : nor were they lefs worthy of being immortalized than the vexillatio's of the Roman legions; for civilization was the conlequence of the labours of both.

Thefe roads begin at Dunkeld, are carried on through the noted pais of Killicrankie, by Blair, to Dalnacardoch, Dalwhinie, and over the Coryarich, to Fort Auguftus. A branch extends from thence eaftward to Invernefs, and another weftward, over Highbridge to Fort William. From the laft, by Kinluch-Leven, over the Black Mountain, by the King's houfe, to Tyendrum ; and from thence, by Glen-Urquie, to Inverary, and fo along the beautiful boundaries of Loch-Lomond, to its extromity.

Another road begins near Crief, paffes by Aberfeldy, croffies the Tiy at Tay-bridge, and unites with the other road at Dalnacardoch; and from Dalwhinie a brauch pafles through Badenoch to Invernefs.

Thefe are the principal military roads: but there may be many others I may lave overlooked.

Rode through fome little vales, by the fide of a fmall river; and from the appearance of fertility, have fome relief from the dreary feenes of the reft of the day. Reach

Tyendrum, a fmall village. The inn is feated the higheft of any houfe in Scotland. The Tay runs eaft, and a few hundred yards further is a little lake, whofe waters run weft. A lead-mine is worked here by a level to fome advantage; was difcovered about thirty years ago: the viens run S. W. and N. E.

September 5 th, continue my tour on a very fine road on a fide of a narrow vale, abounding with cattle, yet deftitute both of arable land and meadow; but the beafts pick up a fuftenance from the grafs that fprings up among the heath. The country opens on an approaching Glen-Urquie, a pretty valley, well cultivated, fertile in corn, the fides adorned with numbers of pretty groves, and the middle watered by the river Urquie: the church is feated on a knoll, in a large ifle formed by the river : the manfe, or minifter's houfe, is neat, and his little demefne is decorated in the moft advantageous places with feats of turf, indicating the content and fatisfaction of the poffeffor in the lot Providence has given him.

In the church-yard are feveral grave-fones of great antiquity, with figures of a warrior, each furnifhed with a fpear, or two handed fword : on fome are reprefentations of the chafe; on others, elegant fret-work; and on one, faid to be part of the coffin of a M'Gregor is a fine ruming pattern of foliage and flowers, and excepting the figures, all in good tafte.

On an eminence on the fouth fide of this vale dwells M•Nabb, a fmith, whofe family have lived in that humble ftation fince the year 1440 , being always of the fame profeffion. The firf of the line was employed by the Lady of Sir Duncun Campbell, who built the cafle of Kilchurn when her hulband was abfent. Some of their tombs are in the church-yard of Glen-I'rquie; the oldent has a hammer and other implements of his trade cut on it. At this place I was favoured with feveral Highland proveros, inferted in the Appendix. After breakfaft, at a goodinn near the village, was there prefent at a chriftening, and became fponfor to a little Highlander, by no other ceremony than receiving him for a moment into my arms : this is a mere act of friendfhip, and no effential rite in the church of Scolland.

Purfue my journey, and have a fine view of the meanders of the river before its union with Loch-dw : in an ine in the beginning of the lake is the caftle of Kilchurn, which had been inhabited by the prifent I.ord Breadalbane's grandfather, The great tower was repaired by his lordfhip, and garrifoned by him in 1745, for the fervice of the
government, in order to prevent the rebels from making ufe of that great pafs crofs the kingdom; but is now a ruin, having lately been ftruck by lightning.

At a place called Hamilton's pafs, in an inftant burft on a view of the lake, which makes a beautiful appearance; is about a mile broad, and fhews at leaft ten miles of its length. This water is prettily varied with infes, fome fo fmall as mercly to peep above the furface; yet even thefe are tufted with trees: fome are large enough to afford hay and pafturage; and in one, called Inch-hail, are the remains of a convent *. On Fraoch-Elan t, the Hefperides of the Highlands, are the ruins of a cafte. The fair Mego longed for the delicious fruit of the ine, guarded by a dreadful ferpent : the hero Fraoch goes to gather it, and is deftroyed by the inonfter. This tale is fung in the Erfe ballads, and is tranflated and publifhed in the manner of Fingal.

The whole extent of Loch-Aw is thirty miles, bounded on the north by Lorn, a portion of Argylefhire, a fertile country, prettily wooded near the water-fide. On the N.E. are vaft mountains; among them Cruachan $\ddagger$ towers to a great height; it rifes from the lake, and its fides are thagged with woods impending over it. At its foot is the difcharge of the waters of this loch into Loch-Etive, an arm of the fea, after a turbulent courfe of a feries of cataracts for the fpace of three miles. At Bunaw, near the north end, is a large falmon-fifhery; alfo a confiderable iron-foundery, which I fear will foon devour the beautiful woods of the country.

Pafs by Scotfown, a fingle houfe. Dinc at the iittle village of Cladifl. About two miles hence, on an eminence in fight of the convent on Inch-hail, is a fpot, called Croif-an-t-fleuchd, or the crofs of bowing, becaufe in Popifh times, it was always cuftomary to kneel or make obeifance on firft fight of any confecrated place §.

Pafs between hills finely planted with feveral forts of trees, fuch as Weymouth pines, \&c. and after a picturefque ride, reach

Inverary $\|$, the caftle the principal feat of the Dukes of Argyle, chief of the Campbells; was built by Duke Archibald; is quadrangular with a round tower at each corner; and in the middle rifes a fquare one glazed on every fide to give light to the faircafe and galleries, and has from without a moft difagreeable effect. In the attic fory are eighteen good bed-chambers: the ground floor was at this time in a manner unfurnifhed, but will have feveral good apartments. The caftle is built of a coarfe lapis ollaris, brought from the other fide of Loch-Fine, and is the fame kind with that found in Norway, of which the King of Denmark's palace at Copenhagen is built. Near the new caftle are fome remains of the old.

This place will in time be very magnificent: but at the prefent the fpace between the front and the water is difgraced with the old town, compofed of the moft wretched hovels that can be imagined. The founder of the caftle defigned to have built a new town on the weft fide of the little bay the houfe flands on: he finifhed a few houfes, a cuftom-houfe, and an excellent inn: his death interrupted the completion of the plan, which, when brought to perfection, will give the place a very different appearance to what it now bears.

[^82]VOL. 111.
P
From

From the top of the great rock Duniquaich is a fine view of the caftle, the lawn fprinkled with fine trees, the hills covered with extenfive plantations, a country fertile in corn, bordering on the loch, and the loch itfelf covered with boats. The trees on the lawn about the caftle are faid to have been planted by the Earl of Argyle: they thrive greatly; for I oblerved beech from nine to twelve feet and a half in girth, pines nine, and a leffer maple between feven and eight.

But the bufy fcene of the herring-fifhery gave no fmall improvement to the magnificent envircns of Inverary. Eivery evening * fome hundreds of boats in a manner covered the furface of Loch-Fine, an arm of the fea, which, from its narrownefs and from the winding of its fhores, has all the beauties of a frefh water lake: on the week days, the cheerful noife of the bagpipe and dance echocs from on board; on the fabbath, each boat approaches the land, and pfalmody and devotion divide the day ; for the common people of the north are difpofed to be religious, having the example before them of a gentry untainted by luxury and diffipation, and the advantage of being inftructed by a clergy, who are active in their duty, and who preferve refpect, amidft all the difadrantages of a narrow income.

The length of l.och-Fine, from the eaftern end to the point of Lamond, is above thirty Scotch miles; but its breadth farce two meafured: the depth from fixty to feventy fathoms. It is noted for the vaft fhoals of herrings that appear here in July and continue till January. The higheft feafon is from September to Chriftmas, when near fix hundred boats, with four men in each, are employed. A chain of nets is ufed (for feveral are united) of an hundred fathoms in length. As the herrings fwim at very uncertain depths, fo the nets are funk to the depth the fhoal is found to take: the fuccefs therefore depends much on the judgment or good fortune of the filhers, in taking their due depths; for it often happens that one boat will take multitudes, while the next does not catch a fingle fifh, which makes the boatmen perpetially enquire of each other about the depth of their nets. Thefe are kept up by buoys to a proper pitch; the ropes that run through them faftened with pegs, and by drawing up, or letting out the rope (after tahing out the pegs) they adjult their fituation, and then replace them. Sometimes the fill fwim in twenty fathom water, fometimes in fifty, and oftentimes even at the bottom.

It is computed that each boat gets about 401 . in the feafon. The fifh are either falted, and packed in barrels for exportation, or fold frefh to the country people, two or three hundred horfes being brought every day to the water-fide from very diftant parts. A barrel holds 500 herrings, if they are of the beft kind: at a medium, 700 ; but if more, for fometimes a barrel will hold 1000 , they are reckoned very poor. The prefent price 1l. 4s. per barrel; but there is a drawback of the duty on falt for thofe that are exported.

The great rendezvous of veffels for the fiflery off the weftern ines is at Cambeltown, in Cantyre, where they clear out on the 12 th of September, and fometimes three hundred bulles are feen there at a time : they mult return to their different ports by January $13^{\text {th }}$, where they ought to receive the premium of 2 l. 1os. per ton of herrings; but it is faid to be very ill paid, which is a great difcouragement to the fifhery.
'The herrings of Loch. line are as uncertain in their migration as they are on the coalt of Wales: they had for numbers of years quitted that water; but appeared again there within thefe dozen years. Such is the cafe with the lochs en all this weftern coaft, not tut people defpair too often of finding them, from one or two unfuccefsful trials in

[^83]north barren, black, and rocky, which darken with their fhade that contrated part of the water. Near this gloomy tract, beneath Craig Rofton, was the principal feat of the M'Gregors, a murderous clan, infamous for exceffes of all kinds; at length, for a horrible maffacre of the Colquhouns*, or Cahouns, were proferibed, and hunted down like wild beafts; their very name fuppreffed by act of council $\dagger$; fo that the remnant, now difperfed like Jews, dare not even fign it to any deed. Their pofterity are nill Gaid to be diftinguifhed anong the clans in which they have incorporated themfelves, not only by the rednefs of their hair, but by their flill retaining the mifchievous difpofitions of their anceftors.

On the well fide the mountains are clothed near the bottoms with woods of oak quite to the water edge; their fummits lofty, naked and craggy.

On the eaft fide the mountains are equally high, but the tops form a nore even ridge parallel to the lake, except where Ben-Lomond $\ddagger$, like Saul amidlt his companions, overtops the reft. The upper parts were black and barren ; the lower had great marks of fertility, or at leait of indultry, for the yellow corn was finely contrafted with the verdure of the groves intermixed with it.

This eaftern boundary is part of the Grampian hills, which extend from hence through the counties of Perth, Angus, Mearns, and Aberdeen. They take their name from only a fingle hill, the Mons Grampius of Tacitus, where Galcacus waited the approach of Agricola, and where the battle was fought fo fatal to the brave Caledonians. Antiquarians have not agreed upon the particular fpot; but Mr. Gordon § places it near Comrie, at the upper end of Strathern, at a place to this day called Galgachanmoor. But to return.

The road runs fometimes through woods, at others is expofed and naked; in fome fo fteep as to require the fupport of a wall; the whole work of the foldiery : bleffed exchange of inftruments of deftruction for thofe that give fafety to the traveller, and a polifh to the once inacceflible native.

Two great headlands covered with trees feparate the firt fcene from one totally different; the laft is called the Point of Firkin. On paffing this cape an expanfe of water burfts at once on your eye, varied with all the fofter beauties of nature. Immediately beneath is a flat covered with wood and corn: beyond, the headlands ftretch far into the water, and confilt of gentle rifings; many have their furfaces covered with wood, others adorned with trees loofely fcattered either over a fine verdure, or the purple bloom of the heath. Numbers of iflands are difperfed over the lake of the fame elevated form as the little capes, and wooded in the fame manner; others juft peep above the furface, and are tufted with trees; and numbers are fo difpofed as to form magnificent viltas between.

Oppofite Lufs, at a fmall diftance from fhore, is a mountainous ine almoft covered with wood; is near half a mile long, and has a moft fine effect. I could not count the

[^84]number of inlande, but was told there are twenty-eight : the largeft two miles long, and flocked with deer.
The length of this charming lake is twenty.four Scotch miles; its greatelt breadth eight; its greateft depth, which is between the point of Firkin and Ben-Lomond, is a hundred and twenty fathoms. Befides the fifh common to the lochs are guiniads, called here poans.

At this time were living at the little village of Lufs the following perfons, moft amazing inftances of cotemporary longevity; and perhaps proofs of the uncommon healthinefs of the place. Thefe compofe the venorable lift:

| Rev. Mr. James Robertfon, minilter, aged | - | - | 90. |  |
| :--- | :--- | :--- | :--- | :--- |
| Mrs. Robertfon, his wife, | - | - | - | 86. |
| Anne Sharp, their fervant, | - | - | - | 94. |
| Niel Macnaughtan, kirk-officer, | - | - | - | 86. |
| Chritian Gay, his wife, | - | - | - | 94. |
| Walter Maclellan, | - | - | - | 90. |

The country from Lufs * to the fouthern extremity of the lake continually improves; the inountains fink gradually into fmall hills; the land is highly cultivated, well planted, and well inhabited. I was itruck with rapture at a fight fo long new to me: it would have been without alloy, had it not been dafhed with the uncertainty whether the mountain virtue hofpitality, would flourifh with equal vigour in the fofter fcenes, I was on the point of entering on; for in the Highlands every houfe gave welcome to the traveller.

On the road fide near Lufs is a quarry of moft excellent flates; and near the fide of the lake, about a mile or two farther, is a great heap of fones in mennory of St. MacKeflog, bifhop and confeffor, who fuffered martyzdom there A. D. 520 , and was buried in Comltraddan church.

The vale between the end of the lake and Dunbarton is unfpeakably beautiful, very fertile, and finely watered by the great and rapid river Leven, the difcharge of the lake, which, after a fhort courfe, drops into the Firth of Clyde bclow Dunbarton : there is fcarcely a fpot on its banks but what is decorated with bleacheries, plantations, and villas. Nothing can cqual the contraft in this day's journey, between the black barren dreary glens of the morning ride, and the foft fcenes of the evening, iflands worthy of the retreat of Armida, and which Rinaldo himfelf would have quitted with a figh.

Before I take my laft leave of the Highlands, it will be proper to obferve that cvery entrance into them is ftrongly marked by nature.

On the fouth, the narrow and wooded glen near Dunkeld inftantly fhews the change of country.
On the eaft, the craggy pais of Bollitir gives a contracted admiffion into the Grampian hills.

On the north, the mountains near Loch-May appear very near, and form what is properly fyled the threfhold of tie country; and on the

Weft, the narrow road impending over Loch-Lomond forms a moft charasteriftic entrance to this mountainous tract.

But the Erfe or Gallic language is not confined within thefe limits; for it is fooken on all fides beyond thefe mountains. On the eaftern coalt it begins at Nairn; on the weftern extends over all the ifles. It ceafes in the north of Caithnefs, the Orkneys, and the Shetland illands $t$; but near Loch-Lomond, is heard at Lufs, at Buchanan, eaft of the lake, and at Rofeneth, weft of it.

* A tolerable inn on the borders of the lake.
$\dagger$ In the Shetland ines are fitll fome remains of the Norfe, or old Norvegian language.

The traveller, who has leifure, fhould ride to the eminence of Millegs, to fee the rich prolipest between L.och-Lomond and the Clyde. One way is feen part of the magnificent lake, Ben-Lomond and the valt inountains above Glen-Crow. On the other hand appears a fine reach of the Clyde enlivened with flipping, a view of the pretty feats of Rofencth and Ardincapel, and the bufy towns of Port-Glafgow and Greenock.

Crofs the ferry over the Leven at Bonnel, and after a ride of three miles reach
Dunbarton, a furall but good old town, feated on a plain near the conflux of the Leven with the Firth of Clyde; it confifts principally of one large ftreet in form of a crefeent. On one fide is the tolbooth, and at the fouth end the church with a fmall fire fteeple; it had been collegiate, was frunded about $1+50$ by Ifabel Countefs of Lenox and Dutchefs of Albany, and was dedicated to St. Patrick, who was born in this countyThe waites of the town are bag-pipes, which go about at nine o'clock at night and five in the morning.

The calle is feated a little fouth of the town on a two-headed rock of a ftupendous height, riting in a frange manner out of the fands, and totally detached from every thing elfe; is bounded on one fide by the Clyde, on the other by the Leven. On one of the fummits are the remains of an old light-houle, which fome fuppofe to have beena Roman pharos; on the other, the powder magazine: in the hollow between is a large well of water fourteen feet deep. The fides of the rocks are immenfe precipices, and often hang-ever, except on the fide where the governor's houfe flands, which is defended by walls and a few cannon, and garrifoned by a few invalids. It feems to have been often ufed as a fate prifon: the Regent Morton was fecured there previous to his trial. From its natural frength, it was in former times deemed impregnable; fo that the defperate but fucceffful fcalado of it in $1571^{*}$ may vie with the greatelt attempts of that kind, with the capture of the Numidian fortrels, in the Jugurthine war, by Marius; of the more horrible furprife of Fefcamp $t$, by the gallant Bois-rofe.

The Britons in very early times made this rock 'a fortrefs; for it was ufual with them after the departure of the Romans to retreat to the tops of craggy inacceffible mountains, to forefts, and to rocks on the fhores of the fea: but Botthius makes the Scots polfefled of it fome ages prior to that, and pretends that it refifted all the efforts of Agricola, who laid fiege to it. It certainly may claim a right to great antiquity, for Bede declares it to have been the beft fortified city the Britons had during his days. Its ancient name was Alcluid, or Arcluid, or the place on the Cluid. But in after-times it acquired the name of Dun Britton, being the laft place in thefe parts held by the Britons againft the ufurping Saxons. In 756, reduced by famine, it was furrendered to Edbert King of Northumberland.

From the fummit of this rock is a fine view of the country, of the town of Dunbarton, the river Leven, the Frith of Clyde (the Glota of Tacitus) here a mile broad, and of the towns of Greenock and Port-Glafgow, on the oppofite fhore. The bufinefs of this country is the fpinning of thread, which is very confiderable. There is alfo a great falmon filhery: but in this populous country, fo great is the demand for them that none can be fpared for curing. Gilfes conce up the river in June, and continue in plenty about twenty days; and many falmon trout are taken from Marci to July. Phinocs, called bere ycllow fins, come in July, and continue about the fame fpace of time as the gilfes : the fifhermen call them the young of fome great fea trout. During May, parrs appear in fuch numbers in the Leven, that the water feems quite animated with them. There are befides in that river, perch and a few poans $\ddagger$.

[^85]fee the rich the magnifie other hand retty feats of ock.

1. T. Book VI. in midwinter. Eudrich, near

Sept. 8. Pafs by the ruins of Dunglas * cafte, near the banks of the Clyde, which meanders finely along a rich plain full of barley and oats, and much inclofed with good hedges, a rarity in North Britain. At a diftance are fome gentle rifings, interfperfed with woods and villas belonging to the citizens of Clafgow. Crofs the water of Kelvin at the village of Partic, and foon after reach

Glafgow.-The beft built of any noulern fecond-rate city I ever faw : the houfes of fone, and in a good tafte. The principal ftreet runs eaft and weft, and is near a mile and a half long, but unfortunately is not frait. The tolbooth is large and handfome. Next to that is the exchange; within is a fpacious roum with full length portraits of all our monarchs fince James I.; and an excellent one, by Ramfay, of Archibald Duke of Argyle, in a judge's robe. Before the exchange is a large equeftrian ftatue of King William. This is the broadent and fineft part of the Areet; many of the houfes are built over piazzas, but too narrow to be of much fervice to walkers. Numbers of other flreets crofs this at right angles, and are in general well built.

The market-places are great ornaments to this city, the fronts being done in a very. fine tafte, and the gates adorned with columns of one or other of the orders. Some of thefe markets are for meal, greens, fifh, or flefh. There are two for the laft which have conduits out of feveral of the pillars, fo that they are conftantly kept fivect and clean.

Near the meal market is a public granary, to be filled on any apprehenfion of fcarcenefs.

The guard-houfe is in the great freet, which is kept by the inhabitants, who regularly do duty. An excellent police is obferved here, and proper officers attend themarkets to prevent any abufes.

The old bridge over the Clyde confifts of eight arches, and was built 400 years ago by bifhop Rea; another is now built. The tide flows three miles higher up the country, but at low water is fordable. There is a plan for deepening the channel, for at prefent the tide brings up only very finall veffels; and the ports belonging to this city lie feveral miles lower, at Port Glafgow and Greenock, on the fide of the Firth.
Near the bridge is a large alins-houfe, a vaft nailery, a fone-ware manufacture, and a great porter brewery, which fupplies fome part of Ireland. Within fight, on the fouth fide are collieries, and much coal is exported into the laft mentioned ifland, and into Anerica.

The great imports of this city are tobacco and fugar: of the former, above 40,000 hogiheads have been annually imported, and moft part of it again exported into France and other countries. The manufactures here are linens, cambricks $\dagger$, lawns, tapes, fuftians, and ftriped linens; fo that it already begins to rival Manchefter, and has, in point of conveniency of its ports, in refpect to America, a great advantage over it.

The college is a large building, with a handfome front to the freet, refembling fome of the old colleges in Oxfurd. Charles I. fubfrribed 2001. towards this work, but was prevented by the troubles from paying it; but Cromwell afterwards fulfilled the defign of the royal donor. It was founded in 1450 by James IL. Pope Nicholas V. gave the bull, but Bihhop 'Turnbull fupplied the money. There are about 400 ftudents belonging to the college, who lodge in the town; but the profeffors have good houfes in the college. Young gentlemen of fortune have private tutors, who have an eye to their conduct ; the relt live entirely at their own difcretion.

[^86]The library is a very handfome room, with a gallery round it. fupported by pillars. 'That beneficent nobleman the firlt Duke of Chandos, when he vifited the college, gave 5:ol. towards buikling this apartment.

Meffrs. Rohert and Andrew loulis, printers and bookfellers to the univerfity, have inflituted an acedemy for painting and engraving; and, like good citizens, zealous to promote the wellare and honour of their native place, have at a valt expence formed a moft numerous collection of paintings from abroad, in order to form the talte of their cleves.
The printing is a very confiderable branch of bufinefs, and has long been celebrated for the beauty ot the types and the correctnefs of the editions. Here are preferved in cafes numbers of monumental and other ftones*, taken out of the walls on the Roman flations in this part of the kingdon ; fome are well cut and ornamented; moft of them were done to perpetuate the memory of the ecxillatio, or party who performed fuch or fuch works; others in menory of officers who died in the country.
The cathedral is a large pile, now divided into two churches. Beneath, and deep underground, is another, in which is alfo divine fervice, where the congregation may truly fay, clamazi c profumdis: the roof is fine, made of fone and fupported by pillars, but the beauty much hurt by the crowding of the pews. Near this is the ruin of the calle, or binhop's palace.
The new church is a very landfome building with a large elegant porch, but the outfide is much disfigured by a flender fquare tower; and, in general, the fteeples of North Britain are in a remarkable bad taite, being, in fact, no favourite part of architecture with the churbh of Scotland. The infide of that juft fpoken of is molt neatly finifhed, fupported by pillars, and very prettily fluccoed: it is one of the very few exceptions to the lovenly and indecent manner in which Prefbytery keeps the houfes of God; reformation in manners of religion feldom obferves mediocrity, here it was outragcous; for a place of worfin commonly neat was deemed to favour of Popery; but, to avoid the imputation of that extreme, they run into another; for in many parts of Scotland our Lord feems fill to be worhipped in a ftable, and often in a very wretched one. Many of the churches are thatched with heath, and in fome places are in fuch bad repair as to be half open at top; fo that the people appear to worhip, as the Druids did of old, in open temples.

Sept. 10. Went to fee Hamilton Houfe, twelve miles difant from Glafgow : ride through a rich and beautiful corn country, adorned with fmall woods, gentlemen's feats, and well watered. Hereabout I faw the firlt muddy fream fince I had left Edin. burgh; for the Highland rivers running generally through a bed of rock or pure gravel, receive no other taint, in the greatedt floods, than the brown cryftalline tinge of the moors, out of which they rife.

See oa the weft, at a little dillance from the road, the ruins of Bothwell cafte, and the bridene, remarkable for the Duke of Mommouth's vitory over the rebels in 1679. I he church was collegiate, founded by Archibald Earl of Douglas, 1398 , and is, as I heard $t$, oddy itaculled with a thin coat of fone.

Hamilton IIoufe, or Palace, as it is called here, is feated at the end of a fmall town; is a large difagrecable pile of building, with two deep wings at right angles with the centre. The yallcry is of great extent, and furnilhed (as well as fome other rooms) with moft excelfent paintings : that of Daniel in :he lion's den, by Rubens, is a great performance.

[^87]1 by pillars. ollege, gave
erfity, have zealous to eformed a atte of their 1 celebrated e prefersed on the Routed ; mort performed h, and deep gation may l by pillars, ruin of the

rgow : ride gentlemen's d left Edin. ck or pure line tinge of
cafle, and Is in 1679. and is, as I
all town; is the centre. ) with moft erformance.

The fear and devotion of the prophet is finely expreffed by his uplifted face and eyes, his clafped hands, his fwelling mufcles, and the violent extenfion of one foot; a lion looks fiercely at him with open mouth, and feems only reftrained by the Almighty power from making him fall a victim to his hunger ; and the fignal deliverance of Daniel is more fully marked by the number of human bones fcattered over the floor, as if to thew the inflant fate of others, in whofe favour the Deity did not interfere.

The marriage-feaft, by Paul Veronefe, is a fine piece; and the obltinacy and refiftance of the intruder, who came without the wedding-garment, is Atrongly expreffed.

The treaty of peace between England and Spain in the reign of James I. by Juan de Pantoxa, is a good hiftorical pitture. There are fix envoys on the part of the Spaniards, and five on that of the Englifh, with their names infcribed over each; the Englith are the Earls of Dorlet, Nottingham, Devonhhire, Northanpton, and Robert Cecil.

Earls of Lauderdale and Lancrk fetting the covenant, both in black, with faces fult of puritanical fotemnity.

Several of the Dukes of Hamilton. James Duke of Hamilton, with a blue ribband and white rod. His fon, beheaded in 1649 . His brother, killed at the battie of Worcefter. The Duke who fell in the duel with Lord Mohun.

Fielding, Earl of Denbigh *, his hair grey, a gun in his hand, and attended by an Indian boy. It feems perfectly to flart from the canvas, and the action of his countenance looking up has matchlefs fpirit. He commanded the fleet in two expeditions for the relief of Rochelle. In the laft, which was in 1628, he found an inferior tleet of the French king's lying before the harbour. Thefe he promifed the befieged to deftroy as foon as a high tide and fit wind concurred. Both happened; but, inftead of attacking the enemy, he made an inglorious retreat, and was purfued by a few French fhips even to our own coafts. Yet, on the breaking out of the civil war, he behaved on land like a ftout and gallant foldier; and died fighting valiantly in the royal caufe in April 1643, in a fkirmifly not far from Birningham. It is remarkable, that in the battle of Edge-hill, his fon, efpoufing the contrary fide, acted in the wing in which his father was pofted.

His daughter married James Marquis (afterwards Duke) of Hamilton. Both their portraits are in this palace.

Old Duke of Chatelherault, with an order about his neck.
Two half lengths in black; one with a fiddle in his hand, the other in a grotefque attitude ; both with the fame countenances, good, but fwarthy, miftakenly called David Rizzo's; but I could not learn that there was any portrait of that unfortunate man.

Maria Dei gratia Scotorum Regina, 1586. Nt. 43. a half length; a ftiff figure, in a great ruff, auburn hair, oval but pretty full face, of much larger and plainer features than that at cafte Braan, a natural alteration from the increafe of her crucl ufage, and of her ill health; yet ftill with a refemblance to that portrait. It was told me here, that fhe fent this picture, together with a ring, to the Duke of Hamilton, a little before her execution.

A head, faid to be Anna Bullen, very handfome, dreffed in a ruff and kerchief edged with ermine, and in a purple gown ; over her face a veil, fo tranfparent as not to conceal

> The bloom of young defire and purple light of love.

[^88]
The rough refonner John Knox.
Lord Dellhaven, author of the fanous fpeecin againt the Union:
1'hilip II. at full length, with a flrange figure of Fame bowing at his feet, with a label and this motto:" Pro mercitte adfo.

About a mile from the houfe, on an eminence, above a deep wooded glen, whth the Avon at its botton, is Chatelhemint; fo called from the eflate the fanily onee pofiefled in tramce; is an elegant banqueting houfe, with a dog kennel, gardens, \&cc. and equmands a tine view of the country. The parle is now much inclofed; but I am told, that there are flill in it a few of the breed of the wild cattle, which Boethius* fays were peculiar to the Caledonian foreft, were of a fnowy whitenefs, and had manes like lions ; they were at this time in a diftant part of the park, and I lon fight of them. ". Returned to Clafgow.

Scpt. 11. Croffed the country towards Sterling. Paffed through the village of Sy. fith, noted for a victory gained by Montrofe over the Covenanters. Through: 1 og, where numbers of the fugitives perifhed, is now cutting part of the canal that is jo join the firths of Forth and Clyde. Saw the fpot where the battle of Ranner'murne was fought, in which the Englifh under Edward II. had a fhameful defeat. J:lward was fo alfured of conqueft, that he brought with him William Bafton, a Carmelite, and famous poet, to cetebrate his victory; but the monarch was defeated, and the poor bard taken and forced by the conqueror, invita Minerved, to fing his fuccefs, which he did in fuch lines as thefe:

> Hic capit, bic rapit, bic terit, bic ferit, ecce dolores;
> Vox tonat; as fonat ; bic ruit; bic luit ; arcto modo res.
> Hic fecat ; bic nccat; bic docet ; bic nocet ; iftc fugatur:
> Hic latet, bic patet ; bic promit, bic gemit ; bic jupcratur.

At this place that unfortunnte monirch James III. was defeated by his rebellious fubjects; in his flight fell down from his horfe, and, bruifed by his fall, was drawn into a neighbouring mill, and fonn after aflaflinated by a prieft called in to receive his confeffion, and afford him fpiritual afiiftance.

Went through the fmall town of St. Ninian $\dagger$, a mile fouth of Sterling. The church had been the powder-magazine of the Rebels; who, on their return, blew it up in fuch hafte, as to deftroy fome of their own people, and about fifteen innocent fpectators.

Sterling and its cafte, in refpect of fituation, is a miniature of Elinburgh; is placed on a ridged hill or rock, rifing out of a plain, having the cafle at the upper end on a high precipitous rock. Within its walis was the palace of feveral of the Scotch kinge, a fquare building, ornamented on three fides with pillars refting on grotefque figures projecting from the wall, and on the top of each pitia: is drace, feemingly the werk of fancy. Near it is the old parliament houfe, a van . Feet lou very high, with a timbered roof, and formerly had a gallery un or toud the intide. Below the caftle are the ruins of the palace belonging to the Earls of Mar, whofe family had once the keeping of this fortrefs. There are flill the Erikine arms, and much orna-

[^89]mental carving on parts of it. The town of Sterling ls inclofed with a wall; the ftreets are irregular and narrow, except that which leads to the cafte. Here, and at the village of Bannocburne, is a confiderable manufatture of coarfe carpets:
From the top of the eaftle is by far the fineft view in Scotland. To the eaft is a vant plain rich in corn, adorned with woods, and watered with the river Forth, whofe meanders are, before it raches the fea, fo frequent and fo large, as to form a multitude of moft beautiful peninfulas; for, in many parts, the windings approxinate fo clofe as to leave only a litte ifthmus of a few yare's. In this plain is an old ubby, a view of Alloa, Clackmannan, Falkirk, the Firth of Forth, and the country as far an Edinburgh. On the north, the Ochil-hills, and the moor where the battle of Dumblain was fought. To the woft, the fraith of Menteith, as fertile as the eaftern plain, and terminated by the Highland mountains, among which the fummit of Ben-Lomond is ve. confpicuous.
The Sylva Caledonia, or Caledonian forelt, begun a little north of sterling, and pafing through Menteith and Strathern, extended, according to Bocthine as far as Athol on one fide, and Lochabar on the other. It is very flightly mention ad by the antients *; but the fuppofed extent is given by the Scottifh hiftorian.
Lie at Falkirk, a large ill-built town, fupported by the great faire or black cattle from the Highlands, it being computed that 24,000 head are annually fo ' here. There is alfo a great deal of money got here by the carriage of goods, lanced at arron wharf, to Glafgow. Such is the increafe of trade in this country, that about twenty years ago not three carts could be found in the town, and at prefent there a. © above a hundred that are fupported by their interccurfe with Glafgow.
In the church-yard, on a plain fone, is the following epitaph on John Grahain, Ayled the right hand of the gallant Wallace, killed at the battle of Falkirk 298 1:

> Here lies Sir John the Grame both wight and wife, Ane of the chief refkewit Scot and thrife. Ane better knight not to the world was lent,
> Nor was gnde Grame of tructh, and of hardiment.
> Mente manuque potens, st Vallx fidus Achates Condiur hic Gramus bello isterfectus ab Anglis. 22 Julii. 1298.

Near this is another epitaph, occafioned by a fecond battle of Falkirk, as diferaceful to the Englifh as the other was fatal to the Scots: the firf was a well dilputed combat ; the laft, a panic on both fides, for part of each army flew, the one weft, the other eaft, each carrying the news of their feveral defeats, while the total deftruetiol of our forces was prevented by the gallant behariour of a brigadier, who with two regiments faced fuch of the rebels as kept the field, and prevented any further advantages. The epitaph I allude to is in memory of Sir Robert Monro $\ddagger$, the worthy chief-

* By Pliny, lib. iv. c. 16. and Eumenius, in his Yanegyric on Conflantius, c. 7.
$\dagger$ luaght between Falkirk and Carron works, at a place called to this day Grahan', Moor.

Virtutis conflilique fama
tain of that loyal clan, a family which loft three brothers the fame year in fupport of the royal caufe. Sir Robert being greatly wounded in the battle was murdered in cool blood by the rebels, with his brother Dr. Monro, who, with fraternal piety, was at that time dreffing his wounds; the third was affaffinated by millake for one who well deferved his death for fpontaneous barbarities on Highlanders approaching according to proclamation to furrender their arms.
I have very often mentioned fields of battle in this part of the kingdom; fcarce a fpot has efcaped unftained with gore; for, had they no public enemy to contend with, the Scots, like the Welfh of old, turned their arms againft each other.

Carron iron-works lie about a mile from Falkirk, and are the greateft of the kind in Europe : they were founded about eight years ago, before which there was not a fingle houfe, and the couatry a mere moor. At prefent, the buildings of atl forts are of vaft extent, and about twelve hundred men are employed. The iron is fmelted from the fone, then caft into cannon, pots, and all forts of utenfils made in founderies. This work has been of great fervice to the country, by teaching the people indutry and a method of fetting about any fort of labour, which, before, the common people had fcarce any notion of.
Carron wharf lies on the Forth, and is not only ufeful to the works, but of great fervice even to Glafgow, as confiderable quantities of goods deftined for that city are landed there. The canal likewife begins in this neighbourhood, which, when effe $\theta$ ed, will prove another benefit to thefe works.

At a fmall diflanc: from the founderies, on a little rifing above the river Carrof, ftood that celebrated antiquity called Arthur's Oven, which the ingenious Mr. Gordon * fuppofes to have been a facellum, or little chapel, a repofitory for the Roman infignia, or ftandards; but, to the mortification of every curious traveller, this matchlefs edifice is now no more; its barbarous owner, a Gothic knight, caufed it to be demodifhed, in order to make a mill-dam with the materials, which, within lefs than a year, the Naides, in refentment of the facrilege, came down in a flood, and entirely fwept away.

Sept. 12. Saw near Callandar-Houfe fome part of Aitoninus's Wall, or, as it is called herc, Graham's Dyke $t$. The vallum and the ditch are here very evident, and both are of great fize, the laft being forty feet broad, and thirteen deep: it extended from the Firth of Forth to that of Clyde, and was defended at proper diftances by forts and watch towers, the work of the Roman legions under the cominand of Lollius Urbicus, in the reign of Antoninus Pius. According to Mr. Gordon, it began

[^90]at old Kirk Patrick on the Firth of Clyde, and ended two miles weft of Abercorn, on the Firth of Forth, being in length 36 miles, 887 paces.

Paffed through Burrowfonefs, a town on the Firth, enveloped in fimoke from the great falt-pans and vaft collieries near it. The town-houfe is built in form of a caftle. There is a good quay, much frequented by flipping; for confiderable quantities of coal are fent from hence to London; and there are befides fome Greenland thips* belonging to the town.

Ride near Abercorn, called by Bede the monaftery of Abercurnig; of which no mention is made in the accounts of the Scotch religious houfes, nor has there been for many centuries the leaft remains; for Buchanan fays, that none of any kind were to be met with even in his time, except the ruins of a tower belonging to the Douglafes.

Reach Hopeton-Houfe, the feat of the Earl of Hopetoun; a houfe begun by Sir William Bruce, and finifhed by Mr. Adams, is the handfoneft. I faw in North Britain: the front is enriched with pilafters, the wings at fome diffance joined to it by a beauti. ful colonade; one wing is the ftables, the other the library. In the laft is a fingie piece of lead ore weighing five tons, got out of his Lordfhip's mines at the Leadhills.

The great improvements round the houfe are very extenfive, but the gardens are ftill in the old tafte; trees and fhrubs fucceed here greatly, among others were two Portugal laurels thirty feet high. Nothing can equal the grandeur of the approach to to the houfe, or the profpect from it. The fituation is bold, on an eminence, commanding a view of the Firth of Forth, bounded on the north by the county of Fife; the middle is chequered with iflands, fuch as Garvey, Inch Keith t, and others; and on the fouth-eaft is a vaft command of Eaft Lothian, and the terminating object, the great conic hill of North Berwick.

The whole ride from Sterling to Queen's Ferry (near Hopeton-Houfe) is not to be paralleled for the elegance and variety of its profpects; the whole is a compofition of all that is great and beautiful : towns, villages, feats, and antient towers decorate each bank of that fine expanfe of water the Firth; while the bufy feenes of commerce and rural economy are no finall addition to the fill life. The lofty mounains of the Highlands form a diflant but auguft boundary towards the north-weft, and the eaftern view is enlivened with fhips perpetually appearing or vanifhing amidft the numerous ifles.

Pafs by Queen's-Ferry ; fall into the Edinburgh road, and finifh this evening in that capital, a moft agreeable and profperous tour. It was impolfible not to recal the idea of what I had feen; to imagine the former condition of this part of the kingdom, and to compare it with the prefent Itate, and, by a fort of fecond-fight, make a probable conjecture of the happy appearance it will affume in a very few years. Nor could I forbear repeating the prophetic lines $\ddagger$ of Aaron Hill, who feemed fcized with a like reverie.

[^91]Once more, O North! I view thy winding fhores,
Climb thy bleak hills and crofs thy dukk moors.
Impartial view thee with an heedful eyc,
Yct lill by nature, not by cenfure try.
England thy filter is a gay coquet,
Whom art enlivens, and temptations whet:
Rich, proud, and wanton, fle her beauty knows,
Ald in a confcious warmith of benuty plows:
Scotland comes after, like an umipe fair,
Who fighs with anguifh at her litter's air ;
Uneonfcious, that fle'll quickly have her day,
And be the toalt when Albion's charms decay.
Sept. 18. After a fow days experience of the fame hofpitality in Edinburgh that I had met with in the Highlinds, I continued my journey fouth, through a rich corn comary, leaving the leatland hills to the weff, whofe fides were covered with a fine turf. Before I reaclied Crook, a finall village, the country grew worfe; after this, it affumed a Highland appearance, the hills were high, the vales narrow, and there was befides a great fearcity of trees, and hardly any corn; inftead, was abundance of good pafturage for fleep, there being great mimbers in thefe parts, which fupply the north of England. The roads are bad, narrow, and often on the edges of precipices, impending over the river Tweed, here an inconfiderable ftream. Reach
Moffat, a fimall neat town, famous for iss fpaws; one faid to be ufeful in fcrophulous cafcs, the other a chalybcate, which makes this place much reforted to in fummer. Doctor Walker, minitter of the place, thewed me in manufcript his natural hillory of the Weftern Ines, which will do him much credit whenever he favours the world with it.
1Iere the unfortunate nobleman Lord Vifcount Kenmure fet up the Pretender's Alandard on the isth of October 1715, in fatal compliance with the importunities of the difaffected Lowlanders.
The country between Moffat and Lockerby is very good, a mixtire of downs and corn-land, with a few fmaH woods; the country grows quite flat and very unpleafant; but inceffant rains throughout my journey from Edinburgh, rendered this part of my tour both difagreeable and uneditying. Crofs a fmall river called the Sark, which divides the two kingdoms, and enter Cumberland.

About three miles farther crofs the Efk over a handfome fone bridge, and lie at the fimall village of Longtown. The country is very rich in corn, but quite bare of trees, and very flat. Near this village, at Netherby, are the ruins of a Roman fation, where flatues, weapons, and coins are often dug up.

Crofs the Eden to Carlife, a pleafant city, furrounded with walls, like Chcfer, but they are very dirty, and kept in bad repair. The caftle is anticnt, but makes a goon appearance at a dillance : the view from it is fine, of rich meadows, at this time covered with thoufands of cattle, it being fair-lay. The Eden here iorms two branches, and infulates the ground; over one is a bridge of four, over the other one of nine arches. There is befides a profpect of a rich country, and a diftant view of Cold-fells, Crofs-fells, Skiddaw, and other mountains.

The cathedral * is very imperfect, Cromwell having pulled down part to build barracks with the materials. There remains fome portion that was buitt in the Saxon times, with very mafly pillars and round arches. The reft is more modern, faid to

[^92]have been built in the reign of Edward III, who hadin one part an aparment tw lodge in. The arches in this latter building are fharp poiated; the ealt winduw remarkably finc.

The manufactures of Carliffe are chiefly of printed linens, for which nar 3000i. per ann. is paid in duties. It is alfo noted for a great manubucture of whip, which employs numbers of children.

Salmons appear in the Fden in numbers fo early as the months of December and January; and the London, and even Newcaftle markets are fupplied with euly filh from this river ; but it is remarkable, that they do not vifit the Lik in any quantity till April, notwithftanding the mouths of both thefe waters are at a fimall dillance from each other. I omitted in its proper place an account of the Newcalle fiihery, therefore infert here the litte I could collect relating to it. The filh follom appear in the Tyntill February : there are about $2+$ fifheries on the river, befides a very confiderable were, and the whole annual capture amounts to about 36,000 liflh. I was informed that once the fifh were brought from Berwick, and cured at Neweaftle; but at prefent, notwishftanding all goes under the name of Newcartle falmon, very little is taken there, in comparifon of what is caught in the 'Tweed.

The country near Carlife confifts of fmall inclofures, but a little farther on, towards Penrith, changes into coarfe downs. On the eait, at a diftance, are ridges of high hills ruming parallel to the road, with a good inclofed country in the intervening fpace. Above Penrith is a rich inclofed tract, mixed with hedge-row trees and woods. On the fouth-weft, a profpect of high and craggy mountains. After I left I.ockerby, Nature, as if exhauited with her labours, in the lofty hills of Scotland, feemed to have lain down and repofed herfelf for a confiderable fpace; but here began to rife again with all the fublimity of Alpine majefty.

Between the twelfth and thirteenth mile-fones is Plumpton. Plumpton park was leafed by Henry VIII. to Jack Mufgrave, Captain of Bewraith, an active man in his day, who fettled on five of his fons as many tenements.

Old Penrith, the antient Bremetenreium and Vorada of Antonina, ftood in this parifh. On the road fide, floping towards the river Petrel, the vallum, fofs, and gates are fill very vifible; and alfo great ruins of a town. The fort is called Caftle feeds; the town Old Penrith. Camden copied feveral infcriptions, for which I refer to his Britannia and to Dr. Bu:n's Hiftory of this county. Here are the faint veftiges of a military road which points towards Kefwick and joined another, which were by Elenborough and Papcafte to Amblcfide. This ftation was alfo the Berada of the Ravennas; and was garrifoned by a Cuneus Armaturarum, a cohort of the Ala Petriana, a body of horfe completely armed, mentioned in the notitia, fo mult have been ftationed here very late in the Ronan empire.

About four miles farther is Penrith, \&cc. an antient town, feated at the foot of a hill: is a great thoroughfare for travellers, but has little other trade, except tanning, and a fmall manufacture of checks. In the church-yard is a monument of great antiquity, confifing of two fone pillars cleven feet fix inches high, and tive in circumference in the lower part, which is rounded; the upper is fiuare, and tapers to a point; in the fquare part is fome fret-work, and the relievo of a crols, and on the interior fide of one is the faint reprefentation of fome animal. Both thefe fones are mortifed at their lower part into a round one; they are about fifteen feet afunder; the face between them is inclofed on each fide with two very large but thin femicircular Rones; fo that there is left a walk between pillar and pillar of two feet in
breadth. Two of thefe leffer ftones are plain, the two other have certain figures at prefent fcarce intelligible.

Thefe fones feem to have been monumental, and are evidently chrifian, as appears by by the crofs on the capital: fable fays that they were to pel petuate the menory of Cefarius, a hero of gigantic ftature, whole body extended from fone to fone : but it is probable, that the fpace marked by thefe columns contained leveral bodies, or might have been a family fepulchre.

Not far from thefe pillars is another called the Giant's thumb, five feet eight inches high, with an expanded head perforated on both fides; from the niddle the flone rifes again into a lefler bead rounded at top, but no part has a tendency to the figure of a crofs, being in no other part mutilated; fo that it is difficult to judge of the ufe or defign of this pillar ${ }^{*}$.

The church is very neat: the galleries fupported by twenty ftones, each ten feet four inches high, and four feet two inches in circumference. On one of the walls is this melanchuly record of a peftilence that wafted the country in the latter end of the reign of Queen Elizabeth :
A. D. M.DXCVIIl ex gravi pefle quie regionibus bifce incubuit, obierunt apud Penrish 2260. Kendal 4500 . Richmond 22 co. Carlife $1196 \dagger$.

Poferi
avortile vos el vivite.
On confulting a very old regifter kept in this parifh it appears that the plague raged here for fifteen months; from the 22d September 1597 to 5th January 1598 , and that only 680 perfons were buried in the parilh during that time. It feems therefore probable that Penrith muft have been the centre of fome particular diftrict, and that the numbers recorded on the wall muft comprehend all that died within that face. Penrith now contains about 2000 fouls. At a medium, 63 have died annually the laft ten years, or 630 in the whole. In the ten years preceding the peffilence there were only 686 funerals; fo that there was no great difference between the number of inhabitants at that and the prefent time. Some centuries previous to this Penrith had another vifitation of the fame nature. When the Scots under the Earl of Douglafs in 1380 made an inroad into Cumberland, they furprized this place at the time of the fair $\ddagger$, and returned with immenfe booty; but fuffered feverely in confequence, for they introduced into their country the plague contracted in this town, which fivept away one third of the inhabitants of Scotland $\mathbf{S}$.
The cafte is at the fkirts of the town, and now very ruinous. It appears not to have been of a high antiquity; for in a compromife of certain differences between Henry III. and Alexander King of Scotland, it was fipulated that Henry fhould grant to Alexander 200 librates of land in Northumberland or Cumberland, if fo much of Henry's land could be found in any of the places where no calle was fituated; and Penrith was part of this grant. Richard Duke of Gloucefter, afterwards Richard III. refided frequently at this caftle, and either was the founder, or repaired it greatly, for there is no inention of it before his time. The feignory of Peurith $\|$ was part of the great eftate he had with his Dutchefs Anne (afterwards queen daughter to Richard Nevil the great Earl of War-

[^93]$\dagger$ It brokeont in Carlife Octuber d.
© Cuthric's Hitt. Scutl. III. 123.
wick. By his refidence here and his magnificent mode of living he gained great popularity in the north, and he feemed to depend greatly on the troops from that part, for he caufed five thouland to march from thence to London to fupport his coronation. On his death, this and other neighbouring manors reverted to the crown : and remained in that fate, till they were granted by King William to his favourite Bentinck Earl of Portland.
The caftle was difmantled by Cromwell, but it does not appear in any hiftory to have fuftained a fiege.

In this town lives Mifs Calvin of exquifite ikill and accuracy in painting of plants and flowers: a heaven-born genius obfc̣ure and unknown I

> Full many a gem of pureft ray ferene, The dark unfathom'd caves of ocean bear : Full many a flower is born to bluh unfeen, And wafte its fweetnefs in the defert air.

She communicated to me a moft beautiful drawing of a fpecies of water-ouzel fhot in the neighbouring fells. It was lefs than the common kind, and the tail fhorter. The throat white, croffed below with a dufky band: the belly mottled with black and white : the upper part of the neck, the back, and coverts of the wings, dufky, nightly edged with white : tail and primaries black.
Crofs over the Eimot at Eamont bridge. The river and bridge take their name from the Saxon Ea or Eye, water, and mont, as the water flows out of a mountainous region. On paffing the bridge I immediately enter the county of

## WESTMORELAND.

September 2 I , At a fmall diftance beyond the bridge, near the road fide, is the circle called Arthur's round table, confifing of a high dike of earth, and a deep fofs within, furrounding an area twenty-nine yards in diameter. There are two entrances exactly oppofite to each other; which interrupt the ditch in thofe parts filled to a level with the middle. Some fuppofe this to have been defigned for tilting matches, and that the champions entered at each opening. Perhaps that might have been the purpofe of it; for the fizc forbids one to fuppofe it to be an encampment.

A little to the north of this, on the fummit of a fmall hill, is Mayborough, a vat circular dike of loofe fones : the height and the diameter at the bottom is ftupendous: it flopes on both fides, and is entirely formed of. pebbles, fuch as are collected out of rivers. There is an entrance on the caft fide leading into an area cighty-eight yards in diameter. Near the middle is an upright fone nine feet eight inches high, and feventeen in circumference in the thickeft part. There had been three more placed fo as to form (with the other) a fquarc. Four again ftood on the fides of the entrance, viz. one on each extcrior corner ; and one on each interior; but, excepting that at prefent remaining, all the others have long fince been blafted to clear the ground.
The ufe of this accumulation feems to have been the fame with that called Bryn-gwyn at Trer Dryw in Anglefea *, a fupreme confiftory of Druidical adminiftration, as the Britifh names import. That in Anglefea is conftructed in the fame manner with this; but at prefent there are no remains of columns in the interior part. Tradition is entirely filent about the origin of this phece: nothing can be collected from the name, which is Saxon, and given long after its contruation.

* Mora Antiqua, zd cd. go.

Almoft oppofite to Mayborough on the Cumberland fide of the Eimot is a vatt cairn or tumulus, compofed of round fones, and furrounded with large grit ftones of different fizes, fome a yard fquare ; which all together form a circle fixty feet in diameter.

Crofs the Lowther or Loder, and in about three or four miles diftance pafs Clifton Moor, where the rebels in 1745 facrificed a few men to fave the reft of their army.

Reach Shap or Heppe, a long village with the ruins of the priory of Premonftrenfian canons and its beautiful tower placed in a fequeftered botton to the north-weft of the road. The religious of this houfe were originally placed at Prefton in Kendal by Thomas fon of Gofpatric ; and afterwards removed to this valley, which in old times was called the valley of Mary Magdalene, and was granted to them by Robert de Veteripont in the thirteenth year of King John.

On the conmmon near the road fide half a mile beyond the village are certain large circles, and ovals formed of fmall ftones : and parallel to the road commences a double row of granites of immenfe fizes, croffed at the end by another row, all placed at fome diftance from each other. This alley I may call it, extended once above a mile; pafsing quite through the village; perfons now living remember to have feen fome fones that formed part of the lines, but now blafted in order to clear the ground. The fpace between the lines at the fouth end is eighty-cight feet : they converge towards each other, for near Shap the diftance decreafes to fifty-nine feet; and it is probable that they met and concluded in a point forming a wedge. That this monument was Danifh may be inferred from the cuftom of the Northern nation of arranging their recording ftones in forms that they feemed to determine fhould be expreffive of certain events: thofe that were placed in a ftrait and long order comnemorated the emulations of champions: fquares fhewed equeftrian conflicts: circles, the interments of families: wedge-fhaped, a fortunate victory *. Succefs might have attended the Northern invaders in this place, which gave rife to their long arrangenent: the fall of fome confanguineous heroes in the action caufed the grateful tribute of the fony circles.
Pafs over Shap fells, more black, dreary and melancholy than any of the Highland hills, being not only barren, but deftitute of every pictureique beauty. This gloomy fcene continues for feveral miles: leave on the right the narrow valley of Long Sladale, and at a diftance the mountain of Kenmere fell, famous for its nate quarries. The profpect grows more chearful within a fmall diftance of
Kendal, a large town, feated in a beautiful valley prettily cultivated, and watered by the river Ken. The principal ftreet is above a mile long, running north and fouth: the houfes old and irregular, moftly plaiftered. Yet the whole has an air of neatnefs and induftry without the leaft oftentation of wealth ; none appear meanly poor, or infultingly rich. The number of inlabitants is about feven thoufand ; chiefly engaged in manufactures of linfies, wortted flockings woven and knit, and a coarfe fort of woollen cloth called cot:ons, fent to Glafgow, and from thence to Virginia for the ufe of the negroes. The carding and the friezing mills, the rafping and cutting of logwood by different machines are well worth feeing: and the tenter fells all round the town, where the cloth is thretched, thew the extent of the manufactures, which employ great quantities of wool from Scotland and Durham.

Yet the place labours under great difadventages; the country near it yields no corn except oats: the fuel is in general peat; for the coals being brought from Wigan and other diftant places, coft nineteen fhillings per ton : yet notwithftanding, it has flourithed in manufactures from the time of Richard the Second to the prefent : Camden honours it with this encomium, Lanificii Gloria, et Indufria pracellens.

I am furprized that Doctor Burn fhould omit the mention of a native of this town who would have done honour to any country. Thomas Shaw, the celebrated traveller, was born here in 1693. He was fon of Gabriel Shaw, flheerman and dyer, a reputable and profitable bufinels. The merit of his travels in Barbary, Egypt, and the Holy-land, are juftly in the higheft eftimation *, and beyond the danger of being either depretiated or fuperfeded. He became fellow of Queen's College, Oxford, and was promoted to the headmip of Edmund Hall, and in 1751 died in high reputation for knowledge, probity, and pleafantry. His countenance was grotefque, but marked moft frongly with jocularity and good humour, fo as to diffuie into the company the full effects of his innocent and inftructive mirth. The print prefixed to his works is a faithful reprefentation of this excellent and able character.

The church is large, divided into five aifles. The moft remarkable tomb is one in the altar form of black marble, with various arms on the fide and end, fuppofed to be that of William Parr, anceftor of William Parr Marquis of Northampton, and his fifter Queen Catherine, wife to Henry VIII.

The ruins of the caftle are on the fummit of a round hill on the eaft fide of the town. It is of great antiquity; but the founder is not known. It appears to me to have been built on an artificial mount raifed on the top of the hill, with a decp foffe round the bafe. The barony of Kendal was granted by Willian the Conqueror to Ivo de Talebois, one of his followers, whofe defcendants frequently refided in the caftle. From them it paffed by marriage to the Roffes, and from them to the Parrs : and when in their poffeffion Catherine afterwards Queen of England was born here; a lady who had the good fortune to defcend to the grave with her head, in all probability merely by outliving her tyrant. It does not appear that this caftle fuftained any fiege: but in 1774 the Scots, under Duncan Earl of Fife, entered and plundered the town, broke open the churches, put all the inhabitants to the fivord, fparing neither age nor fext.

Take a very pleafant walk to Water-Crook, a mile diftant, along the fides of the Ken. This had been the Concangium of the Notitia, a ftation on the eaft fide of the river, whofe veftiges are almoft worn away by the plough. Altars, coins, and other antiquities have been found here. I faw in the walls of the barn of the farm houfe, the monumental infcription preferved by Mr. Horfely, p. 300, fuppofed by him to have been in memory of two freed-men; and that there was added the penalty of a fine on any who prefumed to bury in that fepulchre. Here is preferved an altar un-infcribed, but ornamented with beautiful feftoons: and I alfo faw the remains of the fatue fuppofed of Bacchus or Silenus.

Crofs the river and walk over fome fine meadows. Pafs by fome large round hillocks, one appearing artificial : afcend to gain the heights, above the town : leave below me near the ikirts a well called the Anchorite's, probably from fome hermitage once in its neighbourhood. Reach Caftlehow hill, a great artificial mount above the town, and oppofite to the cafle. The fummit is flat : juft within its verge is a circular ditch: and another tranfiverfe, probably the place of the foundation of a tower. Round the baie is a deep fofs and ligh dike, and on the eaft fide of the dike two baftions to give it additional itrength. Inmediately below is a fpot called Battle place, but tradition does not preferve the reafon of the name.

At a very frmall diftance from Kendal I crofied the Ken; purfued my journey over End-moor, and paffed through the townhip of Prefton Richard, in the parifh of Haverfham, remarkable for being, from the reign of Henry II. to that of Edward III.

[^94]R 2
a fpace
a fpace of two hundred years, owned ty perfons of the name of Richard de Prefon: Soon after, went through the fmall market town of Buton in Kendal, in the parih of Burton, the moft fouthern of any in Weftmoreland. At a finall diftance enter

## lancashire.

After travelling an uninterefting flage reach its capital Lancafter, a large and well built town, feated on the Lune, a river navigable for fluips of 250 tons as high as the bridge. The Cuftom-houle is a finall but moft elegant building, with a portico fupported by four Ionic pillars, on a mont beautiful plain pediment. There is a double flight of iteps, a ruftic furbafe and coins; a work that does much credit to Mr. Gillow, the architect, an inhabitant of this town.

The church is feated on an eminence, and commands an extenfive but not a pleafing view. The caftle is entire, the courts of juftice are held in it; and it is alfo the county jail. The front is very magnificent, conlitts of two large angular towers, with a handfone gateway between.

Eleven miles farther is the yillage Garfang, feated on a fertile piain, bounded on the eaft by the fells, on the weft by Pelling mofs, which formerly made an cruption like that of Solway. The adjacent country is famous for producing the fineft cattle in all the county. A gentleman in that neighbourhood has refufed 30 guineas for a three year old cow : calves of a month old have been fold for $10:$ and bulls from 70 to 100 guineas, which have afterwards been hired out for the feafon for 30 ; fo, notwithftanding his misfortunc, well might honeft Barnaby celcbrate the cattle of this place.

A little to the caft is a ruined towcr, the remains of Grenehaugh caftle, built, as Camden fuppofes, by Thomas Stanley firft Earl of Derby, to protect himfelf from the outlawed nobility, whofe eftates had been granted him by Henry VII.

September 22d, haftened through Prefton, Wigan, Warrington, and Chefter; and finifled my journey with a rapture of which no fond parent can be ignorant, that of being again reflored to two innocent prattlers after an ablence equally regretted by all parties.

## APPENDIX.-Number I: Of Scotch Pines.

By James Firquarason, Efq; of Invercauld.
IT is generally believed that there are two kinds of fir trees, the produce of Scotland, viz. the red or refinous large trees, of a fine grain, and hard folid wood: the other, a white wooded fir with a much fimaller proportion of refin in it, of a coarfer grain, and a foft fpongy nature, never comes to fuch a fize, and much more liable to decay.
de Prefon: he parih of er
re and well high as the ortico fupis a domble Ir. Gillow,
ta pleafing the county ith a hand:
ded on the uption like cattle in all for a three on 70 to o , notwith. is place.
decay. At firf appearance, this would readily denote two diftinct fecies, but I am convinced that all the trees in Scotland, under the denomination of Scotch fir, are the fame; and that the difference of the quality of the wood, and fize of the trees, is certainly owing to circumftances, fuch as the 1 ate, fituation, and foil they grow in. Thefe finelt fir-trees appear in the moft mountamous parts of the Highlands of Scotland, in glens or on fides of hills generally lyiug to a northerly afpect, and the foil of a hard gravelly confilience, being the natural produce of thefe places; the winged fecds are fcattered in quantities by the winds, from the cones of the adjacent trees, which expand in April and May, with the heat of the fun; thefe feedlings when young, rife extremely clofe together, this makes them grow fraight, and free from fide branches of any fize, to the height of 5 or 60 feet before they acquire the diameter of a foot: cven in this progrefs to height, they are very flow, occafioned by the poornefs of the foil, and the numbers on a funall furface, which I may fay makes them in a conftant flate of war for their fcanty nourifhment, the flronger and talleft by degrees ovcrtopping the weaker, and when the winds blow they lafh againft one another; this affifts in beating off any horizontal branches that might damage the timber with knots, as well as by degrees cruflacs the overtopped trees. In fuch flate of hoftility they continue fruggling until the mafter trees acquire fome fpace around them ; then they begin to thoot out in a more bufhy manner at the top, gradually lofing their firal form, increafing afterwards more in fize of body then leight, fome acquiring four feet diameter, and above fixty feet of height to the branches, fit for the fineft deal board. The growth is extremely flow, as is plainly proved by the fmallinefs of the grain of the wood, which appears diftinclly in circles, from the centre to the bark. Upon cutting a tree overclofe at the root, I can venture to point out the exact age, which in thefe old firs comes to an amazing number of years, I lately pitched upon a tree of two feet and a half diameter, as this is near the fize of a planted fir of fifty years of age mentioned, and I counted exactly two hundred and fourteen circles or coats, which makes this natural fir above four times the age of the planted one.' Now as to planted firs, thefe are raifed firft in dreffed ground from the feed, where they fand iwo feafons or more, then are planted out in the ground they are to continue in at regular diftances, have a clear circumference round them for extending both roots and branches; the one gives too quick nourifhment to the tree which fhoots out in luxuriant growths, and the other allows many of the branches to fpread horizontally, fpoiling the timber with knots; befides, this quick growth occafions thefe thick yearly circular coats of wood, which form a coarfe grain, of a fpongy foft nature. The juices never after ripen into a proportional quantity their refinous prefervative balm: fo that the plantations decay before the wood acquires age, at a valuable fize, and the timber when ufed in work has neither ftrength, beauty, nor duration. I believe the climate has likewife a great fhare in forming the nature of the beft wood, which I account for in the following manner. The molt mountainous parts of the Highlands, particularly the northerly hanging fituations, where thefe fine fir trees are, have a much fhorter time of vegetation than a more foutherly expofure, or the lower open countries, being fladed by high hills from the rays of the fun even at midday for months together, fo that with regard to other vegetables nature vifibly continues longer in a torpid fate there than in other places of the fame latitude. This dead fate of nature for fo long a time yearly appcars to me neceffary to form the ftrength and health of this particular fpecies of timber. No doubt they may at firt fhow a gratefulncfs for better foil and more fun by fhooting out fpontaneoufly, but if the plant or tree is fo altered by this luxury that it cannot attain any degree of perfection fit for the purpofes intended, the attempt certainly proves in vain.

From what is faid above, it is not at all my intention to difuade from planting Scotch fir, but to encourage thofe that have the proper foil and fituation to do fo, being of opinion that where thefe circumflances agree, and there, planting not in lines, but irregularly and thicker than common, the trees will come to be of equal fize and value with the natural ones. In confidence of this, I have planted feveral millions on the fides of hills out of reach of feed from the natural firs.

## APPENDIX.-Number II.

Of Elgin and the Shire of Murray.
By the Rev. Mr. Shaw, Minitter of Elgin.
THE parih of Elgin can afford little matter for anfwering Mr. Pennant's queries, and therefore I extend my view through the whole province or country of Murray, extending by the coalt from the river of Spey to the ealt, to the river of Beauly to the weft, which is the boundary of the province of Rofs: and extending to the fouth-weft as far as the north end of Loch-Lochy, and comprehendirg the countries of Strathipey, Badenoch, Strathern, Strath-nairn, and Strath-nerick, all which were the feats of the ancient Moravienfes. I fhall make my anfwers to the queries in order, and advance nothing but what confifts with my perfonal knowledge, or for which I have unqueftionable authority.
I. This province is naturally divided by the rivers of Spey, Loffey, Findern, Nairn, Nefs, and Beauly. The river of Spey rifing on the borders of Lochaber is more than fixty Scotch miles, or a hundred Englifh in length, but too rapid to be navigable. Upon this river great floats of fir and birch wood are carried down to the firth; the float is guided by a man fitting in a courach, of which Solinus, cap. 22. fays of the Irih, "Navigant vimineis alveis, quos circumdant ambitione tergorum bubulorum," a fhort but exact defcription of the courach. It is in fhape oval, about four feet long and three broad, a fmall keel from head to fern, a few ribs crofs the keel, and a ring of pliable wood round the lip of it, the whole covered with the rough hide of an ox or a horfe. The rower fts on a tranfverfe feat in the middle, and holds in his hand a rope, the end of which is tied to the float, and with the other hand he manages a paddle, and keeps the float in deep water and brings it to fhore when he pleafes. The rivers of Lofley, Findern and Nairn, have nothing remarkable in them, but the river of Nefs is obfervable on the following accounts, viz. It runs from Loch-Nefs, a lake 23 miles long, and from 2 to 3 broad; this loch is fed by a river running from Loch-Eoch, into which a river falls from Loch-Garrie, into which a river enters from Loch-Queich: Loch.Nefs and the river running from it never freeze, but the water is warm in the kecneft frolt. There are many other lakes in this province, of which one called the lake Dundelchack is remarkable : the inhabitants of the neighbourhood told me that this lake is never covered with ice before the month of January, but in that month and Fcbruary one night's ftrong froft coversit all over with ice: this lake ftands in the parifh of Darris, within two miles of Loch-Nefs. On the eaft fide of Loch-nefs, a large mile above the loch, is the water-fall of Foher, where the river Feach Len falls over a fteep rock about 80 feet in height; and the water breaking upon the fhelves, rarifies like a tog. In this province are feveral chalybeate mineral fprings, as at Tinland in Lambride parih, at Auchterblare in Duthel parifh, at Relugos in Edenkeely parifh, at Muretown in Lnvernefs parih. g of opinion egularly and ith the natuof hills out

II. In
II. In the parifh of Drainie there is a large cave open to the a, of a ce iderable length, breadth, and height. There are many natural caves in 1 hills, wit a which hunters, herds and thieves take fhelter in time of form: there is an artifical cave in the lands of Raits in Badenoch, in which fugitives and thieves were wont to relt ; but it is now demolifhed in part. Of the mountains in this province I fhall name but two or three: the Carngorm in Strathfpey is remarkable for its height, and for the fones found upon it ; I have feen thefe ftones of blue, green, yellow, and anber colours; fome fo large as to make big fnuffoboxes or fmall cups; fome of a hexagonal or pentagonal figure, and tapering to a point at each end. Thefe are now well known to the curious and to jewellers. Another mountain is Benalar in Badenoch, which I imagine is the higheft ground in Scotland, for waters running from it fall into the fea at Dundee, at Inverlochy, and at Garmoch in Murray. On the weft fide of Loch-Nefs there is a hill called Meafuarvoncy : Mr. Gordon the geogripher was impofed upon by being told that it is two miles perpendicular above the lake, and that on the top of it, there is a fmall lake which could never be founded, and communicates with Loch-Nefs: but I can affure you it is not near one mile above the loch, and there is no fuch lake on the top of it. For picturefque fcenes, worth drawing, 1 know none except Loch-Nefs : with the rocks, woods, cafcades of rills of water, and fome plots of corn land, on both fides of the loch, which make a delightful fcene to one failing the loch in the King's yatcht, or in a barge.
III. No earthquake, that I can learn, was ever felt in this province. No whirlwind any way remarkable: there are feveral echoes, but fcarcely worth the mentioning. About the 1733 or 4, flafhes of lightning fo ftruck the houfe of Innes near Elgin, as by entering into crevices in the wall to drive out big fones, likewife to rent a confiderable long vault, and to tofs a large cap-fone above forty yards from the houfe, as the late Sir Harry lnnes of that ilk told me.
IV. The common difeafes in our country are fevers, rheums, cold, fcrofula, hyfteric and hypocondriac ; bites of ferpents, and mad dogs. Our natural phyficians cure fevers, by making the patient drink plentifully of barley water or wangrefs, and when the fever rifes high the patient drinks a large draught of cold water which brings out a profufe fweat, that ends in a crifis. For rheums, they twice a-day bathe the part af. fected, pouring cold water upon it, and after it is dried, rubbing it till it is warm, and covering it with plaiding or flannel. For colds, they keep bed for two days, drinking warm, and if they fiweat not, they take the cold bath in a river or brook, which produces fweat. The fcrofula they find incurable, but in young perfons, by waifing often with lime water, it curcs in a few years. Hyfterics and hypocondriacs, in my opinion, are the effects of tea, coffee, floth and lazinefs, but thefe dileales are never known in ourHighlands. When one is bit by a ferpent or faake, if be can reach the wound, he fucks the blood, covers the wound, and often foments the part wounded, and members round it, with a decoction of the buds and leaves of ath trees. When one is bit by a mad dog, as often happens in the Highlands, he with a razor immediately cuts out the flefh of the part wounded, fucks the blood in plenty, and covers the wound with a handfull of cobwebs: or if he has not courage to cut out the flefh, and thereby to prevent the poifon from mixing with the blood, he caufes the wound to be well fucked, and then fuments it with warn oil or melted butter. I have feen thefe cures performed with remarkable fuccefs. We have had, lifty years ago, a terrible dileafe called the Civans, which broke out inte blotches in feveral parts of the body, and often turned into a gangrene in the face : this difeafe was brought by the military returning from Flauders,
and was cured only by a plentiful falivation with mercury, but now we are happily free froin it.
V. In the parih of Elgin, William Calanch, a farmer, died about the year 1740, at the age of about 119 years; we have had many who lived to an 100 years; we have fome who have two thumbs on each hand, or two great toes on each foot.
VI. and VII. In this town of Elgin the number of inhabitants increafes, occafioned by frangers living in the borough and many poor people conning from the country into it. But in the parifit to landward the number appears to decreafe, by reafon of tenants taking up larger farms than formerly: the number now is above 5000.
VIII. The corns raifed in this province are wheat, barley, oats, peas and beans, and rye. Of thefe in good years we have enough to ferve the country, and to export above 20,000 bolls, befides ferving the Highland countries. Our manufactures are linen in confiderable quantitics, wool and common fluffs, and now at Invernefs a flourifhing fail manufactory, and a ropery. Our fifhery is confiderable, for of white or fea-fifh there is great plenty to ferve the country and towns, and fometimes to export a little. And our falmon on the rivers of Spey, Findern, Nels, and Beauly, ferves the towns and country, and we export annually to the value of about 12,000 .
IX. Near the frith, the farmers manure with fea ware or weeds, which produces richly; in other parts they ufe marle, lime, dung of cattle, and in the Highlands tathing, i. e. keeping their cattle in fummer and autumn within pinfolds on barren or refted ground, that by their dung they may enrich the foil ; and in many parts they ufe green earth mixed with the dung of black cattle and horfes.
X. We cultivate fome hemp, much flax, of which we not only make linen for home confumption, and have three bleaching fields within the province, befides private bleaching, but we fell great quantities of linen yarn to the merchants of Glafgow and others. We likewife cultivate potatocs in great plenty to ferve the country.

X1. From the Luwlands of the province few or no cattle are fent out of the country, but from the Highland glens and valleys, feveral hundreds of black cattle, fome horfes, but no fiwine, are annually fold into England and the fouthern counties of Scotland.
XII. There are in this province feveral fmall mounts or motes, of which I cannot determine whether any of them be artificial or not; they generally fland about 40 paces one from another; I fhall name only the following : viz. Near the town of Elgin are two little mounts called the fhooting-buts, and two of the fame kind are near the kirk of leaty. I am inclined to think, that, before the invention of fire-arms, thefe were marks for thooting at with bows and arrows; but that in tine of Druidifm, they were the feats on which the Druids met to determine queftions in law and property; and they are in the Gaelic language called 'omavoed, i. e. the court hill; and in the fouth, the yare called Laws, as North Berwick Law, Largo Law, \&c. I may add the Unanis tera, or Mote-hill at Scoon. We have few military entrenchments worth the mentioning, as the Romans encamped little, if at all, fo far north. Druidical circles have been very fequent in this province. The itones were generally about four feet in length, and eighteen inches in breadh; for the moft part, the fones are removed by the country people, and 1 fhall name but one or two; viz. at Stonny-field near Invernefs, there was a large circle about thiry feet diameter, fome of the fones as yet Aamd. In Durris, at the north end of Loch-Nefs, is a Druid temple of three concentric circles: in all thefe druidical circles, there was an altar-ftone at the centre, but that at Durris is taken away, and near the eentre is a hollowed fone, which either was a laver so wath in, or a bafun to receive the blood of the facrifice. Belides circles, there were
many druidical cairns in this country, on which, at their folemn feftivals, they offered their facrifices; thefe cairns were about five feet high, and about thirty fect in circumference, and hedged around with fones pitted in the earth to prevent the falling out of the fones of the cairn; fuch a cairn flands in the parifh of Alves, four miles from Elgin ; another in the parihh of Birney, two miles from that town; and two or three near Avemore, in the parifh of Duthel in Strathfpey. From thefe circles and cairns many churches are to this day called Clachan, i. e. a collection of nones; and as they food in time of druidifm in groves and woods, a church in Wales was called Lhan, probahly from Lhuin a grove. There is within a half-mile to the eal of the town of Forres, an obelifk colled Seven's fone. The height of it cannot now with certainty be known, it is faid to be twelve feet funk in the corn-field. When fome years ago it was likely to fall, the Countefs of Murray caufed it to be erected, and much funk to picvent falling: it is about twenty-three feet above ground, about four feet broad; what is above ground is vifibly divided into feven parts, wheresf the loweft is atmot hid by the ftones fupporting it ; the fecond divifion contains many figures, but much defaced; in the third compartment are figures of men, and fome of beafts with hunan licads; the fourth contains enfigns and military weapons; and in the fifth, fixth, and feventh, the figures are fearce difeernible; on the reverfe there is a crofs, bencath which are two human figures of a Gothic form ; this feems to be a monument of a battle fought in that place, by King Malcolm II. of Scotland againft the Danes, about the year 1008. There are about two or three obelifks of fix or feven feet high below the kirk of Alves, probably as monuments of ikirmifhes, and the burying of men of fome figure.
XIII. In this province we had two bifhopricks, one abby, three priories, once proc. ceptory, and feveral convents. The firft bifhopric was that of Murthlack, now Mortlich, erected by K. Malc. II. An. 1010, when he had given a total defeat to the Danes in that valley: the diocefe confifted only of three parihes, and after three bifhops had ferved there it was tranlated to Aberdeen, an. 1142. As an account of it will be fully given by others, I infift not further.

The fecond bifhoprick was that of Murray. In the fourth century the bifhop af. fected a pre-eminence over his fellow prefbyters, and an equality in many things to fovercign princes : as princes had their thrones, were crowned, wore crowns, had their palaces, their minifters of ftate, their privy council, and their fubjects; fo bifhops had a folium, a confecration, a mitre, palaces, dignified clergy, chapter, and inferior clergy. The epifcopal bifhopric of Murray, was, in my opinion, erected by K. Alexander I. ; and the bilhops of it were in fucceffion.
(1.) Gregorius, who is a witnefs in a charter of K. David I. to Dumfernline, confirming K. Alcxander's charter to that abby; there he is called Gregorius Moravienfis Epifcopus : and in the foundation charter of the priory of Schoon, an. 1115, Gregorius Epifcopus is a witnef, who probably was the fame with the formerly mentioned.
(2.) William was made apoftolic legate, an. 1159 , and died 1162 . I find not what time he was confecrated.
(3.) Felix, is witnefs in a charter by K. William, Wilicimo filio frefken, de terris, de Strablock, Rofoil, In/jkele, Duffus Machare, et Kintray. He died about an. 11\%o.
(4.) Simeon de 'loney, monk of Melrofe, elected 1171, and died an. 1184, he was buricd in Birucy.
(5.) Andrew, confecrated an. 1184, and died 1185.
(6.) Richard, confecrated Idi. Martii, an. 1187, by Hugo bihop of St. Andrew's, and died an. 1203, and was buried in Spynic.
(7.) Bricius, brother of William lord of Dougla, and prior of Leffnahego, elected an. 1203, and died an. 1222, and was buricd at Spynie. He had reprifented to the pope that the former bihops had no fixed fee, or cathedral, fome refiding at Birney, fome at Kinnedar, and fome at Spynie; and he obtained that Spynic flould be the the billop's lee; he appointed the dignified ctergy and canons, and founded a college of canons, eight in number.
(8.) Andrew (fon of William Murray of Duflus, dean of Murray,) confecrated an. 1223. He founded the cathedral church at Elgin, added fourteen canons to the college, and aligned manfes and prebends for them, and for the clignified clergy, and died anl. 1242.

Here it will be proper to give fome account of the cathedral church at Elgin, for it does not appear that Briceus built any church at Spynie. Bifhop Andrew was not pleafed with the fituation of Spynie for a cathedral, and therefore petitioned the Pope, that, becaufe the diftance from the burgh of Elgin, which would divert the canons from their facred functions to go and buy provifions in the burgh, that he might allow the cathedral to be tranflated to the Ecclefice fancla Trinitatis prope Elgin: F'ope Honorius granted his requeft, and by his bull dated $4^{10}$ Idum Aprilis 1224 empowered the bifhop of Caithnefs, and the dean of Rofemarky, to make the defired tranlation. Thefe met at the place defired, on the 14th of the kalends of Auguft, an. 1224; and finding it "in commodum Ecclefie," declared the church of the holy Trinity to be the cathedral church of the diocefe of Murray in all times coming: it is faid that bifhop Andrew laid the foundation-ftone of the church on the fame day abovementioned, but it does not appear what the form or dimenfions of that firft church were.
(9.) Simon dean of Murray fucceeded and died 1252, and was buried in the choir of the cathedral near to bifhop Andrew.
(10.) Archibald dean of Murray, confecrated an. 1253, and died December 5th, an. 1298, and was buried in the choir. This bilhop having no palace, built one at Kinnedar, and lived there. In his time William Earl of Rofs, having done great harm to the parfon of Petty, was obliged to do penance, and for reparation gave the lands of Catholl in Rofs to the bifhops of Murray in perpetuum.
(1i.) David Murray, confecrated at Avignon in France, by Boniface VIII. anno 1299 , and died January 20, anno 1325 .
(12.) John Pilmore, confecrated $3^{\text {1i }}$ kal. Aprilis, anno 1326, and died at Spynic on Michaclmas-eve, 1362 .
(13.) Alexander Bar, doctor decretorum, confecrated by Urban V. an. 13 /12, died at Spynie, May 1397. In his time, viz. an. 1390, Alexander Stewart (fon of king Robert II.) lord Badenoch, commonly called the Wolf of Badenoch, keeping violent poffelion of the bilhop's lands in that country, was excommunicated in refentinent, in the month of May, an. 1390 . He with his followers burnt the town of Forres, with the choir of that church, and the archdeacon's houfe; and in June that year burnt the town of Elgin, the church of St. Giles, the hofpital of Maifon-Dieu, the cathedral church, with eighteen houles of the canons in the college of Elgin. For this he was made to do pernance, and, upon his humble fubmiffion, he was abfolved by Valter Trail, bilhop of St. Andrews, in the black friars chureh of Perth (being firft received at the door, barefoot, and in fackcloth, and again before the high altar in prefence of the king and his nobles, ) on condition that he would make full reparation to the bilhop and church of Murray, and obtain abfolution from the pope. Bilhop Bar begin the

rebuilding of the church, and every canon contributed to it, as did every parifh in the diocefe.
(14.) William Spynie, chanter of Murray, D.I. C. confecrated at Avignon by Benedict the IXth, Sept. 13th, 1397, and died Aug. 20th, an. 1406. He carried on the reparation of the eathedral, but the troubles of the times caufed it to make flow advances. On Iuly 3, an. 1402, Alexander III. fon of the lord of the ines, plundered Elgin, burnt many houfes, and fpoiled the houfes of the canons: he was exconmunicated, and offiered a fum of gold, as did every one of his captains, and he received abfolution: this moncy was npplicd for crecting a crofs and a bell in that part of the canonry which lies next the bridge of Elgin.
(15.) John Innes, parfon of Duffus, archdeacon of Caithnels, and LL. D. was confecrated by Benedict the XIIlth, Jan. 22d, an. 1406, and dsed April 25 th, an. 1414,' and was buried in his own ine in the cathedral, where his ftatue at large ftill remains with this infcription," Hic jacet reverendus in Cbrifto Pater et Doninues D. Jobannes Inncs de Imnes, bujus coclefia Epijcopus, qui boc notabile opus incepit, et per jeptennium cedifcavit." He built that ifle and a part of the great feeple or tower. After his death, the chapter met, and all were fworn, that on whomloever the lot fhould fall to be bifhop, he fhould annually apply one third of his revenues until the building of the cathedral fhould be finifhed.
(16.) Henry Leighton, parfon of Duffus, and LL. D. was confecrated in Valentia by Bendict XIII. March 8th, an. 1415 : he diligently carried on the building, and finifhed the great tower, and was tranflated to Abcrdeen, an. 1425. The cathedral church having been completely finifhed in the time of this bifhop, I fhall here defcribe that edifice, which was all in the Gothic form of architecture. It ftood due eafl and weft, in the form of a paffion or Jerufalem crofs : the length of it 264 feet; the breadth 35 feet; the length of the traverfe 114 feet. The church was ornamented with five towers, whereof two parallel towers food on the weft end, one in the middle, and two at the eaft end: the two weft towers fland entire in the ftone work, and arc cach $8+$ feet high ; what the height of the fpires was I do not find; probably they were of wood, and fell down long fince. The great tower in the centre of the nave ftood on two arched pillars croffing at top, and was including the fires, 198 feet in height; the two turrets in the eait end are flill entire, and each has a winding faircale leading to a channel or paffage in the walls round the whole church. The height of the fidewalls is 36 feet. The great entry was betwixt the iwo towers in the weft end; this' gate is a concave arch, 24 feet broad iur bafe, and 24 in height, terminating in a fharp angle; on each fide of the valves in the fweep of the arch are 8 round, and 8 fluted pilafters, $6 \frac{1}{2}$ feet high, adorned with a chapiter, from which arife 16 pilaters that meet in the key of the arch. Each valve of the door was 5 feet broad, and about to feet high. To yield light to this large building, befides the great windows in the porticos, and a row of windows in the wall above, each 6 feet high, there was above the gate a window of an acute angled arch 19 feet broad in bale, and 27 in height; and in the eaft end hetween the turrets, a row of five parallel windows, each 2 feet broad and o high; above thefe five more each 7 feet high, and over thefe a circular window near 10 feet diameter: the grand gate, the winlows, the pildars, the projesting table, pedeftals, corcons, are adorned with foliage, grapes, and other carvings. The traverte, in length as above, feems to have been built by the families of Dunbar and Innes, for the north part of it is called the Dunhar's inle, and the fouth part the Inases' ifle.

The chapter-houfe, in which the bilhop's privy council met, ftands on the north fide of the choir: it is a curious plece of architecture, communicating with the choir by a vaulted veftry. The houfe is an exact octagon, 34 feet high, and the diagonal breadth within walls 37 feet: it is almoft a cube arched and vaulted at top, and the whole arched roof fupported by one pillar in the centre of the houfe. Arched pillars from every angle terminated in the grand pillar, which is 9 feet in circumference, crufted over with 16 pilafters, and 24 feet high; adorned with a chapiter from which arife round pillars that feread along the roof, and join at top; and round the chapiter are engraven the arms of feveral bifhops. There is a large window in each of the feven fides, the eighth fide communicating, as was faid, with the choir; and in the north wall are five ftalls cut in nitches for the bifhop's minifters of flate, viz. the dean, chapter, archdeacon, chancellor, and treafurer, the dean's ftall raifed a ftep higher than the other four. This fructure of the cathedral came to decay in the manner following : viz. The Regent Earl of Murray being obliged to levy fome forces, and being fraitened in money, appointed by his privy council February 14, 1567, 8, the fheriffs of Aberdeen and Murray, with other gentlemen, to take the lead, thatch or covering off the cathedrals of Aberdcen and Murray, and to fell it for paying the troops, which was done, and fhipped for Holland ; but the fhip foon after launched in the fea, funk with the lead, which it is thought was done by a fuperfitious Roman catholic who was captain of it. Of this whole edifice, the chapter.houfe, the walls of the choir, the weftern fteeples, and the caftern turrets remain as yet entire, but the fide walls of the nave and the traverfe, are moft part fallen, and Peace Sunday, an. 1711, the great tower or fteeple in the middle fell from the foundation.

The cathedral ftood within the precinct of the college, near the river fide of Lofley: this precinct was walled round with a ftrong fone wall, and was about sooo yards in circumference, a part of the walls fill remains entire ; it had four gates, every one of which probably had (as is apparent the eaftern had) an iron gate, a portcullis, and a porter's lodge : within the precinct the dignified clergy and all the canons had houfes and gardens, and without the precinct, towards the town of Elgin, there was a fmall burrow with a crofs, where the churchmen purchafed their provifions. The bihop's palace flood at Spynie a large mile from Elgin; when it food entire, it was the moft ftately I have feen in any diocefe in Scotland. The area of the buildings was an oblong fquare of 60 yards; in the fouth-weft corner flood a ftrong tower vaulted, the wall 9 feet thick, with an eafy winding ftair-cafe, 2 cape-houfe at top, with a battlement round. In the other three comers are fmall towers with narrow rooms. In the fouth fide of the area, there was a chapel and tennis-court ; and in other parts were flables and all neceffary offices. The gate or entry was in the middle of the eaft wall, fecured by an iron grate and a portcullis; over the gate ftand the arms of bifhop John Innes and the initial letters of his name, which affords a conjecture that he was the firlt who built any part of this court. Around the palace was a fpacious precinct, with gardens, and walks, and which now pay twelve pounds fterling to the crown. The lands of Spynie and the precinct were granted by the crown to one gentleman after another tiil the revolution, and fince that time, the precinct continues in the crown, and the lands belong to Mr. Brodic of Spynic, now of Brodie; but the iron grate, the roof, the joifts, and all the timber-work were carried off by the former leffees, and now all is in decay.

The diocefe of Murray comprifed the counties of Murray and Nairn, and the greatef part of the counties of Bamil and lnverncls, and had fifty-fix paftoral charges.

What the revenue of this bihoprick was before the reformation cannot now be well known; for Patrick Hepburn, the laft popifh bifhop, fewed and fold at leaft a third part of the lands of the bihoprick, including what he was obliged to give to the Regent of Scotland, an. 1 568, for harbouring his intercommuned uncle James Earl of Bothwell, who married our unfortunate $Q$. Mary, an. ${ }^{1563}$, when an account of all dignified clergy's revenues was called in by the parliament, the revenues of the bithoprick of Murray, as then given up, were as follows: viz. In money, 1646l. 7s. 7 d . Scots; wheat io bolls; barley, 77 chalders, 6 bolls, 3 firlots, and 2 pecks; oats, 2 chalders, 8 bolls; falmon, 8 latts; poultry, 223. Befides the emoluments of the regaity of Spynie, and of the commiffaries of Spynie and Invernefs, and the great teinds of the parifh of Elgin, and of St. Andrew's in Murray, Oglton, Laggon, and the bihop's fhare of the revenues of the common kirks.

The only abby we had was at Kinlofs, which flood in what is now called the parifh of that name. It was founded by K. David I. $10^{\text {no }} \mathrm{kal}$. Januarii, an. 1150 . The abbot was mitred, and had a feat in parliament; the monks were of the Ciftercian order, called Monachi Albi. K. David endowed it, as did K. William, with many lands. Afelinus was the firft abbot, and Robert Reid was the laft. The revenues of the abby, an. 1561 , were found to be, in money, 1152 l . 1s. od. Scots; barley and meal, 47 chalders, 11 bolls, 1 firlot, and 3 pecks; oats 10 bolls, 3 firlots; wedders, 34 ; geefe, 41 ; capons, 60 ; and poultry, 125 . The abbot had a regality within the abby lands; Mr. Edward Bruce was made commendator, and afterwards lord of Kinlofs, an. 1604; from whom Alexander Brodie of Lethen purchafed the lands of Kinlofs, and the fuperiority of the other abby lands. The ruins of the building are fo fmall, that it cannot be known what it was when entire; for an. 1651 and 1652 , the ftones of it were fold, and carricd to build Cromwell's fort at Invernefs, and nothing now remains but confufed ruins.

The oldeft priory we had in this province was at Urquhart, three miles eaft of Elgin. It was founded by K. David I. an. 1125, in honour of the Trinity. It was a coll of Dumfermline with Benedictine monks. K. David endowed it liberally. The revenues thereof were not given up in an. 1563 , and fo I can give no account of them. The priory lands were erected into a regality, but no veftige of the buildings now remains. In ${ }_{15} 65$, Alexander Seton was made commendator, and 1591 , created Lord Urquhart, and an. 1605 Earl of Dumfermline; but the honours being forfeited in 1690, Seton of Barns claimed the lordhip, and about an. 1730 it was purchafed by the family of Gordon.

The next priory was at Plufcarden, founded hy K. Alexander II. an. 1230, and named Vallis Sancli Andra. It was planted by Monachi Vallis Caulium. None but the prior an. frocurator were allowed to go without the precinct ; the monks becoming vicious were expelled, and other monks brought from Dumfermline. The lands of this priory were very confiderable, and they had a grangia and a cell of monks at Grange-hill. The revenue of this priory, given up an. 1563, was in money 52.51 . 1 os. $1 \frac{1}{2} \mathrm{~d}$ Scots; wheat, 1 chalder, 1 boll, 2 firlots; malt, meal, and barley, 51 chalders, 4 bolls, 3 firlots, I peck; oats, 5 chalders, 13 bolls; dry multures, 9 chalders, it bolls; falmon, 30 lafts. The buildings ftood four miles S . W. front the town of Elgin, in a warm valley called the glen of Plufcarden. The walls of the precinct make a large fquare, and are pretty entire. The church ftands about the middle of the fquare, a fine edifice in the form of a crofs, with a fquare tower, all of hewen alhlar. The oratory and refectory join to the fouth end of the church, under which is the dormitory. The chapter-houle is of curious work, an octagonal cube, vaulted roofs
fupported by one pillar, all as yet entire. They hai a regality in the priory lands and a diftinet regality in Grange-hill, called the regality of Staneforenoon. At the reformation Sir Alexander Seton was, An. 1:65, made commendator. The lands of Plutcarden and Old Milns near Elgin paffed ihrough feveral hands, and are now the property of James Earl of Fife.

The third priory was at Kingufic, founded by George Earl of Huntly, about ant. 1490. Of what order the monks were, or what were the revenues of the priory, 1 have not learned. The few lands belonging to it being the donation of the family of Huntly, were at the reformation re-allumed by them, and continue to be their property.

There were likewife within this province feveral convents of religious orders. In the town of Elgin were Grey Friars, Black Friars, Red Friars, Templars Houfes, and a Nunnery of the religious of St . Catherine of Sienna. There were other convents at Forrers and Invernefs.

Clofe by the town of Elgin food the preceptory of Maifon-Dicu. It was a hofpital for entertaining flrangers, and maintaining poor infirm people. The buildings are now gone to ruins. They had confideroble lands in the parifhes of Elgin, Laubride, Knockando, and Dundurkus, all which were by King James Vl. and Charles I. granted to the town of Flgin, and now hold few of them.

In this province we had four royal forts; the firlt ftood on a round hill that overlooks the town of Elgin ; and fome of the walls, all of run lime, do as yet remain. The Earls of Murray fince the year 1313 were conflables of it, and had confiderable lands for their falary. Their office continued till 1748 , when heritable offices were annexed to the crown, and now they have no more but the hill called Lady hill, which yields a fimall rent annually. Another fort flood in the town of Nairn, but no veftiges of it now remain. Mr. Campbell of Calder (and formetly the Thanes of that ilk) was conflable, and in 1748 was paid a compenfation for that office. The third fort was at Invernefs, of which the Earls of Rofs were formerly conftables; and after their forfeiture, the Earl of Huntly obtained the office of conftable, with very confiderable lands as a falry, and continued to be conitable till 1629. I need not here fpeak of Cromwell's firt at Invernefs, of which no doubt others will give a full account. The fourth fort was at Urquhart, on the weft-fide of Loch-Nefs: the buildings were pretty large, and in a great part as yet ftand. In the time of David II. Alexander Boes was governor of this fort; afterwards, Chifolm of that ilk was governor: but fince the middle of the fiftecnth century I do not find it had any governor, and now the lands of Urquart are the property of Sir Ludowick Grant of Grant. Befides thefe forts we had many old caftes within this province commonly called Fortalicia. One ftood at Duflius, three miles north of Elgin, and was the feat of the chief of the Moravienfes as early as the eleve nth century. The cafle ftood on a green mote, on the bank of the loch of Spynie: it was a iquare, the wall about 20 feet high, and 5 feet thick, with a parapet, a ditch, and a draw bridge: within the fquare were buildings of timber for accommodating the family, and alfo neceflary ofices. The walls are as yet pretty entire. Such Fortulices were alfo at Balveny in the parifh of Murtich, at Abernethy in that parifh, at Lechim'orb in the parifh of Cromdil, at Ract in Nairn parifh, and at Ruthven in Kin, ulle parith. All which were large fquares, and many rooms built with timber within the walls.

I hall give no account of the modern forts of Fort George at Arderfair, or Fort Augulitus at the fouth end of Loch-Nefs, and fhall only defcribe a promontory in the rarifh of Dutlus, four miles from E!gin. Our hiftorians call it Burgus, it juts into the frith, and riles above low water about fixteen yards. To the weft and north it is a per- ie reformaof Pluicarhe property , about an. he priory, 1 he family of ir property. orders. In Houles, and convents at as a hofpital suildings are , Laubride, 1 Charles I.
ill that overyet remain. confiderable ices were anly hill, which at no velliges that ilk) was $d$ fort was at fter their forconfiderable here fpeak of count. The s were pretty der Boes was but fince the v the lands of hefe forts we One ftood at Ioravienfes as bank of the thick, with it imber for acpretty entire. lethy in that dat Ruthven with timber
fair, or Fort ontory in the juts into the th it is a perpendicular
pendicular rock, to the eaft the afcent is fteep but graffy, to the fouth towards land the afcent is more eafy. The area on the top is near a reetangular figure, in length about 100 yards, and in breadth about 50. After the Danes had defeated the Scots army at Forres about an. 1008, they fent for their wives and children, and made this promontory an afylu:3 to them and a place of arms. It was at top furrounded with a frong rampart of oaken logs, of which fome are as yet digged up: by a trench cur on the fouth fide they brought the fea round the promontory, and within this, had other trenches, and they fortificd it to the eaft. The trenches are now filled up. After the battle of Mortlich in the year 1o10, the Danes abandoned it, and left the country of Murray. To return.
(17.) Columba I)unbar fucceeded, and died An. 1435.
(18.) John Winchetter, L. B. and chaplain to King James II. was confecrated 1438; and died 1458. In 1452, the King erected the town of Spynie into a free burgh of barony, and erected all the lands of the bifhoprick into the regality of Spynie.
(19.) James Stewart, dean, confecrated 1458 , died an. 1460.
(20.) David Stewart, parfon of Spynie, fucceeded in 1461, built the high tower of the palace, and died an. 1475.
(21.) William Tulloch, tranflated from Orkney, an. 1477, was Lord Privy Seal, and died 1482.
(22.) Andrew Stewart, dean of Murray and Privy Seal, fucceeded an. 1483, and died 1498.
(23.) indrew Forman, commendator of Dry Burgh, fucceeded an. 1501, and was trannlated to St. Andrew's an. $1: 14$.
(24.) James IIepburn fucceeded, and died an. 1524.
(25.) Robert Shaw, fon of Sauchy, and abbot of Paifly, was confecrated 1525 , and died 1528 .
(26.) Alexander Stewart, fon of the Duke of Albany, fucceeded, and died an. 1535.
(27.) Patrick Hepburn, uncle to James Earl of Bothwell, and commendator of Scoon, was confecrated an. 1537. He dilapidated, fewed, or fet in long leafes a great part of the church lands, and died An. 1573 , on the 20 th June.
I have feen feveral catalogues of the popih bifhops of Murray, both printed and manufcript, but all imperfect; comparing thefe with the writings of Sir James Dalrymple, Sir Robert Sibbald, Bifhop Keith, the chartulary of Murray, and the chronicle of Mel Rofs, the above catalogue may It ink be depended upon. To return to the quæries.
XIV. There are in this province manufeript hiftories of feveral families, which might be of fome fervice in compiling a general hiftory ; as of the families of Dunbar, Innes, Brodie, Calder, Kilravock, M•Intoh, and Grant. With regard to ancient weapons, I have feen in the houfe of Grant, of Kilravock, and in other houfes, fteel helmets, habergeons, and coats of mail, and of buff leather. Adder ftones, glafs beads, \&c. are but amulets not worth regarding.
XV. I know not one picture worth regarding, except a picture of the Virgin Mary in the houfe of Caftle Graut.
XVI. No battle in the parih of Elgin, but many within this province, as at Forres, about an. 1003, betwixt the Scots and Danes; at Mortlich, an. iolo, between the fame; at Spey-mouth, an. ic 78 , the King againtt the Moravienfes; again an. 1110, againtt the fame people; and, an. 1160, on the Muir of Urquhart, King Malcolm IV. againft the fame Moravienfes; at Cleanlochlochie, an. 1544, betwixt the Frazers and M•Donalds; at Glenlivot, an. 1594, the King againt the Larls of Huntly, Errol,

Firrol, and Angus; at Auldern, an. 1645, the covenanters againt Montrofe; at Cromdel, an. 1690, the Kings troops againft the Highlanders and at Culloden, an. 1745, the Duke of Cumberland againft the rebels.
XVII. Druidifin having been the form of religion in this country before Chriftianity, the people ftill retain fome fuperflitious cultoms of that Pagan religion. As Bel-tien : on the firft of May the herds of feveral farms gather dry wood, put fire to it, and dance three times fouthways about the pile. In the middle of June farmers go round their grounds with burning torches in memory of the Cerealia. On Hallow even they have feveral fuperfitious cuftoms. At the full moon in March, they cut withes of the mifletoe or ivy, make circles of them, keep them all year, and pretend to cure hecticks and other troubles by them. And at marriages and baptifms they inake a proceffion around the church, Deafoil, i. e. Cunways, becaufe the fun was the immediate object of the Druids' worthip.
XVIII. Their fports are hunting, fring at marks, foot-ball, club-ball, \&c. And the only annual feftival they obferve is Chriltmas; fpent more as the Saturnalia were of old, than as Chrift's birth ought to be.
XIX. We have no true marle in this country, nor any afbeftus: but we have granite, talcum, lapis fpecularis, and at Stadtfield within four miles of Elgin there was lately found lead ore, and in Glen-garry they have for feveral years had an iron forge and made pigs of iron; likewife about 40 years ago, a company from England fet up a mill and forge for iron in Abernethy in Strathfpey, and made very good bars of iron, but through their own extravagance they abandoned it. There is through all this province great plenty of iron ore. I have often feen the ignis fatuus, which is a piece of rotten birch wood, lying in a mire, and fllining in a dark night, like a flame of firs : likewife ignis lambens, which is an unctuous vapour falling upon a man's wig, or mane of a horfe, which fhines bright, but by a fight rub it is extinguifhed.
XX. Great plenty of the particulars in the 2oth query may be found on the fea coalt in this province, if any will take the trouble to collect them.
XXI. I know no fpecies of wood remarkable, and peculiar to this province, except Red Slaugh, or fallow, which is no lefs beautiful than mahogany, and is much more firm and tough, and not fo brittle; it receives a fine polifh, and in colour refembles light-coloured mahogany; it grows in rocks, and is very rare. But we have great forefts of firs and birches: and as the Grampian hills divide in Athol into one branch running northward, and another eaftward; in the former branch are great woods of fir and birch in Breadalbane, Rannoch, Strathfpey, Badenoch, Glen-morifton, Strathciafs, and Strath-carron in Sutherland; and in the other branch are fuch forefte in Brac-mor, Glen-Muik, Glen-tanner, \&c. I am inclined to think that thefe are the remains of the ancient Sylva Caledonia. Arong other vetegables, we have in great plenty, in the heaths and woods, the following berries, viz. wild rafps, wild ftrawberries, blueberries, bugberrics, uva uría, \&ic. And we have one root I cannot but take notica of, which we call Carmele : it is a root that grows in heaths and hirch woods to the bignefs of a large nut, and fometimes four or five roots joined by fibres; it bears a green Halk, and a fanall red flower. Dio, fpeaking of the Caledonians, fays, "Certum cibi genus parant a! omnia, quem fi ceperint quantum eft unius faber magnitudo, minime efurire aut fitire fulent." Cafar de Bel. Cir. lib. 3 'io. writes, that Vale rius's foldicrs found a root called Chara, "quod admiftum lacte multam inopian levebat, id ad fimilitudinem panis efficis bant." I am inclined to think that our Carmele i. e. fiwect root) is Dio's Cibi genus, and Ciefar's Chara : I have often feen it dried, and kept for journ ys through hills wacre no provifions could be had: I have likewife feen it

Montrofe ; at Culloden, an.

## :e Chriftianity,

 As Bel-tien : o it, and dance go round their even they have es of the millee hecticks and ceffion around : object of the\&c. And the urnalia were of c have granite, here was lately iron forge and od fet up a mill rs of iron, but Il this province piece of rotten firs: likewife or mane of a nd on the fea rovince, except is much more lour refembles we have great ato one branch great woods of brifton, Strathfuch forefts in efe are the rehave in great wild frawbercannot but take birch woods to res; it bears a ays, "Certum bee magnitudo, that Vale rius's jam levebat, id Carmele (i. e. dried, and kept ikewife feen is pounded
pounded and infufed, and when yeft or barm is put to it, it ferments, and makes a li. quor more agrecab'e and wholefome than mead. It grows fo plentifully, that a cart load of it can eafily be gathered, and the drink of it is very balfamic.
XXII. Sea fowl in this province refort in winter to lakes and lochs, as loch of Spynie. I och-Nefs, Loch Nadorb, \&ec. Eagles and falcons breed in high rocks and inacceflible mountains, as Scorgave in Rothemurchus. There are fome fpecies of fowls, if not peculiar to this province, at lealt rare in other comentrics: fuch as, the Caperkyly, as large as the domeflick turkey; it frequents the fir woods, and perchts in the top of very tall trees, but the hen breeds in the heath. Another fowl is the black cock, which frequents birch woods in hills, is of the fize of a capon, of a flining blue colour: it is by fome authors called Gailus Scoticanus. A third fowl is tarmagan, of the fize of a partridge, haunts the high rocky hills, is of a colour fpotted brown and white. Thefe three fowls are very harmlefs, and make delicious food.
N. B. In anfwering quary IV. it is omitted that our natural phyficians, when they find a toe or finger hurt, and beginning to corrupt, they niike it off with a chiffel and fowe the wound with a hot iron, and foon cure it Intead of bleeding by lancets, they fco. fy the flefh about the ancle, and they take blood from the uafal vein by cleaving the quill of a hen and binding it into four branches, and fcarifying the noftrils thercby. For vomits, they ufe a decoction of groundfill, of the bark of the fervice tree, and a decoction of Holborn faugh; and for purgatives, the decoction of fervice bark and a decoction of mugwort boiled in new whey. In anfwering quæry I. I omitted to fay, that the river of Bewly was anciently called Farar: it rifes in the hills towards Glenelg, and runs through Glcnftrathfarar ; and I am inclined to think that in Ptolemy's Geographical Tables the Murray frith is called 牛fuarium Vararis from the river Farar (changing the F into V ) that falls into the head of it . And the river was called Bewly, when An. 1230, a priory of the monks Vallis Caulium was fettled there, who called their feat Beaulicu, i. c. Bello loco; and then the old name of Farar was difcontinued except among the Highlanders.

## APPENDIX.-Number III. <br> The Life of James Crichton, of Clunie, tommonly called the Admirable Cricbton*.

THIS gentleman was defcended from a very ancient family; his father Robert Crichton of Clunie and Elicok, was one of thofe who commanded Queen Mary's army at the battle of Langfide in the year 1568 . He was born at Clunie $\dagger$, his paternal inheritance, in the fhire of Perth, in the year 1551. He was taught his grammar at the fchool of Perth, and his philofophy at the univerfity of St. Andrews $\ddagger$ under Mr.

[^95]John Rutherford *. He had hardly attained to the 2oth year of his age, when he had run through the whole circle of the fciences, and could fpeak and write to perfection in ten different languages: but this was not all; for he had likewife improved himfelf to the umolt degree in riding, dancing, linging, and playing upon all forts of inftruments.

Having thus eftablifhed himfelf at home, his parents fent him abroad to accomplih him further by travelling. And coning to Paris, it is not to be imagined what confternation he raifed in that famous univerfity; as we have it from an eye witnefs, who gives us this account of it $\dagger$ : "There came," fays he, " to the college of Navarre, a young man of 20 years of age, who was perfcctly well feen in all the fciences, as the moft fearned mafters of the univerfity acknowledged : in vocal and inftrumental mufic none could excel him, in painting and drawing in colours none could equal him; in all military feats he was mont expert, and could play with the fword fo dexterounly with both his hands, that no man could fight him; when he faw his enemy or antagonift, he would throw himfelf upon him at one jump of 20 or 24 feet diftance: He was a mafter of arts, and difputed with us in the fchools of the college upon medicine, the civil and canon law, and theology; and although we were above fifty in number, befides above three thoufand that were prefent; fo pointedly and learnedly he anfwered to all the queftions that were propofed to him, that none but they that were prefent can believe it. He fpake Latin, Greek, Hebrew, and other languages moft politely; he was likewife an excellent horfeman, and truely if a man fhould live an hundred years without eating, drinking, or fleeping, he could not attain to this man's knowledge, which ftruck us with a panick fear; for he knew more than human nature could well bear; he overcame four of the doctors of the church; for in learning none could conteft with him, and he was thought to be Antichrift."

Sir Thomas Urquhart of Cromarty giving an account of this difpute, fays, that Crichton, when he came to Paris, caufed fix programs on all the gates of the fehools, halls and colleges belonging to the univerfity, and on all the pillars and pofts before the houfes of the moft renowne! men for literature in the city, inviting all thofe who were well verfed in any art or fcience, to difpute with him in the college of Navarre, that day fix weeks, by nine of the cluck in the morning, where he lhould attend them, and be ready to anfwer to whatever flould be proponed to him in ary art or fcience, and in any of thefe twelve languakes, Hebrew, Syriack, Arabick, Greek, Latin, Spanifh, French, Italian, Englifh, Dutch, Flemifh or Sclawonian, and that either in verfe or profe, at the difcretion of the difputant; and during all this time inftead of making a clofe application to his ftudies, he minded nothing, but huming, hawking, tilting, vaulting, riding of a well managed horfe, toffing the pike, handling the mufket, and other military feats, or in houfe games, fuch as balls, concerss of mufic vocal and inftrumental, cards, dice, temuis, and the other diverfions of youth; which fo provoked the ftudents of the univerfity, that they caufed write beneath the program that was fixt on the Sorbonne gate, "If you would meet with this monfter of perfection, to make fearch for him cilher in the tavern or bawdy-houfe, is the readieft way to find him." Yet upou the day appointed he met with them in the college of Navarre, and acquit himelf beyond expreflion in that difpute, which lafted from nine till fix of

[^96] of inftru.
a handfome fpeech to them, which being accompanied with all the graces and beatuties of eloquence and nature e that appeared in his perifon in their utmolt luftre, he received the thanks of the fenate, and nothing was talked through the whole city, but of this prodigy of nature. Having flayed for fome time at Venice, he went to Paduat to vifit the learned men that were at that famo ss miverfity; and he had no fooner arrived there, but there was a mecting of all the learned men in the city, in the houfe of Jacobus Moyfius Cornelius, to wait upon him, and converfe with him: He opened the affembly with all extemporary poem in praife of the city, univerfity, and the afembly that had honoured iom with their prefence at that time; and after fix hours of a difpute, which he fuftained againft them, in whatever they could propofe to him in all the feiences, he concluded with an extemporary oration in praife of ignorance, that Aldus Manutius $\dagger$ fays that they all thought that they were in a drean, and that he had almoft perfuaded them that it was better to be ignoramt, than learned and wile. Some time after this he fixed a paper on the gates of St. Joha and St. Paut's churehes, wherein he offerel to prove before the univerfity, that there was an infinite nu nber of errors in Ariftutle's philofophy, which was then only in voguc, and in all his commentaries, both in tbeological and philofophical matters, and to refute the dreans of lever.al mathematicians: He likewife made an offer to difpute in all the fciences, and to antwer to whatever flould be propofed to him, or objected againft him, cither in the common logical way, or by numbers and mathematical ligures, or in a hundred forts of verfes as they pleafed.

Aldus Manutius, who was prefont at this difpute, fays $\dagger$, that he performed all that he had promifed, to their greateft amazement : and he tells us likewife of another difpute that he hal before a great concourfe of people in the Bithop of Padua's houfe, without mentioning the occafion or particulars of it; but Joannes Imperialis tells us $\ddagger$, that he was informed by his father, who was prefent at this difpute, that it was with one Archangellus Mercenarius, a famous philofopher, upon philofophical fubjects, in which he acquitted himfelf fo well, that his adverfary owned before the alfembly that he had overcome him.

From Venice he went to Mantua; at this time there was a gladiator at Tiantua, who had foiled in his travels the moft famous fincers in Europe, and had latedy killed in that city three perfons who had entered the lifts with him; the Duke of Mantua was highly offended that he had granted this fellow his protection, fince it had fuch a fatal confequence: Crichton buing informed of this, offered his fervice to the Duk , to rid not only his dominions, but Inaly of this murtherer, and to fight him for fif eer hundred pithoks: though the Duke was unvilling to expole fuch a fine gatle an as our author, to fuch a hazard, vet relying upon the report of his performances mall warfike atchevemonts, it was anred to; and the time and place being appointed, the whele curt were witnels to the performance. In the beginning of the combat, Crichton was upon the defentive, and the It lian attack d him with fuch vir ur and cagernefs, that he tegan to esow fant, having over-ated himblt ; then our authoratacked him with fuch deaterity an! vigour, that he run him thengh the body in three dif-

 they hat bever feen art, grace, or $r$ nato feco 1 the preepts of art with fo much livelinefs as they had feen that day; and t crown the glory of this anion,

[^97]and beatu. luftre, he le city, but to Padua to ner arrived te houfe of opened the he allembly urs of a difmin all the that Aldus : he had al. rife. Some 's churches, a nu nber of dis commenins of feveral id to anlwer the common of verfes as med all that another difdua's houfe, lis tells us $\ddagger$, was with one Ets, in which that he had
lantua, who why kilic:d in Mantua was 1 fuch a fatal Duk, to rid fil ee: hunll: an as our (s) mall warpointed, the mbat, Crichr and eagerthor attacked in three dif. utions of the aldged, that art wich to f this axion,

Crichton beftowed the prize of his victory upon the widows who had lof their hurbands in fighting with this gladiator.
Thefe and his other wonderful performances, moved the Duke of Mantua to make cluice of him for preceptor to his fon Vincent de Gonzagua, a prince of a riotous temper and diffolute life. 'The "ourt was highly pleafed with the 'Duke's choie', and for their diverfion he compofed a comed", wherein he expofed and ridieuled "all the weakneffes and failures of the feveral employments that men betake themfelves to; which was looked upon as one of the moft ingenious latires that ever was made upon mankind; but that which was moth wonderful and attonifhing was, that he himfelf perfonated the divine, philofopher, lawyer, mathematician, phyfician, and foldier, with fuch aninimitable grace, that every time he appeared upon the theatre, he feemed to be a different perfins ; but from being the principal actor of a comedy, he became the woful fubject of a mof tamentable tragedy, being mo!t barbaroufly murthered by his pupil, which happened trus:

One night as he was walking along the ftreets in the time of the carnarval, and playing upon his guittare, he was attacked by half a dozen people in mafks; but they found that they had not an ordinary perion to deal with. for they were not able to ftand their ground againft him, and having difarmed the principal perfon amongt them, he puiled off iis malk, and begged his life, telling him, that he was the Prince his pupil. Crichton, who immediately knew him, fell down upon his knees, and told him that he was furry for his miftake, and that what he had done was only in his own defence, and that if he had any defign upon his life, he might always be nuater of it ; and then taking his own fiword by the point, he prefented him with it; which the prince tahng in his hand, and rot being able to overcome his paffion for the affront that he thought he had luftained, in being foiled with all his attendants, he immediately run him through the heart.

What moved the prince to this ungenerous and bratal action, is varioully conjectured; for fome think it was jealoufy, fufpecting that he was more in favours with a young lady wiom he paffionately loved than he was. Others fay, that it was only to try his valour, and the effect of a drumben ramble; but whatever was the caufe of it, 'tis certain that thus he dict, in the begiming of the month of July, in the ytar 1583 , in the thirty-fecond year of his age, or, as Imperialis fays, in the twenty-feconc.,

[^98]Crichton

His death was extraordinarily lamented by all the learned neen in Furope, and from thele Italian wriers, who knew, and were cotmporary with him, it is, that I have molt of all that I have faid of him. Joannes Imperialis, a doctor of medicine of Vicenza in Italy, who has wrote our author's life, and who could not but know the truth of all, or molt of what he has faid of him, fince he lived upon the places in which they were acted, and who had them from his father, who was an eye and ear witnefs to them, fiys ", "That he was the wonder of the laf age, the prodigious production of nature, the giory and ormament of Parnaffus in a fupendous and an unufual mamer, and as yet in the judgment of the learned world, the lhomix of literature, and rather a thining particle of the Divine Nature and Majelty, than a model of what human nature and induftry can attain to. And what can be more," continues lie $\dagger$, "above our comprehenfion, than in the 2 tit year ot his age to be mafler of ten languages, and to be perfealy well feen in philofophy, mathematicks, theology, the belles-letures, and all the other fciences; befides, was it ever heard of in the whole compars of this globe, that one with all this, thould be found expert to admiration, in fencing, dancing, funging, riding, and the other excrcifes of the gymmaflick arn ? Befides all this, he is faid to have been one of the moft beautiful, and one of the handfomelt gentiemen the world ever faw, fo that Nature had taken as much care about his body, as the had done about his mind; and in one word, he was the utmof that man could come to." M. Bayle fays $t$, that he was one of the greatelt prodigies of wit that ever lived; and Faxix Aftolfus that he had fuch a prodigious memory $S$ that he retained more books upon his mind, than any of his age had read; Plures libros menoriter tenebat quam quifquam ca atate legerat.

And Sir Thomas Urquhart of Cromarty, having infifted on all the particulars of our author's life in a fuftian and bombattical Itrain, tells us, that in the comedy which he compofed, and was an actor in before the court of Mantua, in the fifth and laft act, he himfelf perfonated no lefs than thirteen different characters of perfons and employments in their difierent habits.

And in his character of him, he tells us, that he gained the efteem of all kings and princes, by his magnanimity and knowledge ; of all noblemen and gentlemen, by his courtlinefs and breeding: of all knights, by his honourable deportment and pregnancy of wit ; of all the rich, by his affability and good fellowhip; of all the poor, by his munificence and liberality; of all the old, by his conftancy and wifdon; of all the young, by his mirth and gallantry ; offall the learned, by his univerfal knowledge; of all the foldiers, by his undaunted valour and courage ; of all the merchants and artifiecrs, by his upright daling and honefty; and of all the fair fex, by his beauty and handfomenets; in which refpect, he was a mafter-piece of nature. "The reader," fays he, "perhaps will think this wonderful, and fo would I too, were it not that I know as Sir Phillip Sidney fays, that a wonder is no wonder in a wonderful fubject, and confequently not in him, who for his learning, judgment, v.lour, eloquence, beluty and good fellow thip, was the perfecteft refilt of the joint labours of Pallas, Apollo, Mars, Mercury, Venus and Bacchus, that hath been fince the days of Alcibiades; and he was reported to have been enriched with a memory fo prodigious that any lermon, fpeech, harangue, or other manner of difcourfes of an hour's continuance he was able to recite without hefitation, after the fame mamer of gefture and pronunciation in all poims, wherewith it was delivered at firft ; and of fo Itupendeus a judgwent, that nothing efcaped his

$\ddagger$ Bib. Crit. $\quad$ Oficina Hit. p. 102.
knowledge:" and for the truth of all this, he appeals to ahove two thoufand witneffes, that were ftill alive, and had known him. And fpeaking of his death, which he attributes to an amour, he tells us that it was in the thirty fecond year of his age; that the whole court went in mourning for him; that the epitaphs and elegies that were conpofed upun his death, if collected, would exceed the butk of Homer's works, and that his picture was fill to be feen in the moft of the bed chambers and gallerics of the Italian nobiity, reprefenting him upon horleback, with a lance in one hand, and a book in the other ${ }^{\circ}$.

Dempfter, who was cotemporary with him, and a profeffor of the civil law at Bononia in Italy, agrees as to the molt of what we have faid of him; but he tells us $\dagger$, that he, was for foome time at Geneva, as he was on his travels to [taly, and that they offered him a confiderable falary, if he would remain with them; but that he refufed it, and that no man offered to detract from his jult praifes, but 'Trajano Boccilini ; but that he being a perfon of no erulition, it was rather a glory than any dilgrace upon him to be fo treated by a purton of his character. Yet the fame Dempfter blames our author very much, nut for his beatting of the endowments of his mind, but for his affirming thar he was defcended from the royal family of Scotland Many pooms and epitaphs were compofed upon him, but I hall only infert that of our countryman, Dr. John. Johnfon, in his inferiptions upon heroes, who makes him die in the year 1581.

## JACOBUS CRITONIUS CLUNIUS.

Mufurum pariter nc Mnrtis Alumnus, omnibus in fudii,, ipfis etiam Inflis admirabilis, Mantue a Ducis Mantuani notiurnis infidis occifus eft, anno Cbrijfi 1581.

## APPENDIX.-Numeer IV.

On the Murder of a Laird of Innes.-.Is related in the old Account.
JOHN Lord INNES, having no children, fettles his eftate upon his next heir and coufin Alexander Innes of Cromy, and feems to fuffer him to enjoy bis title and poffeffions in his life time. Robert Innes of Innermarky, another cadet of the family, is difgufted to fee Innes of Cromy endowed with fo much power and preferred to him. He alarms Lord John, and makes him repent fo far of what he had done, that he joins in confpiracy with lunermarky to affuffinate his coufin Alexander. The author fay's, " John being brought over to his minde, (viz. Imes's of Immermarky,) there wanted nothing but a conveniency for purting $y^{\prime}$ purpofe to execution, which did offer iffelf in $y^{c}$ month of spryle $5^{80}$, at $w^{\text {th }}$ tyme Alex, being called upon fone bulinefs to atberdeen, was obliged to ftay longer there then he intended, by rafone that his only fone Robert, a youth of 16 yeirs of age, had fallen fiek at the college, and his futher could not leave the place untill he faw of became of him. He hade tranfported him out of the old tounc, and hade brought him to his own lodgeing in the new toune; he had alfo fent feveral of his fervants home from time to tyme to let his Lady know the reafone of his ftay, by means of thefe fervants it came to be known perfectly at Kinnardy in $q^{\prime}$ circumftance Alcxander was at Aberdeen, $q^{\text {c }}$ be was lodged, and how he was attended, which inxited Innermarky to take the occatione. Whe efore gettiag a confiderable number of allithants with him, he hade Lairll John ryde to Aberdeen : they enter the tom upon the night, and about middnight came to alexander's lodgeing.
"A He outer gate of the clofs they found oppen, but all the reft of the doors fhutt; they wer afrad to break up doors by vintence, leat the noife might alarm the neighbounheed, but choifed rather to ryfe up fuch a try in the clofs as might obleidge thofe who wer within to oppen the door and fee of it might be. The teuds at that tyme betwixt the familys of Gordene and Forbes wer not extinguifhed, therfor they ryled
a cry, as if it had been upon fome outfall among thefe people, crying, 'Help, a Gordon, a Gordon,' which is the gathering word of the friends of $y^{2}$ familie.
"Alexander, being deeply interefted in the Gordon, at the noife of the cry ftarted from his bedd, took his fword in his hand and opened a back door that led to $\mathrm{y}^{\mathrm{c}}$ court below, ftept down three or four fteps, and cryed to know $q^{t}$ was the matter. Innermarky who by his word new him, and by his whytt fhirt decerned him perfectly, cocks his gun and fhootts him through the body in ane inflant, As many as could get about himt fell upon him and butchered him barbaroufly. Inaermarky perceaveing in the mean tyme $y^{\prime}$ Laird John flood by, as either relenting or terrified, held the bloody dagger to his throat that he had newly taken out of the murthered body, fwearing dreadfully $y^{\prime}$ he would ferve himh the fame way if he did not as he did, and fo compelled him $\because$, draw his dagger, and ftab it up to the hilts in the body of his neareft relatione, and the braveft that boare his name. After his example all who wer ther behooved to do the lyke, that all might be alyke guilty ; yea in profecutione of this, it has been told me that Mr. John Innes, afterwards Coxtoune, being a youth than at fchooll, was ryfed out of his bedd, and compelled by Innermarky to ftab a daggar unto the dead body, that the more might be under the fame condemnatione; a very crafty cruelty.
"The next thing looked after was the deftructione of the fick youth Robert, who had lyein $y^{t}$ night in a bedd by his father, but upon the noyfe of $q^{t}$ was done, hade fcrambled from it, and by the help of one John of Culdreafons, or rather fome of the people of the houfs, had got out at ane unfrequented bak door into the garden, and from $y^{\prime}$ into a neighbour's houfs, $q^{\prime}$ he hade fhaltered; the Lord in his providence preferveing him for the executing vengence upon thefe murthurers for the blood of his father.
" Then Innermarky took the dead man's fignet ring, and fent it to his wife, as from her hufband, by a fervant whom he had purchafed to that purpofe, ordering her to fend him fuch a particular box $q^{\text {ch }}$ contained the bond of tailie, and all $y^{\prime}$ hade followed thercupon betwixt him and Laird John, whom the fervant faid he hade left $w^{\mathrm{c}}$ his $\mathrm{m}^{\mathrm{r}}$ at Aberdeen: and $\mathrm{y}^{\mathrm{t}}$ for difpatch he hade fent his belt hors with him, and hade not taken leifure to writ, but fent the ring. Though it troubled the woman much to receave fuch a blind meafage, yet her hufband's ring, his own fervant and his horfs, prevailed fo with her, togither with the man's importunity to be gone, that thee delivered to him $\mathrm{q}^{\text {c }}$ he fought, and let hin go.
"There happened to be then about the houfs a youth related to the family, who was courious to go to the lenth of Aberdeen, and fee the young Laird who had been fick, and to whom he was much addisted. This youth hade gone to the ftable to interceed with the fervant that he might carric him behind him, and his difcourfs hade found the man under great reftraint and confufion of minde, fometiyme fayeing he he was to go no further than Kinnardy (which indeed was the truth, and at oy times that he behooved to be immediately at Aberdeen.
" This brought him to be jealous, though he knew not $q^{\prime}$, but further knowledge he behoved to have, and therfor he ttept out a little beyond the entry, watching the fervant's coneing, and in the by-going fuddenly leapt on behind him, and would needs either go alonges with him, or have fatisficing ratone, why he refufed him.
"The conteft became fuch betwixt them, that the fervant drew his durk to ridd him of the youth's trouble, ${ }^{\text {ch }}$ the other wrung out of his hands, and down right killed him $w^{\prime}$ it, and brought back the box $w^{\text {th }}$ the writs and horis to the houls of Innes (or Cromic, 1 know not q. $^{\text {be }}$.)
vol. 1 I.
U
"As the lady is in a confufione for $q^{\prime}$ had fallen out, ther comes aneother of the fervants from Aberdeen, who gave ane account of the flaughter, fo that fhe behooved to conclude a fpeciall hand of Providence to have been in the firft pafage. Her next courfs was to fecure her hufband's writs the belt fhe could, and flee to her friends for flalter, by whos means fhe was brought $w^{5}$ all fpeed to the King, befor whom fhee made her complaint. And $q$ is heir fet doun is holden by all men to be true matter of fact.
" The Earl of Huntly imediatly upon the report of the flaughter concerned himfelf becaufs of his relatione to the dead, and looked out for his fon, whom he inftantly carried to F.dinburgh, and put him for fhalter into the family of the Lord Elphinftoune, at that tyme Lord iligh Treafurer of the kingdome.
" Innermarky and Laird John, after the flaughter, came back to the Lord Saltoun's houfs, who lived then at Rothimay, and is thought to have been in the knowledge of $q^{\text {e they }}$ had been about, for certain it is they wer fupported by the Abernethys, ay until the law went againft them. From Rothymay they went with a confiderable party of horfs, and repofceft Laird John in all parts of the eftate of Innes. And Innermarky, to make the full ufe of $\mathrm{q}^{\mathrm{t}}$ he hade fo boldly begun, did, upon the feventein Maii 1580 , which was 5 weeks after the flaughter, take from Laird John a new difpofitione of the eftate of Innes.
" By what is faid, Innermarky may appeir to have been a man full of unrighteoufnefs, craft, and cruelty ; yet fome fay for alleviatione of his fact, that he having his chieff's favour, hade got the firft difpofition of his eftate failieing airs of himfelf, but that Cromy had taken a pofterior right and hade fupplanted Innermarky, for $q^{\mathrm{ch}}$ he in revenge had killed him, \&c. But falfenefs of the allegance (mean as it is) is plaine paft contradiction, from the above narraitted writ, $q^{\text {ch }}$ was given to Innermarky but 40 days after the flaughter of Cromy.
"For two full yeirs Innermarky and John hade poffeft the eftate of Innes, frenthening themfelfs with all the friendihip they could acquyre ; but being in end declared out laws, in the $3^{4}$ ycir Robert Laird of Innes, the fon of Alex', caine north with a commiffion againtt them and all others concerned in the flaughter of his father. This Robert was a young man well endued $w^{\text {t }}$ favour and undertanding, which had ingaged the Lord' Treafurer fo far to wedd his intereft, that he firit weded the young man to his daughter, and then gote him all the affiftance requifit to poffefs him of his eftate, $\mathfrak{q}^{\text {ch }}$ was no fooner done but he led waft the poffeffions of his enemies; burning and blood fhed was acied by both partys with animoufly enough.
" In the mean tyme Laird John had run away to feek fome lurking place in the fouth, $q^{\prime}$ he was difcovered by the friends of the Lord Elphinfoune, and by them taken and fent north to the Laird Robert, who did not put him to death, but took him bound to various furts of performances, as appears by the contract betwixt them in anno 1585 : one grofs was, $y$, that he fhould deliver up the chartor chift, and all the old evidents, $q^{\text {ch }}$ he and Innermarky had fafed, and which I doubt if ever he faithfully did, els this relation hade been with lefs pains and more fully inftructed.
"As to Innermarky, he was forced for a while to take the hills, and when he wearicd of that, he hade a retreat of a dificultaccefs within the houfs of Edinglaffy, $q^{*}$ he fleeped in little enough fecurity; for in September 1584, his houfs was furpryfed by Laird Rotert, and that reteicing place of his firft entered by Alexander Innes, aftewards of Cotts, the fame who fome yeirs before had killed the fervant who came from Innermarky with the falfe tokin for $y^{*}$ writs, and who all his lyfe was called Craigg in peirill, for venturing upon Innermarky then defperat, and whos cruelty he helped to repay
it in its own coine; there was no mercy for him, for flain he was, and his hoar head cut off and taken by the widdow of him whom he hade flain, and carried to Edinburgh and caften at the King's fectt; a thing too mafculine to be commended in a wonan."

## APPENDIK.-Number V.

## Of Caithonfs, Strathnaver, and Sutherland.

Dy the Rev. Mr. Alexander Pope, Minifter of Reay.
AS the Piets poffefled the northern parts of Scotland of old, as they did the moft fertile parts of the fouth, and were expelled in the year 839 , we have very little of their hiftory: what preferves the remembrance of that people is only the round buildings wherein they dwelt, of which there are numbers all over the north, particularly Sutherland, Caithnefs, and Orkncy.

It is obfervable in thefe buildings, that there is no mortar of any kind, neither clay nor lime; nor had they any notion of calting an arch. They confift of the beft fones they could find, well laid and joined; the wall was fometimes fourteen feet thick, and the great room, which was quite round, twenty two feet diameter ; the perpendicular wall twelve feet high; and the roof was carried on round about with long fones, till it ended in an opening at the top, which ferved both for light and a vent to carry off the fmoke of their fire. Where the ftones were long and good, they had fmall rooms for fleeping in the thicknefs of their wall. The door or entry was low, three feet for ordinary, hut up by a large broad ftone. There is one of them entire in the parifh of Loth, which the Binhop of Offory vifited and examined. It is the only one that is fo, as far as I could find, excepting one at Suifgil in the parifh of Kildonnan. It is to be obferved, that where the ftones were not flat and well bedded, for fear the outer wall fhould fail, they built great heaps of fones to fupport it, fo that it looks outwardly like a heap without any defign, which is the cafe at Loth beg, in the parifh of Lothis. At the defire of the Bifhop of Offory I meafured feveral of them, and faw fome quite demolifhed. We found nothing in them but hand-mills, or what the Highlanders call Querns, which were only eighteen inches diameter, and great heaps of deer bones and horrs, as they lived much more by hunting than any other means.

What are ftyled foreft, or hunting-houfes, are fuppofed to have been ufed by the antient inhabitants for retreats in the hunting countries. They confift of a gallery, with a number of fmall rooms on the fides, cach formed of three large ftones, viz. one on each fide, and a third by way of covering. Thele are made with the vaft flags this country is famous for. At the extremity is a larger apartment of an oval figure, probably the quarters of the chieftain. The paflage or gallery is without a root; a proof that they were only temporary habitations. Their length is from fifty to fixty feet. Thefe buildings are only in places where the great fags are plentiful. In Glen-Loch are three, and are called by the country penple Uags.

I beg leave to make a few more renarks on the round edifices. They were large or fmall, according to the fize or goodnefs of the ftones in their neighbourhood. The ftones that formed the roof were placed thus: the largett lay loweft, the remainder grew fucceffively fimaller and thinner to the top; fo that there was no danger of its falling in by too great a preflure. Thie builders took great pains to bed their ftones
well; and, where two met, they were wont to band them above by another, and to pin them tight to make them firm. The doors were always on the eaft fide, and only three feet wide at the entrance, but grew higher within, and were clofed with a great flag. They ufually introduced water into thefe houfes, where they formed a well, and covered it with a flag.fone. A deep ditch furrounded the outfides of many of thefe buildings. The dead were interred at fome diftance from the houfes. The cemeteries were of two kinds. In fome places the deceafed were placed within great circles of ftones of a hundred feet diameter, and the the corples covered with gravel. In other plac they were interred in cairns of a fugar-loaf form ; fometimes bones have been found in then, fometimes urns with afhes, a proof that burning and the common fpecies of interment was ufual. Sometimes the remains of iron weapons have been found, but fo corroded that their form could not be dittinguifhed. In one was found a brazen head of a ipear nine inches long.
If thefe buildings were the work of the Piats, they originally extended over many parts of Scotland fouth of this country. The lafthave been fo long in a fate of cultivation, that it is not furprifing that we fee none of thefe houfes at prefent, the fones having been applied to various ufes. Even in thefe remote parts, they are continually deftroyed as farming gains ground, they offer a ready quarry to the hufbandman for making inclofures, or other purpofes of his bufinets.
From the extirpation of the Picts to the ycar 1266, Scotland was haraffed by invafions from the Norwegians and Danes, particularly the north part; for Harold the Fair, King of Norway, leized Orkney in the latter end of the ninth century. From Norway fwarms came to Orkney, and the paffage being fo hort, all the north of Scotland was continually in arms. As nothin: can be expected in that period but fighting, bloodfhed, and rapine, we cannot look for improvements of any kind, and for that reafon it is needlefs to attempt any particular hiltory of it. It is true, Torfaus gives us fome account of that time, which is all that we have.

As to the family of Sutherland, they have pofteffed that country fince the expul. fion of the Picts, and have continued as Thanes and Earls to this time. That they are originally of German extraction, is evident from their arms. Dr. Abercrombie, in his Hittory vis the Scots Heroes, mentions Donald Thane of Sutherland married to a niece of Kiag Kennet II. May that good family continue and profper.

Lord Reay's family derive their original from Ireland, in the twelfth century, when King William the Lion reigned. The occafion of their fettling in the north is mentioned by Torfeus, as captains of a number of warriors to drive the Norwegians out of Caitinefs

The Sinclairs Farls of Caithnefs are only of a late date. The family of Ronlin is their original in Scotland; but their conning into England is as early as the year 1066; for I find them mentioned among the commanders in the army of William the Conqueror, in the roll of Battel abbey. They were firt Earls of Ort:ey, then Earls of Caithnefs, and ftill continue in the perfon of Will $n$ Sinclair of Ratter, who carried the peerage before the Britifh parlianent this prefut year 1772.

As for the hiftory of thefe parts, 1 flall begin with
F.drachilis *.-This parifh, which belongs to the family of Reay, is all foref and rocks, little arable, and fo reely any phan ground, excepting the town of Scoury. The pafture is fine, and plenty of red dect, but the country at fome diftance looks as if one
hill was piled upon another. The firth that runs far into the land abounds with good fifh, and herring in their feafon.
'Torfeus mentions a bloody battle fought in this firth, at a place called Glen du, by two pirates; one of them he calls Odranus Gillius, the other Suenus, wherein the latter was victorious. There is likewife a tradition of fome bloody engagement betwixt the Mackays and Macleods.

Parih of Diurnefs.-This parih was of old a grafs room or ffealing to the bifhop of Caithnefs, and was difpofed of to the family of Sutherland by bifhop Andrew Stuart, and the family of Sutherland gave it to Lord Reay's family. Two pieces of antiquity are to be feen in this parifh : 1ft, Dornadilla's Tower, or hunting-houfe, which ftands in Strathmore; a very frange kind cf building, well worth the feing *. It is certain that the fineft pafture is in the hills of Diurnefs, which rendered it the beft foreft in Scotland of old. Our antient Scots kings hunted there frequently, and it appears that this was a cultom as far back as the time of King Dornadilla. 2d, There is on the fide of a hill called Bui fpinunn, a fquare piece of building, about three fect high and twelve fquare, well levelled, calied Carn nri, or king's carn, which probably was the place where his Majefty fat or tlood, and faw the fport, as he had from hence an extenfive profpect. Torfæus mentions that one Suenus from Orkney waited on the King of Scotland as he was diverting himfelf in the hunting feafon in the hills of Diurnefs. Chis fhould be in the days of Malcolm II.

At Loch-eribol, on the north fide, there is a plain rock which is ftill called Lech vuaies, where they fay that Haco.2 King of Norway flaughtered the cattle he took from the natives in his return to Orkney, atter the battle of Largis in the year 1263. Torfæus gives a journal of that expedition, and mentions King Hacon's landing there. But there is a tradition that a party of Norwegians, venturing too far into that country, were cut to pieces; and that the place is called Strath urradale, from the name of the Norwegian commander: a cuftom very common of old.

The greateft curiofity in this parifh is a cave called Smow. It is a fupendous arch or vault, and runs under ground fo far that the extremity of it was never found.

Donald Lord Reay, the firft of that family, made an attempt, and we are told he proceeded very far, meeting with lakes, and paffing through them in a boat: but, after all, was obliged to fatisfy himfelf with feeing a part.

Here are leveral caves that run far under ground, but Smow is the moft remarkable. 1 an told that of late they have difcovered in the manor or mains of Diurnofs, a hole of great depth : it was of old covered with large ftones, but thefe it feems have mouldered away. So that it is the conjecture of many, that there are numbers of cavities of great extent, under ground, in this parifl.

This parith is all upon the lime fone, and abounds in marble; the part called Itrictly Diurnets, is a plain, the foil good, and the grafs incomparable, therelore capable of the highet improvement. The lakes are ftored with the fineft filh, and tull of marle. 'The hills afford the beft paflurage fur theep, and the feas are well ftored with filh. But the great difadvantage to this country is, that it is expofed to the north-welt ftorms, which drive the land upon it, and have by that means deftroyed feveral good farms, and threaten more harm daily.

In ihis parilh is a firth called Loch.Eriboll; Torfexus calls it Goas-fiord, or the firth of Hoan, an ifland oppofite to it. i his is one of the finelt and fafentroads tor flupping in Liurnp: ; the navy of Great Britain can enter it at low water, and find good anctur-

[^100]ing. It is a lofs that this incomparable bay has not been furveyed, and the dificrent anchoring places marked. It would be a nighty blefling to mariners, being fo near Cape Wrath, one of the moft flormy capes in the word. For it would be a fafe retreat to veffels, in time of ftorm, either failing towards the cape, or to thofe that had the misfortune to receive any damage off it. Cape Wrath is alfo in the parih of Diurnets.

Pariff of Tongue. The antiquities of this parifh are few. There is an old Danifh building upon the fummit of a hill, called Calle varrich, or Barr cafle: for the Danes or Norwegians poffeffed that country for fome time. 'Tongue is the feat of Lord Reay's family. This parih is rather better for palture than tillage, but what corn ground they have is extremely good. Of old there was a fine foreft in it, and there is ftill plenty of decr. The anceftors of Lord Reay's family drove the Dancs from tnefe parts.

In this parfh is a loch, called Loch-Hacon; in it an ifland, called Illan Lochan Hacon, in which there is the ruin of a fone building with an artificial walk in it, called Grianan, becaufe dry and expofed to the fun. From which it appears that Earl Hacon, who ponfeffed Orkney and Caithnefs, had a hunting houfe in this ifland, and lodged there with his warriors, in the hunting feafon. The fea-coaft for the greateft part is all rock, of a rough granite, or what we call whin. Here is a promontory or cape, called Whiten head, very formy when it is a hard gale.

There was formerly a chapel in an ifland near Skeriay ; the common people call it the ifle of Saints; it goes by the name of Ifland comb.

Another ifland, called lllan na nroan, all of a high rock, but good land, and plenty of water and noofs. It might be rendered impregnable. Both thele inlands are in the parih of Tonguc. I have been in llan comb. If the fand had not over-run a part, it would be a charming place.

A bloody battle was fought in this parinh of old, by one of the anceftors of Lord Reay, againft one Agnus Murray, a Sutherland man, wherein the Sutherland men were cut to pieces. The field of battle is called Drim na coub. And in the fame place there was a fkirmifh betwixt Lord Reay's inen, and a number of Frenchmen that were on board the Hazard floop of war, in 1746: fome of the French were killed, and the reft taken prifoners.
This parifh is remarkable for an excellent ebb, where they have the fineft cockles, mufcles, fpout filh, and flounders, or floaks; which is a great bleffing to the poor, and no fmall benefit to the rich. And in the firth of Tongue there is a fine ifland, abounding with rabbets, called Rabbet lile. It has many lochs, or freh water lakes, full of the fineft trout and falmon.

Parih of Far.-'The whole of thefe four parihes was of old called Strathnaver, from the river Navar, which was fo called, as fome think, from the name of one of King Kenneth the Sccond's warriors. It is a noble body of water, well ftored with falmon, having many fruitful and beautiful villages on the banks of it, and is fo inhabited for eighteen miles.

At a place called Langdale there were noble remains of a druidical temple, being a circle of 100 feet diameter, and furrounded with a trench, fo that the earth formed a bank; in the midt of it a fone was crected like a pillar, where the 1) ruids food and taught. The country people have now trenched or delved that ground, and fown it with corn. There was in that town a large round building, and a place where they buried of old.

This parith is of great extent, rather a country for pafture than tillage. A great battle was fought of old at a place called ——, Harald or Marald's ficld or plain, betwixt
betwixt Reginald King of the Ines, and Harald Earl of Orkney and Caithnefs. Harald was well drubbed; and the field of battle is full of fmall cairns, where the flain are buricd, and fome large fones erected like pillars thew where perfons of note were interred. 'Torfaus tells a long flory about this affair; it feems that they had bloody fkirmifhes at -- , and near the nanfe of Far, as appears from the number of cairns in both thefe places. There is a moft curious fepulchral monument in the churchyard of Far, which may be of that date; it is of hard hill granite, well cut, confidering the æra of it. But what the meaning of the fculpture is, we know not. Only we may guefs, that the perfon for whofe fake it was erected, was a chriftian, becaufe of the crofs upon the fone; and that he was a warrior, becaufe we fee a fhield or target upon it. I have taken a draught of it.

In this parifh, in old times, was a chapel at a town called Skail, upon the river Naver; another in the extremity thereof, at Moudale; and another at Sarthie, the moft beautiful and fertile part of the parilh.

Betwixt Far and Kircomy, in this parifh, is a mof fingular curiofity, well worth the pains of a traveller to view, being the remains of an old fquare building or tower, called Borve, fanding upon a fmall point joined to the continent by a narrow neck of land not ten feet wide. This point or head is very high, confifting of rock, and fome gravel on the top; on both fides is very decp water, and a tolerable harbour for boats. This tower feems to be built by the Norwegians; and the tradition is that one Thorkel, or Torquil, a warrior mentioned by Torfæus, was the perfon that built it. They fpeak likewife of a lady that was concealed there; fhe is faid to be an Orkney woman, and Thorkel was an Orkney man. But what is moft curious, is, that through the rock upon which the tower ftands, there is a paflage below of 200 feet in length, like a grand arch or vault, through which they row a boat. The writer has been one of a company that rowed through ii. The paffage is fo long, that when you enter at one end, you fancy that there is no poffibility to get out at the other et vice verfa. How this hard rock was thus bored or excavated, I cannot fay ; but it is one of the moft curious natural arches, perhaps, in the known world.

In this parifh there is alfo a promontory, called Strathy head; Ptolemy the geographer calls it Vervadrum, as he calls Cape Wrath, Tarvedrum, and Dungfey head, Berubium. Thefe three nromontories run in a line, from N. W. to north, and jut far out into the fea, having .wit rapid tides upon them. In Strathy head is a ftately cave, called Uai nei, or cave where they find driven wood or timber. The entrance into this cave is very grand, the natural rock almo!t forming itfelf like the fway of an arch : the writer hereof las admired the beauty of it. This promontory is the fineft pafture for fhesp and goats in the north of Scotland.

To the north-eaft of Strathy there is a flone erected near the highway, with a crofs upon it, which fhews its antiquity as a fepulchral monument. Erected fones were the diltinguifhing marks of the graves of perfons of note in time of Paganifm. And after Chriftianity was planted in this kingdom, the diftinction of Pagan from Chrillian was that a crofs was cut upon the fepulchal monuments of the latter. I have feen many with this diftinguifhing badge.

No doubt there are mincs in this country, if perfons of fill examined our fhores and rocks; as yet no pains have been taken. I have been told that there is at LochEribol plenty of iron Itone, and fomething like a tin mine. As I do not underftand thefe things, I chufe to pafs them over. As for fea-fifh and fhells, we have none extraordinary. It is true, in Caithnefis, John a Groat's buckies are very curious and beautiful, of which we fhall take notice in the parilh of Caunelby.

Parih of Reay. Some part of this parihi lies in the hire of Sutherland, but the greateft part in that of Caithnels; that part in Sutherland is called Strath-Halladale, from Halladha Earl of Orkney, a Norwegian, flain in battle in the beginning of the tenth century. The field of battle is full of fmall cairns, or heaps of ftone. The commander in chief, and principal warriors Iain in that action, are buried in a place apart from the field of battle: I have frequently feen the place. The tradition is, that Halladha is buried in a fpot inclofed with a circular trench ten or twelve feet wide, and that his fword lies by his fide. There was a flone erected in the middle of this circle, part of which ftill remains. Near the field of battle ftands a little town, called Dal Halladha, or Halladha's field. A river runs through Strath-Halladale, which is rather pafture ground on the fides of it, for the eleven miles it is inhabited.

The boundary betwixt Sutherland and Caithnefs, to the north, is called Drim Halliftin. Caithnefs is a flat plain country, having few hills; the foil good, and producing great quantities of corn in fruitful feafons; it lies upon quarries of a black flate kind, and perhaps no country on earth excells it for fmooth thin flags or flates of great dimenfions. As thefe flags may be feen in all part of the country, it is needlels to deferibe them. The foil not being deep, and the country flat, renders our highways very deep in winter, and very dry in fummer. That part of the parifh of Reay in the ©hire of Caithnefs, is excellent corn ground through the whole of it. It appears that many battles have been fought in it in former times, but we have no tradition concerning them. In later times fome bloody fkirnifhes happened betwixt M•Kay of Strathnaver, and Keith Earl Marefchal; and alfo betwixt the Caithnefs and Strathnaver people.

The following chapels ftood in this parifh of old; St. Mary's at Lybfter; St. Magnus's at Shebiber : oneat Shail, another at Baillie, and a third in Shurerie; befides the parih kirk dedicated to St. Colman, at Reay. There is an old caftle at Dunreay, and modern houfes both at Bighoufe and Sandfide.

Lead nines are frequent in Caithnefs; but the country is fo flat, that there is no working them for water. The moft promifing mine is at Sandfide, being in the face of a rock near the fea. It might prove of value, if proper pains were taken to work it. The highwaye run near it.

It feems that the Sasons, in the fifth century, plagued this country; and it is probable that Thurfo is fo called from Horia the Saxon general, who landed in the river of Thurfo, or Inverr-Horfa, the landing-p'ace of Horfa. And when the Saxons plundered Caithnels, it feems they had a bloody conflift with the natives. In this parifh there is a place called Tout Horla, or Horfa's grave, where they fay that fome great warrior was flain and buried; in the place is a great ftone erected. Probably he was one of Horfa's captains. This is the tradition.

Parifh of 'Thurfo. Thurfo, or Inver-Aorfa, fo called from the Saxon general, is a town of an old date; we find mention made ot it as a populous place in the eleventh century, and from it the parifh is denominated. Formerly a flrong caftle food in it, called Caftrun de Thorfa; but no vellige of it is now extant. The Earls of Caithnefs had a fine fquare at Thurfo Eaft now demolifhed. The Biflop of Caithnefs had a frong cafte at Scrabfter, near Thurfo, called the caltie of Burnfide, built in the thirteenth century, by Gilbert Murray, Bifhop of Caithnefs: the ruins are ulill extant. Another caftle ftood at Ormly, near Thurfo : lately demolifhed. At Murkil, to the eaft of Thurfo, there were great buildings of old; it was a feat of the late Earl of Caithnefs, and at Hamer he had a modern houfe. An old tower, fill extant, Itands at Brines, three miles weft of Thurfo.

As for chapels and places of worfhip, one food at Crofs Kirk, one at Brines, another at Gwic, and a fimall chapel flood in the parks of Thurfo Eaft, where Earl Harold the younger was buried. The walls are fallen down; but Mr. Sinclair of Ulbiter, very generoufly is determined to enclole that fpot, becaufe that young nobleman is interred there. The church of Thurfo was the bilhop's chapel; and when he refided in Caithnefs, he often preached there. I was told by the late E:arl of Caithnefs, that there was a nunnery in ancient times near his feat at Murkil. The country people call the place the Glofters; but no veftige of the building is extant, excepting the remains of the garden wall, which enclofed a rich fpot of ground. Torfeus fays that a Queen of Norway lived fone time at Murkil. He relates that Harcid the Bloody, fon to Harold the Fair, was bauifhed for his cruelty, with his Queen; and that his brother Hacon fucceeded to the throne: but after Harold the Bloody was 月ain in England, his Queen returned to Orkney, and refided fome time at Murkil in Caithnefs.

The fame author mentions great battles fought in this parih; one in the eleventh century, on the plains of Thurlo Eaft, betwixt Thorfinnus Earl of Orkney, and one Karl or Charles; he calls him King of Scotland, or a general of the Scots army. Anorher bloody battle at Claredon, near Thurfo Eatt, betwixt the Earls Harold the elder and younger. I have alrcady told that Earl Harold the younger is buried near the field of battle, ard a chapel erected over his grave, which is now to be enclofed by Mr . Sinclair of Ulbfte;, a moft pronifing youth.

The bifhop of Caithnefs, fince the reformation, lived in a fuall houfe at Scrabfter, which is ftill extant, and belongs to the crown. He had a grafs room in the Highlands, called Dorary, where ftood a chapel, called Gavin's Kirk, or Temple Gavin; the walls are ftill ftanding. The river of Thurlo abounds with falmon, ten and eleven lafts of fifh have been caught.

Parifh of Olrig. A fine corn country, two miles and a half in length, and a mile broad, or thereabouts. Nothing memorable in it.

Parifh of Dumet. The northerly winds have covered a great part of this parifh with fand; a large tract of ground is ruined and not likely to be recovered. In this parifh ftands Dumnet head, or what Ptoleny calls Berubium, a large promontory, with a molt terrible tide on the point of it. A hermit in ancient times lived upon it, the ruins of his cell are extant. It is a fine fheep pafture. The parifh itfelf is an excellent corn country. At Ratter is the feat of the prefent Earl of Caithaef.

Parifh of Cannelbey is a fine corn country. Here was the ancient refidence of one of the governors of Caithnefs, under the Norwegian lords that held Orkney and Caithnefs. They dwelt at Dungfocy, and their office was called the Profectura de Dungallbeeis. Torfeus mentions bloody battles fought betwixt the Scots and Norwegians, near Dungithy, in the tenth century. And Ewin, King of Scotland, fought an army of Orkney men, at Huna in this parifh, and deftroyed their King and his army. Here was, formerly, befides the parifh church, a chapel at St. John's head, near Mey, and another at Freliwick.

At Mey there is a beautiful, ftrong cafle, belonging to Sir John Sinclair. Here a kind of coal is found, like the Lanflaffen coal in Wales. At Frefwick ftands a large modern houfe, the feat of Mr. John Sinchair. And there is a ftrong old caftle, built on a high rock joined to the continent by a nariow neck of land to the louth of Frefwick. Tortreus calls it lambaburgum five caltrum agnorum. It fuftained a memorable fiege in the twelfth century. In later times it was poffefled by Mouat of Bucholly. The common people call it Bucclc's caftlc, a corruption of Buchollie's caftle. In Dungifby, the rapid tides of the Pentland throw up valt quanticies of moft beautiful fea hells,
vol., 111.
X
abundance
abundance of which are carried fouth for fhell work. They are called John a Groat's buckies. 'The town and ferry belonged of old to a gentleman of the name of Groat.

An ifland belongs to this parifh, called Stroma, in which there is a vault where they bury, built by one Kennedy of Carnmuch. The coffins are laid on fools above ground. But the vault being on the fea edge, and the rapid tides of the Pentland firth runuing by it, there is fuch a faltifh air continualiy, as has converted the bodics into mummies: infomuch, that one Murdo Kennedy, fon of Carnmuch, is faid to beat the drum on his father's belly.

Parilh of Wick, an excellent corn country, and a fruitful fea; 2000 barrels of herrings were caught here in the year 1771. There was a clapel near Caftle Sinclair, called St. Tav, another at Ulbiter, and a third at Kilmifter. The caftle of Girnigo is the oldeft building in this parifh. I cannot find out by whom it was erected. It is probable fome ftrong building ftood here before the prefent ruinous houfe was erected. It flands on a rock in the fea. Near it flood Calle Sinclair, built by George Earl of Caithnefs; a grand houfe in thofe days. Not far from it food the caftle of Akergit, built by Keith Farl Marefchal : but this place is now rendered a moft beautiful and convenient feat, by Sir William Dunbar of Hemprigs, the proprietor. In the old tover is the largeft vault in the North of Scotland, beautified with elegant ;ights and plaiftering, by Sir William; fo that it is now the grandeft room in all this pat of the country.

The town of Wick is a royal burgh, now rifing fince the herring fifhery has profpered. To the fouth of it flands an old tower, called Lord Olifant's caftle. A copper ore was difcovered there, and wrought for fome time, but I do not find they have proceeded in it.

In this parifh there is a haven for fibing boats, called Whaligo, which is a creek betwixt two high rocks. Though the height of one of thefe rocks is furprifing, yet the country people have made fleps by which they go up and down, carrying heavy burdens on their back; which a ftranger, without feeing, would fearely believe. This is a fine fifhing coaft.

There was a battle fought at Old Namerluch, in 1680, betwixt the Earl of Caithnefs, and Lord Glenurchy.

Parifh of Lathrone, eighteen miles long; partly pafture, partly corn ground. It has a chapel at Eafter Clyth, and another at the water of Dunbeath, belides the parifh kirk.

At the loch of Stemfter, in this parih, fands a famous Druidical temple. I have viewed the place: the circle is large, above too feet diameter: the fones are large and ereft ; and to fhew that the planetary fyftem was obferved by them, they are fet up in this manner, $1: 2: 3: 4: 5: 6: 7$. Then the fame courfe begins again; 1:2: 3: 4: \&ec. Few of the ftones are now fallen. Near the temple there is a ruin, where the Arch-Druid, it feems, refided. I find no fuch large Druid temples in the country: as for fmall ones, they are gencrally found in many places.

Upon a rock in the edge of the fea, in Eafter Clyth, there is an old building, called Cruner Gunn's cafle. 'inis gentleman of the name of Gunn was coronator or jufticiary of Caithefs: he was bafely murdered, with feveral gentlemen of the name, and of other names, in the kirk of St. Teay, near caltle Sinclair, by Keith Earl Marcfehal. 'The fory is told at full length in the hillory of the fanily of Sutherland. This happened in the fifteenth century. At Mid Clyth there was a large !oufe, built by Sir Geurge Sinclair of Clyth. At Nottingham there is an clegant new houfe, built by Captain Sutherland of Farfe: near this is the parifh kirk. There is a ftrong old caltle at Dunbeath; and near Lanswall is a ftrong old ruin, faid to be Ronald Cheir's caftle;
he lived in the fourteenth century, and was a great hunter of deer, as will be told when we come to fpeak of the parifl of Halkirk. He had a third part of Caithnefs in property: his great eltate wis divided betwixt his two daughtet; ; one of which becane a num, the other marred the anceltor of the Lord Inufius.
'There is an ohd building at lathrone, called Harold tower, faid to have been built by wicked harl havold, in the hethels cemury.

We read of Hoody encounters in this parifh, betwist the Caithnefs men, and Hugo Frekin larl of Sulhertand : and likewife many conflicts betwixt the two countries in after-times. 'Tortens days hat King Willian the Lion marched into Caithnefs with a great army, and encamped at Oufdales, or diabenfalale. This expedition of his Alajefty's was to drive out wicked Earl Harohl the elder, who had Gain Harold the younger. The king feized Caithefs as a conquef, then Lanllarohd fubmitted himfelf to him.

Parih of Loth, a fine corn comitry ; much harafled of old by the Danes or Norwegiars. In it are St. Nimian's chapel at Navidule, John the Buptilt's at the river Helmiddale, St. Inan's at Ealler Gartic, and St. Trudlen's at Kintradsel, befides the parifhkirk. The caftle of Helmiflale was build hy Lady Margaret Baillie, Countefs of Sutherland: and thare was a limare or court of building at Craia, erected by Lady Jane Cordon, Countefs of Surlichland; mo rellige of it now extant.

There is fine fifling in the rivers of Helmidiale and Loth. 'The latter has a very high catarak, where the water pours from a high rock, and falls into a terrible gulph be. low. If this could be removed, this river would afford excellent falmon filhing. The hills in this parifl were of old famous for hunting. At - there is a hunting houte, probably built by the licts, confifting of a great number of fmall rooms, each compded of three large foncs. Thefe buildings prove that a tribe lived here in the hunting leafon. Near it tands a large lictifly caltle, called Carn Bran. It feems that this Bran, or Brian, was fome great main in thofe days, and that all thefe accommodations were of his building. 'lue quarry from whence the fones were carried to build this cafte, is ftill to be feen, and the road for their carriage vifible, being like a fpiral line along the fide of the bill.

I read of no battles in this parifh : fome bloody conflicts are told us, and thefe are to be feen in the hiftory of the family of Sutherland. Near the miln of Loth-beg is the entire licts houie, which the bifhop of Offory entered. There is a fine calcade as you travel along the flore under Loth-beg, which makes a charming appearance when there is any fall of rain, or in time of a keen froft.

Parifh of Clyne, partly corn ground, and partly fit for pafture. There was a chapel at Dol, called St. Mahon. No confiderable buildings in this parifh. Suturland of Clyne had a good houfe; and Nicolas Earl of Sutherland had a hunting feat in the Highlands called Calle Uain, but now demolihed.

There is a tradition thar a buttle was fought at Kilalmkill, in this parifl, wherein the conntry people routed the Dancs. The eommon marks of a batte are vifible there, viz. a number of fimall cairn: Another bloody batte was fought at Clyne Milton, betwixt the Sutherkand and Caithnefs men; the llaughter was great, and the cairns, fill to be feon there, cover heap: of than.

The river of Brora affords a fine falmon fifhery: it falls into the fea at Brora. Wibhin two large miles is the loch of that name, which abounds with falmon. From the loch the river lies to the weft; and at a place called Achie-na-hyl, is a molt charming calicade : here alfo they fifh for pearls. On the top of a fmall hill near the houle of Clyne, is a lime-flone quarry: and in the heart of the flone, all forts of fea fhells known in thefe parts are found. They are frefh and entire, and the lime-itone within
the fhell refembles the fift. The binhop of Offory cmployed inen to hew out mafles of the rock, which he broke, and carried away a large guantity of fhells. Near the bridge of Brora there is a fine large cave valled Uam malman. The bithop of Olfory admired it, and faid there were fuch caves about Bethehem in Paleftine. The coal work and falt work are obvious here. But at Strathleven, near the fea, there is a hermit's apartment, cut artificially in the natural rock, well worth a vifit from any curious traveller.

I need not mention the artificial iflands in the loch of Brora, made by the old thancs of Sutherland, as a place of refuge in dangerous times. Near that loch flands a high hill or rock, Creig baw ir, on the fummit of which there is great fpace. 'This rock is fortified round; and as the neck that joins it to another rock is fmall, it feems that when they were invaded by enemies, they fled to this flrong hold, and drove their cattle akewife into it for fafety. Others fay it was a place for keeping of a watch.

Parih of Golfpie, this is a fine corn country. The parilh kirk was of old at Culnalic ; and at Golfpie the family of Sutherland had a chapel of eafe, dedicated to St. Andrew the Apoftle. In this parifh ftands the fcat of the Larls of Sutherland, at 1)unrobin; but during the Danifn wars, they lived at a greater diftance from the fea. 'This parioh affords no other great buildings; nor is there any tradition conceruing any battles fought in it: fmall ikirmithes have happened here; particularly in the year 1746 , when the Earl of Cromarty was taken prifoner. Moft remarkable is the devallation done by fand; large tracts of corn around have been quite fpoiled thereby, and more mifchief is threatened yearly.

Parifh of Dornoch, in this parifh fands tite eathedral church of Caithnefs. The Norwegians having murdered bifhop John at Scrablter, and bifhop Adam at Halkirk, in the year 1222; Gilbert Murray, the fucceeding bifhop, built the cathedral at Dornoch, which was when entire, a neat compact building. It was burnt in troublefone times, and never fully repaired. The billiop had a fiummer refidence at Skito; but in winter he lived in his callle at Dornoch, the ruins of which are to be feen. There was a flately fabrick of a church, built in that town, in the eleventh century, by St. Bar, billop of Caichnefs; but billoop Murray thought it too fmall: it ftool where the council houfe now ftands. We are told that the diocefe of Caithnefs was not divided into parihes till the days of bifhop Murray; and that he tranfated the pfalms and gofpels into the Irifh language, or Scots Gaelic. The dignified clergy had houfes and glebes in Dornoch; thefe made up his chapter when there was occafion to call onc. It is a lofs that we have none of their records; nor indeed is it a great wonder, confidering the daily invafions of the lanes, whichended not till 1266 .

In bifhop Murray's time there was a bloody battle fought at Hilton near Limbo; he and William Earl of Sutherland fought there againft the Danes, and cut them to pieces. The Danih general was killed, and lies buricd in lition. 'I here was a Itone crected over his grave, which the common people called Ree crofs, or crofs in Ri, or King's crofs, fancying that the King of Norway was there buried. $\Lambda$ brother of the bilhop was alfo killed in this batte; his body lies in a fone coffia in the caft aifle of the cathedral, above ground, near the font. The hewn Itone crected to the eall of Dornoch is a trophy of this victory: it has the Earl of Sutheriand's arms on the north file, ftill very vifible, and the bifhop of Caithncfs's arms on the fouth fide, but the heat of the fun has quite deflroyed the ficulpture.

The driving of fand is very hurfful to this parifh, and threatens ftill more harm. 'The only old building in it, excepting thofe already mentioned, is Skibo. Hugo lrefkin, Earl of Suthertand, gave thefe lands to bifhop Gilbert Murriy, then archdeacon of Murray, in a 86 . It paffed through feveral hands, till at latt it came to Lord Duftus's,
and now it returns to the family of Sutherland. It was a great pile of building, furrounded with a rampart. 'The prefent modern houfe is Itill babitable. The fituation is moft beautiful, and a fine houfe there would have a noble effect. Cyder-hall is only a modern houfe. The plantations here, and at Skibo, are the moft thriving in this paria.. At the latter place a houfe was lately built in a very clegant talle. Limbo is an old building, the feat of the knights of Limbo. It is a pity that it has neither platations nor policy about it.

Parifh of Creich has no great buildings in it : Pulcrofif is the bea. The great cataract at Inverfhin is a grand fight: fuch a large body of water pouring down from a high rock camot mifs affording entertainanent. The river of Shin abounds with large falmon, and furgeons are oftell feen there In the 12 th or 12 th century lived a great man in this parillh, called Paul Meutier. This warrior routed an army of Danes near Creich. 'Tradition fays that he gave his caughter in marriage to one Hulver, or Leander, a Dane, and with her the lands of sitrahohee; and that from that marriage are defeended the Clan Landris, a brave people, in Rofsflire. The gentlemen of the name of Gray pofieffed Mertil.Creich of an old date ; and at Mrydol there was a good houfe and orchard, which I believe are ftill extant. I find no other memorabilia in the parifh of Creich.

Parifh of Larg. The moft remarkable thirg in it is Loca. Shin, which is computed to be eighteen miles long, with fine falture-ground on each fide of it. What fkirmifhes have happened in this parifh are nentioned $n$ the hifty of the family of Sutherland.

Parih of Rogart confifts of good paiture and goo orn land. A blondy battle was fought here, near Knochartol, in the days of Councel's Elizabeth. Tradition fays, that upon the field of battle fuch a number of rwords were found, that they threw numbers of them into a loch; and that in dry furmers they ftill find iome of them. There is a place in this parifh called Morinefs, and lookem the geographer places there a people called the Morimi. He allo calls the river Helmifdale, Heas; and the natives call it in the Gadic, Illié, Avin Illic, Bun Illie, Stra Illic.
larifh of Kildoman confifts of a valley, divided into two parts by the river Helmifdale, or lllie, only fit for pallure. The parih kirk is dedicated to St. Donan. A tribe lived hore called Gunns, of Norwegian extraction: they have continued here upwards of five huadred years, and contributed to extirpate the Danes out of Sutherland. They were in all times fatellites to the Earls of Sutherland. Their chieftain is lately dead, an:! reprefented by two boys: it were to be wifled that fome gencrous perfon would take care of their cducation. The moft remarkable piece of hiftory relating to this parifh is what 'Torfeus meations, viz. that Ilelga, Countefs of Orkney, and her fifter Frauhaurk, lived at Kinbrafs, and fupported a grand fanily there. This lady had a daughter called Margaret, who was educated in inforefts, and there married Maddadius Earl of Athole, uncle's fon to King David i. Scotland. Thefe buildings were burnt, and reduced to heaps, fo that we cannot difcern what their model has been; at prefent, they are called Cairn-huin: and Torfeus fays that one Suenus burnt and demolifhed them.

What finall ikirmifhes have happened in this parifh are not worth mentioning, excepting what Torfeus mentions relative to Kinbrals, betwixt Suenus an Orkney man and Aulver Rolla captain of a guard, which an o!d wicked lady, called Frauhaurk, kept to defead her. 'I his lady, we are told, had ordered a party to go and murder Olafus, the father of Suenus, at Dunglbey, which party Aulver commanded. They came to Dungibey, and burnt that brave man, and fix more with him, in his own houfe. Luckily the lady of the houfe was abfent, being invited to an entertainment in the days of Chriftmas, Her fon Gumius, the anceftor of the Gunns, was with her, and Suenus was alfor abrent.
abfent. After maty years Suenus comes with a party, attacks Aulver, and after a fmart engagement defrats him, fo that he fled, and as many as could make their effape with him. Suemus after this burns lrauhaurk and all her family, and made a heap of the buildings: and though the ruins are great, yet no man can tell of what kind they were; that is, whether round like the Pictith houfes, or not. This happened in the i 2 th century.

Parifh of Halkirk, partly corn land, partly panture. Many places of worfhip have heen in this parilh ; fuch as the parifh ki:k of Skiman, the hofipital of St. Nagmes :t Spittal, the walls of the church belonging to it being thill cstamt; the chapel of Olgrin:beg; the chapel of St. 'Troftin, at Welthield ; the chapel ol St, Querin, at Strathmore ; another chapel at Dilred : and as the bifhop of Caitheres lived of okd at Halkirk, his chapel was called St . Kathrin, of which there is no veftige left but a heap of rubbih.

The Norwegian lords that were fuperiors of Caithnefs built the cafle of Bralal. Here lived Earl John, who is faid to have caufed the burning of the bithop of Caitinefs. This biflorp, whofe name was Adam, lived near the place where the miniter's houfe itands, tocncar the bloody Larl. It is fuid he was; fevere in exating tithes, which made the country poople complain; whereupon the Earl told them that they fhould take the bifhop and boil him. Accordingly they went on furioully, and boiled the biflop in his own houle, together with one Serlo a monk, his companion, in the year 1222. King Alexander II. came in perfon to Caithnefs, and, it is liad, exccuted near eighty perfons concerned in that murder. The Larl fled, but afterwards pardoned by the King. However, fome time after he was killed in the town of Thurfo by fome perfons whom he defigned to murder. At Braal there was a fine garden, befide which they catch the firft falmoa from the month of November to the month of Augult. The fituation is molt beautiful, very well adapted for the feat of a great man. The cafle of Dilred was built by Sutherland of Dilred, defcended from the family of Sutherland : it is a fimall building on the top of a rock. His fon, Alexander Sutherland, forfeited his eftate ; and thefe lands were given to the anceflor of Lord Reay, but now belong to Mr. Sinclair of Ulbfier.

Up the river fands an old ruin, called Lord Chein's, or Ronald Chein's, huntinghoufe: he was the Nimrod of that age, fpending a great part of his time in that exercife. The houfe flood at the outlet of a loch, called Loch-more, the fource of the river of Thurfo, which abounds with falmon. Ronald Chein had a cruive on this river, with a beil fo conitructed, that when a fifh tumbled in the cruive the bell rang. The tradition is, that all thefe highlands were then foreft and wood, but now there is fcarcely any wood. This loch is about half a mile long, and near that in breadth, and is the beft fill pond in Britain; many lafts are caught every year on the flore of this loch by the country people. Sixty nets are for ordmary thot on it in a night, and fith in every one. Many gentlemen claim a property in it, for which caufe it is a commen qood to the country in general.

There is in the town of North Calder an old ruin, called Tullocinhoogie. Torfeus fays that Romald liarl of Orkncy was treacheroufly murdered there by a ruflian he calls Thiorbiornusklerkus, and a fimart kirmith enfued. Thiorbiornus fled, and being hotly Furfued, was burnt in a houf, where he took flelter, and eight more with hims. This was in the 1 sitisentury. Two battles ware fought by the Danes in the dales of the purifh of Hakink: one at Tofting gate, the grave of the foreigners. A Scots nobleman, u hom Torlaus calls Comes Magbragdus, commanded on one fide, and a Norwegian, called I.iotus, on the other: Liotus was mortally wounded, and buried at Sten.hou, near the kirk of Watten. The other battle was fought at Halfary. The large ftones ercited
crected at Rangag and thereabout, are fcpulchral monuments, where perfons of note are buried. There was a battle fought in the 16 th century, by the Gunns and others, at a place called Blarimandofs, near Harpifdale, wherein the Gunns were routed. The beautiful river of Thurfo runs through this parih, and numbers of falmon are caught in it. lictifh lioufes are very numerous along the fhore, but all fallen down. It is a moft beautiful parifh, and muft have of old abounded with game and fifh, which invited people to fettle in it. Mr. Sinclair, of Ulbfter, is proprietor of one half of it.
larilh of Bower: here the archdeacon of Caithnefs refided. The pope of Rome was of old patron. I have in my poffeffion two prefentations from his holinefs to the archdeacon of Bowar. It was anciently a very extenfive parih, but now Watten is part of it. I know of no other place of worhip, befides the parihh kirk, excepting the chapel of Dun, where a clergyman officiated, before the erection of the parifh of Watten. I know of nothing memorable concerning it. If there ever were any grand buildings in it, no veftiges of them now remain. Torfeus mentions a great man that lived here in the 12 th century, named Maddan; one of whofe fons was tiled Magnus the Generous, the other Count Ottar of Thurfo. His daughter Helga married Harold the orator, Earl of Orkney. Another married Liotus, a noble Dane, that lived in Sutherland; and the third was married to a Dane that lived in __ in Orkney.

Parifh of Watten, a country fit for both tillage and pafture. The chapt! of Dun ftands now in it. Here are no buildings but of a modern date. The only memorable thing in this parifh is the grave of Liotus, Earl of Orkney. At Sten-hou, near the kirk of Watten, flands a great rock upon a green fpot of ground, which is faid to be the fepulchral monument of this Earl.' The monkifh tradition is, that St. Magnus converted a dragon into this ftone. This is as true as what they relate of his croffing the Pentland Firth upon a ftone, and that the print of the faint's feet is vifible on the fame flone in the kirk of Burrich, in South Ronaldihaw in Orkney.
N.B. In the hiftory of the family of Sutherland mention is made of one Sir Paul Menzies, provoft of Aberdeen, who difcovered a filver mine in Sutherland, and found it to be rich, but death prevented his working it. It feems he covered the place where he found it, and no perfon of fill has obferved it fince that time. It is probable that Creig-nargod is the place where this mine may be, and that this difcovery was the caufe of this appellation ; for I can fee no other reafon for that name or defignation. Perfons of fill ought to examine thefe bounds. Creign-airgid, or the filver hill, is abore. Cullmalie.

## APDENDIX.-Number VI.

## The Life of Sir Ezven Cameron, of Locbicl*.

SIR FIVEN CAMERON was born in February 1629. He lived with his follerfather for the firft leven ycars, according to an old cuftom in the Highlands, whereby the principal gentlemen of the clan are entitled to the tuition and fupport of their chici's children during the years of their pupillarity. The fofter-fathers were alfo frequently at the charge of their education during that period; and when the pupils returned

[^101]home, thefe fathers gave them a portion equal to what they gave their own children; as the portion confilled in cattle, before they came to age it increafed to a confiderable height.
Before his years of pupillarity expired, he was put under the charge and management of the Marquis of Argyle, the fame who was executed foon after the Reftoration. The marquis intending to bring him up in the principles of the Covenanters, put him to fchool at Inverary, under the infpection of a gentleman of his own appointment; but young Lochiel preferred the fport of the field to the labours of the fchool. Argyle obiferving this, brought him back to himfelf, and kept a watchful cye over him, carrying him along with him wherever he went.
After the defeat of the royalifts at Philiphaugh in 1645 , it happened that as the parliament fat at St. Andrew's, on the trial of the prifoners of ditinction there feized, L.ochiel, who went there with the marquis, found means to pay a vifit to Sir Robert Spotfwood, one of the prifoners, a few days before his execution. Then and there it was he received the firlt intelligence coneerning the ftate and principles of parties in Scotland. Sir Robert, happy to fee his young vifitant, the fon of his old acquaintance John Cameron, took the opportunity to relate, in an eloquent manner, the caufes of the prefent rebellion, and its hiftory from its firf breaking out, with a view of the tempers and characters of the different factions that had confpired againft the crown. He explained the nature of our conflitution, infifted much on the integrity and benevolence of the King, but inveighed bitterly againft his Scotch e:temies; and concluded with expreffing his aftonifhment how Lochiel's friends could put him under the charge of Argyle, and conjuring him to abandon that party as foon as, he could. This difcuurfe had fuch an impreffion on the mind of Lochiel, that it continued all his life-time.
Some time after, Argyle addreffed his pupil in a different tone, but had little influence over him: he never could be fatisfied why fo many brave fellows were executed, as he heard no confeffions of guilt, as thieves and robbers are wont to make; but dying with the courage and relolution of gentlemen. After this Lochiel was anxious to return to his country, inflamed with a defire of exerting himfelf in the royal caufe, and of joining Montrofe for that end. Upon the application of ins uncle Breadalbane, and the Camerons, Argyle parted with his pupil ; and he returaed to Lochaber to head his clan in the 18 th year of his age.

An opportunity of acting the chief foon occurred. Glengary and Reppoch, heads of two numerous tribes of the M•Donalds, refuled to pay Lochiel certain taxtations for fome lands they held of him: Lochiel armed a body of the Camerons, with a view to compel them. Glengary and Reppoch, finding hin thus bold and refolute, thought proper to fettle their affairs amicably, and gave him no fur:her trouble for the future. By fuch determined conduct, Lochaber enjoyed a profound peace for fome little time, white the wholeof Scotland befides was a licene of war and bloodhed.

In 1651 Lochicl was honoured with a letter from King Charles II., inviting him and his clan to ule and Fit themfelves in arms, for the relief of their country and fovereign; in confequence of which, early in fpring 1652, after collecting his men, he was the firf who joined Glencairn, who had juft then fot up the royal ftandard in the Highlands. In the different encounters his lordilhip and the royalifts had with Lilburne, Morgan, and others, Lochicl difplayed more conduct and vigour than could be expected from one fo young, and as yet unexperienced in the art of war. He diltinguihed himfelf in a particular manner in a fkirmilh which happencd between Glencairn and Col. Lilburne at Brae-mar, where he was pofted at a pafs, which he defended with great fpirit, till Glencairn and his army retreated to a place of fecurity. Lilburnc, in the inean time,
getting between Lochiel and the army, and finding it impoffible to draw out the general to an engagement, made a violent attack upon Lochiel: Lochiel, after making a bold refiftance for fome time, at laft retreated gradually up the hill, with his face to the enemy, who durft not purfue him on account of the ruggednefs of the ground, and the fnow that then covered it. Glencairn's army was at this time full of factions and divifions, occafioned by the number of independent chiefs and gentemen in his army, who would not condefcend to fubmit to one another either in opinion or action. Lochiel was the only perfon of diftinction that kept himfelf difengaged from thefe factions; for in order to avoid them, he always chofe the moft diftant parts, where his frequent fucceffes had endeared him to the general, who recommended him in a ftrong mianner to the King, as appears by the following letter his majefty fent him.
" To our trufty and well-beloved the laird of Lochiel.
"Cuiarles R.
"Trutty and well beloved, we greet you well. We are informed by the Eari of Glencairn with whi i notable courage and affection to us you have behaved yourfelf at this time of tryal, when our intereft and the honour and liberty of your country is at ftake; and therefore we cannot but exprefs our hearty fenfe of fuch your good courage, and return you our princely thanks for the fame; and we hope all honeft men who are lovers of us and their country will follow your example, and that you will unite toge. ther in the ways we have directed, and under that authority we have appointed to conduct you for the profecution of fo good a work, fo we do affure you we fhall be ready, as foon as we are able, fignally to reward your fervice, and to repair the loffes you fhall undergo for our fervice, and fo we bid you farewell. Given at Chantilly, Nov. 3, 1653 , in the fifth year of our reign."

When General Middleton came from Fiolland, 1654 , to take the command of the king's troops in Scotland, Lochie! joined him with a full regiment of good men, while many of the other heads of clans made their peace with General Monk, who had marched into the Highlands at the head of a fmall army, giving another compofed of horfe and foot to General Morgan. Many trifling conflicts enfued between thefe two generals and the Highlanders; but Lochiel being of the party who had oppofed Morgan, an active and brave officer, run feveral hazards, and encountered many difficulties; but his prefence of mind and refolution never forfook him.

Monk left no method unattempted to bribe him into a fubmifion. Thefe propofals were fo engaging, that many of his friends importuned him to accept of them; but he defpiled them all, and would not fubmit. Monk findiny all his at mp incffectual, refolved to plant a garrifon at Inverlochy, where Fort Wiliam now ftands, in order -, keep the country in awe, and their chief at home. Lochicl bing intormed of this defign, thought the moft advifable plan would be to attack the enemy on their march from Invernefs, imagining they would come from that place or that way; but the fudden arrival of the Englifh at fea difconcerted a! his meafures. They brought with them fuch plenty of materials, and were in the neighbourhood of fo mucla wood, that in a day's time after their landing, Col. Bigan, their commander, and the governor of the new fort to be ereeted, had fecured his troops from all danger.

Lochiel faw all their motions from a neighbouring eminence, and feeing it impracticable to attack them with any probability of fuccefs, retired to a place three miles weftward, to a wood on the north fide of Lochiel, called Achdalew; fron this he could have a full view of his enemy at Inverlochy. All his men he difiniffed to remove their cattle farther from the enemy, and to furnih themfelves with provifions, excepting vol. M .
about thirty-eight perfons vhom he kept as a guard. He alfo had fies in and about the garrifon, who informed him of all their tranfactions. Five days after their arrival at Inverlochy, the governor difpatched three hundred of his men on board of two veffels which were to fail weftward a little, and to ancior on each fide of the fhore near Achdalew. Lochiel heard their defign was to cut down his trees and carry away his cattle, and was determined if poffible to make them pay well for every tree and every hide : favoured by the woods, be came pretty $c^{\prime}$. Se to thic fhore, where he faw their motions fo perfeatly that he counted them as they came out of the fhif, and found the number of the armed exceed one hundred and forty, befides a number of workmen with axes and other inflruments.

Having fully fatisfied himfelf, he returned to his friends to afk their opinion. The younger part of them were keen for attacking; but the older and more experienced remonftrated againft it, as a noit rafh and hazardous enterprife. Lochiel then enquired of two of the party, who had ferved for fome tione under Montrofe, if ever they faw him engage on fo difadvantageous terms; they declared they never did. He, however, animated by the ardour of youth, or prompted by enulation (for Montrofe was always in his mouth), infifted, in a flort but fpirited harangue, that if his poople had any rega:d for their king or their chief, or any principle of honour, the Englifh fhould be attacked: "for," fays he, "if every man kills his man, which I hope you will do, I will anfwer for the refl." Upon this none of his party made further oppofition, but begged that he and his brother Allan fhould ftand at a diftance from the danger: Lochiel could not hear with patience the propofal with regard to himfelf, but commanded that his brother Allan fhould be bound to a tree, and that a little boy hould be left to attend him; but he foon flatered or threatened the boy to difengage him, and ran to the conflie,

The Camerons being fome more than thirty in number, armed partly with mufquets, and partly with bows, kept up their pieces and arrows till their very muzzles and points almoft touched their enenies' breafts, when the very firft fire took down above thirty. Then they laid on with their fwords, and laid about with incredible fury. The Englifh defended themfelves with their mulquets and bayonets with great bravery, but to little purpofe. The ikirmifh continued long and obftinate; at laft the Englifh gave way, and retreated towards the fhip, with their faces to the enemy, fighting with aftonifhing refolution. But Lochiel, to prevent their flight, commanded two or three of his men to run before, and from behind a buhf to make a noile, as if there was another party of Highlanders to intercept their retreat. This sook fo effectually that they fopped, and animated by rage, madnefs, and defpair, they renewed the fkirnifl with greater fury than ever, and wanted nothing but proper arrias to make Lochiel repent of his ftratagem. They were at laft, however, forced to give way, and betake themfelves to their heels: the Camerons purfued them chin deep in the fea; $13^{8}$ were cotinted dead of the Englifh, and of the Camerons only five were killed.
In this engagement Lochiel himfelf had feveral wonderful efcapes. In the retreat of the Englith, one of the ftrongeft and braveft of the officers retired behind a bufl, when he obferved Lochiel puniuing, and feeing him unaccompanied with any, he leaped out and thought him his prey. They met one another with equal fury. The combat was long and doubtful. The Englifh gentleman had by far the advantage in ftrength and fize; but Lochiel exceeded him in nimblenefs and agility, in the end tript the fword cut of his hand: upon which his antagonift flew upon him with amazing rapidity; they clofed and wrefted till both fell to the ground in each other's arns. 'The Englifh officer got above Lochiel and preffed him hard; but ftretching forih his neck by
attempting to difengage himfelf, Lochiel, who by this time had his hands at liberty, with his left hand feized him by the collar, and jumping at his extended throat, he bit it with his teeth quite through, and kept fuch a hold of his grip, that he brought away his mouthful ; this, he faid, was the "fweeteft bite he ever had in his life-time." Immediately afterwards, when continuing the purfuit after that encounter was over, he found $l$ is men chin deep in the fea; he quickly followed them, and obferving a fellow on deck aiming bis piece at him, plunged into the fea and efcaped, but fo narrowly that the hair on the back part of his head was cut, and a little of the fkin rufled. In a little while a fimilar attempt was made to fhooi him: his fofter-brother threw himfelf before him, and received the fhot in his mouth and breaft, preferring his chief's life to his own.

In a few days afterwards, refolving to retirn to General Middleton, he ordered all his men to affemble and join him ; but while he waited for their return, he cut off another party of the garrifon foldiers, who were marching into the country, at Auchentore, within half a mile of the fort, killed a few, and took feveral prifoncrs. His former engagements with the general obliged him at laft to join, which he did, with a great number of his clan; but was not long with him when he had certain information that the governor of Inverlochy availed himfelf of Lochiel's abfence, by making his troops cut down the woods, and collect all the provifions in the country. His return to Lochaber being neceffary, Middleton agreed to it, upon condition he would leave the greateft part of his men behind him. This he did, and fet out privately for his country with only one hundred and fifty men. He foon found his information was too true: in order to obtain redrefs, he pofted his men, early in the morning of the day after his arrival, in different parts of a wood called Stronrevifs, within a mile of the garrifon, where the foldiers ufed to come out every morning to cut and bring in wood. Four or five hundred came in the ordinary manner. Lochiel, obferving them from a convenient part of the wood where he refted, gave the fignal at a proper time. His men foon made the attack, the enemy were foon routed, and a great flaughter made; one hundred fell upon the fpot, and the purfuit was carried on to the very walls of the garrifon. It is remarkable that not an officer efcaped, they being the only active perfons that made refiftance. Thus continued Lockiel for fome time a peft to the garrifon, frequently cutting off fmall detachments, partly by ftratagem, partly by force; but his name carried fo much terror with it, that they gave him no opportunity for fome time of doing them much harm.

General Middleton being at this time extremely unfuccefsful in fome of his adventures, particularly in an action fome of his troops had lately with Major-general Morgan at Lochgarry, where they were totally defeated, fent an exprefs to Lochiel fupplicating his prefence, that meafures might te concerted how to conclude the war in an honourable manner. Lochiel refolved to go at the head of three hundred men, and made the proper preparations for his journey with all imaginable fecrecy ; yet the governor gets notice of his intended expedition, and orders Morgan if poffible to intercept him. Middleton was at Brae-nar, in the head of Aberdeenflire, between which place and Lochaber there is a continued range of hills for upwards of one hundred miles. Over thefe did he travel, fleeping in flellings, (huts which the herds build for fhelter when in the mountains) on beds of he der with their crops turned inwards, without any coverin, but his plaid. In the courfe of this expedition he vas "ke to he furprifed by the activity of Morgan once and again ; but getting up to the top: of the mountains, he always efcaped the enemy, but frequently not to their profit, as his men often run down the hill, and after difcharging a few pieces or arrows among them, with as eafily afcend.

Soon after his junation wi:h Middleton the war was given over, and Middleton retired to France, having prefensed Lochicl with a moft favourable declaration, figned at Dunvegan, in Sky, March 31, 1665. But though the war was thus given over in general, and many of the nobility and heads of clans had fubmitted to Monk, upon getting their eflates reftored, Lochiel itill food out, not able to bear the infolence of the troops quartered in a grerifon fo near him. For the governor, encouaged 'y the departure of Middieton, and taking the advantage of Lochiel's abfence in Sky, wed to alow his officers to go out frequemly in hunting parties, well guarded with a good number of armed men, deftroying the game. Lochiel, on his return, having learned this, fion put a fop to their inftence; for convening a party of the Cumerors, he atched ace day at a convenient place, while he faw on: of thefe lanting parties coming towards the hill wheron he fat, and having divided his men, an! giver th m proper inftructions, the attack was made with fuccels: moft of the party were fain, and the reft taken prifoners. The lofs of fo many officer afforded new matter of grief and aftonifhment to the governor, and prompted hin to make fome aitempts to obtain redrefs, but they were all in rain. He, however, by this time beame acquanted with the fituation and manners of the country, and procureda number of me reenary defperadone around him, Whe gave hi:n exaet intelligence of whatever happenad. This obligeci sochiel to fit bis quarers a fother ditance from the fort, while he employed fuch of his clan as continaed tai : mh, as comater-fites near the garrifon; and by their means the refolutions and plans of the remor were not only made public, but many of his fies were detected and apmendet whom Lochiel ordered to be hung up, without any ceremony or form of trial.
Scom after his uncounter with the lunting party, an exprefs came to him from the Laird of MNaughtin, a true royalift in Cowal, a country oppofite to Inverara, in Argylefhire, acquainting hims that there were in that country thee Englifh and one Scotch colonel, wiih other efizers, who were deputed by General Monk to furvey the forts and fortified places in that part of the Highlands; and that it was poffible to feize them with a few fout fellows. L.achiel, rejoiced at this intelligence, picked out one hundred. choice Cauerons, with whom he marched for Cowal, ftill keeping the tops of the mountains, left his defigns goold be difcovered and publifhed. There he met his friend M'Naughtin, who informed him that the officers lay at a certain inn, well guarded vith armed foldiers. Upua which he gave the proper orders to his men, who executed them with fo much expecition and fill, that the officers, fervants, and foldiers were all apprelended, and carried, almoft without halting, to a place of fecurity, before they well knew where they were. This place was a fmall inland in Loch-Urtaick, a freth-water lake twelve miles in length, about ten miles north of Inverlochy.
The prifoners, though teriiied at firft, were foon undeceived. The horrible executions which Lochiel's men made in the feveral rencounters they were engaged in, made his enemies believe hi:a to be cruel and fanguinary in his difpofition; bur the gentle treatment and the great civility the prifoners met with foon convinced then of the contrary: he omitted nothing that could contribute to their happinefs; but particularly he propofed and exhibied feveral hunting matches, which gave them great cutisfaction. Duing their imprifonment, they took the liberty now and then to reprefent-to?.ochiel the expediency and the prudence of a treaty with the gener-, He at firlt rejected the motion, and fcorned the advice; but being often repeato, he began to give way to their reafonings, but ftill faid that no wife man hould tr: their preiended protector, whole whole life was a continure: bypocrify, and cruelt; ud that though he was aif.
is fatety in the hands of , of ambition, rebellion, litte for the fervice of the

King or his country, yet would he always preferve his confcience and honour unfained, till erhaps a more favourable opportunity of reftoring the King might offer. Thefe conterences being often renewed, brought lochiel to declare himfelf in a more favourable manner. For the truth is, that he difembled his fentiments at firf, wanting nothing fo much as an honourable treaty; for his couitry was impoverilhed, and his people almoft ruined. He fill, however, protefted, that before he would confent to difarm himfelf and his clan, abjure his King, and take oaths to the Ufurper, he would live as an outlaw and fugitive, without regard to confequences. To this it was anfwered, that if he only ihewed an inclination to fubmit, no oath fhould be required, and he fhould have his own terms.

In confequence of this affirmation, Lochiel, with the advice of his friends, made out a draught of his conditions, which were tranfmitted to General Monk, by Colonel Cainpbel, one of the prifoners, he having given his word of honour he would foon return. Upon receipt of this, the General made out a new fet of articles, of inuch the fane nature with the draught fent, which he returned to Lochiel, fignifying to him, if he agreed thereto they would ftand good, otherwife not. After fome littlc alterations, Lochicl confented, and the Marquis of Argyle became his guarantee. This treaty was burned in a houfe of Lochiel's, which was confumed by accident. However, the moft material articles are preferved in Monk's letters to him, and are as follows.

- No oath was required of Lochiel to Cromwell, but his word of honour to live in peace. He and his clan were allowed to keep their arms as before the war broke out, they behaving peaceably. Reparation was to be made to Lochiel for what wood the Governor of Inverlochy cut on his grounds. A free and full indemnity was granted him for all riots, depredations, and crimes committed by him or his men preceding the prefent treaty. Reparation was to be made to the tenants for all the loffes they furtained from the garrifon foldiers. 'The tithes, cefs, and other publick burdens which had not been paid during the wars, were remitted on condition they fhould be paid afterwards, with feveral others of the like nature.' All that was demanded by Monk of Lochiel, was, that he and his clan fhould lay down their arms in the name of King Charles II. before the Governor of Inverlochy, and take them up again in name of the States, without mentioning the protector; that he would afterwards keep the peace, pay public burdens, and fupprefs tumults, thefts, and depredations.

Thefe articles being agreed to, and fubicribed by Monk and Lochiel, the prifoners were difcharged, but Lochiel begged they would honour him with their prefence at the ceremony of laying down theirarms, which they complicd with. Having convened a refpectable number of his clan, he ranged them into companies, under the command of the captains of their refpective tribes, and put himfelf at their head. In this manner he marched to Inverlochy, in the fame order as if going to battle, pipes playing, and colours flying. The Governor drew out the foldiers, and put them in order on a plain near the fort ; placing them on two lines oppofite to the Camerons. Lochicl and the Governor firft laluted each other as friends. The articles of the treaty were then read, and the ceremony of laying down and taking up the arms performed. Both parties afterwards partook of a fplendid en ertainment, prepared by the Governor for the ocation to the great fatisfaction of all prefont. Thus did Lochiel, the only chief in the Highlands shat continued to fupport the royal caufe after it was agreed the war fhould be yiven ovor, at lafl fubmit in an honourable way. Monk irnt him a letter of thanks for his chearful ompliance, dated at 1 , alkeith, 5 June 1655 .

During tie remaining part of Oliver's life, and the reigns of King Charles II. and James II., Luchi.I lived chiclly at home, in a broken kind of tranquillity, occafioned by
the diftractions of the times, and the pretenfions of neighbouring Chiefs and Lairds to parts of his eftate : but he always thewed fo much prudence and courage on every emergency, as gained him the friendfhip of the great and the efteem of all. He was held in particular favour by the two brothers Charles and James, and received from then many marks of their royal regard. It may not be unworthy the attention of the curious to narrate the following incident.

Lochiel and the Laird of M'Intofh had a long difpute concerning fome lands in Lochaber. M•Intolh claimed them in confequence of a grant of them he had from the Lord of the Ifles, afterwards confirmed by K. David Bruce : Lochiel's plea was perpetual poffeffion. The conteft was often renewed, both at the law courts and by arms. Many terms of a'cconmodation were propofed to the contending parties but in vain. King Charles II. himfelf would needs be the mediator; but nothing but fuperior force would prevail. In 1665 , M‘Intofh, with his own clan and the M‘Pherfons, convened an army of 1500 men, with which he fets out for Lochaber. Lochiel, aided by the M'Gregors, raifes 1200,900 of which were armed with guns, broad fivords and targets, and 300 with bows and arrows. (It is remarked, this was the latt confiderable body of bowmen that ever was feen in the Highlands.) Juft as they were in view of one another, and almoft ready to fight, the Earl of Breadalbane, who was coufingerman to both, arrived at the head of 300 men, and immediately fent for the two chiefs. He declared whoever fhould oppofe the terms he was to offer, he fhould join the contrary party with all his power, and be his foe while he lived. Accordingly propofals of agre ment were made, and fubmitted to by both parties. Lochicl continued in poffeffion of the lands: for which a fum of money was given to M•Intofh, to renounce all claims for the future. The articles of agreement were figned 2oth September 1665, about 360 yars after the .commencement of the quarrel; and next day the two Chiefs had a friendly meeting, and exchanged fwords. The leading gentlemen of both clans performed the fame friendly ccremony.

It muft appear firange, that now not a bow is to be feen in the Highlands, nor any propenfity towards that kind of armour. One might imagine, when the difarming act took place, bows and arrows would have been a good fubltitute for guns; and, if I recollect right, there is no prohibition of bows in the act.

At the revolution, Sir Ewen, who was always prepoffeffed in favour of the hereditary right, and particularly for James, whofe friendhip he had often experienced, and was refolved to fupport his caufe, as far as he could, at all hazards. In this refolution he was confirmed by a letter he had from James, dated 29 March 1689, then in Ireland, foliciting his aid, and that of his friends. Upon reccipt of this letter, he vifited all the neighbouring Chiefs, and wrote to thofe at a diftance, communicating to them the King's letter, and calling a general meeting to coneert what meafures fhould be taken. They affembled on May $1_{3}$ th, near his houfe, and mutually engaged to one another to fupport his Majefy's intereft againft all invaders. When Viicount Dundee got a commiffion from King Janes to command his troops in Scotland, Lochiel joined him with his clan, notwithltanding that Gencral M Kay made him great offers, both in moncy and titles, to abandon James's interelt.

Ife made a diftinguihed firgure at the Rirmihh of Killicrankie, under Lord Dundee, againt General M'Ray, though then above the age of fixty-three. He was the molt fanguine man in the conncil for fighting; and in the battle, though plaved in the centre oppogite to General Mi'Kay's own reginent, yot fpoke he to his men one by one, and took their fiveral engagements either to conquer or die. Juft as they begrn to fight, he tell upon this flratagem to encourage his men: He comman:'ed fuch of tie Camerons as
were pofted near him to make a great hout, which being. feconded by thofe who food on the right and left, run quickly through the whole ariny, and was returned by the enemy. But the noife of the mufquets and cannon, with the echoing of the hills, made the Highlanders fancy that their thouts were much louder and briiker than that of the enemy; and Lochiel cried out, "Gentlemen, take courage, the day is ours: I an the oldeft commander in the army, and have always obferved fomething ominous and fatal in fuch a dull, hollow, and feeble noife as the enemy made in their fhout, which prognofticates that they are all doomed to die by our hands this nigitt; whereas ours was brik, lively, and ftrong, and fhews we have vigour and courage." Thefe words, fpreading quickly through the army, animated the tronps in a ftrange manner. The event juflified the prediction: the Highlanders obtained a complete victory. The battle was fought $16 \times 9$. Lochicl continued for fome time with that ariny ; but being diffatisfied with the conduct of Cannon and fome of the principal officers, retired to Lochaber, leaving his fon in his place during the reft of the campaign.

When terms of fubmifion were offered by King William to the outtanding chiefs, though many were glad to accept of then, yet Lochiel and a few others were determined to ftand out, until they had King James's permiffion, which was at laft obtained, and only a few days before King William's indemnity expired.

There is nothing elfe memorable, in the publick way, in the life of Sir Ewen Cameron. He outlived himfelf, becoming a fecond child, even rocked in a cradle; fo much were the faculties of his mind, and the members of his body, impaired. He died A.D. 1718.

## APPENDIX.-Number VII.

## Of the Mafacre of the Colqubouns.

IN the Baronare of Scotland, by Sir Robert Douglas, it appears that in the years $159+$ and 1595 , the clan of M'Gregors with fome of their lawlefs neighbours, came down upon the low country of Dumbartominire, and committed valt outrages and depredations, efpecially upon the territories of the C. Incenouns.

In 1602 Humphry Colquhoun raifed his vaffals and sullowers to oppofe then, and was joined by many of the gentlemen in the neighbourhood. Both parties met in Glenfrone, where a bloody confict enfued. They fought with great obfinacy till night parted tiem, and many brave men were killed on both fides, but the Colquhouns appear to have been worlted. The Laird of Colquhoun efcaped, and retired to a ftrong, cafle; but was clofely purfued by a party of the enemy ; they broke into the cafle, and found him in a vault, where they inflantly put him to death with many circumftances of cruelty. In the month of February it was that this Humphry Colquboun was fain; at which time the young noblemen and gentlemen who were at fehool at Dumbarton came as fipectators to fee the battle of Glenfrone, but were not fuffered to approach near the danger, but were fhut up in a barn by the Colquhouns for fafety. The M'Gregors prevailing, are faid afterwarin \& have barb rroufly put them all to death.

This is the account given by the hiftorian of the family of Lufs, but Mr. Buchanan* afferts that the Laird of Lufs efcaped from the battle, and was afterwards killed in Benachra Cafle by the M•Farlanes, through influence of a certain nobleman whom Luls häd difobliged.

[^102]I.ct thefe facts lland as related by the partizans of each houfe, but from the varions aets of council, and the great feverity of them, and by the frequent confirmation of them by ats of parliament for near fixty years afterwards, under different princes and differeit influences, the neceflity of the fuppreffion of this unhappy clan, for the common good, is fully evinced.

The humanity of the prefent legifature did the laf year repeal thefe fanguinary acts; alletging, that the coire , wistive of them for fupprefling the name of Gregour or M'Cregour, are no: wis. in and have long ceafed.

The ancient names of places marked R. C. are borrowed from the late Dr. Stukeley's account of Richard of Cirencefter, with his ancient Map of Roman Britain and the Itinerary thereof, publifhed in 17.7. The reft from Mr. Horley's remarks on Ptolemy, Antonine's Itinerary, Notitia imperii, and Ravennatis Britanniæ Chorographia.

# A TOUR IN SCOTLAND, AND VOYAGE TO THE HEBRI!ごS IN 1772. 

By Thomas Pennant.

TO SIR JOSEPIT DANKS, HARONET.
Dear Sir,
I THINK myfelf fo much indebted to you, for making me the vehicle for conveying to the public the rich difcovery of your latt voyage, that I cannot difpenfe with this addrefs, the ufual tribute on fuch occalions. You took from me all temptation of envying your fuperior good formue, by the liberal declaration you made that the Hebrides were my ground, and yourlelf, as you pleafantly exprefled it, but an interloper. May I mect with fuch, in all my adventures !

Without leffening your merit, let me fay that no one has lefs reafon to be fparing of his fores of knowledge. Few poffefs fo large a fhare : you enjoy it without oftentation; and with a facility of communication, the refult of natural endowments joined with an immenfity of obfervation, collected in parts of the world, before, either of doubtful exiftence, or totally unknown. You have enriched yourfelf with the treafures of the globe, by a circumnavigation, founded on the moft liberal and fcientific principles.

The fixtenth century received luitre from the numbers of generous volunteers of rank and fortune, who, ditinguilhing themfelves by the contempt of riches, eafe, and luxury, made the molt hazardous voyages, like yourfelf, animated by the love of true glory.

In reward, the name of Banks will ever exift with thofe of Clifford, Raleigh and Willoughby, on the rolls of fame, celebrated inflances of great and enterprizing fpirits: and the arctic Solander mult remain a fine proof that no climate can prevent the feeds of knowledge from vegetating in the breaft of innate ability.

You have had juftly a full triumph decreed to you by your country. May your laurels for ever remain unblighted! and if the has deigned to twine for me a civic wreath, return to me the fame good wifh.

I am, with every due acknowlegeme
Dear Sir, your obliged, and u9: . nt humble Servant, OMAS PENNANT.
Downing.

## ADVERTISEMF:

THIS journcy was undertaken in the fummer ol, . orie: to render more complete my preceding tour ; and to allay that fpecies or reftictinets that infects many minds, on leaving any attempe unfinifhed. Confious of my ficiency in feveral refipects, I prevailed on two gentlemen to favour me with thei. company, and to fupply by their knowledge what I found wanting in myfelf.

To the Rev. Mr. Join Lightfoot, lecturer of Uxbridge, I am obliged for all the botanical remarks fcattered over the following pages. But it gives ine great pleafure to lay that he means to extend his favours, by foon giving to the public a Flora Scotica, an ample enumeration and hiftory of the plants, obferved by him in the feveral places we vifited. To Mr. Lightfoot, 1 muft join in my acknowledgements, the Rev. Mr. John Stuart of Killin, for a varicty of hints, relating to cuftoms of the natives of the

Highlands,

Fighlands, and of the iflands, which by reaton of my ignorance of the Erfe or Galic language, muft have efeaped my notice. To both I was indebted for all the comforts that arife from the fociety of agrecable and worthy rompanions.

I muft not omit my thanks to the feveral gentlemen who favoured me at different times with accounts and little hittories of the places of their refidence, or their environs. To begin with the molt iouthern, my belt acknowledgements are due to

Mr. Aikin, Surgeon, for the account of Warrington.
Mr. Thomas Weft favoured me with feveral things relating to the north of Lancafhire.

Doctor Brownrigg, the Rev. Doctor Burn, Jofeph Nicholfon Efq. ; of Tawkfbery, and the Rev. Mr. Farilh of Carlifle, afforded me large fupplies relating to their counties of Weftmoreland and Cumberland.

In Scotland, John Maxwel, Efq. ; of Broomholme, and Mr. Little of Langhohne favoured me with feveral remarks relating to Itkdale.

The Rev. Mr. Jaffray, minifter of Ruthwell, with a hiftory of his parifh.
Sir William Maxwell, Baronet of Springkeh, with varicty of drawings, found at the Roman ftation at Burrens.

John Goldie, Efq. ; of Dumfries, fupplied me with numbers of obfervations on that town and county.

The Rev. Mr. Duncan Macfarlane of Drummond, with an account of his parifh.
Mr. John Golborn, engineer, with an accome ot Glafgow, and various mifcellancous remarks.

For the excellent account of Pailey, 1 am indebted to Mr. Francis Douglas.
The Rev. Mr. Gerfom Stuart fent me materials for an account of the itle of Arran.
Alexander Campbel Efq. of Ballole, and Charles Freebain Iifq. communicated feveral obfervations relating to the ifle of llay.

Sir Jofeph Banks, Baronet, communicateci to me his defeription of Staffa; and permitted my artift to copy as many of the beautiful drawings in his coliection, as would be of ufe in the prefent work.

I mult acknowledge myfelf in a particular manner indebted to the Rev. Mr. Donald Macquin of Kilmuir, in the ine of Skie, for a molt inftructive correfpondence relating to the ancient cuftoms of the place, and to its various antiquities. A fimall part I have mingled with my own account: but the greater flare, in juftice to the merit of the writer, I have delivered unmutilated in the Appendix to the third volume.

The Rev. Mr. Dounie, Minifter of Gair-loch, obliged me with various remarks on his neighbourhood.

The Rev. Mr. Donald Macleod of Glenelg, the fame, refpecting his.
'To Doctor Ramfay of Edinburgh, I muft return thanks, for a varicty of fervices: to Mr. George Paton of the fame place, for an indefatigable and unparralleled alliduity in procuring from all parts any intelligence that would be of ufe to the work in view.

## (173)

## A TOUR, Er:

0NMonday the 1 sth of May, for a fecond time, take my departure for the North, from Chener ; a city without paraliel for the fingular firnclure of the four principal hasets, which are as if excavated out of the earal, and funk many feet bencath the furface; the carriages drive far below the level of the kitchens, on: line with ranges of h. ; ; and over them, on each fide the ftreets, paffengers walk from end to chd, fecure froh wet or heat, in gallerics purloined from the firth floor of cach houfe, opea and balutiaded in front. The back courts of all thefe houfes are level with the ground, but to go iato any of the four itreets it is neceflary to defend a flight of feveral iteps.

Thee Areets were once confiderably deeper, as is apparent from the fhops, whofe Aonss lie far below the prefent paremont. The lefier firectand allies that run into the proater flrets, were floped to the level of the buttoms of the latter, as is particu'arly vifible in Bridge-freet. It is dificult to afign a realon foe the fe hollowed ways: I can only fuppofe them to have been the void left after the deftruction of the ancient vaults mentioned by an ancient hiftorian: "In this cyte, (fays the Polychronicon *) ben ways under erthe with vowtes and thonc-werke wonderly wrought thre chambred wedes: I grave with old mennes names therein. There is allo Julius Cezars name wonderly in flones grave, and other noble memes alfo, with the wrytynge about :" meaning the altar and monumental inferiptions of the Romans.

The cathedral ।'till the reformation the church of the rich monaftery of St. Werburgh) is an ancicut ttructure, very ragged on the outfide, from the nature of the friable red fone $\dagger$ with which it is built ; but fill may boalt of a moft elegant Weftern front; and the tahernacle work in the choir is very neat: St. Werburgh's forine is now the bifhop's throne, decorated with the figures of Mercian monarchs and faints; to whom the fair patronefs was a bright example, living mmaculate with her huband Ceolredus, copying her aunt the great Ethelreda, who lived for three years, with not lefs purity, with her good man Tonberctus, and for twelve with her fecond hufband, the pions Prince Egfirid. Hiftory relates, that this religious houte was originally a numery, founded A. D. 66 c , by Wulpherus, King of the Mercians, in favour of his daughter's indipofition. The nuns, in procefs of time, gave way to canons fecular; and they again weee difplaced by Hugh Lupus, nephew to the conqueror, 1095, and their room fupplied by Benedictines.

The beauty and elegant fimplicity of a very antique Gothic chapter-houfe, and its fine vellibule, merits a vifit from every traveller. The date of the foundation is uncertain, but it feems, from the fimilitude of roof and pilafters in a chapel in the fquare tower in the cafte, to have been the work of cotemporary architeds, and thefe architects were probably Norman; for the mode of fquare towers, with fquared angles, was introduced immediately on the conquef.

The cloifters, the great refectory, now the free-fchool, and a gate-way of mof fingular ftructure, are at prefent the fole remains of this monatery. The ruins near St. John's church are fine reliques of the piety of the times; and the mafiy columns, and

[^103]round arches within the church, moft curious fpecimens of the clumfy ftrength of Saxon architecture. The former are probably the renains of the monattery of St. Mary, founded by Randal, fecond E. of Chefter, for Bencdictine nuns. 'llie church was founded by King Ethelred, in 689: an uncouth infeription on the walls informs us, that - King Ethelred minding more the bliffe of heaven, edified a colled ge church notable and famous in the fuburbs of Chefter pleafant and beauteous in the honour of God and the baptift St. John with the help of bifhop Wulfrice and good Excillion ".' It was rebuilt in $90 \%$, by Ethelred, F. of Mercia, after he had expelled the Danes out of the city. This was allo the cathedral, until fupplanted in 1551, by the church of the abbey of St. Werburgh.

The caftle is a decaying pile, rebuilt by one of the Norman earls, on the fite of the more ancient fortrefs. The walls of the city (the only complete fpecimen of old fortifications), are one mile three quarters, and a hundred and one yards in circumference, and, being the principal walk of the inhabitants, are kept in excellent order. The views from the feveral parts are very fine: the mountains of Flintfhire, the hills of Broxton, and the infulated rock of Beetton, form the ruder part of the fcencry: a rich Hat gives us a fofter view, and the profpect up the river towards Boughton, recalls in fome degree the idea of the Thames and Richmond hill.

The Hypocault, rear the Feathers im, is one of the remains of the Romans, it being well know that this, place was a principal ftation. Among many antiquities found here, none is more fingular than the rude fculpture of the Dea Armigera Minerva, with her bird and altar, on the face of a rock is a mall ficld near the Wetch end of the bridge.

Chefter has been, at differcit times, a place d'armes, a great thorough-fare between the two kingtoms, and the refidene of a numerous and polifhed gentry. Trade, till of late years, was but little atteniled to, but at prefent effors are making to enter into that of Guinea, America, and the Baltic.

Siuce the year ${ }^{1736}$, and not before, great quantities of linen-cloth have been imported from Ircland to cach of the antual fairs : in that year 449654 yards; and at prefent about a million of yards are browsth to each far. Hops are another great artiele of trade, lor above ten thoufand pockets are fold here annually, much of which is forwarded to the neirhbouring illand. But the only taple trade of the city is in lkins, multitudes of which are imported, dreffed here, but fent out again to be matinfactured. Here is a well regulated poor-houfe, and an i.ffirmary; the laft fupported by contribu. tions from the city, its county, and the adjacent countics of North-Wales. The firt has heppily the leate ufe of this pious foundation; for, whethre from the drynefs of the fitaation, the clearnels of the air, or the purity of the water, the proportion of deaths to the inhabitants has been only as 1 to 31 ; whereas in Loaden in 20 and 3 -4ths; in I.ecds $:$ in 2 and 3.5 ths; and in Northampon and S'rewfoury, 1 in 26, ammally pay he great tribute of maturet. Night l be permited to moralize, I thould call this the reward of the benevolent and chartabe dipolition, that is the charuterittic of this city; tor fuch is the facrifice that is plea, wert the Al angry

About nwo miks from Chefter, pats ov r Hoole houth, noted for having been one of the places of reception for trangers eflabli' \& by llush Lepus, in order to people his new doniniens. This in particular was the adm allonta for the fugitives of Wales.

Ride throuth the fua! thwn of lraphed: this, with the hodhip of Newton, was, as Danicl king obfers s, one of the livel morfeb that the albot of St. Werbureh and his

[^104]convent kept for their own wholefome provifion. Get into a tract of fandy country, and pafs beneath Hellefby-Tor, a high and bluff termination of velamere foreft, compofed of the fame friable ftone as that near Chefter, but veined with yellowHence a view of the junction of the Weever and the Merfey, and an extenfive tract of marfhy meadow, with fome good and much rufhy grafs; and beyond is the beginning of the wide efluary that flows by Livcrpool.

Crofs a little brook, called Llewyn, and reach Frodefham; a town of one long ftreet, which, with its caftle, was allotted by F.dward I. to David, brother to I.lewelyn, laft Prince of Wal's, as a retainer in his double perfidy againt his own blood, and his own country. Not: a vellige is left of the caftle, which ftood at the welt end of the town; was latterly ufed as a houfe by the Savages, and was burnt down in 1652, when one of that name, an Sarl Rivers, lay dead in it.

This as well as moft other towns and villages in Chechire, flands on an eminence of fand-ftone, and by that means enjoys a fituation dry, wholefome, and beautiful.

The church ftands at a vaft height above the town. In the regifter are thefe two remarkable infances of longevity: March the 13th, 1592, was buried Thomas Hough, aged 14r; and the very next day was committed to the earth, Randle Wa:ll, aged ro3. I obferved alfo, that in the winter of 1574 , the peftilence reached this fequeftered place, for four are then recorded to have died of it. In ea ly times that avenging angel fpread deftruction through all parts of the land; but her power is now ceafed by the providential ceflation of the natural caufes that gave rife to that moft dreadful of calmities.

Above the church is Beacon hill, with a beautiful walk cut along its fide. At the foot are four butts (archery being ftill practifed here) for an exercife in which the warriors of this county were of old eminent. The butts lie at four, eight, twelve, and fixteen roods diftance from each other: the laft are now difufed, probably as the prefent race of archers prefer what is calied fhort-fhooting *.

Crofs the Weever, on a good flone-bridge : from a neighbouring warehoufe much cheefe is thipped off, brought down the river in boats from the rich grazing grounds, that extend as far as Nantwich. The river, by means of locks, is navigable for barges as high as Winflow bridge; but below this admits veffels of fixty tons. The channel above and below is deep and clayey, and at low water very difagreeable.

On the north banks are the ruius of Rock-favage, fuifered, within memory, to fall to decay ; once the feat of a family of the fame name; and not far remote, on the fame range, is Afton, a good houle, finely lituated, but rendered too maked through the rage of modern talte.

About two miles farther on the right, is Dutton Lodge, once the feat of the Duttuns; a family in poffefion of a fingular grant, having "Magifterium ommium Leceatorum et meretricum totius C. ?relhire." This privilege cane originally fom Randai 6 th Earl of Chenter, to Roger Lacy, conitable of that city, who, when the Earl was clofely befieged by the Welfh in Rudiand cafte, collected hafily for his relief a band of minthrels, and other idle people, and with them fucceeded in the attempt; after which his fon John alligned it to the Duttons, on: of that name being affitant in the affair.

Reach Halton cafte, feated on an eminence, and given by Hugh Lupus to Nigellus, one of his officers, and founded by one of the two. Niged held it by this honourable and fpirited fervice, that whenever the Farl made an expedition into Weales, the Baron of Halton fhould be formoft in entering the country, and the latt in coming out $\dagger$. It

- I think myfelf indebted to Mr. Robertfon, librarian to the Royal Society, an whather, for the correction of this praftye.
$\dagger$ Elounts Ancient 'caurcs.
became afterwards the property of the houfe of Lancatter, and was a favourite hunting feat of John of Gaunt. The cafte is a ruin, except a part kept as a prifon. It belongs to the duchy of Lancafter, and has hill a court of record, and other privileges.

From the cafle is the moft beautiful view ia Cheflire; a rich profpect of the meanders of the Merfey, through a fertile bottom ; a pretty wooded peninfula jutting into it oppolite to Runcorn; the great county of Lancathire, filled with hedge-row trees; and Feond far the hills of Yorkflire and Lancathire; and on the other fide appears Che. fluire, and the ftill loftier Cambrian mountains; but clofe bencath, near the church, is flill a mor pleafing view; that of a row of neat alm-houfs, for the reception of the fuperammated fervants of the houfe of Norton, founded by the late l'ufey Brook, Efq, my friend, and the frimed of maakind.

Defend the hill, and pas by Nurton, a cood modern houk, on the fite of a priory of canons segnlar of St. Augulline, fonded by William, fen of Nigellus, A. 1). 1135 , "ho did not live to comphth his defign: for luface de Burgavile granted to Hugh de Cathorik padture for a hundred floep, in caie he finifhed the charch in all refpects confermable to the intent of the founder. It was granted at the difiolution to Richard Brook, Eguire.

Continue my way along a hat dull country, rach the banks of the Merfey, ride over a long caufeway, hating before me a perict wood of luty peplar, that feaks the foil; and Warrington as il in the midft of it. Shiter

Lancafire, after crofing a landfome itone bridge of four arches, which leads into the town, and was buil hy the turt Earl of Derly, to accommodate Henry VII., then on his road on a vifit to his lordhip, probably to footh the Earl after the ungrateful execution of mis brother, Sir William Stanly. It was at firft a toll-bridge, but his lordhlip generomly releafed the country from that tax, at a lofs of as many marks as was equitalent to the portion of one of his daughters.

The priory of the hemit friers of Augultine, founded before 1379, food near the bridge, but not a relique exills. The entrance into the town is unpromiling, the flreets lonr, narrow, ill-built, and crowded with carts and paffengers; but farther on are airy, and of a good width, but afford a friking mixture of mean buiddings and handfone houfes, as is the cafe with moft trading towns that experience a fudden rife; not that this place wants antiquity, for Lellud fpeaks of its having a better market than Manchefler upwards of two hundred years ago. At that time the principal part of the town was near the church, remote from the tridge, and was accelifible only by a ford, but the convenimey of a fafer tran it foon drew the buildings to that end.

The church lias of bute andergone much alteration, but two of the ancient fide-cha. pels fill remain : one botonging to the Naflis contans nothing but a fmall mural monument, wi ha very amiable charaiter of lirancis Mafiey, Efq. lord of the manors of Rixton and Glathook, laft of the ancient fanily, which as extinet with him in 1748; but in an oppolite chapel is a magniticent tomb of Sir Thomas Boteler and his hady, in a?...bater: thin chigices lie at top, hand in hand, be in armour, fhe in a remarkable mitro-shapud app; rourd the fides are various figures, fuh has St. Chrithopher, St. Gcorge, and other fupertitiou fculptures. The Botche were of great antiquity in this place; the firlt took his wame from being buter to Ranulf de Gernons, or vefdines, larl of Chefter. His poflerity acquied great podedions in this county *, and one of then ottaincd the chorters for thalkis and tuirs at Warmenton, from his priace Euward I. Tradition fays that É. Thmas, then refient at beauly honfe, near this town, was,

[^105]with his lady, murdered in the night by affafins, who croffed the moat in leathern boats to perpetrate, their villainy.

Beneath an arch in the wall near this tomb is another, containing a figure in a long robe, mufled up to the chin ; the head wrapped in a fort of cap, and bound with a neat filler.

Befides this church is a neat chapel of eafe, lately rebuilt, and many places of worflip for Prefbyterians, Anabaptifts, Quakers, Methodifts, and Roman Catholics: for in manufacturing places it often falls out that the common people happily have a difpofition to feek the Lord, but as unlappily difagree in the means of rendering themfelves acceptable to him.

Here is a free-fchool, very confiderably endowed, and made very refpectable hy the merits of the prefent mafter. An academy has of late years been eftablifhed in this town, with a view of giving an education to youth on the plan of an univerfity.

The manufactures of this plac? are very confiderable; formerly a great quantity of checks and coarfe linens were macia here, but of late years thefe have given way to that of polldavien, or fail-cloth, now carried on with fuch fpirit (in the town and country) as to fupply near one half of the navy of Great B. itain. The late war gave a great rife to this branch, and a fudden improvement to the town.

The making of pins is another confiderable article of commerce; locks, hinges, caftiron, and other branches of hardware, are fabricated here to a great anount: very large works for the refining of copper are carried on near the town; and the glafs and fugar-houfes employ many hands. By means of all thefe advantages the town has been doubled within thele twenty years; and is fuppofed to contain at prefent between eight and nine thouland inhabitants.

The manufactures of this place are mof readily conveyed down to Liverpool by moans of the Merfey. The fipring-tides rife at the bridge to the height of nine feet, and veftels of feventy or eighty feet can lie at Bank-quay, the port of the town, where warchoufcs, cranes, and other conveniences for fhipping of goods are erected. I mult not onit that thirty or forty thouffand bufhels of potatocs are annually exported out of the rich land of the environs of Warrington, into the Mediterranean, at the medium price of fourteen pence per bufhel. This is the root which honef Gerard, about two hundred and forty years ago, fpeaks of "as a food, as alfo a meat for pleafure being either roatted in the embers or boiled and eaten with oile vinegar and pepper or drefled fome other way by the hand of a fillful cooke *."

The falmon-iflery is very confiderable, but the opportunity of fending them to London and other places, at the begiming of the feafon, keeps up the price to about eightpence per pound, which gradually finks to three-pence or twopence-halfpenny, to the great aid of the poor manufacturers. Smetts, or as they are called in all the north, fparlings, migrate in the foring up this river in amazing hoals, and of a fize fuperior to thofe of other parts, fome having been taken that weiched half a pound, and meafured thirtenn inches.

In this river is found a finall fifl called the graining, in fome refpects refembling the dace, yet is a diflinct and perhaps new fpecies; the ufual length is feven inches and a half; it is rather more flender than the dace, the body is almoft ftraight, that of the other incurvated; the colour of the fcales in this is filvery, with a bluill caft; thofe of the dace have a yello. $f$ or greenifh tinge : the eyes, the ventral and the anal fins in the graining are of a paie colour t.

$$

VO1. 111.

Make a vifit to John Blackburne, Efq., at his feat of Orford, a mile from Warrington; dine and lie there. This genteman from his carlieft life, like another Evelyn, has made his garden the employ and amufement of his leifure hours, and been moft fucceffful in every part he has attempted: in fact, he has an univerfal knowtedge in the culture of plants. IIe was the fecond in thefe kingdoms that cultivated the pine-apple : has the beft fruit and the beft kitchen-garden : his collection of hardy exotics is exccedingly numerous; and his collection of hot-houfe plants is at leaft equal to any private collection in this kingdom. He neglects no branch of botany, has the aquatic plants in their propur elements; the rock plants on artificial rocks; and you may be here betrayed into a bog by attempling to gather thofe of the morafs..

Mrs. Blackburne, his daughter, extends her refearches fill farther, and adds to her empire another kingdom: not content with the botanic, fhe caufes North America to be explored for its animals, and has formed a mufeum from the other fide of the Atlantic, as pleafing as it is inftructive.

In this houfe is a large family picture of the Afhtons of Chadderton, confifting of a gentleman, his lady, eleven children living at that time, and three infants who died in their birth: it was painted in the reign of James I. by Tobias Ratcliff; but has fo little merit, that I fhould not have mentioned it, but to add one more to Mr. Walpole's lift of painters.

May 19. Pafs through Winwick, a fmall village, remarkable for being the richeft rectory in England: the living is worth 2300l. per annum; the rector is lord of the manor, and has a glebe of 1 jool. annual rent. It is fingular that this county, the eventh in fize in England, ha: only fixty-one parinhes; whereas Norfolk, the next in dimenfions, has no fewer than fix hundred and fixty.

In the wall of an old porch before the rector of Winwick's houfe, is fafely lodged a bible, placed there by a zealous incumbent, who lived in the days of Oliver Cromwell, in order that at leaft one authentic book might be found, hould the fanatics corrupt the text, and deftroy all the orthodox copies.

On the outfide of the church is this inficription, cut in old leters :
Hic locue, Ofwalde, yuondam tibi placuit valde;
Northanumbrorum tueras Rex, buncque polurum
Kegna tenes, Prato paflus Marcelde $\dagger$ vocato.
Auno milleno quingentenoque triceno,
sclatur poft Chiftum murum renovaverat ilhm:
Hemricus Johulton curatus crat fimul hic tunc.

Ofwald was King of Northumberland; the mon pious prince of his time, and the reftorer of the Chriftian relicion in his dominions: at length, A. D. 640 , receiving a defeat near Oliweflry, by Penda, pagan King of Mercia, was there fain, his body cut in pieces, and fluck on poles by way of trophies.

At Redbank, between this place and Newton, the Scots in Auguft 1648, after their retreat from Preftor, made a retolute fland for many hours againt the vistorious Cromwell, who, with great lofs win joch fides, beat them from their ground, and the next day made himfelf mafter of all their remaining infantry, which, with their commander, lueutenant general Bayly, furrendered on the bare condition of quarter $\ddagger$.

[^106]$\dagger$ Mufer. feld, near Ofwelfry. $\ddagger$ Whitclock, 332. Clarendon, V. 162.

Pafs through Newton, a fmall borough town : the country flat and fertile. On approaching Wiggan, oblerve feveral fields quite white with thread, bleaching for the ma. nufacture of ftrong checks and coarfe linen, carricd on in that town and ncighbourhood.

Wiggan is a pretty large town and a borough. It has long been noted for mannfactures in brafs and pewter, which now give way to that of checks: an ingenious fellow here turns canal coal into vafes, obelifks, and fnuff-boxes, and forms excellent blackmoors heads out of the fame matcrial.

The beft crofs-bows are alfo made in this town by a perfon who fucceeded his father in the bufinefs; the laft coming there from Rippon about a century ago.

In the church is an infcription in memory of Sir Roger Bradhaigh, of Haigh, an eminent loyalift in the time of the civil wars; and a tomb, much defaced, of a Sir William Bradfhaigh and his lady Mabel, who lived in the reigns of Edward II. and III. A remarkable hitory attends this pair: in the time of the firt monarch he fet out for the holy land in quaft of adventures, and left his fair fpoufe at home to pray for his fuccefs; but after fome years' abrence, the lady thinking he made rather too long a flay, gave her hand to Sir Ofmund Nevil, a Welch knight. At length Sir William returns in the garb of a pilgrim, makes himfelf known to his Mabel, is acknowledged by her, and the returns to her allegiance: Sir William purfues the innocent invader of his bed, overtakes him at Newton-park, where my unfortunate countryman is flain. The poor lady being confidered as an acceffary to his death, is condemned to a weekly penance of walking barefoot from the chapel in Haigh-hall, three miles diftant, to expiate her crime, to a crofs near Wiggan, at this day called Mabel's crofs.

Not far from the town is the little river Douglafs, immortalized by the victories of our Arthur * over the Saxons on its banks. This ftream in 1727 was widened, deepened, and made navigable by locks, almoft to the mouth of the Ribble; and was among the firt of thofe projects which have fince been purfued with fo much utility to the inland parts of the kingdom. This canal conveys coal to fupply the north of the county, and even part of Weltmoreland, and in return brings from thence limeftone.

On an cminence about a mile from Wiggan is Haigh, long the feat of the Bradfhaighs, an ancient houfe, built at different times: the chapel fuppofed to be as old as the time of Edward II. ; in the front are the Stanly arms, and beneath them thofe of the family, which in all civil commotions had united with the former, even as early as the battle of Bofivorth field.

In this houfe are fome excellent pictures: our Saviour with his difciples at Enmmaus, by Titian, with the landlord and waiter; a fine attention and refpect is expreffed in the countenances of the difciples.

A very finc head of Sir Lionel Tolmach, by Fr. Zuchero, on wood, fhort grey hair, a forked beard, rofy complexion; a beautiful viridis fenectus.

Eliz. Lady Dacres, daughter of Paul Vifcount Banning, relict of Francis Lord Dacres, created Countefs of Sheppy for life, by Ch. II. in 1/580; a head on wood; a blooming countenance.
$\Lambda$ head, by Riley, of Sir John Guife, great-grandfather to the prefent baronet; and and another cf Lady Guife, by Kneller.

Charles I. in his robes.
George Villiers, Duke of Buckingham, in the robes of the garter, affafinated by the gloomy Felton.

A large equeftrian picture of Ch. I., a copy after Vandyck.

* Henry of Huntingdon, $3 \mathbf{1}$.

His daughter, Mary Princefs of Orange, mother to King Willian.
Henry Murray, Efg. genthman of the bedechamber to Ch. H. : his daughter was mar. ried to Sir Roger Bradlaigh, the fecond baronet.

This neighbourhood abounds with that fine fpecies of coal called canal, perhaps candle coal, from its ferving as cheap light for the poor to fpin by during the long winter evenings: it is fonid in beds of about three feet in thicknels; the veins dip one yard in twenty ; are found at great depths, with a black bafs above and below, and are fubject to the fiune damps fiery and fuffocating as the common coal. It makes the fweetert of fires, and the molt cheerful: is very inflammable, and fo clean, that at Haigh hall a fummer-houfe is built with it, which may be entered without dread of foiling the lighteft cloaths.

Sir Roger Bradfhaigh, baronet, the laft of the male line, died on Septenber 29, 1770. On the death of his widow in - , the feat and eftate fell to - Lindfay, Earl of Balcarras, in right of his wife --...- Dalrymple, great-grand-daughter to the third Sir Roger Bradhaigh. Endeavours have been made to impute to this houfe the infamous regicide John Bradhaw.

Leaving Wiggan, obferve on the road fide, near the north end of the town, a monument, erected by Alexander Rigby, Efq., in memory of his gallant commander Sir Thomas Tildefty, who was killed on this foot in the engagement with Lambert, in 1650: a faithful domeffic, fupporting his dying mafter, was fhot in that fituation by a rebel trooper, "ho was inftantly pilloled by his generous officer, who abhorred the bartarity even to an enemy.

Reach Standifl, a village with a very handfome church and fire feeple: the pillars within fhew an attempt of the Tufcan order; it was rebuilt in 1584 , and chiefly by the affiltance of Richard Moodie, rector of the place, who maintained the workmen with meat, at his own coft, during the time. He was the firft proteltant paftor, conformed and procured the living by the ceffion of the tythes of Standif, probably thinking it better to lofe part than all. He lies in effigy on lis tomb, dreffed in his fruncifcan babit, with an infeription declarative of his munificence towards the church. In front of the tomb are two fmall pillars with Ionic capitals, the dawning of the introduction of Grecian architecture.

Here is a handfome tomb of Sir Edward Wrightington, Kui ht, king's counfl: he died 1658 , and lies in alabafter recumb nt in his gowa. A curious memorial of Edward Chifnal, who was, during the civil wars, colonel of a regiment of horfe, and another of foot; and left there flould be any doubt, the commillions are given in full length upon wood. This gentleman had the honour of defending Latham-houle under the command of the heroine the Courtefs of Derby.

At Mrs. Townley's, at Standifh.hall, are fome few reli.jues of the Arundel collection, particularly eight pieces of glafs, with the labours of Hercules, moit exquilitely cut on them. A large filver fquare, perhaps the pannel of an altar, with a molt beautiful relief of the refurrection on it, by P. V. 1605. Two trinkets, one a lion, the other a dragon, wtoofe bodies are formed of two valt irregular pearls.

Make an excurfion four miles on the weit to Holland, a village whe formerly had been a priory of Benedictines, founded by Robert de Holland in ${ }_{131} 9$, out of th collegiate chapel, before ferved by canons regular. Nothing remains at prefent but the church, and a few walls. The poflerity of the founder rofe to the wreatelt honours during feveral of the following turbulent reigns; but thofe bonours we re tended with the greateft calamities. Kobert himfelf, firlt fecretary to Thomas of Wi oflloch, Farl of Laucalter, after betraying his mafter, toll his head, hy the rage of the people, it the
beginning of the reign of Edward III. His pofterity, many at leaft of them, were equally unfortunate : 'Thomas de Holland, Duke of Surry, and Earl of Kent, fell in the fame manner at Cirencefter, by the hands of the townfmen, after a rafh infurrection, in order to reftore his nafter, Richard II. His half.brother, John, Duke of Exeter, and Jarl of ILuntin, don, underwent the fame fate, from the hands of the populace, at Pleffy, in Fffex, for being engaged in the fame defign. And his grandfon, Henry, Duke of Freter, experienced a fortune as various as it was calamitous. He was the greatelt fubject $\therefore$ :n ower under Henry VI., and was brother-in-law to Edw. IV.; yet, as Comines relates, duing the firt depreflion of his unhappy mafter, he was feen a fugitive in Flanders, running barefoot after the Duke of Burgundy's coach, to beg an alms : on the laft attempt to replace Henry on the throne, he again appeared in arms at the battle of Barnet, fought manfully, and was Ifft for dead in the field; a faithful domeftic gave him affiftance, and conveyed him into fanctuary; he efcaped, and was never heard of till his corpfe was found, by fome unknown accident, floating in the fea between Dover and Calais *; and thus clofed the event hiftory of this ill-fated line.

Return through this deep tract into the road at Standifh : the country from hence to Prefton very good; on the laft a long valley runs parallel. At a place called Pin-cock-brid cres's the Yarrow, a pretty ftream, watering a narrow romantic glen, wooded on both tides.

Ride through V"alton, a very populous villige, near the Ribble, a fine river, extending through a range of very rich meadows, as far as the pieturefque vale of Cucrden. Crofs the river on a bridge of five arches, afcend a hill, through lanes once deep, narrow, and of difficult approach, where, in 1715, the rebels made fome refiftance to the king's forces in the ill-concerted aftair of that year.

On the top lies Prefton, a neat and handfome town, quiet, and entirely free from the noife of manufactures; and is fupported by paffengers, or the money fpent by the numerous gentry that inhabit it. It derives its name (according to Camden) from the priefts or religious i.at were in old times the principal inhabitants. Here was a convent of grey friars, or Francifcans, founded by Edmund Earl of Lancafter, fon of Henry III. Robert de Holland abovementioned was a confiderable benefactor to the place, and was buried here. A gentleman of the name of Prefton gave the ground $\dagger$. Might not the town take its name from him? Here was alfo an ancient hofpital, dedicated to Mary Magdalene, mentic $-d$ in 129 in the Lincoln taxation $\ddagger$.

Ihis place was taken by form in 1643, by the parliament forces under Sir John Seaton, after a molt gal int defence: it was at that time fortified with brick walls $\S$.

North of this tewn began the action between that gallant officer Sir Marmaduke Langdale and the parliament forces under Cromwell. The former commanded the Engliih army that was to act in conjunction with the Duke of Hamilton in his unfortunate invafion in July 1648. Langdale gave the infatuated Scot notice of the approach of Cromwell, and in vain advifing the affembling of the whole force, his counfel was loft. He alone male a ftand in the fields near Prefton for fix hours, unaffifted by the duke, who puthed the march of his troops over the bridge, leaving Sir Marmaduke to be overpowered with numbers.

The walks on the banks above the Ribble command a moft beautiful view of meadows, bounded by delicious rifings; the river meandring between till the profpect clofes with its eftuary. Corsinue here the whole night, and lie at the Black-Bull.
The Spectator has tong fince pointed out the knowledge that may be collected from fygns: it is impoffible not to remark the propriety of the reigning ones of this county;

[^107]$\ddagger$ Tanner, 234.
§ Parlianent Chroncle, 268,
the triple-legs, and the eagle-and-cliild, denote the great poffefions of the Stanli~i: thefe parts; the bull, the juft pre-eminence of its cattle over other counties; and ine royal-oak, its diftinguifhed loyalty to its fovercign. I am amazed they do not adu the Graces, for no where can be feen a more numerous race of beauties among that order, who want cery adwa ge to fet of their mative charms.

May 2e. Goover a llat country, with rufhy fields on each fufo: crofs the Broke and the Calder; 「ee on one fide Blazedale fells, and on the othe felting mofs, which fome years ago made an eruption fimilar to that of Solway. Crofs the Wier, near Gartang, on a bridge of two arches; about tweive miles lower it fwells into a fine harbour, whenc: the provincial proverb, as fafe as Wier. Vefiels put into it for the fail-cloth made at Kirkham.

Breakfaft at Garfang, a fmall town, remarkable for the fine cattle produced in its neighbourhood: a gentleman has refufed thirty guineas for a threc-year-old cow; has fold a calf of a month's age for ten guineas, and bulls for an hundred; and has killed an ox weighing twenty-one feore per quarter, exclufive of hide, entrails, \&c. Bulls alfo have been let out at the rate of thirty guineas the feafon; fo that well might honeft Barnaby * celebrate the cattle of this place, not withftanding the mistortune he met with in one of its great fairs.

> Yeni Garfang ubi nata

> In Juvence dorfuen rui
> Cijus cornu lixfus fui.

Abundance of potatoes are raifed about the place, and fent to London, Ireland, and Scotland.

Sir Edward Walpole is lord of this manor, his father having obtained a grant of it from the crown.
Near the town, in a knowl, is a fugle tower, the poor remains of Grenehaugh cafte: it was built by cindi Stanley, Earl ol Derby, to fecare himfelf in his new poffefions, the forfeited atuates of the Yorkifts, who did not bear, without refentment, his ufurpation on their propery. Anong the attainted lands, which were vefted in his lordnip, are reckoned thofe of Pilkington, Broughton, and Wutton 1.

Soon after leaving Garftang the country grows more barren, uneven, or flightly hilly. From a common called the Grave liave a fine view of

Lancafter, built of fone, and lying on the fide of a hill: the calle, built by Edward III. $\ddagger$, forms one great object, the church another; and far beyond is an arm of the fea, and the lofty mountains of Furnefs and Cumberland. The town is not regular, but is well built, and contains numbers of very handfome houfes. Every flranger muft ad. mire the front of Mr. Noble's, faced with fone, naturally figured with views, rivers, and mountains, in the fame nature with the pictra imbogcata and ruinata of the Italians. The inhabitants are alfo fortunate in having fome very ingenious cabinet-makers fettled here, who fabricate moft excellent and neat goods at remarkably cheap rates, which they export to London and the plantations. Mr. Gillow's warehoufe of thefe manufactures merits a vifit.

[^108]It is a town of much commerce; has fine quays on the river Lune, which brings up mips of 250 tons burden clofe to the place. Forty or fifty fhips trade from hence direelly to Guinea and the Weft Indies; others to Norway. Beffdes the cabinet goods, fome fail.cloth is manufactured here; and great numbers of cardles are exported to the Weft Indies. Much wheat and bariey is imported.

The cuftom-houfe is a fmall but clegant building, with a portico fupported by four Ionic pillars, with a beautiful plain pediment : each pillar is fifteen feet and a half high, and confifts of a fingle ftonle. There is a double llight of fteps, a ruftic furbafe and colns; a work that does much credit to Mr. Gillow, the architect.

The cafte is very entire ; has a mo!t magnificent front, confifting of two angular towers, and a gateway between, and within is a great \{quare tower: the courts of juftice are held here ; ant here are kept the prifoners of the county, in a faf t airy confinement. "Hiee- "rwa were furprifed and taken immediately at orming of Prefton, by a I ri mence under the command of Serjen ....tym irch.
'The church : an eminence near the cafle, and commans anis comblive, but not a pleafing w one of the judges it
hin is a mural monument in memory of Sir Samuel Eyres, z's-bench in the time of King William ; and a very pompous infcription on the fone of Tho. Covell, fix times mayor of the town, fortyeigity years keeper of the cafte, forty-fix years one of the coroners of the county, captain of the freehold land of the hundred of Lonfdale on this fide the fands, \&c. \&c. died Aug. : 1639.

Ceafe, ceafe to mourn, all tears are vain and void,
He's fed, not dead, diffulved, not deftroyed:
In heiv'n' his foul doth reft, his body bere
Sleeps in this dutt, nus his fame every whicre
Triumplis: the town, the cometry, fartluer forth, The land throughous proctaim his nuble worth.

Speak of a man fo courreonus,
So free and every way magnanimous:
That fory told at large liere do you fee
Epitomized in brief, Covell was he.
This is given as a fipecimen of an epitaph fo very extravagant, that the living murt laugh to read; and the decealed, was he capable, munt bluth to hear.

This was one of the churches referved by Henry VIII. as a fanctuary after the abolition of that dangerous privilege in the reft of England.

On the rorth fide of the church-yard are the remains of an old wall, called the wery wall. Camden conjectures it to have taken its name from Caerwerid, or the green fortrefs, the Britifh name of Lancafter; and that it was part of a Roman wall. For my part, with Leland, I fufpect it to have been part of the enclofure of the priory, a cell of Benedictine monks of St. Martin, at Sces in Fiance, fuppreffed by Henry V., and given to Sion abby.

The fhambles of this town muf not be omitted : they are built in the form of a freet, at the public expence; every butcher has his thop, and his name painted over the door.

Crofs the Lume, on a handfome bridge of four arches. Siace I vifited this town there is a new bridge of five arches, built a little above the other, which is yet ftanding, Turn to the left, and after four miles riding reach Hels bank, and at low water crols the arm of the fea, the Moricambe of Ptolemy, that divides this part of the county from the hundred of Furnefs, a detached tract peninfulated by the fea, lake, or river, a melancholy ride of cleven miles; the profpect on all fides quite favage, high barren hills

IMAGE EVALUATION TEST TARGET (MT-3)

Photographic Sciences

indented by the fea, or dreary wet fands, rendered more horrible by the approach of einght, and a tempettuous evening, obfcured by the driving of black clouds. Beneath the fhade difcerned Arnfide tower, the property of the Stanlies for fome centuries. Here the county of Weftmoreland intrudes into the eftuary, and totally feparates the hundred of Loynfdale from the reft of Lancafhire. Before us was an extenfive but fhallow ford, formed by the Kent and other rivers, now paffed with trouble by the beating of the waves.

At the entrance into this water am met by a guide, called here the carter, who is maintained by the public, and obliged in all weathers to attend here from fun-rife to fun-fet, to conduct paffengers over.

Three miles from the fhore is Cartmel, a fmall town with moft irregular ftreets, lying in a vale furrounded with high hills. The gateway of the monaftery of regular canons of St . Auftin, founded in 1188 by Willianı Marefchal, Earl of Pembroke, is fill fanding: but this had long been holy ground. Egfrid, King of the Northumbrians, who reigned between the years 670 and 685 , gave to St. Cuthbert all the tract called Carthmell and all the Britains on it, and a town called Sulgetluit "; a proof of the length of time that the natives of our inland inhabited this part.

The church is large, and in form of a crofs: the length is 157 feet; the tranfept 110 ; the height 57. The fteeple is moft fingular, the tower being a fquare within a fquare; the upper part being fet diagonally within the lower. The infide of the church is handfome and fpacious : the centre fupported by four large and fine cluftered pillars: the weft part more modern than the reft, and the pillars octagonal. The choir beautiful, furrounded with falls, whofe tops and pillars are finely carved with foliage, and with the inftruments of the paffion above.

On one fide is the tomb-ftone of William de Wialton, with a crofs on it. He was either firf or fecond prior of this place. The infeription is only "Hic jacet frater Wilelmus de Walton prior de Cartmel."

On the other is a magnificent tomb of a Harrington and his lady, both lie recumbent bencath a fine carved and open work arch, decorated with variety of fuperftitious figures; and on the furbafe are grotefque forms of chaunting monks. He lies with his legs acrofs, a fign that he had obtained that privilege by the merits of a pilgrimage to the holy land, or a crufade. He is faid to have been one of the Harringtons of Wrafholm tower, his lady a Huddlefton of Millam caftle. It is probably the effigies of Sir John de Harrington, who in 1305 was fummoned by Edw. I., with numbers of other gallant gentlemen, to meet him at Carlife, and attend him on his expedition into Scotland; and was then knighted along with Prince Edward, with bathing, and other facred ceremonies $\dagger$.

The monument erected by Chritopher Rawlinfon of Carkhall, in Cattmel, deferves mention, being in memory of his grandfather, father, and mother. The laft, a monk, defcended from a Tho. Monk of Devonfhire, by Frances Plantagenet, daughter and coheir of Arthur Vifcount Liffe, Ion of Edw. IV.; and this Chriftopher dying without iffue, was the laft male by the mother's fide of that great line.

In a fide chapel is the burial-place of the Lowthers; among other monuments is a neat but fmall one of the late Sir William.

May 21. Pafs through fome fields, a ftrange mixture of pafture, rock, and finall groves. Defcend a hill to Holker, once the feat of the family of the Preftons, fince the property of the Lowthers, and lately that of Lord George Cavendifh : a large irregular

[^109]† Dugdale's Baronage, II. 99.
hou!e,
houfe, feated in a pretty park, well wooded; and on the fide of the houfe is a range of low rocky hills, directing the eye to an immenfe chain of lofty mountains.
At Holker are feveral good pictures: among the portraits, the beautiful, abandone', .vindictive, violent Dutchefs of Cleveland, miftrefs to Charles II. by Lely.

A Mrs. Lowther by the fame.
Admiral Penn, dreffed in black, with a cravat and fafh, long hair, and of a good honeft countenance. He rofe very early in life to the higheft naval commands; was a captain at twenty one, rear admiral of Ireland at twenty-three, general in the firft Dutch war at thirty-two ; difgraced and imprifoned by Cromwell for his unfucceffful attempt on St. Doiningo, though he added, in that very expedition, Jamaica to the kingdom of Great Britain : on the reforation, commanded under the Duke of York in the fame fhip, at the great fea fight of 1665 , when the laurels of the firlt day were blafted by the unfortunate inactivity of the fecond; for where princes are concerned, the truth of mifcarriages feldom appears. He foon after retired from the fervice, and died at the early age of forty-nine.

The late Sir James Lowther ; a character too well known to be dwelt on.
The head of Thomas Wriothefly, Earl of Southampton, the friend of Clarendon, and virtuous treafurer of the firt years after the reltoration.

His lady, leaning on a globe.
A very fine head of a Prefton, in black, a ruff, fhort grey hair, round beard.
A head called that of an Earl Douglafs, with this infeription: "Novis paucos fecura quies, æt. fux. xxii. A. M. D. xi." On the head a black bonnet, countenance good, beard brown, drefs black.

A fine head of Vandyck, when young, leaning: by himfelf.
An old man reading, and a boy, on wood, marked j. w. Stap.
'Two boys at dice, and a woman looking on: a fine piece by Morillio.
St. Francis d'Affize, kneeling, very fine. And variety of other good paintings. Among them four by Claude Lorraine.

Crofs another tract of fands, three miles in breadth, and am conducted through the ford by another Carter. This officer was originally maintained by the priory of Conifhed; but at the diffolution the King charged himfelf and his fucceffors with the payment : fince that time it is held by patent of the dutchy of Lancafter, and the falary is paid by the receiver-general. Reach

Ulverton, a town of about three thoufand fouls, feated near the water fide, and is approachable at high water by veffels of a hundred and fifiy tons; has a good trade in iron ore, pig and bar iron, bark, lime-ftone, oats and barley, and much beans, which laft are fent to Liverpool, for the food of the poor er:laved negroes in the Guinea trade. Numbers of cattle are fold out of the neighbourhood, but the commerce in general declines; at prefent there are not above fixty veffels belonging to the place; formerly about a hundred and fifty moftly let out to freight; but both mafter and failors go now to Liverpool for employ.

Quantities of potatocs are raifed here; and fuch is the increafe that 450 bufhels have been got from a fingle acre of ground. Some wheat is raifed in low Furnefs, near the fea, and in the ille of Walney : but the inhabitants of thefe parts have but recently applicd themfelves to hufbandry. Among the manures lea-fand and live mufcles are frequently ufed: but till within theie twenty years even the ufe of dung was fcarcely known to them.

Make an excurfion of four miles to the welt, to vifit the great iron mines at Whit rigs; the ore is found in immenfe beds beneath two frata, one of pinncl or coaric

[^110]gravel, about fifteen yards thick : the next is lime-fone of twenty yards: the ftraturn of ore is rather uncertain in extent, but is from ten to fifteen yards thick, and forty in extent; and fometimes two hundred tons have been taken up in a week. A cubic yard of ore weighs three tons and a half: the common produce of metal is one toz from thirty-five to forty hundred of ore; but fome has been fo rich as to yield a ton of iron from twenty feven hundred of the mineral.

The ore lies in valt heaps about the mines, fo as to form perfect mountains; is of that fpecies called by mineralogifts hæmatites and kidney-ore; is red, very greafy, and defiling. The iron race that inhabit the mining villages exhibit a ftrange appearance : men, women and children are perfecty dyed with it, and even innocent babes quickly affume the bloody complexion of the foil.

The ore is carried on board the fhips for 125 . per ton, each ton 21 hundred; and the adventurers pay 1s. 6d. per ton farm for liberty of raifing it. It is entirely fmelted with wood charcoal, but is got in fuch quantities that wood in thefe parts is fometimes. wanting; fo that charcoal is fometines procured from the poor woods of Mull, and othey of the Hebrides. The port to thefe mines is Barrow, about five miles to the fouth weft.

Thefe mines have been worked above four hundred years ago, as appears by the grant of William of Lancafter, Lord of Kendal, to the priory of Conifhed, in this neighbour: hood, of the mine of Plumpton, probably part of the prefent vein; which he conveys " libero introitu et exitu ad duos equos cum hominibus minam cariandam, \&c. ""

The vefliges of the ancient workings are very frequent, and apparent enough, from the vaft hollows in the earth wherever they have funk in.
From one of the banks have a great view of the lower Furnefs, as far as appears, a woodlefs tract, and the ille of Walney, ftretching along the coaft, and forming to it a fecure counterfcarp from the rage of the fea. At the fouth end is Peel caftle, originally built, and fupported by the abbey of Furnefs, and garrifoned with fixty men, as a protection againft the Scots.
The abbey lies oppofite, and the very ruins evince its former magnificence $\dagger$. It was founded in 1127, by Stephen Earl of Moriton of Bologne, afterwards King of England, or rather removed by him from Tulket in Aundirnefs. The monks were originally of the order of Tironenfians, of the rule of St. Benedict, but afterwa: 'hecame Ciftercians $\ddagger$.

The little Tarn, or water called Standing Tarn, is within fight ; it is of conduc ae depth, and abounds with pike, roach, and eels ; alfo with large trout; and is remarkable for having no vifible outlet, but difcharges its waters by fome fubterraneous paffage.

See, towards the North, at a fmall diftance, the hill of Black-Ciomb, in Cumberland often vifible from Flinthire, and an infallible prefage to us of bad weather. I found from the report of the inhabitants of thefe parts, that the appearance of our country is equally ominous to them, and equally unacceptable.

See Swartz-moor hall, near which Martin Swartz and his Germans encamped in 1487, with Lambert Simnel, in order to collect forces in thefe parts, before his attempt to wreft the crown from Henry VII: He was fupported by Sir Thomas Broughton, a gentleman of this neighbourhood, who, efcaping afterwards from the battle of Stoke, like our Owen-Glendwr, lived many years (when he was fuppofed to have been flain) in great obfcurity, fupported by his faithful tenants in Weftmoreland.

[^111]And in after-times the melancholy fpirit of George Fox, the founder of quakerifm, took poffeflion of Swartz-moor hall, firtt captivating the heart of a widow, the relict of judge Fell, the then inhabitant, moving her congenial foul to refign herfelf to him in the bonds of matrimony. From thence he fallied forth, and I truft, unintentionally, gave rife to a crowd of fpiritual Quixotes (difowned indeed by his admirers, as his genuine followers) who for a period difturbed mankind with all the extravagancies that enthufiafm could invent.
Return to Ulverfon, and dine with Mr. Kendal of that place, who fhewed me every civility. In his poffeffion faw a fingular tripodal jug, found in the neighbourhood: it was wide at the bottom, and narrow at the top, with a fpout and handle made of a mixed metal ; the height of the veffel was eight inches three quarters, of the feet two three quarters. One of the fame kind was found in the county of Down *, in Ireland; yet probably both might be Roman, the laft brought by accident into that kingdom; for Mr. Gordon, tab. 42. has given the figure of one carved on the fide of an altar.

Proceed by Newland iron furnace; afcend a high hill, whofe very top, as well as others adjacent, appears well peopled. Defcend to Penny-bridge, or Crakeford, where a fhip of 150 tons was then building. Furnaces abound in thefe parts, and various forts of implements of hurbandry are made here.

Keep along a narrow glen on excellent roads, amidft thick coppices, or brufh woods of various forts of trees, many of them planted exprefsly for the ufe of the furnaces or bloomeries. They confift chiefly of birch and hazel : not many years ago fhip loads of nuts have been exported from hence. The woods are great ornaments to the country, for they creep high up the hills : The owners cut them down in equal portions, in the rotation of fixteen years, and raife regular revenues out of them; and often fuperior to the rent of their land, for freeholders of fifteen or twenty-five pounds per annum, are known to make conftantly fixty pounds a year from their woods. The furnaces for thefe laft fixty years have brought a great deal of wealth into this country.

Obferve that the tops of all the afh trees were lopped; and was informed that it was done to feed the cattle in Autumn, when the grafs was on the decline: the cattle peeling off the bark as a food. In Queen Elizabeth's time the inhabitants of Colton and Hawkthead fells remonftrated againft the number of bloomeries then in the country, becaufe they confumed all the loppings and croppings, the fole winter food for their cattle. The people agreed to pay to the Queen the rent the received from thefe works, on condition they were fuppreffed. Thefe rents now called Bloom Smithy, are paid to the crown to this day, notwithftanding the improved ftate of the country has rendered the ufe of the former indulgence neediefs.

Keep by the fide of the river Crake: near its difcharge from Coninfton mere, at a place called Waterfoot, lay abundance of flate brought down by water from the quarries in the fells: oblerved allo great heaps of birch befoms, which are alfo articles for exportation.

Reach Coninfton or Thurftain water, a beautiful lake, about feven meafured miles long; and the greateft breadth three quarters: the greateft depth from thirty to forty fathoms. At the S . end it is narrowed by the projection of feveral little headlands running far into the water, and forning between them feveral pretty bays.' A little higher up the wideft part commences: from thence it runs quite Arait to the end, not incurvated as the maps make it. The fifh of this water are charr and pike: a few years ago the firft were fold for 3 s. 6 d . per dozen, but thanks to the luxury of the times, are

[^112]now raifed to eight or nine fhillings. The fcenery about this lake, which is fcarcely mentioned, is extremely noble. The E. and W. fides are bounded by high hills often wooded; but in general compofed of grey rock, and coarfe vegetation; much juniper creeps along the furface, and fonse beautiful hollies are finely intermixed. At the northweftern extremity the valt mountains called Coninton fells, form a magnificent mals. In the midlt is a great bofom, retiring inward, which affords great quantities of fine flate. The trade in this article has of late been greatly improved, and the value of the quarries highly encreafed : a work that twenty years ago did not produce to the landlord forty fhillings, at prefent brings in annually as many pounds: and the whole quantity at this time exported yearly from thefe mountains, is about two thoufand tons. At their feet is a fmall cultivated tract, filled with good farm houfes, and near the water edge is the village and church of Coninfton. Formerly thefe mountains yielded copper; but of late the works have been neglected on account of the poverty of the ore.

Leave the fides of the lake, and afcend a fteep hill, furrounded with woods. From the fummit have a fine view of the lake, the ftupendous fells, and a winding chafin beneath fome black and ferrated mountains.
The fields in thofe parts are often fenced with rows of great flates; which no horfes: will attempt leaping. See at a diftance a piece of Winander mere, and that of Eaftthwaite; defcend the hill, and foon reach the fmall town of Hawkfhead, feated in a fertile bottom. In the church is an altar tomb, with the effigies of Willian Sandys, and Margaret his wife, molt rudely cut in ftone, and done by order of his fon Edwin, Archbihopof York, who was born in a fmall houfe in this neighbourhood. Round the tomb is. this infcription :

> Conditur hoc tumut, Guilielmus Sandes et uxor, CCii Margareta nomen et omen crat.
> Armiger ille fuit percharus regibus olim, Ilta fed excmplar religionis erat. Conjugii fuerant xquali forte beati. Felices opibus, temmate, prole fide.
> Quos amor et pietas lato conjunxit codem : Hos fub fpe vitx continet ifte lapis.

May 22d, leave Hawkhead, and ride by the fide of Urfwick mere, about two miles long, and three quarters broad; on each fide ornamented with a pretty elevated peninfula, jutting far into the water. Its filh are perch, called here bafs, pike, eels, but no trout. The eels defcend in multitudes through the river that flows from this mere into Winander, beginning their migration with the firft floods after midfummer ; and ceafe on the firf fnows. The inhabitants of the country take great numbers in wheels at that feafon; when it is their opinion that the eels are going into the falt water: and that they return in fpring.

The roads are excellent amidt fine woods with grey rocks patched with mois rifing above. In one place obferved a Holly-park, a tract preferved entirely for fheep, who are fed in winter with the croppings. Wild cats inhabit in too great plenty thefe woods and rocks.

The Lichen Tartareus, or fone rag, as it is called here, incrufts moft of the fones : is gathered for the ufe of the dyers by the peafants, who fell it at a penny per pound, and can collect two fone weight of it in a day.

Reach Graithwaite, the feat of Mr. Sandys; and from the cats craig, an eminence near the houfe, have an extenfive view up and down the water of Winander, for feveral miles. The variety of beautiful bays that indent the fhore; the fine wooded rifings
that bound each fide; and the northern termination of lofty fells patched with frow, compofe a feene the moft picturefque that can be imagined.

See on the plain part of thefe hills numbers of fpringes for woolcocks, hid between tufts of heath, with avenues of fmall fones on each fide to direct thefe foolifh birds into the fnares, for they will not hop over the pebbles. Multiudes are taken in this manner in the open weather; and fold on the fpot for fixteen pence or twenty pence a couple (about 20 years ago at fix pence or feven pence) and lent to the all-devouring capital, by the kendal ftage.

After breakfaft, take boat at a litle neighbouring creek, and have a moft advantageous view of this beautiful lake, being favoured with a caln day and fine iky. The length of this water is about twelve miles; the breadth about a mile; for the width is unequal from the mulnitude of pretty bays, that give fuch an elegant finuofity to its flores, efpecially thofe on the caft, or the Weftmoreland fide. The herns of thefe litte ports project far, and are fuely wooded; as are all the lefler hills that kirt the water.

At a diftance is another feries of hills, lofty, rude, grey and mofly ; and above then foar the immenfe heights of the fells of Coninfton, the mountains of Wrynofe and Hard-knot, and the conic points of Langden fells; all except the firft in Cumbertand.

The waters are difcharged out at the fouth end, at Newby-bridge, with a rapid precipitous current, then alfume the name of Leven, and afte: a coirle of two miles fall into the eftuary called the Leven fands. The depth of this lake is various, from frar yards and a half to feventy-four, and excepting near the files, the bottom is entirely rocky: in fome places are valt fubaqueous precipices, the rock falling at once parpers dicular, for the depth of twenty yards, within forty of the thore; and the fane depth in preferved acrofs the chamel. The fall of the Ieven, from the lake to high water mark, is ninety feet; the deepeft part of the lake a hundred and thirty-two beneath that point.

The boatmen directed their courfe northward, and brought us by the heathy ifle of Lingholm, and the far projecting cape of Rawiinfon's Nab. On the lett hand obferve the termination of Lancafhire, juft fouth of the flor, a great promontory in Wettmoreland, all the remaining weftern fide is claimed by the firtl ; but Weltmoreland bounds the reft, fo has the faireft claim to call itfelf owner of this fuperb water.

On doubling the flor a new expanfe opened betore us; left the litile ine of Growholme on the right, traverfed the lake towards the horfe ferry, and a litle beyond, the great Holme of thirty acres crofles the water, and conceals the rett. This delicious ife is bleft with a rich pafturage, is adorned with a pretty gruve, and has on it a good boufe.

It has been the fortune of this beautiful retreat often to change mafters: the flattering hopes of the charms of retirement have miled feveral to purchafe it from the laft cheated owner, who after a liftle time difcovered, that a contant enjoyment of the fame $\mathbf{o}^{\text {t jects, delightitul as they were, foon fatiated. There muft be fomething more than }}$ external charms to make a retreat from the world long endurable; the qualifications recuifite fall to the flhare of a very few; without them difguft and wearinefs will foon invad: their privacy, notwithtanding they courted it with all the palion and all the romance with which the poet did his miftrefs ${ }^{\bullet}$.

> sic ego fecretis poflum bene vivere fylvis, Quanulla humano fit via thita pede.
> Tumini curarom requies, tu noete vel atra
> Iumen, et in folis to mihi turba locis.
> * Tibullus iv. $13,9$.

From this inland began a new and broader extent of water, bounded on the weft by the, bold and lofty face of a fteep hill, patched with the deep green of valt yews and hollies, that embellifhed its naked flope. This expanfe is varied with feveral very pretty ifles, fome bare, others juft appear above water, tufted with trees: on the north-eaft fide is the appearance of much cultivation; a tract near the village of Boulnefs falls gently to the water edge, and rifes again far up a high and large mountain, beyond which is a grand Ikreen of orhers, the pointed heads of Troutbeck fells, the valt rounded mafs of Fairfield, and the ftill higher fummit of Rydal.

Land, and dine in Weftmoreland at Boulnefs, anciently called Winander, giving name to the lake; and am here treated with moft delicate trout and perch, the finh of this water. The charr is found here in great plenty, and of a fize fuperior to thofe in Wales. They fpawn about Michaelmas, in the river Brathay, which, with the Rowthay are the great feeds of the lake, preferring the rocky bottom of the former to the gravelly bottom of the other. The filhermen difinguih two varieties, the cafe-charr and the gelt-charr, i. c. a fifh which had not fpawned the laft fenfon, and efteemed by them the more delicate: this fpawns from the beginning of January to the end of March, and never afcends the river, but felects for that purpofe the moft gravelly parts of the take, and that which abounds moft with fprings. It is taken in greateft plenty from the end of September to the end of November, but at other times is very rarely met with.
The monks of the abbey of Furnefs had a grant from William of Lancafter, privileging them to fifh on this water with one boat and twenty nets; but in cafe any of the fervants belonging to the abbey, and fo employed, mifbehaved themfelves, they were to be chaflifed by the lord of the water; and in cafe they refufed to fubmit, the abbot was bound to difcharge them, and make them forfeit their wages for their delinquency*.

Remount my horle, and continue my journey along the fides of the lake, and from an eminence about half a mile $\mathbf{N}$. of the village of Boulnefs, have a fine view of the water and all its windings; and obferve that the laft bend points very far to the weft.

On advancing towards the end have an augut profped of the whole range of thefe northern apennines, exhibiting all the variety of grandeur in the uniform immenfe mafs, the conic fummit, the broken ridge, and the overhanging crag, with the deep chafm-like paffages far winding along their bafes, rendered more horrible by the blackening thade of the rocks.

Among the birds which poffefs this exalted tract, the eagles are the firft in rank: they breed in many places. If one is killed, the other gets a new mate, and retains its ancient aery. Thofe who take their nefts find in them remains of great numbers of moor game: they are befides very pernicious to the heronries : it is remarked, in the laying feafon of the herons, when the eagles terrify them from their nefts, that crows, watching the opportunity, will fteal away their eggs.
The red deer which fill run wild in Martindale foref, fometimes fraggle into thofe parts.

Reach Amblefide, a fmall town above the extrenity of the lake: the inhabitants of thefe parts are very induftrious: are much employed in knitting fockings for Kendal market ; in \{pinning woollen yarn, and in making thread to weave their linfies. The countenances of the people begin to alter; efpecially in the tander fex; the face begins to fquare, and the cheek bone begins to rife, as if fymptomatic of my approaching towards North Britain.
Below Amblefide, in a meadow near the river Brathay, is a Roman cannp, the fup. pofed Dictis of the Notitia, where coins, bricks, \&c. have been often found. The out.

[^113]line of the work is nill vifible, and its extent is four hundred feet one way, and three hundred the other: it was the ftation of part of the cohort of the Numerus Nerviorum Dictenfium, and placed very conveniently to command feveral paffes.
May 23. At 2 fmall diftance from Amblefide, fee Rydal-hall, the houfe of Sir Michael le Fleming, placed in a moft magnificent fituation; having the lake full in front, a rich intervening fore-ground; and on each fide a ftupendous guard of mountains. This family have been fixed in the north ever fince the conqueft, and became owners of Rydal-hall by a marringe with one of the coheirefles, daughter of Sir John de Lancafter, in the time of Henry IV.
Storkgill force, near Amblefide, and two calcades near Rydal-hall, deferve a vifit from the traveller.
Near the houfe is a lofty rocky brae, cloathed with multitudes of gigantic yews and hollies, that from their fize and antiquity, give it a moft venerable appearance; and not far from its foot is Rydal water, about a mile long, beautified with little ifles.

Go through Rydal pafs, or in the dialect of the country, Rydal haws, or gullet. Ride through Grals-mere, a fertile vale with a lake clofed at the end by a noble pyramidal mountain, called Helm-crag, with a rude and broken top fingularly grand *.

On a high pafs between the hills, obferve a large Carnedd called Dunmail Wrays ftones, collected in memory of a defeat, A.D. 946, given to a petty king of Cumberland, of that name, by Edmund I. who with the ufual barbarity of the times, put out the eyes of his two fons, and gave his country to Malcolm, King of Scotland, on condition he preferved in peace the northern parts of England.
The defcent from hence to the vale of Kefwick, nine miles.
Near this place enter Cumberland, having on the left the long extended front of Helvellin fells. Moft of the hills in thefe parts are fine fheep walks, fmooth and well turfed. The fheep are fmall, but the mutton exquifitely tafted, being feldom killed Defore it is fix or feven years old. The wool is coarfe, but manufactured into ordinary carpets and blankets. No goats are kept here on account of the damage they would doto the woods.

Arrive within fight of Thirl-water, a moft beautiful but narrow lake, filling the bottom of a long dale for near four miles. From an eminence near Dale-head houfe, have a picturefque view over great part of its extent. .About the middle, the land for above a hundred yards, approaches and contrafts the water to the fize of a little river, over which is a true Alpine bridge; and behind that the water inftantly refumes the former breadth.
Regaining the road, have a frange and horrible view down ards, into a deep and mifty vale, (called the vale of St. John,) at this time appearing bottomlefs, and winding. far amidft the mountains, darkened by their height, and the thick clouds that hing on their fummits.

In the courfe of the defcent, vifit, under the guidance of Doctor Brownrigg (the firf difcoverer), a fine piece of antiquity of that kind which is attributed to the Druids. An arrangement of great fones tending to an oval figure, is to be feen near the road fide, about a mile and a half from Kefwick, on the fummit of a pretty broad and high hill, in an arable field called Caftle. The area is thirty-four yards from north to fouth, and near thirty from eaft to weft; but many of the fones are fallen down, fome inward, others outward; according to the plan, they are at prefent forty in number.

[^114]A the noru, chl, are two much larger than the reft, flanding five feet and a half above the foil: between thefe may be fuppofed to have been the principal entrance; oppofite to :t, on the S. fue, are others of nearly the fame height; and on the eaft is one wear fiven fect high. But what diltinguifhes this from all other Druidical remains of this mature, is a reetangular recefs on the eaft fide of the area, formed of great flones, iike thofe of the oral. Thefe ftructures are confidered in general to have been temples, or phaes of worihip: the recefs here mentioned feems to have been alloted for the Druids, the pricals of the plare, a fort of Holy of Holies, where they met feparated from the rulerr, ts perform their rights, their divinations, or to fit in council, to detormine on cuntroverlios, th compromife all differences about limits of land, or about whertances, or for the withe greater criminals * the Druids pofefling both the afice of puet and indoe. The caufe that this recefs was placed on the ent fide, tecoss tharife tro: the revece paidty the ancient maves of this ife to that beneficent lumanary the fime not wrimatly an idolatrous refpect, but merely as a fymbol of the ", orious all-feing being, its grat Crator.

1 have atho tem tibula cut out of a flat picce of filver, of a form better to be exprefled by the figure than word. Its breadth is, from one exterior fide to the other, four inches. This was difoovered lodged in the mud, on decpening a fifh-pond in Brayton Park in Cumbetland, the foat of Sir Wilfrid Lawfon, and conunumicated to me by Dotor Browarigg. With it was found a large filver hook of two ounces weight. The length of the thank from the top to the curvature at botom, four inches and three eights. The hook not fo long.

Arrive near the Elyfium of the north, the vale of Kefwick, a circuit between land and water of about twenty miks. From an eminence above, command a fine bird's eye Biew of the whole of the broad fertile plain, the town of Kefwick, the white church of Crofswhaite, the boafted lake of Derventwater, and the beginning of that of Baffenthwaite, with a full fight of the valt circumjacent mountains that guard this delicious fipot.

Dine at Kefwick, a finall market town: where, and in the neighbourhood, are manufactures of carpets, flamels, linfics and yarn : the laft fold to people from Cockermouth, who come for it cevery market day.

Take boat on the celebrated lake of Derwentwater. The form is irregular, extending from north to fouth, about three miles and a half. The greateft depth is twenty feet in a chamel, running from end to end, probably formed by the river Derwent, which paffes through, and gives name to the lake. The name is taken from Derwen an oak, probably beftowed on it by the Cumbrian Britons from the phaty of that timber on its banks and thofe of the lake.

The views on every fide are very different : here all the poffibie variety of Alpine feenery is exhibited, with alt the horror of precipice, brok in crat;, or over-hanging rock, or infulated pyramidal hills, contrafted with others whofe finosth and rerdant fides, fivelling into aerial heights, at once plate and furpree the cye.

The two extremities of the lake afford moft difcordans profpects: the fouthern is a compofition of all that is horrible; an immonfe chafin opens in the mint, whofe entrance is divided by a rude conic hill, once topt with a cattle, the habiation of the tyrant of the rocks; beyond, a feries of broken momananous crags, now parched with fnow, foar one above the wime, nverlatowing the dark wind ag deeps of B no volal. In thefe black receftes are luded varicty of ninerats, the origin ot and by thar abul, and placed by nowe, wet remote from the fountain of it.

Ifum eft in vifcera terra,
Quafque recondiderat flygiifque remoierat unbiis, Ifforluiltur opes.

But the oppofite or northern view is in all refpeds a frong and beautiful contraft : Skiddaw fhews its vaft bafe, and bounding all that part of this vale, rifes gently to a height that finks the neighbouring hills; opens a pleafing front, finooth and verdamt, fmiling over the country like a gentle generous lord, while the fells of Borrowdale frown on it like a hardened tyrant. Skiddaw is covered with grafs to within balf a mile of the fummit ; after which it becomes fony. The view from the top extends northward over Solway firth and various of the Scottifh mountains; to the weft the fea and the ifle of Man; while the interjacent country exhibits a flatter variety, no bad contraft to the rude and exalted fells of Borrowdale : finally, to the eaft appear the dreary mountains of Weftmoreland, lefs interefting than the reft of the fcenery.

Each boundary of the lake feems to take part with the extremities, and emulates their appearance: the fouthern varies in rocks of different forms, from the tremendous precipices of the Lady's-leap, the broken front of the Falcon's neft, to the more diftant concave curvature of Lowdore, an extent of precipitous rock, with trees vegetating from the numerous fiffures, and the foam of a cataract precipitating amidft.

The entrance into Borrowdale divides the feene, and the northern fide alters into milder forms; a falt \{pring, once the property of the monks of Furnefs, trickles along the fhore; hills (the refort of thepherds) with downy fronts and lofty fummits fucceed, with woods cloathing their bafes, even to the water's edge.

Not far from hence the environs appear to the navigator of the lake to the greateft advantage, for on every fide mountains clofe the profpect, and form an amphitheatre almoft matchlefs.

Loch-Lomond in Scotland, and Lough-Lene in Ireland, are powerful rivals to the lake in queftion. Was a native of either of thofe kingdoms to demand my opinion of their refpective beauties, I muft anfwer as the fubtle Melvil did the vain Elizabeth : "that the was the faireft perfon in England, and mine the faireft in Scotland."
The ifles that decorate this water are few, but finely difpofed, and very diftinct ; rife with gentle and regular curvatures above the furface, confift of verdant turf, or are planted with various trees. The principal is the Lord's ifland, about five acres, where the Radcliffe family had fome time its refidence; and from this lake took the title of - Derwentwater. The laft ill-fated Earl loft his life and fortune by rebellion of 1715 ; and his eftate now amounting to twenty thoufand pounds per annum, (the mines included) is vefted in truftees for the fupport of Greenwich Hofpital.

St. Herbet's ifle was noted for the refidence of that faint, the bofom friend of St. Cuthbert, who wifhed, and obiained his wifh of departing this life on the fame day, hour and minute, with that holy man.

The water of Derwentwater is fubject to violent agitations, and often without any apparent caufe, as was the cafe this day; the weather was calm, yet the waves ran a great height, and the boat was toffed violently with what is called a bottom-wind.

This lake gave name to the ancient family de Derwentwater before the time of Edward 1. By the marriage of Margaret, only daughter of Sir Jolin de Derwentwater, in the reign of Henry VI., to Sir Nicholas Radcliffi, of Dilfton, in Northumberland, Sir Francis one of his defcendants, was created by James II. Earl of Derwentwater; a title extinct in 1715 , by the unhappy end of his fon James.

May 24. Went to Crofthwaite church ; obferved a monument of Sir John Radcliff and dame Alice his wife, with their effigies on fmall brafs plates: the infcription is in vol. 1 m .
c.c
the
the nyle of the times: "Of your charity pray for the foule of Sir Jolin Radcliff Knight, and for the foulc of came Alice his wife, which Sir Jolin died the 2d day of February, A. D. 1927, on whofe foule the Lord have mercy." Here are alfo two recumbent alabafter figures of a man and a woman; he in a gown, with a purfe at his girdle.

This is the church to Kefwick, and has five chapels belonging to it. The livings of this county have been of late years much improved by Queen Anne's bounty, and there are none of lefs value than thirty pounds a year. It is not very long fince the minifter's Itipend was five pounds per annum, a goofe-grafs, or the right of commoning his goofe; a whittle-gait, or the valuable privilege of ufiug his knife for a week at a time at any table in the parih; and lafly, a hardened fark, i. e. a firt of coarfe linen.

Saw at Doctor Brownrigg's, of Ormathwaite, whofe hofpitality 1 experienced for two days, great variety of the ores of Borrowdale, fuch as lead, common and fibrous, black-jick, and black lead or wad. The lalt is found in greater quantities and purity in thofe mountains than in other parts of the world. Is the property of a few gentlemen who, left the markets flould be glutted, open the mine only once in feven years, then caufe is to be filled and otherwife fecured from the depredations of the neighbouring miners, who will run any rifk to procure fo valuable an article, for the beft fells from eight to twelve fiillings a pound. The legilature hath alfo guarded their property by making the robbery felony.
It is of great ufe in making pencils, black lead crucibles for fufing of metals, forcafting of bombs and caunon-balls, cleaning arms, for glazing of earthen-ware; and fome allert that it may be ufed medicinally to eafe the pains of gravel, ftone, Aranguary, and cholic: it has been fuppofed, but without fuundation, to have been the melanteria and pnigitis of Diofcorides: Dr. Merret calls it nigrica fabrilis, and the people of the country killow and wad, from the colouring quality; killow, or collow, fignifjing, the dirt of coal, and wad feems derived frons woad, a deep dying plant ".

Till of late years, the fuperftition of the bel-tein was kept up in thefe parts, and in this rural facrifice it was cuftomary for the performers to bring with them boughs of the mountain afh.
May 25. Continue my journey ; pafs along the vale of Kefwick, and lieep above Barfenthwaite water, at a finall cultivated dillance from it; this lake is a fite expanfe of four miles in length, bounded on one fide by high hills wooded in many places to their bottoms; on the other fide by fields and the fkiris of Skiddaw.
Between the lakes of Derwentwater and Baffenthwaite is a road which leads through the valley of Newlands to Butter-mere and Crommach-water, two fimall lakes of extr.ordinary and romantic wildnefs, The cataract of Scale-foree, near the laft, has great peculiarity. The report of my friend is fo warm in the praifes of the fcenery of thefe L.kes, that I regret greatly the lofs of what I fhould have fo fully enjoyed.

Marks of the plough appear on the tops of many of the hills. 'Tradition fays, that in the reign of King John the Pope curfed all the lower grounds, and thus obliged the inhabitants to make the hills arable : but I rather believe that John himfelf drove them to this cruel neceffity; for out of refentment to their declining to follow his flandards to the borders of Scotland, he cut down their hedges, levelled the ditches, and gave ail the cultivated tracts of the north to the bealts of chace, on his return from his expedition.

[^115]From Mr. Spedyn's, of Armethwaite, at the lower extremity of the lake, have a fine view of the whole. Near this place the Derwent quits the lake, paffing under Ouze bridge, confifing of three arches. Salmons come up the river froin the fea about Michaelmas, and force their way through buth lakes as far as Borrowdale. They had lately been on their return, but the water near the bridge proving too fhallow to permit them to proceed, they were taken by dozens, in very bad order, in the nets that were drawing for trout at the end of the lake.

On a hilf near this fpot is a circular Britifh entrenchnent; and I was told of others of a fquare form, at a few miles diftance, at the foot of Caermote; I fuppofe Roman.
The country now begins to lower, ceafes to be mountainous, but fwells into extenfive rifings. Ride near the Derwent, and pafs through the hamlets of Ifel, Blincraik, and Redmain; in a few places wooded, but generilly naked, badly cultivated, and inclofed with fone walls. Reach Bridekirk, a village with a fmall chucrh, noted for an ancient font, found at Papcalle, with an infcription explained by the learned prelate Nicholfon, in Camden's Britannia, and engraven in the fecond volume of the works of the Sociery of Antiquaries. 'The height is two feet and an inch; the form fquare; on each fide are different fculptures; on one a crofs, on another a two-headed montter, with a triple flower falling from one common ftem, langing from its nouth: beneath is a perfon, St. John Baptift, performing the office of baptifm by the innmerfion of a child, our Saviour : and above the child is a (now) imperfect dove; on a third fide is a fort of centaur, attacked by a bird and fome animal; and under them the angel driving our firf father out of Eden, while Eve clings clofe to the tree of life.

And on the fourth fide two birds, with fume ornaments and figures beneath; and the infeription in Runic characters thus decyphered by the bifhop: "Er Erkard han men egrocten, and to dis men red wer 'Taner men brogten." That is to fay,

Here Erkard was converted, and to this man's example were the Danes brought.
It is certain that the infcription was cut in memory of this remarkable event ; but whether the fout was made exprefsly on the occafion, or whether it was not of much more ancient date (as the antiquary fuppofes), and the infcription put on at the time of this converfation, appears to me at this period very uncertain.

Pafs, not far from Bridekirk through the village of Papcafle, once a Roman fation, conjectured by Mr. Horlley to have been the derventione of the geographer Ravenna, where many monuments of antiquity have been found. In a field on the left, on defcending into the village, are the remains of fome dykes. Reach

Cockermouth, a large town with broad ftreets, irregularly built, wathed by the Derwent on the weftern fide, and divided into two by the Cocker, and the parts conneted by a bridge of a fingle arch. The number of inhabitants are between three and four thoufand: the manufactures are fhalloons, worited ftockings, and hats; the laft exported from Glafgow to the Weft Indies. It is a borough town, and the right of voting is vefted by burgefs tenure in certain houfes: this is alfo the town where the county clections are inade.

The caftle is feated on an artificial mount, on a bank above the Derwent : is fquare, and is frengthened with feveral fquare towers : on each fide of the inner gate are two deep dungeons, capable of holding fifty perfons in either; are vaulted at thp, and have only a fmall opening in order to lower through it the unhappy prifoners into this dire prifon; and on the outfide of each is a narrow fit with a flope from it; and down this were fhot the provifions allotted to the wretched inhabitants. In the feud il 'im 's death and captivity were almolt fynonymous; but the firft was certainly preferable; which may be one caufe why the battles of ancient days were fo bloody.

This caftle was founded by Waldof, firt Lord of Allerdale, and fon of Gofpatrick, Earl of Northumberland, cotemporary with William the Conqueror; Waldof refided firft at Papcaftle, which he afterwards demolifled, and with the materials built that of Cockermouth, where he and his polterity long refided; but feveral arms over the gateway, which Camien fays are thole of the Multons, Humfranvilles, Lucies, and Percies, evirce it to have been of later times in thofe families. It appears that it was firt granted by Edw. 1l. to Athony de Lucie, fon of Thomas de Multon, who had affumed that name by reafon that his mother was daughter and co-heirefs to Richard de Lucie; and afterwards, by marriages, this cafle and its honours defcended to the Humfranvilles, and finally to the Percies*. In 1648 it was garrifoned for the king; and being befieged and taken by the rebels, was burnt, and never afterwards repaired.

May 26. Purfue my journey for about four or five miles along a tolerably fertile country, and then arrive amidn the collieries: crofs fome barren heaths, with inclofed land on each fide, defitute both of hedges and woods. Pals through Diffinton, a long and dirty town, and foon after, from a great height, at ouce come in fight of Whirehaven, and fee the whole at a fingle glance, feated in a hollow open to the fea on the north : it lies in the parifh of St. Bees. The vaft promontory called the Barugh, or St. Bees-head, noted for the great refort of birds $\dagger$, appears four miles to the fouth; and in days of old ftill more noted for its patroneis St. Bega, who tamed fierce bulls, and brought down deep fnows at midfummer.

The town is in a manner a new creation, for the old editions of Camden make no mention of it; yet the name is in Saxton's maps, its cliffs being known to feamen, and from their colour Camden derives the name. The rife of the place is owing to the collicries, improved and encouraged by the family of the Lowthers, to their great emolument. About a hundred years ago there was not one houfe here, except Sir John Lowther's and two others, and only three fmall veffels: and for the next forty years, the number of houfes increafed to about twenty. At this time the town may boaft of being one of the handfomeft in the north of England, buili of fone, and the ftreets pointing fraight into the harbour, with others croffing them at right angles. It is as populous as it is elegant, containing twelve thoufand inhabitants, and has a hundred and uinety great fhips belonging to it, mofty employed in the coal trade.

In 1566 there were only twelve fmall fhips under eighty tons, and a hundred and ninety-eight mariners in the whole county $\ddagger$.

The tobacco trade is: much declined: formerly about twenty thoufand hogheads were annually imported from Virginia; now fcarce a fourth of that number, Glafgow having folen that branch; but to make amends, another is carried on to the Weft Indics, where hats, printed linens, hams, \&cc. are fent. The laft week was a melancholy and pernicious exportation of a hundred and fifty natives of Great Britain, forced from their natal foil, the Low Lands of Scotland, by the rife of rents, to feek an afylum on the other fide of the Atlantic.

The improvements in the adjacent lands keep pace with thofe in the town: the Brainfly eftate forty years ago was fet for as many pounds; at prefent, by dint of good hufbandry, efpecially liming, is increafed to five hundred and feventy one.
In the town are three churches or chapels: St. James's is elegantly fitted up, and has a handfome gallery, which, with the roof, is fupported by molt beautiful ranges of pillars. Befides, is a prefbyterian meeting, one of feceders; of anabaptift, and quakers.

- Dugdale's Baronage, I. 564, \&c. $\quad$ Burn's Hit. Cumberland, II. 42. $\ddagger$ Burn II. 43 .

The workhoufe is chinly inhabited, for few of tle poor chufe to enter: thofe whom neceflity compels are moft ufefully employed : with pleafure I obferved eld age, idiocy, and even infants of three years of age, contributing to their own fupport, by the pulling of oakum.

The harbour is artificial, but a fine and expenfive work, on the fouth end, guarded by a long pier, where the thips may lie in great fecurity. Another is placed farther out, to break the force of the fea; and within thefe are two long ftraight tongucs, or quays, where the veffels are lodged : clofe to the fhore, on the fouth fide, is another, covered with what is called here a fleer, having in the lower part a range of fmiths flops, and above an extenfive floor, capable of containing fix thoufand waggon-loads of coal, of 42001 b . each. But this is only ufed as a fort of magazine; for above this are covered galleries with rail roads, terminating in large flues, or hurries, placed floping over the quay, and through thele the coal is difcharged out of the waggons into the holds of the fhips, ratling down with a noife like thunder. Commonly eight flips, from a hundred and twenty to a hundred tons each, have been loaden in one cide; and on extraordinary occafions twelve. Each load is put on board for ten fhillings; and the waggons, after being emptied, are brought round into the road by a turn frame, and drawn back by a fingle horfe. The greater part of the way from the pits, which lie about three or four miles diftant from the hurries, is down hill; the waggon is theered by one man, with a fort rf yudder to direct it; fo that he can retard or accelerate the motion by the preffure he gives by it on the wheel.

Many other works are projected to fecure the port, particularly another pier on the north fide, which when complete will render this haven quite land-locked. It is to be obferved, that in coming in veffels fhould carry a full fail till they pafs the pier-head, otherwife they will not be carried far enough in. The greateft part of the coal is fent to Ireland, where about two hundred and eighty thoufand tons are annually exported.

Spring-tides rife licre twenty-four feet. Neap tides thirteen.
Vifit the collieries, entering at the foot of a hill, not diftant from the town, attended by the agent: the entrance was a narrow paffage, bricked and vaulted, floping down with an ealy defent. Reach the firlt beds of coal which had been worked about a century ago: the roofs are finooth and fpacious, the pillars of fufficient ftrength to fupport the great fuperltructure, being fifteen yards fquare, or fixty in circumference; not above a third of the coal having been worked in this place; fo that to me the very columns feemed left as refources for fuel in future times. The immenfe caverns that lay between the pillars exhibited a moft gloomy appearance. I could not help enquiring here after the imaginary inhabitant, the creation of the labourers' fancy,

> The fwart fairy of the mine,
and was ferioufly anfwered by a black fellow at my elbow, that he really had never met with any ; but that lis grandfather had found the little implements and tools belonging to this diminutive race of fubterrancous firits *.

The beds of coal are nine and ten feet thick, and dip to the weft one yard in eight. In various parts are great bars of ftone, which cut off the coal : if they bend one way, they influence the coal to rife above one's head; if another, to fink beneath the feet. Operations of nature paft my fill to unfold.

[^116]Reach a place where there is a very deep defcent: the colliers call this hardknot, from a mountain of that name; and another wrynofe. At about eighty fathoms depth began to fee the workings of the rods of fire-engine, and the prefent operations of the colliers, who work now in fecurity, for the fire-damps, formerly fo dangerous, are almof overcome; at prefent they are prevented by boarded partitions, placed a fout diftance from the fides, which caufes a free circulation of air throughout : but as fill there are fonte places not capable of fuch conveniencies, the colliers, who dare not venture with a candle in fpots where fire-damps are fuppofed to lurk, have invented a curious machine to ferve the purpofe of lights: it is what they call a feel-mill, confifting of a fnall wheel and a handle; this they turn with valt rapidity againft a fint, and the great quantity of fparks emitted not only ferves for a candle, but has been found of fuch a nature as not to fet fire to the horrid vapour.

Fornerly the dainp or fiery vapour was conveyed through pipes to the open air, and formed a terrible illumination during the night, like the eruptions of a volcano; and by its heat water could be boiled : the men who worked in it inhaled imflammable air, and if they breathed againft a candle, puffed out a fiery ftream; fo that I make no doubt, was the experiment made, the fame phenomenon would appear as John Grub* attributed to my illuftrious countryman Pendragon, chief of Britons.

Reached the extremity of this black journey to a place near two miles from the entrance, beneath the fea, where probably flips were then failing over us. Returned up the laborious afcent, and was happy once more to emerge into day-light.
The property of thefe works, as well as the whole town, is in Sir James Lowther, who draws from them and the rents of the buildings fixteen thoufand pounds a year ; whercas his grandfather only made fifteen hundred. The prefent baronet has inftituted here a charity of the moft beautiful nature, ufeful, humane, and unoftentatious. He always keeps filled a great granary of oats, which he buys from all parts, but never difpofes of while the markets are low: but the noment they rife above five fhillings the Cumberland bufhel, or three Winchefter meafures, he initantly opens his fores to the poor colliers and arificers, and fells it to them at five fhillings, notwithftanding it might have coft him feven; thus happily difappointing the rapacity of the vulturine monopolizer.

Leave Whitehaven, and return about two miles on the fame road I camc. See under the cliffis a neat little village called Parton, and a pier, intended for the fhipping of coal ; a new creation by Sir James Lowther.
Leave Morefby on the left; a place near the fhore, mentioned by Camden as of great antiquity, a fort of the Romans, and where feveral infcriptions have been found: he alfo fpeaks of certain caverns, called Picts holes, but the latenefs of the evening prevented me from defcending to vifit them. Ride through the village of Herrington, pafs over a very naked barren country, and have from fome parts of this evening's journey a full view of the lne of Man, appearing high and mountainous. Reach

Workington, the place where the imprudent Mary Stuart landed, after her flight from Dundrannan, in Galloway, creduloufly trufting to the protection of the infidious Elizabeth. The town extends irom the caftle to the fea; it confifts of two cluflers, one the more ancient near the calle, the other nearer the church and pier; and both contain about four or five thoufand inhabitants: they fubfift by the coal trade, which is here confiderable. The Derwent wafhes the fkirts of the town, and difcharges itfelf into the fea about a mile weft: on each bank near the mouth are piers where the fhips die, and the coals are conveyed into them from frames occafionally dropping into

[^117]them from the rai ads. Nincty-feven veffels of different burdens, fome even of two hundred and firt: as, belong to this port.

The caftle flciu. on the feat of the late Mr. Curwen, whofe property, together with the houfe, paffed a few years ago to Mr. Chriftian by marriage with the daughter of the late owner. The Culwens took their name from a great lordhip they poffeffed in Galloway about the year 1152 , foon after which they fettled at Workington, and the name became corrupted into Curwen.

Obferve to the fouth, on an eminence near the fea, a fmall tower, called Holme chapel, faid to have been built as a watch tower to mark the motions of the Scots in their naval inroads.
Near the town is an iron furnace and foundery; the ore is brought from Furnefs, and the iron ftone dug near Harrington. A fine water-wheel and its rods extending near a mile, are very well worth vifiting.
May- 27. Keep along the fea- fhore to Mary Port, another new creation, the property of Humphry Senhoufe, Efq., and fo named by him in honour of his lady : the fecond houfe was built only in 1750 . Now there are above a hundred, peopled by about thirteen hundred fouls, all collected together by the opening of a coal trade on this eftate.. For the conveniency of fhipping (there being above feventy of different fizes, from thirty to three hundred tons burden, belonging to the harbour) are wooden piers, with quays, on the river Ellen, where fhips lie and receive their lading.. Befide the coal trade is fone fkinning bufinefs, and a rope-yard..

At the fouth end of the town is an eminence called the Mote-hill, and on it a great artificial mount, whofe bafe is a hundred and fixty yards round, protected by a deep ditch almoft furrounding it, ceafing only where the fleepnefs of the hill rendered fuch a defence unneceffary: this mount is a little hollowed on the top, has been probed in different plages to the depth of four or five feet, but was difcovered to confift of no, other materials than the common foil which had been flung out of the fols.
On a hill at the north end of the town are the remains of a large Roman fiation, fquare, furrounded with double ditches, and furnifhed with four entrances, commanding a view to Scotland, and round the neighbouring country. Antiquaries differ about the ancient name; one fyles it olcoacum, another virofdum, and Camden volantium, from the wifh infcribed on a beautiful altar found here, volantii vizas *. It had been a confiderable place, and had its military roads leading from it to Moreiby to old Carlifle, and towards Amblefide; and has been a perfect magrazine of Roman antiquities:

Not far from this fation is a tumulus, fingular in its compofition; it is of a rounded form, and was found; on the fection made of it by the late Mr. Senhoufe, to confift of, firt the fod or common turf, then a regular layer of crumbly earth, which at the beginning was thin, increafing in thickuefs as it reached the top. This was at firft britte, but foon atter being expofed to the air acquired a great hardnefs, and a ferruginous look. Beneath this was a bed of frong blue clay, mixed with fern roots; placed on two or three layers of turf, with their grafly fides together ; and under thefe, as the prefent Mr. Senhoufe informed me, were found the bones of a heifer and of a colt, wiith fome wood athes near them.

Took the liberty of walking to Nether-hall, formerly Alneburgh-hall, where Ifoon difoovered Mr. Senhoufe to be poffeffed of the politenefs hereditary $\dagger$ in his family towards travellers of curiofity. He pointed out to me the feveral antiquities that had.

[^118]-been long preferved in his houfe and gardens, engraved by Camden, ${ }^{\text {'Mr. Horfeley, and }}$ Mr. Gordon; and permitted one of iny fervants to make drawings of others that had been difcovered fince.

Among the latter is the altar found in the rubbifh of a quarry, which feemed to have been worked by the Romans in a very extenfive manner: it has no infcription, and appears to have been left unfinifhed; perhaps the workmen were prevented from exccuting the whole by the upper part of the hill nipping down over the lower: a circumftance that fill frequently bappens in quarries worked beneath the cliffs. On one fide of the altar is a broad dagger, on another a patera.

A fragment of fone, with a boar rudely carved, and the letters or D ,
A large wooden pin, with a curious polygonal head. One fimilar to this, but made of brafs, was difcovered, with other trinkets, in a tomb near Choifi in France. Count Caylus calls it a mace, and thinks by the little ax that accompanied it, that the perfon interred was a child defigned for the military life, and that thefe were fymbolical proofs**

The fpout of a brazen veffel. Mr. Senhoufe alfo favoured me with the fight of fome thin gold plate, found in the fame place; and fhewed me, near this houfe, in Hall-clofe, an intrenchment of a rectangular form, forty-five yards by thirty five: probably the defence of fome ancient manfion, fo neceflary in this border county.

It gave me great pleafure to review the fculptures engraven in Mr. Horfeley's antiquities, and preferved in the walls of this place. The following were fixed in the walls of the houfe, by the anceftor of Mr. Senhoufe, coeval with Camden. On No. 65, an altar, appears Hercules with his club, and in one hand the Hefperian apples that he had conveyed
ab infomni malè cuftodita dracone,

What is fingular, is an upright conic bonnet on his head, of the fame kind with that in which the goddefs, on whom he beftowed the fruit, is dreffed $\dagger$. On another fide of the altar is a man armed with a helmet and cloathed with a fagunc claufum, or clofed frock, reaching only to his knees. In one hand is a thick pole; the other relting on a wheel, probably denoting his having fucceeded in opening fome great road.

In No. 70, are feen the two victories fupporting a triumphal crown, the victoria augufti.
'ihe local goddefs Setlocenia, with long flowing hair, with a veffel in her hand, fills the front of one fone; and an altar inferibed to her is lodged in one of the garden, walls.

No. 74, is near the goddefs, a inoft rude figure of a cavalier on his fteed.
In the fame wall with her altar is No. $\sigma_{4}$, a monumental mutilated infeription, fuppofed in honour of Antoninus Pius.

No. 71, the next monument, notes the premature death of Julia Mamertina, at the age of twenty years and three months. A rude head exprefles the lady, and a fetting fiun the funereal futject.

A female exprefling modefty with one hand; the other lifted to her head, flands beneath an arch, as if about to bathe, and is marked in Horfely, No. 73.

In a garden houfe is No. 62, an altar to Jupiter, by the firt cohort of the Spanifh, whofe tribune was Marcus Menius Agrippa.

Another, No. 66, to Mars Militaris, devoted by the firt cohort of the Belgic Gauls, commanded by Julius Tutor.

[^119]And a third, No. 67, to Jupiter, by Caius Caballus Prifcus, a tribune; but no mention is made of the cohort.

Since I vifited this place, Mr. Senhoufe has iavoured me with an account of other difcoveries, made by the removal of the earth, that covered the reliques of this ftation: the ftreets and foot-ways have been traced pav with ftones from the fhore, or free fone from the quarries; the latt much worn by ufe. . Many foundations of houfes; the cement ftill very ftrong; and the plaifter on tome remains of walls appears to have been painted with what is now pink colour; feveral vaults have been ditcovered, one with free-ftone fteps much ufed : fire hearths open before, enclofed with a circular wall behind: from the remains of the fuel it is evident, that the Romans have ufed both wood and pit coal. Bones, and teeth of various animals ; and pieces of horns of ftags, many of the latter fawed, have been found here: allio fhells of oyfters, mufcles, whilks and fnails. Broken earthcn-ware and the handle of a large velfel, marked AEL. Fragments of glafs veffels and mirrors; and two pieces of a painted glafs cup, which evinces the antiquity of that art.

An entire altar found in the fame fearch, is to be added to the preceding: three of the fides are plain: the fourth has a hatchet exactly refembling thofe now in ufe, and a broad knife, or rather clever, with which the viatims were cut up.

But the moft curious difcovery is a fone three feet high, the top formed like a pediment, with a neat fcollop thell cut in the middle. From each fide the pediment falls a ftrait corded moulcin $r$, and between thofe. jutt beneath the foollop, is a mautilated figure, the head being deftroyed; but from che body which is cloathed with the Sagum, and the bucket which it holds in one hand by the handle *, it appears to have been a Gaul, the only fculpture of the kind found in our ifland.

Continue my ride along the coaft, enjoying a mof beautiful profpect of the Solway Firth, the ltuna æettuariun of Polemy, bounded by the mountains of Galloway, from the hill of Crefel, near Dumfries, to the great and little Rofs, not remote from Kirkcudbright.

Keep on the fhore as far as the village of Allanby : then turn to the north-eaft, ride over a low barren woodlefs tract, and difnal moors, feeing on the teft Crefel in Scotland, and on the right Skiddaw, both quite clear ; the lalt now appears of an infulting height over its neigibours. Had the weather been mitty it would have had its cap; and probably Crefel, according to the old proverb, would have fympathized:

Dine at Wigton, a fmall town, with fome manufactures of coarfe checks. Doctor Burn fays that the church has never been rebuilt fince the days of its founder Odard de Logis, colemporary with Henry I About a mile or two to the right is old Carline, fuppofed by Mr. Horfely to have been the Olenacum of the Notitia.

From Wigton the country continues very flat and barren, to a fmall diftance of Carline. Near that city a better cultivation takes place, and the fields often appear covered with linen manufactures: crofs the river Cauda, that runs through the fuburbs, and enter the city at the Irif gate.

Carlille is moft pleafantly fituated; like Chefter is furrounded with walls, but in.very bad repair, and kept very dirty. The caftle is ancient, but makes a good appearance at a diftance: the view from it confifts of an extenfive tract of rich meadows of th: river Eden, here forming two branches and infulating the ground: over one is 2 bridg :

> - Montfaucon Suppl 1II. p. 38. tab. xi。

VOL. 111.
D D
of four; over the other one of nine arches. There is befides a profpect of a rich country; and a diftant view of Cold-fells, Crofs-fells, Skiddaw, and other mountains.
The caftle was founded by William Rufus, who reftored the city, after it had lain two hundred years in ruins by the Danes. Richard III, mate fome additions to it: and Henry VIII. built the citadel, an oblong with three round baftions feated on the weft fide of the town: in the imer gate of the caftle is ftill remaining the old Portcullis; and here are fhewn the apartments of Mary ? after her landing at Workington; and after being for a little fpace entertained with flattering refpect, found herielf prifoner to her jealous rival.

Carlife has two other gates befites the Irith, viz. the Englifh and the Scotch. The principal ftreet is very facious; in it is a guard-houfe, built by Cromwell, commanding three ofluer ftreets that open into this.

The cathedral, begun by Walter, deputy under William Rufus, is very incomplete, Cromwell having pulled down part in 1649 to build barracks: there renains fome portion that was built in the Saxun mode, with round arches, and valt mally round pillars, whofe fhafts are only fourteen feet two inches high, and circumference full feventeen and a half: the relt is more modern, faid to have been built by Edward III. who had an aparment to lodge in, in his frequent expeditions into Scotland. The arches in this latter building are fiarp pointed, the pillars round and cluftered, and the infide of the arches pretily ornamented. Above are two galleries, but wih windows only in the upper ; that in the calt end has a magnificent fimplicity, and the painted glals an uncommon neatnefs, notwithftanding there is not a fingle figure in it.

The choir was not founded till about the year $13 ; 4$; the tabernacle work in it is extremely pretty; but on the aifles on each fide are fome frange legendary paintings of the hiftory of St. Cuthbert and St. Augultine: one reprefents the faint vifted by an unclean firit, who tempts him in a moft indecent manner, as thefe lines inport :

The fpyrit of Fornication to him doth aper ;
And thus he chatteneth hys body with thone and with bryer.
At the weft end of the church is a large plain altar tomb called the Blue-flons: on this the temants of the dean and clapter by certain tenures were obliged to pay their rents.

There had been only one religious houfe in this city; a priory of black canons found. ed by Heury I., replaced on the fupprefion, by a dean and four canons fecular; but what the tyrant Henry VIll. had fpared, fuch as the cloilters and other reliques of the priory, fell in after-times victims to fanatic fury; no remains are to be feen at prefent, except the patew:y, and a handfome building called the Fratry, or the lodging-room of the lay-brothers, or novices.

Before this pious foundation, St. Cuthbert in 686 fixed here a convent of monks, and 2 numery, overthrown in the general defolation of the place by the Danes.

Eut to trace the antiquity of this city with hiforic regularity, the reader flould learn; that after laying afide all fabulous accounts, the Britains call it Caer-Lualid, that it was named by Antonine, or the author of his itincrary, Lugovallium, or the city of Lual on the valluin or wall.

That it was probably a place of note in the feventh century, for Egfrid prefented it to St. Cu'hbert with fifteen miles of territory around; that the Danes entirely deftroyed it in the ninth century, and that it remaned in ruins for two hundred years. Willam Ru'us, in 1092, in a progrefs he made into thefe parts, was fruck with the fituation, founded
founded the cafte, rebuilt the town and fortified it as a bulwark againft the Scots: he planted there a large colony from the fouth, who are faid to be the firlt who introduced tillage in that part of the north.

- Henry I., in 1 122, gave a lum of money to the city, and ordered fome additional fortifications. Stephen yislded it to David, King of Scotland. After the recovery into the hands of the Englifh, it underwent a cruel fiege by William the lion in 1173; and was again befieged by Robert Bruce, in 1315 ; and in the reign of liichard II. was almoft entirely dettroyed by fire. The greater events from that period are unknown to me, till its rediuiun to the rebels in 1745 , on November 16 th, when its weaknefs made it untenable, even had it not been feized with the epidenic panic of the times, It was retak n by the Duke of Cumberland, on the zoth December following, and the fmall felt-devoted garrifon made prifoners on terms that preferved them (without the fladow of impeachment of his Hishuefs's worl) for future juftice.
The town at prelent confifts of two parifhes, St. Cuthbert's and the cathedral, and contains about four theulin.l inhabitants; is handfomely built, and kept very neat. Here is a confiderable manuficlure of printed linens and coarfe checks, which bring in near 3000 l . per amum in duties to the crown. It is noted tor a great manufacture of whips, which omploys numbers of chiluren; here are alfo made moft excellent fifh hooks; but I wastold that the mounding them with flies is an art the iahabitants of Langholm are celebrated for.

May:8.' Saw, at Mr. Bernard Burton's, a pleafing fight of twelve little indufrious girls finining at once on a horizontal wheel, which lets twelve bobbins in motion; yet fo contrived that fhould any accidet thappen to one, the motion of that might be flopped without any impediment to the others.

At Mr. Cult's I was tavoured with the fight of a fine head of father Iludalleton, in black, with a large band :and hang grey hair, with an uplifted crucilix in his hand, probably taken in the attitude in which he lulled the foul of th: dsparting profigate Charles II.
In this city I had the pleafure of being intreduced to that worthy veteran Captain Gilpit. I received from him numb-rs of fine drawings of views, and antiquities rela. tive to this county. Some have been engravea to illuthate this worl.; others I preferve in memory of the good and ingelin us comor.

Crofs the litle river leterel, the thir that bounds the city, and at about three miles eaft, fee Warwick, or W arihwick church. remarka le for its tribune or rounded eaft end, with thirteen sarrow niches, ten feet eight lugh, and i-venten inches broad, reaching almolt to the gromen, and the top of each arched; in two or three is a fanall window. The whole claurch is built with gond cut-llone: the lengh is feventy feet, but it once extended above one and twenty feet farther velt; there being till at that end a goel rounded arch, now filled up.
'lhis church is of great autiquity, but the date of the fundation unknown. It was granted in the time of William the Conqueror * to the abbey of Et . Mary's York, and then mentioned as a chapel.

Beneath it is a haadome bridge of three arches over the Ecien, a bautiful river. Ride for two mils sover a rich and well cultivated trat, to Corbic calle, now a modern houle, feated on an eminence above the river, which rums through a deep and faely wooded glen; that part next the houfe judicioully planned and laid out in walks: in one of them is the votive altar engraven in Mr. Gordon's himerary, tab. 43 , with tolerable exacnefs, except on the top, for the hollow is triangular, not romid.

The fight from this walk of the celebrated cells, and the arch of the ancient priory, were fo tempting that I could notrefilt crolling the river to pay a vifit to thofe curious remains. The laft is the gateway of the religious houfes of Wetherel, with its fine elliptic arch : the houfe was once a cell to the abbey of St. Mary in York, given by Ranulph de Mefchines, Earl of Carlife, and maintained a prior and eight monks *.

A little farther in the midft of a valt precipice, environed with woods, are cut, with much labour, fone deep cells in the live rock: the front and entrance (the laft is on one fide) are made of fine cut-ftone; in the front are three windowe, and a fire-place: the cells are three in number, divided by partitions of the native rock, four fect three inches thick : each is twelve feet eight inches deep, and about nine feet fix wide in the lower part, where they are more extenfive than in their beginning: before them, from the door to the end, is a fort of gallery twenty-three feet and a halt long, bounded by the frent, which hangs at an awful height above the Eden. There are marks of boles, bars and other fecuritics in the windows and door; and veftiges, which thew that there had been doors to the cells.

Thefe are called Contantine's cells, but more commonly the fafeguard, being fuppofed to have been the retreat of the monks of the neighbouring priory, during the inroads of the Scots; no one who fees then will doubt their fecurity, being approachable only by a moft horrible path, anidft woods that grow rather out of precipices than flopes, inpending over the far fubjacent river; and to encrenfe the difficulty, the door is placed at no finall height from this only accefs, fo that prubably the monks afcended by a ladder, which they might draw up to fecure their retreat.

I fearched without fuccefs for the infcription on the fame rock, a little higher up the river. The words, as preferved in the Archaelogia $\dagger$, are

## Maximus Ccripfit <br> Le xx vv cond. cafofus.

The firft line is faid to be a yard diftant from the other, and near, is a coarfe figure of a deer. The meaning is too dark to be explained.

Return to Corbie; and find in the houle an excellent picture of a mufician playing on a bafe-viol; the work of a Spanifh mafter, part of the plunder of Vigo. A large piece of the Emperor Charles V. and his Emprefs; he fitting with a ftern look, as if reproving her, and alluding to a cafket on a table before them. She ftands, and has in her countenance a mixture of obftinacy and fear.

On the fair cafe is a full length of Lord Wiiliam Howard, third fon of the Duke of Norfolk, known in thefe parts by the name of bald.Willy. He lived in the time of Queen Elizabeth, and was the terror of the Mofs troopers, ruling with a rod of iron, but by his neceffary fevirity civilized the country.

There are no traces of the old caftle. The manor belonging to it was granted by Henry II. to Hubert de Vallibus, who configned this and Warwick to Odard, who gave Corbie to his eldeff fon, Ofbert and Warwick to his younger fon, William. By the death of Ofberl, William became puffeffed of both. His eldeft fon, John, fixed himfelf at Warwick, and took the name of the place, which continued in the family till its exkinction, in the male line, in 3772 . In the 31 th of Edward 1 it was held by Thomas de Richemount: from him, came to Sir Andrew de Harcla, the unfortunate Earl of CarKife, executed in the time of F.dward II. and on his attainder, to Sir Richard de Salkeld : from his heirs to Lord Williain Howard then of Naworth, who fettled it upon his fecond fon, in whofe line it flill continues.

[^120]Returned to Carlife, and continue there till the $3^{\text {cth }}$ of May. Crofs the Eden, that Hows about ten miles below into the Solway Firth. Pafs over near the village of Stanwick a mile from Darlife. The fite of the Picts, or more properly Adrian's or Sevcrus's wall, begun by the firf Emperor, and completed by the laft, who may with more' juftice be faid to have built a wall of itone, near the place, where Adrian had made his of turf. For that reafon the Britains ftyled it Gaulfever, Gal-fwer, and Mur-fver. But at prefent not a trace is to be difcovered in thefe parts, except a few foundations, now covered with earth, to be feen in a field called Wall-know. From thence it pafles behind Stanwick to Hiffopholm bank, an eminence above the river; on which are veltiges of fome dikes defcribing a fmall fquare, the fite of a fort to defend the pafs; for the wall reached to the edge of the water, was continued to the oppofite fide, over Soceres meadow, and extended ten or twelve miles farther, till it terninated at Bowlnefs, on the Solway Firth. Adrian's wall, or rather rampart, was made on the north fide of the wall, and is vifible in fome places, but ceafes at or near Burgh, the Axelodunum of the Notitia. Probably this was a fation for cavalry, for near Hillop bank is a ftupendous number of horfes' bones, expofed by the falling of the cliff.

Crofs the Leven, and ride through the village of Arthuret: in the church-yard is a rude crofs, with a pierced capital, forming the exact figure of the crofs of the knights of Malta, and it is probable, it was erected by one of that order. In the fame ground was interred the remains of poor Archy Armftrong, jefter or fool to Chrrles I. and by accident, fuitable to his profefion, the day of his funeral was the firt of April. Archy had long fhot his bolt with great applaufe, till it fell unfortunately upon the prelate Laud *, who, with a pride and weaknefs beneath his rank and character, procured an order of council, the king prefent, for degrading the fool, by pulling his motly coat over his head, for difcharging him of the King's fervice, and banilhing him the court.Near the village are fome high and irregular fandy eminences; probably natural, notwithftanding a contrary opinion has been held, becaufe fome coins and an urn have been' found in them.

Reach Netherby, the feat of the Rev. Mr. Graham, placed on a rifing ground, wafhed by the Efr, and commanding an extenfive view; more pleafing to Mr. Graham, as he fees from it a creation of his own; lands that eighteen years ago were in a fate of nature; the people idle and bad, ftill retaining a fmack of the feudal manners: fcarce a hedge to be feen : and a total ignorance prevailed of even coal and lime. His improving fpirit foon wrought a great change in thefe parts: his example inftilled into the inhabitants an inclination to induftry : and they foon found a difference between floth and its concomitants, dirt and beggary, and a plenty that a right application of the arts of hufbandry brought among them. They lay in the midt of a rich country, yet ftarved in it; but in a fmall time they found, that inftead of a produce that hardly fupported themfelves, they could raife even fupplies for their neighbours: that much of their land was fo kindly as to bear corn for many years fucceffively without the help of manure, and for the more ungrateful foils, that there were lime-ftones to be had, and coal to burn them. The wild tract foon appeared in form of verdant meadows or fruitful corn.fields : from the firft, they were foon able to fend to diftant places cattle and butter: and their dairies enabled then to fupport a numerous herd of hogs, and carry oa a confiderable traffick in bacon: their arable lands, a commerce as far as Lancafhire in corn.

A tract diftinguifhed for its fertility and beauty, ran in form of a valley for fome fpace in view of Netherby : it has been finely reclaimed from its original fate, prettily divided,

[^121]well planted with hedges, and well peopled: the ground originally not worth fix-pence an acre, was improved to the value of thirty thillings: a tract completely improved in all refpects, except in houfes, the ancient clay dabbed batitations flill exilyng. Ifaw it in that fituation in the ycar 1769: at this time a melancholy extcur of back turbery, the eruption of the Solway mofs, having in a few dopsenverel grats and corn, levelled the boundaries of almoft civery farm. deftroyed mofl ot the bow'ris, und driven the proor inhabitants to the utmoft diftrefs, tiil they found (which was "not long, from their landord every relief that a humane mond could fuggelt. Happily his fortune favoured his inclimation to do grod : for the intant lofs of four hundred pounds a year could prove no check to his benevolence.

On vifiting the place from whence this difafter had flowed. it was apparently a natural phomomenos, withont any thing wonderfin or unprecetented. Pellug moff, near Garilang, had made the fance lort of cruption in the prefent century; and Chatmofs, between Manchefter and Warrington, in the time of ilenry VII. as Leland expreflis it, "bralt up wihin a mile of Morley-haul, and deftroied much grounde with mofle thereabout, and deflroied nuch frefch water fifhche theredbout, firlt corrupting with finking water Glafebrooke, and io Glalebronke carried ftinking watcr and mofle imo Merliy water, and Merfey corruptid caried the ronlling mulli, part to the thores of Wales, part to the ille of Man and fimm into Ireland; and in the very top of Chately more, where the molfe was hyeft and brake, is now a fair plaine valley as was in tymes pafte, and a rylle runnith hit, and peaces of finall trees be found in the bottom."

Solway Mofs confills of fixteen hundred acres; lies fome height above the cultivated trect, and feems to have been nothing but a collection of thin peaty mud : the furface itfelf was always fo near the thate of a quagmire, that in molt places it was uniafe for any thing heavier than a fiportiman to venture on, even in the drielt fummer

The the tl or cruft that kept this liquid within bounds, neareft to the valley, was at firft of fuficient ftrength to contain it: but by the imprudence of the prat-diggers, who were continually working on that fide, at length became fo weakenet, as not longer to be abie to refif the weight prefing on it: to this may be added, the fluidity of the mofs was greally increafed by three days rain of unufual viol nce, which preceded the eruption; and extended it!elf in a line as far as Newcallle: took in part of Durham, and a fmall portion of Yorkflire, ruming in a parallel line of about equal breadih, both fides of which running north and fruith, experienced an uncommom drought. It is fingular that the fall of Newcaftle bridge and this accident happened within a night of each other.
Late in the night of the 17 th of November of the laft year, a firmer, who lived aeareft the mofs, was alarmed with an unufual noilie. The crult had at once given way, and the black deluye was rolling towards his houfe, when he was gone out with a lantern to fee the caufe of his tright : he faw the fiream approach hinn; and firt thought that it was his dunghill, that by fome fupernatural caufe, had been fet in motion; but foon difcovering the danger, he gave notice to his neighbours with all expedition: but others received no oth:r advice but what his Stygian tide gave them: fome by its noife, many by its entrance into their houfes, and I have been affured that fome were furprized with it even in their beds : thefe paft a lorrible night, remaining totally ignorant of their fate, and the caufe of their calamity, till the morning, when their neighbours, with difficulty, got thenz out through the roof. About three hundred acres of mofs were thus difcharged, and above four hundred of land covered : the houfes cither overthrown or filled to thair roofs; and the hedges overwhelmed; but providentially not a human life loft : feveral catle were fuffocated; and thofe which
were houfed had a very finall chance of efcaping. The cafe of a cow is fo fingular as to deferve mentions. She was the only one out of eight, in the fame cow-houfe, that was faved, after having llond fixty hours up to the neek in mud and water: when fhe was relieved, fhe did not refufe to cat, hat would not talte water : nor could even look without (hewing maniteft tigns of horror.

The eruption burft from the place of its difcharge, like a cataract of thiek ink; and continued in a frean of the fame appearance, intemixed with great fragments of peat, with their heathy furface; then tlowed like a tide charged with pieces of wreck, filling the whole valley, ruaning up every little opening, and on its retreat, leaving upon the fhore tremendous heaps of turf, memorials of the height this dark torreut arrived at.The farther it flowed, the more room it had to expand, lellening in depth, till it mixed it6 ftrean with that of the lik.

The furface of the mofs received a confiderable change : what was before a plain, now. funk in the form of a valt bafon, and the lofs of the contents fo lowered the furface as to give to Netherby a new view of land and trees unfeen before.

Near this mofs was the fhamoful reddition in 1542, of the Seotch arnly, under the command ot Oliver Sinclair, minion of James V. (to Sir Thomas Wharton, warden of the marches.) The nobility, defperate with rage and pride, when they heard that fai vourite proclained general, preferred an inmediate furrender to a handful of enemies, rather than fight for a King who treated them with fuch contempt. The Englifh commander obtained a bloodlefs victory: the whole Scotch army was taken, or difperfed, and a few fugitives perifhed in this very mofs: as a confirmation it is faid; that a few years ago fome peat-diggers difcovered in it the fkeletons of a trooper and his horfe in complete armour.

In my return vifit the ancient border-houfe at Kirk-andrews, oppofite to Netherby it confilts only of a fquare tower, with a ground floor, and two apartments above, one over the other : in the firlt floor it was ufual to keep cattle; in the two laft was lodged the family. In thofe very unhappy times, every one was obliged to keep guard againft perhaps his neighbour; and fometimes to fhut themfelves up for days together, without any opportunity of talting the frefh air, but from the battlemented top of their cinfelet. Their windows were very fimall; their door of iron. If the robbets.attempted to break it open, they were annoyed from above by the flinging of great flones, or by delages of: Scalding water*.
$\because$ As late as the reign of Jannes I. watches were kept along the whole border, and at every ford by day and by night: fetters, watchers, fearchers of the watchers, and overs feers of the watchers were appointed. Befides thefe cautions, the inhabitants of the marches were obliged to keep fuch a number of flough dogs, or what we call bloodhounds: for example, "in thefe parts, beyond the Fifl; by the inhabitants there were to be kept ahove the foot of Sark, 1 dog. Item, by the inhabitants of the infyde of Eik, to Richnond Cluch, to be kept at the Moot, 1 dog. Item, by the inhabitants of the pas rifh of Arthuret, above Richinond Clugh, to be kept at tiee Barley head, $\mathbf{1}$ - dog; and fo on througtout the border." The chicf officers, bailifs, and conflables throughout the diftrict being directed to fee that the inhabitants kept their quota of dogs, and paid their contributions for their maintenance. l'erfons who wore aygrieved, or had laft any thing; were allowed to purfue the hot trode with hound and horn, with hue and crys and all other accuftomed manners of hot purluit $\dagger$.

[^122]The neceffity of all this was very ftrong; for before the acceffion of James $\mathbb{I}$. to theff kingdoms, the borders of both were in perpetual feuds : after that happy event, thofe that lived by hoftile excurfions, took to pillaging their neighbours; and about that pso siod got the name of mofs-troopers, from their living in the muffes of the country.

They were the terror of the limits of both kingdoms; at one time amounted to fome thoufande, but by the feverity of the laws, and the activity of Lord William Howard, were at length extirpated, The life and manners of one of the plundering chiefiains io well exemplified by the confeffion of Giordie Bourne, a noted theef, who fuffered when Robert Cary, Earl of Monmouth, was warden of one of thefe marches: he fairly acknowledged, "That he had lived long enough to do fo many villainies as he had dones that he had layne with above forty men's wives, what in England, what in Scotland; that he had killed feven Englifhmen with his owne hands, cruelly murthering them; that he had fpent his whole time in whoring, drinking, ftealing, and taking deep revenge for 月ight offences "."

Return to Netherby. The houfe is placed on the fite of a Roman ftation, the caftra exploratorum of Antoninus, and was well fituated for commanding an extenfive view around. By fignifies a habitation ; thus, there are three camps or flations, with this tero mination, not very remote from one another, Netherby, Middleby, and Overby. The firf, like Ellenborough, has been a rich fund of curiofities for the amufement of antiquaries: at prefent the ground they were difcovered in is covered with a good houfe and ufeful improvements; yet not long before Leland's time "ther hath bene marvelus buyldings, as'appear by ruinous walles, and men alyve have fene rynges and flaples yn the walles as yt had been ftayes or holdes for thyppes f." There is a tridition that an anchor had been found not remote from Netherby, perhaps under the high land at Arthurct, i. e. Arthur's head, beneath which it appears as if the tide had once flowed.

Every thing has been found here that denotes it to have been a fixed refidence of the Romans; a fine Hypocault, or bath, was difcovered a few years ago, and the burial place, now a fhrubbery, was pointed out to me. The varinus altars, infcriptions, utenfils, and every other antiquity coll, ated on the fpot; are carefully preferved, and lodged is the green houfe, with fome others collected in different parts of the country.

June in. Take a ride in Liddel's Stringth, or the Mote. A frong entrenchment two miles S. W. of Netherby, on a ftecp and lofty clay cliff, above the river Liddel, commanding a vaft extent of view : has at one end a very high mount, from whence the country might be explored to very great advantage : in the middle is the foundation of a fquare building, perhaps, the pratorium? This place is fmall, rather of a circular form, frongly entrenched on the weak fide; has before it a fort of half moon, with a valt fofs and dike as a fecurity. From this place to Netherby is the veftige of a roado That this fortrefs has been originally Roman is probable, but fince their time has been applied to the fame ufe by other warders. "It was, fays Leland, the moted place of a gentilman cawled Syr Water Seleby, the which was killyd there and the place deft toyed yn King Edward the thyrde when the Scottes whent to Dryham $\downarrow$."

It was taken by ftorin by David the IId. The governor, Sir Walter, wou', hio s compounded for his life by ranfome, but the tyrant, after caufing his two fons to ve frangled before his face, ordered the head of the father, diftracted with grief, to be Aruck off 5 .

[^123]Leland's Itin. vii. p. 56. 3d. ed.
Stow's Chronicle, 243.

Defeend the hill, and croffine the Liddel, enter Scotland in Liddefdale, a portion of the county of Dunfries: a molt fertile and cultivated track of low arable and patture land. Keep by the river fide for three miles farther to Penton-lins, where is a not wild but picturefque feene of the river, rapidly flowing along rude rocks bonuded by cliffs, cloathed on cach fide by trees. 'The bottom the water rolls over aflumes vabous forms ; but the moft fingular are beds of fone repularly quadrangular, and divided by a narrow vacant fpace from each other, retubling inmente maffes of ludi Helmontin, with their fepta loft. Below thefe, the rocks approath each other, leaving only a desp and narrow channel, with a pretty wooden alpine bridge over a depth of furious water, black and terrible to the fight. The fides of the rock are frangely perforated with great and circular hollows, like pots; the work of the vortiginous motion of the water in great floods.

A firmer I met with here told me, that a pebble, naturally perfolated, was an infal', 'h': rure, hung over a horfe that was hag-ridden, or troubled with nocturnal fiveats.
Recturn and pafs through the parih of Cannonfly, a fmall fercile plain, watered by the Eil., where fome canons regular of St. Auguiline had pitched their priory at lealt 1 efore the year 1296, when William, prior of the convent, iwore allegiance " to Edw. I. The parihh is very populous, containing above two thoufand fouls. Much coal and limeftone is found here.
Moft part of the houfes are built with clay : the perfon who has building in view, prepares the materials, then fummons his neighbours on a fixed day, who come furnifhed with victuals at their own expence, fet cheerfully to work, and complete the edifice before night.

Afcend a bank on the fouth fide of this valley, to a vaft height above it: the feenery is great and enchanting; on one fide is a view of the river t fk, far bencath, running through a rocky channel, and bounded by inmenfe precipices; in various places fuddenly decpening to a valt profundity; while in other parts it glides over a botton covered with mofles, or coloured ftones, that reflect through the pure water teints glaucous, green, or fappharine : thefe various views are in moft places fully open to fight ; in others fuffer a partial interruption from the trees, that clothe the ftesp bank, or floot out from the brinks and fiffures of the precipices; the trees are in general oak, but often intermixed with the waving boughs of the weeping birch.

Two precipices are particularly diftinguifhed: one called Carfidel; the other Gilnochie's garden : the latt is faid to have been the retreat of a celebrated outlaw; but originally had evidently been a fmall Britifh fortrefs, guarded on one fide by the fteeps of the precipice, on the other by a deep intrenchment.

The ride was extremely diverfified through thick woods, or finall thickets, with fudden tranfitions from the hade into rich and well-hufbanded fields, bounded on cvery fide with woods ; with views of other woods fill rifing beyond. No wonder then that the inhabitants of thefe parts yet believe the fairies revel in thefe delightful feenes.

Crofs the Fik, through a ford with a bottom of folid rock, having on one fide the water precipitating itfelf down a precipice forming a fmall cataract, which would afford a feene not the moit agreeable to a timid mind. The water too wai of the moft cryitilline, or colourlefs clearnefs, no ftream I have ever feen being comparuble; fo that perfons who ford this river are often led into diftreftes, by being deceived as to its depth, for the great tranfparency gives it an unreal thallownefs.

This river is inhabited by trouts, parre, loches, minnows, cels, and lampries; and

$$
\text { * Kcith's Scotch Bifhopo, } 210 .
$$

what is fingular, the chub, which with us loves only the deep and fill waters bounded by clayey banks.

On the oppofite eminence fee Hol. houfe, a defenfible tower like that at Kirk-andrews, and one of the feats of the famous Johnny Armftrong, Laird of Gilnockie, the mof popular and potent thief of his time, and who laid the whole Englifh borders under contribution, but never injured any of his own countrymen. He always was attended with twenty-four gentlemen well mounted : and when James V. went his progrefs in 1528, exprefsly to free the country from marauders of this kind, Gilnockie appeared before him with thirty-fix perfons in his train *, moft gorgeoufly apparelled; and himfelf fo richly drefied, that the king faid, "What wathts that knave that a king fhould have?" His majefty ordered him and his followers to immediate execution, in fpite of the great offers Gilnockie made ; who finding all application for favour vain, he, according to the old ballad, boldly told the king,

> To feik hot water beneath cold yce, Surcly it is a gran follie $j$ jef face,
> I haif aked grace at a graceles But there is nane for my men and me.

I faw a bov, a direct deicendant of this unfortunate brave, who with his whole family are faid to be diftinguifhed for their honefty and quiet difpofition, happily degenerating from their great anceftor.

Continue my ride on a fine turnpike road, through beautiful woods, to Mr. Maxwell's of Broomholme, environed with a moft magnificent theatre of trees, cloathing the lofty hills, and the whole furmounted by a barren mountain, by way of contraft.

The rent of the ground which Mr. Maxwell keeps in his own hands, and that of a farm now disjoined from it, was in the unfettled times of the beginning of the laft century only five pounds Scotch, or cight fhillings and four-pence Englifh. At prefent Mr. Maxwell's fhare alone would take a hundred pounds fterling annual rent. This is mentioned as anilluftration of the happy change of times, and the increafe of revenues by the fecurity the owners now enjoy, by the improvements in agriculture, and the cheapnefs of money to what they were a century and a half ago. Indeed it thould be mentioned that the old rent was paid by a Maxivell to a Maxwell; and perhaps there might be fome fmall matter of favour from the chicftain to his kinfinan; but even admitting fone partiality, the rife of income muft be amazing.

The road continues equally beautiful, along a fertile glen, bounded by hills and woods. Come in view of a bridge, with the pleafing motion of a mill wheel feen in perfpective through the middle arcli: the river was here low, and the bed appeared roughened with tranfierle waved rocks, extenfively fpread, and fharply broken.
The town of Langholme appears in a fmall plain, with the catrance of three dales, and as many rivers, from which they take their mames, entering into it, viz. Wachopdale, Eufdale, and Efkdale; the laft extends thirty or forty miles in length, and the fides as far as I could fee, bounded by hills of fanooth and vertant grals, the fiweet food of the theep, the great flaple of the country. 'To give an idea of the confiderable traffic caricicd on in thefe animals, the reader may be told, that from twenty to thirty-fix thoufand lambs are fold in the feveral fairs that ase heeld at Langholme in the year. To this muft be added, the great profit made of the wool, fold into England for our coarfer manufactures; of the fleep themfelves fent into the fouth, and even of the cheefe and butter male from the milk of the ewes $t$.

[^124]The truftees for encouraging of inuprovements give annual premiums to fuch who produce the fineft wool, or breed the beft tups; a wife meature in countries emerging from floth and poverty.

The manufactures of Langholme are ftuff, ferges, black and white plaids, \&c. moftly fold into England.

The caftle is no more than a fquare tower, or border-houfe, once belonging to the Armiltrongs. In my walk to it was fhewn the place where feveral witches had fuffered in the laft century : this reminds me of a very fingular belief that prevailed not many years ago in thefe parts; nothing lefs than that the midwives had power of translerring part of the primæval curfe beftowed on our great firft mother, from the good wife to her hufband. I faw the reputed offspring of fuch a labour ; who kindly came into the world without giving her mother the leaft uneafinefs, while the poor hulband was roaring with agony in his uncouth and unnatural pains.

The magifrates of this place are very attentive to the fuppreffion of all exceffive exertions of that unruly member the tongue: the brank, an inftruinent of punifhment, is always in readinefs, and I was favoured with the fight : it is a fort of head-piece, that opens and inclofes the head of the impatient, while an iron, harp as a chiffel, enters the mouth, and fubdues the more dreadful weapon within. This had been ufed a month before, and as it cut the poor female till blood gufhed from each fide of her mouth, it would be well that the judges in this cale would, before they exert their power again, confider not only the humanity, but the legality of this practice.

The learned Doctor Plot * has favoured the world with a minute defcription, and a figure of the inftrument, and tells us, he looks on it "as much to be preferred to the ducking-ftool, which not only endangers the health of the party, but alfo gives the tongue liberty 'twixt every dip; to reither of whicel this is at all lyable."

Among the various cuftoms now obfolete, the moft curious was that of hand-fifting, in ufe about a century paft. In the upper part of Fifdale, at the confluence of the white and the black Eik, was held an annual fair, where multitudes of each fex repaired. The unmarried look out for mates, made their engagement by joining hands, or by handfilting, went off in pairs, cohabited till the next annual return of the fair, appeared there again, and then were at liberty to declare their approbation or diflike of each other. If each party continued conltant, the hand-filting was renewed for life; but if either party diffented, the engagement was void, and both were at full liberty to make a new choice; but with this provifo, that the inconftant was to take the charge of the offspring of the year of probation. This cuftom feemed to originate from the want of clergy in this county in the days of popery. This tract was the property of the abby of Melrofs, which through œconony difcontinued the vicars that were ufed to difcharge here the clerical offices; inftead they only made annual vifitations for the purpofes of marrying and baptifing, and the perfon thus fent was called Book in Bofom, probably from his carrying, by way of readinefs, the book in his breaft; but even this being omitted, the inhabitants became necelfitated at firft to take this method, which they continued from habit to practife long after the reformation had furnilhed them with clergy.

Perfons of rank, in times long prior to thofe, took the benefit of this cuftom; for lindefey $t$, in his reign of James Il., fays, "That James fixth Earl of Murray begat upon Ifabel Innes, daughter of the Laird of Innes, Alexander Dunbar, a man of fingular wit and courage. This Ifabel was but handfilt with him, and deceafed before the

[^125]marriage; where-through this Alexander he was worthy of a greater living, than he might fucceed to by the laws and practifes of this realm."

Of the fports of thefe parts, that of curling is a favourite, and one unknown in England; it is an amufement of the winter, and played on the ice, by fliding from one mark to another great ftones of forty to feventy pounds weight, of a hemifpherical form, with an iron or wooden handle at top. The object of the player is to lay his ftone as near to the mark as poffible, to guard that of his partner, which had been well laid before, or to ftrike off that of his antagonift.

Return and pafs the march dike, or the Scotch border, and continue at Netherby that night.

June 2. Pafs through Longtown, a place remarkable for the great trade carried on during the feafon of cranberries; when for four or five markets, from twenty to twentyfive pounds worth are fold each day at three-pence a quart, and fent in fimall barrels to London.

Crofs the Efk, on a bridge of five arches, a light fructure, as moft of the bridges of this country are. Go through the lanes which had been rendered impaffable at the time of the eruption of the Solway mofs, which took its courfe this way to the Efk. The road was at this time quite cleared; but the fields to the right were quite covered with the black flood.

The fpace between the Eik and the Sark, bounded on the third fide by the March dike, which croffes from one river to the other, feems properly to belong to Scotland; but having been difputed by both crowns, was ftyled the debateable land. But in the reign of our James I. Sir Richard Graham obtaining from the Earl of Cumberland (to whom it was granted by Queen Elizabeth) a leafe of this tract, bought it from the needy monarch, and had intereft enough to get it united to the county of Cumberland, it being indifferent to James, then in poffeffion of both kingdoms, to which of them it was annexed.

Ride by the fide of the Roman road, that communicated betwet: Netherby and the camp at Burrens. Crofs a finall bridge over the Sark, and again enter Scotland.

On the banks of this rivulet the Englifh, under the command of the Earl of Northumberland, and Magnus with a red main, received a great defeat from the Scots, under Douglas Duke of Ormond, and Wallace of Cragie. Numbers of the former were drowned in their flight in Solway firth, and Lord Piercey taken prifoner; a misfortune owing to his filial piety, in helping his father to a horfe, to enable him * to efcape.

At a little diflance from the bridge, ftop at the little village of Gretna, the refort of all amorous couples, whofe union the prudence of parents or guardians prohibits: here the young pair nay be inflantly united by a fifherman, a joiner, or a blackfmith, who marry from two guineas a job, to a dram of whifky: but the price is generalty adjufted by the information of the poftilions from Carlifle, who are in pay of one or other of the above worthies; but even the drivers, in cafe of neceflity, have been known to undertake the faceidotal office. If the purfuit of friends proves very hot, and there is not time for the ceremony, the frighted pair are adviled to flip into bed, are fhewn to their purfuers, who imagining that they are irrecoverably united, retire, and leave them to

> confummate ilicir unfinifhed loves.

This place is diftinguifhed from afar by a fmall plantation of firs, the Cyprian grove of the place; a fort of land-mark for fugitive lovers. As I had a great defire to fee

[^126]the'high prieft, by ftratagem I fucceeded: he appeared in form of a fiflerman, a fout fcllow, in a blue coat, rolling round his folemn chops a quid of tobacco of no common fize. One of our party was fuppofed to come to explore the coaft : we quellioned him about his price; which, after cyeing us attentively, he left to our honour. The church of Scotland does what it can to prevent thefe clardefline matches; but in vain, for thofe infamous couplers defpife the fulmination of the kirk, and excommunication is the only penalty it can inflict.

Continue my journey over a woodlefs flat tract, almoft hellgelefs, but productive of excellent oats and barley. Pals by Rig, a little hanlet, a for: of chapel of eafe to Gretna, in the run-away nuptials. The performer here is an alehoufe kecper.

On the left is Solway firth, and a view of Kefwick.fells, between which and Burnf-work-hill in Scotland, is a flat of forty miles, and of a great extent in length. The country grows now very uncultivated, and confifts of large commons. Reach

Annan, in Annandale, another divifion of Dumfriesflire, a town of four or five hundred inhabitants, feated on the river of the fame name. Veffels of about two hundred and fifty tons can come within half a mile of the town, and of fixty as high as the bridge: This place has fome trade in wine : the annual exports are between twenty and thirty thoufand Winchefter bufhels of corn.

The caftle was entirely demolified, by order of parliament, after the acceffion of James VI., to the crown of England, and only the ditches remain. But Annan was in a masner ruined by Wharton, lord prefident of the marches, who, in the reign of Edward VI., overthrew the church and burnt the town; the firt having been fortified by' the Scots *, under a Lyon of the houfe of Glames.

The Bruces were once lords of this place, as appears by a fone at prefent in a wall of a gentleman's garden, taken from the ruins of the caftle, and thus infcribed: "Robert de Brus Counte de Carrick et fenteur du val de Annand i 300""

After dinner make an excurfion of five miles to Ruthwell, paffing over the Annan on a bridge of five arches, defended by a gateway. The country refembles that I paffed over in the morning; but at Newby-neck obferve the ground furmed into eminences, fo remarkable as to occafion a belief of their bcing artificial, but are certainly nothing more than the freaks of nature.

The church of Ruthwell contains the ruins of a moft curious monument; an obelifk, once of a great height, now lying in three pieces, troken by an order of the general affembly in 1644 , under pretence of its being an object of fuperftition among the vulgar. When entire it was probably about twenty feet high, exclufive of pedeftal and capital; making allowances in the meafurement of the prefent pieces for fragnents chipped off, when it was deftroyed: it originally confifted of two pieces; the lowelt, now in two, had been fifteen feet long; the upper had been placed on the other by means of a focket: the form was fquare and taper, but the fides of unequal breadth : the two oppolite on one fide at bottom were eighteen inches and a half, at top only fifteen; the narrower fide fixteen at bottom, eleven at top. Two of the narroweft fides are ornamented with vinc-leaves, and animals intermixed with Runic characters around the margin : on one of the other fides is a very rude figure of our Saviour, with each foot on the head of fome beafts: above and each fide him are inferibedinSaxon letters: "Jefus Chriftus-judex equitatis, certo falvatoris mundi et an"-perhaps as Mr. Gordon $\dagger$ imagines, "Angelorum-beftix et dracones cognovernm inde;" and laftly are the words, "fregerunt panem."

[^127]Beneath

Beneath the two animals is a compartment with two figures, one bearded, the other not, and above is inlcribed, "Sanctus Paulus."

On the adverfe ficle is our Saviour again, with Mary Magdalene wafhing his feet, and the box of ointment in his hand. The infcriptions, as made out by Mr. Gordon, are: "Alabaltrum unguenti-ejus lachrymis cxpit rigare pedes, ejus capillis-capitis fui ternebat-et prateriens vidi."

The different fculptures were probably the work of different tinies and different nations; the firft that of the chriftian Saxons ; the other of the Danes, who either found thofe fides plain, or defacing the ancient carving, replaced it with fome of their own. Tradition fays that the church was built over this obelifk, long after its erection; and it was reported to have been tranfported here by angels, it was probably fo fecured for the fame reafon as the fanta cafa at Loretta was, left it fhould take another flight.

The pedeftal lics buried beneath the floor of the church: I found fome fragments of the capital, with letters fimilar to the others; and on each oppofite fide an eagle, neatly cut in relief. There was alfo a piece of another, with Saxon letters round the lower part of a human figure, in long veftments, with his foot on a pair of fmall globes: this too feemed to have been the top of a crofs.

Scotland has had its vicar of Bray ; for in this church-yard is an infcription in memory of Mr. Gawin Youig, and Jean Stewart his fpoufe. He was ordained minifter in 1617, when the church was prefbyterian : foon after, James VI. eftablifhed a moderate fort of epifcopacy. In 1633, the famous league and covenant took place: the bifhops were depofed, and their power abolifhed; prelbytery then flourifhed in the fuilnefs of acrimony. Sectaries of all forts invaded the church in Cromwell's time, all equally hating, perfecuting, and being perfecuted in their turns. In 1660 , on the reftoration, epifcopacy arrived at its plenitude of power, and prefbyterianifm expelled; and that fect which in their profperity fhewed no mercy, now met with retributory vengeance. Mr. Young maintained his poft amidft all thefe changes, and what is much to his honour, fupported his character ; was refpected by all parties for his moderation and learning ; lived a tranquil life, and died in peace, after enjoying his cure fifty-four years.

The epitaph on him, his wife and family, merits prefervation, if but to fhew the number of his children!

Far from our own amidg, our own we ly:
Of our dear bairns, thirty and one us by.
anagram.
Gavinus junius
Unius agni ufui
Jean steuart
a true faint
a true faint I live it, fo I die it. tho men faw no, my God did fee it.
This parih extends along the Solway firth, which gains on the land continually, and much is annually wafhed away: the tides recede far, and leave a vaft fpace of fands dry. The fport of falmon-hunting is almont out of ufe, there being only one perfon on the coaft who is expert enough to practife the diverfion : the fportfman is mounted on a good horfe, and furnihed with a long fpear: he difcovers the fifh in the lhallow channels formed by Ekk, purfues it full fpeed, turns it like a grey-hound, and after a long chace feldom fails to tranfix it.
The falt-makers of Ruthwell merit mention, as their method feems at prefent quite local. As foon as the warm and dry weather of June comes on, the fun brings up and incrufts the furface of the fand with falt : at that time they gather the fand to the depth
of an inch, carry it out of the reach of the tide, and lay it in round compact heaps, to prevent the falt from being walhed away by the rains : they then make a pit eight feet long and three broad, and the fame depth, and plaitter the infide with clay, that it may hold water; at the bottom they place a layer of peat and turf, and fill the pit with the collected fand; after that they pour water on it : this filters through the fand, and carries the falt with it into a leffer pit, made at the end of the great one: this they boil in fmall lead pans, and procure a coarfe brown falt, very fit for the purpofes of falting meat or fifh. James VI., in a vifit he made to thefe parts, after his acceffion to the crown of England, took notice of this operation, and for their induftry exempted the poor falt-makers of Ruthwell from all duty on this commodity; which till the union, was in all the Scotch acts relating to the falt duties, excepted.

In this parifh was lately difcovered a fingular road through a morafs, made of wood, confifting of fplit oak planks, eight feet long, fattened down by long pins or ftakes, driven through the boards into the earth. It was found out by digging of peat, and at that time lay fix feet beneath the furface. It pointed towards the fen, and in old timeswas the road to it ; but no tradition remains of the place it came from.

Return through Annan, and after a ride over a naked tract, reach Springkeld, the feat of Sir William Maxwell : near the houfe is the fite of Bell-caftle, where the Duke of Albany, brother to James III., and the Earl of. Douglas, lodged the night before their defeat at Kirkonnel, a place almoft contiguous. This illuftrious pair had been exiled in England, and invaded their own country on a plundering fcheme, in a manner unworthy of them. Albany efcaped; Douglas was taken, and finilhed his life in the convent of Lindores *.

In the burying-ground of Kirkonnel is the grave of the fair Ellen Irvine, and that of her lover: fhe was daughter of the houfe of Kirkonnel, and was beloved by two gentleinen at the fame time : one vowed to facrifice the fucceffful rival to his refentment, and watched an opportunity while the happy pair were fitting on the banks of the Kirtle, that wafhes thefe grounds. Fillen percived the defperate lover on the oppofite fide, and fondly thinking to fave her favourite, interpofed ; and receiving the wound intended for her beloved, fell and expired in his arms. He inftantly revenged her death ; then fled into Spain, and ferved for fome time againft the infidels: on his return he vifited the grave of his unfortunate miftrefs, ftretched himfelf on it, and expiring on the fpot, was interred by her fide. A fword and a crofs are engraven on the tomb-ftone, with. " hic jacet Adaun Fleming ;" the only memorial of this unhappy gentleman, except an ancient ballad of no great merit, which records the tragical event + .

Excepting a glen near Springheld, muft of this country is very naked. It is faid to have been cleared of the woods by act of parliament, in the time of James VI., in crder to deflroy the retreat of the mols.troopers, a peft this part of the country was infamous for: in fact the whole of the borders then was, as Lindefay expreffes, no other thing but theft, reiff and fluchter. They were poffeffed by a fet of potent clans, all of Saxon defeent; and, like true defcendants of Ihmaed, their hands were againtt every man, and every man's hand againtt them. The Johntons, of Lough-wood, in Annandale; their rivals the Maxwells of Caerlavoroc, the Murrays of Cockpool, Glendonwyns of Glendonwin, Carruthers of Holmain, Irvines of Bonhaw, Jardins of Applegarth, and. the Elliots of Liduefdaic, may be enumerated among the great families.

But befids thefe were a fet of clans and furnames on the whole border, and on the

[^128]debatcable ground, who, as my author * fays, were not landed; many of them diftinguifhed by noms de guerre, in the manner as feveral of our unfortunate brave are at prefent, fuch as 'Tou 'lrotter of the hill, the Goodman Dickfon of Bucktrig, Ralph Burn of the Coit, George Hall, called Pat's Geordie there, the Lairds Jok, Wanton Sym, Will of Powder-lampat, Arthur fire the Braes, Gray Will, Will the Lord, Willie ot Gratna-hill, Richie Gıaham the Plump, John Skynbank, Priors John and his bairnes, Hetor: of the Harlaw, the griefes and cuts of Harlaw; thefe and many more, merry men all, of Robin Hood's fraternity, fuperior to the little diftinctions of meum and thum.

June 3 . Vifit the Roman ftation at Burrens, in the parifh of Middleby, feated on a fiat, bounded on one fide by the fmall water of Mien, and on another by a finall birn. It was well defended by four ditches and five dikes; but much of both is carried away by the winter floods in the river that bounded on one fide : a hypocault had been difcovcred here, infcribed fones dug up, and coins found, fome of them of the lower empire. Obferved a place formed of fquare ftones, which I was told contained, at the time of the difcovery, a quantity of grain: I was alfo informed, that there had been a large vault a hundred and twenty feet long, defigned for a granary; but this has long fince been deftroyed for fake of the materials. Mr. Horfley imagines to have been the batum bulgium of Antonine, being on the north fide of the wall, with a military road between it and Netherby, and that it was the place where Agricola concluded his fecond year's expedition. As thatt gencral was diftinguifhed for his judicious choice of fpots of encanipment, fo long after, his fucceffors made ufe of this, as appears by a niedal of Conftantius Chlorus being found here, for that Emperor lived about two hundred and twenty years after Agricola.

The country now begins to grow very hilly, but ufefully fo, the hills being verdant, and formed for excellent heep-walks: on the fides of one called Burnfivork, about two miles from Burrens, are two beautiful camps, united to each other by a rampart, that winds along the fide of a hill; one camp being on the fouth-eaft, the other on the north-weft: one lias the pratorium yet vifible; and on the north fide are three round tumuli, each joined to it by a dike, projecting to fome diftance from the ramparts, as if to protcct the gate on that quarter, for each of thefe mounts had its little fort: the other camp had two of thefe mounts on one fide, and one on each end; but the vefliges of thefe are very faint : both of thefe camps were furrounded with a deep ditch, and a frong rampart both on the infide and the outfide of the fofs; and on the very fummit of the hill is a fmall irregular intrenchment, intended as exploratory, for the view from thence is uninterrupted on every part. Thefe camps are very accurately planned by Mr. Gordon, tab. i. p. 16. Thefe alfo were the work of Agricola, and highly probable to be, as Mr. Horlley imagines, the fummer camp of that at Burrens.

The view from the fummit is extremely extenfive : the town of Lochmaban, with its lake and ruined cafle, built on a heart-haped peninfula; Queentbury-hill, which gives tille to the Duke ; Hartsfell, and the loders, which difpute for height; yet a third, the Driffels, was this day patched with faow ; and lafty, Ericfone, which fofters the Annan, the Clyde, and the Tweed.

Defeend and pais through the fmall town of Ecclefechan (ecclefia Fechani), noted for the great monthly markets for cattle.

Near this place, on the eftate of Mr. Irvine, writer, was found an antiquity whofe ufe is rather doubtful: the metal is gold; the length rather more than feven inches and

[^129]a half; the wcight 2 oz . and a half, and 15 gs . It is round and very flender in the middle, at each end grows thicker, and of a conoid form, terminating with a flat circular plate: on the fide of one end are ftamped the words Helenus fecit; on the other is prick'd. . . . IIIMB. From the flendernefs of the middle part, and the thicknefs of the ends, it might perhaps ferve as a faftening of a garment, by inferting it through holes on each fide, and then twifting together this pliant metal.

Keep along the plain, arrive again on the banks of the Annan, and bave a very clegant view of its wooded margent, the bridge, a light ftructure with three arches, one of fifty-feet, the others of twenty-five, with the turrets of Hoddam caftle a little beyond, overtopping a very pretty grove.

The caftle confifts of a great fquare tower, with three flender round turrets: the entry through a door protected by another of iron bars; near it a fquare hole, by way of dungeon, and a ftaircafe of ftone, fuited to the place; but infead of finding a captive damfel and a fierce warder, met with a courteous laird and his beauteous fpoufe; and the dungeon not filled with piteous captives, but well ftored with generous wines, not condemned to a long imprifonment.

This cafte, or rather frong border-houfe, was built by John Lord Harries, nicknamed John de Reeve, a ftrenuous fupporter of Mary Stuart, who conveyed her fafe from the battle of Langfide to his houfe at Terrigles, in Galloway, and from thence to the abbey of Dundrannan, and then accompanied her in a fmall veflel in her fatal flight into England. Soon after it was furrendered * to the regent Murray, who appointed the Laird of Drumlanrig governor and lord of the marches. Befcre the acceffion of James VI., Hoddam was one of the places of defence on the borders; for " the houfe of Howdam was to be keped with ane wife ftout man, and to have with him four wellhorfed men, and thir to have two flark footmen fervants to keep their horfes, and the principal to have ane ftout footman $\dagger$."

In the walls about this houfe are preferved altars and infcriptions found in the ftation at Burrens: as they do not appear to have fallen under the notice of the curious, an enumeration of them perhaps will not be unacceptable, therefore fhall be added in the appendix.

Near Hoddam, on an eminence, is a fquare building, called the Tower of Repentance. On it is carved the word Repentance, with a ferpent at one end of the word, and a dove at the other, fignifying remorfe and grace. It was built by a Lord Harries, as a fort of atonement for putting to death fome prifoners whom he had made under a promife of quarter.

Proceed over a country full of low hills, fome parts under recent cultivation, others in a healthy ftate of nature. Reach, in a well cultivated and woody flat, the caftle and houfe of Comlongam, the property of Lord Stormont, and the birth-place of that ornament of our ifland, Lord Mansfield.

The caftle confifts of a great 〔quare tower, now almoft in ruins, though its walls of near thirteen feet in thicknefs might have promifed to the architect a longer duration. Many fmall rooms are gained out of the very thicknefs of the fides; and at the bottom of one, after a defcent of numbers of Iteps, is the noifome dungeon, without light or even air-holes, except the trap-door in the floor, contrived for the lowering in of the captives. This fortrefs was founded by one of the anceftors of the Murrays, Earls of Annandale, a title which failed in that name about the time of the Reftoration.

* Holliuhed's Hir. of Scotl. 393.
$\dagger$ Border Laws, app. 197.
vol. III.

June 4. Ride along the fhore by the end of Lockernefs, a morafs of about ten miles in length, and three in breadth, with the little water of Locker running through it. This tract, from recent furvey, appears to have been overflowed by the fea, which confirms the tradition relating to fuch an event. This invalion of the tides was certainly but temporary, for foom the numbers of trees, roots, and other vegetable marks found there, it is evident that this morafs was, in fome very diftant period, an extenfive foreft. Near a place called Kilblain I met with one of the ancient canoes of the primaval inhabitants of the country, when it was probably in the fame flate of nature as Virginia, when firtt difcovered by Captain Philip Amidas. The length of this little veffel was eight feet cight, of the cavity of fix feet feven, the breadth two feet, depth eleven inches; and at one end were the remains of three pegs for the paddle: the hollow was made with fire, in the very manner that the Indians of America formed their canoes, according to the faithful reprefentation by Thomas Harriot *, in De Bry's publication of his drawings. Another of the fane kind was found in 1736, with its paddle, in the fame morais: the laft was feven feet long, and dilated to a confiderable breadth at one end; fo that in early ages neceffity ditated the fame inventions to the moft remote regions $\dagger$. Thefe were long prior to our vitilia navigia, and were in ufe in feveral ancient nations : the Greeks called them Mowgunx and $\sigma \% \alpha \varphi n$ : fome held three perfons, others only one $\ddagger$; and of this kind feems to have been that now mentioned. Thofe ufed by the Germans $\$$ were of a valt fize, capable of holding thirty men; and the Gauls on the Rhone had the fame fpecies of boats, but were indifferent about their fhape, and content if they would but float, and carry a large burden $\|$.

At Mr. Dickfon's, of Luckerwood, faw a curiofity of another nature, found in the neighbourhood: a round pot of mixed metal, not unlike a fmall fhallow mortar, with two rings on one fide, and two handles on the other.

Over Lockermofs is a road remarkable for its origin: a franger, a great number of years ago, fold fome goods to certain merchants at Dumfries upon credit : he difappeared, and neither he nor his heirs ever claimed the money: the merchants in expectation of the demand very honefly put out the fum to intereft ; and after a lapfe of more than forty years, the town of Dumfries obtained a gift of it, and applied the fame towards making this ufeful road. Another is now in execution by the nilitary, which is alfo to pafs over Lockermofs, and is intended to facilitate the conmunication between North Britain and Ireland, by way of Port Patrick.

In this morning's ride, pals by a fquare inclofure of the fize of half an acre, moated round. This was a place of refuge ; for in family difputes, fuch was truly neceflary, and here any perfon who came remained in inviolable fecurity.

See the ifle of Caerlaveroc, with a border-houfe in the middle, built by a Maxwell. This place is far from the fea; but ftyled an ine becaufe moated.

Vifit Wardlaw, a fimall hill with a round Britifh camp, furrounded with two foffes on the top; and on the fouth fide the faint veftiges of a Roman camp, now much ploughed up. The profpect from this eminence is fine, of the firth, the difcharge of the river Nith or Nid, the Nobius of Ptolemy, and a long extent of the hills of Galloway.

The Ruman encampment on this hill might probably be the Uxelum of Ptolemy, efpecially if we are to derive that word from the Britih, uchel, high; for the fite of the

[^130]fortrefs of Caerlaveroc is on fuch a flat as by no means to admit of that epithet, or to be allowed to have been the ancient Uxelum, as Mr. Horfley conje ${ }^{\text {er. }}$. res.
The caltle has undergone its different fieges: the firtt that appear: hiftory, and the moft celebrated, was in the year 1300, when Edward I. fat down before it in perfon. Enraged at the generous regard the Scots fhewed for their liberty, and the unremitted efforts made by their hero Wallace, to free his country from a foreign yoke, the Englif monarch fummoned his barons, and all the nobility who held of him by military tenure, to attend with their forces at Carlife on the fealt of St. John the Baptift. On that occafion, as the poet of the expedition relates, there appeared,
foiffant et vint et fept banierea ${ }^{\circ}$,
each of which, with the arms of the baron, are illuminated in a beautiful manner ; and in the catalogue are, the names $\dagger$ of the moft puiflant peers of this kingdom, with a little euloge on each; as a fpecimen, is given that of Robert Clifford, in whon it may be fuppofed valour and beauty were combined:

> Se je eftoie une pucellette
> Je le tourdie cuure core core,
> Tant ef de lui bonis li recors.

The poet then defcribes the caftle and its fituation with great exactnefs, and gives it the very fame form and fite it has at prefent; fo that I cannot help thinking that it was never fo entirely deftroyed, but that fome of the old towers yet remain:

> Kaerlaverok canteaus efoit
> Si fort ki fiege ne doubtoit; Ainz ki li rois illicee venift, Car rendre mile convenit. James mais kill fut a fon droit, Garniz quant hefogns en vendroit De gena de engins et de vitaille, Com uns efcus eftoit de taille, Car ni ot ke trois coftez entour, Et en chefcune angle une tour. Men ki le une eftoit jumilee, Tant hauti et tant longue et tant lei, Ke par defouz efloit la porte A pont tournis, bien faite et forte, Et autres defenfes affes, \&c.

It is worth obferving, that it was taken by force of engines, and the Englifh as late as the time in queftion ufed much the fame method of attack as the Greeks and Romans did; for they drove the enemy from the walls by fhowers of fones, flung from engines fimilar to the catcpulta of the ancients; and they ufed alfo arietes, or battering rams.

> Entre les affaus efmaia,
> Frere Robert ki envoia
> Mcinte piere par Robinet; Juq au foir des le metinet Ie jour devant ceffe ne avoit,
> De autre part ancore i levoit Trois autres engins moult plus grans Et il penibles et engrana,
> Ke le chaitel du tout confondi
> Tant il receut mo't piere erfonde.
> Defchocs et kang's ateint fent
> A fes coups rien ne fe deffent.

- I am intcbbed to Marmaduke Tunflall, Efq for the M. S. account of this fiege, fincly copied from the original, in the Muftum; which appears to have been compofed in very old bad French, foon after the event it celebrated.
$\dagger$ Appendix.

On the furrender Edward behaved with more moderation than was ufual to him: for his laurels were wont to be blighted with deeds unworthy of his heroifm; but in this cafe the poor reliques of the garrifon experienced his clemency :

> Lora fon iffient ce eft la fome
> Ke de uns ke de autret foifant home
> A grant merveille refguardes
> Mes tenus furent et guardez
> Trant ke li Roya en ordena
> Ki vie et membre leur donna
> Et a chafm robe nouucle
> Lors fu joieufe la nounl?.
> A toute li of du chaftel pris
> Ki cant clloit de noble pris.

It appears that the king inmediately mounted his colours on the caftle; and ap. pointed three barons of the firlt reputation to take charge of it.

> Puis fift le Roy porter amont
> Sa banniere et la feynt Eymont
> La foint George et la faint Edwart
> Et o eelce par droit efwart
> La Segrave et le Herifort
> Eit cek au Seigneur di Cliffort
> A ki le chafteaus fut doanes.

Notwithfanding the care Edward took to fecure this place, it was retaken by the Scots the following year; but very foon atter was repoffeffed * by the Englifh, after a very long fiege. It appears that the Scots again recovered it, for in one of the invafions of the former, the gallant owner, Sir Euftace Maxwell, fupported a fiege in it of fome weeks, and obliged the eneny to retire ; but confidering that it might fall into the hands of the Englifh, and become noxious to his country, generoufy difmantled it, and for that piece of difinterclted fervice was properly rewarded by his prince, who remitted to him and his heirs for ever, the annual pecuniary acknowledgments they paid to the crown for the cafle and lands of Caerlaveroc $\dagger$. It was again rebuilt; bul in 1355 (being then in poffefion of the Englifh) was taken by Roger Kirkpatric, and levelled to the ground $\ddagger$. Notwithftanding thefe repeated misfortunes, it was once more reftored; and once more ruined by the Earl of Suffex in $1570 \|$. From this time the lords of the place feem for fome interval to have been difcouraged from any attempt towards reftoring a fortrefs fo diftinguihed by its misfortunes; for Camden in i607, Speaks of it as only a weak houfe belonging to the Barons of Maxwell ; yct once more Robert firt Earl of Nithfdale, in 1638 , ventured to re-eftablifh the ftrong hold of the family; ftill it was ill-fated; for in the courle of Cromwell's ufurpation, it was furrendered on terms ill preferved, and a receipt was given for the furniture by one Finch; in which, among other particulars, is mention of eighty beds, a proof of the hofpitality or the fplendor of the place. The form of the prefent cafle is triangular ; at two of the corners bad been a round tower, but one is now demolifhed, and on cach fide the gateway, which forms the third angle, are two rounders. Over the arch is the creft of the Maxwells (placed there when the cafte was laft repaired) with the date, and this

[^131]motto, "I bid ye fair," meaning Wardlaw, the, hill where the gibbet flood; for in feudal times, it feenss to have been much in ufe.

The caftle yard is triangular: one fide, which feems to have been the refidence of th family, is very elegantly built; has three fories, with very handfome window cafes . on the pediment of the lower are coats of arms; over the fecond legendary tales; over the third, I think, Ovidian fables, all neatly cut in fone. The oppofite fide is plain. In front is a handfome door cafe, leading to the great hall, which is ninety-one feet by twenty-fix. The whole internal length of that fide a hundred and twentythree.

The antient caftle flood about three hundred yards fouth-eaft of the prefent building. It is of the fame fhape, but fomewhat lefs, and furrounded by a double ditch.

The Maxwells, Lords of Caerlaveroc, are of great antiquity: but their hiftory mixed with all the misfortunes and ail the difgrace fo frequent in ill-governed times. They and the Johnftons had perpetual feuds : in 1593 the clans had a conflict at the Holnels of Dryfe; the chieftain of the Maxwells, and many of his fons were flain. John, a furviving fon, takes his revenge : a meeting between him and Johnfton, a predeceffor of the Marquis of Annandale, was appointed in order to compromife all differences; both met, attended only by a fingle triend to each; the friends quarrel; the Laird of Lockerwood goes to part them, but is hot through the back by the other chieftain; who defervedly met his fate on the fcaffold a few years after. His forfeiture was taken off, and his brother not only reftored but created Earl of Nithfdale : in 1715 the title was lof by the conviction of the Earl of that day; who efcaped out of the tower the night before execution, by the difguife of a female drefs. The eftate by virtue of entail was preferved to the heirs.

Continue my ride along the coaft to the mouth of the Nith, which empties itfelf into the vaft eftuary, where the tide flows in fo faft on the level fands that a man well mourited would find difficulty to efcape, if furprifed by it. The view of the oppofite fide of Creffel, and the other Galloway hills, is very beautiful, and the coalt appearcd well wooded. In a bottum lies Newby abby, founded by Devorgilla, daughter to Alan, Lord of Galloway, and wife to John Baliol, Lord of Cantle-Bernard, who died and was buried here : his lady embalmed his heart, and placed it in a cafe of ivory, bound with filver, near the high altar ; on which account the abby is oftener called Sweet-heart and Suavi.cordiam.

Pafs by Port-Kepel, the firth gradually contracting itfelf; and to this place veffels of two hundred tons may come. The country on both fides the river is extremely beautiful; the banks decorated with numerous groves and villas, richly cultivated and well inclofed. The farmers fhew no want of induftry ; they import, as far as from Whitehaven, lime for manure, to the annual amount of twenty-five hundred pounds, paying at the rate of fixpence for the Winchefter bufhel : they are alfo fo happy as to have great quantities of fhell marl in the neighbouring moralfes; and are now well rewarded for the ufe of it ; much wheat and barley are at prefent the fruits of their labour, inftead of a very paltry oat ; and good hay inftead of rufhes now clothe their meadows. Reach

Dumfries, a very neat and well-built town, feated on the Nith, and containing about five thoufand fouls. It was once poffeffed of a large thare of the tobacco trade, but at prefent has fcarcely any commerce. The great weekly markets for black cattle are of much advantage to the place; and valt droves from Galloway and the fhire of Ayr pals through in the way to the fairs in Norfolk and Suffolk.

The two churches are remarkably neat, and have handfome galleries, fupported by pillars. In the church-yard of St. Michael are feveral monuments in form of pyramids,
very ornamental, and on fome grave-fones are infcriptions in memory of the martyrs of the country, or the poor victims to the violence of the apoftate archbifhop Sharp, or the bigotry of James II. before and after his acceflion. Powers were given to an in. human fet of mifcreants to deftroy upon fufpicion of difaffection; or for even declining to give anfiwers declarative of their political principles; and fuch who refufed (before two witnefies) were inllantly put to death. Many poor peafants were fhot on moors, on the fhores, or wherefoever their enemies met with them : perlaps enthufiafin might poffefs the fufferers; but an internal fpirit had poffeflion of their perfecutors. The memory of thete flagitious deeds are preferved on many of the wild moors ly inferibed grave-ftones, much to the fame effect as the following in the church-yard in this city:

On John Grierfon, who fuffered Jan. 2, 1667.
Urdermeath this flone doth lie
Dult facrifiend to gyranyy,
Yer precious in Inmanuel's fight,
Since martyred tol his kingly right I
When lie con.temns ilefe liellifí drudges
By fifferage, faints fhall be their juiges.
Another on James Kirke, fnot on the fands of Dumfries, fhall conclude this dreadful fubject :

> By bloody Pruce and wretehed Wright I hult my life ingreat defonght. shot dead winhont due time to try And fit me for eternity. A witneff of pelatic rage As ever was in any age.

This place like mof other confiderable towns in Scotland, has its feceders' chapel : thefe are the rigid prefbyterians who poffers their $r$ licion in all its original fournefs; think their chureh in danger becaufe their minilters depenerate into moderation, and wear a gown ; or vindicate patrunage. To avoid thefe horrid innovations, they feparate themfelves from their imaginary falle brethren; renew a fulionn league and covenant, and preferve to the beft of their power all the rags and retits bequeathed to them by John Knox, which the more fenfible preachers of this day are ftriving to darn and patch.

Here I firft found on this fide the Tweed, my good old mother church become a mere conventicler, and her chaplain fupported by a fow of her children, difpofed to lick to her in all conditions.

Inquired for the convent of Dominicans, and the church in which Robert Bruce and his aflociates flew John Cummin, Lord of Badenuck, and owner of great part if the lordthip of Galloway. Cummin had betrayed to Edward I. the gencrous defign of Bruce to relieve his country from flavery; in refentment Bruce llabbed him; on retiring, was afked ly his friends, whether he was fure of his blow, but anfwering with fome degrec of uncertainty, one of them, Roger Kirkpatric, replied, I mac ficker, returned into the church and completed the dech. In memory, the famity atliumed a bloody dagger for a crelt, and thofe words as the motto. The church thus defiled with blood was pulled down; and ano:her built in a different place, and dedicated to St. Michael, the tutelar faint of the town. Rubert Bruce allo built a chapel here, as foon as he got full poffeffion of the kingom, in which prayers were to be daily offered for the repofe of the futl of Sir Chriftopher Scton, who was mofl barbarounly executed by Edward I. for his attachment to Bruce, and for his defence of his country.

Dumfries was continually fubject to the inroads of the Englifh; and was frequently ruined by them. 'To prevent their invafions a great ditech and mound, called Warder's dikes, were formed from the Nith to lockermofs, where watch and ward were con. flantly kept; and when an enemy appeared the cry was a Lorchurn, a Lorcburn. The meaning is no further known, than that it was a word of alarm for the inhabitants to take their ams: and the fame word as a memento of vigilance is iufcribed on a ring of filver round the chony flaff given into the hands of the provolt as a balge of office on the day of ammal election.
On moit of the eminences of thefe parts beacons were likewife eftablifhed for alarning the country on any irruption of their fouthern neighbours: and the inhabitants able to bear arms were bound, on the liring of thele hignals, to repair infantly to the warden of the marches, and not to depart till the enemy was driven out of the country, and this under pain of high treafon.

This regulation was ettablifled in the days of Archibala the Grim, Farl of Douglas, and afterwards renewed with much folemnity by Willian Larl of Douglas, who affembled the lords, frecholders, and principal borderers at the college of Lincluden, and cauled them there to fiwear on the holy evangelifs, that they fhould truly obferve the flatutes, ordinances, and ufages of the marches, as they were ordained in the time of the faid Archibald.

June 5. Had a beautiful view of an artificial water-fall jult in front of a bridge, originally built by Devorgilla, who gave the cuftoms ariing from it to the Francifcan convent at Dumfries. It confifts of nine arches, and connects this county and that of Galloway.

Crols it ; pafs through a fmall town at its foot, and walk up Gorbelly hill, remarkable for the fine circumambient profpect of the charming windings of the Nith towards the fea, the town of Dumfries, 'lerregles, a houfe of the Maxwells, and a rich vale towards the north.
Vifit the abby of Lincluden, about half a mile diftant, fented on the water of the Cluden, which is another boundary of Galloway on that fide. This religious houfe is feated on a pleafant bank, and in a rich country: and was founded and filled with Benedictine nuns, in the time of Malcolm IV. * by Uthred, father to Roland, Lord of Galloway. Thefe were expelled by the Earl of Douglas (known by the titles of Archibald the Black, or Grim, and the Terrible) probably, as Major infinuates, on account of the impurity of their lives $\dagger$, for the Earl was a man in piety fingular through his life, and mont religious according to thofe times. He fixed in their places a provoltry, with twelve beadmen, and changed the name to that of the college.
$p^{1}$ art of the houfe and chancel, and fome of the fouth wall of the church are the fole remains of this antient fructure: in the chancel is the elegant tomb of Margaret, daughter of Robert III. and wife of Archibald Earl of Douglas, firt Duke of Terouan, and ion of Archibald the Grim. Her effigy, at full length, lay on the ftone, her head relling on two cufhions; but the figure is now mutilated, and her bones, till lately, were feattered about in a moft indecent manner, by fome wretches who broke open the repofitory in fearch of treafure. The tomb is in form of an arch, with all parts moft beautifully carved: on the middle of the arch is the heart, the Doughas's arms, guarded by three chalices, fet croffways, with a ftar near each, and certain leters I could not read. On the wall is infcribed,

A L'aide de Dicu.

* Hope's Minor Practics. 511, Malcoln died, iIG5,
$\dagger$ Major de Geft. Scot. 283. Archibald died A. D. 1400.
and at fome diffance beneath,
Hic jacet D.na Margareta regis Scotie filia quōdam comitifa de Douglas Dna Gollovidia et vallia Annandiz.

In the front of the tomb are nine fhields, containing as many arms: in one are the three ftars, the original coat of this great houfe, for the heart was not added till the good Sir James was employed in carrying that of Robert Bruce to the Holy Land : befides thefe, are the arms after that event; and alfo their arms as I.ords of Annandale, Galloway and Niddefdale. Near the tomb is a door-cafe, richly ornamented with carving; and on the top the heart and chalices, as in the former.

In other parts of the remains of the church are the arms of the Douglafles, or Dukes of Terouan, Earls of Angus, of Ormond, and of Murray; here are befides the arms of John Stewart, Earl of Athol, with the motto, "Firth, fortune, and fil the fetters."

Beneath one of the windows are two rows of figures; the upper of angels, the lower of a corpfe and other figures, all much defaced, but feemingly defigned to exprefs the preparations for the interment of our Saviour.

Behind the houfe are veftiges of a flower-garden, with the parterres and fcrolls very vifible; and near that a great artificial mount, with a fpiral walk to the top, which is hollowed, and has a turf fcat around to command the beautiful views; fo that the provoft and his beadfmen feem to have confulted the luxuries as well as necefliaries of life.

Return to Dumfries, where Mr. Hill, furgeon, favoured me with the fight of the head of an old lady, excellently painted, about forty years ago, by Mr. John Patoun, fon to a minifter in this town. After painting three years in Scotland, about the year 1730 he went to London, where he read lectures on the theory of his art; at length was tempted to make a voyage to Jamaica, where he died in a few weeks, leaving behind him the charater of a good man and able artift
Before we left the town, we were honoured with its freedom, beftowed on us in the politeft manner by the magiftrates.

June 6. Continue my journey due north through the beautiful Nithfdale, or vale of Nith, the river meandring with bold curvatures along rich meadows; and the country, for fome fpace, adorned with groves and gentlemen's feats. At a few miles diftance from Dumfries, leave on the left Bardanna and Keir, conjectured by Mr. Horfley to have been the Carbantorigum of Ptolemy. Travel over fmall hills, either covered with corn, or with herds of cattle, flocks of black-faced fheep, attended by little pattors, wrapped in their maides *, and fetting the feafons at defiance The river ftill keeps its beauty, wandering along a verdant bottom, with banks on each fide cloathed with wood and the more diftant view hilly. Ride through a tract covered with broom, an indication of barrennefs; and arrive in fight of Drumlanrig, a houfe of the Duke of Queenfbury, magnificently feated on the fide of a hill, an immenfe mafs embofomed in trees. Crofs a handfome bridge of two arches, of a valt height above the Nith, which fills the bottom of a deep and wooded glen; and, after a long afcent through a fine and well-planted park, arrive at the houfe:
A fquare building, extending an hundred and forty-five feet in front, with a fquare tower at cach comer, and three fmall turrets on each: over the entrance is a cupola,
whofe top is in fhape of a vaft ducal coroner : within is a court, and at each angle a round tower, each containing a ftair-cafe: every where is a wearifome profufion of hearts carved in ftone, the Douglas arms : every window, from the bottom to the third flory, is well fecured with iron bars; the two principal doors have their grated guards; and the cruel dungeon was not forgot; fo that the whole has the appearance of a mag. nificent flate prifon. Yet this pile rofe in compofed times; it was built by William Duke of Queenibury, begun in 1679, and completed in 1689. His grace feemed to have regretted the expence; for report fays, that he denounced, in a writing on the bundle of accounts, a bitter curfe on any of his pofterity who offered to infpect them.

The apartments are numerous : the gallery is a hundred and eight feet long, with a fire placeat each end: it is ornamented with much of Gibbon's carving, and fome good portraits; obferved among them,

The firt Dutchefs of Somerfet, half length, no cap, with a fmall love-lock.
William Duke of Queenibury, diftinguifhed in the reigns of Charles and James II., by many court favours, by his fervices to thofe monarchs, by his too grateful return in affinting in the cruel perfecutions of his countrymen averfe to the teft, and by his honourable difgrace, the moment Janies found him demur to a requeft fubverfive, if complied with, of the religion and liberties of Great Britain.

John Earl of Traquair, Lord High Treafurer of Scotland in the turbulent reign of Charles I., a prudent friend of the indifcreet Laud, and like him a zealous churchman; but unlike him, waited for a proper feafon for bringing his project to bear, inftead of precipitating matters like the unfortunate prelate. A faithful fervant to the crown; yet, from his wife advice brought under the fcandal of duplicity. Was cleared early from the fufpcion by the noble hiftorian; and foon after more indifputably by his im. peachment, and by his conviction by the popular party; by his imprifonment; by his taking arms in the royal caufe on his releafe; by his fecond confinement; by the fequeftration of his eftates : and finally by the diftrefsful poverty he endured till death, he gave full but unfortunate teftimony of untainted loyalty.

John Earl Rothes, Chancellor of Scotland, in his gown, with the feals by him. He was in power during the cruel perfecutions of the covenanters in Charles II 's time; and difcharging his trult to the fatisfaction of the court, was created Duke of Rothes, a title that died with him.

A head of the Duke of Perth, in a bufhy wig: a poft-abdication Duke, a converted favourite of James II. and Chancellor of Scotland at the time of the revolution, when he retired into France.

George Douglas, Earl of Dumbarton in armour ; a great wig and cravat. Inftructed in the art of war in the armies of Louis XIV. was general of the forces in Scotland under James II. difperfed the army of the unfortunate Argyle. A gallant officer, who when James was at Saliibury, generoully offered to attack the Prince of Orange with his fingle regiment of the Scottifh Royal, not with the hope of victory, but of giving him fuch a check as his fovereign might take advantage of: James, with equal generofity, would not permit the facrifice of fo many brave men. Dumbarton adhered to his king in all fortunes, and on the abdication partook of his exile.

General James Douglas, who in 1691 died at Namur.
Earl of Clarendon, fon of the Chancellor, half-length in his robes.
A good portrait of a Tripoli Ambaffador.
In the gardens, which are molt expenfively cut out of a rock, is a bird cherry, of a great fize, not lefs than feven feet eight inches in girth; and among feveral fine filver tirs, one thirteen feet and a half in circumference.
vol. 11.

June 6 th: In my walks about the park fee the white breed of wild cattle, derived from the native race of the country; and fill retain the primæval favagenefs and ferocity of their anceftors: were more fhy than any deer; ran away on the appearance of any of the human fpecies, and even fet off at full gallop on the leaft noife; fo that I was under the neceffity of going very foftly under the fhelter of trees or buthes to get a near view of them: during fummer they keep apart from all other cattle, but in fevere weather hunger will compel them to vifit the out-houfes in fearch of food. The keepers are obliged to fhoot them, if any are wanted: if the beaft is not killed on the fpot it runs at the perfon who gave the wound, and who is forced in orier to fave himfelf, to fly for fafety to the intervention of fome tree.

Thefe cattle are of a middle fize, have very long legs, and the cows are fine horned: the orbits of the eyes and the tips of the nofes are black: but the bulls have loft the manes attributed to them by Boethius.

Ride to Morton cafte, about four miles diftant, feated on a fteep projection, in a lofty fituation, near the Auchenlec hills. This was originally the feat of Dunenald, predeceffor of Thomas Randoliph, afterwards created Earl of Murray by Robert Bruce, when that caftle and that of Auchencafs, near Moffat, was difpofed of to Douglas of Morton, predeceffor of the Earls of Morton : but at the time that title was conferred, the caftleand lands of Morton being fettled on a fon of a fecond marriage of that family, the parliament, on a proteftation on his part, declared, that the beftowing that title Should not prejudice his right to the cafle and lands, but that it was taken from a place called Morton in Wefl-Lothian.

At prefent remains only one front, with a number of finall windows, cach to be afcended on the infide by a flight of fteps: at each end is alfo a rounded tower. I find little of its hifory, any farther than that it was among the cafles demolifhed by David $\mathrm{II}^{\bullet}$, on his return from England, probably in compliance with a private agreement made with Edward III.

Two miles north from Morton food the cafte of Durifdeer, demolifhed at the fane time with the former. In the church of Durifdeer is the inaufoleum of the family of Drumlanrig: over the door of the vault are four fpiral pillars fupporting a canopy, all of marble : and againft the wall is a vaft monument in memory of James Duke of Queenfbury: his grace lies reclined on his arm, with the collar of S. S. round his neck. The Durchefs, in her robes, recumbent; four angels hold a fcroll above, with this infrription:

> Iic
> in codem lumulo
> cum clatifinisis conjuguis cineribus mifci voluit fuis
> - jacobus Dux Queenburix et Doverni;
> Qui
> ad tot et tanta honoris
> Et negotiorum fatitia
> -Qux nullus anten fubditus
> attegit, evectus, Londiai
> tato elfint $f$ xta dic
> Julii anne Cliritti Redemptoris
> 171.

And beneath is an affectiopate and elegant cpitaph on his Dutcherf, who dicd two years before his Grace.

June yth. Vifit Tibbir canle, about a mile below Drumlanrig, placed on a finall hill above the little ftream, the Tibber. Nothing remains but the foundations overgrown with fhrubs: It is fuppofed to have been a Roman fort, but that in after times the Scots profiting of the fituation, and what had been done before, built on the place a fmall cafte ; which tradition fays, was furprized by a ftratagem in time of William Wallace *.

The beauties of Drumlanrig are not confined to the lighelt part of the grounds; the walks, for a very confiderable way, by the fides of the Nith, aioound with molt picturefque and various fenery: below the bridge the fides are prettily wooded, but not remarkably lofty; above the views become wildly magnificent: the river runs through a deep and racky channel, bounded by vaft wooded cliffs, that rife fuddenly fromits margin; and the profpect down from the fumnit is of a terrific depth, encrealed by the rolling of the black waters beneath: tivo views'are particularly fine; one of quick repeated, but extenfive, nseanders amidft broken fharp-pointed rocks, which often divide the river into feveral channels, interrupted by fhort and foaming rapils, coloured with a moory teint. The other is of a long ftrait, narrowed by the fides, precipitous and wooded, approaching each other equiditant, horrible from the blacknets and fury of the river, and the fiery red and black colours of the rocks, that have all the appearance of having fuftained a change by the rage of another element.

Crofs the bridge again, and continue my journey northward for fix or feven miles, on an excellent road, which I was informed was the fame for above twenty miles farther, and mac - at the fole expence of the prefent Duke of Queenfbury : his Grace is in all refpects a warm friend to his country, and by premia promotes the manufactures of woollen fuffs, and a very ftrong fort of woollen ftockings; and by thefe methods will preferve on his lands a ufeful and induftrious population, that will be enabled to eat their own bread, and not opprefs their brethren, or be forced into exile, as is the cafe in many other parts of North Britain.
The ride wasi; for the moft part, above the Nith; that in many places appeared in fingular forms: the moft friking was a place called called Hell's Cawdron, a fudden turn, where the waters eddies in a large hole, of a vait depth and blacknefs, overhung, and darkened by trees. On the oppofite fide is the appearance of a Britifh entrenchment ; and near Duriidcer is faid to be a fimall Roman fortrefs: the Roman road runs by it, and is continued from thence by the Well-path; through Crawford moor, to Elven-foot, has been lately repaired, and is much preferable to the other through the mountains, which would never have been thought of but for the mines in the leadhills.
The river affumes a milder courfe ; the banks bordered with fields, and thofe oppofite, well wooded. On an eminence is the houfe of Eliock, environed with trees, once one of the poffeffions of Criciuion, father to the Admirable ; and before, at fome diftance, is the town of Sanquhar, with the ruins of the caille, the ancient feat of the Lords Crichton. The parifh is remarkable for the manufarture of woollen flockings, and the abundance of its coal.

Quit Nithdale, and turn fuddenly to the right ; pafs through the glen of Lachburn between vaft mountains, one fide wooded to a great height, the other maked, but finely graffed, and the bottom wathed by the Menoch, a pretty ftream ; the glen grows very narrow, the mountains encreafe in height, and the afecnt long and laborious. Ride by Wanlock-head in the parih of Sanquhar, the property of the Duke of Queenf. bury; fometimes rich in lead ore. Crots a fmall dike at the top of the mountain,

[^132]enter Lanerkßhire, or Clydefdale ; and continue all night at the little village of Lead. hills, in the parifh of Crawford : the place confifts of numbers of mean houfes, inhabited by about fifteen hundred fouls, fupported by the mines; for five hundred are employed in the rich fous terrains of this tract. Nothing can equal the barren and gloomy appearance of the country round : neither tree, nor fhrub, nor verdure, nor picturefque rock, appear to amufe the eye; the fpectator mult plunge into the bowels of thefe mountains for entertainment; or pleafe himfelf with the idea of the good that is done by the well beftowed treafures drawn from thefe inexhauftible mines, that are fill rich, baffling the efforts of two centuries. The fpace that has yielded ore is little more than a mile fquare, and is a flat or pafs among the mountains: the veins of lead run north and fouth; vary, as in other places, in their depth, and are from two to four feet thick; fome have been found filled with ore within two fathoms of the furface; others fink to the depth of ninety fathom.

The ore yields in general about feventy pounds of lead from a hundred and twelve of ore, but affords very little filver; the varieties are the common piated ore, vulgarly called Potter's; the finall or ftel-grained ore, and the curious white ores, lamellated and fibrous, fo much fearched after for the cabinets of the curious. The laft yields from fifty-eight to fixty-eight pounds from the hundred, but the working of this fpecies is much more pernicious to the health of the workmen than the common. The ores are fmelted in heaths, blown by a great bellows and fluxed with lime. The lead is fent to Leith in finall carts, that carry about feven hundred weight, and exported free from duty.

The miners and fimelters are fubject here, as in other places, to the lead diftemper, ormill -reek, as it is called here; which brings on palfies, and fometimes madnefs, terminating in death in about ten days. Yet about two years ago died, at this place, a perfon of primxval longevity : one John Taylor, miner, who worked at his bufinefs till he was a hundred and twelve : he did not marry till he was fixty, and had nine children; he faw to the laft without fpectacles, had excellent teeth till within fix years before his death, having left off tobacco, to which he attributed their prefervation; at length, in 1770 , yielded to fate, after having completed his hundred and thirtyfecond year.

Native gold has been frequently found in this tract, in the gravel beneath the peat, from which it was wafhed by rains, and collected in the gullies by perfons who at different times have employed tnemfelves in fearch of this precious metal; but of late years thefe adventurers have fearce been able to procure a livelihood. I find in a little book, printed in 1710, called Mifcellanca Scoticu* ${ }^{*}$, that in old times much gold was collected in different parts of Scotland. In the reign of James IV. the Scots did feparate the gold from the fand by walling. In the following, the Germans found gold there, which afforded the king great fums; three hundred men were employed for feveral fummers, and about 100,000l. fterling procured. They did not difpofe of it in Scotland, but carried it into Germany. The fame writer fays, that the laird of Marchefton got gold in Pentland hills; that fome was found in Langham waters, fourteen miles from Leadhill houfe, in Meggot waters, twelve miles, and Phinland, fixteen miles. He adds, that pieces of gold, mixed with fpar and other fubftances, that weighed thirty ounces were found ; but the largeft piece I have heard of does not exceed an ounce and a half, and is in the poffetion of Lord Hopetoun, the owner of thefe mines.

Continue my journey through dreary glens or melancholy hills, yet not without feeing numbers of heeep. Near the fmall village of Crawford John, procured a guide

- For a further account of gold fumad in Scotland, fee p. 416, of the ad part of this Tour.
over five niles of almoft pathlefs meors, and defcend into Douglafdale, watercd by the river that gives the name; a valley diftinguifhed by the refidence of the family of Douglas, a race of turbulent heroes, celebrated throughout Europe for deeds of arms; the glory, yet the fcourge of their country; the terror of their princes; the pride of the northern annals of chivalry.

They derive their name from Shalto du glaffe, or the black and grey warrior (as their hiftory * relates) a hero in the reign of Solvathius, king of Scotland, who lived in the eighth century; with more certainty, a fucceffor of his, of the name of William, went into Italy in quelt of adventures, and from him defcended the family of the Scotiof Placentia $t$, that flourifhed in the laft age, and may to this time continue there. But the Doughaffes firlt began to rife into power in the days of the good Sir James, who died: in 1330. During a century and a half their greatnefs knew no bounds, and their arrogance was equally unlimited : that high fpirit which was wont to be exerted againft the enemies of their country, now degenerated into faction, fedition, and treafon; they emulated the royal authority; they went abroad with a train of two thoufand armed men ; created knights, had their counfellors, eftablifhed ranks, and conftituted a $\ddagger$ parliament : it is certain that they might almoft have formed a houfe of peers out of their own family; for, ai the fame time there were not fewer than fix Earls of the name of. Douglas \#. They gave fhelter to the moft barbarous banditti, and protected them in the greateft crimes: for, as honeft Lindefay expreffes, "Oppreffion, ravifhing of women, facrilege, and all other kinds of mifchief, were but a dalliance: fo it was thought leifome to a depender on a Douglas to nay or murder, for fo fearful was their name, and terrible to every innocent man, that when a mifchievous limmer was apprehended, if he alledged that he murdered and flew at a.Douglas's command, no man durft prefent him to jultice §."

Douglas caftle, the refidence of thefe Reguli, feems to have been proftrated almoft as frequently as its mafters : the ruin that is feen there at prefent is the remains of the laft old cafte, for many have been built on the fame fite. The prefent is an imperfect. pile, begun by the late Duke : in the front are three round towers; beneath the bafe of one lies the noble founder, and the tears of the country painted above. He was interred there by his own directions, through the vain fear of mingling his afhes with thofe of an injured dead.

The windows are Gothic : the apartments are fitting up with great elegance, which thew that the forms of ambition have been laid, and that a long calm of eafe and content is intended to fucceed.

The infcription on the foundation-ftone of the prefent caftle deferves prefervation, as it gives a little of the hiftory :

> Hoc latus
> Hujus munitiffimi Predii
> Familix de Douglas Ter folo xquati
> Et femel atque iterum inflaurati
> Imperantibus
> Edwando primo Angliz
> Ety apud Scotos Roberto
> primum Iic dicto
> Tandem furgere cxpit
> Novis munitionibus firmatum

Jullu

Juffu et fumptibus<br>Sereniffimi et polentiffimi Archibaldi<br>Dueis de Dovolas, \&c. \&c.<br>Principis faniliac cjus nominis<br>In scotâ antiquifiome<br>Et maxime notabilis<br>Anno Christi<br>MDCCLVII.

Near the cafle are feveral very antient afh-trees, whofe branches groaned under the weight of exccutions when the family knew no law but its will.

In the church were depofited the remains of feveral of this great name. Firf appears the effigies of good Sir James, the moft diftinguifhed of the houfe, the favourite of Robert Bruce, and the knight appointed, as moft worthy to carry his mater's heart to be interred beneath the high altar in the temple of Jerufalem. He fet out, attended with a train of two hundred knights and gentlemen, having the gold box, containing the royal heart fufpended from his neck. He firft put into the port of Sluys, on the coaft of Flanders; where he ftaid for twelve days, living on board in regal pomp (for he did not deign to land) and all his veffels were of gold *. Here he was informed, that Alphonfo King of Spain was engaged in war with the Saracen King of Grenada: not to lofe this bleffed opportunity of fighting againft the encmies of the crofs, he and his knights failed inflantly for Valentia, was mott honourably received by the Spanifh monarch, luckily found him on the point of giving battle ; engaged with great valour, was furrounded by the infidels, flain in the fight, and the heart of Robert Bruce, which was happily refcued, inftead of vifiting the Holy Land, was carried to the convent of Melros, and the body of Sir James to this church ; where his figure lies crofs-legged,' his holinefs having decreed that fervices againlt the infidels in Spain fhould have equal merit with thofe performed in Palefline.
Near him, beneath a magnificent tomb, lies Arclibald firt Earl of Douglas, and fecond Duke of Terouan, in France; his father, Main at the battle of Verneuil, being honoured by the French king with that title. He lies in his ducal robes and coronet. This Earl lived quite independent of his prince, James I. and through refentment to the minitter, permitted the neighbouring thieves of Annandale to lay wafte the country, when his power, perhaps equal to the regal, might have fuppreffed their barbarity. He ded in 143 I .

The Douglaffes and Percies were rivals in deeds of arms; and fortune, as ufual, fmiled or frowned alternately on each of thefe potent fanilies.
James the Fat, feventh Farl of Douglas, next appears in effigy on another tomb : a peaceable chieftain, who feems to have been in too good cafe to give any difurbance to the commonwealth. He died in 1443, and his lady Beatrix de Sinclair, lies by him. Their offspring is alfo enumerated in the infcription.

Ride for fome time in Douglafdale, a tract deficient in wood, but of great fertility; the foil fine, and of an uncommon depth, yielding. fine barley and oats, moft flovenly kept, and full of weeds; the country full of gentle rifings. Arrive in a flat extent of ground, defcend to the river Clyde, crols a bridge of three arches, aftend a fleep road, and reach

Lanerk; a town that gives name to the county. Here the gallant Wallace made his firf effort to redeem his country from the tyranny of the Englifh; taking the place and flaying the governor, a man of rank $t$. The calle food on a mount on the fouth

[^133]fide of the town; and not far to the eaft, is a ruined church, perhaps belonging to the convent of Francifcans, founded by R.obert !3ruce, in 1314.
Not very far from Lanerk are the celebrited falls of the Clyde, the moft diftant are about a half hour's ride, at a place calied Cory-Lin; and are feen to moft ad. vantage from a ruinous pavilion in a ;ent'eman's garden, placed in a lofty fituation. The cataract is full in view, feen over 'bs tops of trees and bufhes, precipitating itfelf for an amazing way, from rock to rock, with hort interruptions, formiag a rude flope of furious foain. The fides are bounded by valt rocks, clothed on their tops with trees; on the fummit and very verge of one is a ruined tower, and in front a wood, overtopt by a verdant hill.
$\Lambda$ path conducts the traveller down to the beginning of the fall, into which projects a high rock, in floods infulated by the waters, and from the top is a tremendous view of the furious ftream. In the clifts of this favage retreat the brave Wallace is faid to have concealed himfelf, meditating revenge for his injured country.

On regaining the top the walk is furmed near the verge of the rocks, which on both fides are perfecly mural and equiditant, except where they overhang; the river is pent up between then. it a diftance far beneath; not running, but rather fliding along a ftony bottom flopug the whole way. The fummits of the rock are wooded; the fides fmooth and naked, the ftrata narrow and regular, forming a flupendous natural mafonry. After a walk of above half a mile on the edge of this great chafm, on a fudden appears the great and bold fall of Boniton, in a foaming fheet, far-projecting into a hollow, in which the water fhews a violent agitation, and a farextending mift ariles from the furface. Above that is a fecond great fall; two leffer fucceed; beyond them the river winds, grows more tranquil, and is feen for a confiderable way, bounded on one fide by wooded banks, on the other by rich and fivelling fields.

Return the fame way to Lanerk : much barley, oats, peas, and potatoes are raifed about the town, and fome wheat; the manure moft in ufe is a white marl, full of fhells, found about four feet below the peat, in a ftratum five feet and a half thick; it takes effect after the firft year, and produces vaft crops. Numbers of horfes are bred here, which at two years old are fent to the marfhes of Ayrhire, where they are kept till they are fit for ufe.

June 9. Again pafs over the bridge of Lanerk, in order to vifit the great fall of Stone-biers, about a mile from the town : this has more of the horrible in it than either of the other two, and is feen with more difficulty ; it confifts of two precipitous cataracts falling one above the other into a vaft chalim, bounded by lofty rocks, forming an amazing theatre to the view of thofe who take the pains to defcend to the bottom. Between this and Cory-Lin is another fall called Dundofflin; but being fatiated for this time with the noife of waters, we declined the fight of it.

Return over the bridge, and walk to Cartland-crags; a zig-zag den of great extent, bounded by rocks of a very uncommon height, and almoit entinely clothed with trees. It is a place of laborious accefs from above, fo difficult is it amidtt the fhade of trees to find a way free from precipice. Ihe bottom is watered by the river Moufe; and the iides, at every fhort turn, fiuely varied with the different appearance of rock, wood, and precipice. Fmerge into the open fpace; remount our horles, and ride for fome miles along a rich vale, with the Clyde paffing along the bottom; all parts are rich in cora, meadow, orchards and groves. Crofs the Nathan. At Nathan foot, gain the heights, which are far lefs fertile; and, after going over the river Avon, reach the town of Hamilton.

The original name of this place, or the lands about it, was Cadzow, or Cadyow, a barony granted to an anceftor of the noble owner on the following occafion: In the time of Edward II. lived Sir Gilbert de Hamilton, or Hampton *, an Englifhman of rank; who, happening at court to fpeak in praife of Robert Bruce, received on the occafion an infult from John de Spenfer, chamberlain to the King, whom he fought and new ; dreading the refentment of that potent family $t$, he fled to the Scotifh monarch, who received him with open arms, and eftablifhed him at the place the family now poffefles; whofe name in after-times was changed from that of Cadzow to Hamilton; and in 1445 the lands were erected into a lordhip, and the then owner Sir James, fat in parliament as Lord Hamilton.

The fame nobleman founded the collegiate church at Hamilton in 1451, for a pro. voft and feveral prebendaries. The endowment was ratified at Rome by the pope's bull, which he went in perfon to procure $\ddagger$.

The old caftle of Hainilton being poffeffed by certain of the name who had been guilty of the deaths of the Earls of Lenox and Murray, was on the 19th of May 1579 furrendered ; and, by the order of the king and council, entirely demplifhed $\|$.

Hamilton houfe, or palace, is at the ond of the town; a large difagreeable pile, with two deep wings at right angles with the centre; the gallery is of great extent, furnihed (as well as fome other rooms) with moft excellent paintings.

That of Daniel in the lions' den, by Rubens, is a great performance : the fear and devotion of the prophet is finely expreffed by the uplifted face and eyes, his clafped hands, his fwelling mufcles, and the violent extenfion of one foot: a lion looks fiercely at him, with open mouth, and feems only reftrained by the Almighty Power from making him fall a victim to his hunger: and the deliverance of Daniel is more fully marked by the number of human bones fcattered over the floor, as if to thew the inftant fate of others, in whofe favour the Deity did not interfere.

The marriage feaft, by Paul Veronefe, is a fine piece; and the obftinacy and refiftance of the intruder, who came without the wedding garment, is ftrongly expreffed.

The treaty of peace between England and Spain, in the reign of James I., by Juan de Pantoxa, is a good hiltorical picture. There are fix ervoys on the part of the Spaniards, and five on that of the Englifh, with the names infcribed over each : the Englifh are the Earls of Dorfet, Nottingham, Devonihire, Northampton, and Robert Cecil.

Earls of Lauderdale and Lanerk fettling the covenant ; both in black, with faces full of puritanical folemnity.
James, Marquis of Hamilton, and Earl of Cambridge, in black, by Vanfomer. This nobleman was high in favour with James VI., knight of the garter, lord high feward of the houfhold, and lord high commiffioner of the parliament; and fo much in the eftecm and affection of his mafter as to excite the jealoufy of Buckingham. He died in 1625 , at the early age of thirty-three. Such fymptoms $\$$ attended his death, that the public attributed it to poifon, and afcribed the infamy to the duke.
His fon James, Duke of Hamilton, with a blue ribband and white rod. A principal leader of the prefbyterian party in the reign of Charles I., dark, uncommunicative, cunning. He managed the truft repofed in him in fuch a manner as to make his politics fufpected by each faction; and notwithfanding he was brought up in the fchool of Guitavus Adolphus in a military capacity, his conduct was ftill more contemptible: he

[^134]ruined the anny he faintly led into England, rather to make his royal mafter fubfervient to the defign of the Scots, than to do his majefty any real \{ervice. Was flamefully taken, and ended his days upon a feaffold.

Ncxt to his is the portrait of his brother, and fucceffor to the title, William Earl of Lanerk, who behaved at the battle of Worcefter with genuine heroifm, was mortally wounded, and died with ever* ntiment of calmuefs and piety; regretting the enthufialm of his younger days, and his late appearance in the royal caufe.

James Duke of Hamilton, who fell in the duel with Lord Mohun. The firt a leader of the tory party in the reign of Queen Amme; the laft a frong whig: each combatant fell; whether the Duke died by the hands of an alfaffin fecond, or whether he fell by thofe of his antagonift, the violence of party leaves no room to determine.

Next appears a full length, the fineft portrait in this kingdom: a nobleman in a red filk jacket and trowfers; his hair fhort and grey; a gun in his hand, attended by an Indian boy, and with Indian fcenery around : the figure feems perfectly to ftart from the canvas, and the action of his countenance, looking up, has matchlefs fpirit. It is called the portrait of Willian Earl of Denbigh, mifcalled governor of Barbadoes. His daughter married the firlt Duke of Hamilton, which Arengthens the opinion of its being that of her father.' The painter feems to have been Rubens; but from what circumftance of his lordfhip's life he placed him in an Indian foreft; is not known.
The old Duke of Chatelherault, in black, with the order, I think, of St. Michacl, pendent from his neck, which he accepted with the title, and a penfion, from Francis I. of France, at the time he was Earl of Arran, and regent of Scotland. He was declared next in fucceflion to the crown, in cafe of failure of heirs in Mary Stuart; a rank that his feeble and unteady conduct would have difabled him from filling with digaity.

A head of Catherine Parr, on wood, by Holbein.
Another, faid to have been that of Ame Bullen, very handfome, dreffed in a ruff and kerchief, edged with ermine, and in a purple gown; over her face a veil, fo tranfiparent as not to conceal

The bloom of young defire and purple light of tove.
Maria Dei Gratia Scotorum Regine, ${ }^{1586}$, att. 43. A half-length: a ftiff figure, in a great ruff, auburn locks, oval but pretty full face, of nuch larger and plainer features than that at cafle Braan; a natural alteration, from the increafe of her cruel ufage, and of her ill health; yet fill preferves a likenefs to that portrait. I was told here that fle fent this picture, together with a ring, a little before her execution, to the reprefentative of the Hamilton family, as an acknowledgment of gratitude for their fufferings in her caufe.

Earl Morton, regent of Scothand; a nobleman of vaft but abufed abilities; rapacious, licentious, unprincipled; reftrained by no confideration from gaining his point; intrepid till the laft hour of his being, when he fell on the fcaffold with thofe penitential horrors * that the enormous wickednefs of his paft life did naturally infpire.

The rough reformer, John Knox, a fevere reprover of the former. The Earl, at the funeral of Knox, in a few words delivered this honourable teftimony of his firit: "There lies he who never feared the face of man."

Alexander Henderfon, a vain, infolent, and bufy miniter during the troubles of Charles I., who was deputed by his brethren to perfuade his Majefty to extirpate epifcopacy out of Scotland: but the king, an equal bigot, and better cafnift, filenced his

[^135]arguments; and Henderfon, chagrined with his ill fuccefs, retired, and died of a broken heart.

A head of Ilobbes (as a contraft to the two former), with fhort thin grey hair.
l.ord Belhaven, author of the famous fpeech againf the union.

Philip II. a full length, with a trange figure of lame bowing at his feet, with a label, and this motto: "Pro merente adfo."

Two half-lengths, in black, one with a fiddle in his hand, the other in a grotefque attitude, both with the fame countenances, good, but fwarthy; miftakenly called David Rizzio's, but I could not learn that there was any portrait of that unfortunate man.

Irrefiftible beauty brings up the rear, in form of Mifs Mary Scott, a full length, in white fattin, a mott elegant figure; and thus concludes the lift with what is more powerful than all that has preceded; than the arms of the warrior, the art of the politician; the admonitions of the churchman, or the wifdon of the philofopher.

About a mile from the houfe, on an eminence, above a decp wooded glen, with the Avon at the bottom, is Chatelherault, fo called from the eftate the family once poffeffed in France; is an elegant banqueting-houfe, with a dog-kennel, gardens, \&c. and commands a fine view. The park is now much inclofed; but 1 am told there are fill in it a few of the wild cattle of the fame kind with thofe I faw at Drumlanrig.

Continue my journey: crofs the Clyde at Bothwell bridge, noted for the defeat of a fmall army of enthufiafts in 1679 , near the place, by the Duke of Monmouth, who diftinguifhed himfelf that day more by his humanity than his conduct ; but it is probable he difliked a fervice againft men to whofe religious principles he had no averion: he might likewife aim at future popularity in the country.

Buthwell church was collegiate, founded by Archibald the Grim, Earl of Douglas, in 1398, for a provoft and cight prebendaries. The outfide is faid to be incrufted with a thin coat of fone, but I confefs it efcaped my notice. In it are interred the founder and his lady, daughter of Andrew Murray, fon to King David Bruce, with whom he got the lordfhip of Bothwell.

The callle, now in ruins, is beautifully feated on the banks of the Clyde: tradition and hiftory are filent about the founder. It is faid to have been a principal refidence of the Douglaffes; and while Edward I. was in poffeffion of Scotland, was the chief ftation of his govcrnor ; and after the battle of Bannockburn, was the prifon of fome of the Englifh nobility taken in that fatal ficld. Major * fays, that in ${ }_{3} 337$ it was taken by the partizans of David Bruce, and levelled to the ground. That leems a favourite phrafe of the hiflorian; for to me it arpears to be in the fame fate with that of Cacrlaveroc, and was only difmantled; for in both, fome of the remaining towers have all the marks of the early tyle of building.

The prefent refidence of the family, called Bothwell houfe, is modern, built between nincty and a hundred years ago by the young Earl of Forfar, who was killed at the batte of Dunblain. IIe was paternal unele to the late Duke of Douglas, who fucceeded to the cllate. The centre is but fmall, being chiefly taken up with flair-cafe and lobby. The Duke of Douglas added the wings, in which are the principal apartments. It fands very near the ancient cafle.

On the fouth fide of the Clyde, oppofite to the caftle, are the remains of Blantyre, a priory of canons regular, founded before the year 1296; mention being made in that year of Frere William D'riour de Blantyr t.

$$
\text { P. 2j2. } \quad+\text { Keilh, } 239
$$

The country from Bothwell bridge is open, very fertile, compofed of gentle rifings, diverfified with large plantations. Reach

Glafgow, the beft built of any fecond-rate city I ever faw; the houfcs of fone, and in general well built, and many in a good tafte, plain and unaffected. The principal ftreet runs eaft and weft, is ncar a mile and a half long, but unfortunately not ftraight; yet the view from the crofs, where the two other great flreets fall into this, has an air of valt magnificence. 'The tolbooth is large and handiome, with this apt motto on the front:

> Hxe domus odit, amat, punit, confervat, honorat, nequitiam, pacem, crimina, jura, probos.

Next to that is the exchange : within is a fpacious room, with full-length portraits of all our monarchs fince James I. ; and an excellent one, by Ramfay, of Archibald Duke of Argyle in his robes as lord of feflions. However expert he might have been in the laws of his land, the following form of refpite to a wretched convict does not fpeak much in favour of his regard to decency.

Edinr Fobry $28 t h, 1728$.
"I Archibald Earl of IAay, do hereby prorogate and continue the life of John Rud. dell, writer in Edin', to the term of Whifunday next, and no longer, by G-d.
"ISLAY, I. P. D."
Before the exchange is a large equeftrian ftatuc of King William. This is the finef and broadeft part of the ftreet : many of the houfes are built over arcades, but too narrow to be walked in with any conveniency. Numbers of other neat ftreets crofs this at right angles.

The market-places are great ornaments to the city, the fronts being done in very fine tafte, and the gates adorned with columns of one or other of the orders. Some of thefe warkets are for meal, greens, fifh or flefh: there are two for the laft which have conduits of water out of feveral of the pillars, fo that they are conflantly kept fweet and neat. Before thefe buildings were conftructed, moft of thofe articles were fold in the public freets; and even after the market-places were built, the magittrates with great difficulty compelled the people to take advantage of fuch cleanly innovations.

Near the meal-market is the public granary, to be filled on any apprehenfion of fcarcity.

The guard-houfe is in the great freet, where the inhabitants mount guard, and regtlanly do duty. An excellent police is obferved here; and proper officers attend the markets to prevent abufes.

The police of Glafgow confifts of three bodies; the magiffrates with the towncouncil, the merchants houfe, and the trades houfe. The lord provoft, three bailies, a dean of guild, a deacon convener, a treafurer, and twenty-five council-men, compofe the firft. It mult be obferved that the dean of guild is chofen annually, and can continue in office but two years. The fecond confifls of thirty-fix merchants, annually elected, with the provolt and three bailies, by virtue of their office, which make the whole body forty. The dean of guild is head of this houfe, who, in ccoljunction with his council, four merchants, and four tradefmen (of which the precedin, dean is to be one), holds a court every Thurfday, where the parties only are admitted to plead, all lawyers being exclurded. He and his council have power to judge and decree in all actions refpecting trade between merchant and merchant; and thofe who refufe to fubmit to their decifions are liable to a fine of five pounds. The fame officer and his council, with the matter of work, can determine all difputes about boundaries, and no proceedings in building fhall be fopped except by him ; but the plaintiff muft lodge a
fuficient fum in bis hands to fatisfy the defendant, in cafe the firf flould lay a groundlefs complaint : and, to prevent delay, the dean and his afliftants are to mect on the fpot within twenty four hours; and to prevent frivolous difputes, Thould the plaintiff be found not to have been aggrieved, he is fined in twenty fhillings, and the damage fiftained by the delay: but again, fould he imarine limmfelf wronged by the decifion, he has power (after lociging forty flillings in the hands of the dean) of appealing to the great council of the city; and iul cafe they alfo decide againt him, the fum is forfected and applied as the dean hall think fit. The fance magiftrate is alfo to fee that no encroachments are made on the public freets: he can order any old houfes to be pulled down that appear dangerous; and, I think, has alfo power in fome places of difpofing of to the beft bidder, the ground of any houfes which the owner fuffers to lie in ruins for three years, without attempting to rebuild. Befides thefe affairs, he fuperintends the weig hets and meafures; punifhes and fines tranfgreffors; fines all unqualified perfons who ufurp the privileges of fremen; adnuits burgefles: the fines to aliens is tool. Scotch: and finally, he and his council may levy a tax on the guild-brethren (not exceeding the above-mentioned fum at a time) for the maintenance of the wives and children of decayed brethren; the money to be diftributed at the diferetion of the dean, his council, and the deacon convener.

The third body is the trades houfe: this confifts of fifty-fix, of which the deacon convencr is the head: there are fourteen incorporated trades, each of which has a deacon, who has a right to nominate a certain number of his trade, fo as to form the houfe: thefe manage a large ftock, maintain a great number of poor, and determine difputes between the trades. In this place may be mentioned, that the merchants hofpital, founded by the merchants of Glafyow in 160 t, has a large capital to fupport the poor: that the town's hofpital contains four hundred indigent, and is fupported by the magifrates and town-council, the merchants houfe, the trades houfe, and the kirk feflions. Hutchinfon's hofpital, founded in 1642 by two brothers of that name, has a fund of twelve thoufand pounds; the town-council a revenue of fix thoufand pounds fer annuin.

The old bridge over the Clyde confifts of eight arches, and was built by Willian Rea, bithop of this fee, about four hundred years ago. A new one has been lately added of feven arches, wifh circular holes between each to carry off the fuperfluous waters in the great floods. This bridge deviates from the original phat, which was very elegant, and free from certain defects that difgrace the prefent.

The city of Glafgow, till very lately, was perfecly tantalized with its river: the water was Thallow, the channel much too wide for the ufual quantity of water that flowed down, and the navigation interrupted by twelve remarkable fhoals. The fecond inconveniency continually increafed by the wearing away of the banks, caufed by the prevalency of the fouth-weft winds that blow here, and often with much violence, during more than half the year: thus what is got in breadth, is loft in depth; fid floals are formed by the lofs of water in the more contracted bed. Spring-tides do not flow above three feet, or neap-tides above one, at Broomy-law-quay, clofe to the town; fo that in dry feafons lighters are detained there for feveral weeks, or are prevented from arriving there, to the great detrinent of the city.

To remedy this evil, the city called in feveral engineers: at length the plan propofed by my old friend, Mr. John Golburne, of Chefter, that howef and able engineer, was accepted, and he entured into contraEt with the magiftrates of Glafgow to deepen the channel to feren feet at the quay, even at neap-tides. He has made confiderable progrefs in the work, and has given the flipulated depth to within four miles of the place.

For a pretent relief he has deepened the intermediate fhoals, and particularly he has given at leaft 1 ur feet of water immediately below the quay, in a fhoal called the Hurf, which was above a quarter of a mile long, and had over it only eighteen inches of water. Before this improvement lighters of only thirty tons burden could reacla the quay; at prefent veflels'of feventy come there with cafe.
Near the bridge is the large alms-houfe, a valt nailery, a fone ware manufactory, and a great porter brewery, which fupplies fome part of Ireland *: befides thefe are manufactures of linens, cambricks, lawns, fuftians, tapes, and Ariped linens; fugarhoufes and glafs-houfes, great roperies; vaft manufactures of fhoes, boots, and faddles, and all forts of horfe furniture; alfo valt tanneries carried on under a company who have $60,0001$. capital, chiefly for the ufe of the colonifts, whofe bark is found unfit for tanning. The magazine of faddles, and other works refpecting that bufinets, is an anazzing fight: all thefe are deftined for America, no port equalling this for the conveniency of fituation, and fpeedily fupplying that market. Within fight, on the Renfrew fide, are collieries, and much coal is exported into Ireland, and into America.

The great import of this city is tobacco. The following flate of that trade for the three laft years exhibits its valt extent and importance :

So that it appears the increafe of importation from Virginia, in 1770, was 435 hogfheads, and from Carolina, 453, and that it decreafed in Maryland, 1399. But what is remarkable, that in the fame year not any part of this vaft fock remained unfold; the whole being difpofed of in the following proportions:

which, with 1032 fold inland, balances the account.
In the laft year $\mathbf{1 7 \% 1}$, the commerce fill improved, for from

| Virginia, | hogft. |
| :--- | ---: |
| 35493 |  |
| Maryland, | 1530 |
| Carolina, | 993 |
| Total, | 49016 |

- Dublin is extremely capable of fupplying Ireland with this liqnor, but, as I am credibly informed, is almon prohibited the attempt by a hard and unpulitic.al tax.

The exports alfo increafed, but not in the fame proportion with thofe of laft year :

But this encouraging inference may be drawn : that, notwithftanding all our fquabbles with the colonies, thofe of the firft importance improve in their commerce with their mother country: receive alfo an equal return in the manufactures of GreatBritain, which, they wifcly difpenfe to thole whom unavailing affociations of prohibition bind from an open traffick with us.

The origin of foreign trade in this great city is extremely worthy of attention. A merchant, of the name of Walter Gibfon, by an adventure firt laid the fuundation of its wealth : about the year 1668 he cured and exported in a Dutch veffel, 300 lafts of herrings, each containing fix barrels, which he fent to St. Mart:n's, in France, where he got a barrel of brandy and a crown for each : the fhip returning, laden with brandy and falt, the cargo was fold for a great fum: he then launched farther into bufinefs, bought the velfel, and two large flips befides, with which he traded to different parts of Europe, and to Virginis : he alfo firft imported iron to Glafgow, for before that time it was received from Sterling and Burrowftonefs, in exchange for dyed fuffs : and even the wine ufod in this city was brought from Edmburgh. Yet I find no flatue, no grateful infription, to preferve the memory of Walter Gitfon!

Glafgow, till long after the reformation, was confined to the ridge that extends from the high.church, or cathedral, and the houfes trefpaffed but little on the ground on each fide. This piace (whofe inhabitants at this time are computed to be forty thoufand) was fo inconfiderable, in 1357, as not to be admitted in the number of the cautionary towns affigned to Ediward III. tor the payment of the ranfome of David II *. But the revenue of the archbifhop was, at the reformation, little lefs than a thouland pounds Iterling per an:um, befides feveral emoluments in corn of different kinds. Religiou was, before that period, the commerce of our chief cities; in the fame manner as commerce is their religion in the prefent age.

Some writers attribute the foundation of this fee to St. Kentigern, in 560 , and make him the firlt bihop: others will give him no other rank than that of a fimple faint. It is with more certainty known, that the cathedral was founded or refounded, in 1136 , by John, governor to David I., and who was the firlt certain bifhop of the place; for it uas not crected into $2 n$ archbifhoprick till 1500 , when Robert Blacader had firft the title.

[^136]This fine church was devoted to deftruction by the wretched minifters of $557^{8}$, who affembled, by beat of drum, a multitude to effect the demolition: but the trades of the city taking arms, declared that they would bury under the ruins the firlt perfon who attempted the facrilege; and to this fenfible zeal are we indebted for fo great an ornament to the place. It is at prefent divided into three places for divine fervice; two above, one beneath, and deep under ground, where the congrege!ion may truly fay, clamavi ex profundis. The roof of this is fine, of fone, and lupported by pillars, but much hurt by the crowding of the pews.
In the church yard is an epitaph on a jolly phyfician, whofe practice fhould be recommended to all fuch harbingers of death, who by their terrific faces fcare the poos. patient prematurely into the regions of eternity:

> Stay, paffenger, and view this fone, For under it lies fucl, a ane Who cured niany while he lived; So gratious he no man gicved: Yea when his phylick's force oft' faikd, His pleafant purpufe then prevailed;
> For of his God he got the grace
> To live in mirth, and die in peace ;
> Heaven has his foule, his curps this tone;
> Sigh, paffenger, and then he gonc. Doctor Peter Low, 1612 .

Befides this church are the Collcge Church, Ramfhorn, Trone, St. Andrew's and Wint. The Fuglifh chapel, college chapel, a highland church, three feceding meet-ing-houfes, a Moravian, an independent, a methodift, an anabaptift, a barony church, and one in the fuburbs of the Gorbels.
But the moft beautiful is that of St. Andrew's, or the New Church, whofe front graced with an elegant portico, does the city great credit, if it had not been disfigured by a flender fquare tower, with a pepper-box top; and in general the fteeples in Glafgow are in a remarkably bad tafte, being in fact no favourite part of architecture with the church of Scotland. The infide of that jult mentioned is finifhed not only with neatnefs but with elegauce; is fupported by pillars, and very pretily fluccoed. It is one of the very few exceptions to the flovenly and indecent mamer in which the houfes of God, in Scotland, are kept : reformation, in matters of relision, fildom obferves mediocrity; here it was at firt outrageous, for a place commonly ne:it was deemed to favour of popery: but to avoid the imputation of that extreme, they ran into another ; for in many parts of North-Britain our Lord feems llill to be worllipped in a fable, and often in a very wretched one; many of the churches are thatchod with healh, and in fome places are in fuch bad repair is to be half open at top; fo that the people appear to worflip as the Druids did of old, in open temples. It is but commea juttice to fiy, that this is no fault of the clergy, or of the people, but entircly of the landed interelt ; who having at the reformation, fhared in the plunder of the church, were burthened with the building and repairing of the houles of worfhip. It is too frequently tile cale, that the gentlemen camot be induced to undertake the moft common repairs, without being threatened with a procefs before the lords of leflions, or perlaps laving the proeds actually made, which is attended with odium, trouble and expence to the poor incumbents.
Near the cathedral is the ruin of the caftle, or the bifhop's palace; the great tower was built by John Caineron, prelate in 1426. Buchanan * relates an abfurd tale, that

[^137]12
this bihop was funmoned to the great tribunal by a loud preternatural voice; that he affembled lis fervants, when to thcir great terror the call was repeated; and the bifhop died in great agonies. His offence is concealed from us, for he appears to have been a good and an able man.

Archbiflop Bethune furrounded the palace with a fine wall, and made a baftion over one corner, and a tower over another. This caftle was befieged in 1544, by the regent Arran, in the civil difputes at that time; who took it, and hanged cighteen of the garrifon, placed there by Lenox, a favourer of the reformation.

In Glafgov were two religious houfes and an hofpital. One of Dominicans, founded by the bifhop and chapter in 1279, and another of Obfervantines in 1476, by John Laing, binlop of Glafgow, and Thomas Forfyth, rector of the college.

The univerfity was founded in 1450, James II., Pope Nicholas V. gave the Bull, but bifhop Turn' all fupplied the money. It confifts of one college, a large building with a handiome fre $t$ to the freet, refembling fome of the old colleges in Oxford. Charles I. fubfcribed 2001. towards this work, but was prevented from paying it by the enfuing troubles; but Cromwell afterwards fulfilled the defign of the royal donor. Here are about four hundred fludents who lodge in the town, but the profeffors have good houles in the college, where young gentlemen may be boarded, and placed more inmediately under the profeffor's cye, than thofe that live in private houfes. An inconveniency that calls loudly for reformation.
The library is a very handfome room, with a gallery, lupported b: pillars; and is well furnifhed with books. That beneficent nobleman, the firlt Duke of Chandos, when he vifited the college, gave 500l. towards building this apartment.

In poffeffion of the college is a very fingular verfion of the bible, by the Rev. Zachary Boyd, a worthy, learned and pious divine of this city, who livel about a century and a half ago, and dying, bequeathed to this feminary of knowledge his fortune, and all his manufcripts, but not on condition of printing his poem as is vulgarly imagined. It is probable that he adapted his verfe to the intellects of his hearers, the only excufe for the variety of grofs imagery, of which part of the foliloquy of Jonas in the fin's belly, will be thought a fufficient fpecimen :
What houfe is this? here's neit!er coal nor cande;
Where I nothing hut guts of fifhes haucle,
1 and tin table are both here within,
Where day ne'er dawn'd, where fun did never thine.
The like of this on earth man never faw,
A living mald within a monfier's maw!
Buryell under mountains, which are hiph and feep!
Plunged under watcrs hundri!' Gathoms deep!
Not fo, was Noah in his homie of tree.
For through a window he the light did fee;
He failed above the highe it waves: a wonder,
1 and my beat ave all the waters under?
He and lis ark might go and alfo come;
But 1 fit dill iu fuch a itrait'.ed roons
As is muit uncouth ; head and feer together,
A mong fuel greafe as would a thonfand fmother;
Where I intombed in melancholy fink,
Choahed, fufucate with excremental ftink!

Meffrs. Robert and Andrew Foulis, printers and bookfellers to the univerfity, have inflituted an academy for painting and engraving ; and like good citizens, zealous to promote the welfare and honour of their native place, have, at valt expence, formed a
mon numerous collection of paintings from abroad, in order to form the tafte of their eleves.

The printing is a confiderable branch of bufinefs, and has long been celebrated for the beauty of the types, and the correctnefs of the editions. Here are preferved, in cafes, numbers of monumental, and other fones, taken out of the walls on the Roman ftations in this part of the kingdom : fome are well cut and ornamented : mof of them were done to perpetuate the memory of the vexillatio, or party, who performed fuch or fuch works; others in memory of officers who died in the country. Many of thefe fculptures were engraven at the expence of the univerfity; whofe principal did me the honour of prefenting me with a fet.

The if plate is very beautiful : a vicory, reclined on a globe, with a palm in one hand, a garland in the other; a pediment above, lupported by two fluted pilafters, with Corinthian capitals: beneath is a boar, a common animal in fculptures found in Britain, probably becaufe they were in plenty in our forefts. Both thefe are in honour of the Emperor Antoninus Pius.

None is more inftructive than that engraven in plate III, on which appears a victory nbout to crown a Roman horfeman, armed with a fpear and fhield. Beneath him are two Caledonian captives, naked, and bound with little daggers, like the modern dirks, by them. On another compartment of the ftone is an eagle and fea-goat, to denote fume victory gained in the courfe of their work near the fea: for it was devoted by a party of the Legio fecunda Auguta, on building a certain portion of the wall.

The XVIth is monumental : the figure is very elegant, reprefenting one gracefully momment, dreffed in a loofe robe : beneath is a wheel, denoting, that at the time of his $\therefore \quad$ e was engaged with a party on the road: and by him is an animal, refembling - : Atmon or Siberian goat.

In this ftreet is the houfe where Henry Darnly lodged, confined by a dangerous illnefs, fufpected to arife from poifon, adminiftered at the inftigation of Bothwell. Here the unharpy prince received a vifit from Mary Stuart, and took the fatal refolution of removing to Edinburgh. This fudden return of her affection, her blandifiments to enveigto him from his father and friends, and his confequential murder, are circumftances unfavourable to the memory of this unfortunate princefs.

June 1 f . Take boat at the quay; and after a paffage of four miles down the Clyde, reach the little flying houfe of Mr. Golborne, now fixed on the Northern bank, commanding a moft elegant view of part of the county of Renfrew, the oppofite fhore. After breakfaft furvey the machines for deepening the river which were then at work: they are called ploughs, are large hollow cafes, the back is of caft iron, the two ends of wood; the other fide open. Thefe are drawn crofs the river by means of capfans, placed on long wooden frames or flats; and oppofite to each other near the banks of the river. Are drawn over empty, returned with the iron fide downwards, which ferapes the bottom, and brings up at every return half a ton of gravel, depofiting it on the bank: and thus twelve hundred tons are cleared every day. Where the river is too wide, the thores are contractel by jettics.

Proceerl down the river; on the left the water of Inchinnan opens to view ; the profpect up the moft elegant and the foftef of any in North Britain; the expanfe is wide and gentle; the one bank bare, the other adorned with a fimall open grove. A little ille tufted with trees divides the water; beyond the fine bridge of Inchinnan receiving the united rivers of the white and black Cart, and the town and fpire of Pailley, backed by a long aud fertile range of rifing land, clofe the feene.
vol. II .

On the right is a chain of low hills, Camfey fells, running N. W. and S. E. diverg. ing N. E. and advancing to the water fide, terminating with the rock of Dunbuc, that almoft reaches to the Clyde.

Pafs under Kirkpatric, where the river is about a quarter of a mile broad; at this place is a confiderable manufacture of all forts of huibandry tools, began about four years ago ; but it is far more celebrated for being the fuppofed termination of the Roman wall, or Grahan's dike, built under the aufpices of Antoninus Pius. Not the leaft religue is to be feen here at prefent : but about a mile and a half to the eaftward on a rifing ground above the bridge c de burn of Dalmure, alar the village of Duntocher, are the veltiges of a fort and wach-tower, with a very deep fofs. The houfes in the village appear to have been formed out of the ruins, for many of the fones are funoothed on the fide; and on one are the letters N.E.R.O. very legible. This wall was guarded with fmall forts from end to end, that is to fay, from near Kirkpatric to within two miles of Abercorn, or, as Bede calls it, the monallery of Abercurnig, or the Firth of Forth, a fpac. of thirty-fix miles cight hundred and eighty-feven paces; of thefe forts ten are planned by the ingenious Mr. Gordon, and numbers of the inferiptions fomd in them, engraven. This great work was jerformed by the foldiery under Lollius Urbicus, lieutenant of Antoninus; in purfuance of the plan before pointed out by the great Agricola, who garrifoned the whole fpace between the two firtls, removing, as it was, the barbarians into another ifland *.

Ireland will fcarce forgive me if I am filent about the birth-place of its tutclar faint. He firt drew breath at Kirkpatric, and derived his name from lis fath re, a noble Roman (a Patrician) who lled hither in the time of perfecution. St. Patric took on himfelf the charge of Ireland; founded there 355 churches, ordanned 365 bithops, 3000 priefts, converted $120 c \circ$ perfons in one diftrict, baptized feven kings at once, eltablifhed a purgatory, and with his faff at once expelled cerery reptile that ftung or croaked.

Somewhat lower, on the fame fide, Dunglafs projects into the water, and forms a round bay. On the point is a ruined fort, perhaps on the fite of a Roman; for probably the wall migh: have ended here, as at this very place the water is deep, and at all times unfordable by foct or horfe. The fort was blown upin : 640 , as fome fay, by the defperate treachery of an linglif boy, page to the Eari of Haddington, who, with numbers of people of rank, were miferably cieftroyed t. Below this the river widens, and begins to have the appearance of an ertuary : the feene varies into other bearties: the hills are rockv, but cloathed at the bottom by ranges of woods, and numbers of prety villas grace the country. Dunbuc nakes now a confiderable figure: the plain of Dumbarton opens; the vaft and ftrange bicapitated rock, with the iortrefs, appars full in front; the town and its fire beyond ; the fine river Leven on one fide, and the valt: mountains above Loch-lomond, and the great bafe and foaring top of Ben-lomond clofe the view.

The Roman fleet, in all probability, had its fation under Dunbarton the Glota or Clyde, has there fufficient depth of water; the place was convenient and fecure; noar the end of the wall, and covered by the fort at Dunglafs; the pharos on the top of the great rock is another ftrong proof that the Romans made it their harbour, for the water beyond is impaffable for thips, or any vencels of large burden.

After a long conteft with a violent adverfe wind, and very turbulent water, pafs under, on the S. hore, Newark; a caltellated houfe, with round towers. Vifit PortGiafgow, a confiderable town, with a great pier, and numbers of large fhips: dependent on Glafgow, a creation of that city, fince the year 1668, when it was purchafed from Sir Patric Maxwell of Newark, houfes built, a harbour formed, and the cuftom-houfe for the Clyde eftablifhed.

Proceed two miles lower to Greenock, anciently called the bay of St. Lawrence; a place fill more confiderable for its fhipping than the former; and like the other a port of Glafgow, twenty-two miles diftant from it. The Firth here expands into a fine bafon, four miles wide, and is land-locked on all fides. Dine here, contract for a velfel for my intended voyage, and return to Glafgow at night.

June 12. Crofs the new bridge, at whofe foot on that fide is Gorbel, a fort of fuburbs to Glafgow. The county of Lanerk fill extends three miles down the river; but after a flort ride, I enter the fhire of Renfrew.

Leave on the left the hill of Langfide, noted for the battle in 1568 ; which decided the fortune of Mary Stuart, and precipitated her into that fatal ftep of deferting her country, and flinging herfelf into an cighteen years captivity, terminating in the lofs of her head, the difgrace of the annals of her glorious rival. Ride through a fine country to Cruickfon cafle, feated on the fummit of a little hill; now a mere fragment, only a part of a fquare tower remaining of a place of much magnificence, when in its full glory. The fituation is delicious, commanding a view of a well-cultivated tract, divided into a multitude of fertile hitrle hills.

This was originally the property of the Crocs, a potent people in this county; hut in the reign of Malcolm Il. was conveyed, by the marriage of the heirefs, daughter of Robert de Croc, into the family of Stuarts, in after-times earls and d kes of Lenox, who had great poffellions in thefe parts. To this place Henry Darnly retired with his cnamoured queen, Cruickfon being then, as Cliefden in the time of Villiers,

## The feat of wantonnefs and love.

Here fame fays that Mary firt refigned herfelf to the arms of her beloved, beneath a great yew, fiill exilting; but no loves would fuile on joys commenced beneath the flade of this funereal tree; the hour was unpropitious.

Ille dies primus Lethi, primusque malorum, caufa fuit.
It was even fard * that Mary, unconfcious of events, ftruck a coin on the occafion, with the figure of the fatal tree, honored with a crown, and diftinguilhed by the motto, "Dat gloria vires." But I have opportunity of contradicting this opinion from an examination of the coins themfelves, whole dates are 1565,1566 , and $1567 \dagger$. The tree is evidently a palm, circumferibed, "Exurgat Deus, diffipentur inimici ejus." Pendent from the boughs, is the motto above cited, which is part of the following lines taken from Propertius, alluding to a fanal climbing up the body of the tree, a modeft comparifon of the honors that Henry Darnly received by the union with his royal fyoufe:

Magnum iter afcuado, fed dat mihi gloria vires,
Non jurat ex facili, lata corona jugo.
I.ib. iv, El. 2.

* B:facp Nicholfon's Scottifh Library, $\mathbf{j 2 3}^{23}$.
$\dagger$ Sec ailo Auderfon's Cuirs, tab. :15.

Vifit Pailley, a confiderable but irregularly built town; at the difance of two miles from Cruickilon, fix miles weft of Glafgow, two miles fouth-weft of Renfrew, and fourteen foutheaft of Greenock. It was erected into a burgh of barony in the yeay 1.88 , and the affairs of the community are managed by three bailies, of which the eldef is commonly in the commiffion of the peace, a treafurer, a town-clerk, and feventeen counfellors, who are annually elected upon the firf Morday after Michaelmas. It flands on both fides the river Cart, over which it has three ftone bridges, each of two arches: the river runs from fouth to north, and empties itfelf into the Clyde; about thiree miles below the town: at fpring-tides veffels of forty tons burthen come up to the quay; and, as the magiftrates are now clearing and deepening the river, it is hoped that fill larger may hereafter get up. The communication by water is of great importance to the inhabitants, for fending their goods and manufactures to PortGlafgow and Greenock, and, if they chufe it, to Glafgow; and betides, was the grand canal finifhed, they will have an eafy communication with the Firth of Forth, a; the canal joins the Clyde about three or four miles north of Paifley.

Notwithfanding its antiquity, this town was of lithe confequence till within thefe laft fifty years; before that period ficarce any other manufacture was carricd on but coarle linen checks, and a kind of ftripel cloth called Bengals; both which have long been given up here; while thefe were the only manufacture, the inhabitants feem to have had no turn for enlarging their trade, for their goods were expofed to fale in the weekly market, and chiefly bought up by dealers from Glafgow: fome of them, however, who travelled into England to fell Scots manufactures, picked up a more general knowledge of trade, and having faved a little money, fettled at home, and thought of eftablifhing other branches; to which they were the more encouraged, as their acquaintance in England was like to be of great ufe to them.

About fifty years ago the making of white ftitching threads was firt introduced into the weft country b;ja private gentewoman, Mrs. Millar, of Bargarran, who, very much to her own honour, imported a twift-mill, and other neceflary apparatus, from Hol. land, and carried on a fmall manufacture in her own family: this branch, now of fuch general importance to Scotland, was foon after eftablifhed in Paitley; where it has ever fince been on the increate, and has now diffufed itfelf over all parts of the kingdon. In other places girls are bred to it ; here they may be rather fail to be borin to it ; as almoft every family makes fome threads, or have made formerly. It is generally computed, that, in the town and neighbourhood, white threads are amually made to the annount of from 40 to 50,0001 .

The manufacture of lawns, under various denominations, is allo carried on here to a conliderable amount, and to as great perfection as in any part of Europe. Vait quantities of foreign yarn are annually imported from France, Germany, \&c. for this branch, as only the lower priced kinds can be made of our home manufactured yarn. It is thought the lawn brench here amounts to about 70,000 . amually. The filk gauze has alfo been eflablifhed here, and brought to the utmoft perfertion; it is w.ought to an amazing variety of patterns; for fuch is the ingenuity of our weavers, that nothing in their branch is too hard for them. It is commonly reckoned that this branch amounts to about 60,000 . annually.

A manufacture of ribbons has, within thefe twelve months, been eftablifhed here, and both flowered and plain are nade, in every refpeet as grood as in any place in England. In thefe different branches a great number of people are employed, many of them boys and girls, who muft otherwife have been idle for fome years. It muft be extrenely agreeable to every man who wihhes well to his country, to fee in the fummer
feafon, both fides of the river, and a great many other fields about town, covered with cloth and threads; and to hear, at all feafons, as he paffes along the freets, the induftrious and agreeable noife of weaver's looms and twift-mills. The late unfortunate ftagnation of trade has been felt here, as vell as in noft other parts of the ifland; but it is hoped, if things were a little more fettled, trade will revive, and the induftrious artificers be again all employed.

Befides thele general manufactures, feveral others of a more local kind are carried on here; there is a vgry confiderable one of hard.foap and tallow candles, both of which are efteemed excellent of their kinds, as the gentlemen concerned fpared no expence to bring their manufacture to perfe尺ition : their candles, efpecially their moulded ones, are reckoned the beft and moft elegant that have been made in Scotland, and great quantities of them are fent to England and to the Veft Indies. They are made after the Kenfington manner, and with this view they tad a man from London, at very high wages. There are alfo two tanning works in town, and a copperas work in the neightourhood.

Before the year 1735, the whole people in the parif, town and country, faid their prayers in one church, and the revcrend and learned Mr. Robert Miller difcharged the whole duties of the paftoral office for many years without an affiftant; but fince that period the town has increafed fo much, that befides the old church there are now two large ones, and two feceding meeting-houfs. The church firft built, called the Laigh, or low-church, is in form of a Greek crofs, very well laid out, and contains a great number of people : the other called the high church, is a very fine building, and at it ftands on the top of a hill, its lofty fone fire is feen at a valt diftatce; the church is an oblong fquare, of eighty-two feet by fixty-two, within the walls, built of freeflone, well fmoothed, having ruftic corners, and an elegant fone cornice at top: though the area is fo large, it has no pillars; and the feats and lofts are fo well laid out, that though the church contains about three thoufand people, every one of them fees the minifter: in the conflruction of the roof, (which is a pavillion, covered with flate, having a platform covered with lead on the top) there is fomething very curious; it is admired by every man of taft, and with the whole building, was planned and conducted by the late very ingenious Baillie Whyte, of this place. The town houfe is a very handfome building of cut-fone, with a"ll fire and a clock: part of it is let for an inn, the reft is uled as a prifon and cou* sooms; for here the fheriff-courts of the county ars he'.d. The flefh-market has a genteel front of cut-ftone, and is one of the neateft and nooft commodious of the kind in Britain; butchers' meat, butter, cheefe, fifh, wool, and feveral other articles, are fold hcre by what they call the tron-pound of twenty-two Englifh ounces and a half. The poor-houfe is a large building, very well laid out, and flands oppolite to the quay, in a fine free air; it is fupported by a fmall tax, impoled upon the inhabitants quarterly. There are at prefent in the houfe above fixty, of which number about thirty-fix are boys and girls, who are carefully educated, and the boys put out to bufinefs at the expence of the boufe. Befides thefe, many out-penfioners have weekly fupplies. Mof of the mechanics and artificers in town, and feveral others, that fall not under thefe denominations, have formed themfelves into focieties, and have eflablifhed funds for the aid of their diftreffed members; thefe funds are generally well managed, and of very great benefit to individuals.

The old part of the town runs from eaft to weft upon the fouth flope of a ridge of hills, from which there is a pleafant and very extenfive profpect of the city of Glafgow, and the adjacent country on all fides, but to the fouthward, where the view terminates on a rilge of green hilis, about two miles diftant. Including the late buildings
and fuburbs, it is about an Englifh mile long, and much about the fame breadth. So late as the year 1746 , by a very accurate furvey, it was found to contain fcarce four thoufand inhabitants; but it is now thought to have no fewer than from ten to twelve thoutand, all ages included. The Earl of Abercorn's burial place is by much the greatelt curiofity in Painley: it is an old Gothic chapel, without pulpit or pew, or any ormament whatever ; but has the fineft celo perhaps in the world: when the end-door (the only one it has) is fhut, the noife is equal to a loud and not very diftant clap of thunder; if you ftrike a fingle note of mufic, you hear the found gradually afcending, till it dies away, as if at an immenfe dittance, and all the while diffufing itiolf through the circumanbient air: if a good voice fings, or a mufical inftrument is well played upon, the effect is inexpreffibly agreeable. In this chapel is the mounment of Marjory Bruce: ©he lies recumbent, with her hands clofed, in the attitude of prayer: above was once a rich arch, with feulptures of the arms, \&c. Her ftory is fingular: the was daughter of Robert Bruce, and wife of Walter, great Iteward of Scotland, and mother of Robert II. In the year 1317, when fhe was big with child, fhe broke her neek in hunting near this place: the Cefarian operation was inftantly performed, and the child taken out alive; but the operator chancing to hurt one eye with his inftrument, occafoned the blemifh that gave him afterwards the epithet of Blear-eye; and the monument is alfo flyled that of Queen Bleary. In the fame chapel were interred Elizabeth Muir and Euphemia Rofs, both conlorts to the fame monarch : the firft died before his acceflion.

About half a mile fouth-weft of Paincy lies Maxwelton: a very neat little village, erected fince the year 1746 , where the manffactures of filk ganze are carrice on to a confiderable extent.

There is frurce a veftige remaining of the monattery, founded in 1160 , by. Walter fon of Allan, "Dapifer Regis Scotix pro anima quondam regis David et anima Henrici " regis Anglix et anima comitis Henrici et pro talute corporis et animx Malcolui et " pro animabus omnium pareatium menrun, et benefactorum nee non et mei ipfius " falute, Sc." The monks, who were inftructed with this weighty charre, were firft of the order of Cluniacs, afterwards changed to Ciftercians; and lally, the firft order was again reftored.

The gardet: wall, a very noble and extenfive one of cut flone, conveys fome idea of the ancient grandeur of the place : by a rude infcription, ftill extant, on the north-weft corner, it appears to have been built by Georgr Shaw, the abbot, in the year 148.4, the fame genteman who four years after procured a charter for the town of Pailley. The infcription is too fingular to be omitted :

> Thy callit the ablot George of Shaw, About my abbey gat make his waw
> An hundred four humbercth zear
> Sighty-four the dare but weir. Pray for his fatazion
> That hid this noble foradation.

As the preat hewers of Sentand were their patrons and ben factore, they mioyed ample privilges, and very confiderable revenes; they were the parons of no fewer than thitty-one parifics, in ditirent parts of the kinglom. 'The monks of this abbey wrote a chronicle of Scots affairs, called the black-book of Pailley, an authentic copy of which is faid to bave been burnt in the abbey of Holyrood-hnile, during Cromwell's ufurpation : another copy taken from Mr. Robert Spotifwoods library, wals carried to England by Gencral Lambert. The chartutary of the monatlery is laid to be ftill ex.
tant ; the necount of the charters, bulls of confirmation, donations, \&c. is brought down to the year 1548. John Hamilton, the laft abbot, was natural brother to the Duke of Hamilton, and, upon his promotion to the fee of St. Andrew's, in 1546, refigned the abbacy of Pafley in favour of Lord Cland Hamilton, third fon of that Duke; which refigration was alterwards confirmed by Pope Julius III. in the year 1553. This Lorl' (land Hanilton, titular abbot of Paifley, upon the diffolution of the monafteries obtuined from King James the VIth, a charter, erecting the lands belonging to the ablacy into a temporal lordflip: this chater is dated at ledinburgh, July 29,1587 . He was, by the fame prince, created a peer, in 1;91, by the title of Lord l'aifley, and died in 1621. In 1604 his elieft fon had been created Lord Abercorn, and in 1606 was raifed to the dignity of an learl. The family is now reprefented by the Right Hon. James Earl of Abercorn, Baron Hamiltón of Straban, in Ireland, \&c. The lordinip of Paincy was difpofed of to the Earl of Angus, in the year 1652, and by him (1) Willian Lord Cochran, afterward, Earl of Dundonald, in 1653 , in which family it continucd till the year 1764 , whenthe prefent Earl of Abercorn re purchafed the p.ternal inheritance of his family. The abbey-church, when entire, has been a grand building, in form of a crofs; the great north window is a noble ruin, the arch very lofty, the middle pillar wonderfully light, and flill entire: only the chancel now renains, which is divided into a middle and two fide-aifes; all very lofty pillars, with Gothic arches; above thefe is another "ange of pillars, much larger, being the fegment of a circle, and above a row of arched niches, from end to end; over which the root ends in a fharp point. The outfide of the building is decorated with a profufion of ornaments, efpecially the great weft and north doors, than which fcarce any thing lighter or richer can be imagined.

But notwithflanding popery and epifcopacy were expelled this country, yet fuperfition and credulity kept full pofleffion in thefe parts. In 1697 twenty poor wretches were condemmed for the imaginary crime of witchcraft, and five actually fuffered at the fake on June soth in the fame year *. One young and handfome; to whom is attributed the heroic reply mentioned in my former volume $\dagger$. So deep was the folly of excefs in belicf rooted here, that full credit feems to have been given to an account that one of the condemned (a wizzard) was itrangled in his chair by the devil, I fuppofe left he flould make a confeffion to the detriment of the fervice.

The veftiges of the Roman camp at Paifley, are at prefent almoft annihilated. Of the outworks mentioned by Camden, there are no traces of any excepting one, for at a place called Cafte Iteal, are flill left a few marks, but nothing entire. There had been a military road leacing to the camp, which is fuppofed to have been the vanduara of i'tolemy.

Continue my journey towards Renfrew. On the road fee a mount or tumulus, with a fofs round the bale, with a fingle flone erceted on the top. Near this place was defated and flain Sumerled Thane of Argyle, who in 1159, with a great army of banditti, collected from Ireland $\ddagger$ and other parts, landed in the bay of St. Laurence, aud led them in rebellion againft Malcolm IV. That this mome was raifed in memory

[^138]of fo fignal an event is not improbable, efpectally as we are told by a moft refpectable writer * , that his troops retired ummotefled; therefore might have leifure to fling up this ufual tribute to the honour of their leader.

Reach Renfrew the county town, now an inconfiderable place. Robert II. had a palace here, which food on a piece of gronnd of about half an acre, ftill called the Caftle hill ; but nothing remains but the ditch which furrounded it. This monarch firft made Renfrew an independent heriffdom, for before it was joined to that of Lanerk.

Pafs by the tower of Inch, or ine fo called, from its once having been, as tradition fays, furrounded by the Clyde. Mr. Crawford, in his hiftory of the county informs us, it had been the property of the barons Rofs of Haulkhead.

All the land in thefe parts excellent, hut moft ill and flovenly dreffed. Crofs the Clyde, pals by Partic, a village where the bakers of Glafgow liave very confiderable mills on the water of Kelvin, and a great tract of land, at prefent valued at ten thoulind pounds; originally granted to them by the regent Murray, in reward for their fervices in fupplying his army with bread previous to the decifive battle of Langfide. Return again to Glaifow.
June 13. Set out in company with Mr. Golborne for I.och Lomond. Pafs for a few miles over a pleafant country, hilly, well cultivated, and often prettily planted, and thick fet with neat villas. Go over the fite of the Roman wall, near Bemulie, where had been a confiderable fort, whofe plan is engraven by Mr. Gordon. Crofs the Kelvin, and enter the flire of Lenox, or fheriffdom of Dunbarton.

See on the right Mugdoc caftle, a fquare tower, the antient feat of the Grahams; and near it is a mount, probably the work of the Romans, for they penetrated on this fide as far as the banks of Loch-Lomond, a gold coin of Nero and another of Trajan having been found in the parifh of Drummond. The country now grows high, moory, black, and dreary. Pafs over Fenwick bridge, flung over a dark and rocky glen, thaded with trees, impending over a violent terrent. Leave at fome diftance on the right the fmall houfe of Mols, immortalized by the birth of the great Buchanan. Crofs a handfome bridge over the water of Enneric, and breakfaft at the village of Drummin or Drummond with the Rev. Mr. Macfarlane, the minifter of the place. The parifh, which takes its name from Druim, a back, from the ridges that run along it, is in extent nine miles by feven; and fome years ago contained about a thoufand eight hundred fouls, but the number is much reduced by the unfeeling practice of melting feveral lefler farms into a greater. Arrive once urore within fight of the charming Loch-Lomond.

Approach its Shores, go through the narrow pafs of Bualmacha, where the Grampian hills finifh in the lake. Many of the inles run in a line with, and feem to have been a continuation of them ; appearing like fo many fragments rent from them by fome violent convulfion. Arrive in a beautiful bay: the braes of the hirls on the right are lofty, fome filled with fuall pebbles, others have a ferruginous look. The inands are mountainous, and exhibit varicty of charns. Inch.Culloch, or the ifle of nuns, has on it the remains of a church, is finely wooded, and is faid to have been the feat of the fair reclufes. Inch-Murrin, or the ifle of St. Murrinus, is two miles long, is a decr-park, and has on it the ruins of a houfe once belonging to the family of Lenox. On this thand John Colquhoun, laird of I.ufs, wih feveral of his followers, were barbaroufly murdered by a party of iflanders, who, under conduet of Lauchlan Maclean, and Murdoc Gibion in 1439, carried fire and fword through this part of North Britain.

Various other thands grace this fine expanfe: Inch-Lonaig of great extent is blackened with the deep green of yews. The ofprey inhabits a ruined caltle on luchGallorith; and feveral little low and and naked ifles ferve to diverfify the feene. From this finot the boundaries of the water are magnificent and diflinet; the wooded fide of the weflern, and the foaring head of Ben-lomond on the eaftern, furm a view that is almoft unequalled.

The top of this great mountain is compofed of a micaceous flate, mixed with quartz. The fibbuldit procumbens, a plant unknown in England, grows on the upper parts. Ptarnigans inhabit its fummit, and roes the woods near its bafe, the moft fouthern refort of thofe animals in our ifland.

The height of Ben-lomond from the furface of the lake is three thoufand two hundred and forty feet ; the profpect from the fummit of valt extent; the whole extent of Loch-lomond with its wooded ifles appears juft beneath. Loch-loung, Loch-kettering, Lochearn and the river Clyde form the principal waters. The mountains of Arran appear very diftinct, and to the north, Alps upon Alps fill up the amazing view.

Return the fame way, and vifit Buchanan, the feat of the Duke of Montrofe, in a low and mont difadvantageous fituation, within a mile of the lake, without the leaft view of fo delicious a water. This had been the feat of the Buchanans for fix or feven ages, till it was purchafed by the family of Montrofe, fometime in the laft century. Trees grow well about the houfe; and the country yiclds a good deal of barley and oats, and fome potatoes, but very little wheat.

His Grace has in his poffeffion a portrait of his heroic ancefor James Marquis of Montrofe; his fix victories, great as they were, do him lefs honour than his magnasimity at the hour of his death : he afcended the gibbet with a dignity and fortitude that caufed the igrominy of his puniflment to vanilh; he fell with a g.llant contempt of the cruelleft infults ; with that intrepid piety that blumted the malice of his enemies, and left them filled with the confufion natural to little minds, difappointed in the frained contrivances of mean revenge.

It is amufing to read the weak ellects of fear, envy, and rancour in the reports of. the times: "The witches (faid the wretched covenanters) were confulted at his birth; it was predicted that the boy would trouble Scotland; and while he was a fucking child (add they) he eat a venomous tond *.

Walk in the afternoon over the neighbouring environs. See the water of Enneric that difcharges iffelf here into the lake. Salmon in their annual migration pafs up the Leven, traverfe the lake, and feek this river to depofit their fodwn.

The furface of Loch-hmond has for feveral years pa il been obferved gradually to increale and invade the adjacent thore; and there is reafon to fuppofe that churches, houfes, and other buildings have been loft in the water. Near lufs is a large heap of flomes at a dillance from the fhore, known by the name of the Old Chureh; and about a mile to the fouth of that, in the midde of a large bay, between Camfraddan and the ille lnch lavenack, is another heap, faid to have been the ruins of a houfe. To confirin this, it is evident by a palfage in Camden's Atlas Britannica, that an ifland, exiling in his tine, is now loft, for be fpeaks of the ine of Camftraddan, placed between the lands of the fame name and lnch-lavanack, in which, adds he, was an boufe and orchard. lefides this proof, large trees with their branches ftill adhering are frequently found in the mud near the flore, overwhelued in former times by the increafe of water. This is fuppofed to be occafioned by the vaft quartities of thone

[^139]VOL. III.
and gravel that is continually brought down by the mountain rivers, and by the falls of the banks of the Leven: the firlt filling the bed of the lake, the laft impeding its difcharge through the bed of the river.

Mr. Golborne, at the requelt of the feveral proprietors, has made a voyage and furvey of the lake, in order to plan fome relisf from the encroachment of the water. He propofes to form a contant navigation down the l.even, by deepening the chamacl, and cutting through the neck of two great curvatures, which will not only enable the inhabitats of the environs of Loch-lomond to convey their flate, timber, bark, \&c. to the market; but alfo by lowering the furface of the lake, recover fome thoufands of acres now covered with water.

The tide flows up t' $:$ Leven two miles and a quarter. From thence as far as the lake is a rapid current, the fall being nincteen feet in five miles ; the water is alfo full of fhoals, to that in dry feafons it becones unnavigable; and cven at belt the veffels are drawn up by a number of horfes.
I muft not leave the parifh of Drummond without fiying, that the celerated Napier of Merchifton, author of the logarithms, was born at Garlies, within its precinets.

June 14 and 15 . Still at Glafgow: am honoured with the freedom of the city.
June 16. Set out for Greenock, pafs again through Renfrew; the country very fine, the lanes for fome fpace well planted on toth fides. Ride over Inchinnan bridge, near which Mathew Earl of Lenox, in 1506, built a magnificent palace; get upon fome high grounds, and, above the feat of Lord Glencairn, have a fine view of the Clyde, Dunbarton, and all the northern More. Reach Greenock; after dimer take boat and crofs into the flire of Lenox, and land where the parilh of Rofncath juts out, and narrows the bay to the breadh of three miles, forming in that part a fort of frait ; the profpect in the middle of this paflage uncommonly fine; a contraft of fertility and favage views; to the eaft were the rich fhores of the thires of Renfrew and Lenox, the pretty feats on the banks, and the wooded penimfula of Ardmore; and to the weft appears the craggy tops of the hills of Argylefhire. Vifit Rofeneath houfe a neat feat of the Duke of Argyle, dated $\mathbf{1 6 3 4}$; the grounds well planted, the trees thriving; in one part of the walks am hewn a precipitous rock, to which I was informed that the hero Wallace was purfued, and obliged to leap down to avoid captivity ; his horfe perifled; the hero efcaped unhurt. This country was the feat of the Mac-Aulays, who liruggled long with the Campbels in defence of their rights, but their genius proved the weaker.

Crofs over the mouth of loch-gair, which runs io the north fix or feven miles up the country, the end overhung with lofty ragged mountains. Vifit Airden capel, a new houfe of Lord Frederic Campbell, fituate on an eminence, commanding a moft beaut. fut view of the Renfrew thore, and the profpect of the ports of Port-Glafgow and Greenock, continually mimated with the movement of fhips, and the bufy haunt of commerce. Ardin-capel was anciently poffeffed by a family of the fame name; but in the time of James III. it was changed to that of Mac-Aulay, from the word Aulay happening to be the Cliriflian name of the owner.

## A VOYAGE TO THE HEBRIDES.

June 17. Go on board the Lady Frederic Campbell, a cutter of 90 tons, Mr. Archibald Thompfon, mafter. Sail at half an hour palt two in the afternoon; pafs on the left, the village and little bay of Gourock, a place of failors and fifhermen; on the
right, the point of Rofeneath, in Lenox; between which, and that of Strone, in Coval, a portion of Argylefhire, opens Loch-Loung, or the loch of thips, which runs north many miles up the country. This is the Skipafiord of the Norwegians, having in their tongue, the fane figuification. 'To this place, in 1263, Haco King of Norwav, detached, with fixty fhips, fome of his officers, who landed and deftroyed all the country round Loch-Lomond *. Immeliately beyond the point of Strone the land is again divided by the Holy-Loch, or Loch-Scant, extending weftward. On its northern thore is Kilmun, once the feat of a collegiate church, founded by Sir Duncan Campbel, in 1442, and fince that time the burial. place of the hou'e of Argyle.

Steer fouth, conveyed rather by the force of the tide than wind; the channel ftrait, and fo narrow as to make every object diftinct. On the eaftern fhore is the fquare tower of Leven, and a little farther projects the point of Cloch. Almolt oppofine, on the weftern fide, are the ruins of the cattle of Dunoon: this fortrefs was poffefled by the Englifh in 1334, but was taken in behalf of David Bruce, by Sir Colin Campbel, of Lockow, who put the garrifon to the fword; in reward he was made hereditary governor, and had the grant of certain lands toward its fupport.

The view down the Firth now appears extremely great : the flire of Renfrew bounds one fide; the hills of Cowal, floping to the water cdge, and varied with woods and corn-lands, grace the other; in front are the greater and the leffir Cumrays, the firf once remarkable for its church, dedicated to St. Columba $t$, nd at prefent for the quarries of beautiful free-ftone; the laft for the abundance of rabbit: the ifle of Bute, with its fertile fhore, lies oblique, and the ftupendous mountains on Arran, foar at fome diftance far, far above.

Am carried by the point and caftle of Towart, the flat fou $n$ extremity of Cowal, leaving on the eaft the fhire of $\Lambda y$ r. Towart is the proper y of the Lamonds, who, during the civil wars, fiding with Montrofe, were befieged in it, and, on the furrender, put to the fword $\ddagger$. At a diftance is pointed out to me, in that county, the fite of Largs, diftinguifhed in the Scottifh annals for the final defeat of the Norwegians in 1263 , which put an end to their invafions, and refored to Scotland the poffeffion of the Hebrides.

Stecr towards the coaft of Bute, and in the evening land at the little point of Squo$\log$, and walk up to Mount-Stewart, the feat of the Earl of Bute; a modern houfe, with a handfome front and wings: the fituation very fine, on an eminence in the midft of a wood, where trees grow with as much vigour as in the more fouthern parts, and extend far beneath on ach fide; and throftles, and other birds of fong, fill the groves with their melody.

The ifle of Bute is about twenty meafured :-ils long; the breadth unequal, perhaps the greatef is five miles; the number ates about twenty thoufand ; of inhabitants about four thoufand; here are two pariihes, Kingarth and Rothefay; at the laft only the Erfe language is ufed. It muft be obferved alfo, that in the laft church were buried two of the bifhops of the ifles $\mathfrak{\xi}$, but whether it was at times the refidence of the prelates docs not appear.

The country rifes into fimall hills, is in no part mountainous, but is higheft at the fouth end. 'Jhe flrata of fone along the fhore from Rothefay bay to Cil-chattan, is a red grit, mixed with pebbles; from the firft, tranfverfe to Scalpay bay, is a bed of flate, which feems to be a continuation of that fpecies of ftone, rifing near Stonehive,

[^140]on the eaftern fille of Scothand, and continued, with fome interruptions, to this illand; but is of a bad kind, both at its orig'n and termination. In the fouth end is foure limefone; fome fpotied ftone, not unlike lava, is found near the fouth end.

The quadrupeds of this illand are hares, polecats, wealels, otters, feals, and as a compliment to the foil, moles. Among the birds, groufe and partridge are found here.

The cuhtivation of an extenfive trat on this eaftern fide is very confiderable. In the article of inclofure, it has the fart of the more fouthern counties of this part of the Kingdon: the hedges are tall, thick and vigorous; the white-thorns and wicken trees; now in full tlower, and about two thoufand acres have been thus improved. The manures are coral and fea-hells, fa-weeds, and lime. I obferved in many places whole thata of corals and theils of a vall thicknefs, at prefent half a mile from the fea, fuch lofies has thai element fuftained in thefe parts. The inland is deftitute of coal, but till much lime is burnt here, not only for private wie, but for exportation at a cheap rate to the ports of Greenock zail Port-Glafgow.

Thr produce or the ifland is barley, oats, and potatos. The barley yields nine from one; the oats four. Turneps and artificial graffes have been lately introduced with cood fuccefs: fo that the inhabitants may have fat mutton throughout the year. A great number of cattle are alfo reared here. The higheft farm here is fixty pounds a year, excepting a fingle fheep farm which renis for two hundred, but the medium is about twenty-five. Arable land is fet at mine or ten fhillings an acre; the price of labourers is cight-pence a day. Rents are at prefent moftly paid in money; the rentroll of the inand is about four thoufand pounds a year. Lord Bute poffeffes much the greater hare, and two or three private gentlemen own the reft.

The air is in general temperate; no mitts or thick rolling fogs from the fea, called in the north a harle, ever infeft this ifland. Snow is fcarcely ever known to lie hore; and even that of lalt winter fo remarkable for its depth and cluration in other places, was in this illand faace two inches decp. The evils of this place are winds and rains, the iaft coming in deluges from the weft.

When the prefent Larl of Bute canse to his eftate, the farms were poffefied by a fet of men, who carried on at the fame time, the profelfion of hufbandry and finhing to the manifell injury of both. His iordhip drew a line between thefe incongruent employs, and obliged each to carry on the bufinefs he preferred, diftinct from the other: yet in juftice to the old farmers, notice muft be taken of their tkill in ploughing even in their rudeft day, for the rilges were frait, and the ground laid out in a manner that did them much credit. But this now arrangenent, with the example given by his bordhip of incloting ; by the encouragement of burning lime for fome, and by tranfporsing gra's to the neareft market the produce of all, has given to this ifland its prefent lowrining afpect.

This ife with that of Arran, the greater and the leffer Cumbray, and Inch-marnoc, form a county under the name of Bute. This ghire and that of Caithnefs fend a member to parliament alternately.

Civil caufes are determined here as in other counties of this part of the kingdom, by the theriff-depute, who is ahways refident: he is the judge in fmaller matters, and has a feiary of about a hundred and fifty pounds a year. Juftices of pace have the fame pouers herr, and oscr the whole county, as in other places; but in North Britain no oher qualifieation is, required, after nominatim, $t$ an taking out their commifions, and giving the ufual oaths.

Criminals are lodged in the county jail at Rothefay, but are removed for trial to Inverary; where the judges of the court of jufticiary meet twice a year for the deternining of criminal caulis of a certain diftrict.
The Earl of Bute is admiral of the county by commifion from his Majefty, but no way dependent on the L,ord Iligh Admiral of Scotland; fo that if any maritime calie occurs within this jurifilition, ('ven crimes of as high a nature as murder or piracy,) his Lordfhip, by virtue of the powers as admiral, is fufficiont judge, or he may delegate his authority to any deputies.
June 18 . Vifit the fouth part of the ifland: riue to the hill of Cil-chattan, a round eminence, from whence is a valt view of all around, infular and mainland. Obferve, on the face of the hills, that the rocks dip almont perpendicularly, and form long columnar flacks, fome oppofing to us their fides, nthers their angles; are hard and cherty, but not bafaltic ; a term I apply to the jointed columns refembling thofe of the giant's cauleway.

Defcend to the ruin of old Kin.garth churst. Two cemeteries belong to it, a higher and a lower; the laft was allotted for the interment of females alone, becaufe in old times certain women being employed to carry a quantity of holy earth, brought from Rome, loft fome by the way, and to incurred this penalty for their negligence, that of being buried feparated from the other fex.

Near this place is a circular inclofure called the Devil's Cauldron: it is made of fone, of excellent mafonry, but without mortar, having the infide faced in the moft fmooth and regular manner. The walls at prefent are only feven feet fix inches high, but are ten feet in thicknefs; on one fide is an entrance, wide at the beginning, but grows gradually narrower as it approaches the area, which is thirty feet dianneter.

Mr. Gordon has engraven in tab. iii. a building fimilar to this, near the courfe of the wall, called Cairn-fual, and fyles it a caltellum. This, I prefume, could never have been defigned as a place of defence, as it is fituated bencath a precipice, from whofe fummit the inmates might infantly have been oppreffed by fones, or miffile weapons; perhaps it was a fanctuary, for the name of the church, Kin garth, implies, kin, chicf or head, garth * a fanctuary; the common word for places of refuge, girth being corrupied from it.

The fouth end of Bute is more hilly than the reft, and divided from the other part by a low fandy phain, called Langal-chorid, on which are three great upright tones, the remains of a druidical circle, originally compofed of twelve.

Return over a coarte commry, and pafs by lands lately incloled with hedges, growing in a very profperous manner. Pafs by loch afcog, a fmall piece of watcr, and foon after by Loch-fal, arout a mile and three quarters long, narrow, rocky on one fide, pretily wooded on the other. The other loehs are Loch-Quyen, and Loch-Greenan, and each has its river. Reach Rohefay, the capital; a fmall but well-built town, of fmall houfes, and atout two hundred families, and within thele few years much improved. The females fipin yars, the men fupport themfelves by fifling. The town has a good pier, and lies at the bottom of a fine bay, whofe mouth exatly opens oppofite to that of Loch-Streven in Cowal: here is a fine depth of water, a fecure retreat, and a ready naviration down the lirila for an export trade; magazines for goods for foreign parts might molt advantageondy be effablihed here.

The calle has been built at different times, the prefent entrance by Robert III. the relt is quite round, wihh sumbl towers at the fides, and is of unknown antiquity.

Hublec *, grandfon of Somerled, was killed in the attack of a caftle in Bute, perhaps of this. Haco $t$ took the cafle and whole ifland in the year $126_{3}$. It was feized by Edward Baliol in $1334 \ddagger$, when poffefed by the high fteward of Scolland, a friend of the Bruces, and heir to the crown. In the year following the whole ifland, as well as that of Arran, was ravaged by the Englifh, under the command of Lord Darcy, Lord Juftice of Ireland. Soon after the natives of Arran and Bute arofe §, and, unarmed, made an attack with fones on Alan Lile, the Englifh governor, put his party to flight, and recovered the fortrefs. It became in after-times a royal refidence: Robert lit. $H$ lived there for a confiderable time; much attention was beltowed on it, for in the reign of James V. we find that one of the articles of accufation againft Sir James Hamilton, was his not accounting for three thoufand crowns, deftined to reform the caftle and palace of Rofiay IT. In 1544, the Earl of Lenox, affilted by the Finglifh, made himfelf mafter of the place; and in the beginning of the laft century (on what occafion I do not recollect) it was burnt by the Marquis of Argyle.

Bute is faid to derive its name from Bothe, a cell, St. Brandan having once made it the place of his retreat; and, for the fame reafon, the natives of this ine, and alfo of Arran, have been fometimes fyled Brandani. It was from very early times, part of the patrimony of the Stuarts: large poffeflions in it were granted to Sir John Stuart, natural fon of Robert II. by one of. his miftrefles, but whether by his beloved More or Moreham, or his beloved Mariota de Cardny, is what I cannot determine "i.

Continue our ride along a hilly country, open, and under tillage; palt on the right, the caftle and bay of Cames, long the property of the Bannentynes; turn to the weft, defcend to the fhore, and find our boat ready to convey us to the veffel, which lay at anchor a mile diftant under Inch-marnoc.

An ifland fo called from St. Marnoc, where appear the ruins of a chapel, and where (according to Fordun $t+$ ) had been a cell of monks. The extent of this little ille is about a mile, has a hundred and twenty acres of arable land, forty of bruhh-wood, near three hundred of moor, and has vaft frata of coral and fhells on the weft fide. It is inhabited by a gentleman on half-pay, who, with his family occupies the place under Lord Bute.

June 19. Weigh anchor at threc o'clock in the morning; am teized wihin calins, but amufed with a fine view of the circumambient land; the peninfula of Cantyre, here lofty, floping, and rocky, divided by dingles, filled with woods, which reach the watcr-edge, and expand on both fides of the hollows; Inch-marnoc and Bute lie to the eaft; the mountainous Arran to the fouth; Loch-fine, the Sinus Lelalonnius of Ptolemy, opened on the north, between the point of Skipnifh in Cantyre and that of Lamond in Cowal, and fhewed a vaft expanfe of water wildly bounded; numbers of herring-buffes were now in motion, to arrive in time at Campbeltown, to receive the benefit of the bounty, and animated the fcene.

Turn northward, leave the point of Skipnifh to the fouth-weft, and with difficulty get through a ftrait of about a hundred yards wide, with funk rocks on both fides, into the fafe and pretty harbour of the caftern L.och-Tarbat, of capacity fufficient for a number of fhips, and of a fine depth of water. The feenery wais pifturefque; rocky little iflands lie acrofs one part, fo as to form a double port; at the bottom extends a fmall village, on the Cantyre fide is a fquare tower, with velliges of other ruins,

[^141]built by the family of Argyle to fecure their northern dominions from the inroads of the inhabitants of the peninfula; on the northern fide of the entrance of the harbour the rocks are of a moft grotefque form : valt fragments piled on each other, the faces contorted and undulated in fuch figures as if created by fufion of matter after fome intonfe heat; yet did not appear to me a lava, or under any fufpicion of having been the recrement of a volcano.

Land at the village, where a great quantity of whiky is diftilled.
Vifit the narrow neck of land which joins Cantyre to South Knaplale; it is fcarcely a mile wide, is partly moraffy, partly interfected by ftrata of rocks, that are dipping continuations from the adjacent mountains of each diftrict. There have been plans for cutting a canal through this ifthmus to facilitate the navigation between the weftern ocean and the ports of the Clyde, and to take away the necefity of failing through the turbulent tides of the Mull of Cantyre: it is fuppofed to be practicable, but at vaft expence; at an expence beyond the power of North Britain to effect, except it could realize thofe fums which the wifles of a few of its fons had attained in idea. While I meditate on the project, and in imagination fee the wealth of the Antilles fail before me, the illufion burfts, the fhores are covered with wrecked fortunes, real diftrefs fucceeds the ideal riches of Alnafchar, and difpels at once the beautiful vifion of Aaron Hill *, and the much aftected traveller.

Afcend a fmall hill, and from the top have a view of the weftern Loch-Tarbat, that winds along for about twelve miles, and is one continued harbour, for it has eight fathom water not very remote from this extremity, and opens to the fea on the wett coaft, at Aird-Patric : the boundaries are hilly, varied with woods and tracts of heath; the country yields much potatoes and fome corn, but the land is fo interrupted with rocks, that the natives, intead of the plough, are obliged to make ufe of the fpade.
The time of the tides vary greatly at the terminations of each of thefe harbours: at this the flood had advanced in the eaft loch full three quarters, in the other only one hour. According to fome remarks Mr. James Watts of Glafgow favoured me with, the foring-tides in Eaft-'Tarbat flow ten feet fix inches; in Welt-1"arbat only four feet fix inches, or, in very extraordinary tides, two feet higher. The tides in the weft loch are moft irregular: fometimes neither ebb nor flow; at other times ebb and flow twice in a tide, and the quantity of falle ebb is about one foot. The mem height of the firth of Clyde is greater than that of Wef-Tarbat.
It is not very long fince veffels of nine or ten tons were drawn by horfes out of the weit foch into that of the ealt, to avoid the dangers of the Mull of Cantyre, fo dreaded and fo little known was the navigation round that promontory. It is the opinion of many that thefe little illhmufes, fo frequently ftiled Tarbat in North Britain, took their name from the above circumftance ; tarruing fignifying to draw, and bata, a boat. This too mught be called, by way of pre-eminence, the tarbat, from a very fingular circumItance related by Torfzus t. When Magnus the Barefooted, King of Norway, obtained from Donald-bane of Scotland the ceffion of the weftern ines, or all thofe places that could be furrounded in a boat, he added to them the peninfula of Cantyre by this fraud: he placed himfelf in the itern of a boat, held the rudder, was drawn over this narrow tract, and by this fpecies of navigation wrefted the country from his brother monarch.

In the afternoon attempt to turn out, but am driven back by an adverfe gale.

June 20. Get out early in the morning into the fame expanfe as before : land on Inch-Bui, or the yellow ifle; an entire rock, covered with the lichen paictinus. Sail by lnci-Skaite; amufed by the fporting of feals. Hail a fmall fifhing,boat, in order to purchate fome of its cargo: ana anfwered by the owner that he would not fell any, but that part was at my fervice; a piece of generofity of greater merit, as in this fcarce feafon the fubitance of the whole family depended on the good ferrune of the day. 'Hhus in chefe parts hofpitality is found even among the mof andigent.

Noft of the monang was paffed in a dead calm: in the afternoon fucceoled brik gales, but from points not the moft favourable, which occafioned frequent tacks in fight of port: in onc broke our top-fail yard. During thefe variations of our courfe, had good opfortunity of obferving the compofition of the ifle of Arran: a feries ef vall mountains, running in ridges acrofs the whole; their tops troken, ferrated, or fpiring; the fummit of Goatfich ring far above the reft, and the fides of all floping towards the water edge; a fcene, at th's diftance, of favare fterility.

Another calm within two miles of land: take to the boat, and approach LochRanza, a fine bay, at the norti end of the ifle of Arran, where 1 land in the evening. The approach was magnificent: a fine bay in front, about a mile deep, having a ruined cafte ncar the low er end, on a low far projecting neck of land, that forms another harbour, with a narrow paflige; but within has three fathom of water, even at the loweft cbb. Beyond is a little plain watered by a fream, and inhabited by the people of a finall village. The wions is environed with a theatre of mountains; and in the back ground the ferrated crags of Grianan-Athol fuar above.

Vifit the cafte, which confifts of two fquare parts united, built of red grit tone: in one room is a chimney-picce, and fre-place large cough to have roafted an ox; but now frewed with the inclls of limpets, the bard fare of the poor people who occafromally take refuge here.

This fortrefs was founded by one of the Scotifh monarchs, and is of fome antiquity; for Fordun, who wrote about the yar 1380 , fpeaks of this and Brodie as royal cantles.

The village of Ranza and a fmall church lie a little farther in the plain: the laft was founded and endowed by Anne Duchefs of Hamilton, in aid of the church of Kilbride, one of the two parifhes this great illard is divided into.

Aminformed of a betking thark that had been harpooned fome days before, and lay on the fhore on the oppofite fide of the bay. Crofs over to take a view of a fifl to rarcly to be met with in other parts of Great Britain, and find it a monfter, notwith. flanding it was much inferior in fize to others that are fometimes taken; for there have been inflances of their teing from thirty fix to forty feet in length.

This was thenty-fern feet four inches beng. The tail comitted of two unequal lobes; the upper five feet long, the upper three. The circumference of the boiy yreat ; the thin cincreat, and rough. The upper jaw much longer than the lower. The tecth minute, difphed in number: along the jaws. The eyes placed at only fourtern iaches diflance trom the tip of the nee. The apertures to the gills very long, and furnifled with framers of the fubtance of whalebone.

Thefe rinate called in the Firfe Cairban, by the Scotch Sail-fig, from the appearance of "e don ans above vater. They inhatit moft parts of the weftern coatts of the northern feas: Limaus fays within the acetic circle ; they are found lower, on the coall of Norway, about the Oriney ince, the Hebrides, and on the coalt of Ireland in the bay of Balithamm, and on the Welch coatts about Anglefon. They appear in the firh in Jum in fimall floals of feren or cight, continue there thll the end of July, and
then difippear. They are moft inoffenfive filh ; feed either on exanguious marine animals, or an alge, nothing being ever found in their fomachs except fome diffoived greenif watter.

They fwim very deliberately with their two dorfal fins above water, and feem quiefcent as if anfeep. They are very tame or very ftupid, and permit the near approach of man : will fuffer a brat to follow them without accelerating their motion, till it comes almoft within contact, when a harpooner ttrikes his weapon into the fifh as near the gills as polfible; but they are often fo infenfible as not to move until the united frength of two men has forced in the harphon deeper: as foon as they perceive themfelves wounded, they fling up their tail and plunge headlong to the bottom, and frequently coil the rope round them in their agonies, attenpting to difengage themfelves from the weapon by rolling on the ground, for it is often found greatly bent. As foon as they difcover that their efforts are in vain, they fwim away with anazing rapidity, and with fuch violence that a veffel of feventy tons has been towed by them againft a frefh gale : they fometimes run off with two hundred fathoms of line, and with two harpoons in them; and will find employ to the fifhers for twelve and fometines twenty-four hours before thcy are fubdued. When killed they are either hauled on fhore, or if at a diftance, to the veffel's inde. The liver (the only ufeful part) is taken out and melted into oil in veffels provided for that purpofe: a large fifh will yield eight barrels of oil, and two of fediment, and prove a profitable capture.

The commidioners of forfeited eftates were at confiderable expence in encouraging this fpecies of fifhery; but the perfon they confided in moft fhamefully abufed their goodnefs; fo at prefent it is only attempted by private adventurers.

Return, land again and walk through a pretty wood of fmall trees, $\mathrm{u}_{\mathrm{p}}$ the fide of a hill that bounds the wettern fide of the bay. A gigantic frog *, of the fpecies called by Linnæus, Bombina, prefented itfelf on the path. In the courfe of our ramble, fall in with the manfe, or minifter's habitation; pafs a cheerful evening with him, and ineet with a hearty welcome, and the beft fare the place could afford. Return to our fhip, which had anchored in the bay.

June 2i. Procure horfes, and (accompanied by Mr. Lindfay, the minifter) ride up the valley, crofs the little river Ranza, and leave that and a corn-mill on the right. Afcend the fteeps of the barren mountains, with precipices often on the one fide of our path, of which our obftinate fteeds preferred the very margin. See to the weft the great crags of Grianall-Athol, with eagles foaring over their naked fummits. Pafs through woods of birch, fmall, weather-beaten, and blafted: defcend by Mac farlane's Carn, crofs the water of Sannocks, near the village of the fame name: fee a lnw monumental flone; kerp along the eaftern coaft; hear a fermon preached beneath a tent formed of fails on the beach ; the congregation mumerons, devout, and attentive, feated along the fhore, forming a groupe picturefque and edifying.

Dine at the Corry, a fivall houfe belonging to a gentleman of Ayrfhire, who vifits this place for the benefit of goats whey.

Much barrennefs in the morning's ride: on the mountains were great maffes of moorfone; on the fhore, mill-ftone red grit-Itoue.

The ride is continued along the coaft beneath la w cliffs, whofe fummits were cloathed with heath that hung, from their margins, and icused to diftil fhowe: i crytalline water from every leaf, the effect of the various fprings above. Meet a : wock of goats, fkipping along the fhore, attended by their herdfiman; and obferved them collecting as they went, and chewing with great delight, the fea plants. Reach

$$

Brodie cafte, feated on an eminence amidft flowinhing plantations, ahove a fmall bay, open to the eaft. This place has not at prefent inuch the appearance of a fortrefs, having been modernized; is inh bited by the Dake of Hamilton's agent, who entertained me with the utnolt civiluy. It is a place of much antiquity, and feems to have been the fort held by the Englith under Sir Jonn Haltings in is 1, when it was.furprifed by the partizaus of Robert Bruce, and the garrifon put to the fivord. It was demolifhed in 1456 by the Earl of Rofs, in the reign of James II. ; is laid to have becn rebuilt by James V., and to have been garrifoned in the time of Cromwell's whepato:Few are the records preferved of thefe diltant plates, thercfore very wide mut be theis hiftoric gaps.

Arran, or properly Arrinn, or the ifland of moamins, ferms not to have ben noticed by the incients, notwithftanding it mult have been known to the Romans, wlofe navy, from the time of Agricola, had its flation in the Clota Dilluarium, or the firth of Clyde: Camden indeen makes this illand the Glota of Antonine, but wo fuch name occurs in his itinerary; it therefore was beftowed on Arran by fome of his commentators.

By the immenfe cairns, the valt monumental ftones, and many reliques of dradifm, this ifland muf have been confderable in very ancient tiries. II ae are atill tadtitions of the hero Fingal, Win-mac-coul, who is fuppoted here to have enjoyed th: pleafures of the chace; whd many flact win his mame : but I can difcover nothing but ora! hiftory that relates to the uland, id the the of Magnus the Barefooted, the Norwegian vitor, who probably included ir an inti: onquets of Cantyre *. If he did not con. quer that ifland, it was certainly incheded amath thofe that Donald-bane was to cede; for it appears that Achot, one of ie isecelors of Magnus, in 1253, laid claim to Arran, Bute, and the Cumays, in conisquence ot that promife : the two firlt he fubdued, but the defeat he met with de Largs foon obliged him to give up his conquefts.

Arran was the propert; of the crowa: Robert Bruce retired here during his diftreffes, and met with protection from his faithful vafials: numbers of them followed his fortunes; and after the battle of Bannockbourn he rewarded feveral, fuch as the Mac-cooks, Mac-kinnons, Mac-brides, and Mac-louis, or Fullertons, with different charters oi lands in their natise country. All thefe are now abforbed by this great fausily, except the Fullertons and a Stuart, defeended from a fon of Robert III, who gave him a fettenont here. In the time of the Dean of the illes, his defendant poffeled calle Douat; an.l" he and his bluil," fays the dean, "are the bett men in that countrey."

The manner in which Robert Bruce difeovered his arrival to his friends, is fo defcriptive of the femplicity of the times, that it merits notice, in the very words of the faithful old poet, hiltorian of that great prince:
The King then blew lis lorn in hy,
And gare lis men that were him by,
Fiold then !ill in pavitic :
And Gya agaiu his horn llew he :
James of Dow ghs heard lime blew,
And well the blatl feon can he kiuw:
Aad find turclie yon is the King,
I ken lim well by inis blowing:
The thisd sime therewilla als he blew,
And then sir Rulbert bloyut him knew,
Aal faid. you is the King bue died,
Gu we will forth to him groed fped.
Barbour.

About

About the year 1334 this ifland appears to have formed part of the eftate of Robert Stuart, great Iteward of Scotland, afterwards Roisert II. At that time * the inhabitants took arins to fupport the caufe of their mafter, who afterwards, in reward, not only granted at their requeft an immunity from their annual tribute of corn, but added feveral new privileges, and a donative to all the inhabitants that were prefent.

In 1456 the whole inland was ravaged by Donald Earl of Rofs, and lord of the ines. At that period it was fill the property of James II. ; but in the reign of his fucceffor, James lil., when that monarch matched his fifter to Thomas Lord Boyde, he created him Earl of Arran, and gave hin the illand as a portion: foon after, on the difgrace of that fanily, he caufed the countefs to be divorced from her unfortunate hufband; and beftowed both the lady and ifland on S:r James Hamilton, in whofe family it continues to this time, a very few farms excepted.

Arran is of great extent, being twenty-three miles from Sgreadan point north to Beimean fouth; and the numbers of inhabitants are about feven thoufand, who chiefly iuhabit the coafts; the far greater part of the country being uninhabitable by reafon of the yaft and barren mountains. Here are only two parifhes, Kilbride and Kilmore, with a fort of chapel of eafe to each, founded in the laft century, in the golden age of this illand, when it was bleft with Anne Duchefs of Hamilton, whofe amiable difpofition and humane attention to the welfare of Arran, render at this diftant time her memory dear to every inhabitant. Bleffed pre-eminence! when power and inclination to diffufe happinefs concur in perfons of rank.

The principal mountains of Arran are, Goat-field, or Gaoil-bheinn, or the mountain of the winds, of a height equal to moit of the Scottifh Alps, compofed of immenfe piles of moor-ftone, in form of woolpacks, cloathed only with lichens and moffes, inhabited by eagles and ptarmigans. Beinn-bbarrain, or the fharp-pointed; Ceum-na-caillich, the ftep of the carline or old hag; and Grianan-Athol, that yields to none in ruggednefs.

The lakes are Loch-jorfa, where falmon come to fpawn; Loch tana; Loch-na-hjura, on the top of a high hill ; Loch-mhachrai, and Loch-knoc-a-charbeil, full of large eels. The chief rivers are, Ablan-mhor, Moina-mhor, Slaodrai-machrai, and Jorfa; the two laft remarkable for the abundance of falmon.
The quadrupeds are very few : only otters, wild cats, fhrew mice, rabbits, and bats : the ftags which ufed to abound are now reduced to about a dozen. The birds are agles, hooded crows, wild pigcons, ftares, black game, grous, ptarmigans, daws, green plovers, and curlews. Mr. Stuart, in aftending Goat-field, found the fecondary feather of an eagle, white with a brown fpot at the bafe, which feemed to belong to fome naknown feecis. It may be remarked that the partridge at prefent inhabits this intand, a prof of the advancement of agriculture.

The climate is very fevere: for befides the violence of winds, the cold is very rigorous; and frow lay here in the vallies for thirteen weeks of the laft winter. In fummer the air is remarkably falubrious, and many invalids refort here on that account, and to drink the whey of gants milk.

The principal difale here is the pleurify: fmall-pox, meafles, and chin-cough vifit the inond nee in svence-sight years. The practice of bleeding twice evcry year ferme to bav. amedela a preventative agand the pleurify; but it is now performed with $\therefore$ smott regularis, at fpring and fall. The Duke of Hamilton keeps a furseon in finy, who at thofe femuns makes a tore of the inand. On notice of his appruw, the

[^142]1. 2. 2
ionatume
inhabitants of each farm affemble in the open air, extend their arms, and are bled into a hole made in the ground, the conmon receptacle of the vital fluid.

In burning fevers a tea of wood forrel is ufed with fuccefs, to allay the heat.
An infufion of ramions, or allium urfinum in brandy, is efteemed here a good remedy for the gravel.

The men are ftrong, tall and well made; all fpeak the Erfe language, but the ancient habit is entirely laid afide. Their diet is chiefly potatoes and meal; and during winter fome dried mutton or goat is added to their hard fare. A deep dejection appears in general through the countenances of all: no time cin be fpared for amufement of any kind; the whole being given for procuring the means of paying their rent, of laying in their fuel, or getting a fcanty pittance of meat and cloathing.

The leafes of farms are nineteen years. The fucceeding tenants generally find the ground little better than a cap:ut mortuun; and for this realon, fhould they at the expiration of the leafe leave the lands in a good ftate, fome avaricious neighbours would have the preference in the next fetting, by offering a price more than the perfon who had expended part of his fubfance in enriching the farm could polibly do. This induces them to leave it in the original thate.

The incthod of letting a farm is very fingular : each is commonly poffeffed by a number of finall tenants; thus a farm of forty pounds a year is occupied by eighteen different people, who by their leafes are bound, comjunctly and feverally, for the payment of the rent to the proprietor. Thefe live in the farm in houfes cluftered together, fo that each farm appears like a little village. The tenants anmually divile the arable land by lot ; each has his ridse of land, to which he puts his mark, fuch as he would do to any writing ; and this fpecies of farm is called run-rig, i. e. ridge. 'They join in ploughing : every one keeps a horfe or more; and the number of thofe animals confume fo much corn as often to occafion a fcarcity ; the corn and peas raifed being (much of it) defigned for their fubfiftence, and that of the cattle, during the long winter. The pafture and moor-land annexed to the farm is common to all the poffeffors.

All the farms are open. Inclofures of any form, except in two or three places, are quite unknown: fo that there mult be a great lofs of time in preferving their corn, \&c. from trefpafs. The ufual manure is fea plants, coral, and fhells.

The run-rig farms are now difcouraged; but fince the tenements are fet by roup, or auction, and advanced by an unnatural force to above double the old rent, without any allowance for inclofing: any example fet in agriculture ; any fecurity of tenure, by lengthening the leafes, affairs will turn retrograde, and the farms relaple into their cid tate of rudenefs; migration will increafe (for it has begun), and the rents be reduced even below their former value: the late rents were fcarce twelve hundred a year ; the expected rents three thoufand.

The produce of the iffand is oats, of which about five thoufand boils, each equal to nine Winchefter buflels, are fown: five hundred of beans, a ferw pas, and above a thoufand bolls of potatoes, are annually fet; notwithltanding this, five hundred bolls of oat-meal are annually imperted to fubfift the natives.

The live llock of the ifland is 3183 milch cows; 2000 cattle, from one to three years old; $105^{8}$ horfes; 1500 theep; and 500 goats; many of the two latt are killed at Micharlmas, and dried for winter provifion, or fold at Grenock. The catte are fold from forty to fifty fhillings per head, which brings into the illand about 12001 . per annum: I think that the fale of horfes alfo brings in about 300 . Hogs were introduced here only two years ago. The herring-fifhery round the ifland brings in 3001. ; the fate of herring-ncts 1001 .; and that of thread about 300l, for a good deal of fax is fown
here. Thefe are the exports of the ifland ; but the money that goes out for mere neceflaries is a melancholy drawback.
the women manufacture the wool for the cloathing of their families; they fet the potatoes, and drefs and fpin the flax : they nake butter for exportation, and cheefc for their own whe.

The inhabitants in general are fober, religious, and induftrious: great part of the fummer is employed in getting peat for fuel, the only kind in ufe here; or in building or repairing their houfes, for the badnefs of the materials requires annual repairs: before and after harveft they are bufied in the herring-fifhery; and during winter the men make their herring-nets; while the women are employed in fpinning their linen and woollen yarn. The light they often ufe is that of lamps. From the beginning of February to the end of May, if the weather permits, they are engaged in labouring their ground: in autumn they burn a great quantity of fern to make kelp: fo that, excepting at new-year's-day, at marriages, or at the two or three fairs in the ifland, they have no leifure for any amufements ; no wonder is there then at their depreffion of firits.

This forms part of the county of Bute, and is fubject to the fame fort of government : but befides, jultice is adminittered at the baron's baily-court, who has power to fine as high as twenty fillings; can decide in matters of property, not exceeding forty fhillings; can imprifon for a month : and put delinquents into the flocks for three hours, but that only during day time.

June 22. Take a ride into the country: defcend into the valley at the head of the bay; fertile in barley, oats, and peas. See two great fones, in forni of columns, fet erect, but quite rude; thefe are common to many nations; are frequent in North Wales, where they are called Main-hirion, i. e. tall ftones, Meini-gwir, or men pillars, and Lleche: are frequent in Cornwall, and are alfo found in other parts of our illand : their ufe is of great antiquity; are mentioned in the Mofaic writings as memorials of the dead, as nomuments of friendhip, as marks to diftinguifh phas of worfhip, or of folemn affemblies *. The northern nations erected them to perpetute the memory of great actions, fuch as remarkable due's; of which there are proofs Luth in Denmark and in Scolland; and the number of ftones was proporionable to the "umer of great men who fell in the fight $t$ : but they were befides erected merely as fepulchral for perfons of rank $\ddagger$, who deferved well of their country.

Not far from hence is a flone, the moft fingular that I ever remember to have feen, and the only one of the kind that evertell within my obfervati u: this lies on the ground, is twelve fect long, two broad, one thick; has at one end the rude attempt to carve a had and floulders, and was certainly the firf deviation from the former fpecies of monument ; the firlt ellay to give to flone a refemblance to the human body. Alt that the native. fay of this, that it was placed over a giant, and is called Mac Bhrolchin's stone.

Afend a fleep hill, with vaft gullies on the fide; and, on . . . . ing, arrive in a plain inhabited by curlews, reforting there to breed, and which ase.v rom d our heads like lapwings. At a place called Muni quil is a fmall circle of fimall itones, placed clofe to each other : whether a little druidical place of worfhip, or of atfenbly; or whether

[^143]a family place of fepulture, as is ufual * with the northern nations, is rot eafy to determine. If an urn is found in the coutre of this coronet, as is not uncommon, the doubt will ceafe.
Pafs by the river Machrai, Hlowing through a rocky channel, which, in one part has worn through a rock, and left fo contracted a heip at the top as to form a very eafy ftep a.crols. Yet not long ago a poor woman in the attempt, after getting one foot over, was ftruck with fuch horror at the trenori: "tont ueneath, that the remained for fome hours in that attitude, not daring ${ }^{+}$) w..... wher fout over, till fome hand paffenger luckily came by, and athlled her ont her diftrefs.
Arrive at lormore, an extenfive phan of good gromd, but quite in a fate of na. ture : feems formerly to have been cuhivata, for there appear feveral veftiges of dikes, which might have ferved as houndaries. There is a tradition that in old times the flores were covered with woods; and this was the habutable part.

The want of trees in the internal part at prefent, and the lin." inaner in which they grow about Brodie, favour this opinion.

On this plain are the remains of four circles, in a line, extending N. E. by S W.; very few fones are flanding to perfect the inclofire, but thofe are of a great fize; and ftand remote from each othe". One is fifteen feet high and cleven in circumference. On the outfide of thefe circllw are two others: one difiers from all I have feen, confifting of a double circle of tones and a mound within the leffer. Near thefe are the reliques of a fone cheft, iomed of five that flones, the length of two yards in the infide: the lid or top is lofl. In the middle of thefe repofitories was placed the urn tilled with the afhes of the dead to prevent its bing broken; or to keep the earth from mixing with the burnt remains. In all probability there had been a cairn or heap of fones above.

By the number of the circles; and by their fequentred fituation, this feems to have been facred ground. Thefe circles were formed for religious purpoles: Boethius relates, that Mainus, fon of Fergus I. a reftorer aad cultivator of reitgion after the Egyptian manacr (as he calls it) inftituted feveral new and folem ceremonies: and cauted great fones to be placed in form of a circte; the hrapelt was fituated towards the fouth, and ferved as an altar for the facrifies to the immortal gods i. Boethius is right in part of his account: but the object of the worthip was the fun $\ddagger$, and what confirms this, is the fituation of the altar pointed towards that luminary in his meridian glory. In this place the altar and many of the llones are lofl: probably carried to build houfes and dikes not very remote from the place.
At a fimall diftance farther is a cairn of a molt tlupendous fizs. formed of great pebbles: which are preferved from being icatrared fobout by a circle ot hirge flones, that furround the whole bate: a circumfance fometimes wifal in thate monumental heaps $\subseteq$.

Defeend through a narrow cleft of a rock to a part of tio weflern fiore called Drum-anduin, of the ricie of the fort, from a round tower that flands abse. Thas beach is bounded by cliffs of whitioh grit fone, bohluwad banati, into valt caves. The moft remarkable are fhofe of Fin-mace-cuil, or Fingal, the fon o! ('umbal, the father of

[^144]Offian, who, tradition fays, reff in this ifland for the fake of hunting. One of thefe caverns is a hundred and twa lve feet long, and thirty high, narrowing to the top like al $\mathbf{G}$ othic arch; towards the end it branches into two: within thefe tao receffes, which penetrate siar, are on each fide feveral fmall holes, oppofite to each other: in thefe were placed craverfe bams, that held the pots in which the heroes feethed their venifon; or probably, according to the mode of the times, the bags form-d of the fins of amimals flain in the chace, which were filled with flefh, and ferved as $k$ ttles fufficiently flrong to warm the contents; for the heroes of old devoured their meat half raw $\dagger$, holding, that the juices contained the beft nourifhment.
On the front of the divifion between thefe receffes, and on one fide, are varions very rude figures, cut on the thone, of men, of animals, and of a clymore or two handed fword: but whether thefe were the amufements of the Fingallian age, or of after times, is not eafy to be afcertaned; for caves were the retreats of pirates as well as hero s. Here are feveral other hollows adjacent, which are fhewn as the ftable, cellars and dog-kennel of the great Mac-cuil: one cave, which is not honoured with a name, is remarkably fine, of great extent, covered with a beautiful fat roof, and very well lighted by two augult arches at each end : through one is a fine perfpective of the promontory Carn-baan, or the white heap of fones whofe fide exhibits a long range of columnar rocks (not bafaltic) of hard grey whin fone, refling on a horizontal flratum of red fone : at the extremity one of the columns is infulated, and forms a fine obclifk.

Afier riding fome time along the fhore, afcend the promontory: on the fummit is an ancient retreat, fecured on the land fide by a great dike of loofe ftones, that inclufes the acceffible part; within is a fingle flone, fet erect; perhaps to mark the fpot where the chieftain held his council, or from whence he delivered his orders.

From this ftone is a line view of Cantyre, the weltern fide of Arran, being feparated from it by a frait about eight miles wide.

Leave the hills, and fee at Feorling another fupendous cairn, a hundred and fourteen feet over, and of a valt height; and from two of the oppofite fides are two valt ridges; the whole formed of rounded flones, or pebbles, brought from the fhores. Thefe immenfe accumulations of fones are the fepulchral protections of the heroes among the ancient natives of our illands: the ftone-cheft, the repofitory of the uras and afthes, are loiged in the earth beneath; fometimes one, fometimes more, are found thus dep, lited; and I have one inftance of as many as feventeen of thefe thone chefts being difcoved under the fame cairn. 'The learned have afligned other caules for thefe heaps of thones; have fuppofed them to have been, in times of mauguration, the places where the chieftian eleet flood to thew himfelf to the beft advantange to the people; or the place from whence judgmens was pronounced ; or to have bean erected on the roal fide in honour of mercury; or to have been formed in memory of fome folemn compact $\ddagger$. Thefe might have been the reatons, in fome intances, where the evidences of tone chefts and urns are wanting ; but thofe generally are found to overthrow all other fyitems.
'Thefe piles may be jufly fuppofed to have been proporticned in fize to the rank of the perion, or to his popularity: the people of a whole ditrict allembled to fhew their relpect to the deceafed, and, by an ative honouring of his memory, foon accumulated heaps equal to thote that attonith us at this time. But thefe honours were not merely thofe of the day; as long as the memory of the deceated exilicel, not a paffenger went

[^145]by without adding a ftone to the heap: they fuppofed it would be an honour to the: dead, and acceptable to his manes.

> Quanguam feflinas, non eft mora longa : licebit
> Injecto ter pulvere, curras.

To this noment there is a proverbial expreffion among the Highlanders allufive to the zld practice: a fuppliant will tell his patron, " Curri mi cloch er do charne "," I will add a ftone to your cairn, meaning, when you are no more I will do all polfible hosour to your memory.

There was another fpecies of honour paid to the chieftains, that I helieve is ftill retained in this inand, but the rofon is quite loll : that of fwearing by his name, and paying as great a refpect to that as to the mof facred oath $t$ : a familiar one in Arran is, by Nail: it is at prefent unintelligible, yet is fufpected to have been the name of fome ancient hero.

Thefecairns are to be found in all parts of our inands, in Cornwall, Wales, and all parts of North Britain; they vere in ufe among the northern nations; Dahlberg, in his $323^{d}$ plate has given the figure of one. In Wales they are called Carneddau; but the proverbtaken from them, with us, is not of the complimental kind: "Karn ar dy ben," or, a cairn on your head is a tok en of imprecation.

Dine at Skeddag, a fmall hamket: after dinner, on the road fide, fee, in Shifkin or Seafgain church yard, a tomb flone called that of St. Maol Jos, that is, the fervant of Josiss. The faint is reprefented in the habit of a prieft, with a chalice in his hands, and a crofier by him: the flone was broken about half year age by fome facrilegious tellow, in feareh of treafure ; but an inander, whoftood hy, aflured me, that the attempt did not go unpumifhed, for foon after the andacious wretch was vifited with a broten leg.

St. Maol-Jos was a companion of St. Columba: the lat chofe Jona for the place of his refidence; this faint fixed on the little ifland of Lamlafh, and officiated by turns at Shifkin, where he died at the age of a hundred, and was there interred.

In this evening's ride pafs by fome farms, the only cultivated tract in the internal parts of the country : faw one of forty pounds a year, which had fixty acres of arable land annexed to it. Am informed that the general fize or value of farms was eight or nine pounds a year.

Return to Brodic calle.
June 23. Take a ride to vifit other parts of the ifland: go through the village of Bredie, at a fmall ditance beneath the callle. Vifit Glencloy, a plain, on which are five earthen tumuli, or barrows, placed in a row, with another on the outfide of them: on the top of one is a depreffion, or hollow; on that of another is a circle of ftones, whofe ends jutt appsur above the earin. 'thefe are probably the memorial of fome hattle: the common men were placed beneath the plain barrows; the leaders under thofe diftinguilhed by the flones.

Pafs by the tuins of Kirk-michel chapel : vifit Mr. Fullerton, defcended from the Mac-luais, originally a Freuch family, but fettled in this illand near leven hundred years. Ite is rne of the leffer proprictors of this ifland: his farm is neat, well cultivated, and inctofed with very thriving hedges. Robent Bruce, out of gratitude for the protection he received from this genteman's anceftor, Fergus Fullerton, gave him a charter dated at Arnele, Nov. 26, in the $2 d$ year of his reign, for the lasds of killmichel and Ary whonyne, or Stwith-ouglilian, which are llill in the family.

[^146]Amile farther is a retreat of the ancient inhab:tants, called Torr-an-fchian cattlo, furrounded with a great ftone dike. Here Robert Bruce theltered himfelf for fome time, under the protection of Mac-Louis.

Two miles farther ealt, near the top of a great hill Dunfuin, on the brow, is a great Atratum of moft fingular ftone, of a dull backegreen calt, fmooth glofly furface, thattery in its compofition, femi-tranfparent, in fmall pieces, and of a mott vitroous appearance: it fometimes breaks into forms rather reruhar, and like thofe of that fpecies called Iceland cryftal; but cannot be reduced to that ciafs, as it frikes fire with ftect, and refufes to ferment with acids. Some pieces, more: :nature, break like glafs; of which it feems an imperfect lipecies, lefs pure than the Iceland agate *, and like that to have been the effect of a volcano.

The other foflil productions of this ifland, that I had an opportunity of feeing, were,
An iron ore, Bolus martialis, Cronfted, fec. 87, 207.
A moft ponderous white fjar, in all probability containing lead, found near Sannox.
The ftone called Breccia quartzofa, Cronfted, fect. 275.
Schifus ardefia of limneus, p. $3^{8 .}$ No. 5. A fine fmooth black kind of flate.
Granites durus grifeus of Cronfted, fect. 270, No. 26. Like our Cornifh moorfone, but the particles finer.

Very fine and large black cryfals, that would be ufeful to feal-cutters and lapidarics.
Great variety of beautiful Sardonyxes : and other beautiful ftones indifcriminately called Scotch pebbles.

A coal-mine has formerly been worked near the Cock of Arran, at the N. end of the illand. The coal had all the qualities of that of Kilkenny, and might prove of the utmof benefit to this country, wais the work purfued; not only as it might prove the means of reftoring the falt-pans, which tormerly flourifled here, but be of the utmolt benefit to agriculture, in burning the lime-flone which abounds in many parts.

In the courfe of my ride, on the other fide of the hill of Dunfuin, facing the bay of I amlafh, faw, on the road fide a cairn, of a different kind to what I had feen before: it was large, of an oblong form, and compofed like the others of round fones: but. along the top was a feries of cells, fome entire, but many fallen in: each was covered with a fingle flat ftone of a great fize, refting on others upright, that ferved as fupp "ts; but I could not count them by reafon of the laple of the leffir ftones. Doctor 5 , hrio fays, that in Cornwall the number of uprigit ftones are three; but in Wiics fometimes exceed that number.

Thefe cells are called in Wales, Cromlêh and Ceft va en or fone chefts: : 1 . of largely by Mr. Rowland $t$, and by Doctor Borlafe, $t$, and by Wormins: the name of Ara, or altar: the firlt is divided in his opinion, for he partly the notion of their having been altars, partly to their having been fepulchre. poles them to have been originally tombs, but that in after-times facrifices wer- performed on them to the heroes depofited in them : but there can be doubt of the formur. Mr. Keyfler preferves an account of King Harold having been interred bencath a tomb of this kind in Denmark : but Mr. Wright difcovered in Ireland a fkeleton depofited beneath one of thefe Cromleh $\cap$. The great fimilarity of the monuments throughout the north, evinces the famenefs of religion to have been fpread in every part, perhaps with fome flight deviations. Many of thefe monuments are buth Britilh and Danifh; for we find them where the Danes neverpenetrated. It muft not be forgotten, that at one end

[^147]VOL. III.
of the cairn in queftion are feveral great fones, fome extending beyond the cairn; and on one fide is a large erect ftone, perhaps an object of worhip.

Return near the thore at the lead of Brodic bay, and fee a valt fratum of coral and Mells, the gift of the fea fome ages argo, fome part being covered with peat.
June 24 . In the afternoon leave lurodic caftle, crofs a hill, defcend by the village of Kiliride, and reach the harbour of Lamlath, where our veffel lay at anchor in the fafeft port in the univerie, a port perfectly Virgiiian:

Hic infila portam
Ffinit objectu laterum.
a beautiful feniluar bay forms one part: while the lofty illand of Lamlarh extending before the mouth fecurcs it from the calt winds: leaving on each fide a fafe and eafy entrance. The whole circumforcnce is :bout nine miles; and the depth of the water is fufficient for the largeft fhips. This is a place of quarantine : at this time three merchantmen belouging to Glafgow lay here for that purpofe, each with the guard boat aftern.

In the bottom of the bay was a fine circular bain or pier now in ruins; the work of the good Dutchefs of Hamilion.

Land on the illand of Lamlafh, a valt mountain in great part covered with heath; but has a fufficient pallure and arable land to feed a few milch cows, fheep and goats, and to raife a little corn and a few potatocs.

In the year $155^{8}$, the Englifh fleet under the Earl of Suffex, after ravaging the coan of Cantyre, at that time in poffeflion of James Mac-comel, landed in this bay, and burned and defroyed all the neighbouring country: proceeded afterwards to Cumray, and treated it in the fame manner.

Buchanan gives this the Latin mane of Molas and Molaffa, from its laving been the retreat of St. Maol-jos: for the fame reafon it is called the holy iflamd, and Hellan Leneow *, or that of Saints, and fometimes Ard-na-molas. St. Maol-jos's cave, the refidence of that holy man, his well of mofl falutary water, a place for bathing, his chair, and the ruins of his chapel are fhewn to ftrangers; but the walk is far from agreeable, as the ifland is greatly infetted with vipers.

The Dean of the itles lays, that on this ifle of Molas was foundit by Jolm Lord of the ifles ane Monaltry of Friars which is decayit. But notuithflanding this, it contributed largely to the fupport of others on the main-land. Thus Lamlafh and the linds round the bay; and thofe from Corry to Loch-rama, were annexed to the abbey of Kil-whinnin. And thofe of Shikkin, Kilmore, Tordin, and Benans to that of Sandale or Sadde: in Cancyre. I imagine that 1 mult have feen the fite of it from the top of Carn baan : therefore take the liberty of mentioning it as having been a convent of Cillercians, tounded by Reginaldus, fon of Somerled, lord of the ifles: the fame Somerled who was flain near Renfrew in 1264 . Here was alfo a cafte belonging to the fuceeflors of that petty prince; whofe owner Angus, lord of the iffes, gate protection during has villtelfes to Rotera Brace.

June 25 . Weighed anchor at half an hour paft one in the norning, and going
 magraficent view on alf lides of drran an ? Lam ahh, and the coaft of Curtyre on one fide; anu of the coalls of Cominghan and Carick on the other. In fromt la; the lulls of Galloway and the cuaft of Iretand ; and the valt crag of silfa, appeaning here

[^148]like an inclined hay-cock, rofe in the midlt of the channel. In our courfe leave to the weft the little and low ifland of Ilada, oppofite, and as if rent from that of Arran, a circumftance the name from bladhan, to break, feems to import.

After a very tedions calm reach the crag of Ailla, and anchor on the N. E. within fifty yards of the fide in twelve fathom water, gravelly bottom. On this fide is a finall beach, all the reft is a perpendicular ruck for an amazing height, but from the edges of the precipice, the mountain affumes a pyramidal form; the whole circumference of the bafe is two miles. On the calt fide is a llupendous and amazing affemblage of precipitous columnar rocks of great height rifing in wild feries one above the other; bencath thefe, amidth the ruins that had fallen from time to time, are groves of elder trees, the only trees of the place: the floping furface bcing almolt entirely co ed with fern and thort grafs. The quadrupeds that inhabit this rock are goats and rabbits; the birds that nefle in the precipices are numerous as fiwarms of bees, and not unlike them in their flight to and from the crag. On the verge of the precipice dwell the gannets and the fhags. Bencath are guillemots, and the razor-bills, and under them the grey gulls and kittiwaks, helped by their cry to fill the deafening chorus. The puffins made themfelves burroughs above, the fea pies found a fcanty place for their eggs near the bafe. Some land birds made this their haunt: amang them ravens, hooded crows, pigeons, wheat ears and rock-larks; and, what is worderful, throfles exerted the fame melody in this licene of horror as they do in the groves of Hertfordhire.

Three reptiles appeared here very unexpectedly: the naked black fnail, the common and the ftriped fhell fuail; not volunteer inhabitants, but probably brought in the falads of fome vifitants from the neighbouring thores.

This rock is the property of the Earl of Catfics, who rents it for 331 . per amm. to people who come here to take the young ganets lior the table, and the other birds for the fake of their feathers. The lalt are eaught when the young birds i.re ready for their flight. The fowler afeends the rocks with great hazard, is provided with a long rod, furniflad at the end with a fhort hair line with a rumning noofe. This he flings round the neck of the bird, hawls it up, and repeats it till he takes ten or twelve dozin in an evening *.

Land on the beach, and find the ruins of a chapel, and the veltiges of places inhabited by fifhermen who refort her: during the featon for the capture of cod, which abound here from January to April, on the grear bank, which begins a little fouth of Arran, pailes this rock, and extends three leagues beyond. The fith are taken with hong lines, very liftie different fiom thofe defcribed in the third volume of the Br. Zoology: a repetition is unneceflary; the fith are drical and then falted, but there are feldom fufficient caught for foreign exportation.

With much difficulty aficend to the calte, a fyuare inwer of three flories, each vaulted, placed pretty high on this only accellible part of the rock. The path is marrow, over a vaft flope, fo ambignous that it wants but little of a true precipice: the watk is horrible, for the depth is alatming. It would have been thought that nothing but an eagle would have fixed his habitation here; and probably it was fome chieftain not lefsan arimal of rapine. The only mark of civilization I faw in the catte was an oven; a conveniency which many parts of Norh Britain are yet frangers to.
In 1507 one Barclay of Ladytand undertook the romantic defign of polfieliag himfolf of this rock, and of fortifying it tor the fervice of the Spmards. He arrived there

[^149]with a few affiftants, as he imagined, undifcovered; but one day walking alone on the beacil, he unexpectedly encountered Mr. John Knox, who was fent to apprehend him; and the moment he faw the untriendly party, in defpair, he rufhed into the fea, and put an end to his exiftence *.

Made a hearty dinner under the fhade of the caftle, and even at that height procured fine water from a fpring within a hundred yards of the place. The view of the bay of Girvan in Carrick, within nine miles; and that of Canpbetown, about twentytwo, boundel each fide of the Firth.

The weather was fo hot that we did not afcend to the fummit, which is faid to be broad, and to have had on it a finall chapel, defigned (as is frequent on the promontories of foreign thores) for the devout feaman to offer up his prayer, of lupplication tor a fafe voyage, or of gratitude for a fafe return.

In the evening return on board, and feer towards Campbeltown, but make very little way, by reation of the fillnefs of the night.

June 26. In the morning find ourfelves within nine miles of the town, having to the fouth (near the end of Cantyre) Sanda, or Avoyn, or illand of harbours $t$, fo called from its being the ftation of the Danilh fleets, while that nation potfefied the Itebrides; a high ifland, about two miles long, inhabited by four familics. In Fordm's time here was the chapel of St. Annian, and a fanctuary for the refuge of criminals $\ddagger$. Near it is Sheep ifland; and a mile to the ealt lics Peterfon's rock, dreaded by mariners. The Mull, or extremity of Cantyre, lies at a linall diftance beyond this groupe.

Direct Mr. Thomplon to carry the veffel round the Mull, and to wait under the the ifle of Gigha. Take the boat, and make for Campbeltown; after feven miles reach the mouth of the harbour, crolled by a finall and high ifland, with a deep but narrow paffage on one ficie; on the other, connected to the land by a beach, dry at the cbb of the tides, and fo low, that ftrange fhips, miftaking the entrance, fometimes run on flore. The harbour widens to a very confiderable extent, is two miles in lengeth, and of a confiderabie depth of water, even clofe to the town, which lits at the bottom.

Campbeltown is $n$ w a very confiderable place, having rilen from a petty fifhing town to its prefent flourifhing llate in lefs than thirty years. About the year $1 \% 44$ it had only two or three fmall vefiels belonging to the port; at prefent there are feventyeight fall, from twenty to cighty tons burthen, all build for and eanployed in the herringbilhery, and about cight hundred faiiors are employed to man them. 'I his town in fact was created by the fifhery, for it was appointed the place of rendezvous for the buffes; two hundred and fixty have been feell in the harbour at once, but their number declines fince the ill payment of the bounty. I do not know the gradual increafe of the inhabiants hore, but it is computed that there are leven thouland in the town and parith. Two miniters officiate, befides another for the chur h of the icecders, called the Reliet-houfe. 'I his is a remarkable neat building, and quite flames that of the eftablithed church; was raifed by a volumary fubteription of 2,300 . collected chiefly among the pofterity of opprefed matives of the Low hats, cacmanged to lette here (in times of perfecution'. oy the Argyle tamily. Wha fe till hap themaides diftinct from the old inhabitant, retain the zeal of ther anceltoms are obfinately averfe to patronage, but are eflecmed the molt indultrious peopie in the comars.

The antient name of this phace was Cear-bechechite C'itrain, or the end of the loc', of St. Kerran, a faint of the neighbourhood. The country of which it is tac cat

[^150]is Cantyre, the moft fouthern part of Argylefhire; derived from Ceann, a head and tire of the land; was the country of the Epidii of the Romans, and the extremity, the Epidii promontorium, now the Mull of Cantyre, noted for the violence of the adverfe tides, compared to the force of a mill-race, from whence the modern name. Magnus the Barefooted made a conqueft of it, and added it to the Hebrides, making an iffand of it by the ratio ultima regum. Torfizus fays, that the antient name was Saltiria, or Satiria, perhaps Norwegian *.
'This peninfula, from the Tarbat to the Mull, is above forty miles long, and from five to twelve miles broad: is hilly, but, comparative to other parts, cannot be called mountainous; is open and in general naked, but near Campbeltown are fome thriving plautations. The country is at prefent a mixture of heath and arable land ; the land is good, capable of bearing wheat, but little is raifed for want of mills to grind it; either the inhabitants buy their flower from England, or fend the grain they have to be ground in the fhire of Ayr. Much bear is fown here, great quantities of potatoes raifed, and near 800 l . worth annually exported. Numbers of black cattle are reared, but chiefly killed at home, and falted for the ufe of the bufles at Campbeltown. Much butter and cheefe is made; the laft large and bad. There are befides fheep and goats; the laft killed for winter provition.

Notwithfanding the quantity of bcar raifed, there is often a fort of dearth : the inhabitants being mad enough to convert their bread into poifon, diftilling annually fix thoufand bolls of grain into whifky. This feems a modern liquor, for in old times the diftillation was from thyme, mint, anife $\dagger$, and other fragrant herbs, and ale was much in ufe with them. The former had the fame name with the ufquebaugh, or water of life; but by Bocthius' account, it was taken with moderation.

The Duke of Argyle, the principal proprietor of this country, takes great pains in difcouraging the pernicious practice; and obliges all his tenants to enter into articles, to forfeit five pounds and the fill, in cafe they are detected in making this liqueur d'enfer; but the trade is fo profitable that many perfift in it, to the geeat neglect of manufactures. Before this bufinefs got ground, the women were accultomed to fpin a great deal of yarn (for much flax is raifed in thele parts) but at prefent they employ themfelves in diftilling, while their humbands are in the fiehl.
Rural economy is but at a low ebo here : his Grace does all in his power to promote that moft ufeful of arts, by giving a certain number of bolls of burnt lime to thofe who can thew the largelt and beft fallow; and allowing ten per cent. out of the rents to fuch farmers who lay out any money in folid improvements; for example, in inclofing, and the like. The Duke alfo Ghews much humanity in another inftance, by permitting his tenants, in the places of his eftates where flags inhabit, to deftroy them with impunity; refigning that part of the autient chieftain's magnificence, rather than beafls of chace thout. watte the bread of the poor.

Cantyre was gramed to the houfe of Argyle after a fuppreffion of a rebellion of the Mac-donalds of the iftes (and I tuppofe of this peninfula) in the beginning of the laft century $\ddagger$, and the grant was atterwards ratificd by parliament $\S$. The antient inhabitants were the Mac-donalds, Mac-eachrans, Mac-kays, and Mac-maths.

June 27. Take a ride along the welt fide of the bay. See, in Kilkerran churchyard, feveral tombs of artificers, with the inhmants of their trades engraven: amoagh others appear a go fe and thears, to denote that a taylor hay beneath. A little further on the thore are the ruins of Kilkerran calle, built by Janes V. when he vifited

```
* Tonfeus,73. + Powhins de Whribus Scor, 51.
```

this place in order to quell a rebellion : he was obliged to fly to it for protection, and, as is faid, to abandon it to the fury of the infurgents, who took the fortrefs, and hung his governor.
'Turn to the forth, and vifit fome caves in the rocks that face the Firth : thefe are very magnificent, and very various; the tops are lofiv, and refemble Gothic arches; one has on all fides a range of natural feats, mother is in form of a crofs, with three fine Gothic porticos, for entrences; this had been the refidence of St. Kerran, had formerly a wall at the entranc, a fecond about the middle, and a third far up, forming different apartments. On the floor is the capitat of a crofs, and a round baton, cut out of the rock, full of fine water, the ber crage of the faint in old times, and of failors in the prefent, who often land to drefs their victuals beneath this helter. An antient pair, upwards of ferenty years of age, once made this their habitation for a confiderable time.

Return ; view the crofs in the middle of the town: a moft beautiful pillar, richly ornamented with foliage, and with this infcription on one fide; Hac: chl: crux: Domini : Tvari: M: H: Eachyrna : zuondam : Rectoris: de Kyrccan : ct: Domini : Andre : nati : cjas: Raturis de Kil: coman : qui banc crucem ficri facichat. Mr. Gordon (by report) menticas this as a Danilh obelifk, but does nor venture the defcription as he had not opportunity of feeing it: his informant laid, that it was brought from Jona, which concurs with the tradition of this place.

At night an admitted a freeman of Campbeltown, and, accorling to the cuRom of the place, confult the Oracle of the Bottle about my future voyage, atfifted by a mumerous company of brother burgeffes.

June 28. Leave Cambeltown with a full fenfe of all the civilities received there. Ride over a plain about five miles wide. See on the road fide a grat uheel, defigned for the raifing water from the neightorring collieri"s. The coal is eight feet thick, dips one yard in five, and points N. F. by N. W.; is folt on the bank for four hillings per ton; but fufficient is mot yot raifed for the ufe of the country.

This plain is fruifful, pretty much inclofed, and the hedges grow well; a great encouragement for further experiments; the improvel land is rented here from fifteen to twenty fhillings an acre.

Obferve on the road fide the ruins of the chapel of Cill-chaovain, or Kil-chyvain; with in are fome old grave fones, whraven with figures of a two-handed fiword, and of uogs chafing a deer.

Ride three miess along the fands of Machrai'-Shamais bay, noted for the tremendous fize and roaring of its waves in formy feafons; and for the lofs of many thips, which, by reafon of the lownefs of the land, are received into deflruction.

Dine at a tolerable houfe at Bar; vilit the great cave of Balach-a'-chanchai., near the fhore. Embark in a rotten, leaky boat, and paffing through fix miles of rippling fea, find late at niphe on: vefielfale at anchor, mider the tatt tide of the ince of Gigh, in the little harb sur of Calas-gioglam, protected by Gigha, and the litte ille of Cara on the weft and fouth, and by a chain of voft rocks to the eaft: numbers appear juit peeping abuve water in feveral pats, and others that run nut fir from the Cantyre fhore correfpond with thefe fo exactly, as to make it probable that they once formed the fame bed.
June 29. Eand on Gigla, an illand a ut fix miles, and one broat; the mont eaflern of the Hebrides: this, with Cara. forms a parifh in the comnty ct Bute, in the prethytery of Cantyre. I Fas in it no high hills, and is a mixtmer of rect, pafture, ant arable land. Produces barley, bear, vats, flax, and potatocs. Malt is made here and
exported; and about a hundred and fifty bolls of bear; infomuch that formetimes the natives feel the want of it, and fuffer by a fcarcity arifing from their own avarice. They alfo rear more cattle than they can maintain, and annually lofe numbers for want of fodder.

The ifand is divided into thirty marklands, each of which ought to maintain fourteen cows and four hoifes, bofides producing a certain quantity of corn. The bear yields five, the oats three fold. Earh marklatid is commonly occupied by one farmer, who has fevcral married fervants under han, whe live in feparate cottages and are allowed to keep a few cattle and fheep. The wages are from three to four pounds a year to the men fivants; from twenty to thirty fhillings to the women. The young men employ themfelves in the: fummsr in the herring fifhery; but during winter give themfelves up entirdy to ..n inative life.

This ifland contains ab, ut five hundred inhabitants, and the revenue is about fix hundred a year; mift of it belouging to Mr. Macneile of Taynifh. In old times the laird was ftyled Thane of Cigha: his family has been long owner of thefe little territories, this fea-girt reign, but was difpofffed of it in 1549 , by the * clan Donald, and recovered it a a ain ; but hiftory omits the time of reftoration. Dilcoment has even reached this fmall inland, and two families have migrated to America.

Breakfait with the minitter, who may truly be faid to be wedded to his flock. The ocean here forbids all wandering, even if inclination excited; and the equal lot of the Scotch clergy is a ftall ftronger check to every afpiring thought: this binds them to their people, ant invigorates every duty towards thofe to whom they confider themfelves connected for life; this equal lot may perhaps blunt the ambition after fome of the more fpecious accompliflments; bur makes more than amends by fharpening the attention to thofe concerns which end not with this being.

Vifit the lew wonders of the ine: the firt is a little well of a moft miraculous quality; for, in old times, if ever the chieftain lay here wind-bound, he had nothing more to do than caufe the well to be cleared, and initantly a tavourable gale arofe. But miracles are now ceafed.

Examine the ruins of a church, and find fome tombs with two-handed fwords, the Claidh-da laimb of the hero depofited beneath.

A little farther, at Kil chattan, is a great rude column, fixteen feet high, four broad, and cight inches thick, and near it, a cairn. Un a line with this, at Cnoc-a'chara, is another, and thll higher in the lame directim, at Cace-i'crois, is a crofs and three cairns; probably the crols, after the introduction of Clmitianity, was formed out of a pagan monument fimilar to the tho former.

In the botom a little calt from thec, is a large artificial mount of a fquare form, growing lefts and lefs towards the top, which is tht, and has the veltige of a brealtwall around. The mount Romelborg in Sweden, engraven by M. Dallberg, No. 325 , is fomewhat fimilar : this probably was the work of the Dancs, the neighbouring nation.

Returu to the thore; obferve a vaft bed of moft pure and fine fand, ufeful in the ghafs manufacture: the fame fpecies, but defiled with a mixture of fea fand, appears again on the oppofite coalt of Cantyre.

The birds that appear bere at prefent are the common gull, common fandpiper, and fea pir. The great artic diver, of the Britih Zoology, fometimes vifits thefe feas, and is ftiled in the Erle farbhaachaille, or the: 'ardfman of the occan; becaufe, as is pre-

[^151]lended, it never leaves that element, never flies, and hatches the young beneath its wing.

The weather extremely fine; but fo calm that Mr. Thompfon is obliged to tow the vefiel out of this little harbour, which is of unequal depths, but unfit for veffels that draw more than fourteen feet water. Pafs under Cara, an ifle one mile long, divided by a narrow channel, fourh of Gigha, is inhabited by one family, and bad once a chapel. At the fouth end it rifes into a hill exactly formed like a loaf of bread. The property of this little place is in Mr. Macdonald of Largis.

Attempt to feer for the ifhand of llay, but in vain. Am entertained with the variety and greatnefs of the views that bound the channel, the great found of Jura; to the cali the mountains of Arran over-top the far-extending flores of Cantyre; to the weft lics Jura, mountainous and rugged; four hills, naked and diftinct, afpire above the reft, two of them known to the feamen by the name of the Paps, ufful in navigation: far to the north jult appears a chain of fimall ifles; and to the fouth the ia: nd of Rathry, the fuppofed Ricnea, or Ricina of Pliny *, on the coaft of Ireland, which ftretches beyond tar to the weft.

## A BRIEF HISTORY OF THE HEBRIDES.

The leifure of: calm gave ample time for reflection on the hifory and greater events of the ilhands nuw in view, and of the others, the objects of the voyage. In juflice to that atin nd learned writer the Rev. Dr. John Macpherfon, late minifter of Slate in Skie, latacknowledge the affiftance I receive from his ingenious effay on this very fubject; tor his labours greatly facilitate my attempt, not undertaken without confulting the authors i, refers to ; and adding numbes of remarks overfeen by hinn, and giving a confiderable continuation of the hiftory. It would be an oftentatious tafk to opcn a new quarry, when fuch heaps of fine materials lie ready to my hand.

All the accourts left us by the Greek and Roman writers are enveloped with obfcurity; at all times brief, even in their defcription of places they had eafieft accefs to, and might have defcribed with the moft fatisfactory precifion ; but in remote places their relatio- furuifh litule more than lints, the food for conjecture to the vifionary antiquary.

That Pytheas, a traveller mentioned by Strabo, had vifited Great Britain, I would wifh to make only apocryphal : he afferts that he vifited the remoter parts; and that he had alfo feen Thule, the land of zomance among the ancients, which all may pretend to have feen; but every voyager, to fwel his fame, made the ifland he faw laft the ultima Thule of his travels. If Pytheas had reached thefe parts he might have obferved floating in the feas multitudes of gelatinous animals, the medufe of Limmens, and out of thefe have formed bis fible : he made his 'Thule a conpofition of neither earth, fea, nor air, but like a compofition of them all; then, catching his fimile from what floated before him, compares it to the lungs $\dagger$ of the fea, the Ariftotelian idea of thefe bodies; and from him adoped by naturalifts, fucceffors to that great philofopher. Strabo very juftly explodes thefe abfird tales, yet allows him meri: in deferibing the climate of the places he had feen. As a farther proof of his having vifited the Hebrides, he mentions their unfriendly fky, that prohibits the growth $f f$ the faner fruits; and that the natives are obliged to carry their com under fhetter, to beat the grain cut, lefl it thould be fpoited by the defect of the fun, and violence of the rains $\ddagger$. This is the probable part of his narrative; but when the time that the great geographer urote is confidered; at
a period that thefe iflands had been neglected for a very long.fpace by the Romans, and when the difficulties of getting among a fierce and unfriendly nation muft be alınott iufuperable, doubts innumerable refpecting the veracity of this relater muft arife: all that can be admitted in favour of him is, that he was a great traveller, that he might have either vifited Britain, with fome of the nations commercing with our ifle, or have received from them accounts, which he afterwards drefled out mixed with the ornaments of fable. A trafic muft have been carried on with the very northern inhabitants of our iflands in the time of Pytheas, for one of the articles of commerce mentioned by Strabo, the ivory bits, were made either of the teeth of the walrus, or of a fpecies of whale native of the northern feas.

The geographer Mela, who flourifhed in the reign of Claudius, is the next who takes notice of our leffer iflands. He mentions the Orcades as confifting of thirty; the Æmodx of feven. The Romans had then made a conqueft of the former, and might have feen the latter; but from the words of the hiftorian, it is probable that the Shetland illands were thofe intended; for he informs us, that the Minolle were carried out over againft Germany: the fite of the Hebrides will not admit ot this defcription, which agrees ve: $y$ well with the others; for the ancients extended their Germany, and its imaginary iflands, to the extreme north.

Pliny the elder is the next that mentions thefe remote places. He lived later than the preceding writers, and of courfe his information is fuller: by means of intervening difcoveries, he has added ten more to the number of the Orcades: is the firlt writer that mentions the Hebrides, the iflands in queftion; and joius in the fame line the Emoda, or, as it is in the beft editions more properly written, the Aemoda *, or extreme point of the Roman expeditions to the north, as the Shetland ifles in the higheft probability were. Pliny and Mela agree in the number of the Emodx, or Acmoda; the former makes that of the Hæbudes thirty ; an account extremely near the truth, deducting the little incs, or rather rocks, that furrounded mof of the greater, and many of them to indiftinet as fcarcely to be remarked, except on an actual furvey.

Solinus fucceeds Pliny: if he, as is fuppofed, was cotemporary with Agricola, he has made very ill ufe of the light he might have received from the expeditions of that grear general, whofe officers might have furnifhed the hiftorian with better materials than thofe he has communicated. He has reduced the number of the Habudes to five : he rells us, that "the inhabitants were unacquainted with corn ; that they lived only on fifh and milk; that they had one king, as the idands were only feparated from each other by narrow ftraits; that their prince was bound by certain rules of government to to juflice ; and was prevented by poverty from deviating from the true courfe; being fupported by the public, and allowed nothing that he could call his own, not even a wife; but then he was allowed free clooice, by turns one out of every diftrict of any female that caught his affection, which deprived lim of all ambition about a fu:celfor $\dagger$."

By the number of thefe illands, and by the miunte attention given by the hiftorian to the circumflance of their being feparated from each other by very narrow ftraits, I foould imagine that which is now called the Long inand, and includes Leewis, Nerth Uitt, Benbecula, South Uif, and Barra, to have becon the live Hebudes of Solhas; for the other great inands, fuch as Skic, Sc. are too remote from ach other to form the preeding very characteritic defription of that chain of illands. Thefe might maturally fall under the rube of one petty prince ; alnelt the only probable part of Solinus's narrative.

After a long interval appears Ptolemy, the Egyptian geographer : he alio enumerates five Ebude, and has given each a name; the weltern, Ebuda; the eaftern, Ricina, Maleos, Epidium. Camden conjectures them to be the modern Skie, Lewis, Rathry, or Racline, Mull, and thay; and I will not controvert his opinion.

The Roman hiflorians give very little light into the geography of thefe parts. Tacitus, from whom moft might have been expected, is quite filent about the names of places; notwithlanding he informs us, that a tleet by command of Agricola performed the circumnavigation of Britain. All that he takes notice of is the difeovery and the conqueft of the Orknies: it hould feem that with the biographers of an ambitious nation, nothing feemed worthy of notice, but what they could dignify with the glory of victory.

It is very difficult to affign a reafon for the change of name from Ebudx to Hebrides; the laft is modern, and feems, as the annotator on Dr. Macpherfon fuppofes, to have arifen from the error of a tranferiber, who changed the $u$ into $r$.

From all that has been collected from the incients, it appears that they were acquainted with little more of the Hebrides than the bare names: it is probable that the Romans, either from contempt of fuch barren fpots, from the dangers of the feas, the violence of the tides, and horrors of the narrow founds in the inexperienced ages of navigation, never attempted their conqueft, or faw more of them than what they had in fight, during the few circumnavigations of Great Britain, which were expeditions more of oftentation than of utility.

The inhabitants had probably for fome ages their own oovernors: one little king to each ifiand, or to each groupe, as neceffity required. It is reatonable to fuppofe, that their government was as much divided as that of Great B:itain, which it is well known was under the direction of numbers of petty princes before it was reduced under the power of the Romans.

No account is given in hiflory of the time thefe iflands were annexed to the government of Scotland. If we may credit our Saxon hiftorians, they appear to have been early under the dominion of the Pits; for Bede and Adamnanus intorm us, that foon efter the arrival of St. Columba in their couutry, Brudeus, a Pietilh monarch, made the faist a prefent of the celebrated ifland of Jona *.

But neither the holy men of this ifland, nor the natives of the reft of the Ilebrides, enjoyed a permanent repofe after this event.
The firft invafion of the Danes does not feem to be eafily afeertained: it appears that they ravaged Ireland, and the ifle of Rathry, as carly as the year 735. In the following ecntury their expeditions became more frequent: Harold Harfager, or the light-haired, purfued in 875 feveral petty princes whom he had expelled out of Norway, who had taken refuge in the Hebrides, and molefted his dominions by perpetual defcents from thofe illands. He feems to have made a rapid conquelt: he gained as many victories as he fought battles; he put to death the chief of the pirates, and made $\dagger$ an indifcriminate flaughter of their followers. Soon after his return, the iflanders repoffefied their ancient feats; and in order to reprefs their infults, he fent Ketil, the Flat-nofed, with a fleet and fome forces for that purpofe. He foon reduced them to terms; but made his victories fubfervient to his own ambition; he made alliances with the Reguli he had fubdued; he formed intermarriages, and confirmed to them their old dominions. This effected, he fent back the Heet to Harold, openly declared bimfelf independent, made himfelf prince of the Hebrides, and caufel them to acknow.

[^152]ledge him as fuch by the payment of tribute, and the badges of vaffalage*. Ketil remained during life mafter of the illancis, and his fubjects appear to have been a warlike fet of freebonters, ready to join with any alventurers. 'Ihus when Eric, fon of Harold Harfager, after being drivcu out of his own country, made an invafion of England, he put with his fleet into the Hebrides, received a large reinforcement of people, fired with the hopes of prey, and then proceeded on his plan of rapinet. After the death of Ketil a kingdom $\begin{aligned} & \text { a: } n \text { in } \\ & \text { after-times compofed out of them, which from the refidence of }\end{aligned}$ the little monarch i: be ifle of Man, vas ftiled that of Man $\ddagger$. The iflands became tributary to that of Norway $\$$ for a confiderable time, and princes were fent from thence || 1 , govern ; but at length they again flook off the yoke. Whether the little potentates ruled independent, or whether they put themfelves under the protection of the Scottifh monarchs, does not clearly appear; but it is realonable to fuppofe the laft, as Donald-bane is accufed of making the Itebrides the price of the affitance given him by the Normegians againit his own fubjects. Notwithitanding they might occafionally feek the protection of Scotland, yet ing ar were without princes of their own: from the chronicles of the kings of Man ** we learn that they had a fucceffion.

In 1039 is an evident proof of the independency of the iflanders on Norway; for on the death of Lagman, one of their monarchs, they lent a deputation to O‘Brian, King of Irelan', to requeft a regent of royal blood to govern them during the minority of the young prince. They probably wight in turn compliment in fome other refpects the if Scottifh neighbours: the illanders muft have given them fome pretence to fovereignty, for,

In 1093 , Donald-bane, King of Scotland, calls in the affiftance of Magnus, the Barefooted, King of No:way, and bribes him with a promife of all the inands $\dagger+$ : Magnus accepts the terms, but at the fame time boafts that he does not come to invade the territories of others, but only to refume the ancient rights of Norway. His conquefts are rapid and complete, for befides the iflands, by an ingenious fraud $\ddagger \downarrow$, he adds Cantyre to his dominions.

The Hebrides continuel governed by a prince dependent on Norway, a fpecies of viceroy appointed by that court, and who paid, on alluming the dignity, ten marks of gold, and never made any other pecuniary acknowledgement during life; but if another viecroy was appointed, the fame fum was exacted from him $5 \S$. Thefe viceroys were fometimes Norwegians, fometimes nativ. of the illes. In 1097 we find that Magnus |||| deputes a nobleman, of the name of lngemund: in after-times we learn that natives were appointed to that high office; yet the feem at times to have fhaken off their independency, and to have aflumed the tit? of king. Thus in 1206 we find $9 T$ King John gives to his brother monarch Reginatl, king of the illes, a fafe conduct; and in fix years after, that Reginald fwears fidelity to our monarch, and becomes his liege-man. It is probable they fuited their allegiance to their conveniency; acknowledging the fuperiority of England, Scotland, or Norway, according to the neceffity of the times. Thus were the Hebrides governed, fro a the conqueft, by Magnus till the year 1263 , when Acho, or Haquin, King of Norwav, by an unfortunate invafion of Scotland, terminating in his defeat at Largs, fo weakcied the powers of his kingdom, that his fuccefor, Magnus IV., was content in 1266 to make a ceffion of the iflands to Alexander III.; but not without Aipulating for the payment of a large fum, and of a tribute

[^153]69 Hift. Normannorum, p. 1 coo.
iif Chron. Man.
© Rymer's Fixdera, I. 140.159.
of a hundred marks for ever, which bore the name of the annual of Norway. Ample provifion was alfo made by Magnus in the fame treaty, for the fecurity of the rights and properties of his Norwegian lubjects who chofe to continue in the ifles, where many of their polterity temain to this day.

Notwithfan :in ; this revolution, Scotlat: fems to lave received no real acquifition of frength : the iflands ftill remained governed by powerful chieftains, the defcends.s of Somerted, thane of Heregaidel, or Argylo, who, marrying the daugher of Olav, Kug of Man, left a divided dominion to his fons Dugal and Reginald : from the firlt were defended the Mac-dougals of Lorn; from the laft the powerlul clan of the Mac-donalds. The lordflip of Argyle with Mull, and the iflands north of it, fell to the thare of the firft; Ilay, Cantyre, and the fouthern ifles were the portion of the laft : a divifion that formed the diftinction of the Sudereys and Nordereys, which will be farther noticed in the account of Jona.

Thefe chieftains were the frourges of the kirgdon : they are known in hiftory but as the devaftations of a tempeft; for their paths were marked with the molt barbarous defolation. Encouraged by their diflance from the feat of royalty, and the turbutence of the times, which gave their monarhs full employ, they ceercifed a regal power, and often affumed the title; but are more generally known in hillory by the ftile of the Lords of the ifles, or the Earls of Rofs; and fometimes by that of the great Mac-donald.

Hiftorians are filent about their proceedings, from the retreat of the Danes, in 1263 , till that of 1335, when John, lord of the ines, withdrew his allegiance *. In the beginning of the next century his fucceffors were fo independent, that Heary IV. F fent two ambafladors, in the years 1405 and 1408, to form an atliance with the brothers Donald and John: this encouraged them to commit frefh hofilities againtt their natural prince. Donald, under pretence of a claim to the carldon of Rofs, invaded and made a conquelt of that country; but pancrating as far as the flire of Aberdeen, afier a fierce but undecifive battle with the royal party, thought proper to retire, and in a little time to fwear allegiance to 1 , monarch $\ddagger$, James 1 . But he was permitted to retain the county of Rofs, and alpore the title of cart. His fucceffor, Alexander, at the head of ten thoufand men, and burnt Invernef; at length terrified with the preparations made agninft him the royal feet, and obtained pardon as to life, but was committed to ftrict confinone: ot.

His kinfman and deputy, Donald Builoch, refenting the imprifonunent of his chieftain, excited another vebellion, and deflroyed the country wihh fire and fword; but on his flight was taken and put to deah by an Irifh chieftain, with whom he fought protcation.

Thefe barbarous inroads were very frequent with a fet of banditti, who had no other motive in war but the infamous inducement of plunder. In P 251 we fee their crucl invafion of the thire of Lenox, and the horrible maffacre in confequence.

In the reign of James II., in the year 1461, Donald, another petty tyrant, and laarl of Rofs, and lord of the ines, renewed the pretence of independency, furprifed the caftle of invernefs, fored his way as far as Athol, obliged the Rarl and Countefs, with the principal inhabitans, to Ceck refuge in the churcli of St. Bridget, in hopes of finding fecurity from bis cruelty by the fanctity of the place; but the barbarian and his followers fet fire to the church, put the ecelefiaflics to the fword, and, with a great b oty, carried the Larl and Countels prifoners to his cafte of Claig, in the ifland of Ilay 乌. In

- Buchanan, lib. ix. e. 22.
$\dagger$ Rym:'t Fadera, vii. $418, j=7$.
| Boeth lib xvi. 342.
§ Buchanan, lib. xii. c. 19.
a fecond expedition, immediately following the firft, he fuffered the penalty of his impiety; a tempeft overtook him, and overwhelmed moft of his affociates, and he efcaping to Invernefs, perifice by the hands of an lrinh harper*: his furviving followers returned to llay, conveyed the Earl and Countefs of Athol to the lanetuary they had violated, and explated their ctime by reftoring the plunder, and making large donations to the flhrine of the offended faint.

Joln, fucceffor to the laft Earl of Rofs, entered into an alliance with Fdward IV. $\dagger$, fent anibaffadors to the court of England, where Edward empowered the Bifhop of Durham, and Earl of Worcefter, the prior of St. John's of Jerufilem, and John Lord Wenlock to conclude a treaty with him, another Ionald Balloch, and his fon and heir John. They agreed to ferve the king with a!l their power, and to become his fubjects: the Earl was to have a hundred marks Porling for life in time of peace, and two hundred pounds in time of war; and ther Tallies, in cafe of the conqueft of Scotland, were to have confirmed to them all te in cafe of a truce with the Scottifl about the year 1476 , Edward, from d and dropt his new allies. James, det them a powerful army, under the Earl o is to the north of the Scottiin fea; and wey were to be included in it $\ddagger$ : But ${ }^{+}$politics, courted the alliance of JamesIII., fubdue this rebellious race, fent againft , and took leave of him with this good wifh, "Furth, fortune, and fil the fetters;" as much as to fay, "Go forth, be fortunate, and bring home many capuives;" which the fanily of Athol have ufed ever fince for its motto. Rofs was terrified into fubmifion, obtained his pardon, but was deprived of his earldom, which by act of partiament was then declared unalienably annexed to the crown ; at the fane time the king reftored to him Knapdale and Cantyre §, which the Earl had refigned, and invefted him anew with the lordhip of the illes, to hold them of the king by fervice and relief '!.

Thus the great power of the ifles was broken; yet for a confiderable time after, the petty chieftains were continually breaking out into fmall rebellions, on harraffed each other in private wars; and tyramy feens but to have been multiplied. James V. found it neceflary to make the voyage of the ifles in perfon in $153^{0^{\circ}}$; feized and brought away with hin feveral of the moft confiderable leaders, and obliged them to find fecu. rity for their own good behaviou:, and that of their vaffals. The names of thefe chief:ains were (according to Lindelay **) Mydyart, Mac-comel, Mac-loyd of the Lewis, Mac-niel, Mac-lane, Mac-intofh, John Mudyart, Mac-kay, Mac-kenzie, and many others; but by the names of fome of the above, there feem to have been continental as well as infular malecoutents. He examined the titcs of their holdings, and finding feveral to have been ufarped, re-united their lands to the crown. In the lame voyage he had the glory of caufing furveys to be taken of the coafts of Scotland, and of the iflands, by his pilot, Alexander Lindefay; which were publifhed in 1583 , at Paris, by Nicholas de Nicholay, geographer to the French monarch $\dagger \dagger$.

The troubles that fucceed the death of James occafioned a negloct of thefe infulated parts of the Scotifh dominions, and left them in a fiate of anarchy : in 1614 , the Macdonalds made a formidable infurrection, oppugning the roval grant of Cantyre to the Earl of Argyle and his relations $\ddagger \ddagger$. The petty chicftains continued in a fort of rebellion, and the fword of the greater, as ufual in weak government, was employed againt

[^154]

them the encouragement and protection given by them to pirates, employed the power of the Campells during the reign of James VI. and the beginning of that of Charles I. *

But the turbulent fpirit of old times continued even to the prefent age. The heads of clans were by the divifions, and a falfe policy that predominated in Scotland during the reign of William IIJ. flattered with an unreal importance : inftead of being treated as bad fubjects, they were courted as defirable allies; inftead of feeling the hand of power, money was allowed to bribe them into the loyalty of the times. They would have accepted the fubfidies, notwithitanding they detefted the prince that offered them. They were taaght to believe themfelves of fuch confequence that in thefe days turned to their deftruction. Two recent rebellions gave legilature a late experience of the folly of permitting the feudal fyftem to exift in any part of its dominions. The act of 1748 at once deprived the chieftains of all power of injuring the public by their commotions $\dagger$. Many of thefe Reguli fecond this effort of leginature, and neglect no opportunity of rendering themfelves hateful to their unhappy vafials, the former infruments of ambition. The Halcyon days are near at hand :- oppreffion will beget depopu. lation; and depopulation will give us a dear-bought tranquillity.

The remainder of the day is paft in the fuund of Jura : about twelve at noon a pleafant but adverfe breeze arofe, which obliged us to keep on towards the north, fometimes tacking towards the coalt of lower Knapdale, black with heathy mountains, verdant near the fhores with tracts of corn : advance towards upper Knapdale, ruggid and alpine : am told of a dangerous rock in the middle of a channel. About one o'clock of June 30, receive notice of getting into the harbour of the fmall ifles of Jura, by the veffel's touching ground in the entrance. On the appearance of daylight find ourfelves at anchor in three fathom and a half of water, in a mof picturefque bay, bounded on the weft by the ille of Jura, with the paps overfhadowing us; and to the eaft fevera! little iflands cloathed with heath, leaving narrow admiffions into the port at North and South : in the maps this is called the bay of Meil.

Land on the greater ille, which is high and rocky. A boat filled with women and children croffes over from Jura, to coilect their daily wretched fare, limpets and perriwinkles. Obferve the black guillemots in little flocks, very wild and much in motion.

Mr. Campbell, principal proprietor of the ifland, is fo obliging as to fend horfes : land in Jura, at a little village, and fee to the right on the thore the church, and the minifter's manfe. Ride weftward about five miles to Ard-fin, the refidence of $\mathbf{M r}$. Campbell, feated above the found of Ilay.

Jura, the moft rugged of the Hebrides, is reckoned to be about thirty-four miles long, and in general ten broad, except along the found of llay : is compofed chiefly of valt motintains, naked and without the poffibility of cultivation. Some of the fouth, and a little of the Weftern fides only are improveable: as is natural to be fuppofed, this illand is ill peopled, and does not contain about feven or eight hundred inhabitants; having been a little thinned by the epidemic migrations.

The very old clane are the Mac-il-vuys and the Mac-raines: but it feems to have changed mafters more than once: in $1549 \pm$, Donald of Cantyre, Mac-guillayne of Doward, Mac-guillayne of Kinlyck-buy, and Mac-duffie of Colonfay were the proprie-

[^155]tors: Mac-lean of Mull hadalio a fhare in 1586. At prefent Mr. Campbell by purchafe from Mr. Campbell of Shawfield; Mr. Mac-neile of Colonfay, Mr. Campbell of Shawfield ; and the Duke of Argyle divide this mafs of weather-beaten barrennefs among them.
In 1607 Jura was included in the lordhip of Cantyre, by charter, dated the laft of May, then granted to Archibald Earl of Argyle.

The produce is about three or four hundred head of cattle, fold annually at 3l. each, to graziers who come for them. About a hundred horfes are alfo fold annually : here are a few fheep with fleeces of moft exceltent finenefs, and numbers of goats. In good feafons fufficient bear and oats are raifed as will maintain the inhabitants: but they fometimes want, I fuppofe from the converfion of their grain into whiky. But the chief food of the common people is potatoes and fifh and fhell fifh. It is to be feared that their competence of bread is very fmall. Bear produces four or five fold: oats three fold.

Ferra afhes bring in about a hundred pounds a year: about two hundred tons of kelp is burnt annually, and fold from 3l. 10 s . to 4l. per ton.

Sloes are the only fruits of the ifland: An acid for punch is made of the berries of the mountain afh : and a kind of fpirit is allo difilled from them.

Neceffity hath inftructed the inhabitants in the ufe of native dyes.' Thus the juice of the tops of heath boiled fupplies them with a yellow; the roots of the white water lily with a dark brown. Thofe of the yellow water iris with a black : and the Galium verum, Rù of the iflanders with a very fine red, not inferior to that from Madder.

The quadrupeds of Jura are about a hundred ftags. Some wild cats, otters, foats, rats and feals. The feathered game, black cocks, grous, ptarmigans, and fnipes. The fags muft have been once more numerous, for the original name of the ifland was Deiry, or the ife of Deer, fo called by the Norwegians from the abundance of thofe noble animals.

The hard fare of thefe poor people feems to have been no impediment to the population of the ifland, nor yet to the longevity of the natives. The women are very prolific, and very often bear twins. The inhabitants live to a great age, and are liable to very few diftempers. Men of ninety work; and there is now living a woman of eighty who can run down a fheep. The account given by Martin of Gillour Maccrain, was confirmed to me. His age exceeded that of either Jenkins or Par : for he kept a hundred and eighty chriftmafles in his own houfe, and died in the reign of Charles I. Among the modern inftances of longevity I forgot to mention John Armour, of Campbeltown, aged one hundred and four, who was a cocl:fwain in our navy at the time of the peace of Utrecht; and within thefe three years was fout enough to go out a fhooiing.

This parifh is fuppofed to be the largeft in Great Britian, and the duty the mont troublefome and dangerous: it confifts of Jura, Colonfay, Oranfay, Skarba, and feveral little ifles divided by narrow and dangerous founds; forming a length of not lefs than fixty miles; fupplied by only one minifter and an affiftant.

Some fuperftitions are obferved here at this time. The oid women, when they undertake any cure, mumble certain rhythmical incantations; and like the ancients, endeavour decantare dolorem. They preferve a ftick of the wicken tree, or mountain ah, as a protection againft elves.

I had fome obfcure account here of a worm, that in a lefs pernicious degree, bears fome rcfemblance to the luria infernalis * of Linnæus, which in the vaft bogs of Kemi

[^156]draps on the inhabitants, eats into the flefh and occafions a moft excruciating death. The Fillian, a little worm of Jura, fmall as a thread and not an inch in length, like the Furia, infinuates itfelf under the kkin, caufes a rednefs and great pain, fics fwiftly from part to part ; but is curable by a poultice of cheefe and honey.

After dinner walk down to the found of Ilay, and vifit the little ifland of Fruchlan, near to the fhore, and a mile or two from the eaftern entrance. On the top is a ruined tower of: a fquare form, with walls nine feet thick; on the weft fide the rock on which it ftands is cut through to a vaft depth, forming a fofs over which had been the draw bridge. This fortrefs feemed as if intended to guard the mouth of the found ; and was alfo the prifon where the.Mac-donalds kept their captives, and in old times was called the caftle of Claig.

July 1. Ride along the fhore of the found: take boat at the ferry, and go a mile more by water: fee on the Jura fide fome fheelins or fummer huts for goatherds, who keer here a ftock of eighty for the fake of the milk and cheefes. The laft are made without falt, which they receive afterwards from the afhes of featang, and the tang itfelf which the natives lap in it.

Land on a bank covered with fleelins, the habitations of fome peafants who attend the herds of milch cows. Thefe formed a grotefque groupe; fome where oblong, many conic, and fo low that entrance is forbidden, without creeping through the little opening, which has no other door than a faggot of birch twigs, placed there occafionally: they are conltructed of branches of trees, covered with fods; the furniture a bed of heath, placed on a bank of fod; two blankets and a rug; fome dairy veffels, and above, certain pendant /helves made of balket work, to hold the cheefe, the produce of the fummer. In one of the little conic huts, I fied a little infant alleep, under the protection of a faithful dog.

Crofs, on foor, a large plain of ground, feemingly improveable, but covered with 2 deep heath, and perfectly in a ftate of nature. See the arctic-gull, a bird unknown in South Britain, which breeds here on the ground : it was very tame, but, if difturbed, flew about like the lapwing, but with a more flagging wing. After a walk of four miles, reach the Paps: left the leffer to the fouth-eaft, preferring the afcent of the greateft, for there are three ; Beinn-a-chaolois, or, the mountain of the found; BeinnTheunta, or the hallowed mountain; an Beinn-an-air, or, the mountain of gold. We began to fcale the laft; a tafk of mu our and difficulty; being compofed of vaft ftones, flightly covered with mofles us . ine bafe, but all above bare, and unconnected with each other. The whole feems a cairn, the work of the fons of Saturn; and Ovid might have caught his idea from this hill, had he feen it.

> A ffectaffe ferunt regnum celefte G'gantes,
> Ataque congefos fluxiffe ad lidera montes.

Gain the top, and find our fatigues fully recompenced by the grandeur of the profpect from this fublime fpot : Jura itfelf afforded a Aupendous feene of rock, varied with littie lakes innumerable. From the weft fide of the hill ran a narrow Itripe of rock, terminating in the fea, called, the fide of the old hag. Such appearances are very common in this ifland and in Jura, and in feveral parts of North Britain, and the North of Ireland, and all fuppofed to be of vulcanic origin, being beds of lava of various breadths, from three feet to near feventy. Their depth is unknown; and as to length, they run for miles teg ther, crofs the founds, and often appear on the oppofite fhores. They frequently appear three or four feet above the furface of the ground, fo that they are called on that account Whin-dikes, forming natural dikes, or boundaries.

The fiffures were left empty from carlieft times. It is impoffible to fix-a period when fome tremendous vulcanic eruption happened, like that of late years infefted Iceland, with fuch fatal effects, and filled every chafm and every channel with the liquid lava. Such a ftream poured itfelf into thefe fiffures, that cooled and conlolidated; and remains evident proofs of the fhare which fire had in caufing the wondrous appearances we fo frequently meet with, and fo greatly admire. In a certain bay in the ifle of Mull, there remains a fiffure which efcaped receiving the ficry flream. The fides are of granite: the width only nine or ten feet; the depth not lefs than a hundred and twenty. It ranges N . by W. and S. by E. to a vaft extent : and appears againft a correfpondent fiffure on the oppofite fhore. In the Ph. Tranf. tab. iv. is a view of this tremendous gap: together with the two ftones which have accidentally fell, and reinained hitched near the top of the northern extremity. Thefe and numbers of other vulcanic curiofities in the Hebrides, are well defcribed by Abraham Mills, Efq. of Macclesfield, who in 1788 vifited feveral of the iflands, and in the lexxth vol. of the Ph . Tranf. has favoured the public with his ingenious remarks. To the fouth appeared Ilay, extended like a map beneath us; and beyond that, the north of Ireland; to the weft, Gigha and Car, Cantrye and Arran, and the Firth of Clyde, bounded by Airhire; an amazing tract of mountains to the N E. as far as Ben-lomond; Skarba finifhed the northerin view; and over the Weftern Ocean were feattered Colonfay and Oranfay, Mull, Jona, and its neighbouring groupe of ifles; and fill further the long extents of Tirey and Col juft apparent.

On the fummit are feveral lofty cairns, not the work of devotion, but idle herds, or curious travellers. Even this vaft heap of fones was not uninhabited: a hind paffed along the fides full fpeed, and a brace of ptarmigans often favoured us with their appearance, even near the fummit.

The other paps are feen very diftinctly : each inferior in height to this, but of all the fame figure, perfectly mamillary. Mr. Banks and his friends mounted that to the fouth, and found the height to be two thoufand three hundred and fifty-nine feet : but Beinn an-6ir far over-topped it ; feated on the pinnacle, the depth below was tremendous on every fide.

The fones of this mountain are white (a few red) quartzy and compofed of fmall grains; but fome are brecciatel, or filled with cryftalline kernels, of an amethyftine colour. The other ftoncs of the ifland that fell under my oblervation, were a cinereous flate, veined with red, and ufed here as a whet ftone: a micaceous fand fone; and betwecn the fmall ifles and Ardefin, abundance of a quartzy micaceous rock-ftone.

Return by the fame road, crofs the Sound, and not finding the veffel arrived, am moft hofpitably reccived by Mr. Freebairn, of Frecport, near Port-afkaig, his refidence on the fouthern fide of the water, in the inand of Ilay.

July 2. Walk into the interior parts: on the way fee abundance of rock and pit marle, convertible into the beft of manures. Vifit the mines, carricd on under the directions of Mr. Frecbairn, fince the year $\mathrm{I}_{7} \mathrm{\sigma}_{3}$; the ore is of lead, much mixed with copper, which occafions expence and trouble in the feperation : the veins rife to the furface, have been worked at intervals for ages, and probably in the time of the Norwegians, a nation of miners. The old adventurers worked by trenching, which is appient every where : the trenches are not above fix feet deep; and the veins which opened into them not above five or fix inches thick; yet, by means of fome inftrument, unknown to us at prefent, they picked or fcooped out the ore with good fuccefs, following it in that narrow face to the length of four feet.

The veins are of various thickneffes; the ftrings numerous, conducting to large bodies, but quickly exhautted.' The lead.ore is good : the copper yields thirty-three pounds per hundred ; and forty ounces of filver from a ton of the metal. The lead ore is fmelted in an air-furnace, near Freeport; and as much fold in the pig, as fince the firt undertaking by this gentleman, has brought in fix thoufand pounds.

Not far from thefe mines are valt frata of that fecies of iron called bog-ore, of the concreted kind: beneath that large quantities of vitriolic mundic.

On the top of a hill, at fome little diftance, are fome rocks, with great viens of emery running in the midf, in a horizontal direction, and from one to three feet thick.

A fmall quantity of quickfilver has been found in the moors, which ought to encourage a farther fearch.
Continue the walk to the neighbouring hill of Dun-Bhorairaig : on the fummit is a Danilh fort, of a circular form, at prefent about fourteen feet high, formed of excellent. mafonry, but without mortar: the walls are twelve feet thick; and within their very thicknefs is a gallery, extending all around, the caferne for the garrifon, or the place where the arms were lodged fecure from wet. The entrance is low, covered at top with great flat ftone, and on each fide is a hollow, probably intended for guard rooms; the infide of the fort is a circular area, of fifty-two feet diameter, with a fone feat running all round the bottom of the wall, about two feet high, where might have been a general refting-place of chieftains and foldiers.

On the outfide of the fort, is another work, under which is the veftige of a fubterraneous paffage conducting into it, a fort of fally port. Round the whole of this ancient fortrefs is a deep fofs. Three of thefe forts are generally within fight, fo that in cafe of any attempt made on any one, a fpeedy alarm might be given to the others. Each was the centre of a fmall diftrict; and to them the inhabitants might repair for Thelter in cafe of any attack by the enemy: the notice was given from the fort, at night by the light of a torch, in the day by the found of trumpet: an inflrument celebrated among the Danes, fometimes made of brafs, fometinues of horn*. The northern Bards fpeak hyperbolically of the effect of the blaft blown by the mouth of the heroes. The great Roland caufed his trunupet Olivant $\dagger$ to be heard twenty miles, and by the found fcattered about the very brains of one of his hearers.

Return, and fee on the road fide the ruins of a chapel dedicated to St. Colomba; and near it an arcient crofs.
July 3. Several gentlemen of the ifland favour me with a vifit: and offer their fervice to conduct me to whatever was worthy of attention. Set out, in their company, on horieback, and ride fouth, croffing the country; find the roads excellent, but the r.ountry quite open ; and too much good land in a fate of nature, covered with heath, but mixed with plenty of natural herbage. See fome funted woods of birch and hazels, giving fhelter to black game. On Imiriconart, or the plain ridge, are the veftiges of fome butts, where the great Mac-donald exercifed his men at archery. Reach and dine at Kilarow, a village feated on Loch-in-daal, a vaft bay, that penetrates very deeply into the ifland. Oppofite Bomore, flaips of three hundred tons may ride with fafety : which renders it a very convenient retreat.
Near Kilarow is the feat of the proprietor of the ifland. In the church yard is now proftrate a curious column, perhaps the fhaft of a crofs, for the top is broken off; and

- Wormii Mufeum, 378. Boate's Nat. Hift. Ireland, 197. Snith's Hif. Cork, ii. 40 . $\dagger$ Wormi Mon. Dan. $3^{8}$ _.
near it is a flat ftone, with a hole in the middle, the probable pedeftal. The figures and infcriptions are faithfully expreffed in the plate given by Mr. Pennant.

The two moft remarkable grave-ftones are, one of a warrior, in a clofe veft and Ileeves, with 2 fort of phillebeg reaching to his knees, and the covering of his head of a conic form, like the Bared of the ancient Irih ": a fword in his hand, and dirk by his fide. The other has on it a great fword; a beautiful running pattern of foilage round it ; and a griffin, a lion, and another animal at one end : near to them is a plain tablet, whether intended to be engraven, or whether like Peter Papin, Lord of Utrique, he was a new knight, and wanted a device, muft remain undetermined.

On a little flat hill, near the village, are the remains of the gallows: this was the place of execution in the days of the lords of the ines. From hence is a pretty view of the loch, and the church and village of Bomore.
This part of the ifland is in many places bounded by a fort of terrafs near twentytwo feet high, entirely formed of rounded fea-worn pebbles, now fome hundred yards diftant from the medium line between high and low water mark; and above twentyfive yards above it. This is another proof of the lofs fuftained by the fea in the Scottifh iflands; which, we know, makes more than reprizals in other places.

Ride along the head of the bay; at Tralaig, on a heathy eminence that faces the fands, are three deep hollows; their infide once lined with ftone: thefe had been the watch-towers of the natives, to attend the motions of any invaders from the fea. Obferve near them a great column of rude ftone.
Pafs by two deep channels, at prefent dry : thefe had been the harbour of the great Mac-donald; had once piers, with doors to fecure his fhipping: a great iron hook, one of the hinges having lately been found there.

The veffels then in ufe were called Birlings, probably corrupted from Bydinga $\dagger$, a fpecies of thip among the Norwegians : but by the fize of the harbours, it is plain that the navy of this potentate was not very confiderable.

Turn a little out of the road to fee the fite of one of his houfes, called Kil.choman, and a deep glen, which is pointed out to me as the place where he kept his fat cattle : fuch a conveniency was very neceffary, as moft of the eftablifhment of the great Macdonald's houfhold was paid in kind. Mr. Campbell, of Ballole, favoured me with the ftate of it in 1542 , which was as follows:

Obferve, near this place, a tract quite covered with clover, fown by nature. Proceed weft, and am conducted to Sundertand *, the feat of Campell, Efq. The improvenents of his lands are excellent, and the grafs fo good, and the fields fo clean, as to vie with any place. Near the houfe, in a well.flelteted nook, is an apple-orchard, which bore plentifully : thefe, with ftrawberries, are the fruits of thefe remote innand; the climate denies other luxuries of this nature : and even in thefe articles, Pomona fmiles but where fhe finds a warm protection.

About a mile from the houfe, on the coaft, feparated from the land by a deep but dry chafin, is a large rock, with a pretty large area on the top: on it are veftiges of various habitations, the retreat of the ancient natives in times of irrefifible invalion: here they were fecure, for the afcent is as difficult and hazarduus as moft I have undertaken. The place is called Burg-coul, and by the name refers to Fingal, or Fin-mac-cuil.

Sat up late, which gave me opportunity of knowing the lightnefs of the night in the ifland at this feafon: for at half an hour paft one in the morning, I could read the fmall print of a newfpaper.
July 4. Vifit Loch-guirn, about two miles diftant front Sunderland; a water of four miles in circumference, hallow, but abounding with trout. It is moft remarkable for a regular fort of the Mac-donald's, placed in a finall ifland, but now in ruins: the form is fquare, with a round baftion at each corner ; and in the middie are fome walls, the remains of the buildings that fheltered the garrifon: beneath one fide, between the two ballions, was the place where Mac-donald fecured his hoats: they were drawn beneath the protection of the wall of the fort, and had another on their outfide, built in the water, as an additional fecurity. The Dean of the illes fays, that in his time this cafle was ufurped by Mac-killayne, of Doward.

Dine at Mr: Campbell's, of Balnabbi. His land is quite riante ; his paftures in good order; and his people bufily employed in hay-making : obferved one piece of good grafs ground, which he aflured me was very lately covered with heath, now quite defroyed by the ufe of thell-fand. Perhaps it may feem trifling to mention, that fome cxcellent new potatoes were ferved up at dimer; but this circunflance, with the forwardnefs of the hay harveft, thews what may be effected by culture in this illand, when the tenure is fecure, for both Sunderland and Baluabbi are proprietors.
Sec, near the houfe, three upright fones, of a flupendous fize, placed nearly equidiftant : the largeft was feventeen feet high, and three broad.

Ride two miles N. W. to Doun-vollan, where fome high rocks project one behind the other into the fea, with narrow Ifthmufes between : on the afcent of each are ftrong Cikes, placed tranfereely, and a path leading towards the top; and on fome parts are

[^157]hollows, probably the lodging of the occupiers. The latt of thefe rocks terminates in a precipice over the fea, and was the demier refort of the defendants : fuch were the fortifications of the barbarous ases: here were the affailants fucceffful, the garrifon had no alternative but to perifh by the edge of the fword, or to precipitate themfelves into the or,an.

In various parts of this neighbourhood are fcattered finall holes, formed in the ground, large enough to hold a fingle man in a fitting pofture: the top is covered with a broad flone, and that with earth: "into thefe unhappy fugitives took fhelter after a defeat, and drawing together fods, found a temporary concealment from cnemies, who in early times knew not the giving or receiving of quarter. The incurfions of barbarians were always fhort ; fo that the fugitives could eafily fubfitt in their earths till the danger was over. Nen were then almoft in a flate of nature: how ftrong was their refemblance to beafts of prey! The whole fcenery of this place was unfpeakably favage, and the inhabitants fuitable. Falcons fcreamed inceflantly over our heads, and we difturbed the eagles percleed on the precipice.

Continue clambering among the rocks impending over the fea, and fpilt by intervals into chafms, narrow, black, and of a ftupendous depth; whofe bottom appeared and difappeared according to the momentary corufcations of the furious foam of the waves, rolling from the heavy ocean. Proceed along a narrow path, furrounding the face of a prorrontory hanging over the water, flipping nimbly over a way that fear alone could make dangerous, laughing at a bulky companion whom the reft had diftanced.

Defcend a deep tract, and found part of our company (who chofe a lefs picturefque road in poffefion of the fine cave of Saneg-mor: the entrance was difficult: but after fome travel found the infide of an auguft extent and height; the roof folid rock, which returned with the noife of thunder, the difcharge of our mufkets. Within this cave was another ftrait before us, with a fine arched entrance: feveral of the company had got into it, and palling wih their tapers backwards and forwards, from recefs to recefs, appeared at our diftance like the gliding fpectres of Shakefpeare in the pit of Acheron. We followed, and found our grotto divided into numbers of far-winding paffages, fometime opening into fine expanfes, again clofing, for a long (pace, into galleries, paffable but with difficulty: a perfect fubterraneous labyrinth. A bagpiper preceded: at times the whole fpace was filled with the found, which died away by degrees to a mere murmur, and foon after again aftonifhed us with the bellowing, according as the meanders conducted him to, or from our fingular thations.
July 5. Tale have of the hofpitable family of Sunderland: ride along a difierent road acrofs the iantel; paifs by fome cairns, and fome anciont feaces on the heaths. Reach the heal of Loch.Drumad, a place celebrated for the battle of Traiidhruinard, in 1.59?, betwen the lord of the illes, and Sir Lauchlan Mac-lean, of Mull: the laft, with : lifteen hundred men, invaded itay, with a view of ufurping it from his nephew: the firt had only eleven humdred, and was at firf obliged to retreat till he was joined by a hundred and twenty frefh tores: this decided the engagement. Sir Lauchlan was Adin, with four-fore of his principal kinfanen, and two hundred of his foldiers, who lay furrounding the body of their chieftain. A fone on the fot, was erected in me. mory of his fall.
Sir Lauchlan confulted a witch, the oracle of Mull, before he fet out on his expedition; and received three pieces of advice: firf, not to land on a Thurflay: a ftorm forced him into difobedience. The fecond, not to drink of a certain fpring: which he did through ignorance. 'The thisd, not to fight befide Loch-druinard: but this the fates may be fuppofed to have dotermand.

Ride by Locl-finlagan, a narrow piece of water, celebrated for its iffe, a principal refidence of the great Mac-donald. The ruins of this place and chapel fill exif, and alfo the ftone on which he flood when he was crowned King of the ifes. This cuftom feems to have been common to the northern nations. The Danes * had their Kongftolen.
'The ceremony, (after the new lord had collected his kindred and vaffals) was truly patriarchal. After puting on his armour his helmet and his fword, he took an oath to rule as his anceftors had done; that is, to govern as a father would his children : his people in return fwore that they would pay the fane obedience to him as children would their parent. The dominions of this potentate about the year 1586 confifted only of llay, Jura, Knapdale and Cantyre. So reduced were they, from what they had been, before the deprivation of the great Earl of Rofs, in the reign of James III.

Near this is another little ifle, where he affermbled his council: Illan na Corlle, or, The ifland of council; where thirteen judges conflantly fat to decide differences among his fubjects; and received for their trouble the cleventh part of the value of the affair tried before them $\dagger$.

In the firt inand were buried the wives and children of the lords of the ines; but their own perfons were depofited in the more facred ground of Jona.
On the fhores of the lake are fome marks of the quarters of his Carnauch and Gilliglaffes, the military of the ifles: the firft fignifying a flong man; the laft, a grim-looking fellow. The firft were light armed, and fought with darts and daggers; the laft with tharp hatchets $\ddagger$. Thefe are the troops that Shakefpeare alludes to, when he fpeaks of a Dunald, who

> From the wefternifes
> Of Kernes and Gallow glafes was fupplied.

Upon the fhore are remains of a pier, and on a fone is cut, A. II. or, OEneas the fecond, one of the lords of the ifles, in whofe reign it was founded 9 . This proves fufficently that Mac-donald was not their general title, as fome have imagined: the miftake arofe from two of the name of Donald, who were moft remarkable for the ravages they made in Scotland, in the reign of Edward Baliol, in ${ }^{1368}$, and that of James I. in 1410. As the tite is popular itill in the ifes, I chufe to continue what is fo much in ufe.

Befides thofe already mentioned, the lords had a houfe and chapel at Laganon, on the fouth fide of Loch-an-daal : a flrong caftle on a rock in the fea, at Dunowaick, at the fourt-eaft end of the country ; for they made this ifland their refidence after their expulfion from that of Man, in 1304.

There is a tradition, that while the ifle of Man was part of the kingdom of the ifles, that the rents were for a time paid in this country : thofe in filver were paid on a rock ftill called Creig-a-nione, or the rock of the filver rent: the other, Creig-a-nairgid, or, the rock of rents in kind. Thefe lie oppofite to each other, at the mouth of a harbour, on the fouth fide of this ifland.

[^158]Return to Freeport, and go on board my velfel, now at anchor on the Jura fide of the found in Whitefa lane bay.

The ine of Ilay, Ina, or, as it is called in Erfe, Ile, is of a fquare form, deeply indented on the fouth by tha great bay of Loch-an daal, divided from Jura, on the northeaft, by the found which is near fourten miles long, and about one broad. The tides the mof violent and rapid; the channel clear, excepting at the fouth entrance, where there are fome rocks on the Jura fide.

The length of Ilay, from the point of Ruval to the Mull of Kinoth, is twenty-eight miles; is divided into the parifhes of Kildalton, Kilarow, Kilchoman, and Kilmenie. The latitude "of Freeport, $55^{\circ} 52^{\prime} 29^{\prime \prime} \mathrm{N}$. The face of the illand is hilly, but not high : the loftieft hills are Aird-inifdail, Diur-bheinn, and Sgarb-bhein. The land in many parts is excellent, but much of it is covered with heath, and abfolutely in a ftate of nature.

The produce is corn of different kinds; fuch as bear, which fometimes yields cleven fold, and oats fix fold; a ruinous diftillation prevails here, infomuch that it is fuppofed that more of the bear is drank in form of whiky, than eaten in the fhape of bannocs. Wheat has been railed with good fuccefs in an inclofure belonging to the proprietor; but in an open country where moft of the cattle go at large, it is impoffible to cultivate that grain, and the tenants are unable to inclofe. Much flax is raifed here, and about 20001 . worth, fold out of the ifland in yarn, which might be better manufactured on the fpot, to give employ to the poor natives.

A fet of people worn down with poverty; their habitations fcenes of mifery, made of loofe ftones, without chimnies, without doors, excepting the faggot oppofed to the wind at one or other of the apertures, permitting the fmoke to efcape through the other, in order to prevent the pains of fuffocation. The furniture perfectly correfponds: a pothook hangs from the middle of the roof, with a pot pendent over a gratelefs fire, filled with fare that may rather be called a permifion to exift, than a fupport of vigorous life; the inm.tes, as may be expected, lean, withered, dufky, and fmoked-dried. But my picture is not of this inland only.

Notwithftanding the excellency of the land, above a thoufand pounds worth of meal is annually imported, a famine threatened at this time, but was prevented by the feafonable arrival of a meal fhip; and the inhabitants, like the fons of Jacob of old, flocked down to buy food.

Ale is frequently made in this ifland of the young tops of heath, mixing two thirds of that plant with one of malt, fometimes adding hops. Boethius relates that this liquor was much ufed among the Picts, but when that nation was extirpated by the Scots, the fccret of making it perifhed with themit.

The country bleft with fine manures; belides โea-wrack, coral, fhell.fand, rock and pit marle, it poffeffes a tract of thirty fix fquare miles of limeftone. What treafures, if properly applied, to bring wealth and plenty into the illand.

Numbers of cattle are bred here, and about feventecn hundred are annually exported at the price of fifty fhillings each. The inand is often overtocked, and numbers die in March for want of fodder. None but milch cows are houfed; cattle of all other kinds, except the faddle-horfes, run out during winter.

The number of inhabitants is computed to be between feven and eight thoufind. About feven hundred are employed in the mines and in the fifhery; the reft are

* I am greatly indebecd to Dr. Lind for the true latitude; and for a beautiful map of the ine from which I tuke my medfurements.
$\dagger$ Defer. Regni Scotorum.
gentlemen,
gentemen-farmers, fubtenants of fervants, 'Ihe women fin. Few as yet have mi-- brated.

The fervants are paid in kind; the fixth part of the crop. They have houfes gratis: the malter gives them the feed for the firlt year, and lends them horfes to plough anmally the land amexed.

The air is lefs healthy than that of Jura: the prefent epidemical difeafes are dropfies and cancers ; the matural efiects of bad food.

The quadrupeds of this illand are lloate, weafels, ott ra, and hares: the lant fmall, dark-coloured, and bad rumers. The birls are sents, perrgrine falcons, black and red game, and a very few parmigans. Real breateal gootanders breed on the flore among the loofe thees, wild inet. in the morers. Herons in the ifland in Lacloguirn. The fifh are plaife, lmeardah, large dats, mullst, ballan, lump-tifh, black goby, greater dragont, and that rare fith the Lapadogafler of M. Gonan.

Vipers fwarm on the heath; the natives retain the vulgar error of their flingiag with their forked tongues; blat a fivord on which the poifon has fallen will hils in water like a rod hot iron; and that a poultice of homan ordure is in infallible cure for the bite.

In this illand feveral antient diverfions and fuperfitions are flill preferved; the laft indecdare almolt extinct, or at molt Jurk only among the very ineanelt of the people.

The late wakes or funcrals, like thofe of the Romans, were attended with fports and dramatic entertainuents, compoted of many parts, and the actors often changed their drefies fuitable to their characters. 'The fubject of the drama was hiflorical and preferved by memory.

The ative fports are wrefling. Another is performed by jumping on a pole held up horizontally by two men; the performer lights on his laces, takes hold with both hamds, bends and kiffes it, and then fprines off: He who fucceeds in the feat when the poll is at higheft elevation, carries the piso.
$\Lambda$ fecond gane of ativity is played by two or three hundred, who form a circle; and every one places his ftick in the ground before him by way of barrier. A perfon, called the odd man, ftands in the middle, and delivers his bounet to any one in the ring. This is nimbly handed round, and the owner is to recover it ; and on fucceeding, takes the place of the perfon whom he took it from, and that perlon again takes the middle place.

There are two other trials of ftrength: firf, throwing the fedge hammer. The other feems local. Two men fit on the ground foot to foot; each lays hold of a fhort flick, and the champion that can pull the other over is the winner.

The power of fatcination is as Ilrongly believed here as it was by the !hepherds of Italy in times of old:

Nefcio quis teneros oculis mihi fafcinat agnos?
But here the power of the evil cye affeets more the milch cows than lambs. If the good houfewite percives the cflit of the malicious on any of her kine, the takes as much milk as the can drain from the enchanted herd, for the witch commonly leaves very little. She then hoils it with certain herbs, and adds to them fliuts and untempered feel; after that the fecures the door, and invokes the three facred pertons. This puts the witch into fuch an agony, that the comes milling-willing to the houfe, begs to be adnitted, to obtain rolief by touching the powerfut pot; the good woman then
makes
makes her terms ; the witch refores the milk to the cattle, and in retum is freed from her pains.

But fometimes to fave the trouble of thofe charms (for it may happen that the diforder may arife from other caufes than an evil-eye, the trial is made by immerging in milk a certain herb, and if the cows are fuper-naturally affected, it inftantly difilils blond.

The unfuccefsful lover revenges himfelf on his happy rival by charms potent as thofo of the Chepherd Alphefibreus, and exaetly fimilar:

$$
\text { Necte tribus nodis ternos } \Delta \text { marylli colores: }
$$

Necte. Amarylli modo.
Donald takes three threads of different hues, and ties three knots on each, three times imprecating the moft cruel difappointments on the nuptial bed: but the bridegroon to avert the harm, fands at the altar with an untied fhoe, and puts a fixpence beneath his foct.

A prefent was made me of a clach clun ceilach, or cock-knee flone, believed to be obtained out of that part of the bird; but I have unluckily forgotten its virtues. Not fo with the clach crubain, which is to cure all pains in the joints. It is to be prefumed both thefe amulets have been enchanted; for the firt very much refembies a common pebble, the other is that (pecies of fofilil fhell called Gryphites.

I was alfo favoured with feveral of the nuts, commonly called Molucca beans, which are frequently found on the weftern thores of this and others of the Hebrides. They are the feeds of the Dolichos urens, Guilandina Bonduc. G. Bonducetta, and mimofa fcandens of Linnacus, natives of Jamaica. The fifth is a feed called by Bauhin, fructus exot : orbicularis fulcis nervifque quatuor, whofe place is unknown. The four firft grow in quantities on the fteep banks of the rivers of Jamaica, and are generally fuppofed to drop into the water, and to be carried into the fea; from thence by tides and currents, and the predominancy of the ealt wind, to be forced through the gulf of Florida into the North American ocean, in the fame manner as the Sargaffo, a plant growing on the rocks in the feas of Jamaica. When arrived in that part of the Atlantic, they fall in with the wefterly winds, which generally blow two-thirds of the year in that tract; which may help to convey them to the fhores of the Hebrides and Orknies *. I was for refolving this phenomenon into fhipwrecks, and fuppofing that they might have been flung on thefe coafts out of fome unhappy veffels; but this folution of mine is abfolutely denied, from the frequency and regularity of the appearance of thefe feeds. American tortoiles, or turtles, have more than once been taken alive on thefe coafts, tempef-driven from their warm feas; and part of the maft of the Tillbury man of war, burnt at Jamaica, was taken up on the weftern coalt of Scotland; facts that give probability to the firlt opinion.

Hiftory furnifhes very few materials for the great events or revolutions of llay. It feems to have been long a feat of empire, probably jointly with the ifle of Man, as being moft conveniently fituated for the government of the reft of the Hebrides; for Crovan the Norwegian, after his conqueft of that ifland in 1066, retired and finifhed his days in Ilay $\dagger$. There are more Danifh or Norwegian names of places in this ifland than any other; almoft all the prefent farms derive their titles from them, fuch as Perfibus, Torridale, 'Torribolfe, and the like. On the retreat of the Danes it became the feat of their fucceffors, the lords of the ifles, and continued after their
power was broken, in the reign of James III. in their defcendants, the Mac-donalds, who held, or ought to have held it from the crown. It was in the poffeffion of a Sir James Mac-donald, in the year 1598, the fame who won the battle of Traii-dhruinard before mentioned. His power gave umbrage to James VI. who directed the Lord of Mac-leod, Cameron of Lochiel, and the Mac-neiles of Barra, to fupport the Macleanes in another invafion. The rival parties met near the hill of Ben-bigger, eaft of Kilarow; a fierce engagement enfued, and the Macdonalds were defcated, and almoft entirely cut off. Sir James efcaped to Spain ; but returned in 1620, was pardoned, received a penfion, and died the fame year at Glafgow, and in him expired the laft of the great Macdonalds. But the King, irritated by the difturbances raifed by private wars, waged between thefe and other clans, refunce * the grant made by his predeceffor, and transferred it to Sir John Camplel of Calder, who held it on paying an annual feu-duty of five hundred pounds ferling, which is paid to this day. The ifland was granted to Sir John, as a reward for his undertaking the conqueft, but the family confidered it as a dear acquifition, by the lofs of many gallant followers, and by the expences incurred in fupport of it. At prefent it is in poffefion of Mr. Campbel, of Shawfield, and the rents are about 2300 l . per annum.

July 6. Weigh anchor at three o'clock in the morning; with the affiftance of the tide get out of the Sound. Sce on the north-wefl fide the place where that gallant enemy Thurot lay, at different times, expecting the fit opportunity of his invafion, to be determined by the news he had of the fuccefs of the Breff fquadron. He was told that he lay in a dangerous place; but he knew that his fecurity confitited, in cafe a fuperior force came againft him, in being able cither to take to fea, or efcape through the Sound, according to the quarter the attack came from. His generofity and humanity are fpoken of in high terms by the illanders; and his diftrefs appeared very deep when he was informed of the mifcarriage of Conflan's flect.

Leave on the coaft of llay, near the mouth of the Sound, the celebrated cave of Uamh-Fhearnaig, or Uam-mhorr. Fourteen or fifteen families retire to it during the fine feafon, as their fheelins, or fummer refidence, and three fanilies refide in it the whole year.

About eight or nine miles from the mouth of the Sound lie the ifles of Oranfay and Coloniay. The ftillnefs of the day made the paffage tedious, which induced us to take boat; the view midway was very fine of Ilay and Jura, of the opening into Loch'Tarbat, a bay penetrating deep into Jura, and affording anchorage for large veflels; as was experienced a very few years ago by one of eight hundred tons, driven in during night : the mafter found an opening, and palfed providentially between two rocks, at a fimall diftance from each other; and, finding himfelf in fimooth water, dropped anchor, and lay fecure in a fine natural wet dock. A difcovery worthy the attention of mariners $\dagger$.

Beyond Jura appears the gulph of Corry-vrekan, bounded by the ifle of Skarba; the mountains of Mull fucceed; and before us extend the fhores of the two iflands, the immediate objects of our vifit. Land about one o'clock on Oranfay ; the fhip arrives foon after, and anchors within Ghudimal, which, with two or three other little rocky illes, forms a harbour.

[^159]After about a mile's walk reach the ruins of the antient monaftery, founded (as fome fay) by St. Columba, but with more probability by one of the Lords of the inles, who fived here a priory of canons regular of Augutine, dependent on the abby of Holyrond in Edinburgh. The church is fifty-nine feet by eighteen, and contains the tombs of numbers of the antient iflanders, two of warriors recumbent, feven feet long: a flattery perhaps of the fculptor, to give to future ages exalted notions of their prowefs. Befides thefe, are fattered over the floor leffer figures of heroes, priefls and fcmales; the laft feemingly of fome order : and near them is a figure, cut in ftone, of full fize, apparently an abbefs.

In a fide chapel, beneath an arch, lies an abbot, of the name of Mac-dufie, with two of his fingers clated, in the attitude of benediction: in the fame place is a fone enriched with foliage, a ftag furrounded with dogs, and a thip with full fail : round is infcribed, "Hic jacet Murchardus Mac-dufie de Collonfa, An. Do. 1539, menfe mart. ora me ille. ammen."

This Murchardus is faid to have been a great oppreffor, and that he was executed, by order of the Lord of the ines, for his tyranny. Near his tomb is a long pole, placed there in memory of the enfign-ftaff of the family, which had been preferved miraculoufly for two hundred years: on it (report fays) depended the fate of the Mac-dufian race, and probably the original perifhed with this Murchardus.

Adjoining to the church is the cloifter, a fquare of forty-one feet : one of the fides of the inner wall is ruined; on two of the others are feven low arches, one feven feet liigh including the columns, which are nothing more than two thin fones ", three feet high, with a flat flone on the top of each, ferving as a plinth; and on them two other thin fones, meeting at top, and forming an acute angle, by way of arch: on the forefide are five finall round arches; thefe furround a court of twenty-eight feet eight inches. This form is peculiar (in our part of Europe) to this place ; but I am told that the fame is obferved in fome of the religious houfes in the iflands of the Archipelago.
Several other buildings join this, all in a ruinous fate; but a moft elegant crofs is yet ftanding, twelve feet high, one fuot feven broad, five inches thick.

St. Columba, when he left Irelaid, made a vow never to fettle within fight of his native country : accordingly when he and his friend Oran landed here, they afcended a hill, and Ireland appeared in full view. This induced the holy men to make a fudden retreat; but Oran had the honout of giving name to the illand.

July 7. Afcend the very hill that the faint did: lofyy and craggy, inhabited by redbilled choughs and fares. On the top is a retreat of the old inhabitants, protected by a flrong fone dike and advanced works. On the plain below is a large round mount, flat at top, on which had probably been a finall Danifh fort, fuch as are frequently feen in Ireland. Nearer the fhore in the eaft fide of the ifland is a large conic tumulus; and on the fame plain, a fmall crofs placed, where a Mac-dufie's corps is faid to have refted. - Take a boat and vifit Bird ifland, and fome other rocks divided by narrow paffages, filled by a mooft rapid tide, Saw feveral eider ducks and fome thieldrakes. The iRanders neglect to gather the down of the former, which would bring in a little money.

This is the bird called by the dean of the ines colk. From the circumftance of its depluming its brealt, he fables that, " at that time her fleche of fedderis falleth of her hailly, and fayles to the mayne fea againe, and never comes to land quhyll the zeir end again, and then fhe comes with her nev fleiche of fedderis: this fleiche that fhe leaves reirly upon her neft hes nae pens in the fedderis, bot utter fine downes."

- On onc of thefe there is an infeription, which was copicd. but by fone accident loft.

P P 2

The feals are here numcrous: a few are caught in nets placed between thefe rocks. The great fpecies is taken on Du hirtach, a great rock about a mile round, ten leagues to the weft ; reported to be the neareft of any to America.

Oranfay is three miles long; the fouth part low and fandy, the reft high and rocky : is divided from Colonfay by a narrow found dry at low water. This infand is a fingle farm, yielding bear, flax, and much potatoes, which are left in their beds the whole winter, covered with fea-wrack, to protect them from the froft. The manure is fhell fand and wrack : the laft laid on grafs will produce but one crop ; on corn-land it will produce two. Sixty milch cows are kept here; and this year eighty head of cattle were fold from the ifland at three pounds a-piece: fome butter and cheefe are alfo exported.
This ifland is rented by Mr. Mac-Neile, brother to the proprietor of both iflands. The rent is not more than forty pounds a year; yet according to the cuftom of the ifles, the farm employs a number of fervants, viz. a chief labourer, who has fifty fhillings a year, and a ftone of meal per week ; a principal herdfman, whofe wages are grafs for two cows, and meal fufficient for his family; a cow-herd, who has twenty-four fhillings a year and fhoes; one under him, whofe wages are about fixteen thillings; and a calf-herd, who is allowed ten fhillings. Befides thefe are two other men, called from their employ aoireannan, who have the charge of cultivating a certain portion of land, and alfo overfeeing the cattle it fupports: thefe bave grafs for two milch cows and fix fheep, and the tenth fheaf, the produce of the ground, and as many potatoes as they chufe to plant. The maid fervants are a houfekecper, at three pounds a year; a principal dairy maid, twelve marks Scots each half year; and five other women, five marks.

Crofs the found at low water, and enter the ifland of Colonfay, twelve miles long, three broad, full of rocky hills, running tranfverfely, with variety of pretty meandering rales full of grafs, and moft excellent for pafturage. Even the hills have plenty of herbage mixed with the rock. The vallies want inclofures and want woods, the common defect of all the Hebrides : they yield bear and potatoes; much of the firft is ufed in diftillation, to the very ftarving of the iflanders, who are obliged to import meal for their fubfiftence. About two hundred and twenty head of cattle are annually exported at ${ }^{3}$ l. each. In 1736 the price was only five-and-twenty fhillings; but the rife ce:1menced two years after the rebellion. Yet even this advance does not enrich the people of this pretty ifland, for their whole profit is exhaufted in the purchafe of bread, which their own induftry ought to fupply.

Oats are fown here about the middle of April, and yield three and a haif. Bear produces eight fold. Forty or fifty tons of kelp are annually made in both iflands. The materials are collected on the fhores in the iniddle of April, and the kelp exported in Auguft, at the rate of $31.10 s$. or 41 . per ton.

Their poverty prevents them from ufing the very means Providence has given them of raifing a comfortable fubfiftence. They have a good foil, plenty of limeftone, and fufficient quantity of peat. A fea abounding with fifl ; but their diftreffed fate difables them from cultivating the one, and taking the other. Thefe two iflands contain eight thoufand four hundred acres, of which about two thoufand fix hundred are arable. How inadequate then is the produce of catte; and how much more fo is that of corn!
'The foil of this ifland is far fuperior in goodnefs to that of Oranfay; yet how difproportionably lefs are the exports: Oranfay owes its advantages to the good management of the tenant.

In both iflands are between five and fix hundred fouls. The old inabitants were the Mac-dufies and the Mac-vurechs. The firft were chief: "This ine (fays the dean) is brukit be ane gentle capitane callit Mac-Jufyke and pertened of auld to Clandonald of Kyntyre," and it is now brukit be ane gentle capitane callit Mac-neile, who has never ruifed his rents, has preferved the love of his people, and loft but a fingle family by migration.

This ifland, fince the time of the dean, was the property of the Argyle family, who fold it to an anceftor of the prefent proprietor about fixty years ago. I conjecture that the ancient owner might have forfeited by engaging in the laft rebellion of the Macdonalds; and that it was included in the large grant of iflands made to the Campbels, in reward for their fervices.

Met with nothing very interefting in the ride. Pafs by a chain of fmall lakes, called Loch-fad, by two great erect ftones monumental, at Cil chattan, and by a ruined chapel. There are three others; but notwithftanding, from this circumftance, Oranfay and Colonfay might be fuppofed to have been ifles of fanctity, yet from the reformation till within the laft fix years, the facrament had been only once adminittered.

Reach Cil-oran, the feat of the proprietor, Mr. Mac-neile, who entertained us with much politenefs. His houfe is well-fheltered, and trees grow very vigoroully in its neighbourhood. There is fcarcely an ifland, where vallies protected from winds may not be found, in which trees might be planted to great advantage. Afh and maple would fucceed particularly well; and in many places the beft kinds of willows would turn to good account, and produce a manufacture of bafkets and hampers, articles our commercial towns have a great demand for.

Rabbits abound here ; about a hundred and twenty dozen of their fkins are annually exported.

Bernacles appear here in vaft flocks in September, and retire the latter end of April or beginning of May. Among the domeftic fowls 1 obferved peacocks to thrive well in the farm at Oranfay; fo far north has this Indian bird been naturalized.

Neither frogs, toads, nor vipers are found here; or any kind of ferpent, except the harmlefs blind-worm.

I met with no remarkable foffils. Black talc, the mica lamellata martialis nigra of Cronfted, fect. 95, is found here, both in large detached flakes, and immerfed in indurated clay. Alfo rock fone formed of glimmer and quartz. An imperfect granite is. not unfrequent.

July 8. In the morning walk down to the eaftern coaft of the ifland, to a creek guarded by the little rocky ifle of Olamfay, where fmall veffels may find fhelter. Find Mr. Thompfon plying off at a mile's diftance. Go on board, and fail for Jona. The lofty mountains of Mull lay in the front : the eaftern views were llay, Jura, Scarba, and the entrance of the gulph of Corryvrekan; beyond lies Lorn, and at a diftance foars the high hill of Crouachan.

Steer to the north-weft; but our courfe greatly delayed by calms: take numbers of grey gurnards in all depths of water, and find young herrings in their ftomachs.

Towards evening arrive within fight of Jona, and a tremendous chain of rocks lying to the fouth of it, rendered more horrible by the perpetual noife of breakers. Defer our entrance into the found till day-light.

July 9. About eight of the clock in the morning very narrowly efcape ftriking on the rock Bònirevor, apparent at this time by the breaking of a wave : our mafter was at fome ditance in his boat, in fearch of fea-fowl, but alarmed with the danger of his
veffel, was hafening to its relief; but the tide conveyed us out of reach of the rock, and faved him the trouble of landing us, for the weather was fo caln as to free us from auy apprehenfions about our lives. After tiding for three hours, anchor in the found of Jona, in three fathoms water, on a white fandy buttom; but the fafeft anchorage is on the eaft fide, between a little itle and that of Mull: this found is three miles long and one broad, fhallow, and in fome parts dry at the ebb of fyring tides: it is bounded on the calt by the ifland of Mull; on the weft by that of Jona, the moft celebrated of the Hebrides.

Multitudes of gannets were now fifhing here : they precipitated themfelves from a vaft height, plunged on their prey at leaft two fathoms deep, and took to the air again as foon as they emerged. Their fenfe of feeing muft be exquifite; but they are often deceived, for Mr. Thompfon informed me that he had frequently taken them by placing a herring on a hook, and finking it a fathom deep, which the gannet plunges for and is taken.

The view of Jona sus very picturefque: the eaft fide, or that which bounds the found, exhibited a beautiful variety; an extent of plain, a little elevated above the water, and almoft covered with the ruins of the facred buildings, and with the remains of the old town fill inhabited. Beyond thefe the ifland rifes into little rocky hills, with narrow verdant hollows between (for they merit not the name of vallies), and numerous enough for every reclufe to take his folitary walk, undifturbed by fociety.

The inand belongs to the pariih of Rofs, in Mull; is three miles long and one broad; the eaft fide moftly flat; the middle rifes into fmall hills; the weft fide very rude and rocky; the whole is a fingular mixture of rock and fertility.

The foil is a compound of fand and comminuted fea fhells, mixed with black loam; is very favourable to the growth of bear, natural clover, crowsfoot, and daifies. It is in perpetual tillage, and is ploughed thrice before the fowing : the crops at this time made a promifing appearance, but the feed was committed to the ground at very different times; fome, I think, about the beginning of May, and fome not three weeks ago. Oats do not fucceed here; but flax and potatoes come on very well. I am in. formed that the foil in Col, Tir-I, and North and South Uitt, is fimilar to that in Jona.

The tenants here run-rig, and have the pafturage in common. It fupports about a hundred and eight head of cattle, and about five hundred fheep. There is no heath in this ifland: cattle unufed to that plant give bloody milk; which is the cafe with the cattle of Jona tranfported to Mull, where that vegetable abounds; but the cure is foon effected by giving them plenty of water.

Servants are paid here commonly with a fourth of the crop, grafs for three or four cows and a few fheep.

The number of inhabitants is about a hundred and fifty: the moft ftupid and the moft lazy of all the iflanders; yet many of them boalt of their defcent from the companions of St. Columba.

A few of the more common birds frequent this ifland: wild geefe breed here, and the young are often reared and tamed by the natives.

The beautiful fea-buglofs makes the fhores gay with its glaucous leaves and purple flowers. The cryngo, or fea-holly, is frequent; and the fatal belladonna is found here.

The granites durus rubefcens, the fame with the Egyptian, is found in Nuns-ifle, and on the coaft of Mull : a breccia quartzofa, of a beautiful kind, is common; and the rocks to the fouth of the bay of Martyrs is formed of the Swedifh trapp, ufeful to glaifsmakers ${ }^{\text {* }}$.

[^160]Jona derives its name from a Hebrew word fignifying a dove, in alluion to the name of the great faint, Columba, the founder of its fame. This holy man, inftigated by his zca?, left his native country, Ireland, in the year 565 , with the pious defign of preaching the gofpel to the Picts. It appears that he left his native foil with warm refentment, vowing never to make a fettlement within fight of that hated iflaud. He made his firft trial at Oranfay, and on finding that place too near Ireland, fucceeded to his wifh at Hy, for that was the name of Jona at the time of his arrival. He repeated here the experiment on feveral hills, erecting on each a heap of ftones; and that which he laft afcended is to this day called Carnan-chul-reh-Lirinn, or the eminence of the back turned to Ireland.

Columba was foon diftinguifted by the fanctity of his manners: a miracle that he wrought fo operated on the Pictinh king, Bradeus, that he inmediately made a prefent of the little ine to the laint. It feems that his majefty had refufed Columba an audience, and even proceeded fo far as to order the palace gates to be fhut againft him ; but the faint; by the power of his word, inftantly caufed them to fly open.

As foon as he was in poffeffion of Jona he founded a cell of monks, borrowing his inflitutions from a certain oriental monaftic order *. It is faid that the firft religious were canons regular, of whom the founder was the firft abbot; and that his monks, till the year 716, differed from thofe of the church of Rome, both in the obfervation of Eafter, and the clerical tonfure. Columba led here an exemplary life, and was highly refpected for the fanctity of his manuers for a confiderable number of years. He is the firt on record who had the faculty of fecond.fight, for he told the victory of Aidan over the Piets and Saxons on the very inftant it happened. He had the honour of burying in this ifland Convallus and Kinnatil, two kings of Scotland, and of crowning a third. At length, worn out with age, he died, in Jona, in the arms of his difciples; was interred there, but (as the Irifh pretend) in after times tranlated to Down, where, according to the epitaph, his remains were depofited with thofe of St. Bridget and St. Patrick.

> Hi tres in Duno tumulo tumulantur in uno: Brigida, Patricius, atque Columba pius.

But this is totally denied by the Scots; who affirm that the contrary is fhewn in the life of the faint, extracted out of the pope's library, and tranfated out of the Latin ino Erfe, by father Cal-o.horan, which decides in lavour of Jona the momentous difpute $\dagger$.'

After the death of St. Columba, the illand received the name of Y-columb-cill, or the ifle of the cell of Columba. In procefs of time the illand itfelf was perfonified, and by a common blunder in early times converted into a laiat, and worlhipped under the title of St. Columb-killa.

The religious continued unmolefted during two centuries; but in the year 807 were attacked by the Danes, who with their ufual barbarity put part of the monks to the fword, and obliged the remainder, with their abbot Cellach, to feek fafety by flying from their rage. 'The monatery remained depopulated for feven years; but on the retreat of the Danes received a new order, being then peopled by Cluniacs, who continued there till the diffolution, when the revenues were united to the fee of Argyle.

Took boat and landed on the fpot called the Bay of Martyrs, the place where the bodies of thofe who were to be interred in this holy ground were received during the period of fuperflition.

[^161]
## 296

 PENNANT'S SECOND TOUR IN SCOTLAND.Walked about a quarter of a mile to the fouth, in order to fix on a convenient fpot for pitching a rude tent, formed of oars and fails, as our day refidence, during our ltay on the ifland.

Obferve a little beyond an oblong inclofure, bounded by a ftone dike, called Clachnan Druinach, and fuppofed to have been the burial-place of the Druids, for bones of various fizes are found there. I have no doubt but that druidifin was the original religion of this place; yet I luppofe this to have been rather the common cemetery of the people of the town, which lies almoft clofe to the bay of Martyrs.

Having fettled the buinefs of our tent, return through the town, confifting at prefent of about fifty houfes, moltly very mean, thatched with ftraw of bear pulled up by the roots, and bound tight on the roof with ropes made of heath. Some of the houfes that lie a little beyond the reft feemed to have been better conftructed than the others, and to have been the manfions of the inhabitants when the place was in a flourifhing ftate, but at prefent are in a very ruinous condition.

Vifit every place in the order that they lay from the village. The firf was the ruin of the nunnery, filled with camonefles of St. Auguftine, and confecrated to St. Oran. They were permitted to live in community for a confiderable time after the reformation, and wore a white gown, and above it a rotchet of fine linen *.

The church was fify-eight fret by twenty: the roof of the eaft end is entire, is a pretty vault made of very thin fon $s$, bound together by four ribs meeting in the centre. The floor is covered fome feet thick with cow-dung; this place being at prefint the common fhelter for the cattle; and the iflinders are too lazy to remove this fine manure, the collection of a century, to enrich their grounds.

With much difficulty, by virtue of fair words and a bribe, prevail on one of thefe liftlefs fellows to remove a great quantity of this dunghill, and by that means once more expofe to light the tomb of the lait priorefs. Her figure is cut on the face of the fone; an angel on each fide fupports her head; and above them is a little plate and a comb. The priorefs occupies only one half of the furface; the other is filled with the form of the Virgin Mary, with head crowned and mitred; the child in her arms; and to denote her Queen of Heaven, a fun and moon appear above. At her feet is this addrefs, from the priorefs: "Sancta Maria ora pro me." And round the lady is inferibed " "Hic jacet Domina Anna Donaldi Terleti $\dagger$ filia quondam prioriffa de Jona quæ obit año mio $\mathrm{d}^{\circ} \mathrm{xi}^{\text {mo }}$ ejus animan altiffimo commendamus "

Mr. Stuart, who fome time paft vifited this place, informed one that at that time he obferved this fragment of another infcription: "Hic jacet Mariota filia Johan: Lauchlani Domini de . ."
Befides this place of fepulture, was another on the outfide, aliotted for the nuns; where, at a refpectable dittance from the virtuous reclufes, lies in folitude a frail filter.

I his nunnery could never have been founded (as foone affert) in the days of St. Columba, who was no admirer of the fair fex: in fact he held them in fuch abliorrence, that he detefted all cattle on their account, and would not permit a cow to come within fight of his facred walls ; becaufe "'Sfar am bi bo, bi'dh bean, 'Sfar am bi bean, bi'dh mallacha:" "Where there is a cow, there muft be a woman; and where there is a woman, there muit be mifchiet."

Advance from hence along a broad paved way, which is continued in a line from the nunnery to the cathedral : another branches from it to the bay of Martyrs; and a third, narrower than the others, points towards the hills.

- Keilh, 280.
+ O. Charles.

On"this road is a large and elegant crofs, called that of Macleane, one of three hundred and fixty that were fanding in this ifland at the reformation *, but immediately after were almoft entirely demolifhed by order of a provincial affembly, held in the illand. It feems to have been cuflomary in Scotland for individuals to erett croffes, probably in confequence of fome vow, or perhaps out of a vain hope of perpetuating their memory.

Arrive at Reilig Ourain, or the burying.place of Oran, a vaft enclofure; the great place of interment for the number of monarchs who were depofited here, and for the potentates of every inte, and their lineage; for all were ambitious of lying in this holy fpot. The place is in a manner filled with grave-ftones, but fo overgrown with weeds, efpecially with the common butter-bur, that very few are at prefent to be feen.

I was very defirous of viewing the tombs of the kings, defcribed by the Dean of the ifles, and from him by Buchanan: the furmer fays $\dagger$, that in his time there were three, built in form of little chapels; on one was infcribed, "Tumulus Regum Scotia." In this were depofited the remains of forty-eight Scottifh monarchs, beginning with lergus II., and ending with the famous Macbeth: for his lucceffor, Malcolm Canmore, decreed for the future Dumferline to be the place of royal fepulture $\ddagger$. Of the Scottif monarchs interred in Jona, fixteen are pretended to be of the race of Alpin, and are ftyled, Righrid Ailpeanaeh.

Fergus was the founder of this maufoleum (Boethius calls it abbatia $\oint$ ), and not only directed that it fhould be the fepulchre of his fucceffors, but alfo caufed an office to be compofed for the funeral ceremony.

The next was infcribed, "Tumulus Regum Hiberniæ," containing four Irifh monarchs; and the third, "Tumulus Regum Norwegix," containing eight Norwegian princes, or more probably viceroys, of the Hebrides, while they were fubject to that crown.

That fo many crowned heads, from different nations, fhould prefer this as the place of their interment, is faid to have been owing to an ancient prophecy:

> Seachd bliadua roimh'n bhrà̀
> Thig muir thar Eirin re anon tra' Sthar Ile ghu irm ghlais
> Ach Snamhaidh I cholum clairich.

Which is to this effect: "Seven years before the end of the world a deluge fhall drown the nations : the fea, at one tide, fhall cover Ireland, and the green-headed Ilay ; but Columba's ine fhall fwim above the flood."

But of thefe celebrated tombs we could difcover nothing more than certain gight remains, that were built in a ridged form, and arched within; but the infcriptions were loft. Thefe are called Jomaire nan righ, or the ridge of the kings. Among thefe fones were found two with Gaelic infcriptions, and the form of a crofs carved on each : the words on one were, "Cros Domhail Fat'afich," or the crofs of Donald LongShanks; the other fignified the crofs of Urchvine o Guin. The letters were thofe of the moft ancient Irifh alphabet, exhibited in Vallancy's Irifh grammar.

Among the fame thones is alfo the following: "Hic jacent quatuor priores de-ex una natione V : Johannes, Hugonius, Patricius: in decretis olim Bacularius, alter Hugonius || qui obiit an. Dom. millefs ${ }^{\text {nc }}$ quingenteffimo."

vol. IIf.

I am indebted to Mr. Stuart for thefe three inferiptions, which he met with in his former vojage ; arriving before the growth of the all-covering weeds. Mr. Frazier, fon to the Dean of the inse, informed Mr. Sacheverel, governor of the ifle of Man, who vifited Jona in 1688, that his father had collected there three hundred iufcriptions, and prefented them to the Earl of Argyle; which were afterwards loft in the troubles of the family.

The chapel of St. Oran ftands in this fpace, which legend reports to have been the firt building attempted by St. Columba; by the workiug of fome evil fpirit, the walls fell down as faft as they were built up.
After fome confultation it was pronounced, that they never would be permanent till a human victim was buried alive: Oran a companion of the faint, generoully offered himfelf, and was interred accordingly : at the end of three days St. Columba had the curiofity to take a farewell look at his old friend, and caufed the earth to be removed. To the furprize of all beholders, Oran ftarted up, and began to reveal the fecrets of his prifon-houfe; and particularly declared, that all that had been did. of hell was a mere joke. This dangerous impiety fo Mocked Columba, that, with great policy, he inftantly ordered the earth to be flung in again; poor Oran was overwhelmed, and an end for ever put to his prating. His grave is near the door, diftinguifhed only by a plain red fone.
Boethius * gives us reafon to fuppofe, before this period, Jona to have been the habitation of the weird fifters and cacodrmons; for King Natholocus, like Saul of old, confulted in this ifland an old witch, of uncommon fame: no wonder, therefore, that the prince of darknefs fhould be interelted in the overthrow of edifices that were to put an end to his influtence.
In Oran's chapel are feveral tom's, and near it many more: within, beneath a recefs formed with three neat pointed arches, is a tomb-ftone with a fhip and feveral ornaments. I forgot whether the fails were furled: in that cafe the deceafed was defcended from the ancient Kings of Man of the Norwegian $\dagger$ race, who ufed thofe arms.

Near the fouth end is the tomb of the abbot Mac. kimman's father, inferibed, Heec eft crux Lauchlani Mc. Fingon et cjus filii Johannis Abbatis de lly. facta an. Doan. mi++ cccelsxxix.

Another of Macdonald of Ilay and Camtyre, commonly called Jnnus, or Angus oig, the chief of the name. He was a ftrong firend to Robert Bruce, and was wilh him at the battle of Bamockbourne. His infription is, Hic jacet corpus Angufii filii Domini Angufii Mc. Domhnill de Itay.
In another place lies the grave flone of Ailean Nan Sop, a Ceatharnarch, or head of a party, of the name of Mactiane; from whom is defcended the family of Torloifg. The ftone is ornamented with carving and a fhip.

A Macleane, of Col, appears in armour with a fword in his leff hand. A Macleane of Buart, with armour, thield and two-handed fword. And a third, of the fame name of the family of Lochbuy: his right hand grafps a piftul, his $1 . f t$ a fivord. Befides thete, are numbers of other ancient heros, whote very names have prifthed, and they deprived of their expected glory: their lives wore, like the path of an arrow, clofed up and toft as foon as paft ; and probably in thofe times of barbaifin, as fatal to their fellow creatures.
About feventy feet fouth of the chapel is a red unpolifed flone; teneath which lies a manelefs King of Fiance. But the monory of the tamous old docior of Mull has had

$$
\text { Lib. vi p yo. } \quad+\text { Dozior Macphation. }
$$

a better
a better fate, and is preferved in thele words: Hic jacet Johannes Betonus Maclenorum fanilic, medicus, qui nortuus eft 19 Novembris 1657. Nt. 63. Donaldus Betonus fecit. 1674.

A little north weft of the door is the pedeftal of a cro's : on it are certain fones, that feem to have been the fupport of a tomb. Numbers who vifit this ifland (I fup. pofe the elect impatient for the confummation of all things) think it incumbent on thems to turn each of thefe thrice round, according to the courfe of the fun. They are called Clacha-brath; for it is thought that the brath, or end of the world, will not arrive till the fone on which they ftand is worn through. Originally, fays Mr. Sacheverel, here were three noble globes, of white marble, placed on three fone bafons, and thefe were turned round; but the fynod ordered them, and fixty croffes, to be thrown into the fea. The prefent ftones are probably futftituted in place of thefe globes.

The precinct of thefe tombs was held facred, and enjoyed the privileges of a Girth, or fanctuary *. Thefe places of retreat were by the ancient Scotch law, not to Thelter indifcriminately every offender, as was the cafe in more bigotted times in Catholic countries: for here all atrocious criminals were excluded; and only the unfortunate delinquent, or the penitent finner fhielded from the inftant froke of rigorous juftice. The laws are penned with fuch humanity and good fenfe, that the reader cannot be difpleafed with leeing them in their native fimplicity $\dagger$.
"Gif any fleis to Halis Kirk moved with repentance confeffes there that he " heavily finned, and for the love of Gov is come to the houfe of God for fafetie of " himfelf, he fall nocht time life nor limme bot quhat he has taken frae anie man he " fall reftore fame-ikill to him, and fall fatisfic the King according to the law of the " countrie.
" And fwa fall fwere upon the Halie Evangell that there-after he fall never commit "reif nor theift." Alex. 1t.c. 6 .
"If ane manflayer takes himfelf to the immunitie of the Kirk, he fould be admon" iffed and required to come forth and prefent himfelf to the law; to know gif the " flauchter was comnitted be forthocht felonie or murther.
" And gif he be admoniffed, and will not come furth; frathat time furth in all time " thereafter he fal be banifhed and exiled as ane committer of murther and forethocht " felonie; keep and refervand to him the immunitic of the kirk to the whilk he take " himfelf." Rob.ir.c.9.

Particular care was alfo taken that they thould receive no injury during their retreat: penalties were enacted for even flriking; but for the murder of any, "The King was to have from the flayer twentye nine kyes and ane zoung kow; and the offender was alfo to affithe to the friends of the defunct conforme to the laws of the countric.'. Wil. c. 5 .

The cathedral lies a little to the north of this inclofure: is in the form of a crofs. The length from ealt to welt is a hundred and fifteen feet. The breadth twenty-three. The length of the tranfept feventy. Over the centre is a handfome tower: on each of which is a window with fome ttone work of different forms in every one.

On the fouth fide of the chancel are fome Gothic arches fupported by pillars, nine feet eight inches high, including the capitals; and cight feet nine inches in circumfer-

[^162]ence. The capitals are quite peculiar ; carved round with various fuperflitious figures, among others is an angel weighing of fouls.
The altar was of white marble veined with grey, and is vulgarly fuppofed to have reached from fide to fide of the chancel : but Mr. Sachevercl ${ }^{\text {² }}$, who faw it when almoft entire, affures us, that the fize was fix feet by four.

The demolition of this ftone was owing to the belief of the fupertitious; who were of opinion, that a piece of it conveyed to the poffeffor fuccefs in whatever he undertook. A very fmall portion is now left; and even that we contributed to diminih.
Near the altar is the tomb of the abbot Mac-kinnon. His firure lics rccumbent, with this infcription round the margin, "Hic jacet Johannes Mac-Fingone abbas de ily, qui obiit anno Domini Milleffimo quingenteffimo, cujus anime propitietur Deus altiffimus. Amen."

On the other fide is the tomb and figure of Abbot Kenneth.
On the tloor is the effigy of an arned knight, with a whilk by his fide, as if he jut had returned from the fcaft of thells in the hall of Fingal.
Among thefe funeral fubjects, the interment (a few years ago) of a female remarkable for her lineage muft not be omitted. She was a direct defcendant, and the laft of the Clan-an-oifter, oftiarii, or door-keepers to the monaftery. The firt of the family came over with Columba, but falling under his difpleafure, it was decreed on the imprecation of this irritable faint, that never mure than five of his clan fhould exift at one time; and in confequence when a fixth was born, one of the five was to look for death. This, report lays, alway happened till the period that the race was extinguifhed in this woman.

It is difficult to fay when the prefent church was built: if we may credit Boethius, it was rebuilt by Malduinus, in the feventh century, out of the ruins of the former. But the prefent ftructure is far too magnificent for that age. Moft of the walls are built with red granite from the Nuns ine in the found.

From the fouth eaft corner are two parallel walls about twelve feet high, and ten fect diftant from each other. At prefent they are called Dorus tàrgh, or the door to the thore: are fuppofed to have been continued from the cathedral to the fea, to h.ve been roofed, and to have formed a covered gatlery the whole way.

In the church-yard is a fine crofs, fourteen feet high, two feet two inches broad, and ten inches thick, made of a fingle piece of red granite. The pedeftal is three feet high.

Near the fouth-eaft end is Mary's chapel. Befides this, we are informed, that there were feveral other founded by the Scottifh monarchs, and the Reguli of the iffes $\dagger$.

I he monaftery lies behind the cathedral. It is in a moft ruinous fate, a fmall remnant of a cloilter is left. In a corner are fome black fones, held fo facred, tuil for what reafon I am ignorant, that it was cuftomary to fwear by them : perhaps from their being neighbours to the tutelar faint, whofe grave is almoft adjacent.

Boethius $\ddagger$ gives this monaftery an earlier antiquity than perhaps it can jufly claim. He fays, that after the defeat of the Scots, at the battle of Munda, A. D. 379, the furvivors with all religions fled to this ifland; and were the original founders of this houfe. But the account given by the vencrable Bede is much more probable, that St. Columba was the original founder, as has been before related.

This ine, fays the Dean, hes beine richlie dotat by the Scotch kings : and mentions feveral little ifands that belonged to it, which he calls Soa, Naban, Moroan, Reringe,

[^163]Inch Kenzie, Forfay, and Kannay. If thefe had been all the endowments, they would never ferve to lead the religious into the temptation of luxury; but they were in porfeffion of a confiderable number of churches and chapels in Galway, with large eftates annexed, all which were taken from them, and granted to the canons of Holyrood houle by William I. between the ycars 1172 and $1,80^{\circ}$.

Columba was the firft abbot: he and his fucceffors naintained a jurifdiction over all the other monafteries that branched from this; and over ali the monks of this abbey that exercifed the priefly or even epifcopal function in other places. One of the infttutes of Loyola feems here to have been very carly eftablifhed, fior the cleves of this houfe feem not to think themfelves freed from their vow of obedience to the abbot of Jona. Bede f fpeaks of the fingular pre-eminence, and fays that the ifland always had for a governor an abbot-prefbyter, whofe power (by a very uncummon rule) not only evciy province, but even the bifhops themfelves, obeyed. From this account the enemies to epifcopacy have inferred, that the rank of binhop was a novelty, introduced into the church in corrupt times; and the authority they affume. was an errant ufurpation, fince a fimple abbot for fo confiderable a fpace was permitted to have the fuperiority. In aulwer to this, archbifhop Uher $\ddagger$ advances, that the power of the abbot of Jona was only local ; and extended only to the bilhop who refided there: for after the conqueft of the ifle of Man by the Englifh, and the divifion of the fee after that event, the bifhop of the illes made Jona his refidence, which before was in Man. But notwithftanding this, the venerable Bede feems to be a flronger authority, than the Ulfter annals quoted by the archbifhop, which pretend no more than that a bilhop had always refided in Jona, without even an attempt to refute the pofitive affertion of the moft refpectable author we have (relating to cl.urch matters) in tho'e primitive times.

North of the monaftery are the remains of the bifhop's houfe: the refidence of the bill ops of the illes after the ifle of Man was feparated from them. This event happened in the time of Edward I. On their arrival the abbots permitted to them the ufe of their church, for they never had a cathedral of their own, except that in the ifle of Man. During the time of the Norwegian reign, which lafted near two hundred years, the bifhops were cholen without refpect of country, for we find French, Norwegian, Ens ifh and Scotch among the prelates, and they were generally, but not always, confert ted at Drontheim. Even atter the ceffion of the Ebudx to Scotland by Magnus, the patronage of this bifhoprick was by treaty. referved to the archbilhop $\oint$. of Drontheim. This fee was endowed with || thirteen iflands; but fome of them were forced from. thim by the tyramny of forne of the little chieftains; thus for example, Rafa, as the honetl Dean fays, was perteining to Mac-Gyllychallan by the fword, and to the bifhop of the ifles by heritage.

The title of thefe prelates, during the conjunction of Man and Sodor, had been univerfally miftaken, till the explications of that molt ingenious writer Ir. Macpherlon $\mathbb{T}$ : it was always fuppofed to have been derived from Soder, an imaginary town, tither in Man or in Jona: whofe derivation was taken from the Greek Soter or Saviour. During the time that the Norwegians were in poffeffion of the ifles, they divided them into two parts: the northern, which comprchended all that lay to the north of the point of

[^164]Arnamurchan, and were called the Nordereys, frum norider North, and cy an ifland. And the Sudercys took in thofe that lay to the fueth of that promontory. 'This was only a civil divition, for the fake of governing thefe featered dominions with more facility; for a feparnte viceroy was fent to each, but both were fubject to the fame jurifdiction civil and ecclefialfical. But as the Sudereys was the moft important, that had the honour of giving name to the bithoprick, and the ille of Man retained both titles, like as England unites that of France, notwithfanding many centuries have elapfed fince our rights to the now ufurped titles are loit.
l'roceed on our walk. 'To the weft of the convent is the abbot's mount, overlooking the whole. Benealh feem to have been the gardens once well cultivited, for we are told that the monks tranfplantel from other places, herts both efculent and medicinal.

Beyond the mount are the ruins of a kiln, and a granary: and near it, was the mill. The lake or pool that ferved it lay behind; is now drained, and is the turbory the fuel of the natives: it appears to have been once divided, for along the midion win a aifed way, pointing to the hills. They neglect at prefent the conveniency al a mill, atel ufe unly querns.

North from the granary extends a narrow tlat, with a dovitre dike and tofs on one fide, and a fingle dike on the other. At the cud is a funare maining a cairn and furrounded with a thone dike. This is called a burial place: it muft have been in very carly times cotemporary wih other cairns, perhaps in: the days of Druidifm; for biGop Pocock mentions, that he had fren two fones feven feet high, with a third laid acrofs on their tops, an evident cromleh: he alto adds, that the Irifh name of the ifland was lifh Drunifh; which agrees with the account I have fomewhere read, that Jona had been the feat of Druids expelled by Columba, who found them there.

Before I quit this height, I muft obferve, that the whole of their religious buildings were covercil on the north fide by dikes, as a protection from the norihern invaders, who paid little regard to the fanctity of their characters.

The public was greatly intereftel in the prefervation of this place, for it was the repofitory of molt of the ancient Scotch records *. The library here muft alfo have been invaluable, if we can depend upon Bocthius, who alferts that Fergus the II. affifting Alaric the Goth, in the facking of Rome, brought away as his thare of the plunder, a cheft of books, which he prefented to the monaltery of Jona. Encas Sylvius (afterwards Pope Pius 11.) intended, when he was in Scolland, to have vifited the library in fearch of the loft books of Livy, but was prevented by the death of the King, James I. A fmall parcel of them were in $15: 5$ brought to Aberdeen $\dagger$, and great pains were taken to unfold them, but through age and the tendernefs of the parchment, little could be read: but from what the learned were able to make out, the work appeared by the fyle to have rather been a fragment of Salluft than of Livy. But the regifter and records of the ifland, all written on parchment, and probably other more antique and valuable remains, were all dell royed by that worfe than Gothic fynod $\ddagger$, which at the reformation declared war againft all fcience.

At prefent, this once celebrated feat of 1 and this feminary of holy men wamts con amiter to aflift them in the cominon dutis of religion.

[^165]July 10. Crofs the inand over a molt fertite elevated trat to the fouth-weft file, to vifit the landing place of St. Columba; a fmall bay, with a pebbly beach, mixed with variety of pretty flones, fuch as violet-coloured quartz, nephritic Itones, and fracinents of porphyry, granite and \%ablitz mable: a vaft tract near this place was covered with heapsof ftones, of unequal fizes: thele, as in faid, were the penances of monks who we. e to raife heape, of dimenfions equal to their crimes : and to judge by fome, it is no beach of charity to think there were among then enormous finners.

On one fide is fhewn an oblong hsap of earth, the fuppofed fize of the veffel that tranfported St. Columba and his twelve difciples from Ireland to this illand.

On my return faw, wn the right hand, on a fmall hill, a fimall circle of fones, and a little cairn in the middle, evidently Druidical, but called the hill of the Angels, Cnoc nar-aingeal; from a tradition that the holy mon had there a conference with thofe celeftial beings foon after his arrival. Bifhop locock i formed me, that the natives were accuftomed to bring their horfes to this circle at the feal of St. Michacl, and to courfe round it. I conjecture that this ufage originated from it cuftom of blefling the horfes in the days of fuperitition, when the prieft and the holy w ater pot were calledin: but in latter times the horfes are ftill affembled, but the r-fon forgoten.

The traveller muft not negleat to afeend the hill in an-ii ; from whofe fummit is a molt picturefque view of the long chain of li tle iflan, neigh bours to this; of the long low illes of Col and IIir-I to the weft; and the valt weight f Rum and Skie to the north.

July 11. At eight of the clock in the morning, with the firft fair wind we yet had, fet fail for the found : tae view of Jona, its cluftered to the great ruins, and the fertility of the ground, were fine contrafts, in our pallage
the red granite rocks of the barren Mull.

Loch-Screban, or Loci-Leven in Mull, foon opens o our view. After paffing a cape, placed in our mips f.r too projecting, fee Loch in Gaal; a deep bay, with the ifles of Ulva and Gometra in its msuth. On Ulva are faltic columns of a lighter colour than ufual. In I.och-Screban that intel igent vova er Mr. Mills in 1788, dif. covered in a glen near Ardlan head, a wouderfal collection bafaltic columns, variounly difpofed, fome erect, others bending as if prefted by the incumbent weight, and attend. ed by lava and vitrified matter. A' infulated rock of a ven farprizing compofition is to be feen at the extremity of the glen, fupported by lofty bafac ic pillars fightly inclined. The greater part of the rock is furmed of rude liva, but one fide confifts of pillars lying horisontally upon the others, and regularly relting on them till they reach the funmit of the lava, and form on that part a molt beautiful and fingular $f_{a}$ ing *,

On the welt appears the beautiful groupe of the 'lrealhunith inlest. Nearent lies Stafta, a new giants caufeway, rifing amidft the waves; but vith columns of double the lieight of that in Ireland; glofy and refplendent, from the beams of the eaftern fun. Their grateft height was at the fouthern point of the ine, of which they feemed the fupport. They decreafed in height in proportion as they advanced along that face of Staffa oppofed to us, or the eaftern fide; at length appeared loft in the formlefs ftrata: and the reft of the lland that appeared to us was formed of flopes to the water edge, or of rude but not lofty precipices. Over part of the ifle, on the weltern fide, was plainly to be feen a vaft precipice, feeminoly columnar, like the preceding. I wifhed to make a

[^166]nearer approach, but the prudence of Mr. Thompfon, who was unwilling to venture in thefe rocky feas, prevented my farther fearch of this wondrous ille; 1 could do no more than caufe an accurate view to be taken of its eaftern fille, and of thofe of the other piaurefque iflands then in fight. But it is a great confolation to me, that I am able to lay before the public a molt accurate account communicated to me through the friendflip of Sir Jofeph Banks, who, on Augult 12 of this fummer, vifited thefe parts on his interefting vojage to Iccland.

## Account of Stcaffa, By Sir Joseph Banks, Baronet.

Augult 12. "In the found of Mull, we came to anchor, on the Morven fide, oppofite to a gentleman's houfe, called Drumnen: the owner of it, Mr. Macleane, having found out who we were, very cordially afked us afhore ; we accepted his invitation, and arrived at his houfe, where we met an Englifh gentleman, Mr. Lcach *, who no fooner faw us than he told us, that about nine leagues from us was an ifland where he believed no one even in the Highlands had beent, on which were pillars like thofe of the Giant's.Caufeway: this was a great object to me who had wifhed to have feen the caufcway itfelf, would time have allowed; I therefore refolved to proceed directly, efpecially as it was juf in the way to the Columb-kill: accordingly, having put up two days provifions, and my little tent, we put off in the boat about one o'clock for our intended voyage, having ordered the flip to wait fur us in 'Tobirmore, a very fine harbour on the Mull fide.
" At nine o'clock, after a tedious paffage, having had not a breath of wind, we arrived, under the direction of Mr. Macleane's fon, and Mr. Leach. It was too dark to fee any thing, fo we carried our tent and baggage near the only houfe upon the ifland, and began to cook our fuppers, in order to be prepared for the carlicft dawn, to enjoy that which from the converfation of the gentlemen we had now raifed the higheft expectations of.
"The impatience which every body felt to fee the wonders we had heard fo largely defcribed, prevented our morning's reft; every one was up and in motion before the break of day, and with the firft light arrived at the fouth-weft part of the illand, the feat of the moft remarkable pillars; where we no fooner arrived than we were ftruck with a fcene of magnificence which exceeded our expectations, though formed, as we thought, upon the moft fanguine foundations; the whole of that end of the ifland fupported by ranges of natural pillars, moflly above fifty feet high, Itanding in natural colonnades, according as the bays or points of land formed themfelves; upon a firm bafis of folid unformed rock, above thefe, the flrattum which reaches to the foil or furface of the ifland, varied in thicknefs as the ifland itfelf formed into hills or vallies; each hill, which hung over the columns below, forming an ample pediment; fome of thefe above fixty feet in thicknefs, from the bafe to the point, formed by the tloping of the hill on cach fide, almoft into the fhape of thofe ufed in architecture.

[^167]"Compared to this what are the cathedrals or the palaces built by men! mere models or playthings, imitations as diminutive as his works will always be when compared to thofe of nature. Where is now the boaft of the architect ! regularity, the only part in which he fancied himfelf to exceed his miftrefs, Nature, is here found in her poffeffion, and here it has been for ages undefcribed *. Is not this the fchool where the art was originally ftudied, and what has been added to this by the whole Grecian fchool? a capital to ornament the column of nature, of which they could execute only a model; and for that very capital they were obliged to a bufh of Acanthus: how amply does nature repay thofe who ftudy her wondenful works!
" With our minds full of fuch rellectio ns we proceeded along the fhore, treading upon another Giant's Caufcway, every ftone being regularly formed into a certaia number of fides and angles, till in a fhort time we arrived at the mouth of a cave, the molt magnificent, 1 luppofe, that has ever been defcribed by travellers.
"The mind can hardly form an idea more magnificent than fuch a fpace, fupported on each fide by ranges of columns; and roofed by the bottoms of wofe, which have been broke off in order to form it; between the angles of which a dillow flalagmitic matter has exuded, which ferves to define the angles precifely; aid at the fame time vary the colour with a great deal of clegance, and to render it fill more agreeable, the whole is lighted from without; fo that the fartheft extremity is very plainly feen from without, and the air within, being agitated by the flux and reflux of the tides, is perfectly dry and wholefome, free entircly from the damp vapours with which natural caverus in general abound.
"We afked the name of it. Said our guide, the cave of Fhinn; what is Fhinn? faid we. Fhinn Mac Coul, whom the tranflator of Offian's works has called Fingal. How fortunate that in this cave we flould meet with the remembrance of that chief, whofe exiltence, as well as that of the whole epic poem is almoft doubted in England.
" Enough for the beauties of Stafla; I fhall now proceed to defribe it and its productions more philofopically:
"The little ifland of Staffa lies on the weft coalt of Mull, about three leagues north-eaft from Jona, or the Columb Kill ; its greateft length is about an Englifh mile, and its breadth about half a one. On the weft fide of the ifle is a fnall bay, where boats gencrally land; a little to the fouthward of which the firft appearance of pillars are to be obferved; they are fimall, and inftead of being placed upright, lic down on their fides, each forming a fegment of a circle; from thence you pafs a fmall cave, above which, the pillars now grown a little larger, are inclining in all directions: in one place in particular a finall mafs of them very much refemble the ribs of a hip $\dagger$; from hence, having paffed the cave, which, if it is not low water, you muft do in a boat, you come to the firft ranges of pillars, which are fill not above half as large as thote a little beyond. Over againft this place is a fmall ifland, called in Erfe, Boo-fhah, or more properly Bhuachaille, or the herdfman, feparated fron the main by a channel not many fathoms wide; this whole ifland is compofed of pillars without any

- "Stafla is taken notice of by Buehanin, but in the nighted manner; and among the thoufands who have navigated thele feas, none have paid the lealt attention to its grand and triking characteritic, till this pefont year.
"This illand is the property of Mr Lauchlan Mac Quaire of Ulva, and in now to he difpoferl of.
+ "The Gian's Cufeway has its bending pillars: but I imagine them to be very different froun thefe. Thofe I faw were enct, and ran aloug the face of a hish cliff, bent ftrangely in their middle, as if unable, at their original formation, while in a foft thate, to fupport the mafs of incumbent earth that preffed on them.
vOL, III.
$R \mathrm{R}$
fratum
fratum above them ; they are fill finall, but by much the neateft formed of any about the place.
"The firf divifion of the ifland, for at high water it is divided into two, makes a kind of a cone, the pillars converging together towards the centre; on the other, they are in general laid down flat, and in the front next to the main, you fee how beautifully they are packed together, their ends coming out fquare with the bank which they form : all thefe have their tranfverfe fections exact, and their furfaces fmooth, which is by no means the cafe with the large ones, which are cracked in all directions. I much queftion however, if any one of this whole illand of Bhuachaille is two feet in diameter.
"The main ifland oppofed to Boo-fla-la and farther towards the north-weft is fupported by ranges of pillars pretty erect, and, though not tall, (as they are not uncovered to the bafe, ) of large diameters; and at their feet is an irregular pavement made by the upper fides of fuch as have been broken off, which extends as far under water as the eye can reach. Here the forms of the pillars are apparent : thefe are of three, four, five, fix, and feven fides, but the numbers of five and fix are by much the moft prevalent. The largeft I meafured was of feven; it. was four feet five inches in diameter. I thall give the meafurenient of its fides, and thofe of fome other forms which I met with.

" The furfaces of thefe large pillars in general are rough and uneven, full of cracks in all directions: the tranfverfe figures in the upright ones never fail to run in their true direct:ons; the furfaces upon which we walked were often flat, having neither concavity nor convexity: the larger number however were concave, though fome were very evidently convex; in fome places the interfices within the perpendicular figures were filled up with a yellow fpar; in one place a vein pafled in among the mafs of pillars, carrying here and there fnall threads of tpar. Though they were broken and cracked through and through in all directions, yet their perpendicular figures might eafily be triced: from whence it is eafy to infer, that whatever the accident might have been that caufed the diflocation, it happened after the formation of the pillars.
"From hence proceeding along fhore, you arrive at Fingal's cave: its dimenfions though I have given, I hall here again repeat in the form of a table:

The cave runs into the rock in the direction of N. E. by E. by the compafs.
"Procecding farther to the N. W. you meet with the higheft ranges of pillars, the magnificent appearance of which is paft all defcription : here they are bare to their very bafis, and the fratum below them is alfo vifible; in a fhort time it rifes many feet above the water, and gives an opportunity of examining its quality. Its furface rough, and has often large lumps of flone flicking in it, as if half immerfed; itfelf, when broken, is compofed of a thoufand heterogeneous parts, which together have very much the appearance of a lava; and the more fo as many of the lumps appear to be of the very fame ftone of which the pillars are formed: this whole fratum lies in an inclined pofition, dipping gradually towards the S.E. As hereabouts is the fituation of the highelt pillars, I fhall mention my meafurements of them, and the different ftrata in this place, premifing that the meafurements were made with a line, held in the hand of a perlon who ftood at the top of the cliff, and reaching to the bottom, to the lower end of which was tied a white mark, which was obferved by one who ftaid below for the purpofe; when this mark was fet off from the water, the perfon below noted it down, and made fignal to him above, who made then a mark in his rope : whenever this mark paffed a notable place, the fame fignal was made, and the name of the place noted down as before; the line bcing all hauled up, and the diftances between the marks meafured and noted down, gave, when crmpared with the book kcpt below, the diftances, as for inftance in the cave :
" No. 1. in the book below, was called from the water to the foot of the firft pitlar, in the book above; No. I. gave 36 feet 8 inches, the higheft of that afcent, which was compofed of broken pillars.

"The fratum above the pillars, which is here mentioned, is uniformly the fame, confifting of numbertefs finall pillars, bending and inclining in all directions, fometimes fo irregularly, that the flones can only be faid to have an inclination to aflume a columnar form; in others more regular, but never breaking into, or difturbing the ftratum of large pillars, whofe tops every where keep an uniform and irregular line.
"Proceeding now along fhore round the north end of the illand, you arrive at Oua na fcarve, or the Corvorant's Cave : here the ftratum under the pillars is lifted up very high; the pillars above it are confiderably lefs than thofe at the N. W. end of the ifland, but fitl very confiderable. Beyond is a bay, which cuts deep into the intand, rendering it in that place not more than a quarter of a mile over. On the fides of this bay, efpecially beyond a little valley, which almoft cuts the ifland into two, are two flages of pillars, but fmall; however, having a fratum between them exactly the fame as that above them, formed of innumerable little pillars, fhaken out of their places, and leaning in all directions.
"Having pafled this bay, the pillars totally ceafe; the rock is of a dark brown ftone, and no figns of regularity occur till you have paffed round the S. E. end of the ifland (a fpace almoof as large as that occupied by the pillars,) which you meet again on the weft fide, beginning to form themfelves irregularly, as if the flratum had an inclination to that form, and foon arrive at the bendiug pillars where 1 began.
" The ftone of which the pillars are formed is a coarfe kind of bafaltes, very much refembling the Giant's Caufeway in Ireland, though none of them are near fo neat as the fpecimens of the latter, which I have feen at the Britifh Mufeum; owing chiefly to the colour, which in ours is a dirty brown, in the Irifl a fue black: indeed the whole production feems very much to refemble the Giamt's Cauleway; with which 1 fhould willingly compare it, had I any account of the former before me *."

Proceed with a fine brecze; fer, beyond Statha, Baca-bsy, and the I)utchman'scap, formed like a Phrygian bonnet; and compofed of rule bafaltic pillars. Next fucceeds Lungat, varying into grotelque flapes as we recede from it ; he low flats of

- As this account is cepied from Mr Bank's j urnal, I take the liberty of foyng iwhaty this time that genteman is well acquanted with,) that htalid is a pemane mats of bataltes, on Gut's (anfeway, but

 the Dutchman's cap, is they appored about eight or nine miles dithat, the tift S. S. by W. th. hat \& W. by S.

Mada next fhew themfelves; and, laftly, the ifles of Cairn-berg more and beg, with columarar appearances : the firt noted for its ancient fortrefs, the outgard to the Sudereys, or fouthern Hebirides.

In the year 1249, John Dungadi, appointed by Acho of Norway, king of the northern Hebrides, was entrufted with the defence of this caftle; and, in return for that confidence, declined to furrender it to Alexander III. of Scotland, who meditated the conqueft of thefe iflands. It was in thofe days called Kiarnaburgh, or Biarnaburgh *. The Macleanes poffeffed it in 171 g , and during the rebellion of that yea:, was taken and re-taken by each party.

In our courfe obferve at a diftance, Tirey, or Tir-I, famous for its great plain, and the breed of little horfes. To the north, feparated from Tirey by a fmall found, is the ifle of Col. I muft not omit obferving, that the firft is reported by a very fenfible writer, to be well adapted for the culture of tobacco $\dagger$.

Pafs the point Ruth-an-i feith, in Mull, when Egg high and rounded, Muck fmall, and the exalted tops of the mountainous Rum, and lofty Sky, appear in view. Leave, on the eaft, Calgarai bay in Mull, with a few houfes, and fome figns of cultivation; the firft marks of population that had fhewn themfelves in this vaft ifland.

The entrance of the found of Mull now opens, bounded to the north by cape Ardnamurchan, or, the height of the boilterous fea; and beyond, inland, foar the valt fummits of Benevifh, Morvern, and Crouachan.

Towards afternoon the fky grows black, and the wind frefhens into a gale, attended with rain, difcouraging us from a chace of feals, which we propofed on the rock Heifkyr, a little to the weft, where they fwarm. To the weft of Caunay, have a fight of the rock Humbla, formed of bafalic columns $\ddagger$.

Leave, three leagues to the weft, the cairns of Cul, a dangerous chain of rocks, extending from its northern extremity.

Sail under the vaft mountains of Rum, and'the point of Bredon, through a moft turbulent fea, caufed by the clafhing of two adverfe tides. See feveral fmall whales, callesl here Pollacks, that, when near land, are often chafed on fhore by boats: they are ufually about ten feet long, and yield four gallons of oil. At feven o'clock in the evening find ourfelves at anchor in four fathom water, in the fnug harbour of the ifle of Camay. Formed on the north fide by Cannay, on the fouth by the little ine of Sanda; the mouth lies oppofite to Rum, and about three miles diftant; the weftern chamel into it is impervious by reafon of rocks. On that fide of the entrance next to Sanda is a rock to be thunned by mariners.

As foon as we had time to calt our eyes about, each fhore appeared pleafing to husmanity; verdant, and covered with hundreds of cattle: both fides gave a full idea of plenty, for the verdure was mixed with very little rock, and fcarcely any heath; but a thort converfation with the natives foon difpelled this agrecable error; they were at this very time in fuch want, that numbers for a long time had neither bread nor meal for their poor babes; fifh and milk was their whole fubfittence at this time: the tirf was a precarious relief, for, befides the uncertainty of fuccefs, to add to their diftrefs, their flock of filh-hooks was almof exhaufted; and to ours, that it was not in our power to fupply them. The rubbans, and other trifles I had brought would have been infults to people in diitrels. I lamented that my money had been fo ufelelsly laid out; for a lew dozens of filh-hooks, or a few pecks of meal, would have made them happy.

[^168]The Turks erect caravanferas. Chriftians of different opinions concur in eftablifhing bupitia amoag the dreary Alps, for the reception of travellers. I could wifh the public bunsty, or private clarity, would found in fit parts of the illes or mainland, magazines ef meal, as prefervatives againft famine in thefe diftant parts.

The crops had faild here the laft year; but the little corn fown at prefent had a promifing afpect; and the potatoes are the befl I had feen, but thefe were not fit for ufe. The illes I fear annually experience a temporary fanine; perhaps from impro. vidence, perhaps from eagernefs to increafe their ftock of cattle, which they can eafily difpofe of to fatisfy the demands of a landlord, or the oppreffions of an agent. The prople of Cannily export none, but fell them to the numerous bufles who put into this Portus Salutis on different occafions.

The cattle are of a middle fize, black, long-legged, and have thin ftaring manes from the neck along the back, and up part of the tail: they look well, for in feveral parts of the iflands they have good warm receffes to retreat to in winter. About fixty head are exported annually.

Each couple of milch cows yielded at an average feven flones of butter and cheefe; two-thirds of the firt, and one of the laft. The cheefe fold at three and fixpence a tione, the butter at eight flillings.

Here are very few fheep, but horfes in abundance. The chicf ufe of them in this little siffrict is to form an amnual cavaleade at Michaclmas. Every man on the ifland mounts his horfe unfurnified with faddle, and takes behind him either fome young girl, or lis ncighbour's w:fe, and then rides backwards and forwards from the village to a certain crofs, without being able to give any reafon for the origin of this cuftom. After the procefion is over, they alight at fome pablic-houfe, where, Arange to fay, the females treat the companions of their ride. When they retire to their houfes an entertainment is preparcd wih prinreval fimplicity : the chief part confifts of a great oat-cake, called Struan.Michecil, or St. Michael's cake, compofed of two pecks of meal, and formed like the quadrant of a circle; it is daubed over with milk and eggs, and then placed to harden before the fire.

Matrimony is hut in fueh elleem here, that an old maid or old batchelor is fcarcely known; fuch firm belife have they in the doctrine of the ape-leading difgrace in the world below: fo to aroid that danger the youth marry at twenty, the laffes at feventeen. The fair fex are ufid here with more tendernefs than common, being employed only in domeflic attairs, and never forced into the labours of the field. Here are plenty of poultry and of eggs.
$A$ bundance of cod and ling might be taken, there being a fine fand-bank between this ife and the rock Heiker, and another between Skie and Barra; but the poverty of the inhabitants will not enable them to attempt a fithery. When at Campbeltown I enquired about the apparatus requifite, and found that a velfel of twenty tons was neceffary, which would coft two hundred pounds; that the crew thould be compofed of eight hands, whofe monthly expences would be fourtee: pounds; that fix hundred fathom of long line, five hundred hooks, and two ftuoy lines (each eighty fathoms long), which are placed at each end of the long-lines with buoys at top to mark the place when funk, would altorether coft five guineas; and the veffel muft be proviced with four fits; fo that the whole charge of fuch an adventure is very confiderable, and pall the ability of thefc poor people *.

The length of the ifland is about three miles, the breadth near one; its furface hilly. This was the property of the bifhop of the ifles, but at prefent that of Mr. Macdonald of Clan-Ronald. His factor, a refident agent, rents moft of the illand, paying two

- In Dr. Z Col III. No. 73, is an account of a fiftery of this nature.
guineas for each penny-land; and thefe he fets to the poor people at four guineas and a half each; and exacts, befides this, three days la our in the quarter from each perfon. Another head tenant poffeffes other penny-lands, which be fets in the fame manner, to the impoverifhing and very farving of the wretched inhatitants.

The penny-lands derive their name from fome old valuation. The fum requifite to ftock one is thirty pounds: it maintains feven cows and two horfes; and the tena:t can raife on it eight bolls of fuall black oats, the produce of two ; and four of bear from half a boll of feed; one boll of potatoes yields feven. The two laft are manured with fea-tang.

The arable land in every farm is divided into four parts, and lots are calt for them at Chriftmas: the produce, when reaped and dried, is divided among them in proportion to their rents; and for want of milts is ground in the quern. All the pafture is common, from May to the beginning of September.

It is faid that the factor has in a mamner banifhed fheep, becaufe there is no good marker for them ; fo that he does his bell to deprive the in habitants of cloathing as well as food. At prefent they fupply themfelves with wool from Rum, at the rate of eightpence the pound.

All the cloathing is manufactured at home: the women not only fpin the wool, but weave the cloth: the men make their own fhoes, tan the leather with the bark of willow, or the roots of the trmentillia crcita, or torncontil, and in defect of wax-thread, ufe fplit thongs.

About twenty tons of kelp are made in the fhores every third year.
Sicknefs feldom vifits this place: if any diforder fcizes them the patients do no more than drink whey, and lie ftill. The fimall-pox vifits them about once in twenty years.

All difputes are fetted by the factor, or, if of grat moment, by the jullices of the peace in Skic.

This ifland, Rum, Muck, and Egg, form one parih. Cannay is inhabited by two hundred and twenty fouls, of which ill, except four families, are Roman Catholics; but in the whole parifh there is neither church, manfe, nor fehool: there is indeed in this ifland a catechilt, who has nine pounds a year from the royal bounty. The minifter and the popilh prieft refide in 1 gg ; but, by reafon of the turbulent feas that divide thefe illes, are very feldom able to attend their flocks. I admire the moderation of their congregations, who attend the preaching of either ind fferently as they happen to. arrive. As the Scotch are ceconomilts in religion, $I$ would recommend to them the practice of one of the little Swils mixed cantons, who, through mere frugality, kept but one divine, a moderate honeft fellow, who, fteering clear of controverfial points, held forth to the Calvinift flock on one part of the day, and to his Catholic on the other. He lived long among them much refpected, and died lamented.

The protellant natives of many of the ines obferve Yule and Pafch, or Chrifmas and Eafter; which among rigid prefbyt rians is elteemed fo horrid a fupertition, that $\mathbb{I}$ have heard of a minitter who under"cut "cenfure for having a goofe to dinner on. Chrittmas day; for having been convicted of holuing that one day was more holy than another, or to be dillinguifhed by any external marks of fettivity.
In popih times here was probably a refident minilter; for here are to be feen the ruins of a chapel, and a finalt erofs.

Much rain and very hard gales the whole night, the weather being, as it is called in thefe parts, broken.
July 12. Bad weather fill continues, which prevented us from fecing fo much of this ifland as we intended, and alio of vifit n ${ }_{j}^{r}$ the rock llumbla. Go on flore at thenearelt part, and vifit a lufty tienur rock, that juts into the lea: on one ide is a little
tower, at a vaft height above us, acceffible by a narrow and horrible path; it feems fo fimall as fcarce to be able to contain half a dozen people. 'Tradition lays, that it was built by fome jealous regulus, to confine a handfome wife in.

To the north-weft above this prifon is the Compafs-hill, in Erfe called Sgar-dhearg, or the red projecting rock. On the top the needle in the mariner's compafs was obferved to vary a whole quarter; the north point ftanding due weft : an irregularity probably owing to the nature of the rock, highly impregnated with iron. Mr. Mills obferved in this inland bafaltic columns.

In the afternoon fome coal was brought, found in the rocks Dun-eudain, but in fuch fimall veins as to be ufelefs. It lies in beds of only fix inches in thicknefs, and about a foot diftant from each other, divided by frata of whin-Itone. Fuel is very fcarce here, and often the inhabitants are obliged to fetch it from Rum.

July 13. A continuation of bad weather. At half an hour after one at noon, loofe from Cannay, and after paffing with a favourable gale through a rolling fea, in about two hours anchor in the ine of Rum, in an open bay, about two miles deep, called Loch-Sgriofard, bounded by high mountains, black and barren : at the bottom of the bay is the little village Kinloch, of about a dozen houles, built in a fingular manner, with walls very thick and low, with the roofs of thatch reaching a little beyond the inner edge, fo that they ferve as benches for the lazy inhabitants, whom we found fitting on them in great numbers, expecting our landing, with that avidity for news comunon to the whole country.

Entered the houfe with the beft afpect, but found it little fuperior in goodnefs to thofe of Ilay; this indeed had a chimney and windows, which diftinguilhed it from the others, and denoted the fuperiority of the owner ; the relt knew neither windows nor chimnies. A little hole on one fide gave an exit to the fmoke: the fire is made on the floor beneath; above hangs a rope, with the pot-hook at the end to hold the veflel that contains their hard fare, a little fihb, milk, or potatoes. Yet, beneath the roof I entered, I found an addrefs and politenefs from the owner and his wife that were altonilhing: fuch pretty apologies for the badnefs of the treat, the curds and milk that were offered, which were tendered to us with as much readinefs and good will, as by any of old Homer's dames, celebrated by him in his Odyfey for their hofpitality. I doubt much whether their cottages or their fare was much better; but it mult be confefled that they might be a little more cleanly than our good holtefs.

Rum, or Ronin, as it is called by the dean, is the property of Mr. Macleane of Col; a landlord mentioned by the natives with much affection : the length is about twelve miles, the breadth fix ; the number of fouls at this time three hundred and twentyfive; of families only fifty-nine, almott all proteflant. The heads of families, with their wives, were at this time all alive, except five, three widowers and two widows. They had with them a hundred and two fons, and only feventy-fix daughters : this difproportion prevails in Cannay, and the other litte inands, in order, in the end, to preferve a balance between the two fexes; as the men are, from their way of life, fo perpetually expofed to danger in thefe flomy feas, and to uther accidents that might occafion a depopu'ation, was it not fo providentially ordered *.

The iffand is one great mountain, divided into feveral points; the highef called Aifgobhall. About this bay, and towards the cuft fide, the land flopes towards the water fide; but on the fouth-weft forms precipiees of a flupendous height. The furface of Rum is in a manner covered wirh heath, and in a tlate of nature; the helghts rucky. There is very little arable land, excepting about the nine little lametets that

[^169]the natives have grouped in different places, near which the corn is fown in diminutive patches; for the tenants here run-rig as in Cannay. The greatelt farmer holds five pounds twelve thillings a ; and pays his rent in money. The whole of the illand is two thoufind marks *.

The little corn and potatocs they raife is very good; but fo finall is the quantity of bear and oats, that there is not a fourth part produced to fupply their ammal wants: all the fubfitence the poor people have befides is curds, milk, and fifh. They are a well made and well looking race, but carry famine in their atpect: are often a whole fummer without a grain in the ifland; which they regret not on their own account but for the fake of their poor babes. In the prefent coconomy of the ifland, there is no profpect of any improvement. Here is an abfiurd cuftom of alloting a certain fock to the land; for example, a farmer is allowed to keep fourteen head of cattle, thirty fheep, and fix mares, on a certain tract called a peuny-land $\dagger$. The perfon who keeps more is obliged to repair out of his fuperfluit' any lofs his neighbour may fuftain in his herds or flocks.

A number of black cattle is fold, at thirty or forty fhillings per head, to graziers who come annually from Skie, and other places. The mutton here is fimall, but the moft delicate in our dominions, if the goodnefs of our appetites cid not pervert our judgment: the purchafe of a fat fheep was four hillings and fixpence : the natives kill a few, and alfo of cows, to falt for winter provifions. A few goats are kept here: abundance of nares, and a neceffary number of fallions; for the colts are an article of commerce, but they never part with the fillies.
Every penny-land is reftricted to twenty-eight fums of cattle: one milch cow is reckoned a fum, or ten heep; a horfe is reckoned two fums. By this regulation, every perfon is at liberty to make up his fums with what feecies of cattle he pleafes; but then is at the fame time prevented from injuring his neighbour (in a place where grazing is in common) by rearing too great a ftock. This rule is often broken; but by the former regulation, the fufferer may repair his lofs from the herds of the avaricious.

No hay is made in this ifland, nor any fort of provender for winter provifion. The domeftic animals fupport themfelves as well as they can on fpots of grafs preferved for that purpofe. In every farm is one man, from his office called lear cuartaich, whofe fole bufinels is to preferve the grafs and corn: as a reward he is allowed grafs for four cows, and the produce of as much arable land as one horfe can till and harrow.

Very few poultry are reared here, on account of the fcarcity of grain.
No wild quadrupeds are found, excepting flags : thefe animals once abounded here, but they are now reduced to eighty, by the eagles, who not only kill the fawns, but the old deer, feizing them between the horns, and terrifying them till they fall down fome precipice, and become their prey.

The birds we obferved were ring-tail eagles, ravens, hooded.crows, white wagtails wheat-cars, titlarks, ring ouzels, grous, ptarmigans, curlews, green plovers, fafceddars or aratic gulls, and the greater terns : the Dean mentions gamets, but none appeared while we were in the ifland.

At the foot of Sgor-m1or, oppofite to Cannay, are found abundance of agates, of that fpecies called by Cronftel, fect. lxi. 6, Achates chalcedonifans, improperly, white cornelians: feveral fingular ftrata, fuch as grey quartzy fone, Cronfted, fect. celxxiv; another, a mixture of quartz and bafaltes, a black fone, fpotted with white, like por-

[^170]phyry, but with the appearance of a lava: fine grit, or free fone, and the cinereous int dorated bole of Cronfled, fect. Ixxsvii.

July 14. Land again : walk five miles up the fides of the ifland, chiefly over heath and moory ground : crofs two deep gullies, waried with fevernt pretty calcades, falling from rock to rock : pafs by great malfes of flone, corroled as if they had lain on the flore. After a long afcent reach Loch-nan-grun, a piece of water amidft the rocks, bencath fome of the higheft peaks of the mountains. Abundance of terns inhabit this loch. Return exceflively wet with conflant rain.

Notwithlanding this ifland has feveral ftreams, here is not a fingle mill ; all the molinary operations are done at home: the corn is graddaned, or burnt out of the ear, inflead of being thrafhed: this is perforned two ways; firft, by cutting of the ears, and drying them in akiln, then fetting fire to them on a floor, and picking out the grains, by this operation rendered as black as coal. The other method is more expeditious, for the whole fheaf is burnt, without the trouble of cutting of the ears: a mof ruinous practice, as it deflroys both thateh and manure, and on that account has been wifely prohibited in fome of the illands. Gradamed eorn was the parched corn of Holy Writ. Thus Boaz prefents his beloved Ruth with parchel corn; and Jeffe fends David with an Ephah of the fame to his fons in the camp of Saul. The grinding was alfo performed by the fame fort of machine the quern, in which two women were neceflarily employed : thus it is prophefied "two women fhall be grinding at the mill, one fhall be taken, the other lef." I mutt vilive too that the illand laffes are as merry at their work of grimdiag the Graddan, the $x \times x$ eos of the ancients, as thofe of Greece were in the days of Arillophanes,

Who watbled as they ground their parched corn ${ }^{*}$.
The quern or brais made in fome of the neighbouring counties, in the mainland, and cofts about fourteen thillings. This inethod of grinding is very tedious : for it employs two pair of hands four hours to grind only a fingle buthel of corn. inftead of a hair fieve to fift the meal the inhabitan's here have an ingenious fubfitute, a heep's fkin Itretched round a hoop, and perforted with fmall holes made with a hot iron. They knead their bannock with water only, and bake or rather toaft it, by laying it upright againt a fone placed near the fire.

For want of lime they drefs their leather with calcined flells: and ufe the fame method of tanning it as in Cannay.

The inhabitants of Rum are people that fearcely know ficknefs: if they are attacked with a dyfentery they make ufe of a decoction of the roots of the 'Formentilla ereta in milk. The fmall-pox has vifited them but once in thirty-four years, only two fickened, and both recovered. The mealles come often.

It is not wonderful that fome fuperfitions fhould reign in thefe fequeftered parts. Second fight is firmly believed at this time. My informant faid that Lauchlan MacKerran of Cannay had told a gentleman that he could not reft from the noife he heard of the hammering of nails into his coffin: accordingly the genteman died within fifteen days.

Molly Mac-leane (aged forty) has the power of forefeeing events through a wellfcraped blade bone of mutton. Some time ago the took up one and pronounced that five graves were foon to be opened; one for a grown perfon: the other four for children; one of which was to be of her own kin: and fo it fell out. Thefe pretenders to fecond

* Nubes, act v. feene 11. Graddan is derived from Grad quick, as the procefs is expeditions.
fight, like the Pythian prieftefs, during their ifpiration 0 into 11 uces, foam at the mouth, grow pale, and feign to abftain from! id for a in ath, fo overpowered are they by the vifions imparted to them during their roxyfins.
I muft not omit a moft convenient fpecies of fecond light, poffeffed by a gentleman of a neighbouring ifle, who forefees all vifitors, fo has time to prepare accordingly: but enough of thefe tales, founded on impudence and nurtured by folly.
Here are only the ruins of a church in this ifland; fo the minifter is obliged to preach, the few times he vifits his congregation, in the open air. The attention of our upifh anceftors in this article, delivers down a great reproach on the negligence of tieir reformed defcendants: the one leaving not even the moft diftant and favage part of our dominions withont a place of worfhip; the other füffering the natives to want both inflructor and temiple.
July 15. The weather grows more moderate; at one o'clock at noon fail from Rum, with a favourable and brikk gale, for the ine of Skic. Soon reach the point of Slate, at the fouth end, a divifion of that great ifland, a mixture of grafs, a little corn and much heath. Leave on the right the point of Arifalg. Pals beneath Armadale in Skie, a feat beautifully wooded, gracing moit unexpectedly this almoot treelefs tract. A little farther to the weft opens the mouth of Loch-in-dal, a fafe harbour, and oppofite to it on the main land, that of Loch.Jurn, or the lake of Hell, with black mountains of tremendous height impending above.
The channel between the Thire of Invernefs and Skic now contracts; and enlarges again to a fine bay oppofite Glenelg, between the main-land and Dunan ruagh, where is good anchorage under Skie. At the north end of this expanfe, the two fides fuddenly contract, and at Kul-ri form a ftrait bounded by high lands, not a quarter of a mile broad; the flood, which runs here at the fpring tides at the rate of feven knots an hour, carried us through with great rapidity, into another expanfe perfectly land locked, and very picturefque. We were now arrived amidt an amphitheatre of nountains; the conntry of Kintail bounded us on the norih and ealt ; and Skie (which from Loch.indaal became more lofity) confined us with its now wooded clifls to the fouth. The ruins of an ancient caftle, feated on the pinnacle of a rock, and fome little ifles formed our weftern view. Thefe of old belonged to the Mac-kinnons, a very ancient race, who call themfelves Clan-Alpin, or the defcendants of Alpin, a Scotch monarch in the gth century. Some of the line have flill a property in Skie.

The violent fqualls of wind darting from the apertures of the hills teazed us for an hour, but after various tacks at halt Mr. Thompfon anchored fafely beneath Mac-kinnon's caltle, amidtt a fleet of buffes, waiting with anxiety for the appearance of herrings, this year uncommonly late. The hard rams were no fmall advantage to our feeneryWe lay beneath a valt hill called Glailbhein, cloathed with birch and oaks, inhabited by roe's: cataracts poured down in various places amidf the woods, reminding me of the beautiful calcades between Scheideck and Meyringen, in the canton of Underwald. This part is in the diftrict of Strath, another portion of Skie.
July 16. Land at a point called the Kyle, or paflage, where about fourfore horfe, were collected to be tramforted ala nage to the oppolite flore, about a mile dillant, in the fame manner as, Polybius * informs us, llanibal patiod his cavalry over the rapid Rhone. They were taken over by fours, by lithe boats, a pair on cach tide held with haters by two men, after being forced off a rock into the lea. We undertook the con-veyance of a pair. One, a pretty grey horfe, fwam admirably: the other was dragged

[^171]along like a $\log$; but as foon as it arrived within fcent of his companions before, landed, revived, difengaged itfelf, and took to the flore with great alacrity. Some very gentleman-like men attended thefe animals, and with great politenefs offered their tervices.

Among the crowd was a lad crectis auribus; his ears had never been fivaddled down, and they flood out as nature ordained; and I dare lay his fenfe of hearing was more accurate by this liberty.

The horned cattle of Skie are fivam over, at the narrow paflage of Kul.ri, at low water; fix, eight, or twelve are paffed over at a time, tied with repes made of twifted withies faftened from the under jaw of the one to the tail of the preceding, and fo to the: next ; the firt is faltened to a boat, and thus are conveycd ti) the oppofite flore. This is the great pafs into the intand, but is dettitute even of a horle-ferry.

July 17. At five in the morning quit our fituation, and pafling through a narrow and fort found, arrive in another fine expanfe, beautifully land-locked by the mainlund (part of Rofshire) the illands of Rona and Croulin, Rofa, diflinguifhed by the high billock, called Duncanna; Scalpa, and the low verdant ille of Pabay, in old times the feat of afiafins*. Skie thews a verdant flope for part of its thore: beyoud fioar the conic naked hills of Straith, and fill farther the raggel heights of Blaven.

See, behind us, the ruins of the calle, and the entrance of the bay we had left, the openings into the great lochs of Kiflerne and Carron, and, as a back-ground, a boundleff chain of rugged mountains. The day was perfectly clear, and the fea fmooth as a mirrour, diflurbed but by the blowing of two whales, who entertained us for a confiderable face by the jot d'caus from their orifices.

Mr. Mac-kinnon, junior, one of the gentlemen we faw with the horfes, overtakes us in a boat, and preffed us to accept the entertainment of his father's houfe of Coirechattachan, in the neighbouring part of Skic. After landing near the ife of Scalpa, and walking about two miles along a flat, arrive at the quarters fo kindly provided; direct. ing Mr. I hompfon to carry the veffel to the north part of Skie.
The country is divided by low banks of earth, and, like the other inlands, has more pallurage than corn. In my walk to Kilchrift, the church of the parith of Strath, fas on the road-fide ftrata of lime-fone and fone-marle, the former grey, the laft whic, and in many parts dillolved into an impalpabice powder, and ready to the hands of the farmer. It is efteemed a fine manure, but better for corn than grafs.

Near the church are valt frata of fine white marble, and fome veined with grey, which I recognized to have been the bed, from whence the atar at Jona had been formod. Oblerve alio great quantities of white granite, fpoted with black. Mefles. 1.ighefost and Stuart afe wed the high lime-ftone mountain of Beinn-fluardal, and find it in a manner covered with that rare plant the Dryas actopela.

On my retura am entertained with a rehearfal, I may call it, of the Luagh, or walking of elcth, a fublitute for the fulling-mill: twelve or fourteen women, divided into two qual numbers, fit down on each fide of a long board, ribbed lengethways, placing the cloth on it: firft they legin to work it backwards and forwards with their hands, finging at the fame time, as at the quern: when they have tired their hands, every fima'e ufes her feet for the fame purpole, and fix or feven pair of naked feet are in the ment tiolent agitation, working one againt the other: as by this time they grow very earneit in their labours, the fury of the fong rifes; at longth it arrives to fuch a pitch, that without breach of charity you would imagine a troop of female demonacs to have been affembled.

They fing in the fame manner when they are cutting down the corn, when thirty or forty join in chorus, keeping time to the found of a bagpipe, as the Grecian latles were wont to do to that of a lyre during vintage in the days of Homer ${ }^{*}$. The fubject of the fongs at the Luaghadh, the quern, and on this occalion, are fometimes love, fometimes panegyric, and often a rehearfal of the deeds of the ancient heroes, but commonly all the tunes flow and melancholy.

Singing at the quern is now almoft out of date fince the introduction of water-mills. The laird can oblige his tenants, as in lughand, to make ufe of this more expoditious kiud of grinding ; and empowers his miller to feareh out and break aity querus he em find, as machines that defraud him of the toll. Many centuries palt, the legiflature attempted to difcourage thefe aukward mills, fo prejudicial to the landlords, who had been at the expence of others. In 128.t, in the time of diexander III. it was provided, that " na man fall prefume to grind quheit mailhloch, or rye, with hants mylne, except he be compelled by form, or be in lack of mills qublilk fould grind the famen. And in this cafe gif a man grindes at hand mylnes, he fal gif the thertion meature as multer, and gif anie man contravcins this our prohibition, he fall tine his hand mylues perpethallic."

July 19. Walk up Beinn-a-callich, or, the hill of the old hag; one of thole pice turefgue mountains that made fuch a figure from the fea. After aleending a fmall pirt, find its fides covered with valt loofe thones, like the paps of Jura, the fhelter of ptarmigans: the top that and naked, with an artificial cairn, of a mott enormous fize, reported to have been the place of fepulture of a gigantic woman in the days of lingal. The profpect to the weft was that of defolation iffelf; a favage feries of rude mountains, difcoloured, black and red, as if by the rage of fire. Neareft, joined to this hill by a ridge is Beia an ghrianan, or the mountain of the Sun ; perhaps venerated in ancient tumes. Mal-more, or the round mountain, appears on the north. The ferrated tops of Blaven affect with aftonihment; and beyond them, the cluftered height of Quillin, or the momentan of Cuchullin, like its ancient hero $\dagger$ " "food like a hill that catches the clouds of heaven." The deep receffes between thefe Alps, in times of old, poffefied "the fons of the marrow vales, the hunters of deer ;" and to this time are inhabited by a fine race of ftags.

The view to the north-eaft and fouth-wef is not lefs amufing: a fea fprinkled over with various ines, and the lonr exturt of coalt foaing int all the forms of Appine wildnefis. I mult not omit that the point of Camitketel, on the fouth of Skie, was thewed to me at a diftance, famous for the cave which gave fhelter for two nights to the young adventurer, and his faithful guide, the ancient Mac kinnon.

Lewe Coire-chatachan, after experiencing every civility from the family ; and from the Rev. Mr. Nicholfon, the minifter. Wind along the bottoms of the fteep hills. Pats by the end of Loch-flappan to the fouth. See a tone dike or fence called Paraienam fiadh, or the inclofure of a deer, which feems once so have been continued up a neighbouring hill. In one angle is a hollow, in the days of ©ffian, a pifall covered with buughs for the deftruction of the anmals chafed into it. P'aces of this name are very common, and very necelfary, when the food of mankind was the bealts of the field.

Turn towards the northern coalt ; pafs by the end of Loch.dligacham, and foon after by the fide of the fmall frelh water Loch ma-caplich, filled with that fearce plant

[^172]Eriocaulon decangulare, firt difcovered by Mr. James Robertfon. Breakfaft at Scon. fer, one of the poot-offices, an inn oppofite to Rafa, an illand nine miles long and three broad, divided from Skie by a found a mile broad. On the fhore, the houfe of Mr. Macleod, the owner of Rafa, makes a pretty figure. The Dean fpeaks of this ifland, "c as having maney deires, pairt of profitable landes inhabit, and manurit, with twa calles, to wit, the caftle of Kilmorocht, and the caftle of Brolokit, with twa fair orchards at the faids twa cafles with ane parifh kirke, called Kilmolowocke. In his time, he fays, it perteining to Mac-ghyllichallan of Raarfay be the fword, and to the biflope of the illes be heritage." This ufurper was a vaffal of Macleod of Lewis, who probably configned it to his chieftain, from whom the prefent proprietor derives his family.

Continue our journey pointing to the fouth-weft. Meet great droves of fine cattle, on their way to change of pafture. See a fmall quantity of very poor flax, raifed from the feed of their country, a very upproftable management: but the greateft part of the land was covered with heath. Leave to the left the mountains of Cuchullin, Cullin, or Quiliin, which reach to the lea. Come to the end of Loch-Bracadale, which pierces the illand on this fide. Skie is fo divided by branches of the fea, that there is not a place five miles diftant from a port; fuch numbers of good harbours are there in a place deflitute of trade, and without a fingle town. Near the end of this loch the ground is more cultivated; but all the corn land is dug with the cas.chrom or crooked fade, inftead of being ploughed: eight men are neceflary to dig as much in a day as a fingle plough would turn up: the harrows are commonly tied to the horles tails; but in very wet land, the men and women break the fods by dragging over them a block of wood, with teeth and a long handle, called Raachgan.

Defcend through a narrow pafs, and arrive inftantly in a tract flat as any in Holland, opening to the wett a fine diftant view of north and fouth Uilt, and other parts of the l.ong ifland: bounded on the other three fides by high precipices, enlivened with cataracts formed by the heavy rains. In a wood in a fing corner lies 'Ialythir, inhabited by Mr. Macleod, lieutenant-coloned in the Dutch fervice, who with the utmoft hofpitality theltered us from the inclemency of the day. This honfe belongs to the chief of the mane; and in old times was always the portion of a fecond fon: he enjoyed it for life, with the view of giving him the means of educating his children; who after that were left to the care of fortune; which cuftom filled foreign fervice with a gallant fet of ofticers. Daughters of chieftains were generally portioned with cattle; and often with a fet of fout men, who in feudal times were valuable acquifitions to the huband, who eftimated his wealth by the power of his people, for he inftantly adopted and incorporated them with his own clan.

It will not be impertinent to mention here the origin of the Scotch regiments in the Dutch fervice. They were formed out of fome independent companies, fent over either in the reign of Elizaberh or James VI. At prefent the common foldiers are but nominally national, for fince the farcity of men, occafoned by the late war, Holland is no longer permitted to draw her recruits out of North Britain. But the officers are all Scotch, who are obliged to take oaths to our govermment, and to qualify in prefence of our ambaltador at the Hague.

June 20. See here a Cly-more, or great wo handed fiword, probably of the fame kind with the ingentes gladii of the Caledonians, mentioned by Tacitus: an unwieldy weapon, two inches broal, doubly edged; the length of the blade three feet leven inches; of the handle, fourteen inches; of a plain tranfere guard one foot; the weight fix pounds and a half. Thefe long fiwords were the original weapons of our country, as appears by a figure of a foldier, found among the ruins of London, atier the great fire,
A. D.
A.D. 1666, and preferved at Oxford * : his fword is of a vaft length, his hair flowing, his legs bare, his lower garment fhort, and faftened by a girdle round his waitt ; the fagum is flung carclefsly over lis breaft and one arm, ready to be flung off, as cuftom was, in time of action. The great broad fword, and much the fame kind of drefs, were preferved in the Highlands to the la't age, at the battle of Kilicrankie: the upper garment was thrown of by the Highlanders, in order to enable them to ufe this twohanded inftrument with greater effect. But the enormous length of weapon has been found ufclefs againft the firmnefs of determined troops, frorn the battle of the $\dagger$ Mons Grampius, to the recent victory of Culloden. The fhort fwords of the forces of Agricola, and the bayonets of the Britifh regulars, were equally fuperior.

Colonel Macleod favours me with a weapon, common to the Romans, Scandinavians, and Britons. It is a brazen fword, whofe blade is twenty-two inches long; the handle (including a round hollow pummel) five and a half; the middle of the blade fwells out on both fides, and the edges very fharp; the end pointed; we are told $\ddagger$ that the ciabbards are of brafs, but this was deflitute of one. The weapon was found in Skie. The fame kind is met with in many parts of Scotland and of Wales, which the Danes have vifited; and they have been frequently difcovered in tumuli, and other fepulchres, in Denmark and Holfice, depofited there with the urns in honour of the deceafed $\$$. Others, fimilar, have been found in Sweden \|.
Walk down the eaf fide of the vale, and fee the well of Cuchullin. Take boat near the lofty infulated rock, Stach in nuchidar, or that of the fuller, pyranidal and inclining: am rowed beneath a range of magnificent cliffs, at whofe bafe were lodged plenty of white cryftallized zeolite, and raft rocks of fone, of the appearance of lava, filled with rounded kernels.

Our boat's crew were iflanders, who gave a fpecimen of marine mufic, called in the Erfe, Jorrams: thefe fongs, when well compofed, are intended to regulate the frokes of the oars, and recall to mind the cuftoms of claffical days.

> Mediz flat margine puppis
> Qui voce alternos nautarum temperet ithus, Et remis diftet fonitem, pariterque relatis, Ad numerum plaudat refonantia crerul.، tonfis.

Stlius, lib. iv.
But in modern tincs they are generally fung in couplets, the whole crew joining in chorus at certain intervals: the notes are commonly long, the airs folemn and flow, rarely chearful, it bcing impofible for the oars to keep a quick time : the words gencrally have a religious turn, confonant to that of the people.

July 21. Vifit a high hill, called Briis-mhawl, about a mile fouth of Talyfkir, having in the front a fine feries of genuine bafaltic columns, refembling the Giant's caufeway: the pillars were above twenty feet high, confifting of four, five and fix angles, but moftly of five : the columns lefs frequently jointed than thofe of the Irilh; the joints being at great and unequal diftances, but the majority are entire : even thofe that are jointed are lefs concave and convex on their oppofite furface than the columns of the former. The fratum that refted on this colonade was very irregular and flattery, yet feemed to make fome effort at form. The ruins of the columns at the bafe made a

[^173]grand appearance: thefe were the ruins of the creation ; thofe of Rome, the work of human art, feem to them but as the ruins of yefterday.

At a fimall diftance from thefe, on the flope of a hill, is a tratt of fome roods entirely formed of the tops of feveral feries of columns, even and clofe fet, forming a reticulated furface of amazing beauty and curiofity. This is the molt northern bafaltes 1 am acquainted with: the lalt of four in the Britilh dominions, all runuing from fouth to north, nearly in a meridian: the Giant's Caufeway appears firt ; Staffa fucceeds; the rock of Humbla, about twenty leagues further ; and, finally, the column of Briismhawl : the depth of occan, in all probability, conceals the lolt links of this chain.

Take leave of Talyfir. S.e veey near to the houfe the vefiges of fome fmall buildings, and by tiem a heap or fones, with a bataltic column fet ereet in the middle. Crofs a range of barren lands for four miles; reach Loch-Bracadale. Exchange our horfes for a boat. Pafs over this bemuffil land-locked harbour abounding with fafe crecks. Cod-fifh fwarm here in the herring featon purfuing the floals: a man with a fingle hand line caught in three hours as many as were fold for three guineas, at the rate of two-pence a piece. Land, afier a traject of four miles, and find ready a new fet of horfes.

This feems to me the fittef place in the ifland for the forming of a town. The harbour is deep and unlpaakably fecure. It is the Milford haven of thefe parts; it opens at its mouth to the beft part of the fea. Skic has not in it a fingle town or even village. But what is a greater wonder, there is not a town from Camphelon in the Firth of Clyde to Tiurfo at the end of Caithefs, a tract of above two hundrecs miles.

Proceed : ride by, at Struam, a beautiful Danifh fort on the top of a rock, formed with moft excellent matonry. The figure as ufual circular. The diameter from outfide to outfide finty feet; of the infide forty-two. Within are the velliges of five apartments, one in the centre, four around; the walls are eighteen feet high. The entrance fix feet high, covered with great flones.

About a furlong north-welt of this, is another large rock precipitous on all fides but one. On that is the ruin of a very thick wall, and the traces of a dike quite round, even on the inacceffible parts. Between which and the wall is a large area. This feems to have been built without regularity, yet probably belonged to the fame nation. Each feems defirned to cover an affemblage of people who lived bencath their protection in a hoffile country, for under both are remains of numbers of fruall buildings with regular entrances. The laft inclofure is fuppofed to have been defigned for the fecurity of the cattle, of which thefe free-booters had robbed the natives; and this fpecies is dittinguithed by the name of Boaghun.

Thefe fortrefles are called univerfally in the Erfe, Duns. I find that they are very rare in the country from whence they took their origin; no people will give themfelves the trouble of fortifying againtt the fecurity of friends. Mr. Frederic Suhm of Copenhagen, whom I had the pleafure of addrefling on this fubject, could point out but a fingle inflance of a fimilar tower, and that on the Suallibery, a mountain half a Norwegian league diftant from Drontheim. But we may expect further elucidations from a thilful antiquary now on the tour of the country.
$\therefore$ bout two miles farther, fee near the roadfide tiro lirge conoid cimims; pafs near the end of Doch-ca-roy, a branch of the nuble Loch-Bracadale, anc: foon after reach the cattle of
1)un-vegan, the feat of Mr. Macleod, a gentleman defeended from one of the Norwegian vicc-roys, governors of the illes while they bore a forcign yoke. But the an-
tiquity of his defcent is an accident that would convey little honour to him, had he not a much more fubftantial claim; for; to all the milkinefs of human nature ufually concomitant with his early age, is added, the fenfe and firmnets of more advanced life. He feels for the diftreffes of his people, and infenfible of his own, with uncommon difintereftednefs, has relieved his tenants from their oppreffive rents; has received inftead of the trahh of gold, the trealire of warm affections, and unfeigned prayer. He will foon experience the good effects of his gencrofity; gratitude, the refult of the fenfibility ftill exitting among thofe accuftomed to a feudal government, will fhew itfelf in more than empty words; and in time they will not fail exerting every nerve to give his virtue the due reward. leudal governuents, like that of unmixed monarchy, has its conveniences and its bleflings. The latt rarely occur from the imperfection of human nature : One Being only can lay claim to that; therefore it is the bufinefs of every honeft man to refif the very appearance of undivided power in a prince, or the fhadow of independency in a fubject. The Highlanders may blefs the hand that loofened their bonds; for tyranny nore often than protection was the attendance on their vaffalage. Yet fill from long habitude, and from the gleams of kindnefs that darted every now and then amidft the forms of feverity, was kindled a fort of filial revercuce to their chieftain : this fill is in a treat degree retained, and may, by cherithing, return with more than wonted vigour. The noxious part of the feudal reign is abolihed; the delegated rod of power is now no more. But let not the good part be lof with the bad: the tender relation that patriarchal government experiences, fhould fill be retained; and the mutual inclination to beneficence preferved. The chieftain fhould not lofe, with the power of doing harm, the difpofition of doing good. Such are the fentiments of Mr. Macleod, which ripen into attions, that, if perffifted in, will bring lafling confort into his own botom, and the moft defired of bleflings amongtt a numerous chan.

The caftle of Dun-vegan is feated on a high rock, over a loch of the fame name, a branch of Loch Falart. Part is modernized, but the greateft portion is ancient: the oldeft is a fquare tower, which with a wall round the edge of the rock, was the original ftrength of the place. Adjacent is a village and the poft-office; for from hence a pacquet-boat, fupported by fubfcription, fails every fortnight for the Long Inand.

Here is preferved the Braolauch fhi, or fairy- flag of the family, beftowed on it by Titania the Ben-hi, or wife to Oberon king of the fairies. She bleffed it at the fame time with powers of the firlt importance, which were to be exerted on only three occafions: but, on the laft, after the end was obtained, an invifible Being is to arrive and carry off ftandard and flandard-bearer, never more to be feen. A family of Clan y Faitter had this dangerous office, and held by it free lands in Bracadale.

The flag has been produced thrice. The firft time in an unequal engagenent againft the Clan-Roland, to whofe fight the Macleods were multiplied ten-fold. The fecond preferved the heir of the family, being then produced to fave the longing of the lady; and the third time, to fave my own ; but it was fo tattered, that Titania did not feem to think it worth fending for.

This was a fuperilition derived from the Norwegian anceftry of the hovfe; the fable was caught from the country, and might be of ufe to animate the clan. The Danes had their magical fandard, Reafan, or, the raven, embroidered in an inflant by the three daughters of Lodbroke, and fillers of Hinguar, Hubba, or Ivar *. Sigurd had an enchanted flag given him by his mother, with circumftances fomewhat fimilar

- Alfer. vit. Alfred. 10.

VOL. $11 \%$.
T T
to the Dun-vegan colours: whofoever bore it in the day of battle was to be killed; accordingly in one of his battles three ftandard-bearers werc fucceffively flain; but on the death of the laft he obtained the vidory *.

Here is preferved a great ox-horn, tipped with filver; the arm was twifted round its fpires, the mouth brought over the elbow, and then drank off. The northern nations held this fpecies of cup in high efteem, and ufed the capacious horns of the great Aurochs $\dagger$. They graced the hofpitable halls of kings $\ddagger$, and out of them the ancient heroes quenched their thirft: Haquin §, weary with flaughter, calls aloud for the mighty draught :

Heu labor immenfus, feflos quam velicat artua !
Quis mihi jam prabet cornua plena mero?
In this caftle is alfo preferved a round fhield, made of iron, that even in its decayed fate weighs near twenty pounds; itfelf a load in thefe degenerate days; yet they were in ufe no longer ago than in the beginning of the laft century. Each chieftain had his armour-bearer, who preceded his mafter in time of war, and, by my author's $\|$ account, in time of peace; for they went armed even to church, in the manner the North Americans do at prefent in the frontier fettlement, and for the fame reafon, the dread of favages.
In times long before thofe, the ancient Scotch ufed round targets, made of oak, covered wihh the hides of bulls; and long thields, narrow below and broad above, formed of pieces of oak or willow, fecured with iron: I guefs them to be of the fame kind with the Norwegian thields figured by Wormius T, and probably derived from the fame country. They had alfo a guard for their fhoulders, called Scapul; and for offenfive weapons had the bow, fword, two handed fword, and Lochaber ax, a weapon likewife of Norwegian origin. But the image-tombs of ancient warriors are the beft lectures on this fubject.

Mr. Macqueen informs me, that near this place is an Anait, or druidical place of worhip, of which there are four in Skie, much of the fame fituation and confruction. This lies in the heart of an extenfive moor, between the confluence of two waters. To the eaft ftands one hill, to the weft another: which gradually flope down toward the plain, and from which a clear profpect might be had of all that paffed below. From one of thele waters to the other is a frong fone wall, forming an equilateral triangle; the rocks face it towards the water, and every crevice is filled with ftones regularly laid; fo that it feems to have been on that fpot inacceffible in former days. Nar the centre of this triangle, is a fmall fquare edifice of quarried ftones, and on each fide of the entrance which leads to it from the wall, are the remains of two houles, both within and without. In thofe lodged the priefts and their families; the fervants moft probably on the outfide. A ftrong turf rampart protected alfo the wall from water to water, acrofs a rifing ground, which hath been cut through by a road leading from the Tempul na Anait (as the edifice is called) a great way into the moor. There is no tradiion of the ufe of this place. My learned friend fuppofes it to have been defigned for the worthip of the Earth, Bendis or Diana, which, according to Hefychius, was fuppofed to be the fame. Plutarch gives the fame goddefs the title of Anait, the name of this place of worlhip; and Pliny fpeaks of a country in

[^174]Armenia, called Anaitica, from Anaitis, a goddefs in great repute there, where'a noble temple had been built, which was plundered of its immenfe riches by the foldiers of Antony in his Parthian expedition. Paufanias alfo fpeaks of the temple of Diana the Anait. Thefe temples were erected when the purity of the Celtic religion had been debafed by the extravagance of fancy, and idols introduced. Here we may fuppofe that this deity was worfhipped in the utmolt fimplicity.
July 22. Proceed on our journey; pafs over a black and pathlefs tract of moor and bog, for about fifteen miles. Dine on a foft fpot of heath, with that appetite which exercife and the free air never fail to create. Arrive on the banks of LochGrifernis, a branch of I.och-fnifart : take boat ; obferve that the ropes for the fifhingnets are made of the purple melic grafs, the pund-glafs of the Highlanders, remarkable for lafting long without rotting. After a paffage of a mile, land at Kingiburgh; immortalized by its miftrefs, the celebrated Flora Mac-Donald, the fair protectrefs of a fugitive adventurer; who, after fome days concealing himfelf from purfuit, in the difguife of a lady's maid, here flung off the female habit. I had the pleafure of her acquaintance at the firt Sir Watkin William Wynne's in the year 1746 ; but at this time I unfortunately found that the was abfent on a vifit.
Mr. Macdonald did me the favour of prefenting me with three very curious pieces of antiquity: an urn, a Glain-naidr, or ferpent-bead, and a Denarius, found not remote from his houfe. The firt is an urn of elegant workmanfhip, found in a ftone cheft, formed of fix flags as before defcribed: this urn was filled with afhes; was placed not prone, as that mentioned in the former volume, but with the mouth up, and covered with a light thin fone. This was difcovered beneath an immenfe cairn
The Glain-naidr, or Druidical bead, as it is vulgarly called, is an unique in its kind, being of a triangular fhape; but, as ufual, made of glafs, marked with figures of ferpents coiled up. The common people in Wales and in Scotland retain the fame fuperfitions relating to it as the ancients, and call it by the name of Serpent-ftone. The Gauls, taught by their priefts, believed the ftrangett tales of their ferpents, defcribed from the profe of Livy, in a moft 〔pirited manner, by the ingenious Mr. Mafon, who thus makes his Druid demand of a fapient brother:

But tell me yet
From the grot of charms and pells, Where our matron fifter dwells ; Bremus, has thy holy hand Safely brought the Druid wand, And the potent adder-ftone. Gender'd 'fore the autumnal moon ? When in undulating twine The foaming fnakea prolific join: When they hifs, and when they bear Their wond'rous egg aloof in air ; Thence, before to earth it fall, The Druid in his holy pall, Receives the prize, And inftant flict, Follow'd by the envenom'd brood, Till he crofs the filver sood.

The ancients and moderns agree in their belief of its powers; that good fortune attends the poffeffor wherever he goes. The ftupid Claudius, that Ludibrium aule TT 2

Augufi,

Augufi, put to death a Gaulin * knight, for no other reafon than that he carried ovum anguinum, a ferpent-ftone about him. The vulgar of the prefent age attribute to it other virtues; fuch as its curing the bite of the adder, and giving eafe to women in childbirth, if tied about the knee : fo difficult is it to root out follies that bave the fanction of antiquity.
The laft favour that I was indebted to Mr. Mac-donald for, is a denarius of the Emperor Trajan, found on a moor near the fhore of I.och-Grifernis; a probable, but not a certain evidence that the Romans had landed in this inland. We have no lights from hiftory to enable us to fay what was done during tie reigu of that emperor: in the fucceeding, Adrian reduced the bounds of the empire to the place ftill called his wall, and loft all communication with the illands; but in the following reign they were extended to their ancient bounds, and the ines might be vifited from the Glota cltuarium, the flation of the fleet, and the money in queftion loft at that time in Skie, But its being found there may be accounted for by another fuppofition; that of its having been the bcoty of an ifland foldier, taken from the Romans in fome of the numberlefs ikirmifhes in one of the following reigns, and brought here as a mark of victory.

I obferve that the great fcallop-fhell is made ufe of in the dairies of this country for the kimming of milk. In old times it had a more honourable place, being admitted into the hallis of herocs, and was the cup of their feftivity. As Doctor Mac-pherfon expreffes it, "The whole tribe filled the hall of the chieftain; trunks of trees covered with mols were laid in form of tables from one end to the other; whole beeves or deer were roalted and laid befure them on rough boards, or hurdles of reds woven together: the pipers played while they fat at table, and filence was obferved by all. $\Lambda$ ifter the feaft was over, they had ludicrous entertainments; a practice ftill continued in part of the Highlands: the females retired, and the old and young warrious fat in order, down from the chieftain, according to their prosimity in blood to him; the harp was then touched, the fong was raifed, and the fligat-crechin, or the dinking-thell, went round."
Am lodged this night in the fime bed that formerly received the unfortunate Charles Stuart. Here he lay one night, after having been for fome time in a female habit under the protection of Flora Macdonale. Near this place he refumed the drefs of his own fex by the affilance of the maller of the houfe, Mr. Alexander Macdonald, who fuffered a long imprifomment on that accome ; but neither the fear of panifhment, nor the promifes of reward, could induce him to infringe the rights of holpitality, by betraying an unhappy man who had flung himfelf under his protection. Ile prefented me with a pair of gloves worn by Charles Stuart while he appeared ist the chazacter of the tender fex: they are kept as a memorial of a daring adventure, moft usequally fuiported.

July 23. Leave Kingthugh, travel on a good horfe road, pafs by a caim, with a great tone at the top, ealled the high-ftone of Ugj. I muft remark, that the Danes left behind them in many pleces the names of their devitis, their heroes, and their bards: thus in the rock Humbla is perpetuated the name of Humblus t, one of their anciont kings; the ille of Gunua athumed the title of one of the Valkyrie, the fatal fitt is; Ulva takes its name from the bear-begoten hero Ulvo $\mathcal{E}$; and the fone of $\mathrm{U}_{\mathrm{gg}}$ feems to have been crected in memory of the poet Uggerus $\|$.

Bineath is the fertile bottom of Ugr, laughing with corn: afcend a hill, and on the other fide defend into the parilh of kimore, the sranary of Skie. Leave, on the left,

[^175](1) Ihid. 1.8.

Mugganot,

Mruggaftot, the principal houfe of Sir Alexander Mac-donald, lineally defeended frons the lords of the inles: all the eflates at prefent poffeffed by that gentleman were befiowed by John, the laft Regulus, and Earl of Rofs, on his brother Hugh, and confirmed by a charter dated at Aros, in the year 1449, and afterwards by James IV. at Sterling, in 1495.

Beneath the houfe was the lake of St. Columba, now drained; once noted for a monaftery of great antiquity, placed in an ifland. The ruins evince its age, being built with great ftones, without mortar, in the manner cuftomary in the times of druidifm. The cells and feveral rooms are flill yery diftinguifhable. The chapel is of a later date, and built with mortar, as are all the other chapels in Skie, and in the little iflands along its fhores: thefe chapels were ferved by the monks: the place they landed on, in order to difcharge thefe religious duties, was called Pein-orah, or the land of prayer; for after folemnly recommending themfelves, and the objects of their journey, to the Moft High, they feparated, and took their refpective routes.

Purfue our journey. A minitter, who gave us the pleafure of his company, obferved to us, that a couple were in purfuit of him in order to have their nuptials celebrated: unvilling to be the caufe of deferring their happinefs, I begged he would not on my account delay the ceremony: we took poffeffion of a cottage; the nimifter laid before them the duties of the marriage ftate, afked whether they took each other willingly? joined their hands, and concluded with a prayer. I obferved that the bridegroom put all the powers of nagic to defiance, for he was marricd with both fhoes tied with their latchet.

Not many years have elapfed fince it was cuftomary in fome parts of the north of Scotland for the lairds to interfere in the marriages of their vaffals, and direct the pairing of their people. Thefe flrange tyrannies, thefe oppreffions of inclination, feem to have occafioned the law of Alexander I. to prevent fuch a foundation for domeftic mifery; it is indeed the cafe of the widow only that he took into confideration. " Na widow (fays the flatute) fould be compelled to marie gif fche pleafe to live without ane hufband, but fche fould give fecuritic that fche fall not marie without confent of hir lord, gif fche holds of ane other than the king."

Take a repaft at the houfe of Sir Alexander Mac-donald's piper, whe, according to ancient cuftom, by virtue of his office, holds his lands free. His dwelling, like many others in this country, confifts of feveral apartments: the firf for his cattle during winter; the fecond is his hall ; the third for the reception of ftrangers; and the fourth for the lodging of his family : all the rooms within one another.

The owner was quite mafter of his inftrument, and treated us with feveral tunes, In feudal times the Mac-donalds had in this ifland a college of pipers, and the Macleods had the like; thefe had regular appointments in land, and received pupils from all the neighbouring chieftains. - The Mac-karters were chicf pipers to the firft ; the Mackrumens to the laft.
The bagpipe has been a favourite inftrument with the Scots, and has two varieties: the oue with fhort pipes, played on with the fingers; the other with long pipes, and founded with the mouth: this is the loudeft and moft ear-piercing of all mufic, is the genuine highland pipe, and fuited well the warlike genius of the people, roufed their courage to battle, alarmed them when fecure, and collected them when fcattered; folaced them in their long and painful marches, and in times of peace kept up the menory of the gallantry of their anceftors, by tunes compofed after fignal victories; and too often kept up the firit of revenge, by airs expreffive of defeats or maflacres from rival clans. One of the tunes, wild and tempeltuous, is faid to have been played at the

> bloody
bloody battle of Harlaw, when Donald, Lord of the ines, in 1410, oppofed the powers of James I. under the conduct of Aleximder Stuart, Larl of Mar.

Neither of thefe inftruments were the invention of the Danes, or, as is commonly fuppofed, of any of the northern nations; for their ancient writers prove them to have been anmated with the cangor tubarum. Notwithfanding they have had their foeckpipe long amongft them, as their old fongs * prove, yet we camnot allow them the honour of inventing this metodious inftrument; but mult affert that they borrowed it from the invaded Caledonians. We mult ftill go farther, and deprive even that ancient race of the credit ; and derive its origin from the mild climate of Italy, periap; from Grecce.

There is now in Rome a moft beautiful bas-relievo, a Grecian feulpture of the higheft antiquity, of a bagpiper playing on his inftrument, exaclly like a modern highlander. The Greeks had their Arxaunns, or inftrument compofed of a pipe and blown-up fkin: the Romans in all probability borrowed it from them, and introduced it among their fwains, who ftill ufe it under the names of pive and cornu mufa $\dagger$.

That mafter of mufic, Nero, ufed one $\ddagger$; and had not the einpire been fo fuddenly deprived of that great artif, he would (as he gracioufly declared his intention) have treated tho people with a concert; and, among other curious inftruments, would have introduced the utricularius, or bagpipe. Nero pcrihed, but the figure of the inftrument is preferved on one of his coins, but highly improved by that great mafter. It has the bag and two of the vulgar pipes, but was blown with a bellows, like an organ, and had on one fide a row of nine unequal pipes, refemb ing the fyrinx of the god Pan 5 . The bagpipe, in the unimproved fate, is alfo reprefented in an ancient fculpture, and appears to have had two long pipes or drones $\|$, and a fingle fhort pipe for the fingers. Tradition fays, that the kind played on by the mouth was introduced by the Danes. As their's was wind mufic, we will admit that they might have made improvennent, but more we cannot allow: they were fkilled in the ufe of the trumpet; the highlanders in the piohb, or bagpipe.

Non tuba in ufa illis, conjecta at tibia in utrem
Dat belli fignum, et mattem vocat horrida in arma $\varphi$.
Proceed two miles farther ; pafs under a high hill, with a precipitous front, fyled Sgor-more, or the great projection; and immediately after reach Dun-tuilm caftle, or the caftle of the round graffy eminence, placed at the verge of a high precipice over the fea; the ground adjacent formed of fine verdant turf.

Find our veffel at anchor under the little rocky Elan-tuilm, lofty, and of a picturefque form.

Take leave of feveral gentlemen, who, according to the worthy cuftom of thefe illands, convoyed us from place to place, and never left us till they had delivered us over to the next hofpitable roof, or feen us fafely embarked. Among others who did me this honour was Doctor John Maclean, whofe family have been hereditary phyficians for fome centuries to that of Mac-donald. They have been educated at the expence of the chicflain ; and receive to this day an appeintment in land, holdung the farm of Shulifta at the gates of the ancient refidence of the Mac-donalds, the caftle of Duntuilm, which the Doctor enjogs together with a penfion from the late Sir James Macdonald.

[^176]$\ddagger$ Suetonina, lib vi. e. 54 .

Dun-tuiln caftle is a ruin, but was inlabited as late as 1715 . It was the original feat of the Mac-donalds in Skie: near it arhill, called Cuock an cirick, or the hill of pleas: fuch eminences are frequent near the houfes of all the great men, for on thefe, by the affiftance of their friends, they determined all differences between their people: the place was held facred, and to the refpect paid to the decifions delivered from the fummit, may in fome meafure be attributed the frict obedience of a fierce and military race to their chieftain.

Near this place was peinted to me the fpot where an inceftuous pair (a brother and Gifter) had been buried alive, by order of the chieftain.

In the rocks are abundance of fwall compreffed ammonita, and on the fhores faw fragments of white quartz, the hectic fone fo often mentioned by Martin.

Skie is the largett of the Hebrides, being above fixty meafured miles long; the breadth unequal, by reafon of the numbers of lochs that penetrate far on both fides. It is fuppofed by fome to have been the Eaftern Ebbudx of the ancients; by others tu have been the Dumna. The modern name is of Norwegian origin, derived from Ski, a mift, and from the clouds (that almoft continually hang on the tops of its lofty hills) was Ityled Ealand Ikiamach, or the cloudy illand *. No epithet could better fuit the place; for, except in the fummer feafon, there is fcarcely a week of fair weather : the fummers themfelves are alfo generally wet, and feldom warm.

The wefterly wind blows here more regularly than any other, and arriving charged with vapour from the valt atlantic, never tails to dafh the clouds it wafts on the lofty fummits of the hills of Cuchullin, and their contents deluge the ifland in a mauner unknown in other places. What is properly called the rainy feafon commences in Auguft: the rains beg:n with moderate winds, which grow ftronger and fronger till the autumnal equinox, when they rage with incredible fury.

The hufbandman then fighs over the ruins of his vernal labours: fees his crops feel the injury of climate; fome laid profrate; the more ripe corn fhed by the violence of the elements. The poor forefee famine, and confequential difeafe: the humane tackfmen agonize over diftreffes that inability, not want of inclination, deprives then of the power of remedying. The nearer calls of family and children naturally firft excite their attention : to maintain and educate are all their hopes, for that of accumulating wealth is beyond their expectation ; fo that the poor are left to Providence's care; they prowl like other animals along the fhores to pick up limpets and other fhell-filh, the cafual repafts of hundreds during part of the year in thele unhappy illands. Hundreds thus annually drag through the feafon a wretched life; and numbers unknown, in all parts of the weftern inlands (nothing local is intended), fall beneath the preflure, fome of hunger, more of the purid fever, the epidemic of the coafts, originating from unwholefome food, the dire effects of neceffity. Moral and innocent victims! who exult in the change, firft finding that place " where the wiched ceafe from troubling, and where the weary are at reft."

The farmer tabours to remedy this diftrefs to the beft of his power, but the wetnefs of the land late in fpring prevents him from putting into the ground the early feed of future crops, bear, and finall oats: the laft are fitted for the climate; they bear the fury of the winds better than other grain, and require lefs manure, a deficiency in this ifland. Poverty prevents him from making experiments in rural œconomy : the ill fuccefs of a few made by the more opulent determines him to follow the old trakt, as attended with more certainty, unwilling, like the dog in the fable, to grafp at the fhadow and lofe the fubflance, even as poor as it is.

[^177]The produce of the crops very rarely are in any degree proportioned to the wants of the inhabitants: golden feafons have happened when they have had fuperfluity; but the years of famine are as ten to one. The helps of the common years are potatoes: it is difficult to fay whether the difcovery of America by the Spaniards has contributed to preferve inore lives by the introduction of this vagetable, or to have caufed more to perith by the infatiable lift after the precions metals of the new world.

I'he difficulties the farmer undergoes in this ball climate are unknown in the fouth; ther he fows his fecd, and fees it flourifh beneath a benign fun, and fecured from every invafion. Here a wet tiky brings a reluctant crop * : the ground, inclofed only with turf mounds, aceeffible to every animal: a continual watch enuploys mumbers of his people: fome again are occupied in repairing the damages fultained be their houfeng from forms the preceding year; others are labouring at the turberries, ts provide fucl to keep off the rigour of the fevere fealion; or in fencing the natural (the only) grafics of the country to preferve their cattle from ftarving, which are the true and proper itaple of thefe iflands.

The quantity of corn raifed in tolerable feafons in this ifland is encened to be about nine thoufand bolls. The number of mouths to confume them in the preflyytery of Skie $\dagger$, near thirteen thoufand: migrations and depreflion of fpirit, the latt a common canfe of depopulation, having fince the year 1750 reduced the number from fifteen thourand to between twelve and thirteen: one thoufand having croffed the Athantic, others funk beneath poverty, or in defpair, ceafed to obey the firlt great command, " increafe and multiply."

In that year the whole rent of Skic was three thoufand five hundred pounds. By an unnatural force lome of the rents are now doubled and trebled. People long out of all habit of induftry, and ufed to the convivial tables of their chieftain, were unable inftantly to fupport fo new a burden: in time not very long preceding that, they blt the return of fome of their rents; they were enabled to keep hofpitality; to receive their chieftain with a well-covered board, and to feed a multitude of poor. Many of the greater tackfinen were of the fame blood with their chieftains; they were attached to them by the ties of confanguinity as well as affection: they felt from them the firf act of opprefion, as Cafiar did the wound from his beloved Brutus.

The high advance in the price of cattle is a plea for the high advance of rents; but the fituation of the tackfman here is particular : he is a gentleman, and boafts the fame blood with his laird: (of five hundred fighting men that followed Macleod in 1745 in his majety army, four hundred were of his kindred) has been cherifhed by him for a feries of years often with paternal affection: has been ufed to fuch luxuries as the place affords, and cannot inftantly fink from a good board to the hard fare of a common farmer. When the chieftains riot in all the luxuries of South Britain, he thinks himfelf entited in thare a due degree of the good things of this life, and not to be for ever coufined to the diet of brochan, or the compotation of whifkey. 1)uring the feudal reign their love for their chieftains induced them to bear many things, at prefent intolerable. They were their pride and their glory: they ftrained every nerve in fupport of them, in the fame manner as the French, through vanity, refufe nothing to aggrandize theirGrand Mnnarque.

[^178]Refentment drove many to feek a retreat beyond the Atlantic: they fold their ftock, and in numbers made their firft effay. They found, or thought they found, while their paflions were warm, an happy change of fituation : they wrote in terms favouring of romance, an account of their fituation : their friends caught the contagion; and numbers followed; and others were preparing to follow their example. The taikfmen from a motive of independency : the poor from attachment; and from excefs of mifery. Policy and humanity, as 1 am informed, have of late checked this fpirit fo detrimental to the public. The wifdom of legiflature may perhaps fall on fome methods to conciliate the affeecions of a valuable part of the community : it is unbecoming my little knowledge of the country to prefume to point out the methods. It is to be hoped that the head will, while time permits, recollect the ufe of the moft diftant members.

The proper products of this and all the Hebrides, are men and cattle: the ufe of firlt neell not be infifted on, for England cannot have forgot its fad deficiency of recruits towards the end of the late long and deftructive war: and what it owed in the courfe of it to North-Britain. In refpect to cattle, this in particular bears the pre-eminence of having the largeft breed of all the Highlands. The greater tenants keep their cattle during winter in what are called winter-parks, the drieft and beft ground they have: here they are kept till April, except the winter proves very hard, when they are fiddered with fraw : in April the farmer turns them to the moor-grafs (cotongrafs) which fprings firft, and at night drives them into the dry grounds again.
The poorer tenants, who have no winter-parks, are under the neceffity of keeping the cattle under the fame roof with themfelves during night; and often are obliged to kecp them alive with the meal defigned for their families. The cows are often forced, through want of other fiud, to have recourle to the fhores, and feed on the fea-plants at low water : by inftinct they will, at ebb of tide, haften from the moors, notwithflanding they are not within fight of the fea.

One of the greater farms in Skie is thus focked:
Fifty cows, and their followers, viz. 20 young heifers, fit for bull ; 30 ditto, three years old; 35 ditto two years old : 40 yearlings, or furks. Of thefe the owner can fell only 20 cows at 45s. each at an average ; can make butter and cheefe for his family, but none for fale, for their beft cow will not yield abov: three Englifh quarts of milk, at a meal. Such a farm was formerly rented for 161 . a year, at prefent is raifed to 501 . The greateft rent in the ifland is 8ol., but the medinm from 301 . to 401 .

In Skie when a tackfman has a greater farm than tee can manage, he often fets off part to a Bowman or Aireach, who takes care of the fock of cattle on a ce:tain tract; and binds himfelf to give to the tackfinan every year four fone of cheefe, and two of butter, from each couple of milch cows. If there is any arable ground, he is provided with horfes and a plough; and feed fufficient to fow it; and receives part of the crop; and fome additional grafs ground for two or three milch cows, for his trouble.

There is certainly much ill management in the direction of the farms: a tackfman of fify pounds a year often keeps :wenty fervants; the lazief of creatures, for not one will do the lealt thing that does not belong to his department. Mof of them are marricd, as in Ilay. 'I heir common food is Brochan, a thick meal pudding, with milk, butter or treacle; or a thinncr fort, ealled Eafoch, taken with their bannocs. This number of fervants feemed to anfwer the retainers in great families before that pernicious cuftom was abolifhed by Henry Vll.; in feudal times they were kept here for the fame bad end. The caufe is now ne more, but the habit cannot fuddenly be fhaken off; vol. itt.
v U
charity
charity forbids one to wifh it, till fome employ is thought of for them ; otherwife, like the poor cottagers beforementioned, flarving mult be their portion.

Catte is at prefent the only trade of the inand: about four thoufand are annually fold, from forty thillings to three pounds a head. The lofs fuftained in Skie by the feverity of the latt winter, and the general failure of the crops the preceding feafon amounted to five thoufand; perhaps in foune meafure owing to the farms being over-ftocked.

About two hundred and fifty horfes are purchafed from hence every year.
Here are no fheep but what are kept for home confumption, or for the wool for the cloathing of the inhabitants. Hogs are not introduced here yet, for want of proper food for thofe animals.

Goats inight turn to good advantage if introduced into the wooded parts of the inand. Thefe animals might be procured from the neighbourhood of L.ochnefs; for being naturalized to the climate, would fucceed better than any imported from the fouthern parts of Lurope, or from Barbary. As an inducement, I mult inform the natives of the Hebrides that in the Alpine part of Wales a well haired goatkin fells for feven and fix-pence or half-a guinea.

About three hundred tons of kelp are mace here amually, but it is thougit not to anfiver, as it robs the land of fo much manure.

There are not above two or three flated houfes in the inand; the general thatch is fern, root and ftalk, which will laft above twenty years.
'The roots of the orobus tuberofus, the cor meille or carmel of the Highlanders, are in high eftem in this and the other illands: they fometimes chew them, at others make a fermented liquor with them. They imagine that they promote expectoration, and that they are very efficacious in curing any diforders of the breaft or humps: they alfo ufe it as a remedy againft hunger, chewing it as fome of our pooreft people do tobaceo ${ }^{\circ}$, to put off that uncaly fenfation.

Ligunticum Scoticum, Scotch parney, or the flunis of this ifand, is alfo much valued; in medicine, the root is reckoned a good carminative, and an infution of the leaves is thought a good purge for calves. It is befides ufed as a food, cither as a fallad, raw, or boiled as greens.

Very few fuperlitions exit here at prefent : pretend res to licond-fight are quite out of repite, except among the mott ignormt, and at prefent very fhy of making boalls of their foculies.

Poor Browny, or Robin Good-fellow, is alfo put to light. This ferviceable fprite was wont to clean the houfes, helped to churn, thrahbed the corn, and would belabour all who pretended to make a jelt of him. He was reprefented as thout and bloominy, had fine tong flowing hair, and went about with a wand in his hand. He was the very counter-part of Milton's Lubbar-fiend, who
'lells h w the drudsine goblin fiveat
Tosears the cream-bowl daly fec;
When in one ni!! he, ere whingf: of mort,
Ilis fastowy fale hath thralid the corn
'I'hat ten day-lab'rers could not end ;
'Then hay hin down the lubibar fiend,
And tretch'd along the chimery's length,
Bafiss at the fire has hairy ftre:cth.

The Grungach is a deity in form reprefenting the laft; and who was worflipped in old times by tibations of milk; and milknaids ftill retain the cuftom by pouring fome
on certain fones that hear his mame. Gruagach fignifies the fair-haired, and is fuppofed by Mr. Macqueen* to have been an emblem of Apollo, or the Sun; and to correfoond with the epithet revoroxpusc. A ftone was dug up near Muffelburgh, dedicated $\Lambda$ pollini Gramo Grianach the Sunny, an ephithet probably borrowed from the Caledonians. The fame deity might alfo receive the title of Galasius from the libation of milk ltill retained in thofe parts.

A wild Ipecies of magic was practifed in the diftrict of Troternefs, that was attended with a horrible folemnity. A tamily who pretended to oracular knowledge practifed thefe ccremonies. In this country is a vaft cataract, whofe waters falling trom a high rock, jet fof far as to form a dry hollow beneath, between them and the precipice. One of thefe impoftors was fowed up in the hide of an ox, and to add terror to the cercmony, was placed in this concavity, the trembling inquirer was brought to the place, where the flonde and the roaring of the waters, encreafed the dread of the occation. 'The quellion is put, and the perfon in the hide delivers his anfiver, and fo ends this fpecies of divination fyyled 'Taghairm.

But all thefe itle tales are wotally exploded, and good-fenfe and polifhed nanners prevail, inftead of that barbarity whech in ' $59^{8}$ induced James VI. to fend here a new colony to civilize the natives; who were fo litte difpofed to receive their inllructors, that his Majeny was in the end obliged to defilt from his defign $\dagger$. At prefent the illand forms part of the flire of Invernefs. The fherifl of that county appoints a fubltitute who refides here and takes cognizance of fmall difputes about property, and petty crimes; but, on account of the dittance, avoids harraffing the inhabitants, by requiring their attendance on the Lords of Seffious and Jufticiary Courts at Invernefs, the jurymen being felected from among the gentry and inhabitants of the mainland.

July 24. After a moft tempentuous night, loofe from our harbour at two o'clock at noon. Go through a narrow channel at the north end, a rock lying in the middle. Having to the weft a view of Fifher's rock; and to the north a ftrange chain of rocky ines, very fingular in their appearance; and varying in their forms in the procefs of our courfe. The higheft is called Bordh-mor-mhic-leod, or Macleod's great table $\ddagger$. Another is called Flada. On the firit Mr. Thomplon took in our abfence the little Petrel, which with numbers of others were lurking beneath the loofe ftones, and betrayed thenfelves by loud twittering. Thefe are the leaft of palmipeds; the dread of mariners, who draw a certain prefage of a ftorm from their appearance; for they always collect in numbers at the approach of a tempelt bencath the ftern; running along the waves in the wake of the fhip, with a fiviftefs incredible. This bird is the Camilla of the ocean: like her,

> She fwept the feas, and as the lkimm'd along, Her fying teet unbathid on billows hung.

The feamen call them Mother Cary's chickens: fome devotecs ftyled them Petrels, from the attempt of the apofle St. Peter to tread the water. They are feen in all parts of the ocean; and were not overlooked by the ancients, who named them Cypfelli, and take nosice of this remarkable particular.

[^179]Mr. Thompfon alfo fhot one of thofe enormous 'feals, or the great feal fyn. quad. No. 266; but to my great regret it funk as foon as killed.

Have a full view of the ife of Lewis, the Lodhus of the Norwegians: and off it a groupe of little illes called Siant, or Schant, and fomewhat to the north of thofe is the fine harbour, and town of Stormaway. It was my intention to have fleered for that port, but was difluaded from it by the accoun!s I had from the gentlemen of Skie, that a purrid fever raged there with great violence.

Direct our courfe for Loch-Broom, in the county of Rofs. An eafy breeze carrics us off the cape Ruth an ri, in the maps Row-rie. Ahout eight o'clock in the morning of July 25. - find ourfelves near a coniderable number of fmall ines, with a moft dreary appearance, mifealled the Sc ..mer iflands. Within is a great bay fix milcs broad and eight deep, bounded by valt and barren mountains, patched with fnow. The wind chops about and blows very fretl, fo that after many teazing tacks, about mine o'clock in the evening drop anchor under ille Martin, in the bottom of the bay, which is here called Loch-Kinmard. To the fouth is a hill, which we landed on, and afcended, and faw on the other fide great loch Broom, or Brion, narrow, of a valt depth, ard ruming many miles up the country. At its head receives a river frequented by falmon in April.

This parith is one of the largeft on the mainland of Scotland, being thirty-fix miles long and twenty broad. It has in it feven places of worfhip, three catechilts ", and about two thoufand examinable perfons : but is deftitute of a parochinl fchool. None of the people except the gentry underfand Englifh. The country is inhabited by the Mackenzies, even quite from Kint.il, whofe chicfain is the Earl of Seaforth.

It is a land of mountains, a mixture of rock and heath, with a few flats between them producing bear and black oats, but never fufficient to fupply the wants of the inhabitants.

Cattle are the great fupport of the country, and are fold to graziers who come for them even as far as from Craven in Yorkfhire, at the rate of thirty fhillings to thrce pounds a head. A great deal of butter and cheefe is fold to the buffes. Land is fet here by the Divoch or half Davoch; the laft confifts of ninety-fix Scotch acres of arable land, fuch as it is, with a competent quantity of mountain and grazing ground. This maintains sixty cows and their followers; and is rented for fifty-two pounds a year. To manage this the farmer keeps eight men and eight women fervants; and an overfeer, who are all paid partly in money and partly in kiad. The common fervants have thirty fhillings per annum, houfe, garden, fix bolls of meal and hoes. The dairy maids thirteen fhillings and four-pence and fhoes: the conmon drudges fix and eight-pence and thocs.

The tender cattle are houfed during winter. The common manure of the country is dung, or fea-wrack.

July 27. Still on board. The weather very bad.
July 28. Land at the bottom of the bay, in Rufs-fhire. Procure horfes. Obferve fome houfes buitt for the veteran foldiers and failors; but as ufual all defered. Proceed up Strath K mard, which with Coygach that bounds the north fide of the bay is a forfeited eflate, and unalienably annexed to the crown. The enmmition res give all poffible encouragement to the tenans; and have power to grant longer lealis than the

[^180]lairds are inclined to do, which keeps the people under the government contented, and banifhes from their minds all thoughts of migration.

Kindnefs and hofpitality poffefs the people of thefe parts. We fcarce paffed a farm but the good woman, long bifore our approach, fallied out and flood on the roadfide, holding out to us a bowl of milk or whey.

Aicend a very high mountain, and pals through a birch-wood, impending over a pretty little loch; various other woods of the fame kind were fcattered over the bottoms, but the trees were fimall. Roots of pines filled all the moors, but I faw none of tho'e trees ftanding. Pafs under fome great precipices of limeftone, mixed with marble; from hence a molt tremendous view of mountains of ftupendous height, and generally of conoid forms. I never faw a country that feemed to have been fo torn and convulfed; the flock, whenever it happened, fhook off all that vegetates; among thefe alpiring heaps of barrennefs, the lugar-loaf hill of Suil-bhein made a confpicuous figure; at their feet, the blacknefs of the moors by no means affited to cheer our ideas. Enter Allynt, in Sutherlind : ride by Luch-Camloch; enjoy fome diverfity of the fcene, for it was prettily decorated with little wooded illands. Reach Led-beg, where we obtained quarters, and rough hofpitality.

This country is environed with mountains, and all the frata near their bafe, and in the bottoms, are compofed of white marble, fine as the Parian : houfes are built with it, and walls raifed; burnt, it is the manure of the country, but oftener nature diffolves, and prefents it ready prepared to the lazy farmer.

This tract feems to be the refidence of foth, the people almoft torpid with idlenefs, and moft wretched; their hovels mult miferable, made of poles wattled and covered with thin fods. There is not corn raifed fufficient to fupply half the wants of the inhabitants; climate confpires with indolence to make matters worfe, yet there is much improveable land here in a fate of nature, but till famine pinches they will not beftir themfelves; they are content with little at prefent, and are thoughtlefs of futurity; perhaps on the motive of Turkilh vaffils, who are oppreffed in proportion to their im. provements. Difpirited and driven to defpair by bad management, crowds were now paffing, emaciated with hunger, to the ealtern coaft, on the report of a hhip being there loaden with meal. Numbers of the miferables of this country were now migrating; they wandered in a flate of defperation, too poor to pay, they madly fell themfelves for their paflage, preferring a temporary bondage in a ttrange land, to ftarving for life in their native foil.

Every country has had its prophets: Greece its Caffandra, Rome its Sibyls, England its Nixon, Wales its Rubin Ddu, and the Highlands their Kenneah Oaur. Kemneah long fince predieted the migrations in thefe terms: " Whenever a Macleane with long hands, a Frazer with a black fpot on his face, a Macgregor with the fame on his knce, and a club-fcoted Maclood of Rafa, fhould have exifted; whenever there fhould have been fucceffively three Macdonalds of the name of John, and three Mackinnons of the tame Chrillim umue ; oppellors, would appear in the country, and the people change their own land for a flange one." The prediations, fay the good wives, have been fulfilled, and not a lingle breach in the oracular effufions of Kenneah Oaur.

In a country where innorance and poverty prevail, it is lefs wonderful that a tragical affair thould happen, finilar to that at Tring, near our polithed capial. About three years ago lived in this neightourhool, a woman of more than common ftrength of underitanding: the was often confulted on the ordinary occurrences of life, and obtained a fort of relpeit which excited the envy of another female in the fame diatrit. The laft ga:e out that her neighbour was a witch; that fhe herfelf thad a good genins,
and could counteract the evils dreaded from the other: at length, fle fo worked on the weak minds of the fimple vulgar, that they determined on deftroying her rival, and efiected their purpofe by infligating a parcel of children to ftrangle her. The murder was inquired into, but the inciters had fo artfully concealed themfelves, that they eflaped their reward, and no punifhnent was inflicted, except. what was fuited to the tender years of the deluded children.

Afing parih contains betweon three and four thoufand fouls; and fends out five bundred head of catte annually; and about two or three lafts of falmon are taken every year in the water of lanard, on the coant.

I haw here a male and female red-throated diver ; which convinces me of my miftake in fuppofing another to have been of this fpecies *.

July 28 . It was our defigh, on having the Hip, to have penetrated by land as far as the eatrenity of the illand; but we were informed that the way was impallable for horfes, and that even an ifland foot meflenger mull aveid part of the hills by crofling an arm of the fea. Return the fame road threuzh a variety of bog and hazardous sock, that nothing buc our thoelef's little fleeds could have carried us over. At length we arrive fitely on board the hip,

Found in our harbour fome bufies, juft anchored, in expetation of inding the floals of herrings ufually here at this feafon, but at prefent were difappointed: a few were taken, fufficient to convince us of their fuperiority in goodnefs over thore ene fouth; they were not larger, but as they had not wafted themfeles by being …, their backs, and the part next to the tail, were double the thicknels of the oth .a. the ineat rich beyond expreflion.

Mr. Anderfon $\dagger$ gives to the Scotch a knowledge of great antiquity in the herring finhery: he fays that the Netherlanders reforted to thefe coafts as carly as A. 1). 8;6, to purchafe falted lifh of the natives; but impofing on the ftrangers, they learned the art, and took up the trade, in after-times of fuch immenfe emolument to the Duteh.

Sir Walter Raleigh's obfervations on that nead, extracted from the fame author, are extremely worthy the attention of the curious, and excite reflections on the vaft frength refulting from the wiflom of well applied induftry.

In 1603 , remarks that great man, the Dutch fold to different nations, as mary herrings as amounted to 1,759, cool. fterling.

In the year 1615 , they at once fent out 2000 buffes, and employed in them 37,000 fihermen.
In the year 1618 they fent out 3000 hips, with 50,000 men, to take the herringe, and 9000 more thips to tranfort and fell the fifh, which by fea and land cmpleycd $150,0 c 0 \mathrm{men}$, befides thofe firit mentioned. All this wealth was gotten on our coalls; while our attention was taken up in a diftant whale fifhery.
The Scotilh monarchs for a long time feemed to direct alt their attention to the prefervation of the falmon fiflery; probably becaufe ideir fubjects were fuch novices in fea affairs. At length James III. endeavoured to flimulate his great men to thefe patriotic undertakings; for by an at of his third parliament, he compelled "cortain lords $1 ;$ ir tual and temporal, an I burrows, to make thips, bufhes, and boats with nets and other pertinents for fifhing. That the fame thould be made in each burgh; in

- Bi. Zcul. i., No. $2 f^{\circ}$
† Dît Commerce, i. 41 .
number according to the fubftance of each burgh, and the leaft of them to be of twenty tons: and that all idle men be compelled by the fheriffs in the country to go on board the fame."

But his fucceffors, by a very falfe policy, rendered this wife inftitution of little effect; for they in a manner prevented their fubjects from becoming a maritime people, by directing that no white fifh fhould be fent out of the realm, but that Arangers may come and buy then *; that free ports be firlt ferved; the cargoes fold to freemen, who are to come and tranfport the fame $\dagger$. The Dutch at this very time having an open trade.

It is well known that there have been many attempts made to fecure this treafure to ourlelves, but without fuccels; in the late reign a very ftrong effort was made, and bounties allowed for the encouragement of Britilh adventurers; the firlt was of thirty fhillings per ton for every buls of feventy tons and upwards. This bonnty was afterwards raifed to fifty fhillings per ton, to be paid to fuch adventurers who were entitled to it by claining it at the places of rendezvous. The buffes are from twenty to ninety tons burden, but the beit fize is cighty. A veflel of eighty tons ought to take ten lalls, or a hundred and twenty barrels of herrings, to clear expences, the price of the filh to be admitted to be a guinca a barrel: a thip of this tize ought to have eighteen men and three boats; one of twenty tons fhould have fix men; and every five tons above require an additional hand.

To every ton are two humdred and eighty yards of nets; fo a vellel of eighty tons carries twenty thoufand fiquare yards; each net is twelve yards long, and ten deep, and every boat takes out from twenty to thirty nets, and puts them together fo as to form a long train : they are funk at cach end of the orain by a fone, which weighs it down to the full extent; the top is fupported by buoys, made of fheep's fkin, with a hollow ftick at the mouth, fatened tight; through this the fkin is blown up, and then ftopt with a peg, to prevent the efcape of the air. Sometimes thefe buoys are placed at the top of the nets; at other times the nets are fuffered to fink deeper, by the lengthening the cords fattened to them, every cord being for that purpofe ten or twelve fathoms lonr. But the bett fitheries are generally in more fhallow water.

Tle nets a e made at Greencct, in Knapdale, Bute, and Arran ; but the beft are procured from Ireland, and, I think, from lome part of Caernarvonhire.

The thhing is always performed in the night, unteis by accident. The bulfes re. main at anchur, and send out thei bonts a lithe before fun. fet, which continue out, in winter and lummer, till day ligit ; ofen taking up and emptyins their nets, which they do ten or twelve times in a night in cale of good luccels. During winter it is a molt dangerous and fatiguing employ, by reafon of the greatnets and froguency of the gales in thele leas, and in fuch gales are the mot fuccetstul captures; but, by the providence of Heaven, the fithers are fedom lot, and, what is wonderful, few are vilited with ilheis. 'Ihey go out well prepared, with a warm great coat, boots, and fkin aprons, and a good provilion of beef and fpirits. The fante good fortune attends the bulfes, who, in the rempelluous leafon and in the darkelt nights, are continually fhifting in thefe narrow leas from habour to harbour.

Sonetimes eighty barrels of herrings are talsen in a night by the boats of a fingle velfel. It once happened in Luch-Slappan, in Skie, that a buls of eighty tons might have taken two hundred barrels in one ni,ht, with ten thouland fuare yards of net; but the mafter was ouliged to delilt, for want of a fufficient number of hands to prererve the capture.

[^181]$\dagger$ James IV, and James VI.
The:

The herrings are preferved by falting, after the entrails are taken out; an operation performed by the country people, who get three-pence per barrel for their trouble, and fometimes, even in the winter, can get fifteen pence a day. This empluys both women and criildren, but the falting is only entrufted to the crew of the bufics. The fifh are laid on their backs in the barrels, and layers of falt between them. The entrails are not loft, for they are boiled into an oil: eight thoufand fifh will yield ten gallons, yalued at one fhilling the gallon.

A veffel of eighty tons takes out a hundred and forty-four barrels of falt: a drawback of two fhillings and eight-pence is allowed for each barrel ufed for the foreign or Irifh exportation of the fifh; but there is a duty of one fhilling per barrel for the home confumption, and the fame for thofe fent to Ireland.

The barrels are made of oak-taves chiefly from Virginia; the hoops from feveral parts of our own ifland, and are made either of oak, birch, hazel, or willow ; the laft from Holland, liable to a duty.

The barrels coft about three fhillings each; they hold from five to eight hundred finh, according to the fize of the fifh, are made to contain thirty two gallons. The barrels are infpected by proper officers; a cooper examines if they are fatuteable and good, if faul'y, he deftroys them, and obliges the maker to fland to the lofs.

The herrings in general are exported to the Weft Indies, to feed the nagroes, or to Ireland, for the Irih are not allowed to fifh in thefe feas By having a drawback of five-pence a barrel, and by re-packing the fifh in new barrels of twenty-eis.t gallons, they are enabled to export them to our colonies at a cheaper rate than the Scots can do.

The trade declines a-pace; the bounty, which was well paid at firlt, kept up the fpirit of the fifhery, but for the laft fix years the detention of the arrears has been very injurious to feveral adventurers, who have fold out at thirty per ceut lofs, befides that of their intereft.

The migrations of the herrings has been very fully treated of in the third volume of the Britifh Zoology: it is fuperflıous to load this work with a repetition, I fhall therefore only mention the obfervations that occur to me in this voyage, as pertinent to the prefent place.

Loch-Broom has been celebrated for three or four centuries as the refort of herrings. They generalty appear here in July ; thofe that turn into this bay are part of the brigade tha: detaches itfelt from the weftern column of that great army that anmually deferts the vaft depths of the arctic circle, and come, heaven-directed, to the feats of population, offered as a cheap food to millions, whom wafteful luxury, or iron-hearted avarice hath deprived, by enhancing the price of the wonted fupports of the poor.

The migration of thefe fifh from their northern retreat is regular: their vifits to the weliern ifles and coalls, certain ; but their attachment to one particular loch, extrenely precarious. All have their turns : that which fwarmed with filh one year, is to:illy deferted the following, yet the next lach to it is crowded with the floms. Thefe changes of place give often full employ to the buffes, who are continually hitting their harbour in queft , news refpecting thefe important wanderers.

They commonly appear here in July, the tatter end of Augult they go into deep water, and continue there for fome time, without any apparent caufe; in November they return to the fhallows, when a new filhery commences, which continue; tit Januars, at that time the herrings become full of roe, and are ulites as artictes of comnerce. Some donbt whether thefe herrings that appar in November are not part of a new migration; for they are as fat, and make the fane appearace as thole that compofed the firtt.

The figns of the arrival of the herrings are flocks of gulls, who catch up the fin while they kiin on the furface; and of gannets, who plunge and bring them up from confiderable depths. Both thefe birds are clofely attended to by the fifhers.

Cod-fifh, haddocks, and dog-fifin follow the lierrings in valt multitudes: thefe voracious fill keep on the outfides of the columns, and may be a concurrent reafon of driving the fhoals into bays and creeks. In fummer they come into the bays generally with the warmeft weather, and with eafy gales. During winter the hard gales from northweft are fuppofed to affilt in forcing them into fhelter. Laft winds are very unfavourable to the fifhery.

In a fine day, when the fifh appear near the furface, they exhibit an amazing brilliancy of colours: all the various corufcations that dart from the diamond, fapphire, and emerald, enrich their tract; but during night, if they break, i. e. play on the furface, the fea appears on fire, luminous as the brighteft phofphorus.

During a gale, that pari of the occan which is occupicd by the great floals, appear as if covered with the oil that is emitted from them.

They feem to be greatly affected by lightning: during that phenomenon they fink towards the bottom, and move regularly in paralled hoals one above the other.

The enenfies that affail thefe fifh in the winter feafon are varied, not diminifhed: of the birds, the gannets difappear ; the grulls fill continue their perfecutions; whales, pollacks *, and porpeffes are added to their number of foes: thefe follow in droves; the whales deliberately, opening their valt mouths, taking them by hundreds. Thefe monflers keep on the outfide, for the body of the phalans of herrings is fo thick as to be impenetrable by thefe unwieldy animals.

The herring-fifhers never obferve the remains of any kind of food in the fomachs of that fifh, as long as they are in good condition: as foon as they become foul or poor, they will greedily rife to the fly, and be taken like the whiting-pollack.
'íncy do not deponit their fpawn in fand, or mud, or weeds, like other fifh, but leave it in the water, fulpended in a gelatinous matter, of fuch a gravity as prevents it from foating to the furface, or finking to the bottom. The fifhermen difoover this by finding the flimy matter adhering to the hay ropes fometimes in ufe to hold the fone that finks the nets, the middle part being limed over, the top and bottom clear.

Before 1 leave this bay it :auft be obferved, that there are here, as in mof of the lochs, a few, a sery few of the natives sho poffels a boat and nets, and fifh in order to fell the capture frefl to the hufles: the utmolt thele porr people can attain to are the boat and nets; they are too indigent to become mafers of barrels, or of falt, to the great lofs of the public as well as therifles. Were magazines of falt oftablifhed in thefe diftant parts; was encouragement given to thefe diftant Britons, fo that they might be embled by degrees to furnith themelves with the requifites for fithing, they would foon form themfelves into feamen, by the courfe of life they mutt apply themelyes to; the bulfes would be certain of handing a tand manhe of fifh ready cured; the natives supht induftry, which would be quickened by the profit made by the commodity, which tiey mightafiord cheaper, as tule th at their very doors, without the wear and tear of ditant woyages, as in the promat cafe. Hatf of the hads employed now in fifhing and curing generally come out as raw famen as the inhanans of the te parts: they do wot return with much greater experience in the working of a thip, heing employed entirely in the boats, or in falting of the herrings, and feem on board as aukward as manmes in comparifon of able feamen. A bomty on thefe home captures would ftinnatate the peophe

[^182]to induftry; would drive from their minds the thoughts of migrations; and would never leffen the number of feamen, as it would be an incitement for more adventurers to fit out vefiels, becaufe they would have a double chance of freight, from their own captures, and from thole of the refidents, who might form a flock from fhoals of fifh, which often efcape while the former are wind-bound, or wandering from loch to loch.

July 29. Weigh anchor, and fail with a favourable breeze towards the mouth of the bay, with a defign of returning fouth; but towards evening the wind changes, cold weather and hard adverfe gales fucceed, which oblige us to tack and anchor in the mouth of Little Loch-Broom, an arm of the fea, about feven miles long, and not half a mile broad, bounded by high mountains, covered in many parts with birch woods. "ihe hill 'Talloch-Effie may vie with the higheft I have feen.

For two hours anufe ourfelves with taking with hand lines abundance of cod, fome dog-fifh, and a curious ray.

The night was mof tempefluous: our fituation was difagreeable, as Mr. Thompfon thought our :effel would drive, and that he thould be abliged to cut his cables and put to fea; which, under the circumfances of a black night, a furious form, and rocky narrows, did not contribute to the repofe of frefh-water feamen.

July 3o. The wind grows moderate: in weighing anchor difcover on the cable feveral very uncommon afteric. No fooner was our anchor on board, but a furious fquall arifes, and blows in blafis like a hurricane, disiving us before it at a valt rate, till we arrived within a mile of the botom of the loch. Drop anchor, but without effect; are obliced to weigh again, while the furious gale engages an attention to the fails, and flings us into a double perplexity in this narrow flrait, where for an hous ou tacks were almoft perpetual, and the veffel frequently in no fimall danger. The blatts from the mountains were tremendous, not only raifing a vaff fea, but catching up the waves in eddics, and raifing them up in the air to a furprifing lheight. At length we were relieved from our diflrefs by a fucceffful anchorage, under a high and finely wooded hill, in cight fathom water, but within a fmall dittance of eighty.

Procure horfes, by favour of Kemeth Mac-kenzie, Efy. of Dundonnel. Ride about a mile on the fide of the hill, above the loch; arrive in a finall but fertile plain, winding among the valt mountains, and adorned with a pretty river and woods of alder. Here we were rejoied with the fight of enclofures long ifrangers to us: the hay was good, the bear and oats excellent; but the manner of manaring, called in thefe parts tatning, was very fingular: many of the faeds were covered with the boughs of alders, lately cu: : thefe are left during the whele winter io rot; in March the ground is cleare. if the undecayed parts, and then ploughed. Ferre is alfo uted for the fame end. Reach

Duadonnet. Determined to go by land to ifit Loch-maree, a great lake to the fouth; and direct Mr. Thompfon to fail and wait for us at Cair-loch.

We found ourfelves feated in a fout equalized by few in piaturefque and magnificent feenery. The banks of the river that rulles by the houfe are fringed with trees, and the courfe often interrupied by calcades. At a mall diftuce the ground begins to rife: os we mount, the eyes are entertained with new objects; the river rolling beneath the dark fhade of alders, an extert of plain compofed of fields bounded by groves; and as the walk adrances, appears a deep and tremendecs hollow, fhagged with trees, and viading far amidet the hills. We are alarmed with the roar of invifible catarats, long before their place is difcovered; and find them precipitating themfelves down narrow chatims of thupendous depth, fo marrow at top, that highanders in the cagernefs of the chace will fearlefly firing over thele baratha. They meander for miles amidf the momums, and are the age-worn work of water, barach off into every glen, hid with trees
of various fpecies. Torrents roll over their bottouns often darting down precipices of a thouland forms, lofing themfelves beneath the undermined rocks, and appearing again white with the violence of the fall. By laying afide the boughs, and creeping to the verge, got fight of thefe otherwife latent cataracts ; but the profpect fufficiently tired my head. Befides thefe darkfome waters, multitudes of others precipitate themfelves in full view down the fleep fides of the aljacent hills, and create for fevera! humdreds of feet a feries of moft magnificent falls.

Above rifes a magnificent hill, which as far as the fight can reach is cloathed with birch and pines, the flelter of flays, roes, and black gane.

To, the well is a view where the awful, or rather the horrible, predominates. A chain of rocky mountains, fome conoid, but united by links of a heighe equal to mott in North Britain, with fides dark, decp, and precipitous, with fummits broken, flarp, ferrated, and fping into all terrilic forms ; with fnowy glacieres lodged in the deap fladed apertures. Thefe crags are called Squr-fein, or hills of wine: they rither ment the tille of Squr-fhain, or rocks of wind; for here AElus may be faid to make his refidence, and ever employed in fabricating blalls, fqualls, and hurricanes, which he fcatters with no fparing hand over the fubjacent vales and lochs.

Jnly 31. Moft agrecably detained with the good family of Dundomel by a violent fall of rain, which rendered the waters impaflable. Obferve after dinner that cloudberries *, that grow on the adjacent mountains, were ferved as a defert.

Augult 1. After taking a deoch-an-doruis, or a door-cup, proceed fouth, afeend a ftecp hill far ahove a bank wooded with various trees, among others the wych-elm grew native. To the weft were the valt mountains, naked, rugged and dreary, their bafes foping, furrowed with long clefts, emptying their precipitated waters into the river beneall. Defcend into a vale with birch-trees thinly feattered over it ; and the extremity croffed by a high rock wooded and divided in the middle by a vaft and foaming cataract, the waters of Loch-nan-niun, or the lake of birds. On the weft fide is an amazing mountain flecply floping, compofed of a whitifh marble, fo extenfive, fmooth, glofly and even, as to appear like an enormous theet of ice; and is, I doubt not, as flippery. Our guide called the hill Lecach. The oppofite fide of the vale was precipitous; varied with trees and cafeades, that fell among the branches. The whole of -1 Scene was truly alpinc.

Afeend again. Arrive amidft frata of red and white marble, the way horrible, broken, flcep, and nippery; but our cautious ftecds tried every ftep before they would venture to proceed. Black morafly heaths fucceed, named Glian-dochartai. Dine on the fide of a rill at the bottom, on plentiful fare provided by our kind hoft, whofe fon, Mr. Mackenzic, and another geutlemain of the name, kindly undertook the charge of us to the next fage. Ride through a narrow !rath called Kin.loch-ewe, where we firt faw the figns of houfes and a little cultivation fince morning. This terminates in a meadowy plain, clofed at the end winh Loch-mares: the night proved wet and tempeftuous; we thercfore determined to defer the voyage till the next day, and to take fheler in a whifkey houfe, the inn of the place. Mr. Nackenzie complimented Mr. Lightion and me with the belhem, weil covered witha warm litter of beath: we lay in our cloaths, wropped ourlclues in phails, and cnjoyed a good repofe. We flept like the Lufitanians of old $t$, fuper thores berbaceos. Our fricnds did not lofe their fleep; but great was our furprife to fee them form their bed of wet hay, or rather grafs collected from the fiehs; they thung a plaid over it, undrefled, and lay moft comfortably, without

[^183]injury, in what in a little time mut have become an orant hot bed; fo bleft with hardy conflitutions are cven the gentlemen of this country !

Augult 2. At feven in the morning take a fix-oared boat, at the cart end of Lochmaree: keep on the north thore beneath thep rocks, monlly filled with pines waving over nur heads. Obferve on the fhore a young man of good appearance, hailing the boat in the Erfe language. I demanded what be wanted; was informed a place in the boat. As it was entircly filled, ) was obliged to refule his requelt. He follows us for two miles through every difficulty, and hy his voice and geftures threatened revenge. At lengh a rower thought fit to acquaint us that he was the owner of the boat, and only wanted admilion in licu of une of them. The boat was ordered to thore, and the malter taken in with proper apolngies and antempts to footh him for his hard treatment. Inllead of infulting us with abufe, as a Charon of South Britain would have done, he inftantly compofed himfelf, and tohl us through an interpreter, that he felt great pride in finding that his conduct hat gained any degree of approbation.

Contime our courfe. The lake, which at the legiming was only half a mile broud, now, nearly half its length, widens into a great bay, bending towards the fouth, about four miles in breadh, filled with little ifles, too much cluftered and indiltinct.

Land on that called hech-maree, the favoured ille of the faint, the patron of all the coat from Applecrofs to Loch-brom. The flores are neat and gravelly; the whole furface covered thickly with a beautiful grove of oak, afl, willow, wicken, birch, fir, hazel, and enormons hollies. In the midt is a circular dike of fones, with a regular narrow entrance; the inner part has been ufed for ages as a burial place, and is flill in ufe. I fufpect the dike to have been origitally druidical, and that the ancient fuperltition of Piganifin had been taken up by the faint, as the readielt method of making a conqueth over the minds of the inhalitiants. A thump of a tree is thewn as the altar, probably the memorial of one of fone; but the curiofity of the place is the well of the faint, of power unfpeakable in cafes of lunacy. The patient is brought into the facred illand, is made to kneel before the altar, where his attendants leave an ofiering in moncy: he is then brought to the well, and fips fome of the holy water: a fecond officing is made; that done, he is thrice dipped in the lake; and the faure operation is repated everg day for fome weeks; and it ofion happens, by matural caules, the patient receives fone relicf, of which the fiant reccives the credit. I malle add, that the vifitants draw from the thate of the well an oncn of the difpolition of St. Alaree: if his well is full, they fuppofe he will be propitious; if not, they procecd in their operations with fears and doubts; bat let the event be what it will, he is held in high ctteem: the common oath of the country is by his name: if a traveller pafles by any of his relting-phaces, they never neglect to leave an offering; but the faim is fo moderate as not to puthim to any expence : a llone, a ftick, a bit of rag content him.

This is the molt beautiful of the ifes; the others have only a few trecs fprinkicd over their furface.

About a mile farther the lake again contraks. Pafs theneath a high rock, formed of fhort precipaces, with fletwes betwen, filled with multitudes of felf-fown pines, making a molt beauiful appearance.

The fouth fide of the water is bounded with mountains adorned with birch woods, mixed with a few pincs: a military roid runs along its length. The mountans are not very high, but open in many parts to give a view of others, whofe naked and broken tops fhooting into flarp crags, Itrangely diverfify the feete, and form a noble termination.

Towards the bottom of the lake is a headland, finely wooded to the very fummit. Here the water fuddenly narrows to the breadth of a hundred yards, and contimues fo for near a mile, the banks cloathed wih trees, and often bending into little femilumar bays to the very extremity; from whence its waters, after the courfe of a mile, a continual rapide, dificharge into a deep and darkfome hole called l'ool-Ewe, which opens into the large bay of Loch-Ewe.

The lake we had left is eighteen miles long: the waters are faid to be fpecifically lighter than molt ohtors, and very rarely frozen: the depth is various, in fome places fixty fathoms; but the bottom is very uneven : if ten feet of water were drained away, the whole would appear a chain of little lakes.

The fill are fahmon, char, and trout; of the laft is a fpecies weighing thirty pounds.
Land; are received by the Rev. Mr. Domie, minifter of Gairloch, whom we attend to church, and hear a very edifying plain comment on a portion of feripture. He takes us home with him, and by his hofpitality makes us experience the difference between the lodgings of the two nights.

Augult 3. 'Take a view of the environs: vifit the mouth of the river, where the falmon-filhery fupplics the tenant with three or four lafls of fith annually. On the bank are the renains of a very ancient iron furnace. Mr. Dounie has feen the back of a grate, marked S. G Hay, or Sir Gcorge Hay, who was heal of a company here in the time of the Queen Regent, and is fuppofed to have cholin this remote place for the fake of quiet in thofe turbulent times.

Potatoes are raifed here on the very peat-moors, without any other drains than the trenches between the beds. The potatoes are kiln-dried for prefervation.

It is to be hoped that a town will form itfelf here, as it is the tation of a government packet, that fails regularly from hence to Stornaway, in Lewis, a place now growing confiderable, by the encouragement of Lord Seaforth, the proprietor. This is a fpot of much concourfe; for here terminates the military road, which croffes from the eaft to the weft fea, commencing at Invernefs, and paffing by Fair-burn and strath-bian to this place. Yet I believe the beft inn on the laft thirty miles is that of Mr. Roderick Mac donald, our lar dlord the latt night but one.

Ride above fix mites fouth, and reach G.ir-loch, confifing of a few fcattered houfes, on a fine bay of the fame name. Breakfaft at lilowerdale, a good houfe, beautifully feated bencath hills fmely woodu. This is the fat of Sir Hector Mackenzie, whofe ancellor rectived a writ of free and fword araintt the ancient rebellious owners: he fucceeded in this commifion, and received their lands for his pains.

The parilh of Gair-loch is very extenfive, and the number of inhabitants evidently increafe, owing to the fimple mothod of life, and the conveniency they have of drawing a lupport from the fifhers. If a young man is pofieflid of a herring-net, a hand-line, and thre or feur rews, he imucfatedy thinks himfelt able to fupport a tmily, and marsics. The prefont number of fouls are about wo thouland cight humdred.

Herrings offer themfilves in fhoals from June to Jamury: cod-fifh atound on the great fand-bank, one comer of which raches to this bay, and is fuppofed to extend as far as Cape-Wrah, and fouth as low as Rona, off akie; with various branches, all fwarming with cod and ling. 'The fifhery is carit d on with log- lines, begins in February, and cods in April. The amual capture is uncertain, from five to twentyfeven thoufand. The native labour under fonte oppreflions, which might be eafily rer moved to the great advancement of this commerce. At prefent the fifh are fold to fome morchants from Campbeltown, who contract for them with the laird, at two.
pence-halfpenny a piece, after being cured and dried in the fun. The merchants take only thofe that meafure eighteen inches from the gills to the fetting on of the tail, and oblige the people to let them have two for one of all that are beneath that lengit. The fifl are fent to Bilboa: ling has alfo been carried there, but was rejected by the Spaniards. This trade is far from being pufhed to its full extent; is monopolized, and the poor fithers cruelly forced to fell their fih for three-halfpence a piece to thofe who fell it to the merchants.

The want of a town is very fenfibly felt in all thofe parts: there is no one commodity, no one article of life, or implement of fifhery, but what is gotten with difficulty, and at a great price, brought from a diftance by thofe who are to make advantage of the neceffities of the people. It is much to be lamented that after the example of tide Larl of Seaforth, they do not collect a number of inhabitants by feuing their lands, or granting leafes for a length of years for huilding; but flill fo much of the firitit of the chieftain remains, that tincy dread giving an independency to their people; a falle policy! as it would arich both parties, and make the landlord more refectable, as malter of a fet of decent tename, than of thoulands of bare-footed half-ftarved vaflals. At prefent adventurers from diflant parts take the employ from the natives: a town would create a market; a market would foon occafion a concourfe of thipping, who would then arrive with a cercainy of a cargo ready taken for them; and the mutual wants of ilranger and native would be fupplicd at an eafy rate.

Thefe and various other hints, flung out to this refpectable part of our inand, in dif. ferent parts of thefe travels, have been adopecd, and ats of parliament framed to carry them into execution. I have only to wifh every fuccefs to their efforts; and thall think labours undergone in pointing out to my northern fellow fubjects their local advantages fully repaid, by the reflection of having by my mite consributed to their happinefs and imprevement. Let them not fight with the heavens, and they will fucceed. Let them cherifh men, catte, and figheries, and the benefits will be felt from the extreme north to the moft fouthern promontory of our happy illand.

By example of a gentlenan or two, fome few improvements in farming appear. Lime is burnt; fea-tang ufed as manure; and Thell fand imported ly fuch who can afford the freight. But the bett trade at prefent is catle : about five hundred are annually fold out of this parih, from the price of one pound feven to two pounds five a piece. Ahout eighty horfes, at three pounds each, and a hundred and fifty thepp at three pounds per feore. The cattle are blooded at fpring and fall : the blood is preferved to be eaten cold.

We found our veffel fafely arrived at anchor with many others, under the facter of a little ine, on the fouth lide of the bay. Weigh and get under lail with a good breeze. Pals by the mouth of Loch-Torridon : a few leagues firther hy Apple-crofs bay, fimall, with populous and well cultivated thores. The back ground moft uncommonly mountainous.

Applecrofs houfe is inhabited by a moit hofpitable genteman as fame reports: we lamented therefore our inability to pay our $r$ efpects.

On the right leave the ifles of Rona and Rufa and Scalpay: hefore us is Croulin, and beyond forar the vaft hitls of Skic. Sall clofe under Crualin, inhabited by two families, producing a little corn and a few cathe. Almoll oppofite to its fouthern end is the common entrance into the two great ', ehs, Kilerne and Carroa.

Pafs the found between Skie and Kintail; anchor about nine o'elock, and onee more Decp bencath Mac-kin:mon's calle.

Auguft 4. In failing down the bay, had to the north-eaft a full view of Kintail in RofsShire, the original feat of the Mac-kenzies, or rather Mac-Kenneths ", a patronymic from their great anceftor Kenneth, fon of Colin Fitzgerald, of the houfe of Defmond in Ireland. To him Alexander III. made a grant of thefe lands for his good fervices at the battle of large. His pofterity, a warlike race, filled all the lands; for the heroes of North-Briain, like Polypes, multiply the more exceedingly by cuts and wounds.

Leave to the eaft the entrance into Loch-Lung and Loch.Duach; two miles from the fouth fide of the laft are the dangerous paffes of Glen-fheil and Strachell; where, on June the roth, 1719, a petty rebellion, projected by Cardinal Alberoni, and to have been fupported by the Spaniards, was fuppreffed. A tempelt difperfed the hoftile fquadron, and only about three hundred forces arrived. The Highlanders made a poor fland at Strachell; but were quickly put to flight, when they had an opportunity of deftroying the King's forces by rolling down ftones from the heights. I muft not omit that among the clans that appeared in arms, was a large body lent by a neighbouring chieftain, nerely for the battle of that one day; and win or lofe was to return home that night.
Pafs through the Kil.ru, buffetted feverely on the way by violent fqualls. Land on the calt fide in the parifh of Glen-elg, in the county of Invernefs. The veffel anchors three miles diftant on the oppofite fide of the bay, under Skie.

Walk up to the church; and obferve near it a fingular tree, whofe boughs had bent to the ground, and taking root formed a frange arbour. Pafs by the barracks of Bernera, built in 1722, handfome and capacious, defigned to hold two hundred men : at prefent occupied by a corporal and fix foldiers. The country lament this neglect. They are now quite fenfible of the good effects of the military, by introducing peace and fecurity: they fear leaft the evil days fhould return, and the ancient thefts be renewed, as toon as the banditti find this protection of the people removed.

Walk up the valley of Glen-Elg, or the vale of Deer: vifit Mr. Macleod, the minifter, and receive all the welcome that the Res angufta Domis would permit. He flewed us, at a fmall diftance from his houfe, the remains of a mine of black lead, neglected on account of the poverty of what the adventurers found near the furface; but it is probable, that at a proper depth it may be found to equal that of Cumberland. A poor kind of bog iron ore is alfo tound here.

Above the manfe, on the top of a hill, is a Britih fortrefs, diked round with fone, and in the middle is the vellige of a circular inclofure, perhaps of a building, the fhelter of the oflicers. Within fight is another of thefe retreats, which are called in the Erfe, Badbun, or the place of refuge.

[^184]This valley is the property of Mr. Macleod, of Dunvegan, aequired hy a marriage of an anceftor with a daughter of Lord Briffet. The parith is of valte extent, and comprehends Knodiart and North Morar. Glenelg has near feven hundred inhabirants, all proteflants; the other two diftricts are almoft entirely of the popifl perfuation. The reader who has the curiofity to know the number of Roman Caholics in thefe parts of North Britain, may fatisfy his curiofity in the Appendix, from an abfract taken fron the Report made by the gentemen appointed by the General Afembly, in 176o, to vifit thefe remote Highlands, and the Hebrides, for the purpofe of enquiring into the fate of religion in thofe parts.

I his part of Glen-Elg is divided into two vallies; Glen-more, where the barracks are, from which is a military road of fifty-one miles extent, waching to Fort-Auguftus: the other is Glen-beg. The parith fends out a combiderable number of cattle : ihefe vallies would be fortile in corn, was it not for the plague of rain, which prevents tillage to fuch a degree, that the poor inhabitants feel the fame difter fies as their neighbours.

Walk back by the birrack to $\mathbf{G}$ len-beg, to vifit the celebrated edifices attributed to the Danes: the firtt is placed about two miles from the mouth of the valley. The more entire fide appears of a molt elegant taper form: the prefent height is thirty feet fix incles; but in 1722, fome Goth purloined from the top, feven feet and a half, under pretence of applying the materials to certain public building., By the appearance of fome ruins that now lie at the bate, and which have tallea off fince that time, I believe three feet more may be added to the hight, which will make the whole about forty-one.

The whole is built with dry walls, but the courfis moll beanifully difpofect. On one fide is a breach of at leaft one quarter of the circumference. The diameter within is thiry-flire feet and a half, taken at a diflance of ten feet from the bintom : the wall in that part is feven feet four inches thick, but is formed thinuer and thinner till it reaches the top, whofe breadth I forgot to caufe to be meafured. This infide wall is quite perpendicuar, fo that the inner diameter mull have heen equal from top to bottom: but the exterior wall flopes, encreafing in thicknefs till it reaches the gromed.

In the thicknels of the wall wretwo calleries; one at the lower part, about fix fect two inches high, and wo fect five at the butom, narrowing to the top; flagged, and alo covered over with great lat thones. This gallesy ran quite round, and that horizontally, but was divided into apartments: in one place with fix flyse placed equidillant from cach other; and were acceflible above by means of : hole from another gallery : into the lower were two enarances (before the ruin of the other fide there bad been two others) above each of thefe entrances were a row of holes, ruming up to the top, civided by flags, appearing like factues: near the top was a circle of projecting flones, which probably were intended to hold the beams that formed the roof: above is another hole like the former. None of thefe openings pats through, for there is not the appearance of wiatow nor opening on the outlide wall. All thefe holes are fquare; are too fmail to almit tice humat body, fo were probably defigned to lolge arms, and dificurnt ofter matters, fecure from wht or harm.

Over the firf gallery was another, divided fiem it only by flags. This alfo went round, but was tree from any feparation: the height was five feet fix; only twenty incles wite at bottom. This was alio covered with thags at top.

At a din?ance abowe, in the loroken fides of the wall, was amother hole; but it fecmed too fmall for a gallery. The afeent was not fafe, fo could not venture up. The height was taken by a little boy, who frambled to the top.

## PENNANT'S EECOND TOUR IN GCOTLAND.

The entrance was a fquare hole, on the well fide : before it were the remains of fome building, with a narrow opening that led to the door. Almotl contiguo:s to this entrince or portico, was a fmall circle formed of vude flones, which was called the foundation of the Druids' houfes. It probably was formed for fome religions purpofe. I was old there were many others of this kind feattered over the valley.

At lefs than a quarter of a mile ditant from this flands the fecond tow or, on a little flat on the fide of the hill. 'The form is fimilar, but the number of galleries differs: here are three, the loweft goes entirely round; but at the eait end is an aperture now of a fmall depth, but once of fich extent, that the goats which fheltered in it were often loft : on that account the entrance was filled with fones. This is fix feet high, four feet two inches broad, and flagged above and below.

A fecond gallery was of the fame height, but the breadth of the floor only three feet five.

The third gallery was of fuch difficult accefs that I did not attempt to get up: it was fo narrow and low, that it was with difficulty that the child who climbed to it could creep through.
The prefent ineight of this-tower is only twenty-four feet five inches; the diameter thirty ; the thicknefs of the lower part of the wall twelve feet four.
I could not perceive any traces of the winding nairs mentioned by Mr. Gorden : but as thefe buildings lave fuff - wed grealy fince that gentleman faw them I have no doubt of his accuracy.

Thefe were in all probability phoci of defence; but it is difficult to fay any thing on the fubject of their origin, or hy what nation they were crected. They are called here Caifteal 'Ceilbah, or the r Ches of 'Tcilba, buit by a mother for her four fons, as tradition, delivered ir this tanli tion of four Eite lines, informs:

> My four fons a fair clan,
> Ileft in the fuathof one glen :
> My Malcomb, my Lovily Chonil,
> My Telve, my Trodsam.

There had been two others, now totally demolifhed, and each named after her children. Mr. Gordon mentions others of this kind; one at Glen-dunin, two at Eafter Fearn in Rofs-fhire, and two or three in Lord Reay's country : one of which is called the Dune of Dornadilla, from an imaginary prince, who reigned two humdred and fixty years before the Chriltian cera. This appears to be fo well defcribed by an anonymous writer in the Ldinburgh magazinc, that it will poffibly be acceptable to the reader to find it copied in the note *.

## 'The

[^185]The rain, which poured a deluge during the whole of this walk, attended with a moft violent gale, prevented us from going abroad: but we found a moft comfortable lodging enticr the hofpitable roof of the good minitter.

Auguft 5. The whole morning continued wet and boifterous. In the evening crofs over to Skic: fee, near the fhore, cut on the live rock, an infcription in rude characters. It mult have been of great antiquity, as it was difcovered by the accidental digging of peat at the depth of four feet.

Auguft 6. Weigh anchor at cight o'clock in the morning, and turn out with wind and tide adverfe. After a fruggle of three or four miles, put into Loch-Jurn, or the lake of hell, on the lavernefs coaf, and anchor about two o'clock near a little ife to the fouth fide. frur miles within the mouth. Land on the north fide, three miles diftant from our flip, and vifit Mr. Macleod of Arnifdale: I hall never forget the hofpitality of the houle : before I could utter a denial, three glaffes of run, cordialized with jelly of bilbcrives, were poured into me by the irrefiflible hand of good Madam Macleod. Meffrs. Lightfoot and Stuart fallied out in high fpirits to botanize: I defcended to my boat to make the voyage of the lake.
Steer S. F. Alter a fanall fpace the water widens into a larg $=$ bay, bencing to the fouth, which tears the name of Barrifdale: turn fuddenly to the eaft, and pafs through a very narrow Ilrait, with feveral little ifles on the outfide; the water of a great depth, and the tide violent. For four mikes before us the loch was frait, but of an oval form; then fuddenly contracts a fecond time. Beyond that was another reach, and an inftantaneous and agreeable view of a great fleet of bufles, and all the bufy apparatus of the herring fifhery; with multitude of little occafional hovels and tents on the fhore, for the accommodation of the crews, and of the country people, who refort here at this feafon to take and fell herrings to the flrangers. An unexpected fight at the difance of thirteen miles from the fea, amidft the wildeft feene in nature.

A little farther the loch fuddenly turns due South, and has a very narrow inlet to a third reach : this flrait is fo fhallow as to be fordable at the ebb of fpring-tides; yet has withirn, the depth of ten and feventeen fathom: the length is about a mile; the brealth a quarter. About feven years ago it was fo filled with herrings, that had crowded in, that the boats could not force their way, and thouiands lay dead on the ebb.

The feencry that furrounds the whole of this lake has an Alpine wildnefs and magnificence; the hills of an enormous height, and for the noft part cloathed with extenfive

[^186]forefts of oak and birch, often to the very fummits. In many places are extenfive tracts of open fpace, verdant, and only varied with a few trees fcattered ryer them : amidf the thickeft woods afpire valt grey rocks, a noble contraft! nor are the lofty headlands a lefs embellifhnent; for through the trees that wave on their fummit, is an awful fight of ky , and fpiring fummits of vaft mountains.
On the fouth fide, or the country of Knodyart, are valt numbers of pines, fcattered among the other trees, and multitude of young ones fpringing up. A conflagration had many ycars ago deftroyed a fine foreft; a lofs which, in a little time, it is to be hoped, will be repaired. Befides this, I can add fome other pine forefts to my former lift *: that near Loch-maree; Abernethy, and Roth-murchu; both belonging to gentlemen of the name of Grant; Glen-more, the Duke of Gordon's; and Glen-taner, the property of Lord Aboyne. Our old botanifts are filent about thefe Britifh productions, till the time of Mr. Evelyn and Mr. Ray. This fpecies of pine feems not to have been cultivated in England, till the former, as he fays, received fome feeds from that unhappy perfon, the i.:.te Marquis of Argyle : but Speed, in his chronicle, mentions the valt fize of thofe on the banks of Loch-Argicke, and their fitnefs for malts, as appeared by the report from commiflioners fent there fur that purpofe, in the time of James $\dagger$ VI. Taylor, the water-poet, fpcaks in high terms of thofe in Brae-mar, "That there are as many as will ferve to the end of the world, for all the fhippes, carracks, hoyes, galleys, boates, drumlers, barkes and water craftes, that are now in the world, or can be thefe forty ycars $\ddagger$.
It is not wonderful, that the imagination, amidft thefe darkfome and horrible feenes, fhould figure to itfelf ideal beings, once the terror of the fupertitious inhabitants: in lefs-enlightened times a dreadful fpectre haunted thefe hills, fometimes in form of a great dog, a man, or a thin gigantic hag called Glas-lich. The exorcift was called in to drive away thefe evil Geniii : he formed circle within circle, ufed a multitude of charms, forced the Damon from ring to ring, till he got it into the laft entrenchment, when if it proved very obflinate by adding new fpells, he never failed of conquering the evil fpirit, who like that which haunted the daughter of Raguel, was

> With a vengeance fent
> From Media polt to Eggpt, there fall bound.

In our return from the extrenity of this fequeftered fpot, are moft agreeably amufed with meeting at leaft a hundred boats, rowing to the place we were leaving, to lay their nets; whiie the perfons on fhore were bufied in lighting fires, and preparing a repaft for their companions, againt their return from their toilfome work.
So unexpected a profpect of the bufy haunt of men and fhips in this wild and romantic tract, afforded this agrecable reflection: that there is no part of our dominions fo remote, fo inholpitable, and fo unprofitable, as to deny employ and livelihood to thoufands; and that there are no parts fo polifhed, fo improved, and fo fertile, but which muft floop to receive advantage from the dreary fots they fo effectually defpife; and mult be obliged to acknowledge the mutual dependency of part on part, howfoever remotely placed, and howfoever different in modes or manner of living. Charles Brandon's addrefs to his royal fpoufe may well be applied to both extremes of our ifle:

> Cloth of gold, do not defpife,
> Altho' thou art match'd with cluth of frize. Cloth of frize, be not too bold, Altho' thou art match d with cloth of gold.

- 1f, 2J, qd edit: pp. 183, 19f $212 . \quad$ - Speed's Chronicie, p. 9.
$\$$ Pennileffe Pilgrimage, ${ }_{3} 6$.

Return to Armifdale, and pafs a moft chearful evening. Mr. Lightfoot ieturned happy in having found the azalea procumbens; Mr. Stuart loaden with fine fpecimens of amianthus and black talc.

Return on board at midnight : the night moft exceffively dark, but every froke of our oars, every progrellive motion of our boat, fiung a moft refplendent glory around, and left fo long and luminous a train in our wake, as more than compenfated the want of fars in the firmament. This appearance was occafioned by myriads of nott. lucous Nereids, that inhabit the ocean, and on every agitation become at certain tinces opparent, and often remain flicking to the oars, and, like glaw-worms, give a fine light. Mr. Thompfon informed us, that they were moft brilliant before rain and tempefts. He was not deceived in his predictions.

There is not an inftance of any country having made fo fudden a change in its morals as this I have juft vifited, and the vaft tract intervening between thefe coafts and Loch-nefs. Security and civilization poffefs every part; yet thirty years have not elapfed fince the whole was a den of thieves, of the moll extraordinary kind. They conducted their plundering excurfions with the utmont policy, and reduced the whole art of theft into a regular fyftem. From habit it lolt all the appearance of criminality; they confidered it as labouring in their vocation, and, when a party was formed for an expedition againft their neighbour's property, they and their triends prayed as earnefly to heaven for fuccefs, as if they were engaged in the moft laudable defign.

The conftant petition at grace of the old Highland chieftains, was delivered with great fervour, in thefe terms: " Lord! turn thou the world urfide down, that Chriftians may make bread out of it." The plain Englifh of this pious requeft was, that the world might become, for their bencfit, a feene of rapine and confufion.

They paid a facred regard to their oath; but as fuperflition muft, among a fet of banditti, infallibly fuperfede piety, each, like the diftinct cafts of Indiars, had his particular object of veneration; one would fwear upon his dirk, and dread the penalty of perjury, yet make no fcruple of forfivearing hinifelf upon the Bible; a fecond would pay the fame refpect to the name of his chieftain; a third again would be moft religioully bound by the facred book, ind a fourth regard none of the three, and be crt dited only if he fwore by his crucini.. It was always necefliary to difcover the inclination of the perfon, before you put him to the telt : if the objed of his veneration was miftaken, the oath was of no fignification.

The greateft robbers were ufed to preferve hofpitality to thofe that cane to their houfes, and, like the wild Arabs, obferved the fricteft honour owards their guefts, or thofe that put implicit confidence in them. The Kennedies, two common thiever, took the joung Pretculer under protection, and kept him with faith inviolate, notwithllanding they knew an immenfe rewari was offered for his head. They often robbed for his fupport, and, to fupply him with linen, they once furprized the baggage horles of one of our general officers. They often went in difguife to Invern to to buy proviluons for him. At length, a very confiderable time after, one of incic poor fellows, who had virtue to refill the semptation of thirty thoufand pounds, was hanged for fealing a cow, value thinty thilings.

The greatell crime among thefe feions, was that of infidelity among themfelves: a criminal underwent a fummary trial, and, if convisted, never milfed ot a capital punithment. The chieftain hatd his officers, and differ nt departments of government; he had his judge, to whom he entufted the decition of all civil difputes; but, in criminal caufes, the clicf, atifted perhaps by fome favourites, ala ays undertook the procefs.

The principal men of his fani'y, or his officers, formed his council ; where every thing was debated refpecting their expeditions. Eloquence was held in great efteem among them, for by that they could fometimes work on their chiefiain to change his opinion; for, notwilhfanding he kept the form of a council, he always referved the decifive vote in himfelf.

When one man had a c...iim on another, but wanted power to make it grod, it was held lawful for him to fteal from his tebtor as many cattle as would fatisfy his demand, provided he fent notice (as foon as he got out of reach of purfuit,) that he had them, and would return them, provided fatisfaction was made on a certain day agreed on.

When a creach, or great expedition, had been made againft diftant herds, the owners, as foon as difcovery was made, rofe in arms, and, with all their friends, made inftant purfuit, tracing the cattle by their track for perhaps fcores of miles. Their nicety in diftinguifhing that of their cattle from thofe that were only cafually wandering, or driven, was amazingly fagacious. As foon as they arrived on an eftate where the track was loft, they immediately attacked the proprietor, and would oblige him to recover the track from his land forwards, or to make good the lofs they had fultained. This cuftom had the force of law, which gave to the Highlanders this furprizing ikill in the art of tracking.

It has been obferved before, that to feal, rob, and plunder with dexterity, was eftcemed as the highett act of heroifm. The feuds between the great families was one great caufe. There was not a chieftain but that kept, in fome remore valley in the depth of woods and rocks, whole tribes of thieves in readinefs to let loofe againft his neighbours; when, from fome public or private reafon, he did not judge it expedient to relent openly any real or imaginary affront. From this motive the greater chieftain. robbers always fupported the leffer, and encouraged no fort of improvement on the eftates but what promoted rapinc.
The greateft of the heroes in the laft century, was Sir Ewin Cameron, whofe life is given in the other volume. He long refilted the power of Cromwell, but at length was forced to fubmit. He lived in the neighbourhood of the garrifon fixed by the ufurper at Inverlochy. His valfals perfifted in their thefts, till Cromwell fent orders to the commanding-officer, that on the next robbery he fhould feize on the chieftain, and execute him in twenty-four hours, in cafe the thief was not delivered to juftice. An act of rapine foon happened; Sir Ewin received the moffage, who, inftead of giving himfelf the trouble of looking out for the offender, hid hold of the firf fellow he met with, fent him bound to Inver-lochy, w' ere he was inftantly hanged. Cromwel', by this feverity, put a ltop to the exceffes, till the time of the reftoration, when they were renewed with double violence till the year $17+5$.
Rob-Roy Macgregor was another diftirguifhed hero in the latter nd of the laft, and the beginning of the prefent century. He contributed greatly towa forming his profeffion into a fcience, and eflablifling the police above mentioned. 'ie Duke of Montrofe unfortunately was his neighbour; Rob boy frequently faved the Grace the trouble of collecting his rents; ufed to extort them from the tenants, and at the fame time gave them formal difeharges. But it was neither in the power of the Duke or of any of the gentlemen he plundered to bring him to juttice, to Atrongly protected was he by feveral great men to whom he was ufeful. Roy had his good qualitics, he fpent his revenue generoufly; and, flrange to fay, was a true friend to the widow and orphan.
Every period of time gives new improvement to the alts A fon of Sir Ewin Cameron refined on thofe of Rob-Roy, and, inftead of diffipating his gains, accumulated
wealth. He, like Jonathan vrild tinc Great, never fole with his own hands, but conducted his commerce with an addrefs, and to an extent unknown before. He employed feveral companies, and fet the more adroit knaves at their head, and never fuf. fered merit to go unrewarded. He never openly received their plunder, but em. ployed agents to purchafe from them their cattle. He acquired confiderable pros. perty, which he was forced to leave behind, after the battle of Culloden gave the fata! blow to all their greatnefs.

The laft of any emine ee was the celebrated Barrifdale, who carried thefe arts to the higheft pitch of perfection : befides exerting all the common practices, he improved that article of commerce called the black meal to a degree beyond what was ever known to his predeceffors. This was a forced levy, fo called from its being commonly paid in meal, which was raifed far and wide on the ettate of cvery nobleman and gentleman, in order that their cattle might be fecured from the leffer thicves, over whom he fecretly prefided, and protected. He railed an income of five hundred a year by thefe taxes; and belaved with genuine honour in reforing, on proper confideration, the ftolen cattle of his friends. In this he bore fome refemblance to our Jonathan, but differed, in obferving a frict fidelity towards his own gang; yet he was indefatigable in bringing to juftice any rogues that interfered with his own. He was a man of polifhed behaviour, fine addrefs, and fine perfon. He coufidered himife!f in a very high light, as a benefactor to the public, and pre!erver of general tranquillity, for on the filver plates, the ornaments of his Baldrick, he thus addreffed his broad-fword:

> Pge tibi erunt artex, pacis componert mozes ; Pa:cere fubjectis tt debellare iuperbus.

Aug. 7. After a meft tempeftuous and rainy night, fail at eight o'clock in the morning, defiguing to reach the found of Mull but the wind proving contrary, we ran over to Ille Oranfay in the ine of Skie, a fafe harbour; where we continued confined by adverfe winds till the next day.
Aug. 8. At half an hour after one at noon, fail. As foon as we got out, we found a vaft fwell from the fury of the laft night's form ; the waves mountainous, but, thanks to a gentle breeze, we made our way finely through them.
Pafs on the ealt, Loch-nevifh, or the lake of Heaven, a fine and pi\&urefque inlet.
Pol-morrer where fmall craft may lie. About half a mile inland from this bay is the great frelh-water lake called Loch-morrer ; next is the country of Arifaig, and its celebrated point; for within this, a little to the fouth, in Loch-nan-ua, or the bay of caves, landed the young Pretender, on July 25, 1745; and from hence concluded his Phaetonic expedition, Septemiher 20 th of the following year. The two frigates that lay there in May of the fame fun-mer, with arms and ammunition, had an engagenent off this poine with two of ours, and maintained their fation. They landed part of their flores, but finding the caufe defperate, returned to Fra.'ce with feveral of the fugitives from the battle of Culloden.

Sai! by Loch-Hailyort, and the country of Moydart, the moft foutherly part of the mire oi Invernefs. Leave to the weft the point of Slate in Skic; the valt hills of Blaven and Cachullin open to view, then fucceeds the mountainous Rum; keep clofe under the infe of Egg, diftinguifhed by the lofty fpire of Squr-egg. Pais inmediately under the point of Ard-na-murchan, the moft northern part of Argylefhire. Turn ints the found of Mull, a fine opening five miles broad: to the eaft of the point is Loch-funart, penetrating decply into the country of Morven. At the head is Strontian,
tian, noted for a lead-mine. About nine o'clock at night anchor in Tobir Moire bay, in the ifle of Mull.

This bay is a mof beautiful circular bafon, formed by Mull on one fide, and the ifle of Calve on the other. All the banks are verdant and embellifhed at this time with three cafcades. It takes its name from a chapel and well, dedicated to the Virgin Mary. Here in 1588 the Florida, one of Philip's invincible Armada was blown up after the lifperfion of the fleet; fome fay by accident, others by the defperate refolution of: Scoichman. Several attempts were made to recover the funk treafure. One in 1683, by William Sach everel, Efq. who fitted up diving bells, and tried them with fuccefs at the depth of ten fathom, and report fays, he got up much treafure. A piece of the wreck was given me by an old inhabitant of the place; to be preferved in memory of this fignal providence, fo beautifully acknowledged by Queen Elizabeth in the motto of the medal fruck on the occafion:

> Aflavit Deus, et diffipantur.

In this bay alfo the unfortunate Earl of Argyle may be faid to have wrecked both life and fortune, in the ycar 1686: for in this place he made the firf landing w:th a few friends, in his fatal invafion in concert with the Duke of Monmouth. Tise noft in.human medal I ever faw (next to that in memory of the maffacre of Paris, by Charles IX.) is one in my poffeffion, flruck'by James II. on occafion of the fad cataftrophe of thefe two noblemen. Their heads are placed on two altars, at whofe bafe are their blecding corpfes; the motto,

## Ambitio malefuada ruit.

A little north is Bloody-bay, fo called from a fea-fight between a Macdonald of the ifles and his fon. The former was fupported by Hector Obhar Macleane, the fame who died glorioufly at the batile of Floddon, covering his monarch, Janies IV., from the arrows of the Englifh archers.

On the oppofite fhore of Morven is Dun-an-gal, a ruined cafte of the Macleanes. In this the rebels of 1719 put a finall garrifon, which foon furrendered to one of our men of war that attacked it.

Aug. 9. Leave Tober Moire at eight o'clock in the morning, and about half paft ten, anchor oppofite to Aros cafte, feated on a rock above the fea, and once a feat of Macdonald of the iffes. At the foot of the rock is the ruin of an oval pier, where he fecured his boats.

Breakfaft with Mr. Campbel of Aros, and collect a few particulars of this rough ifland: that it is twenty-four Scotch miles long, and about the fame in breadth; that it is divided into thry great parifhes, viz. Torcay, Rofs, and Kilmore, or Kil-ninian, containing in ail newr lour thoufand catechifable perfons; that it is in general rocky and barren, and does not yield corn coough for its inhabitants; that it fends out anmually about eighteen hundred head of cattle, fold from thirty to fifty fhillings a-piece; that there are but few floeep; that the graziers have fuffered greatly this year by the lofs of cattle, but that none of the people have as yet migrated. That the ufual manure is fucll fand, which the farmers procure from thir-ey. That there : rnal in the ifland nearly inacer "ble by the badnefs of the roads! and that this mof mortant article, which aloac would bring wealth at.! e infort to the ifle is unaccountabiy neglected!
'The illand was originally part oi the dominions of the Lords of the llles, but in afier-times became the pofferfion of the antient and valiant famity of the Macleane , who fill retain ha'f. The other moiety is litigated proper:y the Duke of A:

Ele, whofe anceftor poflefled himfelf of it in 1674 , on account of a debt; and after the courts of $i$." had made an adjudication in his" favour, he was obliged to fupport their decree by force of arms.

Sail again down the found, which in general is about four miles broad; the coant on both fides fiopes and is patched with cori-land. 'the northern coaft is Morven, the celebrated country of lingal.

Leave on the fide loch-aylin, a fafe harbour, with a mon comracted entrance. A little farloer is Cafle-ardornih, a rum wa low heabland juring into the found,

 the eaft is Cattle duart, once the feat of the Mackeanes, lords of the inland, but now garrifoned by a licutenabis and a detabment tiom Fort- William. Morven, near Ardtornifh, begins to grow lofty nd weoceu; and the Mull beyond this cafle appears very mountainous.
 Gine view of the valt mountain, as:d the pitureque hiil. of Glin-co. l'afs to the fouthern end of Lifmore, and fteer nort' bitwen that ie and Middle Lorn. Sail by the ifle of Kerrera, noted for the deah of Alexander li. in 1:49, white he lay there with a mighty fleet meditating the conqueft of the ilebrides, then pollefed by the Normegi :re.

Cofofte to this ifland, in Lorn, is the bay of Oban, where are the cuftom-houfe c. $\mathrm{m}^{2}$ matolice.

Cis a great rock within land, precipitous on three fides, is the caftle of Dunolly, once the refidence of the chieftains of Lorn.

Continue our courfe; and, palling whith difficulty through a very narrow found, formed by the Ilan Beach and the main land, arrive in a fine bay. Auchor under the antient cafle of Dun-ftaffage, or Stephen's Mount; and inflantly receive, and accept, a moll polite invitation from the owner, Mr. Campbel.

This cafte is fabled to have been founded by Liwin, a I'ikth monarch, cotemperary with julius Cafar, haming it after himfelf Evonium. In faci, the founder is unknown, but it is certain'y of great antiquity, and the firlt fat of the Pictifh and Scottifh princes. In this place was long preferved the famous fone, the Palladium of North Britain; brought, fays l.egend, out of Spain, where it was firl ufed as a feat of juflice by Gcthatus, coevai with Mofes. It continued here as the coronation chair till the reine of Kenneth the Stcond, who removed it to Scone, in order to focure his reign; for, according to the infcription,

> Ni fallat fatum, Scoti, quocunque locatum luvalient lapidem, regnare tencutur ibidem.

Mr. Campbel thowed to me a very pretty little ivory image, found in a ruinous part of the calle, that was certainly cut in memory of this chair, and appears so have been an inauguration feulpture. A crowned monarch is repiefented litting in it, with a book in one hand, containing the laws of the land, whath he was fwearing to on ferve. They never took the oath by kifling the Bible, but uy holding up the rige hand. 1.

[^187]The cafte is fquare; the infide only eighty-feven feet, partly ruinous, partiy habitable. At three of the corners are round towers, one of them projects very little. The entrance is towards the fea at peefent by a ftair-cafe, in old times probably by a drawbridge, which fell from a little gateway. The mafonry appears very ancient, the tops battlemented. This pile is feated on a rock, whofe fides have been pared to render it precipitous, and to make it conform to the thape of the caftle.

In 1307 this caftle was poffeffed by Alexander Macdougal, Lord of Argyle, a friend to the Englifh; but was that year reduced by Robert Brace, when Macdougal fued for peace with that prince, and was received into favour *.
I find, about the year 1455 , this to have been a refidence of the L.ord of the Ifles; for here James laft Earl of Douglas, after his defeat in Annandale $\dagger$, fled to Donald the Regulus of the time, and prevailed on him to take arms, and carry on a plundering war againft his monarch James the Second.

At a fmall diftance from the cafte is a ruined chapel, once an elegant building, and at one end an inclofure, a family cemetry, built in 1740. Oppofite to thefe is a high precipice, ending abrupt, and turning fuddenly toward the fouth-eaft. A perfon concealed in the recefs of the rock, a little beyond the angle, furprizes friends fationed at fome diftance beneath the precipice, with a very remarkable echo of any word, or even fentence he pronounces, which reaches the laft diftinct and unbroken. The repetition is fingle, but remarkably clear.
Aug. 10. After breakfaft ride along the edge of a beautiful bay, with the borders fertile in fpots. The bear almoft ripe. Crofs a ferry at Connel, or Conf huil, or the raging flood, from a furious cataract of falt-water at the ebb of fpring tides. This place is the difcharge of the waters of Loch-etive into the fea, where it fuddenly contracts to a fmall breadth ; and immediately above, certain rocks jut out, which more immediately direct the valt pent up waters to this little ftrait, where they gufh out with amazing violence, and form a fall of near ten feet.

Loch-etive runs far up the country, and receives the waters of Loch-aw at Bunaw. Here is at times a confiderable falmon filhery, but at prefent very poor. See at a diftance, on the northern bank, the fite of Ard-chattan, a prior of monks of Vallis Caulium, founded, A. D. 1250, by Duncan Mac-coul, anceftor of the Macdougals of Lorn. Here Robert Bruce is faid to have held a parliament, but more probably a council; for he remained long mafter of this country before he got entire poffeffion of Scotland.

A mile from Connel, near the fhore, is Dun-Mac-Sniochain, the ancient Beregonium, Borogomum. The foundation of this city, as it is called, is attributed by apocryphal hiftory to Fergus II. and was called the chief in Scotland for many ages : it was at beft fuch a city as Cæfar found in our ifland at the time of his invafion; an oppidum, or fortified town, placed in a thick wood, furrounded with a rampart and fofs, a place of retreat from invaders $\ddagger$. Along the top of the beach is a raifed mound, the defence againft a fudden landing. This, from the idea of here having been a city, is fyled, Straid-a-mhargai, or market-ftreet ; within this are two rude erect columns, about fix feet high, and nine and a half in girth, behind thefe a peat-mofs, on one fide a range of low hills, at whofe neareft extremity is an entrenchment called Dun-valirè. On the weftern fide of the morafs is an oblong infulated hill, on whofe fummit, the countrypcople fay there had been feven towers, I could only perceive three or four excavations of no certain form, and a dike around thein,

> * Barbnur. + Lives of the Douglaffes, 203 .
> $\ddagger$ De Bello Gallico, lib. v. ci 2 I.
> (1.

VOL. 111.
In

In moft parts of the hill are dug up great quantities of different forts of pumices, or fcoria of different kinds: of them one is the pumex cinerarius; the other the P. molaris of Linnxus; the laft very much refembling fome that Mr. Banks favoured me with from the ifland of Iceland. The hill is doubtlefs the work of a volcano, of which this is not the only veftige in North Britain.

Ride on a fine road to Ard-muchnage, the feat of the late Sir Duncan Campbell; a very handfome houfe, and well finificd. Sir Duncan, at the age of forty, began to plant, and lived to fee the extenfive plantations in his garden, and on the picturefque hills round his lands, arrive to perfection. The country about rifes into a lofty but narrow eminence, now finely wooded, extending in a curvature, forming one fide of an enchanting bay, the other impending over the fea.

On my return obferve, near the hill of the feven towers, a druidical circle, formed of round ftones placed clofe together. The area is twenty-fix feet in diameter; and about ten fect diftant from the outfide is an ercet pillar feven feet high. At fuch fones as thefe, my learned friend, the late Dr. William Borlafe ", remarks, might have ftood the officers of the high prieft, to command filence among the people, or fome inferior perfon verfed in the ceremonies, to obferve that none were omitted, by waruing the officiating prieft, in cafe any efcaped his memory.

Retarn, and lie on board.
Auguft 11. Weigh anchor at fix o'clock in the morning. Sail by the back of loch-nel hill, forming a moft beautiful crefvent, partly cultivated, partly covered with wood to the fummit. Land near the north end of the inle of Lifmore, which is about nine miles long, one and a half broad, and contains about fifteen hundred iuhabitants $\dagger$. It derives its name from Liofimor, or the great garden; but tradition fays it was originally a great deer foreft ; and as a proof, multitudes of fag horns of uncommon fizes are perpetually dug up in the mofes. At prefent there is fcarce any wood; but the leffer vegetables grow with uncommon vigour. The chief produce of the land is bear and oats: the firf is raifed in great quantity, but abufed by being diftilled into whilky. The crops of oats are gencrally applied to the payment of rent; fo that the inhabitants are obliged for their fubfiftence annually to import much meal.

The ground has in moft parts the appearance of great fertility, but is extremely illmanaged, and much impoverifhed by excefs of tillage, and neglect of manure. Pit and rock marle are found here. The whole ille lics on a lime-ftone rock, which in many places peeps above ground, forming long feries of low tharp ridges. No ufe can be made of this as a manure for want of fuel to bu:n it. The peat here is very bad, being mixed with earth; it muft firft be trampled with the feet into a confiftence; is then formed into fmall flat cakes, and muft afterwards be expofed on the ground to dry.

About a hundred head of cattle are annually exported, which are at prefent remark. ably finall: they feem to have degenerated, for I faw at Ard-muchnage the fkull of an ox dug up in this illand, that was of much larger dimenfions than my now living in Great Britain.
Horfes are in this ifland very fhort-lived: they are ufed when about two or three years old; and are obferved foon to lofe all their teeth. Both they and the cows are honfed during winter, and fed on ftraw.

Otters are found here; but neither foxes, hares, nor rats. Mice are plentiful, and very deftructive.

There are three fmall lakes: two abound with fine trout ; the third only with eels. Variety of the duck kind frequent thele waters during winter.

[^188]Walk up to a Danifh fort : at prefent the height is feventeen feet; within the wall is a gallery, and round the area a feat, as in that defcribed in llay.

Vifit the church, now a mean modern building. In the church.yard are two or three old tombs, with clymores engraven on them: here is alfo a renarkable tomb, confining of nothing more than a thick log of oak. This fubtlitute for a grave-ftone muft have been in this country of great antiquity, there being no worl in the Erfe language to exprefs the laft, it not being ftyled leichd lithicll, a grave ftone, but darag lithidh, or a grave $\log$. On a live rock are cut the radii of a dial, but the index is loft. On another rock is a fimill excavated bafon, perhaps one of the rock bafons of Dr. Borlafe, in times of druidifm ufed for religious purpofes.

This inland had been the fite of the binhop of Argyle: the fee was disjoined from that of Dunkeld about the year 1200, at the requef of Jolu the Englifhman bilhop of that diocefe. There are no reliques of the cathedral or the bifhop's houfe, whofe refidence vas fuppofed to have been latterly in the cafle of Achanduin, on the wefl fide of the ife, oppofite to Duart in Mull.

The inhabitants in gencral are poor, are much troubled with fore eyes, and in the fpring are afllicted with a coftivenefs that often proves fatal. At that feafon all their provifions are gencrally confiuned, and they are forced to live on fleeps' milk boiled, to which the diftemper is attributed.

The ine of Lifmore forms but a fmall part of the parifh: the extent is not to be comprehended by an Englifhman. From the point of Lifinore to the extrenity of Kinlochbeg is forty-two computed miles, befides nine in Kingerloch. It comprehends this ifle, Appin Juror, Glenco, Glencreran, and Kingerloch, and contains three thoufand examinable perfons, under the care of one minitter and two miffionaries.

Get on board, and have in mid-channel a mof delightful view : the woods of Lochnell; the houfe of Airds; beyond is the caftle of Ellenftalker, feated in a little ifle; the country of Appin ; the valt mountains of Lochaber; Dunolly, Lifmore, and various other ifles of grotefque appearance *. To the fouth appear the Slate iflands, Scarba, Jura, and Ilay ; and to the welt, Oranfay and Colonfay.

Sail between Inch and the Mair. ifr-, leaving the noted Slate ifland of Eufdale to the eaft, and clofe to it Suil and Luing, she hy the property of the Earl of Breadalbane : within thefe are the harbours of Eufúale, of Cuain, between Luing and Suil; Bardrife, off Luing; and below is that of Black-muil bay.

Oppofite to Luing, on the welt, is a groupe of rough little ifles, of wich Plada and Belia-hua are productive of flate. In the broad baton between thefe $!$ Luing is a moft rippling tide; even in this calm forces us along with vaft celerity dd violence: the whole furface difordered with eddies and whirlpools, rifing firf with furious boilings, driving and vanifhing with the current. Anchor under the caft fule, beneath the valt mountain of Scarba, an ifland of great height, about five miles long, clielly covered with heath; but on this fide are fome woods, and marks of cultivation. Mr. Macleane lives on this fide, and favours ". with a vilit, and offers his fervice to fhew us the celebrated gulph of Corry-vrekan whith we did not wait till morning to fee, as our expectations were raifed to the higheft pitch, and we thought of nothing lefs than that it would prove a fecond Mal-dtrom. We accordingly took a moft fatiguing walk up the mountain, through heath of an uncommon height, fwarming with grous. We arrived in an ill hour, for the tide did not fuit, and we faw little more than a very frong current.

Auguft 12. This morning we take boat, and after rowing two miles, land and walk along the rocks till we reach a fit place for furveying this phenomenon The channel between this ifle and Jura is about a mile broad, expofed to the weight of the Atlantic, which pours in its waters here with great force, their courfe being directed and confined by the found between Colonfay and Mull. The tide had at this time made two hours flood, and ran with a furious current, great boilings, attended with much foam *, and in many place finmed colifiderable whirlpools. On the fide of Jura the current dathes, as is realuo... 'r ... uppofe, againft fone funk rocks. It forms there a moft dreadfuf back tuice which in tempefts catches up the veffels that the whirlpools fling into it; fo that almolt certain deftruction attends thofe that are fo unfortunate as to be foreed in at thofe feafons. It was our ill-luck to fee it in a very pacific Itate, and paffable without the leaft hazard.

The chief whirlpool lies on the Scarba fide, near the weft end. Here, as that fkilful pilot Mr. Murdock Mackens: - .... ved me, it is of various depths, viz. 36,47, 83 and 9 1 fathoms, and at fome piaces unfa:homaile: the tranfitions fudden, trom the leffer to the greater depths: the bottom all tharp rocks with vaft chafms between; and a fathoralefs one where the greateft vortex lies, from which, to the caftern end of Scarba, clofe to flore, the depth are 13, 9, 12.

There is another whirlpool off a little ine on the weft end of Jura, which contributes to the horrors of the place. In great florms the tides run at the rate of fifteen miles an hour; the height of the boilings are faid to be dreadful, and the whole rage of the waters unfpeakable. It is not therefore wonderful that there fhould have been here a chapel of the Virgin, whofe affiftance was often invoked, for my hiftorian $\dagger$ fays, that the worked numbers of miracles, doubtlefsly in favour of diftreffed mariners.

Scarba contains forty inhabitants. Mr. Mac-leane, the proprietor, refides here. When he favoured us with his company, he cane with two of his fons and their tutor; for in North Britain there is no gentleman of ever fof fmall an eftate, but trictly attends to the education of his children, as the fure fommation of their futhe fortune. A perfon properly qualified and eafily procured at a chcap rate attends in th, amily, where the father fees that jultice is done to them, at far lefs expence than if ho fent them to diftant fchouls.

Leave Scarba; pafs between Nether-Lorn and the ifles of Laing and Suil to the eaft, and of 'leracy and Shuna to the weft, all inhabited, and the firff almoft covered with excellent corn. In Toracy is an ancient tower once belonging to the great Mac-donal.!, who made it his half way hunting feat in his progrefs from Cantyre to his northera inls; for which reafon it was called Dog caftle; and here he made it a moft laudable rule to refide till he had $\eta_{\mathrm{n}}$ nt the whole of his revenue collected in the neighbourhood. According to the report $\ddagger$. thefe ifles and part of the neighbouring maintand form a parifh, whofe church is in Suil.

Take boat: turn at the point of Suil, am carried by a rapid tide through the gut of Cuan ; vifit Eufdale, the noted flate ifland, whofe length is about half a mile, and compofed entirely of date, interfected, and in fome parts covered, with whin-flone, to the thicknels of fixteen feet: the itratum of flate is thirty-fix, dipping quick fouth-eaft to north-weft. In order o be railed, it is at firft blafted with powder; the greater pieces are then divided, $c_{\text {i.. }} 1$ off in wheel-barrows, and lally fplit into the merchantable

[^189]fizes, from eighteen by foutteen inches, to nine hy fix, and put on bonrd at the price of twenty fillings per thoufand. About two millions and a half are fold annually to Fngland, Norway, Canada, and the Weft Indies. In the flates are multitudes of cubic pyrita. In one place, about fixteen feet above high-water-mark, juft over the flates, is a thick bed of fr' all fragments, worn finooth, as if hy the action of the waves, and mixed with them are multitudes of the common fea fhells; a proof of the valt retreat of the octan in thefe parts.

There are many other gond flate quarries in this neighbourhood, as on the ifles of Suil, Luing, Balna-hua, and Kerrera, and fome few oppofite to them on the coalt of N . her Lorn.

The boat takes us the length of the wefern fide of Suil. At the north point, turn into Clachan Firth, the narroweft frait I ever was in, dividing that inand from Lorn, in parts fo contracted as would admit the flinging an arch from thore to thore. The depth is very various: in fome parts fifiy fathoms; in others fo flallow as to be fordable at the ebb of fpring-tides. On the banks of the ifland and mainland, the frata of ftone rife in form of walls, of a great height, and not above two fect and a half thick, extending far, fo as eafily to be miftaken for the bounds of an inclofure.

Arrived in the beautiful bay of Ard-maddie, or the height of the wolves. A houfe frmall, but elegant, ftands in front, and the fides of the bay high, entirely cloathed with wood. Here I find the kindeft welcome from my worthy acquaintance, Captain Archibald Campbell, tenant here to the Earl of Breadalbane, who, with the utmolt friendlhip, during the voyage charged himfelf with the care of my groom and my horfes. Here I allo took lrave of Mr. Archibald Thompfon, whofe attention to the objects of my enquries, obliging conduct throughout, and fill in his profeflion, demand my warmeft acknow led ;ments. Thus ended this voyage of amufenent, fucceffful and fatisfactory in every part, unlefs where embittered with reflections on the fulferings of ny fellowcreatures. Gratitude forbids my filence refpecting the kind reception I univerfally met with; or the active zeal of every one to facilitate my purfuits; or the liberal communication of evry fpecies of information, ufetul or entertaining.

1 retired to my chamber, filled with reflections on the various events of my voyage; and every feene by turns prefented itfolf before my imagination. As foon as my cyes were clofed. I difcovered that "the number of the body was but the waking of the foul "." All I nad feel appeared to have been dull and clouded to my apprehention, ferving to evince "that our waking conceptions do not match the fancies of our fleept." I imagined myfolf again gently wated down the found of Mull, bounded on each fide by the former dominions of mighty chieftains, or of herocs immortalized in the verfe of Offian. My bufy tancy was worked into a fpecies of enthuliafm, and for a time it

> Bodied forth
> The forms of things unknown; Tursed them to fhape and gave to airy nothing A heat habistion and a taane.

A figure, dreffed in the garb of an ancient warrior, floated in the air before me: his target and his clymore feemed of no common fize, and fpoke the former Itrength of the thero. A graceful vigour was apparent in his countenance, notwithftanding time had robbed him of part of his locks, and given to the remainder a venerable hoarinefs. As foon as he had fixed my attention, he thus feemed to addrefs himfelf to me:
" Stranger, thy purpofe is not unknown to mn ; l lave attended thee (inviible) in all thy voyage; lave fympathifed with thee in thating tear at the mifery of my onceloved country; and fighs, fuch as a fpirit can emit, lave been faithful echoes to thofe of thy corporeal frame.
"Know, that in the days of my exiftence on earth I poffeffed an anuple portion of the tract thou feeft to the north. I was the dread of the neighbouring clieftains; the delight of my people, their protector, their friend, their father: no injury they ever received pallied unrevenged; for no one excelled me in conferring bencfits on my clath, or in repaying infults on their enemies. A thonfand of my kindred followed me in arms, wherefoever I commanded. 'Their obedience was to me implicit, for my word was to them a law; my name the molt facred of oaths. I was (for nothing now can be concealed) fierce, arrogant, defpotic, irritable : my pallions were flong, my anger tremendous; yet 1 had the arts of conciliating the aflections of my people, and wis the darling of a numerous brave. They knew the love I bore them: they faw, on a thouland occafions, the flrongelt proofs of my affection. In the day of battle I have covered the weak with my flield, and laid at my feet their holtile antagonitts. The too grateful valthl, in return, in the next confliat, has fiprung before me, and received in his own bofom the thaft that has been levelled at mine. In retreats from over-powering numWers, I was ever laft in the field. I alone have kept the enemy at bay, and purchafed fafety for my people with a hundred wounds.
" In the hoort intervals of peace my hall was filled with my friends and kindred: my hofpitality was equal to my deeds of arms; and hecatombs of beeves and deer covered my rude but welcone tables. My neareft relations fat next to me, and then fucceeded the braveft of my clan; and below them, the emulous youth leaned forward to hear the gallant recital of our palt actions. Our bards rchearfed the valiant deeds of our great anceftors, and inflamed our valour by the fublimity of their verfe, accompanied with the infpiring found of the ear-piercing peebirechts.
" The crowds of people that attended at an humble ditance partook of my hounty: their families were my care; for I beheld in their boys a future fupport of the greatnefs of my houfe, an hereditary race of warriors.
" My numerous kindred lived on lands the gift of my diftant progenitors, who took care to plint their children near the main fock : the cions took firm root, and proved in after-times a grateful helter to the parent tree, againft the fury of the fevereft forms. Thefe I confidered, not as mercenary tenants, but as the friends of good and of adverfe fortune. Their tenures were eafy, their duchas inviolate: I found my intereft interwoven with theirs. In fupport of our mutual welfare, they were enabled to keep a becoming hofpitality. They cherifhed their neighbouring dependents; and could receive my vifits in turn with a well-covered board.
" Strong fidelity and warm friendflip reigned among us; difturbed perhaps by the momentary guls of my paffions: the fun that warmed them might experience a fhort obfcurity; but the cloud foon paffed away, and the beams of love returned with improved advantage. I lived beloved and revered: I attained the fulnefs of years and of glory; and finifhed ny courfe, attended to my grave with the full coranich of my lamenting people.
" My progeny for a time fuiported the great and wild magnificence of the feudal reign. Their diftance from court unfortunately prevented them from knowing that

[^190]they had a fuperior; and their ideas of loyalty were reguited only by the refpect or attention paid to their fancied independency. Their atials were happy or miferable, according to the difpofition of the little monarch of the tine. Two centuries, from my days, had clapled before their greatnefs knew its tinat period. The fhackles of the feudal government were at length fruck off, and pofibly happinefs was announced to the meaneft saflal. The target, the dirk, and the clymore, too long abufed, were wrefted from our hands, and we were bid to learn the arts of peace, to fpread the net, to thoot the fhutle, or to cultivate the ground.
"The mighty chieftains, the brave and difinterefted heroes of old times, by a mont violent and furprifing transformation, at once funk into rapacious landlords; determined to compenfate the lols of power with the increafe of revenue; to exchange the warm affections of their people for fordid trafh. Thir vifits, to thofe of their forefathers, are like the furveys of a cruel land-jobber, attended by a fet of quick. fighted vultures, fkilled in pointing out the moft exquifite methods of oppreflion, or to infruct them in the art of exhaulting their purfes of fuins to be wafted in diflant lands. Like the talkmafters of Egypt, they require them to make brick without fraw. They leave them in their primaval poverty, uninftrukted in any art for their future fupport; deprived of the wonted refources of the hofpitality of their lord, or the plentiful boards of his numerous friends. They experi nce an infantaneous defertion; are flung at once into a new ftate of life, and demand the foftering hand as much as the moft infant colony. When I hover over our vales, I fee the fane nakednefs exift, the fame mifery in habitation, the fane idle difpofition. Would I could have feen the fame firit and vigour as in days of yore ' But the powers of their fuuls are funk with opprefion, and thofe of their bodies loft with want. Th y look up in defpair at our deferted calles; and, worn out with famine and difrafe, irop into an unnoticed grave.
" The ties of affection among relations are now no more; no diftinction is at prefent made betwixt proximity of blood and the moft difant ftranger. Intereft alone creates the preference of man to man. The thoufands that with joy expected the return of their cliceftain, now retire with fullen gricf into their cottages; or, in little groupes, exprefs their mage in curfes both loud and de, No vaffal now fprings to reccive the weapon levelled at the breaft of the lord, bu ar wihes to plant his own in the bofom of the oppreflor.
" I he "ncient native, full of the idean
of his youth, is lof in admiration at ih?
changed; the one effeminated, the other
of his youth, is lof in admination at th
changed; the one effeminated, the other flions of foreignclimes: loft to the live of patriarchal life! What then, may 1 .
'., look of the warriors and friends progeny: feature and habit are Nous by adopting the ille fa-
-. ! loft to all the fweet affections .s. us of your travels? What arts have you brought home, that will ferve to brmg dubfinence to your people? To recompence them for your drafted revenues? Wat to clothe the naked? To feed the hungry? To furnih them with more comicrable protection from the inclemency of the weather? They require no great matters; a finall portion of raiment, a little meal. With fad comparifon they lean, that chieftains fill exitt, who make their people their care; and with envy they hear of the improving ftate of the vaffals of an Argyle, an Athol, a Breadalbane, and a Bute.
" Return to your country: infor:n them with your prefence; refore them to the laudable part of the ancicnt mamers; eradicate the bad. Bring them inftructors, and they would lemr. 'Yeach them arts adapted to their climate; they would brave the fury of our feas in fifling. Send them materials for the coarfer manufactures; they would with paticace fit down to the loom; they would weave the fails to waft your
navics
navics to victory ; and part of then rejoice to fhare the glory in the moft dinant combats. Select a portion of them for the toils of the ocean : make your levies, enroll them; difcipline them under able veterans, md fend ammally to our ports the fmaller veffels of your tremendous navy. Troit them with fwords, and a fmall retaining pay. If you have doubts, eftablifh a place d"armes, in vacant times, the depofite of their weapons, :inder proper garrifon. They would fubmit to any reftrictions; and think no reflraints, founded on the fafety of the whole, an infringement of liberts, or an invafion of property. Legiflature has given them their manumiflion; and they no longer confider themfelves as part of the live flock of their chieftain. Draft them to diflant elimes, and they will facrifice their lives in the juff caufe of government with as much zeal as their fore-fathers did under the lawlefs direstion of my valiant anceftors. Limit only the time of their warfare; fiwecten it only with the hopes of a return to th $\cdots$ native country, and they will become willing fubftitutes for their Southern brethici. Occupied in the foft arts of peace, thofe flould extend your manufactures; and thefe would defend your commerce. Perfuade their governors to experience their zeal; and let courtly favour rife and fall with their actions. Have not thoufands in the late war proved their fincerity? Have not thoufands expiated with their blood the folly of rebellion, and the crimes of their parents?
"If you will totally neglect them; if yon will not refide among them; if you will not, by your example, inftruct them in the fcience of rural œeconomy, nor caufe the m to be taught the ufeful arts: if you cannot obtain leave for them to devote themfelves to the fervice of their country, by deeds of arms; do not at leaft drive them to defpair, by oppreffion : do not force them into a diftant-land, and neceffitate them to feek tranquillity by a meafure which was onee deemed the punifhment of the moft atrocious criminals. Do not be guilty of treafon againft your country, by depriving it of multitudes at ufeful menbers, whofe defence it may too fom want, againft our natural enemies. Lio not create a new fpecies of difaffection; and let it not receive a more exalted venom, in a continent replete with the mof dangerous kind. Extremes of change are always the worft. How dreadful will be the once-exiftent folly of Jacobitifm, transformed into the accurfed fpirit of political libertinim!
" Leave them (if you will do no more) but the bare power of exiftence in their native country, and they will not envy you your new luxuries. Wate your hours in the lap of dillipation; refign yourfelf up to the fafcinations of Acrafia; and fport in the bower of blifs. Cover your tables with delicacies, at the expence of your familhed clans. Think not of the wretches, at thofe feafons, leaft your appetite for the bors d'ouvres be palled, and you feel a momentary remorfe for death occafioned by ye, ye thoughtlefs deferters of your people! With all my failings, I exult in innocence of fuch crimes; and felicitate myfelf on my acrial ftate, capable of withdrawing from the fight of miferies I cannot alleviate, and of oppreffions I cannot prevent."

A TOUR IN SCOTLAND, Ė:-PART IH:

## ADVERTISEMENT.

THIS fecond part brings my journies of 1769 and 1772 to a conclufion. I ber leave to return thanks to the feveral gentlemen who gave themfelves the trouble of fupplying me wih materials, and with variety of remarks and frictures that have ferved to correet the many miftakes I may have commited. I hold myfelf peculiarly indebted to

- Prazer, l:fq. of Invernefs;

The Rev. Mr. Mac.intyre, of Glenurchie;
The Rev. Dr. Fergufon, of Nouline;
The Rev. Dr. Biffer, of Logicrait ;
John Machenzie, Efq. of Delvin;
Mr. Thomas Marthall of P'erth;
Or. Drummond;
The Kev. Mr. Duff, of Tibbirinoor;
The Rev. Mr. Scett, of Meigle;
John Haliburton, Efq. of Dundee;
The Rev. Mr. Bell, of Aberbrothic;
Rutrick Scott, Efc. of Roffic ;
Mr. Alexander Chriftic, Iate Provoft of Montrofe;
Robert Barclay, Efq. of Urie;
Profeffor Wation of St. Andrews;
George Skene, Efq of Carefton;
Mr. James Gillies, of Brechin;
Geore Chalmers, Efq. of Dumferline;
and fuperlatively to
Mr. George Allan, of Darlington.

I muft apologize to the public for fo hattily paffing over two places of which amplet accounts might have been expected. I have lived fo long in Chefter that a nore minute hiftory of it ought to have been given ; but after all, it would have leemed trivial, on the appearance of the labours of the Rev. Dr. Foot Gower, which the Public has very long expected. I fhall rejoice on a future occafion to have opportunity of drawing frem fo rich a magazine, a variety of materials for a farther elucidation of the refpectable capital of fo refipectable a county.

I wilh I could afign as good a reafon for my worfe than neglect of the venerable I.incoln. When I paffed through it in $1 ; 69$, I muft have been planet-flruck, not to have obferved the amazing beauties of the external as well as internal architecture of the cathedral. I could not nifle my remorfe. Latt year I haftened thither; and with all figns of contrition, made the amende bonorable before the great door. I truft that my penitence was accepted by the whole chapter. A recantation of the little refpect I payed to its external elegance will be a fubject of a future volume, a 'Tour through the eaftern parts of the Mercian kingdom.

Downing, March, 1,1776 .

## THOMAS PENNANT.

For numbers of corrections in the prefent edition I am obliged to friendly frictures I received from Sir David Dalrymple, Baronet, of Hails.
T. ${ }^{\prime}$ '.

Downing, Dece. 26, 1790.

## Part II.

AUGUST 15 . Pafs this day at Ard maddie. The houfo commands a beantiful view of the bay, and the ine of Suil, where the parifl church and the manfe of the minifter of the parifh are place , accellible at all times, by reafon of the narrownefs of the chamel of Clachan. This tract is hilly, finely wooded near the houfe, and on the adjacent part of the flore; contains about eleven hundred examinable perfons, and abounds with cattle. A quarry of white marble, veined with dull red, is found on the weft fide of the bay.

This parifh lies in Nether-Lorn, a diftrict of the vaft county of Argyle. Thefe divifions (for there are three Lorns) were, in the time of Robert Bruce, poffefled by the Mac-cougals, opponents of that prince; paffed from them to the Stuarts; but in the fiftemih century were transferred * into the family of the Campbells, by the marriages of three co-i.tirefles, dawhters of the laft Stuart, Lord of Lorn. Sir Colin of Gleaurchie, furnamed the black, took to his fhare Ifabel the eldeft; difpofed of the fecond to his half brother Architald; and referved for his nephew (Colin, firft Earl of Argyle, then under his guardianhip) the youngelt Marrate Na Nhaghn, or Margaret the Rhymer.
'This county was part of the ancient Ergadia, or Jarghael, or land of the weftern Caledonians, which extended as far as Gairloch, in the thire of Rofs. It formed part of the dominions of the old Scots, whofe kingdom reached from the Firth of Clyde, aloug the whole coalt, even as far as Dungfby head in Caithnefs $t$.

Augult 14. Leave Arn-maddie. Ride along a fine road, for fome time by the dide of an arm of the fea, called, from the plenty of fhells, Loch-fuchan. Go by a

[^191]heap of fones, called Cairn-Alpine, becaule from hence the bodies of the Alpiniades, or fucceffors of that monarch, were embarked for interment in the ficeed sround of Jona, After quitting this loch arrive in a barren trate of back heathy land, enlivened now and then with foms pretty lakes. Reach the banks of Loch-Aw, where that fime water is contrated to tike breadth of about three quarters of a mile. Am wafted over in a horle boat; land on a fpet ftyled Port-fonnachan, and after about ten miles riding, pafs between hills, finely planted with feveral forts of trees, fuch as Weymonth pines, acc. and reach the town and cafle of inveraray *, feated on a fmall but beautiful plain, of the fide of Loch-Fine. This had long been the feat of the Campbells. It was inhabited about the latter end of the fourteenth century by Colin, furnamed jongallach, or the Wonderful, on account of his marvellous exploits; and, I may add, his odd whims: anoug which, and not the leaft, may be reckoned the burning of his houfe at Inveraray on receiving a vitit from the O'Neiles of Ircland, that he might have pretence to entertain his illultrious guefts in his magnificent field equipage. The great tower, which Wis fanding till very lately, was built by the black Sir Colin, for his nephew, the firft Earl of Argyle, at that time a minort. I do not difcover any date to afcertain the time of its foundation, any further than that it was prior to the year $1+80$, the time of Sir Colin's death. The power of the family, and the difficult approach to the place, preferved it from the infult of encenies, excepting in two inflances: in $\cdot$ December, $16+4$, amidt the fnows of this fevere climate, the enterprifing Montrofe prured down his troops on Inveraray, through ways its chieftain thourht impervious. The Marquis of Argyle made his efeape in a little filhing boat, and left his people to the merilefs weapons of the invaders, who for a twelvemonth carried fire and fiwordthrough the whol: Campbel race, retalating, as is pleaded $\ddagger$, the fimilar barbarities of its leader.

After the unfortunate expedition of his fon, in 1685, this place and poople experienced a frefh calamity : another clan, deputed by the government to carry deftruction throughout the name, was let dip, armed wifh the dreatful writ of fire and fword, to att at difcretion among an unhappy people; feventecn gentemen of the name were infantly executed. On the fpot is crected a column, with an infcription, commemorating, with a moderation that does honour to the writer, the jullice of the caufe in which his relation fell.

In 1715, Archibald, Duke of Argyle, then Earl of llay, collected a few troops in this place, in order to prevent the rebels from becoming matters of io important a pafs, through which they mighr have led their forces to Glafigow, and from thence into the north of England. General Gordon approached within a funall diftance, reconnoitred it, and actually cut fafrines to make the attack; but was deterred from it by the determined appearance of the garrifon.

The figure of the magnilicent bridge over the Aray is engraved by Mr. Pemmant. That fine fructure, built at the expence of governent, and deflroyed by the violent autumnal flood of this year.

The portraiss in the eattle are few; of then two only merit notice. The firt is a hoad of the Marquis of Argyle, his hair fhort, his drets black, with a plain white turnover. A diftinguibed perfon during the reign of Clasts I and the confequent umpation. A ran, as his own father fyled him, of crafi and fubtity. In his he ort mo frime to the reyal caufo, temporizing according to the complexion of the times; fiehling an

[^192]hearty but fecret concurrence with the difafficted powers, and extending a feigned and timid aid to the flackled rovalty of Charles II. when he entrufted himfelf to his northern fungicts, in 1f50. At all times providing pleas of merit with both parties, apparently finctre with the ufurpers only. With them he took an active part * during their plenitu 'e of poncr, y it at firt chamed only proteclion, freedom, and payment of his debts due from the litghath parliancent $\dagger$. His intereft feems to have been conftanty in view. While Charies was in his hands he received from that penetrating prince a promifory note for great honous and greap emoluments $\ddagger$. He is charged with encouraging his people in various acts of muder and cructy $£$; but the provocations he had received by the horrible ravages of Montrofe, may perlaps extenuate retaliation on fuch of his neightows, who, foc any thing that appears, partook of the exceflis IHe is charged allo with puftiding himfelf of the ellates of thote who ware put to death by his anthority ; a charge not repelled in bis fine defence on his trial. His generofity in declining to take an open part in the profecution of his arch enemy Montrofe, would have done him great bonour, had be not meanly paced himfelf in a window, to fee the fallea hero pafs in a cart to receive judgnene $\|$. On the relioration, he fell a victin to his manes. It was intended that he thould undergo the fame grominous cleath, which was efterwards changed to that of b healing. "1 cond, fays he,) die like a Koman, but choofe rater to die like a Chiman." He to whathernim; in his laft monems with ruth exculpating himete from having any concern in the mur. ther of has Royal Mafter; chming his confcieree with the opinion, that his criminal conplances were but he equdenic difate and fault of the times. Its guilt of treafon was indilpuable; but the act of grace in 1641, and the other in 1651, ought to have been his tecurities from a capital punifhement.

Here is alfo a beat of his fon, the Farl of Aryyle, a ftealy, virtuous, but unfor-
 Charles I. Was apponted colonel of his guards in 1650 , but feorned to receive his commilion from the tyranniad dates of his country, and infilled on receiving it from his Majelly alone. Neither the defeas at Dubar, or at Worecter alated his zeal fir the defprate canfe; be betook himfelf to the Highlands, and $f$ a long time refifted the ulurping powers, notwithtanniug he wes cath off, and his aiherents declared traitors by the $Z$ alcus $A$ requis, his tather ©. Sullered, after his fubmillion to the irrefilib e ty anny of the times, a long impritemment. His releale, at the relloration, fubjectad him but to fre fir ironbls: in matude fecms to have been the firft return to his ferties. A bare rectal of 1 is thechs wihthe King, in repelling certain injuries done him, was cirithed Leating-making, or creating diffenfons between his Majcfy and his fubjecte. For this, by the scuith taw, he was condemned to lofe his head: a foncale tox unjult to be permitad to be put into caccution. After a long itaprifonment, was rollord to farour, to his fortmie, and to the title of Farl. In all his actions he preferval a parriwtic, yut loyal modeatom; but in 1681, deliveriag in an explanation of an oath he was to take, as a tell not to attempt any alteration in church or thate", he was aman ifigraced, mad, and a fecent time condemed; and the infamous fontene woml! have bean excomed, had he not efaped from the power of his enemiks. In 685 , in cencert with the Duke of Menmonth, he made a fatal attempt to retlore the litention of his combtry, then invaded y Jancs Il. Ile failed in the delign, and put to dath on his former fentence.

On the day of execution he eat his dinner, and took his afternoon's nap with his ufual compofure, falling with a calmnefs and contancy fuitable to the goodnets of his life.

Juit before he left the prifon, his wife, a frugal lady, aiked him for the golden buttons he wore in his fleeves, Ieft the exccutioner flould get them. "Is this a time for fuch a requelt ?" fays the brave Earl. He afcended the featiold, and then took them out and ordered them to be delivered to his Countefs.

A little before his death he compofed his epitaph, I think ftill to be feen in the Greyfryar's church yard, Edinburgh. The verfes are rather to be admired, as they thewed the ferenity of his mind at that awful period, than for the fmoothnefs of the numbers; but the Latin trannation, by the Rev. Mr. Jamifon of Glafgow, cannot but be acceptable to every reader of tafte:
Audi, hofpes, quicunque venis, tumulumque revilis,
El rogatis quali crimine tinctus erain.
Non me crimen habet, non me malus abfulit etror,
Et vitiun nullum, me pepulit patia.
Solus amor parrix. veriyue ninmenfa cupido
Diffuetas juflit fumere tela misula.
Opprinur. en! rediens, vi fol. et fraude meorum,
Hoftibus et fervis vietima tern. cado
Sit licet hic nofter labor irritus, haud Deus a quus
Defpiciet populum frecula cuncha fuum.
Namque alius veriice tatis melonitous ortus
Qui totics ruptum fine beahit opus.
Sat nihii credo (quamvis ca ut enfe fecetur)
Hine petor ax:herei sucida tenpia poli.
Thou, paffenger, who flatit have fo much time.
As vicu my grave, an I alk what was my crime:
No thain of error, $n$, black viecs' biand,
Did me compel to leave m, native land.
I. ove io my courtis, thuth condemind an die,
Did force try hands forgot'en arms to tiy
More troun friendh' fiaud my fail proceedal hath
'Than foes, tho' thice they dill atiempt my death.
O. my defign tho' Providane did frown,
Yet G . d, at latt, will furely raife his own.
Another hand wila more ficceliful ipeed,
Shath raife the semuats, bruife the ferpent's liead.

The line woods and cafcades at Efachoffen mut not pafs unnoticed; nor the fertice tract of corn-land between it and the fea; nor the deer-park, called Beauchamp, with its romantic hens; nur the lake Du-loch, near the foot of Glenfhiera, a frefh water, communicating with loch-fine, which reccives into it fatmon, featrout, flounders, and even herrings, fo that the family, during the feafons, find it a never-failing relervoir of h.

The tuany *requents this and feveral other branches of the fea, on the weftern coaft during the leafe: ef henings, which they purfuc: the Scotch call it the Mackerelllure, or for, fiom its cnormous tize, it being the largelt of the genus. One that was taken off Inveraray, when I was there ia 1769 , weighed betwien four and five hundred pounds. Thefe fith are taken by a hook, baited with a herring, and, notwithfandin their valt bulk, foon lofe their fpirit, and tamely fubmit to their iate. 'Iheir capture is not attended to as much as it merits, for they would prove a choap and wholefouse

- Dr. \%ul. iii. No. 133. tub. z2.
frod to the poor. The few that are caught are cut in pieces, and either fold frefh, or falted in cafks. Tunnies are the great fupport of the convents in the countrics that bound the Mediterranean fea, where they fwarm at ftated feafons, particularly bencath the great promontories of Sicily, the Thunnofcopia * of the ancients, becaufe watchmen were placed on them to obferve the motions of the runnies, and give fignals of their approach to the fifhermen. In Scotland they arrive only in fmall herds of five or fix, are difcovered by their playing near the furface, and by their agility and frequent leaps out of the water.
In the midft of the Duke's eflate, not far from the cafle, is a tract of about a hundred a ycar value, the property of the Earl of Breadalbane $t$; a gift of a chieftain of this houfe to an anceflor of his Lordhhip, in order to maintain the valt train of followers that attended on the great in feudal days: fo that, whenever the owner of Taymouth paid his refpects to his lord in Invcraray, the fuite might be proparly accommodated; the difficulty of fupplying fo vaf an addition to the fanily with forage might be cbviated, and quarrels prevented between two fuch little armies of retainers.

Aug. 15. Return north, and reach Cladich, a village on the banks of Loch-aw, fo named from Evah, heirefs of the country about the year 1066, when the name was firft changed from that of loch cruachan. I have here the pleafure of meeting Mr. Macintyre, minifter of Clachan-dyfart, in the beautiful vale of Glenurchie He coitducts me to a cairn, in which had been found the alles perhaps of fome ancient hunter. and the head of a deer, probably buried with them, trom the opinion, that the departed fpirit might till be delighted with its favourite enploy during the union with the body;

## Eidem fequitur tellure repoftos.

The cuftom of burning the dead was common to the Caledonians as well as the Gauls $\ddagger$. Loth were attentive to the fecurity of thefe poor remains; thought a neatect, impwty, and the violation of them the greatelt act of emmity The Highlanders to this day retain a faying, derived from this very remote cullom. If the y would exprefs the malice of an cnemy, they would tell him that was it in his power "he would wifh to fee their aflhes floating on the water: Dburigè tu mo luatb le llifge."

Take boat, and vifit Inch-hail, a litle ifle, on which had been a cell of Ciffercians, dependent on Dunkeld. Amidt the ruins of the church are fome tombs of rude fculpture; among others, one of a Campbel, of Inveraw, of uncommon workmanfhip indeed!

Pdfs under Fraoch Elal, a fmall but lofty iffand tufted with trees, with the ruins of a fortrefs appearing abore.

A little lifgher to the north opens the difcharge of the lake; a narrow ftrait, fingged on each fide with woods. Prom hence, after a turbulent courfe of three miles, a feries of cataracts, the water drops into Loch Litive, an arm of the fea.

On the fite of this thrait is a nilitary road leading from Dalmalie to Bunaw; and near it is the cave of Mac Phaidan, a chieftain, who, taking part againft his country wih Fdw. I. was purfued and hain in this retrear by the here Wallace.

Vilit Kilchurn cafle, a mannificent pile, now in ruins, feated on a low inf, near the fouthern border of the lake, whofe original name was Elan kei'guhirn. The forter was built by Sir Colin Campbel, Lord of Lochow, who died, aged 8 , in 1480 : others

[^193]fay, by his lady, during the time of his abfence, on an expedition againt the infidels, to which he might have been obliged by his profeflion, being a knight of Rhodes. $H$ fis fucceffors added greatly to it. Within are fome remains of apartments, elegant, and of no great antiquity. The view from it of the rich vale, bounded by valt motrntains, is fine ; anoong which Crouachan foars pre-eminently lofty.

This ifland was probably the original feat of the O'Duimhms, Lords of Lochow, the anceflors of the Campbels, who, in the reign of Malcolm Cammore, affuned their prefent name, on account of the marriage of a Malcolm Mac-1)uimhm (who had gone into France in queft of adventures) with the heirefs of Bellus Campus, or Beauchamp in Normandy. From thofe lands Giallaefpig, or Archibald, his fon, took the name of Campbel, came into England with the Conqueror, and, vifiting the country of his anceflors, married F.vah, fole daughter of the chicftain; and thus became poffefor of the eftate of lochow. This barony, and the laad of Ardfordyrche, were confirmed by Robert I. to Colin, fon of Nigel Campbel, by the tenure of providing for the King's forvice, whenever it was demanded, a flhip of forty oars, completely furnifhed and manned, and the attendance cultomary with the other barons of Argylefhire*.

1 mult not leave this parih without mentioning a deep circular hollow, in form and of the fize of a large cauldron, in a morafs near Hamilton's. Pafs, on the fouth fide of the lake. There is a tadition that this was one of the vatts frequent in the Highland turberins, from which the old natives drew an unctuous fublance, ufed by them t: dye their cloth black, before the introduction of enpperas, \&e. The ingredient wa collected from the fides of the hole, and furface of the water; the cloth or yarn was boiled in it, and reccived a lalting colour.

Aug. 16. Continue my journey for fome time through the vale of Glenurche, poffeffed by the Campbels $\dagger$ fince the time of Sir Colin before mentioned, anceftor of the Breadabane line, the famous knight of Rhodes, furnamed from his complexion and from his travels 1)uibh Na Romh, or Black Colin of Rome $\ddagger$. This tract is of great fortility, cmbilifined with litule groves, and watered by a fine fream. The view bounded on one fide by the great till of Cromachan, and on the other by that of Benbaighe. The valley now comerats into a glen, abounding with cathe, yet deflitute both of arable land and meadow; but the bealts gather a good futtenance from the grafs that fprings among the heath. Suc fecenemly on the road fides farall verdme hillocks, ftyled by the common pooph, thi an, whe Pary-hamt, becate here, fy they, the larics, who love not the eque of day, mathe the retreat, atter the culenam of their acturnal revels.

Pas by a little lake, whefe waters run into the weftern fat On the road fule a tod-mine is worked to fone adamas, by mans of a I vel. The veins are richef near the furface, but dumble away towarls the foles. At this phace enter the dilltich of Beatabone, in Perthathe, and breaktat at Tyendrum, or the toufe of bight, being the moft elevated habitation in North Britan. Bradalame alo lignifying the loftiet made of Abin, or scotiand. 'Thefe hirls are a part of that hofy range commoneng at Loch I omom, aravering the counery whe firth of Dornoch, and caltad by fom: writer, ham-atbia. In my pafioge, in 'gho, from the kins's-houfe to this phace, 1 rode usar the membains of 1 Bmomen. One of them is clebrated for the hollow found it fords forth about twenty-fors hows in wre any hewer rain. The firit of the mounain faricke $\$$, wams the peatants w theter their hocks; and utters the fame awful prespofices, that Virgil antrbutes w thete on lealy;

[^194]Concima

Continuo ventis furgentibus, ant fret ponti
Incipiunt ngitata tumefcere, et avidus altio Montibuo audiri fragor.
When winds approach. the vex'l foa heaves around: From the bleak mountain conies a hollow found.

Wharten

Immediately below the village of Tyendrum rifes the river Tay, which takes its courfe into the caftern fea; fuch oppofite currents have two flreanis, not half a mile diftant from each other. Ride over the fmall plain of Dalrie, perhaps the feat of the Dalreudini mentioned by Bede *, or the ancient government of Dalrieta, noticed by Canden, or perhaps from having been the feene of the following action, was called Dal-rie, or the King's field. On this fpot was the conliict between Robert Bruce and the forces of Argylefhire, under Macdougal chieftain of Lorn, when the former was defeated. A fervant of Lorn had feized on Bruce, but the prince efcaped by killing the fellow with a blow of his battle-ax ; but at the fame time loft his mantle and brocth, which the affailant tore away in his dying aronies. The brotche was long preferved in the family, at length deftroyed by a fire, that confumed the houfe of Dunolly, the refidence of the reprefentative. One I have feen had been the property of
Tacleane of Lochbuy, in the ife of Mull, and is faid to be made of filver found on the rftate. The workmanfhip is elegant, and feems to he of the time of Queen Elizabeth t. It i . about five inches diameter at bottom. Round the upper margin is a low upright rim ; within that are ten obelifks, about an inch and a quarter high, prettily fludded, and the top of each ornamented with a river paarl. Thefe furround a fecond rim; from that rifes a meat cafe, whofe fides project into ten demi-rounders, all neatly fludded. In the center is a round cryttalline ball, a nagical gem, fuch as deferibed in the tour of 1769. This cafe may be taken off; has a confidcrable hollow, in which might have been kept amulets or reliques; which, with the affiftance of the powerful fone, mult needs prove an infallible prefervative againf all harms.

Luter Strath-fillan, or the vale of St. lillan, an abbot, who lived in the vear 703 , and retired the latter end of his days. He is pleafed to take under his protection the difordered in mind; and works wonderful cures, fay his votar:es, even to this day. The whappy lunatics are brought hare by their friends, who firft perform the ceremonv of the Deafil, thrice round a neighbouring cairn; afterwards offer on it their raf, er a little bunch of heath tied with worfted; then thrice immerge the patient in a holy nool of the river, a fcond Bethefda; and, to conclude, leave him faft bound the whoie night in the neighbouring chapel. If in the morning he is found loofe, the faine is fuppofed to be propitices; for if he condinues in bonds, lis cure remains doubtful; but it often happens that death proves the angel that releafes the aflicted before the morrow, from all the troubles of this life.

The Deafil t, or turning from caft to wefl, according to the courfe of the fun, is a ct flom of high antiquity in seligious ceremonics. The Romans $§$ pratifed the motion in the manner notv performed in Sicotland. The Gaulifh Druids made their circumsolution in a manner directly reverfe: but the Druids of Gaul and Britain had probably the fame reaton fir thefe circum-ambulations; for as they held the omniprefence of their God, it might be to inflruet their difeiples, that wherefoever they

[^195]turned their face, they were fure to meet the afpect of the Deity *. The number of turns was alfo religioully obferved in very ancient days: thus t: arch enchantrefs Medea, in all her charms attends to the facred three :

> Tere fe convertit, ter fumtis flumine crinem
> lrroravit aquis ; ternis ululy "ns ota
> solvit, et ill dura fubnifio :" thice serra,
> Nox, ait, \&c.
> She enrn'd her thitec around, and thrice the threw
> On her leng trefics the notural diw:
> Then yething trice a mott writic found,
> ller base knee bendal on the flinty ground.

The faint, the object of the veneration in queftion, was of mon fingular fervice to Robert Bruce, according to the creduh us Bocthins, infpiring his foldiery with uncommon courage at the battle of Bannockbuon $t$, by a miracle wrought the day before in his favour. 'His Majelly's chaplain was direted to bring with him into the fiehd, the arm of the faint, lodged in a filver thrine. 'the grond man, fearing, in cale of a defeat, that the Englifh might become mattere of the precions limh, trought only the empty cover; but, white the King was involing the aid of St. Yilhn, the iid of the flhrine, placed before him on the altar, opened and thut of its own accond : on infpection, to the wonder of the whole army, the arn was found reflored to its place; the foldiers accepted the omen, and affured of vietory, fought wih an enthunafun that enfured fuccefs. In gratitude for the affinace he received that day from the faint, he founded here, in 1314, a priory of canons regular, and conlecrated it :on him. At the diflolution, this horle, with all the revenues and fuperioritis, were granted to an anceltor of the prefent poffefior the Earl of Breacialbane $\ddagger$.

This part of the conntry is in the parifh of Killin, very remote from the church. As the chapel here is defitute of a refident minifter, I.aly Glenurchy, with diftinguifhed piety, lias juft eftablifhed a fund for the fupport of one; has built a good houfe for We acemmotation, and Lord Breadalbane has added to the glebe.

I!e trat is at prefent almoft entirely flocked with fouth-counnry fleep, which have in a manner expelled the breed of black catic. Sheep are found to turn more to the adrumage of the proprictors; but whether to the benefit of the community, is a doubt. The live ftock of cattle of this kingdon decreafes; from whence will our navy be victualled? or how will thofe, who may be able to purchate anmal fool, be fupplied, if the mere private intureit of the farmer is fuffered univerfally to take place? Millions at this time look up to the Legilature for reltrictions, that will once more reflore plenty to thefe kingdoms.
Pals near the feat of Rob-Roy, the celebrated free-booter mentioncal in the former volume.
Enter Glen. Dochart, and go by the fides of I.och-1)ochart, beautifully ormamented with trees. In a lofy ilund embefomed in wood, is the ruin of a caltic, one of the nine under the rule of the great knight of I.ochow. It was once taken hy the Macgregors, in a manner that did credit to the invention of a rude age. The place was not accellible during fummer; the athilants therefore took advantage of a frof, formed waft hafemes of fraw and boughs of trees, rollad thete before them on the ict, to prorect then agank the arrows of the garrifon, till they could get near enough to make

[^196]their attacin, by fealing at once the walls of the fortrefs. The Velta * of the northern nations were of this kind: the ancient Sivedes and Goths practifed an attack of the fame nature ; but did, what perhaps the Meegregors might alfo have done, wait for is high wind in their favour, roll the Velta as near as polfible to the fort, fet them on fire, and under favour of the flame, diftrefling the befieged, never failed of a fuccefsful event.

I muft olferve that the Mac-gregors were of old a moft potent people. They poffeffed Glenurchic, were owners of Glen-Lion, and are even fuid to have been the original founders of Balloch or Taymouth, or at laft to have had their refidence there betore they were fucceeded by the Campbells $t$.

Somewhat farther, oppofite to the farm of Acheffan, is a fimall lake, noted for a flonting i" $\quad$, fifty-one feet long, and twenty-nine broad, that Mifts its quarters with the wi like the illands of the Vadimonian lake, $\quad$ ntly deferibed $\ddagger$ by the teeding on this nobile folum, dececived wit.. the watace of its being firm lat bot indeed boalt of carrying on its furface the darkfome groves of thofe on the ci $\quad$ ters ; but, like the I.ydian Calamina $£$, may be lanched from the fides of the .x h poles, and can thew plenty of coarfe grafs, fonce fmall willows, and a sittle birch treell.
'roceed by the fides of the river, fince its paffage through Loch Dochart, afluming the name of that lake. 'The panl-fifhery in this part of the river fome years ago was carried on with great fuccefs, and the pearls were efteemed the faireft and largeft of any.

The military road through this country is planned with a diftinguifhed want of judgmont ; a feries of undulations, quite unneceflary, diftrefs the traveller for a confiderable part of the way. Neur Achline the eye begins to be relieved by the fight of inclotures; and fome plantations begin to hide the makednefs of the country. On approaching the village of Killin, every road and crery path was filled with groupes of people, of both fexé, in neat dreffes, and lively plaids, returning from the facrament. $A$ fober and decent countenance diflinguifled every party, and evinced the deep fenfe they had of fo folemn a conmemoration. Breadalbane in general is exempt from the charge of impropriety of conduct on thefe occafions, which happens fometimes; and by the undilcerning, the local fault is indiferiminately attributed to the whole.

Crofs two bridges. The river here forms two iflands, beautifally planted with firs : Inifhbuy, the moft calterly, is remarkably picturefque, the water rolling with tremendous force on each fide for a long tract over a feries of broken rocks, and fhort but quick-repented cataracts, in a channel of unfpeakable rudenefs.

Reach Killin, or Cill-Fhin, from the tradition of its having been the burial-place of Fingal. Here is an excellent im, built by Lord Breadalbane, who, to the unfpeakable comfort of the traveller, eftablifhed others at Dalmalic, J'yendrum, and Kenmore, where they are as acceptable as caravanferas in the Eat.

Mount Strone Clachan, a hill above Mr. Stuart's, the minifter's houfe, and am overpaid for the labour of the afeent by a molt enchanting view. A moft delicions plain fpreads itfelf bencath, divided into verdant meadows, or glowing with ripened corn;

embellithed wih woods, and watered with rivers uncommonly contrafted. On one fide, pours down its rocky channel the furious Dochart; on the other, glides betweenits wooded banks the gentle Lochy, forming a valt bend of fill water, till it joins the firf; both terminating in the great expanfe of Loch-Tay. The northern and fouthern boundaries fuit the magnificence of the lake; but the northern rife with fuperior majefty in the rugged heights of Finiarig, and the wild fummits of the fill loftier Laurs, often patched with fnow throughout the year. Extenfive woods clothe both fides, the creation of the noble proprictor.

At the foot of the firft; aunidft woods of various trees, lie the ruins of the caftle of the fame name, the old feat of the Campbells, the knights of. Glenurchie, and built by. Sir Colin between the years 1513 and $1523^{*}$. The venerable oaks, the vaft chefnuts, the afh trees, and others of ancient growth, give a fine folemnity to the feene, and compliment the memory of progenitors, fo ftudious of the benefit of pofterity- Tradition. is loud in report of the holpitality of the place, and blends with it tales of galantry ; one of feftivity, terminating in blood and naughter. Amidnt the mirth of a chriftening, in the great hall of Finlarig, inhabited, I think, at that time by Sir Robert, fon of the. chieftain, news arrived that the Mac-donalds of Kcppoch had made a creach into thelands of fome of their friends, had acquired a great booty, and were at that time paffing. in triumph over the hill of Strone-clachan. 'The Campbells, who were then affembleds in numbers to honour the occafion, took fire at the infult, and, warm with the convivial cheer, farted from the table to take fudden revenge. They afcended the hill with, thoughtlefs bravery to begin the attack, were overpowered, and twenty cadets of thefamily left dead upon the fpot. News of the difarter was immediately fent to Taymouth, the refidence of the chisftain, who difpatched a reinforcement to thofe who had efcaped. They overtook the Mac-donalds at the braes of Glenurchie, defeated them, flew the: brother of the chieftain, refcued the booty, and returned back triumphing in the com.pletion of their revenge.

Augult 17. Crofs a large arch over the Lochy, winding to the north-weft; through. a fmall but elegant glen, whofe fertile bottom is finely bounded by woods on both fides. Turn thort to the eaft, and continue my journey on a fine road, at a confiderable height: above Loch-Tay. The land flopes to the water edge, and both above and below the highway forms a continued tract of cultivated ground, rich in corn, and varied with, groves and plardations. The abundance of inhabitants on this fide furpaffes that of any place in Scolland of equal extent; for from Finlarig to the forks of the Lion, aboutfifteen miles, there are not fewer than feventeen hundred and eighty fouls, happy undes? a humane chieftain. Their habitations are prettily grouped along the fides of the hill, arc linall and mean, often without windows or dours, and are the only difgrace to the naguificeace of the fceners:

The oppofite part of the lake is lefs populous, and lefs fertile ; y y t-from the patches of corn-land, and the frequent woods, exhibits a moft beautiful view.
In going through Laurs obferve a druidical circle, lefs complete than one that fhould have been mentioned before, at Kinnel, a little fouth-weft of Killin; which confifts of fix vaft ftones, placed equi-diftant from each other.

The windings of the lake in the courfe of the ride become very conficuous, appearing to form three great bendings. Its length is about fifteen miles, the breadth one: the depth in many places a hundred fathoms; and even within as many yards of the hore is fifty fathoms deep. It abounds with fifh, fuch as pike, perch, falmon, char,

[^198]trout, fanlets, minnows, lampries, and eels. A fpecies of trout is found here that weighs thirty pounds.

All this country abounds with game, fuch as grous, ptarmigans, ftags, roes, \&c.
Roes are in a manner confined to Glen Lion, where they are protected by the principal proprietor. Foxes are numerous and deftrudive. Martins are rare; but the yellow-breafted was lately taken in the birch woods of Rannoch. The otter is common. The vulgar have an opinion that this animal has its king or leader; they defcribe it as being of a larger fize, and varied with white. They believe that it is never killed, without the fudden death of a man or fome other animal at the fame inftant; that its ikin is endued with great virtues, is an antidote againft all infection, a prefervative to the warrior from wounds, and infures the mariner from all difafters on the watery element.

The cock of the wood, or capercaille, or capercalze, a bird of this genus; once frequent in all parts of the Highlands, is now confined to the pine forefts north of Lochnefs : from the fize it is called the horfe of the woods, the male fometimes weighing fifteen pounds. The colour of the breaft is green, refembling that of the peacock: above each eye is a rich fcarlet $\mathfrak{k i n}$, common to the grous genus: the feet of this and the black cock are naked, and the edges of the toes ferrated; for thefe birds, fitting upon trees, do not want the thick feathery covering with which nature hath cloathed thole of the red game and ptarmigan, who during winter are obliged to refide bedded in the fnows. Bifhop Lefly * defcribes three of the fpecies found in Scotland; the capercalze, which he truly fays feeds on the extreme fhoots of the pine, the common grous with its feathered fect, and the black cock : he omits the ptarnigan. It has been. my fortune to meet with every kind:- the three lait frequently; the capercalze only at Invernefs.

Woodcocks appear in Breadalbane in the beginning or middle of November; but do not reach Ard-maddie, or, I may fay, any part of the weftern coaft of the Highlands till the Jatter end of December, or the beginning of January : they continue there in plenty till the middle or latter end of March, according to the mildnefs or rigour of the feafon, and then difaypear at once. - In the firft feafon they continue arriving in fuceeffion for a month; and in every county in Scotland (where they are found) fly regularly from caft to weit. Their firft landing-places are in the eallern counties, fuch as. Angus, Merns, ixc. ufually about the end of October; but their tay in thofe parts is very fhort, as woods are fo fcarce. Woodcocks are very rarely feen in Caithnefs; and there are fill fewer in the Orknies, or in the more remote Hebrides: one or two appear there, as if by accident driven thither by tempefts, not voluntary migrants. There is no account of thefe birds having evcr bred in Scotland, any more than of the fieldefare and redwing; yet all thrce make their fummer refidence in Norway, from whence, in all probability, many of them vifit our iffands.

Sea eagles breed in ruined towers, but quit the country in winter; the black eagles continuc there the whole ycar. They wore to numerous a few years ago in Rannoch; that the commiffioners of the forfeited eftates gave a reward of five fhillings for every. one that was deftroyed. In a little time fuch numbers were brought in, that the honourable board thought fit to reduce the reward to three flillings and fixpence; but a fmall advarce, in proportion as the birds grew fcarcer, in all probability would have cffected their extirpation. But to refume the journey. The whole road on the fide of the lake is excellent, olten croffed by gullies, the effects of great rains, or torrents from the melted fnow. The public are indebted to Lord Breadalbane not only

[^199]for the goodnefs of the way, but for above thirty bridges, all made at his expence, to facilitate the palfage. Crofs the opening into the little plain of Fortingal, mentioned in my former Tour, noted for its camp, the moft northern work of the Romans that I could get any intelligence of. It feems to have been the caftellum of fome advanced party in the time of Antonine, or Commodus, or perhaps a temporary fation in that of Severus, in whofe reign the Romans abandoned thefe parts. A copper veffel, with a beak, handle, and three feet, was found in it. I did not hear of any coins met with on the fpoi; but, in digging the foundation of a tower near Taymouth, fourteen filver denarii were difcovered, but none of a later date than Marcus Aurelius.

I muft alfo commemorate again the wonderful yew-tree in the church.yard of Fortingal, whofe ruins mealure fifty-fix feet in circumference. The middle part is now decayed to the ground; but within memory was united to the height of three feet: Captain Campbell, of Glen-lion, having aflured me that, when a boy, he has often climbed over, or rode on, the then conuecting part. Our ancefors feem to have had a claffical reafon for planting thefe difmal trees among the repofitories of the dead; and a political one, for placing them about their houles: in the firt inftance, they were the fubftitutes of the invifa cupreflus; in the other, they were the defigned provifion of materials for the flurdy bows of our warlike ancettors,

> Who drew,

And almolt joined, the horns of the tough yew.
In the days of archery fo great was the confumption of this fpecies of wood, that the bowyers were obliged to import flaves of yew * for making the beft fort of bows. This tree is not univerfally difperfed through England in its native flate; or at leaft is now in moft parts cradicated, on account of its noxious qualities; yet it is ftill to be found in quantities on the lofty hills that bound the water of the Winander, thofe near Rydal in Weftmoreland, and on the face of many precipices in different parts of this kingdom.

Not far from the church is the houfe of Colonel Campbell, of Glen-lio:1, a beautiful vale that runs feveral miles u! the country, watered by a river of the fame name.

1 mult add to my account of the cryftal gem in polfieflion of that gentleman, that ${ }^{*}$ there was a remarkahle one in poffellion of Sir Ldward Harley, of Brampton Brian, fet in a filver ring, refembling the meridian of a globe, with a e: a the top, and on the rim the powerful names of Uriel, Raphael, Michael, am: riel. This predicted death dictated receipts for the cure of all curables $\dagger$; and another, of much the fame kind, even condefcended to recovar loft goods $\ddagger$. It was cuftomary in early times to depofit thefe balls in urns or fepulchres. Thus twenty were found at Rome in an alabaltrine urn, cafed with tuo great ftones, and ludged in a hollow made in each to receive it. The contents were bcfides the balls) a rinir with a fone fet in it, a needle, a comb, and fome bits of gold mixed with the athes: the needle fhewed thefe remains to have been thofe of a lady.

In the tomb of Childeric, King of France, was found another of thefe balls. Some Merin might have beftowed it on him ; which muft have been an invaluable gifr, if it had the fame powers with that given by our magician to the Britifh Prince.

> Such was the glafy glube that Merlin made, And gave nato King Ryence for his gard, That wever foes his kingum might invade, lhur he it knew at home before he hatd, Tydings thereof, and fo them uill debarr'd;

It was a famous prefent for a priuce, And worthy worke of iofinite rewarde, That treafons cou'd betray, and foes convince : Happy this realme liad it remayned cver fince *!
Approach near Taymouth, keeping fill on the fide of the lake. Leave on the right, not far from the flore, the pretty ifle of Loch-Tay, tufted with trees, fhading the ruins of the priory. From the ancient inhabitants of this holy ifland, the prefent noble owner has liberty of fifling in the lake at all times in the year; which is denicd to the other land-owners in the neighbourhood. But it was neceffary for the monks to be indulged with that privilege, as their very exiftence depended oat it. To this ifland the Campbells retreated at the approach of the Marquis of Montrofe, where they defended themfelves for fome time againft that hero. A fhot narrowly miffed him, which enraged him to that degree as to caufe him inftantly to carry fire and fword through the whole country. It was taken and garrifoned; but in 1654 was furrendered to General Monk $\dagger$.

On the right is a plantation, the orchard of the monaftery. In it is a black cherrytree that meafures, four feet from the ground, ten feet three inches in circumference.

Crofs the Tay on a temporary bridge, juft below its difcharge from the lake, where it properly begins to aflime that name.' A moft elegant bridge is now conftructing in this place, under the direction of Captain Archibald Campbel, after a defign by Mr. Baxter, partly at the expence of Lord Breadalbane, partly by that of the neighbouring gentry, and partly by aid of the commiffioners of forfeited eftates. It confilts of three large arches, and a fmaller on each fide, in cafe of floods. Reach

Taymouth, his lordfhip's principal houfe, originally called Balloch caftle, or the caftle at the difcharge of the lake; was built by Sir Colin Campbell, fixth knight of Lochow, who died in the year 1583 . The place has been much modernized fince the days of the founder ; has the addition of two wings, and loft its caftellated form, as well as the old name. We are informed that this Sir Colin "was an great jufticiar all his tyme thr shtht quhille he fuftenit that dadlie feid of the Clangregour ane lang fpace. And befydis that he caufed execuft to the death many notable lymmeris. He behaddit the Laird M'Greg' himfelf at Candomir in prefence of the Erle of Atholl, the juftice clerk, and fundrie other noblemen $\ddagger$."

By a poem I met with in the library at Taymouth, it appears that this unfortunate chieftain, furnamed Duncan Laider, or the Strong, made a very good end; and delivered, in penitential shymes, in Spenfer's manner, an account of his paft life, his forrow for his fins, and his pathetical farewell to the various feenes of his plundering exploits. Like Spenfer, he perfonifies the vices. The two firf ftanzas will fuffice for a fpecimen. of his manner:

Qulin paffit wes the tyme of tendir age,
And youth with infolence mail acquentance.
And wickitnefs enforced evill courage,
Quhill Might with Crueltie maid alliance ;
Then Falfhead tuke ou him the governance, And me hetaucht ane houfhald fur to gyde

Callit evil compunie, baith to gang and ryde.
My mailler hounthald wes hecicht Oppreffioun,
Reif nyy fleward that cainit of na ov ang;
Murthure, slanchtir, ay of ane profeffioun,
My cubicularis, bene thir ycaris lang:
Recept, that of tuik mony ane fang,
Was porter to the yettic, to oppin wyde,
And Covaice wes chamberlane at all tyde.

- Epenfer's Fuiry Qucell, Dook III. c. 2. Alanza 2t. † Whitelock's Mem. 5¢2. $\ddagger$ Black Bonk.

The moft remarkable part of the furniture of Taymouth is the portraits; here being a moft confiderable collection of the works of Jamefon, the Scotch Vandyck, an eleve of this family.

In the fame room with the famous genealogical picture are about twenty heads of perions of the fame family. Among them is the laft Sir I uncan Campbell, a favourite of James VI. ; and not lefs fo of Anue of Denmark; who, after the acceflion, often by letter folicited his prefence at her new court ; and fent him, as a mark of innocent elteent, a ring fet with dianonds, and ornamented with a pair of doves.

The other pittures of Jamefon's performance are in a finall parlour ; but unfortunately much injured by an attempt to repair them. There are the heads of

William Graham, Earl of Airth, 1637 . He was originally Earl of Menteith, a title derived from a long train of anceftors. He was much favoured by Charles I. who indulged his pride by conferring on him, at his requeft, the earldom of Strathern, which he pretended to, as being defcended from David Stuart, nephew to David II. Unfortuately his vanity induced him to hint fome pretenfions to the crown. Charles punithed his folly by depriving him of both earldoms; but, relenting foon after, created him Earl of Airth, with precedence due to the creation of Malife, E. of Menteith by James I.

John Lord Lefsly, ${ }^{1636}$, afterwards Duke of Rothes:. He diedin 1681; and had, according to the extravagant folly of the times, a funeral of uncommon magnificence $t$. The Duke of York being at that time in Scotland, was afked how be fhould be buried, his highnefs anfwered as chancellor of Scotland; bis relations, ill verfed in courtly language, concluded that his funeral was to be at the public expence, and beftowed on it a fum their circumftances would not admit of. But a happy confequence of this vanity was a law reftricting the idle expence of coftly funerals.

James, Marquis of Hamilton, ${ }^{1636}$, afterwards Duke of Hamilton.
Mary, Marchionefs of Hamilton, 1636 , daughter to the former, and on the death of her brother, heirefs to the title and fortune. This lady is diftinguifhed for her works of piety and charity, in the ifle of Arran, by the glorious title of the Good.

Archibald Lord Napier, 1637, grand-fou of the celebrated John Napier, author of the Logarithms.

William Earl Marifhal, 1637, a remarkable fufferer in the caufes of Charles I. and II.: rewarded, on the reftoration, with the privy feal of Scotland.

The Lord of Loudon, 1637, afterwards chancellor of Scotland.
Thomas Hamilton, Loid Binning, fon of the firt Earl of Hadington, and fucceffor to the title. In 1640 , being commiandant of the garrifon of Dunglas, then held for the Covenanters, was blown up, with feveral other perfons of quality, by the defjerate treachery of his page, an Englifh boy, who had been infutted by the company on account of fome fuccefs of the Scots, and in revenge fet fire to the powder magazine; one gentleman, who at the time flood at an open window, was blown out and furvived; the boy's arm was found in the ruins with a ladle in it, with which he was fuppoled to have carried the fuel.

John Earl of Mar, 1636, made Knight of the Bath at the creation of Henry, Prince of Wales.
Sir Robert Campbell, of Glenurchie, 1641.
Sir John Campbell, of Glenurchic, $1 \mathbf{G}_{\mathbf{4} 2}$.

- Vide Vol. I. 10 .
† Reprefented in fuur large plates, publifhed by Thomas Som ners.

In the drawing room are two portraits, by Vandyck, of two noble brothers, diltinguined characters in the unhappy times of Charles I. The firft may be ftiled one of the nooft capital of that great painter's performances. Sir Robert Walpole, the beft judge of paintings in his time, was of that opinion, and would have given any price for it. Ther is particular reafon for the exquifite finifhing of this picture; Vandyck was patronized by his lorlthip, lived with him at Holland houfe, and had all opportunity to complete it at full leifure. The beautiful, the courteous, the gallant Henry Rich, Earl of Holland, is reprefented at full length, dreffed with the elegance he might have appeared in to win the affections of the Queen of his unfortunate mafter. He appears in a' white and gold doublet; a fcarlet mantle, laced with gold, flows gracefully from him ; his white boots are ornamented with point; his armour lies by him. Charles was flruck with jealouly at the partiality Mewn to this favourite by Henrietta. He directed his lordhip to confine himfelf to his houfe; nor was the reftraint taken off, till the Queen refufed on that account, to cohabit with her royal fpoufe.* But neither loyalty to his mafter, nor tendernefs to his 'air miftrefs, could prevent him from joining the popular party after receiving every favour from the court, his earldom, the garter, conmand of the guard, and groom of the ftole. With unfettled principles, he again deferted his new friends, fhifting from fide iv lide. At length, iminediately before the murder of his fovereign, roufed by the dangers of one to whom he was fo much indebted, he made a fingle effort in his favour; but, on the firf appearance of danger (as he had done more than once) fled the attack, was taken, and ended his days on the fcaffold, falling tinidly, inglorious, unpitied.

In the fame room is the portrait of his elder brother Robert Earl of Warwick, high admiral of England, in the fervice of the parliament. The fhips in the back ground denote his profeffion. His perfon, like the Earl of Holland's, elegant ; his mind more firm, and his political conduct more coherent. He left a court he had no obligation to; adhered to the Parliament as long as it exifted, and fupported bimfelf by the power of Cromwell, as foon as the tyrant had deftroyed that inftrument of his ambition. He was of great popularity with the puritanical party, kept open houfe for the Divines of the times, was a conftant attendant at their fermons, " made merry with them and at them, which they difpenfed with. He became the head of their party, and got the flyle of a godly man. Yet of fuch a licence in his words and in his actions, that a man of lefs virtue could not be found out $\dagger$." What a picture of fanatical prieft-hood? which could endure, for its own end, the vices of the great ; yet at the fame time, be outrageous againft the innocent pleafures of the multitude.

In the dining room arc portraits of a later time. John, the firf Earl of Breadalbane, a half length, in his robes. His lady, daughter to the unfortunate Holland, is in another frame, near him. His lordhhip was unhappily a diftinguifhed character in the reign of King Willian. He had formed a humane plan for conciliating the affections of the clans by bribing them into loyalty, till reflection and cooler times would give them opportunity of feeing the benefits that would refult from change of government. The chieftains at once attended to his propofals; and, at the fame time, gave affurance to their old mafter, that they would preferve terms no longer than was confiftent with his intereft. Enraged at their perfidy, and perhaps aetuated by feudal refentment, he formed the common fcheme in North Britain, of extirpation by fire and fword. The moft pernicious indeed of the clans was fingled out for execution; but the manner and the feafon were attended with circumftances of fuch a nature, that caufed the indifferent to fhudder; the clans to refent with a long and fatal revenge.

In

In the library is a hiftory of Thebes, in verfe.
The will of Duncan Laider, before quoted; a long poem in manufcript.
His lordhip's policy* furrounds the houfe, which ftands in a park, one of the few in North Britain where fallow deer are feen.

The ground is in remarkably fine order, owing to his lordfhip's affiduity in clearing it from the fones with which it was once covered. A blafter waskept in conflant employ, to blaft with gunpowder the great fones; for by reafon of their fize, there was no other method of removing them.

The Berceau walk is very magnificent, compofed of great lime trees, forming a fine Gothic roof, four hundred and fifty yards long. The fouth terrace on the banks of the Tay is eighteen hundred jards long; that on the north, two thoufand two hundred, and is to extend as far as the junction of the Tay and the Lion, about eighteen hundred more: each is fifty feet wide, and kept with the neatnefs of the walks of a London villa. The river runs with great rapidity, is clear but not colourlefs; for its pellucidnefs is that of brown cryftal, as is the cafe with moft of the rivers in Scotland. The Tay has here a wooden bridge, two hundred fect long, leading to a white feat on the fide of the hill, commanding a fine view up and down Strath Tay. The rich meadows beneath the winding of the river, the beginning of Loch-May, the difcharge of the river out of it, the pretty village and church of Kinmore, form a moft pleafing and magnificent profpect.

The view from the temple of Venus is that of the lake, with a nearer fight of the church and village : the two fides of the fine water are feen to valt advantage.

Much flax is cultivated in thefe parts. A few years ago, when premia were given for the greateft crops, from feventy to a hundred and twenty hoghheads of lin-feed were annually fown; and each peck yielded two fones of drefied flax; and when the yarn fold higheft, two thoufand pounds worth has been fold out of the country. The prefent low price affects the trade of the country, yet fill more flax is imported than the land produces.

Oats, bear $t$, and potatoes are the other crops. Oats yield from four to fix-fold at the moft, oftener lefs; bear, from eight to ten, at an average, fix. The corn raifed feldom fuffices the number of inhabitants; for they are often obliged to have recourfe to importation.

Every perfon has his potatoe-garden; and they often change the fort : the London. Lady has been found to fueceed belt, which in fonie farms yields from feven to ten fold. Some people have diftilled from this root a very frong firit, which has been found to be cheaper than what is diltilled from any grain. Starch is alfo made of it; and, in fome families, bread.

Corcar, or the Lichen omphaloides, is an article of commerce; great quantities have been fcraped from the rocks, and exported for the ufe of the dyers, at the price of a fhilling or fixteen pence a fone.

A good many fheep are now reared here. The beft fat weathers fell for eleven fhillings each. Thofe of the old fimall kind for only fix. Much wool is feat out of the country.

The beft black cattle have been fold for five guineas per head; but the ufual price of the four year old is about five and forty fhillings. While on this fubject, 1 cannot help

[^200]mentioning the diftrefsful flate of this country, previous to the rebellion; for, till the year 1745, Lord Breadalhane was obliged to keep a conftant guard for the protestion of his vafilials catte, or to retain fries anong the thievith clans, having too much firitit to fabmit to pay the infamous tax of black neal to the plundering chieftains.

Fewhorfes are reared here. Such which feed on the tops of the higher hills are often affected with a diftemper that commonly proves fatal, if a remedy is not applied within twenty-four hours. It attacks then in the months of July and dugult, ulually after a fall of rain, on or before the dew rifes in the morning. An univerial fwelling fpreads over the body; the remedy is exercife, clafing, or any method that promotes urine and perfpiration. The vulgar attribute this evil to a certain animal that fcatters its venom over the grafs; but more probably it arifes from fome noxious vegetable hitherto unoblerved.

Auguft 19. Crofs the Lion at a ford near its union with the Tay. To the north foars the recky hill of Shi-hallin, or the paps; and to the left lies the road to Ramnoch, noted for its lake and pine foreft.

Vifit Caftle Menzies, the feat of Sir Robert Menzics, placed romanticly at the foot of the northern fide of Strath-Tay. The woods that rife boldly above, and the grey rocks that peep between, are no fimall embellifhment to the vale. Far up the hill are the remains of a hermitage, formed by two fides of native rock, and two of wall, fome centuries paft, the retreat of the chicf of the family, who difgulted with the world, retired here, and refigned his fortune to a younger brother.

Crofs Tay bidge, and vifit on the oppofite fide, Monefs, a place Mr. Fleming is fo happy as to call himfelf owner of. A neat walk conducts you along the fides of a deep and well-wooded glen, enriched with a profufion and variety of cafcades, that ftrike with aftouilhment. - The firf, which lies on the left, runs down a rude ftaircafe with numbers of landing-places, and patters down the fteps with great beauty. Advancing along the bottom, on the right, is a deep and darkfome chafm, water-worn for ages; the end filled with a great cataract, confifting of feveral breaks. The rocks more properly arch than impend over it, and trees imbrown and fhade the whole.

Afcend a zig-zag walk, and, alter a long labour, crofs the firft cafcade. The path is continued among the woods to the top of the hill : emerge into a corn-field, re-enter the wood, and dilicover, from the verge of an immenfe precipice, another cataract, forming one valt fhe $t$, tumbling into the deep hollow, from whence it gufhes furioufly, and is inflantly loft in a wood beneath.

No franger muft omit vifiting Monen : it being an epitome of every thing that can be admired in the curiofity of water-falls.

Aurult. 20. Leave Taymouth. Soon reach the eaftern extremity of Lord Breadalbane's eftate; which, I may now fay from experience, reaches near a hundred miles; having feen the other end among the flate iflands in the weftern fea. The anceftor of Lord Breadalbane's being afked why he placed his houfe at the extremity of his eftate, antivered, that he intended it fhould be in time in the middle of it. In thofe days he might have a profpect of making his words good.

Ride along the banks of the Tay. The river flows in frequent reaches of confiderable length, which are finely bordered with corn-fields, inter:nixed with fmall groves; both which fpread on both fides, far up the hills. Crofs Tay-bridge, and continue the Lame tort of pleafing ride, with one variation only, and that for a finall fpace, where the banks heighten, and are cloathed with hanging woods; and near them are a few rifings covered with broom.

A little below Tay-bridge enter that divifion of Perthhire, called Athol, infamous, fays Camden, for its witches ; with more truth, at prefent, to be admired for its high improvements, natural and moral.

Enter the parih of Logierait, containing about 2,200 inhabitants. Go through the little town of Logierait, in feudal days the feat of the regality court, where the fanily of Athol had an extenfive civil and criminal jurifdiction. By power delegated from the crown, the great men had formerly courts, "with fock, fack, pitt " and gallous, toill and hame, infangthief and outfangthief, had power to hald courts for flauchter; and to doe juftice upan ane man taken with theift, that is feifed thairwith in hand have-and, or on back bearand." Juftice was adminiftered with great expedition, and too often with vindictve feverity : originally the time of trial and execution was to be within three funs: about the latter end of the laft century, the execution was extended to nine days after fentence : but, on a rapid and unjuft execution in Hamilton $\dagger$, in the year 1720, the time was to be deferred for forty days, on the fouth, and fixty on the north, of the Tay, that the cafe might reach the royal ear, and majefty have opportunity of exerting its brighteft prerogative.

Above the town, is the poor remnant of the cafle, defended on the acceffible fide by a deep ditch : the other is of great fteepnefs. It is faid to have been a hunting feat of Alexander III. The profpect from hence is fine; for three beautiful vales, and two great rivers, the Tay and the Tumel, unite beneath. This was felected as the place of execution, that the criminal night appear a friking example of juftice to to great an extent of country. I muft add, that l'executeur de la baute juffice had his houfe free, and two pecks of meal, and a certain fee, for every difcharge of his office.

Defcend, and an ferried over the Tumel : reach the great road to Blair, and turning to the left, reach Dallhian; where on the fummit of a little hill, in an area of a hundred and fixty feet diameter, is the ruin of St . Catherine's chapel : on the acceffible fide of a hill is a ditch of great depth. This place feems to have been an ancient Britifh poft; and that in after-times the founder of this chapel might prefer the fituation on account of the fecurity it might afford to the devotees in a barbarous age. There are in other parts of this parifh remains of chapels, and other religious foundations, as at Killichaflie, Tillipuric, Chapeltown, and Pilgir; and at Killichange may be feen a ruin, furrounded with woods, with the rolling waters of the Tumel adding folemnity to the fituation.

Enter the parih of Mouline, Ma-oline, or the little lake, from the wet fituation of part : that called the Hollow of Mouline is the moft fertile. The parifh contains about two thoufand five hundred fouls. Their manufactures, and thofe of Logierait, are the fame: in both great quantities of flax being fpun into yarn; and much Hax imported from Holland and the Baltic for that purpofs, befides what is raifed in the country. Notwithftanding the apparent fercility of thefe vales, the produce of oats, bear, and potatoes, is not equal to the confumption; but quantities of meal are imported. Barley bread is much ufed in thefe part, and efteemed to be very wholefome.

To the homour of the landlords of all the tracts I paffed over fince niy landing, none of the tenants have migrated. They are encouraged in manufactures and rural ceconomy. The ladies promote the article of cleanlinels among the lower order of femates by little pramia: for example the Duchels of Athol rewards with finart hats the lafiss who appear neateft in thole parts, where her Grace's influence extends.

[^201]In this parih are confiderable natural woods of oak: they are cut done in twenty years for the fake of the bark, which is here an important article of commerce. The timber fells at little or no price, being too finall for ufe.

The comnion difeafes of this country (I may fay of the Highlands in general) are fevers and colds. The putrid fever makes great ravages. Among the nova colors fobrium which have vifited the earth, the ague was till of late a franger herc. The Glacach, or, as it is fometimes called, the Mac-donalds dilorder, is not uncommon. The afflicted funds a tightnefs and fullnefs in his chett, as is frequeut in the beginning of confumptions. A family of the name of Macdonald, an hereditary race of Machaons, pretend to the cure by glacach, or handling of the part affected, in the fame manuer as the Irilh Mr. Greatreaks, in the lalt century, cured by froking. The Macdonals touch the part, and mutter certain charms; but, to their credit, never accept a fee on any entreaty.

Common colds are cured by Brochan, or water gruel, fweetened with honey; or by a dofe of butter and honey melted in fpirits, and adminiftered as hot as poffible.

As I am on this fubject, I fhall in this place continuc the lift of natural remedies. which were found efficacious before they began to

> Fee the Doctor for his naufeous draught.

Adult perfons freed themfelves from colds, in the dead of winter, by plunging intothe river; inmediately going to-bed under a load of cloaths, and fweating away their complaint.

Warm cow's milk in the morning, or two parts milk and one water, a little treacleand vinegar made into whey, and drank warm, freed the Highlander from an inveterate cough.

The chin-cough was cured by a decoction of apples, and of the mountain afh, fweetened with brown fugar.

Confumptions, and all the diforders of the liver, found a fimple remedy in drinking of butter-milk.

Stale urine and bran made very hot, and applied to the part, freed the rheumatic from his excruciating pains.

Fluxes were cured by the ufe of meadow fweet, or jelly of bilberry, or a poultice of flour and fuet; or new churned butter; or ftrong cream and frefh fuet boiled, and drank plentifully morning and evening.
Formerly the wild carrot boiled, at prefent the garden carrot, proved a relief in cancerous, or ulcerous cafes. Even the faculty admit the falutary effect of the carrot-poultice in fweetening the intolerable feetor of the cancer, a property till lately neglected or unkrovn. How reafonable would it be therefore, to make trial of thefe other remedics, founded in all probability, on rational obfervation and judicious attention to nature!

Perfons affected with the fcrophula imagined they found bencfit by expofing the part every day to a fream of cold water.

Flowers of daifies; and narrow and broad leaved plantane, were thought to be remedies for the ophthalmia.
Scabious root, or the bark of afh tree burnt, was adminittcred for the tooth-ach.
The water ranunculus is uled inftead of canthrades to raife blifers.
But among the uleful plants, the Corr or Cor-meille * muft not be omitted, whofe root dried are the fupport of the Highlanders in long journies, aunidt the barren hills-

[^202]dellitute of the fupports of life; and a fimall quantity, like the alimentary powders, will for a long time repel the attacks of hunger. Infuled in liquor it is an agrecable beverage, and, like the Nepenthe of the Gretks, exhilirates the mind. From the fimilituds of found in the name, it feems to be the fame with Chara, the root difcovered by the foldiers of Catiar at the fiege of Dyrrachium 0 , which Iteeped in milk was fuch a relief to the famithed army. Or we may reafonably belisere it to have been the Caledonian food deferibed by liot, of which the quantity of a bean would prevent both bunger and thirf: and this, fays the hittorian, they have ready for all occafions.

Among the plants of mere rarity, inuft be reckoned the trailing thyme leaved Azalra, and the reclining Sibbaldia. The firlt is found on Cromachan, and on Beamore ; the Latt on Benmore.

Mr. Jolin Stuart informed me, that he had difeovered, in fome part of Breadalbane, the Betula Nana, or Duarf Birch. This plant grows in plenty in fonte boggy fround in the canton of Schweita, where the natives believe it to be the fpecies with which our Savicur was finurged ; and from that period it was curfed with a flunted growth.

For burns, they boil crean till it becomes oil, and with it anoint the part.
The Itch declines in proportion as cleanlinels gains ground. It may happen that that diforder may be fought in the purlieus of St. Giles's, and other feats of filth, poverey, and debauchery, in our great towns.
1)uring the unhappy civil wars of this kingom in the laft century, a loathfome and horrible diftemper, originating from the vices of mankind, made its appearance in the Highands, and was fuppofed to have been communicated firt by the parliamen's garrifon at lue erlochy. It has ince diffufed itfeff over moll parts of the llighlards, and even crept into the Lowlands, feeming to lave accomplifaed the divine menace, in vifiting the fins of the father upon the children to the third and fourth generation.

The recital is difigrecable, but too curious to be luppreffid; and therefore, not to betray the delicate mind into a difgutting narratue, I throw it into the Appendix, and leave the perufal to the choice of the reader.

1 fhall now proceed from the diforders of the body to thofe of the foul; for what elfe are the fuperfitions that infeet mankind? a fow minoticed hefore ate ftill prederved, or have till within a fmall fpace 1 ee.s found in the places 1 h.ve vifited, and which may merit mention, as their exittence in a timle time may happily be loth.

After marriage, the bride immediately walks round the chuch, unattended by the bridegroom. The precaution of loofening every knot about the new-joined pair is ftrictly obferved, for fear of the penalty denounced in the former volumes. It mult be remarked that the cuftom is obferved even in France, nouer laiguilltta being a common phrafe for difappointments of this nature.

Matrimony is avoided in the month of January, which is called in the Erfe the cold month; but what is more fingular, the ceremony is avoided even in the enliveuing month of May. Perhaps they might have caught this fupertliion from the Romans, who had the lame dread of entering into the nuptial itate at that feafon; for the amorous Ovid informs us,

Nie vidure zedis caden, nec virginis apta
Tempora, qua rupha nom diuturia fai.
Hac quoque die coulo, fi se proverban tanguit,

No tapers then fiall burn ; for never bride. Wed in ill feafon, long her blifo enjoy'd. If you are fond of provesto, alwaya fay. No lafe proves thrifty, who is wed in May.
After baptifm, the firlt meat that the company taftes is crowdie, a mixture of meal and water, or meal and ale thoroughly mixed: of this every perfon takes three foon. fulls.

The mother never fets about any work till he has been kirked. In the church of Scotland there is no ceremony on the occafion; but the woman, attended by fome of her neighbours, goes into the church, fometimes in lervice-time, but oftener when it is empty ; goes out agaiu, furrounds it, refiethes herfelf at tome public-houfe, and then returns home. Before this ceremony fhe is looked on as unclean, never is permitted to eat with the family; nor will any one eat of the victuals fhe has drefled.

It has happened that, after baptifin, the father has placed a bafket filled with bread and cheefe on the pot-hook that impended over the fire in the middle of the room, which the company fit around, and the child is thrice handed acrofs the fire, with the defign to fruftrate all attempts of evil fpirits or evil eyes. This originally feems to have been defigned as a purification, and of idolatrous origin, as the Ifraelites made their children pafs through the fire to Moloch. 'The word ufed for charms in general is colas or knowlege, a proof of the high repute they were once held in. Other charms were Atyled paiders, a word taken from the Pater nofter. A necklace is called padreuchain, becaufe on turning every bead they ufed one of thefe paiders. Other charms again are called toifgeuls, from the ufe of particular verfes of the gofpel.

The fuperftition of making pilgrimages to certain wells or chapels is ftill preferved : that to St. I'hillan's is much in vogue; and others again to different places. The object is relief from the dilorders mankind labour under. In fome places the pilgrims only drink of the water; in others they undergo immerfion.

A Highlander, in order to protect himfelf from any harms apprehended from the fairy tribe, will draw round himfelf a circle with a fapling of the oak. 'This may be a relique of druidifm, and unly a continuation of the refpect paid to the tree held in fuch veneration by the prienhood of our anceftors.

They pay great attention to their lucky and unlucky days. The Romans could not be more attentive on fimilar occafions; and furely the Highlander may be excufed the fuperftition, fince Auguftus* could fay that he never went abroad on the day following the Nundina, nor began any ferious undertaking on the Nona, and that merely to avoid the unlucky omen. The Scouifh mountainecrs eftem the 14th of May minortunate, and the day of the week that it has happened to fall on. Thus Thurfday is a black day for the prefent year.

They are alfo very claflical in obferving what they firlt meet on the commencement of a journcy. They confider the looks, garb, and character of the firft perfon they fee. If he has a good countenance, is decently clad, and has a fair reputation, they rejoice in the omen; if the contrary, they procced with fears, or return home, and begin their journcy a fecond time.

The beltein, or the rural facrifice, on the firt of May O. S., has been mentioned before. Hallow eve is alfo kept facred : is foon as it is dark, a perfon fets fire to a buth of broom faftened round a pole, and, attended with a crowd, runs about the village. He then tlings it down, keeps great quantity of combullible matters in it, and makes a great bonfire. A whole trat is thus illuminated at the fame time, and makes a fine

[^203]appearance. The carrying of the fiery pole appears to be a relique of druidifm; for, fays Doctor Boriafe ", faces preferre was efteemed a fpecies" of paranifin, forbidden by the Gallic councils, and the accenfores facularum were condemned to capital punifhment, as if they facrificed to the devil.

The Highlanders form a fort of almanack or prefage of the weather of the enfuing year in the following manner: They make obfervation on twelve days, beginning at the laft of December, and hold as an infallible rule, that whatfoever weather happens on each of thofe days, the fame will prove to agree in the correfpondent months. Thus, January is to anfiver to the weather of December the 311 ; February to that of January ift ; and fo with the reft. Old prople ftill pay great attention to this augury.
To thefe fuperftitions may be added certain cuftoms now worn out, which were pe. culiar to this country.

In old times the great Highland families fent their heir, as foon as he was weancel, to fome wealthy tenant, who educated him in the hardy manner of the country, at his own expence. When the fofter-father reftored the child to his parents, he always fent with him a number of cows, proportioned to his abilities, as a mark of the fenfe he had of the honour done him. A firong attachment ever after fubfifted vetween the two families: the whole family of the foller-father was received under the protection of the chieftain, and held in the higheft efteem.

To this day the greater chicftains are named by their clans from fome of their anceftors, eminent for ftrength, wifdom, or valour. Thus the Duke of Argyle is fyled Mac-chailean mhoir, the fon of the great Colin. Lord Breadalbane, Mac-chailean mhic Dhonachi, the fon of Colin, fon of Duncan. The head of the family of Dunftaffage, Mac-In nais an Duin, or the fon of Angus of the hill.

Moft of the old names of the Highlanders were derived from fome perfonal property. Thus Donald or Don-fhuil fignifies brown eye; Fin-lay, white head; Dun-can, brown head; Colin, or Co-aluin, beautiful; and Gorm-la, a blue eyc.

The old Highlanders were fo remarkable for their hofpitality that their doors were always left open, as if it were to invite the hungry travellers to walk in and partake of their meals; but if two crofs flicks were feen at the door, it was a fign that the family was at dinner, and did not defire more guefts. In this cafe the churl was held in the higheft contempt; nor would the moft preffing neceffity induce the paffenger to turn in. Great hofpitality is fill preferved through all parts of the country to the ftranger, whofe character or recommendations claim the mof diftant pretenfions. But this virtue muft ceafe, or at beft leffen, in proportion as the inundation of travellers increafes: a quick fucceffion of new gucts will be found to be a trouble and an expence unfupportable; but they will have this confolation, that good inns will be the confequence even of a partial fubverfion of the hofpitable fyftem.

Strict fidelity is another diftinguifhing character of the Highlanders. Two inftances, taken from diftant periods, will be fufficient proofs of the high degree in which they poffefs this fhining virtue. In the reign of James V., when the Clan chattan had raifed. a dangerous infurrection, attended with all the barbarities ufual in thofe days, the Earl of Murray raifed his people, fuppreffed the infurgents, and ordered two hundred of the principal prifoners to execution. As they were led one by one to the gallows, the Earl offered them a pardon in cafe they would difcover the lurking place of their chieftain; but they unanimoufly told him, that were they acquainted with it, no fort of punifhment fhould ever induce them to be guilty of a breach of truft to their leader $\dagger$.

[^204]'The other cxample is taken from more recent and mercenary days. In the year 1746, when the young pretender preferred the prefervation of an unhappy life by an inglorious flight, to the honour of falling heroically with his faithful followers in the field of Culloden, he for five months led the life of a fugitive, amidtt a numerous and various fet of mountaincers. He trufted his perfon often to the loweft and moft difiolute of the people; to men pinched with poverty, or acculomed to rapiue; yet neither the fear of punifhment for aflifting the wretched wanderer, nor the dazzling allurement of the reward of thirty thoufand pounds, could ever prevail on any one to violate the laws of hofpitality, or be guilty of a breach of truft. They extricated him out of every dificulty; they completed his deliverance, preferving his life for mortifications more afllicting than the dreadful hardfhips he fuftained during his long flight.

Soon after entering the parih of Mouline, leave on the right Edradour. At this place, on the top of a fteep den, are the remains of a circular building, called the Blackcaltle, about fixty fect diameter within fide, and the walls about eight fect thick. It is luppofed to have been inhabited by an Englifh baron who married a Scots heirefs in the reign of Edward I. There is another about a mile weft from the village of Mouline, near Balyou'an; and a third on an eminence fouth of the former. One of thefe anfivers to another fimilar at Killichange, in the parifl of Logicrait. Some conjecture thefe round buildings to have been intended fo: making fignals with fires in cafe of invafions; others think them to have been Tigh Fafky, or a ftorehoufe for the conccalment of valua!!'e effects in cafe of fudden inroads. The firt is a very probable opinion, as I can trace, approaching towards the weft fea, a chain of thefe edifices, one within fight of the next, for a very confiderable way. It is not unlikely, if fearch was made, but that they may even extend to the ealt fea, fo as to form a feries of beacons crofs this part of the kingdom.

My worthy fellow-voyager, Mr. Stuart, has, from renarks on feveral in the neighbourhood of Killin, enabled me to trace them for feveral miles. To begin with the molt eaftern, next to thofe I have mentioned, there is one on the hill of Drummin, oppofite to Taymouth, on the fide of the vale; another lies within view, above the church of Fortingal : on the hill Druim-an-timhoir is a third, oppofite to Alt-mhuic, eaft of Miggerny : one under the houfe of Cahly, calied Caftal-mhic-ncil; and another, about half a mile weft, of the name of Caftal-a-chon-bhaican, a crooked ftone called Con-bhacan, being erected about two hundred feet ealt .rom it, and fo named, from a tradition that the Nimrods of old times tied their dogs to it with a leathern thong, when they returned from the chace. The figure of this building differs from the others, being oval * : the greateft length within the wall is feventy-one fect; the breadth forty; the thicknefs at the fides twelve feet, at the ends only eight. The door at the eaft end low and narrow, covered with a flag.

But the moft entire is that Ityled Caftal-an dui, lying at the foot of the hill Grianan, on the farm of Cathly, three miles weft from Miggerny. On the north-weft fide is a ftone twenty-nine feet long, and nine thick, which fupplies part of the building on the ontfide. The form of this building is a circle: the thickuefs from eleven to twelve feet; and within the place where the great fone flands, is an additional ftrength of wall, about eight feet thick. The moft complete place is nine feet and a half high : the diameter within the wall is forty-five feet. The greateft part of the flones ufed in this edifice are from three to fix feet long, and from one and a half to three feet thick.

[^205]About three hundred yards wefl from this is another, called Caftal-an-Deirg. A mile farther weft is another, of the name of Fiam-nam-bòinean; and laftly, within fight of this, five miles diftant, on the fide of a hill called Ben-chaftal, is one more, the moft wefterly of any we have yet had intelligence of. Moft, if not all of thefe, lie in GlenLion. The tradition of the inhabitants refpecting them is included in thefe lines:

> Dà chaifteal-deug aig Feann
> Aan an crom-ghleann nar clach.

That is, "Fingal, the king of heroes, had twelve towers in the winding valley of the grey-headed ftones."

I mult mention two others, that are out of the line of thefe, yet might be fubfervient to their ufe. One lies on the north fide of Loch.Tay, about five miles eaft of Killin, above the public road. The other called Caifteal Baraora, on the fouth fide, about a quarter of a mile from the lake, and a meafured mile eaft of Achmore, the feat of Mr. Campbel, of Achalader.

On the top of a great eminence, a furlong from this, are the remains of a valt inclofure, a ftrong hold, of the fame nature with that 1 faw in Glen-elg ${ }^{*}$, to which the inhabitants might irive their cattle in time of invafion, on the fignals given from the round towers. The form tends to an oval; the greaten length is three hundred ard fixty feet ; the breadth one hundred and twenty. No part of the wall is entire, but the flones that formed it lie in ruins on the ground to the breadth of fifteen feet. Within, near the eaft end, is the foundation of a redangular building, thirty-eight feet long, ten broad. This poft commands a vaft view of the weft end of Breadalbane, almoft to the head of the vallies of Glen-Dochart and Glen-Lochy ; and at a very fmall diftance $f$ om it is feen the hill of Drummin, from whofe round tower the fignal might eafily be received.

The round edifices of this internal part of Scotland, and thofe of the coalt and of the inlands, feem to hare been erected for the fame purpofe, but probably by different architects. The former are the labours of much lefs filful workmen; the fones more rude, the facings lefs exact and elegant, but not inferior to the manner now in ufe in the commen dry walled houfes of the country.

I cannot but think that all thefe buildings were originally conftructed by the natives; and that thofe fo frequent in the iflands, and of fuch fuperior workmanhip, might have been rebuilt by the Danes and Norwegians, on the fame model, but more artificially than thofe they found on the fpot. From all the enquiries I have made among the nalives of Scandinavia, I do not learn that any fuch buildings are known there, a fingle inflance excepted on the Sualeberg $t$, a mountain half a Norwegian league diflant from Drontheim. If no more are difcovered, it is probable that the invaders did not bring this mode of building with them. But they might have confidered the ufe and conveniency of thefe fructurea, and adopted the plan, making fuch improvements as appeared to tiom neceffary. Thus, in fome they formed walls, with galleries within; and in others, ereeted fmall buildings in the areas $\ddagger$, to protect them from the inclemency of the weather; for being in an enemy's country, the Danes were oblired to ufe them as little garrifons: on the contrary, the natives never might confider them in any other

[^206]"ghat than as thort and temporary retreats from an invading enemy. It is alfo pretty crtain, that the Danes either never reached fome of the places where we now fee thefe wuildings, or at leaft never made any more than a fhort inroad. On the other hand, they poffeffed the iflands and fome of the coalts for a long feries of years, and had ample time to fo $m$ any improvements that were agreeable to them.

A few other antiquities are alfo found in this parifh. On a plain below Dirnanean in Strath.Ardle, is a circular mount, compofed of fmall round flones, mixed with carth, coated with turf, on whofe fummit is an erect four-fided fone, of a confiderable fize. This feems a fepulchral memorial of fome perfon of rank, whofe urn is probably beneath. Another fone of the fame kind is alfo to be feen at fome diftance from it, at the edge of the river.

At the eaft enid of the fame plain is the appearance of a grave, fixteen feet long, with a large fone at each end. In the language of the country this is fyled the grave of high blood, from a tradition that a Danifh prince was flain and interred here. It is fufpected that a fkirmin might have been fought here, and the flain in general buried in this place.

Of caftes of a more modern date, this parifh boafts only one, in the hollow of Mouline, of a fquare form, built with bad whin fone, cemented with hot lime, fo ftrong as fcarcely to be broken. Two round towers yet remain, and a tranfverfe wall. The veltige of the ditch is nill to be traced. The inhabitants afcribe the building to one of the Cummins; but Sir James Balfour ${ }^{*}$, with more certainty, gives it to Thomas of Galloway, Earl of Athol, and acquaints us that it was the refidence of the ancient Earls.

Proceed on my way; and, after a thort ride through a barren and dreary tract, am again euraptured with the charms of Falkally, which appears like fairy ground, amidit the wild environs of craggy mountains, fkirted with woods; it is feated in a beautiful meadow, on one fide bordered with woods, on the other bounded by the Tumel, rival in fize to the Tay, which at a fmall diftance appears again gufhing from between the wooded rocks, and tumbling down a precipice of great height, to water thefe delicious fcenes.

Salmons annually force their paflage even up this furious catara\&t, and are taken here in a moft artlefs manner : a hamper, faftened to a wicker-rope, pinned into a cleft of the rock by a ftick, is flung into the ftream : now and then a fifh, in the fall from its effort to get up, drops into this little ware. It is not to be fuppofed that the owner can enrich himfelf by the capture: in fact, the chance of his good fortune is hired out at the annual rent of one pound fourteen thillings.

At other times the fifher flings into the fream below a crow-foot, or caltrop, faftened to a long rope. On this inftrument the falmons often transfix themfelves, and are drawn up to land. Another method, of much rifque to the adventurer, is at times practifed. A perfon feats himfelf on the brink of the precipice, above the cataracts, and fixes one foot in the noofe of a wicker-cord: here he expects the leap of a falmon, armed with a fear: the moment the fifh rifes, he darts his weapon at the hazard of falling into the water by his own effort, or the ftruggle of his prey.

A little to the eaft of this fall the Garrie unites itfelf with the Tumel, a river that rifes from a lake thirteen computed miles above Blair. The noted pafs of Killicrankie is formed by the hills that impend over it on each fide; the waters of the Garrie rufling beneath in a deep, darkfome, and horrible channel; in the laft century a pafs of much danger and difficulty, a path hanging over a tremendous precipice, threatening

> * Ms.

3 D 2
deftruction
deftruction to the leaff falfe ftep of the traveller ; at prefent a fine road, formed by the foldiery lent by goverament, and encouraged by fixpence per day added to the pay, fives an cafy aceds to the remoter Highlands. A fine arch over the Garrie joins the once impervious fides.

Near the north end of this pafs, in its unimproved and arduous fate, on an open fpace, was fought the celebrated batte of Killicrankic ; when the gallant Vifeount Dundee fell in the moment of vietory, and with him all the hopes of tie abdicating monarch. The enemies of this illuftrous hero made his eulogy : Mackay, the defeated general, in the courfe of his flight, pronouncing the death of his antagonift: "Was Dundee alive," fays he, "my retreat would not have been thus uninterrupted." His body was interred in the church of Blair. His glory required no infcription to perpetuate it; yet the elegance of his epitaph, compofed by Doctor Archibald Pitcairn, merits repetition, doing equal honour to the hero and poet :

Uhime Scolorum, poluit quo fofpite folo Libertas patrix falva fuiffe ture.
Te moriente novos accepit scotia cives: Aecepitque novos de moricute Deos. Illa tibi fuperefle negat, tu non potes illi, Ergo Caledonix nomen inane sale.
Tuque vale gentis prifcx fortiffime ductor, Optime Scolorum atque ultime, Grame, vale.
O laft and beft of Scots! who did! maintain Thy country's freedom from a fureign reign; New people fill the land, now they are gone; New gods the temples, and new kings the throne: Seotland and thou did each in other live, Thou could't not her, nor con'd fle the furvive ; Farewel, thou, living that didit fupport the tinte, And cou'dll not fall, but by thy coumty's fate.

Drymen.
Auguft 21. Continue my ride to Athol-houfe, in the Blair of Athol, feated on an eminence above a plain watercd by the Garrie ; a molt outrageous flream, whofe ravages have greatly deformed the vallcy by the vaft beds of gravel it has left behind.

The houfe or caftle is of uncertain antiquity : the oldett part is called Cummin's tower, being fuppofed to have been built by John, commonly called de Strathbogy, who enjoyed the title of Athol in right of his wife. It became the principal feat of his fucceffors. In 1644 the Marquis of Montrofe poffefled himfelf of it, and was joined by a large body of the Athol Highlanders, to whofe bravery he was indebted for the victory at libbirmoor. In the troubles of 1653 , the place was taken by ftorm by Colonel Daniel *, an officer of Cromwell, who, unable to remove a magazine of provifion lodged there, deftroyed it by powder. In 1689, it occafioned one of the greateft events of the time, being the cauie that brought on the celebrated batte of killicrankic. An officer belorging to Vifcount Dundee flung himfelf into it, and refufing to deliver it to Lord Nurray, lun to the Marquis of Athol, was by him threatened with a ficge. His lordhiip, to chect the reduction, affembled a body of forces and marched towards the place. Dundee knew the importance of preferving this pafs, and the communications with the Highland clans, in whom he had the greatelt confidence $\dagger$. With his ufual copedition he jemed the garrifon; and in a few days after concluded his glorious life with the well-known defeat of the royal forces under Mackay.

The laft fiege it experienced was in 1746, when it was gallantly defended by Sir Andrew $\Lambda$ gnew againt the rebels, who retired from before it a few weeks preceding the battle of Culloden. As foon as peace was eftablifhed, a confiderable part of that fortrefis was reduced in herght, and the infide moit magnificently furnifhed.

The views in front of the houfe are planted with fo much form, as to be far from pleafing, but the picturefque walks among the rocks on the other fide cannot fail to attract the admiration of every traveller of talte. The late Noble owner, with great julgment, but with no lefs difficulty, cut, or rather blafted out, walks along the vaft rocks and precipices that bound the rivers Banovy and Tilt. The waters are violent, and form in various places cafcades of great beauty. Pines and trees of feveral fpecies wave folemmly over the head, and darken the romantic fcene. The place appeared to great advantage : for the Highlands, as well as other beauties, have their good and their bad days. The glen, that in 1769 I thought deficient in water, now by reafon of the rains, looked to great advantage, and finifhed finely the rich fcenery of rock and wood.

The York calcade, a mile from the houfe, merits a vifit. It firt appears tumbling amidtt the trees, at the head of a finall glen. The waters are foon joined by thofe of another that dart from the fide. Thefe united waters fall into a deep chafin, appear again, and, after forming four more cataracts, are loft in the Tilt, which likewile difappears, having for a confiderable fpace excavated the rock we ftood on; running invifible, with a roaring torrent, before it emerges to day.

It is but of late that the North Britons became fenfible of the beauties of their country; but their fearch is at prefent amply rewarded. Very lately a cataract of uncommon height was difcovered on the Bruer, a large fream about two miles north from this place. It is divided into five falls, vifihle at once, and in a line with each other: the four uppermoft form together a fall of a hundred feet; the fifth alone is nearly thefame height; fo that when the whole appear in front, in high floods, they feem one flect of near two hundred feet : a fight fcarcely to be paralleled in Europe.
Trees of all kinds profper here greatly: larches of twenty years growh yield plank of the breadth of fifteen inches. The late Duke annuaily leifened the makednefs of the hills, and extended his plantations far and wide. His attention to the culture of rhubarb. mult no: pafs umoticed: for his benevolent defign of rendering common:and cheap this ufeful medicine, is bleft with the utmont fuccels. The roots which he had cultivated in the light foils, fimilar to thofe of the Tartarian deferts, the native place, increafe to a valt fize: fome when frefl having been found to weigh fifty pounds, and to be equal in fimell, tafte, and effect to thofe we import at an enormous expence to our country. On being dried, they flaink to one quarter of their oriminal weight. There is reafon to fuppofe that the Scotch rhubarb may be fuperior in virtue to the foreign, the laft being gathered in all feafons, as the Mongall hunters chance to pals. by. They draw up the roots indiferiminately, picrce them at one ond, and fling them on their belts, and then leave them to dry in their tents without further care.
Aug. 22. Leave Athol houfe. Return by Fafkally along the great :oad to the junction of the Tumel with the Tay. Nature hath formed, on each fide of the vale, multitude of terraffes, fome with grafly fide, others wooded. Art hath contributcd to give this road an uncommon magnificence: fuch parts, which want cloathing are planted not only with the ufual trees, but with flowering flhrubs; and the fides of the way are fodded in the neatelt manner. In a little time the whole way from Dalnacardoch to Perth, near forty-five miles, will appear like a garden; if our fifter Peg gocs on at this rate, I wifh that, from a confefled flattern, the does not become dowaright tincal.

On approaching Dunkeld, the vale becomes very narrow : at laft leaves only fpace for the road and the river, which runs between hills covered with hanging woods. The town of Dunkeld is feated on the north fide of the Tay; is fuppofed to take its name from the word Dun a mount, and Gael the old inhabitants, or Caledonians, and to have been the Caftrum Caledonia, and the Oppidum Caledoniorum of the old writers *. At prefent I could not hear of any veftiges of Roman antiquity. The town is fmall, has a fhare of the linen nanufacture, and is much frequented in fummer by invalids, who refort here for the benefit of driuking goats' milk and whey.

This place in very early days became the feat of religion. Conftantine III. king of the Picts, at the inftance of sdamnanus is faid to have founded here a monaftery of Culdees, in honour of St. Columba, about the year 729: thefe religious had wives according to the cuftom of the eaftern church, only they were prohibited front cohabiting dum vicifim admini/trarunt. About 1127 that pious prince David I. converted it into a cathedral, difplaced the Culdees, and made Gregory their abbot, the firt bifhop, who obtained from Pope Alexander III. ample protection and confirmation $\dagger$. The revenue at the Reformation was 1 505l. 10s. 4d. Scots, befides a large contribution of different forts of grain $\dagger$.

The prefent church was built by Robert Arden, the 1 cth bifhop, who was interred in it, about the year 1436 g . Except the choir, which ferves as the parifl church, the reft exhibits a fine ruin, amid the folemn fcene of rocks and woods. The extent within is 120 feet by 60 . The body is fupported by two rows of round pillars, with §quared capitals. The arches Gothic.

In the veftry-room is a large monument of the Marquis of Athol, who died in 1703. It is hung with the arms of all the numerous connections of this illuftrious houfe, which, by its great acceftor Sir James Stuart, called the Black Kni, ht of Lorn, and firft Earl of Athol of the prefent family, may boaft of being related to every crowned head in Europe, excepting the Grand Segnior.
In the body of the cluurch is a tomb with the recumbent cfligies in armour of Alexander Stuart, Earl of Buchan, third fon of Robert 11. by Elizabeth More; a perfon of moft uncommon impiety $\|$; and for his cruelty jultly lyled the Wolf of Badenoch. Yet his epitaph, when entire, ran thus:
" Hic jacet bena memorix, Alexander Senefcallus comes de Buchan et dominus de Badenoch, qui obiit 24 Novemb. ${ }^{1}$ ミ94"

The cathedral was denolifhed in 2559 : the monuments were deftroyed in 1698, by the garrifon that was placed there at that time. I looked in vain for the tomb of Marjory Scot, who died at Dunkeld, January 6th, 1728. Her epitaph was compofed by Alexander Pennicuik, and is faid to have been infcribed in memory of her longevity. It thus addreffes the reader:

Stop, paffenger, until my life you read,
The living may get knowledge from the dead.
Five timen five years I liv'd a virgin life;
Five times five years 1 liv'd a happy wife;
Tent times five years 1 liv'd a widow chate;
Now wearicd of this mortal life I reft.
Petwixt my cradle and my grave were feen
Eight mighty kings of Scoland and a queen.

[^207]4th Edir. Tour Scot, 297.

# PENNANT'S SECOND TOUR IN SCO'ILAND. 

Four limes five yeare a commonwealth I faw,
Ten times the fubjects rile agaioft the law;
Thrice did I fee old prelacy pull'd down,
And thrice the cloak was humbled by the gown.
An end of Stuari's race I faw, nay more, I faw my country fold for Euglifh ore.
Such defolations in my time have been;
I have an end of all perfection feen.
The great ornament of this place is the Duke of Athol's extenfive improvements, and magnificent plantations, bounded by crags witth fummits of a tremendous height. The gardens extend along the fide of the river, and command from different parts the moft beautiful and picturefque views of wild and gloomy nature that can be conceived.

Afcend the hill, and from a fouthern brow have a view of a chain of fmall lakes, on whofe banks is Leagh Wood, an eftate granted by James III. to John Stuart, Earl of Athol, as a reward for his victory over the great Macdonald of the infes.

Return towards the north, along an extenfive flat, bounded on the right by vaft and precipitous crags. On this plain is planted abundance of rhubarb, by way of trial whether it will fucceed as well in thefe wild tracts as in the manured foils.. Walk through a narrow pafs, bounded by great rocks. One retains the name of the King's feat *, having been the place where the Scottih monarchs placed themfelves, in order to direct their fhafts with advantage at the flying deer driven that way for their amufement. A chace of this kind had very nearly prevented the future miferies of the unhappy Mary Stuart. 'The ftory is well told by William Barclay, in his t'eatife contra Monarchomachos: it gives a lively picture of the ancient manner of hunting ; and, on that account, will perhaps be acceptable to the reader in an Englifh drefs.
"I once had a fight of a very extraordinary fort, which convinced me of what I have faid. In the year 1563 , the Earl of Athol, a prince of the blood royal, had, with much trouble and vaft expence, a hunting-match for the entertainment of our moft illuftrious and moft gracious Queen. Our people call this a royal hunting.: I was then a young man, and was prefent on that occafion: two thoufand Highlanders, or wild Scotch, as you call them here, were employed to drive to the hunting ground all the deer from the woods and hills of Atholl, Badenoch, Marr, Murray, and the countrics about. As thefe Highlanders ufe a light drefs; and are very fwift of foot, they wentup and down fo nimbly, that in lefs than two nonths time they brought together two thoufand red deer, befides roes and fallow deer. The Quieen, the great men, and a number of others, were in a glen when all thefe deer were brought before them ; believe me, the whole body moved forward in fomething like battle order. This fight ftill frikes me, and ever will ftrike me; for they had a leader whom they followed clofe wherever he moved.'
"This leader was a very fine ftag with 2 very high head : this fight delighted the Queen very much, but fhe foon had caufe for fear; upon the Earl's (who had been from his early days accuftomed to fuch fights) addrefing her thus, 'Do you obferve that flag who is foremoft of the herd, there is danger from that fag, for if either fear or rage Thould force him from the ridge of that hill, let every one look to himfelf, for none of us will be out of the way of harm; for the rell will follow this une, and having thrown us under foot, they will open a paffage to this bill behind us.' What happened a mo-

[^208]ment alter confirmed this opinion: for the Queen ordered one of the beft dogs to be Ict loofe on one of the deer; this the dog purfues, the leading ftag frighted, he flies by the fame way he had cone there, the reft rufh after him and break out where the thicken body of the Hightunders was; they had nothing for it but to throw themfelves hat on the heath, and to allow the deer to pafs over hem. It was told the Queen that feveral of the Highlanders had been wounded, and that two or three had Deen killed outright ; and that the whole body had got off, had not the Lifighanders, by their thill in hunting, tallen upon a ftratagem to cut of the rear from the main body. It was of thofe that had been feparated that the Queen's dogs and thofe of the nobility made flaugher. There were killed that day 360 deer, with five wolves, and fome roes."
lrom the fummit of the King's feat is a beautiful profpect to the north of Strath-Tay; and to the fouth, a ftial finer one of the winding of the river, through a tract enriched with corn-fields, and varied with frequent woods; and, at a diltance, the celebrated wood of Birnum, and hill of Dunfinane.

On defcending into the gardens, vifit the houfe, or rather villa, belonging to the Duke of Athol ; fmall, but furnifhed with peculiar elegance; the windows are fincly painted by Mr. Singleton, an eleve of the houfe, whofe performances do him much credit.

Crofs the Tay, to vifit the improvements on the banks of the great torrent Bran, which rufhes impetuoufly over its rugged bottom. All this part is a mixture of cultivation, with vaft rocks fpringing out of the grounds among which are conduced variety of walks, bordered with flowers and flowering fhrubs, and adorned with numbers of little buildings, in the tyle of the oriental gardens.

Continue my ride on the weft fide of the Tay, and foon quit this auguft entrance into the Scottifh Alps. The mountains gradually fink, the plain expands, and agriculture increafes. Arrive in the plain of Stormont, a part of Strathmore, or the great plain, being the moft extenfive of any in North Britain, bounded on the north by the Grampian hills, on the fouth by thofe of Ochil, and of Seidlow, and on the eaft by the fea; flretching at one extremity within a fmall diftance of Sterling, at the other to Stonehive in the Merns, but diftinguifhed in different places by different names.

Pafs by a neat fettlement of weavers, ealled, from the inhabitants, Spittlefields. This country is very populous, full of fpinners, and weavers of buckrans and coarfe cloths or ftentings; of which twelve millions of yards are annually exported from Perth. Much flax is raifed here, and the country is full of corn, but not fufficient to fupply the numerous inhabitants. Late at night reach Inch-tuthel, the modern Delvin, the feat of John Mackenzie *Eq. where I found a continuation of Highland hofpitality.

The fituation of this houfe is of ftrange fingularity ; on a flat of a hundred and fiftyfour Scotch acres $t$, regularly fteep on every fide, and in every part of equal height; that is to fay, about fixty feet above the great plain of Stormont, which it flands on.

[^209]The figure is alio renarkable, and much better to be expreffed by an engraving than by any defcription of mine.
'Two nations took advantage of this natural frength, and fituated themfelves on it. The lias, the long poffefiors of thefe eaftern parts of the kingdom, in all probability lad here an oppidum, or town, fuch as uncivilized people inhabited in early times; often in the midt of woods, and fortified all round with a dike. Here we find the velliges of fuch a defence, a mound of tones and earth running along the margin of the fleep, in many places entire, in others, time or accident hath rendered it lefs vifible, or hath totally deltroyed it. The flones were not found on the fpot, but were brought from a place two miles diftant, where quarries of the fame kind are fill in ufe.

Another dike crofles the ground, from margin to margin, in the place it begins to grow narrow. 'This feems intended as the firft defence againt an enemy, fhould the inhabitants fail in defending their outworks, and be obliged to quit their ftation and retire to a flronger part. Near the extremity is what I fhould name their citadel ; for a fmall portion of the end is cut off from the reft by five great dikes, and as many deep foffes, and within that is the ftrong hold, impregnable againft the neighbouring nations.

This place had alfo another fecurity which time hath diverted from them: the river Tay once entirely environed the place, and formed it into an ifland, as the name in the antient language, which it fill retains, imports; that of Inch-tuthel, or the ifle of 'Tuthel. The river at prefent runs on one fide only; but there are plain marks on the north in particular, not only of a channel, but of fome pieces of water, oblong, narrow, and pointing in the direction the 'Tay had taken, before it had ceafed to infulate this piece of ground. I cannot afcertain the period when its waters confined themfelves to one bed; but am informed that a grant flill exifts from one of the James's of a right of fifhing in the river, at Caput-mac-Athol, eaft of the place.
It is not to be imagined that there can be any traces of the habitations of a people who dwelt in the moft periflable hovels: but as the moft barbarous nations paid more attention to the remains of the dead than to the conveniency of the living, they formed, either for the protection of the reliques of their chieftains from infults of man, or favage beaft, or for fepulchral memorials, mounts of different fizes. Ancient Greece and ancient Latium concurred in the fame practice with the natives of this itland. Patroclus among the Greeks, and Hector among the Trojans, received but the fame funeral honours with our Caledonian herocs, and the afhes of Dercennus* the Laurentine monarch had the fame fimple protection. The urn and pall of the Trojan warrior might perhaps be more fuperb than thofe of a Britifh leader : the rifing monument of each had the common materials from our mother earth :

> The fnowy bones his friends and brothers place, With tears collceted, in a golden wafe; The golden vafe in purple palls they rolled, Of foftelt texture, and inwrought with gold. Latt o'er the urn the facred earth they fpread, And rais'd a tomb memorial of the dead $\dagger$.

Or, as it is more ftrongly expreffed by the fame elegant tranflator, in the account of the funeral of l'atroclus:

> High in the midt they heap the fivelling bed
> Of rifing earth, memorial of the dead $\ddagger$.

[^210]$\dagger$ Pope's Homer's Iliad, book xxiv, line 1003 .

Monuments of this kind are very frequent over the face of this plain: the tumull are round, not greatly elevated, and at their baiis furrounded with a fofs. Many bonee have been found in foine of thefe barrows, neither lodged in fone cheita nor depofited in urns.

The Romans, in their courfe along this part of Britain, did not neglect fo fine a fituation for a flation. Notwithfanding the great change made by inclofures, by plantation, and by agriculture, there are ftill veftiges of one ftation five hundred yarda fquare. The fide next to Delvin houle is barely to be traced : and part of another borders on the margin of the bank. There is likewife a fimall fquare redoubt near the edge, facing the Eaft-inch in the Tay, which corered the fation on that fide.

The firf was once inclofed with a wall fourteen feet thick, whofe foundations are remembered by two farmers of the name of Stertan, aged about feventy ; who had received from their father and grandfather frequent accounts of athes, cinders, brick, iron, utenfils, weapons, and large pieces of lead, having been frequently found on the fpot in the courfe of ploughing ": and to the weft of this fation, about thirty years ago, were difcovered the veltiges of a large building, the whole ground being filled with fragments of orick and mortar. A rectangular hollow made of brick is fill entire: it is about tee or twelve feet long, three or four feet wide, and five or fix feet deep. Boethius calle this place the Tulina of the Picts; and adds, that in their time, it was a moft ponpaus city ; but was deferted and burnt by them on the approach of the Romane iupter Agricola. He alfo informs us, that it bore the name of Inch-tuthel in his dayat. The materials from which this hiftorian took the early part of his work are unknown to us, any further than what we learn from himfelf, that they were records fent to him in 1525 from Jona; but by whom compiled, remains undifcovered. I do not doube his affertion; nor do I doubt but that fome truths collected from traditions may be featered amida the innumerable legendary tales, fo abundant in hia firt books. This I would with to place among the former; as the actual veftiges of two nations are fill to te traced on the fpot. I would alfo call it the Orrea of the Ro. mans, which the learned Stukely fuppofes to have been Perth, notwithftanding he places it in his map ! north-eaft of the Tay, and on the very fpot where the prefent Delvin fands.

Aug. 24. Leave Delvin. Crofe the Tay, at the ferry of Caputh. Pafs over a fhort trad of barren country. On the banks of a fmall rill are veftiges of an encampment, as is fuppofed, of the Danes, and to have been called from thole invaders Gally Burn, or the burn of the ftrangers. A little farther, in a very fertile improved country, is Loncarty, celebrated for the fignal victory obtained by the Scots, under Kenneth III S, over the Danes, by means of the gallant peafant Hay, and his two fons, who, with no other weapons than yokes which they fnatched from their oxen then at plough, firf put a fop to the flight of their countrymen, and afterwards led them on to conquef. Thefe fpirited lines are a perfect picture of the action:

> Quo ruitis, cives? Heia! hofti obvertite vultus! Non pudet infami vertere terga fugá ? Hoftis ego vabis; ant ferrum vertiee in hoftem. Dixit, et armatus dux prait ipfe jugo.
> Quâ, quâ ibat vaftum condetı́a per agmina Danám Dat fragem. Hinc amnis confequiturque fuga.

[^211]+ Hit. Scotix, lib. iv, p. $6+$.
$\$$ Who began his reign in 976.

Servavit cives. Vietorem reppulit hoftem. Unus cum natis agminis inflar erat. Hie Decios agnofce tuos magne amula Rome, Aut prior haci aut te his Scotiz majur adhue $\bullet^{\bullet}$.
The noble families of Hay derive their defeent from this ruftic hero, and, in memory of the action, bear for their arms the inftrument of their victory, with the allufive motto of jub jugo. Tradition relates, that the monarch gave this deliverer of his country, in reward, as much land as a grey-hound would run over in a certain time, or a falcon would furround in its llight: and the flory fays that he chofe the lant. There is fomething heroic in this tale: but after all the truth is, the family may be derived from the ancient tock of De la Haye of Norman origin.

Over this tract are fcattered numbers of Tumuli, in which are frequently found bones and entire ineletons, fometimes lodged in rude coffins, formed of fones, difpofed in that form ; at other times depofited only in the earth of the barrow. In one place is an upright fone, fuppofed to have been laid over the place of fepulture of the Danif leader. The prefent natnes of two places on this plain certainly allude to the action and to the vanquifhed enemy. "Turn again Hillock" points out the place where the Scots rallied, and a fpot near eight Tumuli, called Danemerk, may defign the place of grenteft naughter.

Continue my ride through a fine plain, rich in corn; the crops of wheat excellent. The noble Tay winds boldly on the left ; the eaftern borders are decorated with the woods of Scone. The fine bridge now completed, the city of Perth, and the hills and rifing woods beyond, form a moll beautiful finifhing of the profpect.

Perth, till about the year 1437, was the principal city of Scotland, the frequent refidence of its princes, and feat of parliaments and courts of juftice. It is placed in the middle of a verdant plain, which it divides in two parts, one called the north, the other the fouth Inch. This city rofe after the deftruction of the old Perth or Bertha, a place above two miles higher up the river, which was overwhelmed by a flood in the time of William the Lion in 1210, who, with his family, with difficulty efcaped in a fmall ikiff. William re built the town in a place lefs liable to fuch calamities; and called it St. John's Town in honour of the faint.

Old Perth was a place of commerce in the year 1128; is evident from the charter of David I. to the abbey of Holyrood houfe, in which he gives a hundred fhillings out of his fmall tithes there, or the duties arifing from the firft merchants that fhould come into the port. In 1160 found here fecurity in a frong tower from an attack made on him by Ferquhard Earl of Strathern, who made here an unfucceffful attempt to feize his perfon $t$.

The new Perth became confiderable, not only on account of its being a royal refidence, but likewife by reafon of the vaft commerce which its fituation on one of the firt rivers in North-Britain would naturally convey. Its importance foon gave it walls and fortifications. Major $\ddagger$ calls it the only walled city in Scotland. The caftle ftood near the Skinner-gate ftreet. The importance of the place made it frequently experience the calamities of war. Edward 1., when he over-ran Scotland, poffelfed himfelf of this city. In 1312 it was taken by Robert Bruce $\$$ in the month of January; when he put to death the chief perfons both Englifh and Scotch, but fpared the common people; after which he levelled the fortifications. After the fatal battle of Dupptin in ${ }^{1} 33^{2}$, Baliol, with fmall oppofition, entered the place, and left it in poffefion of the
enemies of his country. Edward III, who knew its importance, repaired the walls, and reftored the fortifications at the expence of the rich abbies of Arbroth, Cowper, Iindores, Balmerinoch, Dumforlince, and St. Andrew's; and placed there, as governor, Sir thomas Ochtred. It remainel under a forcign yoke but a finall time; for it 1340 Robert Stuart, guardian of Scotand, with a flong army, and the affithance of Villiam Douglas, who came opportunely from France, with five fhips, reffored the place to its natural matter, after a gallant defence of two months and two weeks, by the governor Sir 'Thomas Ochtred *.

I do not recoll at that it underwent any fiege from that period till the religious wars of 1559 ; when the queen regent, provoked by the infult of the inhabitants on all fie held venerable and lioly $t$, placed there a garrifon of French. The zeal however of the congregation foon colleeted a potent army to its relicf under Argyle, who, after a fhort fiege, obliged the garrifon to capitulate and retire.

Perth from that time remained in pence above a century. In $\mathrm{C}_{\mathrm{tat}}$ the Marquis of Montrofe feized the place, after the battle of Tibbirmoor ; and Cromwell, in July 16;1, atter a weak defence from a weak garrion, made limenff matter of this important city: and, to fecure the pofifflion, the Englifh commiflioners ordered $\ddagger$ a citadel to be huile on the South Incl, capable of containing five hundred men, the remains of which thill retain the name of Oliver's Mount.

The Earl of Mar's army, in the rebellion of 1715 , lay a confiderable time in this place, and fpent here confiderable fums of money. This circumflance contributed as much to enrich the city, as the fettlement of numbers of O iver's forces, after the eflablifhment of peace, affifted in introducing that fpirit of induftry, which, to this monent, dillinguithes the inhabitants.

Perth is large, well built, and populous, and contains about eleven thoufand inhabitants, nine thouland of whom are of the eftablifhed church of Scotland ; the reft of a variety of perfuafinns, fuch as Epifcopalians, Non-jurors, Glaffites, and Seceders; the fecond chietly confifts of a congregation of venerable females. The town has but one parifh, fupplied with three churches, befides the chapels for fuch who dilfient from the eftablifhed church.

The wo principal freets are remarkably fine: in fome of the leffer ones are fill to be feen a few wooden houfes in the old thyle; but as they decay, the magittrates proh:bit the re-building them in the fame manner. The great improvement of the town is to be dated from the year ${ }^{1745}$, it being fuppofed to have increated one third fince that turbulent period: for the government of this part of Great Britain had never been properly fetted till a little after that time.

The lay wafhes the calt fide of the town, and is deep enough to bring velfels of one hundred and twenty tons burden as far as the quays: and, if Dutch-built, or that-hottomed, cven of two hundred tons burden. This enables the inhabitants of Perth to carry on a very confiderable trade. The exports are as filn of white and brown linens, about feventy five thoufind pounds worth are anmel, : London mides a very great quantity that is difpoled of to Edinburgh and ...in : ....id Londua, Man. chefter and Glafgow take about ten thonfand pounds worth of linen yarn.

Linfeed oil forms a confiderable article of commerce. Scven water-mills belonging to this phace are in full employ, and make, on a medium, near three hundred tons of vil,

[^212]which is chie9y fent to London, and brings in frum eight to nine thoufand pounds. The firll mill for this purpofe was erected, athut the beginning of this century, by John Duke of Athol. At the tirft a glafs of whiky, mixed with halt as much of the oil, was a fafhionable dram; hut this foon grew out of ufe, as well at the cuftom of throwing away the linfeed cakes; which are now fold at a good price, and ufed with the utmoft fuccefs in feeding cattle The gentlenm is now living, who firf butroduced fallofed beef into $t_{1}$ - market of Porth. Before that time the gre ete ft part of Sconland lived on falt meat throughout the winter, as the natives of the H brides do at prefent, and as the Englifh did in the fudal times *. So fir behind has North Britain been in the conveniencies of life, and fuch rapid progrels has it of hate made towards ataining them.

The exports of wheat and barley are from swenty fur toahirty thouland bolls.
Confiderable quantities of tullow, b:it wax, dretled theeprofins, Jof fed and raw calve.fkins, and goat-Ikins are fhipped from this place.

The exports of falmon to London and the Mediterranean brings in the thoufand two hundred pounds flerling. That fifh is taken here in great abundance. Three thoufand have been caught in one morning, werghing, one with another, fixte pounds a-picce; the whole capture being forly cight thouland pounds. The fifhery begins at St. Andrew's.diy, and ends Angult $26: \mathrm{h}$, Old Style. The rent of the fícries amount to three thoufand pounds a year.

No beggars are feen about the fleets. In July 1776, fixteen perfons were chofen from different quarters of the town, to affels the place for poor rates, for the m intenance of the indigent.

It is to no purpofe to fearch for any remains of the monaftic antiquities of 11 's place; fanatic fury having in a few hours protrited the magnificent works of mi en piety. "Pull down the nefts, and the rooks will fly away," was the maxim of " rough apofle Rnox, and his dilciples took effectual care to put in execution the - nion of their maller.

The Dominicans firft fett the effect of their rage. After the conclufion of se of his fermons, inciting the demolition of inages and church ornaments, an indife 1 prieft began the celebration of mats. A boy in his zeal flung a fone and injured a wicture: the populace took that as a fignal to begin the demolition, and in a very fhe time plundered the monaftery, and laid all in ruin. This houfe was founded in 231 by Alexander II. In $1+37$ its walls were polluted by the execrable murder of Jimes I. the beft and molt accomplifted prince of the name. He had retired to this convent on the mmeur of a confiracy. The attack was made : the heroifm of Catherine Douglafs, an attendant on the Queen, mult not be pafted in filence. She ran and thet the door on the firt alarm; but, miffing the bar which fhould have fecured it, fubftitured her tender arm in the place, whilh was inftanty cruthed to pieces by the efforts of the amalinus.

The Obfervantines, a bianch of the Francifcans, had here a monaftery, founded by I.ord Oliphant, in 1460. It underwent the lame fate with the other. In it, lay the writers on the refornation, were found eight puncheons of till beef, wine, beer, and plenty of other provifions, befides moft excellent furniture, confifting of fheets, blankets, and beds; and yet there were only eight parfons in the convent; from whence they drew an interence how ill the monks obf twed their vows of poverty and ablti-

[^213]sence; never confidering that the religious houfes were the fupport of the poor, and the inns of the rich; and that their regular acts of charity and holpitality obliged then to keep thefe large ftocks of provifions, without affording the means of applying them to the purpofe of felfifh luxury.

The rigid order of Carthufians founded a place here. James I. on his return from his Englifh captivity, eftablifhed a convent of them in $1429^{\circ}$, as thefe monkifh lincs exprefs:

A nnus millenus vicenus ficque rovenus
Quadringentenus Scotis fert mutera plenus:
Semina forrum, germina morum, my flica mella
Cuun tibi, Scotia, fit Carthufia, fponfa novella.
The vicar of the Grand Chartreufe in Dauphiné was the firf fuperior. On the diffolution, James VI. created George Hay, of Nethercliff, commendator of this priory, with the itile of Lord, but finding the revenue too fmall to fupport the dignity, wifely refigned it into his Majefty's hands.

The church belonging to this monaftery was faid to have been one of the fineft in Scotland. In it was the tomb of the royal founder, that of his Queen, Jane, daughter of the Duke of Somerfet, fon of John of Gaunt, and that of Margaret, Queen of James IV. and daughter of Henry VII. in right of whom the crown of England devolved on the royal family of Scotiand. In the houfe was preferved the douhlet in whic: James I. was murdered; which the monks, with pious regard, fhewed, tlained with bloud, and pierced in many places with the fwords of the confpirators.

Leave Perth, and pals over the South-Inch, a green beautifully plant do. Keep afcending a hill for a confiderable fpace, and enjoy a rich view of the carfe of Gowrie, and of the firth of Tay, bounded by that fine tract on one fide, and the county of Fife on the other. On paffing the heights of this afcent, have a full view of Strathern: continue my way, for fome time, on the fine terrace that runs along the northern file; and finilh this day's journey at Dupplin, the feat of my noble friend the Earl of Kinauul.

In the houfe are feveral very fine pictures: among others
The adoration of the flepherds; the worfhipping of the wife men in the eaf; and Diogenes remarking the boy drinking out of his hand; three capital pieces, by Paulo l'auni. The figures uncommonly fine.
Two monks praying : heads. By Quintin Metfis.
A fine half length of St. Jerom, half naked: a figure of intenfe devotion. His eycs lifted up, his mouth opening. By Lamanfe.

A fine head of an old woman, looking over her Inoulder, keen and meagre. By Honthort.

Heads of Polembergh, the painter, and his wife. By Honthorf.
The head of Boon, a comic painter, playing on a lute. By himfelf $\dagger$.
Head of Spenfer the poetic ornament of the reign of Elizabeth; the fweet, the melancholy, romantic bard of a romantic queen; the moral, romantic client of the moral romantic patron, Sir Philip Sydney; fated to pafs his days in dependence, or in Atruggling againit adverfe fortune, in a country infenfible to his merit: either at court

[^214]To loofe good daye, shat might be better Ipent,
To wafte long nights in penfive difeontent ;
To fpeed to day, to be put back to-morrow,
To feed with hope, to pine with fear and forrow ;
To have his prince's grace, yet want her peers;
To have his akking, yet wair many yeara;
To fret his foul with crofes and with carea,
To cut his heart with comfortlefo defpair ;
To fawn, to crouch, to ride, to wait, to run ;
To fpend, to give, to want, to be undone *.
Or in Ireland to be tantalized with the appearance of good fortune; to be feated amidft fcenery indulgent to his fanciful mufe; yet, at length, to be expelled by the barbarous Tyrone; to have his houfe burnt, and his innocent infant perifh in the flames ; to return home; to die in deep poverty; lamenting

> That gentler wits fhould breed
> Where thick ikin chuffes laugh at a fcholler's need $\dagger$.

May it not be imagined, that, in the anguifh of his foul, he compofed his Cave of Defpair $t$, as fine a defcriptive poem as any in our language ? Might not his diftreffes furnifh him with too powerful arguments for fuicide, had not his Una, or his imate religion, fnatched him from the danger ?

Another poet, equally neglected, but of too merry a turn to fink under any preffure, is the droll Butler, whofe head, beautifully painted by Sir Peter Lely, is here alfo. This poet, intead of whining out his complaints to infenfible Majefty, rallies his monarch with the fame pleafantry that he expofed the ridiculous characters in his immor. tal poem :

This prince, whofe ready wit and parto
Conguer'd both men and women's heartes
Was fo o'ercome with knight and Ralph,
That he could never claw it off;
He never eat, nor drank, nor flept,
But Hudibras ftill near him kept;
Nor would he go to churcb, or fo
But Hudibras muft with him go;
Nor yet to vifit concubine,
Or at a city feaft to dine,
But Hudibras muft nill be there,
Or all the fat was in the fire.
Now after all, was it not hard
That he fhould meet with no reward,
That fitted out this knight and 'iquire
This monarch fo much did admire?
That he fould never reimburfe
The man for equipage and horfe,
Is fure a ftrange ungrateful thing
In any body but a King.
But this good King, it feems, was told
By fome that were with him too bold,
"If e'er you hope to gain your ends,
"Carefs your focs, and trult your friends."
Such were the doctrines that were taught,
'Till this unthinking King was brought
To leave his friends to ftarve or die;
A poor reward for loyalty $\wp!$

* Mother Hubbard's Tale.
$\ddagger$ Buok I. canto ix.
+ Quoted in the Britifh Biography.
$\$$ Buter's Remains.

Mrs. Tofts, in the character of St. Catherine : a beautiful picture. Mrs, Tofts lived at the very introduction of the opera into this kingdom, and fung in company with Nicolini; but, being ignorant of Italian, chaunted her recitativo in Finglih, in anfwer to his Italian: but the charms of their voices overcame this abfurdity. Her character may be collected from the following epigram:

> So bright is thy beauty, fo charming thy fong,
> As had drawn both the bealts and their Oopheus along;
> But fuch is thy av'rice, and fuch is thy pride,
> That the beaits mult have flarv'd, and the poet have dy'd *.

A head of Prince Rupert, by Lely, covered with a valt wig; the mfortunate mode for that great artilt, Aiff and ungraceful. Rupert after a thoufand actions, diftinguifhed as much by their temerity as valour ; after feveral battles won and loft by his excefs of courage, at once difgraced himfelf by a pannic. Accultomed to face an enemy in the field, and to act the part of the aftailant; he feems to have loft all fipitit when cooped up within walls. IIe knew to little of himfelf that he fromifed his ill-fated uncle a four months defence of the important town of Briflol; but as foon as the attack was made, he funk beneath it, and made an almott inflant furrender. After be was commanded by Charles to quit the kingdom, he flill attempted fome naval fervices; but neither acquired fame nor fuccefs. After the reftoration he recovered his former reputation; aud in the naval engagement with the Dutch, to which all later battles have been but play, his temerity feemed to have been loft : but his courage and conduct fhone with equal luftre. His active fpirit never fuffered him to reft even in the intervals of peace. Love and the Arts were his relaxations. Mifs Hughes, an actrefs, was the object of the firf. Among the lalt we owe to him the art of mezzotinto furaping. He invented a metal for geat guns, and a method for boring them. He alio taught the firf Kirkby the art of giving the fine temper to filh-hooks.

Robert IIarley, Earl of Oxford, in a gown and velvet cap. By Richardfon.
A beautiful miniature of Sir John Eamly, chancellor of the exchequer in the reign of Charles II., and one of the commifioners of the trafury in that of James II. on the difplacing of IIyde, Earl of Rochefter. By Cooper.

A head of Sir Thomas Nicholfon, attorney-general. By Jumefon.
Gcorge Llay, firlt Earl of Kinnoull, and chancellor of Scotland in 1622, who died in 1634. Ilis drefs a black robe furred; a ruff; a laced linen cap: the feals by him. A fine full length, painted in the year 1633. Aged 63. By Mytens.

His fon, the fecond Earl, captain of the guards to Charles l. a tall upright figure, with great rofes in his hoes; an active but unfortunate royalift, continued in arms as late as the year $\mathbf{1 6 5 4}$, when he was totally defeated, and made prifoner, by the ufurping powers in Scotland.

Sir George Hay of Meginnis; full length, in armour : done at Rome, 1649 . liy L. Ferdinand.

Below fairs, in one of the bed chambers, is a half-length portrait of the celebrated James Ilay, Vifcount Doncafter, and Farl of Carlitle, one of the mot fingular characters of the age. His engaging manner recommended him to the favour of James 1 . who lirfl beftowed on him the title of Lord Hay, with rank next to our barons, but without privilege of fitting in the Englith larliment. Scon after, without external ceremony, but by the meredelivery of the letters patent, before witnefles in the privy

[^215]chamber, at Greenwich, he conferred on him the honour of an Englifh peerage; and this the lawjers held to be equally valid with any formal veftiture *.
His majelty then aprocured him the fole daughter and heirefs of Lord Denny, the greatelt match of that time; and never ceafed heaping on him honour, favours, and riches, which he feems not to have coveted for any other end than to indulge his violent paflion for drefs, luxury, and magnificence. He was a man of the greateft expence, and introduced more excels in cloaths and diet than any other that ever lived $\dagger$; and was the inventor of all thofe expenfive fafions from which others did but tranfcribe their copies. His drefs in the portrait at Dupplin is an exception; being black flafhed, and puffed with white; his hair fhort and curled; his beard peaked; but when he made his public entry into Paris as ambaffador, his cloak and hofe were of white beaver, richly embroidered with gold and filver. His cloak had no other lining than embroidery, the doublet cloth of gold richly wrought, and his white beaver hat brimful of cmbroidery. His horfe was fhod with filver fhoes, flightly tacked on, fo that every curvet flung off one to be fcrambled for by the populace; and that was inflantly replaced by a farrier who attended for the purpole $\ddagger$.
Sumptuous as his apparel was on this occafion, it fell fhort of the drefs in which he ad the Earl of Holland appeared when they elpoufed, by proxy, Henrietta Maria; for they received her clad in beaten filver. They certainly did not confult the Graces in this fliffnefs ol fplendor.
In his embaffy into Germany the fame pomp followed hin. At the Hague he met with tis contraft in the frugal Maurice, Prince of Orange; who being told he ought to give an entertaiument to the great Englifh ambaffador, "Let him come," fays his highnefs; and looking over his fimple bill of farc, feeing only one pig, ordered a couple §, by way of making the treat more fumptuous, nor could he be prevailed on to alter it. What a feaft was this to him who feemed to have realized the entertainments of Sir Epicurc Mammon! who ufed to have the board covered, at the entrance of his guefls, with difhes as high as a tall man could reach, filled with the greateft delicacies; and after they hall feafted their eyes, would caufe them to be removed for a frefh fervice; who once permitted one perfon to carry off in his cloak-bag forty pounds worth of fweatmeats; another to eat a pye compofed of ambergrife, mull, and magiterial of pearl $\|$. It is not furprifing that with all thefe extravagancies ic wafted above four hundred thoufand pounds; not that his generofity, attended with uncommon affability and gracefulnefs of manners, and with a great and univerfal underftanding, fhould rivet him in the affection and efteem of the whole Englifh nation. But that with the luxury of an Apicius, he could mingle the honeft fentiments of a Clarendon in his advice to his prince $\mathbb{F}$; and that he darcd to deliver to his opiniative mafter difagreeable truths, and unpalatable counlels, are facts more aftonifhing than any of his wafteful fooleries. To conclude, he finifhed his life in $16 ; 6$, and quitted the ftage conviva fatur **, dying, as the noble hiftorian obferves, with as much tranquillity of mind to all appearance, as

[^216]ufed to attend a man of the moft fevere exercife of virtue, and with as little apprehenfion of death, which he expected many days.

In this apartment is a half-length of his fon and fucceffor to the title; but in the dining room is a full-length of the fame, a moft beautiful portrait, by Cornelius Janfen. It is difficult to fay which is moft elegant, the perfon or the drefs of this young nobleman, for it is drawn at an early period of life: all his father's fancy feems excrted in the habit, befet with loops and buttons : a love-lock graces one fide of his neck : one hand is on his ftaff of office, the other on his fide. His hiltory is but brief. He married Margaret, daughter of Francis fourth Earl of Bedford; was appointed captain of the ycomen of the guard to Charles I.; and for taking an active part in putting the commiffion of array in execution, in the county of Efex, was by the parliament fent to the Tower. In 1643 he appears among the nobility, who figned the letter at ()xford to the popular general ; but foon after deferted the royal caufe, atd took the oath appointed by parliament for thofe who flung themfelves under its protection *. At lcngth, diftrefled in his circumfances, he retired to Barbadoes $t$, an ifland granted to his father, and died in 1060 .

But the moft remarkable head is that of the celebrated Catherine, Countefs of Defmond. She lived to the age of fome years above a hundred and forty, and died in the reign of James I. Sir Walter Raleigh fpeaks of her marriage as a fact well known to all the noblemen and gentlemen of Munlter $\ddagger$. He gives us room to think that the died before the publication of his Hiftory, which was in the year 1614. Suppofing then her lady fhip's age to have been a hundred and fifty at the time of her death, fhe might have danced in the court of King Edward, at the age of nineteen, a blooming widow, that prince not dying till 1483 .

This lady was a moft popular fubject with the painters: befides this at Dupplin, there are not fewer than fuur others in Great Britain, in the fame drefs, and without any difference of feature. The moft ancient is on board, in a bed-chamber at Devon-fhirc-houfe, with her name and age (140) infcribed. The honourable John Yorke has another, at his feat near Cheltenlam. There is a fourth in poffeffion of Mr. Scott, printer, in Chancery-lane; and the fitioh is in the ftandard clofet in Windfor cafte. The laft was a prefent from Sir Robert Car, Earl of Roxburgh, as is fignified on the back; above that is written with a pen, Rembrandt, which mutt be a millake, for Rembrandt was not fourteen years of age in 1614 , at which time it is certain that the Countefs was not living §. The picture at Dupplin, which is much in the manner of that celebrated painter, is proldably a copy done by him after fome original he might have met with in his own cour. 1 ry, for it does not appear he ever vilited England.

Take the earlict epportunity of paying my refpects to Mr. Oliphant, poft-maftergeneral, at his feat of Roflie, a few miles from Dupplin. I am in a particular manner indebted to this get.tleman for the liberal concern he took in my journey, by directing that all my correfpondencies relating to it thould be freed and forwarded to me. A crue inflance of national politenefs, and a peculiar honour done to myfelf.

In my road crols the Earn, and pals by the church of Fort-teviot, once the fite of a Pictill palace, where Kenneth II. departed this life $\|$, and where Malcoln Cammore is faid to have refided. Near this place, a litile to the weft, are the veltiges of a camp, occupied by Edxard Baliol, immediately before the battle of Dupplin, in Angult 13.32. Donald, Earl of Mar, regent in the minority of David II., lay encamped on the hiill,

[^217]at no grent diftance fron Dupplin houfe. By an unhappy but common difagreement in feudal times, the other part of his forces were feparated under the Earl of Dunbar, at Auchterarder, a few miles diflant. This had determined Mar to ftand on the defenfive till he could be joined by the former; but Baliol croffing the river in the night, and beginning liis attack, he was induced partly by that, partly by the reproach of timidity from the larl of Carrick, to fuffer his prudence to give way to rafhnefs, and to renew the fight with Baliol, fupported by the Englifh archers, the beft troops then in Europe. A horrible carnage enfued: three thoufand Scots fell on the fpot, ainong whom were the flower of the nobility; with no farther lofs to the enemy than two knights, and thirty-tiree 'fquires, without that of one common man. The day was particularly fatal to the Hays. Hiftorians relate that the name would have been extinct, had not feveral of the warriors left their wives pregnant. We may be permitted to qualify this, by fuppofing, as feems to have been the cafe, that the line of the chieftain would have failed but for fuch an accident, a pofthumous child preferving the race; or perhaps the whole may have been an invention, borrowed from the Roman ftory of the Fabii.

Augutt 26. Determine on a little journey up Strathearn, and to the head of the river, at the loch of the fame name. At a fmall diftance from Dupplin, at the top of the hill, firft meet with the Roman road, twenty-four feet broad, formed with great fones, and vifible in many places. It continues one way by Tibbirmoor to Bertha, and from thence over the Tay near Perth; and to the weft paffes a little to the north of the caftle of Innerpeffery, and is continued on the other fide of the river, where it falls into the camp at Strageth, and from thence to that at Ardoch. Mr. Maitland feems to have traced the Roman roads and camps of North Britain with great induftry, and to have difcovered many that were never before obferved. It was my ill fortune not to meet with his book till I had in a manner quitted the claffical ground, therefore muft refer the reader to his firft volume of the Hiftory of Scotland for an account of thefe curious remains.

Proceed weft. Pafs by the great plantations at Gafk-hall : in thefe woods is a fmall circular intrenchment; and about half a mile farther, on Gafk-moor, is another, whofe ditch is eleven feet wide; the area within the bank fifty-fix in diameter; and between this and Innerpeffery are two others, fimilar, placed fo near, that every thing that ftirred beneath, or at a certain diftance around, could be feen, having probably been the fite of little obfervatory forts, fubfervient to the flations eftablifhed by Agricola, on his conqueft of this country.

Reach the village of Innerpeffery. At this place is a good room, with a library, for the ufe of the neighbourhood, founded by David, Lord Madderty, which ftill receives new fupplies of books. Juft beneath crots the Earn in a ferry-boat, and turning to the left vifit the Roman canp at Strageth : much of it is now defaced with the plough; but many of the vaft foffes and ramparts are to be feen in feveral parts; alfo the rows of foffes and ramparts facing the exterior fouth-weft fide. According to Mr. Gordon, who caufed it to be furveyed and engraved, the length is ninety-five paces, the breadth near eighty.

Breakfaft at Mr. Keir's, agent to the forfeited eftate of the Duke of Perth. The ground here is fertile, and about this place (Muthel) is well cultivated; the land is manured with grey marle, filled with river hells, though lodged eight feet beneath the furface; and turnips and cabbages are raifed to feed the catte; an example, if followed, of the firt importance to the country.

Proceed along the military road towards Cricf. See on the rond fide a row of neat fmall houfes, intended for quiet retreats for difbanded foldiery, but, as ufual, deferted by the colonitts. 'I his feems to have been the only Utopian projeet of the commiffioners appointed by his Majelly for the management of the forfeited ellates unalienably annexed to the crown, by the act of 25 George II. But as thefe gentlemen, with rare patriotifim, difcharge their truft without falary, they ought not to be liable to centure, like hircling plasmen, on every trifing failure *.

The fervice that this board has been of to North Britain is fo confiderable, that it merits a little farther attention than I have hitherto paid it. Firft, I muft prenife that the grofs rent of thefe eflates amounts to about eight thoufand pounds; but after paying certain annuities to the widows of attainted perfons, minifters' ftipends, and other public demands, the falaries of agents, and other neceffary officers, the clear refidue, which comes into the hands of the receiver-general, amounts to little more than 50001 .

The application of this money has proved a great benefis to the country; out of it is paid annually tivo hundred pounds to fchoolnalters ftationed in many remote parts ot the Highlands. The like fum annually for the purpofe of bringing up the fons of the poorer tenants to ufeful trades; fuch as blackfmiths, cart-wrights, coopers, weavers, flax-dreffers, \&c. \&c.; who, befides the expence of their education, are furnifhed with a fet of tools, and a reafonable aid towards enabling them to purfue their refpective trades, when they return to fettle in their own country.
The commifioners often fend the fons of lome of the better fort of tenants into the Lowlands, and fome into England, to be taught the beft fort of farming. They encourage artificers to fettle on the annexed eftates, by affording them proper accommo-- dation, and beftowing on them feafonable aids. They have from time to time expended large fums for the purpofe of introducing and eftablifhing the linen and the woollen manufactures, and for promoting fifheries in the Highlands; for making highways, and erecting bridges within the annexed eftates and countries adjacent. In particular, they beftowed, under the fanction of His Majefty's permiffion, an aid of eleven thoufand pounds towards building a bridge over the Tay at Perth; a noble work, and of great national utility.
They have caufed large traEts of barren and uncultivated grounds on different parts of the eftates to be inclofed, and planted with oaks, firs, and other trees, now in a very profperous condition, and which will in time be of confiderable valuc. They allow certain fums to tenants for inclofing their farms, free of intereft for three years, after which they are to pay five per cent. advance in their rent. They employ fkilful perfons to make trials for difcovery of mines and minerals, of medical and other ufeful indigenous plants. They lend their aid to every undertaking of public utility, that comes within the intent of the act, and conftantly keep in view and hope to accomplifh the great objects of it: "the civilizing of the inhabitants of the annexed eftates, the promoting among then the proteftant religion, good government, induftry, manufaeturcs, and the principles of loyalty to the prefent royal line."

Soon after leaving thefe houfes, the unfortunate proofs of their good intentions, ob. ferve on the right and left two great rocks, called Concraig, running eaft and weft for a vaft way; their fronts fteep, and perfectly finooth and even, fo as to be eafily mif. taken for a wall. Go over the bridge of Crief, and pafs through the town. It is plea-

[^218]fantly feated on the fide of a hill, and tolerably well built. It poffeffes a fmall thare of the coarfe linen manufacture.
Turn to the north-weft, and have in front a fine view of the ferpentine Earn, and numbers of little hills tufted with trecs, and backed by immenfe rugged mountains.
l'afs by Auchtertyre, the feat of Sir William Murray, fituated on a hill, Sprinkled over with good oaks, and commanding a moft clegant view. The pretty Loch Monivard lies beneath, whofe bottom yields a quantity of excellent marle, which is dragged up for a manure. The church of the fame name lies at a finall diftance from it. About the ycar 1511, this place was a horrid fcenc of feadal reveinge. Walter Murray, abbot of Inchaffery, having a claim on the tythes of this parih, then the property of the Drummonds, rode the boundaries in a manner that was interpreted by them infulting and tumultuous. They were deternined to repel the abbot and his party, and at the inftant were accidentally joined by an ally, the captain of Dunftaffage, who was likewife on an errand of revenging the ulurders of fome Drummonds by certain of the name of Murray. 'The abbot fearing to be overpowered, took fanctuary in the church; when a fhot from one of his party flew a follower of Dunftaffage, who took inftant and cruel vengeance, by burning the place and all that had retired into it.
Pafs by Laurs, a feat of Colonel Campbell, agreeably placed amidf woods. Go through the village of Comerie, near which are four great ftoncs, erect, and placed fo as to form a fquare. They appear to me the portal of a druidical temple, or place of worhhip, now deftroyed; and that it was meant to dignify the entrance, and inflire the votaries with greater reverence, as if it was the place of peculiar fandity. The curious, by confulting p. 187, and tab. sv. of the learned Borlafe's Antiquities, may find a complete hiflory of what thefe fones form only a part.

The valley begins now to grow very marrow, being continually interfected by fmall but beautiful hills, mofly cioathed with woods, which occafion every half mile or lefs an agreeable change of feenc; new vallies fucceed, or little plains beyond plains, watered by the L:arn, here limpid and rapid ; frequently to be croffed on gemuine Alpine bridges, fupported by rude bodies of trees; over them others covered with boughs, well gravelled over. 'The higher we adranced the more picturefque the fcenes grew; the little hills that before interfected the valcs, now changed into great infulated rocks, fome naked, others cloathed with trees. We wound about their bales frequently through groves of fnall oaks, or by the fide of the river, with continued views of the vaft rugged Grampians on each hand, foaring far above this romantic fcencry. Some little corn and grafs filled the fmall plains where there was fpace free from trees. The laft was now in harvelt ; but fo fhort, that the peafants were obliged to kneel to cut it with a fickle. Their induftry went fo far as to induce them to cut it even among the bufhes, and carry it into open places for the bencfit of drying it in the free air.

At once arrive in fight of Loch-Earn, a fine extent of water, about eight miles long and one broad, filling the whole vale. A pretty ifle tulted with trees divides the lake at this end. The boundaries are the valt and rugged mountains, whole wooded bafes bound the margin, and very rarely give any opportunity of cultivation. A fine road through woods impends over one fide, and is a ride of uncommon beauty. The great rocks that lay above us guarding the lands of Glen. Karken, are moft wild and picturefque; for a while bend inwards, then foar precipitous, prefenting a wooded front, overtopped with naked rocks, opening in parts to give a view of corn fields and farm houfes, at a dreadiul height above us.

This lake is the termination of Strathern towards the north-weft, and gives name to the river which gives name to the valley. The word is originally derived from the

Celtic, Eryn, or Heryn, the weft, as the river runs from that quarter. The Romans adopted it; and Claudian in particular fpeaks of this country, when celebrating the victories of the elder Theodofius.
maduerunt Saxoue fufo
Oreades : incaluit Pictorum fanguine Thule : Scotorum cumulos ficvit glacialis Ierne *.

The Orknies firft he dyed with Saxon gore,
Then Thule with the Pictill blood grew hot:
Icy Strathern bemoan'd huge heaps of Scots.
Return and dine at Comerie. Near this place, on a plain of fome extent, is the famous camp which Mr. Gordon contends to have been occupied by Agricola, immediately before the battle of Mons Grampius, and to which, in order to fupport his argument, he gives the name of Galgachan, as if derived from Galgacus, leader of the Caledonians at that fatal engagement. This camp lies between the river of Earn and the little fream called the Ruchel : and on a plain too contracted for fuch a number of combatants as Tacitus fays there was, to form and act in, or for their charioteers or cavalry to fcour the field. There are indeed fmall hills at the foot of the greater, where the Britif forces might have ranged themfelves before the battle; but the diftance from the fea is an infuperable argument againt this being the fpot, as we are exprefsly informed that Agricola fent his fleet before, in order to diftract and divide the attention of the enemy, and that he himfelf marched with his army till he arrived at the Grampian mountains, where he found Galgacus encamped. From the whole account given by Tacitus, it fhould be fuppofed, that action was fought in an open country, at the foot of certain hills, not in a little plain amidft defiles, as the vallies about Comerie confift of. A conjecture may be made hereafter concerning the fpot where the Grampian victory was obtained. The battle which was fought here, might have been that occafioned by the attack of the Caledonians on the ninth legion. Claffical authority informs, that, in the general infurrection of that gallant people in the fixth year of Agricola's command, he divided his army into three parts; one might be at Ardoch, the other at Strageth, the third or the ninth legion might be fent to puin up the defiles of Comerie, in order to prevent the enemy trom furrounding him, or taking advantage of their knowledge of the country, or his inferiority of numbers $\dagger$. His three divifions lay fo near, as to enable them to affift each other in cafe of an attack.

The Caledonians naturally directed their force againt the weakeft of the three armies, the ninth legion, which probably had not fully recovered the lofs it fuftained in the bloody attack by Boadicia $\ddagger$. The camp alfo was weak, being no more than a common one, fuch as the Romans flung up on their march. It has no appearance of ever having been ftative: and it is probable that as foon as Agricola had, by an expeditious march, relieved this part of his army out of a difficulty they were fairly involved in, he deferted the place, and never hazarded his troops again amidft the narrows of this hoftile country. Weapons and other inftruments have been difcovered on the fpot, in the courle of the forming the roads through this pafs. A brazen fpur, iron bands, a fort of iron hammer, and a moft curious fmall iron battle-axe, or rather pick-axe, have been met with; which are evidences of a conflict on this fpot.

[^219]The camp, notwithttanding it could not boaft of any great Atrength, is beautifully defigned. The four entrances are entire, guarded by curtains within and without; but there are no veftiges of the pretorium, w. confirms my fufpicion that the attack was begun before all the ufual works were cumpleted. On the north fide of this is another fquare entrenchment, joined to this by a regular communication. One fide had been bounded by the Ruchel, but at prefent that little fream has removed itfelf to fome diftaice. Within this entrenchunent is another : 1 cannot help thinking that thete works were intended as a ftationary fort, it having the fituation that the Romans confulted, that of a rivcr on one fide, but that it was left unfinifhed for the fane reafon that the camp was. The fize of the camp is about nine hundred and feventyfive feet by nine hundred. There are fome particularities about this place worthy to be mentioned; fuch as the mullitude of oblong hollows that lie parallel, and divided from one another by banks three feet wide, which are to be feen juft on the outfide of the northern aggee of the camp. Thefe feem to have been places for dreffing the provifions for the foldiery, not places of interment, as was fufpected; for Mr. Macnab, fchoolmafter of Comerie, at my requeft, was fo obliging as to caufe feveral of thefe holes to be dug throurh, and informed me that nothing but large quantities of wood charcoal was to be found, the cu'inary fuel; and not the eaft trace of urn or human bones were inet with to countenance the other opinion. Befides thefe are two remains of antiquities, both monumental. The one Britifh, a vaft upright fone, near the edge of the camp: perhaps erected, after the retreat of the Romans, by the Caledonians, over fome chicftain flain in the fight. The other a valt tumulus, which probably covered the flain. This was a Roman tribute to the memory of their unfortunate countrymen. Germanicus performed fuch exequies over the remains of the legions of Varus in Germany, and carried the firt fod to the heap. Primum extruendo tumulo cefpittm Cafur pofuit, gratifimo munerc in defunctos, et prafentibus doloris fociis *.

Aug. 27. Vifit Caftle 1)rummond, feated boldly on the fide of a hill, amidft a fine extent of woods, commanding a great view down Strathearn. The houfe is very unequal to the ficuation, being both mean and fmall; nor is it of any great antiquity. On the back part are fome remains of the old caftle, built by Sir John Drummond, hereditary fteward of Strathearn in 1493, after removing from the ancient feat of the family at Stobhall. The family derive themfelves from Mauritz, an Hungarian of royal blood, who, having the conduct of the mother and filters of Edgar Atheling, in their flight from the Norman ufurper, was (with his royal charge) driven by a ftorm into the Firth of Forth. The reigning mouarch Malcolm Caumore fell in love with, and married the l'rincefs Margaret, one of the filters; and, in reward to Mauritz, for his ikiliul pilotage, made him a confiderable grant of lands, and caufed him to affume the mame of Drymen, or the high ridge; but figuratively the great wave of the fea, in memory of the perils from which he had delivered the fair Queen.

The cattle was befieged immediately after the cruel burning of the church of Monivard; the chieftain and his followers having retired thither to fereen themfelves from their merited punihmment. It foon furrendered to the King, James IV. on condition that their lives fhould be preferved; but as foon as that Prince got them in his power, he carried them to Stirling, where they fufferd death for their impious barbarity. It was afterwards befieged, taken and garrifoned by Cromwell's forces, and finally, at the Revolution, totally demolifhed. The ruin of the family was completed in 1745, when the Duke of Perth, by an unfortunate attachment, forfeited the ancient eftate, to

[^220]the amount of four thoufand a year, and loft his life, worn out with the fatigues of the winter's campaign.

Continue my ride foutherly. See, on the top of a moor about four miles from Cafte Drummond, a fmall but itrong exploratory fort, called Kemp, or, more proper'y, Camp-Cafte. The area is feventy-fix feet by fixty-four, and is defended by three deep ditches. This feems to have been a place of obfervation fubfervient to that of Ardoch, two miles diflant. The Roman way, which is continued from the camp at Strageth, paffes by this fort, and leads me to the next. On each fide are to be obferved multitudes of holes, moftly of a round form, out of which probably the materials had been got for the making of the roads, fuch at leaft are frequent on the fides of the Roman roads in Fingland and in Italy.

Pafs through a fmall glen, or rather a deep bollow, which croffes the road, and fee a deep and oblong trench, perhaps made as a lodgment for a fmall party to defend this part. A listle farther, on a line with this, is a fmall round area, like thofe on Gakkmoor, but confiderably ftronger, being furrounded by not fewer than three foffes. Not remote from this, on the front of a deep dell, is a regular lunette, with a very flrong fofs; and near that again another round fort, defended by two ditches.

From this lunette is a great fofs, which paffies half a mile wide of Ardoch, and, as I was informed, fell into the water of Kneck, at two miles diftance froal its origin.
lam now in the nidat of claffical ground; the bufy feene of action in the third year of Agricola's expeditions. Through this valley he led his troops, when he carried the terror of his arms as lar as the Tay ; when he paffed unmolefted through new difcovered nations, with the elements warring againft him *. Here atter all the difficultics he met with in conducting his forces through the forefts, and wading through axtluaries firlt tried by himfelf $t$; he found an ample fpace for erecting of fortreffics, and eftablifhing of flations $\ddagger$. Of thefe

Ardoch forms the firft and chief, feated at the head of two vales, and commanding a view into each: into the fertile Strathallan, which lads to Stirling, the probable rout of Agricola; and into the Glacialis lerne, the prefcat Strathearn, an open tratt, which, under the coinmon name of Strathmore, gave full face for the operations of this celebrated leader.

As this fationary camp was the molt important, fo it was fecured with greater Atrength and artifice than any of the ref. No general ever equalied him in the judicious choict of fituation; no camp he made was ever taken by form, or obliged to furrender, or to be deferted §. This he fixed on an elevated fituation, with one fide on the fteep bank of the little river of Kneck, and being fortified on that part by nature, he thought fit to give it there the fecurity of only a fingle fols. The other three have five, if not fix folfes, of a vart depth, with ramparts of correfpondent heights between. The works on the fouth fide are much injured by the plough; the others in fine prefervation. In the area is the pratorium, or the quarter of the general, in a tolerable perfeet ftate. The area is four hundred and fifty feet by four hundred. The four porta, or entrances, are plainly to be diftinguifhed; and the road from the pratorian port to the protorium very vińble. This ttation was of force fufficient to bafle any fiege from a barbarian enemy: this was one of thofe that he made a winter garrifon during

[^221]the remaining time of his command in the country; and by layine a yearts solaga zines of provifions freed the foldiers from all apprehenfions of a ockade *, ind enabled them to make frequent fallies.

To the north of this fortrefs are the outlines of three inclofures, furrounded, if I recollect right, by only fingle ramparts. They are the works of duifent periods, or perhaps might have been the fummer camps to this ftation; or they might have been the proceftria to the place, a fort of free towns, built and inclofed with fight entrenchments, under the cover of the fort, which might be ftyled their citadel $t$. The firft is contiguous to it, and receives into the weft fide the Roman road. The meafurements of the area are a thoufand and eighty feet by eight hundred and forty. The porta are quite filled up.

Anotlier very large one lies north of this, and part of the fouth, and even trefpaffes on, and takes in a fimall portion of it. The four entrances are very vifible, and each has, by way of defence, oppofite to it, on the outfide, a fhort rampart. The dimenfions of this are two thoufand fix hundred feet, by fixteen hundred and feventy. The prefent road to Stirling runs through the midft of this.

A third, which feems never to have been completed, breaks in on one fide of the greater; it points towards the Kneck, and either never reached that water, or has been on that fide totally defaced.

Many antiquities have been found about this flation, fuch as bits of bridles, fpearheads, and armour, which were depofited at Ardoch-houfe, the feat of Sir William Stirling, where they remained till the year 1715, when they were carried away by the foldiers. Since that time a very curious fepulchral monument has been difcovered there, and prefented to the College at Glafgow. It is infcribed thus:

Dis manibus Ammonius. Damionis coh. 1. Hifpanorum fitendiorun XXVII. Heredes F. C.

This is engraven in the xvth plate of the College Antiquities, and mentioned by Mr. Horley among the Scottifh monuments. Sir William Stirling did me the honour of informing me, that feveral coins have been found there, but now difperfed; and that there is in his poffeffion an urn filled with afhes, a fragment of the unburnt fcull, and a picce of money. The laft had, in all probability, been put into the mouth of the deceafed as the fare of Charon for wafting him over Styx.

I muft not oInit, that oppofite to Ardoch, on the other fide of the Kneck, is a place called the Keir. Here, fays Mr. Gordon, (for I did not vifit it,) are a great many circumvallations and ramparts of fone and earth, and regular terraces defcending on the fide of the hill. In Wales we have many Britifh pofts that bear the general name of Caer ; and had I time to have examined it, I fhould doubtlefs have found it to have been one.

Nor muft I leave this place without obferving, that from its ramparts is to be feen the plain of Sheriffinoor, where the ill-difputed battle of Dunblain was fought in 1715. The Earl of Mar lay with his army the evening before at Ardoch.

On leaving this fine relique of antiquity, proceed down Strathearn. Pafs by a ftupendous Cairn. Crofs an extenfive black moor, and foon after reach Tullibardine $\ddagger$, a great old houfe, the original feat of the Murrays, and which gives the title of Mar-

[^222]quis to the heir of Athol. In 1715 it was made a garifon by the rebels, and for fome time impeded the advauce of the King's army towards l'erth. Before the houfe, according to honeft lindefay, was thewn the length and the breadth of the great Mip, the Great Michacl, built by James IV. and defcribed by his hiftorian with moft fcrupulous minutenefs ". The dimenfions, fays he, were exprefled here by the fhipwrights, by a plantation of hawthorns, which I looked for, but in vain.

Near the houfe is a very neat cafe of a fmall church ; but the infide is quite ruinous.
Draw near the Ochil hills, verdant and finooth; fee at a fmall diftance, at their foot, Kincardine, an ancient feat of the Montrofe family. To the left is the fimall town of Auchterardire, which, with Muthel, Blackford, Dinin, and feveral other villages, were burnt by an order of the Pretender, dated from his court at Scone, the ifth of January, and the fifteenth year of his reign, 1715-1716. This crucl command was executed in a moft uncommonly fevere feafon; and the poor inhabitants of every age and fex left expofed to the rigour of the cold. 'To palliate thefe proceedings, the neceffity of obftructing the march of the King's forces tiwards Perth was pleaded: and that the Pretender, on his flight from that city, left in the hands of General Gordon, for the ufe of the fufferers, a large fum of money, with a letter to the Duke of Argyle, requefting a proper diftribution.

Go through Dinin, and reach Dupplin at night.
Aug. 28. Ride to fee the ruins of a great cairn on the road fide, about a mile north of Dupplin, which had been lately demolifhed. On removing the ftones, were dif. covered at the bottom a great number of chefts whofe dimenfions were two feet eight by two feet two, every one confifting of five flags, forming four fides and a lid. In all excepting one were bones, and mixed with them in fome of the chefts were round perforated bodies, which I fufpect to have been druidical beads; there were befides numbers of rings, heart. fhaped trinkets, and others of a flat and oblong form, all made of a coarfe glafs.

At a fmall diflance from this place is the plain of Tippir-moor, where the Marquis of Montrofe gained a fignal viftory over the Covenanters, a rabble from the county of Fife, with an infefior army of half-armed Highlanders and Irifh. "If ever God lpake word of truth out of my mouth," fays one of the enthufiaftic divines to his friends, "I promife you in his name affured vialory this day :" but he was poffeffed with a lying fpirit ; for two thoufand of their flock fell in the field, and two thoufand more were taken prifoners. Tradition records a barbarous fupertition of the Irifh troops, who that morni ig put to death an innocent herdfman they happened to meet, from the notion that vietory would declare iffelf for the party which firft drew blood.

[^223]Reach the church of 'lippir-moor, which takes its name from a holy well, dedicated to the Virgin Mary. This parifh was fometime the refidence of the bilhop of Dunkeld. Bifhop Galfred died here in 1249; and Bifhop Sinclair in $1337^{\circ}$. The laft re-built and reftored the church of St. Serf, on the north fide of the water of Almond, once the chief of this parilh; but, as report goes, was afterwards deferted on account of a child of Lord Ruthven's being drowned in the river, in returning from being baptized.

Below the minifter's houfe is a rhomboid intrenchment, call d the Ward: but there is not the leaft tradition about the defign of it. A litte farther is a high copped tumulus or mount, flyled the round Law, fuch places being in thefe parts generally fuppofed to have been the feats of juftice.

At a finall diflance from hence arrive at the high banks above the river Almond, which here waters the plain that extends to Perth, and falls into the Tay, about a mile above that city. Near this place was feated the ancient Bertha, or J'erth, which Boethius afferts had been the refidence of the Scottifh Kings. Here, fays he, Kenneth exercifed fevere juftice on the great Banditi $\dagger$. This place, fays Buchanan $\ddagger$, was befieged by the Danes before the battle of I.oncarty ; it was totally defiroyed by a flood in 1210, and the city re-built on the fpot where the prefent Perth flands. The tide of the Thay, in former times, reached this place; from which circumftance is derived the name, Bertha, being a contraction from Aber-Tay, or the place where the Tay met the fea §. An anchor has been found here; and, as I have been told, that on digging, are to be found almoft every where old walls, vaults and cauleways, far beneath the prefent furface of the ground. The Romans had a fation on its banks, which their road pointed to: and ftill the falls of the cliffis produce many proofs of the truth of the affertion. About eight years ago, by the lapfe of a great piece of land, was difcovered great quantities of excellent iron, in fhort thick bars, from one to two feet in length, as if it had been cut for the conveniency of retailing.

Other falls have produced difcoveries ftill more fingular, and have layed open a fpecies of interment, as far as I know, hitherto unnoticed. Some years ago, in the face of a broken bank, were difcovered, fix pillars in a line, ten feet diftance from one another, and eighteen feet high from the top of the ground to the bed of the Almond, Shewing out of the bank a femicircular face. Thefe proved to have been the contents of certain cylindrical pits, funk in the earth as places of fepulture. The urns were placed in them, and the hollows filled with earth of a different kind from the banks, and fo ftrongly rammed in, as to remain coherent, after the former had in part been wafhed away. The Rev. Mr. Duff has defcribed thefe hollows in a manner fomewhat different, comparing them to the fegments of a cone, with the broader part downwards; and to have been filled with bones, afhes, and fragments of urns. Thefe funebrious veffels have been found here of different fizes; one of very uncommon dimenfions as well as materials : being of fine clay only half an inch thick; and entirely plated in the infide with brafs. It is capable of containing ten gallons; and was filled with afhes. Other urns of a fimall fize have been met with in thefe pits; one held fome wood afhes, and part of a lacrymatory; an evidence of the nation they belonged to. So that if we may rely on the map of Richard of Cirenceter, this place might have been the Orrea of the Romans.

A mile farther, on the plain, is the ancient houfe of Ruthven; once the feat of the unfortunate Gowries. It confilts of two fquare towers, built at different times; and

[^224]diftinct from each other; but now joined by buildings of latter date. The top of one of the towers is called the Maiden's leap, receiving its name on the foliowing occation: a daughter of the firft Earl of Gowrie was addrefled by a young gentleman of inferior rank in the neighbouriood, a frequent vifitor of the family, who never would give the leaft countenance to his paffion. His lodging was in the tower, feparate from that of his mintrefs;

Sed veluere parres quod non potucte vetare.
The lady, before the door was flut, conveyed herfelf into her lover's apartment; but fome prying Duenta acquainted the countefs with it; who cutting off, as the thought, all poffibility of retreat, haftened to furprize them. The young lady's ears were quick; the heard the footteps of the old countefs, ran to the top of the leads, and took the defprate leap of nine feet four inches over a chafm of fixty feet, and huckily lighting on the battlements of the other tower, crept into her own bed, where her aftonifhed mother found her, and of courfe apologized for the unjuft fufpicion. The fair daughtor dill not choofe to repeat the leap; but the next night eloped, and was married.

But this place was the feene of more ferious tranfaations, which laid the foundation of a refentment that proved fatal to its noble mafter. Here was executed the generous defign of freeing Jumes VI. from his worthlefs favourites, who were poifoning his youth with exalted notions of royal prerogative; and iaftilling into him thofe principles which, in after times, proved fo deftruclive to his progeny. Gowrie, with numbers of other peers, inveigled James into this cafte, in the year 1592 , on his return from a hunting mateh in Athol. When he was about to depart, he was fopped by the nubles in a body, who prefented him with the memorial againft the ill conduct of his principal favourites. He endeavoured to free himfelf from reftraint, but was prevented; and upon his burfing into tears, was told by the guardian of Glames, that it was better children.weep than bearded men. This was called the Raid of Ruthven. The confpirators carricd him off; but on his efcape he again refigned himfelf to Arran, a favourite void of every feecies of virtue, and even, after an act of oblivion, declared them guilty of high treafon, and actually put Gowric to death at Stirling, after a trial injurious to his Majefty's honour.

After the doubtful confipiracy of the two fons of this unfortunate nobleman at Perth, and after their deaths, and pofhumous conviction, the very name was abolifhed by act of parliament; the houfe indeed was preferved; but to obliterate all memory of fo detefted a family, even the name of that was changed to Hunting. Tower.

Near this houfe is the fone building called the Lowfwork, fo flylad from Low the firt contriver. This ferves to divert part of the water of Almond into an aqueduct, leading to Perth, which is of the greateft fervice to the various mills at this prefent time, and anciently affifed to make the place almoft impregnable, by filling the ditch that furrounded the walls. On one fide of this aqueduct is the boult of Balhoufic, a fone work, perforated with an orifice, thirty- wo inches round, guarded with a circle of iron at each end. This hole is permitted, by very ancient ufage to convey a portion of water to the mill of that name. A contract is fill extant between the magiffrates of Perth and Eviot, then the owner of Balloufie, in 1464, about the repair of this boult; and very lately the fame has been renewed by the Earl of Kinnoul, the prefent noble poffeffor of thofe lands ${ }^{*}$.

[^225]Mr. Duff from this fpot pointed to me the fite of Tillilum, near Perth, once a conrent of Carmelites, in the eaft end of the parifh of Tippir-moor. The founder is not mentioned: we only learn from Keith that Richard Inverkeithing, Bifhop of Dunkeld, built here a fine chapel and a houfe, in 1262, and that the fynods of the diocefe were wont to be kept here for fear of the Cattarranes, or the Highland robbers, till the year 1460, when Thomas Lauder, Bifhop of Dunkeld, removed them to his own cathedral *.

In my return to Dupplin had a diftant view to Methwen, a place lying between Tip-pir-moor and the Almond, noted for the defeat Robert Bruce received here from the Englifh, in 1306 , under Aymer de Valence, Earl of Pembroke.

The banks of this river, about two miles higher than Bertha, afforded an untimely grave to the fair friends, Beffic Bell, and Mary Gray, two neighbouring beauties, celebrated in an elegant Scotch ballad, compofed by a lover deeply ftricken with the clarms of both. One was the daughter of the Laird of Kinvaid, the other of the Laird of Lednoch. A peftilence that raged in 1666, determined them to retire from the danger. They felected a romantic and fequeftered fpot, on the fide of Brauchie Burn, where

> They bigged a bower on yon Burn brae, And thick'd it o'er with rafhes.
Here they lived for fome time, and as fhould feem, without jealoufy, for they received the vifits of their lover, till catching the infection, they both died, and were both interred in the lands of Lednoch, at Dronach Haugh $\dagger$.

Auguft 29. Leave Dupplin, and re-vifit Perth. Am honoured by the magiflates with the freedom of the city.

Pafs over the part of the North-Inch. On this plain, in ${ }_{139} 6$, a private war between the Clan Chattan, and the Clan Kay, was decided in a manner parallel to the combat between the Horatii and Curiatii. A cruel feud raged between thefe warlike tribes, which the King, Robert the III., in vain endeavoured to reconcile : at length the Earls of Crawford and Dunbar propofed, that the difference fhould be deternined by the fword, by thirty champions on each fide. The warriors were chofen, the day of combat fixed, the field appointed, and the King and his nobility affembled as fpectators. On reviewing the combatants, one of the Clan-Chattan (feized with a panic) was miffing; when it was propofed, in order to form a parity of numbers, that one of the Clan Kay fhould withdraw ; but fuch was the fpirit of that brave people, that not one could be prevailed on to refign the honour and danger of the day. At length one Henry Wind, a fadler, who happened accidentally to be prefent, offered to fupply the place of the loft Macintofh, for the fmall fum of a French crown of gold. He was accepted; the combat began, and Henry fairly carned his pay, for by his prowefs victory declared itfelf in favour of his party. Of that of Clan-Chattan only ten and the volunteer were left alive, and every one of them dangeroufly wounded. Of the ClanKay only one furvived, who, dectining fo unequal a combat, flung himfelf into the Tay, and fwan over unwounded to the oppofite fhore $\ddagger$.

Ride over the bridge of Perth, the moft beautiful fructure of the kind in North Britain, defigned and executed by Mr. Smeaton. Its length is nine hundred feet; the breadth (the only blemifl) twenty-two within the parapets. The piers are founded ten feet beneath the bed of the river, upon oaken and beachen piles, and ftones laid in puzzalane, and cramped with iron. The number of arches nine; of which the centre

[^226]is ferenty-ive fect in diameter. This noble werk opens a communication with all the different great roads of the kingdom, and was completed at the expence of twenty-fix thoufand pounds : of this the commiffioners of forfeited eftates, by his Majefty's permifion, gave eleven thoufand; Perth, two ; private fubferibers, four thoufand feven hundred and fifty-fix; the royal boroughs, five hundred. But ftill this great work would have met with a check for want of money, had not the liarl of Kinnoull, with his characteriftic public fpirit, advanced the remaining fum, and taken the fecurity of the tolls: with the hazard only to himfelf.

Several preceding bridges hive been wafled away by the violent floods, that at times pour down from the Highlands. The firt misfortune on record is that which befel it in 1210 , in the time of William the Lion, b-fore recited by ine. I am uncertain whether it fuftered a fecond time before the year 1329; or whether the order given that year by Robert I., for liberty of getting ftones out of the quarries of Kynkarachi and Balcormec *, for the building of that, the bridge of Earn, and the church of Perth, was not for re-building the former, which might have lain in ruins fince the days of William. After this, it met with a fucceffion of misfortunes, in the years $\mathbf{5 7 3}, 1582$, and 1589 ; and finally, in the year 1612 , when it had been juft re-built and completed in the moft magnificent manner, a fatal flood overthrew the whole : a judgment, faid the people, on the iniquity of the place, for in 1606 here was held that parliament, " at which bifhops were erccted, and the lords rode firft in their fcarlet gowns" $\dagger$. From that period it lay neglected, till the late fucceffful attempt reftored it at leaft to its former fplendor.

On reaching the caftern banks of the Tay, make a digreflion about a mile and a half to the left, to fee the ectebrated abbey of Scone $\ddagger$, feated amidtt beautiful woods, and, at a fmall diftance from the river. Long after the foundation of the abbey, Scone had been a place of note. It is called by fome the ancient capital of the Picts: but it certainly was the feat of the princes of Scotland as early as the time of Kenueth. On a tumulus, fill in being, they kept their court of juftice : on this they fat to determine the pleas between thcir tarons, whence it was called the Mons Placiti ce Scona, omnis terra, or the Mote hill of Scone. It is alfo, fometimes called Boot hill, in allufion to a fuppofed ancient practice of bringing to this place, a bootfull of earth from different eftates, when the proprictors were here to be invefted in them. Mote, in the Galic tongue, fignifies a court; fur in very early times it was cuftomary for the great people to deliver their laws from eminences of this kind. Our Druids had their Gorleddau, where they fate aloft, and delivered their decrees, their fentences, and their orations to the people.
It has been faid, that Malcolm Mac-Kenneth, or Malcolm the II. feated in the famous chair, placed on this mount, "gave and diftributed all his lands of the realm of Scotland amongt his men, and referved nathing in propertie to himfelf, bot the royall dignitie, and the Mutehill in the towne of Scone $\$$." So that it fhould feem the very exiftence of his royal dignity depended on the poffeffion of this hill of authority. But I muft remark with Mr. Guthric, that this diftribution ought to be taken in a more limited fenfe : it being incredible that any Prince ihould thus totally divelt himfelf of all the royal demefnes. It is noft probable that he only renewed to his barons the grants

[^227]of their lands, and in reward for their faithful fervices made their tenures fure and hereditary, which before they held precarioully, and on the will of the crown *.

The abbey was founded by Alexander the Firft, in 1114, and was dedicated to the Holy Trinity and St. Michacl the arch-angel, and filled with canons regular of St. Auguftine. It is faid to have been originally a feat of the Culdees, which is not improbable, as it is not to be fuppofed that fo noted a place could be deftitute of fome religious order. The revenues at the reforiation were confiderable: amounting to 114 ol . 6s 6d. Scots; befides fixteen chaldrons and two firlots of wheat ; feventy-three claldrons thirteen bolls, two firlots and two pecks of bear ; fixty-two chaldrons of meal ; eighteen chaldrons and three bolls of oats; and one laft of falmon.

In the church of $t$ lis abbey was preferved the famous chair, whofe bottom was the fatal ftoae, the palladium of the Scottifh monarchy; the fone, which had firf ferved Jacob for his pillow, was afterwards tranfported into Spain, where it was firft ufed as a feat of juflice by Gethalus, cotemporary with Mofes. It afterwards found its way to Dunflaffage in Argylefhire, continued there as the coronation chair till the reign of Kenneth II. who to fecure his empire removed it to Scone. Here it remained, and in it every Scotifh monarch was inaugurated till the year 1296, when Edward I. to the mortification of North-Britain, tranflated it to Weftminfter abbey; and with it, according to ancient prophecy, the empire of Scotland.

The ceremony of placing the new monarch in the coronation chair was hereditary in the ancient Earls of Fife. Edward, in the midh of his ufurpation, paid a ftrict attention to that point : the office was in Duncan the eleventh Earl; but as he was under age and with the King, I find in Rymer's Foedera $\dagger$ a writ dated Nov. 21, 1292, at Norham, directing one John of Perth, inftead of the young Earl, to perform the ceremony of putting his creature John Baliol into the regal chair at Scone.

This abbey, with the church, in the year 1559, underwent the common fate of religious houfes, in the furious and ungovernable feafon of reformation. This was demolifhed by the zealots of Dundec, in refentunent of one of their company being killed by a flot from the houfe. The nobility who were prefent ftrove to divert their rage, being more interefted in the prefervation, from the profpect of fharing in the plunder of the church.

In the church is the monument of Sir David Murray, anceftor of Lord Stormont, the prefent owner of the place. Sir David's figure is placed in an attitude of devotion, with a long infcription, relating his lineage, offices and virtues. Charles II. was crowned in this church before he fet out in the expedition that terminated in the fatal battle of Worcefter. 'The crown was placed on his head by the Marquis of Argyle, the wily peer being for once cheated by the young prince, who flattered him with the hope of feeing one of his daughters mother of a line of kings $\ddagger$.

In the year 1715 the old Chevalier refided here for fome time, and iffued out fix proclamations, among which was one for his coronation on the 23d of January 1716; but before that time his refolution failed, and he fied from a crown he was unworthy to wear. His fon, in 1;45, made the place a fhort vifit.

Return the fame road ; pafs near the end of the bridge of Perth, and after a fhort fpace, ride beneath the vaft rocks of Kinnoull, which threaten deftruction to the traveller, from the frequent falls from this black and ragged precipice. Many awful ruins are fcattered far beyond the road; one of which a few years ago overwhelmed a fmall.

[^228]cottage and the poor inhabitants. Bcautiful agates are frequently found in this hill. In exanining the fragments that lay beneath, I difcovered a confiderable quantity of lava, a proof of its having been an ancient volcano.
In tlee church of Kinnoull is the magnificent monument of Chancellor Hay ". His lordhip is reprefented flanding under a rich entablature, fupported by three pillars: two elegantiy carved, the third plain, furrounded by a coronet. His drefs is a long gown, great ruff, and fmall clofe cap. The feals and a fcull are placed on a table before him. Beneath is a fpace defigned for the epitaph, but left uninfcribed.

Soon reach the noted Carfe of Gowric, a fine tract that extends in length fourteen miles, and in breadth four, bounded on the north by a range of hills called the Braes of Gowrie, and by the river Tay on the fouth. Too much cannot be faid of its fertility: It is covered with corn of every fpecies; peas and clover all in great perfection; varied with orchards, plamtations, and gentlemen's feats. The roads are planted on cach fide with trees, which, with the vaft richnefs of the country, reminded me of Flanders; and the extenfive corn lands, with the mud-houfes, dabbed on the ouffide with cow-dung, for fuel, imnediately brought before me the idea of Nortiamptonfhire. It agrees with the laft alfo, in finding during fummer a great deficiency of water for common ufcs, and a great lack of fuel all winter; fo that the following is become a proverbial faying, (falfe, I truft, in the laft inftance) " that the Carfe of Gowrie wants water all fummer, fire all winter, and the grace of God all the year through."
The view of the Tay and the oppofite fhore add greal charms to the view. On the fouthern bank ftands Elcho, a poor convent of Ciftertian nuns, founded by David Lindfay of Glanerk and his mother, on a piece of ground belonging to Dumferline; endowed afterwards by Madoch $\dagger$, Earl of Strathearn, with the lands of Kinnaird in Fife. But the reclufes were never very opulent, as their whole revenue at the Reformation amounted but to fixty-four pounds fix fhillings and eight-pence.

A little further the Tay begins to fpread confiderably, and to aflume the form of an aftuary. At a hamlet called Hawkeftone, fee on the road fide a very large ftone, faid to be that on which the bawk of the peafant Hay alighted, after it had performed its flight round the land which was given to the gallant ruftic in reward of his fervices: on it is infcribed in modern letters, I know not why, the word Caledonia.

Reach Errol, a fmall town, renarkable for the beautiful views, particularly thofe from the gardens of Mr. Crawford, feated on a knowl, with a rich view of land or water from every part. Here I remarked the arbor vita of a very uncommon fize, being five feet fix inches in circumference. The feeds ripen here very well.

Obferve, about a mile to the left, Cafte-Lion, a feat of the Lions Earls of Strathnore.
The Carfe of Gowrie terminates a few miles farther, when the land grows higher, but fill continues fo "e and improved.

The fouthern boundary of the Tay is the fhire of Fife, a beautiful extent of country, rifing gently from the water cdgc. Newburgh, a port of Perth, where veffels of three hundred tons may lie, is to be feen on that thore, a little eaft of Abernethy. Farther on are many places of note that lie on that coaft, and were feen in the courfe of this day's ride. The firt is lindores, a little calt of Newburgh, a rich abbey, founded by David Earl of Huntingdon, brother to William the Firt, on his return from the Holy Land, about the year 1178 . The pious inhabitants were Tyronefian monks, drawn from the abbey of Kelfo, whom Boethius pronounces to have becn famous for the inno-

- Sir George Hay firl Earl of Kinnoull.
$\dagger$ Probably Malaife or Maurice, for 1 fee no Madochs among the Earle.
cency of their manners. Their revenue in money was two thoufand two hundred and forty pounds fourteen fhillings and fourpence Scots; and they had befides twentyotwo parifh churches dependent on them. The Duke of Rothefay, eldeft fon to Robert II., who was ftarved to death at Falkland by his uncle, was, according to report, buried in the church of this abbey.

A few miles more to the caft, on the fame thore, are the ruins of Balmerino, or Balmerinoch, a noof beauiful abbey of Ciftercians (tranfplanted from Melrofs), begun by Alcxander 1I. and his mother Emergarda, in 1229, on lands purchafed by her for a thoufand marks from lichard de Ruele, who refigned this and the lands of Cultreach and Ballindean to her in 1215 , for this pious ufe. Various other donations were beflowed on it ; anong which may be reckoned Corbie and Birkill, and its parks, hequeathed by Lawrence of Abernethy, becaufe the royal foundrefs had left him in hor will a legacy of two hundred marks fterling. The preceptory of Gadvan in Fife alfo belonged to this abbey, and two or three of the monks always refided on it. The revenues of the place were not large, not exceeding feven hundred and four pounds two Shillings and tenpence halfpenny in Scots money. At the Reformation Balmerino was evecled into a barony, in favour of Sir James liphinfton.

Near the village of Invergowrie quit the fhire of Perth, and enter that of Angus, and after a ride of three or four miles arrive at Dundee, a well-built town, feated on the wituary of the Tay, about eight miles from the mouth, in lat. 56.-24. 30. long. from London 3-5. 3. weft, and is the third in rank of the royal boroughs. The number of inhabitants in the town and fuburbs amount nearly to fourteen thoufand. Here are three ellablifhed churches, with three minifters and two affiftants, for the difcharge of the dury of the parifh, which includes a certain diftrict near the town; befides, there are two epifcopal chapels, a meeting-houfe for the Glaffites *, and thrce for the burgher and antiburgher feceders.

The town is feated on the fide of a hill, and is rather irregularly laid out. Above it is Law of Dundee, a mark to feamen. The harbour is artificially protected by piers, and furnifhed with a quay, on which are three very handfome public warehoufes, built in 1756. The largeft is compofed of a centre a hundred feet long, with two handfome wings, all built of free-ftone, and their corners adorned with ruftic work. The harbour is very commodious, and very acceffible by people that are acquainted with it. There are on the north fhore, near the entry of the æftuary, two light-houfes, very completely finifhed, and well attended, bein the property of the fraternity of feamen at Dundee; but the want of a new furvey is inuch to be regretted, as the fands have of late years thifted: the public therefore look up to the admiralty expecting its attention in this important article. The port will contain about two hundred fail, has at fpring tides fourteen feet water, and admits veffels of upwards of three hundred tons burden. There are at prefent about feventy fhips belonging to the place, and one of two hundred and fixty-four tons, that is cmployed in the Greenland whale-fifhery. An attempt is now making to revive the coafting cod-fifhery.

The manufactures of Dundee are linen, efpecially of Ofnaburghs, fail-cloth, cordage, threads, thread-Itockings, buckrams (a new work in Scotland), tanned leather, and fhoes, for the London market; hats, which has fet afide their importation from England for the fupply of thefe parts; and laftly, as an article of trade, may be mentioned a fugar-houfe, erected about feven years ago, which does confiderable bufinefs. Here was, in memory of man, a manufadure of coarfe woollen cloth, called plaiden, which

* Or the followers of Mr. John Glafs, founder of the fect of Independents in North Britain. vol. IH.
was exported undreffed, undyed, to Swoden, Germany, and the United Provinces, for cloathing the troops of thofe countries; but this was fuperfeded by that of ()fnaburghs, which commenced in the year 17.7, and is now the ttaple of the county of Angus. In $1773,4,44^{8,4} 40$ yards were Itamped; the price from fourpence to fixpenee a yard. Thefe are fhipped for Iombon, Newaftle, I, eith, Burrowthonefs, and Glafrow, from whence they are fent to the Welt Indies and America, for the chathing of the flaves. To the fame places are alfo exported threads, foap, fhocs, teather, an If fallery goods. To Sweden and Norway are fent potatoce, and drefings of flax; and in times of penty, when exportation is allowed, corn, meal, and flour. Tine falmon taien near BroughTay cafte is fent falted to Holland.

In refpect to imports, it receives from North Amcrica, Ruffin, Momet and Dantzick, Sweden, Norway, Spain, Portugal, the ufual exports of thote countries; and from Holland undrett flax, for the manufacture of threads and fine lincus, pot-a hies, linfeed, clover-feed, old iron, and madder, for the ufe of dyers. Such is its prefent Itate.

The public buildings, ancient and modern, are thefe: the magaifieent Gothic tower of the old church, a vencrable and fuperb building, now tandiag by itfelf, giving reafon to every fpectator to regret the lofs of the body. The only remains are the cho $r$, called the Old Kirk, whore weft end is croffed by another building, diviled into two places of worfhip, evidently of a later conflruction, and probalbly built out of the ruins of the old : the latt, when entire, was in form of a crofs, ant, according to Boethius, founded by David Earl of Huntingdon, brother to William I. of Sconlank, and dedicated to the blefled Virgin. This happened on his return from his third crufade, in which he had accompanied Richard 1. in 1189, and carried with him five hundred of his countrymen. After undergoing varions calamities incident to thefe pious warriors, on his return to his native country he was nearly perifhing by flipwreck in fight of this place, when vowing to erect a temple to the Virgin he was intlantly relieved, and fhewed his gratitude in this fuperb pile *. It muft be confeffed that he called in the aid of other well-difpofed people; for he obtained a mandate from the Pope, fill to be feen in the Vatican $t$, recommending, to aflift in the expence, a collection throughout Chriftendon.

The time that part of the body of the church was deftroyed is not certainly known; it was probably at the time of the Reformation, when the zealots of this place inade excurfions far and wide to deftroy the churches of other cities.

This place had fevcral religions houfes; onc of Mathurines, founded by Janes Lindfay, whofe charter was confirmed at Perth, in 1392, by Robert III. Another of Dominicans, by Andrew Abercrombie, a burgefs of the town. A third, of Francifcans, by Devorgilla, daughter to Alan Lord of Galloway; but that was fupported only by alms. Lady Beatrix, dowager of William Earl of Errol, gave them a hundred pounds Scots, on condition that the monks prayed (with a low voice) for her foul, and that of her humband. In 1482 they confifted of a warden and fourteen brethren. The fourth was a nunnery, whofe name is barcly mentioned $\ddagger$.

The town-houfe is a moft elegant fructure, begun in the year 1730, and finifhed in 1734. It was carried on under the directions of the father of the gentlemen to whom we owe the Adelphi. It contains the pofl-office, the court-room, with vaulted repotitories for the records, the guildhall, and the council-chamber.

[^229]Here is a new church, built in a flyle that does credit to the place, and winch fhews an enlargement of mind in the preflbyterians, who now begin to think that the Lord may be praifed in benuty of holinefs.
'lhere is not a relique left of the ancient caftle; but its fite may be found where the Lion inn row ftands.

Two or three miles caff of Dundee, on the river, are the ruits of the fort called Brough-Tay Crag; over againft which is Parton Crags, or Eaft Ferry, from whence is the road to St. Andrew's. This place was taken by the Englifh ffeet, in 1547, on the invafion of Scotand by the Duke of Somerfet. The Einglifh remained in poffefion of it till 1550 , when it was furrendered to the French under M. Defle, who by its capture freed the Scots from a moft troublefome neighbour.

This place derives its name from Dun, a hill, and Dee or Tay, the river, on which it ftands; for Tay feems to have been corrupted from Dee, a common Celtic name for feveral rivers. Bocthius fays that its ancient name was Alectum, but I cannot learn on whet foundation. The Roman fleet cutered this æfluary, and might have had a flation in fome part; but from diligent enquiry I cannot learn that there have been either camp or road, or coins, or any other traces of that nation difcovered in the neighbourhood.

The firt notice I find of it in hiftory is on the occafion before mentioned, when the Earl of Huntingdon founded its church, and changed, as Boethius afferts, its name from Alectum to Dei Donum. It was a confiderable place in the time of Edward I, who in his northern progrefs, in 1291, reduced it and other places that lay in his way. About the year 1311 it was in poffeffion of his fon, who placed there as governor William de Montfichet *. In 1423 it entered into an obligation with Edinburgh, Perth, and Aberdeen to raife eleven thoufand pounds towards paying the ranfom of James I., then prifoner in England $t$. This is a proof of its wealth at that time; and an evidence of its commerce in ${ }_{1}+58$ may be collected from the royal privilege granted to it by James II., of the following tolls towards the repair of the harbour, which were thus impofed : on every fhip ten fhillings; on every crayer, bufs, barge, or ballinger, five fhillings; on every fercoft, twelve-pence; on every great boat, fix-pence $\ddagger$.

But Dundee received a dreadful check by the fiege it underwent by the Englifh, under Generial Monk, in September 1651. The governor, Major-general Lumfden, was fummoned; but returning a very infulting anfwer, Monk determined to ftorm the place. By means of a Scotch boy he difcovered the fituation of the garrifon, that it was fecure, and generally by noon in a flate of intoxication. He made a feint, as if he intended to raife the fiege; but returned inftantly with his forces fupplied with fheaves of wheat cut out of the neighbouring fields; with them they filled the ditch, fucceeded in their attack, and put about fix hundred of the garrifon to the fword. The governor perifhed, as Sir Philip Warwick fays §, by the hands of a fanatic officer, after quarter was given, to the great concern of the humane Nonk. The booty was immenfe, for befides the wealth found in the town, there were fixty fail of fhips in the harbour $\|$.

I mult not quit Dundee without faying that Dulhope, the feat of the gallant Vifcount Dundee, lies a little north of the place. It had been the ancient refidence of the Scrymfeours, and was rebuilt in 1600 by Sir John Scrymfeour, a family ruined in the civil wars. It fell at length to the crown, and was granted by James Vil. to the Vifcount, then only

[^230]Graham of Claverhoufe ; on his heroic death it was given to the Marquis of Douglas, and ftill remains in that houfe.

Aug. 30. In the morning continue my journey, and turn from 1)undee northward, The country grows a little more hilly; is ftill much cultivated; the foil is good, but the fields of wheat grow fcarcer. Leave on the left Balumbi, a ruined caftle with two round towers. On the right is Clay-pots, one of the feats of the famous Cardinal Beaton.
Leave, unknowingly, to the weft a curious monumental ftone, fet up in memory of the defeat of Camus, a Danifh commander, flain on the fpot, about the year 994. According to Mr. Gordon *, it is in foom of a crols. On one fide is a molt rude frgure of our Saviour crucified ; beneath, a ftrange Centaur-like monfter with fix legs. On the upper part of the other fide is a man, his head furrounded with a glory, and an angel kneeling to him. Beneath are two forms like Esyptian nummies; and in the third compartment, two men with bonnets on their heads and books in their hands. The battle was fought near the village of Barray, where numbers of tumuli mark the place of flaughter; but Camus flying, was flain here. Commiffary Maule mentions a camp at Kace-boddo, fortified with rampart and fofs, to this day ftyled Norway dikes.

Reach Pammure, a large and excellent houfe, furrounded by valt plantations. It was built about a hundred years ago, on the fite of the feat of the ancient family of the Maules, in the barony of Pammure, conveyed into that houfe by the marriage of the heirefs of the place, daughter of Sir Willian de Valoniis, lord chamberlain of Scotland in the reign of Alexander II. This barony and that of Banevin had been granted to his father Philip de Valoniis, and contirmed to himfelf by William to be held by the fervice providing half a foldier whenfocter demanded $\dagger$.
In the houfe are fome excellent portraits of diftinguifhed perfonages; among them a half-length of the Earl of Loudon, chancellor of Scotland during the civil wars of the laft century, efteemed the mott eloquent man of his time, and the moft active leader of the covenanting party. We may learn from his hiftory, that the regard pretended by the faction for the interefts of religion was mere hypoctify. The proof may be collected from the imprifonment of this nobleman in the Tower, in the year 1639, for the higheft 2at of treafon; for joining in an offer to put his country under the protection of the French king, provided he would aflitt the party in their defigns $\ddagger$; for offering to unite with powers the molt arbitrary in Furope, and the moft cruel and inveterate perfecutors of their Calviniftical beethren; but the violence of party would have induced then to have heard a mals which they pretended to abhor, provided they could reject the innocent liturgy, and tyramize over fimking monarchy. Afier the quarrel of the Scots with the Englifh parliament, he united in the endeavours of his countrymen to reflore Charles 11., yet paffed fentence, as chancellor, on the gallant Montrof, with all the fournefs of his old frimens, and with all the infolence of a Jefferies. On the defeat of the King at Worceiter, his new attachments wbliged him to avoid the rage of the ruliag powers: he fled to the Ilighlands, at length made his peace, and lived in obfcurity till his death in $166_{3}$.

A haiflength of the firft Earl of Pammure, in his robes. He was lord of the bedchamber to Charles l ., and a faitifful fervant to lis Majefty in all fortunes. After the King's dath he retired into Scotiand, where, in a 6,5 , he was fined, by an ordinance of the Protcter's council, in the fum of ten thoulma pounds, for no other reafon than that his fons were engaged in the rogal caufe.

[^231]James Earl of Panmure, in a long wig, and armour, difgraced by James II. for non. compliance with that Prince's defigns in favour of popery; yet, at the convention of the eftates at the Revolution, was a ftrenuous advocate in defence of his old mafter. In 1715 carried his attachment fo far as to join the infurgents in favour of the fon; behaved with ga! nntry at the battle of Sheriff-moor, and forfeited his eftate and honours in the caufe. siis nephew, by his merit, recovered the title, being created on that fcore Earl of Pammure in the kingdom of Ireland; and fortune, in this inftance a judicious goddefs, fupplied him with the means of purchafing the large family eflate.

A fine head of Prince Rupert, looking over one fhoulder.
A fine portrait of the Duke of Monmouth, fitting : his hair long and beautiful; his drefs, a brown fattin mantle, and a laced cravat.

A head of the Duke of Hamilton, killed by Lord Mohun.
Charles XII. of Sweden, with his ufual favage look.
The Duc d'Aumont, the French ambafialor in the reign of Queen Anne, who came over on the occafion of the peace. He is faid to have paid this fine compliment to the troops that had helped to reduce the dangerous power of his mafter, by obferving emphatically, at a review near London, "that he was very glad to fee them in that place "."

Mr. Coleftill of Chigwell, Yorkfhire, a half-length, in a black cap, furred gown, with a gold chain.
His daughter, grotefquely dreffed in black; her arms perfectly heriffès with points. She was the lady of Sir Edward Stanhope, prefident of the north, whofe picture in fmall is by her.

Auguft 31. Proceed eaftward through an open country, and in two hours reach Aberbrothic, or Arbroath, feated on the difcharge of the little river Brothic into the fea, as the name imports; aber in the Britifh implying fuch a fituation. It is a fmall but flourifhing place, well built, and fill encreafing: the town has been in an improving ftate for the thirty laft years, and the number of inhabitants greatly augmented. This is owing to the introduction of manufactures; the number at this time is faid to be about three thoriand five hurdred : thefe principally confift of weavers of coarfe brown linens, and Some fail-cloth; others are employed in making white and coloured threads; the renainder are cither engaged in the fhipping of the place, or in the neceffary and common mechanic trades.

The brown linens, or Olinaburghs, were manufactured here before any encouragement was given by government, or the linen company erected at Edinburgh. The merchant who firtt introduced the manufacture is itill alive, and has the happinefs of feeing it overfpread the comitry. It appears from the books of the ftamp.office in this town, that feven or eight hundred thouland yards are annually made in the place, and a fmall diftrict round. Befide this export, and that of thread, much barley, and fome wheat is fent abroad; but fo populous is the country, that more than an equivalent of meal is imported.

The foreign imports are flax, flax-feed, and timber, from the Baltic. The coaft. ing trade confits of coals from Borron fonefs, and lime from Lord Elgin's kilns in Fife. The firt forms a confiderable article of commerce, this being the laft port to the north into which that conumodity may be brougit, free from the heavy duty commencing after it has paffed the promontory, the Red Head. The coalt from the Buttonefs, or northern cape of the lirth of lay, is cantirely deftitute of a port, as far as the harbour

[^232]of Montrofe. In fact this eaftern fide of the kingdom is as unfavourab'e to the feaman as it is to the planter. Whofoever will give thenfelves the trouble of cafting their eye on the map, will perceive that from the Humber's mouth to John-a-Croat's houfe, there is an uncommon fearcity of retreats for the diftreffed navigator: they oceur feldom, and have often near thei entrances the obftructions of fand to render the accels tificult. On the weftern fide of the kingdom nature haih deale out the harbours with a perfect profufion; not a headland can be doublell, but what offiers a fale anchorage to the diftreffed vefel.

Aberbrohic would have wanted a harbour, had not the aid of art been called in; for in default of a natural, a tolerable artificial one of piers has been formed, where at fpring tides, which rife here fitteen fect, hips of two hundred tons can come, and of cighy at neap-tides; but they mutt lie dry at low water. This port is of gre t antiquity: there is an agreement yet extant betwen the abbotand the burghers of Aber. brothic, in the year 1194, concerning the making of the harbour. Hoth parties were bound to enntribute thair proportions; but the largelt fell to the flase of the former, for which he was to recese an annual tax, parable out of every rood of land lying within the borough. 'Tlis is a royal borough, and, with Montrofe, Brechin, huverbervie, and Aberden, returns one member to partiment.

The glory of this plice was the abbey, whole very ruins give fome idea of its former magnificence: it lies on a rifing above the town, and prefents an extenfive and venerable front; is moft delicioufly lituated, commands a view of the fea to the ealt, of a fertile country to the weft, bounded by the Grampian hills; and to the fouth, of the op mings into the firths of Tay and Forth.

The abbey was once inclofed with a ftrong and lofty wall, which furrounded a very confiderable tract : on the fouth-weft corner is a tower, at prefent the fteeple of the parich-church; at the fouth-ealt corner was another tower, with a gate beneath, called the Darn-gate, which, from the word darn, or private, appears to have been the retired way to the abbey. The magnificent church fands on the north fide of the fquare, and was built in form of a crofs: on the fide are three rows of falfe arches, one above the other, which have a fine effect, and above them are very high windows, with a circular one above. In April laft a part adjoining to the weft end fell fuldenly down, and deftroyed much of the beauty of the place. The length of the whole church is about two hundred and feventy-five feet, the breadth of the body and fide-aifes, from wall to wall, fixty-feven : the length of the tranfept an humdred and lixty-five feet; the breadh twenty-feven.

It feems as if there had been thrce towers; one in the centre, and two others on each fide of the weftend, part of which ftill remains. On the fouth fide, adjoining the church, are the ruins of the chapter-houfe; the lower part is vaulted, is a fpacious room, well lighted with Gothic windows. A bove is another good apartment.

The great gate to the abbey fronts the north: above the arch had been a large gallery, with a window at each end. At the north-welt corner of the monaftery fland the walls of the regality prifon, of great ftrengrth and thicknefs: within are two vaults, and over them fome light apartments. The prifon did belong to the convert, which refigned this part of its jurifdiction to a layman, whom the religious elected to julge in criminal affairs. The family of Airly had this office before the Reformation, and continued poffeffed of it till the year 1747, when it was fold and vefted in the crown with the other heretable jurifdictions.

In the year 1445, the election of this officer proved fatal to the chieftains of two noble families. The convent had that year chofen Alexander Lindefay, eldeft fon of
the Farl of Crawford, to be the judge or bailey of their regality; but he proved fo expenfive by his number of followers, and high way of living, that they were obliged to remove him, and appoint in his place Alexander, nephew to John Ogilvie of Airly, who had an hereditary claim to the place; this occafioned a crucl feud between the families; each affembled their vaflals, and terminated the difpute near the town. The Lindfays were victorious, but both the principals fell in the battle, with about five hundred of their followers.

Very few other buildings remain. In the area within the great gate is to be feen part of the abbot's iodgings, built on ftrong vaults, three ftories high, confifting of fome targe ind handfome rooms.
This :abley was founded by William the Lion in 1178, and dedicated to our celebrated pinate Thomas it Becket. The founder was buried here, but there are no remains of his tomb, or of any other, excepting that of a monk of the name of Alexander Nicol. The monks we:e of the Tyronenfian order, and were firlt brought from Kelfo, whofe abbut declared thofe of this place on the firft infitution to be free from his jurifliction. 'The laft abbot was the fanous Cardinal Beaton, at the fane time archbifhop of St. Andrew's, and, before his death, as great and ablolute here as Wolfey was in Fugland. On the Refirmation, Juhn Hamilton was commendatory abiot. In $16: 8$ it was erected into a barony, in favour of his fon James, then was conveyed to the Earl of Dy fart, and finally bought by Patrick Maule of Panmure, with the patronage of thirty four pounds.

The revenues were very great: in the year 1562, they were reckoned two thoufand five hundred and fifty-three pounds Scots, befides the valt contributions of corn from the tenants, who paid their rents in kind. The ordinance for the yearly provifion of the houfe in 1530, will ferve to give foone idea of the great charity and holpitality of of the place. There was an order for buying,

$$
\begin{aligned}
& 800 \text { weathers, } \\
& 180 \text { oxen, } \\
& \text { is barrels of falmon, }
\end{aligned}
$$

$$
1200 \text { dried cod.fifh. }
$$

All which appears additional to the produce of their lands, or what thei: tenants brought in. This profufion of ftores would feem very extraordinary, when the rumber of monks did not exceed twenty five: but the ordinance acquaints us, that the appointments of that year exceeded thofe of 1528, notwithitanding in the latt the king had been there twice, and the archbihhop thrice. In the chartulary of the houfe, thele vifits are complained of as an intolerable burden, and with reafon, for befides loading the abbey with valt expence, it deprived then of the means of exerting their ufual holpitality towards the poor.

King John, the Eaglifh monarch, granted this monaftery moft uncommon privileges; for, by charter under lis great feal, he exempted it a teloniis at conjuctudinc in :wery part of England, except London.

In this monaftery Robert Bruce convened the notility of this kingdom, who here framed the lpirited letter and remonfrunce to Pope John, dated April 6, 1320; in which they trace the origin of the Scots from the greater Scythia, through ihe Tyrrhenian fea, and the pillars of Hercules into Spain; they inform him that they expelled the ancient Britons, deflroyed the Picts, and maintained this kingdom free, through a a race of 113 kings of uninterrupted lineal defcent. They ftrongly allert their independency of the Finglifh, and difelain the right that Edward 11. pretended th the kingdon. They entreat his Holinefs to admonilh Edward to defitt from his hivitilities;
and heroically aequaint the Pope, that even thould Bruce defert their caufe, they wouhd choofe another leader, (folitte notion had they evou then of hereditary right,) and never fubmit everi to extromity to the unjult pretenfions of the Eimpling monarch. "Cai (Roberto) tanquan illi per quem fatus in populo tacta eft, pro nollra libertate tuenda tam jure quan meritis tenemur et volumus in ounibus adherve; yuem fi ab inceptis deffleret Regi Anglorum aut Anglicis nos ant regmum notrum volens fubjicere, tanquam inimicum notrum, et fui noftrifque juris fubverforen, flatime capellere niteremur, et aliun regem noltrum, qui ad defentionem notrum fufficeret, faceremus. Quia quamdiu centum vivi remanferint, munquam Anglorum domino aliquatenus volumus fubjugari; non enim propter glorian, diviais aut honows puguamus, fed propter tibertatem folummodo, qui nemo bonus nifi fimul cum vita amistio."

There is no immediate anfwer from the l'ope extant; but there is reafon to fuppofe that this very important remoathance had great weight; for in Augult of the fame year, he fent a bull * to Edward. to exhort him to make peace with the Scots, in order that the operations againtt the luffuds in the Holy land might be purfoed without interruption. There is alfo a letter from his Holinefs to the lame prince, 10 acquant him, that at the earneft requelt of Rohert, he had fuppended the fentence of excommunication, perhaps through fear of lofing the whole Scottith nation by too rigorons a procedure.

After dimer continue my journey towards Montrofe. I am informed that near the road ftands the church of St. Vigian, a Gothic building fupported by pillars, with ifles on each fide, and ftanding on a prevey green mount, in the midtt of a valley. The church returns a fine echo, repeating difinctly an hexancter verfo.

Pafs through an open country, and obferve, that the plantations are vally moffed, being expofed to the cankering blafts of the eaftern winds, which bring with them froquent rains, and grat volumes of black fog. Ride by extenfive fields of peas and potatoes; the laft a novelty till within the latt twenty years.

The open country continues as far as Luman, wh re the inclofures commence. To the right is the promontory called the Red-head, forming one horn of Luman bay, open to the eaft wind. The fhore in this part is high, bold, and rocky, and often excavated with vaft hollows, extremely worthy the attention of the traveller; no place exhibits a greater variety; fome open to the fea, with a narrow mouth ; and, i::ternally, infanily rife ino lofty and facious vaults, and fo extenfively meandring, that no one has, as yet, had the hardinefs to explore the end.

Others of thefe caves fhew a magnificent entrance, divided in the middle by a valt column, forming two arches of a height and grandeur that thames the work of art in the noblef of the Gothic cathedrals. The voyager may anufe himfelf by entering in a boat on one file of the pillar, furrounding it, and returning to the fia on the other. But the moft aftominhing of all is the cavern, called the Geylit Por, that almott realifes in romantic form a table in the Perfian Tales. The traveller may make a confiderable fubterrancous voyage, with a picturefque feenery of lofy rock above, and on every fide; he may be rowed in this folemn leene till he finds himfelf fuddenly reftored to the fight of the heavens; he finds himfith in a circular chafin, open to the day, with a narrow bottom, and extenfive top, widening at the margin to two hundred feet in diameter; on gaining the fummit a moft unexpected profpect appears; he rinds himfelf at a diltance from the fea, amidft corn ficlds, enjoys a fine view of the country, and a gentleman's feat at a fimall diftance from the place out of which he emerged. Such
may be the amufement of the curious in the calms of the fummer-feafon; but when the ftorm is directed from the eaft, the view from the edge of this hollow is tremendous; for from the height of above three hundred feet, they may look down on the furous waves, whitened with foam, and livelling in their long confinement.

The cliffs of this fhore are not without their fingularities : peninfulated rocks, of ftupendons height, jut frequendy from their fromt, precipitous on all fides, and walhed by a great depeth of water: the ithmus that joins them to the land is extremely narrow, impafable for any more than two or three perfons a.brealt; but the tops of the rocks fpread into verdant areas, containing velliges of rude fortifications, in ancient and barbarous times the retreat of the neiphbouring inhabitants from the too powerful invader.
On the fouth fide of Lunan water is Red-caltle, once a retidence of William the I.ion. After crolling that water, the country becomes inclofid, and divided into fields of about eight or ten Scotch acres in fize, fenced wilh walls or banks, planted with French furze, or with white-thorn. A great fipit of huibandry appears in thefe parts, eljectially in the parih of Craig, which I now enter. The improvements were originally begum by twis brothers, Meffrs. Scotts, of Roflie and Duninald, who about forty years ago made their experiment on an eftate of cight or nine hundred a year value; and at prefent they or their heirs find the reward of induftry by receiving from it three thouland pounds per ammom. The principal manure is lime, but every ipecies of good hufbandry is practifed here, and the produce is correlpondent; all kiads of grain yied fix from one; the grals-land is fet from twenty-five to thirty filllings an acre. The improvements made of a farm on tive hundred a year, held by Mr. Patrick Scott, mult not be forgoten, as he has the merit of making land not worth five fhillings per acre, at prefent worth twenty. There need no Itronger proof of the improvements in huflandry, and the fertility of the land in this neighbourhood, than to meation the annual exports of bear, meal, and malt, from the port of Montrofe, which in favourable feafons amount to twenty thoufand bolls.

On the fouth fute of this parilh (which is a promontory between Lunan bay and the South E.fk) is a great body of bluifh limefone, I may fay, at prefent tantalizing the honelt farmer, who by reafon of the dearnefs of coal is forbidden the ufe of it ; a fatal duty of three Rillings and three-pence a ton on all coal, commencing at the Red-head, to the infinite prejudice and difcouragement of rural economy in thefe parts. The thoughtlefs impofition of a tax, before the ufe of lime was fcarcely known in thefe parts, is now feverely felt, and obliges the farmers to neglect the cheap manure Providence intended for then; and at great expence to import their lime from the Earl of Elgin's works on the Firth of Forth, which cofts them about feventeen pence per boll. Nature hath denied them coal, peat, and wood; fo that at prefent they cannot burn their lime with the imported fuel at lefs than twenty-pence the boll.

Reach the village of Ferryden, oppofite to Montrofe, and, croffing over the frait or entrance to the harbour, arrive there late at night.

Montrofe, or more properly Mon-rofs, derives its name either from Moin rofs, the fenny promontory *, or from Mant er off, the mouth of the ftream $t$, is feated partly on an iltmus, partly on a peninfula, bounded on one fide by the German ocean, on the other by a large bay, called the balon or back fands. This peninfula is evidently a large beach, formed in old times by the fea, as appears by digging to any depth $\ddagger$.

[^233]The end of this forms one fide of the entrance to the harbour ; a rocky point, called by Adair, Scurdinefs, at this time Montrofe-nefs, lies on the fouth-fide, and certain fands, called the Annot, on the northern. On the firt is a fquare tower, a fort of light-houfe, to direct the courfe of veffels in dark nights. The Amnot fands, after violent forms from the eaft, appoach nearer to the Nefs, but are argain removed to their old limits by the floods of the E.ik, a circumftance to be attended to by mariners. The tide rufhes up this entrance with a great head and vall fury, but the depth of water is confiderable, being fix futhoms in the middle, about three days before fpringtide. The breadth is fearcely a quarter of a mile, but the bafon inftantly expands into a beautiful circle of conliderable diameter; but unfort $\bar{y}$ ately moft of is is dry at low water, except where the Southefk forns its channel, in which veffels of fixty tons will float cven at the loweft ebb. Inch-broik lise on the fouth fide of the entrance, and oppofite to that is the pier, which lhips of any fize may reach, that can bear the ground at low water.

Montrofe is built on the caft fide of the bafon, and confifts chiefly of one large freet, of a confiderable breadth, terminated at one end by the town-houle or Toll-booth; a handfome pile, withelegant and convenient apartmentsfor the affemblies of the magilt rates. The houfes are of fone, and, like thole in Flanders, often with their gable ends towards the flreets. The houfe in which the Marquis of Montrofe was born is ftill to be feen. The town contains about fix thoufand inhabitants, of which fifteen hundred are Epifeopalians, the reft are of the eftablifhed church, with the ufual fchifms of Seceders, Glafites, Nonjurors, \&c. Numbers of genteel families, independent of any trade, refide here as a place of agreeable retreat, and numbers keep their carriages ; thele are principally of the church of England. Their chapel, which was founded in 1722 , is very ncat, has a painted altar-piece, and a fmall orgai. It is occaionally frequented by the l'relbyterians, who thew here a moft laudable moderation. It is chiefly in the fouth and fouth-weft, that religious bigotry reigns, and that ufually among the common people. Our tifhors, who have vifited Scotland, have never failed meeting with a treatment the molt poite and refpectiul, but the introduction of the order is impracticable in a country where the natural as well as religious objections are fo flrong; for the finatices of North Britain can never bear the pomp of religion, even thould the people be induced to admit the ceremonial part.

In the times of popery the Dominicans had a convent here, founded by Sir allan Durward, in the year 1230. The friers were afterwards tranfported to an hofpital noar this city, resuilt hy latrick Pauter, but in 1524 were permited to return to their old feat ". Maitland fays, that their houfe was called the abbey of Celurea; I fup. pofe from the ancient name of the town which Boethius bellows on it.

The town has increafed one-third fince the year 1745; at that time there was not a fugle manufacture, the inhabitants lived either by one another, or by the hiring out of thips, or by the falmon trade. At prefent the manufatures have rifen to a great pitch : for example, that of dail-cioth, or fail cluck, as it is here called is very confiderable; in one houfe eighty-two thoufani five hundred and tixty-fix pieces have been made fince 175.5. Lach piece is thirty-cight yards long, and numbered from VIth. to I. No. VIII. weighs tweny-four pounds, and every piece, down to No. I., gains three pounds in the pisce. The thread for this cloth is fun here, not by the common wher but by the hands. Women are employed, who have the ilax phaced round their wains, twitt a thred with cach hand as they recede from a wheel, turned by a boy at the end of a great room.

Coarfe cloth for fhirts for the foldiers is alfo made here ; befides this, coarfe linens, which are fent to London or Manchefter to be printed; and cottons, for the fame purpole, are printed at Perth. Great quantitics of tine linen, lawns and cambricks are manufactured in this town, the laft from two fhillings and fix-pence to five fhillings a yard. Diapers and Ofnaburghs make up the fum of the weaver's employ; which are exposted to London, and from thence to the Welt-Indics.

Much thrad is fiun here, from two fillings and fix-pence to five hillings a pound. It is fpun both in town and colntty, and brought here by the rural fpintters to be cleaned and made into parcels ; and much of it is coloured here.
"he bleshery is very confiderable, and is the property of the town : it is not only ufed by the manufacturers, but by private families, for the drying of their limen; all paying a certait ece to the perion who rents it from the magiftrates. The men pride themfelves on the resuty of their linen, both wearing and houfehold; and with great reaton, as it is the elect of the lkill and induftry of their fpoules, who fully emulate the charact re of the good wife, fo admiably deferibed by the wifelt of men.

The falmon fithery of thefe parts is vory confiderable; from fix hundred to a thoufand barrels are ammatly exported, valued at three pounds each; and about fifteen hundred pounds worth of kitted or pickled fith. Much of the frefl finh is fold into the country, from three haltpence to two pence-halfpeny a pound. The fifhermen begin to take falmons abont the feconsl of February, and leave olf at Michachas. Its importance has been confidered in very carly times, and the legiflature confulted its prefervation by molt fevere penalties *.

Qumbities of white-fifh, fuch as the cod kind, turbots, \&c. might be taken on the great fand bonks off this coalt. The long Fortys extend parallel to it ; and beyond that lie Montrofe pits $t$, a great bank with fix pits in it of uncommon depths, and fingular in their lituation. They are from forty to a hundred fathon deep, reckoning from the furface of the water, and poffibly may be fubmarine fwallows. Thefe banks fwarmz with fith, but are thamefully neglected, or left perhaps to toreigners. In the laft century about five hundred barks and boats, which during winter were employed in the herring fithery on theie coalts, during firing and part of fummer turn their thoughts to the capture of cod and ling $t$, and after curing, carried their cargoes to Holiand, Hamburgh, into the Bal:ic, to England and to France. By fome mifehance this filhery was lufl; and the curgoes to Hollanders and Hamburghers fairly beat the natives out of their trate. In the time of Henry Vlll. England was fupplied with falt fifh from this narker: the labbedyn: Aberdeen) fith was an article in every great larder 5 .

Incredi le numbers of lobters are taken on this coaft, from the village of Ufan. Sixty or feventy houfad are fent ammally to london, and fold at the rate of twopence labpenny a-picee, provided they are five inches round in the body; and if lefs, two are allowed for one The attention of the natives to this fpecies of fifhery is one reafon of the neglect of that of white fifh, to the great lof of the whole country, which by this iatatention is deprived of a cheap and comfortable diet. Agates of very beantiful kinds are gathered in cumtitios beneath the clitis, and fent to the lapidaries in i.ondon.

1 camot difoover any veftiges ot amiquity about this place, except a large mount called the Forthill, on the eatt hible of the town. No marks are left of its ever having Le:n lamified; but the materials might haw been applied to other purpofes; and there is a tradition that it was in luil repair when Edward ill. was ia Scothand.

[^234]Boethius * relates, that it was a fortified place at the landing of the Danes, a little before the battle of Loncarty: that thofe barbarians put the inhabitants to the fword, levelled the walls, and deftroyed the caltle. This the only remarkable event which I can difcover to have happened to the town. In this century it was diftinguifhed by the flight of the Pretender, who, on the $4^{\text {th }}$ of February, 1716, efcaped on board of a frigate which lay in the road, and conveyed him fafe to France.

September 1. This day we were honoured with the freedom of the town; and handfomely entertained by the magiftrates. I obferved that the feal of the diploma was impreffed with rofes allufive to its prefent name, which feems a poatical fiction: *

> Aurcolis urbs picta rofis: mons molliter urbi : mminet, line ubbi nomina faça canunt.
> At veteres pelhibent quond $m$ dixific Celurcam, Nomine fie prifco et mobillitata novo eft.
> Lit pififà arque novà inflynis vircute, virumque Ingeniis, Patrix qui peperere decus $\dagger$.

Leave Montrofe, and after five miles riding, crofs the North-Efk, at North Bridge. This river and that of South-Elk rife in the extreme northern borders of the county, among the Benchichin hills: this, flowing along Glenefk, retains the fame name from the fource to the fea; the cther is called the White Water for a confiderable way from its fountain. Near this bridge is Egglis Madie, Ecclefia Magdalena, the feat of the Falconers, barons of Halkerton, whole family took its name from the office of an anceftor, falconer to William the Lion. After paffing the river, enter the county of Merns; or, the fhire of Kincardine.

Some derive the firlt from Merns, a valiant nobleman, who, fubduing the country, received it in reward from his prince Kenneth II. Camden with müch probability fuppofes it to retain part of the name of the old inhabitants, the Vernicones of Ptolemy, it being common for the Britons in difcourfe to change the V into M . The other name is taken from the ancient capital, Kincardine, now an inconfiderable village.

Lie this night at the village of Laurence Kirk. The cultivation of the land in the atternoon's ride appeared lefs ftrong than on the South-Eik ; but great efforts are making towards the improvement of the country. Streams of corn feem darting from the hills towards the centre of the valley, and others again radiate from the coafts: I doubt not but in a few years the oblcure or heathy parts will entirely vanilh, and this whole tract become one glory of cultuation.

September 2. Proceed through a fine rich bottom, called the hollow of the Merns, bounded on one fide by the Grampian hills, on the other by a rifugg ground, that runs almoft parallel to them. The Grampians prefent here a low heathy front; the hollows and the eaftern bonndary fertile in corn. Pafs near the two feats of Meffis. Carnegie, and Lord Gardinfton. Crofs the water of Bervie, which falls into the fea a fcow miles to the eaft. Near its mouth lies the fmall town of Inner-bervie, made a royal burgh by David Bruce, who landed there affer his long retreat into France. The rock he debarked on is to this day called Craig Davy.

Near the village of Drum-lethic the country grows hilly and heatij;. Pafs near Glen-bervie, the leat of Sir James Nicholfon. Incline now towards the fhore, and find an improvement in the country, which continues till I reach

Stone-hive, or Stone-iaven, is a fmall town, but the head of the burgh of the fhire: the fheriff's court having been removed from Kincardine to this place by act of parlia-

$$
\text { Lib. XI. p. } 228 . \quad+\text { JunRoo. }
$$

ment in the reign of James VI. It is placed at the foot of fome high cliffs in a fmall bay, with a moft rocky bottom, in one part opening a little, fo that fmall veffels may find admittance, but that mult be at high water. A pier laps over this harbour from the north fide, to give them fecurity after their entrance. The town confifts of about eight hundred inhabitants. The manufaclures are fail cloths and Ofnaburghs, which began about feven years ago; and contributed much to make the place more populous. Here is alfo a confiderable one of knit worlled and thread fockings. Women gain four-pence a day by knitting, and fix-pence by fpinning; the men, a fhilling by weaving.

The manufactures of the Merns inay be divided thus: the focking trade employs the natives from the banks of the Dee to this place. From hence to the North-Efk they are wholly occupied in weaving.

Vifit the celebrated caftle of Dunnoter, built on a lofty and peninfulated rock, jutting into the fea, and divided by a valt chafm, a natural fofs, from the main-land. The compofition of the rock is what is called Plumb-pudding fone, from the pebbles lodged in the hard cement. Kittiwakes and fome other gulls breed on the fides.

The entrance is high, through an arched way. Beyond that is another, with four round holes in front, for the annoying any enemy who might have gained the firf gate. The area on the top of this rock is an Englifh acre and a quarter in extent. The buildings on it are numerous, many of them vaulted, but few appi ared to have been above a century and a half old, excepting a \{quare tower of a confiderable height, and the buildings that defend the approach. The fides of the rock are precipitous, and even that part which impends over the ifthmus has been cut, in order to render this fortrefs ftill more fecure. The ciftern is almoft filled up; but had been of a great fize, not lefs than twenty-nine feet in diameter.
The view of the cliffs to the fouth is very picturefque. They project far into the fea, in form of narrow but lofty capos. Their bafes are often perforated with great arches, pervious to boats.

This cafle was the property of the Keiths, earls Marechals of Scotland, a potent and heroic family: but in the 1715 , by one fatal itep, the fortune and title became forfeited; and our country loft the fervices of two moft diftinguifhed perfonages, the late earl, and his brother the general, the ableft officer of the age. According to the Scotch peerage *, the property of the Keiths in this county came to them, in the reign of David Bruce, by the marriage oi Sir Willian to Margaret, daughter of Sir John Frafer: but I have been informed that this fortrefs had been the property of an Earl of Crawford, who exchanged it for an eftate in Fife, with an Earl Marechal, on condition that he and his dependants fhould, in cafe of neceffity, be permitted to take refuge there.
Abuut the year $12 \mathrm{ç6}$ this caftle was taken by Sir William Wallace, who, according to his hiflorian, Blind Harry t, burnt four thoufand Englifhmen in it. I forbear to repeat his account, fince he is fuppofed by the judicious annalitt to have been an impoltor.
In 1,366 it was re-fortified by Edward Ill, in his progrefs through Scotland; but as foon as the conqueror quitted that kingdom, the guardian, Sir Andrew Murray, inftantly retook it. Hillory leaves us in the dark after this for a very long period. I do nut recolect any mention of it till the civil wars of the lalt century, when it was be-

[^235]fieged, and the church again burnt. The tradition is, that it was defended by the Earl Marechal, againg the Marquis of Montrole, by the perfuation of Andrew Cant. The marquis, according to the barbarous cuftom of the time, fet fire to the country around; which, when Andrew faw, he told the noble owner, that the flames of his houfes "were a fweet-fmelling favour in the noftrils of the Lord;" fuppofing that his lordfhip fufered for righteoufnets' fake. This cafte was inlabited till the beginaing of the prefent century, when an agent for the York-building company reduced it to the prefent ruinots flate by pulling down and felling many of the materials. The annotator on Camds mentions the ftately romas in the new buildings. and the library. He alfo fpeaks here, of St. Pardie's church, famous for being the burial place of St. Eallatins, who in 431 was fent by Pope Cedetine to preach the golpel to the Scots: but it lies about fix miles weft of Stone hive, in a deep den, enviroted on all fides but the fouth by high mountains.

Wait on Robert Barclay, Efq ; at his feat at Urie, about a mile difant from Stone hi.e. This gentleman, by the example he fets his neighbours in the fine management of his land, is a moft ufful and worthy character in his country. He has been long a peripatetic obferver of the "ifferent modes of agriculture in all parts of Great.Britain: his journics being on foot, followed by a fervant with his baggage, on horfeback. He has more than once walked to London, and by way of experiment has gone eighty miles in a day. He has reduced his remarks io practice, much to dis honour and enolument. The barrea heaths that ouce furrounded him, are now comerted into rich ficlds of wheat, bear, or oats; and his clover was at this time under a fecond harveft.

He is likewife a great planter: he fills all his dinghs with trees, but avoids planting the cminences, for he fays they will not thrive on this eaflem coaft, except ia helterd bitoms. The few piantations on the upper grounds are flunted, cankered and molsgrown.

Mr. Barclay favorred me with the following account of the progrefs of his in!provements. IIe firt fit abont them with firit in the yea. 1763 ; fince which he has reclamed about four hundred acres, and continues to finilh about a hundred annually, by draining, levelling, claring aswy the fones, and liming. Thefe, with the ploughing. fecr, \&c. amount to the expence of ten pounds an acie. The firf crop is conmonly vats, and beings in fix pounds an acre: the fecond, white peas, worth fomctimes as moch, but generally only four pounds: turnips are third crops, and ufually worth fix pounds; the fourth is barley, of the fane value: clover fececeds, worth about four pounds: and lafty wheat, which baings in about feven pounds ten fhillings an acre, but oftencr more.

As fon as the land is once thoronghly improved, it is thrown into this courfe: turnips, larkey, chover and wheat ; fonetimes turnips, barley, clover and ryegrafs. He fonctimes breaks wip the lait for whene peas, and afterwards for what: and fometimes fallows from the graf, and manures it for when, by folding his fheep

The land thus improved was originally heath, and ven that which was arable, prodiaced moft miferalle crops of a poor degenerate.., and was apon the whole not worth two thillings an acre; but in is pretat improved fate is wor:h twenty, and the t nants live twice as well as before the improvement.

Some of the ficlis have been fallowed from thath, and fown with wheat, and produced large crops. One futd of thiry-four acres, whinh had been mettly heath, was the firt year falioned, drained, clared of the fones, limed, Sce and fown with wher, which produced in the london market two hund od and fermy poud, at ar of all expences. Mr. barchay las lately creetala mill for fiace ilar, the ong one in the
county, which fully anfwers; and has ferved to encourage many of his neighbours to fow wheat where it was never known to be raifed before. At prefent near eight hundred bolls are annually produced within ten miles of the place.

The firft tumips for feeding of cattle were raifed by this gentleman: and the markets are now plentifully fupplied with frefh bect. Before that period frefl meat was hardly known in thefe parts, during the winter and fpring montls. Every perfon killed his cattle for winter provifinns at Michaelnas; and this was called laying-in time. Necer. fity urged this'; for fo low was the flate of farming, that winter fodder for the fattening of cattle was then unknown. So that this country, till within thefe few years, was in the fame condition with that of Fingland above three hundred years ago : in that period beeves, fheep, and hogs were killed at Martinnas, and preferved falted till the fpring ; when vegetation was renewed, and the half ftarved cattle recovered their fith, a:ch were become fit for flanghter: fo that the feafon of frefh meat fearcely lafted half the year. The Hebrides are fill in this fituation.

The great grand-father of Mr. Barclay was not lefs eminent for his improvements in affuirs firitual. The celebrated Robert Barclay made Urie his refidence, and here compofed that apology for the Quakers which will ever remain an evidence of his abilities and his piety. His moderate difpofition and cool head gave credit to the fect; for it was the peciliar happinefs of George Fox to have united hinfelf with his worthy brother, fince Gcorse's tenets, as Molheim exprefles, delivered by him in a rude, confuled, and ambiguous manner, we e prefented in a diferent form by the maiterly hand of Barclay, who drefed them with fuch fagacity and art, that they alfumed the afpect of a regular fyltem. To him then is owing the purification of the opinions of the profeffors of it at this time. He was the great reformer of quakerifm, and his followers may exult in him as in one who would do honour to any reli ; ion.

Scptember 3. Letive Urie, and return by the fame road as far as Red Mears, where we turn to the north-weft, and travel near the foot of the Grampian hills, through a fine open country. Go near the houfe of captain Falconer, with excellent improvements around; and foon after by Fafque, the frat of Sir Alexander Ramfay, a gentle. man ditinguifhed for the fine method of agriculture. Stop at Fetter-cairn, a fmall village, for the fake of refrefhing owfelves and larfes.
In this morning's ride, offerve a particular ncatnefs in the cottages of the country. They are made cither of zed clay, or of fods, placed on a flone fumdation; the roofs are pretily thatelech, and bound by a neat net-work of tuifted firaw rupe, which keeps them extromely tight.

Near Fetter-cairn was the refflence of Tinclla, the daughtr of a nobleman of large pofieftons in this country, infamous for her atiaflimation of Kemeth III, in 994 . She artfully isfinuated herfelf into his favour, and inveigling him into her palace (under pretence of revealing fome confpirscies, the was really privy to) there cauted him to be murdered. The place was befe by lis freads, but Finella efaping out of a window, joined the comfederates in her wikednefs. Such is the relation given ty Boethius and Bucinnan *, but the relations of thofe carly times are often doubtul and fabulous.

About two miles from this place, on the roadfide, is a cairn, of a ftupendous fize, and uscommon form, which protably might give name to the parifh. The fhape is oblong, and the height at leall thirty feet. At fome diftance from the ground the fides are formed into a broad terrace : the cairn rites again confiderably above that, and con-

[^236]fifts of great loofe ftones, mixed with much femi-vitrified or lava fike matter. On one fide is a large long fone, probably once crect. Along the top is an oval hollow, about fix feet detp: its length, within, a hundred and fifty-two; the breadth, in the middle, fixty-fix; the length from the outfide of the furrounding dike, a hundred and fixtyfeven; the breadth, eighty-three. Tlismav be prefumcd to have been monumental; the northern nations thought no labour too great in paying thefe funeral toonours to their deceafed heross. The tumulus of Haco was the fize of a hill *: whole years, as well as whole armies, were employed in amaffing thefe flupendous teftimonics of refpect. Three years were confumcd in forming one, the common labour of two aterine brethren, Norwegian chieftains $\dagger$.

Travel over an ill-cultivated flat; crofs the North-Efk, at the bridge of Gannachie, a vaft arch, caft from rock to rock, built by fubleription, by one Miller. Beneath is a vaft chafm, near fify feet deep from the top of the battements; through this the water runs with great force. A rocky chaniel, with lofty precipitous fides, fringed with wood, forms moft picturefque views for above a quarter of a mile above and below the bridge.

Re-enter the flire of Angus; on whofe borders lies the caflellated houfe of Edzel, once the feat of the moft ancient branch of the Lindfays, of the caftle of Invermark, who acquired it about three hundred years ago by the marriage of an anceftor with the heirefs of a Sterling, who built the houfe, and was Lord of Glenetk, which by this match was conveyed to them. They were remarkable for being chigf over a nu. merous fet of fmall tenants. Not fixty years are palt fince the Laird kept up the parade of being attended to a church by a band of amed men, who ferved without pay or maintenance, fuch duties being formerly eftemed honourable. This ceaftle was deferted by the then owner on account of a murder he had committed on his kinfman, Lord Spynie, in 1607. This affair involved him in difficulties, and he retired on thant account, to the houfe of Auch-mull, about two miles higher on the North Efk as the infription on the houfe fhews. A little after the Laird of lidzel thought prof'r to bellow on one Durie, a barren knowl near the houfe, and by charter contticuted him and his family hereditary beadles of the parifh, and annexed the perquifite of two bannocks for ringing the bell at the funcral of every farmer, and one for that of every cottager: which remained in the family till very lately when it was purchafed by the Earl of Panmure, the prefent owner of the eftate. This is mentioned to hew the affectation of royalty in thefe Reguli, who made their grants and conferred places with all the dignity of majefty.

After riding two miles on black and heathy hills, alcend one divided into two fummits, the higher named the white, the lower the black Catter-thun, from their different colours. Both are Caledonian polts, and the firf of moft uncommon ftrength. It is of an oval form, made of a ftupendous dike of leofe white 'lones, whole convexity from the bafe within to that without, is a hundred and twenty two feet. On the outfide, a hollow, made by the difpotition of the fones, furrounds the whole. Round the bafe is a deep ditch, and below that a hundred yards, are the vefliges of another, that went round the hill. The area within the ftony mound is flat ; the axis cr length of the oval is four hundred and thirty-fix feet; the tranferfe diameter, two hundred. Near the eaft fide is the foundation of a rectangular building; and on molt parts are the foundations of others, fmall and circular : all which had once their fuperitructures, the

+ Itid. 39 .

$$
3 \quad \text { fhelter }
$$

flelter of the poffeffors of the pof. There is alfo a hollow, now almont filled with ftones, the welt of the place.

The other is called brown, from the colour of the ramparts, which are compofed only of earth. It is of a circular form, and confifts of various concentric dikes. On onc fide of this rifes a furall rill, which running down hill, has formed a deep gully. From the fide of the fortrefs is another rampart, which extends parallel to the rill, and then reverts, forming an additional poft or retreat.
It is to be obferved, that thefe pofts were chofen by the Caledonians with great judgmont: they fixed on the fummits of a hill commanding a great view, and perfectly detached, having to the north the Grampian hills, but on that fide feparated from then by the lofty and rugged banks of the Welt-water, which gives them additional fecurity ". Pofts of this kind are, as 1 am informed, very common at the foot of the Grampian hills, intended as places of retreat for the inhabitants on the invafion of an eneny. There is one above Phefdo, in the Merns; another called Barmkine hill, eight miles weft of Aberdeen. I have feen a long chain of fimitiar polts in my own country; they are generally fituated on high hills, over-looking the lower, or on lefler hills over-looking plains, and feem defigned as afyla for the people of the low and defencelefs countries.

The literal tranflation of Catter-thun is Camp-town. Thefe pofts are of the fame kind with that made by Caractacus, on the borders of North Wales. 'Tunc mon. tibus arduis, ot $\sqrt{i}$ qua clcmenter accedi potcrant, in modum valli fawa praffruit $\dagger$. It is very probable that the Caledonians occupied thefe hills before the battle of Mons Grampius, which might have been fought in the plains below, where there was ample room for large armies to act in, and for the armed chariots to perform their careers. In thele rude fallnefles the Caledonians might leave their wives and children, as was the cuftom of the other Britons, and then defcend into the bottoms, to repel the invaders of their liberties. It is difficuit to fix the fpot; but there are not fewer than three Roman canps not remote from this range of hills, which Agricola might have occupied, and before one of them drawn out his forces to have received the encmy. Of thefe one is at Kiethic, near Brechin; a fecond near Caerboddo, between Forfar and Panmure; and a third near Kemmyoor, called Battledikes $\ddagger$. In the neighbourhood of one of thefe feems to have been the celeorated action; after which he led his army to the confines of the Horefti $\oint$, recej. .d hoftages, and ordering his flect (then in all likelihood lying in the Tay) to perform we voyage round Britain, retired by flow marches into winter quarters.

Defcend, and after travelling three miles reach Brechin, a town confifing of one large and handfome ftreet, and two finaller, feated on the top and fide of a hill, wafhed by the river South-Eik. At the foot of the town is a long row of houfes, independent of it, built on ground held in feu from the family of North-Eik. It is a royal burgh, and with four others fends a member to parliament. In refpeat to trade, it has only a fimall fhare in the coarfer linea manufacture. It lies at no great diftance from the harbour of Montrofe; and the tide flows within two miles of the town, to which a canal might be made, which perhaps might ereate a trade, but would be of certain fervice in conveying down the corn of the country for exportation.

[^237]Brechin was a rich and ancient lifhoprick, founded by David I. about the year 1150 : at the Reformation its revenues in money and in kind amounted to feven hundred a year; but after that event were reduced to a hundred and fifty, chiefly by the alienation of the lands and tythes by Alexander Campbell, the firlt proteftant bithop, to his chieftain the Earl of Argyle, being recommended to the fee by his patron, probably for that very end.

The Culdees had a convent here: their abbot Lcod was witnefs to the grant made by King David to his new abbey of Dumfernline. In after-times they gave way to the Mathurines, or Red-friars. The ruins of their houfe, according to Maitland, are ftill to be feen in the College-wynde.
Here was likewife an hofpital, called Maifon de Dieu, founded in 1256 by William de Brechin, for the repofe of the fouls of the Kings William and Alexander; of John Earl of Chefter, and Huntingdon his brother; of Henry his father; and Juliana his mother. Albinus, bihop of Brechin, in the reign of Alexander III., was witnefs to the grant. By the walls, which are yet flanding, behind the weft end of the chief ftreet, it appears to have been an elegant little building.

The cathedral is a Gothic pile, fupported by twelve pillars; is in length a hundred and fixty-fix feet, in breadth fixty-one; part is ruinous, and part ferves as the parifh church. The weft end of one of the aifles is entire ; its door is Gothic, and the arch confifts of many mouldings; the window of neat tracery; the feeple is a handfome tower, a hundred and twenty feet high; the four lower windows in form of long and narrow openings: the belfry windows adorned with that fpecies of opening called the quatrefoil; the top battlemented, out of which rifes an hexangular firice.

At a fmall diftance from the aifle flands one of thofe fingular round towers, whofe: ufe has fo long baffled the conjecturcs of antiquaries.

Thefe towers, as far as my reading or enquiries have extended, appear to have been peculiar to North Britain and Ireland: in the laft frequent ; in the former only two at this time exif. That at Brechin food origimally, as all I have feen do, detached from other buildings: it is at prefent joined near the bottom by a low additional aifle to the church, which takes in about a fixth of its circumference. From this aife there is an entrance into it of modera date, approachable by a few fteps, for the ufe of the ringers, the parifhioners having in time palt thought proper to hang their bells in it inftead of the fteeple. 'lwo handfome bells are placed there, which are got at by means of fix ladders, placed on wooder femicircular floors, each refling on the circular abutments within fide of the tower.

The height from the ground to the rocf is eighty feet; the inner diameter, within a few feet of the bottom, is eight fect; the thicknefs of the wall at that part feven feet two inches; fo that the whole diameter is fifteen feet two ; the circumference very near forty-eight feet; the inner diameter at the top is feven feet eight ; the thicknefs of the walls four feet fix ; the circumference thirty-eight feet eight inches; which proportion gives the building an inexpreflible clegance: the top is roofed with an octagonal fpire, twenty-three feet high, which makes the whole one hundred and three. In this fire are four windows, placed alternate on the fides, refting on the top of the tower; near the top of the tower are four others, facing the four cardinal points; near the bottom are two arches, one within another, in relief; on the top of the outmoft is a crucitixion; between the mouldings of the outmoft and inner are two figures, one of the Virgin Mary, the other of St. John, the cup and lamb: on each corner of the bottom of this arch is a figure of certain bealts; one, for aught I know, may be the Caledonian bear, and the other, with a long fnout, the boar: the fone-work within the inner arch has a fmall
nir, or peep-hole, but without the appearance of there having been a door within any modern period; yet I imagine there might have been one originally, for the filling up confifts of larger fones than the reft of this curious rotund. The whole is built with moft elegant mafonry, which Mr. Gough obferved to be compofed of fixty courfes *. I am informed by Mr. Gillies, of Brechin, that he has often ficen it vibrate in a high wind.

The learned among the antiquarics are greatly divided concerning the ufe of thefe buildings, as well as the founders. Some think them Piatifh, probably becaufe there is one at Abernethy, the ancient feat of that nation; and others call them Danifh, becaufe it was the cuftom of the Danes to give an alarm $\dagger$ in time of danger from bigh places. But the manner and fimplicity of building in early times of both thefe nations was fuch, as to fuperfede that notion; befides, there are fo many fpecimens left of their architecture, as tend at once to difprove any conjecture of that kind: the Hebrides, Caithnefs, and Rofs-fhire, exhibits reliques of their buildings totally different. They could not be defigned as belfries, as they are placed near the ftecples of churches, infinitely more commodious for that end; nor places of alarm, as they are often erected in fituations unfit for that purpofe. I mult therefore fall into the opinion of the late worthy Peter Collinfon $\ddagger$, that they were inchforia, at arcli incluforii ergaftula, the prifons of narrow inclofures: that they were ufed for the confinement of penitents, fome perhaps conftrained, others voluntary, Dunchad o Braoin being faid to have retired to fuch a prifon, where l.e died A. D. 937 . The penitents were placed in the upper fory; after undergoing their term of probation, they were fuffered to defcend to the next; (in all I have feen there are inner abutments for fuch floors) after that they took a fecond fep ; till at length the time of purification being fulfilled, they were releafed and received again into the bofom of the church.

Mr. Collinfon fays, that they were built in the tenth or eleventh century. The religious were in thofe early times the beft architects $\$$, and religious architecture the beft kind. The pious builders either improved themfelves in the art by their pilgrimages, or were forcign monks brought over for the purpofe. Ireland being the land of fanctity, patria fanclorum, the people of that country might be the original inventors of thefe towers of mortification. They abound there, and in all probability might be brought into Scotland by fome of thofe holy men who difperfed themfelves to all parts of Chriftendon to reform mankind.

The caftle of Brechin was built on an eminence, a little fouth of the town; but not a relique is left. It underwent a long feege in the year 1303, was. gallantly defended againit the Englifh under Edward IIL, and notwithtanding all the efforts of that potent prince, the bravc governor, Sir Thomas Maule, anceflor of the prefent Earl of Panmure, held out this fmall fortrefs for twenty days, till he was flain by a fone caft from an engine $\AA$ on Auguft 2oth, when the place was inftantly furrendered. James Earl of Panmure built, in 1711, an excellent houfe on this fpot; but in 1715 engaging in the rebellion, had but a fhort enjoyment of it.

I muft not forget to mention the battle of Brechin, fought in confequence of the rebellion raifed in $145^{2}$ on account of the nurder of the Earl of Douglas in Stirling caftle. The victory fell to the royalifts, under the Earl of Huntly. The malcontents were headed by the Earl of Crawford, who retiring to his caftle of Finehaven, in the

[^238]frenzy of difgrace declared, " he would willingly pals feven years in lell to obtain the glory which fell to the fhare of the rival general -

Sept. 4. This morning we were honoured with the ficedom of the town ; after whicl: we continued our journey five miles to Careflon, the leat of Mr. Skene, where we palfed the day and evening in a roolt ayrecable mamer.

Sept. 5. After at thore ride ford the South.lik, kaving on the reght the ruined catle of Finehaven, once the feat of the Limdelays, rarls of Crawford. A Spanilh chefnut of vaft fize was till of late years an ornament to the phace: it wals of the fipeading kind; the circumference near the ground was forty-two feet eight ; of the top, thirty-five rineinches; of one of the largell hrunches, twenty three fiet.

Above the cafte is the hill called the callte hith of linelaven, a creat sumence or ridge, with a valt and long hollow in the top. Alour the cheres are vall mates of fons, ftrongly cemented by a femi-vitrified fubtance, or lava. 'libefe mafics fem of a tonweight; they were procured out of the hill, and phaced as a defence to the place, it having been a Britifh poof. The form of the lalll (which ends abrupt at one cond, at the other is joined by an ifthmus to the neightouring hand), tegether with the cavity in the middle, renders it extremely fit for the purpofe. The illhmes i.s fecured by a deep ditch cut tranfuerlely.

This hill is certainly the effect of a volcano; at the one ond of the follow are two great holes of a fumel flape, the craters of the place through which the anater had been - ejected. One is fixty feet in diameter, and above thiry deep; and bad been much deeper, but it was from time to time made more fhallow of the finging in of fones, as cattle were fometimes lof in it.

On both fides of the hill are found in digging great quantities of burne earth, that
 in countrics that abound with volcanoce, and fo ufefulfor all works that are to lie un. der water.

On defcending from this hili ind ourfolves at Aberlemi. In the clurch yard, and on the road fide are to be feen fome of the curious carved flones, fuppofed to have been erected in memory of vietories over lanes, and other great events that happened in thofe parts. Thefe, like the round towers, are local monuments; but ftill mere contined, being, as far as I can learn, unknown in Irchand; and indsed limited to the caftern fide of North Britain, for 1 hear of none beyond the firth of Murray or that of Forth. The greateft is that near Forres, taken notice of in the Tour of 1769; and is alfo the fartheft north of any. Mr. Gordon defcribes another in the county of Mar, near the hill of Benachie; the next are thefe under confideration. The firt deferibed by that ingenious writer $t$, is that figure which tands in the church-yard. On one fide is the form of a crofs, as is common to modt, and proves them at leat to have been the work of a Chriftian penple.

The next which 1 faw is on the road, with both fides fuil of fculpeure. On one a neat crofs included in a circie; and bencath two excedingly rude figures of ancels, which fome have miftaken for characters. On the other ide are the tirures of certain infruments, to me quite unintedigible; bencath are two men founding a trumpet, four horfemen, a footman, and feveral animals, feemingly wild horfes purfucd by dogs; under them is a centaur, and behind them a man holiting fome unknown animal t. This is the fone menioned by Boethius to have been put up in memory of a defat of a party of Danes, belonging to the army of Camus, on this fpot. "Quo loco ingens

[^239]Thpis eft erectus. Iluic animantium effigies, nonnullis cum characteribus artificiofe, ut tum fiebat, que rem geftam pofteritati annunciarent, funt infculptae *."

On a rumulus on the road fide is a third, with various fculptures paft my comprehen. foon. This is engraven by Mr. Gordon, tab. iv., and mentioned by him p. 158.

Near this is a tourth pillar quite plain, which was probably erected over the grave of lome perfon who was deemed perhaps unworthy the trouble of fculpture. 'This is as artlefs as any of the old Britifh monuments, which I apprehend thefe carved fones fucceeded. Thefe wore, from their exceffive rudenefs, the firf efforts of the feulptor, imitative of the animal creation; and his fuccefs is fuch as might be expented: but in the ortaments about the croffes, and the running pattens along the fides of fome, is a fancy and elegance that does credit to the artifts of thofe early days. Boethius is willing that thefer engraven pillars thould be luppoted to have been copied from the Egyptians, and that the figures were hieroglyphic, as expreffive of meaning as thofe found on the cafes of mummies, or the fculpturcd obelifks of Egypt $\dagger$. The hiftorian's vanity in fuppofing his countrymen to have been derived from that ancient nation, is deftitute of all authority ; but his conjecture that the figures we fo frequently fee on the coiumns of this country had their fignification, and were the records of an unlettered age, is fo reafonable as to be readi'g admitted. It was a method equally common to the moft civilized and to the moft barbarous nations ; common to the imbabitants of the banks of the Nile, and the natives of Mexico $\ddagger$. In the northern hemifphere, monuments of this nature feen confined to the tract above mentioned : they cannot be compared, as the learned bifhop Nichulfon does, to the Runic flones in liemmark and Sweden; for they will be found always attended with Runic intcriptions, by any one who will give himfelf the trouble of confulting the antiquities of thote nations $\$$.

I mult take notice of a new-difcovered fone of this clafs, found in the ruins of a chipel in the den of Auldbar, near Carefton, by Mr. Skene, who was fo obliging as to favour me with the drawing of it. On one fide was a crofs; in the upper compartment of the other file were two figures of men, in a fort of cloak, fitting on a chair, perhaps religious perfons; beneath them is another, tearing aftuder the jaws of a certain beat ; near him a fpear and a harp; below is a perfon on horleback, a beaft like the nufinon, which is fuppofed to have once inhabited Scotland; and laftly, a pair of animals like bullocks, or the hornlefs cattle of the country, going fide by fide. 'I his fone was about feven feet long, and had been fixed in a pedeftal found with it.

Proceed towards Forfar. About a mile on this fide of the town is a moor, noted for a battle between the Piets and the Scots, in the year 831 . The Scots, under Alpin, had rather the advantage; by them therefure might the great cairn near he fpot be compofed which to this day is called Piets Cairnley. The bafe was once furrounded with a coronet of great upright columns; but only one remains, which is eleven feet high, feven broad, and eighteen feet in girth.

Ferfar, the capital of the county, contains about two thoufand fouls; but, fince the great ara of the proiperity of North Britain, has increaled above half. The manufatures of linens in this neighbourhood, from four-pence to feven pence a yard, are very confiderable, and bring, is is faid, near twenty thoulad a year.

The cafle ftood on a fmall hill near the town, but at prefent not a fragment is left.

[^240]The lake lies, or rather did lie, at a fmall diftance from the cafte, and, according to tradition, once furrounded the town; there being in feveral parts, even to this day, marks of the deferted channel : of late years it has been very confiderably reduced by draining, to which the vaft quantity of fine marle at the bottom was the temptation. This fine manure is found there in frata from three to ten feet thick, and very often is met wit's beneath the peat in the moors. The land inproved with it yields four crops fucceflively, after which it is laid down with barley and clover. The county of Angus is fuppofed to be benefited, within the fix laft years, by this practice, by an advance of four thouland a year in the rents. Much of this is owing to an old feaman of this country, Mr. Strachan of Balgayloch, who invented the method of draggill oup the marle from the bottom of the waters, in the fame manner as the ballaft is for Ahips.

About a mile north of Forfar, lay the cell or priory of Reftenot, dependent on the abbey of Jedburgh. This houfe was placed in a lake, and accelfible only by a drawbridge; here, therefore, the monks of Jedburgh depofited their papers and all their valuable effects *.

Five miles further is the caftle of Glames, a place much celebrated in our hiftory; finft for the murder of Malcolm the Second, who fell here by the hands of affaffins, in a pallage fill fhewn to ftrangers. It might at the time be part of the poffeffions of the family of the fanous Macbeth, who tells us, through the mouth of Shakefpear,

> By Sinel's dealh I know I am Thane of Clames.

This Sinel being, as Boethius informs us, father to that tyrant. Probably after his death it became forfeited, and added to the property of the crown; for, on the acceffion of Robert the IId., it was beftowed (then a royal palace) on his favourite Sir John Lyon, propter laudabile et fidele fervitium. The ancient buildings were of great extent, as appears by a drawing trom an old print, which the Earl of Strathmore did me the honour to prefent to me. The whole confifted of two long courts divided by building; in each was a fquare tower and gateway beneath, and in the third another tower, which conftitutes the prefent houfe, the reft being totally deftroyed. This has received many alterations, by the additions of little round turrets, with grotefque roofs; and by a great round tower in one angle, which was built in 1686, by the reftorer of the cafle Patrick Lord Glames, in order to contain the curious fair-cafe, which is fpiral; one end of the feps refting on a light hollow pillar, continued to the upper ftoryBefides the fpot of affafination, is thewn the feat of poetry and inufic, an ancient feftivity, where the bards took their place, and fung the heroifm of their patron and his anceftors. In early times a chieftain was followed to court by his poets, and his ableft muficians: hence it was, that in the hall of a Celtic prince, a hundred bards have fruck up at once in chorus t. And even about a century ago every chieftain kept two bards, each of whom had his difciples, infeparable attendants.
The inof fpacious rooms are, as ufual in old cafles, placed in the upper fories, and furnithed with all the tawdry and clumfy magnificence of the middle of the laft century. The habitable part is below flairs. In one of the apartments is a good portrait of the firl Duke of Ormond, in armour, by Sir Peter Lely ; the greateft and mof virtuous charater of his age.
His daughter, Countefs of Chefterfield, a celebrated beauty, and the greateft coquet of the gay court of Charles II. beloved by the Duke of York, and not lefs by George

[^241]Hamilton.

Hamilton. She was negle气ted at firft by her hufband, who, rouzed by the attention of others to his fair fpoufe, became too late enamoured with her charms. At lenzth a mutual jealoufy feized the lady and her lover Hamilton; he, in the frenzy of revenge, perfuades the Earl to carry her from the feene of gallantry, to pafs her Chrittmas at his feat in Derbythire *. She difcovers the treachery of her lover, but contrives to inveigle him to vifit her in her retreat, through all the real inconveniences of bad roads, dreadful weather, and dark nights, with the additional terrors of imaginary precipices and bogs, which the had painted in her billet, to add to the milery of his journey. $\Lambda$ bad cottage is provided for ins concealment; a falle confidante brings him at midnight into a cold paffage, under promife of an interview; he remains there: till day approaches; the night began with rain and ended with froft; he was caled with ice, perhaps complaining,

> Me tuo longas pereunte nodes,
> Lydia, doumis.

He quits his ftation in defpair, retires to his cabin, is terrified with the news of Lord Chefterfield being at home, is alarmed with the found of hounds, and the Earl enjoying the pleafures of the chace; peeps out, and find the country beautiful, and neither bog nor precipice; in a word, returns to London the next night, the ridicule of the gay monarch and his merry court $\dagger$.
I muft not forget another portrait, that more in ediately relates to the houfe of Patrick Lord Glames; who, 1 am inforned, wrot his own nemoirs, and relates that he married the daughter of the Earl of Middleton, Lord Commiffioner in the time of Charles II.; and fuch was the fimplicity $\mathrm{o}^{\prime}$ :mners at that time, he brought his lady home mounted behind him, without any " ther train than a man on foot by the fide of his horle.

In the church-yard of Glames is a fone fimilar to thofe at Aberlemni. This is fuppofed to have been erected in memory of the affaffimation of King Malcolm, and is called his grave-ftone. On one front is a crofs, on the upper part is lome wild beaft, and oppofite to it a centaur; beneath, in one compartment, is the head of a wolf, thefe animals denoting the barbarity of the confpirators ; in another compartment are two perfons fhaking hands, in their other hand is a battle-ax: perhaps thefe two are reprefented in the act of confederacy. On the oppofite front of the ftone are reprefented an cel and another fifh. This alludes to the fate of the murderers, who, as foon as they had committed the horrid act, fled. 'The roads were at that time covered with fnow ; they loft the path, and went on to the lake of Forfar, which happened at the time to be frozen over, bu ant fufficiently frong to bear their weight, the ice broke, and they all perifhed miferidy. This fact is confirmed by the weapons lately found in druining the lake, particularly a battle-ax, of a form like thole reprefented in the feulpture. Several brafs pots and pans were found there at the fame time, perhaps part of the plunder the aflaflins carried off with them.

Near Glames are tivo other flones, one with the crofs on one front, an angel on one fide, and two men with the heads of hogs on the other; probably fatirically alluding to the name of Sueno, or the fivine, a Danifh monarch. Beneath are four animals refembling lions; on the oppofite front is a fingle eel. This is in the park of Glames $\ddagger \cdot$
"he wher is at the village of Coffens, a inile weft of the cafte, and is called St. Onland's thone. 'The crofs takes up one front; on the upper part of the other are

[^242][^243]certain unknown inftruments; beneath are horfemen and dogs; under them a fculpture, which in my drawing reprefents a boat; beneath that a cow, and another animal *.

I miffed feeing Denoon cafte, which I am informed lies two miles to the fouth-weft of Glames. According to Mr. Gordon, it is feated on an eminence, environed with itecp rocks, and almoft inacceffible. On the north are two or thrce rows of terraffes. It is of a femicircular form, and encompaffed with a ftupendous wall of fone and earth, twenty-feven feet hirh, and thirty thick. The circuit three hundred and thirty-five yards. The entrances are on the fouth-eaft, and north-weft. Within the area are velliges of buildings, and there is a tradition that there was a fpring in the middle. 'Ihis appears to me to be the fame kind of fafteres as that of Catter-thum.
Sept. 6. Proeed to Belinont, the feat of the honourable Stuart Mackenzie, Lord Priyy Sal of Seotland, where I found the molt wbliging reception. It is feated in the parifh of Meggle, where I again enter the county of Perth.

The gros:aid of this parifh is very fertile, and much improved of late by the manure of thellemat!. It yields barley, oats, fome wheat, and a little rye; and, in general, more grain than be inhabitants, who amount to about twelve hundred, can confunce. Much llax is raifed, many potatoes planted, and of late artificial graffes begin to find a place here. Improvements in agriculture, and in making good roads, go on molt profperoully under the aulpices of Lord Privy Scal. The only manufacture in the panifh is that of coarfe brown linens, which employs about a hundred weavers. But fince a great proprietor has thought proper to debar the inhabitants from the ufe of a large peat mofs, it is feared that the manufacturers muft remove (as many have already done) for want of that effential article, fuel.

Belmont ftands entirely on clallical ground; for on its environs lay the laft fcene of the tragedy of Macbeth. In one place is fhewn his tumulus, called Belly Duff, or, I Chould rather call it, the memorial of his fall ; for to tyrants no fuch refpect was paid, and their remains were treated with the utmoft indignity among the northern nations. Thus Amlethus, after deftroying the cruel Fengo, denies every honour to his body $t$. And Starcather beautifully defcribes the obfequies of the wicked:

> Cæforum corpora curria
> Excipiant famuli, promptufque cadave:a lictor Effcrat, officiio merio caritura fupremis, El bultis indigna tegi. Non faneris itlis Yompa rogufve pium turnali comporact honarem: ${ }^{\prime}$ 'rida fargantur campis, aviumeque serenda Moifibus, intello maculent rua undique tabo $\ddagger$.

By the final fyllable, I fhould choofe to fyle it a monument to perpetuate the memory of the gallant Macduff. It is a verdint mount, furrounded by two terraffes, with a cope at top, now fhaded by broad-leaved laburnums, of great antiquity. The battle, which began beneath the caftle of Dunfimane, might have fpread as far as this place. Here the great ftand might have been made; here Macduff might have fummoned the ufurper to yield; and here 1 imagine him uttering his laft defiance,

[^244]I will not yield<br>To kifs the ground before young' Malcolm's feet ; And to be baited with the rabile's curfe. Though Dirnan wood be come to Dunfuane, And flou eppos'd, be of no woman born, Yet I will try the latt. Befure my body I throw my warlike mield. Lay on, Macduff! And damn'd be he that firt cries, "Huld ! enough! ""

In a ficld on the other fide of the houfe is another monument to a hero of that day, to the memory of the brave young Seward, who fell, flain on the fpot by Macbeth. A ftupendous fone marks the place, twelve feet high above ground, and eighteen feet and a half in girth in the thickeft place. The quantity beiow the furface of the earth only two feet eight inches; the weight, on accurate computation, amounts to twenty tons; yet, I have been affured, that no fone of this fpecies is to be found within twenty miles. But the pains that were beftowed on thefe grateful remembrances of departed merit, may be learned from the filial pisty of Harald, the fon of Gormon, who employed his whole army, and a vaft number of oxen, to draw a ftone of prodigious fize from the Ihore of Jutland, to honour the grave of his mother $\dagger$.

Near the great fone is a fmall tumulus, called Duff's-know; where fome other commander is fuppofed to have fallen. But Meigle is rich in antiquities, the churchyard is replete with others of a more ornamented kind, abounding with hieroglyphic columns. Mr. Gordon has engraved all I faw, one excepted; however I venture to caufe them to be engraved again from the drawings of my fervant; for, notwithfanding I allow Mr. Gordon to poffefs great merit as a writer, yet his iketches are lefs accurate than I couid wiff.

The moft curious is that whereon is feen, in the upper part of one front, dogs and horfemen, and beiow reprefented four wild beaits, refembling lions, devouring a human figure. 'The country people call all of them Queen Vanora's graveflones, and relate that the was the wife of King Arthur ; I fuppofe the fane lady that we Wellh call Guinever, and Guenhumara; to whofe chaftity neither hiftorians nor bards $\ddagger$ do much credit. The traditions of thefe parts are not more favourable to her memory. The peafants affert, that, after the defeat of her lover, fhe was imprifoned in a fort on the hill of Barra, oppofite to this place, and that there fhe died, and was interred in the parifh of Mcigle. Others again fay, that the was torn to pieces by wild beafts, to which this fculpture alludes; if, as Mr. Gordon juftly obferves, the carvings might not fometimes prove the foundation of the tale.

It is reported that her grave was furrounded by three ftones, in form of a triangle, mortifed into one another: Some of them have hinles and grooves for that purpofe, but are now disjointed, and removed to different places.

Another ftone, is very curious: on it is engraved a chariot, with the driver and two perfons in it ; behind is a monfter, refembling a hippopotamus, devouring a proftrated human figure. On another fone is the reprefentation of an elephant, or at leaft an animal with a long probofcis. Whence could the artifts of a barbarous age acquire their ideas of centaurs, or of animals proper to the torrid zone?

Sept. 8. I.eave Belmont. Pafs bencath the famous hill of Dunfinane, on the fouth fide of Strithmore, on whofe fummit flood the caftle, the refidence of Macbeth, full in

[^245]view of Birnam wood, on the oppofite fide of the .plain. No place could be better adapted for the feat of a jealous tyramt: the fides are fleep, and of the moft difficult afcent, the fummit commanding a view to a great diftance in front and rear. At prefent there are not any remains of this celebrated fortrefs: its place is now a verdant area, of an oval form, fifty-four vards by thirty, and furrounded by two deep ditches. On the nurth is a hollow road, cut through the rock, leading up to the cutry, which lies on the north-call, facing a deep narrow chafm, between this and the next hill. The hill has been dug into, but nothing was difeovered, excepting fome very black corn, which probably had undergone the operation of Graddan, or burning. This place was fortified with great labour, for Macbeth depended on its ftrength and natural fleepnefs as a fecure retreat againft every enemy. He fummoned the Thanes from all parts of the kingdom to attilt in the work. All came exceptiag Macduff, which fo enraged the tyrant, that he threatened to put the yoke that was on the oxen then labour. ing up the iteep fide of the hill, on the neck of the difobedient 'Thane *.

A little to the eaftward is a hill called the King's.feat, where tradition fays, Macbeth fat as oll a watch-tower, for it commands a more comprehenfive view than Dunfinane. Here his fcout might be placed, who brought him the fatal news of the maich. of Birnam wood:

> As I did fand my watch upon the hill, I look'd toward birnam, and anon, melhought The wood began to move!

On the plain beneath thefe hills are fe veral other monuments of antiquity, fuch 2 s a great ftone tying on the ground, ten feet long, called the Long Man's Grave. Here are ilfo feveral rumuli compofed of earth and flones of a pyramidical form, called here Lawes. One of a co:fiderabie fize, near a gentleman's feat, called Law-town, is fuppofed to have been that from which Macbeth adniniftered juftice to his people. No prince ruled with more equity than he did in the beginning of his reign. Ile was the firft of the Scottifh monarchs that formed a code of laws, which were duly obferved during his government, but afterwards were neglected or forgotten, as Buchanan fays, much to the lofs of the kingdon in general.

Continue our ride weftward. Pafs through Perth. Reach Dupplin, where we continue till next morning.

Sept. 9 Crofs the river Earn, at Earn-bridge, near the houfe of Moncrief; keep on the fouth tide of Strathearn, and breakfalt in its eaflern extremity, at the village of

Abernethy, fated near the junction of the Barn and the Tay, and once the capital of the Pictith kinglom. The crigin of thefe people has bern greatly litigated: fome fuppofe then to have be n foreigners inported from Scandinavia $t$, or out of Sasony; but apparenty whou any fombation. There is no refon to imegine then to have had any other orgin than from the Caledonians, the anciont indabitants of the country. They wate the unoonomed part, who, on the death of Sewerus, recovered from his foris the conguent of the firter, who haraffed the Romans and fouthern Britons with frequent excurions, and whe, wihtheir kindred Scots, in the retreat of the Romans, forced their continemen, now callet Graran's-uike, and with irrefiltible fory extended than dominions as far as the banks of the Hamber.

Two kingiome land bent rected: the one flythd that of the Pips, the other that of the Scots. Each of then were new names: the firit that mentions the Picts is

Eumenius the panegyrift, who wrote in 309, and the firt who fpeaks of the Scots is Amnianus Marcellinus.

The words are of Celtic origin : Pict is derived from Pietcich ", or Pictich, a plunderer or thief: it was beftowed on them by their fouthern neighbours, who probably experienced the cructy of their excurfions. The Caledonian offipring accepted the title, as it conveyed, in their idea, an addition of honour inflead of infamy; for the northern nations, from the carlieft antiquity, held robbery to have been honourable; nor does that opinion feem to be worn out to this day with fome of the northern 1 winces.

The kingdom of tine licts was on the eaftern parts of North Britain : that of the Scots on the weftern. The latt derived their name from Scottan, a fmall flock $\dagger$, or from Scuite, wanderers t. The firlt perhaps from their making inroads in fmall parties, the laft from their acknowledged way of life, running about feeking whom they might devour. As foon as thele two nations had-eftablifhed a power, wars, atiended with various fuccefs, arof: between them: at length the Scots proved vienorious; they totally fubdued their Ifatifh neighbours, cut cfl multitudes, forced numbers to lly abroad for fecurty, overturned their kinglom, incorporated the few which were left, and made their very mame to ccafe.

That the Romans might allo give the name of Piatit the Britifh nations from the caftom of painting their bodies with woad and other dyes is inconteftible, not withftanding it is denied by many of the Scotith authors. They argue from the inconfiftency of the Roman writers, fome of whom affert that the Britous went naked, others that they were cloathed in fkins, others with garments called Brachre. That any were fo wretched as to be deftitute of cloathing in this fevere climate is very improbable: no northern nations yet difcoverel, were ever found in fuch a flate of nature. But, fay the former, as the Britons were cloathed, why fhould they give themfelves the trouble of adorning their bodics with paintings, fince they could neither fhew them through vanity to their friends, or as objects of terror to their enemies? It is difficult to trace the caufe of cuftoms in fuch diftant periods; but we know at prefent, from recent authority, that there are two nations, who to this day retain the cuftom of painting their bodies, and fome of thom the moft conccaled parts, which they are as averfe to expofing as any European. Both of thefe people are cloathed: thofe of Otaheite have one kind of drefs; the new Zcalanders another. In diftant ages they mey leave off the cuftom of tattowing their fkins; and the authority of our modern voyages become as difputable as thofe of Cafar, Dion Caflius, or Herodian, are with fonc later writers. But that the painted bodies of our anceftors might be capable of Itriking terror into their cnomi sis very certain; for in an action they freed $\$$ themfelves from the incumbrances of the loofer garments, and part at leall of their bodies painted with wild fancy, was left expofed to the view of the altonifhed foe.

1 conld not hear that there were the leaf remains of antiquity at Abernethy that could be attributed to its ancient polefors. The Piets have left memorials of their feat at Inch-tathel, and marks of their retreats in time of danger on the funmit of many a hill. Alove the houfe of Moncrief, on Mordun hill, is a faltuefs, formed by a bulwark of flones, furrounding about two acres of ground, which might have been the citadei of $\Lambda$ bernethy, the refuge of its inhabitants in time of war, at laaf of its women, its children $\|$, and its cattle, while the warriors kept the fied to repel the encmy.

[^246]3 L 2

Here is indeed a round tower like that of Brechin ; but Tam more willing to give thefe edifices to the Iribh than the Piats. The Scots have fuflicient remains of antiquity to forgive this conceflion: the tower at Abernethy is :meovered; the height within is feventy-two feet; the inner diameter eight feet two ; the thicknefs of the wall at top two feet feven; at bottom three feet four; the circumference near the ground fortyfeven. Within is, at prefent, a bell, platform;, and ladders, like that in the capital of Angus.

St. Brigid, a virgin of Caithnefs, here firt dedicated herfelf to the fervices of heaven, not with vows frail as human nature, but with a refolate perfeverance in the duties of the monaftic life: and with her nine others alopteci the fame courfe ${ }^{\bullet}$. At this place fie died in 5:3, and left fuch a reputation for piety, "that the moft extravagant honours were paid to her memory. The Hebrides paid her divine honours: to her the greatelt number of their churches were dedicated: from her they had oracular refponfes; by the divinity of St. Brigid, was one of their moft folemn oaths: to her they devoted the firl day of February, and in the evening of that feftival performed many ftrange ceremonies of a Druidical and moft fupertitious kind $t$."

Here were pefferved her reliques: here, in honour of her, was founded a collegiate church; and this place was a bilhoprick, the metropolitan of all Scotland, illl it was in $8 \nmid 0$ tramated to St. Andrew's by Kenneth III., after his victory over the Picts $\ddagger$. Before which it was a populous city, given by Neclanus, king of the Picts, to God and St. Bricid, till the day of judgment $\oint$.

Afcend the Ochil hills, and in lifs than two miles crofs a rivulet, and eater into the flire of Fife; the neareft or moft foutherly part of the Roman Caledonia, the Otholinia and the Rofs of the Picts if. The Forth-ever or Over of the Saxons, and the Fife of the prefont tine; the hat from Iifus Duffus, a warrior of the country.

Near the junction of Fife and Strathern, not far from the fot 1 paffed, is Mugdrum crofs, an upright pillar, with feulptures on each fide, much defaced; but lill may be traced figures of horfemen, and beneath them certain amimals. Near this place ftood the crofs of the famous Macduff, Thane of liffe, of which nothing but the pedeftal has been left for above a century palt. On it were inferibed certain Mactronic verfes, a flrange jargon, preferved both by Sibvald $\mathbb{T}$ and Gordon *". Mr. Cumingham, who wrote an effay on the crofs, tranilates the lines into a grant of Malcolm Canmore, to the Earl of Fife, of feveral emoluments and privileges; among others, he allows it to be a fanctuary to any of Macduff's kindred, within the ninth degrec, who fhall be acquitted of any man-laughter, on flying to this crofs, and paying nine cows and a heifer $\dagger \dagger$.

Defcend the Ochil hills, and arrive in a pretty valley, called the firath of Eden, bounded on the fouth by the Lomond hills, and watered by the river Eden. Go through a fmall town, and after croffing the vale, reach

Falkland; another fmall town, made a royal burgh by James II. in $1 / 45$. Here ftood one of the feas ?of the Macdulis, Earls of Fife. On the attainder of Murdo Stuart, feventeenth Ear!, it became forteited to the crown in 1424. James V. who grew very fond of the place, enlarged and improved it. The remains evince its former magnificence and elegance, rnd the fine tafte of the princely architect. The gateway is placed between two fine reund towers; on the right hand joins the chapel, whofe roof is of wood, handfomely git and painted, but in a molt ruinous condition. Bereath are

[^247]feveral apartments. The front next to the court was beautifuliy adorned with ftatues, beads in bas-relicf, and elegant columns, not reducible to any order, but of fine proportion, with capitals approaching the Ionic fcrol. Beneath fome of thefe pillars was minfribed. I. R. M. G. ${ }^{1537}$, or Jacobus Rex. Maria de Guife.

This place was alfo a favourite refiduce of James VI. on account of the fine park, and plenty of deer. The eaft fide was aceidentally burnt in the time of Charles II. and the park ruined during Cromwell's ufurpation, when the fine oaks were cut down in order to build the fort at Perth.

In the old caftle was cruelly farved, by the villany of his uncle the Duke of Albany, David Duke of Rothefay, fon to Robert III. For a time his life was prolonged by the charity of two women; the one fupplying him with oaten cakes, conveyed to him through the prifon grates: the other, a wet nure, with milk, conveyed by means of a pipe. Both were detected, and both moft barbaroully put to death *. The death of this Prince occafioned a parliamentary enquiry. The murderers were acquitted; and pardoned: certainly the innocent would never have required fuch fecurity $\dagger$.

Near the prefent palace are feveral houfes, marks of the munificence of Jımes VL. who built and beftowed them on his attendants, who acknowledge his bounty by gratefulinferiptions on the walls, moftly in this flyle:
"Al praife to God and thankis to the moft excellent monarche of Great Britane of whofe princelie liberalitic this is my portioune. Nicol Moncrief. 1610 ."

Continue our journcy along the plain, which is partly arable, partly a heath of urrcommon flatnefs, darkened with prodigious plantations of Scotch pincs. In the midft is Melvil, the feat of the Farl of Leven and Mclvil; a fine houfe, with nine windows in front, defigned by the famous Sir William Bruce, and executed 'Jy Mr. James $S m i t h$, and built in 1692 .

The nobic owner is defeended, thy the female line, from Alcxander Lefly, firft of the title; a gallant and moft trulled officer, under the great Guftavus Adolphus. To him he gave the de'ence of Stralliund, when beficged by the Inperiaiits, whofe commander, the impious or the frantic Walftein, fwore he would take the place though it hung in the air from heaven by a chain of adamant $\ddagger$ : but Lefly difapointed his rodomontade. On his return to Scothand he headed the covenanting army, during part of the civil wars, and contributed greatly to the victory of Marfton-moor, in 1644. After the death of Charles 1 . he favoured the loyal party, was imprifoned, and fuffered fequeftration; fo little did the parliament refpect his lormer fervices. A neat miniature of him is preferved here, and a fine medal given him by Guftavus, for his brave defence of Stralfund.

Guftaves himfelf, at full length, in a flort buff coat. This portrait is an original, brought out of Germany by the General.

Gcorge, Larl of Melvil, Lord ! !igh Commiffioner in 16go, a poft he received as a reward for his fuiferings in 168 , when he had the honour of being accuifed of correfpouding with the virtuous Lord Ruffel; was obliged to fly into Holland, and, on refufing to appear on being cited, fuffered, till the revolution, the forfciture of his eftate.

David, Lawl of Leven, commander of the forces in North.Britain, from 1706 to 1710, a fis half.length, in armour, looking over his fhoulder. By Sir John do Medina.

In the garden is a fquar tower, one of the fummer retreats of cardinal Beaton; wh? near it is Cardan's well, named from the celeb
$\pm$ Harl's Liscol Guftav": i. 99.
for from Milan, to Hamilton, archbihop of St. Andrew's, who was here ill of an afthma, Cardan effected his cure but to preterve him for a moft ignominious fate, which the phy. fician, by cafting the mativity of his patient, foretold. The prelate"was aficrwards hanged on a live tree at Stirling, and the following cruel farcafm compofed on the occafion:

> Vive diu, felix arbor, femperque vircto Frondibe, ut nobia talia poma fosas,

September 10. I eave Melvi. The eountry is well improvel, infofed, and taned with quickft hedges. Vafs by Dairfie church, and cattellate.! houlic. The churc 1 is ancient, but of elegant architecture; the toser polygemal, terninaing it a rate. If built at the edge of an eminence, over the river Eden, which vathes a beanitul betmm. The view from it of the bridge, the church, and hence, are ancommonly pleafing. The eflate of Dairfic was once the property of the fee of Et. Andrew's, but in 1550 was feued out to Lamont of Darfie, to be held by di:ty paid to this day. It was afterwards twid to archbifhop Spotfwood.

After palling over a barren moor, have a moft extentive vion. Beneath on the north a the Eden, difcharging iffelf into a fmall bay under Gai: bridge, confilting of fix arebes buile by Henry Wardiaw, bifhop of St. Andru's, whe difol in :-1 o: beyond is the mand of the 'iay, ereat part of the county of Avers, temination with the Redhead, which, is shenefs in this county, forms the great bay of St. Andrew's. Full in ifont, at the besem of berg deceat, appears the city, placed at the extremity of a plai: at the wateredye st numerous towers and fires gives it an air of valt magnificence, and ferve tor whe co:pectation of thangers to the higheft pitch. On entering the wefl part, a wed duilt Itrest, ftrait, and of a vait length and breadth, appears; but 10 grafs genw, and tuch a dreary folitude lay before us, that it formed the perfoct idea of having been had watte by the peftilence.

On:a father advance, the towers and ipires, which at a diftance afforded fuch an apparance of grandeur, on the near view fhewed themfelves to be the aweful remains of the magni cent, the pious works of palt geacrations, A forcigner, ignorant of the hiftory of the country, vould naturally mquire, what culamity has this city undergone? his it fufered a bombardment fromfome barbarous enemy ? or has it not, like Latbon, felt the thore incuitable fing of a convilive earthquake? but how great is the horror on re1.ag, that this deftruction was owing to the more bariarous zeal of a minifter, who, 1 ' 'is difoourtes, firit enflamed, and then permittel a furious crowd to overthrow edifiwe dedicated to that very Being he pretended to honow by their rain. The cathedral was the labour of a humded and fisty years, a building that did honour to the country: yet in June $1: 5 y$, John Kion chli cied its demotition in a fingle day.

If we may credit legend, St. Amerew's owes its origin to a fingular accident. St. Rogulus, or St. Rule, as lie is often called, a Greck of Achaia, was warned by a vifion whave his native counery, and vift Abion, an ille placed in the remotelt far: of the wo.lid a ad to take with han the arm-bone, three fingers, and three foen of st. Andrew. H. obeyod, and feting fail with his conpanions, ater being grievoufy rampett-toft, was in 370 at length thip.wrecked on the coaths of Otholinia, in the turrion ; of Herpultus, King of the licts. Ilis majely mo fooner heard of the arrivat of the nious hangers, and neir pacions reliques, than he gave orders for their reception, prefented the fame with his own patace, and!n It it near the church, $\because, \therefore$ to this day bears the name of $\mathrm{R}^{2}$ eulus.

The the was then Atted Mucrofs; o", the land of how.. . round was foreft, and the lands befowed ont int arre called byrenid. ars equalled in fize the

Erymanthian ; as a proof, two tufks were chained to the altar of St . Andrew, each fixteen inches long, and four thick. But Regulus changed the name to that of Kilry mont : here he eftablifhed the firft chriftian priefts of this country, the Culdees; a word which fome derive fron cultores Dei, or worfhippers of God; others with more juflice, from Kelcdei, or dwellers in cells. Thefe had the power of chufing their own bifhop, or overfeer, profeffed for a long time a monaflic life, and a pure and uncorrupt religion, and withfood the power of the popes. But David l. fiding with his holinefs in a difpute between the Culdees and the prior and canons of St. Andrew's, about the riglit of chufing a bifhop, would have engaged the former to admit the laft to partake of the powers of election; but on their refufal entirely divefted them of their right. From that time their authority ceafed, and probably their order, notwithfanding they are mertioned again in 1298, as oppofing the election of Lamberton, and even appealing to the pope; a fign that the original doctrine of the Culdees was loft, and that thefe were only fecular priefts, who founded their pretenfions to vote on the ancient ufage of their predeceffors. The prior and canons after this retained the right of election.

This church was fupreme in the kingdom of the Picts, Ungus having granted to God and St. Andrew that it fhould be the head and mother of all the churches in his dominions *. This was the prince who firf directed that the crofs of St. Andrew fhould become the badge of the country. In 518 , after the conquelt of the Piets, he remov.d the epiicopal fee to St. Andrew's, and the bifhop was flyled Maximus Scoturun Epifcopus. In 1441 it was erected into an archbifhoprick, by Sextus IV., at the intercelfion of James III. In 1606 the priory was fuppreffed, and the power of election, in 1617, transferred to eight bifhops, the principal of St. Leonard's college, the archdeacon, the vicars of St. Andrew's, Letuchars, and Coupar.

The cathedral was founded in 1161 by bifhop Arnold, but many years elapfed till it attained its full magnificence, it not being completed before 1918 . Its length, from eaft to weft, was three hundred and feventy feet; of the tranfept, three hundred and twenty-two. Of this fuperb pile nothing remains but part of the eaft and weft ends, and of the fouth fide; with fuch fuccefs and expedition did facrilere effect its ruin.

Near the eaft end is the chapel of St. Regulus, a fingular edifice. . The tower is a lofty equilateral quadrangle, of twenty feet each fide, and a huadred and three high. The body of the chapel remains, but the two fide-chapels are ruined. The arches of the windows and doors are round, fome even form more than femi-circles; a proof of the antiquity : but I cannot admit Herguftus, to whom it is attributed, to have been the founder.

The priory was founded by Alexander I. in 1122, and the monks (canons regular of St. Augultine) were brought from Scone in 1140, by Robert bifhop of this fee. By act of parliament, in the time of James I., the prior hid precedence of all abbots and priors, and on the days of feftival wore a mitre, and all epifcopal ornaments $t$. Dependent on this priory were thofe of Lochleven, Pormoak, Monimutk, the ifle of May, and Pitenween, cach originally a feat of the Culdees.

The revenues of the houfe were vaft, viz. In money, 22371. 25.10 Id. $3^{8}$ chaldrons, 1 boll, 3 frlots of wheat; 132 ch .7 bolls of bear; 114 ch .3 bolls, 1 peck of meal; $: 51$ ch. 10 bollis, 1 firlor, 1 peek and a half of oats; 3 ch .7 bolls of peas and beans; 480 acres of lamd alfo belonged to it.

Noting remains of the priory except the walls of the precinct, which fhew its vaft extent. In one murt is a moft artlefs gateway, formed oniy of feven ftones. This inclofure begins ar the cathedral, and extends to the fhore.

[^248]+ Keith, 237.

The other re'igous houfes were, one of Dominicans, founded in 1274 by bifhop Wifhart; another of Obfervantines, founded by bilhop Kennedy, and finifhed by his ticceflor, Patrick Graham, in 1478; and, according to fome, the Carmelites had a ficurth

Imm diately above the harbour food the collegiate church of Kirk-heugh, originally $f$ funded by Conflantine 1II., who, retiring from the world, became here a Culdec. From its having been firft built on a rock, it was flyled Prapofitura fancta Maria di repe.

On the eaft fide of the city are the poor remains of the cafle, on a rock overlooking the feal. This fortrcfs was founded, in 1401, by bilhop Trail, whowas butied near the high altar of the cathedral, with this fingular epitaph:

Hic fuit ecclefie directa columna, feueftra
Lucida, Thuribuluns redolens, campana fonora.
The entrance of the caftle is fill to be feen; and the window is fhewn out of which it is pretended that cardinal Beaton leaned to glut his cyes with the cruel martyrdon of Gcorge Wifhart, who was burnt on a fpot beneath. This is one of thofe relations whofe verity we fhould doubt, and heartily wifh there was no truth in it *; and, on enquiry, we may confole ourfelves that this is founded on puritanical bigotry, and invented out of hatred to a perfecutor fufficiently deteftable on other accounts. Beaton was the director of the perfecution, and the caufe of the death of that pious man; and in this cafte, in May 1546, he met with the reward of his cruelty. The patience of a fierce age, as the able Dr. Robertion obferves, was worn out by this nefarious deed. Private revenge, inflamed and fanctified by a falfe zeal for religion, quickly found a fit inftrument in Norman Lefly, eldeft fon of the Earl of Rothes. The attempt was as boid as it was fuccefsful. The cardinal at that time, perhaps infligated by his fears, was adding new frength to the cafle, and, in the opinion of the age, rendering it impregnable. Sixteen perfons undertook to furprize it: they entered the gates, which were left open ty the workmen, early in the morning, turned out his retinue vithout confufion, and forced open the door of the cardinal's apartment, which he had barricadocd on the firt alarm. The confpirators found him feated in his chair; they transtixed him with their fwords, and he expired, crying, "I am a prieft! ge! fie! all is gone!" He merited his death, but the manner was indefenfible, as is candidly admitted by his enemy, the hiftorian and poet, Sir David Lindfay :

> As for this cardinal, I grant,
> He was a man we might well want;
> Gud will forgive it foon.
> But of a that the footh to fay,
> Altho the loon be well away, The fuct was foully doue.

The confpirators were infantly befieged in the cafle by the regent, Earl of Arran; and, motnithiftanting they had acquired no greater flength than a hundred and lifty men, refited all his cfiorss for five months: at lencth they furrendered, on the regent mgating to procure for them an abfolution from the pope, and a pardon from the Sobtifh parlianent.

1 hall flep (rather out of courfe) to the church of St. Nicholas, remarkable for the monument of a prelate, whofe life and death bears, in fome refpects, a great fimilitude

[^249]10
to that of the cruel Beaton. Archbihop Sharp was originally bred a rigid prefbyterian, had the full confidence of the party, and was entrufted with their interefts at the time of the Reforation. Tempted by the fplendour of the preferments of ou: church, he apoftatized from his own, received in reward the archbifhoprick of St. Andrew's, and, as ic commonly the cafe with converts, became a violent perfecutor of his deferted brethren. His career was ftopped in 1679 . Nine enthufiafts, fome of them men of fortune, inftigated by no private revenge, bound themfelves by vow to facrifice lim to the fufferings of their fect. They had enquired the Lord's mind anent, i. e. concerning the murder, and the word bore in upon them, "Go and profper"." On the third of May they met him in his coach on Magus-moor, four miles from the city, accompanied by his daughter. As foon as he faw himfelf purfued, he geve up all hopes of life, was taken out of his carriage, and, amidt the cries and entreaties of the lady, moft cruelly and butcherly murdered. He died with the intrepidity of a hero, and the piety of a chriftian, praying for the affaffins with his lateft breath! The murderers all retired to feparate prayer: ; and one of them, William Daniel, after prayer, told them all that the Lord had faid unto him, "Well done, good and faithful fervants $\dagger$."

The munument is very magnificent : in the lower part is reprefented the manner of his death; in the middle the prelate is placed kneeling, the mitre and crofier falling from him; an angel is fublituting, inftead of the firf, a crown of glory, with the allunive words, pro mitra; and above is the bas relief of a falling church, fupported by the figure of the archbifhop. J. This piece of flattery is attended with as flattering an epitaph : the difputable parts of his life are fully related; his undoubted charity and deeds of alms omitted.

In the church of St. Salvator is a mon beautiful tomb of biflop Kennedy, who died, an honour to his family, in 1466. The Gothic work is uncommonly elegant. Within the tomb were difcovered fix nagnificent maces, which had been concealed here in troublefome times. One was given to each of the other three Scotch univerfities, and three are preferved here. In the top is reprefated our Saviour; around are angels, with the inftruments of the paffion.

With thrfe are flewn lome filver arrows, with inge flver plates affixed to them, on which are inferibed the arms and names of the noble you's, victors in the annual competitions in the generous art of archery, which were dropt but a few years ago; and golf is now the reigning game. That fport and football were formerly prohilited, as utelefs and unprofirable to the public; and at all weapon fchawings, or reviews of the people, it was ordered that "fute-bal and golfe be utterly cryed down, and that bowmarkes be maid at ilk parifinkirk, a pair of buttes and fchutting be ufed. And that ilk men fchutte fex flholles at leaft, under the paine to be raiped upon them that cummis not, at leaft twa pennyes to be given to them that cunmis to the bow-markes ta drinke $\ddagger$."

The town of St. Andrew's was erected into a royal borough by David I., in the year 1140, and their privileges were afterwards enfirmed. The charter of MalcolmIV. is pecerved in the tolbouth, and appears writ . . a a bit of parchment; but the contents equally valid with what at this time would require whole ikins. In this place is to be fect the monilrous ax that, in 1646, took of the heads of Sir Robert Spotfwood a:al other dillinguifhed loyalifts, for the wretched preachers had declared that God requir d their blood. Here are kept the filver keys of the city, which, for form fake, are

[^250]delivered to the King hould he vifit the place, or to a vikorious enemy, in token of fubmifion. It underwent a fiege in 1337, at which time it was poffefled by the Englifh and other partizans of Batiol ; but the loyalifls, under the Earls of March and life, made thenfeives mafters of it in three wecks, by the help of their battering marlines. It furrendered on terms of fecurity to the inhabitants as to life, limbs, and fortume.

The city is greally $\quad$ it the number of inhatitants; at prefent it fcarcely exceeds two thoufand. the \& ocertainty of the fum when it was the liar of the prirate, and in the duct, of its glory. All we know is, that during the period of its fplendour there were between fixty and feventy bakers; but at this time nine or ten are fufficient for the place. The circuit of this city is a mile, and contains three principal frects. The trade of St. Andrew's was alfo once very confuderable. I am informed what, during the time of Cromwell's ufurpation, finty or feventy velifls belonged to the port; at prelent only one of any fize. "1. "rbour is artificial, garded by piers, with a narrow entrance to give fhelser so volels from she vilance of a moft havy fea. The manufactures this city might in former times poffefs are now reduced to one, that of golf.bails, which, trifling as it may feem, maintains feverid people. 'The trade is commonly fatal to the artifts, for the balls are made by fuffing a great quantity of feathers into a cathern cafe, by help of an iron rod, with a wooden handle, prefled againgt the breaf, which feldom tails to bring on a confumption.

The celebrated univerfity of this city was founded in 1411 by bifhop Wardlaw, and the next year he obtained from Benedict III. the bull of confirmation. It confifted once of three colleges: St. Salvator's, founded in $145^{8}$ by bilhop Kennedy. This is a handtome building, with a court or quadrangle within : on one fide is the church, on another the library; the third contains apartments for ftudents; the fourth is unfinifhed.

St. Leenard's college was founded hy prior Hepburn in 1512. This is now united with the laft, and the buildings fold, and convarted into private houfes.
'The new, or St. Mary's college, was eftablifhed by archbilhop Itamilton in 155., but the houfe was built by James and David Bethune, or Beaton, who did not live : complete it. This is faid to have been the fite of a fchol, illuffris long before the eft: blifhment cven of the uaiverfity, where feveral eminent elergymen taught, gratis, the fciences and languages. But it was called the new college, becaufe of its late crectica into a divinity college by the archtithop.

The univerfity is governed by a chancellor, an office originally defigned to be perpetually vefted in the archbintops of St. Andrew's; but tince the Reformation, he is elected by the two principals, and the profeflors of both the colleges.

The prefent chance llor is the Earl of Kinnoull, who, with his charaterittic zeal for pronoting all good works, has eftablifhad lere premiums, to be diftributed among the ftudents, who make the bell figure in the anmal exercifes. The eflect is already very a- rarent, in exciting the ambition of a genereus youth to receive thefe marks of difvinction that wil! honour their latefl days.

The rector is the next great officer, to whofe care is committed the privileges, difcipline, and ftatutes of the univerfity. The colleges ilave their resurs, and profeffors of different fciences, who are indefati able in their attention to the intruction of the ftudents, and to that effential artic'. ir morals. 'I his place pofferles feveral very great advantages refpecting the cducat va of wh. The air is pure and folubrious; the place for exercife dry and extenfive; the exercifes themfelves heatthy and innocent. The univerfity is fixed in a peniniulated country, remote from all commerce with the world, the haunt of dillipation. From the fmallnefs of the fociety every fudent's character is perfealy known. No little irregularity can be committed, but it is
inftantly difoovered and checked : vice caunot attain a head in the place, fur the incorrigible are never permitted to remain the corruptors of the reft.

The fudents may be boarded in the colleges, or in private houfes, or in thofe of the profeffors. 'The price at the colleges is only cight pounds for the feffions, which lafls feven months. The diet is very goos, and a matter always prefides at the table.

The price at the profetrers, or at private houfes, is from ten to tweity-five pounds a quarter. I obferved at one of the profedfor's, young gentlemen from Bath, from Bourdeaux, and from Bern; a proof of the extentive reputation of the univerfity, notwithftanding the lludents are far from numerous: there are at prefent little more than a hundred, who during fellions wear red gowns without fleeves.

Sept.12. L.eave St. Andrew's; afcend a hill, and find the country on the heights very uncultivated, and full of moors. Here firt meet with collieries on this fide of North Britain. Defcend into a tract rich in corn, and enjoy a moft extenfive and beautiful view of the firth of Forth, the Bodotria of T'acitus. The Bafs ifland, with the fhores of Lothian, extending beyond Edinburgh, bound the fouthern profpect. 'To the left, a few miles from the coalt of Fife, appears the ifle of May, about a mile in length, inacceflible on the weftern fide, on the eaftern is fafe riding for fhips in wefterly forms. This ifle in old times was the property of the monks of Reading, in Yorkfhire ; and in it David I. founded a cell, dedicated to all the faints, who were afterwards fuperfeded by Adrian, a holy man, murdered by the Danes in Fife, and buried here. By his interceffion the barren had the curfe of fterility removed from them, and great was the refort hither of female pilgrims.

It was afterwards annexed to the priory of St. Andrew's, having been purchafed by bifhop I.amberton for that purpofe, from the religious of Reading, in defiance of all the remonftances of that tremendous monarch, the conqueror of Scotland. In later times a light-houfe has been erected on it.
Reach the fhore of the fine bay of Largo ; pals by the lands of the fame name, beflowed in 1482 by James lif. on that gallant feaman, his faithful fervant, Sir Andrew Woorl, in order to keep his hlip in trim. With two flips he attacked and took five Englith men of war, that infefted the firth; and foon after had equal fuccefs againft another fquadron, fent out by Henry VII. to revenge the difgrace *. 'The Scots, during the reigns of Janes III. and IV., were ftrong rivals to England in maritime affairs.

Continue my ride along the curvature of this beautiful bay, and meet with the cheerful and frequent fucceflion of towns, chateaux, and of well-managed farms. The country is populous: the trade is coal and falt; the laft made from the fea water. The coal is exported chiefly to Campvere and Rotterdam, and generally oats are brought back in return.

Go through the village of Lundie. In a field not far diftant are three vaft upright ftoncs; the largeft is fixteen feet high, and its folid contents two hundred and feventy. There are fragments or velliges of three others; but their fituation is fuch as bafles any attempt to guefs at the form of their original difpofition when the whole was entire. Near this place the Danes met with a confiderable defeat from the Scots, under the conduct of Macbeth and Banquo: it is therefore probable that thefe ftones are monuments of the vitory. Mr. Dougal, of Kirkaldie, who was fo obliging as to favour me with their admeafurement, gave himfelf the trouble of caufing the earth about them to be examined, and found, on digging about four feet deep, fragments of human boncs.

Breakfalt at the town of Levin, on the water of the fame name, wining from Loch. leven, near Kinrofs. The mouth forms a harbour, where at high vater veffels of a hundred tons may enter. Somewhat farther are the piers of Methel, built in the laft century by David Earl of Wemys. Go through the villages of Buckhaven, Wemys, and Eafter.Wenys; all in the beginning of the laft century carrying on a confiderable fifhery. On an eminence impending over the fea is the houfe of Wemys, the feat of the ancient family of that name, defeended from the old Earls of Fife. The place derives its title from the various caverns in the cliffs beneath. I forgot to mention, that on the fhores near St. Andrew's, and on different parts of this coalt, is found that beautiful plant, the palmonaria maritima, or fea buglofs, one of the molt elegant in our inland. It is frequent alfo among the Hebrides; and immediately attracts the eye by its fine glaucous colour, and by the fine red and blue fowers which enliven the dreary beach.

Pafs through a tract of collieries, and obterve multitudes of circular holes, furrounded with a mound, and filled with water. Thefe coal-heughs, or pits, were once the firacles or vent-holes in inexperienced days of mining. Many of the beds have been on Gire for above two centuries; and there have been formerly initances of eruptions of fmoke apparent in the day, of fire in the night. The violence of the con:lagration has ceafed, but it nill continues in a certain degree, as is evident in time of friow, which melts in ftreams on the furface wherever there are any fillures. George Agricula, the great metallurgitt, takes notice of the phrenomenon at this place ${ }^{\bullet}$.

Buchanan, from this circumflance, fixed on the neightourhood of Iyfart for the fene of exorcifin in his Francifcanus, and gives an admirable defcriptive view of it under the horror of an eruption :

> Campus crat latè incultus, non floribus horti
> Arrident, now meffe agri, non froudibus albos:
> Vix lleilis ficcis vellitur arena myricio:
> Et pecorrum rara in fulis velligia lerris:
> Vicmin Deferta vocant. Ibi faxea fubter
> Anlra te punt nigras vilcania femina cantes:
> Sulphurein paflim concepla incendia venis.
> Fumiferam volvunt nebulam, piceoque vapore
> Semper anhelat humus: cxcifque inclufa casernis
> Flamina furche, dum lastando penctrate fub auras
> Conatur, totis paffim fpiracwla campls
> Findi, it ingenti tellurem pandit hiatu:
> Teter udor, trillifque habitus faciefyue locorum.

A little beyond this once tremendous place is the rown of Dyfart, a royal burgh, large, and full of pcople. Leave on the left the caftle of Ravenfheugh, feated on a cliff. Pals by Path-head, a place of check-weavers and nailers: a modern creation, for within thefe fixty years, from being fcarceiy inhabited, about four hundred families have been colletted, by the encouragement of feuing. Adjoining is Kirkaldie, a long town, containing fixteen hundred inhabitants: this is another royal burgh, where I experienced the hofpitality and care of Mr. Ofwald, its reprefentative, during a hort illnefs that over. took me here.

This, like moft other maritime towns of Fife, depends on the coal and falt trade. The rountry is very populous, but far let's than it was before the middle of the laft century, when the fifheries were at their height. During winter it poffeffed a valt herring-fifhery; in fpring a moft profitable one of white fith. One fatal check to population was the victories of Montrofe. The natives of this coaft were violently feized with the religious

[^251]furor of the times, and took up the caufe of the covenant with mon diftingu: fied zeal. lultigated by their preachere, they crowded under the banners of the ;oul'y, and five thoufand fell victims to enthuficftic delufion at the battle of 'Tippir-mor:"

Of late years many of the inhabitams have removed to the fouth-witern parts of this kingdom; yet lifll fuch numbers remain, that more provifions are confumed than even this fertile country can fupply. There is one clafs of men on this coatt, and I believe in moft of the coal countries of North Britain, from whom all power of migrating is taken, be their inclinations for it ever fo ftrong. In this very illand is, at this day, to he found a remnant of llavery paralleled only in Poland and Rullia; thoufands of our fellow fubjects are at this time the property of their landlords, appurtenances to their eftates, and transferable with them tit any purchafers. Multitudes of colliers and falters are in this fituation, who are bound to the fot for their lives; and even frangers who come to fettle there are hound by the fame cruel cullom, unlefs they previoufy fipulate to the contrary. Should the poor people remove to another place on a temporary ceffation of the works, they are liable to be recalled at will, and conitrained to return on fevere penaltics *. This, origimally founded on vaflalage, might have been continued to cleck the wandering firit of the nation, and to preferve a body of people together, of whofe lofs the whole public might otherwife feel the moft fatal effects.

During my ftay at Kirkaldic I lent my fervant, Mofes Griffith, to Doctan, about four miles diftant, where he drew the columm moil erroneoully figured by Sir Robert Sibbald $\dagger$. It is at prefent much defaced by time, but fill are to be dilicerned two rude figures of men on horfeback; and on the other fides may be traced a running pattern of ornament. The ftone is between fix and feven feet high, and mortifed at the botton into another. This is faid to have been erected in memory of a viftory, near the Leven, over the Danes in 874 , under their leaders Hungar and Hubba, by the Scots, commanded by their prince, Conftantine II.

Sept. 15. Continue my journcy. After proceeding about a mile, pafs by the Grange, once the feat of the hero Kirkaldie, a ftrenuous partizan of Mary Stuart, after her florm of misfortune commenced ; before, an honelt oppofer of her indiferetions. After an intrepid defence of Edinburgh caftle, he fell into the hands of the regent Morton, who, fearing his unconquerable dpirit, bafely fuffered him to und $\cdot$, the moft ignominious death.

Leave on the left the ruins of Scafield cafle, a fquare to anear the fhore, in former times the feat of the Moutrays. A little farther :borough. The caftle was one of the fents of the king: Robert II., who, giving his daughter in marriage to su part of portion. At this place is the ferry between at.e a fmall town and till the time of - Ad this town in If and the port of Leith, a traject of feven miles. Below this twwn, on th. Oi.... grows the liguficum Scoticum, or Scotch parlley, the flumis of the Hebrides, where it is ofien eaten raw as a fallad, or boiled inflead of greens. This root is efteenied a gond carminative; and an infufion of the leaves in whey is uled there as a purge for calves.

Oppofite to Kinghorn, nearly in the middle of the firth, lies Inch-keith, an ifland of about a mile in length. It is faid to derive its name from the gallant Keith, who fo greatly fignalized himfelf by his valour in 1010 in the battle of Barry, in Angus, againft the Danes; after which he received in reward the barony of Keith, in Lothian, and this little inle. This feems to be the place that Bede calls Cacr-Guidi, there being no other that will fuit the fituation he gives it in the middle of the Forth $\ddagger$. His tranflator renders

[^252]Caer

Casi by the word city ; but it hould be rendered a fort or poft, which will give probability to Bede's account.

In 1549 the Englifh fleet, fent by Edward VI. to alfitt the lords of the congregation againk the queen dowager, landed and began to fortify this ifland *. of the inportance of which they grew fenfible after their neglect of fecuring the port of Leith, fo lately in their power. They left heee five companies to cover the workmen, under the command of Cotterel; but their operations were foon interrupted by M. D.fic, geneal of the Freach ausiliaries, who took the place, after a gilliant defence on the part of the Englifh. The Scots kent puffellion for fome yars ; but at latt the fortifications were dellroyed by act of parliamen, to prevent it frombeing of any ufe to the former $t$. Whe French gave it the name of L'ifle des chovans, from its property of foon fattering horfes.

In 1497, by order of council $\ddagger$, will venereal patients in the neighbourhood of the capial were tranfported there, ne quid detrimenti rajpulica capcril. It is remarkable that this diforder, which was thonght to have made its appearance in lurope only four years before, fhould make to quick a progrefs. The horror of a difeafe, for which there was at that period no cure known, mult have occafioned this attention to ftop the contagion; for even half a century after, one of the firlt monarchs in Europe, Francis 1., fell a victim to it.

Abcut a mile from Kinghorn is the precipice fatal to Alexander III. Who, in 1285 , was killed by a fall from it, as he was riding in the dulk of the evening $\varsigma$. A mile beyond this is the town of Brunt-ifland; the beft harbour on the coaft, formed by a rocky inc, cked out with piers, for there are none on this file the country entircly natural. This is dry at low water. The church is fquare, with a fteeple rifing in the centre. The old caftle built by the Duries commanded both town and harbour. The place has a natural frength, which, with the convenicncy of a port oppofite to the capital, made it, during the troubles of 1 goo, a moit defirable poit. The French, allies of the Queen Regent, fortified it flrongly. In 1715 it was furprifed, and poffeffed by the rebels, who here formed the bold defign over a body of troops to the oppofite thore; which was in part executed under the conduct of Brigadier Macintofh, notwithitanding all the ethorts of our men of war.

A litle farther is Abcrdour, another fmall town. The lat of Morton bas a pleafant feat here. In old times it belonged to the Viponts $\|$; in 1126 was transferred to the Mortimes by marriage, imd afterwards to the Douglafes. William, Lord of Liddefdale, furnamed the Flower of chivalry, in the reign of Darid II. by charter, conveged it to James Douglas, anceftor of the prefent noble owner. The monks of Inch.colm had a grant for a burial place here from Ailan de Mortimer, in the reign of Alexander III. The nums, ufually flyled the poor Clares, had a convent at this place.
I had the pitafure of fecing near Aberdour, a moft file 5 collection of pictures, made by Captain Stuart, who, with great politenefs, obliged ine with the fight of them. It is in vain to attempt the defcription of this elegant cabinet, as I may fay, one part or other ufed to be always on the march. This gentleman indulges his elegant and laudable pafion to far as to form out of them un cabinct pertaif, which is his amufement on the road, in quarters ; in hort, the companions of all lis motions. His houfe is very fmal!; to get at his nbrary lafe nded a ladder, which remi ided me of the labitation of Mynhicr Bifcop, at Rotterdam, the richeft repofitory in Lurope under the pooreft roof.

[^253]Two or three miles to the weft lics lach-colm, a fmall ifland at a little diffance from the fhore, celebrated for a monaltery founded about 1123 , by Alexander I. on this fingular occafion. In paffing the firth of Forth he was overtaken with a violent form, which drove him to this ifland, where he met with the moft hofpitable reception from a poor hermit, then refiding here in the chapel of St. Columb, who, for the three days that the King continued there tempef-bound, entertained him with the milk of his cow, and a few fhell-filh. His Majety, from the fenfe of the danger he had efcaped, and in gratitude to the faint, to whom he attributed his fafety, vowed fome tuken of refpect, and accordingly founded here a monattery of Auguftincs, and dedicated it to St. Columba *. Allan de Mortimer, Lord of Aberdour, who attended Edward III, in his Scotch expedition, beftowd balf of thofe lands on the monks of this ifland, for the privilege of a family burial place in their church.

The buildings made in confequence of the piety of Alexander were very confiderable. There are ftill to be feen a large fquare tower belonging to the church, the ruins of the church, and of feveral other buildings. The wealth of this place in the time of Edward III. proved fo ftrong a temptation to his fleet, then lying in the Forth, as to fupprefs all the loorror of facrilege, and refpect to the fanctity of the inhabitants. The Englifh landed, and fured not even the furniture more immediately confecrated to divine worthip. But due vengeance overtook them, for, in a ftorm which inftantly followed, many of them perilhed; thofe wion efcaped, ftruck with the juftice of the judgment, vowed to make ample recompence to the injured faint. The tempelt ceafed, and they made the promifed atonement $\dagger$.

The Damifh monument, figured by Sir Robert Sibbald, hies on the fouth-caft fide of the building, on a rifing ground. It is of a rigid form, and the furface ornamented with feale.fike figures. At each end is the reprefutation of a human head.

Boethius gives this ifland the name of Emonis, frem Y mona, or the iffe of Mona.
After lensing this place, fee, on ine lefi, Dumimifl, the feat of the Earl of Merray. In 1592 this was the feene of the cruct murder of the bony, or the handfome Earl, whote charms were luppofed to have engated the heart of Ame of Demmark, and to have excited the jraboufy of her royal !pouli. The tomer at lealt was the popular notion of the tine:

> lle was a braw graỉant
> And he play'd at the gluve:
> And the hemen Ent of Mury,
> Oh! be was the (luenes luve.

Political reatons were given for his arreft ; but more than an arreft fems to have been intended, for the commillion'was entrufted to his inveterate enemy Huntly, who, with a number of armed men, furcomaing the houfe in a datk night, let it on fire, on Murray's refulal to furrender; he efaped the llames, but was mfortunately difcoverd by a park that fell on his hehnet, and "as nlain, in telling Gordon of Buckic, who thad wounded him in the face, "You hare pipit a bette" face than your azoin."

Ride through Inverkeithing, a rogal burgh; and, durian the time of David I. a royal refidence. It was much fiwoured by William, who, in their firft charter, extended its liberties from the water of Dovan to that of Leven. The Mowbrays had large polfeflions here, forfeited in the reign of Robert I . The Francilcans had a convent in this town; and, according to Sir Robett Sibbald, the Dominicans had another.

Separatel from the bay of Inverkeithing loy a finall headand, is that of St, Margaret; the place where that illulitions prineds, afterwards queen of Malcelm III. landed
with her brother Edgar in 1068, after their flight from England, to avoid the confequences of the jealoufy of the Conqueror, on account of the title of the former to the crown. This paffage is alfo called the Queen's ferry, being afterwards her familiar paffage to Dumfernuline, her ufual refidence.

The village on this fide is called the North-ferry. At this place food a chapel, ferved by the monks of Dumfermline, and endowed by Robett I. Near it are the great granite quarries, which help to fupply our capital with paving fones, and employ a number of veflels for the conveyance. The granite lies in perpendicular flacks, and above is a reddifh earth, filled with micaceous friable nedules.

From Kinghorn to this place the firth contracts itfelf gradually ; but here, by the jutting out of the northern flore, almoft inftantly forms a frait of two miles in breadth, and beyond as fuddenly opens in a large and long expanfe. Abuut midway of this ftrait lies Inchgarvie, with the ruins of a fort. This was a fine fation to review the flores I had travelled, and to feaft the eye with the whole circumambient view. The profpect on every part is beautiful : a rich country, diverffified with the quickeft fucceffion of towns, villages, caftles, and feats; a vaft view up and down the firth from its nextremity, not remote from Stirling, to its mouth near May illand, an extent of fixty miles. 'To particularife the objects of this rich feene mull be enmmerated, the coatts of Lothian and of Fife, the ifles of Garvie and Inch-colm, the town of Dumferline; the fruth and noth ferries, and Burrowfonefs, finoaking at a diflance, from its numerous falt-pans and fire- angines: on the fouth fide are Hopetoun houfe, Dundas cafile, and many other gentlemen's feats, with Blacknefs caltle, once an important fortrefs : on the north fide are Rofyth calle, once the leat of the Stuarts, formerly a royal houfe and the feat of Queen Margaret; Dunibriffel, and, in the diftant view, the caftle and town of Burnt-ifland; Leith, with its roids often filled with fhips, and a magnificent view of Edinburgh calle on the fe , h a afift to complete this various picture.

As I am nearly arrivad at the extrenity, permit me to take a review of the peninfula of Fife, a county to populous, that, excepting the enviruns of Iondon, fance one in South-hritain can vie with it ; fertile in foil, abundant in catte, happy in colliaries, in iron, llone, lame, and free-fone, blelt in manufactures, the property remarkably well divided, none infultingly powerful, to difrefs and often to depreplate a country, molt of the fortuncs of a ufeful medioctity. The number of towns is perhaps unparallsled in an equal tract of conft, for the whole thore from Crail to Culrofs, about forty Eng'ifh miles, is one continued chain of towns and villag's. With juftice, therefore, does Johnfton celebrate the advantages of the comutry in thefe lines:

Oppida fic toto funt Iparfa in littore, ut mum Dixeris: inque mo plaima juna cidern.
Littore atot curvo $\mathrm{F}^{\circ}$ rthe wohnatur ath: $x$ Quotque midis wha wadiar ora foin;
 Urbibas et eeters pene cos máaminar.
Cun a operis interbatmos fieda rotia uefcit ; Eccula curidamii fedala ruma foris
Quax matia e quas loon terias aminofa juvent:3 Ah: fragili blicens andel adtre malue.
Ausit ope, virtus, simsidirap:1/1 J. weta, etiam lucro din:"a furte tu .

Quar tecese viris animes, cuhtumque the here A. Enanimis profunt dama, pericla, libure

Afte: lawing pafed by the Quech's ferry, turn almot due north. See, on the road

it in her way to Dumfermline. In a little time have a fine view of that flowifling town, and the ruins of its cathedral and palace full in front.
1)anfermine lies at the diftance of four miles from the firth, is pretily fituated on n rifing ground, and the country round is beatifully divided by low and well-cultivated hills; the grounds are inctofed, and phanted with hedge-row trees. The town wants the advantage of a river, but has a finall frem for economic ufes, which is conducted through the ftreets in a flagged chamel. At iss difcharge it joins another rivulet, then arriving at a fall into a wooled dell of a hundred feet in depth, becomes again uffui ia turuing five mills, placed one below the other, whilh room for as many more. Three of the mills are for corn, the fouth for flax, the fifth for beating iron. This dell winds about the weflern fide of the town, is cloathed with trees, and in one part contributes a moft piaurefque feenery to the walks laid out by Mr. Chalmers, whofe feat is on the oppofite banks.

This place is very populous. The number of inhabitants are between fix and feven thoufand; and fuch have been the improvements in manufactures as to have increafed near double its ancient number within the laft twelve years. The manufactures are damalks, diapers, checks and ticking, to the ame me of forty thoufand pounds a year; thefe employ in town and neighbourhood about a thoufand loons. I was informed that the number might be doubled it it was not prevented by the low duty on foreign linens, which encourages a foreign importation. But probably fome other branch of Britifh trade might receive its iujury in a greater degree, was that importation to be checked.

That the iron bufuefs does not flowifh more in this place is a mater of furprife. Iron ftone abounds. Here are collieries in all parts, even to the very entrance of the town; and the coals of fuch variety, that in difierent parts are found, befides the Scotch, thofe which have the qualities of the Neweaftle, and of the Kilkenny. I am informed thar, on the Pittencrief eftate, are feven feams of coals in the depth of thirty fathon, from the thicknefs of two to that of eight feet, all of which may be worked with a level without the affitance of any machinery. The price of coal here is from twenty-pence to half-a-crown a ton.

The moft remarkable modern building here is the Tolbooth, with a flender fquare tower, very lofty, and topped with a conic roof. Mr. Chalmers has alfo made a work of valt expence over the glen on the weft end of the town, in order to form a communication with his eftate, and to encourage buildings and improvements on that fide. To efiect which, he filled that part of the glen with earth, after making a drain for the water beneath, which runs through an arched channel three hundred feet long, ten high and twelve wide.

This place has been at times, from very diftant periods, the refidence of the Scotilis monarchs. Nalcolm Cannor lived here, in a caftle on the top of an infulated hill, in the midit of the glen; but only fome poor fragments remain. A palace was afterwards built on the fide next the town, which, falling to decay, was re-built by Anne of Denmark, as appears by the following infeription:

Propylaum ct fuperftruflas ades vetufate ct injuriis temporam: collapfas dirutafque; a fundamentis in banc ampliorcm formam, refituit et inftauravit Anna Regina I rederici Danrum Regis augufi:/fimi filia : anno falutis 1600 .

The ruins are magnificent, and do credit to the reftorer. In this palace fhe brought forth her unfortunate fon Charles 1. A gateway intervenes between the royal refidence and the magnificent abby,

Begun by Malcolm Canmore, and finifhed by Alexander I. It was probably firt intented for the pious and more ufeful purpofe of a religious infirmary, being fyled in
vol. 11 .
3 N
fome
fome old manufcripts * Monafterium ab monte infirmorum. David I . changed it into an abby, and brought into it thirteen monks from Canterbury, but at the difolution it fupported twenty-fix $\dagger$. Its endow ments were very confiderable. At the Reformation the revenue, in money alone, was two thouland five hundred and thirteen pounds Scots. Some of the grants were fingular: that of David I. gives it the tythe of all the gold found in Fife and Fotheril, a proof of the precious metal being then difcovered in flreams flowing from the hills. Another, from the fame monarch, invefts it with part of the feals taken near Kinghorn ; and a third by Malcolm IV., gives them the heads iexcept the tongues) of certain fmall whales, called crefpeis, which might be taken in fuch part of Scotchwatir (the firth of Forth) where the church food; and the oil extracted from them was to be applied $t$ its ufe.

The remains of the abby are confiderable, and evince its former fplendour. The window of the room near the gateway, called lrater-hall, is very beautiful. The abbot's houfe is adjacent. In 1.30.j, Edward I. burat down the whole abby, excepting the church and celts, pleading in excufe of his facrilege, that it gave a retreat to his enemies. In plain words, becaule the gallant nobility of the cotintry fometimes held their affemblies here to free thenfelves from an Engliilh yoke.

Part of the church is at prefent in ufe. It is lupported by three rows of maffy pillars, farcely leventeen feet high, and thirteen and a half in circui.ference. Two are ribbed fpirally, and two marked with zig-zag lines, like thofe of Durham, which they refemble. The arches are alfo Saxon, or round. As the church was built by Mialcolin C-nmor, at the inftance of Turgot, bifhop of St. Andrew's (once prior of Durham) that might be the reafon ic was conllructed in a funilar ftyle $\ddagger$. From this time the celebrated Jona loft the honour of being the cemetery of the Scotiif monarchs. Malcolm and his queen, and fix other kings $\S$ lie here; the two firt apart, the others under as many fat fones, each nine feet long.

In the church is the tomb of Robert Pitcairn, abbot, or rather commendator of Dumfermline, fecretary of fate in the beginning of the reign of James VI. in the regency of Lenox. He was of Morton's faction, and was fent to the court of Elizabeth, to folicit the delivery of Mary Stuart into the hands of the King's party $\|$. He attended Janes in his confinement, after the Raid of Ruthven, and artfully endeavoured to make friends with each fide; but, failing, was imprifoned in Lochleven caftle, and died in $15^{8} 4$. His critaph fets his virtues in a very high light :

> Hic fites ef heros modica Rubertas in urna Pitcarnus, parriax fors colum mque fux:
> Quem virtus, gravitas genernfo pectore digna
> OImabatit veta et cumpictate foles
> Poft varios visx fluctus jam inole relicta
> Corporis, elytiun pergit in umbra neenus.

September 16. Leave Dunfermine. At a diftance is pointed out to me a cumulus, planted with trees, cal'e'' the penitent-mount, from a vulgar notion, that it was formed by facks full of fand, brought there from diftant places by the frail, by way of panance for their fins. At Clune ain fruck with the magnificence of the profpeat, excending weft to Benlomond, and ealt : Old-Cambus; is view of the whole Forth, and the calles of Edirburgh ar: Stirling, two moft capital objects.

[^254]Defcend towards the fhore; and near it, reach the Lime-kilns, belonging to the Earl of Elgin, the greatelt perhaps in the univerfe; placed amidf inexhauftible beds of limeftones, and near immenfe feams of coal. The kilns are placed in a row; their openings are bencath a covered way, formed by arches and pillars in front, into a magnificent colonade. They lie beneath the ftrata of lime-ftome, which, when broken, is conveyed into them by variety of rail roads; and for hipping the lime, either burat or crude, is a convemient pier. A hundred and twenty men are confantly employed, and a little town built for them. Above twelve thoufand pounds has been expended on this ufeful project, which promifes to turn out as much to the emolument of the noble family, which lo generounly encaged in it, as to the whole caftern coaft of North Britain, which either wants this great fertilizer, or fuel to burn the fone they ufeletsly poffels.

By the following account it is pleafing to obferve the improving ftate of agriculturc, and of building, in thefe parts of the kingdom; for the laft alfo occafions a confiderable confu uption :

## Sold, from Martinmas, 1770 , to ditto, 177 I .

From Martinmas, 1771, to ditto, 1772,

Oppofite to the Lime-kilns, on a rock projecting into the Forth, is Blacknefs cafle, once a place of great iuportance in preferving a communication between Edinburgh and Sterling; now a fhelter to a few invalids. This fortrefs is a large pile, defended by towers, both fquare and rouncl. Irvine $\dagger$ fays, that in his time it was a flate prifon: he adds, that it was of old one of the Roman forts, and that it food on the beginning of the wall. But Mr. Gordon feems, with more truth, to place its commencement at (iairn, or Caridden, weft of this place. Blacknefs was once the port of Linlithgow, had a town near it, and a cuftom-houfe; both which were loft by the new commerce of falt and coass that rofe at Burrowftonefs.

After a ride of four miles enter a portion of Perthlhire, which juft touches on the Firih, at Culrofs; a fmall town, remarkable for a magnificent houfe with thirteen windows in front, built about the 1590, by Edward Lord Kinlofs, father to the Lord Bruce, fiain in the noted duel between him and Sir Edward Sackville.

Some poor remains of the Ciftercian abbey are ftill to be feen here, frunded by Mal. com, Earl of Fife, is $-: 7$. The church was jointly dedicated to the virgin, and St. Serf, confeffor. The revenue, at the diffolution, was feven hundred and fixty-eight

[^255]pounds Scots, befides the rents paid in kind. The number of monks, exclufive of the: abbet, were nine.

Continue my ride, in fight of van plantations; and, in a flort fpace, enter the little fhire of Clackmannan, which, with that of Kinrols, alternst Jy eleat a member, their mutual reprefentative. The fmall town of Clackmanain is pleafanly feated on a hill, along the feat of the chicf of the Bruces, thoping on every fide; and on the fummit is, the eafte, commanding a noble viow. The large fqure tow is called alter the name of Robert Bruce; whele great ivord and calque is till prefer ed here. The hill is prettily wooded, and, with the tower, forms a picturfque objet. On the weltern lide, crofs the latte river Devail, and, after a mile's mide, reach the town of Alloe, renarkable for its coal trade. Scodmad exports anmaily, above a hundred and eighteen thou-. find tons of coal, out of which, I was inform d, alloa alune lends forty thoufand. The town and parilh is very populous, containing live thonfand fouls. I found here the moll polite reception from Mr lirkine, repremative of the family of Mar; who lives in the calle, now modernized, on one fide of the town. The gardens planted in the old Ayle, are very extenfive. In the boufe are fome good portraits, particularly one of the celebrated Lucy, Countefs of Bedtord *, a full length, in black, with a ruff, and a coronet on her head. She fits with a penfive countenance, her face reelined on onc hand, and is, without beauty, an elegant figure. She was fifter to John Lord Harringtons, and wife to Edward Farl of Bedford, and became, on the death of her brother, pofieffed of great part of his terge fortune. She affeted the paronage of wits and ets; and probably pofiefed pit of the qualities they atributed to her, or the philoaphic Sir Willian Templef would never have condericended to celebrate her fine tatte in cardening. She might purchafe every pertection from the former; for Donne informs us,

She rained upon him her fweet thoweri of gold $f$ :
on Ben Johnfon, haunches of venifon § ; and they, in gratitute, beftowed on her as many beauties and as many virtues as ourht to have put vainity herfelf out of countenance. She makes the rourh Donne dechare,

> Leaving that buta praife and all appeale,
> To higher couts, fenfers decree is the
> The miac, the magaine, the stmmonweale,
> The tiony of beanty, in Twick han is, and yon.
> Who hathien ons, would beh, as who bad tin
> 1. Paradice, wouid feek the Cherubin If.

In a word, her ideas became too fublime for dorneftic affairs; fhe fpent her own and part of her huflond's great fortunes, and having eltablilhed her character for tafte, departed this life in the year $162 \%$.

Catherine, daughter and heirets of Francis Earl of Rutlant, wife of George Villars, Duke of Buckinghana, by Vandyck. She: is painted fittin? with her children, and the head of the duke in an oval above her. Sh afterwards married the Earl of Antrim. "She was a lady", fays the noble hiforia, "of great wit and fipirt; who, by her influence over Charles I., forced him, minde. pretence of his majetty's fervice, to gratify her vanity, by creating her hulband a marquis -"

A remarkall te half length of Mary Stuart, on copper, in a gauze cloak, crown on her head, and paffion flower in her hand; fickly and pale.

- Painted by Cornclius Jafen, in ifizo, in the 3 erh gere of her rige.
i Gardens of Fpicurus.
$\ddagger$ As quoted by Mr. Granger. \& Epigram 85th. : 'jums, p. sz. \& Hita. of Rebellion, ii. 4740
$\Delta$ head

A head of Anne of Denmark. A princefs of fo fpotlefs a life, that malice could not find a bl milh in her ; therefore well might Wilfon* fay, on her monument a character of virtue may be engraven. When heaven claims her, a living queen cannot efcape the fane epitaph.

September 17. The Ochil hills begin beyond Alloa to approach very near to the Forth, hetween which is a narrow arable tract, well cultivated and adorned with woods. In thefe hills was found, in th: heginuing of this century, a large bolly of native filver, beamifully ramified; and of late years, fome cobalt ore. The view of Stiiling, and the windings of the Forth, now a river, are extremely elegant. Anr now again in a portion of Perthflire. Tum halfa mile out of the road, to vilit tine ancient abby of

Cambus-Kenneth, or rather its remains, nothing being left by the rude hand of refornation, excepting a vaft fquare tower, and an arcied door-way, between which is a fine view of Stirling, on is foping rock. 'This houfe was founded by David I. in 1147 , for cannus-regular of St. Augultine, brought from Aroife near Arras ; but the fuperiors were often called abbuts of Stirling. Keith fays, that it now belongs to Cowan's holpital, in that town. J.macs III. and his queen were buried in this place.

After a thort ride, reach the britge of Sterling; a little higher up the river, food the wooden bridge, celebrated for the defeat of the linglifh in 1297, by Wallace. The Englifh were commanded by Earl Warren ; who, againf his jusoment, at the infligation of IHugh de Creffingham, treafurer of Scotland, and a clergyman, crofled the bridge, and was defeated with horrible flaughter, before the army could be formed on the oppofite fide. Creffingham was flain. So detefted was he by the Scots, that they flayed his body, and cut his Ikin into a thoufand pieces, by way of infult on lis pride and avarice. The Fnglihh, on their retreat, burnt the bridge; abandoned their baggage, and fled to Berwick $\dagger$.
L:nter Sterling, a town, fays Boethius, which gave name to ferling money, beeaufe Ofbert, a Saxon prince, after the overthrow of the Scots, eftablithed here a mint $\ddagger$. It was allio anciently called Striveling; as is fail, from the fiequency of trifis or conllicts in the ueighbourhool: and from this old name the prefent feens to have been formed.
The tewn cont:ins about four thoufand inhabiants; has a manufacture of tartanes and thalluons, and employs about thirty loons in that of earpet. The great treet is very broad; in it is the tolbooth; where is $k$ ept the ftandard for the wer meafures of Scotland. The other ftrects narrow and irregular ; the weft fide hal been defended by a wall.
I cammot trace the foundation of the cafte: if we may credit Bocthius, it was a place of thergth in the midule of the nimth century. 't he Romans had a camp and a militagy way on the well fide : it might be their Alaun, but clouds and darknefs relt on this part of our hiflory.
Sicrling is a minature refemblance of Edinburgh, built on a rock of the fane form with that on which the capital of North-Britain is placed, with a fteng furtrefs on the fummit.

The cafte is of great Atrength, impending ever a feep precipice. Within fide ftands the palace, built by Jancs $V$. a prince that had a ftrong turn to the arts, as appears by bis buildings hereand at l'alkland. This pile is large, of a fquare form, ormamented on three fides with pillars, relling on grotelique figures, jutting from the wall. On the anp of each pillar, a tanciful flatue.

[^256]Two rooms, called the Queen's and the nurfiry, are large; the roofs of wood, divided into fquares and other forms, well carved.

A clofet is thewn, noted for the murder of William Earl of Douglas, in 1452, trepanned here by a fife conduct from James II. This nobleman, too potent for legal execution, had entered into affociations injurious to his prince; who commantled him to refcind the offenfive alliance; and; on refuful, Itabbed the earl with his own hand. In revenge, the friends of Douglas inltimety burnt the town.

The parlianent-houfe is a vaft room, a hundred and twenty feet long, with a timbered roof. This town, during the reigns of Mary and Janes VI, was much frequented by the court and the notility. In Scptember, 1571 , a blondy attempt was made here by the queen's party, on the Regent Lenox; who was furprized at midnight, furrounded by his friends, and in full fecurity. Fxcept the Earl of Morton, none of the numerous nobility made the leaft refillance, bue furrendered themfelves quietly to the encmy. Morton defended his houfe till it was all in flames. This gave the townfmen time to recollect their courage; they in turn at:acked the affailants, who, tlruck with a panick, gave themfelves up to th. ir own prifoners. But the unfortunate Lenox fell a vidim to the manes of the archbifhop of St. Andrew's. Sir David Spence, to whom he had furrendered, perifhed in the attempt to fave him, being fhot by the bullet that flew his noble captive.

From the top of the cafle is by far the fineft view in Scotland : to the eaft is a vaft plain, rich in corn, adorned with woods, and watered with the river Forth, whofe meanders are, before it reaches the fia, fo frequent and fo large, as to form a multitude of moft beautiful peninfulas; for in many parts the windings approximate fo clofe as to leave only a little ithmus of a few yards. In this plain is an old abbey, a view of Alloa Clackmannan, Falkirk, the firth of Forth, and the country as far as Edinburgh ; on the north, lie the Ocliil hills, and the moor where the battle of Dumblain was fought; to the weft, the flrath of Menteith, as fertile as the caftern plain, and terminated by the Highland mountains; among which the fummit of Ben-lomond is very confpicuous.

Among the houfes of the nobility, the moft fuperb war that of the Earl of Mar, he. gun by the regent, but never finithed; the front is ornamented with the arms of the family, and much fculpture. It is laid to have been built trom the ruins of Cambuskenneth, and that being reproached with the facrilege, directed thefe words, yet extant, to be puit over the gate:

> Effyy. Tpeik. Furth I. cair notht.
> Cunidir. wail I cair nowth.

Near the cafle are Fdmonfton's walls, cut through a little wood, on the vaff fecps. Nature hath ftrangely huttreffed it up with tones of inmenfe fize, wedged between each other with more of the fame kin ! piled on their tops. Bencath, on the flat, are to be feen the veftiges of the gardens belonging to the palace, call d the king's knot; where, according to the tafte of the times, the flowers had been difpofed in beds and curious knots, at this time very eafily to be traced in the fantallic. form of the turf.

Above thefe walks is the Ladies-hill ; for here fat the fair to fee their faithful knights exert their vigour and addrefs in the tilts and tournaments, performed in a hollow between this foot and the cafle.
The church or royal chapel was collegiate, founded by pope Alexander VI. at the requeft of James IV. - for a dean, fubdean, facriftan, chanter, treafurer, chancellor, arch-

[^257]dean, fixteen chaplains, and fix finging-boys, which, with the chaplains and a muficmafler, were appointed by the king. The queen's confeffor was the dean, who had epifcopal jurifdiction. The whole moft richly endowed.
The Carmelites had a houfe here, founded by James IV. in 1494. Remorfe for his father's death feems to have infteated him to attempt thefe pious atonements. To this nlace he was wont to retire from all wordly affairs, and to perform the duties of reli, , ion with all the au!lerities of the devoted inhabitants.

Ber ath the walls was another, of Dominicans, eftablinhed in 123.3, by Alexander II. In this church was interred, an impoftor, who. at the infligation of the Countefs of Oxford, affumed the character of Richard II. After his retreat, he found here an honourable fupport to the day of his death *.

The hofpital for decayed merchants, founded by John Cowan, a merchant of this town, is very richly endowed. Here is another, founded by Robert Spittal, taylor to Jannes IV. for the relief rot only of merchants but decayed tradefmen.

This place has expernaced its fieges, and other calamities of war. In 1175 it was delivered, by William to the Englifh, (with feveral other places) as a fecurity for his acknowledgement, that he held the crown of Scotland from the kings of England. An inglorious celiun, extorted by his unfortunate captivity. But Richard I. the fucceeding monarch, reflored them $f$.

During the wars ietween the Englifh and Brucean Scots, it often changed mafters. In 1299 it was in poffeffion of Edward I. whofe affairs in Scotland were at that time fo bad, that he was obliged to fend his governor an order to furrender. But the year following, he retook it, after a moft gallant defence by William Oliphant, who gave it up on terms ill obferved by the conqueror.

In 1303, it was again taken by the Scots, under Lord John Sowles: Oliphant refumed the command, and in the next year fuftained a fecond fiege. It was battered moft furioully by the artiliery of the age, which caft ftones of two hundred weight againft the walls, and made valf breaches. At length, when the garrifon was reduced to a very few, the brave governor fubmitted and was received into mercy.

In the reign of Edward II. ir was beffeged by Sir Edward Bruce. The governor, Sir Philip Mowbray, made a valiant defence; but, in confequence of the battle of Bannocbourne, was redured to yield to the victorious army. During the wars of Edward 111. it was reciprocalis taken and re taken; the laft time in $1 ;+1$. The other great events of this place hiw lipped my memory. I muft make a long flide to its memorable fiege in the win er of 1746 , when the gallant old officer, General Blakeney, baffled all the efforts ot the rebels to reduce this important place.
In the evening, pafs through the fuall town of St. Ninian, and the village of Bannocbourne.

Afcend a hill, and pafs by the reliques of Torwood, noted for having given helter to Wallace, after th fatal battle of Falkirk. Some remains of an oak, beneath which the hero is faid to have repofed, is ft:ll pointed out with great veneration. Over this place paffes the Ronidn military road, which I traced before to the north of Dupplin. At fome diftance from this, leave, in a valley on the left, the two mounts, called Dunipace, placed on the north bank of the Carron, Car-avon, or the winding river. Night clofed on me before I reached this place, fo 1 muft feak by quotation from an ingemistis efliy on the an:"quitics of Sterlingfhire, publifhed in the Edinburgh magazine. The one, fays the author, is perfictly round ind ahove fifty feet high. The other, which le feems unvilling to admit to be the work of art, is of an irregular form, and
compoted of gravel. Mr Gordon conjectures them to have been csplanmey moms. the water of the eflive, that they were fepulchal. The lat feems bedt fomatiod, ton, it I recollet, the tops is explomatory hills are truncated or flat.
'To the nomberath whan e, on the fame file of the river, at the diftarece of a few miles, Aond the celebrated antiquity called Arthur's oven, which Mr. C whon fupholis tohave been ataccile"., or lithe chapel, a repolitory for the Romam ina ar fomdirds.

I his bwtope was cireular, uprighe on the fides, and rowaded towards the top, in "hidh was apening deven leed fix inches in diameter. Bencas' this was on one hide
 the hetiblo the round opening at the lop was twenty-two fere ; the inmer dianeter of the budding at the botom, nineten feet fix inches; rotimt the made, thoshius intorne w, were fone feats; and on the fouth fide an altor. Ilwollowamints us that the thor was tellallated, as appeared by the fragments that might be piched up in bis time e. D te adds, that there were on lome of the thones the feupture of cates sealy defaced by ane; and that there had been an inferipuon on a poill:ed flone, fignifying wat the butbing was erected by Vefpafian, in honour of the emperor Claudins, and the godde is Vistorg. 'This he ipenks by tradition; for our Edward, comqueror of Scothand, is charged with camying it away with him. All the old hillormas that take notice of this watice spete that it was the work of the Romans, from the Broth Nemius to the Sooth Beaham. Ilow lar that may be allowed will be a future confoderation: at grefont I hall only, in oppofition to Mr. Maithand, afiert what it was not, a mautoum refembling tee fepulchere of Metella t, which is a round tower, totally open at top. $\boldsymbol{\Lambda}$ nore apt comparifon might be found in the Calictariun of the batho of Dioclelian ${ }_{4}$, whole valted rool, rended, and with a central aperture, atgrees whth that of the deplored Scotifh antiquity.

Leave:a a linall diflance on the left Cameion, the fite of a Roman town, whofe ftreets and walls might be "aced in the midt of the ruins in the time of Buchanan $£$; but, as 1 was informed, bof a relique is to be feen at prefent worthy of a vilit. 'The fea once flowed up to the insu if the report be true, that fragments of anchors have been found near it ; and bern fer-fhelis in various places, it wis time remote from the forth, which is kept cminamed from ovcrllowing the flat tract in many parts between this place and Borrowflunefs. Buchanan fuppofes this town to have been the Care guidi of the venerable Bede $\|$; but as that writer exprefoly fays, that it lay in the middle of the l'orth, it was probably a fortrefs on Inch-Kcith, as his Alcluith is another on the furth of Clyde.

Lie at Falkirk, a large ill-built town, fupported by the great fairs for black cattie from the llighlands, it being computed that 24,000 head are anmally fold here.

Carron wharf lies upon the river, which falls a few miles below into the Frath, and is not only ufeful to the grent iron works erected near it, but of great lerwice even to Glafgow, confiderable quantities of geods deftined for that city being landed here. The canal, wheh is to form a communication between this firth and that of Clyde, begins on the fouth fide of the mouth of the Carron. Its courfe will be above thirty miles, affilted by thirty-nine locks. Its weflern termination is to be at I almuir-buirn-foot, eight miics bolow (ilafgow; but, for the conveniency of that city, it is propofed to form another braneh from the great trunk, at a place called the Stocking-bleachfich, between two and three miles diftant from the city.

[^258]Sept.

Sept. 18. Near Callendar houfe at a finall difance eall from Falkirk, are fome large remains of Antominus' wall, or, as it is called here, Graham's dike, from the notion that o e Grahan, or Grimus*, firft made abreach in it, foon after the reteat of the Romans out of Britain. This vaft work was effected by Lollius Urbicus, governor of Bitain, during the seign of Autoninus lius, as appears by inferiptions found on tones difeovered among the ruins of the chain of forts that defended it. More of then are in honour of the emperor ; one only mentions the lieutenant t. The wall iffelf was of turf, which in this place was forty feer broad, and the disch thirteen feet deep. Loollius, after defeating the Britons, and recovering the country, which was, as Tacitus $\dagger$ expreffes it, " lof as foon as won," reftored to the empire the boundary left by Agricola, and zemoved the bai barians to a greater difunce §. It is probable that bollius might either place his forts on the $f$ lite with thofe built by Agricola, or make ufe of the fame in cafe they were mo at clapfed from the im th the legate of Antot cuds at Caeridden, tw to Mr. Gordon, int lengt ; but the firft is nooft probable, as fifte-fiv $\quad$ had
wa left the inland, to the re-conquet of to. by wall begins near Kirk-Patrick, on the firt A. and It of Abercorn, on the firth of Forth, being, according -fir miles, eight hundred and cighty-feven paces, and defended, I think, by twe we at not thirteen forts. It is probable that the Romans did not keep poffefion even of this wall for any length of time; for there are no infcrip. tions but in honour of that fingle emperor.

Continue our journey over a naked and barren country. Leave on the right the nunnery of Manwel, founded by Malcolm IV. in 1156 . The reclufes were of the Cif. tercian order. Crofs the water of Avon, and enter the fhire of Linlithgow, and foon after have a beautiful view of the town, the cafle, and the lake. This is fuppofed to be the Lindum of Ptolemy, and to take its name from its intuation on a lake, or lin, or llyn, which the word lin or llyn fignifies.

The town contains between three and four thoufand fouls, and carries on a confiderable trade in dreffing of white leather, which is fent abroad to be manufactured. It alfo employs many hands in drelling of flax, and in wool-combing; for the laft, the wool is bruught from the borders. Its port was formerly Blacknefs, but fince the decline of that place, Burrowfonces, about two miles diftant from Linlithgow.

The calle was founded by Edward I. who refided in it for a whole winter; but in $\mathbf{1 3 0 7}$ we find that if was taken and demolifhed by one Binny, a Scotfinan. In the reign of Edward III. the Engliih poffeffed it again; for there is extant an order for the cuftody of the hofpital to Johu Swanlund \|.

1 cannot difcover by whom it was re-built. It is at prefent a magnificent edifice, of a fquare form, finely feated above the lake. James V. and VI. ornamented it greatly. The infide is much embellifhed with fculpture : over an inner gate are niches, in former times holding the ftatues of a pope and a cardinal; erected', as tradition fays, by James V . in compliment to his holinefs for a prefent of a confecrated fword and helmet I. On an outward gate, detached from the building, are the four orders of knighthood, which his Majefty bore, the garter, thifte, goly-ghoft, and golden-fleece.

Within the palace is a handfome fquare: one fide is more modern than the others, baving been built by James VI., and kept in good repair till 1746, when it was acci-

[^259]

Corporation

dentally burnt by the Kirg's forces. The pediments over the windows are neatly carved, and dated 1619 .

The other fides are more ancient : in one is a room ninety-five feet long, thirty feet fix inches wide, and thirty-three high. At one end is a gallery, with three arches, perhaps for mufic. Narrow galleries run quite round the old part, to preferve communications with the rooms ; in one of which the unfortunate Mary Stuart firf faw light. Her faiher, James V., then dying, foretold the miferies that impended over her and the kingdom. " It came," faid he, " with a lafs, and will be loft with one."

The chapel was built by Janes V., and takes up one fide of the fquare. The kitchen for the ufe of the kings and queens is below ground. I heard here of a letter from James VI. to borrow fome filver fpoons for a fealt ; and of another to borrow from the Earl of Mar a pair of filk ftockings, to appear in before the Enylifh ambaffador. Though I caninot authenticate thefe relations of the fimplicity of the times; yet I have $n$ curious letter from the fame monarch, to borrow a thoufand marks, in the year $15^{3} 9$, being that of his wedding, telling the lender (Jihn Boifwell, of Balmato), "Ye will rather hurt your felf veiry far, than fee the dighounour of your prince and native country with the povertie of baith fet downe before the face of flrangers."

The chuich would be a handfome building, if not difyraced with a moft ruinous floor. I was fhewn the place remarkable for the perfonated apparition that appeared to James IV., while he was meditating the fatal expedition into England; and which, as honeft Lindfay relates, as foon as it had delivered its meffage, "vanifhed like a blink of the fun, or a whip of a whirlwind." The tale is told with wouderful fimplicity, and would be fpoiled in the abridgment: "The king (fays the hiftorian*) cane to Lithgow, where he happened to be at the time for the council, very fad and dolorous, making his devotion to God to fend him good chance and fortune in his voyage. In this mean time there came a man clad in a blue gawn in at the kirk-door, and belted about him in a roll of linen-cloth; a pair of botrikins on his feet, to the great of his legs, with all other hofe and clofe conform thereto; but he had no thing on his head, but fyde red yellow hair behind, and on his haffits, which wan down to his Moulders; but his foreherd was bald and bare. He feemed to be a man of two and fifty years, with a great pyke-ftaff in his hand, and came firt forward among the lords, crying and fpeiring for the King, faying, he defired to fpeak with him. While at the laft he came where the King was fitting in the delk at his prayers; but when he faw the King, he made him little reverence or falutation, but leaned down grofings on the delk before him, and faid to him in this manner, as after follows: 'Sir King, my mother hath fent ne to you, defiring you not to pafs at this time where thou art purpofed; for if thou does, thou wilt not fare well in thy journey, nor none that paffeth with thee. Further, fhe bade thee mell with no woman, nor ufe their counfel, nor let them touch thy body, nor thou theirs; for if thou do it, thou wilt be confounded and brought to theme.'"

In one of the freets is fhewn the gallery from whence Hamilton, of Bothwel-baugh, in 1570, with a blamelefs revenge flot the regent Murray. Hamilton had embraced the party of his roval miftrefs, Mary Stuart. The regent beftowed part of his effate on one of his favourites, who, in a winter's night, feized on his houfe, and turned his wife naked into the open fields $t$, where before morning the became furioully mad. Love and party rage co-operated foftrongly, that he never refted till he executed his purpofe. He followed the regent from place to place, till the upportunity of a flow

[^260]march
march through a crowded freet rendered his intent fucceffful. He fed to France, and being there folicited to deftroy the admiral Coligini, he replied, with a generous refentment, "That notwithftanding his injured affection compelled him to commit one murder, nothing fhould induce him to proftitute his fword in bafe affaffination."

Proceed along Strathbrock, watered by the Almond. To the right are Bathgate hills, once noted for mines of lead-ore, fo rich as to be deemed filver mines. Dine at Kirklifton bridge; near this place in $129^{8}$ Edward I. encamped, juft before the battle of Falkirk. He had beftowed among his foldiers a donative of wine, a fudden and national quarrel arofe between his Englifh and Welh troops: the latt wrecked their revenge on the clergy, and new eighteen Engliih ecclefiaftics. The Englifh horfe made great flaughter among my countrymen, who in difguft feparated themfelves from the army*. Edward had not fewer than fifteen thoufand Wellhmen, which lie drew from his new conquefts with the defign of oppofing them to the Highlanders $\dagger$. About a mile farther, after croffing the Almond, enter the fhire of Edinburgh.
-This river runs into the Forth, about four miles from this place. On the caftern bank of its influx is the village of Cramond, once a Roman ftation and port. Many medals, infcriptions, and other antiquities $\ddagger$, have been difcovered here. Mr. Gordon fays there is one, and Mr. Maitland that there are three Roman roads leading to it; 'but my time would not permit me to vifit the place.

- On the right hand, at a fmall diftance from our road, are fome rude ftones. On one, called the Cattean, a compound of Celtic and Saxon, fignifying the ftone of battle, js this infription : "In hoc tumulo Jacet veta F. victi," fuppofed in memory of a perfon nain here.

Vifit, on the road fide, Cortorphine, a collegiate church, in which are two monuments of the Forefters, ancient owners of the place, each recumbent. One preferves the memory of Sir John Forefter, who made the church collegiate in 1429, and fixed here a provof, five prebendaries, and two finging-boys. Here is alfo an infcription to the fift provof, Nicholas Bannochtyne, dated $\mathbf{1 4 7 0}$, concluding with a requeft to the reader to "pray for the pope and him." Crofs the water of Leith, at Coltfbridge, and foon arrive at Edinburgh.

I thall here take notice of thofe remarkable places which efcaped my notice in my former tour, or at leaft merited a little further mention than I at that time paid them. I thall begin with the caftle that crowns the precipitous fummit of this fingular cily.

That fortrefs is of grent antiquity. The ancient Britifh name was Caftell Mynydd Agned. Our long-lof Arthur, if Nennius $\$$ is to be credited, obtained one of his victories in its neighbourhood. His name is ftill retained in the great rock impending over the city, literally tranlated from the Britih, Cader, the feat of Arthur. Maitland, who gives the molt probable account of the derivation of the name, attributes it to Edwin, King of Northumberland, who, from the conquefts of his predeceffors, was in poffeffion of all the tract from the Humber to the firth of Forth. Accordingly we find, in very old writers, that the place was called Edwinfurch, and Edviniburg $\|$. . It continued in the hands of the Saxons or Englifh, from the invafion of Octa and Ebufa, in, the year 452, till the defeat of Egfrid, King of Northumberland, in 685 , by the Piets, who then re-poffeffed themfelves of it. The Saxon Kings of Northumberland re-conquered it in the ninth century, and their fucceffors retained it till it was given up to Indulfus, King of Scotland, about the year 956. All the names in this tract are of Saxin origin, and the language now fpoken is full of old Englifh words and phrafes.

[^261]The cafte is of great frength; and, as it was for a long time fuppofed to be impres. nable, was called the Naiden cafle. Fdward 1 ., in 126 , made binfelf wafter of it in a f w days; but in the reign of his fucceffor it was, in 1.12 , furprized and taken by Thomas Rardolph, Earl of Murray. It fell again into the hands of the Englihh, who, in 134t, loll it by a ftratagem contrived by Sir William Doughas. He entered the harbour of Leith, with a veffel loaden with provifions, and manned with about two hundred Highlanders. He diffuifed twelve in the drefs of peafants, and placed the reft in ambuih amidft the ruins of an al:bey. He led the firft up to the cafte, accompanying twelve horfes laden with oats and fuel: he offered thefe to fale to the porter, who telling him that the garrifon flood in great want of them, let Sir William into the gateway. They flew the porter, blockaded the gate, by killing their horfes in the middt of it, and alfembling their other party by found of horn, made themfelves mafters of the place.

The hero Kirkaldie difinguifhed the year 573 by a gallant defence of this cafte, which he kept, in hopes of mending the fortunes of his unhappy miftrefs, then imprifoned in Eingland. For three and thirty lays he refifted all the efforts of the Scots and the Englifh, excited by courage and emulation. At length, when the walls were battered down, the wells deftroyed, and the whole rendered a heap of rubbih, he retolved to perilh glorioully in the laft intrenchment; but the garrifon, which wanted his heroifm, or had not the fame reafon for defpair, mutinied, and forced him to furrender *.

In 1650 it fuftained a fiege of above two months againft the parliament army, commanded by Cromwell, and furrendered at length on very honourable terms $\dagger$.

At the Revolution, it was held for fome time by the Duke of Gordon for the abdicating prince. When his grace furrendered his charge, he made terms for every one under his command; but, with uncommon fpirit and generofity, fubmitted his own life and interefts to the mercy of the conqueror $\ddagger$. After the city was poffeffed by the rebels in 1745 , it underwent a flort and impoient fiege. The royalitls, under the Generals Gueft and Prefton, leept quiet poffefion of it, after a few weak and unavailing hofilities.

Beneath the floor of one of the paffages were interred the remains of William Earl of Douglas, and his brother. Thele noble youths (too powerful for fubjects) were inveigled here, on the faith of the royal word, and while they were fitting at table w their prince were feized and hurricd to the block. Hiftory mentions an uncomn. circuniftance. A bull's head was ferved up, a fignal in thofe days of approaching death. The Douglafes grew pale at the fight, accepting the omen y .

In a fimall room in this fortrefs Mary Stuart brought into the world James VI., an event of which fome uncouth rhymes on the wall inform the franger.

The regalia of Scotland are faid to be preferved here, and a room in which they are kept is pointed out, but made up and inacceflible. According to Maitland, they were acknowledged to have been here in 1707 , as appears by a formal inftrument preferved in that hitiortan.

The great caunon called Mons-meg, made of iron bars, bound together with iron hoope, was a curicfity preferved in this fortrefs; till it was tranfported fome years ago to I. undon. It is faid to have been brought here from Roxburgh, and that one of the lame kind proved fatai to James II., by burling near the royal perfon.

[^262]The city is of far later date than the caftle. Walfingham, who wrote about the year 1440, rpeaks of it as a mean place, and the houfes covered only with thatch: yet Froiffart, who lived pror to the former, fays, it was "la principal fiege du royaume, et auff par ufage le Roy d'Ecoce f'y tenoir, (car il y a bon chaftel, \& bomse grofle ville, et beau heure ".)" But it feems not to have been in any very flourihing condition till the reign of James I., in whofe laft year (1436) a parliament was firft held here. After thofe meetings were continued, its profperity increafed, and the importance of Perth, before confiderable, began to leffen. Till that perind, the princes and parliaments of Scotland thought the firth of Forth a proper fecurity azaintt the inroads of the Englifh, who often carried their depredations as far as this city, and of fen facked it.

I fhould mention that, befides the caltle, it was alfo guarded by walls and gates. The firt began near the fouthern bafe of the caftle, and, protecting the town on the fouth and eaft, terminated near the North loch, then filled with water, and a fufficient fecurity on that fide.

The gates are numerous, but none that are now flanding are in any degree remarkable. The Netherbow-port, which food at the head of the Canaongate firect, was built in the reign of James VI., but is now demolifhed. A figure of it is preferved in Maithand's Hittory of Edinburgh; and a fill finer, but fcarce, etching of it is fometimes met with, the work of Nir. Alexander Runciman.

To purfue the defcription of Edinburgh, I fhall begin with the great freet, which, under feveral names, is continued almolt in a line from the cafte to Holyrood-houfe, being in tength a mile and a half, and in fone places eighty feet wice, and in the part called the High freet, finely built.

In the flreet called the Caftle.hill is the great refervoir for fupplying the city withwater. Below this is the lawn-market, where every Wednefday are fold linens, checks, \&c.
'The weighing.houfe, which brings in a large revenue to the city, flands at the Bowhead, at the upper end of the lawn market.

Near that are the Luckenbooths, with the tolbooth, or city prifon. The guard-houfe is a little lower. I think the guard confifts in all of feventy-five men, commanded by the provoft and three lieutenants, who are fyled captains. The men are well cloathed and armed. Inftead of the halbert, they fill retain the ancient weapon, the Lochaber ax.

In the Parliament-clofe, a fmall fquare, is the Parliament-houfe, where the courts of juftice are held. Beneath are the advocates' library, and the regifter-office. In my former Tour I mentioned certain curiofities preferved in the library; but neglected the notice of others in a fmall but felect private cabinet.

Amoing others in the cabinet of Mr. John Macgowan, difcovered near this city, is an elegant brafsimage of a beautiful Naidd, with a little fatyr in one arm. On her head is a wine-vat, or fome fuch veffel, to denote her an attendant on Bacchus; and beneath one foot, a fubverted vafe, expreffive of her charatter as a nymph of the fountains. The fatyr is given her, not only to fhew her relation to the jovial god, but from the opinion that the Naiades were mothers $\dagger$ of that fylvan race.

A veffel refembling a tea.pot, with a handle and foout : it wants a lid, but the orifice is covered with a fixed plate, full of perforations, like thofe of a watering-pot. Count Caylus has given. a figure of a pot of this kind; but is as ignorant as myfelf of its ufe.

[^263]Some fpear-heads, and a brazen celt finely gilt. This embellifhment of the laft intimates, that the inftruments of that fort were not for mechauic ufes, but probably the heads of javelins or enfign ftaffs*:

In the fame collection is an iron whip, a moft cruel infrument of punihment among the Romanst. The handle is thort; the lafh, a chain dividing into three parts, with a bullet at the end of each. Thefe bullets were fometimes of lead, fometimes of $\ddagger$ copper. Whips of this kind are often feen in paintings of martyrdoms. It is fingular, that the Europeans found among the natives of Bengal this claflical fcourge, or one nearly relembling it: the bullets in the Indian chawbuc, or whip, being affised to thongs inflead of chains.

The great church, divided into four places of worfhip; and St. Giles's, with its tower terminated by a crown of itone, built by a Milne, ancettor of a celcbrated race of architents; grace part of the ftrect below the Parliament-clofe.

The Trone church is remarkable for its fine lonic front.
IIere are four chapels for the ufe of the proteltants of the church of England. The new one, when completed, will be a moft elegant building, and the front adorned with a beautiful portico, fupported by fix Doric pillars, with fuitable finilling. Over the :ltar is an afeenfion by Mr. Runciman, and here are befides four other paintings by the fame gentleman. Thefe, with a fine organ, are comfortable proofs of the moderation that at prefent reigns in the church of Scothand, which a few years ago would have looked with horror on thefe innocent decorations, and never have pernitted to others what they did not approve. Perhaps the difapprobation ftill continues; then how far more meritorious is this toleration!

At the bottom of Canon-gate ftands the magnificent palace of Holyrood-houfe, once an abby of canons regular of St. Augufine, founded by David I. in 1128, and dedicated to the holy-crofs. This was the richelt of the religious houfes in North Britain, the annual revenue, at the Reformation, anounting to two thoufand nine hundred and twenty-fix pounds Scots $\oint$, befides numbers of rents in kind. In 1547, it was almof ruined by the Regent Duke of Somerfut, who totally uncovered it, and took away with him the lead and bells.

That beautiful piece of Gothic architceture, the chapel, is now a ruin, the roof having fallen in. It was fitted up in a moft elegant manner by James VII. At the end was a throne for the fovereign, and on the fides twelve ftalls for the knights companions of the thillle; but, in 1688, the whole was demolifhed by the fury of the mob.

In the apartments belonging to the Duke of Hamilton, who is hercditary houfekeeper, are feveral curious portraits. Ainong them, a full length of a tall youth, with his hat on a table.' It is called that of Henry Darnley, but, by the countenaace, I fhould rather imagine it to be that of Henry Prince of Wales II.

A head of Jants IV. in black, with ermine; the hair lank and Thort. From the great refemblance to Hemry VII. I am tempted to think it the portrait of Janies V., who was defcended from the daughter of Henry.

Mary Stuart, aged about fifteen; a half length, Araight and Aender; large brocade nceves, fmall ruff, auburn hair.
$A$ head of Cardinal Beaton, black hair, fmooth face, a red callot. An ambitious, cruel, and licentious prieft ; fo fuperior to decency, that he publicly married one of his

[^264]fix natural children to the mafter of Crawford, owned her for his daughter, and gave with her (in thofe days) the valt fortune of four thoufand marks, Scote.
A.tern half length of John Knox, writing.

Lord John Belafys, in a red doublet and flafhed fleeves, young and handfome; fon of Lord Fauconberg. A perfon, fays the noble hillorian, of exemplary induftry and courage, who raifed fix regiments for the King's fervice, and behaved with great fpirit in feveral engagenents; at length, being made commander in chief of the forces in Yorkilhire, at the battle of Selby, funk beneath the fupsrior fortune of Sir Thomas Fairfax, and was by him taken prifoner. He received great honours at the Reftoration, and lived till the year 1689.

A fine old portrait, a half length in rich armour.
Twenty finall heads, in black lead, of the family of Hamilton and its allies. Very neat.

The life of Hercules, in ten fmall pieces, highly finifhed, but with a fiff outline, like the manner of Albert Durer. In the back ground are views of Flemith houfes, fo probably thefe were the work of a Flemifh artift. Perhaps of John de Mabeufe, who was in England in the time of Henry VIII. The fet is fuppofed to have been part of the collection of Sir l'eter Lely ${ }^{*}$.

Edward Earl of Jerfey, a nobleman in great truft with King William ; ambaflador to France, and fecretary of flate; in the next reign, lord chamberlain, and appointed lord privy feal on the day of his death, Auguft $11,171 \mathrm{t}$.

At Lord Dunmore's lodgings is a very fine picture, by Mytens, of Charles I. and his Queen, going to ride, with the fky flowering rofes on them. The Queen is painted wilh a love-lock, and with browner hair and complexion, and younger than any of her portraits I have feen. A black ftands by them holding a grey horfe; and the celebrated dwarf Jeflery Hudfon attends, holding a fpaniel in a ftring. Several other dogs are fporting around. The little hero in this piece undervent a life of vaft variety. He was born the fon of a labourer at Oakham, in 1619; at the age of feven he was not eighteen inches high, at which time he was taken into the family of the Duke of Buckingham, at Burleigh on the hill, and had there the honour of being ferved up to table in a cold pye, to furprize the court then on a progrefs. On the marriage of Charles the Firf, he was promoted to the fervice of Henrietta; and was even fo far trufted as to bo fent to France to bring over her Majefty's midwife. . In his paffage he was taken by a pirate, and carried into Dunkirk. His captivity gave rife to the Jeoffreidos, a poem, by Sir William Davenant, on his duel in that port with a turkey-cock. His diminutive fize did not prevent his acting in a military capacity, for, during the civil wars, he ferved as captain of horfe. In following the fortunes of his miftrels into France, he unluckily engaged in a quarrel with Mr. Crofts, who came into the field armed only with a fquirt; a fecond meeting was appointed, on horfeback, when Jeffery killed his antagonift at the firf flot. For this he was expelled the court, which fent him to fea, when he was again captive to a Turkifh rover, and fold into Barbary. On his roleafe he was made a captain in the royal navy ; and on the final retreat of Henrietta, attended her to France, and remained there till the Reftoration. In 1682, this little creature was inade of that importance as to be fuppofed to be concerned in the Popifh plot, and was cominited to the gate-houfe; where he ended his life, at the age of fixty-three, paffed with all the confequential activity of a Lilliputian hero $t$ :

[^265]: The precincts of this abby, including the park (next to be mentioned) and a fpace as far as Duddington, is nill a place of refuge to the unfortunate debtor; and has its bailey, who keeps courts, and punifhes offenders within his jurifdiction.

The college, founded by the citizens of Edinburgh, in 1582, in confequence of a legacy left in 1558, for that ufeful end, by Robert Reid, bifhop of Orkney, is a very imean building. It is built on the fite of the collegiate church of Kirk-of-field, formerly dedicated to St. Mary, and in popifh times fupplied with a provoft and ten preteends.
The mufeum is at prefent totally empty, for fuch has been the negligence of paf times, that fcarce a \{pecinen of the noble collection depofited in it by Sir Andrew Balfour, is to be met with, any more than the great additions made to it by Sir Robert Bibbald.

The feffion, as they term it, of the univerfity of Edinburgh, begins on November i, and continues fix months. Soon after the commencement a gencral day is appointed for matriculation, if a form can be fo called, which is annually repeated by each fludent, as long as he fays. It was begun in the year 1764 , and was looked upon as ian innovation, intended both to gain a footing for fonse authority over the fludents, and to raife a fund for the public library. The manner was this: a folemn obligation (in Latin) to belave well, to refpect the authority and interefts of the univerfity, and -obey its laws (of which they were allowed to be entirely ignorant) was written in a book, and the ftudents fubfribed their names underneath in alphabetical order. A fum, not lefs than half-a.crown, was at the fame time demanded, for the ufe of the Jibrary; in return for which a ticket was given, entitling the bearer to the ufe of books, upon depofiting their value in money by way of fecurity. I never heard of the leaft cognizance taken of the morals and conduct of any fudent, though I believe there are a few inftances of expulfion for very flagitious crimes. Degrees in phyfic ufed to be conferred like thofe in divinity and law, at the pleafure of the leads, without any neceffity of having fludied either there or at any other univerfity; but, on the laft inflance of this kind, in the year 1763 , or 64 , feveral Atudents, piqued at a proceeding which put on a footing with themfelves perfons whom they thought not entitled to academical honours, mutually engaged not to take a degree at Edinburgh. The profeffors, alarmed at this refolution, gave an affurance, that for the future no degree in phyfic fhould be conferred without at lean two years fludying at the place, and attendance upon all the medical claffes. This has been, I believe, rigoroufly adhered to; moreover the examinations, previous to conferring the degree, are faid to be very flrit. By a regulation of a later date, degrees are only granted in the fummer, twice a year, during the recefs from bufinefs. The number of medical Itudents are now annually reckoned at about three hundred; a majority of whour, being only defigned for the lower branches of the profeffion, fay but one feffion. Every one is at liberty to attend what lectures he choofes, and in what order; except that thofe who mean to graduate, muft, during their flay, attend all the truly medical ones. They who have leifure and means properly to complete their medical education, feldom ftay lefs than three fiflions, and frequently more. Lectures in botany, and attendance on the infirmary, go forward in the fuinmer; and a good many of the fludents, efpecially thofe who come from a diftance, continue at Edinburgh during that feafon.

This univerfity began to be celebrated for the ftudy of medicine about the year 1720; when a number of gentlemen, natives of this country, and pupils of the illuftrious Boerhaave, fettled here, and filled the profeffor's chairs with fuch abilities, as ferved to eftablifh Edinburgh for the feat of inftruction in the healing art. It was
its peculiar grod fortune to have a fucceflion of profeffors of mof diftinguifhed parts, which has preferved its tame with undiminifhect luftre to the very prefent time.

Near the college is the Trades-maiden-hofpital, a plain, neat building, with eleven windows in frout, founded in 1\%07, by the mechanics of the city, for the maintenance of the daughters of thair decayed brethren. Mrs. Mary Erkine (of whom more will be mentioned hercatter) contributed largely towards this defign, and had the honour of being entided joint fonndrels. It maintains, at prefent, filty-two girls.

Somewhat farther are two churches under one roof, called the Grey friers. The convent belonging to it was founded by Jamics I. for the purpofe of inflructing his people in divinity and philofophy, and was faid to have been fo marnificent, that the fuperior, who was ient for from Zuric-zee to prefide, at fill declined accepting it. In this church I had the fatisfaction of hearing divine fervice performed by tie celebrated Dr. Robertfon. It began with a hymn; the miniter thear repeated a prayer to a ttanding congregation, who do not diftract their attention by bows and compliments to each other, like the good people in England. He then gave an excellent comment on a portion of Scripture, which is call d the lecture. Atter this fucceeded another hymn, and prayer, the fermon, a third hymn, and the benediction.

Near this church is a pleafing groupe of eharitable foundations, the genuine fruits ef religion. Immediately behind it is the great workhoufe, the receptacle of the poor of the city. When compieted, it is to confift of a centre and two wings, but the laft are not yet finifhed. It maintains about fix or feven hundred perfons of all ages; each of whom contribute by their labour to their fupport. Beficles thefe are about two hundred out-penfioners, who have fixpence or a fhilling a weck. Near it are three other buildings dependent on it; one for the reception of lumatics, the fecond for the fick, the third for a fort of weaving fchool.

The orphan-hofpital was begun in 1733, under the aufpices of Mr. Andrew Gairdiner, and other charitable perfons. At prefent it maintains feventy poor children, who weave their own cloaths, and affift in the whole economy of the houfe. The building is very handfome, and has nine windows in front.

To the weft of this is Herriot's-hofipital, a magnificent pile of Gothic Grecian architechure, founded by George Herriot, goldfinith and jeweller to Anne of Denmark, who left the valt fum of near forty four thoufand pounds ferling for the building and endowment. It is deftined for the fupport of boys, and maintains at prefent a hundred and three. Within is a handfone fquare, with the ftatue of the founder. In the council-room is his portrait, a half length by Scougal: in his hand are fome jewels; for to that branch of his bufinefs he owed his fortune, partuiculy by the profution bought for the wedding of the princefs of Bohemia. He was naember of the Englifh parliament; and dicd, aged 63 , in the year 1023.
In the fame roon is a head of William Aytone, mafon, and builler of the hofpital.
Behind this is another fine foundation, cailed Watfon's holpital, a building with twenty-one windows in front. The founder owing his rife to the charity of a relation, eftablifhed this houff, for the fupport of about fixty boys, fons and grandfons of decajed merchants of Edimburgh. They are educated here, and apprenticed out; and, after having ferved their times with credit, and remained after that three years unmarried, receive fifty pounds to fet up with.

The Merchants-maiden-hofpital lies north-eaft of Watfon's. It owes its inflitution to the merchants of Edinburgh, and the fame Mrs. Mary Lrfkine before mentioned, for the maintenance of the girls of diftreffed burgefles. It fupports about fixty, who
vol.. :3.
$3^{8}$
appear
appear on Sundays in a drefs truly fimplex munditiis, in dark brown gowns, black filk handkerchiefs, and black filk bonnets.

The private acts of charity are alfo very confiderable. Every Sunday a collection is made for the fick and necefitous. Such a religious refpect do the common people pay to this fund, that nothing but extreme diftrefs will induce them to apply for relief. It feens to them a fort of facrilege to partake unneceffarily of a bounty delined for the miferable; and children will undergo any labour to prevent their parents from becoming burthenfome to this parochial fock.

The New Town is connected to the city by a very beautiful bridge, whofe highert arch is ninety-five fect high, and feventy-two feet wide. This bridge is flung over a deep glen, once filled with water, and called the North-loch, but at prefent drained. To the eaft and to the north of this bridge, is a motley affemblage of churches, methodift meeting, hofpitals, and play-houfe. The old Trinity collegiate church, founded by Mary of Guellres, mother to James III is a Gothic pile. Near it is an hofpital, founded on the diffolution of the former: it maintains, in a moft comfortable manner, numbers of aged perfons of each fex; for befides good diet, they have the luxury of a garden and library.

Leith, the port of Edinburgh, is feated about two miles to the eaft, is now a confiderable town, divided into two parifhes, called north and fouth Leith, feparated by a river of the fame name. The original name was Inverleith, and is firt mentioned in 1329, in a grant of it to the citizens of Edinburgh, under whofe jurifdiction it lies. They appoint out of the old magiftrates a baron bailiff, who with the affiflance of other officers directs the affairs of the place. It was for fome time the refidence of Mary of Lorrain, queen regent, who followed by her court, gave rife to feveral handfome buildings fill exifting. The fame princefs, when the called in the affiftance of the French, fixed their forces here, and caufed it to be fortified, on account of the convenient harbour and its vicinity to the capital. Here Mary Stuart landed on her return from France, in 1561, and in two years after defiroyed the independency of the place, by mortgaging, for a great fum of money, the fuperiority of it to the city of Edinburgh *. When Henry VIII. propofed the match between his fon Edward and Mary, he followed his demand in a manner worthy fo boifterous a prince. In this rough courthip, as it was humouroufly fyled, he fent the Earl of Hertford with a numerous army to fecond his denand, who hurnt both this place and Edinburgh.

After that it was fortified by the French, and underwent a long figge; the French behaved with fpirit, and for a great length of time baffed all the attempts of the Englifh, who fupperterl the lords of the congregation. At length it was yielded on compofition, and the fortification razed. In 1571, it was re-fortified by the Earl of Morton; and in a little tefs than a century afterwards, a citadel was added by general Monk, denolifhed on the reftoration.

The harbour is but iudifferent; yet by means of a fine pier large veffels lie here with fecurity. The fouthern fhore of the Forth is flallow and f:ndy: no part between Leith and Inch-Keith is above ten fathom deep. The north is of a great depth, and has a rocky or foul bottom. Oppofite to Kinghorn is a ledge of rocks called the Blae, which at a low ebb are only four fathom from the furface. Yet the water decpens to fifty fathoms within a hlip's length. The pier is a beautiful and much frequented walk : and the annual races are on the fands, near low-water mark. It has happened often when the heats have been long, that the horfes run beily deep in the flowing tide.

$$
\text { - Rubeifon, i. } 312
$$

The difpropurtion of rain between this and the weftern fide of the kingdom has been frongly exemplified here. Leith lies in a line fixty miles diftant from Greenock. Some years ago, when the rope-walks of both places were uncovered, it was obferved that the workmen at the laft were prevented by the wet from working eighty days more at Greenock, than at Leith, and only forty days more at Glafgow; fo fudden is the abatement of rain, and fo quick is the change of climate, on receding from weft to eaft.

In my return to Edinburgh, paffed by Reftalrig, the ancient refideuce of the Logans. The lalt poffeffor was accufed five years after his death) of being concerned in the Gowrie confpiracy; and was cited to appear, but proving contumacious, his eftate was forfeited, his bones burnt, and his heirs declared infamous.

On the 21 ft of this month I vifited Hawthornden, the feat of the celebrated hiforian and poct, Drummond, about feven miles fouth of Edinburgh. The houfe and a ruined caftelet are placed on the brink of a valt precipice of free-flone, with the North-Efk running in a deep den beneath. In the houfe are preferved the portraits of the poet and his father.

In the front of the rock, juft beneath the houfe, is cut a flight of twenty-feven fteps. In the way, a gap, paffible by a bridge of boards, interrupts the defcent. Thefe feps lead to the entrance of the noted caves, which have been cut with valt labour out of the rock. The delcent into the great chambers is by eight feps; but, on the firt entrance on right and left, are two rooms; that on the right confifts of a gallery, fifteen feet long, with a fpace at the end (twelve feet by feven) whofe fides are cut into rows of fquare holes, each nine inches deep, and feems to have been the pigeon-houfe of the place, there being an entrance cut through the rock. On the left hand is another gallery, and through the front of this is a hole, facing the bridge, which feems intended as the means to draw in the boards, and fecure the retreat of the inhabitants. In this gallery is a little bafon cut in the rock ; perhaps a Benitoire.

The grand apartment faces the door, and is ninety one feet long; the beginning is twelve feet wide, the reft only five feet eight ; the height fix. In a recefs of the broader part is a well, fome fathoms decp. Above is cut a funnel, which pierces the roof to the day. Near the end of this apartment is a fhort turning, that leads to another gallery, twenty three feet by five.

Thefe curious hollows have been fuppofed by fome to have been the works of the Picts; but to me they feem to have been defigned as an afylum in troublefome times for fome neighbouring inhabitants, in the fame manner as Wetherell cells were for the monks of the abbey. It appears by Major*, that the brave Alexander Ramfay, in 1341 , made thefe caves his refidence for a confiderable time. To him reforted all the gallant youth of Scotland; and to him parents fent their fons to be initiated in the art of war. From hence he made his excurfions to the Englifh borders with his pupils; each inroad was to them a lecture for valour and frratagem.
Thefe alone attract the attention of Arangers; but the folemn and picturefque walks cut along the fummits, fides, and bottoms of this beautiful den, are inuch more deferving admiration. The vaft mural fence, formed by the red precipices, the mixture of trees, and grotefque figure of many of the rocks, and the fmooth fides of Pentland hills, appearing above this wild fcenery, are more ftriking objects to the contemplative mind.

After croffing the river, and clambering up a fteep hill, difcover on the fummit a work of art, not lefs admirable than thofe of nature which we had fo lately quitted, I

[^266]mean, the chapel of Rollyn, Rolkelyn *, or the hill in the glen; a curious piece of Gothic architecture, founded, in 14.46 , by William St. Clare, prince of Orkney, for a provof, fix prebendaries, and two finging-boys. 'The outfide is ornamented with a multitude of pinnacles, and variety of ludicrous feulpture. 'The infide is fixty-nine feet long, the breadth thirty four, fupported by two rows of cluftered pillars, between feven and eight feet high, with an aille on each fide. The arches are obtufely Gothic. Thefe arches are continued acrofs the lide ailles, but the center of the church is one continued arch, elegantly divided into compartunents, and tinely feulptured. 'The capitals of the pillars are enriched with foliage, and yaricty of figures ; and, amidtt a heavenly concert, appears a cherubion blowingthe ancient llighland bagpipe. In thort, in all parts is a profufion to exquifite, as feems even to have affected with refpect the barbarifm of Kinox's manual reformers, fo as to induce them to fare this beautiful and venerable pile.

In a deep den far bencath, amidft wooded eminences, are the ruins of the calle, fixed on a peninfilated rock, accellible by a bridpe of ilnpendous height. This had been the feat of the great name of Sinclair. Of this houfe was Oliver, livourite of Janues V. and the innocent caufe of the lofs of the battle of Solway Mols, by the hatred of the nobility to his preferred commans. He lived in poverty to give a fine leflom of the uncertainty of profprity to the pride of the worthlefs Arran, minion to James VI. appearing before the intaknt favourite, in the garb of adverfity, repeating only thefe words, "I am Oliver Sinclair."

Near this place, the Englifi, under John de Sngrave, regent of Seotland, in 1302, received three defiats in one day from the Scots, under Joln Cummin and Simon Frazer.

In my return, vifit St. Catherine's woll, woted for the Petroleun fwimming on the furface. A little father, to tixe left, is a noted camp of an oval form.

On returning into this city, I called at Mr. Bradwood's academy of dumb and deaf. This extrierdinary profofir had under his care a mumber of young perfons, who had received the Promethian bear, the divine inhatus; but from the unhappy contruction of their organs, were (iill they lad receincal his inflructions) denied the power of utterance. Every idea was hocked up, or appared but in their eyes, or at their finger eads, till their nafl: intructed them in arts maknown to us, who have the faculy of hearing: Apprehenfion reaches us by the grofer fenfe. They fee our words, and our uttered thoughts become to them vifible Our ideas expretled in fpeech frike their esrs in vain: their eyes receive them as they part from our lips. They conceive by intuition, and fpeak by imitation. Mr. Braidwool firft teaches them the letters and their powers; and the ideas of words written, begiming with the mol fimple. 'The art of fpeaking is taken from the motion of his lips; his words being uttered flowly and di!tincty. Their anfwers are flow and fomewhat harfl.

When 1 entered the room, and found nylfelf furrounded with numbers of human forms fo oddly circumfanced, I felt a fort of anxicty, lich as I might be fuppofed to feel had I been environed by another order of beings. I was lion relieved by being introduced to a molt angelic young creature, of about the age of thirteen. She hoo noured me with her new acquird converfation; but I may truly lay, that I could fcarcely bear the power of her pieccing eyes; the looked me through and through. She Ioon fatisfied me that fhe was an apt lcholar. She readily apprehended all I taid, and returned me anfwers with the utnoft facility. She read; the wrote well. Her reading was not by rote. She could clothe the fame thoughts in a new fet of words,

[^267]and never vary from the original fenfe. I have forgot the book fhe took up, or the fentences the made a new verfion of; but the ctfed was as follows:

## Original paffage.

Lord Paean has divided the whole of human know. ledge into hiflury, paetry, and philufuply, which are referred to the three powera of the nind, incmory, imagination, and refifon *.

## Verfion.

A nubleman has parted the tutal or all of man's Aury, or under llanding, intu an ace cmunt of the life manners, religion, and cuftoms of any peiple or c. uutryi verfe ar metre! mural or natural knowledge: which are pointed to that three facultics of the foul or fpirit, the faculties of remembering what is paft, thuught or cuilception, and right judgment.

1 left Mr. Braidwood and his pupils with the fatisfaction which muft refult from a reflection on the utility of his art, and the merit of his labours: who, after receiving un. der his care a Being that feemed to be merely endowed with a human form, could produce the divina particula aura, latent, and, but for his kill, condemned to be ever latent in it; and who could reftore a child to its glad parents with a capacity of exerting its rational powers, by expreflive founds of duty, love, and affection.

Before I quit Elinburgh, I mult mention that it is the firlt royal burgh in Scotland; is governed by a provott, who has the addition of lord, four bailies, and a dean of guild : who did the the diftinguithed honour of conferring on me its free lom, after an elegant entertainment at the houfe of the Right Honourable John Dalrymple, Lord Provol?.

I refer the reader to the Appendix for a lift of the manufactures in and about this great city. If the inention of feveral may be thought too minute, it muft be confidered, how many even of the neceffirics of life were wanting in North-Britain, till the rifing induftry of the age determined that this country fhould fupply its own deficiencies. In the time of James VI. how deplorable was its trade ! for, as old Hackluyt fings, it even imported its wheel-barrows and cart-wheels:
And the "cots bene charged knownen at the eye,
Out of Flandera wilh litte mercerie,
And greas plentie of haberdahars ware
And half her thippes with car:-wheeles bare,
And with barrowes are laden as with fublance:
Thus moll wde are in lier chevifance $t$.

But notwithfanding the prefent progrefs that Scotland has made in the ufeful arts, it muft fop at a certain point, propurtinate to its wealth and population, which fland thus in refpect to England: when the land tax is at two fhillings in the pound, Scotland pays $23977 \mathrm{l} . \mathrm{cs} .7 \mathrm{~d}$. and England $99+96 \mathrm{cl}$. os. 4 d . that is, lefs than the proportion of 11041 . The landed property of the former is $1,000,0001$. per annum; of the latter $16,000,000 \mathrm{l}$. But if the wealith in moveables is added, the difference will be as 1 to 20 . In refpect to numbers of people, England has $8,000,000$; Scotland only 2,000,000.

Sept. 26. Leave Edinburgh. Ride through Dalkeith, and have the pleafure of pafsa ing the day with Sir John Dalrymple, at Craniton caftle. The country good, full of corn, and decked with numbers of !mall woods. Dilpofe of the morning by vifiting the caftles of Crichton and Borthwick. The firtt is feated on the edge of a bank, above a graffy glen. Was once the habitation of the chancellor Crichton, joint guardian with the Earl of

[^268]Callendar, of James II. a powerful and fpirited ftatefiman in that turbulent are, and the advifer of the bold but bloody deeds againft the too potent Douglaffes; facts excufable only by the plea of neceffity of Itate. During the life of Crichton, it was bi li.ged, taken, and levelled to the ground, by Wiliam Earl of Douglas, after a fiege of nine months ".

It was rebuilt, and fome part, which appears more modern than the reft, with much elegance. The front of one fide of the court is very handfome, ornamented with diamond. fhaped facets, and the foffits of the flaircafe beautifully carved; the cafes of fome of the windows adorned with rofettes, and twifted cordage. The dungeon, called the Mafmore, is a deep hole with a narrow mouth. Tradition fays, that a perfon of fome rank in the country was lowered into it for irreverently pafing this caftle, without paying his refpects to the great owner.

The parifh church had been collegiate; founded in 1449, by the chancellor, with the confent of his fon, for a provoft, nine prebendaries, and two finging-boys, out of the rents of Crichton and Lockerwort.

About a mile farther is Borthwick cafle, feated on a knowl in the midt of a pretty vale, bounded by hills covered with corn and woods; a moft picturefque feene it confifts of a vaft fquare tower nincty feet high, with fquare and round baltions at equal diftances from its bafe. The flate rooms are on the iritt fory, once acceffible by a draw-bridge. Some of the apartments were very large, the hall forty feet long, and had its mufic gallery, the roof lofty, and once adorned with paintings. The caitte was built by a Lord Borthwick, once a potent family. In the vault lies one of the name, in armour, and a little bonnet, with his lady by him. On the fide are numbers of little elegant human figures. The place was once the property of the Earl of Buthwel, who a little before the battle of Carberry-hill, took refuge here with his fair confort $\dagger$.

Lodge at a good inn at Blackfhields; a village, as I was informed, lying in a portion of Haddingtonfhire, furrounded by Lothian.

Sept. 27. After croffing a rivulet enter the fhire of Berwick. Afcend Soutry-hill, from whence is a fine view of the firth of Forth, the county of Fife, the Bafs ine, and the rich county of Eaft Lothian immediately beneath us. This advantageous fituation made it a noted beacon, which caufed it to be particularly noticed in the old Scotch laws on that account $\ddagger$. Crofs a tedious dreary moor, and defcend ir to Lauderdale; a long narrow bottom, uninclofed, and deftitute of wood, but abundant in corn. Reach Lauder, a fmall town, noted for an infolent act of jultice done by the nobility on the wpflart favourites of James III. Cochran a mafon, created Earl of Mar, Hommila taylor, Leonard a fmith, Rogers a mufician, and Torffan a fencing-mafter, directing all his councils. The nobility affembled here with their vaffals, in obedience to his Majelly's fummons, in order to repel a foreign invafion; but took this opportunity to free themfelves from thofe wretched minifters. They met in the church to confult the neceffary meafures, and while they were in debate, Cochran, deputed by the King, knocked at the door, to demand the caufe of their affembly. His attendance, and his urefs, as defcribed by Lindefay, are moft defcriptive of the fellow's arrogance, "who was well accompanied with a band of men of war, to the number of three hundred light axes, all clad in white livery, and black bends thereon, that they night be known for Cochran the Earl of Mar's men. Himfelf was clad in a riding.pie of black velvet, with a great chain of gold about his neck, to the value of five hundred crowns; and four blowing horns, with both the ends of gold and filk, fet with precious fones. His

[^269]+ Critical Enquiry, \&c. 3d ed. 289.
horn was tipped with fine gold at every end, and a precious ftone, called a berryl, hanging in the midf. This Cochrau had his heumont born before him over-gilt with gold, and fo were all the reft of his horns; and all his pallions were of fine canvas of filk, and the cords thereof of fine twined filk, and the chains upon his pallions were double over-gilt with gold "." He was feized, thus equipped, his chain and his horns torn from him, and, with his comrades, hanged over a bridge (now demolifhed) in fight of the King and the whole army.

Near the town is Thirleftane cafte, a fingular old houfe of the Earl of Lauderdale. The front fmall, bounded on each fide with a great round tower, capt with fated concs. The infide had been heavily ftuccoed by the Duke of Lauderdale, one of the noted cabal in the time of Charles II. His portrait, by Lely, is to be feen here; a much more advantageous one than that by the noble hiftorian, who paints him. "infolent, imperious, flattering, diffembling, had courage enough not to fail, where it was abfolutely neceffary, and no impediment of honour to reltrain him from doing any thing that might gratify any of his paffions $\dagger$."

After riding two miles through a long tract of coarle fheep-walks, turn out of the great road, and cuter the flhire of Roxburgh.

Pafs by Threepwood, infamous in tormer days for mofs-troopers; defcend into a little vale, and fee fome ruined towers at Cohmfie and Hilliap; aicend again, and foon after fall into a pretty valley woodsui and watered by the Gala; and at a houfe of the fame name receive every civility from its owner, John Scott, Efq. We have now croffed the water, and are in the county of Selkirk, or the forclt of Etrick, which was formerly referved by the Scottih princes for the pleafure of the chace, and where they had fimall houfes for the reception of their train. One in Gala Shields, the adjoining village, ftill keeps the name of Hunter's Hall.

This country is fupported chiefly by the breed of theep, which fell from eight to twelve pounds a fcore. They are generally fold into the fouth, but fometimes into the Highlands, about the month of March, where they are kept during fummer; and, after being improved by the mountain-grafs, are returned into the Lowlands the beginning of winter. The ufual weight of a wether is from thirteen to eighteen pounds of twenty.two ounces per quarter. The fleece has been of late much improved by the ufe of oil and butter, inftead of tar; and the wool, which once was fold at five thillings and fixpence, now fells for ten fhillings per fone of twenty-four pound.

The fhecp inhabit the hills, but the ground is fo indifferent that an acre will maintain but one. A theep farm of fifteen hundred acres is let for eighty pounds. Numbers of cattle are reared here; and much cheefe and butter made, but the laft very bad in general, and ufed chiefly for greafing the theep. The Dorfethire breed has been introduced here, but, in this northern climate, in two or three years they lofe their prolific nature.

I am uncertain whether a cuftom that prevails a little north of Coldfream, does not extend alfo to thefe parts. About Duas, the fair fpinfters give much of their leifure time to the fpinning of blankets for their welding portion. On the nuptial night, the whole ftock of virgin induftry is placed on the bed. A friend of mine has, on fuch an occalion, counted not fewer than ten, thick and heavy. Was the Penelope who owned them forlaken by her Ulyffes, the never could complain, like the Grecian fpoufe,

> Non ego ceferto jacuifter frigida lecto!

About a mile weft of Gala Shields are very evident veftiges of the great ditch called the Catrail, which is twenty-five feet wide, bounded on each fide by a great rampart. It has been traced twenty two miles; paffes four miles weft of Hawick, up Docluch. hill, by Fairnyfide-hill and Skelfe-hill, acrofs Fllen water, afcends Carriage-hill, and gocs by the Maiden Paps, reaches Pear fell on the Dead-water, on the borders of Northumberland, and from thence may be traced beyond Langholme, pointing towards Cannomby, on the river Eik. On feveral parts of its courfe are flrmg round forts, well fortived with ditches and ramparts, fome even exceedin, in trengh thofe of the Romans. Whether it ever reached farther north than Gala his; not been difcovered, but the tradition is, that it extended from fea to fea. Mr. Gordon, the o:ly antiquary that has explored it, traces it no farther ; but has obferved the chan of forts towards ealt Lothian. It is probable, that is was catt up ly the inhabitants of the country north-weft of it, as a protection againft the i:anods of invaders; hut whe they were, or what was the date of the work, are difficulties not to be detcrmined from hiftorical authority.

Sept. 2is. Continue my journey for a time along a fertile bottom, and, noar the junction (the laft in this place,) of the Gala and the Tweed, a fine river, again enter the flire of Roxburgh.

All the country is open, and much of it full of corn. Here the farmets injudicioufly cut up the fides of the hills, and fpoil their fine fheep-walks to get a little late and bad corn.

At a place called Bridgend food, till within thefe few years, a large pier *, the remaining one of four, which formed here a large bridge over the Tweed. In it was a gateway large enough for a carriage to pafs throurgh, and over that a room, twenty feven feet by fifteen, the refidence of the perfon who tock the tolls. This bridge was not formed with arches, but with great planks laid from pier to pier. It is fail that it was built by David 1. in order to afford a pallage to his abby of Melros, whith he had newly tranflated from its ancient fite; and alfo to facilitate the journies of the devout to the four great pilgrinages of Scot'and, viz. Scone, Dandee, Paifley, and Melros.

Crofs the new bridge, pafs by Darnwick, and foon after by Skimeer or Skirmini hill, noted in 1526 for a fray between the Earl of Angus and the family of the Scotts, under their laird, Scott of Buccleugh. Angus had poffefion of the perfon of James V. then in his minority ; and uled his power with fo little moderation, as to make the young prince defirous of being releafed. The power of the Douglafles was often an overmatch for the regal. Such was the cafe at prefent; James therefore was obliged to apply to Buccleugh, a potent borderer, to attempt his deliverance. That Lord, in order to bring His Majefty within the limits of his eflate, encouraged all kinds of exceffes among his people. This brought the King, attended by Angus, to fupprefs their depredations. Buccleugh appeared with his powers; a diermifh begun, the Scotts were defeated, and James was for a time obliged to fubmit to the tyramy of his keeper.

At a fmall diftance lie the elegant remains of the abby of Melros, founded in $1: 36$, by David I., as thefe jingling lines import:

> Anno mitlenn centemo, ter quoque denn,
> Et fexto Chrilti, Melrote, tunduta fuifti.

David penpled it with Ciftertians, brourht from Rivale ahby, in Yorkfhire, and dedicated it to the Virgin Mary. At the Reformation, James Donglas was appointed

[^270]commendator, who ton: building a large houic i
-wn much of the building in order to ufe the materials in anfelf, which is fill flanding, and dated 1590 . Nothing is
a part of the cloifter walls, elegantly carved; but the ruins of left of the abbey, excep:..g a part of the cloifter walls, elegantly carved; but we rains of
the church are of muft uncommon beauty ; part is at prefent ufed for divine fervice, the reft uncovered; but every part does great honour to the arclitef, whofe memory is preferved on the walls in thefe uncouth lines:

> John Murdo fum tym callit was $\mathrm{I}_{\text {, }}$ And horn in Paryffe certainly: And had in kepying all mafom werk, Of Sant minoya, the lije kirk Of Glafgn, Melros, and Pail 1 y, Ot Nyddyfdayl, and of Galway. Pray to God and Mary bailh, And fweet St. John keep this haly kirk from Ikaith.

The fouth fide and the eaft window are elegant palt defcription; the windows lofty, the tracery light, yet ftrong. The church had been in form of a crofs, and of confiderable dimenfions ; the pillars cluftered; their capitals enriched with moft beautiful foliage of vine leaves and grapes. A window at the nork end of the tranfept is a moft rich rofe quatre-foil. The work of the outfide is done with uncommon delicacy and cunning. The fpires or piunacles that grace the roof; the brackets and niches that, till $16_{4}$, were adorned with flatues, are matchlefs performances. But what the fury of the difciples of Knox had fpared, the ftupid zeal of covenanting bigots deftroyed. In times long prior to thefe it had felt the rage of impious invaders. In 1322, the bafled Edward II. vented his rage on the abbies of Melrofs and Dryburgh. Richard II. was not more merciful to it; and in the reign of Henry VIll., in 1544 , two of his captains, violating the remains of the Douglaffes, felt the fpeedy refentment of their defcendant, Archibald Earl of Angus, in the battle of Ancrum-moor.

- The fide of the weft end of the church, which remains ftanding, is divided into five chapels, orice probably belonging to private families; for (befides Alexander II., who lay below the great altar) it was the place of interment of the Douglaffes, and other potent families. James Earl of Douglas, nain at the battle of Oiterbourn, was depofited here with all the pomp that either the military or the religious profeffion could bctow. Here too lies the Lord of Liddefdale, the flower of chivalry, who fell an affaffinated victim to the jealoufy of William 1. Earl of Douglas. His eulogy fyles him "terrible and fearefull in arms; meek, milde, and gentle in peace; the fcourge of England, and fure buckler and wall of Scotland, whom neither hard fucceffe could make flack, nor profperous floathfull "."

The fituation of this religious houfe is remarkably pleafant, feated near the Tweed, and fhaded with woods, above whofe fummits foar the venerable ruins, and the tricapitated top of Eldon hill. On one of the heads is a Roman camp. I have fince been informed of others, with military ways, to be traced in various places.

Pals by Newited, and Red-abby-ftead, a houle belonging once to the knights Templars.t. Proceed to Old MeIros, now reduced to a fingle houfe, on a lofty promontory, peninfulated by the Tweed; a molt beautifulicene, the banks lofty and wooded, varied with perpendiualar rocks, jutting like buttrefles from top to bottom. This was the fite of the ancient abbey of Culdees, mentioned by Bede to have exifted in $66_{4}$, in the reign of the Saxon Ofwy. This place was as celebrated for the aulterities of Drichelmus, as

[^271]> vor.. IIt.
ever Finchal was for thofe of St. Godric. The firt was refored to life after being dad for an entire night. During that lpace he paffed throu th purgatory and hell, hid the beatific vifion, and got very near to the confines of heaven. His angelic guide geve him an ufeful leffon on the efficacy of prayer, alms, falling, and particularly matles of holy men; infallible means to relieve the fouls of friends and relations from the place of torment *.
The deferiptions which Bede has given of the feats of mifery and blifs are very poetical. He paints purgatory as a vallev of a flupendous length, breadih, and depth: one fide filled by furious florms of tail and fuow; the other with lambent, mextinguifhable flames. Inthefe the fouls of the deceafed alternately experienced the extremes of heat and cold. Both Shakefpeare and Milton make ufe of the fame idea: the firlt in his beautiful defeription of the flate of the dead in Meafure for Mcalure :
Ay, but to die and go we know not where;
To lie in cold ubltrustion, and to rot ;
This fer fible warm motion to become
A kneaded clod; and the delighted fyinit
To bathe in fiery floods, or to refide
In thrilling regions of thick-ribbedice;
To be imprifon'd in the vicwlefs wiuls,
And blown with relllefs violence abuat
The pendent work!

Milton's thought is dreffed only in different words:
At certain revolutions all the damn'd
Are trought; and feel by turns the hitter charge
Offierce extrames, extremes by change mare lierce;
From leds of raging lire to flarve in ice
Their foft chhereal heat.
Crofs the Tweed at Dryburgh boat, and re-enter the fhite of Berwick. On the northern fide, in the deep gloon of wood, are the remaius of the abbey of Dryburgh, founded by Hugh Morville, conftable of Scotland, in the time of David I., and Beatrix de Campo Bello his wife. There are farce any retiques of the church, but much of the convent, the refeetory, fupported by two pillars, fevcral vaults, and other offices; part of the cloifter walls, and a fine radiated window of fone-work. Thefe remains are not inelegant, but are unadorned. This was iuhabited by Pramonftratenlian monks, who fyled the Irifh abbies of Druin la croix and Woodburn their daughters $\dagger$. At the Reformation James VI. beftowed Dryburgh on Henry Erlkine, fecond fon of the Earl of Mar, whofe houfe as commendator is ftill inhabited.

Continue the ride through a fine country full of gentle rifings, covered with corn, and refenbling Picardy. Keep ftill in fight of the 'Tweed, whote banks, adorned wih hanging woods, and variety of beautiful borders, well merit the apoftrophe of the old fong :

Pafs oppofite to a round tower, called Little Den, placed on a cliff above the river, once a border-houfe of the Kers. Crofs the river at another ferry. l'afs by Rutherford, where Robert III. founded an hofpital, dedicated to Mary Magdalene, and beflowed it on the abbey of Jedburgh, which was to maintain here a pricit to pray for his foul, and thofe of his anceftors, kings of Scotland $\ddagger$.

[^272]Again enter the county of Roxburgh, and foon after fee, on a high clifit above the water, a fmall Roman camp, with two deep fofles on the land fide, and not far dittant an exploratory mount. The view grows more picturefque; the river, bounded by lafy clifts, cloathed with trees; and on a rifing a little beyond appear the great woods of Fleurus, and the houfe in front, the feat of the Duke of Roxburgh.
Pafs bencath the fite of the once potent cafle of Roxburgh, feated on a valt and lofty knowl, of an oblong form, fuddenly rifing out of the plain, near the junction of the Tweed and the Tiviot. On the north and wefl it had been defended by a great fols. The fouth impends over the 'Tiviot, fome of whofe waters were diverted in former times into the caftle ditch, by a dam obliquely croffing the ftream, and whofe remains are ftill vifible. A few fragments of walls are all that exift of this mighty freugth, the whole area being filled with trees of confiderable age. At the foot was once feated a town of the fame name, deftroyed by James II. when he uadertook the fiege of the calle, and probably never re built.

The ancient name of the caftle was Marchidun, Marchmont, or the hill on the marches *. The name of the founder eludes my enquiry. The firft mention I find of it is in $1132 \dagger$, when a treaty was concluded here on the part of King Stephen, by Thurtan, archbilhop of York, between him and David I. In 1174, after Willian the Lion was taken prifonce near the caftle of Alnwick, Roxburgh and four others of the ftronget in Scotland were delivered to Henry II., as fecurities for doing homage (on his releafe) for the crown of Scotland $\ddagger$. They were reltored to the Scots by his fucceffior. In $129^{6}$ it was taken by Ldward I. § In $\mathbf{3} 342$, the year in which David Bruce returned from France, this fortrefs was reftored to his crown by the valour of Alexander Ramfay, who was appointed governor; an honour he enjoyed but a fhort time, being furprifed by the envious Doughas, and farved to death in the caftle of Hernitage \|. The Scots loft this fortrefs in the reign of Edward III., who twice celebrated his birth-day in it 5 . It was put into the hands of Lord Henry Percy, after the defeat and captivity of David, at the battle of Nevil's-crofs **. But the moft diftinguifhed fiege was that in 1560 , fatal to James II., a wife and gallant prince, who was flain by the burfting of one of his own cannons. A large holly, inclofed with a wall, marks the fpot. His queen, Mary of Gueldres, carried on the attack with vigour, took and totally demolifhed it.

We have feen before the misfortunes that attended the firf of this ill-fated name. James I. fell by the hands of affaffins at Perth : his fucceffor met at this place, in the height of profperity, with a violent death. Jancs III. Was murdered by his rebellious fubjects, after the battle near Bannockbourn. James IV. lolt his life in Flodden field. James V. died of a broken heart, on the defear at Solway; and the fate of his unhappy daughter, Mary Stuart, is unknown to none. In her fon, James VI., adverfity remitted for a time the perfecution of the race; but refumed it with double fury againlt his fucceffor Charles. His fon experienced a long feries of misfortuncs; and the bigotted James fuffered the punifhment of his infatuation, and tranfmitted to his offspring exile and feclufion from the throne of their anceftors.

Pafs by an inclofure called the Friery, the fite of a houfe of Francifcans, belonging to Roxburgh. Ford the Tiviot, which gives the name of Tiviot-dale to all the fine country from Melros to this place, notwithftanding it is wallhed by the Tweed; fo that the old fong, with propriety, calls its inhabitants

[^273]All pleafant men of Tiviotale, Haft by the river Twetd.

Have here a moft charining view of Kelfo, its ancient church, Mr. Dickfon's pretty toufe, and the elegant bridge of fix arches over the Tweed, near its junction with the Tiviot. On croffing it enter that neat place built much after the manner of a Fleaith town, with a fquare and town-houfe. It contains about twenty feven hundred fouls, has a very ceniderable market. and great quantities of corn are fold hr re wedky hy sample. The parifh church is dakfome and inconvenient, being part of that belonging to the abbey ; but a new one is building, in an octagunal form, cighty-two fect in diameter, fupported by a circle of pillars.

The abbey of Tyronenfians was a vaft pile, and to judge by the remains, of vencrable magnificence. The walls are ormamented with falfe round arches, interfecting each other. Such interfedions form a true Cothic arch, and may as probibly have given rife to that mode, as the arched flades of avenues. The fteeple of the church is a vaft tower. This houfe was founded by David I. when Earl of Cumberland. He trit placed it at Sclkirk, then removed it to Roxburgh, and finally, when he came to the crown, fixed it here in 1128 . Its revenues were in money above two thoufand a year Scots. The albot was allowed to wear a mitre and puntifical robes; to be exempt from epifcopal jurifdiction, and permited to be prefent at all general councils.

The environs of Kelfo are very fine; the lands confitt of gentle rilings, inclufed with hedges, and extremely fertile. They have much reafon to toatt of their profpects. From the Chalkheugh is a fine view of the forks of the rivers, Roxburgh hill, Sir Jimes Douglas's neat feat, and at a diftaice Fleurs; and from Pinnacte hill is feen a valt extent of country, highly cultivated, watered with long reaches of the Tweed, well wooded on each margin. Thefe borderers ventured on cultivation much carlier than thofe on the weft or eaft, and have made great progrefs in every fpecies of rural oconomy. Turnips and cabbages, for the ufe of cattle, cover many large tracts; and potatoes appear in valt fields. Much wheat is raifed in the neighbourhood, part of which is fent up the firth of Forth, and part into England.

The fleeces here are very fine, and fell from twelve to fourteen fiillings the fone, of twenty-four pounds; and the picked kind from eighteen to twenty. The woul is fent into Yorkfhire, to Linlihgow, or into Aberdeenfire, for the flucking manufacture; and fome is woven here into a cloth cilled plains, and fold into England to be dreffed. Here is alfo a confiderable manufacture of white leather, chielly to lupply the capital of Scotland.

From what I can colled, the country is greatly depopulated. In the reign of James VI., or a little before the union, it is faid that this county could fend out filteen thoufand fighting men; at prefent it could not raife three thoufand. But plundering in thofe times was the trade of the borderers, which might occalion the multitude of inhabitants.

I cannot leave Kelfo without regretting my not arriving there in time to fee the races, which had been the preceding week. Thefe are founded, not on the fordid principles of ganing, or diffipation, or fraud, but on the beautiful bafis of benevolence, and with the amiable view of conciliating the affections of two nations, where the good and the bad, common to every place, are only divided by a rill fcarcely to be diftinguifhed; but prejudice for a time could find no merit but within its own narrow bourne. Some enlarged minds, however, determined to break the fafcination of erroncous opinion, to mix with their fellow-fubjects, and to infiruct both the great vulgar and the fmall, that the northern and fouthern borders of the Tweed created in their inhabitants but a mere difference
difference witbout a diftinction, and that virtue and good fenfe were equally common to both. At thefe races the flewards are felected from each nation; a Percy and a Douglas may now be feen hand in hand; the example of charity (preads, and may it fpread ${ }_{2}$ with all its fweet influences, to the remoieft corner of our ifland !:

What pleafing times to thofe that may be brought in contraf! when every houte was made defenfible, and each owner garrifoned againf his neighbour; when revenge at one time diftated an inroad, and neceflity at another; when the miftrefs of a cafle has prefeuted her fons with their fpurs to remind them that her larder was empty; and that by a forray they mult fupply it at the expence of the borderers; when every evening the fleep were taken from the hills, and the cattle from their pafture, to be fecured in the lower floor from robbers prowling like wolves for prey; and the difappointed thicf fuund all in fafety, from the fears of the cautious owner. The following fimple. lines give a true picture of the times: .

> Then Johnie Armitrong to Willie 'gan fays:
> Billie, a iriding then will we :
> Eugland and us have been long at feud, Perhaps we may hit on fume bootie.
> Then they're come on to Hution-ha,
> They rade that proper place about;
> But he laird he was the wifer man,,
> For he had leit na geir without. .

Thiefe were the exploits of petty robbers; but when princes dictated an inroad, the confequences bore a proportion to their rank. An Armitrong might drive away a few Theep; but when an Henry directs invafion, 192 towns, towers, ftedes, barnekyns, churches, and baftel-houfes are burnt; 403 Scots flain, 816 taken prifoners; 10316 catte, 12492 fheep, 1296 nags and geldings, 200 goats, 200 bolls of corn, and infight geare without meature, carried off. Such were the fuccefles during four months of the.year $1544^{\circ}$.

Crofs the river, turn almof due eaft, and after a ride of three or four miles find my. . felf at the extremity of the kingdom. I look back to the north, and with a grateful mind acknowledge every benefit I received from the remotelt of thei Hebrides to the prefent fpot; whether I think of the hofpitality of the rich, or the efforts of unblameable poverty, ftraining every nerve to accommodate me, amidf dreary hills, and ungenial fies. The little accidents of diet, or of lodgings, affect not me: I look farther than the mere differences of living, or of cuftoms; to the good heart, and extenfive benevolence, which foftens every hardhip, and turns into delicacies the groffett fare $: \cdots$ My conftitution never yet was difpofed to apathy; for which I can claim. no merit, but am thankful to the author of my frame, fince. "I feel not in myfelf thofe common antipathies that I can difcover in others: thofe national repugnancies do not touch me, nor do I behold with prejudice the. French, Italian, Spaniard, or Dutch, much more my fellow-fubjects, howfoever remotely placed from me. But where I find their actions in balance with my countrymen's, I honour, love, and embrace them in fome degree. I was born in the eighth climate, but feem to be framed and conftellated unto all:: all places, all airs, make unto me one country; I am in England every where, and under. every meridian $\dagger$."

Crofs an infignificant rill, called Riding-burn, and enter Northumberland.

[^274]Pifs through Carham, a village, on the fouthern banks of the Tweed. Iere was as houte of black canons, a cell to that of Kirkham, in York hire. It was burnt in 1296 by the Scots, under Wallace, who gives name to this day to an adjacen field. See a fragment of Wark cafte, once the property of the Rofles, originally granted by Henry III. * to Robert, fon of the Baron of Helinfly. It paffed afterwards into the family of the Greys, who took their title from the place. After the union of the two kingdoms, by the acceffion of James I., Lord Grey's eftate rofe from one thoufand to feven or cight thoufand pounds a year $\dagger$; fo inflantly did thefe parts experience the benefit.

It was offen attacked by the Scots, and in 1296 was taken and burat ly them. The love of a Robert de Rofs for a fair Scot occafioned this misfortunc. He betrayed it to his northern neighbours, and then joined the famous Wallace $\ddagger$. In $1_{3} 3_{3}$ it was again bumt by the Scots $\S$; but after the battle of Flodden, the garrifon revenged its former difgrace by cutting off numbers of the fugitives.
leave behind us, on the northern fide of the Tweed, Coldftream, the head-quarters of General Monk; from whence he marched to reflore monarchy to his diftrefted country. On the fouthern fide is Cornhill, noted for its fine Roman camp $\|$, which we paffed unwittingly on the left. This town lics in a large detached part of Durham, furrounded by Northumberland.

All this country is open, deffitute of trees, and almoft even of hedges; for hedges are in their infancy in thefe parts, as it is not above feven or eight years fince they have been introduced. The land is fertile, fwells into gentle rifings, and is rich in corn. It is miferably depopulated; a few great farm-houfes and hamlets appear rarely fcatered over the valt tructs. There are few farms of lefs value than one hundred and fifty pounds a year; they are generally three, four, or five hundred; and I heard of one, poflefled by a fingle family, that even reached twenty-five hundred: in this was a fingle field of thrice thoufand acres, and which took fix hundred bolls of feed-wheat, of fix Wincheller bufhels each. A humour fatal to the commonwealth prevails over many parts of the north, of flinging numbers of fmall tenements into a large one, in order to fave the expence of building; or perhaps to avoid the multiplicity of receipts, lay a whole country into a fheep-walk. Thefe devour poor men's houfes, and expel the ancient inhabitants from their fire-fides, to feck their bread in a ftrange land. I have heard of a charater (I have forgot the fpot it curfes) that is too barbarous and infamous to be overlooked; which has fo little feeling as to depopulate a village of two hundred fouls, and to level their-houfes to the ground; to deflroy eight or ten farm-houfes on an eflate of a thoutand a year, for the fake of turning almoft the whole into a fheepwalk. There he lives, and there may he long live his own tormentor! detefting, detefed by, all mankind! Wark and Learmouth, once confidcrable places, are now farcely intiabited: the laft, formerly a great market-town, is now reduced to a fingle farm-houfe. 'The inhabitants have long fince been difperfed, foreed to exchange the wholefome, the vigorous, the innocent lives of the rural ceconomifts, for the fickly fhort-lived employs of manufacturers in Birningham, and other great towns, where difeafe, and often corrupted morals, caule double the confumption of people as would happen, were they permitted to enjoy their ancients feats. The want of labourers begins to be ienfibly felt. As a proof, they are retained by the year; and policy dictates to their employers, the affording them good wages: each has his cottage, a piece of land, gratis, and a fhilling a day in fummer, and ten-pence in winter. I call this good

[^275]pay in a country which ought to be very cheap; if not, what are the fine effects of the great improvements? The Spectator fpeaks much of the deferts of the man that raifes two ears of corn where one grew before. But who will point out the man who has the foul to make his poor brethron feel the happy effect of his art? I believe, that at prefent there are numbers who have raifed ten for one that were known a few years ago. It would be natural to fuppofe, that plenty would introduce cheapnefs; but till the providential plenty of the prefent year, corn was exactly double the value of what it was fourteen years pait. Yet the plenty of moncy has not been found doubled by the poor manufacturer or labourer. The land-owner in the north has taken full care of himfelf. $\Lambda$ farm of $75^{1}$. per anmom, twenty years ago, has been lately fet for 3651 , another of 2301, will be foon fet for toocl. per ammu. An eflate was bought in 1759, for 68001 , it confilted of 1560 acres, of which 750 have been fold for 84001 . And all thefe improvements refult from the unprincipled and iniquitous notion of making the buyer of the produce pay not only to latisly the demand of the landlord, but to emable the farmer to make a princely fortunc, and to live with a luxury the fhame of the times. They have lof the relpectable character of the old Englifh yeomanry, by too clofe an imitation of the extravagam follics of their betters.
The oxen of thefe parts are very fine; a pair has been fold for fisty-five pounds. The weight of one was a hundred and fixty-cight fones. 'The mountain fleep are fold for half-a guinea apiece; the lowland ewes for a guinea; the wethers for a guinea and a half: the bef wool from fixteen to eighteen hillings the fone, of twenty-three pounds and a half:-But to purfue our journey :

Obferve on the right feveral very regular terraces cut on the face of a hill. They are moft exactly formed, a little raifed in the middle, like a fine walk, and about twenty feet broad, and of a very coifiderable length. In fome places were three, in others five flights, placed one above the other, terminating exactly in a line at each end, and moft precifely fuilhed. I am told, that fueh tiers of terraces are not uncommon in thefe parts, where they are called bauiks. Mr. Wallis conjectures them to be places for the militia to arrange themfelves on in time of war, that they might fhew themfelves to advantage thus placed rank above rank *. Mr. Gordon delcribes feveral which he faw in Scotland, which he conjectures to have been Roman, and formed for itinerary encamp. ments $\dagger$; in my opinion a lefs fatisfactory account. It appears more reafonable, that they were defigned for what Mr. Wallis imagines, as nothing could more highly gratify the pride of a chieftain's heart, in this warlike country, than to review, at one glance, his vaffals placed fo advantageoufly for that purpofe.

Reach the village of Paliniburne, and finding ncither provifion for man or horfe, have recourfe to the hofpitality of John Afkew, Efq. ; of Paliniburne-Hall, where all our wants were relieved in the amplett mamer. From his houfe we vifited Flodden hill, celcbrated in hiltory for the greateft lofs the Scots every fuftained. Here in 1313, encamped James IV. in his ill-adviled invafion of England. According to the cuftom of the time, every chieftain had his feparate camp, whode velliges are apparent to this day. Infituated wih the love of Lady Iferon, of Ford, a neighbouring caltle $\ddagger$, he wafted his days in inactivity, and fuffered the fair Dalilah to vilt the Earl of Surry, the general of his enemy, under pretence of receiving from her intelligence of his motions. She betrayed her credulous lover, whofe army dwindled by delay, of which clans were always impatient. The enemy unexpectedly appeared before him; he would neither permit a

[^276]retreat, nor fuffer his gallant mafter of artillery to annoy them in their palfage over the Till *. Surry cut off his paffage into Scotland, and hrought on the engagement, that the devoted prince fo much withed for: it raged chiefly near Brankfon. 'The Scots formed a ring round their monarch, and he fell with many wounds, furrounded by the dead bodies of his faithful nobllity. Not a great houfe in Scotland but limented the lois of its chieftain or near relation. The body of the king was enbalned, cered and wrapped in lead; and prefented with the King's gauntlet to Queen Catherime, then at the palace at Richmond. After excomnunication was taken off (on reprefentation that he gave figns of repentance $\dagger$ in his laft moments) he was interred in the abbey at Shene. On the diffolution, the body was flung with great indecency mo a lumber room, where it continued till the reign of Queen Elizabeth, where Stow hays he faw it. Some workmen wantonly cut off the head; which was preferved for tome time by one Younge, mafter glazier to her Majeft, who tired with it, gave it to the fexton of St. Michael's church, Wood-ftret, to be buried among the vulgar bones of the charnel houfe $\ddagger$. Such pofthumous refped do the reliques of princes receive! The Scots pretend that his body was never found, and that which was taken for it ly the Finglifh, was that of one of his nobility; for many on that fatal day droffed themfelves in the fame habit. They alledge, that the body found was not furrounded with the penitential chain §; but it is poffible, as Mr. Guthrie imagines, that fign of remorfe for his parricide was only worn on certain days. His fword and dagger are now in the Heralds - office, prefented by the viftorious earl $\|$.

Otober ift. Pafs near Ford cafle, now the feat of Sir John Delaval, poffefled in the reign of Henry III. by Odonel de Ford; and by the marriage of his daughter to William Fieron, pafled into that family II: from then to the Carrs; from the Carrs to the prefent owner.

- Crofs Millefield plain, a flat of five miles extent; obferve on one part a circular ceamp, with a fingle fofs and dike; and oppofite to it, a fimall fquare entrenchment. At the village of Millefield is faid to have been the refidence of the Kings of Bernicia after Edu in **. On the right is Copeland caftle; a fquare tower, formerly the feat of the Wallaces, but in our time tramsferred to the Ogles, by purchafe. Crofs the Glen, a fmall river, but henoured with baptizing in its waters a multitude of Northumbrians, who were converted by Paulinus, after King Edu in had embraced the faith : the retidence of him and his gueen being at that time at Adigefrin, the neighbouring Yevering $t+$.

Pafs by Humbleden hill, where, in 1401, the Scots under Archil ald, Farl of Doug. las, reccivel a fignal defeat by the Fngiith, commanded by Henry Percy, Jurnamed HotSpur, in which Douglas was taken prifiner. On the hilare fome maths of entrenchments, which the Scots flung up before the battle. The face of this hill is allo divided by mulnitedes of terraces, refembling thofe above defcribed.

Ride throug W'ooler, a fnall town. Obferve teveral of the people wear the bonnet, the lat remains of the Finglifh drefs in the reigns of Fdward VI and Mary. The hills on the right approach very near us, and the conntry riles on botli fides, and forms a mixture of corn-land and fheep-walk. On the welt appear the Cheviot hills, fuooth and verdant. Among them is laid the fene of the battle of Chevy-chace, in the celebrated ballad of that name. Notwithllanding there is nothing but ballad authority tor

[^277]it, get it is highly probably that fuch an action might have happened between two rival chieftains, jealous of the invafion of their hunting.grounds. The limits of the kingdoms were then unfetted; and even at this time, there are debateable lands amidfe thefe very hills. The poet has ufed a licence in his defcription of the fight, and mixed in it fome events of the batlle of Otterbourne, for neither a lercy nor a Douglafs fell in this woful hunting.

Turn three niles to the fouth.ealt to vifit Chillinghan calle, the ancient property of the Greys, afterwards Lords of Werk, now of the Earl of 'Tankerville. 'The prefent building is large, and of no greater antiquity than the time of Janes I. . Here are numbers of portraits, alinoft entirely mifnamed. In the hall is the picture of a toad, fail to have been found in the centre of the fone it is painted on ; and beneath are thefe lines:
Heus Stagyrita,
Tho fi velis quid inirabilius Euripo,
Huc renito.
Fluant, rofluantyue maria, et fit I manaticus
Qui fuo triviam foliat linnore:
Ein tibe movi quid, quod nom portat Afriza,
Nee fabulotiz Nilus arenis,
Iguen, Aunmamyne puram,
Aura tamen vitali caflam!
Cuco e receffin feifli, quod vides, iasi,
Oblletrices luetm Lithotomi dedere Slanus
Vivo Bufoni.

In the park are between thirty and forty wild catte, of the fame kind with thofe defreribed at Drumlanrig.

Pafs over a dreary country, chiefly a fheep walk, open, and without trees; crofs the Tiil, a fmall river, and on Hegely moor fee the octagonal fhaft of Percy's crofs, on whofe broader fides are carved the arms of the family, crefents and pikes. 'This was erected in memory of Sir Ralph Percy, who was fain here, in 1463 , in battle between the partizans of the houfe of Lancalter, and Lord Montacute. Lord Hungerford, and the other leaders, fled at the firlt onfer ; he, with the fipirit of a Percy, kept his ground, and died, confoling himfelf, that he had "faved the bird in his breatt;" meaning, that he had preferved lis allegiance to Henry, never reflecting, as the unglozing hiftorians * of old times remark, that he had abandoned that unhappy prince in his greateft neceffity, and fubmitted to his rival, Edward.

Near this crofs get on an ancient military road, micalled the Wating-ftrcet, which runs north into Scolland, and fouth to Corbridge. The northern part is better known by the name of the Devil's dike : but as there is not a fingle fation on it, from the place it unites with the genuine Roman way near Beuclay, it may be fuppofed to have been the works of the Saxons, there being variety of little fortreffes near its courfe.
$\Delta$ fter a few miles riding, fall into the vale of Whitingham, inclofed with hedges of ancient Itauding. Leave, on the right, the conic hill of Glanton-Pike, a noted beacon. Again crofs the Till, at this place called the Bremih. Ride through Whittingham, a little town, on the Aln, (here a little ftream,) and, palling over part of the black and difmal Rimfide moor, lie at a neat inn, called the Half-way houle.

October 2. Defcend into a cultivated narrow vale : reach the fimall town of Rothbury, feated on the Coquet, which, below the town, runs through a large extent of Gat frec-ltone rock, in a dit about forty feet long and five wide, through which the Hream rufhes with great violence, and has worn multitudes of thofe circular bafons

[^278]vol. 111.
called the Giant's-pots. 'Thin manor belonged to the Claverings ; a name taken from a place in lillex, but their firlt fettement was in this comnty, In the reign of King Johe, one of them, dillinguithed by the name of Fiza.Roger, obtained a grant of this manor, with the words blonging; but his majefty refev ved to himfelf rhe liberty of hunting in them. Bue the lath of the family refigning it to the crown, is was re-granted to the Percies, by Fdwad 111 . -

Crofs the Cequet, on ab bridge of four arches; afcend a neep hill, and arrive in a woodlets, hedgolets, and mathivated country, which contimes for fome miles; the inclofures eilier banks or thene walls. Reach Camhoe, a row of neat houltes on an eninenee, where the coumpry mends, and trees and hedges app: ar. Mr. Wallis $t$ Cays, it liguilits the fort on the hill, and that in the reign of Honry III. it belonged to sir

Below it is Wailingitur ; a good homfe, belonging to Sir Walter B'acket, whofe ancefor purchafed it trom the mformate Sir Jhn Fenwick, beheaded in fog6, in whofe fanily it had becn from the reion of Henry IV. Afer a tew mals prits be siwinburne cafte, croling a lime norih of it, the true Watling-trect way, which runs into the flire of Roaburgh. At Cholleron, we crofs the Erring, a fmallitrean, falling jult below into the rorth Tyne, a beautiful river, widh foping banks, fiedy en mated. At a fmall diflance fouth of Cholletton, crols the fite of Adtian's dike, and sever rus's wall, eppofite to Walwick, the ancint Cilurnm; a lation on the well bank of the Tyne. Here was fationed the liody of horlo, or ala focunda Aforum, as appears hy a fepulchral fone, figured by Horfly $\ddagger$. Several other monumemal imferiptions have been found there, preferved by the lame anhor. 'I his wall, which is commonly known ty the name of the Picts wall, crofies the ifand from fea to fa, beginning at B ulads 9 : on th: Solway firth, and endiug in a fort at Coufin'shoufe near the village of Wall'semb, the old Segedunum, near the mouth of the Tyne, a few miles eath of Pons Elii, or Newcalle. The whole length of this waft work was fixty-eighth miks and threc furlongs $\|$; the height, in the time of Bede ", wodve fect, exclufive perhaps of parapet. The thicknefi, iroan feven to mine teet. It was guarded by a mumbede of towers, generally within Lefts thas a mile dittans from each other ; all of them fisty-ix feet fiquar:. Betweenevery two of thefe towns we re for exploratory turrets, mily four yards iquare: as thefe were within call, entinels were placed in hom ogive an alim. Betids state were feventeen fiations, at about four miles dillance from each other. Theferare known hy wanes fuch as Cilurnum, Procolita, and the like. A military way was made by surcrus, at the fame time with his wall, and ran from turect to turret, and was resuldrly paved ".

More to afift myown memory, than to inform the reader, l may be permitted to name, in order of time, the number of walls or defences, formed by the Romans, or repaired by them, in onder to kecp our ne rethern fellow-tuljects within bounds. The firlt was the chain of forts, made by Agricola, trom the firth of Forth to that of Clydr, in the year 81, to proted bis conguells from the incurfions of the Caledonans ; a.a', as Tacitus exproffes it, wremove them, as it were, into amother fland.

The fecond was the vallum, or dike, flum up by dimian, in the ycar 121. Sparti bears witnefs to this; who informs us, that Adrian vifited Britain, reformed many things, and made a wall cighty miles long, to feparate the barbarians from the Romans.

[^279]+11. 52F.
il Finfuly, 12 r .
B'isy iu Cumbuland.
$\ddagger$ Northumberland, No. xxiv.
** Hurfely 188.

This was made of earth and ftones. It terminated on the wellern fide of the lingtom, at Axelodunum, or Brugh, on the Sulway fands, and was fuppofed to have reaclied no farther than Pons Jolii, or Newealle, on the caftern. Buit by an accomit 1 very recemty * received from Mr. Robert ITarrifon of that town, I fued it extended on this fide as far as the wall of Severus. A brolen ftone has lately beendifeovered at Wall's-cnd, wilh this infcription:

> HNDR
> MUR: COND
> IOOC: MARM.
> POS: COSS. D.

The third was alfo of earth, made in the year $13^{8}$, by Enllies Urbicus, lieutenant - Int minus, who recovering the country, once conquered by Agricola, built another tui: win $\Gamma$ oa the boundary left by that great general, and removed the Catedonians farther from the Roman province. This is proved not only by Capitolinus, but by tha infriptions from the flations in the courfe of it.

The fourth in the year 210 , by Severus, as above defcribed. Notwithlanding his hiftorian vaunts, hat this emperor $p$ netrated to the remotef parts of the inand, he femed to judge it prodent to reduce its limits to the vallumen of Adrim.

If we may credit Nemius, Carafius, in 290, repaired the wall ef Severus, and fortified it with feven towers. A work feemingly needlefs, ns it was before fo well fupplied will forts. It feems as if Nennius confounded the wall of Antorine with that of Sevorus, for inmediately after mentioning the laft, he fpeaks of Pongual, and the river Cluth. The firlt, being Kins.icl, near the end of Amonine's wall, on the firth ot Forth; and the Cluth, the Clyde, where it terminates on the weflern coan $\ddagger$

Theodofins, in ; 6 , afier driving the croveds of Scoti, Attacoti, and ather barbarous invaders out of the Roman province, repaired the boundary, built nee forts, and called the parts he lad recovered, Valcutia, in honour of the Emperor Valens $\$$.

The provincial Britons, after they were relieval from their diftrefles, by the affif. ance of a Romen legion, in $4 \approx 6$, once more repaired the wall of Antonine with turf $\mu$, being ton ignorant weftect it in any other manner. Ans, fumally, by the advice of Gallio, and the help of a legion under his command, the wall of Severus was reftored of ; a poor fecurity to the degenerate Britons after the retreat of the Romans.

Proceed by the village of Wall, and from a rifing ground have a fine vicw of the river, now enlarged ty the waters of the South Tyne. Pafs by Hernitage, the houfe of the late Dr. Jurin, the celebrated natural philolopher. In ancient times St. John of Beverley made the adjacent woods his retreat from the world, which gave name to the place. Ford the river; the benutiful bridge, lately finifhed, having been fwept away by the floods. Emter

Hexam, the Haguftald of Bede, and Hextoldefham of the Saxons. Till the $33^{\text {a }}$ of Itemy " 11 . It wals called a county palatine, but at that period was ftripped of its power. In ancient times it was a manor belonging to the fee of York, wiofe protates had here a regality and great powers. Their liberties were affirmed to them by the King's courcil in parliament, in the zill of Edward $I$, and by a claufe in the 13 th of Ldward III. had jura regalia, and the right of levying tenths and fiftecnths. The

[^280]parifh was alfo called Hexammire, having, till the 14 of Queen Elizabeth, been a distind hire; but in that year was united with the county of Northumberland.
The town is ancient, finely feated on the foubern banks, confifing of about five thoufand inhabitants, whofe chief manufacture is that of fhoes and glores, and it alfo carrics on a confaderable trade in taming. But afexham, like many other places, malt vaunt of the glory of paft times: in that of the Romans, it was probably a ftation, il one may judge from the half.defaced infcriptions on cortain fones that antiquaries have difoovered worked up in the walls of the vanls of the church *; the molt curious of which is that inferibed with the name of the Fimperor Lucius Scptimins Sevcrus. Antiquaries for a time univerfally agreed, that this place was the Axclodunum of the Notitia; but Mr. Horfely, with much reafon, remows it to Burgh, and conjectures that Hexham might have been the Fpiacum of Ptokeny $\dagger$.

Very early in the Saxon time it grew dillinguifhed by its cectefiafical follendor. Hexham and the adjacent countiy were part of the crown-lands of the kings of Northumberland, and fetted hy king ligfrid, as dower on his queen Ethelreda. Wilfrid $\ddagger$, bithop of York, obtained from the king a gramt of it; and here prevailed on him to found a bifhoprick, which faw but feven prelates, being overthrown in the Danifh wars, about the year 821. But the mangificence of the church and monaltery, founded here in 674 , by Wilfrid, is fpoken of in the higheft terms by ancient writers. They celsbrate the varisty of the buildings, the columms, the ormancotal carvings, the oratories, and the crypis; they alfo relate the pains he was at to obtain artifts of the greatef fkill from dificent parts both at home and abrond. 'They mention the richefs of covers for the al:as, the gidiang of the walls with gohland filver, and the noble tibrary, colltced with amazing indultry: in few words, fay they, there was not fuch a church to be found on this fide of the Alps. As this place fuffered greatly by the barbarity of the Danes, there is no veftige of the ancint churct. The prefent building, which, when entire, was large and heautiful, is probably the work of 'lhomas the fecond archbihop of York, to which fee it had been given by llenry l. The prelate, ftruck with the defolation of the place, eflablifhed here in 1113 a convent of canons regular of Auguflines. 'Ihe architecture is mixed; has much Gothic, and a litte Saxon, and, in one part, the narrow flarp-arched windows, all which began to be in ufe about that reign. The tower is large, and in the centre; the church having been in form of a Greek crofs; but the weft end was quite demolifhed by the Scots in $12 y$. The town was allo plundered by David II. in 1346 , but faved from the thanes, as he intended it as a magazine for provifions.
'lhe infile is fupported by cluftered pillars, with Gothic arches; the gallery above upens with Saxon arcles, including in each two of the pointed kind. On the wooden hreen before the choir is painted the dance of death; in each pisce the meagre monfier is feizing a character of every rank. Many other paintings, now much injured by time, adorned this part. Beneath the dance on a molding are twelve fquare pieces of wood; (uriginally there were lourten) on each is elegantly cut in relief and gilt, a certain capial letter, and in every one a pretty cypher of other letters, which may be thus read. "Orate pro anima Domini 'Thom: S. Prior hujus coclefia qui fecit hoc "pus." The letters in italics are to fupply the parts, and are conjectural to fupply the ferfe.

[^281]The tomb of Alfwald I. king of Northumberland, afaffinated in 988 , by Sigga one of his nobles, is fhewn beneath an arch, at the fouth cnd of the north caft aine.

An $1 / \mathrm{mfravil}$ lies recumbent, crofs-legg'd, the privilege of Croifaders. On his thich are the arms of the fumily, who were geat benefacors to this abby. Here is alfo another knight, with the fame nark of holy real, mifcalled the Duke of Somerfet, beheajed here in 16.4 . But the arms of the faield, three gerbes, fhew that the deceafed was not a Beaufort, who quartered the arms of Fingland and France.

In the choir is a beauiful oratory, of ftone below and wood above, moft exquifitely carved, now converted into a pew. Near that is the tomb of a Rcligious, probably a prior. Above, in a fhidd, are, in Sason charaters, the letters R. I., thefe heing in many purts of the building, are probably the initia's of fome of the pious bencfactors; and about the fides are feveral moft ridiculous figures, the product of the fportive chiffel of the fculptor: an ape fitting, on a thoice with its hand to its mouth; a deformed figure in a chofe bood with a pendent taflel, and a hare, or fome other amimal, in his bofom, end other montrous engravings of no maning or moment *. Againft a pillar is a ridiculous figure of a barefooted man, with a great club, perhaps a pigrim.

Here is preferved the famnus fridftol, or fool of peace; for whofocver took poffeffion of it was fure of remifiont. This phace had the privilege of a fanctuary, which was not morely confince to the church, but extended a mile four ways $\ddagger$, and the linats each way marked by a crofs. IIeavy penalties were levied on thofe who dared to violate this fantuary, by feizing on any criminal within the prefribed bounds; but if they prefumed to take hin out of the flool $\oint$, the offence was not redeemable by any fum; it was efteemed botolofs, beyond the power of pecuniary annends; and the offenders were left to the utmolt feverity of the church, and futiered excommunication, in old times the mof terrible of punifhments.
l'art of the monaftery flill remains habitable. It was granted, on the difflution to Sir Reginald Camaby; afterwards paffed to the Fenwicks, and lafly to the Blackets. The convent gate is entire, and confits of a fine round arch. This is cevidently of a much older thate than any of the prefent remains of the convent. It is of Saxon arehitecture, and perhaps part of the libours of the great Wilfrit.

The tow hohle is luilt over an antient gate; bevond that is an old fquare tower,
 neifhbourhood, before the accefion, were feldom untenanted.

The little rivulet Itexold, which rune I! the town, would not merit mention, if it did not give name to tire biace.

Oct. 4. Preced caftward. About three mites from Hexiam, crofs the bivil, on a tridge of two arches. On an cminence is a fquare tower, perping pieturefurly above the trees. This was part of the eftate of the martunate Eat of 1)erwentwater, now vefled in Green wich Hofrital. On the barke of this river was fought, in 1463 , the bloody Latte of Hexham, between the Lancaftrians and Yorkits, in which the frift were defeated. The meck Itenry fled wilh fo creat precipitation as to lofe his abacock, or cap fot with jewels, whicis was carried to his rial at York. His fatitiful confort Margaret betook herfeff, with the infant primee, to a neighbou:ing foreft, where fle

[^282]was furrounded with robbers，and fpoited of her jewels and rings．The darknefs of the night，and a difpute that arole ainong the banditi about the diviion of the booty， gave her opportunity of naking a fecond efeape；1 ut while fhe wandered，oppretfal wihh bunger and fatigue，another robber approached with a drawn fword；her fprit now proved her fafety．Sthe adranced towards the man，and prefenting to him the young priace，called out to him，＂Here，friend，I commit to you the protection of the fon of your King．＂The man，perhaps a Lancoftrian，reduced by nec nity on this courfe of 1 fe ，was ：ffeced with her gall ane condidence，devoted himfelf to her fervice， and concealed his royai charge till he fou：d opportmaity of conveying them beyond the reach of their chemiss．

Crofs at this place the Whating－flreet，which runs direaly on Elbeheltor，the ancient Vindonana；pafs the Tyne，on a bridge of leven arches，near whofe northern end is Corbridge，a luall town，but fomerly confidersble，for leland tays，that in his the wore the names of diverfe flreets，and great toke：of old fomblations．Nar Cor－ britge is Colcheiter，a flation on the line of the wat，the old Carllopitum；the Ro． man way paffes througin it，and was cominucd on the other fore by a bridge，whe ruins leland was informad of by the vicar of the parifl．Nir．Iforthy acquants us， that even in his time fome refliges were to be fan＂．A bitle a ore is the fanath fiscam of Corvet．Ichand，p．212，of the fecond volume of his Colleciata，relates， that King lohn，when he was an Dexham，cauled great farch on be mate after a tra． fure，he had heard was hitden here，but to his difappomment fou do sothing biot ftones，old brefs wire，iron，and lead．Aburdance of antiguary treatures have been found bere face：annerg ohers，an infctiption or Macus Aurchis Antoninus an－ other commonorating a colort，that made part of the wal；here is alto a figure of Vistory，holding in her hand，I think，a flag．But the molt curims andumise are the two Grokk incriptione，and the fileor phate found in the adjucont gromids．The in－ feriptions are on two ath rs．＇Whe firf is memioned，in the tomer part of this $j$ ，urney ； and was crected by Pulchor to the gnddecs Altate．＇The wher，in we primon of
 an ox＇s head and a krife；and crected，as the incription ienpoats，by the chiff pricters Diodera，to the Tyman Ierchles $\dagger$ ．

The other athicuity，which is atto in his Grace＇s calinet，is of mathlef beanty and

 ruming foliege o！sume lewes and grapes．He liollw is alom an inch beneath．In

 J＇later，adad a gillim that pocs coulde to his chaint．

> ましたし!!いr, \&u.
> Clavilan vi. Conf. Ilrmorii.

[^283]Ceres ftands next, with her hair turned up, and tied behind; over her forehead a deaf, an emblem of veretation, and in one hated a blumed fpear. Her rohe and artitude are elegant. The other hand points to her neck, and paftes through a pendent filler, hanging below her brad. Beasath her feet, and that of the fucceeding figure, are two ears, perhips of corn, but fo ill executed as to leave the mater in doubt.

Minerva is placed with her back to Cores. Her figure is by no means equivocal: her holmet. fpiar, flield, and the head of Miduta on her breatt, fulficiently mark the goddefs. Her ri,hthand is lifted up, as if pointing to another figure, that of Diana, drefidd and armed for the chace. Her tower garment is thore, not reaching to her kue: ; over that flows a mantle, talling to the middle of her legs, and hanging gracefully over one arm. Her legs drefed in butkins:

One hand extends her bow towarts Minerva, the oiner holds an arrow ; between them is a tree branchrog ore both of them, with feveral birds parched on it; among them that of Jove, immediacly ower the had of Minerva, periaps to mark her as the daugher of that deity. On the fide next to Diana is an aldar, with a fmall globular body on it ; probably as my learned antiquary imagines, libamina e.s farre, melle et cles.

One leg of that giddicf is placed over a rock, on whofe fide is an mrn, with a copinus Itream flowing from it. 'The rock and tree recal into Mr. Gale's mind, the addrefs of Horace, to the fane delity:

Mundium cullos nemorumque virgi.
Between the rock and the altar of eternal fire is a grey hound, looking up to her, and a dad deer; both belonging to this godelf of the chace.

Mr. Gale inarines it to have lieen one or the lances, or facrificing plates, fo often mentioned by Virgil, on which were placed the leflir vict ms:

## Dona ferunt, cumalantgue vie ratis lancilus asas.

Continue our ride by the fide of the Tyne. Reach Bywell, a fmall vilage, feated in a manor of the fame name, which Guy de Buliol was invelted with by Willam Rufus ", and which Hagh de Baiiol held atterwards by the fervice of five kuights' fees, and finding thirty foldicrs for the defence of Newcatle upon'Tyne, as his ancettors had done from their tiefl puffilion $t$.

Near the village is a ham fome modern houfe, the feat of Mr. Fenwick. A little farther is a fquare tower, buit by the Nevils, fucceflors to the Buliols, which was furfeited by the rebellion of the Fart of Weflmerelan!, in the reign of Queen 1 lizabeth. At that time it was noted for a manufuchure of tits, flirrups, and buckles, for the wfe of the borderers. At the tame time, fuch was the umbapy fituation of the place, that the inhabitims, through fear of the theves of Tynedale, were obliged nightiy, in fummer as well as winter, to bring their cante and theep into the frect, and to keep wateh at the end; and when the enemy approached, to make hue-and-ciy to rouze the paple to tave their property $\ddagger$. As this was a dangerous county to travel throunh, the tenomes of every manor were bound to guad the julge though the precinets, but no farther. Lord chict jultice Norda dutcribs his attendants with long bearde, fhont cloaks,

[^284]lons batket hilted broad fwords, hanging from broad belts, and mounted on little horfes, fio that their legs and fwords touched the ground at every turning. His lordthip alfo informs us, that the fherill prefented his train with arms, i. e. a dagger, knife, penknife, and fork, all togerher *.

A little beyond Bywell are the piers of an old bridge. I have been informed that workmen have remarked, that thefe piers never had any fpring of arches, the fuperftructure therefore mat have been of wood. 'Two or three miles farther is the village of Ovingham, in which was a cell of three black canons $t$, belonging to the monaltery of Hexham, foumded by Umfianvil, baron of Prudhow, the ruins of whofe caftle make a tine object on the oppofite bank of the river. This family came into England with the Conqueror, who bellowed on Robert with the Beard the lordthip of Riddeddale, to be held tor ever by the fervice of defending the country agrant thieves and wolves witi the fane fivord with which William entered Northmberland $\ddagger$, and the bareny of Prudhow, by the fervice of two knights fees and a half. Odonel de Umframil, in 1174, fupported in this eatfle a fiege agan't Wilian I. of Scothond, who was obliged to retire from tefore the phace, but probably not withont damaging the caftle; for we find this fane Odonel accufed of oppretling and plundering his neighbours in order to repair the reof. It continued in the fanily till the reign of Henry VI., when on the death of the lat it fell by entail to the 5 . Tailboys, a lhore-lived race; for on the execution of Sir William, after the battle of Itexhm, it became forfeited to the crown. The Duke of Northumberland is ribe prefent owner; his right is derived from the Percies, who pofiefted it for fome ages (admituing a few interruptions from attainders, to which the name was fubjeat), but from which they had the merit of emerging with fingular honour.

Ride for fome miles along the rail-roads, in which the coal is conveyed over to the river, and pals by numbers of coal-pits. The whole road from Corbridge is the moft beautiful imaginable, on the banks of the: river, which runs through a marow vale, inclofed and highly cultivated. In fome parts the borders are compofed of meadows or cora fields, llanked by flopes covered with wood. In others the banks rife fuddenly above the water, cloathed with hanging groves. The country is very populous, and feveral pretty feats embellifh the profpects: the back view to the fouth foon alters to barren and black moors, which extend far into Durlam, and are, as I am informed, almoft pathetis.

Reach Newburn, a place of note preceding the conqueft. In thefe parts prefided Copfi, created by William Farl of Northumberlmal, afier expelling Ofulf, a governor, fubtlituted by Morcar, the preceding Jiarl. Olulf being defeated, and forced into woods and deferted, gathered new forces, obliged (oppi to take refinge in the church, which he fet on fire, fieized him as $h^{\infty}$ flumed the flancs, and cut off his head $\|$.

In the laft century this village wats infanous for the defat of the Englifh, in $56 .+0$, by the Scots, who paffed through the dep river in the face of our amy, drawn on the oppofite bank ready to receive them. A panic feized our tores and their commander; with this difference, the trenps were afhanced of their lighr, and wilhed to repair their difgrace, and to revenge it on a foe that hardly credited its cown fuccels; but the timid general, uninfluenced by the fame fente of honour, never afternards turned his face to the enemy 4 .

[^285]+ Tanmers Momar 394.
". Sema ill pate of this journey.

At this place quit the river, and after afcending a bank, reach the fine road that extends fromi Carlife to Newcaftle, almoft following the courfe of the wall.

At a mile's diftance from Newcafle pafs over the fite of Condercum, the modern Behwel, where feveral inferiptions have been found, preferved in Horfely. The moft remarkable is the altar, dedicated to Jupiter Dolichenus, who is fuppofed by antiquaries to prefide over iron-mines *. Oppofite to this place the Derwent difcharges itfelf into the 'lyne.

Reath Newcafle, a vaft town, feated on the fteep banks of the coaly Tyne, the Vedra of Ptolehyy, joined by the bridge to Gatefhead, in Durham, and appears as part of it. The lower ftreets and chares, or alleys, are extremely narrow, dirty, and in general ill-built; confifting often of brew-houfes, malt-houfts, granaries, warchoufes, and cellars. The keelmen chiefly inhabit the fuburb of Sandgate and the North-fhore, a mutinous race, for which reafon the town is always garrifoned. In the upper part are feveral handfome flreets.

The origin of this place is evidently Roman, like that of nany of our great towns and cities. This was the Pons Elii, a ltation on the line of the wall, where the Romans had a bridge to the oppofite fhore. No altars or infcriptions are extant to prove the name; a great and populous town has covered the ancient fite, and deftroyed or abforbed into it every veftige of antiquity. Some part of the wall, which paffed through the fpace now occupied by the prefent buildings muf be excepted; for workmen have in the courfe of digging the foundations of new houfes, Itruck on parts of it. There is alfo fhewn at Pandon gate the remains of one of the ancient mural towers; and at the Carpenter's tower was another. As old as Pandon gate, is a common proverb in thefe parts, which fhews its reputed antiquity. The wall had paffed from the weft, through the Vicarage gardens, the Groat market, the north part of St. Nicholas's church, and from thence to Pandon gate.

After the Romans had deferted this ifland, it is not probable that this ftation fhould be entirely defolated; but we know nothing relating to it from that period, for fome centuries from that great event, befides a bare name, Monk-chefter; which thews that it was pofieffed by the Saxons, and noted for being the habitation of religious men. Thefe proved the victims to the impious barbity of fome unknown enemy, who extirpated throughout thefe parts every houfe of devotion. In all Northumberland there was not a monaftery; fo that in 1074, when Aldwin, Alfvin, and Remfrid $\dagger$, made their holy vifitation to this place, they fcarcely difcovered even a church flanding, and not a trace of the congenial pietilts they expected to find. Their deftruction muft have been early; for the venerable Bede, who died in 735, takes no notice of the place, though he mentions Jarrow $\ddagger$, a convent, on the fouthern fide of the Tyne, not remote from it. The ruin therefore of the place cannot be attributed to the Danes, whofe firft invafion did not take place till after the death of that hitlorian.

It continued an inhabited place in the year 1080, when Robert Courthofe, fon to William the Conqueror, returning from his expedition againft Scotland, halted here with his army, and then built the prefent tower, that goes by his name; and changed at the fame time that of Monk-chefter into Newcaftle, whether from the novelty of the building, or in oppofition to fome ancient fortrefs, the work of the Romans or Saxons, is not certain. From this time may be dated the importance of the place; for the advantage of living in this border country, under the lecurity of a fortrefs, foon caufed a

> Horfely, 209. Hollinfhed, iii. p. 11.
> $\ddagger$ Hif. Eccl. lib. \%. c. 21. p. 210. Vita Cudberati, c. 35. p. 2540
refort of people. If it is true that David I. (who was poffefied of it as Earl of Northumberland) founded here two monafteries and a nunnery ", it was a place of note before the year 1153 , the time of that prince's death.

The walls of Newcaftle are pretty entire, with raniparts of earh within, and a fofs without. Leland $\dagger$ informs us, that they were begun in the reign of Edward r ., and completed in that of Edward III. He afcribes the origin to the misfortune of a rich citizen, who was :aken prifoner by the Scots out of the middle of the town. On his redemption, he endeavoured to prevent for the future a fimilar difafter; for he immediately began to fecure his native place by a wall; and, by his example, the reft of the merchants promoted the work; and it appears that in 19 Edward I. they obtained the royal licence for fo filutary an end $\ddagger$. The circuit of the walls are rather more than two miles; but at prefent there are very confiderable buildings on their outfides. All the principal towers are round: there are generally two machecollated towers between every two, which project a little over the wall.

Robert's tower was of great flrengh, fquare, and furrounded with two walls; the height eighty-two feet; the fquare on the outfide fixty.two by fifty-four ; the walls thirteen feet thick, with galleries gained out of them: within was a chapel. Not long after the building it was belieged, on the rebellion of Robert Mowbray againft William Rufus §, and taken. The town was taken by treachery by the Scuts in 1135 , or the firft year of King Stephen, nor was it reftored to the linglifh before 1156, when, at Chefter, Malcolm IV. ceded to Henry II. the three northern counties. From that time neither cafle nor town underwent any fiege, till the memorable onc in $16_{44}$, when, after a leaguer of two months, it was taken by form by the Scots, under the Farls of Callendar and Leven.
There were feven gates to the city : that of Pandon, ot Pampedon, is moft remarkable, leading to the old town of that name, mited to Newealtle in 1299 . It is faid that the Kings of Northumberland had a palace here, and that the houfe was called Pamdonhall |l.
This town was frequently the rendezvous of the Euglifh barons, when fummoned on any expedition againt Scotland; and this was alfo the place of interview between the monarchs of each kingdom for the adjufting of treaties. The Kings of England refiled at the Side, an appendage to the caftle, fince called Lumley-place, being afferwards the habitation of the Lords Lumblies. The kings and nobility of Scotland refided at the Scotch inf ; the Earls of Northumberland at a great houfe of the fame name; and the Nevils had another, fyled Weffenoreland place.
The religious houfes were numerous: the moft ancient was a nunnery, contemporary with the conqueft I, to which Agas, mother to Margaret Qucen of Scotland, ant Chriitian her fifter, retired after the death of Malcolm, at Altiwick **. Near the dillibution, here were ten nuns of the Bencdictine order, whofe revenues amounted but to thirtyfix pounds per annum.
Poor as thefe filters were, they were more opulent than the Carmelites, or white friars, founded here by Elward I., whofe incone amounted but to nine poundseleven and four-pence, to fuppert a prior, feven friars, and two novices found there at the Reformation $\dagger \dagger$.

[^286]In the clofe of this houfe was a fraternity, fyled the brethren of the penance of Jefus Chrift, or the brethren of the fack, to whom Henry III. gave the place called the Calgarth.

The Dominicans had a houfe founded by Sir Peter Scot, firt mayor of Neweanle, and his fon, about the middle of the 13 th century. At the diffolution here were a prior and twelve friars. The remains of this houfe are engraven by Mr. Grofe.

The Francifans, or grey friars, had an eflablifhment here, founded by the family of the Carliols in the time of Henry III. In this place Charles I. was confined after he had put himfelf into the hands of his Scotcl fubjects : part is ftill remaining, and with fome additional building, the refidence of Sir Walter Blacket. The famous Duns Scotus, the Ductor Subtilis, was of this houfe. He dicd of an apoplexy; was too fuddenly buried, and coming to life in his tomb, dafhed out his brains in the laft fruggle.

The monallery of Auguflines was founded here by a Lord Rofs of Werk, in the reign of Edward 1 .

When the grievous diftemper of the leprofy raged in thefe kingdoms the piety of our anceftors erected afyla for thofe poor wretches who were driven from the fociety of mankind. Henry 1 . founded an liofpital here for their reception ; and fixed a malter, brethren, and fifters; but when this difeafe abated, the houfe was appointed for the poor vifited with the peftilence; a fcourge that heaven in its favour has freed us from. Here were befides four other hofpitals, founded for the pious purpofes of redeeming the captive, for the reception of pilgrinss or travellers, for the relief of diftrefled clergy, or the interring of the poor. Each of thefe in general the eftablifhment of individuals: our prefent foundations the united charity of the mites of multitudes. How unequal are the merits!

But the more modern charitics in this town are very confiderable: firf, the general infirmary for the fick of the counties of Durham, Northumberland, and Newcaftle, which, from its inftitution to 1771, has difcharged, cured, about thirteen thoufand patients. The fecond is the lying.in hofpital, for married women; and another charity for the fupport of thofe who lie-in at their own houfes. Thirdly, a public hofpital, for the reception of lunatics. Fourthly, the keelmen's hofpital, a fquare building, with cloifters, founded in 1702 by the poor keelmen, who allowed a penny per tide for that purpofe. Befides thele are numbers of charity-fchools, and hofitals for the reception of the aged of both fexes.

The tower of St. Nicholas's church is very jufly the boaft of the inhabitants. Its height is a hundred and ninety-four fect; round the top are feveral moft elegant pinnacles, from whofe bate fpring feveral very neat arches, that fupport the lanthorn, an open edifice, ornamented with other pinnacles of uncommon lightnefs. The church was originally founded in the reign of Henry I. The tower, built in the time of Henry V1. by Robert Rhodes; and on the bottom of the belfry is an entreaty to pray for the foul of the founder.

The exchange contains variety of apartments, and alfo the courts of juftice for the town. The front towards the river is enriched with two feries of columns, and is of the architceture of the period of James I. The builder, Robert Trollop, is buried oppolite to it in the church-yard of Gateflead. His flatue pointing towards the exchange ftood formerly over his grave, with thefe lines under his feet:

> Yere lies Robert 'Trollop, Who made yon tonees roll-up. When denth took his foul-up, Ilis body filled this hole-up.

Newcafte is divided into four parilhes, with two chapels *, and about a dozen meet-ing-houles, a d is a county containing a fmall diltrict of ten miles circuit; a privilege beltowed on it by Henry IV., rendering it independent of Northumberland. It firft fent members to patianent in the reign of Edward I. $\dagger$, and was alfo honoured with the fivord of flate. It is a corporation, governed by a mayor, fheriff, and twelve aldermen. Their revenues are confilerible. An annual allowance is made to the mayor of a thoufand pounds, befides a coach, furnihed manfion-houfe, and fervants: he has alfo extra allowances for entertaining the judges on their circuit, who lodge at the mayor's houfe. The flacriff has alfo a handfome allowance for a public table. The receipts of the corporation in October 1774 were 20360l. 95. 8d.; the difburfements 19,4451. It is reckoned that between this town and Gatelhead thore are thirty thoufand inhabitants, exclufive of thofe who live on each fide of the river, adjacent to thofe places $\ddagger$. The exports are very confiderable, confilting of coals, lead, glafs, falt, bacon, falmon, and grinding-fones. Here are not fewer than fixtcen glafs-houfes, three fugar-houfes, great manufactures of feel and iron, befides thofe of wrought iron at Swalwell, three miles up the river: alfo another of broad and narrow woollen cloth, which is carried on with great fuccefs, and not fewer than thirty thoufand firkins of butter are annually fent abroad; and of tallow, forty thoufand hundreds.

The great export of this place is coal, for which it has been noted for fome centuries. It is not exaclly known at what time that $\{p$ cies of fuel was firf dug: it is probable that it was not very early in general ufe. That the Romans fometimes made ufe of it appears in our former volume; but fince wood was the fuel of their own country, and Britain was over-run with forefts, it was not likely that they would pierce into the bowels of the earth for a lefs grateful kind. But it was exported to foreign parts long before it was in ufe in Londun; for London likewife had iss neighbouring foretts. We find that in 1234 Henry 11I. confirms to the good people of Newcafle the charter of his father, King John, granting them the privilege of digging coals in the Cafte-moor, and converting them to their own profit, in aid of their fee-farm rent of a hundred a year§; which moor was afterwards gramted to them in property by Edward III. The time of the firft exportation of coals to London does not appear. In 1307, 35 Edward I., they were connidered in the capital as a nuifance; for on the repeated complaints of prelates, nobles, commons of parliament, and inhabitants of L.ondon, againlt the ftench and fmoke of coals ufid by brewers, dyers, and other artificers, the King ifued out his proclamation ag inft the ufe of them; which being difregarded, a commifion of oyer and terminer was illued to punifh the difobedient with fines for the firft offmee, and for the fecond, by the deftruction of their furnaces II. In 1379 we find that their ufe was not only tolerated, but their confumption made beneficial to the flate; for in that year a duty of fixpence per ton each quarter of a year was impofed on fhips coming from New-cafl IT. in 1421 the trade became io inmortant as to engage the regulations of governmint, and orders were given about the lengths of the keels, fo that the quantity of coal might be atcertained. From that period the commerce advanced continually. The prefent itate may be collected from the following view of the fhipping:

[^287]| Ships. | Tons. | Chaldr. coals. | Cwt. lead. |  |
| :---: | :---: | :---: | :---: | :---: |
| $35 \times 5$ | 689,090 | 330,200. | 123,370 | coalt trade. |
| 363 | 49,124 | 21,6.90 | 30,064 | rreign parts. |
| Tot. 3948 | 738,214 | 351,890 | 153,434* |  |

There are about twenty-four confiderable collieries, which lie at different diftances, from five to eighteen miles from the river. The coal is brought down in waggons along rail roads, and difcharged from certain covered places called Staiths, built at the edge of the water, into the keels or boats, which have the advantage of the tide flowing Give or fix miles above the town.

Thefe boats are ftrong, elumfy, and oval, and carry twenty tons a-piece. About four hundred and fifty are conftantly employed: they are fometimes navigated with a fquare fail, but generally by two very large oars: one on the fide, plied by a man and a boy; the other at the ftern, by a fingle man, ferving both as oar and rudder. Moft of thefe keels go down to Shields, a port near the mouth of the river, about ten miles from Newcaftle, where the large fhips lie; for none exceeding between three and four hundred tous can come up as high as the town. I mult not onsit that the imports of this. place are very confiderable. It appears that, in 1771,

810 ihips, carrying \begin{tabular}{l}
77,880 <br>
18,650

$\quad$

tons, from foreign parts. <br>
coafting trade.
\end{tabular}

$$
950 \quad 96,530
$$

were entered at this port; and that the cuftoms for coal amnunt to 41,000 . per annum, befides the 15,000 . paid to the Duke of Richmond, at one fhilling per chaldron on all fent coaftways.

Leave Newcaftle, and crofs the Tyne in the ferry-boat. Midway have a full view of the ruins of the bridge, and of the deftruction made by the dreadful flood of November 1771, which bore down four arches, and twenty-two houfes, with fix of the inhabitants: one of the houfes remained for a time fufpended over the water; the Ihrieks of the devoted inmates were for a long fpace heard, without the foffibility of affurding them relief.

This bridge was of fone, and had food above five hundred years. It confifted firlt of twelve arches, but by the contraction of the river by the quays on the northern fide, was reduced to nine. The houfes on the bridge were generally built at diftances from each other. About the middle was a handfome tower, with an iron gate, ufed by the corporation for a temporary prifon. At the fouth end was (formerly) another tower, and a draw-bridge.

By the ancient name of the fation on the northern bank, Pons $E$ lii, it is evident that there had been a bridge here in the tine of the Romans; and I am informed that there are ftill veftiges of a road pointing directly to it from Chefter-le-Atreet. I cannot help thinking that part of the Roman bridge remained there till very lately; for, from the obfervation of workmen upon the old piers, thofe, as well as the piers of the bridge at Bywell, feem originally to have been formed without any fprings for arches. This was a manner of building ufed by the Romans; witnefs the bridge built over the Danube by Trajan $\dagger$, at Severin, twenty Hungarian miles from Belgrade, whofe piers I

[^288]believe fill exif *. Alrian was probably the founder of the bridge at Newcafte, which was called after his family name Pons Elii, in the fame manaer as Jerufalem was flyled Elia Capitolina, and the games he infítuted at Pincum, in Moffa, Eliana Pincenfia. The coins difcovered on pulling down fome of the piers, in 1774, confirm my opinion. Several were difcovered, but only three or four refcued from the hands of the workmen. All of them are coins pofterior to the time of Adrian, probably depofited there in fome later repairs. One is a beautiful Fauftina the elder, after her deification: her forchead is bound with a fimall tiara; her hair full, twifted, and dreffed a la moderne; round is infcribed "Diva Fauftina." On the reverfe is Ceres, with a torch in one hand, and ears of corn in the other: the inicription, "Augufta, S. C."

The next has the laureated head of Antoninus Pius. On the reverfe, Apollo, with a patera in one hand, a pledrum in the other; the legend fo much defaced as to be illegible.

The third is of Lucius Verus (like that of Fauftina, after confecration). On the reverfe is a magnificent funcral pile, and the word, "Confecratio, S. C."

The original fuperftructure of this bridge was probably of wood, like that over the Danube; and continued, inade with the fame inaterial, for feveral centuries. Notice is taken of it in the reign of Richard I., when Ihitip Puititrs, bilhop of Durhaw, gave lience to the burgeffes of Gatefhead to give wood to whomfoever they pleafed, to be fpent about the river 'Tyne; which is fuppofed to mean in the repairs of the bridge and quay on the part belonging to Durh m ; for one third belongs to the bithop, and two to the town: fo that, after it was deftroyed in 1248 by a furious fire, the bifhop and the town united in the expence of building the flone bridge, of which this calamity was the origin. The prelate (Walter Kirkham) had the adrantage in this; for, armed with firitual powers, he iffued out indulgenciss from all penances to ewery one that would affift either with money or labour. The town alfo applied to other bifhops for their affifance in promoting fogood a work; and they, in confequence, granted their indulgencies: but then the clergy of the north were circed by their archawacon, to prefer the indulgencies of their own prelate to any other. In the end both partics fucceeded, and the money raifed was given to Laurentius, mafter of the bridge.

The boundaries of the bridge were flriatly prefirved. Edward III. by writ, 1334, forbids the mayor and Geriffs of Newcafte to fuffer their thips to lie on the fruthern fide. And feveral other proofs may be brought of the ttrick obfervance of thefe rights of the bifhop. By the calamity of November $17 \mathrm{th}, 1771$, this part of the bridge was

[^289]greatly damaged. An act was therefore paffed this year, to enable the prefent bifhop, and his fuccefiors, to raife a fum of money by annuities equal to the purpofe. Crofs the water, and land in the bifhoprick of Durham.

Enter Gatefhead; a confiderable place, built on the fteep banks of the fouthern fide of the river, containing about five hundred and fifty houfes. Camden fuppofes it to have been the ancient Gabrofentum, and it retained part of the name in its prefent Goathead, as if derived from the Britifh Gafr, a goat. Mr. Horfely jutlly imagines this place to have been to near to Pons 不li for the Romans to have another fation here, therefore removes it to Drumburgh. It appears to me to have been very little altered from the old Saxon unme Geats-lievod; or, the head of the road : and that it was fo ltyled from being the lead of the Roman military way which thofe new invaders found there.

It was a place eminent for ecclefinflical antiquity. Bede mentions under the year 653, Uttan, brother of Adda, who had been abbot of a monaltery here *; but no reliques of it now exif. Here are the ruins of a beautiful chapel $t$, belonging to an hofpital dedicated to St. Edmund, where frur chaplains were appointed. The founder was Nicholas Farnham, Bifhop of Durham, about the year 12.4. In the reign of Henry Vl. it was granted to the nuns of St. Bartholomew, in Newcaftle, and in that of Edward VI. to the mayor and burgeffes of Newcafle. Here was befides another hofpitab; dedicated to the Holy Trinity, in the beginning of the reign of Henry III, to which Henry de Ferlinton gave a farm, to find a chaplain, and maintain three poor men. This was re-founded by James I. in 1610 .

Hugh Pudfey granted to the burgeffes of Gatefhead liberty of foreflage, on paying a fmall acknowledgement. Edward VI. annexed this place to Newcafte; but his fucceffor Mary reftored it again to the church of Durham.

Pafs over a barren common, full of coal-pits; then, through a rich country, inclofed and mixed with wood. Defcend into a rich hollow ; reach the fnall town of Chefter-leItreet, the Cuncaceftre of the Saxons: a fmall town, with a good church and fine fpire. Within are ranged in nice order, a complete feries of monuments of the Lumley fanily, from the founder Liulphus, down to John Lord Lumley, who collected them from old monafteries, or cauled them to be made a-new, and obtained, in 1594, a licence from Tobias Matthews, bifhop of Duriam, for placing them there. Over each is an infcription, with their names or hiflory. The moft remarkable is that of Liulphus, an AngloSaxon of diftinction, who, during the diftractions that reigned on the conqueft, retired to thefe parts, and became fo great a favourite with Walcher, bifhop of Durham, as ta raile the envy of his chaplain Leofwin, who villainoufly caufed Liulphus to be murdered, by one Gilbert, in his houfe near Durhan. The bihop lay under fufpicion of conniving at the horrid deed. The friends of Liulphus rofe to demand juftice: they obtained an interview with the bifhop at Gatefhead; but the prelate, inflead of giving the defired fatisfaction, took refuge in the church with the two offenders. On which the enraged populace, firft facrificing Gilbert and the bihop, fet the church on fire, and gave the deferved punifhment to the original contriver of the mifchief.

In the Saxon times Chefter-le-ftrett was greatly refpected, on account of the reliques of St . Cuthbert, depofited here by bifhop Earduff, for fear of the Danes, who at that time (about 884) ravaged the country. His fhrine became afterwards an object of great devotion. King Athelfan, on his expedition to Scotland, paid it a vifit, to obtain by interceffion of the faint, fuccefs on his arms; beftowed a multitude of gifts on the. churclt, and directed, in cafe he died in his enterprize, that his body fhould be interred

[^290]there. I muft not omit, that at the fame time that this place was honoured with the remains of St . Cuthbert, the bifhoprick of Lindesfarn was removed here, and endowed with all the lands between the Tyue and the Were, the prefent county of Durham. It was ftyled St. Cuthbert's patrimony. The inhabitants had great privileges, and always thought themfelves exempt from all military duty, except that of defending the body of their faint. The people of the north claimed this exemption, on account of their being under a continual neceffity of defending the marches, and oppofing the incurfions of the Scots. The fame excufe was pleaded by the town of Newcaifle for not fending members to parliament. Rymer * produces a difcharge from Henry III. to Robert bihop of Durham, Peter de Brus, and others, of having performed the military fervice they owed the king, for forty days, along with his fon E.dward. They, with the reft of this northern tract, afferted that they were Hali-werke folks, that they were enrolled for holy work; that they held their lands to defend the body of the faint; and thofe in particular in his neighbourhood, were not bound to marel beyond the confines of their country. In fact, Chefter le-Itreet was parent of the fee of Durham; for when the reliques were removed there, the fee, in 995, followed them. Tanmer fays, that probably a chapter of monks, or rather fecular canons, attended the body at this place from its firt arrival: but bifhop Beke, in 1286, in honour of the faint, made the church collegiate, and effablifhed here a dean, and fuitable ecclefiaftics; and, among other priwileges, gives the dean a right of fifhing on the Were, and the tythe of fill $t$.
At a fmall diftance from the town, fands l.umley-calle, the ancient feat of the name, It is a fquare pile, with a court in the middle, and a fquare tower at each corner; is modernized into an excellent houfe, and one of the feats of the Farl of Scarborough. It is faid to have been built in the time of Edward 1. by Sir Robert de Lumley, and en. larged by his fon Sir Marmaduke. Prior to that, the family refidence was at Lumley, (from whence it took the name) a village a mile fouth of the cafte, where are remains of a very old hall houfe, that boafts a greater antiquity. The former was not properly caltellated, till the year 1392, when Sir Ralph (the firt Lord Lumley) obtained from Richard II. "Licentiam caltrum fuum de Lomley de novo adificandum, muro de petra et calce batellare et kernellare et caftrum illud fic batellatum, et kernellatum tenere, \&c." This Sir Ralph was a faithful adherent to his unfortunate fuvereign, and lon his life in his caufe, in the infurrection, in the year 1400, againft the ufurping Henry. There are no dates, except one on a fquare tower; 1. L. 1570 , when, 1 prefume, it was re-built by John Lord Lumley.

The houfe is a noble repofitory of portraits of perfons eminent in the fixteenth cen. tury.

The brave, impetuous, prefuming, Robert, Earl of Effex, appears in full length, dreffed in black, covered with white embroidery. A romantic nobleman, of parts without difcretion; who fell a facrifice to his own paffions, and a vain dependance for fafety on thofe of an aged queen, doting with unfeafonable love; and a criminal credulity in the infinuation of his foes.
Sir Thomas More ; a half megeth, dreffed in that plainnefs of apparel which he ufed, when the dignity of office manad afide : in a furred robe, with a coarfe capuchin cap. Hle was the mof virtuous, and the greatelt character of his time; who, by a circumffance that might humiliate human nature, fell a victim for a religious adherence to his own opinion; afrer being a violent perfecutor of others, for firmuefs to the dictates of their oman conftience. To fuch ingoufutencies are the beft of mankind liable!

The gallant, accomplifhed, peetical Earl of Surrey; in black, with a fword and dagger, the date 15,45 . The ornament (fiys Mr. Walpole) of a boifterous, yet not unpolifled court ;'a viaim to a jealous tyrant, and to family difcord. The articles alledged againt him, and his convition, are the flame of the times.

A portait of a lady in a fingular drefs of black and gold, with a red and gold petticoat, dated 15 fic. This is called Plizabeth, thisid wife of Edward Earl of Lincoln, the fair Geraldine, celebrated fo highly by the E.at of Surrey; but fo ill-favoured in this piture, that I muft give it to his firft wife, Blizabeth Blount. Geraldine was the young wife of his old age. Her portrait at Woburn reprefents her an olject worthy the pen of the amorous surrey.

Ambrofe Dulley, Earl of Warwick, fon of the great Dudley, Duke of Northumberland. His drefs a bonnet, furred cloak, fmall ruff, and pendant George. This pect followed the fortunes of his father, but was received into mercy, and reftored in blood; was created Earl of Warwick by Quen Elizabeth, and proved a gallant and faithfal fubject. He died in 1589, and lies under an elegant brafs tomb in the chapel at Warwick.

Sir William Peter, or Petre, native of Devonhire, fellow of All-Souls college, and afterwards feeretary of ilate to four princes; Heary VIII. Edward VI. Mary and Elizabeth. Ilis prudence, in maintaining his pott in reigns of fuch different tempers, is evident; but in that of Mary he attended only to polities; of Elizabeth, to religion *.

The firt Earl of Bedford, engraven among the illulltious heads.
A half-length of the famous eccentric phytician and clymilt of the fifteenth century, Philip Theophraltus Paracelfus Bombaft de Hohenheim : on the picture is added alfo the title of Aureolus. The cures he wrought were fo very furprifing in that age, that he was fuppofed to have recourfe to fupernatural aid; and probably, to give greater authority to his practice, he might infinuate that he joined the arts medical and magical. He is reprefented as a very handforne man, bald, in a clofe black gown, with both hands on a great fword, on whofe hilt is inferibed the word Azot. This was the name of his fami iar fipit, that he kept in prifon in the pummel, to confult on emergent occafions. Buther humouroufly defcribes this circumftance:

> Bombaftus kept a de vil' hird
> Shut in the pumund of his fivord;
> 'lhat taught him all she connung pranks
> Of patt or future mountebanks

A head of Sir Anthony Brown, a favourite of Henry VIII. with a bufhy beard, bonnet, and order of the garter. IHe was malt, $r$ of the horfe to that prince, and appointed by him one of the executors of his will; and of the council to his young fucceffor.

Two full lengths of John Lord L.umley : one in rich armour; a grey beard; dated 1588, att. 54. the other in his robes, with a glove and handkerchief in one hand; a little back fcull cap, white beard; dated 1591. This, I bolieve, was the performance of Reclard Stevens, an able ftatuary, painter, and medallit, mentioned by Mr. Walpole $\ddagger$.

This illufrious nobleman reftored the monumen's that are in the neighbouring church, was a patron of learning, and a great collector of $\mathrm{i} o \mathrm{ks}$, affiftel by his brother-in-law, Humphrey Lhuyd, the famous antiquary. The books were afterwards pur-

[^291]3 T
chafed by James I. and proved the foundation of the royal library. Mr. Granger fays, that they are a very valuable part of the Britifh Mufeum.

His firf wife, Jane Fitzallan, daughter of the Farl ot Arundel; in black robes, with gloves in her hand. She was a hady of uncommon learning, having tranflated, from the Greck ino Latin, fome of the orations of lfocrates, and the Iphigenia of Euripides into Englifh. She compliments her father hishly in a dedication to him, prefixed to one of the orations, which begins, "Cicero, Pater honoratillime, illuftris." She died before him, and was buried at Cheame in Surrey *.

The Earl himfelf, the laft of that name; a three quarters piece. His valour dif. tinguifhed him in the reign of IIenry VIII. when he ran with his fquadron elofe under the walls of Boulogne, and foon reduced it. In the following reign, he oppofed the mifufed powers of the unhappy protector, Somerfer; and he declined comection with the great Northumberland. He fupported the juft rights of Queen Mary; was imprifoned by the former, but on the revolution was employed to arreft the abject falien duke. He was clofely attached to his royal miftrefs by fimilitude of religion. In his declining years, he aimed at being a hufband to Qucen Elizabeth $\dagger$. Had her majefty deigned to put herfelf under the power of man, he never would have given the preference to age. On his difappointment, he went abroad; and, on his return, firt introduced into England the ufe of eoaches $\ddagger$.

A half length of that artful ftatefman, Robert Earl of Salufbury, minifter of the laft years of Elizabeth, and the firt of James I.

Thomas Ratcliff, Earl of Suffex, a full length; young and handfome: his body arnsed, the reft of his drefs white ; a faff in his right hand, his left relting on a fiworl; on a table a hat, with a vaft plume. This motto, " amando et fidendo tropp", lion ruinato." This nobleman was a confiderable character in the reigns of Mary and Elizabeth; frequently employed in embaffies; in both reigns deputy of Ireland; and in the firf, an alive perfecutor of the proteltants. He conformed outwardly to the religion of his new miftrefs; was appointed by her prefident of the north, and commanded againft, and fuppreffed, the rebellion of the Larls of Northumberland and Weftmoreland, notwithllanding he fecretly approved the opinions they armed in favour of. He was the fpirited rival of Leicefter; but the death of Suffex left the event of their difpute undetermined.

Leicefter. his antagonift, is here reprefented, in a three-quarter piece, dated 1587 , with the collar of the garter, and a ftaff in his hand.

A fine full length of the Duke of Monmouth, with long hair, in armour.
A half length of Sir Nicholas Carew, mafter of the horfe to Henry VIlI. There is valt fpirit in his countenance. In his hat is a white feather; his head is bound round with a gold ftuff handkerehief. He was beheaded in 1539, as Lord Herbert fays §, for being of council with the Marquis of Exeter, a favourer of the drcaded Cardinal Pole, then in exile. During the time of his confmement in the tower he imbibed the fentiments of the reformers, and died avowing their faith $\|$.

Killegrew, gentleman of the bed-chamber to Charles 1I. in a red fafh, with his dog. A man of wit and humour ; and on that account extremely in favour with the king.

A good half length of Mr. 'Thomas Windham, drowned on the coalt of Guinca, aged 42, M. D. L. a robuit figure, in green, with a red fafh, and gun in his hand.

- She was dead before Decomber 30th, 1579, as appears by her father's will. Vide Ballard's Britifh Ladies, 6.
$\dagger$ Camden's Annals. Kennet, $3^{83}$. $\ddagger$ Idem. $\$$ Hitl. IIenry VIII. 439.
\& Holliafhed, $94^{5}$.

A thrce-quarter length, unknown, dated 1596, aged 43, dreffed in a ftriped jacket. blue and white; black cloak and breeches, white ruff, gloves on, collar of the garter.

Here are fome illuftrious foreigners. A half length, infcribed Fernandes de 'Toledo, Duke of Alva, in rich armour, with his baton; flort black hair, and beard. A great officer, and fortunate till his reign of cruelty. He boafted, that he had caufed, during his command in the Low Countries, eighteen thoufind people to perifh by the executioner. He vifited Eagland in the train of his congenial mafter, Phillip II. I imagine that this portrait was painted when the duke was young; for I have feen one (fent into England by the late Mr. Benjamin Keen) now in pofieflion of the Bifhop of Ely, which reprefents him with a vaft flowing white beard.

A three-quarter length of Andrew Doria, the great Gconefe admiral, and patriot. Ue is drefied in black, in a cap, a collar, with the flecee pendent; a truncheon in his hand, and a dagger in his girdle. View of thips through a window.

Garcia Surmeinta Cuma; a full length, in armour; a ruff, red frockings, white floes, a crofs on his breaff, a fpear in his hand. He was captain of the guard to Phillip II.

A ihree-quarter length of a man in a fcarlet robe; and over his left fhoulder a white mantle: a fcarlet cap tied in the middle, and open behind; a narrow white ruff; and a collar of the fleece. The fcarlet robe is furred with white: on it arc feveral times repeated the words, Ab! amprins au ra jay! Oh! had I undertaken it!

In the hall is a tablet, with the whole hiftory of Liulphus, and his progeny, infcribed on a tablet, furrounded with the family arms; and round the room feventeen pictures of his defcendants, down to John Lord Lumley, who feemed to have a true veneration for his anceftors. Liulphus appears again in the kitchen, mounted on a horfe of full fize, and with a battle-ax in his hand. When James I . in one of his progreffes, was entertained in this cafle, William James, bihop of Durhan, a relation of the houle, in order to give his majefty an idea of the importance of the family, wearied him with a long detail of their anceftry, to a period even beyond belief. "O mon, fays the king, gang na farther, let me digett the knawledge I ha gained; for, by my faul I did na ken that Adam"s name was Lumley."

A little to the left, midway between Chefter le ftrect and Durham, lies Coken, the feat of Mr. Carr, a moft romantic fituation, laid out with great judgment; in former times the feene of the favage aufterities of St. Golric. Betore his arrival, here had been an ancient hermitage, given before the year 1128 , by Ralph Flambard, bilhop of Durham *, to the monks of Durham, who permitted that holy man to make it his refidence; which he did, firt with his fifter + , and atter her deatin entirely in folitude.

Attracted by the fame of the deceated, who died in 1170, fome monks of Durham retired here. Hugh Pudfey, bifhop of Durham, made them an allowance, and granted the m by charter many privilegest; fome call him founder of Finchale, the religious houfe, whofe ruins are till confiderable; but Tanner $\$$ gives that honour to his fon Henry, who, about the year 1196 , fetted here a prior and monks of the Benediatine order, fubordinate to Durham. It maintaned, at the diffolution, a prior and eight monks; when it was regranted to the dean and elapter, its value, according to Dugdale, was 1221.15 s .3 d .
Proceed towards Durham. Near the city, on the right, food Nevil's Crofs, ereeted in memory of the fignal victory over David Bruce of Scotand, in 1346. The arny of

[^292]the Englifh was commanded by the two archbifhops and three fuffragans，in con－ junction with fome nol le lay－officers．The action was attended with great lols to the Scots；whofe king，after Yoewing the utmoft valour，was taken priloner by an Englifh－ man of the name of Copland．

After admiring the bauniful fituation of the city from an adjacent hill，enter Dur－ ham ；a place of Saxon Eundation；the original name was Dun－holme，from Dun，a hill，and holme an ille，formed by a river＊．But it is only a lofty narrow peninfula， wafhed on each five by the Were，the Viurus of the venemble Bede $t$ ．The city is difpofed on the fide of the hill，and along part of the neighbouring flat，and the build． ings in general are very ancient．The approaches to it are extremely picturefque， efpeciatly that from the fouth，through a deep hollow，fincly cloathed with trees．The banks of th：river are cuved with woods，through which are cut numbers of walks， contrived with judgment，and happy in the mot beautiful and folemn feenry．They impend over the water，and recive a moft vencrable improvement from the cattle and ancint cathedral，which tower far above．

This hill，till about the year 995，was an errant defert，over run with woo！，and un－ inhabitable．At that perind，the religicus of Cuneaceftre，having，throush fear of the Danifh pirates，removed the body of St．Cuthbert to Rippon，on their return back， when the danger was over，met with an admonition that determined them to depofit it in this place $\ddagger$ ．The corpfe and the body be came fuddenty immoveable；no force could draw it a ftep farther．It was revealed to St．Eadmer，that it fhould be brought to Durham，and，on that refolution，a llight flrength removed it to the deftined fpot． With the affiftance of the Farl of Northun＇berland，the wood was foon cleared away； a church arofe in honour of the fiam，compofed indeed of no bettor materi：ls than rods． But this feems to have been only a temporary temple，for the whole country flocking in，aflifted in building one of ftone，which coft three years＇labour．A provolt and fecular canons were eftablifhed here；thefe continued till about the ycar 1083，when Williari de Carilepho § removed them，placing in their room a prior and monks of the Benediatine orler．

The Saxoms of thefe parts，unwilling to fubmit to the Norman yoke，retired to this as a place of Arength，and built a fortrefs，for a time a great anoyance to the Conqueror． This they called Dunhome．The Isun，or artiticial hill，on which the great tower is built，was of their work．On the approach of William，the Saxons quitted their poft． He pofiefled himfelf of fo adrantagenus a finuation，and founded the catte．This after－ wards became the refidence of the prelats，and，by ancient cuftom，the keys were， during a vacancy of the fee，bung over the tomb of the tutelar St．Cuthbert．The am－ bitious prelate，Hugh Pudfey，nephew to King Stephen，repaired and rebuilt feveral parts，which，during his time，had fuftered hy fire II．Hatfild，a munificent prelate in the reign of Edward III．，reflored fuch parts as he found tin ruins，rebuilt the great ladl，and that bolonging to the conilable，and abded a preat tower for the farther fe－ curity of the phace－To the mild and aniable lunilab is owing the maynificent gate， the chapel，and fome adjacent buildings＊＂；and to Bithop Cofins，the firlt prelate of the fee after the Refloration，the profut besuty and magniticence of the place，atier the cruct havock made hece by the brutal Hatelrig．

The city, or rather the precincts of the abby and cafte, were furrounded with a wall, by Ralph Flambard *, in the beginning of the reign of Henry I. The admiftion was through three gateways: Framwell-gate, at the head of a bridge of the fame name; Claypath-gate, near the market-place; and the Water-gate, beneath the end of the Pribendaries' Walk. I do not find, that at any time the ftrength of the place was ever tried by a fiege.

The catbedral fands below the caftle. It was begun in ro93, by William de Carilepho, bihhop of the diocefe, who pulled down the old church, built by Aldwin. In this work he was affilted by Malcolm I. ot Scotland, and T'urgot, the fecond prior, and his monks; who, at their own expence, and at the fame time, made their own cells, and other conveniences for the monaftery.

Ralph Flambard, fucceffor to Carilepho, had the honour of completing this fuperb ftructure, with exception of certain additions, fuch as the Galile $\dagger$, which was built by bifhop Puafey; the ftone roof, which was done by bifhop Farnham, in the time of Henry III. Bifh.p Skirlaw, in the reign of Richard II. buitt the cloitters; prior Foffor beauthied it with feveral fine windows, and enriched both the church and convent with variety of new works; and prior Wa'worth finilhed whatloever his pious predeceffor was prevented by death from bringing to a conclufion $\ddagger$.

The revenues of this houfe at the diffolution are eftimated by Dugdale at ${ }_{1} 3661$. 1os. yd., by Sperd at 161 gl .14 s . 1od. The value of the bihoprick, at that time, 2821 l. Is. 5 d. clear $\S$. The reader is referred to Willis's Hiftory of Cathedrals, i. 222. for the eftablifhenent and its revenue after that period.

This magnificent pile is 411 feet long, the breadth near 8o, the crofs ifle 170 ; over its centre riles a lofty tower, reckoned 223 feet high, ornamented on the outfide with Gohic work; at the weft end are two low towers, once topt with two fires, covered with lead In the infide is preferved much of the clumfy, yet venerable magnificence of the early Norman ftyle. The pil'ars are valt cylinders, twenty-three feet in circumference; fome alorned with zig zag furrows, others with lozenge-dhaped, with narrow ribs, or with firal ; the arches round, carved with zig-zag; above are two rows of g.llteries, each with round arches or openings.

A row of fmall pilafters run round the fides of the church, with rounded arches interfecting each other. The windows are obtuiely pointed.

Between two of the pillars are the mutiated tombs and figures of Raph and John Lord Nevil. Excepting Richard de Bernardcalfre, who in 1,370 erected a thrine in honor of Bede, thefe feem to have been the only laity admitted into this holy ground in the earlier times.

Ralph diod in the year $1,3 \%$, and was the firft fecular that was buried in this cathedral: his body was conveyed in a chariot drawn by feven horfes as far as the churchyard, then carried on the th ulders of knights into the middle of the church; where the abbot of S'. Mirs's at York, in the abfence of the bithep or illnef's of the prior, performed th, funcral office; at which were offered eight horfes, four for war, with four nen aned, and four for peace; and three cloths of gold interwoven with tlowers. His fon John de N vil redecmed four of the horifs, at the price of a humatred marks. But this bavour was mot done gratis by the holy men of the place. Ralph had prefented then with a vellment of red velvet, richly embroidered with golk. filk, great pearls and images of dante, dedicate! to St. Cuthbert. His widow alf fent to the facritit a hundred and twenty pounds of filver, for the repairs of the cathedral, an.t

[^293]feveral rich vellments for the performance of the facred offices *. This was the nobleman who was fo inftrumental in gaining the victory of Nevil's Crofs.

His fon John had alfo his merits with the pietifts of this church; for, by the magnificent offerings he made at the funeral of his lirth wife, and by fome clegant and expenfive work beneath the flrine of St. Cuthbert, in ${ }^{1} 339$, he obtained admiffion for his remains in a fpot not renote from his father $\dagger$. Both their monuments are greatly mutilated; having been defaced by the Scotch prifoners, conined here after the battle of Dunbar.

In the choir is the bilhop's throne, clevated to an uncommon height, crected in times of the triumph of fipertition: a painful afient to the prefent prelate, whofe wilh is directed more to diftinguifh himfelf by bencolence and fincerity, than any exterior trappings, or badges of dignity.

On the fides of the pulpit are the evangelifts, finely inlaid.
The chancel and altar-pisee is of itone, beautifully cut into open work $\ddagger$, and on each fide are two falls, in ltone, originally detigned for the reting places of fick votaries.

On one fide of the choir is the tomb of bithop Hatfield, who died in $1 ; 3$, ornamented wihas many coats of arms as would ferve any German prince. Multitudes of other prelates and priors refted in this church, covered with beautiful tombs and bralles, fwept away by the hand of facrilege in the time of Henry VIII., or of undiflinguifhing reformation in fucceeding reigns, or of fanaticifun, in the unhappy times of the lait century.

Behind the altar flood the thrine of St. Cuthbert, once the richeft in Great Britain: the marks of pilgrims' feet in the worn floor ftill evince the multitude of votaries; at the diffohution, his body was taken out of the tomb and interred beneath.

Beyond this, at the extreme ealt end, ftood nine altars, dedicated to as many fiints; above each is a moft elegant window, extremely narrow, lofty, and fharply arched; above thefe, is a round window, very large and finely radiated with tone work, called St. Catharine's, from its being in the form of the wheel ufed at her nartyrdon. In this part of the church is anocher fine window, divided into circular portions. Alt the windows in this ifle terminate tharply; and were the work of a later age than that of the body of the church, probably the time of prior Foffor.

The Galilee, or lady's chapel, lics at the weft end of the cathedral. Within are three rows of pillars, each coniffing of round united columns, the arches round, feulptared on the mouldings with zig zag work 9 . This place was allotted to the female part of the votaries, who were never permitted to paifs a cerdain line to the eaft of it, drawn juft before the font. Here they might fland to hear divine fervice, but were confined to this limit on pain of excommunication. Legend affigns as the caufe of this averfion in St. Cuthbert to the fair fex, a charge of feduction brought araint him by a cortain princefs, who was inflandy punifhed by being fwallowed up by the earth, which, on the intercetion of the pacified faint, reftored her to the king her father. From that time, not a woman was pernifted to enter any church dedicated to this holy man. Mr. Grofe \|f relates, that in the fifteenth century two females, indligated by invincible curiofity, drefling themfelves in man's apparel, ventured beyond the prolibitory line, were detected, and fuffered certain penances as atonement for their crime.

In the Galilee is the tomb of the venerable Bede. His remains were firft depofited at Jarrow, then placed in a golden coffin on the right fide of the body of St. Cuthbert; and finally, in 1370, tranflated by Richard of Barnard-caftle to this place.
The tomb of bifhop langley is near that of Bede. This prelate was chancellor of England in the reign of Henry IV. but refigned that high poft, on being confecrated biflop of Durham. He obtained the cardinal's hat in 1411 , and, after doing many acts of munificence, died in 1437.
In the veltry-room is preferved the rich plate belonging to the cathedral; and here are fhewn five moft fuperb veltments for the facred fervice: four are of great antiquity, the fifth was given by Charles I.

The cloilters adjacent to the church are 147 feet fquare, and very neat. The chapter-houfe opens into them: is a plain building, in form of a theatre; on the fides are pilafters, the arches interlecting each other. At the upper end is a fone chair, in old times the feat of the biflop.

The old Fiatry was converted into a noble library by dean Sudbury, who, not living to complete his defign, by will dated :683, bound his heir Sir John Sudbury, to fulfil his intention. This is likewife the repofitory of the altars, and othe: Roman antiquitios, diicovered in the bifhoprick. The dormitory, the loft, the kitchen, and other parts of the ancient abby, are fill exifling, and fill of ufe to the prefent poffeflors.

The prebendal houfes are very pleafantly fituated, and have backwards a moft beautiful view. After the fubverfion of monarchy, Cromwell, in 1657 , on the petition of the inhabitants of the county *, converted the houfes belonging to the dean and chapter into an univerfity, and affigned certain lands and revenues in the neighbourhood of the city for its fupport. This fhort-lived Ieminary confited of a provol, two preachers, four profeffors, four tutors, four fchool-mafters (fellows,) twenty-four fcholars, twelve exhibitioners, and eighteen free-fchool fcholars. They had liberty of purchafing lands as far as fix thoufand pounds a year; had a common feal, and many other prisileges. On the acceffion of Richard, thefe new academics were not wanting in gratitude to the memory of their maker; for, in their addrefs to the fucceffor, they compared Cromwell to Augultus, and gave him the prowefs of our fifth Henry, the prudence of our feventh Henry, and the piety of our fixth Edward; and recommended to the " vital beams of the piteous alpect of his fon, his new crection, an orphan farce bound up in its fwabdlling cloaths." 'This orphan thrived apace; it endeavoured to eonfer degrees, and-mimic its grown-up fifters of Oxfor I and Cambridge, who checked its prefumptions by petitions to the new lrotector. Liat in lefs than two years the illpatched machine of goverument fell to pieces, and with it this new feminary for knowledge.

There are two handfome bridges to the walks over the Were: from one the profpect is particularly fine, towards the cathedral and cafte; and another bounded on each fide by wood, with the fteerle of Elvet, a place adjoining to Durham, foaring above. There is alfo a third bridge, which joins the two parts of the town, and is covered with houfes.

I had heard on my road many complaints of the ecclefiaftical government this county is fuljeet to; but, from the general face of the country, it feems to thrive wonderfully well under it. Notwithltanding the bifhops have ftill great powers and privileres, yet they were fripped of fill greater by flatute of the 27 th of Henry VIII. Lut the time of the Conqueror it was a maxim, quicquid rex babet extra comitatum Duncimenfin,

[^294]epifcopus babet intra, nifi aliqua fit conceflio, aut prefiriptio in contrarium. They had power to levy taxes, make truces with the Scots, to raife defenfible men within the bithoprick from fixteen to fixty years of age. They could call a parliament, and create braros to fit and vote in it. He could fit in his purple robes to pronounce fentence of death, whence the faging, folum Dunsimcnje judicat fola ct cnfi. He could coin moncy, hold courts in his own name, and all writs went in his own name. He claimed and feized for his own wfe all goods, chattels, and lands of perfons convited of treafons or felonics; could appoint the great oflicers under him, and do varicty of acts emulating the royal authority *. He was lord paramount in the county, and the great people held molt of their lands from the church. Thus the potent Nevils paid four pounds and a thag annually for Raby, and cight other manors. Two of the tonures are fingular; 1 beg leave to prefent them to the reader in the form I had the honour of receiving them from the prelent worthy prelate.
"The valuable manor of Sockbum, the leat of the ancient family of the Conyers, in the county palatine of Durham, is held by the Blackett famly, of the bifhop of Durham, by the ealy fervice of prefenting a falchion to every hifhop upon his firt entrance into his diocefe, as an enblem of his temporal power. When the pretent bifhop mate his firlt entrance in the month of Sopt. 1771, he was met upon the midde of Crolt bridge, (where the counties of York and Durham divide, ) by Mr. Blackett, as fubllitute for his brother Sir Edward, who prefented his Lordflip with the falehion, addrefling him in the antient form of words:
": 'Sir Edward Blackett, Rart now reprefents the perfon of John Conyers, who, in the fields, with this falchion $f$, llew a monllous creature, a diagon, a worm, or a flying ferpent $\ddagger$, that devoured men, women, and childern. The then owner of Sockburn, as a reward for his bravery, gave him the manor, with its appurtenances to hold for ever, on condition that he meets the Lord Biflop of Durham with this talchion, on his firft cntrance into his diocele after his chection to that fee.'
"At Croft Bridge the bilhop was allo met by the high-fleriff of the county palatine, who is an officer of his oun by patent during pleafure, by the members for the county and city of Durham; and by all the principal gentlemen in the county and noighbourhood, to welcome his Lordhip into his paistatate, who conducted him to Darlington, where the all dincol with him, after which they proceded to Durhan. Before they reached the city, they were met by the dean :and chapter, with thair congratulatory addrefs; the bifhop and the whole company alighted from their carrages to rective them; when the cercmony of the addrets, and his lordllip's antiwer was finifhed, the procellion moved on to the city; here they were met by the corpora-

[^295]tion, the different companies with their banners, and a great concourfe of people; they proceeded immediately to the cathedral, where the bifhop was habited upon the tomb of the vencrable Bede, in the Galilee, at the weft end of the church; from whence he went in procefion to the great altar, preceded by the whole choir finging $T e$ Deum; after prayers the bifhop took the oaths at the alar, and was then cathroned in the ufual forms, and attended to the calle by the higin-flewifl and other gentlemen of the county. Pollard's lands, in this county, are hothen of the bifhop by the fame kind of fervice as the manor of Sockburn. At his Lordhap's firt coming to Aukland, Mr. Johnfon met the prefent hifhop at his firlt arrival there, and, prefenting the fal. chion upon his knee, addreffed him in the old form of words, faying, ' My Lord, in behalf of myfelf, as well as of the feveral other tenants of Pollart's tands, 1 do humbly prefent your Lordfhip with this falchion, at your firlt coming here, wherewith, as the tradition goes, Pollard flew of old a great and venemons ferpent, which did much harm to man and beaft ; and by the performance of this fervice thefe lauds are holden."

Sept. 6 Leave Durham, and journcy through a beautiful country, having near the city views of lands, brok 1 into moft delightful and cultivated knowls; and, on the left, of fine hanging woods; the land much inclofed, and the hedges planted. (In the right lies Brancefpeth caftle, originally the leat of the Bulmers, afterwards that of the Nevils, Earls of Weltmoreland, forfected by the rebellion of the laft in the time of Queen Elizabeth. The great fteeple of Merrington is feen on the left. Turn out of the high road, and pafs through the bifhop's grounds and park, and enjoy a fine view of the Were, running along a deep bottom, bounded by wooded and well-cultivated banks. On the fouth fide ftands

Bifhop's-Aukland, a good town, with a large and fquare maket-place. On one fide is a handfome gateway, with a tower over it. This is a modern edifice, defigned by Sir Thomas Robinfon ; that built by bilhop Skirlaw * having been long fince deltroyed. Through this gateway lies Aukland cafle, long fince the refidence of the bifhops of Durham. It has loft its caftellated form, and now refembles fome of the magnificent foreign abbics. It is an irregular pile, built at different times; but no part is left that can boaft of any great antiquity. Over a bow-window are the arms of Bifhop Tunftal, who died in the begiuning of the reign of Elizabeth. This was originaily a manorhoufe belonging to the fee, and was firft encaltellated $\dagger$ by bifhop Beke; who allo built a great hall, and adorned it with marble pillars; he founded a fair chapel, and co!legiate church, with a dean and prebends, which chureh is that of St. Andrew's, at a fmall diftance from the town. Excepting the church, there are no relicks of the labours of this pielate; the place having been bellowed by the parliament on their furious partizan Sir Arthur Hafelrigg, who, taking a fancy to the place, determined to make it his chief refidence. IIe demolifhed almoft all the buildings he found there, and out of their ruins erected a moft magnificent houfe

On the Reforation, the former bifhop, the munifieent Cofins, was refored to his diocefe. He had a palace ready for his reception, but by an excefs of piety declined making fe of it, Irom the confideration that the ftones of the ancient chapel bad been farrilegioully applied towards the building of this late habitation of famaticifin. The bilhop pulled it down $\mathbb{G}$, and reftoring the materials to their ancient ufe, built the prefent elegant chapel. 'The roof is wood, fupported by two rows of pillars, each confilting of four round columns, freeftone and marble alternate. The flatis of fome of

- Leland, Itin. i. 73.
$\ddagger$ Hitt. Ch. Durham, Dugdale, 82.
+ Ibid.
f Ibid.
the marble are fixteen feet high; the length of the chapel is eighty-four feet, the breadh forty-right; the outfide ornamented with piunacles. On the floor, a plain flone, with a modell epitaph, informs us that the pious refounder lies beneath, dying in the year 167 .

The principal apartments are an old hall, feventy-five feet by thirty-two, the height thirty-five; and a very handione dining-parlour, ormamented with portraits of Jacob and the twolve patriarchs. Jacob bows under the weight of years: his fons, with each his feriptural attribute. The figures are amimated; the colouring good. I think the painter's name is Xubero, ne I do not difcover in any lift of artifts. The pictures were bought by the profent, from the exccutors of the lace hilhop, and beftowed on the palace. The late generons prelate built a fuite of additional apartments; but dying betore they were completed, they are now furnilhed in a molt magnificent manner by his fucceffor.

On the old wainfeot of a room below ftairs are painted the arms of a ftrange affemblage of potentates, from Queen Elizabeth, with all the Luropean princes, to the Emperors of Abylinia, Bildelgerid, Cathave, and Tartaria; fixteen peers of the fame reign, knights of the garter, and above them the arms of every bifhoprick in England.

The caftle is feated in a beautiful park, watered by the litte river Gaunlefs, which falls, after a thort courfe, into the Were. The park is well planted, and has abundance of vaft alders, that by age have loft the habit of that tree, and affume the appearance of ancient oaks. Nothing can equal the approach through this ground to the cattle, whicts is varied with verdant flopes, rifing grounds, woods, and deep precipices, impending over the river. The great decr-houfe, buile by bithop Trevor, is an elegant Cquare building, and ne fmall embellithment to the place. Leland telis us, that in his time there was a fuir park, having falow deer, wild bulles, and hin.

On an eminence on the oppofite fide of the Were is Binchefter, the ancient Vinovia, where feveral Roman coins, altars, and inferiptions have been found. Several of the latter are worked up in the walls of a gentleman's houfe on the ftation, but now fiarcely legible. An account of them may be feen in Mr. Horfely, p. 295. Urns full of afhes and bones, and figuline lacrymatories, have been alio found in the park, where the fistion probably extended. A military way may be traced from this place as far as Brancefpeth-park one way, and the other by Aukland to Peirce-bridge into York flhire.

Sept. 7. Preceed tor a little way from Aukhand on the Roman way: leave on the left, at a mile and a half difiance from the town, the church of St. Andrew's Aukland, once collegiate, and well endowed by Aatony bifhop of Durham. At the dififolution here wore found a dean and deven prebends ${ }^{6}$. A houle called the deanery thill remains. The chict lomb in this church is that of a Pollard; a crof-legged knight, armod in mail to his fingers' ends, with a divirt, formed of flripes, reaching to his knees, a thort fword, and conic helm.
Pafs through St. Helens-Aukland and Weft-Aukland, and after a fhort digreffion fall in with the old Roman road, which continues to Peirce or Priett-bridge, where was once a chapel, founded by John Baliol, King of Scotland, and dedicated to the Virgin $\dagger$. The gateway is ftill Randing, in what is called the Chapel-garth. Till Leland's time the bridge confifted of tive arches, but he fays that of late it, was rebuilt with three. The Tees flow buteath in a picturefque channel finely fladed on each fide with trees. Near this bridge, in a field called the Tofss, had been a confiderable Roman ftaion: uras and coins in abundance have ben difcovered there. A Itone coffin, with

[^296]a ficleton, is mentioned by bihop Gibfon; but that I apprehend to be of more modern datc. 'The foundains of houfes have been obferved; and Mr. Horfely imagines he could trace an aqueduct. He fuppofes this place to have been the Magæ of the Notitia, I mult offerve that the Roman road is continued in a direct line between the roads to Barmard-Cafle and Darlington, and is continued over a fmall brook, and through the the inclofure parallel to the To:', when it croffes the river about two hundred and fixty paces call of the bridge, and then falls into the turnpike-road to Catterick-bridge. The whole breadth of the rrad is fill to be traced; and the fones it is formed of appear to be flrongly conented with run lime. The Romans had here a wooden bridge: the materials, fuch as the bodies of oaks, and feveral ftoops, were to be feen till wahhed away ty the great floods of 1771 . On crofling the Tces enter Yorkfhire.

After a ride of a few miles palis through Aldbrough, now a little village, but once a place of eminence, as its ruins, oblerved by Camden, evince. In the time of Henry I. Stephen liarl of Albemarle and IIoldernefs had a manor and caltle here, the tythes of which he beftowed on the abbey of Albemarle in Normandy *; and that abbey in the recign of Richard II. granted them to the abbey of Kirkfall $t$. Henry III. again beftowed the place on Hubert de Burgh, Earl of Kent. By failure of ifiuc, it fell to the crown in the time of IJenry IV., who gave it to his third fon, Jolm Duke of Bedford $\ddagger$.

Pafs over a large common, called Gatherley moor, and by the fides of the Doubledike, or Roman hedge, a valt fofs, with banks on cach fide, extending from the Tees to the Swale. On the right is Didderfon hill, whether a tumulus or exploratory, was too diftant for me to determine. After defeending a hill, pafs by Gilling, where Alan Fergaunt, Earl of Bretagne and Richmond, had a capital manfon-houfe §. This place was infamous for the murder of Ofwyn, King of Deira, by his fucceffor Ofwy; but his Queen Famfled obtained permifion from her hutband to found here a monaftery, in order to expiate fo horrible a crime. At this time the place was called Ingetling, and was deftroyed in the Danilh wars \|. Reach

Richmond, a good town, feated (in a flire of the fame name) partly on a flat, and partly on the fide of a hill: on the lalt is the market-place, a handfome opening, in which is the chapel of the Trinity, and in the middle a large column inftead of the old crofs. The trade of this place is that of knit woollen fockings, in which men, women, and children are employed, the neighbourbood fupplying the wool. The fockings are chiefly exported into Holland. Much wheat is fold here, and fent into the mountainous parts of the country.

There were feveral religious houfes in this place and its neighbourhood. In the town, on the plain on the north fide, was a houfe of grey friars $T$, founded in 1258 by Kalph Fitz-Randal, Lord of Middleham, and had at the diffolution fourteen monks. Nothing remains excepting the beautiful tower of its church. Near this was alfo a nunuery**. About a mile caft of Richmond are the fine ruins of St. Agatha, feated at the end of fome beautiful meadows, upon the river Swale. It was founded in 1151 by Roaldus, conitable of Richmond caflle; and at the time of the Reformation maintained feventeen white canons, or Premonitratenfian monks. The abbot and religious, in 1253, agreed will Henry Fitz-Ranulph, that he fhould hold of them in pure and perpetualallins their poflellions of Kerperby, on condition he paid them annually one pound of cumin feed, a drug in no fmall efteen in old timestt. Richard Scroope, chancellor

- Dugdale, Monait. i. 588.
- Dugdalo, Barona i. 6 o.

1 Bede firm, 59 . + Magra Britarnis, vi. 633.

of Iingland, was a great benefactor to this place; for, Lefides his manor of Brumpton. uponsiwale, he granted a hundred and fifty pounds a year for the fupport of ten additional canons, wo fecular canons, and twenty-two poor men, who were to pray for the repole of his fonl, and thole of his heirs *. 'The ruins are very venerable, an I the magnificent arch-work in the intide are fine proots of the flill of the times in that tpecies of aschitecture. 'The arch of the gateway is extrencely obtufe; that of the windows greaty pointed.

Near this place was a hofpital, dedicated to St. Nicholas. I camot learn the fombdoy's name but fimd it was epaired in the time of lemry VI, whogave the patrona e 10 Willim Aytrough, one of his judges ; who reftored the hofpital at great expence, and added another chamery prict to the former 1 .

Nearer to Richmond, on an eminence above the river, are the poor reliques of St. Martin's, a cell ol nine or ten Bencdictines, clependent on the abbey of St. Mary, at York. It was fiundal in 1100 by Wymar, chict fteward to the Earl of Richmond?. Befides thede, were various other pious foundations on the Swale, whote waters were facred with the biptifin of ten thoufand Saxons near Catterick, in 627, by Pablinus biflop of Yoiks.

It now remains to fpeak of the fortifications of this ancient town : part had been defended by walls, which took in little more than the market-phee, and had three gates. 'Ite caflle fands on the fouth-welt part of the hill, in a lofty and bold fituanion, above the Swale, and half environed by it. The remains are the walls of the precinct, fome fimall fquare towers, and one very large, all built in the Norman ltyle. This fortrefs was founded by $A$ lan Earl of Bretagne $\|$, nephew to the Conqueror, who commanded the rear of his army at the battle of Haltings, was created by him Larl of Richmond, and received from him the fhire of the fame name, and a hundred and fixty manors in the county of York alone. This country had been before the property of the brave Edwin, Larl of Mercia. The great tower was built by Conan, gramdfon of the former, the vault of which is fupported by a fine octagonal pillar. 'lhe view from the cattle is picturefque; beneath is the feat of Mr. York, and beyond, a profpect up the Swale into the mountainous parts of the country, rich in mincral; and on the banks of the river lived Sir John Swale, of Swale-hall, in Swale-dale, falt upon the river Sivale.

Crofs the river, and after pafling over a dreary moor, defcend into a valley not more pleafint, being totally inclofed with ftone fences. Go through the fmall towns of Billerfly and Leybourne; and foon after find an agrecable change of conntry, at the entrance of Wenfley-dale, a beautiful and fertile vale, narrow, bounded by hish hills, inclofed with hedges, and cultivated far up, in many parts cloathed with woods, furmounted with long ranges of fars, white rocke, fmooth and precipituns in tront, and pericetly even at their tops. 'The rapid cryftal Ure divides the whole, fertilizing the rich meadows wihh its flream.

See on the left Middleham cafte. The manor was bettowed by Alan Eart of Richmond on his younger brother, Rinebald. His grandton, ityled Robert linz-Ralph, receiving from Conan I:arl of Rehmond all Wentley-dale, lounded this calte about the year 1190 . By the marriage of his daughter and coheir to Robert de Novil © , it paffed into that fanily in the year 1260 . In this place Edward IV. finfered a thort imprifonment, after being furprifed by Richard N evill, the grear Einl of Warwick, and commined to the cullody of his brother, the archbithop of York, who provider too in-

[^297]dulgent a keeper, foon lof his royal prifoner, by permitting him the pleafure of the chace unguarded. The ruin of his houfe enfued. On its forfeiture, Richard Duke of York became polfeffed of it, and here loft his only fon Edward. He who had made fo many childlefs, felt in this misfortune the ftroke of heaven. It is a vaft building; its towers fteep, and turrets fquare. Part was the work of Fitz.Ralph; part of the Lord Nevill, called Darabi *. The hall, kitchen, and chapel, were built by Beaumont bilhop of Durham t. It was imhabited as late as the year 1609, by Sir Henry Lindley, knight $\ddagger$.

Vifit the church of Wenfley. On the floor are feveral carved figures on the fones, probably in memory of certain Scroopes interred there §. Alfo a figure of Ofwald Dyker, in his prieflly vellments, with a chalice in his hand. The infcription fays that he lad been rector of the parilt, and died in 1607. I prefume by his habit he was only nominal rector. Lord Chancellor Scroope defigned to make this church collegiate, and obtained licence for that purpofe from Richard II.; but it does not appear that the intent was ever executed.

At a little diftance beyond the church is a neat bridge of confiderable antiquity, which L.cland fpeaks of as "the fayre bridge of three or four arches, that is on Ure, at Wenc law, a mile or more above Midleham, made two hundred yer ago and more, by one caullyd Alwine, parfon of Wincelaw."

Vilit Bolton houfe, a feat of the Duke of Bolton, finihed about the year 1678 , by Charles Marquis of Winchefter. Here are a few portraits of the Scroops, the ancient owners.

A head of Henry Lord Scroope, one of the lords who fubfcibed the famous letter to the pope, threatening his holinefs that if he did not permit the divorce between Henry VIII. and Catherinc, that they would reject his fupremacy.

Helers: Clifford, his wife, daughter to the Earl of Cumberland. Here is another head of a daughter of Lord Dacres; third wife, according to Dugdale \|, of the fame Lord Scroupe.

Another Henry, warden of the weft marches in the reign of Elizabeth, in whofe cuftody Mary Stuart remained for fome time after her flight to her faithlefs rival.

His wile Margaret, daughter to Henry Larl of Surry. After the difgrace of the Earl of Efex, this lady alone ftood firm to him ; "for," fays Rowland White, "The endures much at her Majefty's hands, becaufe fie doth daily doe all the kynd offices of love to the Queen in his behalf. She wares all black, fhe mournes, and is penfive; and joiss in nothing but in a folitary being alune; and it is thought fhe faies much that few would venter to fay but herfelf 9 ."

A head of the fame lord, infcribed "Lord Harric Scroope, Baron of Bolton, one of the tilters before Queene Elizabeth, at the firftriumphe at the crownacion, æt. 22, $155^{8^{* *} . " ~ T o ~ t h e f e ~ m a y ~ b e ~ a d d e l ~ t h e ~ h e a d ~ o f ~ h i s ~ f o n, ~ T h o m a s ~ L o r d ~ S c r o o p e ; ~ a n d ~ h i s ~}$ fon again, Lord Emanuel, created by Charles I. Earl of Sunderland, who died the laft of this line.

Cruls the Ure, on a bridge of two arches, and have from it a fine view of the river above and below, each bank regularly bounded by trees like an avenue. On the right is Bolton cafte, built, lays Leland, by Richard Scroope, chancellor of England under Richard II., after cighteen years labour, and at the expence of a thoufand marks a year.

[^298]Moft of the timber employed was brought from Engthy foreft, in Cumberland, drawn by draughts of oxen, luccelively changed. He alfo founded here a chauntry for fix priefts ${ }^{\circ}$. The integrity of the chancellor foon lott him the favour of his mafter; for on his refufal to put the feals to the exorbitant grants made to fome of the worthle favourites, the King demanded them from him; at firit he declined obedience, deelaring he received them from the parliament, not his Majetty $t$.

This cafle is noted for having been the firt place of ennfinement of Mary Stwa.t, who was remored from Carline to this fortrefs, under the care of the noble owner. Several of her leters are dated from hence. In the civil wars it underwent a fiege by the parliament forces; and was, on Nov. $5,16+5$, on conditions, furmered, with with great quantities of ftores and ammunition $\ddagger$.
The building is fquare, with a valt fquare tower at each corner, in which were the principal apartments. Leland obferves the fingthar maner in which the linoke was conveyed from the chimuies of the great hall, by tunels made in the walls, conveying it within the great piess between the windows. This caftle, and the great potfedions belonging to it in thefe parts, are the property of the Duke of Bolton, derived by the narriage of his anceftor, Charles Marquis of Boloon, with Mary, natural daughter of Emanuel Seroope, Earl of Sunderland, laft male heir of this ancican houfe.

Reach Ayfgarth §, or Aytigarth-Force, remarkable for the fine arch over the Ure, buitt in 1539. The feenery above and below is molt mancomonly pieturefyuc. The banks on both fides are lofty, rocky, and darkened with trees. Above the bridge two regular precipices crofs the iver, down which the water falls in two beanilul calcader, which are feen to great advantage trom below. The ghom of the pendent trees, the towerin?; fecple of the church above, and the rage of the waters beneath the ivy.bound arch, form all tegetier a molt romantic view.

A little lower down are other falls; but the fineft is at about half a mile diftance, where the river is crofied ty a great fear, which opens in the middle, and forms a maynilicent flight of fteps, which grows wider and wider from top to bottom, the rock on each fide torming a regular "all. The river falls from fep to llep, and at the loweft drops in a rocky chamel, fillel with circular balins, and interrupted for fome fpace with lefler falls. The eye is fincly dit caded to this beautiful cataract by the fears that bound the river, beine lofy, precipitons, and quite of a tmooh front, and their funmits tringed with hollies and other trees.

Near Ayfgarth, or, as the catardets are called, Ayfgarth-Foree, was foundel the convent of white monks, brought from Savigny, in France, by Akaries litz-Bardolf, in 1145. They were fubject to Bylant, and received from thence in 1150 , an aibbot and thetre monk: who were afterwards removed to the neighbouring abbey of Jerviux \|, This was called, from the cataracts, Fors, atho Wandency-dale, a:d de Charitate.

Crofs the ridge dhat divides Wenfly-dale from another charming valley, called Bilhopfdale. All the litte inclofures are nearly of the fane fize and form, and the meadows are laid out with the utmoll regularity. It appeared as if in this fpot, the plan of the Spartan legilator had caken place: "It relembled the ponfeflions of brethren, who hat juit been dividing their inheritance amonr them."

Before I quit, then delicions tracts, I mult remark, that from leybourne to theirextrmisy there is anrcely a mile but what is terminat dy a lithe town; and every fent even far up the hills, embelifhed with fmall neat houle:. ladultry and competenc.

[^299]feem to reign among thefe happy revions, and, Highland as they are, feem diftinguifhed by thole circumiftances from the flothful but honelt natives of fome of the Scottifh Alps. Mittens and knit thockings are their manufactures. The hills produce lead; the vallies cattle, horfes, fheep, wool, butter, and checfe.

Alcend a fteep a mile in length, and at the top arrive on a large plain, a pafs between the hills. After two miles defeend into a mere glen, watesed by the Wharf; ride through Buckden, and Star-bottom, two villages, and lie at Kettlewel, a finall mine town. There are many leacimines about the place, and fome coal; bue peat is the general fuel, and oat-cakes, or tannocks, the ufual bread.

Ottober 9. Continue our journey along a plealant vale. Ride bencath Kilnfeyfear, a ftupendous rock, ninety-three yards high, more than perpendicular, for it overhangs at top in a manner dreadful to the traveller. 'The road bad, made of broken lineftones uncovered. This vale ends in a valt theatre of wood, and gave me the idea of an American feene. Afeend, and get into a hilly and lefs pleafing country. Overtake many droves of eatte and horles, which had been at grafs the whole furnmer in the remotef part of Craven, where they were lept from nine hiillings to forty per head, according to their fize. Reach
Skipton, a good town, feated in a ferile expanded vale. It cunfifts principally of one briad llreet, the church and cafle terminating the upper end. The caftle is faid to have been origanally buile hy Rohert de Romely, loord of the honour of Skipton. By failure of male iffue, it fell to William Fitz Dunean, Earl of Murray, who married the daughter of Romely. William le Gros, Earl of Albemarle, by marriage with her daughter, received as portion her grandfather's eftates. It fell afferwards by females to other familics, fuch as William de Mandevil, Earl of Eflex, to William de Fortibus, and Baldwin de Betun. In the time of Richard I. Avelin, daughter to a fecond William de liortibus, a minor, fucceeded. She became ward of King Henry III. who, on her coming of age, in 1269 , beftowed her and her fortuncs on his fon Edinund, Earl of Lancalter*; tut on the forfecture of his fon for treafon againf Edward II. the honour and cafle were granted, in 1309, to Robert de Cliflord, a Ilerefordflire Baron, in whofe line it crumind will the laft centurv. I know of no remarkable event that befel this eaflle, excepting 小et it ot is difmantled by ordinance of parliament, in $16+8$, becaule it had reccived a mal gartion during the civil wars.

It was reftoret, and repained, in $16 ; 5 \cdot 16 ; 8$, by the famous Anne Clifford, who made it, with tive other eatles her alternate relidence. It is feated on the edge of a decp dingle, premily woodecl, and watered by a canal, that ferves to convey limeftone to the main to nk of the navigation, which pafies near the town. At prefent the calle feems more calculated for habitation than defence. A gateway, with a round tower at a fmall diftance from it. The towers in the caftle are generaily round, lome polygonal. Over the entrance is an intcription, purporting the time of repair. The hall is worthy the hofpiatity of the family; has two fire-places, a hatch to the kitchen, and another to the cellar.

The great family picture is a curious performance; and till more valuable on account of the diflinguifhed perfons reprefented. It is tripartite, in form of a ikreen. In the contre is the celebrated George Clifford, Earl of Cumb.rtand, the hero of the reign of Elizabeth ; and his lady, Margaret Ruffel, laughter of Francis, heond Farl of Bedford. He is dreflied in armour, fpotted with ftars of gold ; but much of it : conccaled by asveft and fkirts reaching to his knees; his helmet and gauntet, lying on the
floor, are fudded in like manner. He was born in the year $155^{\circ}$, and by the death of his father fell under the guardiamhip of his royal miltrefs, who placed him under the tuition of Doctor Whitgift, afterwards Archbifhop of Canterbury. He applied himfelf to mathenatics; but foon after leaving the college he felt the finit of his warlike anceftors rife within him, and for the reft of his life diftinguifhed bimfolf by derds of arus honourable to himfelf ' , and of ufe to his country, in not fewer than twent $\boldsymbol{\gamma}^{\text {-t wo woy- }}$ ages againft the Geryon of the time, Phillip 11. who felt the effects of his prowefs, againft the invincible arnada, againft his European dominions, and the more dittant ones in America. He was always fucceffful againg the enemy, but ofim fuffered great hardfhips by ftorms, by difeafes, and by famine. The wealth which he acguired was devoted to the fervice of the flate, for he fpent not only the acquintions of his wyages, but much of his paternal fortune in building of lhips; and much alio he dif. fipated by his love of horfe-races, tommaments, and every expenfive diverfion. Queen Elizabeth appointed him her champion $\dagger$ in all her tilting matchis, from the thirty-third year of her reign; and in all thofe exerciles of tiltings, turnings, and courfes of the field, he excelled all the nobility of his time. His manificent armour worn on thofe occafions (adorned with rofes and fleurs de hs $\ddagger$ ) is actually preferved at Appleby cafte, where is, befides, a copy of this picture. In the courte of the life of foldier failor, and courtier, he fell into the licentiontinefs fomesimes incilent to the profeffions: but, as the inicription on the pithure imports, the effects of his carly education were then felt, for he died penitently, willingly, and chri dia ly.

His hady ftands oy him in a purple gown, and whe petticoat, cinbroidered with gold. She pathetically extends one hand to two beautiul buys, as if in the action of difluading her Lord from fuch dangerous voyages, when more interelting and tender clains urged the prefence of a parent. How muft he have been affected by his refufal, when he found that he had loft both on his return from two of his expeditions, if the heart of a hero does not too often divelt itfelf of the tender fenlations !

The letters of this lady are extant in manufcript, and alfo her diary; fhe unfortunately marries without liking, and meets with the fame return. She mentions leveral minutis that I omit, being only proofs of her attention to accuracy. She complains greatly of the cootnefs of her Lord, and his neglect of his daughter, iune Cliftion! ; and endured great poverty, of wh: hithe writes in a molt moving firain to Jumes I. to feverat great perfons, and to the Earl himfelf. At her letters are humble, fuppliant, and pathetic, yet the larl was faid to have parted with her on account of her hioh fipirit \$s.
Above the two principal figures are painted the heads of two fifters of the Earl, Anne, Countefs of Warwick, and Elizabeth, Countefs of Bath; and two, the filters of the Countefs ; Frances, married to Phillip, Lord Wharton; and Margaret, Countefs of Derby. Bencath each is a long infeription. The feveral inferiptions were conpofed by

[^300]Anne Clifford, with the affiftance of Judge Hales, who perufed and methodized for her the neceffary papers and evidences *.

The two fide-lcaves flow the portraits of her celebrated daughter, Aune Clifford, afterwards Countefs of Dorfet, Pembroke, and Montgonery ; the moft eminent perfon of her age for intellectual accomplifhments, for fpirit, magnificence, and deeds of bencvolence. Both thefe paintings are fuil lengths: the one reprefents her at the age of thirteen, fanding in her ftudy, drefled in white, embroidered with flowers, her head alorned with great pearls. One hand is on a mufic-book, her lute lies by her. The book informs us of the talnionable courfe of reading among people of rank in her days. I perceived among them, Eufebius, St. Augultine, Sir Pbilip Sidney's Arcadia, Godfrey of Boulogne, the Frencl Academy, Camden, Ortelius, Agrippa, on the vanity of occult Sciences, \&ec. \&c. Abotr are heads of Mr. Samuel Daniel, her tutor, and Mrs. Anne Taylor, iner governefs; the laft appearing, as the infcription fays fhe was, a religious and good woman. This memorial of the inftructors of her youth is a mof grateful acknowledgement of the benefits fhe received from thein. She was certainly a moft happy fubjeet to work on; for, according to her own account, old Mr. John Denham, a great altronomer, in her father's houfe, ufed to fay, "that the fweet influence of the Pleiades, and the bands of Orion, were powerful both at her conception and birth;" and when fle grew up, Doctor Donne is reported to have faid of her, that "fle knew well how to difcourfe of all things, from predeftination to flea-filk" t.

In the other leaf he appears in her middle age, in the flate of widowhood, drefled in a black gown, and black veil, and white fleeves, and round her waift is a chain of great pearls ; her hair long and brown; her wedding ring on the thumb of her right hand, which is placed on the bible, and Charron's Book of Wifdom. The reft of the books are of piety, excepting one of diftillations, and excellent medicines. Such is the figure of the hrroic daughter of a hero father, whofe firit dictated this animated anfwer to the infolent minitter of an ungrateful court, who would force into one of her boroughs, a perfon difagreeable to her:
" I have been bullied by an ufurper: I have been neglected by a court; but I will not be dictated to by a fubject. Your man tha'nt ftand.

" Anne Dorfet, Penbroke, and Montgontery."

Above her are the heads of her two hufbands, Richard Earl of Dorfet, who clied in 1624; an aimable nobleman, a patron of men of letters, and bounteous to diftreffed worth. The other is of that brutal fimpleton, Plilip, Larl of Pembroke, the juft fubject of Butler's ridicule, whom the married fix years atter the deaih of her firtt lord. Yit the fpeaks favourably of each, notwithfanding their mental qualifications were fo different: "Thele two Lords, fays the, to whom I was by the divine providence married, were in their feveral kindes worthy noblemen as any in the kingdom; yet it was my mistortune to have crolles and contradiations with them both. Nor did there want malicious ill-willers to blow and foment the coals of dillenfion between us, fo as in both their life-times the marble pillars of Knowle, in Kent, and Wilton, in Wilthhire, were to me but the gay arbours of anguilh, infomuch as a wife nan, who knew the infide of my fortune, would often fay, that I lived in both thefe my Lords great familics as the niver of Roan, or Rodanus, runs through the lake of Geneva, without mingling any part of its ftreams with that of the lake."

- Life of Lord Keeper North.

4 Bifhop Rainbow's difcourfe at her funeral, in 1657.

But the was releafed from her fecond marriage by the death of her hufoand, in 1650 . After which the greatnefs of her mind burf out in full and uninterrupted lull re. She re-built, or repaired, fix of her ancient cafles; the reftored feven churches, or chapels; founded one hofpital, and repaired another. She lived in wall hofpitality at all her calles by turns, on the beauiful motive of difpenfing her charity in rotation, atmong the poor of her valt eftates. She travelled in a horfe-litter; and often took new and bad roads from caftle to caftle in order to find out caufe of haying out money among the indigent, by employing them in the repairs. The opulent alfo felt the effect of her gencrofity, for the never fulfered any vifitors to go away without a prefent, ingenioufly contrived according to their quality *. After the reftoration fle was tolicited to go to court, but declined the invitation, laying " that if the went, the mut have a pair of blinkers fuch as her horles had, left fhe fhould fee fuch things as would offend her." Slie often fite ir perfon as fheriffets of the county of Weftmoreland; at length died, at the age of eigh -fix, in the year 1676, and wis interred at Appleby. Her grear poffeffions devoiven to Joha Larl of Thanet, who married Margaret, her eldelt daughter, by the Farl of Dorfet.

Here are four heads of this illuftrious Countefs, in the flates of childhood, youth, midde, and old age $\dagger$. My print is taken from one refenbling the lalt in the gallery at Straw berry-Hill, which the Hon. Horace Walpole was io obliging as to permit to be copied $\ddagger$.

In one of the rooms is a fictitious picture of the fair Refamond, daughter of Walter de Clifford, and miftrels to Henry II. She is dreffed in the mode of the reign of Elizabeth; but at her ear is a red rofe, an allution of the painter to her mame.

A picture of a young perfon, with a crown by her. Another of a name infcribed, vultus indcx anini ; and a third portrait, half length, of the great Larl of Cumberland, in a white hat, are the moft remarkable unnoticed.

I mult mention two good octagonal rooms, in one of which is fome fingular tapeftry, expreffing the punifhment of the vices. Cruaute is reprefented wih head, hands, and feet in the flocks; and Mal-bouche and Vil-parler undergoing the cutting off of their tongues.

On the feeple of the church is an incription, importing, that it was repaired after it had been ruined in the civil wars, by Lally Clifford Countefs of Pembroke, in 1655. Within the church are infcriptions, on plain ftones, in memory of the three firft Earls of Cumberiand. Thote on the two firtt relate little more than their lineage: but the noble hiftorian of the family informs us, that the firft Earl was brought up with Henry VIII. and beloved by him. 'ithat he was one of the moft cminent lords of his time, for noblenefs, gallantry, and courthip, but walted much of his eltate. That the fecond Farl at the beginning was allo a great watter of his eftate, till lie retired into the country, when he grew rich. He was much additted to the ltudy and practice of atchemy and chemiftry, and a great diftiller of waters for medicines; was thedious in all manner of learning, and had an excellem library both of written-hand books, and printed $£$.

[^301]Continue my journcy through a pleafant vale, watered by the Are, or the Gentle River, as the Celtic Ara fignifies, exprefive of its fmooth courfe ". Along its \&ide winds the canal, which, when finifhed, is to convey the manufactures of Leeds to Liverpool. Ride beneath a great aqueduct, at Kildwick, and have foon after a view of the rich valley that runs towards Leeds. Reach Kighly, at the bottom of another rich vale, that joins the former. This place has a confiderable manufacture of figured everlaftings, in imitaion of French filks, and of fhalloons and callinancoes; and numbers of people get their livelihood by fyinning of wool for the ftocking-weavers. The ancient fanily of Kighly take their name from this town. One of them, Henry Kighly, "obtained from Edward I. for this his manour, the privileges of a market and fair, and a frec-warren, fo that none might enter into thofe grounds to chace there, or with defign to catch any thing pertaining to the faid warren, without the pernifion and leave of the faid Henry and his fucceflors" + .

After crofing fome very difmal moors, varied with feveral tedious afcents and defeents, reach, at the foot of a very fleep hill, the great town of

Halifax, or the Holy-Flair, from a legendary tale not worth mentioning. It is feated in a very deep bottom, and concealed from view on every fide, till approached very nearly. The ftreets are narrow; the houfes moltly built and covered with fone, and the freets have been lately paved in the manner of thofe at Edinburgh. The town extends far in length, but not in breadth. Here is only one church, fpacious, fupported by two rows of octagonal pillars, and fupplied with a handfome organ. The Conqueror beftowed the lordhip of Wakefeld $\ddagger$, of which this place is part, on his reLe". Willian Earl of Warren and Surry, who gave the church and manour to the $a^{\prime} \quad \therefore$ Lewes; and his fuccelfors conftantly held courts here from that time to the dif1. \%. The parifh is of valt extent, contains above one and forty thoufand inhabitants, and is fupplied with twelve chapels. In the town are feveral meeting-houfes; one, called the chapel, is a neat and elegant building, erected by the independents, and even fuccoed.

Halifax rofe on the decline of the woollen trade at Rippon; which was brought from that tnvo in the time of a Mr. John Waterhoufe, of this place, who was born in 1442, and lived near a century. In the beginning of his time, here were only thirtecn houfes, but in 1556 above a hundred and forty houfholders paid dues to the vicar $\|$; and in 1738 , fays Mr. Wright, there were not fewer than eleven hundred families. The woollen manufactures flourith here greatly; fuch as that of the narrow cloth, bathceatings, fhalloous, cverlaitines, a fort of coarle broad cloth, with black hair lift for Portugal, and with blue for Turkey; fayes, of a deep colour, for Guinea; the latt are packed in pieces of twelve yards and a half, wrapped in an oil cloth, painted with negroes, elcphants, \&c. in order to captivate thole poor people; and perhaps one of thefe bundies and a bottle of rum may be the price of $a$ man in the infanous trafic. Many brood-red clothes are exported to Italy, from whence they are fuppofed to be fent to Tinkey. The blues are fod to Norway. The manufacture is far from being confined to the neighbourhood, for its influnce extends as tar as Settle, near thirty miles dittant, either in the fiming or weaving branches. The great manufacturers give out a thock of wool to the artificers, who return it again in yarn or cloth; but many taking in a larger quantity of work than they can finifh, are obliged to advance farther into the coun-

[^302]try in fearch of more hands, which caufes the trade to fpread from place to place, which has now happily extended its influence; but not always alike, for it is bounded by the kerlies at Soyland, and by the bays at Rochdale.

October 2. In paffing through the end of Halifax, obferve a fẹuare fpot, about four feet high and thirteen broad, made of neat afhler ftone, acceflible on ene fide by four or five fteps. On this was placed the Maiden, or inftrument for beheading of criminals; a privilege of great antiquity in this place. It feens to have been confined to the limits of the foreft of Hardwick, or the ei-hteen towns and hamlets within its precincts. The time when this cuftom took place unknown; whether Earl Warren, Lord of this foreft, might have eftablifhed it anong the fanguinary laws then in ufe againft the invaders of the hunting rights, or whether it might not take place after the woollen manufactures at Halifax began to gain Itrength, is uncertain. The laft is very probable ; for the wild country around the town was inhabited by a lawlefs fet, whofe depredations on the cloth-tenters might foon Itifle the efforts of infant induftry. For the protection of trade, and for the greater terror of offenders, by fpeedy expcution, this cuftom feems to have been effablifhed, fo as at laft to receive the force of law, which was, "that if a felon be taken within the liberty of the forelt of Hardwick, with goods ftolen out, or within the faid precincts, either hand-habend, back berand, or confeffion'd, to the value of thirteen-pence half-penny, he thall, after three market days or meeting-days within the town of Halifax, next after fuch his apprehenfion, and being condemned, be taken to the giblet, and there have his head cut from its body.

The offender had always a fair trial; for as foon as he was taken he was brought to the Lord's bailiff at Halifax : he was then expofed on the three markets (which here were held thrice in a week) placed in a flocks, with the goods ftolen on his back, or if the theft was of the cattle kind, they were placed by hin; and this was done both to ftrike terror into others, and to produce new informations againft him $\dagger$. The bailiff then fummoned four freeholders of each town within the foreft to form a jury. The felon and profecutors were brought face to face; the goods, the cow, or horle, or whatfoever was ftolen, produced. If he was found guilty, he was remanded to prifon, had it week's time allowed for prepaiaior, and thes was ronveyed to this fpot, where his head was flruck off, by this machine. I fhould have premifed, that if the criminal, either alter apprehenfion, or in the way to execution, could efcape out of the limits of the foreft' 'part being clefe to the town) the bailif had no farther power over him: but if he fhould te caught within the precinits at any time after, he was immediately executed on his former fentence.

This prisilege was very freely ufed curing the reign of Elizabeth: the records before that time were lon. Twenty-five fuffered in her reign, and at lealt twelve from 1623 to 1650 ; after which I believe the privilege was no more exerted.

This machine of death is now deftroyed; but lhaw one of the fanc kind in a room under the parliament-houfe at Fidinburgh, where it was introduced by the Regent Morton, who took a model of it as he pafled through Malifax, and at he th fuffered by it himfelf. It is in form of a painter's eafel, and about ten feet high: at four feet from the bottom is a crofs bar, on which the felon las s his head, which is kept down by another placed above. In the inner cdges of the frame are grooves; in thefe is placed a thar? ax with a van weight of lead, fupported at the very fummit with a peg; to that peg is faftened a cord, which the executioncr cuting, the ax falls, and does the af-

[^303]fair effectually, without fuffering the unhappy criminal to undergo a repetition of flrokc:, as 'is been the cafe in the common method. I muft add, that if the fufferer is comdemmed for ftealing a horfe or a cow, the fring is tied to the beaft, which, on being whipped, pulls out the peg, and becomes the executioner.

On defcending a hill, have a fine view of a vale, with the Calder meandring through it. Towards the upper end are two other little vales, whofe fides are filled with fmall houfes, and bottoms with fulling-mills. Here are feveral good houfes, the property of wealthy clothicrs, with warehoufes in a fuperb and elegant ftyle; the fair oftentation of induftrious riches. Dine at a neat alchoufe, at the foot of the hill, at the head of the canal, which conveys the manufactures to the Trent. Call here on my old correfpondent Mr. Thomas Bolton, and am furprized with his valt collection of natural hiftory, got together to amufe and improve his mind after the fatigues of bufinefs.

Crofs the Calder at Lowerby bridge; after a fleep afcent arrive in a wild and moory country, pafs by the village of Loyland; reach Blackftone-edge, fo called from the colour of certain great ftones that appear on the fummit. The view is unbounded of Lancafhire, Chefhire, and Wales. The ancient road down this hill was formerly tremendous; at prefent a new one winds down the fides for two miles excellently planned. The parifh of Halifax reaches to this hill It is my misfortune that the Rev. Mr. Watfon's full account of this parifh did not fall into my hands till this fheet was going tothe prefs; for my account would have received from it confiderable inprovements. A little before our arrival on the top of this Lall, enter the county of Lancafter.

Reach Rochdale, a town irregularly built, noted for its manufactory of bays. The church is on an adjacent eminence, to be reached by an afcent of about a $h$-ndred and feventeen fteps. The Roche, a fmall ftream, runs near the town.

OAt. 11. After fix miles ride, pafs by intiddleton. In a pretty vale, on an eminence, is Alkrington, the feat of Ahton Lever, Efq. where I continue the whole day, attracted by his civility, and the elegance of his mufeum.

Oct. 12. Wearied with the length of my journey, haften through Manchefter and. Warrington, and find at home the fame fatifactory conclufion as that of my former. tour.

## APIENDLX.-Numeer I. <br> Concerning the Confitution of the Church of Scotland.

PRESBYTERIAN goverument in Scotland took place after the reformation of popery, as being the form of ectlefiaftical government moft agreeable to the genius and inclinations of the people of Scotland. When James VI. fucceeded to the crown of Fnghand, it is well known that, during his reign and that of his fucceffors of the family of St wart, defigns were formed of altering the conftitution of our civil government, and ecndering our kings more abfoluts. The eflablifment of epifcopacy in Scotland was thought to be one point proper to facilitate the execution of thefed figns. F.picopacy was accordingly ellablifind at length, and continued to oe the govemment of the church till the Revolution, when, fuch defigisi fubfifting no longer, Prelbyterian government was reftored to Scotiand. It was eftablifhed by att of parliament in 1690 , and was afterwards fecured by an exprefs article in the treaty of union between the
two kingdoms of England and Scotland. Among the minifters of Scotland there fub. fifts a perfect equality; that is, no minifter, confidered as an individual, has an authoritative jurifdiction over another. Jurididion is competent for them only when they at in a collective body, or as a court of judicature; and then there is a fubordination of one court to another, or inferior and fuperior courts.

The courts eftablifhed by law are the four following, viz. Cnurch Scffions, Prefbyteries, Provincial Synods, and above all a National or General Affembly.

A Church Seffion is compofed of the miniller of the parifh and certain difercet laymen, who are chofen and ordained for the exercife of difcipline, and are called Eiders. The number of thefe Elders varies according to the extent of the parifl. Two of them, together with the Minifter, are necefiary, in order to their holding a legal meeting. The minifter always prefides in thefe niectines, and is called Moderitor; but has no other authority but what belongs to the Prefes of any other court. The Church Seffion is appointed for infpecting the morals of the parifioners, and managing the funds that are appropriated for the maintemance of the poor within their own bounds. When a perfon is convitted of any intlance of immoral conduct, or of what is inconfiftent with his Chriltian profeffion, the Church Seflion inflicts fome eccelefiatical cenfure, fuch as giving him an admonition or rehuke; or if the crime be of a grofs and publick nature, they appoint him to profefs his repentance in the face of the whole congregation, in order to make fatisfaction for the publick offence. The highet church cenfure is excommunication, which is feldom inllicted but for contumacy, or for fome very atrocious crime obllinately perfilled in. In former times there were certain civil pains and penalties which followed upon a fentence of excommmiation; but by a Britifh ftatute thefe are happily abolihed. The church of Scotland addrefl's its cenfures only to the conlciences of men; and if they camot rechaim offenders by the methods of perfuafion, they thirk it inconfiltent with the fipirit of true religion, to have recoufe to compulfory ones, fuch as temporal pains and penaltiec.

If the perfon thinks himfelf aggrieved by the Church Seflien, it is competent for him to feek redrefs, by entering an appeal to the Prolbytory, which is the next fuperior court. In like manner he may appeal from the Prefbytery to the Provincial Synod, and from the Synod to the Afembiy, whofe fentence is finul in all ecchtadtical matters.

A Prefbytery confifts of the Minifters within a certain diftrit, and alfo of one ruling Elder from each Church siffion within the diftrict. In fetting the boundarits of a Prefbytery, a regard was paid to the fituation of the commery. Where the country is poptilous and champaign, there are inftances of thirty Minifters and as many lladers teik; joined in one Prefbytery. In mountanous countries where travelling is more dificult, there are only feven or eight Minillers, in fome places fewer in a l'rethytery. The number of Prefbyteries is computed to be at about feventy. Prefbytatis reviec the procedure of Church Seffiors, and judge in relerencos and appoals that are brought before them. They take trials of candidates for the minittry; and if, upon fuch trab, they find them duly qualified, they licenfe them to preach, but not to difpeme the facraments. Such licentiates are called Probationers. It is not common fir the church of Scotland to ordain or confer holy orders on fuch hicontates till they be prefented to fome vacan kirk, and therely acquire a right to a bencfice.

It is the priviteges of Prefbyteres to judge their owne members, at leafl in the furt inllance. They may b. judged for herefy, that is, for proching or pablithing doctrines that are conrary to the publick ftandard impoted by act of Parliantent and AfemLly; or for any inftance of immoral conduct. Profecutions fur herefy were formerly
more frequent than they are at prefent, but happily a more liberal fpirit has gained ground anong the clecty of Scotland. They thinis more freely than they disl of out, and confequently a firit of inquiry and moderation feems to be on the grewing land; to that profecutions for herely are become more rare, and are generally looked upoa as invidious. Some lenfible men among the clergy of Scotland look upon fubferiptions to certain articles and creeds of human compofition as a grievance, from which they would willingly be deliversd.
lyefbyterics are more fevere in their cenfures upon their own members for any infance of immoral conduct. If the perfon be convicted, they fufpend him from the excrcife of his minitterial office for a limited tine ; but if the crime be of a heinous mature, they depofe or deprive him of his clerical character; fo that he is no longer a minitter of the chureh of Scotland, but forieits his title to his benefice, and other privileges of the eftablifhed church. However, if the perfon thinks himfelf injured by the fentence of the Prelbytery, it is lawful for him to appeal to the i'rovincial Synod, within whofe bounds his Prefbytery lies; and from the Synod he may appeal to the National Affembly. Prefbyteries hold their meetings generally every month, except in remore countries, and have a power of adjourning themfelves to whatever time or place within their diftrict they Ghall think proper. They choofe their own Prefes or Moderator, who muft be a minifter of their own Prelbytery. The ruling Elders who fit in Prefbyteries, nult be changed every half.year, or elfe chofen again by their refpective Church Seflions.
Provincial Synods are the next fuperior courts to Prefbyteries, and are compofed of the feveral Pretbyteries within the province, and of a ruling Elder from each Church Seffio. The ancient diocefes of the bilhops are for the moft part the boundaries of a Synod. Moft of the Synods in Scotland mect twice every year, in the months of April and October, and at every mecting they choofe their Prefes or Moderator, who mult be a clergyman of their own number. They review the procedure of Prefbyteries, and judge in appeals, references and complaints, that are brought before them from the inferior courts. And if a.Prefbytery fhall be found negligent in executing the ecclefiallical laws againtt any of their members, or any other perfon within their jurifdiction, the Syrod can call them to account, and cenfure them as they fhall fee caufe.

The General difembly is the fupreme court in ecclefiaftical matters, and from which there lics no appeal. As they have a power of making laws and canons, concerning the difcipline and government of the church an the publick fervice of religion, the King fends alwavs a Commilioner to reprefent lus royal perfon, that nothing may be enacted inconfi? ; with the laws of the ftate. The perfon who reprefents the King is generally fome Scots nobleman, whom His Majefly nominates annually fome time before the mecting of the affembly, and is allowed a fuitable falary for defraying the expence of this honourable office. He is prefent at all the meetings of the affembly, and at all their dehates and deliberations. After the affembly is conftituted, he prefents his commillion and delivers a (jeech; and, when they have finifhed their bufinefs, which they commonly do in twelve days, he adjourns the affembly, and appoints the time and phace of their next annual mecting, whicin is generally at Edinburgh, in the month of Mas.
the Affenbly is compofed of Minifiers and ruling Elders chofen annually from each Prethytery in Scothal. As the number of Minifters and Elders in a Pre fbytery varies, fi) the number of their reprefentanives mult hold a proportion to the number of Minifrevs and elders that are in the Prefbytery. The proportion is fixed by laws and reguLutions fur that purpole. Lach royal burgh and univerfity in Scotland has likewife the
privilege of choofing a ruling Filder to the Affembly. All elections muft at leaft be marle forty days before the meeting of the Aftembly. Their jurifliction is either conIlitutive or judicial. By the firtt they have authenity to make laws in ecclefiallical matrers; by the other they judge in references and appeals brought before them fion the fubordinate courts, and their fentences are decifive and final. One point, which greatly employs their attention, is the fettement of vacant parifies. The common people of Scotand are grealy prejuliced againt the law of patronage. llence when a patron prefents a candidate to a vacant parilh, the parihioners frequently make great oppolition to the fettement of the prefenter, and appeal from the inferior courts to the Aliembly. The Affembly now-a-days are not difpofed to indulge the parifhioners in unreatonable oppofition to prefentes. On the oher hand, they are unwilling to fette the prefentee in oppofition to the whole people, who refufe to fubmit to his miniftry, becaufe in this cale his miniflrations among't them mutt be ufelefs and without effect. The Afiemhly, therefore, for the moft part delay giving fentence in fuch cafes, till once they have ufed their endeavours to reconcile the parifhioners to the prefentee. But if their attempts this ways prove unfucceffful, they proceed to fettle the prelentee in obedience to the act of parliament concerning patronages. Upon the whole it appears that, in the judicatories of the church of Scotland, there is an equal reprefentation of the laity as of the clergy, which is a great fecurity to the laity againf the ufurpations of the clargy.

The bufinefs of every miniter in a parifh is to perform religious worhip, and to preach in the language of the country to his congregation every Sunday, and likewifo on other extraordinary occafions appointed by the laws and regulations of the church. The tendency of their preaching is to inftruct their hearers in the effential doetrines of natural and revealed religion, and improve thefe inftructions in order to promote the practice of piety and focial virtue. Of old, it was cultomary to preach upon controverted and m";iterious points of divinity, but it is now hoped that the generality of the clergy confine the fubject of their preaching to what has a tendency to promote virtue and cood morals, and to make the people peaceable and ufeful members of fociety.
Minifters likewife examine their parihioners annually. They go to the different towns and villages " of the parith, and in an ealy and familiar manner converfe with them upon the effential doctrines of religion. They make trial of their knowledge by putting queftions to them on thefe heads. The adult as well as children are catechiled. They likewife vifit their parifhes and inquire into the behaviour of their feveral parifhione s, and admonifh them for whatever they find blameable in their conduct. At thefe vifitations the minifter inculcates the practice of th, relative and focial duties, and infilts upon the neceffity of the practice of them. And if there happen to be any quarrels among neighbours, the minitter endeavours by the power of perfuafion to bring about a reconciliation. But in this part of their conduct much depends upon the temper, prudence, and diferction of miniflers, who are cloathed with the fame paflions, prejudices, and intirmities that other men are.

[^304]To this fenfible account of the church of North Britain, I beg leave to add another, which may be confidered as a fort of fupplement, and may ferve to fling light on fome points untouched in the preceding; it is the extract from an anfwer to fome queries 1 fent a worthy correfpondent in the Highlands, to whom I am indebted for many fenfible communications:
" To apprehend well the prefent flate of our church patronage and mode of fettlement, we mult briefly view this inatter from the Reformation. At that remarkable period the whole temporalitics of the church were refumed by the crown and parliament; and foon after a new maintenance was fettled for minifters in about 960 parifhes. The patrons of the old, fplendid popih livings, ftill clained a patronage in the newmodelled poor flipends for parihiminifters. The lords or gentlemen, who got from the crown grants of the fuperiorities and lands of old abbies, claimed alio the patronage of all the churches which were in the gift of thofe abbies during popery. The King too elinimed the old patronage of the crown, and thofe of any ecclefiaftic corporations not granted away.
"Li y-patronages were reckoned always a great grievance by the church of Scotland; and ac ordingly tro" the beginning of the Reformation the church declared againft lay-patronage ard prefentations. The ecclefiaftic laws, or acts of affembly, confirnied at latt by parliament, required, in order to the fettlement of a minifter, fome concurrence of the congregation, of the gentlemen who had property within the cure, and of the elders of the parifh.
" The elders, or kirk. feffion, are a number of perfons who, for their wifdon, piety, and knowledge, are clected from the body of the people in every parifh, and continue for life fefe bene gerentibus, to alfift the parifh minitter in fupprelling immoralities, and regulating the affairs of the parifh. Three of thefe men and a minifter make a quorum, and form the loweft of our church courts.
"Thus matters continued to the ycar $16+9$, when by act of parliament patronages were abolifhed entirely, and the election or nomination of minifters was committed to the kirk felfion or elders; who, in thofe days of univerfal fobriety and outward appearance'at leaft of religion among the prefbyterians, were generally the gentlemen of beft condition in the parih who were in communion with the church. After the reftoration of King Charles II., along with epiicopacy patronages returned, yet under the old laws; and all debates were finally determinable by the general affembly, which even under epifcopacy in Scotland was the fupreme ecclefialtic court. Thus they continued till the Revolution, when the prefbytrian model was reltored by act of parlianent.
"The people chofe their ow', miniflers, and matters continued in this form till the year 1711, when Qucen Anne's miniflty intending to defeat the Hanover fucceffion, took all methods to harrats fuch as vere firmly attached to it, which the Prefbyterian gentry and clergy ever were, both from principle and interelt. An act therefore was obtained, and which is flill in force, reltoring patrons to their power of electing minilters.
" 3 Hy this act the King is now in poffeffion of the patronage of above $; 00$ churches out of 950 , having not only the old rights of the crown, but many patronages acquired at the Reformation not yet alienated; all the patronages of the fourteen Scots bilhops, and all the patronages of the lords and gentlemen forfeited in the years 1715 and 1745 . Lords, gentlemen, and magittrates of boroughs, are the patrons of the remaining churches. A patton mult prefent a qualitica perfon to a charge within fix months of the lat incumben's removal or death, otherwife his right falls to the prefbytery.
" A preffytery confifs of feveral minifiters and elders. All parifhes are annexed to fome preflyytery. The preflytery is the fecond church conrt, and they revife the acts of the kirk-feflim, which is the loweft. Above the prefbytery is the fynod, which is a a court confilling of feveral prefbyteries, and from all thele there lies an appeal to the general affembly, which is the fupreme church court in Scotand. This fupreme court confifts of the King reprefented by his commifioner, minitters from the different prefbyteries, and ruling elders. They meet amnually at Edinburgh, enact laws for the good of the church, and fimally determine all controverted elections of minillers. They can prevent a clergynan's tranfportation from one charge to another. They can find a pretentee qualificd or unqualified, and confequentily oblige the patron to prefent another. 'They can depofe from the miniftry, and every intrant into holy orders becomes bound to fubmit to the decifions of this court; which, from the days of our reformer Jolin Knox, has appropriated to itfelf the titles of "'the very vencrable and very reverend Affembly" of the Church of Scotland.
"All the clergymen of our communion are upon a par as to autherity. We call enjoy no pluaralitics. Non-refidence is not known. We are bound to a regular difeharge of the feveral dutics of our office. The different cures are frequently vifited by the prefbytery of the bounds; and at thefe vilitations Hrict enguiry is made into the life, doetrine, and diligence of the incumbent. And for default in any of thefe, he maty be fufpended from preaching; or if any grofs immorality is proved againt him, he can be inmediately depofed and rendered incapable of ofliciating as a minifter of the gofpel. Appeal indeed lies, as I faid before, from the decifien of the inferior to the fuprenee court.
" Great care is taken in preparing young men tor the minitry. After going through a courfe of philofophy in one of our four univerfities, they muft attend at leaft for four years the divinity hall, where they hear the prelections of the profeffors, and perforn the different excreifes prefcribed them: they muft attend the Greek, the Hebrew, and rhetoric clafies; and before ever they are admitted to trials for the miniftry before a prefbytery, they muft lay teflimonials from the hiferent profeffors of their morals, rhair attendance, their progrefs, before them; and if upon trial they are found unqualified, they are cither fet alide as unfit for the office, or enjoined to apply to their ftudies a year or two more.

- Our livings are in general from 601 . to 1201 . fterling. Some few livings are richer, and a few poorer. Every minitter befides is entited to a manfion-houfe, barn, and ftable; to four acres of arable and three of pafturage land. Our livings are excmpted from all public duties; as are alfo our perfons from all public flatute-works. As fchools are erected in all our parihes, and that education is cheap, our young generation is beginning to imbibe fone degree of tafte and liberal fentiment unknown to their illiterate rude forefathers. The Englifh language is cultivated even here annongf thefe bleak and dreary mountains. Your divines, your philofophers, your hiftorians, your pocts, have found their way to our fequeftered vales, and are perufed with pleafure even by our lowly fwains; and the names of Tilloton, of Atterbury, of Clarke, of Sceker, of Newton, of Locke, of Bacon, of Lyttelton, of Dryden, of Pope, of Gay, and ef Gray, are not unknown in our diflant land."

# APPENDIX.-Number II. <br> Of the Fama Clamofa. <br> Dy the Rev. Mr. Rutherpord. 

" SIR,
" WHEN I had the pleafure of feeing you laft, you defired me to give you fome account of the proceedings of the church of Scotland againt the minifter in cafe of a fama clamofa. I would think myfelf happy if I could in the leaft contribute to allift you in your laudable defign of diffufing knowledge, and of making one part of the king lom acquainted with the manners and cuftoms of the other. You are well acquainted with the church courts, and the method of proceeding in ordinary cales, as I find from your Cour. An appeal can be made from a feffion to a prefbytery, from a prefbytery to a fynod, from a fynod to the general afembly, which is the fupreme court, and from its decifion there lies no appeal. Any porfon who is of a good character, may give to the prefbytery a complaint againt one of their nembers; but the prefbytery is not to proceed to the citation of the perlon accufed, or, as we term it, to begin the procefs, until the accufer under his hand gives in the complaint, with fone account of its probability, and undertakes to make out the libel, under the pain of being confidered as a flanderer. When fuch an accufation is brought before them, they are obliged candidly to examine the affair. But, befides this, the prefbytery confiders itfelf obliged to proceed againf any of its members, if a fama clamoja of the fcandal is fo great that they cannot be vindicated, unlefs they begin the procefs. This they can do without any particular accufer, after they have enquired into the rile, occafion, and authors of this report. It is a maxim in the kirk of Scotland, that religion muft fuffer if the fcandalous or imnoral actions of a minifter are not corrected. And wherever a minifter is reputed guilty of any immorality, (although before the moft popular preacher in the kingdom) none almoft will attend upon his minifry; therefore the preflytery, for the fake of religion, is obliged to proceed againft a minitter in cafe of a fama clamofa. This however is generally done with great tendernefs. After they have confidered the report railed againft him, then they order him to be cited, draw out a full copy of what is reported, with a lift of the witnefles' namss to be led for proving this allegation. He is now to be formally fummoned to appear before them; and he has warning given him, at leaft ten days before the time of his compearance, to give in his anfivers to what is termed the libel; and the manes of the witnetis nught alfo to be fent him. If at the time appointed the minifier appear, the libe! is to be read to him, and his anfwers are alfo to be read. If the libel be found relevant, then the prefbytery is to endeavour to bring him to a confeffion. If the matter confefled be of a fcandalous nature, fuch as uncleannefs, the prefbytery generally depofe him from his office, and appoint him in due time to appear before the congregation where the feandal was given, and to make public confeffion of his crime and repentance.
"If a minifter ablent himfelf by leaving the place, and be contumacious, without maki:g any reievant excufe, a new citation is given him, and intimation is made at his own church when the congregation is met, that he is to be holden as confefed, fince he refuled to appear before them; and accordingly he is depofed from his office. When I was in Caithnefs an inflance of this kind took place. A certain minilter of that comnty was reported to have a ttronger alfection for his maid than bis wife. He made frequent excurfions wih this gir!; and although no proof of criminal converfition could be brought, yet there was great caufe for cenfure, as all the country took notice
of the affiar. Upon mecting of the preßbytery, his brethren candidly advifed him to remove from lis houfe a fervant with whom the public report had fcandalized him; that her longer centinuance would increafe the fufpicion; and as it gave offence to his parillioners, if he would not immediately difmifs her, they muit confider him as an enemy to his owa intereft, if not as guilty of the crime laid to his charge. They remonltrated with him in the gentleft terms; but he was ftill refractory, left the country, and carried his favourite maid in his train. The prelbytery confidered this as a confeffion of his guilt, and depofed him from his office."

## APPENDIX.-NUMbar III.

## Galic Proverbs.

1. LEAGHAIDH a chdir am beul an anmbuinn.

Juflice itfelf melts away in the mouth of the feeble.
2. 'S laidir a thitid,'s anmbunn a this. The ftrong fhall fall, and of the weak efcape unhurt.
3. 'S fadà làmb an flèumanaich.

Long is the hand of the needy.
4. 'S lailiir an t' anmbunn un uchd tredir.

Strong is the feeble in the botom of might.
5. 'S maith an Sgàthan sùil càrraid.

The eye of a friend is an unerring mirror.
6. Cba blis ' $n$ bochd soggh-ar failbir.

The luxurious poor fhall ne'er be rich.
7. Fur an tàin' an abbuin, 's ànn as mügha a fùaim. Moft fhallow-moft noify.
8. Cha neil clittb air an ole, acb gun a dbèanamb. There is no concealment of evil, but not to commit it.
9. Gibht uac cloinne-bige, bhi'ga tòirt's ga gràdiarraidlb.

The gift of a child, oft granted-oft recalled.
10. Cba neil fuoi gun "a choimeas.

None fo brave without his equal.
11. 'S mìnic a thainis combuirlic ghfic a biul amadain. Oft has the wifett advice proceeded from the mouth of folly.
12. Tuißlocbid an t' cach ceithir-chafach.

The four-footed horle doth often ttumble, fo may the frong and mighty fall.
13. Mar a chaimbsazs duin' a bleatha, bbeir c brèith air a cldim-bsarfuach. As is a man's own life, fo is his judgment of the lives of others.
14. Fàmaidh duine sòna' re sith, 's bleeir duine dôna duìlcum.

The to riunate man awaits, and he flall arrive in peace; the unlucky hatens, and evil fhall be his fate.
15. Cha do chùir a ghuala ris, nach do chuir tuar baris. Succefs muft attend the man who bravely ftruggles.
16. Cha ghbdir a dbearablas ach gniomb.

Triumph never gain'd the founding words of boaft.
17. 'S tric a db' fbds am fuigheal-focbaid, 's a mbeith am fuigheal-faramaid. Oft has the object of caufelefs fcorn arrived at honour, and the once mighty fcorner fallen down to contempt.
18. Cha do deìobair Fcann righ nan làocl) riamh fcar a laimbe-deife.

The friend of his right hand was never deferted by Fingal, the king of heroes.
19. Thig Dia re b' airc, 's cha'n airc nar thig.

God cometh in the time of diftrefs, and it is no longer diftrefs when He comes.
EPITAPH, by Ben Jonson.
UNDERNEATH this marble he:rfe
Lies the fubject of all verfe; Sidney's fifter, Pembroke's mother : Death, ere thou haft kill'd another, Fair and learn'd, and good as fhe, Time fhall throw a dart at thee.

Tranflated into Galic.
AN fho na luighe fo lic-lighe
Ha adh-bheann nan uille-bhuadh, Mathair Phembroke, piuthar Philip: Ans gach Daan bith' orra luadh. A bhais man gearr thu fios a coi-meas, Beann a dreach, fa h' juil, fa fiach, Brittidh do bhogh, gun thave do fhaighid: Bithi'-mar nach bith' tu riamh.

A SAILOR's EPITAPH, in the Church-yard of Great Yarmouth, Norfolk.
THO' Boreas' blow and Neptune's waves
Have toft me to and fro, By God's decree, you plainly bia,
l'm harbour'd here below :
Where I muft at anchor lye
With many of our fleet;
But once again we mult fet fail,
Our admiral Chrift to meet.
Tranflated into Galic.

EPITAPH on a LADY, is the Parifh-church of Glenorchay, in North Britain.

1. AN mo na luigh ta fan Innis Bean bu duilich leom bhi ann Beul a cheuil, is lamh a ghrinnis, Hal iad niothe fle nan tamh.
2. Tuill' cha toir an bochd dhuit beannachd: An lom nochd cha chluthaich thu nis mo' Cha tiorıaich dèur bloo haùil na h'ainnis: Co tuill' O Lagg! a bheir dhuit treoir?
3. Chan fhaic hin tuille thu fa choinni : Cha fuidh hinin tuille air sa bhòrd: D'thàlabh uain ûuirceas, fiurc is mòthan Ha bròn 's bì-mhulad air teachd oiru.

## In Englifh.

1. LOW the lies here in the duft, and here memory fills me with grief: filent is the tongue of melody, and the hand of elegance is now at reft.
2. No more fhall the poor give thee his bleffing ; nor flall the naked be warmed with the flecce of thy flock. The tear halt thou not wipe away from the cye of the wretched. Where now, O Feeble, is thy wont d help!
3. No more, my fair, fhall we meet thee in the focial hall ; no more fhall we fit at thy hofpitable board. Gone for ever is the found of mirth: the kind, the candid, the meek is now no more. Who can exprefs our grief ? Flow ge tears of woe !

## A YOUNG LADY's LAMEN TATION on the leEATll of her LOVER.

Tranflated from the $\mathbf{G}$ lic.
GLOOMY indeed is the night and dark, and heavy alfo is my troubled foul: around me all is filent and ftill; but fleep has forfaken my eyes, and my bofom knowath not the balm of peace. I mourn tor the lofs of the dead the young, the beaut ous, the brave, alas! lies low. Lovely was thy form, () vouth! lovely and fair was thy open foul! - Why did I know thy worth ? -Oh! why muft I now that worth deplore?

Length of yoars feemed to be the lot of my love, yet few and fleeting were his days of joy. Strong he flood as the tree of the vale, but untimely he fell into the filent houfe. The morning fun faw thee flourifl as the lovely rofe; before the noon tide heat low thou droop'it as the wihered plant.

What then availed thy blonm of youth, and what thy arm of flrength? Ghaftly is the face of Love - dim and dark the foul-exprefling eye-The mighty fell to arife no more!

Whom now flall I call my frind? or from whom can I hear the found of joy? In thee the friend has fallen - in thy grave my joy is laid - We lived, we grew together. O why together did we not alfo fall!

Death, thou crucl poiler ! how oft haft thou caufed the tear to flow! many are the mifcrable thou halt made, and who can efcape thy dart of woe?

Kind tate, come lay me low, and bring we to my houfe of reft. In yonder grave, beneath the lealy plane, my love and I thall dwell in peace. Sacred be the place of our repofe.

O leek not to diflurb the ahhes of the dead.

> APPENIDIX.-Number IV.
> Account of the Fafting Woman of Rofisbirc.

Dumrobin, Augul ${ }^{24}, 1769$.
The Information of Mr Rainy, Miffionary-MiniAer, in Rincardinc, anent Katherine MLLeod.
KdTHARINE M‘LA:OD, caughter to Donald M‘Leod, farmer in Croig, in the parifh of Kincartine, Rof thire, an unmarried woman, aged about thirty-five years, fixteen years ago contracted a tever, afin which fhe became blind. Her father carried her to feveral plyficians and furgeons to cure her blindnefs. Their prefcriptions proved of
no effect. He carried her alfo to a lady fkilled in phyfic, in the neighbourhood, who, doubtful whether her blindnefs was occafioned by the weaknefs of her eye-lids, or a defect in her eyes, found by the ufe of fome medicines that the blindnefs was occafioned by a weaknefs in her cye-lids, which being ftrengthened, fhe recovered her fight in fome meafure, and difcharged as ufual every kind of work about her father's farm: but tied a garter tight round her forehead to keep up her eye-lids. In this condition fhe continued for four or five years, enjoying a good ftate of health, and working as ufual. She contracted another lingering fever, of which the never recovered perfectly.

Sometime after her fever her jaws fell, her eye-lids clofed, and the loft her appetite. Her parents declare, that, for the fpace of a year and three-quarters they could not fay that any meat or liquid went down her throat. Being interrogated on this point, they owned they very frequently put fomething into her mouth: but, they concluded that nothing went down her throat, becaufe fhe had no evacuation; and when they forced open her jaws at one time, and kept them open for fome time by putting in a flick between her tecth, and pulled forward her tongue, and forced fomething down her throat, fle coughed and ftrained, as if in danger to be choaked. One thing, during the time fle eat and drank nothing, is remarkable that her jaws were unlocked, and fhe recovered her fpeceh, and retained it for feveral days, without any apparent caufe for the fame; the was quite fenfible, repeated feveral queftions of the fhorter catechifims; told them that it was to no purpofe to put any thing into her mouth, for that nothing went down her throat : as alfo that fometimes the underftood them when they fpoke to her. By degrees her jaws thereafter fell, and the loft her fpeech.

Sometime before if faw her fhe received fome fultenance, whey, water-gruel, \&c. but threw it up, at lealt for the moft part, immediately. When they put the flick beiween her teeth, mentioned above, two or three of her teeth were broken. It was at this breach they put in any thing into her mouth. I caufed them to bring her out of bed, and give her fomething to drink. They gave her whey. Her neck was contracted, her chin fixed or her breaft, nor could by any force be pulled back: the put her chin and mouth into the difh with the whey, and I perceived the fucked it at the abovementioned breach as a child would fuck the breaft, and immediately threw it up again, as her parents had told me fhe ufed to do, and fhe endeavoured with her fand to dry her mouth and chin. Her forehead was cuntracted and wrinkled: her cinecks full, red, and blooming. Her parents told me that the flept a great deal, and foundly, perfpired fometimes, and now and then emitted pretty large qnantities of blood at her mouth.

For about two years paft they have been wont to carry her to the door once every day, and he would fhew figns of uneafinefs when they neglected it at the ufual time. Laff fummer, after giving her to driuk of the water of the well of Stratheonnen, fhe crawled to the door on her hands and feet without any help. She is at preient in a very languid way, and fiil throws up what fhe drinks.

## APPENDIX.-Number V. <br> Parallel Roads in Glen-Rcy.

ALL the defcription that can be given of the parallel roads, or terraces, is, that the Glen of itfelf is extremely narrow, and the hills on each fide very high, and gencrally not rocky. In the face of thefe hills, both fides of the Glen, there are three roads at fmall diftances from each other, and direttly oppofite on each fide. 'Thefe roads lave
been meafured in the completeft parts of them, and found to be 26 paces of a man five feet ten inches high. Thetwo higheft are pretty near each other, about 50 yards, and the loweft double that diftance from the neareft to it. They are carried along the fides of the Glen with the utmoft regularity, nearly as exact as if drawn with a line of rule and compars.

Where deep burns or gullies of water crofs thefe roads, they avoid both the defeent and afcent in a very curious manner; fo that on the fide where the roads enter: thofe hollows, they rather afend along the flope, and defeend the oppofite fide until they come to the level, without the traveller being fenfible of afeent or defent. There are other fimaller glens falling into this Glen-Roy. The parallel roads furround all the fmaller ones ; but where Glen-Roy ends in the open country, there are not the fimalleft veftiges of them to Fe fuen. The lengeth of thele roads in Glen-Roy are about feven miles. There are other two glens in that neightourhood, where thefe roads are equally vifible, called Glen Gluy, and Glen-Spean, the former ruming north weft and the latter fouth from Glen Roy. Both ti: efe roads are much about the fane length as Glen-Roy.

It is to ie obferved that thefe roads are not caufeway, but levelled out of the earth. There are fome fmall rocks, though few, in the courle of thefe roads. People have examined in whar manner they made this paffage through the rocks, and find no vcftige of roads in the reck; but they begin on each fide, and keep the regular line as formerly. So far I am indebted to Mr. Trapaud, Governor of Fort Auguftus.

I cannot learn to what nation the inhabitants of the country attribute thefe roads: I was informed that they were inacceffible at the eat end, open at the weft, or that neareft to the fea, and that there were no traces of buildings, or Druidical remains, in any part, that could lead us to fufpect that they were defigned for ceconomical or religions purpoles. The country people think they were defigned for the chace, and that thefe terraces were made after the fpots were cleared in lines from wood, in order to tempt the animals into the open paths after they were rouzed in order that they might come within reach of the bowmen, who might conceal themfelves in the woods above and below. Ridings for the fiportfinen are fitll common in all great forelts in France and other countries on the continent, either that they might purfue the game without interruption of trees, or fhoot at it in its paflige.

Mr. Gordon, p. 114, of his Intinerary, mentions fuch terraces, to the number of feventen or eighteen, rafied one above the other in the moft regular mamer, for the trace of a mile, on the fild of a hi l, in the county of Tweedale, near a village catled Remana, and alfo near two fmall Roman camps. They are from fifteen to twenty feet broad, and appear at four or five miles diftance not unlike a great amphithearreThe fame genteman alfo has obferved fimilar terraces near other camps of the fame nation, from whence he fufpects them to be the works of the Romans, and to have been thrown up by their armies for itinerary encaupments. Such may have been their ufe in thofe places: hut what could have been the object of the contrivers of the tar. races of Glen-Roy, where it is more than probable thofe conquerors never came, remains a myflery, except the conjecture above given fould prove fatisfactory.

## APPENDIX.-Number VI. Of Slough Doggs.

SIR Willian Lawfon, and Sir William Hutton, Knights, two of his Majefties Com. mifioners for the Middlifhires of Great Britain. To Joln Niufgrave the Provoft Marfhall, and the reft of his Majefties garryfon, fend falutations. Whereas, upon due conffileation of the increafe of flealths dayly growing both in feed and reporte among you on the borders. We formerly concluded and agreed, that, for reforming thereof, watche fhould be fett, and flough doggs provyded and kept, according to the contents of his Majeltics directionsto us in that behalf prefcribed. And for that, according to our faid agreement, Sir William Hutton, ai his laft being in the country, did appoint how the watches hould be kept, when and where they hould begin, and how they might belt and molt fitly contine. And withall for the bettering his Majeftics fervyce, and preventing further danger shat might enfue by the outlaws, in refortinge to the houfes of Thomas Rontledge, alias Baylihead, being neere and next adjoyninge to the wayffs, he himfelfe beinge fled amongft them, (as it is reported) order and direction was lykewife, that fome of the garryfon flould keepe and refyde in his the faid Thomas Routledge's houfes, and there to remaine till further directions be given them, unleffe he the faid lhomas Routledge fhall come in and enter hinfelfe aniliverable to his Majeltyes lawes, as is convenient. Further, by virtue of our authority from his Majeity to us directed, wishing the border fervyce. We command you that the faid watches be duely fearcted as was appointed, and prefentment to us, or th' one of us, be mad of every default, either in conftables for thir neglect in not fettinge yt fourth, or in any perfons חyppinge or negleatinge their dutyes therein. And that you likewyfe fee that flongh doggs be provyded accordinge to our former directions, and as this note to this warrant annexed particularly fetts down. Faile yee not hereof, as you will anfwer the contrarye at your perrills. Given under our hands and feals this 2 gth of November 1616 .

A NOTE how the SLOUGH DOGGS was agreed upon to be provyded and kept at the charge of the inhabitants, as followeth:
Imprimis, beyond Eik, ty the inhabitants there to be kept above the foot of Sarks kept at the Moot
1 Dogg

Item by the inhabitants of the parifh of Arthuret above Richnondelugh, to be kept at the Bailyhead

Item the parifh of Lanercoft and Walton . . .
$\begin{array}{llllllll}\text { Item } & - & - & - & 0 & 1 & \mathrm{D} . \\ \text { Iteri } & - & - & - & 1 & \mathrm{D} .\end{array}$
Total $\qquad$
It was appointed and commanded that the chiefe officers, bayliffes, and cont ables, within every circuit and cumpafe wherein the flough doggs are appointed to te kept,
fhould take charge for tafkeing the iuhabitants towards the charge thereof, and collect the fame, and for provydinge the Slough Doggs, and to inform the commiffioners, if any refufed to pay their contribution, whereby fuch as refufed fhould be committed to the ganle till they paid the fame.
N. B Bifkop Nichulfon has publifhed the orders of the watches, 6 Ed. VI. in his

Border laws, p. 215 , \&c. but as I have net with nothiag concerning the Slough
Doggs till the time of James the Firft, am inclined to think it was a new inflitution in that King's reign, when they were alfo appointed in the Scotch borders.

APPENDIX.-Number VII.<br>A Letter from Mr. Gcorge Malcolm, concerning Sheep.Farms, $\mathcal{B}^{\circ}$.<br>Communicated by Juin Maxwell, Efq. of Broomholme.

THESE grounds are not in common as in England, but are all feparate properties, and divided into extenfive farms, with diftinct marches, from three to four thoufand acres. They are moltly paftured with fheep; that is to fay, the farmer depends upon his fheep for paying the rent and yielding him profit. 'The cows which he keeps, and the corn which he fows, feldom do more than maintain his family. Farms of this large extent become neceffary; for, as they are not inclofed, the fheep could not be paltured with ea'e and convenience within narrow marches. Though the country was in a complete ftate of improvement, it is probable the hills will never be inclofed, as nature feems to have intended them for breeding cattie to fupply the cultivated paltures in the low lands which fatten. So long as they are applied to that purpofe, and I think they can never be made fit for any other, they camnot pay the expence of inclofing. Every flock has a fhepherd to take care of them, whofe bufinefs it is to make them eat the ground equally, and in bad weather to keep them on fuch parts of the farm, where they are moft fheltered from the ftorms. He can do nothing without his dog, which, you know, he learns to do wonderful things; but it would be wrong to mention th:m to Arangers, as they would think we bordered on the marvellous. It is fuf. ficient to inform them, that he can command all or any part of his fock, at the diftance of more than a mile. As the kinds of hheep, and the methods of managing them, vary fo much in different parts of the country, it will be difficult to give your friend any clear idea of them. There is a gradual decline of foil from the eaf to the weft coalt. This fact is put beyond a doubt, from the fize of both fheep and black-cattle turning fmaller and fmaller as you advance from the eaft to the weft. The large fheep of the calt border have often been brought here, but they did ant thrive, but turned fmaller ; and I have known nur theep fent to them, which you would not have known for largenefs in a year or two. This flews that the alteration of the fize is not owing to the fancy of the farmer, but to a real difierence of fini. There are different kinds of fivil required for different kinds of theep, and at difierent ages. The hoss, which is the name they go by before they aw. year old, fhould have dry pafture, well mixed with heaths, and not much expoled to florms of fnow, which breeds them firm and found. The ewe, which is the female, flould have much grats, and not ver bhand, on account of the lambs which they bring forth in the fpring, and the weterer, which is the gelded male flecp, is fitteft for the very high grounds, as being frongelt and moit
hardy. 't his ascoune for mon farmers having more farms tham ons, as one feldom contains all thefe different foils and fituations. 'Thengh liwiotdale, the product which mott of the fumers fell is wedders above three yeas olid, and about a feventh or eighth part of the oldell of their ewe llock, which are commomly about fix years old. They fell the wedders in June, and the ewes about Michedmas. They are moftly bought by the Englifin for feeding. It is impolible to give you an account of prices, as they vary atmont crey leafon. Withat thefe twelve yan, 1 have known the Tiviotale wedlers fell from ten to ffeen !hillings, and the ines from fix to ten thillings. Wo thear or clip tice wool in the months of June and fuly. The priee of the wool saries as much as the price of the fhep, from thee thillings and fixpence to fix fhillings and fixpence per flene Linglifh, fixteen pounds on the ftome. Firom tive to be eiven fis and feren leeees go to the tlone. The maket for woul is fomenmes at Edinbugh, :nd fometines in butand. La fone parts of the ealt of Tivodale they do not falve their flate, fus they do it in moll places. It is thought tar warms the meep, and dedroys a had verman colled a cade, which infelts them monh. The method of falsing is wey whent, with recard to rhe quantity of butter mixed with the tare and alfo with : what to the quatio bo bh had on the fheep. The mixture is from weaty four pouads Englifh to alom three ftones of batcr to fixteen quarts of tar; and with this quanty they will fille from foey to ane handred and twenty theep. The greater propotion of buter the detar ibis won! is, not in point of finenels, but it wallies whier, and confequemty takes a Litw d... The cotler the ground is, the more falve is laid on. It cofts from wo p ance hatiman to the epence halfpemy each theep. In Tiviotdate, they bave got math into the antue of giving their theep hay in the frows of winter, which is of much furvice to !t: I amnot pretend to give you my opinion potitively with regard $\because$ tha matis paid, aad how many fheep are kept liy the acre : they vary wita the finil of the ground, and often according to the opinion the aiferent landlords entertain of the vabue of their eftates. More grounds keep below a fhee; no the ate than atrove it; and the rent flands from two fillings to three fhillings and siapence for cach heep. The rents of moft farms have advanced within the e twh. © fourten years, from a third to double; which great advance has made Highand farming very uncertain, as no inaprovements which meliorate the farm:s can be made; but they entirely depend upon the rife and fall of the markets, befides running a great riique trom bad leatons. In Eikdale, where we live, we fell no wedders, becaufe we cannot eford to beed wedder hege, on account of a difeafe, which kills great numbers of that ave in our grounds. Our produa is lambs and ewes at the age alreaty mentioned. Whihin thefe twelve years, we tave fold our lambs from two nilling:s to tour thi !ings, and ixpence, and our ewes from five thillings and fixpence to nine fhatiogs. Our markess are the fane as in Tiviotale; our wool fells lower. Sany of us have a practice of milking our ceves; though it is going fall into difufe, becaufe it is pencraty thmenth to be hurtu!. It renders the cwe lefs lit to bear the forms in witur; ; makes her have lefs woel; and the will fell at a much higher price at Michaclmas, it not milkol, being fatter. The great temptation to milk ewes is to prov:de butter for faving, which of late years has been very dear. As perbaps Mr.! may have a rurinfity to fee a calculation of how much is made by milking, I thath give you an arrount of what i made this year out of three hundred and eirity ebes at Rumfort ; for I milk at wo oher of my farms.

I made 75 fones Englifh of cheefe in fix weeks at 4s. 4d. per ftone 12 Stones of butter, it 5 s . Gd. per fone Englifh

N. B. The whey made from the milk is more than equal to the maintenance of the above five fervants.
This comes to about 9 d. each fheep.
To the north-weft of us, in Tweddale, Clydefdale, the head of Annandale, and in Galloway, the farmers fell for their product wedder hogs, and fome of them lambs as we do. For the moit part the Englifh buy them to lay on their commons. They are a thort coarfc-woolled fheep, and efteemed very hardy. In thele parts they are free of that difeafe which kills the young fheep in our country, and which is the reafon of their keeping all their male lambs on moft of the farms. Thefe hogs have fold, within thefe twelve ycars, from five fluillings to eight fhillings and fixpence. The difeafes to which theep are liable are many. I flall only mention three of them, which are moft mortal. That which we efteem the worft is called the Rot. 'They contract it by pafturing in wet marfhy ground, when it happens to be a rainy feafon in the months of Auguft and September. The ouly remedy is draining. A bad feafon will even bring on a rot in dry grounds, where there is much grals. If they fuffer much hunger, either from an overttock in fummer, or from the fnows in winter, it will occafion this difeafe. We call another difeafe the Sicknefs; it appears to be a kind of cholir, as it fwells them much in the body; it moftly attacks young fheep from before Martinmas until the fpring. We have no remedy for it. The third difeafe is called the Louping.ill which rages moftly from the ift of April to the ift of June. It deprives them of the ufe of their limbs. We likewife know no remedy for it.
P. S. In reading over my letter, I think it right to explain that part of it, where I fay, that there are farms of four thoufand acres, I do not mean that thefe large farms are all paftured by one flock of fheep, for one flock has feldom above feven or eight hundred acres to go upon.

> APPENDIX-Number IX.
> Of the Gold Mines of Scotland.

From a MS. of Col. Borthw ex and others.
MR. CORNELIUS DEVOSSEC, a lapidary in London, was the firt who difcovered gold in Scotland. In the vallies of Wanlockhead (near Leadliills) Abraham Grey, a Dutchman, who lived fo we time in London, got a good quantity of natural gold. He paid his workmen weekly, and lens to diverfe men before hand, as it is written in that parchment book, faying, with this natural gold, gotten in Greatheard's time (for fo he was called, becaule of his great long beard, which he could have bound his middle) was made a very fair deep bafon, without any addition of any other gold, at Edinburgh, in the Canougate ftreet. It was made by a Scotfinan, and contained by eftimation, within the brims thereof, an Englifh gallon of liquor ; the fame bafon was of clean neat natural gold. It was then filled up to the brim with coined pieces of gold, called unicorns (which appear to have been only coined in James III. and James IV.'s time. For this vide Anderf. Diplom. et Numifmata Scotiæ) which bafon and pieces both were prefented to the French king by the regeut Earl of Morton, who fignified upon his honour to the king, faying, "My lord, behold this bafon and all that therein is; it is natural gold got within this kingdon of Scotland by a Dutchman, named Abraham Grey." Abraham was ftanding by and affirmed it upon a folemn oath, but he faid unto the faid king, that he thought it did engender and increafe within the earth, and that he obferved it fo to do by the influence of the heavens; then Earl Morton ftood up, faying, "I alfo believe that it engenders within the earth, but only of thefe two elements, viz. water and earth; and that it was made perfect malleable gold from the beginning by God; and am certain that this cup, and all the pieces therein are of natural Scots gold, without any other compound or addition."

Mr. Atkinfon and Mr. George Bowes, both Englifhneen, procured a commiffion into Scotland unto the gold mines, and I hariened on a book of his making in England; I compared the fame (having carried it with me into Scotland,) with the, ye, ort of the country; and the countrymen at Wanlockhead faid it was fo, and moft tru, that Mr. Bowes difcovered a fmall vein of gold upon Wanlockhead. He fwore all his workmen to keep it fecret from the King of Scotland and his council : and fo he promifed, before his departure from England to the Queen Elizabeth, and by her letters to the council of Scotland, got a new warrant; fo was fuffered to dig and delve as he would, after another fafhion than Mr. Bulmer or his men did. He digged fundry fhafts, found oftimes good feeling gold, and nuch fmall gold, of which he gave ten or twelve ounces, to make friends in England and Scotland. He had both Englifh and Scots workmen, and paid them with the fame gold. Mr. Bulmer's men found little or none. And when he and his men had filled their purfes, then he caufed the thaft to to be filied up again, fwearing his men to fecrecy, and keep it from the King of Scotland and his council. This was confeffed by fome of Mir. Sowes's chief fervants fince his death. On his return to Eugland, he fhewed the Queen a long purfe full of the gold found in the vein he had difcovered, and it was valued to be worth fevenforere pounds. He told her Majefly he had made it very fure, and hid it up till next going there. She liked very well thereof, and promifing him a triple reward, and to prepare himfelf next fyring to go there at her Majefty's charge alone, to feek for a greater
a greater vein; he went home reit to his owa country in the north of Singland, where he dwelt; but umfortmately riding to lee the copper works and mincs in Cumberland, at Kefwell, as he was going down into the deep, lie ladder broke, the earth fell in, and lhe was bruifed to death.
'then Mr. Atkinfon fucceeded Mr. Bowes, and found gold which was prefented to King James. Cornelius Devoffec, painter to Quen Filizabeth, excellent in the trial of minerals and mineral fones, and acquainted "ir) Nibholas Hilliard *, goddimith and miniature-painter to her Majefy, engaged : wis ne with him in learch of gold in Scotland. Both made an aflignmen: in d:tu a ban B:ownchurlt to operate for them. 'I hey being informed by traveliers of yood expericuce, how that as fand and gravel have their feveral beds in England, even to are there beds of gold and filver in forecign countries they had travelled; rocks and craigs having veins and beds of iron, copper, and tin mincl, even fis gold and filver have their veins amongt rocks and in the ground, fo they hoped to find out a bed or vein of gold in S.roland. In confe-
 all in the mint-houfe by command of the King, being a minor ; and Larl Morton, regent, refufed Brownchurft the liberty of fearch, without paying full value for all fuch natural gold as thould be getten by him in Scothand ; and, though a liutor four months, never obtained it, but became one of his Majelly's fworn ferwams in Scotland, to draw fimall and great pictures to tw King. Mr. Bulmer, in Queen Elizabeth's time, fea:ched and found gold, \&e. in thef places in Scotland; viz. 1. Upon Mamock moor in Niddeldalc. 2. Wenlock water, on Robert moor, in Niddefdalc. 3. Frier moor, or Glengonnar water in Clydefdale. 4. Short cleugh water in Crawford moor. 5. LongCleuch bracs, or Iong-Cleuch head. He prefented to the Queen a gold porringer, upon which were engraven the following lines:

> I dare not give, nor yel prifent, Bue render pirt of hat's thy own; My mind and heart Thall fall iuvent To feek out treafures get unk nown.

But, having loft his living by his own and others' prodigality, he recalled himfelf, and fenned a book of all his acts, works, and devicus, named Bulmer's Skill, and another great book on filver-mines, minerals, mincral fones, tin-mines, coal-mitues, and faltworiss, \&.c. It was propofed in council for him to procure twenty four gentlemen of land, rent 10,000 . value, or 5001 . yearly, who were to difburfe jool. tterling each man, in money or victuals, for maintenance of gold-mines in Scotland; for which each was to be kuighted, and called the Knight of the Golden Mines, or the Golden Knight; but it did not take place, for the Farl of Salithury crolfed his views, only one knight was made, Sir John Claypool, with Sir Bewes Bulmer. Mr. Bulmer writeth of the varicty of flones and metals found by him in Scotland ; i. vi\% natural gold great and fmall, 2. natural filver, 3. copper-fone, 4. Icad-or 5. iron-Itun:, 6. marble, 7. Atone-coal, 8. beds of alabalter, 9. anethyit, io. pearls.

Memoranduan of the mincrals found in Scotland by Colonel Borthwick. 1. A filver mine on the murth fide of the hill S. Jordan in the prrith f lioveran. 2. Gold found about Dunicur beyond aberdeen. 3. Silver called yolden bank, at Menzies, in the parifh of Foveran 4 Silver, at the back of a pas ther there is a well that ferves Dißblair's houhold, parifh of Fintra, eight miles sumth b: Aberdeen. 5. Gold
in the boggs of New Leflie, at I mgarran, two miles from Dunidur. 6. Iron at the well of Sipa, weft fide of Woman-hill, near Gilkomftone miln, quarter of a mile from Aberdeen. 7. Gold, very rich, in a town called Overhill, parifh Bechelvie, belongs to L. Glames, fourteen fathoms below the kiln. 8. Lead, at the head of Loughlieburn, north fide of Selkirk. c. Copper, in a place called Elphon, in a hill befide Allen laird of Hilltown's lands. 1o. Silver, in the hill of Skrill, Galloway. 1 i. Silver, in Windyncil, 'Tweedale. 12. Gold, in Glenclought, near Kirkliill. ${ }_{1}$. Copper, in I.ocklaw, Fife. 14. Silver, in the hill fouth fide Lochenhill. 15. Lead, in L. Brotherfone's land. 16. Several metals near Kirkeudbright. 17. Copper, north fide Borthwickhill, Hawick, and Branxome. 18. Silver, in Kylefmoor, Sorn, and Machlin, Ayrfhire. 19. Several ures in Orkney.

## APPENDIX.-Number X.

## A Differtation on the Government of the People in the Weffurn Ifes.

Writlen November 17, 1774, by the Rev. Mr. Donald Macey enn, of Kilmuir, in the Ine of Skie.
THE diflance of thefe ines from the centre of the fate, fecured as they were from the awe of fupreme power, by high mountains, extenfive moors, and impetuous feas, while their fovereigns were employed in quelling more dangerous infurrections at home, or in repelling the frequent incurfions of their fouthern neighbours, left them in a kind of indopendency on the crown of Scotland, efpecially while for fome centuries they continued to be governed by Norvegian viceroys, who coming from a wild and barbarous country, camot be expected to have brought order or civilization along with them; vor was the matter much mended when Somerlade, the famous thane of Argyle, upon being married to a daughter of Olave, depute King of Man, got a footing in the ifles, all of which to the north of the Mull of Kintyre, together with Kintyre itfelf, he polfeffed by limfelf or his defeendants, or thofe having right from them, until about the begiming of the fifteenth century. All this while whatever reformation was made in the beart of the kingdom on the manners and prejudices of barbarous times, could have made but a very flow progrefs in the ifles; though, as iflands, they muft be fuppofed th heve yielded to the arts of peace and good order earlier than their neighbours upon the wninent. Iflands, on account of the goodnefs of the foil, and the additional fubfiltence they draw from the fea, are generally clofer inhabited; crimes could not then lie folong conccaled among them as in diftant unhofpitable glens and mountains: they are allo more frequented by frangers; and therefore by a fort of collifion the men would polifh one another into good manners. They had a fheriff of the ifles under the Norwegian dynafly; but when the lands were parcelled out afterwards by the lords of - she ifles, the defcendants of Somerlade, among barons of different ranks and fizes, each of thefe barons, affifted by the chief men of the community, held his court on the top of a hill called Cnock and Eric, i. c. the hill of pleas, wiere the difputes they had anong themfelves were determined, where the encroachments of their neighbours were confidered, and the manner of repelling torec by force, or the neceffary alliances they were to enter into, refolved on. In this period, when agriculture, trade, and manufactures were at a very low pitch, the laws were few and general: their little contracts were eithenticated by being tranfacted in the prefence of witnelles; the marches of the different barons were fixed before a crowd by two or more fagacious men, and two or more young lads were fcourged with thongs of leather, that they might the better revol.. mi .

## 546

 pennant's akcond tour in scotland.member the tranfaction. The laft who was thus ufed is now an old man, and a pen.. fioner to the family of Macdonald. Nor were the people in their purchafes fo diff. dent of one another, as to infilt upon a cautioner, that the beaft or fubject expofed to open fale was fairly come by, or would not be reclaimed by another, which was once a common practice over the kingdom, called in plain Gaulic, Ra-dificah. The penal laws were more numerous, fevere, and particular; for when reftraiuts are put upon natural liberty, and the cuftoms to which men were habituated in a ftate of barbirity were to be reduced or abolifhed, men muft have very alarming examples painted before their eyes. The laws of the firft leginators in all countries are very fevere, and are foftened and moderated according to the progrefs of civilization. The legiflator of the Jews, though a very meek man, punifhes feveral crimes with the molt cruel kinds of death, foning and burning. Of Draco's laws, one of the firlt Athenian leginators, it is faid that they were written with blood; and it is well known that the laws of the twelve tables were very fevere. Traitors were put to death in the ifles, being, according to a cuftom that prevailed among the Norwegians, firf gelded and both their cyes pulled out. Incefluous perfons were buried in marfhes alive, and bankrupts, without entering into a confideration of the nature of their misfortunes, were ftripped of their all, clad in a party-coloured clouted garment, with flockings of different fets, and had their hips dafhed againft a ftone in prelence of the people by four men, each taking hold of an arm or a thigh. This punifhment they called Ton cruaigh; and cowardice, when not capitally punifhed, was accompanied with perpetual intamy. The prifons were dark vaults, without beds, or the fmallent crevice to introduce light, where no friend was permitted to comfort the criminal, who, after a long faft, was often killed with a furfeit. This was the cafe of Heitchen, the fon of Archibald Clerich, a traitor againft the family of Macdonald, who died in the vault of Duntulm, of a furfeit of falt beef, being refufed any kind of drink. The feverity of juftice laid hold but on a few; for the protection of the tribe or clan was generally reforted to, who did all in their power to fave their own man from diftrefs, or to purfue with vengeance the perfon who had offended any of their number. It often happened in this cafe, that among powerful tribes the voice of the judge was too weak to be heard; then religion Itepped in as a neceffary fupplement to his power. Sanctuaries, called girths, were confecrated in every diftriet, to which the criminal fled; where the fuperftition of the times, countenanced by the political inftitutions, fecured him from every act of violence, until he was brought to a judicial trial. To this day we fay of a man who tlies to a place of fecurity, bug c an girter; and whatever party violated the fanctuary, which very feldom happened, brought the terrible vengeance of the church upon their back. Such a bridle as this became abfolutely neceffary to reftrain the anger and impetuofity of a lawlefs tribe when provoked. Again, when the criminal got in among his own people, they did all in their power to juftify his conduct and fave his perfon. In this cafe the refentment turned on the clan, and any one of them who fell into the hands of the offended was fure to fuffer diftrefs, or to be kept in durance, until the criminal was delivered over to jullice, which practice was at latt found expedient to be turned into a law in the Eingdom, to prevent the clans from coming buckled in all their armour to the field, to determine their own quarrels.

In procefs of time they learned from their neighbours, as well as from their own experience, that to perpetuate ftrife and diforder among tribes who were almoft in full poffeffion of their natural liberty, excepting when the local cuftom ftood in their way, was dangerous to the public, and ruinous to themfelves. To ftop the progrels of refentment, they cancelled the injury by fatisfaction with their cattle, by a mutual agree-
ment
ment betwixt the parties, which therefore was called a compofition, to be divlded betwixt the injured party and his clan. But as the compofition was not always eafily accepted, the principals of the different tribes fixed the value of it for every injury, and eftimated the life of a man according to his rank : here a people void of refinement made little diftinetion betwixt voluntary and involuntary trefpaffes, for fear that impunity in any cafe fhould give a fcope to wicked perfons to abufe the indulgence of cuf. tom or law. The greatnefs of the compofition in this cafe brought not only honour along with it, but greater fecurity in a rude and barbarous neighbourhood. This ranfom was called Eric. The clan was then obliged to give up the defender, or become liable for the penalty proportioned to the injury committed. Thus the clans became mutual pledges for the good behaviour of the individuals who compofed them. When fpecie found its way in among them, a price was put upon the cattle, and by the neceffary decreafe in the value of money, which they were not aware of, the eric came at length to be very trifing; but by this time the laws of the kingdom had made near approaches to them, which were far from being welcome, to men clofely attached to their own cuftoms and connections, being deaf to the voice of parties, and to the diftinctions of clans and individuals. "The law hath come the length of Rofshire," faith one neighbour by way of news to another. " O ho!" replies he, " if God doth not flop it, you will foon have it nearer home." Much after this manner hath the progrefs of civilization been carried on in all the countries of Europe; for fimilar caufes produce fimilar effects.

All the time preceding the beginning of the fifteenth century, and fomewhat later, the goverument of the iffes and of the neighbouring continent was of the military kind. The pcople were made up of different clans, each of which was under the direction of a chief or leader of their own, and as their fecurity and honour confifted in the number and Atrength of the clan, no political engine was neglected that could be thought of to increafe their numbers, or inflame their courage. The children of the principal people were given out to nurfes: the fofter-brothers, or coalts, as they called them, with their children and connections for many generations, were firmly attached to their will and intereft. This fort of relation was carefully traced out, and the memory of it preforved, being efteemed a fronger bond of friendhip than blood or alliance. It was to in ereafe their numbers that baltardy was under no fort of difhonour : befides that the got out of wedlock, to remove the uncertainty of their birth, expreffed more 'or underwent more hazards on account of the clan, than the lawful children, they generally acquired a higher degree of ftrength both of mind and body: 3 fore were fometimes called to the fucceffion by a heroical tribe, in prefci-
who by the prefent laws fhould enjoy it. Such a breach in the lineage difavowed, as being a difhonourable blot by the prefent race, though then branches are apt to charge it upon one another, when debating upon the ideal chieftainary of a clan. It was however reckoned no diferedit in the days of military prowefs. Alimelech, King of Sichem, was begot by Gideon, on a concubine, and preferred ic the feventy children he had by his married wives. William the Conqueror was not afhamed to call himfelf the Baftard of Normandy; as little was Ulyfles to acknowledge that he was the fon of a concubine. The fafety of the community is the fupreme law, to which every political confideration muft oecafionally yield.
It would be altonifhing to hear that theft and plundering, infead of being infamous, were reckoned the moft wholefome exercile of youth, when they went without the limits of their own community, and were not taken in the fact, if it were not commonly known to have been the calc every where. From this fource the chieftains derived
rewards for their numerous followers, and dowries fometimes for their daughters. It is known that one of them engaged in a contract of marriage to give his fon-in-law the purchafe of three Michaelmas moons, at a feafon of the year when the nights were long, and the cattle ftrong enough to bear hard driving. This tranfaction happened on the maia land, where dark woods, extenfive waftes, high forked mountains, and a coaft indented with long winding branches of the fea, favoured the trade. Thefe were flrong holds, little frequented by ftrangers, where the ancient practices and prejudices might be preferved tw the laft periods of time, without fome fuch violent thock as that of the year 1745. The iflanders yielded much earlier to the arts of peace and civility, for the Dean in the year 1549 mentions only fome petty piracies from a few of the fimaller :dands which were divided from a well-peopled neighbourhood.

In the military days, the chicfain drew litte or no rent from his people: he had fome of the beft farms in his own hands, to which there was a caflial acceffion by forfeitures; he had his proportion of the fines haid upon the trefpafers of the law; he had the herezield horfe when any of his farmers died; he had a benevolence or voluntary contibutions fent him, according to the power and good intentions of every man; he and his cofhir, or retinue, could lodge upon them when he pleafed; and they were obliged to fipport him and his baron-like train, when he was employed in difpenfiar jultice among them. This allowance was called a Cutting for the Court, or Gearyigh Moid. When rents began to be levied, which were at firll but a moderate part of the produce of each farm, the former revenucs gave way graduality, though fome branches of them were prefe:ved till within the memory of men now liviag. Nor was it necelling to ufe diftrefs for levying thefe accultomed taxes or iervitudes; an attachment to the chief was the firft principle of the people's education ; adefct on that head was julged a renunciation of all virtue; their thoughts and words were much employel abons him; it was the ufual acclamation on a furpritie from any unexpected mistortunc, "God be wiht the chief! May the chief be uppermoft!" and fwearing by his hand was a common form of affeveration; on sery fuch occafion giving him his proper title. Further, on the fide of the chienain, no art of affitility, generofity, or friendlap, which could infpire love and , feem, was left untried to fecure a full and willing obedernee, which fremgthened the inprefiom of cducation, while they were not y i at ufedty the crict, at the inttigation of lusury, and the ambition of cutting an unneaning figure in the Low Country, where numbers were more refpected, and his ufefulnels could very weil be fpared.

All this while the people prefersed a good deal of their liberty and independence; the difpenfation of juftice, fuch as it was, kept them hawever in order withia the limits of their own count: : but there was a law of another kind planted in the human breat by the friendly hand of our Maker, which mided their matural inpetuofty much more; that was a quick fenfe of honour and hame, which was nourilhed by their education, being all bred to the ufe of arms, to hunting, to the exertion of their Itrength in feveral amuler ate, games, and feats of ativiny. The bard celebrated the prailes of him who diftuguifhed himfolf on any of thefe occafions, aud dealt out his fatire but with a very lparing hand, for fear of roufing up the felocity of men, who were in ufe to julgre in their own caufe, when they appealed to the fword, and efther retrieved their hemour or died; valour was the virtio mont in repate; accordine, to their progreds in it were they diflim, wifhed by their chiethan and friends. Every one of the luperor clans thought Limfelt a genteman, as deriving his pedigree from an honourable theck, and propoted to do nothing uarmety of his defent of connetims; and the inferior clans, the Doddacks, at they called them, tread at an humble dillance in the fteps of their patron, whole
whofe efteen and applaufe they courted with paflionate keennefs. The love, affection, and efteem of the community all aimed to procure by a difinterefted practice of the focial durics, truth, generofity, friendhip, holpitality, gratitude, decency of manners, for which there are no rewards decreed in any country, but were amply paid among the Highlanders by that honour and refpect of which they had a very delicate talte. Avarice, debauchery, churlifhncfs, deceit, ingratitude, which can fcarcely be punifhed by the magiftrate, were banifhed by the dreadful fear of flame. Thefe two provifions, which kind mature hath made for directing the conduct of man, were fo incorporated with the hearts and manners of the people, that the influence of them came down to our days, and continued a good fupplement to the want of law, and to the lame execution of what law they had. Nen of lively open tempers are generally fincere, faithful, and eligious obfervers of their words. Men ufed to terminate their difputes by the fiw, 1 will deted fraud and dupicity as the true enfigns of cowardice. Yet it mult be owned, that their virtues were too much confined to their oun community, whofe friendthips and enmities cvery individual efpoufed, and were therefore more animated by the fpirit of faction than by their regard to reafon and common juftice, which led them often in a wrong way. (If all virtues their hofpitality was the moft extenfive; every door and every harrt was open to the flranger and to the fugitive; to thefe they were part cularly humane and gencrons, vied with one another who would ufe them belt, and look ad on the perfen who fought their protection as a facred depgitum, which on no comideration they were to give up. Men of narrow principles are dilipofed to attribute tie uncommon hofpitality of the Highlanders not fo much to generofity as to felf-love, the :bhtolute want of inns making it neceffary to receive the ffranger, in hopes of being repaid in their own perfins, or in that of their friends. Hofpitality was founded ats immemoral collom, befor the thoughts of men were contracted by the ufe of weights and mealures, and reckoned to liar a facred obligation as to think themfelves bound to conterain the man who from a priciple of ill-will and refentment, formed * upon hem with a mmerons retinue, which weat under the mame of the Odious Vititur, Cuinimb Dhatimigh. Of this there lave heen intances within a century back; which kind of

To return from this dyreffion (if it be one) abur the favourite virtues of the intaders and thir neghbours on the opporte coalt. Let us recoitet, that when our fovereigns had any relpite from foreign and si mellic troubles, they did not negleit to try all
 and indultrious fubjects. The nowt of the proprieturs, inficad of holling of the lords of the ifles, were, on the fall of that graat hamly, directed by their belf iriends to get their charters contirmed by king dmes $1 V^{r}$. Kim, Juncs $V$, male an expedition among them, wh geth their infurrections; and King Janies VI. ferionly propoled to introduce the comforts of civilization among th:m, when, in hi, lifecenth parliament, iwe erected the three burghs of Kilkerran or Campbeltows, Inverluchy, and Storneway, which, though among a pcople impatient of forcigat intruders, they did not produce the full effect intemad by government, yet made way for beating and diffrefling the renegadocs into food manners, by means of the Camplels and Mackenzies, loy al fubjects fupported by pullic outhrity, as could not mils to determine the iftheners and others to lubmit to good order.

At length the local cuftoms, and fuch now fatutes as occafion required, enacted by the proprietor, his baley, and fome of the bettrent of people, wre reduced into writing, not above a century ago, in the ithe of $5 k y$, and proclaimed amually at the

[^305]church-doors. Some of thefe regulations are furprizingly regular and difinet; and under the adminiftration of a humane mafter and a judicious bailey, the people found themfelves lappy enough. While the fpirit of clanfhip preferved any of its warmeth, the chieftain feldom intended an injury; and when any was offered, by him or by another, it was foon demolifhed by the weight of a multitude; but when this baiance of power was weakened and diffolved, the people lay much at mercy. In time of a minority, or when the proprietor took it into his head to vifit London or Edinburgh, the eftate being ieft under the management of this bailey, who generally was the fteward or factor, the rights of mankind were often trampled under foot: being his malter's eyes, ears, and almoft his very foul, by whom he faw, heard, and underitood every thing, any obnoxious perfon was eafily mifreprefented. In time of a minority his powers of doing mifchief were more unreftrained, tutors being lefs attentive than any men to their own intereft. Scarce an imperial procurator fent to one of the dillant provinces, clad in all the authority of the fovercign city, was more dreadful than he, when a judge, executor of the lawe, raifer of the rents, a drover, and entrulted with keeping the lands. The feats of juftice were at too great a diftance; the law a flow, uncertan, expenfive redreffer of grievances; the factor like to be fupported by his conftituent, while the general voice of a fervile neighbourhood went along with the man in power. Thefe were difcouragements which the feeble efforts of a farmer could not eafily furmount. In proportion as the old military fpirit decajed, all the matural and artificial connetions of the clans diffolved apace; every man was then lett fingle, to combat a force too ftrong for him to manage. In a very feafonable hour the heritable juriflictions were abolifhed, and fheriffs depending upon the fovereign alone appointed to difpenfe jullice, which was furely a great relief to the leidges, where their fphere of action was not too extenfive for themfelves or the fubflitutes they were able or willing to employ in excentric corners; even in that cafe the people muftered up more foirit, and acquired fome knowledge of the rights they were born to.

The proprietors had fill a hold which the laws could not even moderate; for they could fet what value they pleafed on their freehold; and fome among them who had run themfelves in debt by high living; fome who had a paffion for money, and did not fufficently confider the flate of their peoplc, the greater number miltaking the high prices of cattle and of the other produce of their lands for the true flandard by which to eftimate their rent-roll, without making the neceffary allowance for the greater difburfement of the farmers in fervants' wages, implements of tillage, and in every article of living and family-keeping; and others, a few I beiieve, unwilling to fee any part of their former authority taken away without a fuitable compenfation for it, loaded their people with heavier rents than the advanced price of their cattle, Sce. could bear ; and rather than fink under this burden, crowds of thein made their way to the wilds of America; though the rage of emigration, like a contagious diftemper, feized upon feveral who had little caufe to complain.
P. S. The hand-fifing of the fouthern part of Scotland has put me in mind of an omiffion in the above. It was an ancient practice, among the men of rank efpecialiy, to take an year's trial of a wife, and if they were mutually fatistied wilh one another in that time, the marriage was declared good and lawful at the expiration of it. But when either of the parties infifted upon a feparation, and that a child was begoten in the year of probation, it was to be taken care of by the father only, and to be ranked among his lawful children next after his heirs. He was not confidered as a baftard, becaufe the cohabitation was jullified by cultom, and introduced with a view of making way for a happy and peaceable marriage. One of the great Lords of the Ines took fuch a trial of a nobleman's daughter upon the continent, got a fon by her, and after feparation fetted
an extenfive fortune upon him in lands tenendus de me, et heredibus meis, the greater part of which his homurable pofterity poffefs to this day. Such was alfo the power of cuftom, that this apprenticefhip for matrimony brought no reproach on the feparated lady; and if $h \mathrm{r}$ character was good, fhe was entitled to an equal match as if nothing had ever happened.

Adultery was punifhed liere by dipping the guilty in a pond, or by making him or her ftand in a barrel of cold water at the church door; and when the rigour of judicial difcipline was a littlefoftened, the delinquent, clad in a wet canvafs fhirt, was made to fland before the congregation; and at the clofe of fervice, the minifter explained to him the nature of his offence, and exhorted him to repentance.

All civil profeffions were anciently hereditary in the inles. The bards, the /beanchies or genealogits, the phyficians, the pipers, and even the cooks, all of whom had appointments in lands fettled on them, according to the munificent temper of the feudal govermment. It was only in the time of our fathers, that Macdonald of Clan-ronald's Sieanchy and Bard, Mac-Mhurach, began to pay rent for his heretable farm. The othcr hereditary profefions have long been come to a clofe, except the Mac-Kartars and Mac-Krumens, the pipers of the family of Mac-Donald and Mac-Leod, who ftill preferve their appointments. I fhall alfo except Doctor John Maclean, whofe anceftors have been phyficians to the family of Macdonald for time immemorial, educated at the expence, and preferred to the farm of Shulifta, near the gates of Duntulm. The late Sir James Macdonald, for the farther encouragement of the above gentleman, fettled upon him a confiderable penfion during life, to raife alio the emulation of any of his fons who might be bred to his bufinefs, when they obferve a diftinction made according to the merit of thefe hereditary profeflors of medicine.

Though the profeffions were confined to one family, which might naturally be fuppofed to quench emulation, yet the frequent occafion thefe artifts had of intermixing with the neighbouring chieftains, determined them to fupport the pride of their fuperiors, by exerting their whole powers to excel every other profeffor of their own art ; bccaufe their love and attachment to their chief was the firt principle of their education.

Neither have I heard that any of thefe families ever failed, though, according to the courfe of things, that fometimes might have happened ; but they lad the choice of the women among their own rank, the fuperior often giving directions in this momentous affair; and among a number of childrer fome one or other would be found fit to follow his father's, or, in cafe of an accident, his uncle's calling. It would be ftrange indeed, if, among ten or twelve fons, Docor Maclean could not find one with a genius for phyfic.

> Of thic Griftgich.
> By the Same.

BEFORE the arts of carving, engraving, or fatuary-work were invented, or in the countries, into which they were not introduced, the reprefatations of the Divinity, whether high or fubordinate, were no other than the trunks of trees, or rude unformed ftones. The emblem of the Supreme God at Dodona, confecrated by the Hyperboreans, was the trunk of an oak, and fo it was in the Mallilian grove.

[^306]The emblem of Apollo at Delphi, fet up by the Pelas-Gi, the primitive inhabitants of Grecce, was no other than a pillar of fone. Several examples of this kind are mentioned by Clemens Alexandrinus and Eufebius.

As the Celtic tribes woofluipped friritual Gods, whether the Supreme, or fubordinate unes; they well knew that material reprefentations could not be axpreffive of them, though the trunk of a tree or a floze could very well mark out the place of worfhip, in a grove or on the fummit of a mountain, where the linall focieties in the neighburhood might convene on folem occiffins, or as the necefity of the community might feem to require, in order to conciliate the favour and aflitance of the Diviniy whom they reforted to. Men of different religious principles have been often unjuft to one another in common charge of idolatry; the Proteflamts lay it to the account of the Catholics, the Catholics to the account of Prans of all denominations, which all deny, who know beft what they are employed about. They furely pray, fuch at leaft of them as can think, not to a llock or a flone, whether in a llate of nature or formed by art into a fatue, but to the Divinity, of which one or the other is an emblem. Among the variety of fubaitern Divinitics, which the Celtic tribes worflipped, the fpirit of the fun was in the foremoit rank, the fun being the moft chearful, and the moft univerfally beneficent of all created and vifible beings. It brought joy and gladnels along with it to all the animal creation, to groves, to fields, and meadow.s. The day of its return was celebrated in every dillict by a fou dijove; whence May.day was called in the Gaulic, la Beltein, the day of Bel's fre; Beli beng one of the names of the fun in Gaul. Herodian, lib. 8. The worlhip of the fun was fo frequent, that feveral miftook it for the piancipal object of adoras:n. The incl,fures called Griman, or Grianham, the Houle of the Sun, are to be met with every wher, in which they offered their farritices, commonly horfes, burn betwixt two large fres ; whence the proverb, "He is berwixt two Beltein fires," which is applied to one in the hands of two artfui perfons, whofe in. trigues he is not aide to efcape. Fron diefe inchofures they alfor received oracular refponfes. When the elegant arts were invested, the Celtic Doities appeared carved, engraved, or painted, in fuch forms as the imagination of the workman fuggelted to him as the moft emblematical and expreflive of the common consevit they enteramed of the Divinities they meant to point out. Then they changed the rude in ps into figures refembling living creatures, generally into men, as being the moit homourable forms. The Spirit of the Sun, or the God who, acanding to the ancient creed, guided it in its sourfe, was figured as a young lively man, with lore, yellow, difhevelled hair : under this appearance Apollo hath the epitht of \%fora- por, the golden haired, given him by Euripides; and of axsengeno: the unfhaven, by liomer, alluding to beams of the fun, which are long and yellow. This imaginary concsit of the Hyperboren Apullo made its way to the Ilighlands of Scotlan!, where to this day he is called by the it me of Gruagach, the furr-haired. The fuperfition or warm imagination of ignorme people introduced him as a foortive falutary guect into feveral fanailics, in which he played many entertaining tricks and then difappeared. It is a litte mure th. $n$ a cenrury ago, fisice he hath been fuppofeci to have got an bovef man's daughter with child, at Shulita, near to Duntulme, the foat of the fimily of Macdo:ald: though it is more protable, that one of the great man's retinu did that bufinefs for him. But though the Grmagach offers himfelf to every one's faticy as . young handfome man, with fair treffes, his emblems, which are in atmon every villeg, are no other than rude unposlifhed thones of difterent figures jult as thy , feemed aate up to the hand of the bruid wito confecrated them. Carving was noe Entroduced into the Hobrides; and though it
had, fuch of the unformed inages as were preferved would for their antiquity be reve. renced, in preference of any attempts in the modern arts.

The Gruagich fones, as far as tradition can inform us, were only honoured with libations of milk from the hands of the dairy maid, which were offered to Gruagach upon the Sunday, for the prefervation of the cattle on the enfuing week. Frons this cuftom Apollo feems to have derived the epithet Galaxius. This was one of the fober offerings that well becane a poor or frugal people, who had neither wine nor oil to beftow; by which they reconmended their ouly ftock and fubfiftence to their favourite divinity, whom they had always in their eye, and whofe bleflings they enjoyed every day.—The infcription "Apollini Granno" (Grianich the Sunny) was on a ftone of this kind, dug up from the ruins of the Roman Pretenture, in King James the fixth's time-_The infcription in Gruter, "Apollini Befino," feems to have been on fuch another, -The rock idols of Cornwall, in Dr. Borlafe, feem to be of the fame kind, though of diffrent forms; for it was not the fhape, but the confecration, that pointed out theifí ufes. Notwithftanding they are numerous in this illand, you will fcarce meet with any two of them of the fame caft. The idol fones befides that remain with us are oblong fquare altars of rough fone, that lie within the Druids houfes, as we call them. Obferve alfo, that the worlhip of the fun feems to have continued in England until King Canute's time, by a law of his, which prohibits that, with other idolatrous practices.

## APPENDIX.-Number XII. Copy of a Writ of Fire and Sevorch.

"CHARLES, by the grace of God, King of Great Britain, France, and Ircland, Defender of the Faith, To our Lovites *

Meffengers, our Sheriffes in that part, conjunctly and feverally, fpecially conftitut; and to all and fundry our leidges whom it effeirs, greitting. Forafmuchas wee and the Lords of our l'rivy Councell being informed, that upon the 23d day of June laft by patt, the Pufons underwritten, viz. Luuchlan M'Laine of Broloies, Hector Oig M‘Laine his brother, \&c. were orderly denounced rebels and put to the horn by virtue of letters of denounciation direct at the inftance of Duncan Fifher, Procurator Fifcal of the Jufticiar Court of Argyle for our intereft againft them, for their not compearing perfonally within the Tolbuith of the burgh of Innerrary, upon the faid 23 d day of June lait, before Mr. John Campbell of Moy, Sheriffe Depute of the Sherriffedome of Argyle, to our right trufty and well beloved Coufin and Councellor Archibald Earle of ingyle, Herctable Jufticiar General of the faid Shyre of Argyle and the illes thercof, as they who were lawfully cited upon the 24 th and 25 th days of May laft, by Duncan Clarke, Meffenger, to have compeared the faid day and place, to have found caution asted in the bookes of adjournall for their compearance the faid day, to have anfwered and underlyen the law for their convocating the number of thro or four hundreth men in Aprile laft, by fending of Five proces thro' ths itle of Mull, Morveran, and other places, and remaining and abydeing upon the lands of Knokerfmartin in ane warlyke pollure, from the 22 d of the faid month to the latt thereof; as alfo convocating one hundreth men, and keeping them in arms the fpace forclaid at Gadderly and Glenforfay; and ficklike for garrifoning the houl and fort of Cairnbulg upon the or ane or other of them, with the number of day of the faid month, armed perfons, and appointing a captain and other officers for kecping the fame, and fecuring the country againft the exccution of our laws; for their violent away carrying feveral corns, bear, horfe, and fuync, arrefted upon the lands of Croffchoill and Sulnavaig, by luncan Clarke Mefle ger, notwithftanding of a lawful intimation made by the taid Meffenger of the faid arellment; and likewife for the faid Lauchlan M'laine of Broloies, and David Ramry commiffary of the ifles, and their followers, being in lirie in Aprile laft, and opprefling the tenants there, by quartering and forming upon them, and cauling bring moal ard provifion frae the tenmis and polfefors of vendway in Tirie, and others, to latuchlai M'Laine baillie, in Tirie, his thoufe in Kilfaile; and laftly, for the forfaid perfons and their followers, in the months of March or Aprile lall, their entering into a leacue and bond, and obligeing thenfelves by oath to join and adhere one to another, and immediately thereater garrifoned the boufe and fort of Cairnbaty in anamer forfaid, contrar in and in contempt of our laws and acts of parliament ande againt thefe wrymes in manner at length epecified in the criminal letters raife! agant thom therenshin, as the faid letters of denunciation, duly execute and regitrate in the books of aitjumal of the Jultice Court of the Shyre of Argyle, conform to the act of parlimment, produced in the prefence of the Lords of our Privy Counce I bears. At the proces of the which hom the forenamed perfons molt proudely and contemptuoufy lye and remain taking no reguard thereof nor of our authority and laws, bot in contempt of
the fame haunts, frequents, and repairs to all places within this our realm, as if they were our free leidges. Wee therefore, with the advice of the Lords of our Privy Council, have made and confitute, and hereby make and conftitute, the Lord Neill Campbell, John Campbell younger of Glenorchy, Sir James Campbell of Lawers, John M‘Leod of Dunvegan, Sir Nornan M•Leod, Campbell of Ardfinglas, M•Donald captain of Clanronald, Alexander Campbell, uncle to Auchinbreck,

M•Alafter of Loop, and Duncan Stewart of Appin, our commifioners in that part, to the effect after fpeceified givand, grantand, and committand to them conjunatly and feverally our full power and comnifion, exprefs bidding, and charge to convocat our leidges in armes, and to pafs, fearch, feek, take, and apprehend, and, in cafe of refiftance or hoftile oppofition, to purfue to the death the faids Lauchlan Maclaine of Broloes and remnant perfons forefaids rebells for the caufes above-written. And if for their defence they fhall happen to flee to frengthes or houfes, in that cafe, Wee, with advice forefaid, give full power and authority to our faids Commiffioners conjunctly and feverally as faid is, to pafs, perfue, and affedge the faids ftrengtiss and houfes, raile fyre and all kynd of force and warlyke engynes that can be had, for winning and recovering thereof, and apprehending the foids rebells and their complices being thereintill; and if in purfute of the faids rebells and their complices, they refifting to be taken, or in affedging the faids Arengths and houfes, there fhal! happen to be fyre raifing, mutilation, llaughter, deftruction of corns or goods or other inconvenience: 10 follow, Wee, with advyce forcfaid, will and grant, and for us and our fucceffors, decern and ordain, that the fame thall not be imputed as cryme or offence to our fail Commifioners, nor to the perfons allifting them in the exceution of this our commifion; with power to our faids Commiltioners, or fuch as fhall be convocat be them, to bear, wear, and make ufe of haghuts and piftolls in the execution of this our commiffon, notwithttanding of any law in the contrary. And farder, we do hereby take our faids Commiffioners and fuch perfons as thall aflif them in the execution of this our commilion, under our fpecial protection and fafeguard. And this our commiffion to continow and endure for the face of ane year after the date herenf: Provyded that our faids Commifioners give ane account to us of their diligence and procedure herein betwixt and the firf day of January next.
"Our will is herefore, and we charge you frietly and command that, incontinent thir our letters feen, ye pafs to the market crofles of and other places needful, and thereat in our name and authority command and charge all and fundry our good and loving fubjects, in their moft fubftantial and warlyke mamer, to ryfe, concur with, fortify and affil our faids Commifioners in the execution of this our commiffion under all highell paynes and clarges that after may follow. Given at, \&c."

The ahove is copied from the reconds of the Privy Council of Scotland, on the 22.1 Tuly 1675.

> Appendix.-Number XIII.

> Of the Sivechs.

A Lomtheme and very interious difare whe veneral kind, called the sivene, has long aflhated the inhathents of the Itightand, and from thence fome pars of the

was introduced by the foldiers of Cromwell garrifoned in the Highlands. It occafions foul uleers in the throat, mouth, and $\mathbb{K}$ kin, and fometimes deep boils, which, when ulcerated, put on a cancerous appearance. It fometimes deftroys the nofe, or caufes the teeth to drop out of their fockets; fometimes a fungus appears in various parts of the body, refembling a rafberry, in the Erfe language called Sivven. This diforder chiefly attacks children, and the lowelt clafs of people, who communicate it to each other by their dirty habit of living. It is propagated not only by fleeping with, fucking, or fitluting the infecteif, but even by ufing the fame fpoon, knife, glafs, cup, pipe, cloth, \&c. before they have been wafhed and cleaned. This, like other fpecies of the venereal dfeafe, is cured by inercury; and the only means of preventing fo dreadful a malady is by the frictelt attention to every circumftance of cleanlinefs.

> APPENIIX.-Number XIV.
> On the Duchefs of Atboll and Lady Wright fifbing at Atboll.Houlfe. By a Lamy.

WHERE filver-ıuted Garry nimbly flows, Whofe verdant barks the nymphs and naiads love;
Where nature ev'ry blooming fweet beftows, Not lefs delightful than Idalia's grove;
As contemplation led my wand'ring feet Along the margin of the cryftal flood, The feather'd fongfers hail'd the fweet retreat, And gentle zephyrs whifper'd thro' the wood.
Charm'd with the fcene, filent a while I gaz'd, Intently liftening to the murn'ring fream, In grateful tranfports nature's God I prais'd, And long my foul purfu'd the rapt'rous theme.
At length I heard, or fancy form'd the tale, A gentle voice in ournful notes complain;
Soft echo bore the a a nts thro' the vale, And thus the mourne feem'd to breathe his pain:
" Why did I idly leave the coral groves, Where fafety on the breatt of filence lies?
Danger ftill waits the beedlefs fool that roves, And in purfuit of fleeting blife he dies.
" One fatal day, as ne.r the brink 1 ftray'd, Two pleafing forms lean'd o'er the trembling brook;
Their gentle fimiles an artlefs mind betray'd: Mifchief fure never wore fo fair a look!

# " Lach held a magic wand with wond'rous grace, A pendant line convey'd the tempting bait; 0 ! fight portentous to the finny race, Fraught with the dire contmand of cruel fate! <br> -6 My iender mate play'd fean...s by my fide ; Vith eager joy fle fiatch d the hidden dart, Intlant, alas! floft my lovely bride; What racking torture feiz'd my wounded heart! <br> " E'er fince that hour, to pining grief a prey, My flowing tears increafe my native flood; In melancholy fighs I walte the day, And fhun the commerce of the fealy brood. <br> "Should chance this mournful tale at Mair relate, Where dwell the dang'rous fair who caus'd my pain; They who can love fo well would mourn my fate, And ne'er difturb our harmkefs race again." 

## APPENDIX.-Number XV.

Rectojitory of A/his.
TWO miles north of Coupar Angus, near a finall village called Coupar Grange, on a geatle eminence, was lately difcovered a repofitory of the afthes of tacrifices, which our anceflors were wont to offer up, in hotour of their deitics. It is a large lpace, of a circular form, fenced with a wall on either fide, and paved at bottom with thars. The walls are about five feet in height. and buit with coarle fonc. They form an outer and an inner circle, dillant fron eacis other nine feet. The dameter of the inner circte is fixty feet; and the area of i: $i: 01: \therefore$ piece with the circumjacent foil. But the fpace between the walls is filled wht ather of wood, particularly oak, and wiat the bones of various fpecies of aninals. I coald plainly dillinguilh the extremities of feveral bones of heep; and was informed that teeth of oxen and fheep had been fumend. The top of the walls and afhes is near two fect below the furface of the field. The entry is from the N. W. and about ten or twelve feet in breadtl. From it a pathway fix teet broad, and paved with fmall itones, leads catward to a large free-fone, flanding erect betwen the walls, and reaching tive feet above the pavenent, fupported by other fones at bottom. It is that on the upper part and two feet fquare. Another repofitory of the fame kind and dimenions was tome months ago difcuvered at the diftance of three hundred paces from the former. From the numbers of oak trees that have been diged out of the neighbouring grounds it would appear that this was anciently a grove.

A further account of fimilar frmotures have been fince communicated to me.
Mr. Pennant, in the third volume of his Tour in Scothand, gives an account of an ancient building difcovered near the village of Coupar Grange, within two miles of Coupar in Angus; this he fuppofes was a repofitory tor the afles of the facrifices which our anceflors were wont to ofler in honour of their deities. A building of this kind,
and which probably had been intended for the fame purpofes, was lately difcovered in the county of Edinburgh, in a field to the north of Midleton houfe, the feat of Mr. Michelfon, and about a mile and half fouth-weft of Borthwick cafle. This building, like that defcribed by Mr. Pennant, was about a foot under the prefent furface of the fickd, and was difcovered by the plough; it differed from Mr. Pennant's in being only an irregular fegment of a circle, and in having the bottom lined with fine clay in place of Hags; like Mr. Pennant's, it had a narrow entry, pointing nearly N. W. Below I have given a rude figure, with the dimenfions. This building is formed in general of rough land llones, and is open at top, the flones not bound or overlapping one another as in good maforry, and none, even of the beft fones, appear to have been formed by art; the furroundine 'is gravel going deeper than the foundation
of the walls. The whole fpace be ferent from the circumacent foil : mould, irregularly interiperfed wi: to a refemblance of inw-duft ; a gre: very entire, all evidently the teeth of $p^{1}$, fheep and oxen, and no appearance of milan teeth. No artificial fubtances were found, nor any thing elfe but fome fones that mult have fallen from the furrounding walls. The whole bottom was lined to the depth of fome inches with fine foft clay. On a rifing gre and to the eaft, called are fome large fones, and are probably remains of fome ancient religious ftructure. About a mile to the weft a field called the Chefters, with regular terraffes, on a bank to the north of it. It is wifhed that our Britifh antiquarians would confider this ancient fubterraneous building, and give fome accouni of it.
P. S. I am informed that a building of the above kind has been lately difcovered in the eaft of Fife.

## Defription of Craigball.

CRAIGHALL, a gentleman's feat, two miles north of Blairgowrie. The fituation of it is romantic beyond the power of defcription. It is placed in the midit of a deep glen, liurrounded on all fides with wide-extended dreary heaths; where are ftill to be feen the rude monuments of thoufands of our anceftors, who here fought and fell.

Photographic Sciences Corporation

23 WEST MAIN STREET WEBSTER,N.Y. 14580 ( 716 ) 872-4503

The houfe itfelf flands on the brow of a valt precipice, at the foot of which the river Erecht runs deep and fullen along. It commands a profpect for the fpace of half a mile northward, the moft pleafant and moft awful that can be conceived. About twice the diftance now mentioned, the river, that had for many miles glided along beautifully foping banks, covered with trees of various kinds planted by the hand of nature, feels itfelf confined in a narrow channel, by rocks of an aftonifhing height, through the chinks of which the oaks fhoot forth and embrace each other from oppofite fides, fo as to exclude the kindly influences of the fun, and to occafion almoft a total darknefs below. The ftream concealed from our view makes a tremendous noife, as if affrighted by the horrors of its confinement. The echoing of the caves on every fide render the fcene ftill more dreadful. At length the river is diverted in its courfe by a promontory of a great height, vulgarly called Lady Lindfay's Caftle: Near the fummit this rock is feparated tnto two divifions, each of which rifes to a confiderable height, oppofite one to another, and appear like walls hewn out of folid ftone. In the intermediate fpace, fame fays, this adventurous heroine fixed her refidence. After a few more windings, the river directs its courfe to Craighall, having faluted feveral impending precipices as it rufhed along; particularly one of enormous fize and fmooth in front, at the bafe of which, in a hollow cavern, is heard a continual dropping of water at regular intervals.

## Reeky Linn.

REEKY LINN,three miles north of Alyth, and two from the famous hill of Barry, one of the largeft and moft beautiful cafcades of water in Scotland. The river Illay here darts over a precipice fixty feet in height. Through the violence of the fall the vapour is forced upward in the air like fmoke, or, as the Scotch term it, reek, from whence it has its name. For a confiderable fpace along the courfe of the river, the rocks on each fide rife 2 hundred feet, and the river itfelf, in feveral places, has been found thirty fathoms deep.

## Of certain Antiquities in the Neighbourbood of Perth.

## Communicated by Mr. Thomas Manshall.

ON the eaftern banks of the Tay, about a mile and a quarter above Perth, is a place called Rome, to which the Roman road, traced from Ardoch to Innerpeffery and Dupplin, points, and is continued on the other fide of the Tay, in the manner that thall be prefently obferved.

At Rome is fuppofed to have been a bridge made of wood; for, in very dry feafons, large beans of oak, placed up and down the fream, are feen. Thefe were the foundations, fixed exactly in a fpot where the tide never flows, and is only immediately out of its reach. This bridge was much frequented, ftrongly guarded, perhaps often attacked; for in the ground on the weftern fide are frequently found urns.

About half a mile eaft of Rome, at a place called Sherifftown, are the veftiges of a fort, but much defaced by agriculture. The caufeway or Roman road is continued from Rome, turns north at the fields of Sheriffown, and paffes through a noted Roman camp at Graffywall.
In its courfe it goes by a druidical temple confifting of nine large fones, furrounding an area of twenty-five feet diameter, placed on a fummit commanding a great view. The road then paffes Berry-hill, and through the village of Dirige-moor, where it is very complete. From thence it is continued by the houfe of Byres, Stobhall, and Gallow-moor, near which are two other druidical temples, of nine foncs each. The road
road afterwards paffes near E. Hutton, and from thence runs to the banks of the Illa or Ilay. Its whole courfe from Rome to this place is nine miles, vifible in many places, left fo near to the villages as the fones have been removed for building.

At the fpot where the road touches on the Illa, a bridge is fuppofed once to have ftood: the neceffity is evident; for on the oppofite fide was a confiderable Roman poft. The Romans profited of the commodious accident of the two rivers, the Tay and the Illa, which unite at a certain diftance below. Thefe formed two fecure fences: the Romans made a third by a wall of great thicknefs, defended again by a ditch both on the infide and the outfide. Thefe extend three miles in a line from the Tay to the Illa, leaving within a vaft fpace, in form of a Delta. Near the head of the bridge is a large mount exploratory, and probably once protected by a tower on the fummit. On a line with this are two others; one about the middle of the area, the other nearer the Tay : thefe are round; but Mr. Marfhall doubts whether they are the work of art. But clofe to the junction of the Tay and Illa is a fourth, artificial, which is 今tyled Car-rick-know, or the Boat- hill, and feems defigned to cover a landing-place. I muft note that the wall is ftyled the Cleaving-wall. It merits further difquifition, as it will probably be found to be fubfervient to the ufes of the camps at Hiethic and other places in the neighbourhood, which fome native antiquary may have ample time to explore.

Not far from Blairgown is a vaft rectangular inclofure, encompaffed with a lofty rampart and a deep ditch ; the length is an Englifh mile and a quarter; the breadth half a mile: Three rifing grounds run parallel to each other the whole length of it. Two rivulets and Lornty water take likewife parallel courfes at the bottom between thefe rifings. In certain parts within are mulcitudes of tumuli. The fame are obferved in greater numbers on the fouth exterior fides, and fome on the eaft. With them are mixed feveral circular buildings, with an entrance on one part: of thefe little more than the foundations are left, which are fix feet thick. Some include an area of fortyeight feet; but the greater number only twenty-feven. The ditch is on the infide; by which this inclofure appears to have been defigned for a different purpofe than a camp. It probably was an oppidum of the ancient inhabitants of the country : the circular foundations, the reliques of their habitations, which, when entire, might have been of the form of the IJanif Dunes, fo frequent in the Hebrides; as the tunuli are certainly the places of interment.

## APPENDIX.-Number XVI.

An abridged Account of the Effects of the Lightning which broke on Melvill Houfe, in FifesAire, the Scat of the Earl of Leven, on the 27th of Oclober, 1733 :

Being Extracts of a Letter from Mr. Colin Macraurin, Profeffor of Mathematics at Ediuburgh, to Sir Hans Sloane.

#### Abstract

"s SIR, Edinburgh, December 3, 1733. "AT the defire of the Earl of Leven I went to Melvill houfe, and took a particular furvey of the effects of the lightning, which broke upon the houfe on the 27th of October latt. As fome of them were very furprifing, I thought it might be worth while to fend you the following relation, not doubting of your thinking it worthy the attention of the Royal Society. The houfe ftands about tiventy miles north from Edinburgh, on the north fide of a plain, which extends far from eaft to weft and towards three

miles broad, fronts to the eaftward of fouth, and near it are great plantations, which almoft furround it, and in fome places extend to the diftance of three miles.
" We had fine weather in this country from the gth to the 25 th of October, when the mercury fell very confiderably, and the weather changed. The 26th was a very bad day, having heavy rain, and in fome places fnow and hail. On the 27th the wind was welt, the morning cloudy, and we had thunder and lightning in many places very remote from Melvill.
" It was on the 27th, betwixt fix and feven in the morning, that the lightning broke upon the houfe, attended with loud peals of thunder. I could only meet with one man who was in the lields at that time, who was fo much terrified that I could gather but little from him. He faid the form came from the N. E. towards the S. W., felt it very hot, and a ftrong fulphurcous fmell as the lightning paffed over him; faw it break, as he imagined, with all the colours of the rainbow among the trees near the houfe, filling all the country round with an extraordinary light.
" The houfe is covered with lead, and has four chimney-tops on each fide of the cupola. Of the four on the ealt end of the houfe, one of them, in which was one of the kitchen vents, and where there only was fire at that time of the morning, was beat down level with the lead roof: fone of the fones were carried above one hundred feet into the garden. The flates which covered the floping part of the roof on the weft end were broke off for a confiderable fpace. There was one breach appearing in the outfide of the wall, which we were fure pierced through it : this was in the attic ftory, towards the weft end of the north front. A fone was drove twenty feet from the breach upon a level, broke a fplinter off a fone ftep of a back faircafe, and rebounded twelve feet. That part of the lightning which produced the moft confiderable effects came down the chimney-head, which is the moft northerly of the four on the eaft of the cupola, where there is a vent of another chimney in the kitchen. In its defcent it made feveral breaches in that vent : it is plain that two proceeded from it, becaufe the fmoke from that chimney proceeded from both; one of them in the great flaircafe, from which a ftone of thirty-two pounds heavy weight was beat out, fo as to frike the marble floor at twentyfix feet difance, meafured on a level, and after that rebounded on the adjoining wail. All $t_{i}$. wirdows were entire in this ftaircafe; nor did any other effects appear there. The breach in this vent was in the oppofite direction, and pierced into a bedcharmsi. on the eaft fide, where was a noifome, fulphureous finell for a confiderable time after, and a great heat: it made in the bed chamber a large breach in the plaifter cornice, and carried plaifter and lath quite acrofs the roo:n. Many pancs of glats were broke in both windows. I apprehend there muft have been another breach from the fame vent with a fouth direction, becaule of the wonderful effect in the corncr of the great dining-room, where a finall fplinter of wood, about thirteen inches long, and not heavier than two quills, was beat with fo much force againft the tloor, as to leave a mark cqual to the depth and length of its own body. Un taking down the pannel belonging to this bit of moulding, there was a crevice found, and this is very near oppofite to the great breach in the ftaircafe, only aboint four feet higher, hut divided by the folid mid wall of the houfe. In this dining-ronan many of the picture-frames were fcorched, the paintings defaced and fpoiled, but the canvas entire. Panes broke here in all the windows; and the window-curtains fo much funged as to blacken our hands, on rubbing the fide next the windows. In the drawing-room at the eaft end of the freat dining.room, the cornice plaifter was broke in many places, and panes broke. The bed.chamber next it was already mentioned.
" In the drawing-room on the weft end of this dining.room, the windows were entire, the fhutters clofe, the doors locked, and no loot came down the chimney; yet there is a large deep fplinter tore out of a ftrong oak pannel. Before the pannel flands a japaned cabinet, greatly tarnifhed at one end. A pier glafs betwixt the windows, in a glafs frame, has two breaches in the fraine, and the reft entire. In the bed-chamber next to this drawing-room nothing was obferved. In the corner of the drefling-roon belonging to this apartment there ftood a barometer, which was broke in pieces: the mercury difappeared, and we could find no remains of it. I mult mention in this place, that his lordhip would not allow a fervant to clean any part of this principal floor till I fhould fee the effects of the lightning. In this dreffing-room the pannels were much brocte and fhattered; and of thirty panes fifteen were broke.
"Below thele apartments, in the firft floor, is the bed-chamber where my lord and lady lay, being the centre room in the weft front. Two panes of one of the windows were broke, and the glafs found fticking on the curtains of the bed. Many pieces of the mouldings of the pannels were broke and torn off. The mirror of a drefling-glafs broke to pieces; the quickfilver melted off, but the frame entire, and ftood in its place; it fmelt oiffulphur for fome hours atter. Two fmall pictures beat from one fide of the room to the other. A pier glais betwixt the windows entire, but the pannel below it beat out ; and a cheft of drawers before the pannel received no harm. The frames of two pictures, which hung at the fide of the bed, were much broke; and one of the pannels fell out lately, when a fervant was dufting it.
" My lord's account of what he obferved is, that he was awaked with the noife of a great guft of wind; that, upon looking up and drawing the curtain, he perceived the lightning enter the room with great brightnefs, appearing of a bluifh colour. It made him cover his eyes for a moment; and on looking up, the light feemed to be abated, and the bluifh colour had difappeared; at the fame time he heard the thunder, which made an uncommon noife; he felt at the fame time the bed and the whole room thake, much in the fame manner one feels a horfe when he roufes, and was like to be choaked with the fulphur. When the maid opened the door, fhe was fcarcely able to breathe from the fulphureous fteams which filled the room; happily the room was large, being twenty-two feet fquare, and fixteen feet high.
" In an adjoining bed-chamber a gilded fcreen was quite fpoiled, and though folded up, the gilding is burnt off every leaf.
" In the parlour the gilding was melted off the leather hangings nearly of this form);
and in the window directly oppofite, at the diftance of twenty-four feet, in one of the panes, there is a rent exactly of the fame form with the melted place of the gilding, which does not reach to either end of the pane, about two inches long each line, the length of the lines of the melted hangings being above two feet each. This room in the fouth front.
"In the drawing-room on this floor there were many effects of the lightning. It has two windows to the fouth, and two to the eaft. A pannel was loofe, but kept from falling by a half length picture which hung before it, upon a nail in the wall above the top of the pannel : on removing the picture the pannel came down, and a pidce of ftone in the wall fell in, which probably had beat the pannel out of its place. On the outfide of the houfe we difcovered two breaches oppofite to the pannel, but they did not feem to go deep. Several other pannels were beat out, and particularly one of nine feet high, and three feet broad, was beat out fo to as to have the infide turned outward, and was
found refting with the end upon a chair. Betwixt the two fouth windows ftood a pier glafs, which has a piece taken out of it of a femicircular figure, nearly three inches long and two inches deep, and no crack or flaw in the reft of the glafs; the gilded frame much finged above and below : the piece was found broken, and one part had the quickfilver melted: above the glafs we perceived a hole in the pannel, as if burnt through. There was only one pane broke in this room, which was in one of the eaft windows. The hole in the pane was of the fize and fhape of a weaver's fhuttle. A glafs (like the other) which ftood betwixt the two ealt windows was broke in pieces: the chimney-glafs not touched. The vent of this room goes to the chimney-top, which was beat down.
" In the adjoining bed-chamber, there were feveral pannels beat out, and fome parts of them appeared to be burnt. A piece of fone was found in the floor, which was evidently beat from behind one of the pannels, from a large hard ftone, which appeared to be much fhattered.
"In the attic flory is the billiard-room, above the two eaft drawing-rooms: here the floor is torn up in two places, and large fplinters are carried off from the middle of the planks. A picture was driven out of its frame towards the other fide of the room ; the leather hangings torn, and the gilding melted in many places. Of forty panes in this room, thirty-four were broke.
" Above the drefling-room, where the barometer was broke, is an interfole, where there is a confiderable breach in the infide of the wall, from which lime and rubbinh were beat over the room. On a fhelf feveral glaffes were broke, as were fome bottles, and a china bowl: four large botties full of gunpowder on the fame fhelf efcaped untouched.
" In the under fory, in the kitchen, one of the windows looking eaft was beat to pieces : one of the iron bands beat to the oppofite wall; the other was driven out of a door, in a direction at right angles to the former; the plaifter below the window torn up; and a lead ciftern which food near it received fome damage.
"No perfon in the houfe received any harm, except that my lord complained much of his eyes for fome days."

## APPENDIX.-Number XVII. <br> Copy of King Malcolm's Charter to the Town of St. Andrew's.

MALCOLMUS, Rex Scottorum, onnibus fuis probis hominibus falutem. Sciatis me conceffifle hac Carta confirmaffe Burgenfibus Epifcopi Sancti Andrex onnes libertates et confuetudines, quas nuei Burgenfes communes habent per totam terram meam, et quibufcunque portibus applicuerint. Qua de re volo et firmiter fuper meum plena. rium foris factum prohibeo ne quis ab illis aliquid injufte exigat. JOHN LESSLIE.

Refined fugars; Edinburgh, Glafgow, Dundec, \&c.
Hats nearly equal to the Linglifh; Ldinburgh.
Thread and yarn of all kinds.
Thread lace; Dalkeith, Hamilton, Leeith.
Paper both for printing and writing.
Candles.
Soap, hard and foft; Lecith.
Snuff.
Salt; Alloa, Kirkaldy, Preftonpans, \&c. Vitroil and fal-ammoniac. Bricks and tyles.
Confiderable breweries for exportation at Edinburgh and Glafgow.
Among the arts not effentially neceffary for human life may be reckoned the curious manufactures of leathern fnuff-boxes. The artifts Meffrs. Wilfon and Clerk have extended it even to mufical inftruments, and made a violin entirely of leather, which, I hear, gives as melodious a found as the bat of wood: and that they have lately made a German flute of the fame materials. Paper has been lately made of the weeds taken out of Dudding fon Loch; I do not know with what fuccefs. Perhaps this was attempted after the example of the Germans, who have of late made a fort of nettle, and other vegetables.

ITcollen Manyfucturi.
WOOLLEN manufatures are mentioned in 1424 , in the fecond parliament of James I. where it is difcouraged by a tax. "Item, It is ordained, that of ilk poundes worth of woollen claith had out of the realine, the King fall have of the out-haver for cuftom twa fhillinges."

After this, feveral regulations were prefcribed by leginature, and the wool prohibited from being fent into Eugland. A law of James II. in 2457, (perhaps for the purpofe of peopling the boroughs, and civilizing his people, by drawing them out of the woods into civil fociety) prohibits any but burgefles to buy wool, "to lit, nor mak claith, nor cut claith." Yet, not to leave the majority of his people naked, adds, "Bot it is to be otherwife faid, gif ane man hes woll of his awin fheip."

James VI. who (notwithftanding fome of us Englifh may think otherwife) had frequent intervals of wiflom, prohibited the wearing of any cloth in Scotland but what was the manufacture of the country.
I imagine, that in defiance of all the laws againft fmuggling of wool out of the kingdom, it was carried to Flanders. Old Hackluyt mentions it among the few exports of Scotland.

Morcover of Scotland the commodities,
Are felleb, hides, and of wooll the feefe, And all the fe muit paffe by us away Into Flaniers by England, footh to fav. And all her woolle was draped for to fell In the townes of Poperinge and Lell *.
At length a woollen manufacture arofe in fome degree. There was an exportation of it into Holland till 1720: it was a coarfe kind, fuch as is made in the Highlands: much of it was fold to Glafgow, and fent into America, for blankets for the Indians.

[^307]It is in Scotland a clothing for the country people, and is worth about rod. or 12 d . a ayrd. The only broad cloth worth mentioning is that made at Paul's work in Edinburgh, which is brought to great perfection.

## Linen Manufacture.

I CANNOT afcertain the time when the linen manufactures arofe. There could not be a great call for the commodity, a century and a half ago, when people of fafhion: fcarcely changed their fhirts above once the week in England. But, thanks to the luxury, or rather the neatnefs of the times, this article has become a moft national advantage. The following table will fhew the flourihing fate of it in this kingdom; and its great advance in forty-three years. At the foot of it is an account of the imports of flax into England and Scotland: and the exports of coal from the laft.

## ACCOUNT OF THI: DROSAGKS.

[From Garnet'。 'I'our.]

AUGUST if. About feven o'clock in the morning we fet out from Callander, along the banks of the 'Teath, and paffed through the finall village of Kilmahog; on our right we faw the houfe of Leney, the refidence of John Hamilton Buchanan, Filq. proprietor of that village, pleafantly fituated on an eninence; here we croffed the Teath, and, kirting the Couthern limb of Benledi, a high mountain on our right, we came to Lochvanachoir ", out of which the 'Teath runs, though its origin is properly in Loch Catherine.
L.ochvanachoir is nearly four miles in length, and in general about one in breadth; its banks are very pleafant, covered with wood, and noping gently into the water.

Soon after leaving this lake we came to another, but fimaller, called $\dagger$ Lochachray. The length of this lake is about a mile and a half, and its breadth fcarce more than half a mile, but its banks are very pleafant, being covered with wood. The feenery at the upper part is remarkably bold and Ariking.

It was here that we had the firft view of the Trofachs $\dagger$, which are rough, rugged, and uneven hills; beyond thefe is feen the rugged mountain Benvenu, which differs in nothing from the Trofachs, except in magnitude. As foon as we lad paffed Lochachray, we entered the Trofachs by a road winding anoong then. The feenery here is exceedingly wild and romantic ; rugged rocks of every fhape furround the road, and in many places overhang it ; thefe rocks are almoft covered with heath, and ornamented to the very top with weeping birch. This part of the road prefents feenery which is wild and horrid; it feemed to be Glencoe in miniature; but the mountains, though vaftly finaller, are more rugged, and being covered with heath and birch wood, have a different character.

I hall not enter into a farther defcription of the Trofachs, for it is impofible by words to convey any idea of the kind of fcenery. Thefe hills had been deicribed to me by feveral perfons who had vifited this place, and I had read fome defcriptions of them, but could form no diftant idea of what 1 was to fee: as I have no pretenfions to fuperior powers of this kind, I fhall leave the tafk to Mr. Watts, whofe pencil will give an exact reprefentation of fome part of the feenery.

The Trofachs are compofed of argilaceous fliftus, Aratified, and imbedded here and there with veins of quartz. The frata are, in fome inftances, nearly perpendicular to the horizon, and in all dip very much, a proof that fome convulfions or powerful caufes have renoved thefe lumpifh hills from their original fituation. Some fuppofe them to have been torn from the fides of the adjacent mountains, but there are, 1 think, no appearances which warrant this conclufion.
After we had followed the winding road which may be feen in the engraving, among thefe ftange mafes, for about three quarters of a mile, we had a fight of the lower part of Loch Catherine, winding its way among the Trofachs, fome of which appear above its level furface in the form of bold and rugged iflands and prontontories. The feenery about this lake is uncommonly fublime, particularly when we had gone about

[^308]a mile up the northern bank, where the road has been made with great labour, in many parts out of the folid rock, but which is impallible for a carriage, and can fearely be travelled over on horleback with fafety. Here, furning back our eyes towards the 'I'rofachs, the view was particulaly grand; rocky iflands rife boldly out of the lake, and in the back ground is howenne, rearing is rugged fummit far above the whole, having its lower part clothed with wood. The view up the lake to the weftward is likevife very fine ; the expanfe of water lecing bounded by Alpine mountains, foftened by ditance, and appeaning of a fine dark blue.
Loch Catherine is about ten miles in length, but not much more than one in breadth; and if it poffels not the beauty of other lakes which we had feen, its feenery is much more grand and romantic.

Near the foot of the lake, the Honourable Mrs. Drummond of Perth has creeted fome huts of wicker work, for the convenience of Itrangers who vifit this wild feenery; hrere they can partake of the refrefluneats which they bring from Callander, and fhelter themfetves from a ltorm.
The wood, which abounds on the banks of Loch Catherine, is made into charcoal ; a certain portion being cut down amnally, and when burnt, it is brought down to the foor of the lake in boats, from whence it is conveyed in carts to the Carron foundery. The Circea Alpina, or mountain enchanter's night-fhade, grows in great abundance on the banks of this lake; the pebbles found on the fhore are chiefly argilaceous and nicaceous fhiftus, with fome quartz.
Lochvanachoir abounds both with falmon and trout, and Lochavray with pike, which prevents almolt any other fifh from living in its vicinity. In Loch Catherine are trout and char, but the falmon and pike are prevented from entering this lake by a fall at its mouth.

Thefe three lakes are only expanfions of the beautiful river Teath, which may be faid to originate in Loch Catherine, or more properly in the numerous ftreams that pour into this lake in cataracts from its fteep and rugged banks.

After having feen whatever was remarkable in the neighbourhood of Loch Catherine, we returned by the fame road to Callander; and, as it was our wihh to make the beft of our way to Glafgow, after dinner we took the crofs road to Fintry, fixteen miles diftant. About fix miles from Callander, we came to the Loch of Monteath, a beatiful little lake almof five miles in circumference, adorned with two fmaller fylvan iflands. On the larger are the ruins of a monaflery, and on the fmaller the remains of an ancient feat of the once-powerful Earls of Monteith, whofe chicf refidence, as has been before oblerved, was Doune Caltle.

This lake abounds with perch and pike, which laft are very large. A curious method of catching this fifh ufed to be practifed: on the iflands a number of geefe were collected by the farmers, who occupied the furrounding banks of the lake. $\Lambda$ fter baited lines of two or three feet in length had been tied to the legs of shefe geefe, they were driven into the water. Steering naturally homeward in different directions, the bait was foon fiwallowed. A violent and often tedious ftruggle enfued; in which, however, the geefe at length prevailed, though they were frequently much exhaufted before they reached the fhore. This method of catching pike is not now ufed, but there are fome old perfons who remember to have feen it, and who were active promoters of this amufement *.

[^309]
# 572 ) <br> A DESCRIPTION OF THE WESTERN ISLANDS OF SCOTLAND. br, M. Martin, Gent:* 

TO HIS ROYAL HIGHNESS PRINCE GEORGE OF DENMARK,
LOKD HIGH ADMIRAL OF ENGLAND AND IRELAND, AND OF ALL HER MAJESTY'S PLANTATIONS, AND GENERALISSIMO OF ALL HER MAJESTY'S FORCES, ETC.

MAY IT PIEASE YOUR ROYAL HIGHNESS,
AMONGST the numerous crowd of congratulating addreffers, the Inlanders defcribed in the following theets prefume to approach your Royal Perfon: they can now, without fufpicion of infidelity to the Queen of England, pay their duty to a Danifh Prince, to whofe predeceffors all of them formerly belonged.

They can boalt that they are honoured with the fepulchres of eight kings of Norway, who at this day, with forty-eight kings of Scotland, and four of Ireland, lie entombed in the ifland of Jona; a place famed then for fome peculiar fanctity.

They prefume that it is owing to their great diftance from the imperial feat, rather than their want of native worth, that their iflands have been fo littled regarded; which by improvement might render a confiderable acceflion of ftrength and riches to the crown, as appear's by a fcheme annexed to the following treatife. They have fufered hitherto under the want of a powerful and affectionate patron; Providence feems to have given them a natural claim to your Royal Highnefs. And, though it be almoft prefumption for fo finful a nation to hope for to great a bleffing, they do humbly join their prayers to God, that the protection which they hope for from two Princes of fo much native worth and goodnefs, might be continued in your royal pofterity to all generations. Su prays, may it pleafe your Royal Highnefs,

Your Highnefs's moft humble and moft obedient fervant;
M. MARTIN.

THE PREFACE.
THE Weftern Iflands of Scotland, which make the fubject of the following book, were called by the ancient geographers Æbudx, and Hebrides; but they knew fo little of them, that they neither agreed in their name nor number. Perhaps it is peculiar to thofe ifles, that they have never been defcribed till now by any man that was a native of the country, or had travelled them. They were indeed touched by Boethius, Bilhop Lefly, Buchanan, and Johniton, in their Hiftories of Scotland, but none of thofe authors were ever there in perfon; fo that what they wrote concerning them was upon trult from others. Buchanan, it is true, had his information from Donald Monro, who had been in many of them; and therefore his account is the beft that has hitherto appeared, but it muft be owned that it is very imperfect : that great man defigned the hiftory, and not the geography of his country, and therefore in him it was pardonable. Befides, fince his time, there is a great change in the humour of the world, and by contequence in the way of writing. Natural and experimental philo「ophy bas been much improved fince his days; and therefore defcriptions of countries, without the natural hiftory of them, are now juftly reckoned to be defective.

[^310]This I had a particular regard to in the following defcription, and thave every where taken notice of the nature of the climate and foil, of the produce of the places by faa and land, and of the remarkable cures performed by the natives merely by the ufe of fimples; and that in fuch variety as, I hope, will make amends for what defects may be found in my ftyle and way of oriting: for there is a wantonnefs in language as well as in other things, to which my countrymen of the ifles are as much flrangers, as to other exceffes which are too frequent in many parts of Europe. We fludy tiings there more than words, though thofe that underlland our native language muft own, that we have enough of the latter to inform the judgment, and work upon the affections in as pathetic a manner as any other language whatever. But 1 go on to my fubject.

The infes here defcribed are but little known or confidered, not only by ftrangers, but even by thofe under the fame government and climate.

The modern itch after the knowledge of foreign places is fo prevalent, that the generality of mankind befow little thought or time upon the place of their nativity. It is become cuftomary in thofe of quality to travel young into foreign countries, whilf they are abfolute flrangers at home; and many of them when they reture re only loaded with fuperficial knowledge, as the bare names of famous libraries, fait $y$ edifices, fine ftatues, curious paintings, late fafhions, new dilhes, new tunes, new dances, painted beauties, and the like.

The places here mentioned afford no fuch entertainment ; the inhabitants in general prefer conveniency to ornament both in their houfes and apparel, and they rather fatisfy than opprefs nature in their way of eating and drinking; and not a few among them have a natural beauty, which excels any that has been drawn by the fineft Apelles.

The land and the fea that encompalie's it produce many things ufeful and curious in their kind, feveral of which have not hithertu been mentioned by the learned. This may afford the theorift fubject of contemplation, fince every plant of the field, every fibre of each plant, and the leaft particle of the fmalleft infect, carries with it the imprefs of its Maker ; and, if rightly conifidered, may read us lectures of divinity and morals.

The inhabitants of thefe iflands do for the moft part labour under the want of knowledge of letters, and other ufeful arts and fciences; notwithftanding which defect, they feem to be better verfed in the book of nature than many that have greater opportunities of improvement. This will appear plain and evident to the judicious reader, ! pon a view of the fucceffful practice of the iflanders in the prefervation of their health, above what the generaiity of mankind enjoys: and this is performed merely by temperance and the prudent ufe of fimples; which, as we are affured by repeated experiments, fail not to remove the moft ftubborn diftempers, where the beft prepared medicines have frequently no fuccefs. This I relate not only from the authority of many of the inhabitants, who are perfons of great integrity, but likewife from my own particular obfervation. And thus with Celfus, they firt make experiments, and afterwards proceed to reafon upon the effects.

Human induftry has of late advanced ufeful and experimental philofophy very much; women and illiterate perfons have in fome meafure contributed to it, by the difcovery of fome ufeful cures. The field of nature is large, and much of it wants ftill to be cultivated by an ingenious and difcreet application; and the curious, by their obfervations, might daily make further advances in the hiftory of nature.

Self-prefervation is natural to every living creature : and thus we fee the feveral animals of the fea and the land fo careful of themfelves, as to oblerve nicely what is agreeable, and what is hurtful to them; and accordingly they chufe the one, and reject the other.

The hufbandman and the fifher could expect but little wis without obfervation in their feveral employments; and it is by oblervation thar :- byfician commonly judges of the condition of his paticnt. A man of obfervation pres often a phyfician to himfelf; for it was by this that our anceltors preferved their healih till a good old age, and that mankind laid up that flock of natural knowledge of which they are now poffefled.

The wile Solomon did not think it beneath him to write of the meaneft plant, as well as of the talleft cedar. Hippocrates was at the pains and clarge to travel foreign countries, with a defign to learn the virtues of plants, roots, \&c. I have in my little travels endeavoured, among other things, in fome meafure to imitate fo great a pattern: and if I had been to happy as to oblige the republic of learning with any thing that is ufeful, I have my defign. I hold it enough for me to furnin my oblervations, without accounting for the realon and way that thofe fimples produce them: this 1 leave to the learned in that faculty; and if they would oblige the world with fuch theorems from thefe and the like experiments, as might ferve for rules upon occalions of this nature, it would be of great advantage to the public.

As for the improvement of the ifles in general, it depends upon the government of Scetland, to give encouragement for it to fuch public-fipirited perfons or focieties as are willing to lay out their endeavours that way: and how large a field they have to work upon will appear by taking a furvey of each, and of the method of improvement that 1 have hereunto fubjoined.

There is fuch an account given here of the fecond fight, as the nature of the thing will bear. This has always been reckoned fufficient among the unbiaffed part of mankind; but for thofe that will not be fatisfied, they ought to oblige us with a new fcheme, by which we may judge of matters of fact.

There are feveral inftances of heathenifm and pagan fuperfition among the inhabitants of the iflands related here; but I would not have the reader to think thofe practices are chargable upon the generality of the prefent inhabitants, fince only a few of the oldeft and moft ignorant of the vulgar are guilty of them. Thefe practices are only to be found where the reformed religion has not prevailed; for it is to the progrefs of that alone that the banifhment of evil lipirits, as we!l as of evil cuftoms, is owing, when all other methods proved ineffectual. And for the iflanders in general, I may truly fay, that in religion and virtue they excel many thoulands of others, who have greater advantages of daily improvement.

## A DESCRIPTION, Sc.

THF: ifland of Iewis is fo called from Leog, which in the Irifh language fignifies water, lying on the furface of the ground ; which is very proper to this illand, becaufe of the great number of frell-water lakes that abound in it. The ifle of Lewis is by all Itrangers and feafaring men accounted the outmoft tract of illands lying to the north-weft of Scotland. It is divided by feveral narrow channcls, and dillinguifhed by feveral proprietors as well as by feveral names: by the inlanders it is commonly called the Long Illand, being from fouth to north one hundred miles in length, and from eaft to weft from three to fourteen in breadth. It lies in the fhire of Rofs, and made part of the diocelfe of the ifles.
The ine of Lewis, properly and ftrictly fo called, is thirty-fix miles in length, viz. from the north point of Bowling-head to the fouth point of Huffinefs in Harries; and
in fome places it is ten, and in others twelve miles in breadth. The air is temperately cold and moift, and for a corrective the natives ufe a dofe of treftarig, or ufquebaugh. This inand is for the moft part healthy, efpecially in the middle from fouth to north. It is arable on the weft fide for about fixteen miles on the coaft; it is likewife plain and arable in feveral places on the eaft. The foil is generally fandy, excepting the heaths, which in fome places are black, and in others a fine red clay, as appears by the many veffels made of it by their women; fome for boiling meat, and others for preferving their ale, for which they are much better than barrels of wood.

This inland was reputed very fruifful in corn, until the late years of fcarcity and bad feafors. The corn fown here is barley, oats, and rye; and they have alfo flax and hemp. The beft increafe is commonly from the ground manured with fea-ware: they fatten it alfo with foot; but it is obferved that the bread made of corn growing in the ground fo fattened, occafions the jaundice to thofe that eat it. They obferve likewile that corn produced in ground which was never tilled before, occafions feveral diforders in thofe who eat the bread, or drink the ale made of that corn; fuch as the head-ach and vomiting.
The natives are very induftrious, and undergo a great fatigue by digging the ground with fpades, and in moft places they turn the ground fo digged upfide down, and cover it with fea-ware; and in this manner there are about five hundred people employed daily for fome months. This way of labouring is by them called Timiy, and certainly produces a greater increafe than digging or plowing otherwife. They have little harrows with wooden teeth in the firft and fecond rows, which break the ground; and in the third row they have rough heath, which fmooths it. This light harrow is drawn by a man having a ftrong rope of horfe-hair acrofs his breaft.

Their plenty of corn was fuch, as difpofed the natives to brew feveral forts of liquor, as common uiquebaugh, another called treftarig, id eft, aqua-vitx, three times diftilled, which is frong and hot; a third fort is four times diftilled, and this by the natives is called ufquebaugh-baul, id eft, ufquebaugh, which at firft tafte affects all the members of the body : two fpoonfuls of this laft liquor is a fufficient dofe; and if any man exceed this, it would prefently ftop his breath, and endanger his life. The treftarig and ufquebaugh-baul are both made of oats.

There are feveral convenient bays and harbours in this illand. Loch.Grace and Lochtua, lying north-weft, are not to be reckoned fuch, though veffels are forced in therc fometines by ftorm. Loch-Stornvay lies on the eaft fide in the middle of the ifland, and is eighteen milcs directly fouth from the northernmoft point of the fame: it is a harbour well known by fcamen. There are feveral places for anchorage about half a league on the fouth of this coaft. About feven miles fouthward there is a good harbour, called the Birkin Incs: within the bay called Loch-Colmkill, three miles further fouth, lies I.och-Erifort, which hath an anchoring.place on the fouth and north : about five miles fouth lies Loch.fca-fort, having two vifible rocks in the entry; the beft ha:bour is on the fouth fide.

About twenty-four miles fouth-weft lies Loch-Carlvay, a very capacious, though unknown harbour, being nuer frequented by any veffels; though the natives affure me that it is in all refpects a convenient harbour for fhips of the firft rate. The beft entrance looks north and north-weft, but there is another from the weft. On the fouth fide of the inand Bernera there are fmall iflands without the entrance, which contribute much to the fecurity of the harbour, by breaking the winds and feas that come from the great ocean. Four miles to the fouth on this coaft is Loch-Rogue, which runs in among the mountains. All the coafts and bays above-mentioned de in fair weather abound
abound with cod, ling, herring, and all other forts of fifhes taken in the weftern iflands.

Cod and ling are of a very large fize, and very plentiful near Loch-Carlvay; but the whales very much interrupt the fifhing in this place. There is one fort of whale remarkable for its greatnels, which the fifhermen diftinguifh from all others by the name of the Gallan-whale, becaufe they never fee it but at the promontory of that name. I was told by the natives, that about fifteen years ago this great whale overturned a fifher's boat, and devoured three of the crew; the fourth man was faved by another boat which happened to be near, and faw this accident. There are many whales, of different fizes, that frequent the herring-bays on the eaft fide: the natives employ many boats together in purfuit of the whales, chacing them up into the bays till they wound one of them mortally, and then it runs ahoore; and they fay that all the reft commonly follow the track of its blood, and run themfelves alfo on fhore in like manner, by which means many of them are killed. About five years ago there were fifty young whales killed in this manner, and moft of them eaten by the common people, who by experience find them to be very nourihing food. This I have been affured of by feveral perfons, but particularly by fome poor meagre people, who became plump and lufty by this food in the fpace of a week : they call it fea-pork, for fo it fignifies in their language. The bigger whales are more purgative than thefe leffer ones, but the latter are better for nourifhnent.

The bays afford plenty of fhell-fifh, as clams, oyfters, cockles, mufcles, limpets, wilks, fpout-fifh; of which laft there is fuch a prodigious quantity caft up out of the fand of Loch-tua, that their noifome finell infects the air, and makes it very unhealthful to the inhabitants, who are not able to confume them, by eating or fattening their ground with them; and this they fay happens moft commonly once in feven years.

The bays and coafts of this ifland afford great quantity of fmall coral, not exceeding fix inches in length, and about the bignefs of a goofe's quill. This abounds moft in Loch-fea-fort, and there is coraline likewife on this coaft.

There are a great many frefh-water lakes in this ifland, which abound with trouts and eels. The common bait ufed for catching them is earthworms, but a handful of parboiled mufcles thrown into the water attracts the trouts and cels to the place: the fittelk time for catching them is when the wind blows from the fouth-welt. There are feveral rivers on each fide this illand which afford falmons, as alfo black mufcles, in which many times pearl is found.

The natives in the village Barvas retain an ancient cuftom of fending a man very early to crofs Barvas river every firlt day of May, to prevent any females crolling it firf ; for that they fay would hinder the falmon from coming into the river all the year round: they pretend to have learned this from a foreign failor, who was fhipwrecked upon that coalt a long time ago. This obfervation they maintain to be true from experience.

There are feveral fprings and fountains of curious effects; fuch as that of LochCarlvay, that never whitens linen, which hath often been tried by the inhabitants. The well at St. Cowften's church never boils any kind of meat, though it be kept on fire a whole day. St. Andrew's well, in the village Shadar, is by the vulgar natives made a teft to know if a fick perfon will die of the diftemper he labours under. They fend one wih a wooden difh to bring fome of the water to the patient, and if the difh which is then laid fofily upon the furface of the water turn round fun-ways, they conclude that the patient will recover of that diftemper; but if otherwife, that he will die.

There are many caves upon the coalt of this ifland, in which great numbers of otters and feals do lie; there be alfo many land and fea-fowls that build and hatch in them.

The cave in Loch-Grace hath feveral pieces of a hard fubflance in the bottom, which diltil from the top of it. There are feveral natural and artificial forts in the coalt of this inland, which are called Dun, from the Irih word dain, which fignifies a fort. The natural forts here are Dun-owle, Dun-coradil, Dun-eifen.

The caftle at Stornvay village was deftroyed by the Englifh garrifon kept there by Oliver Cromwell. Sone few miles to the north of Brago there is a fort compofed of large foncs; it is of a round form, made taperwife towards the top, and is three fories high : the wall is double, and hath feveral doors and ftairs, fo that one may go round within the wall. There are fome cairns or heaps of fones gathered together on heaths, and fome of them at a great diftance from any ground that affords fones; fuch as Cairnwarp near Mournagh-hill, \&c. Thefe artificial forts are likewife built upon heaths at a confiderable diffance alfo from fony ground. The thrufhel fone in the parifh of Barvas is above twenty feet high, and almoft as much in breadth. There are three erected ftones upon the north fide of Loch-Carlvay, about twelve feet high each. Several other ftones are to be feen here in remote places, and fome of them flanding on one end. Some of the ignorant vulgar fay, they were men by inchantment turned into ftones; and others fay they are monuments of perfons of note killed in battle.

The moft remarkable fones for number, bignefs and order, that fell under my obfervation, were at the village of Claffernifs ${ }^{*}$, where there are thirty-nine fones fet up fix or feven feet hight, and two fect in breadth each: they are placed in form of an avenue, the breadth of which is eight feet, and the dittance between each fone fix ; and there is a fone fet up in the entrance of this avenue : at the fouth end there is joined to this range of fone a circle of twelve flones of equal diftance and height with the other thirty-nine. There is one fet up in the centre of this circle, which is thirteen feet high, and fhaped like the rudder of a fhip: without this circle there are four fones ftanding to the weft, at the fame diftance with the fones in the circle; and there are four fones fet up in the fame manner at the fouth and eaft fides. I enquired of the inhabitants what tradition they had from their anceftors concerning thefe fones; and they told me, it was a place appointed for worhip in the time of heathenifm, and that the chief druid or prieft ftood near the big ftone in the centre, from whence he addreffed himfelf to the people that furrounded him.

Upon the fame coaft alfo there is a circle of high flones ftanding on one end, about a quarter of a mile's diftance from thofe above mentioned.

The fhore in Egginefs abounds with many little fmooth fones prettily variegated with all forts of colours; they are of a round form, which is probably occafioned by the toffing of the fea, which in thofe parts is very violent.

The cattle produced here are cows, horfes, fheep, goats, hogs. Thefe cows are little, but very fruifful, and their beef very fweet and tender. The horfes are confiderably lefs here than on the oppofite continent, yet they plow and harrow as well as bigger horfes, though in the fpring-time they have nothing to feed upon but fea-ware. There are abundance of deer in the chace of Ofervaul, which is fifteen miles in compafs, confifting in mountains, and vallies between them: this affords good pafturage for the deer, black cattle, and fheep. This foreft, for fo they call it, is furrounded with the fea, except about one mile on the weff fide : the deer are forced to feed on feaware, when the fnow and froft continue long, having no wood to fhelter in, and fo are expofed to the rigour of the fcafon.

[^311]I faw big roots of trees at the head of Loch-Erifport, and there is about a hundred young birch and hazle trees on the fouth-weft fide of Loch-Stornvay; but there is no more wood in the ifland. There is great variety of land and fea-fowls to be feen in this and the leffer adjacent iflands.

The amphibia here are feals and otters; the former are eaten by the vulgar, who find them to be as nourilling as beef and mutton.

The inhabitants of this ifland are well proportioned, free from any bodily imperfections, and of a good ftature : the colour of their hair is commonly a light brown or red, but few of them are black. They are a healthful and frong-bodied people, feveral arrive to a great age: Mr. Daniel Morifon, late minifter of Barvas, one of my acquaintance, died lately in his cighty-fixth year.

They are generally of a fanguine conftitution : this place hath not been troubled with epidenical difeafes, except the fmall-pox, which comes but feldom, and then it fiveeps away many young people. The chin-cough afliets children too: the fever, diarrhca, dyfenteria, and the falling down of the uvula, fevers, jaundice, and flitches, and the ordinary coughs proceeding from cold, are the difeafes moft prevalent here. The common cure ufed for removing fevers and pleurifies is to let blood plentifully. For curing the diarrhea and dyfenteria, they take fmall quantities of the kernel of the black Molocca beans, called by them crofpunk; and this being ground into powder, and drunk in boiled milk, is by daily experience found to be very effectual. They likewife ufe a little dofe of treftarig water with good fuccefs. When the cough affects them, they drink brochan plentifully, which is oat-meal and water boiled together; to which they fometimes add butter. This drink, ufed at going to bed, difpofeth one to fleep and fiveat, and is very diuretic, if it hath no falt in it. They ufe alfo the roots of nettles, and the the roots of reeds boiled in water, and add yeaft to it, which provokes it to ferment; and this they find alfo beneficial for the cough. When the uvula falls down, they ordinarily cut it, in this manner: they take a long quill, and putting a horfe-hair double into it, make a noofe at the end of the quill, and putting it about the lower end of the uvula, they cut off from the uvula all that is below the hair with a pair of fciffars, and then the patient fwallows a liftle bread and cheefe, which cures him. This operation is not attended with the leaft inconvenience, and cures the diftemper fo that it never returns. They cure green wounds with ointment made of golden-rod, all-heal, and freh butter. The jaundice they cure two ways: the firt is by laying the patient on his face, and pretending to look upon his back-bones, they prefently pour a pail-full of cold water on his bare back, and this proves fuccefsful. The fecond cure they perform by taking the tongs and making them red-hot in the fire; then pulling off the cloaths from the patient's back, he who holds the tongs gently touches the patient on the vertebra upwards of the back, which makes him furioufly run out of doors, ftill fuppofing the hot iron is on his back, till the pain be abated, which happens very fpeedily, and the patient recovers foon after. Donald-Chuan, in a village near Bragir, in the parihh of Barvas, had by accident cut his toe at the change of the moon, and it bleeds a frefh drop at every change of the moon ever fince.

Anna, daughter to George, in the village of Melboft, in the parih of Ey, having been with child, and the ordinary time of her delivery being expired, the child made its paffage by the fundament for fome years, coming away bone after bone. She lived feveral years after this, but never had any more children. Some of the natives, both of the inland of Lewis and Harries, who converfed with her at the time when this extraordinary thing happened, gawe me this account.

The natives are generally ingenious and quick of apprehenfion; they have a mectanical genius, and feveral of both fexes have a gift of poefy, and are able to form a fatire or panegyric extempore, without the affiftance of any ftronger liquor than water to raife their fancy. They are great lovers of mufic ; and when I was there they gave an account of eighteen men who could play on the violin pretty well, without being taught. They are ftill very hofpitable, but the late years of fcarcity brought then very low, and many of the poor people have died by fanine. The inhabitants are very dextrous in the exercifes of fwimming, archery, vaulting, or leaping, and are very flout and able feamen; they will tug at the oar all day long upon bread and water, and a fnufh of tobacco.

## Of the inferior adjucent IJands.

WITHOUT the mouth of Loch-Carlvay lies the fmall illand Garve; it is a high rock, about half a mile in compafs, and fit only for pafturage. Not far from this lies the ifland of Berinfay, which is a quarter of a mile in compals, naturally a ftrong fort, and formerly ufed as fuch, being almoft inacceflible.

The ifland Fladda, which is of fmall compafs, lies between Berinfay and the main land. Within thefe lies the illand called Bernera Minor, two miles in length, and fruitful in corn and grafs. Within this inland, in the middle of Loch-Carlvay, lies the ifland of Bernera Major, being four miles in length, and as much in breadth : it is fruitful alfo in corn and grafs, and hath four villages. Alexander Mac-Lenan, who lives in Bernera Major, told me, that fome years ago a very extraordinary cbb happened there, exceeding any that had been feen betore or fince; it happened about the vernal equinox, the fea retired fo far as to difcover a fone-wall, the length of it being about forty yards, and in fome parts about five, fix, or feven feet high, they fuppofe much more of it to be under water : it lies oppofite to the weff-fide of Lewis, to which it adjoins. He fays that it is regularly built, and without any doubt the effect of human induftry. The natives had no tradition about this piece of work, fo that I can form no other conjecture about it, but that it has probably been erceted for a defence againft the fea, or for the the ufe of fifhermen, but came in time to be overflowed. Near to both Berneras lie the fmall iflands of Kaialifay, Cavay, Carvay, and Grenim.

Near to the north-weft promontory of Carlvay Bay, called Galen-head, are the little illands of Pabbay, Shirem, Vaxay, Wuya, the Great and Leffer. To the north-weft of Gallen-head, and within fix leagues of it, lie the Flannan-Iflands, which the feamen call North-hunters; they are but fmall iflands, and fix in number, and maintain about feventy !heep yearly. The inhabitants of the adjacent lands of the Lewis, having a right to thefe iflands, vifit them once every fummer, and there make a great purchafe of fowls, eggs, down, feathers, and quills. When they go to fea, they have their boat well manned, and nake towards the iflands with an eaft-wind; but if before or at the landing the wind turn wefterly, they hoift up fail, and feer directly home again. If any of their crew is a novice, and not verfed in the cuftoms of the place, he muft be inftructed perfectly in all the punctilios obferved here before landing; and to prevent inconveniencies that they think may enfue upon the tranfgreffion of the leaft nicety obferved here, every novice is always joined with another, that can inftruet him all the time of their fowling : fo all the boat's crew are match'd in this mannor. After their landing, they faften their boat to the fides of a rock, and then fix a wooden ladder, by laying a flone at the foot of it, to prevent its falling into the fea; and when they are got up into the ifland, all of them uncover their heads, and make a turn fun-ways round, thanking God for their fafety. The firt injunction given after landing, is not to eafe

Nature in that place where the boat lies, for that they reckon a crime of the higheft nature, and of dangerous confequence to all their crew; for they have a great regard to that very piece of the rock upon which they firft fet their feet, after efcaping the danger of the ocean.

The bigeft of thefe iflands is called lifand-More; it has the ruins of a chapel dedicated to St. Flannan, from whom the ifland derives its name. When they are come within about twenty paces of the altar, they all ftrip themfelves of their upper garments at once; and their upper clothes being laid upon a llone, which ttands there on purpofe for that ufe, all the crew pray three times before they begin fowling: the firt day they fay the firft prayer, advancing towards the chapel upon their knees; the fecond prayer is faid as they go round the chapel; the third is faid hard by or at the chapel: and this is their morning fervice. 'Their vefpers are performed with the like number of prayers. Another rule is, that it is abfolutely unlawful to kill a fowl with a fone, for that they reckon a great barbarity, and directly contrary to ancient cuftom.

It is alfo unlawfal to kill a fowl before they afcend by the ladder. It is abfolutely unlawful to eall the inland of St. Kilda (which lies thirty leagues fouthward) by its proper Irilh name Hirt, but only the high country. They mult not fo much as once name the iflands in which they are fowling, by the ordinary name Flannan, but only the country. There are feveral other things that mult not be called by their common names: e.g. vi $k$, which in the language of the natives fignifies water, they call burn: a rock, which in their language is creg, muft here be called crucy, i. e. hard: thore in their language expreffed by claddach, muft here be called vab, i. e. a cave: four in their language is expreffed gort, but muft here be called gaire, i. e. fharp: flippery, which is exprefled bog, muft be called foft : and feveral other things to this purpofe. They account it alfo unlawful to kill a fowl after evening-prayers. There is an ancient cuftom, by which the crew is obliged not to carry home any fheep.fuet, let them kill ever fo many fheep in thefe illands. One of their principal cuftoms is not to fteal or eat any thing unknown to their partner, elfe the tranfgreflor (they fay) will certainly vomit it up; which they reckon as a juft judgment. When they have loaded their boat fufficiently with fheep, fowls, eggs, down, fifh, \&c. they make the beft of their way homeward. It is oblerved of the fheep of thefe iflands, that they are exceeding fat, and lave long horns.

I had this fuperfitious account not only from feveral of the natives of the Lewis, but likewife from two who had been in the Flannan illands the preceding year. I afked one of them if he prayed at home as often and as fervently as he did when in the Flannan illands, and he plainly confeffed to me that he did not: adding further, that thefe remote iflands were places of inherent fanctity; and that there was none ever yet landed in them but found himfelf more difpofed to devotion there, than any where elfe. The ifland of Pigmies, or as the natives call it, the inland of Little Men, is but of fmall extent. 'There has been many fmall bones dug out of the ground here, refembling thofe of human kind more than any other. This gave ground to a tradition which the natives have of a very low fatured people living once here, called Lürbirdan, i. e. Pignies.

The ifland Rona is reckoned about twenty leagues from the north-ealt point of Nefs in Lewis, and counted but a mile in length, and about half a mile in breadth: it hath a hill in the weft part, and is only vifible from the Lewis in a fair funmers' day. I had an account of this little ifland, and the cuftom of it, from feveral natives of Lewis, who had been upon the place; but more particularly from Mr. Daniel Morifon, Minilter of Barvas, after his return from Rona ifland, which then belonged to him, as part of his glebe. Upon'my landing (fays he) the natives received me very affectionately, and addreffed me with their ufual falutation to a franger: "God fave you, pilgrim, you are
heartily welcome here; for we have had repeated apparitions of your perfon among us, (after the manner of the fecond fight, and we heartily congratulate your arrival in this our remote country." One of the natives would needs exprefs his high efteem for my perfon, by making a turn round about me fun-ways, and at the fame time bleffing me, and wifhing meall happinefs; but I bid him let alone that piece of homage, telling him 1 was fenfible of his good meaning towards me : but this poor man was not a little difitp. pointed, as were allo his neighbours; for they doubted not but this ancient ceremony would have been very acceptable to me: and one of them told me, that this was a thing due to my claracter from them, as to their chief and patron, and they could not nor would not fail to perform it. 'They conducted me to the little village where they dwell, and in the way thither there were three inclofures; and as I entered each of thefe, the inhabitants feverally faluted me, taking me by the hand, and faying, "Traveller, you are welcome here." They went along with me to the houfe that they had afirned for niy lodging; where there was a bundle of ftraw lain on the floor, for a feat for me to fit upon. After a little time was fpent in general difcourfe, the inhabitants retired to their refpective dwelling-houfes, and in this interval, they killed each man a theep, being in all five, anfwerable to the number of their families. The fkins of the fleep were entire, and flayed off fo from the neck to the tail, that they were in form like a fack. Thefe fkins being flayed off after this manner, were by the inhabitants inftantly filled with bar-ley-meal; and this they gave me by way of a prefent: one of their number acted as fpeaker for the reft, faying, "Traveller, we are very fenfible of the favour you have done us in coming fo far with a defign to inftruct us in our way to happinefs, and at the dame time to venture your felf on the great ocean; pray be pleafed to accept of this finall prefent, which we humbly offer as an expreflion of our fincere love to you." This I accepted, though in a very coarfe drefs; but it was given with fuch an air of hofpitality and good-will, as deferved thanks. They prefented my man alfo with fome pecks of meal, as being likewife a traveller: the boat's-crew, having been in Rona before, were not reckoned ftrangers, and therefore was no prefent given them, but their daily maintenance.

There is a chapel here dedicated to St. Ronan, fenced with a fone wall round it; and they take care to keep it neat and clean, and fiveep it every day. There is an altar in it, on which there lies a big plank of wood about ten feet in length; every foot has a hole in it, and in every hole a fone, to which the natives afcribe feveral virtues: one of them is fingular, as they fay, for promoting fpeedy delivery to a woman in travail.

They repeat the Lord's Prayer, Creed, and Ten Commandments in the chapel every Sunday morning. They have cows, heep, barley and oats, and live a harmlefs life, being perfectly ignorant of moft of thole vices that abound in the world. They know nothing of money or gold, having no occafion for either; they neither fell nor buy, but only barter for fuch little things as they want ; they covet no wealth, being fully content and fatisfycd with food and raiment; though at the fame time they are very precife in the matter of property among themfelves: for none of them will by any means allow his neighbour to fifh within his property; and every one mutt exaftly obferve not to make any incroachuent on his neighbour. They have an agreeable and hofpitable temper for all frangers : they concern not themfelves about the reft of mankind, except the inhabitants in the north part of Lewis. They take their firname from the colour of the fky, rain-bow, and clouds. There are only five familics in this fmall illand, and every tenant hath his dwelling-houfe, a barn, a houfe where their beft effects are preferved, a houfe for their cattle, and a porch on each fide of the door to kcep off the rain or fnow. Their houfes are built with fone, and thatched with flraw, which is kept
down with ropes of the fame, poifed with ftones. They wear the fame habit widh thofe in Lewis, and fpeak only Irifh. When any of them come to the Lewis, which is feldom, they are aftonithed to fee fo many people. They much admire greyhounds, and love to have them in their company. They are mightily pleafed at the light of horfes; and one of them obferving a horfe to neigh, afked if that horfe laughed at him. A boy from Rona perceiving a colt run towards him, was fo much frighted at it, that he jumped into a bufl of nettles, where his whole fkin became full of blifters.

Another of the natives of Rona having had the opportunity of travelling as far as Coul, in the flhire of Rofs, which is the feat of Sir Alexander Mac-kenvie, every thing he faw there was furprizing to him; and when he heard the noife of thofe who walked in the rooms above him, he prefently fell to the ground, thinking thereby to fave his life, for he fuppofed that the houfe was coming down over his head. When Mr. Morifon the miniflcr was in Rona, two of the natives courted a maid with intention to marry her; and being married to one of them afterwards, the other was not a little difappointed, becaufe there was no other match for him in this ifland. The wind blowing fair, Mr. Morifon failed directly for Lewis; but after three hours failing was forced back to Rona by a contrary wind: and at his landing, the poor man that had loft his fweetheart was overjoyed, and expreffed himfelf in thefe words; "I blefs God and Ronan that you are returned again, for I hope you will now make me happy, and give me a right to enjoy the woman every other year by turns, that fo we both may have illue by her. Mr. Morifon could not refrain from fmiling at this unexpected requeft, chid the poor man for his unreafonable demand, and defired him to have patience for a year longer, and he would fend him a wife from Lewis; but this did not eafe the poor man, who was tormented with the thoughts of dying without iflue.

Another who wanted a wife, and having got a shilling from a feaman that happened to land there, went and gave this fhilling to Mr. Morifon, to purchafe him a wife in the Lewis, and fend her to him, for he was told that this piece of money was a thing of extraordinary value; and his defire was gratified the enfuing year.

About fourteen years ago a fwarm of rats, but none knows how, came into Rona, and in a fhort time eat up all the corn in the ifland. In a few months after, fome feamen landed there, who robbed the poor people of their bull. Thefe misfortunes, and the want of fupply from Lewis for the fatace of a year, occafioned the death of all that ancient race of people. The fteward of St. Kilda being by a florm driven in there, told me that he found a woman with her child at her brealf, both lying dead at the fide of a rock. Some years after, the minifter (to whom the ifland belongeth) fent a new colony to this ifland, with fuitable fupplies. The following year a boat was fent to them with fome more fupplies, and orders to receive the rents; but the boat being lott, as it is fuppofed, I can give no further account of this late plantation.

The iuhabitants of this little ifland fay, that the cuckow is never feen or heard here, but after the death of the Earl of Seaforth, or the minifter.

The rock Souliker lieth four leagues to the eaft of Rona; it is a quarter of a mile in circumference, and abounds with great numbers of fea-fowl, fuch as Solan geefe, guillamote, coulter-neb, puffin, and feveral other forts. The fowl called the colk is found here : it is lefs than a goofe, all covered with down, and when it hatches it cafts its feathers, which are of divers colours; it has a tuftit on its head refembling that of a peacock, and a train longer than that of a houle-cock, but the hen has not fo much ornament and beauty.

The ifland Siant, or, as the natives call it, Inand-More, lies to the caft of Uhinefs in Lewis, about a legue. There are three fmall iflands here; the two fouthern illands
are feparated only by fpring.tides, and are two miles in circumference. Inand-More hath a chapel in it dedicated to the Virgin Mary, and is fruitfulia corn and grals: the inand joining to it on the weft is only for palturage. I faw a couple of eagles here: the natives told me, that thefe eagles would never fuffer any of their kind to live there but themfelves, and that they drove away their young ones as foon as they were able to fly. And they told me likewife, that thofe eagles are fo careful of the place of their abode, that they never yet killed any fheep or lamb in the inand, though the bones of lambs, of fawns, and wild-fowls, are frequently found in and about their neft; fo that they make their purchafe in the oppofite inlands, the neareft of which is a league diftant. This ifland is very ftrong and inacceffible, fave on one fide where the afcent is narrow, and fomewhat refembling a llair, but a great deal more high and fteep; notwithftanding which, the cows pafs and repafs by it fafely, though one would think it unealy for a man to climb. About a mufket-fhot further north lics the biggeft of the illands called More, being two miles in circumference: it is fruitful in corn and pafturage, the cows here are much fatter than any I faw in the inand of Lewis. There is a blue fone on the furface of the ground here, moift while it lies there, but when dry, it becomes very hard; it is capable of any impreffion, and I have feen a fet of table-men made of this: ftone, prettily carved with different figures. There is a promontory in the north-end of the ifland of Lewis, called Europy.Point, which is fuppofed to be the furtheft to north-weit of any part in Europe.

Thefe illands are divided into two parihes, one called Baryas, and the other Ey or Y; both which are parfonages, and each of them having a minitter. The names of the churches in Lewis Illes, and the Saints to whom they were dedicated, are St. Columkil, in the ifland of that name; St. Pharaer in Kaernefs, St. Lennan in Sternvay, St. Collum in Ey, St. Cutchou in Garboft, St. Aula in Greafe, St. Michael in Toliolta, St. Collum in Garieu, St. Ronan in Eorobie, St. Thomas in Haboft, St. Peter in Shanaboft, St. Clement in Dell, Holy-Crofs Church in Galan, St. Brigit in Barove, St. Peter in Shiadir, St. Mary in Barvas, St. John Baptift in Bragar, St. Kiaran in Liani Shadir, St. Michael in Kirvig, St. Macrel in Kirkiboft, St. Dondan in Little Berneray, St. Michacl in the fame ifland, St. Peter in Pabbay ifland, St. Chriftopher's chapel in Uge, and Stornvay church : all thefe churches and chapels were, before the reformation, fanctuaries; and if a man had committed murder, he was then fecure and fafe when once within their precincts.

They were in greater veneration in thofe days than now: it was the conflant practice of the natives to kneel at firf fight of the church, though at a great diftance from them, and then they faid their Pater-nofter. John Morifon of Bragir told me, that when he was a boy, and going to the church of St. Mulvay, he obferved the natives to kneel and and repeat the Pater-nolter at four miles difance from the church. The inhabitants of this ifland had an ancient cufton to facrifice to a fea.god, called Shony, at Hallow-tide, in the manner following: the inhabitants round the ifland came to the church of St. Mulvay, having each man his provifion along with him; every family furnifhed a peck of malt, and this was brewed into ale: one of their number was picked out to wade into the fea up to the middle, and carrying a cup of ale in his hand, ftanding ftill in that pofture, cried out with a loud voice, faying, "Shony, I give you this cup of ale, hoping that you'll be fo kind as to fend plenty of fea-ware, for inriching our ground the enfuing year :" and fo threw the cup of ale into the fea. This was performed in the night time. At his return to land, they all went to church, where there was a candle burning upon the altar: and then fanding filent for a little time, one of them gave a fignal, at which the candle was put out, and immediately all of them went to the fields, where
they fell a drinking their ale, and fpent the remainder of the night in dazeling and finging, \&c.
The next morning they all returned home, being well fatisfied that they had punctually obferved this folems anniverfary, which thev believed to be a powertul means to procure a plentiful crop. Mr. Daniel and Mr. Kenneth Morifon, minifters in L.exis, told me they fpent feveral years, before they could perfuade the vulgar matives to absano don this ridiculous pisce of fuperfition; which is quite abolifhed for thele thirty-two years patt.

The inhabirants are all proteftants, except one family, who are Roman catholicks. I was told, that about fourteen years ago, three or four fiflermen, who then forfook the proteflant communion, and mbraced the Romihh faith, having the opportunity of a Popiifh prieft on the place, hey applied themfelves to him for fome of the holy water; it being utual for the priells to frinkle it m. the bays, as an infallible means to procure plenty of herring, as alio to bring the to intio thofe nets that are befprinkled with it. Thefe fifhers accordingly having ot the watur, poured it upon their nets before they droped them into the fea; they lilewife turned the infide of their coats outwards, after which they fet their nets in the evening st the ufual hour. The proteftant fifhers, who. ufed no other ineans than throwing their nets into the fea, at the fame time were unconcerned; but the Papifts being impatient and of expectation, got next morning betimes to draw their nets, and being come to the place, they foon perceived that all their nets were loft; but the proteltants found their nets fafe, and full of herring : which was no fimall mortification to the prieft and his profelites, and expofed them to the derifion of their neighbours.

The proteflant natives obferve the feftivals of Chriftmas, Good-Friday, Eafter, and Michoelmas: upon this lait they have an anniverfary cavalcade, and then both fexes ride on horfe-back.

There is a village called Storn-Bay, at the head of the bay of that name; it confifts of about fixty families: there are fome houfes of entertainment in it, as alfo a church, and a fchool, in which Latin and Englifh are taught. The fteward of the Lewis hath his refidence in this village. The Lewis, which was poffeffed by Mack-leod of Lewis, for feveral centuries, is, fince the reign of King James the fixth, become the property of the Earl of Scaforth, who ftill cujoys it.

## The I/le of Harries.

THE Harries being feparated from Lewis is eighteen miles, from the Huninefs on the weftern ocean to L.och-Seafort in the eaft; from this bounding to the point of Strond in the fouth of Harrics, it is twenty-four miles; and in fome places four, five, and fix miles in breadth. The foil is almoft the fame with that of Lewis, and it produces the fame forts of corn, but a greater increafe.

The it itererately cold, and the natives endeavour to qualify it by taking a dofe of Antwin . Trandy: i. hey brew no fuch liquors as Treftarig, or Ufquebaughbay: wer coan of Harries is generally rocky and mountainous, covered with with grafs and heath. The weft fide is for the moft part arable on the fea-coaft ; fome parts of the hills cn the eaft fide are naked without earth. The foil being dry and fandy, is fruifful when manured with fea-ware. The grafs on the weft fide is moft clover and dafy, which in the fummer yields a moft fragrant finell. Next to Loch-Seafort, which for fome miles divides the Lewis from Harries, is the notable harbour within the ifand, by fea-faring men called Glafs, and by the natives Sculpa: it is a mile and a half
long from fouth to north, and a mile in breadth. There is an entrance on the fouth and north ends of the ine, and feveral good harbours in each, well known to the generality of feamen. Within the iffe is Loch-Tarbat, running four miles wett ; it hath feveral fmall ifles, and is fometimes frequented by herring. Without the Loch there is plenty of cod, ling, and large eels.

About half a league further on the fame coaft lies Loch-Stoknefs, which is about a mile in length ; there is a frefh-water lake at the entrance of the ifland, which affords oyftere, and feveral forts of fifh, the fea having accefs to it at fpring-tides.

About a league and a half farther fouth, is Loch. Finiflay, an excellent though unknown harbe it the land lies low, and hides it from the fight of the fea-faring men, till they come verv near the coaft. There are, befides this harbour, many creeks on this fide, for barks and leffer boats.

Frefh-water lakes a hound in this ifland, and are well fored with trout, eels, and falmon. Each lake has a river onning from it to the fea, from whence the falinon comes about the heginning of May, and fooner if the fealon be warm. The beft time for angling for falmon and teut, is when a warm fouth-weft wind blows. They ufe earth-worms commonly for b a , but cockles attract the falmon better than any other.
'There is variety of excellent fprings iffuing from all the mountains of this ifland, but the wells on the piaine $n$. $r$ the fea are not good. There is one remarkable fountain lately difcovered near Marag.houfes, on the eaftern coaft, and has a large fone by it, which is fulficient to "ect a flranger to it. The natives find by experience that it is very effectual for re. g loft appetite ; all that drink of it become very foon hungry, though they have ea entifully but an hour before: the truth of this was confirmed to me by thole that w perfectly well, and alfo by thofe that were infirm; for it had the fame effect on both.

There is a well in th heath, a mile to the eaft from the village Borve; the natives fay that they find it effic sious againft cholics, ftitches, and gravel.
There are feveral cav is in the mountains, and on each fide the coaft : the largeft and befl formified by nate is that in the hill Ulweal, in the middle of a high rock; the paffage leading to it is io narrow, that one only can enter at a time. 'This advantage renders it fecure from any attempt; for one fingle man is able to keep off a thoufand, if he have but a ftaff in his hand, fince with the lealt touch of it he may throw the ftrongeft man down the rock. The cave is capacious enough for fifty men to lodge in : it hath two welly in it, one of which is excluded from dogs; for they fay that if a dog do but tafte of thw water, the well prefently drieth up: and for this reafon, all fuch as have occafion to lodge there take care to tie their dogs, that they may not have accefs to the water. The other well is called the Dog'swell, and is only drunk by them.

There are feveral ancient forts erected here, which the natives fay were built by the Danes; they are of a round form, and have very thick walls, and a paffage in them by which one can go round the fort. Some of the fones that compofe them are very large : thefe forts are named after the villages in which they are built, as that in Borve is called Down. Borve, \&c. They are built at convenient dittances on cach fide the coaft, and there is a fort built in every one of the lefler ifles.

There are feveral ftones here erected on one end, one of which is in the village of Borve, about feven feet high. There is another ftone of the fame height to be feen in the oppofite Ine of Faranfay. There are feveral heaps of fones, commonly called karnes, on the tops of the hills and rifing grounds on the coaft, upon which they ufed to burn heath, as a fignal of an approaching enemy. There was always a fentivol. 1 m.
nel at each karne to obferve the fea-coaft ; the fteward of the ine made frequent rounds to take notice of the fentincls, and if he found any of them ancep, he itripped them of their clothes, and deferred their perfonal puniflments to the proprietor of the place. This ifle produceth the fame kind of catte, fheep, and goats, that are in the Lewis. The natives gave ne an account, that a couple of goats did grow wild on the hills, and after they had increafed, they wore obferve! to bring forth their young twice a year.

There are abundance of deer in the hills and mountains here, commonly called the Foreft, which is eighteen miles in lenglh from cat to welt; the number of deer computed to be in this place is at leaft two thoufand; and there is none permitted to humt there without a licence from the fteward to the forefter. There is a particular mountain, and :bove a mile of Ground furrounding it, to which no man hath accefs to humt, this place being referved for Macleod himfelf; who, when he is difpofed to hunt, is fure to find game enough there.

Both hills and vallers in the foreft are well provided with plenty of good grafs mixed with heath, which is all the fhelter thefe decr have during the winter and fipring; there is not a fhrub of wood to be feen in all the foreft; and, whea a form comes, the deer betake themfelves to the fea-coaft, where they feed upon the alga marina, or feawarc.

The mertrick, a four-footed creature, about the fize of a big cat, is pretty numerous in this infe; they have a fine fkin, which is finooth as any fur, and of a brown colour. They fay that the dung of this animal yiclus a fent like mulk.

The amphibia here are otters and feals; the latter are eat by the meaner fort of people, who fay they are very nourifhing. The natives take them with nets, whofe ends are tied by a rope to the flrong alga, or fea ware, growing on the rocks.

This ifland abounds with variety of land and fea fowl, and particularly with very good hawks.

There are eagles here of two forts; the one is of a large fize and grey colour, and thefe are very diftructive to the fawns, fheep, and lambs.

The other is confiderably lefs, and black, and fhaped like a hawk, and more dcAructive to the decr, \&cc. than the bigger fort.

There are no venemous creatures of any kind here, except a little viper, which was not thought venomous till of late, that a woman died of a wound the received from one of them.

I have feen a great many rats in the village Rowdil, which became very troublefome to the natives, and deftroyed all their corn, miik, butter, cheefe, \&c. They could not extirpate thefe vermin for fome time by all their endeavours. A confiderable number of cats was employed for this end, but were fill wortted, and became perfectly faint, becaufe overpowered by the rats, who were twenty to one. At length one of the natives, of more fagacity than his neighbours, found an expedient to renew his cat's flength and courare, which was by giving it warm milk after every encounter with the rats; and the like being given to all the other cats after every batte, fucceeded fo well, that they left not one rat alive, notwithtanding the great number of them on the place.

On the eaft fide the village Rowdil, there is a circle of ftone, within cight yards of the fhere; it is about three fathom under water, and about two forics high; it is in form ! roader above than below, like to the lower thory of a kiln: I faw it perfectly on one luit, but the feafon being then windy, hindered me from a full view of it. The natives lay that there is fuch another circle of lefs compats in the pool Borodil, on the other fide the bay.

The fhore on the weft coaft of this ifland affords a variety of curious fhells and walks; as Tclline and Turbines of various kinds; thin Patella, ftreaked blue, various coloured, Pectencs, fome blue, and fome of orange colours.

The $O_{s-f \text { cpic }}$ is found on the fand in great quantities. The natives pulverize it, and take a dofe of it in boilcd milk, which is found by experience to be an effectual remedy againt the diarrhea and dyfenteria. They rub this powder tikewife, to take off the film on the cyes of theep.

There is varicty of nuts, called Molluka beans, tome of which are ufed as amulets againft witchcraft, or an evil eye, particularly the white one; and, upon this account, they are wore about children's necks, and if any evil cye is intended to them, they fay the nut changes into a black colour. That they did change colour, I found true by my own obfervation, but camot be pofitive as to the caule of it.

Malcolm Campbell, fteward of Harrice, told me, that fome weeks before my arrival there, all his cows gave blood : facad of mith for feveral days together: one of the neighbours told his wife that th:e muft be witchcraft, and it would be eafy to remove it, if the would but take the white nut, called the Virgin Mary's nut, and lay it in the pail into which the was to milk the cows. This advice fle prefently followed, and having milked one cow into the pail with the nut in it, the milk was all blood, and the nut changed its colour into dark brown; fhe ufed the nut again, and all the cows gave pure good milk, : hich they afcribe to the virtue of the nut. 'This very nut Mr. Campbell prefented me with, and I keep it flill by me.

Some fimall quantity of ambergreafe hath been found on the coaft of the ifland Bernera. I was told that a weaver in this inland had burnt a lump of it, to fhow him a light for the moit part of the night, but the ftrong feent of it made his head ache exccedingly, by which it was difcovered.

An ancient woman, ahout fixiy years of age, here loft her hearing, and having no phyfician to give her advice, the would needs try an experiment herfelf, which was thus: fhe took a quill with which fhe ordinarily finfled her tobacen, and filling it with the powder of tobacco, poured it into her ear; which had the defired effect, for fhe could hear perfectly well next day. Another neighbour about the fame age, having lolt her hearing fome time after, recovered it by the fane experiment, as I was told by the natives.

The fheep which feel here on fandy ground, become blind fometimes, and are cured by rubbing chalk in their eyes.

A fervant of Sir Normond Nacleod's living in the inand of Bernera, had a mare that brought forth a foal with boh the hinder feet cloven, which died about a year after: the natives concluded that it was a bad omen to the owner, and his death, which followed in a few yoars after, contimed thom in their opinion.

The matives make ufe of the fecds of a white wild carrot, inftead of hops, for brewing their beer; and they fay that it anfivers the end fulficiently well, and gives the drink a good rulth betides.

John Cimpiedi, forefter of Harries, makes ufe of this fingular remedy for a cold: he walks into the fa up to the midate with has clothes on, and immediately after goes wh bed in his wet clothes, and then laying the bedectothes over him, precures a fivent, which removes the diftenper; and this, he told me, is his only remedy for all mamer of colls. One of the faid John Campbell's fervants having his cheek fivelled, and there being no phyfician near, he atked his mafter's advice; he knew mething proper for him, but however bid him apply a plaifter of warm barley-dough to the place allieted. 'This afluaged the fwelling, and drew out of the flefh a little werm,
about half an inch in length, and about the bignefs of a goofe-quill, having a pointed head, and many little feet on each fide : this worm they call fillan, and it hath been found in the head and neek of feveral perfons that I have feen in the ifle of Skie.

Allium Latifolium, a kind of wild garlic, is nuch ufed by fome of the natives, as a remedy againit the fone : they boil it in water, and drink the infufion, and it expels fand powerfully with great eafe.

The natives told me, that the rock on the caft fide of Harrics, in the found of ifland Glafs, hath a vacuity near the front, on the north-weft fide of the found; in which they fay there is a fone that they call the Lunar-ftone, which advances and retires according to the increale and decreafe of the Moon.

A poor man born in the village Rowdil, commonly called St. Clement's-blind, loft his fight at every change of the moon, which obliged him to keep his bed for a day or two, and then recovered his fight.

The inferior iflands belonging to Harries are as follow : the illand Be:nera is five miles in circumference, and lies about two leagues to the fouth of Harries. The foil is fandy for the noof part, and yields a great product of barley and rye in a plentiful year, efpecially if the ground be enriched by fea-ware, and that there be rain enough to fatisfy the dry foil. I had the opportunity to travel this ifland leveral times, and upon a frict inquiry I found the product of barley to be fometimes twenty fold and upwards, and at that time all the eaft fide of the ifland produced thirty fold. This hath been confirmed to me by the natives, particularly by Sir Normond Macleod, who poffeffes the ifland; he likewife confirmed to me the account given by all the natives of Harries and South-Vift, viz. that one barley-grain produces in fome places feven, ten, twelve, and fourteen ears of barley; of which he himfelf being diffident for fome time, was at the pains to fearch nicely the root of one grain after fome weeks growth, and found that from this one grain many ears had been grown up. But this happers not, except when the feafon is very favourable, or in grounds that have not been cultivated fome years before; which, if manured with fea-ware, fellom fail to produce an extraordinary crop. It is obferved in this ifland, as elfewhere, that when the ground is dug up with fpades, and the turfs turned upfide down, and covered with fea-ware, it yields a better product than when it is ploughed.

There is a freh-water lake in this ifland, called I.och-Bruift, in which there are fmall iflands abounding with land and fea-fowl, which build there in the fummer. There is likwife plenty of eels in this lake, which are eafieft caught in September; and then the natives carry lights with them in the night-time to the rivulet running from the lake, in which the cels fall down to the fea in heaps together.

This inand in the fummer is covered all over with clover and daify, except in the corn-fields. There is to be feen about the houfes of Bernera, for the fpace of a mile, 2 foft fubftance, in fhew and colour exactly refembling the fea-plant called flake, and grows very thick among the grafs. The natives fay, that it is the product of a dry hot foil; it grows likewife in the tops of feveral hills in the ifland of Harries.

It is proper to add here an account of feveral ftrange irregularities in the tides, on Bernera ceaft, by Sir Robert Murray, mentioned in the Phil. Tranfactions.

The tides increafe and decreafe gradually, according to the moon's age, fo as about the third day after the new and full moon, in the Wettern Illes and Continent they are commonly at the higheft, and about the quarter moons at the loweft : (the former called fpring-tides, the other neap-tides.) The tides from the quarter to the higheft fpringtide increale in a certain proportion, and from the fpring-tide to the quarter-tide in like proportion; and the ebbs rife and fall always after the fame manner.

It is fuppofed that the increafe of tides is made in the proportion of fines: the firf increafe exceeds the loweft in a fimall proportion, the next in a greater, the third greater than that, and fo on to the middlemeft, whereof the excefs is greateft d diminifing again from that to the higheft fpring-tide, fo as the proportions before and after the middle do anfwer one another. And likewife from the higheft fpring tide to the loweft neap-tide, the decreales feem to keep the like proportions; and this commonly falls out when no wind or other accident caufes an alteration. At the beginning of each flood on the coat, the tide moves fafter, but in a finall degree, increafing its fwiftnefs till towards the middle of the flood; and then decreafing in fwiftnefs again fromthe mildle to the top of the high-water ; it is fuppofed that the inequal fpaces of time, the increafe and decreafe of fwifteefs, and confeguently the degrees of the rifings and fallings of the fame unequal fpaces of time, are performed according to the proportion of fines. The proportion cannot hold precifely and exactly in regard of the inequalities that fall out in the periods of the tides, which are believed to follow certain pofitions of the moon in regard to the equinos, which are known not to keep a precife contant courfe; fo that there not being equal portions of time between one new moon and an. other, the moon's return to the fame meridian cannot be always performed in the fame time. And the tides from the new moon being not always the fame in number, or fometimes but fifty-feven, fonmetimes fifty-eight, fometimes fifty-nine, (without any certain order or fucceffion) is another evidence of the difficulty of reduciug this to any great exactnefs.

At the eaft end of this ifle there is a ftrange reciprocation of the flux and reflix of the fea. There is another no lefs remarkable upon the weft fide of the Long Ifland; the tides which come from the fouth-weft run along the coaft northward; fo that during the ordinary courle of the tides, the flood runs ealt in the Frith where Berneray lies, and the ebb weft; and thus the fea ebbs and flows orderly, fome four days before the full and change, and as long after; (the ordinary fpring-tides rifing fome fourteen or fifteen foot upright, and all the reft proportionably, as in other places,) but afterwards, for four days before the quarter moons, and as long after, there is conftantly a great and fingular variation. For then (a foutherly moon making there the full fea) the courrie of the tide being eaftward, when it begins to flow, which is about nine and. a half of the clock, it not only continues fo about three and a half in the afternoon, that it be high-water; but after it begins to ebb, the current runs on ftill eaftward during the whole cbb ; fo that it runs eaftward twelve hours together, that is, all day long, from about nine and a half in the morning till about nine and a half at night. But then when the night-ride begins to flow, the current turns, and runs weftward all night, during both flood and ebb, for fome twelve hours more, as it did ealtward the day before. And thus the reciprocations continue, one flood and ebb running twelve hours eaftward, and another twelve hours weftward, till four days before the full and new moon; and then they refume their ordinary regular courfe as before, running eaft during the fix hours of flood, and welt during the fix of ebb.
There is another extraordinary irregularity in the tides, which never fails: that whereas between the vernal and autumnal equinox, that is, for fix months together, the courfe of irregular tides about the quarter moons, is to run all day, ${ }^{12}$ hours, as from about nine and a half to nine and a half or ten, exactly eaftward ; all night, that is, twelve hours more, weftward; during the other fix months, from the autumnal to the vernal equinox, the current runs all day weftward, and all night eaftward. I have obferved the tides as above, for the face of fome days both in April, May, July, and Augult.

The natives have frequent opportunities to fee this both day and night, and they all agree that the tides run as mentioned above.

There is a couple of ravens in this ifland, which beat away all ravenous fowls, and when their young are able to fly abroad, they beat them alfo out of the infand, but not without many blows, and a great noife.

There are two chapels in this ille ; to wit, St. Afaph's and St. Columbus's chapel. There is a ftone erected near the forner, which is eight feet high, and two feet thick.

About half a league from Bernera, to the weftward, lies the ifland Pabbay, three miles in circumference, and having a mountain in the middle. The foil is fandy, and fruitful in corn and grafs, and the natives have lately difcovered here a white marble. The weft end of this ifland, which looks to St. Kilda, is called the Wooden Harbour, beciufe the fands at low-water difcover feveral trees that have formerly grown there. Sir Normond Macleod told me, that he had feen a tree cut there, which was afterwards nade into a harrow.

There are two chapels in this ifland, one of which is dedicated to the Virgin Mary, the other to St. Muluar.

The fteward of Kilda, who lives in Pabbay, is accuftomed in time of a form to tie a bundle of puddings, made of the fat of fea-fowl, to the end of his cable, and lets it fall into the fea benind the rudder; this, he fays, hinders the waves from breaking, and calms the fea; but the feent of the greafe attracts the whales, which put the veffel in danger.

About half a league to the north of Pabbay, lies the ifle Sellay, a mile in circumference, that yields extraordinary pallurage for theep, fo that they vecome fat very foon; they have the biggelt horns that ever I faw on theep.

About a league farther to the north, lies the ille Taranfar, very fruiful in corn and grafs, and yiedds much yellow talk. It is three miles in circunfernce, and has two chapels, one dedicated to St. Tarran, the other to St. Keith.

There is an antient tradition among the natives here, that a man muft not be huricd in St. Tarran's, nor a woman in St. Keith's, becaufe otherwife the corpfe would be fund above-ground the day after it is interred. I told them this was a molt :idiculous fancy, which they might foon perccive by experience, if they would but put it to a trial. Roderick Campbell, who refides there, being of my opinion, refolved to embrace the firt opportunity that offered, in order to undecelse the credulous valrar ; and accordingly a poor man in this ifland, who died a year alter, was buried in St. Tarren's chapel, contrary to the ancient cuftom and tradition of this place, but his corpfe is till in the grave, from whence it is not like to rife until the general refurrection. This inflance has delivered the credulous natives from this unreafonable fancy. This illand is a mile diltant from the main land of Harries, and when the inharitants go from this ifland to Harrics, with a defign to fay for any there, they agree with thole that carry them over, on a particular motion of walking upona certan piece of ground, unknown to every body but themfelves, as a figmal to bring than back.
Three leagues to the weftward of this ifland bis Gaker, about half a mile in circumference; it excels any other plot of its extent fir ruitfunds in grals and product of milk; it maimains cioht or ten cows. The natives kill fals here, which are very big.

About two leagues farther north lies the ifland Se:rr, two mil.s in circumlernce, and is a high land covered with heal and grals.

Between Bernera and the main land of Harros lies the ifland linfay, which is above two mites in circumfereace, and for the molt part arable ground, which is fruitlul in
corn and grafs; there is an old chapel here for the ufe of the natives; and there was lately difcovercd a grave in the weft end of the ifland, in which was found a pair of fcales made of brafs, and a little hammer, both which were finely polifhed.

Between Enfay and the main land of Harries, lie feveral fmall iflands, fitter for pafturage than cultivation.

The little ifland Quedam hath a vein of adamant fone, in the front of the rock. The natives fay that mice do not live in this ifland, and when they chance to be carried thither among corn they die quickly after. Without thefe fmall iflands, there is a tract of fmall illes in the fame line with the eaft fide of the Harries and North-Vitt; they are in all refpects of the fame nature with thofe two iflands, fo that the fight of then is apt to difpofe one th think that they have been once united together.

The moft foutherly of thefe iflands, and the neareft to North-Vift is Hermetra, two miles in circumference: it is a moorifh foil, covered all over almof with heath, except here and there a few piles of grals, and the plant milk-wort; yet, notwithlanding this difadvantage, it is certainly the beft fpot of its extent for pafturage, among thefe ifles, and aflords great plenty of milk in January and February beyond what can be feen in the otlice inlands.

I faw here the foundation of a houfe built by the Engliih, in Charles the Firf's time, for one of their magazines to lay up the cafl, falt, \&cc. for carrying on the fifhery, which was then begun in the Weftern Inands; but this defign mifcarried becaufe of the civil wars which then broke out.

The channel between Harrics and North-Vift, is above three leagues in breadth, and abounds with rocks, as well under as above water ; though at the fame time veffels of three hundred tons have gone through it, from eatt to weft, having the advantage of one of the natives for a pilot. Some fixteen years ago, one Captain Froft was fafely conducted in this manner. The Harrics belongs in property to the Laird of Macleod; he and all the inhabitants are Proteltants, and obferve the feltivals of Chrittmas, GoodFriday, and St. Michael's day ; upon the latter, they rendezvous on horfeback, and make their cavalcade on the fands at low water.
The ifland of North-Vift liss about three leagues to the fouth of the ifland of Harries, being in form of a femicircle, the diameter of which looks to the eart, and is mountainous and full of heath, and fitter for palturage than cultivation. The weft fide is of a quite different foil, arable and phain; the whole is in length from fouth to north nine miles, and about thirty in circumfercnce.

There are four mountains in the middle, two lie within lefs than a mile of each other, and are called South and North-Lee. All the hills and heath afford good pafturage, though it confifts as much of heath as grafs. The arable ground hath a mixture of clay in fome places, and it is covered all over in fummer time and harveft with clover, daify, and variety of other plants, plealant to the fight, and of a very fragrant fmell; and abounds with black cattle and theep. The foil is very grateful to the hurbandman, yielding a produce of barley, from ten to thirtyfold in a plentiful year; provided the ground be manured with fea-ware, and that it have rain proportionable to the foil. I have, upon feveral occafions, enquired concerning the produce of barley in this and the neighbouring iflands; the fame being much doubted in the fouth of Scotland, as well as in England; and, upon the wholc, I have been affured by the moft ancient and indullious of the natives, that the increafe is the fame as mentioned before in Harries.

They told me, likewife, that aplot of ground which hath lain unmanured for fome ycars, would, in a very plentiful ieafon produce fourteen ears of barley from one grain; leveral ridges were then flhewed me of this extraordinary growth in different places.

The grain fown here is barley, oats, rye ; and it is not to be doubted but the foil would alfo produce wheat. The way of tillage here is commonly by ploughing, and fome by digging. The ordinary plough is drawn by four horles, and they have a little plough called rifle, i. e. a thing that cleaves, the coulter of which is in form of a fickle; and it is drawn fometimes by one, and fometimes by two horfes, according as the ground is. The defign of this little plough is to draw a deep line in the ground, to make it more eafy for the big plough to follow, which otherwife would be much retarded by the ftrong roots bent lying deep in the ground, that are cut by the little plough. When they dig with fpades, it produceth more increafe; the little plough is likewife ufed to facilitate digging as well as ploughing. They continue to manne the ground until the tenth of June, if they have plenty of braggir, i. $c$. the broad leaves growing on the top of the slga-marina.

About a lcague and a half to the fouth of the ifland Hermetra in Harries, lies LochMaddy, fo called from the three rocks without the entry on the fouth fide. They are called Maddies, from the great quantity of big mufeles, called Maddies, that grows upon them. This harbour is capacious enough for fome hundreds of veffels of any burden: it hath feveral ifles within it, and they contribute to the fecurity of the harbour, for a veffiel may fafely come clofe to the quay. The feamen divide the harbour in two parts, calling the fouth-fide Loch-Maddy, and the north fide Loch-Partan. There is one ifland in the fouth loch, which for its commodioufinefs is, by the Englifh, called Nonfuch. This loch hath been famous for the great quantity of herrings yearly taken in it within thefe fifty years laft palt. The natives told me, that in the memory of fome yet alive, there had been four hundred fail loaded in it with herrings at one feafon; but it is not now frequented for fifling, though the herrings do ftill abound in it; and on this coaft every fummer and harveft, the natives fit angling on the rocks, and as they pull up their hooks, do many times bring up herrings. That they are always on the coaft, appears from the birds, whales, and other finies, that are their forerunners every where; and yet it is ftrange, that in all this ifland there is not one herringnet to be had: but if the natives faw any cucouragenent, they could foon provide them. Cod, ling, and all forts of fill taken in thefe inlands, abound in and about this lake.

In this harbour there is a finall ifland called Vack fay, in which there is fill to be feen the foundation of a houfe, built by the Englifh, for a magazine to keep their cafk, falt, \&c. for carrying on a great fiflicry which was then begun there. The natives told me, that King Charles the Firft had a hare in it. This lake, with the convenience of its fifhings and iflands, is certainly capable of great improvencont; much of the ground about the bay is capable of cultivation, and affords a great deal of fuel, as turf, peats, and plenty of frefh water. It alfo affords a good quantity of oyfters, and clam fheilfifh; the former grow on rocks, and are fo big that they are cut in four pieces before they are cat.

About half a mile further fouth is Loch-Eport, having a rock without the mouth of the entry, which is narrow: the lake penetrates fome miles towards the weft, and is a good harbour, having feveral fimall ifles widhin it. The feals are very numerous here. In the month of Juiy the fpring-ides carry in a great quantity of Mackrel, and at the return of the water they are found many times lying on the rocks. The vulgar natives make ufe of the afles of burnt fea-ware, which preferves them for fone time inftead of falt.

About two miles to the fouth of Loch. Eport lises the bay called the Kyle of Rona; haring the ifland of that name (which is a little hill) within the bay; there is a harbour on each fide of it. This place hath been found of great convenience for the fifhing of cod
and ling, which abound on this coaft. There is a little chapel in the ifand Rona, called the Lowlanders' chapel, becanfe feamen who die in time of fifhing are buried in that place.

There is a harbour on the fowh file the ifland Borera; the entry feems to be narrower than really it is: the inkud and the oppofite point of land appear like two little promontories off at fea. Some veffels have been forced in there by ftorm, as was Captain l'eters, a Dutchman, and after him an Englifh Chip, who both approved of this harbour. The former built a cock-boat there on a Sunday, at which the natives were much offended: the latter having landed in the inland, happened to come into a houle where he found only ten women, and they were employed (as he fuppofed) in a frange manner, viz. their arms and legs were bare, being five on a fide; and between them lay a board, upon which they had laid a piece of cloth, and were thickening of it with their hands and feet, and finging all the while. The Englifhman prefently concluded it to be a little bedlam, which he did not expect in fo remote a corner; and this he told to Mr. John Maclean, who poffeffes the ifland. Mr. Maclean anfiwered, he never faw any mad people in thofe inands : but this would not fatisfy him, till they both went to the place where the women were at work; and then Mr. Maclean having told him that it was their common way of thickening cloth, he was convinced, though furprifed at the manner of it.

There is fuch a number of frefh-water !akes here as can hardly be believed: I myfelf and feveral others endeavoured to number them, but in vain, for they are fo difpofed into turnings, that it is impracticalle. They are generally well tocked with trouts and cels, and fome of them with falmon ; and which is yet more ll range, cod, ling, mackrel, \&ic. are taken in thele lakes, into which they are brought by the fpring-tides.
Thefe lakes have many fmall illands, which in fummer abound with variety of land and fea-fowls, that build and hatch there. There are alfo feveral rivers here which afford falmon: one fort of them is very fumpular, that is called marled falmon, or, as the natives call it, iefidrumin, being leffer than the ordinary falmon, and full of frong large fales; no bait can allure it, and a fhadow frights it away, being the wildeft of filhes: it leaps high above the water, and delights to be on the furface of it.

There is great plenty of fhell-fith round this ifland, more particularly cockles: the iflands do alfo afford many fmall filh called eels, of a whitifh colour; they are picked out of the fand with a fmall crooked iron made on purpofe. There is plenty of lobfters on the weft fide of this ifland, and one fort bigger than the reft, having the toe fhorter and broader.

There are feveral ancient forts in this ifland, built upon eminences, or in the middle of frefl-water lakes.
Here are likewile feveral cairns or heaps of fones: the biggef I obferved was on a hill near to Loch-Eport. There are three ftones erected, about a foot high, at the diftance of a quarter of a mile from one another, on eminences, about a mile from LochMaddy, to amufe invaders; for which reafon they are flill called falfe fentinels.
There is a fone of twenty-four feet long and four in breadth in the hill Criniveal : the natives fay, a giant of a month old was buried under it. There is a very confpicuous ftone in the face of the hill above St. Peter's village, above eight feet high.
There is another about eight feet high at Down-roffel, which the natives call a crofs. There are two broad ftones, about eight feet high, on the hill two miles to the fouth of Valay.

There is another at the key, oppofite to Kirkibaft, twelve feet high : the natives fay that delmquents were tied to this flone in time of divine fervice.

There is a fone in form of a crofs in the row oppofite to St. Mary's church, about five feet high: the natives call it the Water-crols, for the ancient inhbbitants had a cuftom of erecting this fort of crofs to procure rain, and when they had got enough, they laid it flat on the ground; but this cuflom is now difufed. The iuferior ifland is the illand of Heikir, which lies near three le.gues weftward of North-Vift, is three mites in circumference, of a fandy foil, and very fruitful in corn and grafs, and black cattle. The inhabitants labour uider want of fuel of all forts, which obliges them to burn cows' dung, barley-ftraw, and dried fea-ware : the natives told me, that lread baked by the fuel of fea-ware relifhes better than that done otherwife. They are accultomed to falt their cheefe with the afhes of barley-ftraw, which they fuffer not to lie on it abowe twelve hours time, becaufe otherwife it would fpoil it. There was a flone chent lately difoo. vered here, having an carthen pitcher in it which was full of bones, and as foun as touched they turned to dult.

There are two fmall iflands feparated by narrow channels from the north-weft of this ifland, and are of the fane mould with the big ifland. The natives lay, that there is a couple of ravens there which fuffer no other of their kind to approach this illand, and if any fhould chance to come, this couple immediately drive them away, with fuch a noife as is heard by all the inhabitants: they are obferved likewife to beat away their young as foon as they are able to purchafe for themfelves. The natives told me, that when one of this couple happened to be wounded by gun-fhot, it lay flill in the corner of a rock for a week or two, during which time its mate brought provifion to it daily, until it recovered perfectly. The natives add further, that one of thefe two ravens having died fome time after, the furviving one abandoned the ifland for a few days, and then was feen to return with about ten or twelve more of its kind, and having chofen a mate out of this number, all the reft went quite ofl, leaving thefe two in poffefion of their little kingdom. They do by a certain fagacity difeover to the inhabitants any caucafe, on the fhore or in the fields, wherenf 1 have feen feveral inftances : the inhatitants pretend to know by their noife whether it he flefh or fifh. I told them this was fuch nicety that I could fcarcely give it credit; but they anfwered me, that they came to a knowledge of it by obfervation, and that they make their loudeft noific for llesh. There is a narrow channel between the ifland of Heiker and one of the leficr iflands, in which the natives formerly killed many feals, in this manuer: they twifted together feveral finall ropes of horfe hair in form of a net, coneracted at one end like a purfe; and fo by opening and fhuting this hair-net, thefe feals were catched in the narrow channel. On else fouth fide of North-Vift are the iflands of Itheray, which are aceeffible at low water, each of them being three miles in compafs, and very ferile in corn and cattle.

On the weftern coaft of this ifland lies the rock Eoufmil, about a quarter of a mile in circumference, and is fill famous for the yearly fifhing of teals there, in the cond of Octo. ber. This rock belongs to the farmers of the next aljacent iands: there is one who furnifheth a boat, to whom there is a particular hare due on that account, betales his proportion as tenant. The parifh minifter hath his choice of all the young foals, and that which he takes is called by the natives Cullen-Mory, that is, the Virgiu Mary's feal. The fteward of the iflard hath one paid to him, his officer hath amother, and this by virtue of their offices. Thefe farmers man their boats with a competent number fit for the bufinefs, and they always embark with a contrary wind, fur their fecurity againft being driven away by the ocean, and likewife to prevent then from being difcovered by the feals, who are apt to frincll the fecnt of them, and prefently run to feat

When this crew is quietly landed they furround the palfes, and then the fignal for the general attack is given from the buat, and fo they beat them down with big ftaves.

The feals at this onfet make towards the fea with all fpeed, and often force their palfage over the necks of the flouteft affailants, who aim always at the forehead of the feals, giving many blows before they are killed; and if they are not hit exactly on the front, they contract a lump on their forehcad, which makes them look very fierce; aud if they get hold of the faff with their teeth, they carry it along to fea with them. Thofe that are in the boat floot at them as they run to fea, but few are catched that way. The natives told me, that feveral of the liggeft feals lofe their lives by endeavouring to fave their young ones, whom they tumble before them towards the fea. I was told :allo, that three humdred and twenty feals, young and old, have been killed at one time in this place. The reafon for attackiug them in October is, becaufe in the beginning of this month the feals bring forth their young on the ocean fide; but thefe on the eaft fide, whoare of the lefler flature, bring forth their young in the middle of Junc.

The feals cat no fifh till they firlt take off the fkin: they hold the head of the fifl between their tecth, and pluck the fkin off each fide with their fharp pointed nails; this I obferved feveral times. The natives told me that the feals are regularly coupled, and refent an encroachment on their mates at an extraordinary rate. 'The natives have obferved, that when a male had invaded a female, already coupled to another, the injured male, upon its return to its mate, would by a frange fagacity find it out, and refent it againft the aggreffor by a bloody confict, which gives a red tincture to the fea in that part where they fight. This piece of revenge has been often obferved by fealhunters, and many others of unqueftionable iategrity, whofe occafions obliged them to be much on this coaft. I was affured by grod hands, that the feals make their addreffes to each other by kifies: this hath been obferved often by men and women, as fifhing on the coalt in a clear day. The female puts away its young from fucking as foon as it is able to provide for iffelf; and this is not done without many fevere blows.

There is a hole in the tkin of the fcmale, within which the teats are fecured from being hurt, as it creeps along the rocks and fones; for which caufe nature hath formed the point of the tengue of the young one cloven, without which it could not fuck.

The natives falt the feals with the anhes of burnt fea-ware, and fay they are good food: the vulgar eat them commonly in the fpring-time with a long pointed fick inftead of a fork, to prevent the flrong fincll which their hands would otherwife have for feveral hours after. The theh and broth of frelh young feals is by experience known to be pectoral ; the meat is aftringent, and ufd as an effectual remedy againt the diarrhea and dyfenteria: the liver of a feal boing dried and pulverizol, and afterwards a lit.le of it drunk with milk, aquavite, or red wine, is alfo good againft fluxes.

Some of the naives wear a girdle of the feal-kin about the middle, for removing the fciatica, as thofe of the fire of Aberdecn wear it to remove the chin-cough. Phis four-footed creature is reckoned one of the fwiftert in the fea; they fay likewife that it leaps in cold weather the heighe of a pike above water, and that the flin of it is white in fummer, and darker in wimer; and that their hair flands on end with the food, and falls again at the ethb. The fkin is by the natives cut in long pieces, and then made ufe of inftead of ropes to fix the phough to their horfes when they till the erround.
 tion, though ,under a dificent name, to wit, ham: this I have been atured of by good hands, and thus we fee that the generatity of mon are as mach lo! by fancy as julgment in their patates, as well as i: ontice things. The popifl volgar, ia the inands fouthward from this, eat thefo feals in lom initud of tha. This ocratoned a debate between a proteftant fenteman and a papid of my açuantance: the former alledged that the other had trangrefled the ruacs of his church, by cating lach in Lent : the
latter anfiwered, that he did not ; for, fayshe, I have eat a fa-creature, which only lives and feeds upon fifh. The proteflimt replied, that this cresture is amphibious, lics, creeps, eats, fleeps, and fo fpends much of its time on hand, which no fifh cando and live. It hath allo another faculty thet no filh has, that is, it breaks wind backward fo loudly, that one may hear it at a great diflance. But the papift fill maintained that he muft belicve it to be fifh, till fuch time as the pope and his priefts decide the queftion.

Abwut three leagues and a half to the woft lie the fmall inands called thawker-Rocks, and Hawfker-Ergath, and I Hawker. Nimanich, id off, Monks-Ruck, which hath an altar in it. The firft called fo from the cecan, as boing near to it ; for beev or than in the ancient language fignifies the ocean: the more foutherly rocks are fix or fen bir ones nicked or indented, for argatb fignifies fo much. 'Hhe largelt ifland, which is northward, is near half a mile in circumference, and it is covered with long grafs. Only fmall veffels can pafs between this and the fouthern rocks, heing neareft to St. Kilda of all the wef iflands; both of them athound with fowls as much as :my ifles of their extent in St. Kilda. The coulterneb, guillemot, and farts, are moll numerous lere; the feals likewife abound very much in and about thefe rock.

The ifland of Valay lies on the weft, near the main land of North Vift; it is about four miles :in circumference, arable and a dry fandy fuil, very fruifflificorn and grafs, clover, and daify. It hath three chapels ; one dedicated to St. Uiton and another to the Virgin Mary. There are two croffes of ftone, each of them about feven feet high, and a foot and a half broad.

There is a little font on an altar, being a bizf fone, round like a cannon-ball, and having in the upper end a little vacuity capable of holding two fpoonfuls of water. Below the chapels there is a flat thin flone, called Brownies fone, upon which the aucient inhabitants offered a cow's milk every Sunday; but this cultom is now quite abolithed. Some thirty paces on this fide is to be feen a little flone houfe under ground; in is very low and long, having an entry on the fea fide: I law an entry in: the middle of it, which was difonered by the falling of the fones and carth.

About a league to the northeaft of Valay is the ifland of Borera, about four miles in circumference: the mould in fome places is fandy, and in others black earth; it is very fruifful in cattle and grafs. I faw a mare here which I was told brought forth a foal in her feeond year.

There is a cow here that brought forth two fomale calves at once, in all things fo very like one another, that they could not be diltinguilhed by any outward mark; and had fuch a fympathy that they were never feparate, except in time of fucking, and the a they kept fill their own fide of their dam, which was not obferved until a diltinguifhing mark was put about one of their necks by the milk-maid. In the middle of this inand there is a frefhewater like, well focked with very big ecls, fome of them as long as cod or ling filh. There is a paffage under the ftony ground, which is between the fea and the lake, through which it is fuppofed the eels come in with the fpring-tides: one of the inhabitants, called Mac-Vanich, i. e. Monks Son, had the curiofity to creep naked through this paffage.
This ifland affords the largeft and beft dulfe for eating ; it requires lefs butter than any other of this fort, and has a mellowifh taite.

The burial-place near the houfes is called the monks.ficld, for all the monks that died in the illands that lie northward from Egg were buried in this little plot: each grave bath a flone at looth ends, fome of which are three, and others four feet high. There are big ftones without the burial-place even with the ground; feveral of them

Have litt Gries in on if iade by art: the tradition is, th: thefe vacuities were duy, for 1 , wing the onks' knces when they prayed upon them.

The in, siflinge lies half a league feuth on the fide of Borera: it is fingular in refpert of lan!s al vilf, and the other iflands that furround it, for they are all comprofed of fant, and the son the contriry is altogether mofs covered with heath, affording five peats in depth; and is very ferviceable and ufeful, furnifhing the ifand Borera, \&ec. with plenty of good fuel. 'Tlus ifland was hed as confecrated for feveral ages, infoansh that the natives would not then prefume to cot any farl in it.
'He cattie prodnced here are horles, cowe, sheep, and hogs, generally of a low fathre. The horles are very Irong, and fit for pads, though expoled to the rigour of the weather all the winter and lpring in the open fieh's. Their cows are allo in the fields all the fpring, and their bedf is fiweet and tender as any can be : they live upon fea-ware in the winter and fpring, and are fattened by it; nor are they daughtered before they eat plentifully of it in December. The natives are accultomed to falt their beed in a cow's lide, which keeps it clofe from air, and preferves it as well, if not better, than barrels: and tattes they fay beit when this way ufed. This beef is tramported to Glafgow, a city in the weft of Scotland, and from thence (being put in barrels there) exported to the Indies in good condition. The hills afford fome humbeds of deer, who eat fea-ware alfo in winter and fpring-time.

The anphibia produced here are feals and otters. There is no fox or venomous creature in this ifland. The great eagles here fatten their talons in the back of tifh, and commonly of falmon, which is often above water and on the furface. The natives, who in the funmertime live on the coalt, do fometimes rob the eagle of its prey after ite landing.

Here are hawks, eagles, pheafants, moor-fowls, tarmogan, plover, pigeons, crows, fwans and all the ordinary fea-fowls in the weft iflands. The eagles are very deftructive to the fowns and lambs, efpecially the black eagle, which is of a leffer fize than the other. 'The natives oblerve, that it fixes its talons between the deers' hurns, and beats its wings conftamly about its eyes, which puts the dece to run continually till it fall into a ditch, or over a precipice, where it dis, and fo becomes a prey to this cunning hunter. 'There are athe fane time feveral oher enges of this kind, which fly on both fides of the deer, which fright it extremely, and contribute much to its more fudden deftruction.

The furefler and feveral of the natives aflured mo, that they had feen both forts of eagles kill deer in this manner. The fwans come hither in great numbers in the month of October, with north-catt winds, and live in the frefh lakes, where they feed upon trout and water-plants till March, at which time thoy fly away again with a fouth-ealt wind. When the natives kill a fwan, it is common for the eaters of it to make a negative vow (i. e. they fwear never to do fomething that is in itlelf impracticable) before they tafte of the fowl.

The bird corn-craker is about the bignefs of a pigeon, having a longer neck, and being of a brown colour, but blacker in barveft than in fummer: the natives fay it lives by the water, and under the ice in winter and fpring.

The colk is a fowl fomewhat lels than a goofe, hath feathers of divers colours, as white, grey, green, and black, and is teautiful to the eye: it hath a tuit on the crown of its head like that of a peacock, and a train longer than that of a houfe-cock. This fowl lofeth its feathers in time of hatching, and lives moltly in the remoteft iflands, as Heiker and Rona.

The grawlin is a fowl lefs than a duck, it is reckoned a true prognoflicator of fair weather; for when i: fings, fair and good weather always follows, as the natives commonly obferve: the piper of St. Kilda plays the notes which it fings, and hath compoted a tune of them, which the natives judged to be very tine mufic.

The rain-goofe, bigger than a duck, makes a doleful noife before a great rain : it builds its neft always upon the brink of frefh-water lakes, fo as it may reach the water.
the bonnivochil, fo called by the natives, and by the feamen bithop and carrara, as hig as a goofe, having a white fpot on the brealt, and the relt party-columed; it fehdom fies, but is exceedingly quick in diving. The minitter of North Vift told me that he killed one of them which weighed fixteen pounds and an onace: there is about an inch deep of fat upon the ikin of it, which the natives apply to the hip-boas, and by expericace find it a fuccefftul remedy for removing the fexatica.

The bird goylir, about the bignefs of a foallov, is obferved never to land but in the month of January, at which time it is fuppofed to hateh: it dives with a violem fivifmefs. When any number of thefe fowls are feen together, it is concluded to be an undoubted fign of an approaching form ; and when the horm ceafes, they diappor mader the water. The feamen call them malifigies, from maliedhgics, which they offen find to be true.

The bird fereachan-aittin is about the lignefs of a large mall, but having a longer body, and a bluith colour; the bill is of a carnation colour. This lied flhicks moll hideoully, and is obferved to have a greater affection for its mate than any hewl whafeever; for when the cock or hen is killed, the firriving one doth for cight or ten days atiturward make a lamentable noife about the place.

The bird falkidar, about the bignefs of a fea-maw of the middle fize, is obferved to fly with greater fiwifters than any other fowl in thofe parts, and purfues lefier fowls, and forces them in their flight to let fall the food which they have got, and by its nimblenefs catches it before it touches the ground.

The natives obferve that an extromdinary heat without man, at the ufual time the fea fowls lay their eqge, hindors then from laying any erges for about eight or ten days; whereas warm weater, accompanal with rain, dipofes then to lay much foomer.

The wild geefe are plemiful here, and very deftruative to the barley, notwiblianding the many methods need for driving them away hoth by traps and gun-hot. There are fome flocks of barren fowls of all kinds, which are dilinguifhed by the ir not joining with the rett of their kind, and they are feen commonly upon the bare rocks, without any nefts.

The air is here moit and moderately cold, the matives qualify it fometimes by drinking a glats of ufquebaugh. The moilture of this phace is tuch, that a loaf of fugar is in danger to be diffolved, if it be not preferved by being near the fire, or laying it amoay; oatmeal, in fome clofe phace. Iron here becomes quickly ruily, and iron which is on the fa-fide of a houfe grows fooner retty than that which is on the land-fide.

The greatell fnow falls here with the fouth-weit winds, and fihlom cominnes above three or four tays. The ordinary fiow falls with the north and north-welt winds, and does nat lie fo desp on the ground near the fa ats on the tops of mometans.

The frolt continues till the fyring is prety far advanced, the feverity of which occafions great numbers of trouts and eds to die; but the winter frolts have not this effect, for which the inhabitants give this reafon, viz. that the rains bing more frequeat in October, do, in their opinion, carry the juice and quintelfence of the plants into the lakes, whereby they think the lifh are nourihed during the winter ; and there being no fuch nour:henent in the fprines, in regard of the uninterrupted running of the watr,
which
which carries the juice with it to the fea, it deprives the fifh of this nourihment, and contequenty of lite. And they add further, that the filh have no accefs to the fuperficies of the water, or to the brink of it, where the juice might be lad. The natives are the more confinned in their opinion, that the filles in lakes and marfines are obferved to out-live boh winter and lpring frolls. The call-northoalt winds always procure fair weather here, as they do in all the north-welt iflands; and the rains are more frequant in this place in ()etober and February than at any other time of the year.

Fountan-water drunk in wimer is reckoned by the natives to be mach more wholefome than in the fring; fir in the bater it caufeth the diarriea and dylemteria.
'the difeafes that prevail here are fevers, diarthea and dylenteria, ltited, cough, feat tica, megrim, the fuall-pux, which commonly comes once in feventen years time. The ortinary cure for fevers is letting bleod plentifully: the diarrhea is cured hy drinking aquavita, and the flronger the better. The flefh and liver of feals are ufed as above nentioned, both for diarrhea and dyfenteria. Milk wherein hectic flone has been quenched, being frequently drunk, is likewife a good remedy for the two difeafes laft mentioned.

The kernel of the black nut found on the flore, boing beat to powder, and drunk in milk or aquavite, is reckoned a good remedy for the faid two difieales: flitches are cured fometimes by letting blood.

Their common cure for conghe is hrochan, formerly mentioned. The cafe of the carrata fowl, with the fat, bcing powdered a little and applied to the lip-bone, is an approved remedy for the feciatical. Since the great change of the feafons, which of late years is become more percing and coll, by which the growth of the corn both in the foring and fummer fealons are retarded, there are fome difeales ditcovered which were not known here before, viz a fpoted fever, which is commonly cured by drinking a grafs of brandy or aquavite liberally when the difeafe ficizes them, and ufing it till the fpots appear outwardly. 'This fever was brought hither hy a ftranger from the ifland of Mull, who infected thefe other iflands. When the fever is violent, the fpots appear the fecond day, but commonly on the fourth day, and then the difeafe comes to a crifis the feventh day: but if the fpots do not appear the fourth day, the difeafe is reckoned mortal; yet it has not proved fo here, though it has carricd off feveral in the other adjacent iflands. The vulgar are accultomed to apply flamula jovis for evacuating noxious humours, fuch as caufe the head-ach, and pans in the arms or lege, and they find great advantage by it. The way of uling it is thus: they take a quantity of it, bruited finall and put into a patella, and apply it fo to the fkin a bittle below the place affected: in a finall time it raifes: Whiter alout the tigncfs of an egg, which, when broke, wids all the matter that is in it; then the fin fills and fwells twice again, and ats often voits this mater. 'They we the fea plant linarich to cure the wound, and it proves clictual for this purpofe, and alfo for the megrim and burning.

The broth of in lamb, in which the plants fisunifla and Alcsander have been boiled, is found by experience to be good againtt conimuptons. The green fea-plant linarich is by them applied to the temples and forehoad to dry up defluxions, and allo for drawing up the tondeis. Neil Macdonald, in the ifland of Ileilkir, is fubject to the falling of the tonfels at every change of the moon, and they continue only for the firlt quarter. This intirmity hath continued with him all his days, yet he is now feventy-two years of age.

Ithn Fake, who lives in Pabble, in the parilh of Kilmoor, alias St. Mary's, is conftantiy troubled with a great fineezing a day or two before rain; and if the fineezing be more than ufual, the rain is fail to be greater; therefore he is called the rain-almanack. He hats had this faculty thefe nine years paft.

There is a houfe in the village called Ard ninobnothin in the pariin of St. Marys; and the houfe-cock there never crows from the tenth of September till the middle of March. 'I his was told me two years ago, and fince confirmed to me by the natives, and the profint minifter of the parifh.

The inhabitants of this ifland are generally well-proportioned, of an ordinary fature and a good complexion; healthful, and fome of flhem come to a great age: feveral of my acquaintance arrived at the age of ninety, and upwards; John Mac-donald of Griminis was of this number, and died lately in the ninety-third year of his age. Donald Roy, who lived in the ifle of Sand, and died lately in the hundredth year of his age, was able to travel and manage his affairs till about two years before his death. They are a very chiritable and hofpitable people, as is any where to be found. There was never an inn here till of late, and now there is but one, which is not at all frequented for catin $\stackrel{\text {, but }}{ }$ only tor drinking; for the natives by their hofpitality render this new-invented houfe in a manner ufelefs. The great produce of barley draws many trangers to this ifland, with a defign to procure as much of this grain as they can; which they get of the inhabitants gratis, only for afking, as they do horfes, cows, fheep, wool, \& cc. I was told fome months before my arrival there, that there had been ten men in that place at one tine to afk corn gratis, and every one of thefe had fome one, fome two, and others three attendants; and during their abode there, they wure all entertained gratis, no one returning empty.

This is a great, yet vo'untary tax, which has continued for many ages; but the late general fcarcity has given them an occafion to alter this cultom, by making acts againf liberality, except to poor natives and objects of charity.

The natives are much addicted to ridiag, the plainnefs of the country difpofing both men and horfes to it. 'They obferve an anniverfary cavalcade on Michaelmas day, and then all ranks of both fexes appear on horfe-back. The place for this rendezvous is a large piece of firm fandy ground on the fa-fhore, and there they have horie-racing for fmall prizes for which they contend eagerly. There is an ancient cultom, by which it is lawful for any of the inhabitants to fteal his neighbour's horfe the right before the race, and ride him all next day, provided he deliver him fafe and found to the owner after the race. The manner of ruming is by a few young men, who ufe neither faddles nor briales, except two fmall ropes made of bent inflead of a bridle, nor any fort of fpurs, but their bare heels: and when they begin the race, they throw thefe ropes on their horfes' necks, and drive them on vigoroully with a piece of long fea-ware in each hand, inftead of a whip; and this is dried in the fun feversl months before for that purpofe. This is a happy opportunity for the vulgar, who have few occafions for meeting, except on Sundays: the men have their fweet-hearts behind them on horfeback, and give and receive mutual prefents; the men prefent the women with knives and purfes, the women prefent the men with a pair of fine garters of divers colours, they give them likewife a quantity of wild carrots. This ifle belongs in property to Sir Donald Mac-donald of Sleat: he and all the inhabitants are proteftants, one only excepted; they obferve Chirttmas, Good-Friday, and St. Michael's Day.

## The Ifle Benbccula, its Difance, Length, Bay, Mold, Grain, Fifh, Cattle, Frefh Lakcs, Forts, a Stone 'Vault, Nunncry', Propricior.

THE inland of Benbecula lies direatly to the fouth of North Vift, from which it is two miles diftant; the ground leing all plain and fandy between them, having two little rivers or channels no higher than one's knee at a tide of ebb: this paffage is overflowed
by the fea every tide of flood, nor is it navigable except by boats. There are feveral fmall iflands on the eaft-fide of this channel. This ifland is three miles in length from fouth to north, and three from eaft to weft, and ten miles in compafs. The eaft-fide is covered with heath ; it hath a bay called Viikway, in which fmall veffels do fometimes harbour, and now and then herrings are taken in it.

The mountain Benbecula, from which the ine hath its name, lies in the middle of it: the eaftern part of this ifland is all arable, but the foil fandy, the mould is the fame with that of North-Vift, and affords the fame corn, fifh, cattle, amphibia, \&c. There is no venomous creature here. Ii hath feveral frefh-water lakes well flocked with filh and fowl. There are fome ruins of old forts to be feen in the finall inands, in the lakes, and on the plain.

There are alfo fome fimall chapels here, one of them at Bael-nin-killach, id eff, NunsTown, for there were nunneries here in time of popery. The natives have lately difcovered a fone vault on the eaft-fide the town, in which there are abundance of fmall bones, which have occafioned many uncertain conjee?ures; fome faid they were the bones of birds, others judged them rather to be the benes of pigmies. The proprietor of the town inquiring Sir Normand Mackleod's opinion concerning them, he told him that the matter was plain as he fuppofed, and that they muft be the bones of infants born by the nums there. This was very difagreeable to the Roman catholick inhabitants, who laughed it over. But in the mean time the natives out of zeal took care to thut up the vault, that no accefs can be had to it fince; fo that it would feem they believe what Sir Normand faid, or ellie feared that it might gain credit by fuch as afterward had occation to lee thcm. This ifland belongs properly to Ranal Mac-donald of Benbecula, who, with all the inhabitants, are Roman Catholicks; and I remember I have feen an old lay capuchin here, called in the language Brahir-bocht, that is, poor brother; which is literally true, for he anfwers this character, having nothing but what is given thim : he holds himfelf fully fatisfied with food and raiment, and lives in as great fimplicity as any of his order; his diet is very mean, and he drinks only fair water: his habit is no lefs mortifying than that of his brethren elfewhere; he wears a fhort coat, which comes no further than his middle, with narrow fleeves like a wailtcoat; he wears a plad above it girt about the midale, which reaches to his knee: the plad is faftened on his breaft with a wooden pin, his neck bare, and his feet often fo too: he wears a hat for ornament, and the flring about it is a bit of fifher's line made of horfe-hair. This plad he wears inftead of a gown worn by thofe of his order in other countries. I told lim he wanted the flaxen girdle that men of his order ufually wear: he anfivered me, that he wore a leather one, which was the fame thing. Upon the matter, if he is fpoke to when at meat, he anfwers again; which is contrary to the cultom of his order. This poor man frequently diverts himfelf with augling of trouts; he lies upon ftraw, and had no bell (as others have) to call him to his devotion, but only his confcience, as he told me.

The fpeckled falmons, defcribed in North-Vift, are very plentifui on the weft fide of this ifland.

The illand of South-Vift lies directy two miles to the fouth of Benbecula, being in length one and twenty miles, and three in breadth, and in fone places four. The caltfide is mountainous on the coaft, and heathy for the moll part: the weft-fide is plain arable ground, the foil is generally fandy, yielding a good produce of barley, oats, and rye, in proportion to that of North.Vilt, and has the fanc fort of cattle. Both ealt and weft fides of this inland abound in frefh-water lakes, which afford trouts and eels,

[^312]befides variety of land and fea fowls. The arable land is much damnified by the overflowing of thefe lakes in divers places, which they have not hitherto been able to drain, though the thing be practicable. Several lakes have old forts built upon the fnall joands in the middle of them. About four miles on the fouth-eaft end of this ifland, is Loch-F.ynord; it reaches feveral miles weftward, having a narrow entry, which makes a volent current, and within this entry there's a rock, upon which there was faved to pieces a frigate of Cromwell's which he fent there to fubdue the natives. Ambergreafe hath been found by feveral of the inhabitants on the welt coalt of this ifland, and they fold it at Glafgow at a very low rate, not knowing the value of it at firt ; but when they knew it, they raifed the price to the other extreme. Upon a thaw after a long frolt the fouth-e It winds caft many dead fighes on the thore. The inhalitants are generally of the fame nature and complexion with thofe of the next adjacent northern illands; they wear the fane habit, and ufe the fame diet. One of the natives is very fanous for his great age, being, as it is faid, a hundred and thirty years old, and retains his appetite and underftanding; he can walk abroad, and did labour with his hands as $\mu f u-1 l y$, till within thefe three years, and for any thing I know is yet living.

There are feveral big kairnes of fone on the eaft-fide $t$ is infud, and the vulgar retain the ancient cuflom of making a religious tour round them on Sundays and holidays.

There is a valley hetween two mountains on the eaft-fide, called Glenflyte, which affords good panurage. The natives who farni i, come thither with whir c ttle in the fummer-time, and are poff fled with a firm belief that this $v$ lley is haunted by firits, who by the inbibitants are caled the Great Men; and that whatfoever man or woman enters the valley, without making firft an entire refignation of themfelves to the conduct of the great men, will infallibly grow mad. The words by which he or the gives up bimfelf to thefe men's conduct, are comprehended in three fentences, wherein the Glen is twice named; to which they add, that it is inhabited by thefe great men, and that fuch as enter depend on their protection. 1 told the natives, that this was a piece of filly credulity as ever was impofed upon the moit ignorant ages, and that their imagiary protectors deferved no fuch invocation. They anfwered, that there had happened a late inflance of a woman who went into that Glen without refigning herfelf to the conduct of thefe men, and imnediately after hle became mad; which confirmed them in their unreafonable fancy.
The people refiding here in fummer, fay they fometines hear a loud noife in the air, like men lpa aking. I inquired if their prieft had preached or argued againft this fuperfitious cullom? They told me, he knew better things, and would not be guilty of diffiuading men from doing their duty, which they doubted not bie judged this to be; and that they refolved to perfift in the belief of it, until they found better motives to the contrary, than have been fhewed them hitherto. The proteftant minifter hath often endeavoured to undeceive the $m$, but in vain, becaufe of an implicit faith they have in their prieft : and when the topicks of perfuafion, though never fo urgent, come from one they believe to be a heretick, there is little hope of fuccefs.

The ifland Erifca, about a mile in length, and three in circumference, is partly heathy, and partly arable, and yields a good produce. The inner-fice hath a wide anchorage, there is excellent cod and ling in it; the natives beyin to manage it better, but not to thit advantage it is cap. ble of. The firall ifland near it was overgrown with heath, and about three $y$ ars $\mathbf{a}_{0}$ o the ground threw up all that heath from the very root, fo that thete is not now one fhrub of it in all this ifland. Such as have occafion to traved
by land between South-Vift and Benbecula, or Benbecula and North-Vift, had need of a guide to direct them, and to oblerve the tide when low, and alfo for croffing the channel at the right fords, elfe they cannot pafs without danger.

There are fome houfes under-ground in this illand, and they are in all points like thofe defcribed in North-Vift ; one of them is in the South Ferry-Town, oppofite to Barray. The cattle produced here, are like thofe of North-Vift, and there are above three hundred deer in this ifland: it was believed generally, that no venomous creature was here, yet of late fome little vipers have been feen in the fouth end of the illand.

The natives fpeak the Irifh tongue more perfectly here, than in moft of the other inands; partly becaufe of the remotenefs, and the fmall number of thofe that fpeak Englifh, and partly becaufe fome of them are fcholars, and verfed in the Irifh language. They wear the fame nabit with the neighbouring iflanders.

The more ancient people continue to wear the old drefs, efpecially women : they are a hofpitable well-meaning people, but the misfortune of their education difpofes them to uncharitablenefs, and rigid thoughts of their proteftant neighbours; though at the fame time they find it convenient to make alliances with them. The churches here are St. Columba and St. Mary's in Hogh-more, the moft centrical place in the illand; St. Jeremy's chapels, St. Peter's, St. Bannan, St. Michael, St. Donnan.

There is a fone fet up near a mile to the fouth of Columbus's church, about eight feet high, and two feet broad: it is called by the natives the Bowing-fone; for when the inhabitants had the firt fight of the church, they fet up this fone, and there bowed and faid the L.ord's Prayer. There was a buckle of gold found in Einort ground fome twenty years ago, which was about the value of feven guineas.

As I catne from South-Vift, I perceived about fixty horfemen riding along the fands', directing their courfe for the eaft fea ; and being between me and the fun, they made a great figure on the plain fands: we difcovered them to be natives of South.Vift, for they alighted from their horfes, and went to gather cockles in the fands, which are exceeding plentiful there. This ifland is the property of Allan Mac-donald of Moydart, head of the tribe of Mac-donald, called Clanronalds; one of the chief families defcended of Mac-donald, who was Lord and King of the iflands. He and all the inhabitants are Papifts, except fixty, who are Proteftants: the Papifts obferve all the feftivals of their church, they have a general cavalcade on All-Saints Day, and then they bake St.' Michael's cake at night, and the family and ftrangers eat it at fupper.

Fergus Beaton hath the following ancient Irih manufcripts in the Irif character; to wit, Avicenna, Averroes, Joannes de Vigo, Bernardus Gordonus, and feveral volumes of Hypocrates.

The ifland of Barray lies about two leagues and a half to the fouth-weft of the inland South-Vift; it is five miles in length, and three in breadth, being in all refpects like the iflands lying directly north from it. The eaft fide is rocky, and the weft arable ground, and yields a good produce of the fame grain that both Vifts do : they ufe likewife the fame way for enriching their land with fea-ware. There is plenty of cod and ling got on the eaft and fouth-fides of this ifland: feveral fmall hips from Orkney come hither in fummer, and afterward return loaden with cod and ling.
There is a fafe harbour on the north-eaft fide of Barray, where there is great plenty of fifh.
The rivers on the eaft fide afford falmons, fome of which are fpeckled like thefe mentioned in North-Vift, but they are more fuccefsful here in catching them. The natives go with three feveral herring-nets, and lay them crofs-ways in the river where the falmon are moft numerous, and betwixt them and the fea. Thefe falmon at the fight or
fhadow of the people make towards the fea, and feeling the net from the furface to the ground, jump over the firft, then the fecond, but being weakened, cannot get over the third net, and fo are catchel. They delight to leap above water, and fwim on the furface : one of the natives told me, that he killed a falmon with a gun, as jumping above water.

They informed me alfo, that many barrels of them might be taken in the river abovementioned, if there was any encouragement for curing and tranfporting them. There are feveral cld forts to be feen here, in form like thofe in the other iflands. In the fouth end of this ifland there is an orchard, which produces trees, but few of them bear fruit in regard of their nearnefs to the fea. All forts of roots and plants grow plentifully $n$ it ; fome years ago tobacco did grow here, being of all plants the molt grateful to the natives, for the iflanders love it mightily.

The little ifland Kifmul lies about a quarter of a mile from the fouth of this ine; it is the feat of Mac-neil of Barray, there is a fone wall round it two ftories high, reaching the fea, and within the wall there is an old tower and an hall, with other houfes about it. There is a little magazine in the tower, to which no ftranger has accefs. I faw the officer called the Cocknan, and an old cock he is: when I bid him ferry me over the water to the ifland, he told me that he was but an inferior officer, his bufinefs being to attend in the tower; but if (fay's he) the conftable, who then flood on the wall, will give you accefs, I'll ferry you over. I defired him to procure ure the conftable's permifion, and I would reward him; but having waited fome hours for the conftable's anfwer, and not receiving any, I was obliged to return without feeing this famous fort. Macniel and his lady being abfent, was the caufe of this difficulty, and of my not feeing the place. I was told fome weeks after, that the conftable was very apprehenfive of fome defign I might have in viewing the fort, and thereby to expofe it to the conqueft of a foreign power; of which I fuppofed there was no great caufe of fear. The natives told me there is a well in the village Tangftill, the water of which being boiled, grows thick like puddle. There is another well not far from Tangfill, which the inhabitants fay in a fertile year throws up many grains of barley in July and Auguft. And they fay that the well of Kilbar throws up embrios of cockles, but I could not difcern any in the rivulet, the air being at that time foggy. The church in this inand is called Kilbarr, i. e. St. Barr's church. 'There is a litle chapel by it, in which Macneil, and thofe defended of his family, are ufually interred. The natives have St. Barr's wooden image flanding on the altar, covered with linen in form of a fhirt: all their greatelt affeverations are by this faint. I came very early in the morning with an intention to fee this image, Dut was difappointed; for the natives prevented me, by carrying it away, left I might take occafion to ridicule their fuperftition, as fome proteftants liave done formerly : and when I was gone, it was again expofed on the altar. They have feveral traditions concerning this great faint. There is a chapel (about half a mile on the fouth fide of the hill near St. Barr's church) where I had occafion to get an account of a tradition concerning this faint, which was thus: "the inhabitants having begun to build the church, which they dedicated to him, they laid this wooden image within it, but it was invifibly tranfported (as they fay) to the place where the church now flands, and found shere every morning." This miraculous conveyance is the reafon they give for defifting to work where they firft began. I toid my informer that this extraordinary motive was fufficient to determine the cafe, if true, but afked his pardon to diflent from him, for I had not faith enough to believe this miracle; at which he was furprized, telling me in the neean time that this tradition hath been faithfully conveyed by the priefts and natives fucceffively to this day. The fouthern illands are, 1. Muldonifh, about a mile in cir-
cumference;
cumference ; it is high in the middle, covered over with heath and grals, and is the only foref here for maintaining the deer, being commonly about feventy or eighty in number. 2. The ifland Sandreray lies foutherly of Barray, from which it is feparated by a narrow channel, and is three miles in circumference, having a mountain in the middle; it is defigned for pafturage and cultivation. On the fouth fide there is an harbour convenient for fimall veffels, that come yearly here to fifh for cod and ling, which abound on the coaft of this ifland. 3. The ifland Sandreray, two miles in circumference is fruitful in corn and grafs, and feparated by a narrow channel from Vatterfay. 4. To the louth of thefe lies the ifland Bernera, about two miles in circumference; it excels uther illands of the fame extent for cultivation and fifhing. The natives never go a filhing while Macneil or his fteward is in the illand, left feeing their pienty of filh, perhaps they might take occafion to raife their rents. There is an old fort in this illand, having a vacuity round the walls, divided in little apartments. The natives endure a great fatigue in manuring their ground with fea-ware, which they carry in ropes upon their backs over high rocks. They likewife faften a cow to a ftake, and fpread a quautity of fand on the ground, upon which the cow's dung falls, and this they mingle together, and lay it on the arable land. They take great numbers of fea-fowls from the adjacent rocks, and falt them with the ahes of burnf fea-ware in cows' hides, which preferves them from putrefaction.

There is a fort of fone in this ifland, with which the natives frequently rub their brealts by way of prevention, and fay it is a good prefervative for health. This is all the medicine they ufe; providence is very favourable to them, in granting them a good ftate of health, fince they have no phyfician among them.

The inhabitants are very hofpitable, and have a cuftom, that when any frangers from the northern illands refort thither, the natives, immediately after their landing, oblige them to eat, even though they flould have liberally eat and drunk but an hour before their landing there. And this meal they call Bieyta'v; i. e. Ocean Meat; for they prefume that the fharp air of the ocean, which indeed furrounds them, muft needs give them a good appetite. Aud whater number of ftrangers come there, or of whatfoever quality or fex, they are regularly lodged according to ancient cuftom, that is, one only in a family; by which cuftom a man cannot lodge with his own wife, while in this ifland. Mr. John Campbell, the prefent minifter of Harries, told me, that his father being then parfon of Harries, and minifter of Barray (for the natives at that time were Proteftants) carried his wife along with him, and refided in this inland for fome time, and they difpofed of him, his wife and fervants in manner above-mentioned: and fuppole Macneil of Barray and his lady fhould go thither, he would be obliged to comply with this ancient cuftom.

There is a large ront grows among the rocks of this ifland lately difcovered, the natives call it Curran-l'tris, of a whitifh colour, and upwards of two feet in length, where the ground is deep, and in flape and fize like a large carrot; where the ground is not fo deep, it grows much thicker, but fhorter : the top of it is like that of a carrot.
The rock Limmull, about half a mile in circumference, is indifferently high, and almoft inacceffible, except in one place, and that is by climbing, which is verv difficult. 1 ms rock abounds with fea-fowls that build and hatch here in fummer; iuch as the guillemot, coulter-neb, puffin, \&ic. The chief climber is conmonly called gingich, and this. name imports a big man having ftrength and courage proportionable. When they approach the rock with the boat, Mr. Gingich jumps out frit upon a ftone on the rockfide, and then by the allitance of a rope of horle-hair, he draws his fellows out of the boat upon this high rock, and draws the reft up after him with the rope, till they all
arrive at the top, where they purchafe a confiderable quantity of fowls and eggs. Upon their return to the boat, this gingich runs a great hazard, by jumping firft into the boat again, where the violent fea continually rages; having but a few fowls more than his fellows, befides a greater efteem to compenfate his courage. When a tenant's wife in this or the adjacent iflands dies, he then addreffes himfelf to Macneil of Barray, reprefenting his lofs, and at the fame time defires that he would be pleafed to reconmend a wife to him, without which he cannot manage his affairs, nor beget followers to Macneil, which would prove a public lofs to him. Upon this reprefentation, Macneil finds out a fuitable inatch for him ; and the woman's name being told him, immediately he goes to her, carrying with him a bottle of ftrong waters for their entertainnent at marriage, which is then confummated.

When a tenant dies, the widow addreffeth herfelf to Macneil in the fame manner, who likewife provides her with a huband, and they are married without any further courthip. There is in this ifland an altar dedicated to St. Chriftopher, at which the natives perform their devotion. There is a fone fet up here, about feven feet high; and when the inhabitants come near it, they take a religious turn round it.

If a tenant chance to lofe his milk-cows by the feverity of the feafon, or any other misfortune ; in this cafe Macneil of Barray fupplies him with the like number that he loft.

When any of thefe tenants are fo far advanced in years that they are incapable to till the ground, Macneil takes fuch old men into his own family, and maintains them all their lives after. The natives obferve, that if fix fheep are put a grazing in the little ifland Pabbay, five of them ftill appear fat, but the fixth a poor fkeleton; but any number in this ifland not exceeding five are always very fat. There is a little ifland not far from this, called Micklay, of the fame extent as Pabbay, and hath the fame way of feeding theep. Thefe little inands afford excelient hawks.

The ines above mentioned, lying near to the fouth of Barray, are commonly called the Bifhop's Ifles, becaufe they are held of the bithop. Some inles lie on the eaft and north of Barray, as Fiaray, Mellifay, Buya Major and Minor, Lingay, Fuda; they afford pafturage, and are commodious for fifhing; and the latter being about two miles in circumference, is fertile in corn and grafs. There is a good anchoring place next to the inf on the north-eaft fide.

The feward of the leffer and fouthern iflands is reckoned a great man here, in regard of the perquifites due to him; fuch as a particular thare of all the lands, corn, butter, cheefe, filh, \&c. which thefe iflands produce: the meafure of barley paid him by each family yearly is an omer, as th y call it, containing about two pecks.

There is an inferior officer, who alfo hath a right to a thare of all the fame products. Next to thefe come in courfe thofe of the loweft pofts, fuch as the cockman and porter, each of whom hath his refpective due, which is punctually paid.

Macneil of Barray, and all his followers, are Roman Catholice, one only excepted, viz. Murdock Macneil; and it may perhaps be thought no fimall virtue in hin to adhere to the Proteflant communion, confidering the difadvantages he labours under by the want of his chiet's favour, which is much leflened for being a heretic, as they call him. All the inhabitants obferve the anniverfary of St. Barr, being the 27 hh of September; it is performed riding on horfeback, and the folemnity is concluded by three turns round St. Barr's church. This brings into my mind a ftory which was told me concerning a foreign prieft, and the entertainment he met with after his arrival there fome years ago, as follows: this prieft happened to land here upon the very day, and at the particular hour of this folemnity, which was the more acceptable to the inhabitants,
who then defired him to preach a commemoration fermon to the honour of their patron St. Barr, according to the ancient cuftom of the place. At this the prieft was furprifed, he aever having heard of St. Barr before that day; and therefore knowing nothing of his virtues, could fay nothing concerning him : but told them, that if a fermon to the honour of St. Paul or St. Peter could pleafe them, they might have it intantly. This anfwer of his was fo dilagreealle to them, that they plainly told him he could be no true prieft, if he had not heard of St. Barr, for the pope himfelf had heard of him; but this would not perfuade the prieft, fo that they parted much diffatisfied with one anorher. They have likewife a general cavalcade on St. Michael's day in Kilbar village, and do then alfo take a turn round their church. Every family, as foon as the folemnity is ended, is accuftoned to bake St. Michael's cake, as above defribed; and all ftranyers, together with thofe of the family mult eat the bread that night.

This iffand, and the adjacent leffer iflands, belong in property to Macneil, being the thirty tourth of that name by lineal defcent that has polleffed this ifland, if the prefent genealogers may be credited. He holds his lands in vaffalage of Sir Donald Macdonald of $S$ la'e, to whom he pays 401 . per ann. and a hawk, if required, and is obliged to furnifh him a certain number of men upon extraordinary occalions.

## The ancient and modern Cuftoms of the Inhabitants of the Weftern IJands of Scotland.

EVERY heir, or young chiefain of a tribe, was obliged in honour to give a public fpecimen of his valour, before he was ouned and declared gove:nor or leader of his people, who obeyed and followed him upon all occafions.

This chieftain was ufually attended with a retinue of young men of quality, who had not beforehand given any proof of their valour, and were ambitious of fuch an opportunity to fignalize themfelves.

It was ufual for the captain to lead them, to make a defperate incurfion upon fome neighbour or other that they were in feud with; and they were obliged to bring by open force the cattle they found in the lands they attacked, or to die in the attempt.
After the performance of this atchievement, the young chieftain was ever after reputed valiant and worthy of government, and fuch as were of his retinue acquired the like reputation. This cuftom being reciprocally ufed among them, was not reputed. robbery; for the damage which one tribe fuftained by this eflay of the chieftain of another, was repaired when their chieftain came in his turn to make his fpecimen : but 1 have not ineard an inflance of this practice for thefe fixty years paft.

The formalities obferved at the entrance of thefe chieftains upon the government of their clans were as follow:

A heap of fones was erected in form of a pyramid, on the top of which the young chieftain was placed, his friends and 'followers ftanding in a circle round about him, his elevation fibuifying his aumority over them, and their fanding below their fubject:on to him. One of his principal friends delivered into his hands the fiword wore by his father, and there was a white rod delivered to him likewife at the fame time.

Immediately after the chief druid (or orator) ftood clofe to the pyramid, and pronounced a rhetorical panegyrick, fitting forth the ancient pedigree, vatour, and liberality of the family, as incemives to the young chicftain, and fit for his imitation.

It was their cultom, when any chieftain marched upon a military expedition, to draw fome blood from the firt animal that chanced to meet them upon the chems's ground, and thereafter to frmikle fome of it upon their colours. This they reckoncd as a good omen of future fuccefs.

They had their fixed officers, who were ready to attend them upon all occafion; whether military or civil. Some families continue them from father to fon, particularly Sir Donald Macdonald has his principal fandard-bearer and quarter-mafter. The latter has a right to all the hides of cows killed upon any of the occafions mentioned above; and this I have feen exacted punctually, though the officer had no charter for the fane, but only cuftom.

They had a conflant centincl on the top of their houfes called gockmin, or, in the Englifh tongue, cockman; who was obliged to watch day and night, and, at the approach of any body, to atk, "Who comes there ?" This officer is continued in Barray ftill, and has the perquifites due to his place paid him duly at two terms in the year.

There was a competent number of young gentlemen, called I uchbtach, or Guard de Corps, who always attended the chieftain at home and abroad. They were well trained in managing the fword and target, in wreftling, fiwimming, jumping, dancing, fhooting with bows and arrows, and were ftout feamen.

Every chieftain had a bold armour-bearer, whofe bufinefs was always to attend the perfon of his mafter night and day to prevent any furprize, and this man was called Galloglach; he had likewife a double portion of speat afligned him at every meal. The meafure of meat ufually given him, is called to this day bicyif, that is, a man's portion; meaning thereby an extraordinary man, whofe ftrength and courage dittinguifhed him from the common fort.

Before they engaged the enemy in battle, the chief druid harangued the army to ox. cite their courage. He was placed on an eminence, from whence he addrefled himfelf to all of them ftanding about him, putting them in mind of what great things were performed by the valour of their ancellors, raifed their hopes with the noble rewards of honour and victory, and difpelled their fears by all the topics that natural courage could fuggett. After this harangue, the army gave a general thout, and then charged the enemy foutly. This, in the ancient language, was called brofnichiy kah, i. e. an incentive to war. This cultom of fhouting aloud is belicved to have taken its rife from an inftinet of nature, it being attributed to moft nations that have been of a martial genius: as by Homer to the Trojans, by Tacitus to the Germans, by livy to the Gauls. Every great family in the ines had a chief druid, who foretold future events, and decided all caufes civil and ecciefialtical. It is reported of them that they wrought in the night-time, and refted all day. Cafar fays they worfhipped a deity under the name of Taramis, or Taran, which, in Welfh fignities thunder; and in the ancient language of the Highlanders, 'Torin fignilies thunder alio.

Another God of the Britons was Belus, or Belinus, which feems to have been the Affyrian God Bel, or Betus; and probably from this Pagan deity comes the Scots terin of Beltin, the
day of May, having its tis ft rife from the cuftom practifed by the druids in the ofes, of extinguilhing all the fires in the parif umtil the tythes were paid; and upon payment of them, the tires were kindled in cach family, and never till then. In thofe days malefactors were burnt between two fires; hence when they would exprefs a man to be in a great Itrait, they fay, "he is between two tires of Bel," which in thair tanguage they exprefs thas, Edir da bin I'caul or Bel. Some object that the druids could not be in the ifles, becaufe no oaks grow there. To which I anfwer, that in hofe days oaks did grow there, and to this day there be oaks growing in fome of them, particularly in Sleat, the moft fouthern part of the ille or skie. The houles named aiter thofe druids flall be defcribed elfewhere.

The manner of drinking ulicd by the chicf men of the illes, is calle! in their langure. Areah, i. c. a round; for the company fat in a circle, the cup.bcarer tilled the drink
round to them, and all was drank out, whatever the liquor was, whether frong or weak; they continued drinking fometimes twenty-four, fometimes forty-eight hours; it was reckoned a piece of manhood to drink until they became drunk, and there were. two men with a barrow attending punctually on fuch occafions. They flood at the door until fone became drunk, and they carried them upon the barrow to bed, and returned again to their poit as long as any continued freth, and fo carried off the whole company one by one as they became drunk. Several of my acquaintance have been witneffes to this cuftom of drinking, but it is now abolifhed.

Among perfous of diflinction it was reckoned an affront upon any company to broach a piece of wine, ale, or aquavita, and not to fee it all dramk out at one meeting. If any man chance to go out from the company, though but for a few minutes, he is obliged upon his return, and before he take his fear, to make an apology for his abfence in rhyme; which, if he cannot perform, he is lidble to fuch a fhare of the reckoning as the company thinks fit to impofe; which cuflom obtains in many places ftill, and is called beanchiy bard, which, in their language, fignifies the poct's congratulating the company.

It hath been an antient cuftom in thele ifles, and fill continues, when any number of men retire into a houfe, cither to dificourle of ferious bufinels, or to pafs fome time in drinking; upon thefe occafions the door of the houfe flands open, and a rod is put crofs the fame, which is underfood to be a fign to all perfons without diftinction not to approach : and if any fhould be fo rude as to take up this rod, and come in uncalled, he is fure to be no welcome gueft; for this is accounted fuch an affront to the company, that they are bound in honour to refent it; and the perfon offending may come to have his head broken, if he do not meet with a harfher reception.

The chieftain is ufually attended with a numerous retinue when he goes a hunting the deer, this being his firft fpecimen of manly exercife. All his clothes, arms, and hunting-equipage are, upon his return from the hills, given to the forefter, according to cuftom.

Every fanily had commonly two ftewards, which, in their language, were called marifchall tach: the firt of thefe ferved always at home, and was obliged to be well verled in the pedigree of all the tribes in the illes, and in the Highlands of Scotiand; for it was his province to affign every man at table his feat according to his quality; and this was done without one word fpeaking, only by draiving a fcore with a white rod which this marifcball had in his hand, before the perfon who was bid by him to fit down: and this was neceffary to prevent diforder and contention; and, though the mariccball might fometimes be miftaken, the mafter of the family incurred no cenfure by luch an efcape; but this cutom has been laid afide of late. 'They had alfo cupbearers, who always filled and carried the cup round the company, and he himfelf drank off the firt draught. They had likewife purfe-mafters, who kept their money. Both thefe officers !adi an hereditary right to their office in writing, and each of them had a town and land for his fervice: for fome of thofe rights I have feen fairly written on good parchment.

Befides the ordinary rent paid by the tenant to his mafter, if a cow brought forth two calves at a time, which indeed is extraordinary, or an ewe two lambs, which is frequent, the tenant paid to the mafter one of the calves or lambs; and the mafter, on his part, was obliged, if any of his tenants' wives bore twins, to take one of thens, and breed him in his own family. I have known a gentleman who had fixteen of thefe twins in his family at a time.
vol. in.

Their ancient leagucs of friendhip were ratified by drinking a drop of each other's blood, which was commonly drawn out of the little finger. This was religiouly obferved as a facred bond; and if any perfon after fuch an alliance happened to violate the fame, he was fron that time reputed unworthy of all honeft men's converfation. Before money became current, the chieftains in the iffes beltowed the cow's head, feet, and all the entrails upon their dependents; fuch as the phyfician, orator, poet, bard, muficians, sc. and the fame was divided thus: the fmith had the head, the piper had the, \&c.

IT was an ancient cuftom among the iflanders to hang a he-goat to the boat's maft, hoping thereby to procure a favourdbic wind: but this is not practifed at prefent; though I am told it hath been done once by fone of the vulgar within thefe thirteen years lalt pait.

They had an univerfal cuftom of pouring a cow's milk upon a little hill, or big fone, where the fpirit called Browny was belicved to lodge: this fpirit always appeared in the fhape of a tall man, having very long brown hair. There was farce any the leaft village in which this fuperltitious cuftom did not prevail. I cuquired the reafon of it from feveral well-meaning women, who until of late had practifed it; and they told me that it had been tranfmitted to them by their anceftors fuccefffully, who believed it was attended with good fortune, but the mof credulous of the vulgar had now laid it anide. It was an ordinary thing annong the over-curious to confult an invifible oracle concerning the fate of families and batiles, \&c. This was performed three different ways: the firt was by a company of men, one of whom being detached by lot, was afterwards carried to a river, which was the boundary between two villages; four of the company laid hold of him, and having thut his eyes, they took him by the legs and arms, and then tolling him to and again, fruck his hips with force againft the bank. One of them cried out, "What is it you have got here?" Another anfwers, " A log of birchwood." The other cries again, "Let his invifible friends appear from all quarters, and let them relieve him by giving an anfwer to our prefent demands;" and in a few minutes after a number of little creatures came from the fea, who anfiwered the queftion, and difappeared fuddenly. The man was then fet at liberty, and they all returned home, to take their meafures according to the prediction of their falfe prophets; but the poor deluded fools were abufed, for the anfwer was nill ambiguous. This was always pracliled in the night, and may literally be called the works of darknefs.
I had an account from the mof intelligent and judicious men in the ifle of Skie, that about fixty-two years ago the oracle was thus confulted only once, and that was in the parifh of Kiluartin, on the eaf fide, by a wicked and mifchievous race of people, who are now extinguithed both root and branch.
The fecond way of confulting the oracle was by a pruty of men, who firft retired to folitary piaces, remote from any houfe, and there they fingled out one of their number, and wrapt him in a big cow's hide, which they lulded about hinn: his whole body was covered with it except his head, and fo left in this potture all night, until his inviíble friends relieved him, by giving a proper anfwer to the queftion in hand; which he received, as he fancied, from feveral perfons that he found atout him all that time. His conforts returned to him at break of day, and then he communicated his news to them; which eften proved fatal to thofe concerned in fuch unwarrantable enquiries.
There was a third way of confulting, which was a confirmation of the fecond above mentioned. The fame company who put the maninto the hile, took a tive cat and put him on a fpit; one oc the number was cmployed to turn the fit, and one of his con-
forts enquired of him, "What are you doing ?" He aniwered, "I roaft this cat until his friends anfwer the queflion;" which mult be the fame that was propofed by the man thut up in the hide. And afterwards a very big cat comes, attended by a number of leffer cats, defiring to relieve the cat turned upon the fpit, and then anfiwers the queftion. If this anfwer proved the fame that was given to the man in the hide, then it was taken as a confirmation of the other, which in this cale was believed infallible.

Mr. Mlexander Cooper, prefent minitter of North.Vilt, told me that one John Erach, in the ine of Lewis, affured him that it was his fate to have been led by his curiofity with fome who confulted this oracle, and that he was a niglat within the hide, as above mentioned; during which time he felt and heard fuch terrible things, that he could net exprefs them: the impreffion it made on him was fuch as could never go off, and the faid that for a thonfand worlds he would never again be concerned in the like performance, for this had difordered him to a high degrec. He confeffed it ingenuoully, and with an air of great remorfe, and feemed to be very penitent under a juft fenfe of fo great a crime: he declared this about five years fince, and is ftill living in the illand of Lewis, for any thing I know. The inhabitants here did alfo make ufe of a fire called Tin-egin, i. e. a forced fire, or fire of neceflity, which they ufed as an antidote againft the plague or murrain in cattle; and it was performed thus: all the fires in the parifh were extinguilhed, and then eighty-one marricd men, being thought the neceffary number for effecting this defign, took two great planks of wood, and nine of them were employed by turns, who by their repeated efforts rubbed one of the planks againft the other until the heat thereof produced fire; and from this forced fire each family is fupplied with new fire, which is no fooner kindled than a pot full of water is quickly fet on it, and afterwards fprinkled upon the people infected with the plague, or upon the cattle that have the murrain. And this they all fay they find fuccefsful by experience : it was practifed in the main land, oppofite to the fouth of Skie, within thefe thirty years.

They preferve their boundaries from being liable to any debates by their fucceffors thus: they lay a quantity of the athes of burnt wood in the ground, and put big fones above the fame; and for conveying the knowledge of this to pofterity, they carry foree boys from both villages next the boundary, and there whip them foundly, which they will be fure to remember, and tell it to their children. A debate having rifen betwixt the villages of Ofe and Groban in Skie, they found athes as above mentioned under a ftone, which decided the controverfy. It was an ancient cuftom in the iflands, that a man thould take a maid to his wife, and keep her the fpace of a year without marrying her; and if the pleafed him all the while, he married her at the end of the year, and legitimated thefe children; but if he did not love her, he returned her to her parents and her portion alfo; and if there happened to be any children, they were kept by the father: but this unreafonable cuftom was long ago brought into difufe.

It is common in thefe illands when a tenant dies, for the mater to have his ciooice of all the t.orfes which belonged to the decealed; and this was called the eacbjuin borizcida, i. e. a lord's gift : for the firft ufe of it was from a gift of a horfe granted by all the fubjects in Scotland for relieving King . . . . . from his imprifonment in Engiand. 'I here was another duty payable by all the tenants to their chief, though they did not live upon his lands; and this is called calpich: there was a fanding law for it alfo, called cilpici, law ; and I am informed that this is exacted by fume in the main land to this day.

Women were anciently denied the ufe of writing in the iflands, to prevent love intigues: their parents believed that nature was too ikilful in that matter, and needed not
the help of clucation; and therefore that writing would be of dangerous conlequence to the weaker fex.
'the oraturs, in their language callod If dan', were in high efteem both in thefe illands and the continent ; until wibn thede forty years they fat ahways anow, the mobles and chiefs of tamities on the farabls or erele. Their houles and hate villiges were fanccuaries, as well as churehes, and they took place before dectors of p yis. The orators, after the: druids were exinet, were broust in to profive the genconger of fanilies, and to repsat the hame at every fucection of a chief; and upon the occation of marriages and biaths, they made epichatamiums and panegyrics, which the port or bard promonced. The oraters by the fore of their elognence had a powerful afeendant over the greatef men int their time; for if any oratur did but alk we habir, ams, horfe, or any outher thing belongint tin the growe mon in thetio iflands, it wis reatily granted them, fonctimes ent of ripect, and fometimes for fen of being exchaned araint by a fatire, which in thofe days was reckoned a great dufhomour: but thele gentemon beconis infolent, lent ever fince both the profit and efteem which was formerly due to their chatacter; for neither their panegyries nor fatires are regarded to what they have been, and they are now allowed but a finall falary. I muft not onit to relate their way of fhaty, which is very lingular: they thut their doors and windens for a day's time, and bie on their backs, with altone upon their betly, and plails about their hededs, and their cyes being covered, they pump their brains for rhetorical encomiun or panegyric; and indeed they furnith fuch a thyle from this shrk cell as is undertlood by very tew; and if they purchale a comple of horfes as the reward of their meditation, they think they have thene a great maticr. The poet or bard had a tille to the bridegroom's upper garb, that is, the plaid and homet; but now he is fatisfied with what the bridegroom pleales to give him on fied necafions.

There was an ancint cuftom in the innol of Lewis, to make a fiery circle about the houfes, corn, cattle, \&ce. belonging to cach particular fanily: a man carried fre in his right hand, and went round, and it was cal ed deffit, from the right hand, which in the ancient tanguage is called dijs. An infance of this round was performed in the village Shatir, in Levis, about fixteen years ago (as 1 was old), but it proved fatal to the practifer, called Mac-Callum; for after he hat carefully pref rmed this round, that very might following he and his family were fadte furprife and ad his homies, corn, cattle, Ne. were confuned with fire. I his fuperititious contom is quite abolithed now, for there has not been above this one inftance of it in he ty years palt.

These is another way of the deffl, or carrying fire so un atone somen before they are churched, after child-bearing; and it is uted tih wate about childem mel they ane chriflend; both which are perturmond in the newrang and ae night. This is ony pracifed now by fome of the ancient mimiks: I wquired their reaton for this culum, which I wh them was altegether unawful; his ditubtired them mighty, juf much that they would give me no latisfution. But ethese, that were of a more agresable
 and the matal fam the power of eval firite, who are ready at fuch times to do minched, and fomenmes cary anesy the intst; and when they get them once in the in

 belioved that their children were thns lakn away, to wig a grave in the fiek upm quares-day, and there to lay the fairy the! ton till mext morman; ar which tome the parents went to the place, where they donbed not to timd theis own child indlead el
this ikeleton. Some of the poorer fort of people in thefe iflands retain the cultom of performing thefe rounds fun ways about the perfons of their benefactors three times, when they befs them, and wing enod fuccefs to all their enterprizes. Some are very caretul when they fet out to fica that the boat be firf rowed about fun-ways; and if this be neglected, they are afrail their voyage may prove uufortunate. I had this ceremony paid me when in the ifland of Ila) by a poor woman, after I had given her an alms: I defired her to let alone that compliment for I did not care for it; lut fhe infifled to make thefe three ordinary turns, and then prayed that God and Mace Charmig, the patron $f$ int of that ifland, minht blefs and profper me in all my defigns and affairs.

I attempted twice to go from Ita to Collonlay, and at both times they rowed about the boat full-wiys, thergh 1 forbid them to do it; and by a contrary wind the boat and thole in it were forced back. I took boat again a thirl time from Jura to Collonfay, and at the lame time forbid the to row about their hoat, which they obeyed, and hen we landed lifely at Collonfay wibout any ill adventure, which fone of the crew did not be ieve poffible, for want of the round; but this one inftance hath convinced them of the ranity of this fupertitious ceremony. Another ancient cullom obferved on the fecond of Fibruary, which the papifts there yet retain, is this: the miltrefs and fervants of each family take a fheaf of oats, and drefs it up in women's apparel, put it in a large balket, and lay a wooden cluh liy it, and this they call Briidsbed; :nd then the mill refs and fervants cry three times, Briid is come, briid is welcone. This they do juft before going to bed, and when thev rife in the moming they to k among the afhes, expecting to fee the impreffion of Briid's club there; which if they do, they recken it a true prefage of a good crop and profperous year, and the contrary they take as an ill omen.

It has been an ancient cuftom among the nativer, and now only ufed by fome old people, to fiwear by their chid $f$ or laird's hand.

Whin a de bite arifes hetween two perfnens, if one of them affert the matter by your futher's hand, they reckon it a great indignity; but if they go a degree higher, and out of lipite fay, ly your father and grandfither's hand, the next word is cominonly accompanicd with : how

It is a reccived opinion in thefe inands, as well as in the neighbouring part of the main land, that we men by a charm, or fome other fecret way, are able to convey the increafe of their neighbour's cows milk to their own ufe; and that the milk fo charmed doth net produce the ordinary quantity of butter; and the curds made of that milk are fo tough, that it camot be made fo firm as other checfe, and is alfo much lighter in weight. 'I he buter fo taken away, and joined to the charmer's butter, is evidently difcernible by a mark of feparation, viz. the diverfity of colours; that which is charmed being Ilill paler than that part of the butter which hath not been charmed; and if butter having thele marks be found with a fufpected woman, fhe is prefently faid to be guilty. Their utual way of recovering this lofs, is to take a little of the rennet from all the fufpecked perions, and put it in in egr-theil full of mils, and when that from the charmer is magled with it, it pretently curdles, and not before.

This, was aftiertel to me by the generality of the moft judicious people in thefe iflands; fome of them having, as they told me, come to the knowledge of it to the ir coft. Some women make ufe of the root of groundfel as an amulet againt fuch charms, by puting it anong their cream.

Buth men and women in thofe iflands, and in the neighbouring main land, affirm that the increafe of milk is likewife taken away by trouts, if it happen that the difhes or pails wherein the milk is kept, be walhed in the rivulets where truats are : and the way
to recover this damage is by taking a live trout and pouring milk into its mouth; which they fay doth prefently curdle, if was taken away by trouts, but otherwife they fay it is not.

They affirm likewife that fome women have an ârt to take away the milk of nurfes.
I faw four women whofe milk were tried, that one might be chofen for a nurfe; and the woman pitched upon was after three days' fuckling deprived of her nilk; whercupon the was fent away, and another put in her place; and on the third day after, the that was firf chofen recovered her milk again. This was concluded to be the cffect of witchcraft by fome of her neighbours.

They alfo fay that fome have an art of taking away the increafe of malt, and that the drink made of this malt hath neither life nor good tafte in it; and on the ountrary, the charmer hath very good ale all this time. A gentleman of my acquai , dnce, for the fpace of a year, could not have a drop of good ale in his houfe; and having complained of it to all that converfed with him, he was at laft advifed to get fome yeaft from every alehoufe in the parifh; and having got a little from one particular man, he put it among his wort, which became as good ale as could be drank, and fo defeated the charm. After which the gendeman in whofe land this man lived banifhed him thirty-fix miles from thence.

They fay there are women who have an art of taking a mote out of one's eyc, though at fome miles diftance from the party grieved; and this is the only charn thefe women will avouch themfelves to underfand, as fome of them told me, and feveral of thefe men, out of whofe eyes motes were then taken, confirmed the truth of it to me.

All thefe iflanders, and feveral thoufands on the neighbouring continent, are of opinion, that fome particular perfons have an evil cye, which affects children and cattle; this they fay occafiens frequent mifchances, and fometines death. I could name fome who are believed to have this unhappy faculty, though at the fame time void of any ill defign. This hath been an ancient opinion, as appears from that of the poet:

## Nefcio quis teneros oculus milibi faffinat agnos.

## Courts of Judicatory.

AT the firt plantation of thefe ines, all matters wete managed by the fole authority of the heads of tribes, called in the Irihh thiarna, which was the fame with tyramnus, and now it fignifies lord or chief, there being no ftandard of equity or juftice but what fowed from them; and when their numbers increafed, they erected courts called mode, and in the Englif, baron courts.

The proprietor has the nomination of the members of this court; he timfelf is prefident of it, and in his abfence his bailiff ; the minifter of the parifh is always a menter of it. There are no attornies to plead the caufe of either party, for both men and women reprefent their refpective caufes; and there is aluays a fpeedy decifion, if the parties have their witneffes prefent, \&c.

There is a peremptory fentence paffes in court for ready payment; and if the party againft whom judgment is given prove refractory, the other may fend the comnou officer, who has power to diffrain, and at the fame time to exact a fine of twenty pounds Scots, for the ufe of the proprietor, and about two marks for himfelf.

The heads of tribes had their offenfive and defenfive leagues, called bonds of mandrate and manrent in the Lowlands, by which each party was obliged to aflitt one another upon all extraordinary emergencies: and though the differences between thofe chieflains
chieftains involved feveral confederates in a civil war, yet they obliged themfelves by the bond mentioned above to continue ftedfaft in their duty to their fovereign.

When the proprictor gives a farm to his tenant, whether for one or more years, it is cuftomary to give the tenant a ftick of wood, and fome ftraw in his hand: this is imme diately returned by the tenant again to his mafter, and then both parties are as much obliged to perform their refpective conditions, as if they had figned a leafe or any other deed.

## Cburcls Difcipline.

EVERY parifh in the weftern ifles has a church judicature, called the confiftory, or kirk-fellion, where the minitter prefides, and a competent number of laymen, called elders, meet with him. They take cognizance of icandals, cenfure faulty perfons, and with that frictnefs, as to give an oath to thofe who are fufpected of adultery or fornication; for which they are to be proceeded againft according to the cuttom of the country. They meet after divine fervice ; the chief heretor of the parifh is prefent, to concur with them, and enforce their acts by his authority, which is irrefiftible within the bounds of his jurifdiction.

## A Form of Prayer ufed by many of the I/Randers at Sea after the Sails are boifsed.

[This Form is contained in the Itifh Liturgy compofed by Mr. Jolan Kerfwell, afterwards Bifhop of Argyle, printed in the year 1566, and dedicated to the Earl of Argyle. I have fet down the original, for the fatisfaction of fuch readers as underfand it.]

Steerfman. God the Father Almighty, for the love of Jefus Chrift his Son, by the comfort of the Holy Ghoft, the one God, who miraculoufly brought the children of Ifracl through the Red Sea, and brought Yonas to land out of the belly of the whale, and the Apofle St. Paul and his hip to fafety from the troubled raging fea, and from the violence of a tempeftuous ftorm ; deliver, fanctify, blefs and conduct us peaceably, calmly, and comfortably through the fea to our harbour, according to his Divine will : which we beg, faying, Our Father, \&c.

> A Defcription : jle of Skie.

SKIE (in the ancient language Skianach, i. e. winged) is fo called becaufe the two oppofite northern promontories (Vaternefs lying north-weft, and Trotternefs north-eaft) refemble two wings. This ife lies for the nooft part half-way in the weftern fea, between the main land on the eaft, the flire of Rofs, aid the weftern ifle of Lewis, \&c.

The ine is very high land, as well on the coaft, as higher up in the country; and there are feven high mountains near one another, almoft in the centre of the inf.

This ifland is forty miles in length from fouth to north, and in fome places twenty, and in others thirty in breadth; the whole may amount to a hundred miles in circumference.

The channel between the fouth of Skic and oppofite main land (which is part of the fhire of Innernefs) is not above three leagues in breadth; and where the ferry boat croffeth to Glenelg it is fo narrow, that one may call for the ferry-boat, and be eafily heard on the other fide. This ifle is a part of the fheriffoom of Innernefs, and formerly of the diocefs of the ifles, which was united to that of Argyle: a fouth-calt moon caufeth a lpring tide here.
-The mold is generally black, efpecially in the mountains; but there is fome of a red colour, in which iron is found.

The aratle land is for the moft part black:, and yet affords clay of different colours; as white, red, and blue : the rivulet at Dunvegan church, and that of Nifboft, have fullers-carth.

The villages Borve and Glenmore afford two very fine forts of earth, the one red, the other white; and they both feel and cut like melted tallow. There are other placesthat afford p'enty of very fine white marle, which cuss like butter; it abounds moft in Corchattachan, where an experiment has been made of its virtue; a quantity of it being tpread on a floping hill covered with heath, foon after all the heath .': to the
fround, as if it had been cut with a kniff. They afterwards fowed barley on the ground, which though it grew but unequally, fome places producing no grain, becaufe perhaps it was unequaily laid on; yet the produce was thiriy-five fold, and many falks carried five ears of barley. I his account was given me by the prefent poffeffor of the ground, Lachlin Mac-kinon.

There are Marcafites black and white, refembling filver ore, near the village Sart'e: there are likewife in the fame place feveral fones, which in bignefs, fhape, \&c. refemble nutmeg, and many rivulets here afford variegated fones of all colours. The Applesglen near Loch-fallart has aggat growing in it of different lizes and colours; fome are green on the out fide, fome are of a pale fky-colour, and they all frike fire as well as flint: I have one of them by me, which in thape and bignefs is proper for a fword-hande. Stones of a purple colour how down the sivulets here after great rains.

There is clnyfal in fereral places of this ifland, as at Pottery, Quillin, and Mingnis ; it is of different fizes and colours, fome is fex-angular, as that of Quillin, and Mingnis; and there is fome in Minrinefs of a purple colour. The village Torrin in Strath affords a great deal of good white and black marble; I have feen cups made of the white, which is very fine. There are large quarries of frec-ftone in feveral parts of this ifle, as at Snifinefs in Strath, in the fouth of Borrie, and ifle of Rafay. There is abundance of lime-ftone in Strath and Trotternefs : fome banks of clay on the eaft coaft are overflowed by the tide, and in thefe grow the Lapis Ceranius, or Cerna Ainomis, of different flapes; fome of the breadih of a crown-picce, bearing an impreffion refembling the fun; fome are as big as a man's finger, in form of a femi-circle, and furrowed on the inner fide; others are lefs, and have furrows of a yellow colour on both fides. Thefe ftones are by the uatives called cramp-ftones, becaufe (as they fay) they cure the cramp in cows, by wafling the part affected with water in which this ftone has been fteeped for fome hours. The Velumintes grow likewife in thefe banks of clay; fome of chem are twelve inches long and tapering towards one end: the natives call them Bot Stones, becaufe they believe them to cure the horfes of worms which occafion that diftemper, by giving them water to drink, in which this fone has been fteeped for fome hours.

This itone grows likewife in the middle of a very hard grey fone on the fhore. There is a black fone in the furface of the rock on Rig-fhore, which refembles goats horns.

The lapis becticis, or wbite Hestick fone, abounds here both in the land and water: the natives ufe this ftone as a remedy againft the $d y$ fenteria and diarrbea; they make them red-hot in the fire, and then quench them in mills, and fome in water, which they drink with good fuccefis. They ufe this fone after the lame manner for confunptions, and they likewife quench thefe foncs in water, with whish they bathe their feet and hands.

The ftones on which the fcurf called Corkir grows, are to be had in many places on the coaft, and in the hills. This fcurf dyes a pretty crimfon colour; firt well dried, and then ground to powder, after which it is ftecped in urine, the veffel being well fecured from air ; and in three weeks it is ready to boil with the yarn that is to be dyed. The natives obferve the decreafe of the moon for fcraping this fcurf from the fone, and fay it is ripeft in Auguft.

There are many white fcurfs on fone, fomewhat like thefe on which the Corkir grows, but the Corkir is white, and thinner than any other that refembles it.

1 here is another coarfer fcurf called Croftil; it is of a dark colour, and only dyes a philamot.

The rocks in the village Ord, have much talk growing on them like the Venice-talk. vol. 111.

4 K
This

This iffe is naturally well provided with varicty of excellent bays and harbours. In the fouth of it lies the peninfula called ( ronfo, alias Ifland Dierman; it has an excellent place for anchorage on the eafl-fide, and is generally known by moft Scots feamen. About a league more eafterly on the fame coaft there is a finall rock, vifible only at half low-water, but may be avoided by feering through the middle of the channel. About a teague more eafterly on the fame coaft, these is an anchorage pretty near the fhore: within lefs than a enile further is the narrow found called the Kyle, in order to pafs which it is abfolutely neceflary to have the tide of flood for fuch as are northward bound, elfe they will be obliged to retire in order, becaufe of the violence of the current; for no wind is able to carry a veflel againit it. The quite contrary courfe is to be obferved by veffels coming from the north. A mile due calt from the Kyle, there is a big rock, on the fouth fide the point of land on Skie fide, called Kaillach, which is overflowed by the tide of flood; a veffel may go near its out file. Above a mile further due north, there are two rocks in the paflage through the Kyle; they are on the caftle fide, and may be avoided by keeping the middle of the channel. About eight miles more to the northward, or the eaft of Skie, there is fecure. anchorage between the ille Scalpa and Skie in the middle of the channel; but one muft not come to it by the fouth entry of Scalpa: and in coraing between Rafay and this ifle, there are rocks without the en:ry, which may be avoided beft, by having a pilot of the country. More to the north is Lockligichan, on the coalt of Skie, where is good anchorage; the entry is not deep enough for veffels of any burden, except at high water: but three niles further north lies Loch-Portry, a capacious and convenient harbour of above a mile in length.
'The inand Tulm, which is within half a mile of the northermoft point of Skie, has an harbour on the infide. The entrance between the ifle and Duntulm caftle is the beft.

On the weft of the fame wing of Skie, and about five miles more foutheriy, lies LochUge, about a mile in length, and a very good harbour for veffels of the greateft burden. About two miles on the coaft further fouth is Loch-fnifort ; it is three miles in length, and half a mile in breadth; it is free from rocks, and has convenient anchorage.

On the weft fide of the promontory, at the mouth of Lecis-fnifort, lies Loch-arnifort, being about two miles in length, and half a milic in breadth: there are two fmall ifles in the mouth of the entry, and a rock near the wefl fide, a little within the entry.

Some five miles to the weft of Arnifort lies L.ch-fallart ; the entry is between Vaternilhead on the eaft tide, and Dunvegan-head on the weft fide. The loch is fix miles in length, and about a league in breadth for fome miles: it hath the illand lfa about the middle, on the eaft file. There is a rock between the north end and the land, and there veffels may anchor between the N. E. fide of the ife and the land; there is alio good anchorage near Dunvegan-caftle, two miles further to the fouthward.

Loch-Brakadil lies two miles fouth of Loch-fallart; it is feven miles in length, and has feveral good anchoring-places: on the north fide the entry lie two rocks, called Wacleod'; Maidens. About three miles fouthweft is Loch-einard, a mile in length; it bas a rock in the entry, and is not vifible but at an ebb.

About two miles to the eaftward, there is an al choring-place for barks, between Skic and the ifle of Soa.

About a league further eaft lie I.och-flapan and Loch-effort; the firf reaches about four miles to the north, and the fecond about fix miles to the eaft

There are feveral mountains in the ife of a confiderable height and extert; as Quillin, Scornificy, Bein-fore, Bein-vore-fcowe, Bein-chro, Bein nin, Kaillach : fome of them are covered with frow on the top in fummer, others are almoft quite covered
with fand in the top, which is much wafled down with the great rains. All thefe mountains abound with heath and grafs, which ferve as good paiturage for black cattle and fheep.

The Quillin, which exceeds any of thofe hills in height, is faid to be the caufe of nuch rain, by breakiizg the clouds that hover about it ; which quickly after pour down in rain upon that quarter on which the wind then blows. There is a high ridge of one continued mountain of confiderable height, and fifteen miles in length, running along the middle of the eaft wing of Skie, called Troternefs; and that part above the fea is faced with a fteep rock.

The arable ground is generally along the coaft, and in the valleys betwcen the mountains, having always a river running in the middle; the foil is very grateful to the hufbandman. I have been flowed feveral places that had not been tilled for feven years before, which yielded a gcod product of oats by digging, though the ground was not dunged; particularly near the village Kilmartin, which the natives told me had not been dunged thele forty years laft. Several pieces of ground yield twenty, and fome thirty fold, when dunged with fea-ware. I had an account, that a fmall tract of ground in the village of Skerybreck, yielded an hurdred fold of barley.

The ine of Altig, which is generally covered with heath, being manured with feaware, the owner fowed barley in the ground, and it yielded a very good product; many falks had five ears growing upon them. In plentiful years, Skie furnifhes the oppofite continent with oats and barley. The way of tillage here is after the fame manner that is already defcribed in the ifles of Lewis, \&c. and digging doth always produce a better increafe here than ploughing.

All the mountains in this ine are plentifully furnifhed with variety of excellent fprings and fountains; fome of them have rivulcts, with water-mills upon them. The moft celebrated well in Skie, is Loch-fiant well; it is much frequented by ftrangers, as well as by the inhabitants of the inc, who gencrally believe it to be a fpecific for feveral difeafes; fuch as ftitches, bead-aches, ftone, confumption, megrim. Several of the common pecple oblige themfelves by a vow to come to this well, and make the ordinary tour athout it, called Deffil, which is performed thus: they move thrice round the well, proceeding fun-ways from ealt to weft, and fo on. This is done after drinking of the water; and when one goes awoy front the well, it is a never-failing cuftom, to leave fome fimall offering on the fone which covers the well. There are nine fprings iffuing out of the hill above the well, and all of them pay the tribute of their water to a rivulet that falls from the well. There is a little frefh-water lake within ten yards of the faid well; it abounds with trouts, but neither the natives nor ftrangers will ever prefume to deftroy any of them, fuch is the efteem they have for the water.

There is a fall coppice near to the well, and there is none of the natives dare venture to cut the leaft branch of it, for fear of fignal judgment to fcllow upon it.

There are many wells here efteemed effectual to remove feveral dftempers. The lighteft and wholefomeft water in all the ine is that of Tombir Tellibr $k$ in Uge : the natives fay that the water of this well, and the fea-plant called Dulfe, would ferve inftead of food for a confiderable time, and own that they have experienced it in time of war. I faw a little well in Kilbride in the fouth of Skie, with one trout only in it; the natives are very tender of it, and though they often chance to catch it in their wooden pales, they ate vory careful to preferve it from being deftroyed; it has been feen there for many years: there is a rivulet not far diftant from the well, to which it hath probably had accefs through fome narrow pallage.

There are many rivers on all quarters of the ine, about thirty of them afford falmon, and fome of them black mufces, in which pearl do breed; particularly the river of Kilmartin, and the river Ord. The proprietor told me, that fome years ago a pearl had been taken out of the former, valued at twenty pounds fterling. 'T here are feveral cataracts, as that in Sker-horen, Holm, Rig and Tont. When the river makes agreat noile in time of fair weather, it is a fure prognollick here of rain to caflue.

There are many frefh-water lakes in Skie, and generally, well focked with trout and eels. The conmon fly and the earth-worms are ordinarily ufed for angling trout; the beft ieafon for it is a calm, or a fouth-weft wind.

The largeft of the feflowater lakes is that named alter St. Columbus, on the account of the chapel dedicated to that Saint ; it fands in the ifle about the middle of the lake.

There is a little frefh-water lake near the fouth fide of Loch-einordtard, in which muicles grow that breed pearl.
This ifle hath anciently been sovered all over with woods, as appears from the great trunks of Iir-trees, \&c. dug out of the bogs frequenty, \&c. There are feveral copp:ces of wood, fcattered up and down the ifle; the largelt called Lettir-hurr, exceeds not three mies in l-ngth.
Herrings are often taken in moft or all the bays mentioned above : Ioch-effort, Sla. pan, Loch-fallart, Loch-fcowfar, and the Kyle of Scalpa, are fુencrally known to llrangers, for the great quantities of herriug taken in them. This fort of fifh is commonly feen withom the bay, and on the coalt all the fummer. Alt other fifh follow the herring and their fry, from the whale to the le ? fifh that fwims; the higgeft till deftroying the leffer.
The fifthers and others told me, that there is a big herring alnof double the fize of any of its kind, which leads all that are in a bay, and the fhoal follows it wherever it goes. This leader is by the fihers called the king of herring, and when they chance to catch it alive, they drop it carefully into the fea; for they judge it petty treafon to deftroy a fifh of that name.

The fifhers fay, that all forts of fifh, from the greatef to the leaf, have a leader, who is followed by all of its kind.

It is a general obfervation all Scotland over, that if a quarrel happen on the coaft where herring is caught, and that blood be drawn violently, then the herring sway from the coalt, without returning during that feafon. This, they fay, has been obferved in all patt ages, as well as at prefent, ut this I relate only as a common tradition, and fubmit it to the judgment of the learned.

The natives preterve and dry their herring wihhout falt, for the fpace of eight months, provided they be taken after the tenth of Scpember: they ufe mother art in it, but take out their guts, and then tying a areh about the ir neeks, hamg them by pairs upou a sope made of heath crofs a houfe; and they cat well, and frec from purcfaction. after eight months keeping in this manner. Cod, ling, herring, nackrel, haddoch, whiting, turbot, together with all other fifl that are in the Scots feas, abound on the coalls of this ifland.

The beft tine of taking fifh with an angle is in warm weather, which difpofes them to come near the furface of the water; whereas in cold weather, or bain, they go whe bottom. The beft bait for cod and ling is a piece of herring, whiting, manatack, haddock, or eel. The grey lord, clias black-mouth, a fifh of the fize and thape of a falmon, takes the limpet for bait. There is another way of angling for this fith, by fattening a fhort white down of a goofe behind the hook; and the boat being continually
rowen, the fifh run greedily after the down, and are cafily caught. 'Tlie grey:lord fwims in the furface of the water, and then is caught with a lpear; a rope being tied to the further end of it, and fecured in the filherman's hand.
sll the bays and places of anchorage here abound with moft kinds of hell-fifh. The Kyle of scalpa alfiords oyfters in fuch plenty, that commonly a fpring-(ide of ebb laaves fiftecth, fometimes twenty horfe-load of then on the fands.

The fands on the coalt of Bernftill village at the fpring-tides afford daily fuch plenty of mufcles, as is fufficient to mainain fixty perlons per day: and this was a great fupport to many poor families in the neighbourhood, in the late years of fearcity. The natives obferve that all hell- fifh are plumper at the increafe than decreafe of the moon; they oblerve likewife, that all fhell- filh are plumper during a fouth-weft wind, than when it blows from the north or north-caft quarters.

The limpet being parboiled with a yery little quantity of water, the broth is drank to increafe milk in nurfes, and likewife when the milk proves altringent to the infants. The broth of the black perivinkle is ufed in the fame cafes. It is obferved, that limpets being frequently eat in June, are apt to occation the jaundice; the outiide of the fifh is coloured like the fkin of a perfon that has the jaundice: the tender yellow part of the limpet, which is next to the flicll, is reckoned good nourifhment, and very eafy of digellion.

I had an account of a poor woman, who was a native of the iffe of Jura, and by the troubles in King Charles the Firft's reign was almoft reduced to a flarving condition; fo that the lof her milk quite, by which her infant had nothing proper for its fuftenance; upon this fhe boiled fome of the tender fat of the limpets, and gave it to ner infant, to whom it became fo agrecable, that it had no other food for feveral months together; and yet there was not a child in Jur:a, or any of the adjacent illes, wholefooner than this poor infant, which was expofed to fo great a flrait.

The limpet creeps on the fone and rock in the night-time, and in a warm day; but if any thing touch the fhell, it infantly clings to the flone, and then no hand is able to plack it off without fome inftrument; and, therefore, fuch as take them have little hammers, called limpet-hammers, with which they beat it from the rock; but if they watch its motions, and limprize it, the lealt touch of the hand puils it away: and this that is taken creeping, they fay, is larger and better than that which is pulled off by force. The motion, fixation, tafte, and feeding, \&c. of this little animal being very curious, I have here exhibited its figure, for the fatisfaction of the inquifitive reader.

1 have likewile here exhibited the figure of the balanos, growing on tlone and thells; in which very fmall wi ks are found to lodge and grow.

The pale wilk, which in length and limathefs exceeds the black periwinkle, and by the matives called gil-fiunt, is by them beat in pieces, and both thell and fith boiled; the broth being ftrained, and drank for fome days together, is accounted a good remedy aguinft the flone; it is called a dead man'secye at Dover. It is obferved of cockles and Spout-fifh, that they qo deeper in the fands with morth winds than any other; and on the contrary, they are cafier reached with fouth winds, which are lill warpent.
rt is a general oblervation of all fuch as live on the fea-coalt, that they are more prolitic than any other peope whatoever.

## The Sea Plants bere, are as follows:

L'NARICH, a very thin fmall green plit, about eight, ten, or twelve inches in length; it grows on flone, on thulls, and on the bare land. This plant is spolied
plailtur-
plaifter-wife to the forehead and temples, to procure flecp for fuch as have a fever, and they fay it is effectual for this purpofic.

The linarich is likewife applied to the crown of the head and temples, for removing the megrim, and alfo to heal the ikin after a blifter-plaifter of flaminula Jovis.

Slake, a very thin plant, almoft round, about ten or twelve inches in circumference, grows on the rocks and fands ; the natives eat it boiled, and it diffolves into oil ; they fay that if a little butter be added to it, one might live many years on this alone, without bread, or any other food, and at the fame time undergo any laborious exercife. This plant, boiled with fome butter, is given to cows in the fpring, to remove coftivenefs.

Dulfe is of a reddifh brown colour, about ten or twelve inches long, and above half an inch in breadth; it is eat raw, and then recknued to be lootening, and very good for the fight; but if boiled, it proves more loofening, if the juice be drank with it. This plant applicd plaiter-wife to the temples, is reckoned effectual againt the megrim: the plant boiled, and eat with its infufion, i; ufed againft the cholic and Itone; and dried without wafhing it in warer, pulverized and given in any convenient vehicke fatting, it kilis worms; the natives eat it boiled wish butter, and reckon it very wholefome. The dulle recommended here is that which grows on llone, and not that which grows on the alga marina, or fea rangle; for though that may be likewife eaten, it will not ferve in any of the cafes above mentioned.

The alga marina, or fea-tangle, or, as fome call it, fea-ware, is a rod about tour, fix, eight, or ten feet long; having at the end a blate commonly tht into feven or cight pieces, and about a foot and a half in length; it grows on flone, the blade is eat by the vulgar natives. I had an account of a young man who hadd loit his apperite, and taken pitls to no purpofe; and being advifed to boil the blade of the alga, and drink the infufion boiled with a litile butter, was reftured to his former flate of health.

There is abundance of white and red coral growing on the fouth and welt coaft of this ifle; it grows on the rocks, and is frequently interwoven with the roots of the alga; the red feems to be a good freth colour when firlt taken out of the fea, but in a few hours after it becomes pale. Some of the natives take a quantity of the red coral, adding the yolk of an egg roafled to it, for the diarrhea. Both the red and white coral here is not above five inches long, and about the bignels of a gooie-quill.

There are many caves to be feen on each quarter of this ine, fome of them are believed to be feveral miles in length : where is a big cave in the village Bornkittag, which is fuppofed to exceed a mile in length. The naives told me that a piper, who was over-curious, went into the cave with a defign to find out the length of it; and after he entered, began to play on his pipe, but never returned to give an account of his progrefs.

There is a cave in the village Kige, wherein drops of water that ifue frem the roof petrify into a white limy fubltance, and hang down from the rouf and fides of the cave.

There is a cave in the village Holm, having many petrified twigs hanging from the top; they are hollow from one end to the other, and from five to ten inches in length.

There is a big cave in the rock on the eaff fide of Portry, large enough for cighty perfons; there is a wall within it, which, together with its fituation and narrow entry, renders it an inace flible fort; one man only can enter it at a time, by the fide of a rock, to that with a itatf in his hand he is able by the lealt touch to caft over the rock as many as fhall attempt to come into the cave.

On the fouth fide Loch-Portry, there is a large cave, in which many fea cormorants do build; the natives carry a bundle of ftraw to the door of the cave in the nighttime, and there fetting it on fire, the fowls fly with all fpeed to the light, and fo are caught in balkets laid for that purpofe. The golden cave in Sleat is faid to be feven miles in length, from the weft to eaft.
There are many cairas, or heaps of ftones in this ifland. Some of the natives fay they were erected in the times of Heathenifm, and that the ancient inhabitants worfhipped albout them. In Popifh countries, the people ftill ret in the ancient cuftom of making a tour round them.

Others fay, thefe cairns were erefted where perfons of diftinction, killed in battle; had been buried, and that their urns were laid in the ground under the cairns. I had an account of a cairn in Knapdale in the fhire of Argyle, underneath which an urn was found. 'There are little cairns to be feen in fome places on the common road, which were made only where corpfes happened to refl for fome minutes; but they have laid afide the making fuch cairns now.
There is an erected flone in Kilbride in Strath, which is ten feet high, and one and a half broad.

There is another of five feet high placed in the middle of the Cairn, on the fouth fide Lowh.Uge, and is called the high flone of Uge.

There are three fuch fones on the fea-coalt oppofite to Ske:inefs, each of them three feet high; the natives have a tralition, that upon thefe flones a big cauldron Was fet, for boiling Fin-Mac-Coul's meat. 'This gigantic man is reported to have been gencral of a militia that came from Spain to Ireland, and from thence to thofe ifles: all his foldiers are called Fienty from Fiun. He is believed to have arrived in the ifles, in the reign of King Evan: the natives have many fories of this general and his army, with which I will not trouble the reader. He is mentioned in Bifhop Lefly's Ihitory.

There are many forts erected on the coalt of this ifle, and lup;ofed to have lieen built by the Danes; they are called by the name of Dun, from Dain, which in the ancient language fignified a fort; they are round in form, and they have a palfuge all round within the wall; the door of them is low, and many of the fones are of fuch tulk, that no number of the prefont inhabitants could raife them withour an engine.
All thefe forts fland upon eminences, and are fo difpofed, that there is not one of them, which is not in vicw of fome other ; and by this means, when a fire is made upon a beacon in any one fort, it is in a few moments after commanicated to all the refl : and this hath been always obferved upon fight of any number of foreign veffels, or boats approaching the coalt.
The forts are commonly mamed after the place where they are, or the perfon that built them ; as Dun Skudborg, Dun Derig, Dun-Skerinefs, Dum.David, \&ce.

There are feveral little ftone houfes, bailt under ground, called carth-houfes, which ferved to hide a few people and their goods in time of war ; the entry to them was on the fea or river-fide : there is one of them in the village Lachfay, and another in Camftinvag.

There are feveral little fone houfes built above ground, capable only of one perfon, and round in form ; one of them is to be feen in lortry, another at Lincro, and at Culuknock: they are called Tcy nin druinich, i. e. Druid's-houfe. Druinich funnifies a a retired perfon, much devoted to contemplation.

The fewel uled here is peats dug out of the heaths; there are cakes of iron found in the athes of fome of them, and at Flodgery village there are peats from which falt-petre tiparkles. There is a coal lately difcovered at Holm in Portry, lome of which I have
feen; there are pieces of coal dug out likewife of the fea-fand in Heldurla of Vaternis, and fome found in the village Mogltat.
The cattle produced here are horles, cows, heep, goats, and hogs. The common work-horliss are expofed to the rigour of the feation during the winter and furing; and though they have neither corn, hay, or but feldom flaw, yet they undergo all the labour that other horfes better treated are liable to.

The cows are likewile expofed to the rigour of the coldelt feafons, and become mere hetetons in the fpring, maty of them not being able to rife from the gromal willout help; but they recover as the fealon becones more fivourahle, and the grafs grows up: then they acquire new beef, which is both fweet and tender; tixe fut and lean is not fo much leparated in them as in other cows, but as it were lawided, which renders it very agrecable to the talte. A cow in this inc may be twelve years old, when at the fame time is beef is not above four, five, or fix months old. When a calf is flain, is is an wfual cuftom to cover another calf with its fkin, to finck the cow whofe calf hath been flim, or etfe the gives no milk, nor fullers herfelf to be approached by any body; and if the difcover the cheat, then fhe grows enraged for fome days, and the laft remedy ufed opacify; her, is to ufe the fweetelt voice, and fing all the time of milking her. Whet any man is troubled with his neighbour's cous, by breaking into his inclofures, he brings all to the utmof boundary of his ground, and there drawing a quantity of blood from each cow, he leaves them upon the fpot, from whence they go away, without ever returning again to trouble him, during all that feafon. The cows often feed upon the alga marina, or fea-ware; and they can exactly diftuguifh the tide of ebb from the tide of flood, though at the lame time they are not within view of the fea; and if one mect them running to the fhore at the tile of ebb, and offie to turn them again to the hills to graze, they will not return. When the tide has ebbed about two hours, fo as to uncover the fea-ware; then they fleer their courfe dircelly to the neareft coaft, in their ufual order, one atter another whatever their number be : there are as many inflances of this, as there are tides of etb on the fhore. I had occafion to make this oblervation thirteen times in one week; for, though the natives gave me repeated afluramers of the truth of in, 1 did not fully believe it, till I faw many inllancess of it in my travels along the coaft. The natives have a remark, that when the cows belonging to one perfon do of a fudden become very irregular, and rum up and down the fields, and make a loud noife, without any vifible caufe, it is a pretage of the mather's or miftrels's death; of which there were feveral late inflances given me. Janes Macdonald of Capitil having been killed at the battle of Kelicranky, it was oblerved that night, that his cows gave blood inftead of milk; his family and other neighbours concluded this a bad omen. The minifter of the phace, and the miftrefs of the cows, together with feveral ncighbours, aftured ine of the truth of this.

There was a calf brought forth in Vaternis without legs; it 1 aped very far, bellowed louder than aly other calf, and drank much more milk: at latt the owner killed it. Keme th the carpenter, whe lives there, told me that he had feen the calf. I was alfo inff romed, that a cow in Vaternis brought forth five calves at a time, of which three died.

There was a calf at Skerinefs, having all its legs double, but the bones had but one Foin to cover both; the owner fancying it to be ominous, killeci it, after having lived nine montls. Several of the natives thereabouts told me that they bad teen it.

There are feveral calves that have a lit in the top of their ears, and thefe the maives fancy to be the iflue of a wild bull, that comes from the dea or fecth lakce; ;and this calf is by them called corky fyre.

There is plenty of land and water-fowl in this ine; as hawks, eagles of two kinds, the one grey and of a larger fize, the other much lefs and black, but more deltructive to young cattle ; black-cock, heath hen, plovers, pigeons, wild-geefe, tarmagan, and cranes : of this latter fort, I have feen fixty on the fhore in a flock together. The feafowls are malls of all kinds, coulterneb, guillamot, fea-cormorant, \&c. The natives obferve that the latter, if perfectly black, makes no good broth, nor is its flefh worth eating ; but that a cormorant, which has any white feathers or down, makes good broth, and the flefl of it is good food, and the broth is ufually drunk by nurfes to increafe their milk.

The natives obferve, that this fowl flutters with its wings towards the quarter from which the wind is foon after to blow.

The fea-fowl bunivochil, or, as fome feamen call it, carara, and others bihop, is as big as a goofe, of a brown colour, and the infide of the wings white; the bill is leng and broad, and it is footed like a goofe; it dives quicker than any other fowl whatever; it is very fat. The cafe of this fowl being flayed off with the fat, and a little falt laid on to preferve it, and then applied to the thigh-bone, where it muft lie for feveral weeks together, is an effectual remedy againft the fciatica, of which I faw two inftances. It is obferved of firc-arms that are rubbed over (as the cuftom is here) with the oil or fat of fea-fowls, that they contract ruft much fooner, than when done with the fat of land-fowl ; the Fulmar oil from St. Kilda only excepted, which preferves iron from contracting ruft much longer than any other oil or greafe whatfoever. The natives obferve, that, when the fea-pye warbles its notes inceflantly, it is a fure prefage of fair weather to follow in a few hours after.

The amphibia to be feen in this ifle, are feals, otters, vipers, frogs, toads, and afps. The otter fhuts its eyes when it eats; and this is a confiderable difadvantage to it, for then feveral ravenous fowls lay hold on this opportunity, and rob it of its filh.

The hunters fay, there is a big otter above the ordinary fize, with a white fpot on its brealt, and this they call the king of otters; it is rarely feen, and very hard to be killed; feamen afcribe great virtues to the fkin, for they fay that it is fortunate in battle, and that victory is always on its fide. Serpents abound in feveral parts of this ille; there are three kinds of them, the firf black and white fpotted, which is the moft poifonous, and if a fpeedy remedy be not made ufe of after the wound given, the party is in danger. I lad an account that a man at Glenmore, a boy at Portry, and a woman at Loch-feah-vag, did all die of wounds given by this fort of ferpents. Some believe that the ferpents wound with the fting only, and net with their teeth; but this opinion is founded upon a bare conjecture, becaufe the iting is expofed to view, but the teeth very rarely feen: they are fecured within a hofe of hefh, which prevents their being broke; the end of them being hooked and exceceling fmall, would foon be deftroyed, it it hal not been for this fence that nature has given them. The longef of the black ferpents mentioned above, is from two to three, or at molt four feet long.

The yellow ferpent with brown 'pots is not fo poifonous, nor fo long as the black and white one.
'The brown ferpent is of all three the leaft poifonous, and fmalleft and fhorteft in fize.

The remedies ufed here to extract the poifon of ferpents are various. The rump of a houfecock fitipt of its feather, and applied to the wound, doth powerfully extract the poifon, if timely applied. The cock is obferved after this to fwell to a great bulk, far above its former fize, and being thrown out into the fields, no ravenous bird or beaft will ever offer to talte of it.
vol.. 111.
$+L$
The

The forked fing taken out of an adder's tongue is by the natives fleeped in water, with which they wafh and cure the wound.

The ferpent's head that gives the wound being applied, is found to be a good remedy. New che fe applied timely extracts the puifon well.
There are two lorts of weanes in the ine, one of which exceeds that of the common fize in bignefs; the natives fay that the breath of it kills calves and lambs, and that the 1 Tir fort is apt to occafion a decay in fuch as frequen:ly have them tame about them; efpecially fuch as fulfer them to fuck and lick. ahous their mouths.

## Ths infirior I/lis about Skic.

SOA.BRETTIL lies wit'in a quarter of a mile to the fouth of the mountain Quillin ; it is five miles in circunference, and full of boys, and fitter for pafturage than cultivation. Ahout a mile on the weft fide it is covired with wood, and the reft confills of heath and grafs, laving a mixture of the mertillo all over. The red garden-currants grow in this ife, and are fuppufed to have been carried thither by birls. There has been mo venomgus creature ever feen in this little ille until within thefe two years laft, that a black and white big ferpent was feen by one of the inhabitants, who killed it; they biliev' it came from the oppofite coalt of Skie, where there are many big ferpents. There is abundance of cod and ling round this ille.

On the fruth of Sleat liws ifland Oranfa, which is a peninfula at low water; it is a mile in circumference, and very fruifful in corn and grats. As for the latter, it is faid to excel any piece of yround of its extent in thofe pirts.

In the north entry to Kyle-Akin lie feveral furall in :s; the biggeft and next to Skie is Ilan Nin $\mathbf{G}$ illin, abour half a mile in circumference, covercd all over with long heath, and the crica baccifera: there is atundance of feals and fea fowls about it.

A league further north lies the inle Pabbay, about two miles in circumference; it excels in pafturage, the cows in it afford near double the milk that they yield in Skic. In the dog days there is a big fly in this ithe which infetts the cows, makes them ron up and down, difcompotes them exceedingly, and hinders their feeding, infomuch that they mall be brought nut of the ille to the ifle of $S$ i. . This ille affords abundance of lobthers, liw...pets, wilks, crabs, and ordinary fea-plants.

About hall a league further north lies the finall ine Gilliman, being a quarter of a mile in circumfernce ; the whole is covered with long heath, and the crica baccifcrif. Within a call further north lies the ine of Sealpa, very near to skie, five miles in circumference; it is mount inour from the fouth ond almoft to the north end, it has won! in feveral parts of it ; the fouth end is molt armb, and is Iruirfal in corn and grat

About a mile further north is the in: Rafay, bemp feven miles in lenth, atd thete in breadth, floping on the wort and eaft files; it has lone wood on all the quarers of it, the whole is fiter for patarage than cultation, the gromed beine genceally very whequal, but very wetl wat red with rivuh is and fpringes. There is a foring runuias down the face fa high rock on the cent fole of the in'; it purifies into a white farHace, of which very the lime is mon, and ib re is a crat quantity of it. There is a
 weft fide, which fers: on lolge fevert! tmiliz, who, for their convenience in srazins,

equal length ; for the longeft is always fuppofed to have beft accefs to the tifh, which would prove a difalvantage to fuch as might have th reer oncs.

There are fime forts in this ifle, the higheft is in the fouth end, it is a natural ftrength, and in form like the crown of a lat; it is called Dumb-Cann, which the n.ttives will needs have to be from one Came, confin to the King of Denmark. The other lies on the fide, is an artificial fort, three ftories high, and is called Cattle Vreokle.

The proprictor of the ine is Mr. Mac-Leod, a cadet of the family of that name; his feat is in the village Clachan, the inhabitant have as great veneration for him as any fubjects can have for their king. They preferve the nemory of the deceafed ladies of the place, by erecting a little pyramid of Aone for each of them, with the lady's name. Thefe pyramids are by them called crofles; feveral of them are built of fone and lime, and have three fteps of gradual aicent to them. There are eight fuch crofies about the village, which is adorned with a lietle tower, and lefler houfes, and an orchard with feveral furts of berries, potherts, \&ec. The inhabitants are all proteftants, and ufe the fame ianguage, habit, and diet widh the natives of Skie.

About a quarter of a mile further north lies the ifle Rona, which is three milus in length: vellels pafis through the narrow chamel between Rofay and Rona. This little ifle is the moft unequal tocky piece of ground to be feen any where; there is but very few acres tit for digging, the whole is covered with long heath, erica baccifera, mertillus, -all fome mixture of grafs; it is reckoned very fruitful in palturage; moft of the rocks
waift of the hectic ftone, and a confiderable part of them is of a red colour.
There is a bay on the fouth-weft end of the ifle, with two entries, the one is on the weft fide the other on the fouth, but the latter is only acceffible; it has a rock within the entry, and a good filling.

About three leagues to the north.weft of Rona is the ifle Fladda, being almoft joined to Skic; it is all plain arable ground, and about a mile in circumference.

About a mile to the north lies the ifle Altwig, it has a high rock facing the eaft, is near two miles in circunference, and is reputed fruitful in corn and grafs; there is a little old chapel in it, dedicated to St. Turos. There is a rock of about forty yards in length at the north end of the ifle, diftinguifhed for its commodioufnefs in fifhing. Herrings are feen about this rock in great numbers all fummer, infomuch that the fifherboats are fometimes as it were entangled among the fhoals of them.
'The ine of Troda lies within half a league to the northernmoft point of Skie, called Hunih; it is two miles in circumference, fruitful in corn and grals, and had a chapel dedicated to St. Columbus. The natives toll the that there is a couple of ravens in the ifle, which fuffer none other of their kind to come thither; and when their own young are able to fly, they beat them alfo away from the ifle.
Fladda-Chuan, i. e. Fladda of the Ocean, lies about two leagues diftant from the welt fide of Hunifh point; it is two miles in compafs, the ground is boggy, and but indifferent for corn and grafs: the ifle is much frequented for the plenty of filh of all kinds on each quarter of it. There are very big whales which purfue the fifh on the coalt; the natives diflinguifh one whale for its bignefs above all others, and told me that it had many big limpets growing upon its back, and that the eyes of it were of fuch a prodigious bignets, as ftruck no fmall terror into the beholders. There is a chapel in the ifle dedicated to St. Columbus, it has an altar in the eaft end, and there is a blue flone of a round form on it, which is always moilt. It is an ordinary cullom, when any of the fifhermen are detained in the ifle by contrary winds, to wafh the blue flone with water all round, expecting thereby to procure a favourable wind, which the credulous teniant living in the ifle fays never fails, efpecially if a franger wafh the fone: the fone
is likewife applied to the fides of perple troubled with ftitches, and they fay it is effectual for that purpofe: and fo great is the regard they have for this ftone, that they fwear decifive oaths on it.

The monk O'Gorgon is buried near to this chapel, and there is a fone five feet high at each end of his grave. There is abundance of fea-fowl that come to hatch their young in the inte; the coulter-nebs are very numernus here, it comes in the middle of March, and goes away in the middle of Auguft : it makes a tour round the ifle fun-ways before it fettles on the ground, and another at going away in Augull; which cercmony is much approved by the tenant of the ine, and is one of the chief arguments he made ufe of for making the like round, as he fets out to fea with his boat.

There is a great flock of plovers, that come to this ife from Skie, in the beginning of September; they return again in April, and are faid to be near two thoufand in all: I told the tenant he might have a couple of thefe at every meal during the winter and fpring, but my motion feemed very difagrecable to him; for he declared that he had never once attempted to take any of them, though he might if he would: and at the fame time told me, he wondered how I could imagine that he would be fo barbarous as to take the lives of fuch innocent creatures as came to him only for felf-prefervation.

There are fix or feven rocks within diftance of a mufket-hot on the fouth-eaft fide the ifle, the fea running between each of thein: that lying more cafterly is the fort called Bord Cruin, i. e. a round table, from its round form; it is about three hundred paces in circumference, flat on the top, has a deep well within it, the whole is furrounded with a fteep rock, and has only one place that is acceffible by climbing, and that only by one man at a time: there is a violent current of a tide on each fide of it, which contributes to render it an impregnable fort, it belongs to Sir Donald Macdonald. One fingle man above the entry, without being expofed to fhot, is able, with a ftaff in his hand, to keep off five hundred attackers; for only one can climb the rock at a time, and that not without difficulty.

There is a high rock on the weft fide the fort, which may be fecured alfo by a few hands.

About half a league on the fouth fide the round table lics the rock Jefkur, i. e. Fifher, becaufe many filhing.boats refort to it; it is not higher than a fmall veffel under fail. This rock affords a great quantity of fcurvy-grafs, of an extroordinary fize, and very thick; the natives eat it frequently, as well boiled as raw : two of them told me that they happened to be confined there for the face of thirty hours by a contrary wind; and being without victuals, fell to eating this fcurvy-grats, and finding it of a fweet taite, far different from the land fcurvy-grafs, they eat a large bafket full of it, which did abundantly fatisfy their appetites until their return home: they told me allo that it was not in the leaf windy, or any other way troublefome to them.

Ifland Tulm on the weft of the wing of Skie, called Troternefs, lies within a mufquet-- fhot of the caftce of the name; it is a hard rock, and clothed with grafs; there are two caves on the weft fide, in which abundance of fea cormorants build and hatch.

About five leagues to the fouth.weft fron Tulm lies the ifland A「crib, which is divided into feveral parts by the fea; it is about two miles in compafs, and affords very good pafturage; ali kinds of fifh abound in the neighbouring fea. On the fouth-welt fide of the ifle Afcrib, at the diftance of two leagues, lie the two fmall inles of Timan, directly in the mouth of Loch-arnifort; they are only fit for pafturage.

On the weft fide of Vaternis promontory, within the mouth of Loch-fallart, lies IG, two miles in compars, being fruifful in corn and grafs, and is commodious for fifhing of cod and ling.

There are two fimall ifles, called Mingoy, on the north-ealt fide of this ine, which afford good pafturage.
There is a red fhort kind of dulfe growing in the fouth end of the ifle, which occafions a pain in the head when eaten, a property not known in any other dulfe whatever.

The two inles Bnia and Harlas lic in the mouth of Loch Brackadil; they are both pretty high rocks, each of them about a mile in circumference; they afford good pafturage, and there are red currants in thefe fmall illes, fuppofed to have been carried there at firlt by birds.

The fouthern parts of Skie, as Sleat and Strath, are a month earlier with their grafs than the northern parts; and this is the reafon that the cattle and fhecp, \&c. bring forth their young fooner than in the north fide.

The days in fummer are much longer here than in the fouth of Englatd or Scotland, and the nights fhorter, which about the fummer folltice is not above an hour and an half in length; and the further we come fouth, the contrary is to le obferved in proportion.

The air here is commonly moin and cold: this difpofes the inhabitants to take a larger dofe of brandy or other ftrong liquors than in the fouth of Scotland, by which they fancy that they qualify the moitture of the air : this is the opinion of all itrangers, as well as of the natives, fince the one as well as the other drinks at lealt treble the quantity of brandy in Skie and the adjacent ifles, than they do in the more fouthern climate.

The height of the mountains contributes much to the moifture of the place, but more efpecially the mountain Quillin, which is the hufbandman's almanack; for it is commonly obferved that if the heavens above that mourtain be clear and without clouds in the morning, then it is not doubted but the weather vill prove fair ; at $\dot{e}$ contra, the height of that hill reaching to the clouds breaks them, and then they prefently after fall down in great rains according as the wind blows: thus when the wind blows from the fouth, then all the ground lying to the north of Quillin hills is wet with rains, whereas all the other three quarters are dry.

The fouth-weft winds are oblerved to carry more rain with them than any other, and blow much higher in the moft northern point of Skie than they do two miles further fouth; for which I could perceive no vifible caule, untefs it be the height of the hill, about two miles fouth from that point; for after we come to the fouth lide of it, the wind is not perecived to be fo high as on the north fide by half.

It is obferved of the call wind, that though it blow but very gente in the ife of S'is, and on the well fide of it , for the lpace of about three or four leagues towaris the weft, yet as we advance more wefterly it is fenfibly higher; and when we come near to the coalt of the more wettern ines of Ull, Harriss, \&ec. it is obferved to blow very frelh, though at the fame time it is almont calm on the welt fide rie itle Skie. The wind is attended with fair weather, both in this and other weftern illes.

The fea in the time of a callu is obferved to have a rifing motion, before the north wind blows, which it has not betore the approaching of any other wind.

The noth wind is fill colder, and more delt ructive to corn, cattle, Ac. than any other.
Women obferve that their breafts contract to a leffer bulk when the wind blows from the north, and that then they yield lefs milk than when it blows from any uther quarter; and they make the like obfervation in other creatures that give milk.

They oblerve that when the fea yields a kind of plafant and fieet feent, it is a fure prefage of fair weather to catue.

The wind in fummer blows flronger by land than by fea, and the contrary in winter.

In the fummer the wind is fometimes obferved to blow from different quarters at the fame time: I have feen two boats fail quite contrary ways, until thcy came within lefs than a league of each other, and then one of them was becalmed, and the other continued to lail forward.
The tide of ebb here runs foutherly, and the tide of flood northerly, where no headlands or promontories are in the way to interpofe; for in fuch cales the tides are obferved to hold a courfe quite contrary to the ordinary motion in thefe ifles, and the oppofite main land: this is obferved between the ealt fide of Skic and the oppofite continent, where the tide of ebb runs northerly, and the tide of tlood foutherly, as far as Killach-ftone, on the fouth-eaft of Skie; both tides ruming direally contrary to what is to be feen in all the weftern ifles and oppofite continent. The natives at Kylakin told me that they had feen three different ebbings fucceffively on that part of Skie.

The tide of ebb is always greater with north winds, than when it blows from any other quarter; and the tide of flood is always higher with fouth winds than any other.

The two chief fpring-tides are on the tenth of September, and on the tenth or twentieth of March.

The natives are very much difpofed to obferve the influence of the moon on human bodies, and for that caufe they never dig their peats but in the decreaie; for they obferve that if they are cut in the increafe, they continue flill moit, and never burn clear, nor are they without fmoke, but the contrary is daily obferved of peats cut in the decreafe.

They make up their earthen dykes in the decreafe only, for fuch as are made at the increafe are ftill obferved to fall.

They fell their timber, anu cut their rufhes in time of the decreafe.

## The Difiafes known and not known in Skie and the adjacent Ifes.

THE gout, corns in the feet, convulfions, madnefs, fits of the mother, vapours, palfy, lethargy, rheumatifms, wens, ganglions, king'seevil, ague, furfeits, and confunptions are not frequent, and barrennefs and abortion very rare.

The difeafes that prevail here are fevers, ftitches, cholic, head-ach, megrim, jaundice, fciaica, Itone, finall-pox, mealles, rickets, fcurvy, worms, Iuxes, tooth-ach, cough, and §quinance.

The ordinary remedies ufed by the natives are taken from plants, roots, fones, animals, \&c.

To cure a pleurify, the letting of blood plentifully is an ordinary remedy.
Whey, in which violets have been boiled, is ufed as a cooling and refrefhing drink for fuch as are ill of fevers. When the patient has not a fweat duly, their thirt is boiled in water, and afterwards put on them, which caufes a fpeedy fweat. When the patient is very coftive, and without paffage by fool or urine, or paffes the ordinary time of fweating in fevers, two or three handfuls of the fea-plant called dulfe, boiled in a little water, and fome frefh butter whit it, and the infufion drunk, procures a pallage both ways, and fweat fhortly after: the dulfe, growing on ftone, not that on the feaware, is only proper in this cale.

To procure feep after a fever, the feet, knees, and ancles of the pationt are wafled in warm water, into which a good quantity of chick-weed is put, and afterwards fome of the plant is applied warm to the neck, and between the fhoulders, as the paticnt groes to bed.

The tops of nettles, chopped fmall, and mixed with a few whites of raveggs, applied to the forehead and temples, hy way of a frontel, is ufed to procure fleep.

Foxglove, applied warm plaifterwife to the part affected,' removes pains that follow after fevers.

The fea-plant linarich is ufed to procure fleep, as is mentioned among its virtues.
Erica baccifera boiled a little in uater, and applied warm to the crown of the head and temples, is ufed likewife as a remedy to procure fleep.

To remove ftitches, when letting blood does not prevail, the part affected is rubbed with an ointment made of camomile and frefh butter, or of brandy with frefh butter ; and others apply a quantity of raw fcurvy-grafs chopped fmall.

The fearlet-fever, which appeared in this ifle only within thefe two years laft, is ordjnarily cured by drinking now and then a glafs of brandy. If an infant happen to be taken with it, the nurfe drinks fome brandy, which qualifies the milk, and proves a fuccefisful remedy.

I he common alga, or fea-ware, is yearly ufed with fuccefs, to manure the fruit-trees in Sir Donald Macdonald's orchard at Armidill : feveral affirm that if a quantity of fea-ware be ufed about the roots of fruit-trees, whofe growth is hindered $b$, the fea air, this will make them grow and produce fruit.

Head-ach is removed by taking raw dulfe and linarich applied cold by way of plaiter to the temples. This likewife is ufed as a remedy to remove the megrim.

The jaundice is cured by the vulgar as follows : the patient being ilripped naked behind to the middle of the back, he who acts the furgeon's part marks the eleventh bone from the rump on the back with a black ftroke, in order to touch it with his tongs, as mentioned already.

Sciatica is cured by applying the cafe with the fat of the carara-fowl to the thigh tone; and it muft not be removed from thence till the cure is performed.

Flamula-jovis, or fpire-wort, being cut fmall, and a limpet-fhell filled with it, and applied to the thigh bone, caufes a blifter to rife about the bignefs of anegg; which being cut, a quantity of watery matter iffues froin it : the bliter rifes three times, and being emplied as often, the cure is performed. The fea-plant linarich is applied to the place, to cure and dry the wound.

Crow-foot of the moor is more effectual for raifing a blifter, and curing the fciatica, than flamula-jovis; for that fometimes fails of breaking or raifing the fkin, but the crowfout fifdum tails.

Several of 11 common people have the boldnefs to venture upon the famula jovis, inft ad of a pur se: they take a little of the infufion, and drink it in melted trefh butter, as the properelt vehicle; and this preferves the throat from being excoriated.

For the Itone they drink wits ruel without falt: they likewife eat allium, or wild garlick, and drink the infufion of Triled in water, which they find effectual both ways. The infufion of the fea plant duh led is alfo good againft the fone; as is likewife the broth of wilks and limpets : and againft the cholic, coltivenefs, and ftitches, a quantity of fcurvy-grafs boiled in water, with fome freh butter added, and eaten for forne days, is an effet:tal remedy.
To kill worms, the infufion of tanfy in whey or aquavita, taken fafting, is an ordinarv medicine with the iflanders.

Caryophylata alpina chamedreos fol: it grows on marble in divers parts, about Chrift. Church in Strath; never obferved before in Britain, and but once in Irviand, by Mr. Hiaton. Morifon's Hift. Ray Synopfis, 137.

Carmel, aliats Knaphard, by Mr. James Sutherland called Argailis Sywaticus: it has a blue flower in July; the plant itfelf is not ufed, but the root is eaten to expel wind: and they fay it prevents drunkennefs, by frepuent chewing of it; and being fo ufed, gives a good relifh to all liquors, mills only excepted. It is aromatick, and the natives prefur it to ficice, for brewing Aquavita; the ruot will keep for many years: fone fay that it is cordial, and allays hunger.

Shonnis is a plant highly valued by the natives, who eat it raw, and alfo boiled with. fifh, flefh, and milk: it is ufed as a fovereign remedy to cure the fheep of the cough; the root eaten fafting, expels wind: it was not known in Britain, except in the north weft ifes, and fome parts of the oppofite continent. Mr. James Sutherland fent it to France tome years ago.

A quantity of wild fage elhewed between one's teeth, and put into the cars of cows or floep that become blind, cures them, and perfectly reftores their fight; of which there are many frefl inftances both in Skie and Harrics, by perfons of great integrity.

A quantity of wild fage choped fmall, and eaten by horfes mixed with their corn, kills worms; the horfe muft not drink for ten hours after eating it.

The infufion of wild fage after the fame manner, produces the like effect.
Wild fage cut fmall, and mixed among oats given to a horfe fafting, and kept without drink for feven or eight hours after, kills worms.

Fluxes are cured by taking now and then a fpoonful of the fyrup of blue berrics that grow on the Mertillus.

Phantain boiled in water, and the hectic-ftonc heated red hot quenched in the fame, is fuccefffully ufed for fluxes.

Some cure the tooth-ach, by applying a little of the famula jowis, in a limpet-fhell, to the tempies.

A green turf heated among embers, as hot as can be endured, and by the patient applied to the fide cf the head affected, is likewife ufed for the tooth-ach.

For coughs and colds, water gruel with a little butter is the ordinary cure.
For coughs and hoarfenefs, they ufe to bathe the feet in warm water, for the fpace of a quarter of an lour at-leaft; and then rub a little quantity of deer's greafe (the older the better) to the foles of their feet by the fire; the decr's greafe alone is fufficient in the morning : and this method mult be continued until the cure is performed. And it may be ufed by young or old, except women with child, for the firf four months, and fuch as are troubled with vapours.

Harts-tongue and Maiden-lhair, boiled in wort, and the ale drunk, is ufed for coughs and confumptions.

Milk or water, whercin the hectic.ftone hath been boiled or quenched red-hot, and being taken for ordinary drink, is alfo efficacious arainft a confumption.

The hands and fect often walhed in water, in which the heatic ftone has been boiled, is elteemed reltoraive.

Yarrow with the lectic flone boiled in milk, and frequently drunk, is ufed for confumptions.

Water-gruel is alfo found by experience to be good for confumptions: : purifies the blood, and precures appetite, when drunk without falt.

There is a fmith in the parifh of Kil-martin, who is reckoned a doctor for curing faintnefs of the fpirits. This he perfornis in the following manner:

The patient being laid on the anvil with his face uppermoft, the fuith takes a big hammer in hoth hands, and making his face all grimace, he approaches his patient; and then drawing his hammer from the ground, as if defigned to hit him with his full
ftrength on his forelead, he ends in a feint, elfe he would be fure to cure the patient of all difealis: but the fuith being accuftomed to the performance, has a dexterity of managing his hammer with difcretion; though at the fame time he muft do it fo as to fluike terror in the patient: and this they fay has always the defigned effect.

The fmith is famous for his peligrree; for it has been obferved of a long time, that there has been but one only child born in the family, and that always a fon, and when he arrived to man's ettate, the father died prefently after: the prefert fmith makes up the thirteenth generation of that race of people who are bread to be finiths, and all of them pretend to this cure.
Iliach $p a / f i o$, or twilting of the guts, has been feveral times cured by drinking a draught of cold water, with a litte oatmeal in it, and then hanging the patient by the heels for fome time. The laft inftance in Skie was by John Morrifon, in the village of Taliker, who by this remedy alone cured a boy of fourteen years of age. Dr. Pitcairn told me, that the like cure had been performed in the flire of Fife for the fame difeafe. A cataplafm of hot dulfe, with its juice, applied feveral times to the lower part of the belly, cured the iliac pafion.

The fea plant dulfe is ufed, as is faidabove, $t$ remove cholicks; and to remove that diftemper and coftivenefs, a little quantity of fre h butter, and fome fcurvy-grafs boiled, and eaten with its infufion, is an ufual and effectual remedy.

A large handful of the fea-plant dulle, growing upon ftone, heing applied outwardly, as is mentioned above, againft the iliacapa/io, takes away the after-birth with great eafe and fafety; this remedy is to be repeated until it produce the defired effect, though fome hours may be inter nitted: the frefher the dulfe is, the operation is the flronger; for if it is above two or three days old, little is to be expected from it in this cafe. This plant fcldom or never fails of fuccefs, though the patient had been delivered feveral days before; and of this I have lately feen an extraordinary inftance at Edinburgh in Scotland, when the patient was given over as dead.

Dulfe, being caten raw or boiled, is by daily experience found to be an excellenta an tifcorbutic ; it is better raw in this cafe, and muft be firf walhed in cold water.

For a fracture, the firt thing they apply to a broken bone, is the white of an egg, and fome barley meal; and then they tie fplinters round it, and keep it fo tied for fome days. When the fplinters are untied, they make ufe of the following ointment, viz. a like quantity of bctonica panli, St. John's wort, golden-rod, ali cut and bruifed in fheeps' greate, or frell butter, to a confiftence; lome of this they fpread on a cloth, and lay on the wound, which continues untied for a few days.

Giben of St. Kilda, i. e. the fat of fea fowls made into a pudding in the ftomach of the fowl, is alfo an approved vulnerary for man or bea!t.

The vulgar make purges of the intufion of feurvy-grafs, and fome frefh butter; and this they continue to take for the face of a week or two, becaufe it is mild in its operation.

They ufe the infufion of the fea-plant dulie, after the fame manner, inftead of a purge.

F:yes that are blood-fhot, or become blind for fome days, are cured here by applying fome blades of the plant fern the yellow is by them reckoned beft; th they mix with the white of an egg, ancty it on fome coarfe fla: - and the egg next to the face and brows, and the patient is ordered to lie on his back.

To ripen a tunor, or boil, they cut female jacobea fmall, mix it with fome frefh butor on a hot flone, and apey it warm; and : s ipens and draws the tumor quickly,
v: . 1.

and
and without pain: the fame remedy is ufed for women's brealts that are hard, or livelled.

For taking the fyroms out of the hands, they ufe afhes of burnt fra-ware, mixed with fate water; and wafhing their hands in it, without drying them, it kills the worms.
lBurnt athes of fea-ware preferve cheefe intlead of falt; which is frequently practifed in this inc, shes of burnt fea-ware fower flaxen thread better, and make it whiter than any thing ets.

Whan their foes are iwelied and benumbed with cold, they fearify their heels with a larc:-

Ihey maise gliners of of plant Mercury, and fome of the vulgar ufe it as a purge, for wh whit feres bon wiy.
' 'ltey make glifters atho of the roots of flage, water, and falt butter.
"Ho have found out a flrange remedy for lich as could never cafe nature at fea by fivol or urine: there were three fuch men in the parith of St. Mary's in Trotternefs, two of them I knew, to wit. John Mac-Phade, and Finlay Mac-Plade; they lived on the coaf, and wenishtar a tilling, and after they had fpent fome nine or ten hours at fea, there bellies would fvell: for after all their endeavours to get palfage either ways, it war impratical!s until they came to lind, and then they found no difficulty in the thing. This was a great aconvenience to any boat's crew in which either of thefe three men had been tiihing, for it obliged thern often to forbear when the filling was molt plentiful, and to row to the thore with any of thefe men that happened to become fick; for landing was the only remedy. At length one of their companions thought of an experiment to remove this inconvenience; he confidered, that when any of thefe men had got their feet on dry ground, they could then eafe nature with as much freedom as any other perfon; and therefore he carried a large green turf of earth to the boat, and placed the green fide uppermoft, without telling the reafon. One of thefe men who was linject to the infirmity above-mentioned, perceiving an earthen turf in the boat, was furprized at the fight of it, and enquired for what purpofe it was brought thither? He that laid it there aniwered, that he had done it io ferve him, and that when he was difpofed to eafe nature, he might find himfelf on land, though he was at fea. The other took this as an affront, fo that from words they came (1) blows: their fellows with much ado did feparate them, and blamed him that brought the turf into the boat, fince fuch a fancy could produce no other effect than a quarrel. All of them employed their time eagerly in fifhing, until fome hours after, that the angry man, who befure was fo much affrouted at the turf, was fo ill of the fwelling of his belly as ufual, that he begged the crew to row to the fhore, but this was very difobliging to them all. He that intended to try the experiment with the turf, bid the fick man fland on it, and he might expect to have fuccels by it; hu: he refuled, ind flill refented the affront which he thought was intended upon him: but at hatt all the boat's ceew urged him to try what the turf might produce, fince it could not make him worfe than he was. The man being in great pain, was by their repeated importunities prevaited upon to fland with his feet en the turf; and it had the wifled effeet, for mature becalme obedient both ways: and then the angry man changed his note, for he thanked lis doetor, whom he had fome hours hefore beat. And from that time pere of thefe three men ever went to tea without a green turf in the boat, whi. pros. ellocthel. This is matter of fact
 $1^{2}=\cdot$

The ancient way the iflanders ufed to procure fiveat, was thus: a part of an earthen floor was covered with fire, and when it was fuficiently heated, the fire was taken away, and the ground covered with a heap of Rraw ; upon this ftraw a quantity of water was poured, and the patient lying on the flraw ; the leat of it put his whole body into a fiveat.

To caufe any particular part of his body to fwat, they dig an lanle in an earthen floor, and fill it with hazel flicks, and dry rufles; above thefe they put a hectick-flone red hot, and pouring fome water into the hole, the patient holds the part affected over it, and this procures a fpecdy fweat.

Their common way of procuring fweat is by drinking a large draught of water-gruel with fome butter, as they go to bed.

## Of the various Effects of Fiflecs onferveral Conplitutions in thefe Ifands.

Dongal Mac-Ewan became feverifh always after eating of fifh of any kind, except thornback and dog-fifh.

A ling fifh liaving brown fpots on the fkin, caufes fuch as eat of its liver, to caft their flin from head to foot. This happened to three children in the hamet of Talifkir, after eating the liver of a brown fpotted ling.

Fimlay Rofs and his family, in the parifh of Uge, having eaten a frefl ling fifh, with brown fpots on its ikin, he and they became indifpofed and feverifl for fone few days, and in a little time after they were blitered all over. They fay that when the frefh ling is falted a few days, it has no fuch effect.

There was a horle in the village Bretill, which had the crection backward, contrary to all other of its kind.

A weaver in Portric has a faculty of crecting and letting fall his ears at pleafure, and opens and fhuts his mouth on fuch occafions.

A boy in the cafle of Duntuln, called Miiter to a by-name, hath a pain and fwelling in his great toe at any change of the moon, and it continucs only for the fpace of one day, or two at mofl.

Allen Mac-leod, being about ten years of age, was taken ill of a pain which moved from one part of his body to another, and where it was felt, the fkin appeared blue; it came to his toc, thigh, teflicles, arms and head: when the hoy was bathed in warm water, he found moft eafe. The hinder part of his head, which was laft affected, had a little fwelling; and a woman endeavouring to fquceze the humour out of it, by brufing it on cach fide with her mails, fle forced out at the fame time a little animal near an inch in length, having a white head fharp pointed, the reft of its body of a red colour, and full of fmall feet on each fide. Animals of this fort have been feen in the head and legs of feveral perfons in the ifles, and are diflinguithed by the name of lillian.

## liaft, how prefireced by the Natives.

A rod of oak, of four, five, fix or eight inches about, twitted roind like a wyth, hoild in wort, and well dried and kept in a little bundle of Larley-ftraw, and being Shepodigain in wort, caufeth it to ferment, and procurcs yealt : the rod is cut before the middle of May, and is frequently ufed to furnifh yeaft; and boing preferved and wfed in this manner, it ferves for many yars torecther. I have feen the experiment :ried, and was thewed a piece of a thick wyth, which hath been preferved for making ale with, for :bout twenty or thinty years.

## The Fiffects of cating tiemlock. Rcot.

Fergus Kaird, an empiric, living in the villare 'latiker, having by a mitake eaten a hemlock-root inftead of the white wild carrot; his eyes did prefently roll ahout, his countenance becane very pale, his tight had almolt failed him, the frame of his body was all in a ftrange convulfion, and his pudinda retired fo inwardly, that there was no difcerning whether he had then been male or female. All the remedy given him in this ftate was a draught of hot milk, axd a little aqua-rite added to it ; which he no fooner drank, but he vomited prefently after, yet the root Itill remained in his fomach. They continued to adminilter the fime remedy for the fpace of four or five hours together, but in vain; and about an hour after they coafed to give him any thing he roided the root by fool, and then was refored to his former flate of health : he is ftill living, for any thing 1 know, and is of a frong healdhful conftitution.

Some few years ago, all the flax in the barony of Troternefs was over-run with a great quantity of green worms, which in a few days would have deftroyed it, had not a flock of ravens made a tour round the ground where the flax grew, for the face of fourteen miles, and eat up the worms in a very hort time.

The inhabitants of this inle are generally well proportioned, and their complexion is for the moft part black. They are not olliged to art in forming their bodies, for nature never fails to act her part bountifully to them; and perhaps there is no part of the habitable globe where fo few bodily imperfections are to be feen, nor any children that go more early. I have obferved feveral of them walk alone before they were ten months old: they are bathed all over every morning and evening, fome in cold, fome in warm water; but the latter is mon commonly ufed, and they wear nothing frait about then. The mother generally fuckles the child, failing of which, a nurfe is provided, for they feldom bring up any by hand: they give new-born infants frefl butter to take away the miconium, and this they do for feveral days; they tafe neither fugar nor cinnamon, nor have they any daily allowance of fack beflowed on them, as the cultom is elfewhere, nor is the nurfe allowed to tafte ale.

The gencraliy weat neither floes nor flockings before they are feven, cight, or ten years uld; and many among them wear no night-caps bofore they are fixtecn years ohd, and upwards; fome ufe none all their life-time, and there are not fo liable to headaches as others that keep their heads warm.

They ufe nothing by way of provention of ficknefs, obferving, it as a rube "s do little or nothing of that nature. The abflemioufnefs of the mothers is no finall advantage to the children: they are a very prolific people, fo that many of their mmerous iftue moft feek their fortune on the continent, and not a few in foreign countries, for want of employment at home. When they are any way fatigued by travel, or otherways, they fail not to bathe their feet in warm water, wherein red mols has been boiled, and rub them with it going to bed.

The ancient cuftom of rubbing the body by a warm hand oppofite to the fire, is now laid afide, except from the lower part of the thigh downwards to the ancle; this they rub before and behind, in cold weather, and at going to bed. Their fimple dict contributes much to their ftate of health, and long life; feveral among them of my acquaintance arrived at the age of eighty, nincty, and upwards; but the Lady Macleod lived to the age of one hundred and three years: the had then a comely head of hair, and a cafe of good teerh, and always enjoyed the free ufe of her underftanding, until the week in which the died.

The inhabitants of this and all the Weftern hes do wear their fhocs after Mr. I.ocke's mode, in his Book of Education; and, among other great advantages by it, they reckon thefe two, that they are never troubled with the gout, or coms in their feet.

They lie for the molt part on beds of ftraw, and fome on beds of heath; which latter being made alter their way, wilh the tops uppermoft, are almoft as foft as a fea-ther-bed, and yield a phealaut feent after lying on them once. The natives by experience have found it to be effectual for drying fuperfuous humours, and ftrengthening the nerves. It is very refrelling after a fatigue of any kind. The Picts are faid to have had an art of brewing curious ale with the tops of heath, but they refufed to communicate it to the scots, and fo it is quite lott.

A native of this ife requires treble the dofe of phyfic that will ferve one living in the fouth of Scetland for a purge; yet an infander is cafier purged in the fouth than at home. Thofe of the bell rank are cafier wrought on by purging medicines than the vulgar.

The inhabitants are of all people eafieft cured of green wounds; they are not fo liable to fevers as others on fuch occations; and they never cut off arm or leg, though never fo ill broke, and take the freedom to venture on all kind of meat and drink, contrary to all rule in fuch cales, and yet commonly recover of their wounds.

Many of the natives, upon ocalion of ficknefs, are difpofed to try experiments, in which they fucceed fo well, that I could not hear of the leaft inconvenience attending their practice. I thall only bring one inftance more of this, and that is of the illiterate empiric Neil Beaton in Skic; who of late is fo well known in the intes and continent, for his great fuccefs in curing feveral dangerous diftempers, though he never appeared in the quality of a phyfician unt he arrived at the age of forty years, and then allo, without the advantage of education. He pretends to judge of the various qualities of plants and roots, by their different taltes; he has likewile a nice obfervation on the colours of their flowers, from which he learns their aftringent and loofening qua. lities; he extrats the juice of plants and roots, after a chymical way peculiar to himfelf, and with little or no charge.

He confiders his patients' conlfitution before any medicine is adminittered to them; and he has formed luch a fyftem for curing difeafes, as ferves for a rule to him upon all occafions of this nature.

He treats Riverius's Lilium Medicina, and fome other practical pieces that he has heard of, with contempt; fince in feveral inftances it appears that their methods of curing has failed where his ho, sod fuccets.

Some of the difcafes cured uim are as follows: running fores in legs and arms, grievous head aches; he had the boldnefs to cut a piece out of a woman's fkull broader than half a crown, and by this reftored her to perfect health. A gentlewoman of my acquaintaince having contracted a dangerous pain in her belly, fome uaj; after her delivery of a child, and feveral medicines being ufed, fhe was thought paft recovery, if the continued in that condition a few hours longer; at lift this doctor happened to come there, and being empliyed, applied a fimple plant to the part affected, and refored the patient in a quarter of an hour after the application.

One of his patients told me that he fent him a cap interlined with fome feeds, \&c. to wear for the cough, which it removed in a little time; and it had the like effect upon his brother.

The fuccefs attending this man's cures was fo extraordinary, that feveral people thourht his performances to have proceeded rather from a compact with the devil, than from the virtue of fimples. 'To obviate this, Mr. Beaton pretends to have had fome
education from his father, though he died when he himfelf was but a bo 1 have difcourfed with him ferioufly at different times, and am fully fatisified, that be ufes no unlawful means for obtaining his end.
His difcourfe of the feveral contitutions, the qualities of plants, \&e. was more folit than could have been expected from one of his education. Several fick people from renote ifles came to hinn; and fome from the fire of Rofs, at feventy miles diftaner, fent for his advice : 1 left him very fuccelifilul, but can şive no further account of him fince that time.
They are generally a very fagacinus paople, quick of apprethenfion, and eren the vulgar exceed all thofe of their rank and education I ever yet haw in any other country. They have a great genius for mufic and mechanics. I have obferved feveral of theic chiddren, that, before they could fpeak, were capable to diltinguifh and make choice of one tune before another upon the violin; for they always appeared uneafy until the tune which they fancied beit was played, and then they eapreffed their fatistaction by the motions of their head and hands.
There are feveral of them who invent tunes vcry taking in the fouth of Sentand, and elfewhere : fome mulicians have endeavoured to nafs for firf inventers of them by changing their mane, buif this has been impraticabic; for whatever language gives the modern name, the tune ftill continues to !peak its true original : and of this 1 have been flewed feveral intances.
Some of the natives are very dexterous in engraving trees, lirds, deer, doge, \&ec. upon bone, and horn, or wood, without any other tool than a fharp-pointed knife.
Several of both fexes have a quick vein of poefy, and, in their language, (which is very emphatic) they compofe rhyme and verle, both which powerfully affet the fancy: and, in my judgment, (which is not fingular in this natter,) with as great force as that of any ancient or modern poet I ever yot read. They have gencraily very retentive memories, they fee things at a great ditlance. 'The unhappinefs of iteir education, and their with of converfe with forcign nations, deprives them of the opportunity to cultivate and beautify their gonius, which fiths whave been formed by Nature for great attainments. And, on it ather hand, their retiredelefs may be rather thought an adrantage, at leaf to their better part: according to that of the hillorian; Plus zeathit aifud bes ignorantia vitiorum, quam asped Gracos omnia pricepta philofoplicrum!: "The ignorance of vices is more powerful ameng thefe, than all the precepts of philofophy are among the Greeks."

For they are to this day happily ignorant of many vices that are pracifed in the learned and polite world: I could mention teveral, for which they have not as get got a name, or to much as a notion of them.

The diet generally ufed by the natives contifs of frofh food, for they feldom talte ary that is talted, except butter; the genewhy tat but litte ildeth, and only pertons of diftination eat it escry day, and make three meais, tor all the reft cat oniy two, and they eat more boiled than roafted. Thar ordatary dit is butter, chicefe, milh, potatoes, coinorts, brochan, i. c. oatmeal and we.ter heiled; the latter taken with lome bread is the conflant food of feveral thoutands of beth fexes in this and other iffes, during the wimef and fpring: yot they undergo many fatigues boh loy fa and land, and are very halchlul. This verifis what the poct failh, lopulis fitt oft lymplaque Cerefjue: Nature is fatisficd with trent and wath.

There is no place fo well fored with fuch great quantity of good beff and maton, where to littic is confunied by eating. Tiny gererally ufo no fine fances to entice a fatte appette, nor brandy or tea for digellion; the pureft water ferves them in fuch

## .

cafes: this, together with their ordinary exercife, and the free air, preferves their bodies and minds in a regular frame, free from the various convulfions that ordinarily attend luxury. There is not one of them ton corpuleme, nor too meagre.
The men-lervants have always double the quantity of bread, \&c. that is given to women-fervants; at which the latter are no ways offended, in regard of the many fatigues by fea and land, which the former undergo.

Ocn, which in Englifh figuifies froth, is a difla ufed ly feveral of the iflanders, and fome on the oppofite main-land, in time of fcarcity, when they want bread; it is made in the folloning manuer: a quantity of milk or whey is boiled in a pot, and then it is wruught up to the mouth of the pot with a long fick of wood, having a crofs at the lowerend; it is turned about like the tlick for making chocolate; and being thus made, it is fupped with foooss. It is made up five or fix times, in the fame manner, and the tait is always reckoned bett, and the firft two or three frothings the worft: the milk or whey that is in the bottom of the pot is reckoned much better in all refpects than fimple milk. It may be thought that fuch as feed after this rate, are not fit for action of any kind ; but I have feen feveral that lived upon this fort of food, made of whey only, for fome months together, and yet they were able to undergo the ordinary fatigue of their employments, whether by fea or land; and 1 have feen them travel to the tops of high inomatains, as brikly as any I ever faw.

Some who live plentifully make this difh as abovefaid of goats' milk, which is faid to be nourihing ; the milk is thickened, and tattes much better after fo much working; fome add a little butter and nutmeg to it. I was treated with this difh in feveral places, and, being alked whether this faid dith or chocolate was beft? I told them that if we julged by the effects, this difh was preferable to chocolate; for fuch as drink. often of the former, enjoy a better ftate of health, than thofe who ufe the latter.

## Gradlan.

The ancient way of dreffing corn, which is yet ufed in feveral ines, is called grad. dan, from the frilli word grad; which lignifies quick. A woman fitting down, takes a handful of com, holding it by the llalks in her left hand, and then fets fire to the ears, which are prelently in a flame; fhe has a tlick in her right hand, which the manages very dexteroufly, beating of the grain at the very infaut, when the hufk is quite burnt; for if the mifis of that the melt ufe the kiln, but experience has taught them this art to perfection. The corn may be to dreffed, wimowed, ground, and baked, willin an hour after reaping from the ground. 'He oat bread dreffed as above is loolening, and that dreffed in the kiln aftringent, and of greater flrength for labourer:; but they love the gradlan, as being more agreeable to thair talte. This barbarous cuftom is much laid afite, fince the number of their mills increafed. Capt. Fairweather, maller of an Engrith vefid, having dropt anchor at Bernera of Glenleg over againft bice, haw two women at this employment, and, wondering to fee fo much flame and finsak, he came near, and finding that it was corn they burnt, he run away in great hatte, telling the nalives that he had feen two mad women very bufy burning corn: the people came to fee what the matter was, and laughed at the Captain's mittake, though he was not a little furprifed at the frangenefs of a cuftom that he had never feen or heard of before.

There are two fairs of late held yearly at Portry on the eaft fide of Skie: the convenience of the harbour, which is in the midale of the ifle, made them choofe this for the fittell place. 'The firt holds about the niddle of June, the fecond about the
beginning
beginning of September. The various products of this and the adjacent illes and continent and fow here, viz. horfes, cows, theep, goats, hides, ikins, butter, cheefe, fifh, wool, $s$.

All the horfes and cows fuld at the fuir fwim to the main land over one of the ferric: or founds calleal K yles, one of which is on the eat, the other on the fouth fide of Skic. That on the calt is about a mile broad, and the other on the fouth is half a mile : they begiu when it is near low water, and falten a twifled wyth about the lower jaw of each cow, the other end of the wyth is faltened to another cow's tail, and the number fo tied tryether is commonly live. A boat with four oars rows off, and a man fitting in the thera, holds the wyth in his hand to keep up the foremott cow's head; and thus all the five cows fwim as fift as the boat rows ; and in this manner above an hundred may be be ferried over in one day. Thefe cows are fometimes drove above four hundred miles further fouth; llacy foon grow fat, and prove fweet and tender beef.

## Their Mabit.

The firt habit wore by perions of diftinction in the iands was the leni.croich, from the Irih word leni, which fignifies a fhirt, and croich faffron, becaufe their thirt was dyed with that herb : the ordinary number of ells ufed to make this robe was twentyfour; it was the upper garb, reaching below the knees, and was tied with a belt round the middle: but the inanders have laid it afide about a hundred years ago.

They now generally ufe coat, waiftcoat, and breeches, as elfewhere; and on their heads wear bonnets made of thick cloth, fome blue, fome black, and fome grey.

Many of the people wear trowis: fome have them very fine woven like llockings of thofe made of cloth; fome are coloured, and others ftriped: the latter are as well fhaped as the former, lying clofe to the body from the middle downwards, and tied round with a belt above the haunches. There is a fquare piece of cloth which hangs down before. The meafure for flaping the trowis is a ftick of wood, whofe length is a cubit, and that divided into the length of a finger, and half a finger; fo that it requires more fkill to make it than the ordinary habit.
The fhoes anciently wore were a p.ece of the hide of a deer, cow, or horfe, with the hair on, being tied behind and before with a point of leather. The generality now wear thoes, having one thin foal only, and haped after the right and leff foot; fo that what is for one foot will not ferve the other.

But perfons of difinction wear the garb in falhion in the fouth of Scotland.
The plaid, wore only by the men, is made of fine wool, the thread as fine as can be made of that kind; it confifls of divers colours, and there is a great deal of ingenuity required in forting the colours, fo as to be agreable to the nieflt fancy. For this reafon the women are at great pains firft to give an exact pattern of the phid upoa a piece of wood, having the number of every thread of the flripe on it. The length of it is commonly feven double ells; the one end hangs by the middle over the left arm, the other going round the body, hangs by the end cover the keft arin alfo: the right hand abowe it is to be at liberty to do any thing upon occafion. Fvery ille differs from each other in their fancy of making plaids, as to the flripes in breadth, and colours. This humour is as different through the main land of the Highlands, in fo far that shey who have feen thofe places are able, at the firlt view of a man's plaid, to guels the place of his refidence.

When they travel on foot, the plaid is tied on the breaft with a bodkin of bone or wood (jult as the fpina wore by the Germans, according to the defeription of C.'Tacitus):
the plad is tied roumit the middle with a leather belt; it is plaited from the belt to the knee very nicely : wio diefs for footmen is found much eafier and lighter than breeches or trowis.
The ancient cretts wore by the women, and which is yet wore by fone of the vulgar, called arifad, is a white plad, having a few fmall flripes of black, blue, and red; it reached from the neck to the heels, and was tied before on the brealt with a buckle of filver or brafs, according to the quality of the perfon. I have feen fome of the former of an hundred marks valuc; it was broad as an ordinary pewter plate, the whole curioufly eugraven with various animals, \&c. There was a leffer buckle, which was wore in the middle of the larger, and above two ounces weight; it had in the centre a large piece of chryftal, or foine finer fone, and this was fet all round with feveral finer fones of a leffer fize.

The plad being plaited all round, was tied with a belt below the breaft ; the belt was of leather, and feveral pieces of filver intermixed witi the leather like a chain. The lower end of the belt has a piece of plate about eight inches long, and three in breadth, curioufly engraven; the end of which was adorned with fine fones, or pieces ot red coral. They wore fleeves of farlet cloth, clofed at the end as men's vefts, with gold lace round them, having plate butoons fet with fine flones. The head-drels was a fine kerchief of linen ftrait about the head, hanging down the back taper-wife; a large lock of hair hangs down their checks above their brealt, the lower end tied with a knot of ribbands.
The illanders have a great refpect for their chiefs and heads of tribes, and they conclude grace after every meal with a petition to God for their welfare and profperity Neither will they, as far as in them lies, fuffer them to fink under any misfortune; but in cafe of a decay of cftate, make a voluutary contribution on their behalf, as a common duty, to fupport the credit of their families.

## Way of Figbting.

The ancient way of fighting was by fet battles; and for arms, fone had broad twohanded $f$; rds and head-pieces, and others bows and arrows. When all their arrows were ff , "ey attacked one another with fword in hand. Since the invention of guns, the ary early accuftomed to ufe then, and carry their pieces with them where: , ot they likewife larn to handle the broad fword and target. The chis, andrances with his followers within fhot of the enemy, having firt lat : five av... their target on their left hand (as they did at Killicranky), which foon .... .anter to an ifflue, and verifies the obfervation made of them by your hiftorians:

## Aut mors cito, aut victoria leta.

This inte is divided into three parts, which are poffefed by different proprictors. The fouthern part, called Slait, is the property and title of Sir Donald Macdonald, knight and baronet: his family is always dillinguilhed from all the tribes of his name, by the Irifh as well as Englifh, and called Mac.Donald abfolutely, and by way of excellence, he being reckoned by genealogifts and all others the firlt for antiquity among all the ancient tribes, both in the illes and continent. He is lineally deficended from Sommerled, who, according to Buchanam, was thane of Argyle. He got the ifles into his poffeflion by virtue of his wife's right; his fon was called Donald, and from him all the families

of the name Mac. Donald are defcendel. He was the firt of that name who had the title of King of the liles. One of that name fubferibing a charter granted by the King of Scots to the family of Roxburgh, wites as follows: "Donali, King of the liles, witnets." He would not pay homage to the King for the illes, but only for the lands which he held of him on the continent.

One of Donald's fuccefiors married a daughter of King Rotert II., the firt of the name of Stuart, by who:n he acquircd feveral lands in the Highlands. The carldom of Rols came to this family, by marrying the heirels of the houfe of Lefly. One of the Earts of Rofs, called John, beiug of an ealy temper, and too liberal to the church, and to his rafals and friends, his fon Aneas (by Buchanan called Donald) was fo oppofite to his father's conduct, that he gathered together an army to oblige him from giving away any more of his eltate. 'tie father rafed an army againth his fon, and fought him at fea, on the coat of Mull; the p ..e is fince called the Blocdy-bay: the fon however had the victory. This difpofed the father to gollaight to the King, and make over the right of all his eftate to him. The fon kept poffeffion fome time atter; however this occafioned the fall of that great family, though there are yet extant feveral ancient tribes of the name, both in the illes and continent. Thus far the genealogit Mac-Vurich, and Hugh Mac Donald, in their mamieripts.

The next adjacent part to Slait, and joining it on the north fide, is Strath ; it is the property of the laird of Mac-Kimm, head of an ancient tribe.

On the north-welt fide of Strath lies thit part of Skie called Macleod's country, pof. feffed by Macleod. Genealogitls fay he is lineally defended from L.eod, fon to the black prince of Man; he is head of an ancient tribe.

The barony of Tioternets, on the north tide of Skie, belongs to Sir Donald MacDonald; the proprietors and all the inhabients are protellants, except twelve, who are Roman Catholics. The former obferve the fettivals of Chritmas, Eater, Good-Friday, and that of St. Michael's. Upon the latter they have a cavaleade in each parilh, and feveral families bake the cake callied St. Michael's bamock.

## Biot.

THE ifle of Boot, being ten miles in length, lies on the welt fide of Cowal, from which it is feparated by a narrow channel, in feveral parts not a mile sroal. The north end of this ife is mountainous and heathy, being more defigned for palturage than cultivation: the moul!! is brown or black, and in fome parts clayey; the gromed yields a good produce of oats, barley, and peafe: there is but little wood grow ing there, yet there is a coppice at the fide of Loch fad. The gromsd is arable from the middle to the fouthward, the heatic-ftone is to be had in many parts of this ifle; and there is a quarry of red flone near the town of Rofa, by which the fore there, and the chapel on its north fide, have been built. Rothlay, the head town of the thire of Brot and Arran, lics on the eaft coat of $B 0^{\circ}$, and is one of the titles of the Pince of Scotland : King Robert III. created his fon Duke of Rothtay, and Iteward of Scotland ; and afterwards Queen Mary created the Lord Darnkey buke of Rothlay, belure her mariade with him. This town is a very ancient royal berough, but thinly peopled, there nut being above a hundred families in it, and the nave no foreign tratio. On the north fide of Rothlay there is a very ancient ruinous fort, round in lorm, havig a thich, wail, and bour three foris hi $\mathrm{j}_{\mathrm{j}}$, and palfages romd within the wall, it is furrounded wita $\mathbf{a}$ wet cur h ; it has a gate on the louth, and a double gate on the call, and a baltion on

forty yards of it. The fort is large enough for exercifing a battalion of men; it has a chapel and feveral little houfes within, and a large houle of four fories high fronting the eaftern gate. 'The people here have a tradition, that this fort was built by King Rofa, who is faid to have come to this ifle before King liergus I. The other forts are Down-Owle and Down-Allin, Inth on the weft fide.

The churches here are as follow: Kilmichel, Kil-Blain, and Kil-Chattan, in the fouth parifh; and Lady-Kirk in Rothfay is the mott northerly parifh: all the inhalitants are proteftants.

The natives here are not troubled with any epidemical difeafe: the fmall-pox vifits then commonly once every fixth or feventin year. The oldeft man now living in this iffe is one Flening, a weaver, in Ruthfay; his neightours toll me that he conld never cafe nature at fea, who is nincty years of age. The inhabitants generally fieak the Englifh and Irifh tongue, and wear the fame habit with thole of the otier inanis; they are very induftrious fifhers, efpecially for herring, for which ufe they are furwhed with about eighty large boats: the tenants pay their rent with the profit of herrinos, if they are to be had any where on the weftern coalt.

The principal heretors here are Stuart of Boot, who is hereditary fheriff of this hire, and hath his feat in Rofa: Ballantine of Keans, whofe feat is at the head of the bay of that name, and has an orchard by it: Stuart of Eftick, whofe feat has a park and orchard. And about a mile to the fouth of Rothfay, next lies two infes called Cumbray the Greater, and the Leffer ; the furmer is within a league of Boot. This ifland has a chapel and a well, which the natives efteem a catholicon for all difeafes. This ine is a mile in Iength, but the other ifle is much lefs in compafs. Both illes are the property of Montgomery of Skelmorly.

## Arrin.

THE name of this iffe is by fome derived from arran, which in the Irifl language fignifies bread: others think it comes more probably from arin or arfy, which in their language is as much as the place of the giant Fin-Mac-Coul's flaughter or execution; for aar fignifies flaughter, and fo they will have arinonly the contraction of arrin or fon The received tradition of the great giant Fin-Mac-Coul's military valour, which he exercifed upon the ancient natives here, feems to favour this conjecture; this they fay is evident from the many fones fet up in divers places of the ifle, as monments upon the graves of perfons of noie that werc killed in battle. This ine is twenty-four miles from fouth to north, and ferco miles from eaft to weft: it lies between the ille of Boot and Kyntyre, in the oppofite main land. The iffe is high aud mountainous, but flopes on each fide round the coatt, and the glen is only made ute of for tillage. She mountains near Brodick-bay are of a confiderable height; all the hilis generally afford a good pafo turage, though a preat part of then be covered only with heath.

The mould her is of divers rolours, being black and brown near the hills, and clayey and fanly upon the ccatt.

The natives told me that fome places of the ine aftind fullersearth. The coaft on the call fide is rocky near the thore; the fones on the cont, for fome miles beneath Brovick, are ail of a red colour, and of thefe the cafle of Brodick is huilh. The natives fay that the mountains near the cafle of Brodick afford cryttal, and that the Duchefs of thaniton put fogreat a value on it, as we at the charge of cutting a necklace of it; which the inkathants take as a great ho ur done them, becaufe they have a great veneration for her Crace. There is no confiderable woods here, but a lew coppices, ye: \& $s=$ that
that in the glen towards the weft is above a mile in length. There are capacious fields of arable ground on each fide Brodick-bay, as allo on the oppofite weftern coaft. The largeft and beft field for palturage is that on the fouth-wedt fide.

Several rivers on each fide this ifle afford falmon, particularly the two rivers on the weft called Mackir-fide, and the two in Kirkmichel and Brodick-bay.

The air here is temperately cold and moit, which is in tome meafure qualified by the frefh breczes that blow from the hills; but the natives think a dram of frong-waters is a good corrective.

There are feveral caves on the coaft of this ine: thofe on the welt are pretty large, particularly that in Druim-crucy, a hundred men may fit or lie in it; it is contracted gradually from the floor upwards to the roof. In the upper end there is a large piece of rock formed like a pillar; there is engraven on it a deer, and underneath it a twohanded fword; there is a void fpace on each fide this pillar.

The fouth fide of the cave has a horfe-fhoe engraven on it. On each fide the door there is a hole cut out, and that they fay was for holding big trees, on which the cauldrons hang for boiling their beef and venifon. The natives lay that this was the cave in which Fin-Mac-Coul lodged during the time of his refidence in this ifle, and that his guards lay in the leffer caves, which are near this big one : there is a little cave joining to the largeft, and this they call the cellar.

There is a cave fome miles more foutherly on the fame coant, and they told me that the minifter preached in it fometimes, in regard of its being more centrical than the parifh church.

Several erected fones are to be feen on each fide this ife: four of thefe are near Brodick-bay, about the diftance of feventy yards from the river, and ate feven feet high each. The highef of thefe fones that fell under iny obfervation was on the fouth fide of Kirkmichel river, and is above fifteen feet high; there is a fone coffin near it, which has been filled with human bones, until of late that the river wafhed away the carth, and the bones that were in the coffin: Mac-Louis, who had feen them, fays they were of no larger fize than thofe of our own time. On the welt fide there are three fones erected in Baelliminich, and a fourth at fome diftance from thefe, about fix feet high each. In the moor os the call fide Druin-crucy there is a circle of flones, the area is about thirty paces; there is a fone of the fame fhape and kind about forty paces to the weft of the circle: the natives fay that this circle was made by the giant Fin-Mac-Coul, and that to the fingic Itone, Bran, Fin-Mac-Coul's hunting-dog, was ufually tied. About h.alf a mile to the north fide Baelliminich there are two ftones erected, each of them eight feet high.

There is a circle of his flones a little th the fouth of Druim-crucy, the area of which is about twelve paces; there is a broad thin ftone in the middle of this circle, fupported by three I. fier flones: the ancient inlabitants are reported to have burn their derifices on the broad ftone in time of heathenifin.

There is a thin broad thone tapering, towards the top, creited within a quarter of a mile of the fa, near Machir river, and is nine feet high; and at fome hitte ditance foom the river there is a large eavern of Itones.

There is an eminence of ahont a theufand paces in compafs on the fea-coaft in Druincrucy village, and it is fenced atont with a llone wall: of old it was a fanctuary, and whatever number of men or catle could get within it were fecured from the alfaults of their enemies, the place being privileged ty mivertal confent.

The ouly geod hartour in this inc is Lambath, which is in the fouth-eat end of the ife of that name.
'There is a great fifling of cod and whiting in and about this bay.
The whole ifle is defigned by nature more for pafturage than cultivation; the hills are generally covered all over with heath, and produce a mixture of the erica baccifera, cat's-tail, and juniper, all which are very agreeable to the eye in the fummer. The higheft hills of this inand are feen at a confiderable diftance from feveral parts of the continent and north-weft ifles, and they ferve inftead of a foreft to maintain the seer, which are about four hundred in number, and they are carefully kept by a forefter, to give fport to the Duke of Hamilton, or any of his family that go a hunting there; for if any of the natives happen to kill a deer without licence, which is not often granted, he is liable to a fine of twenty pounds Scots for each deer: and when they grow too numerous, the forefter grants licences for killing a certain, number of them, on condition they bring the fkins to himfelf.

The cattle here are horfes and cows of a middle fize, and they have alfo fheep and goats. This ifle affords the common fea and land fowls that are to be had in the weftern ifles. The black cock is not allowed to be killed here without a licence; the tranfgreffors are liable to a fine.

The caftle of Brodick, on the north fide of the bay of that name, ftands on a plain, from which there is about four hundred paces of a gradual defcent towards the fea.

This cafte is built in a long form; from fouth to north there is a wall of two ftories high, that encompaffes the caffle and tower: the fpace witbin the wall on the fouth fide the cafle is capable of muftering a battalion of men.

The caftle is four ftories high, and has a tower of great height joined to the north fide, and that has a baftion clofe to it, to which a lower baltion is added. The fouth and weft fides are furrounded with a broad wet ditch, but the eaft and north fides have a defcent which will not admit of a wet ditch. The gate looks to the eaft. This caftle is the Duke of Hamilton's feat, when his Grace or any of the family make their fummer vifit to this ifland. The bailiff or fteward has his refidence in this caltle, and he has a deputation to act with full power to levy the rents, give leafes of the lands, and hold courts of juftice.

There is another caftle belonging to the Duke in the north fide of the inle, at the head of Loch-Kenifil, in which there is a harbour for barks and boats. The ifle of Arran is the Duke of Hamilton's property (a very fmall part excepted); it lies in the fheriffdom of Boot, and made part of the diocefe of Argyle.

The inhabitants of this ifland are compofed of feveral tribes. The moft ancient family anoong them is by the natives reckoned to be Mac-Louis, which in the ancient language fignifies the fon of Levis: they own themfelves to be defcended of French parentage, their firname in Englifh is Fullerton, and their title Kirk-Michell, the place of their refidence. If tradition be true, this little family is faid to be of feven hundred years flanding. The prefent poffeffor obliged me with the fight of his old and new charters, by which he is one of the King's coroners within this ifland, and as fuch, he hath a halbert peculiar to his office; he has his right of late from the family of Hamilton, wherein his title and perquifites of coroner are confirmed to him and his heirs. He is obliged to have three men to attend him upon all public emergencies, and he is bound by his office to purfue all malefactors, and to deliver them to the fteward, or in his abfence to the next judge. And if any of the inhabitants refufe to pay their rents at the ulual term, the coroner is bound to take him perfonally, or to feize his goods. And if it flould happen that the coroner with his retinue of three men is not fufficient to put his office in execution, then he fummons all the inhabitants to concur with him; and immodiately they rendezrous to the place, where he fixes his coroner's ftaff. The perquifites
quifites due to the coroner are a firlet or buthel of oats, and a lamb from very village in the ifle; both which are punctually paid him at the ordinary terms.

The innabitants of this ifle are well proportioned, gencrally brown, and fome of a black complexion: they enjoy a good tate of healh, and have a genius for all callings or employments, though they have but few mechanicts: they wear the fame habit with thole of the neareft infes, and are very civil ; they all fpeak the lrifh language, yet the Finglifh tongue prevails on the ealt fide, and ordizarily the miniters preach in it, and in Irith on the weft fide. Their ordinary afleveration is by Nale , for I did not bear any oath in the ifland.

## The Churches in this Ihe are,

Kilbride in the fouth-eafl, Kilmore in the fuath, Cabel-Uual a chapsi, Kitmichd in the village of that name, St. Janes's church at the north ond.

The natiees are all proteftants, they obferve the feltivals of Chriftmas, Gcod-liday, and Eatter. I had like to have forgot a valuable curiofity in this ife, which they call baul mulliy, i. e. molingus his fone globe: this faint was chaplain tu Mac-donald of the ifles; his name is celebrated here on the account of this glote, fo much eftemed by the inhabitants. This ftone for its intrinfic value bas been carefully tranfmitted to poiterity for feveral ages. It is a green flone much like a globe in figure, about the bignefs of a goofe egg.

The virtue of it is to remove fitches from the fides of fick perfons, by laying it clofe to the place affected; and if the patient does not out-live the ditemper, they fay the ftone removes out of the bed of its own accord, and $\bar{i}$ contra. The natives ufe this fone for fiwearing decifive oaths upon it.

They afcribe another extraordinary virtuc to it, and it is this: the crechlous vulgar firmly believe that if this fone is calt among the fron of an eneny, they will all run away; and that as often as the enemy rallies, if this thone is calt anong thim, they ftill lofe courage, and retire. They fay that Mace donald of the iiles carricd this tlone about him, and that victory was always on his fide when he threw it among the enemy. The cuftody of this globe is the peculiar privilege of a little family called Clan chatens, alias Mac-intofh ; they were ancient followers of wac donald of the illes. This thone is now in the cuflody of Margaret Miller, alias Mac-intoth : fhe lives in Buelinianich, and preferves the globe with abundance of care; it is wrapped up in fair linen cloth, and about that there is a piece of woollen cloth, and fie keeps it tall locked up in her cheft, when it is not given out to excrt its qualities.

## Ifciay,

IS a big rock, about fix leagues to the fouth. weft of Arran; it rifes in form of a fugarloaf, but the top is plain, and large cnough for "rawing up a thouland min in ranks: there is a frefl water lake in the middle of the plain, the whole ife is covercd with long grafs, and is inacceflible, except on the fouhbewn fote, hy a fair cout out in the rock; in the middle of it there is a fmall tower of three Aorics hi, hith we top. There is a fref water fpring ifluing out of the fide of the great row ; helow the entry there is a place where the fifincrs take up their refidence during their !lay ahout this rock in queft of cod and ling; and there is a good anchorage for their velfels, very near their teuts.

This rock in the fummer time abounds with variety of fea-fowl, that build and hatch in it. The Solan gecfe and culterncb are mof numerous here; the latter are by the fiflors called Albomich, which in the anciput Irifh language fignifies Scotfmen.

The ife hath a chapel on the top called Fiunnay, and an ancient pavement, or caufeway.
Iflefiy is the Farl of Cafil's property, the tenant who farms it pays him one hundred merks Scots yearly; the product of the ine is hogs, fost, down, and fi.h. The ifle Avon, above a mile in circumference, lies to the fouth of Kintyre Mulc; it hath a harbour for barks on the north.

## The I/fe Gigay.

THE ifle Gigay lics about a leaguc from Lergie on the weft fide of Kintyre; it is four mils in length, and one in breadth, was formerly in the d.ocefe, and is ttill part of the fherifflom of Argyle. This ifle is for the moft part arable, but rocky in other parts: the mold is brown and clayey, inclining to red; it is good for pallurage and cultivation. The corn growing here is oats and barley. The catte bred here are cows, norles, and fhecp. Thre is a church in this iflind called Kil-chattan, it has an altar in the ealt-end, and upon it a font of fone which is very arge, and hath a finall hole in the middle which woes quite through it. There are feveral tomb-flones in and about this church; the family of the Mac-ncils, the principal poffelfors of this iffe, are buried under the tomb-fones on the call fide the church, where there is a plat of ground fet apart for them. Moit of all the tombs have a two handed fword engraven on them, and there is one that has the reprefentation of a nan upon it.

Near the weft fide the charch there is a flone of about fixteen feet high, and four broal, erected upon the eminence. About fixty yaris diftance from the chapel there is a finare tlone erected about ten fee high; at this the ancient inhabitants bowed, becaufe it was there where they had the firt view of the church.

There is a crofs four feet high at a little diftance, and a cavern of fone on each fide of it.

Ihis ine afforls no wool of any kind, but a few bulhes of juniper on the little hills. The fones, upon which the fourf corkir grows, which dyes a crimon colour, are found here; ats alfo thofe tiat produce the croitil, which dyes a plilamot colour. Some of the matives told me that they wed to chew actles, and hold them to their no rils to flach bleeding at the nofe; and that nettes being applied to the pace, would alfo flop bifeding at a vein, or otherwife.
There is a well in the nerthe end of this ile called Tombir-more, i.c. a great well, becanfe of its cllicts, for which it is famous amone the inlancess; who together with the intabitants ufe it as a cathulicon for dikalis. It is cuvered with thone and clay, becaufe the natives fancy that the frem that tows from it migat over-flow the ifle; and it is always opened by a diruch, i.e. an mate, effe they minh it would not exert its virtues. they aftrite one very extraordin.ry effect to $i$, and it is this; that when any foreign boats are wind bound here (which ofna i spens) the mafter of the boat ordinarily gives the native : at lets the water run, a piece of money; and they fay, that immediately afterwards the wind changes in favour of thofe that are tinu. detained by witrary winds. Revery fanyer that gocs to drirk of the water of this well, is acculomed to bave on its thone covir a pice of money, a nede, pin, or one of the prettielt variegated hences they can imat.

The inhabitants are all proteftants, and fpeak the Irifh tongue gencrally, there being but few that feak Englifh: they are grave and referved in their converfation; they are accuftomed not to bury on Friday; they are fair or brown in conplexion, and ufe the fame habit, diet, \&c. that is made ufe of in the adjacent continent and ines. There is only one inn in this ine.

The ifle Caray lies a quarter of a mile fouth from Gigay; it is about a mile in compafs, affords good pafturage, and abounds with coneys. There is a harbour for barks on the north-eaft end of it. This ifland is the property of Mac-Alefter of Lergy, a family of the Macdonalds.

## Jurab.

THE ine of Jurah is, by a narrow channel of about half a mile broad, feparated from Ila. The natives fay that Jurah is fo called from Dih and Rah, two brethren, who are believed to have been Danes: the names Dih and Rah figuifying as much as without grace or profperity. Tradition fays, that thefe two brethren fought and killed one another in the village Knock-Cronm, where there are two fones erected of feven feet $\mathrm{h}: \mathrm{gh}$ each, and under them, they fay, there are urns with the afhes of the two brothers; the diftance between them is abcut fixty yards. The ifle is mountainous along the middle, where there are four hills of a confiderable height; the two higheft are well known to fea-faring men, by the name of the Paps of Jurah: they are very confinicuous from all quarters of fea and land in thofe parts.

This iffe is twenty four miles long, and in fome places fix or feven miles in breadth; it is the Duke of Argyle's property, and part of the fheriffdom of Argyle.

The mold is brown and greyif on the coaft, and black in the hills, which are covered with heath, and fome grafs, that proves good pafturage for their cattle, which are horfes, cows, fheep, and goats. There is variety of land and water-fowl here. The hills ordinarily have about three hundred deer grazing on them, which are not to be hunted by any, without the fteward's licence. 'This ine is perhaps the wholefomett plat of ground either in the infes or continent of Scotland, as appears by the long life of the natives, and their ftate of health; to which the height of the hills is believed to contribute in a large meafure, by the frefh breezes of wind that come from them to purify the air: whereas Ilay and Gigay on each fide this ifle, are nuch lower, and are not fo wholefome by far, being liable to feveral difeafes that are not here. The inhabitants obferve, that the air of this place is perfectly pure, from the middle of March till the end or middle of September. Therc is no epidemical difeafe that prevails here : fevers are but feldom obferved by the natives, and any kind of flux is rare; the gout and agues are not fo much as known by them, neither are they liable to fciatica. Convulfions, vapours, palfies, furfeits, lethargies, megrims, confumptions, rickets, pains of the fomach, or coughs, are not frequent here, and none of them are at any time obferved to become mad. I was told by feveral of the natives, that there was not one wonan died of child-bearing there thefe thirty-four years paf. Blood-letting and purging ase not ufed here.

If any contract a cough, they ufe brochan only to remove it. If after a fever one chance to be taken ill of a titch, they take a quantity of lady-wrack, and half as much of red.fog, and boil them in water; the patients itt upon the veffel, and receive the fune, which by experience they find effectual againf this diftemper. Fevers and the diarrheas are found here only when the air is foggy and warm, in winter or fummer.

The inhabitants for their diet make ufe of beef and mutton in the winter and fpring; as alfo of fifl, butter, cheefe, and milk. The vulgar take brochan frequently for their diet during the winter and fpring; and brochan and bread ufed for the falace of two days, reftores loft appetite.

The women of all ranks eat a lefier quantity of food than the men: this and their not wearing any thing ftrait about them, is believed to contribute much to the heal:h both of the mothers and children.

There are feveral fountains of excellent water in this :ne: the moll celebrated of them is that of the mountain Beinbrek in the Tarbat, called Toubir ni Lechkin, that is, the well in a fony defeent; it runs eafterly, and they commonly reckon it to be lighter by one half than any other water in this ine: for though one drink a great quantity of it at a time, the belly is not fwelled, or any ways burdened by it. Natives and ftrangers find it efficacious againlt naufeoufnefs of the fomach, and the fone. The river Niffa receives all the water that ilfues from the well, and this is the reafon they give why falmons here are in goodnefs and tafte far above thole of any other river whatever. The river of Crokbreck affords falmon alfo, but they are not eftemed fo good as thofe of the river Nifla.

Several of the natives have lived to a great age : l was told that one of them, called Gillour Mac-crain, lived to have kept one hundred and eighty Chrittmallics in his own looufe; he died about fifty years ago, and thege are feveral of his acquaintance living to this day, from whom I had this account.

Bailiff Campbell lived to the age of one hundred and fix years, he died three years ago, he paffed the thirty-three lalt years before his death in this iile. Donald Mac N'Mill, who lives in the village of killemat atefent, is arrived at the age of ninety years.

A woman of the ifle of Scorba, near the north end of this ifle, lived fevenfcore years, and enjoyed the free ufe of her fenfes and underftanding all her days: it is now two years fince the died.

There is a large cave, called King's Cave, on the weft fide of the Tarbat, near the fea; there is a well at the entry, which renders it the more convenient for fuch as may have occafion to lodge in it.

About two niles further from the Tarbat, there is a cave at Corpich which hath an altar in it ; there are many fmall pieces of petrified lubftance hanging from the roof of this cave.

There is a place where veffels ufe to anchor on the weft file of this ifland called Whitfarlan, about one hundred yards north from the porter's houfe.

About four leagues fouth from the north end of this inle, lics the bay Da'l Yaul, which is about half a mile in length; there is a rock on the north fide of the entry, which they fay is five fithom deep, and but three fathom within.

About a league further to the fouth on the fame coaft, lies the fmall ifles of Jurah, within which, there is a good anchoring place; the fouth entry is the beft: illand Nin Gowir mult be kept on the left hand; it is eafily diftinguifhed by its bignefs from the reft of the ifles. Conney inle lies to the north of this illmd. There are biack and white fpotted ferpents in this ille; their head being applied to the wound, is by the natives ufed as the beft remedy for their poifon. Within a mile of the Tarbat there is a flone erected about eight feet high. Loch-Tarbat on the wefl lide runs eafterly for about five miles, but is not a harbour for veffels, or leffer boats, for it is altogether rocky.

The thore on the welt f.le affords coral and coraline. There is a fort of dulfe growing on this coalt, of a white colour.
yol. 1 It.
40
Betwen

Between the north end of Jurah, and the ille Scurba, lies the famous and dangerous gulph, called Cory Vrekan, about a mil, in breadth; it yields an impetuon, current, not to be matched any where abour the ine of Britain. The fea begins to buil mail ferment with the tide of flood, and refembles the boiling of a pot; and then iucreafes gradually, until it appear in many whirlpools, whicia form themfelves in fort of pyaimids, and immediately after fout up as high as the malt of the little veffel, and at the fame time make a loul report. Thefe white waves run two lognes with the wind before they break : the fea continues to repear thefe various mations from the beginning of the tide of flood, until it is more tham half flood, and then it decreafes gradually until it hath chbed about half an hour, and continues, to boil till it is within an hour of low water. This boiling of the fea is not above a piftol-fhot diftant from the coaft of Scarba Hile, where the white waves meet and fpout up: they call it the Kaillach, i.e. an old hag; and they fay that when the puts on her herchief, i. c. the whiteft waves, it is then reckoned fital to approach her. Notwithfanding this great ferment of the fea, whici brings $u_{p}$ the leaft thell from the ground, the fmalleft fifler boat may ve., we to crofs this gulph at the lat hour of the tide of flood, and at the laft hour of the tade of cebb.

This gulph haih its name from Brekan, faid to be fon to the King of Denmark, who was drowned here, cat ${ }^{17}$ athore in the north of! rah, and buried in a cave, as appears from the tomb fione and aliar there.

The natives told me, that about three; rs ago an Finglifh vefiel happened inadver. tently to paifs through this gulph at the time when the fea began to boil : the whitenefs of the waves, and their lpouting up, was like the breaking of the fea upon a rock; they found thembles attracted irrefilibly to the white rock, as they then fuppofed it to be: this quickly of liged them to comlint their fafety, and fo they betook themfeives to the fmall boat with $1 l l$ lpeed, and thought it no fmall happinefs to land fafe in Jurah, commiting the veflel under all her fails to the uncertain conduct of tide and wind. She was driv n to the oppolite continent of Knapdale, where the no foonc: arrived, than the tide and wind becane contrary to one another, and fo the veffel was call into a creek, where fle was fate; and then the mafter and crew were by the natives of this ife conducted to her, where they found her as fafe as they ieft her, though all her fails were flill hoilled.

The natives gave me an account, that fome years ago a veffil had brought one rats hither, which increaled to much, that they became very masy to the people, ait on a fudden they all vanithed; and now there is not one of them m the ille.

There is a church here called Killearn, the iahabitants are all proteftants, an ; obferve the fettivals of Chrithas, Ealter, ami Michactmas; they do not opon a grave on Friday, and bury none on that cay, except the grave has been opened before.

The hatives here are very well proportioned, being generally black of compiexion, and free from bodily impertcetions. They feeak the Irill language, and wear the plad, bonnet, \&ce as other illanders.

The ifle of tha lits to the weft of Jurah, from which it is feparated by a narrow chane. nel: it is twenty-four miles in length from fouth to noth, and cighreen from eatt to wef the re are fome late mountains about the middle on the caft fide. The coatt is for the molt part heathy and uneven, and by confequence not proper for tillage ; the aneth end is alfo full of heaths and hulls. The fouh-weft and weit is pretty well cultivated. and there is fix miles between Kilrow on the weft, and Port Efcok in the ealt, wheh is arde, and well inhabited. There is abour one thonfand little hills on this road, and all abound with hime-ftone; anong which there is lately difcovered a lead
mine in three different places, but it has not turned to any account as yet. The corn growing here is barley and oats.

There is only one harbour in this ine, called Loch-Dale; it lies near the north end, and is of a great length and breadth; but the depth being in the niddle, few vefiels come within half a league of the land.fide.
There are feveral rivers in this ifle affording falmon. The frefh-water lakes are well ftocked with trouts, eeks, and fome with falucns; as I.ocl.Guirm, which is four miles in circumference, and hath feveral forts built on an indand that lies in it.

Loch-linlagan, about three miles in circumference, affords falmon, trouts, and eals: this take lies in the center of the ifle. I he ifle Finlagan, from which this lake hath its mame, is in it. It is famous for being once the court in which the great Mac-I) onald, king of the ifles, had his refidence; his houfss, chapel, \&c. are now ruinous. His guards de corps, calted lucht-taeh, kept guard on the lake-fide noareft to the iffe; the walls of their houfes are flill to be feen there.

The high court of juclicature, confilting of fourteen, fat always here; and there was an appeal to them from all the courts in the ifics: the eleventh flare of the fum in debate was due to the principal judge. There was a big ftone of feven feet fquare, in which there was a deep impreflion made tor receive the feet of Mac-Donald ; lor he was crowned King of the lles ftanding in this ftone, and fwore that he would continue his valfals in the poofldition of hleir lands, and do exact juftice to all his fubjects; and then his father's fivord was put into his hand. The bifhop of Argyle and feven priefts anointed him King, in prefonce of all the heads of the tribes in the ifles and continent, and were his valfals: at which time the orator rehearfed a catalogue of his anceftors, \&c.

There are feveral forts built in the iffes that are in frefl-water lalses, as in Ilan Lochguirn, and Ilan Viceain: there is a fort called Dunnivag, in the foum-wett fide of the ills, and there are feveral caves in different places of it. The largett that I faw was in the north end, and is called Vah Vearnas ; it will contain two hundred men to ftand or fit in it. There is a kiln for drying corn made on the ealt fide of it; and on the wher fide there is a wall built clofe to the fide of the cave, which was ufed for a bedchamber: it had a fire on the floor, and fome chairs about it, and the bed food clofe to the wall. There is a flone without the cave-door, about which the common people make a tour funways.

A mile on the fouth weft fide of the cave is the celebrated well, called Tonbir in Knabar, which in the antient language is as much as to fay, the well that falied from one place to another : Cor it is a received tralition among the vulgar inhabitants of this ine, and the oppofite ille of Collonfay, that this well was firft in Collonfay, until an improdent womian happened to walh her hands in it, and that inmmediately after, the woll being thus abufed, came in an intant to Ila, where it is like to continue, and is ever fince efteened a c.atholicon for difeafes by the natives and adjacent illanders; and the great refort to it is commonly every cuarter day.

It is common with tick people to make a vow to come to the well, and, after drinking, they make a tour funways rouad it, and then lease an offering of fome frall token, liuch as a pin, needle, liarthing, or the like, on the fone cover which is above the well. But if the patient is not like to recover, they fend a proxy to the well, who acts as above-mentioncel, and carrics hone fome of the water to be drank by the fick perfon.

There is a little chapel betide this well, to w' , h fuch as had formd the benefit of the water, came back and returned thanks to God or their recovery.

## 652

 martin's description of tileThere are feveial rive on cach file this ife, that aftord falmon: I was told b, in natives, that the Brion of ha, a famous judge, is, according to his own defire, urew ftanding on the brink of the river Inggan; having in his right hand a fpear, luch as they ufe to dart at the filmon.
'There are fome ifles on the coaft of this ifland, as thand 'lexa, on the fouth-we'?, abow a mile in circumference; and Jland Ouirla, a mile likewife in circumference, with the duall ifle called Nave.

## The Names of the Cious. les in this yle are as follow:

Kil-Chollim Kill, St. Columbus his church, ucar Port lifeock, Coil-Chovan in the Rins, on the weft dide the ife; Kil-Chiaran in Rins, on the weft fide $\mathbb{N}^{\top}$ is in the Rius, St. Columbus his church in Laggan, a chapel in Ifand Nitve, Alen, north-weit of Kidrow. There is a crols ftanding near St. Coluntow "s, Efcock fide, which is ten fect high. There are two ftones fet up at t! Loch.F̈nlagan, and they are fix feet high; all the inhabitants are proteft. among them obferve the feftivals of Chriftmas and Good-lirilay. They are " portioned, and indifferently heathiful; the air here is not near fo good as that , rus i, from which it is but a fhort mile diltant; but lla is lower and more marthy, which makes it liabe to feveral difeafes that do not trouble thofe of Jura. 'I hey generally fpak the Irifh tongue, all thofe of the bett rank freak Englith; they ute the fane habit and dict with thofe of Jura. This ifle is annexed to the crown of Scotland; Sir Hugh Campbell of Caddel is the king's fteward there, and has one half of the itland. This ife is reckoned the furtinet we!t of all the ifles in Britain: there is a village on the weft coalt of it called Cul, i. c. the back part ; and the natives fay that it was fo called, becaufe the ancierts thought it the back of the world, as being the remoteft part on that fide of it. The natives of Ila, Collonlay, and Jura fay, that there is an inand lying to the fouth-weft of thefe ifles, about the diftance of a day's failing, for which they have only a bare tradition. Mr. Mack Swen, prefent minifter in the ille Jura, gave me the following account of it, which he had from the mafter of an Engtifh weflel that happened to anchor at that litte ille, and came afterwards to Jura; which is thus:

As I was failing fone thirty leagucs to the fouth woft of Ila, I was becalmed near a little ife, where I dropt anchor, and went afhore. I found it covered all over with long grafs; there were abundance of feals lying on the rocks, and on the fhore; there is likewife a multitude of fea-fowls in it: there is a river in the middle, and on each fide of it I found great heaps of fifh-bones of many ferts; there are many planks and boards caft up upon the coaft of the ine, and it being all plain, and almolt level with the fea, I caufed my men (being then idle) to crect a heap of the wood about two flories high; and that with a defign to make the ifland more confpicuous to feafaring men. This ine is four Englifh miles in length and one in breadth: I was about thirteen hours failing between this ille and Jura. Mr. John Mac-Swen above-mentioncd, having gone to the itle of Collonfay, fome few days after, was told by the inhabitants, that from an eminence near the monaftery, in a fair day, they faw as it were the top of a little mountain in the fouth-weft fea, and that they doubted not but it was land, though they never offerved it before. Mr. Mac-Swen was confirmed in this opinion by the account above mentioned : but when the fummer was over, they never faw this little !iil, as they called it, any more. The reafon of which is fuppofed to be this, that the high winds, in all probability, had citt down the pile of wood, that forty
feamen had erected the preceding year in that ifland; which, by reafon of the defeription above recited, we may aptly enough call the $\mathbf{G r e c n}$ Inand.

## The Ifle of Collonfay.

#### Abstract

ABOUT two leagues to the north of Ita, lies the ille Oranfay ; it is feparated from Collonfay only at the tide of flood: this peninfula is four miles in circumference, being for the moft part a plain, arable, dry, fandy foil, and is fruitful in corn and grafs; it is likewife adorned with a church, chapel, and monaftery; they were built by the famous St . Columbus, to whom the church is dedicated. There is an altar in this church, and there has been a modern crucifix on it, in which feveral precious ftones were fixed; the $m n^{n}$ valuble of thefe is now in the cullody of Mac Duffie, in black Raimufad village,, places here, ans. on them. On is 1 ast iale of the charch within, lie the tombs of Mac.Duffie, and of the cadets of his fumly; there is a thip under fail, and a two-handed fword engraven on the principal tomb-Itone, and this infeription, Hic jacit Malcolumbus Mac-Duffic de Colionfay: his coat of arms and colour-ftaffis fixed in a fone, through which a hole is made to hold it. There is a crofs at the eaft and weft fides of this church, which are now broken; their haight was about tweive feet each : there is a large crofs on the weft fide of the church, of an entire fone, very hard; there is a pedeftal of three fleps, by which they afcend to it, it is fixteen feet high, and a foot and half broad; there is a large crucifix on the weft fide of this crofs, it has an infeription underneath, but not legible, being almof worn of by the injury of time; the other fide has a tree engraven on it.

About a quarter of a mile on the fouth fide of the church there is a cairne, in which there $i$ a a ftune crofs fixed, called Mac-I uffie's crofs; for when any of the heads of this fumily were to be interred, their corpfes were laid on this crofs for fome moments, in their way toward the church. On the north-fide of the church there is a fquare fone-wall, about two fory high; the area of it is about fourfore paces, and it is joined to the church-wall; within this fiquare there is a lefier fquare of one flory high, and about fixty paces wide, three fides of it are built of fmall pillars, confifting of two thin ftones each, and each pillar vaulted above with two thin ftones tapering upwards. There are inferiptions on two of the pillars, but few of the letters are perfect. There are feveral houfes without the fquare, which the monks lived in. There is a garden at twenty yards diflance on the north fide the houfes.

The natives of Collonfay are accuftomed, after their arrival in Oronfay ifle, to make a tour funways about the church, before they enter upon any kind of bufinefs. My landlord having one of his family fick of a fever, alked my book, as a fingular favour, tor a few moments. I was not a little furprifed at the honeft man's requelt, he being illiterate : and when he told me the reafon of it, I was no lefs amazed, for it was to fan the patient's face with the leaves of the book : and this he did at night. He fought the book next morning, and again in the evening, and then thanked me for fo great a favour: and told me, the fick perfon was much better by it; and thes I underfood that they had an ancient cuftom of famning the face of the fick with the leaves of the Bible. The ifle of Collonfay is four miles in length from eaft to weft, and above a mile in breadth. The mould is brown and fandy on the coaf, and affords but a very fimall produet, though they plough their ground three times; the middle is rocky and heathy,

which in moft places is prettily mingled with thick ever-grcens of crica-bacciftra, juniper, and cat's-tail.

The cattle bred here are cows, horfes, and neep all of a low fize. The inhabitants are generally well proportioned, and of a black complexion; they fpeak only the Irilh tongue, and ufe the habit, diet, \&c. that is ufed in the Weftern Ifles; they are all proteflants, and obferve the feftivals of Chriftmas, Eafter, and Good-Friday; but the women only obferve the feftival of the Nativity of the Bleffed Virgin. Kilouran is the principal church in this ifle, and the village in which this church is, hath its name from it. There are two ruinous chapels in the fouth fide of this ifle. There were two fone chefts found lately in Kilouran fands, which were compofed of five ftones each, and had human bones in them. There are fome frefh-water lakes abounding with trouts in this inle. There are likewife feveral forts here, one of which is called Duncoll: it is near the middle of the ifle, it hath large fones in it, and the wall is feven feet broad.

The other fort is called Dun-Lvan : the natives have a tradition among them, of a very little generation of people, that lived once here, called Lubbirdan, the fame with. pigmies. This ifle is the Duke of Argyle's property.

## Mull.

THE ifle of Mull lies on the weft coaft, oppofite to Lochaber, Swoonard, and Moydart. It is divided from thefe by a narrow channel, not exceeding half a league in breadth; the ine is twenty-four miles long from fouth to north, and as many in breadth from eaft to weft. A fouth-eaft moon caufes high tide here. This ifle is in the fheriffdom of Argyle; the air here is temperately cold and moift; the frefh breezes that blow from the mountains do in fome meafure qualify it : the natives are accuftomed to take a large dofe of aquavita as a corrective, when the feafon is very moift, and then they are very careful to chew a piece of charmel-root, finding it to be aromatic, efpecially when they intend to have a drinking-bout; for they fay this in fome meafure prevents drunkennefs.

The mould is generally black and brown, both in the hills and valleys, and in fome parts a clay of dillerent colours. The heaths afford abundance of turf and patt, which ferve the natives for good fuel. There is a great ridge of montains about the middle of the ille, one of them very high, and therefore called Bcin lore, i. c. a great mountain. It is to be feen from all the Wellern llles, and a confilerable part of the continent. Both mountains and valleys afford good pafturage for all forts of catte, as fheep, goats, and deer, which herd among the hills and buthes. The horfes are but of a low lize, yet very farightly; their black catte are likewife low in fize, but their fle!h is very delicious and fine. There is abundance of wild fowl in the hills and valleys; and anong them the black cock, heath-hen, ptarmagan, and ver; fine hawks: the feacoalt affords all fuch fowl as are to be had in the Weftern hes. The corn growing here is only barley and oats. There is great variety of platas in the hills and vallevs, but there is no wood here, except a fuw coppices on the coaif. There are fome bays, and places for anchorage about the ille. The bay of L sart on the call fite, and to the north of the cafle of that name, is reckoned a tife anchoring-place, and frequented by ftrangers. Luchbuy, on the oppofite weft fide, is but an indificent harbeur, yet veffels go into it for herrings.

The coaft on the weft abounds with rocks for two leagucs weft and forth-weft. The Bloody Bay is over againft the north end of inand Columki', and only fit for veffels of about an hundred tons.

Some few miles further to the north eaft is Loch Levin, the entry lies to the weftward, and goes twelve niles eafterly; there are herrings to be had in it fometimes, and it abounds with oyfters, cockles, mufcles, clams, \&cc.

Loch lay lies on the fouth fide of Loch-Levin ; it is proper only for fmall veffels; herrings are to be had in it fometimes, and it abounds with varicty of fhell filh: the fmall ines, called the White Ine, and Ine of Kids, are within this bay. 'To the north of Loch-Levin lies Loch Scafford; it enters fouth weft, and runs north-eaft ; within it lie the ifles Eorfa and Inchkenneth, both which are reputed very fruitful in cattle and corn.

There is a little chapel in this ifle, in which many of the inhabitants of all ranks are buried. Upon the north fide of Loch-Scafford lies the inle of Vevay; it is three miles in circumferencc; and encompaffed with rocks and fhelves, but fruifful in corn, grafs, \&cc.
To the weft of Ulva lies the ine Gometra, a mile in circumference, and fruitful in proportion to the other ifles.

About four miles further lie the fmall illes, called Kairnburg More and KernbugBeg; they are natually very frong, faced all round with a rock, having a narrow entry, and a violent current of a tide on each fide, fo that they are almoft impregnable. A very few men are able to defend thefe two forts againft a thoufand. There is a fmall garrifon of the flanding forces in them at prefent.

To the fouth of thefe forts lie the fmall inles of Fladday, Lungay, Back, and the Call of the Back : cod and ling are to be had plentifully about all thefe inands.

Near to the north-ealt end of Mull lies the inl Calve; it is above two miles in compafs, has a coppice, and affords good pafturage for all kind of cattle. Between this inle and the inle of Mull there is a capacious and excellent bay, called Fonbir Mory, i.e. the Virgin Mary's well ; becaufe the water of a well of that name, which is faid to be medicinal, runs into the ray.

One of the fhips of the Spanifh armada, called the Florida, perifhed in this bay, having been blown up by one Smallet of Dunbarton, in the year 1588. There was a great fum of gold and money on board the Thip, which difpoled the Earl of Argyle and fome Englifhmen to attempt the recovery of it ; but how far the latter fucceded in this enterprize is not generally well known; only that fome pieces of gold and money, and a golden chain was taken out of her. I have feen fome fine brafs cannon, fome pieces of eight, teeth, beads, and pins that had been taken out of that hhip. Several of the inhabitants. of Mull told me hat they had corverfed with their relations that were living at the haroour when this fhip was blown up; and they gave an account of an admirable providence that appeared in the prefervation of one Dr. Beaton, (the famous phyfician of Mull,) who was on board the flip when the blew up, and was then fitting on the upper deck, which was blown up entire, and thrown a good way off; yet the Doctor was laved, and lived feveral years afer.
The black aad white Indian nuts are found on the weft fide of this ifle; the natives pulverize the black kernel, or the black nut, and drink it in boiled milk for curing the diarrhea.

There are feveral rivers in the ifle that afford falmon, and fome rivers abound with. the black mufcle that breeds pearl. There are alfo fome frefh-water lakes that have trouts and eels. The whole ille is very well waterec: with many fprings and fountains. They told me of a fpring in the fouth fide of the mountain Bein Vore, that has a yellow. coloured ftone at the botton, which doth not burn or become hot, though it thould be kept in the five for a whole day together.

The amplibia in this ine are feals, otters, vipers, of the fame kind as thofe defcribed in the infe of Skie, and the natives ufe the fame cures for the biting of vipers. Foxes abound in this ifle, and do much hurt among the lambs and kids.

There are three caftles in the ifle : to wit, the caftle of Duart, fituated on the eaft, built uron a rock, the eaft fide is furrounded by the fea. This was the feat of Sir John MacLean, head of the ancient family of the Mac-Leans; and is now, together with the eflate, which was the major part of the ifland, become the Duke of Argyle's property, by the forfeiture of Sir John.

Some miles further on the weft coaft flands the caftle of Moy, at the head of Loch. buy, and is the feat of Mac-Lean of Lochbuy.

There is an old caftle at Aros in the middle of the ifland, now in ruins. There are fome old forts here called Dunns, fuppofed to have been built by the Danes. There are two parifh-churches in the ine, viz. Killinchen-Benorth, Loch-Levin, and a little chapel, called Kilwichk-Ewin, at the lake above Loch-Lay ; each parifh hath a minitter. The inhabitants are all Proteftants except two or three, who are Roman Catholics; they obferve the feftivals of Chriftmas, Eafter, Good.Friday, and St. Michael's. They fpeak the Irifh language gencrally, but thofe of the beft rank fpeak Englifh; they wear the fame habit as the reft of the inlanders.

Jona.
THIS ille in the Irifh language is called I. Colmkil, i.e. the ifhmus of Columbus the clergyman. Colum was his proper name, and the addition of Kil, which fignifies a church; was added by the iflanders by way of excellence; for there were few churches then in the remote and leffer ifles.

The natives have a tradition among them, that one of the clergymen who accompanied Columbus in his voyage thither, having at a good diftance elpied the ifle, and cried joyfully to Columbus in the Irih language, Chimi, i. c. I fee her; meaning thereby the country of which they had been in queft : that Columbus then anfwered, "It fhall be from henceforth called $1:$ "

The ine is two miles long from fouth to $n 0^{r+h}$, and onc in breadth from eaft to weft. The ealt fide is all arable and plain, fruitfu: orn and grafs; the weft fide is high and rocky.

This ifle was anciently a feminary of learning, famous for the feverc difcipline and fanctity of Columbus. He built two churches, and two monafteries in it, one for men, the other for women; which were endowed by the kings of Scotland and of the ifles; fo that the revenues of the church then amounted to four thoufand marks per ann. Jona was the bifhop of the ines' cathedral, after the Scots lof the Ile of Man, in which King Cratilinth erected a church to the honour of our Saviour, called Fanum Sodorenfe. Hence it was that bifhop of the illes was flyled Eipifcopus Sodorcnfis. The vicar of Jona was parfon of Soroby in Tyre-iy and dean of the ifles. St. Mary's church here is built in form of a crofs, the choir twenty yards long, the cupola twenty-one feet fquare, the body of the church of equal length with the choir, and the two crofs ifles half that length. There are two chapels on each fide of the choir, the entry to them opens with large pillars neatly carved in bafo relievo; the feeple is pretty large, the doors, windows, \&c. are curioully carved; the altar is large, and of as fine marble as any I ever faw. There are feveral abbots buried within the church; Mac-llikenich his itatue is done in black marble, as big as the life, in his epifcopal habit, with a mitre, crofier, ring, and flones along the breaft, \&c. 'The reft of the abbots are done after the fame manner; the infcription of one tomb is as follows:

Hic jacct Joannes Mack-Fingonc, abbas de Oui, qui obiit anno Domini milefimo quingentcfillio.

Bifhop Knox, and feveral perfons of difinction, as Mac-L.eod of Ifarries, have alfo been buried here.

There is the ruins of a eloiter behind the church, as alfo of a library, and under it a large room; the natives fay it was a place for public difputations.
There is a heap of ftoncs without the church, under which Mackean of Ardminurchin lies buried. 'There is an empty piece of ground between the church and the gardens, in which murderers, and children that died before baptifin, were burie.J. Near to the weft end of the church in a litte cell lies Columbus' tomb, but without infcription ; this gave me occafion to cire the diftiel, afferting that Columbus was buried in Ircland; at which the natives of Jona feemed very much difpleafed, and affirmed that the Irifh who faid fo were impudent liars; that Columbus was once buried in this place, and that none ezer came from Ireland fince to carry away his corpfe, which they had attempted, would have proved equally vain and prefumptuous.

Near St. Columbus' tomb is St. Martin's crols, an entire ftone of eight feet high; it is a very hard and red flone, with a mixture of grey in it. On the weft fide of the crofs is engraven a large crucifix, and on the eaft a tree; it flands on a pedeftal of the fame kind of flone. At a little further diftance is Dun Ni Manich, i. e. Monk's fort, built of fone and lime, in form of a baftion, prẹty high. From this eminence the monks had a view of all the families in the ine, and at the fane time enjoyed the free air. A little further to the weft lie the black fones, which are fo called, not from their colour, for that is grey, but from the effects that tradition fay enfued upon perjury, if any one became guilty of it after fwearing on thefe flones in the ufual manner; for an oath made on them was decifive in all controverfies.

Mac-Donald, king of the inles, delivered the rights of their lands to his vaffals in the ifles and continent, with uplifted hands and bended knees, on the black fones; and in this pofture, before many witneffes, he folemnly fiwore that he would never recall thofe rights which he then granted: and this was inftead of his great feal. Hence it is that when one was certain of what he affirmed, he faid pofitively, I have freedom to fwear this matter upon the black ftones.

On the fouth fide the gate, without the church, is the taylors' houfe, for they only wrought in it. The natives fay, that in the time of the plague the outer gate was quite Shut up, and that all provifions were thrown in through a hole in the gate for that purpofe.

At fume diftance fouth from St. Mary's is St. Ouran's church, commonly called Rcliqui Ouran; the faint of that name is buried within it.

The laird of Mac-Kinnon has a tomb within this church, which is the fatelieft tomb in the ifle. On the wall above the tomb there is a crucifix engraven, having the arms of the family underneath, viz. a boar's head, with a couple of fheep's bones in its jaws, The tomb-Hone has a ftatue as big as the life, all in armour, and upon it a fhip under fail, a lion at the head, and another at the feet. The infcription on the tomb is thus: Hıc oft Abbas Lacblani, Mack-Fingone, et cjus filius Abbatis de I. Atatis in Dno Mo ccac ann.

There are other perfons of diftinction in the church, all done in armour.
On the fouth fide of the church, mentioned above, is the burial-plave in which the kings and chiefs of tribes are buried, and over them a flinine; there was an infeription, giving an account of each particular tomb, but time has worn them off. The niddle-

Vol. H ,
mof had written on it, "The tombs of the Kings of Scotland;" of which forty-eight lie there.

Upon that on the right hand was written, "The tombs of the Kings of Ireland;" of which four were buried here.

And upon that on the left hand was written, "The Kings of Norway;" of which eight were buried here.

On the right hand within the eatry to the church-yard there is a tomb-ftone now overgrown with earth, and upon it there is written, Hic jacct Joanncs Turnbull, quondans epifcopus Cantcrburienfis. This I deliver upon the authority of Mr. Jo. Mac-Swen, miniter of Jura, who fays he read it.

Next to the kings is the tnimb-ftone of Mac. Donald of Ila; the arms, a fhip with hoifted fails, a ftandard, four lions, and a treec : the infcription, Hic jacet corpus Ang"fit Mack-Donuill de Ile.

In the weft end is the tombs of Gilbrid and Paul Sporran, ancient tribes of the MacDonalds.

The families of Mac-Lean of Duart, Lochbuy, and Coll, lié next all in armour, as big as the life.

Mac-Alifter, a tribe of the Mac-Donalds, Mac.Ouery of Ulvey, are both done as above.

There is a heap of ftones on which they ufed to lay the corps while they dug the grave. There is a fone likewife erected here, concerning which the credulous natives fay, that whofocver reaches out his arm along the fone three times, in the name of the Father, Son, and Holy Ghoft, will never err in fteering the helm of a veffel.

One tomb hath a clergyman, with this infcription upon it ; Sancta, छ̊c.
About a quarter of a mile further fouth is the church Ronad, in which feveral prioreffes are buried: one of the infcriptions is, Hic jacet Dna. Anna Terleti, filia quandan: prioreffe de Jona, qua obiit anno $M^{\circ}$ Cbrifli, aninam Abrabamo commendamus.

Another infcription is, Bebag Nijn Sorle vic Il vril priorifa, i. e. Bathia daughter to Somerled, fon of Gilbert, priorefs.

Without the nunnery there is fuch another fquare as that befide the monaftery for men. The two pavements, which are of a hard red fone, are yet entire; in the middle of the longeft pavement there is a large crofs, like to that mentioned above, and is called Mac-L.ean's Crofs. There are nine places on the ealt fide the ifle, called Ports for landing.

The dock which was dug out of port Churich is on the fhore, to preferve Columbus? boat called Curich, which was made of ribs of wood, and the outfide covered with bides; the boat was long, and fharp-pointed at both ends: Columbus is faid to have tranfported eighteen clergymen in his boat to Jona.

There are many pretty variegated fones in the fhore below the dock ; they ripen to a green colour, and are then proper for carving. The natives fay thefe fones are fortunate, but only for fome particular thing, which the perfon thinks fit to name, in exclufion of every thing clfe.

There was a tribe here called Clan vic n'ofer, from Ofiarii; for they are faid to have been porters. The tradition of thefe is, that before Columbus dicl, thirty of this family lived then in Jona, and that upon fome provocation Columbus entailed a curfe upon them; which was, that they might all perifh to the number of five, and that they might never exceed that number, to which they were accordingly reduced: and ever fince, when any woman of the family was in labour, both the and the other four were
afraid of death; for if the child that was to be then born did not die, they fay one of the five was fure to die; and this they affirm to have been verified on every fuch occafion fucceffively to this day. I found the only one of this tribe living in the iffe, and both he and the natives of this and of all the weftern inles unanimoufly declare that this obfervation never failed; and all this little family is now exinct, except this one poor man.

The life of Columbus, written in the Irifh character, is in the cuftody of John MacNeil in the ifle of Barray; another copy of it is kept hy Mac-Donald of Bembecula.

The inhabitants have a tradition, that Columbus fuffered no women to ftay in the ifle except the nuns; and that all the tradefmen who wrought in it were obliged to keep their, wives and daughters in the oppofite little ine, called on that account Women's-ife. They fay likewife, that it was to keep women out of the ifle that he would not fuffer cows, fheep, or goats to be brought to it.

Beda, in his Ecclefiaftical Hittory, lib. iii. cap. 4. gives an account of him. In the year of our Lord 565 , at the time that Juftin the younger fucceeded Juntimian in the government of the Roman empire) the famous Columba, a prefbyter and abbot, but in habit and life a monk, came from Ireland to Britain to preach the word of God to the northern provinces of the Picts; that is, to thofe who by high and rugred mountains are feparated from the fouthern provinces. For the fouthern Picts, who have their habitation on this fide the fame hills, had, as they afirm themfelves, renounced idolatry, and received the faith a long time before, by the preaching of Ninian the bifop, a moft reverend and holy man, of the country of the Britons, who was regularly cducated at Rome in the mylteries of truth.

In the ninth year of Meilochen, fon to Pridius King of Piets, a moft powerful king, Columbus, by his preaching and example, converted that nation to the faith of Chrift. Upon this account they gave him the ifle above-mentioned (which he calls Hii, book iii. cap. 3.) to erect a monaftery in; which his fucceflors poffefs to this day, and where he himfelf was buried, in the feventy-feventh year of his age, and the thirty-fecond after his going to Britain to preach the gofpel. He built a neble monaftery in Ireland before his coming to Britain ; from both which monafteries he and his difciples founded feveral other monafteries in Britain and Ircland; among all which, the monaftery of the ifland in which his body is interred, has the pre-eminence. The ife has a rector, who is always a prefbyter-abbot, to whofe jurifdiction the whole province, and the bifhops themfelves ought to be fubject, though the thing be unufual, according to the example of that firft doctor, who was not a bifhop, but a prefbyter and monk; and of whofe life and doctrine fome things are faid to be wrote by his difciples. But whatever he was, this is cortain, that he left fucceffors eminent for their great chaftity, divine love, and regular inftitution.

This monaftery furnifhed bifhops to feveral diocefes of England and Scotland; and amongt others, Aidanus, who was fent from thence, and was bifhop of Lindisfairn, now Holy-Ifland.

The Ihe of Tiriciy, is fo callcd from Tire a Country and Iy an Ifthmus; the Rocks in the narrow Cbannel feem to favour the Etymelagy.
THIS ifle lies about eight leagues to the weft of Jona, or I Colm-Kil. The land is low and moorifl, but there are two little hills on the fouth-weft fide; the mould is generally brown, and for the moft part fandy. The weftern fide is rocky for about three leagues: the inle affords no convenient harbour for fhips, but has been always valued
for its extrandinary fruitfulnefs in corn, yet being tilled every year, it is become lo/s fruifful than formerly. There is a phain piece of ground about fix miles in compafs on the eaft coaft, called the Rive ; the grafs is feldom fuffered to grow the length of half an inch, being only kept as a common, yet is believed to excel any parcel of land of its extent in the ifles or oppofite continent: there are fmall channels in it, through which the tide of flood comes in, and it fometimes overflows the whole.

The ifle is four miles in length from the fouth-eaft to the north-weft ; the natives for the moft part live on barley-bread, butter, milk, cheefe, fifh, and fome eat the roots of filver-weed; there are but few that eat any flefh, and the fervants ufe water-gruel often with their bread. In plentiful years the natives drink ale generally. 'I here are three ale-houfes in the infe: the brewers preferve their ale in large earthen veffels, and fay they are much better for this purpofe than thofe of wood; fome of them contain twelve Englifh gallons. Their meafure for drink is a third part larger than any I could obferve in any other part of Scotland. The ale that I had in the inn being too weak, 1 told my hoft of it, who promifed to make it better; for this end he took a hecticftone, and having made it red-hot in the fire, he quench'd it in the ale. The company and I were fatisfied that the drink was a little more brikk, and I told him that if he could add fome more life to our ale, he would extremely oblige the company. This he frankly undertook; and to effect it toafted a barley-cake, and having broke it in pieces, he put it into the difh with the ale; and this experiment we found as effectual as the firft. I enquired of him if he had any more art to revive our ale, and then he would make it pretty good; he anfwered, that he knew of nothing elfe but a malt cake, which he had not then ready; and fo we were obliged to content ourfelves with what pains had been already ufed to revive our drink. The natives preferve their yealt by an oaken wyth, which they twift and put into it; and for future ufe, keep it in barleyfraw. The cows and horfes are of a very low fize in this ifle, being in the winter and fpring time often reduced to eat fea-ware. The cows give plenty of milk; when they have enough of freh fea ware to feed on, it fattens them: the horles pace naturally, and are very fprightly, though little. The ground abounds with flint-fone; the natives tell me they find pieccs of fulphur in feveral places. The weft winds drive the ordinary Indian nuts to the fhore of this ine, and the satives ufe them as above, for removing the diarrhea; and the water of the well called Tonbir in Donich, is by the natives drunk as a catholicon for difcafes.

Some years ago abour one hundred and fixty little whales, the biggef not exceeding twenty feet long, run themfelves afhore in this ifle, very feafonably, in time of fearcity, for the natives did eat them all; and told me that the fea-pork, i. e the whale, is both wholefone and very nourihhing meat. There is a frefl-water lake in the middle of the infe, on the eaft fide of which there is an old caftle now in ruins. The ifle being low and noorifh, is unwholefome, and makes the natives fubject to the ague. The inlabitants living in the fouth-caft parts are for the moft part bald, and have but very thin hair on their heads. There is a cave in the fouth-wett, which the natives are accuftomed to watch in the night, and then take many cormorants in it. There are feveral forts in the ifle; one in the midule of it, and Dun.Taelk in Baelly Petris: they are in form the fame with thofe in the northern infes. There are feveral great and fraall circles of ftones in this ifle The inhabitants are all Proteftants; they obferve the feftivals of Chrittmas, Good-Friday, Eafer, and St. Michael's Day. Upon the latter there is a general cavaleade, at which all the inlabitants rendezvous. They fpeak the Irifh tongue, and wear the Highland drefs. This ifle is the Duke of Argyle's property, it being one
of the ifes lately poffeffed by the laird of Mac-Lean : the parih church in the ine is called Soroby, and is a parfunage.

## The Ife of Coll.

THIS ine lies about half a league to the enft and north-caft of Tire-iy, from which it lath been fevered by the fea. It is ten miles in length, and three in breadth; it is generally compofed of little rocky hills, covered with heath. The north-fide is much plainer, and arabie gromb, affording barley and oats; the inhabirants always feed on the latter, and thole of Tire-iy on the former. The ine of Coll produces more boys than girls, and the ine of 'lire-iy more girls than boys; as if nature intended both thefe ifles for mutual alliances, without being at the trouble of going to the adjacent ifles or continent to be matched. The parifh-book, in which the number of the baptized is to be feen, confirms this obfervation.

There are feveral rivers in this iffe that afford falmon. There is a frefh-water lake in the fouth-eaft fide, which hath trouts and eels. Within a quarter of a mile lies a little caftle, the feat of Mac-Lean of Coll, the proprietor of the ine: he and all the inhabitants are Proteflants; they oblerve the feftivals of Chriftmas, Good-Friday, Eafter, and St. Michael: at the litter they have a general cavalcade. All the inhabitants fpeak the Irih tongue, (a few excepted.) and wear the habit ufed by the reft of the iflanders. This ife is much wholefomer than that of Tire-iy. I fav a gentleman of Mac-Lean of Coll's family here, aged cighty-five, who walked up and down the fields daily.

Cod and ling abound on the coaft of this ine, and are of a larger fize here than in the adjacent inles and continent.

On the fouthealt coaft of this ine lie the train of rocks called the Carn of Coll ; they reach about half a league tron the fhore, and are remarkable for their fatality to feafaring men, of which there are feveral late inftances. There is no venomous creature in this ifand, or that of Tire-iy.

## Run.

THIS ine lies about four leagues fouth from Skie; it is mountainous and heathy, but the coalt is arabie and fruifful. The ifle is five miles long from fouth to north, and threc from eaft to weft; the north end produces fome wood. The rivers on each fide afford falmon. There is menty of land and fea-fowl ; fome of the latter, cfpecially the puffin, build in the hills as nuch as in the rocks on the coaft, in which there are abundance of caves: the rock facing the weft fide is red, and that on the eall fide grey. The mountains have fome hundred of deer grazing in them. The nativ s gave me an account of a frange obfervation, which they fay proves fatal to the pofterity of Iachlin, a cadet of Mac-Lean of Coll's family; that if any of them fhoot at a deer on the mountain Finch: a, he dies fuddenly, or contracts fome violent diftemper, which foon puts a period to his life. 'They told me fome iallances to this purfofe: whatever may be in it, there is none of the tribe above named will ever offer to fhoot the deer in that mountain.

The bay Loch-Screford on the eaff fide is not fit for anchoring, except without the entry.

There is a chapel in this ifle; the natives are Proteftants; Mac.Lean of Coll is proprietor, and the language and habit the fame with the northern iiles.

Inc Muck.
IT lies a little to the fouth-weft of Rum, being four miles in circumference, all furrounded with a rock; it is fruitful in corn and grafs: the hawks in the rocks here are reputed to be very good. The catte, fowls, and amphibia of this illand, are the fame as in other ifles; the natives fpeak the lrinh tongue only, and ufe the habit wore by their neighbours.

## IJe Camay.

THIS ine lies about half a nile off Rum; it is two miles from fouth to north, and one from eaft to weft. It is for the molt part furrounded with a ligh rock, and the whole fruitful in corn and grals: the fouth cind lath plenty of cod and ling.

There is a high hill in the north end, winich diforders the needle in the compafs: I laid the compafs on the ftony gromad near it, and the needle went often round with great fwifnefs, and inftead of fettling towands the north, as ulual, it fetted here due eaft. The fones in the furface of the earth aire black, and the rock below facing the fea is red : fome affirm that the needle of a thip's compafs, fiiiling by the hill, is difordered by the force of the magnet in this rock; but of this 1 have no certainty.

The natives call this ifle by the name of Tarlin at fea ; the rock Heifker on the fouth end abounds with wild gecfe in ciugult, and then they caft their quills. The church in this ifle is dedicated to St. Columbus. All the naives are Romay Catholics; they ufe the language and habit of the other illes. Allan Mac-Donald is proprietor. There is good-anctorage on the north-ealt of this inte.

## A Defcription of the IJe of Egg.

THIS infe lies to the fouth of skie about four leagues; it is three miles in length, and a mile and a half in breadth, and about nine in circumference: it is all rocky and mountainous from the middle $t$ wards the welt; the eaft fide is plainer, and more arable : the whole is indifferently good for paifturage and cultivation. There is a mountain in the fouth end, and on the top of it there is a high rock called Skur Egg, about an hundred and fifty paces in circumference, and has a freth-water lake in the middle of it ; there is no accel's to this rock but by une palliage, which makes it a natural fort. There is a harbour on the fouth-eaft fide of this inle, which may be entered into by either fide the fmall ifle without it. There is a very big cave on the fouth-weft fide of this ine, capable of containing feveral hundreds of people. The coaft guarding the northweft is a foft quarry of white ftone, having fome caves in it. There is a well in the village called Fivepennies, rejuted efficacious againgt feveral diftempers: the natives told me that it never fails to cure any perfon of their firf difeafe, only by driuking a quantity of it for the fpace of two or three days; and that if a ftranger lic at this well in the night-time, it will procure a deformity in fome part of his body, but has no effect on a naive; and this they fay 7 ath been frequently experimented.

There is a heap of thones here called Martin $D(J I J$, i. e. a place confecrated to the faint of that name, about which the natives oblige themfelves to make a tour round fun ways.

There is another heap of fones, which they fay was confecrated to the Virgin Mary.
In the village on the fouth coalt of this ille there is a well, called St. Katherine's well; the natives have it in great efteem, and believe it to be a catholicon for difeafes. They told me that it had been fuch ever fince it was confecrated by one Father Hugh, a popilh
prief, in the following manner : he obliged all the inhabitants to come to this well, and then employed them to bring together a great heap of fones at the head of the fpring, by way of penance. This being done, he faid mafs at the well, and then confecrated it; he gave each of the inhabitants a piece of wax candle, which they lighted, and all of them made the dellil, of going round the well fun ways, the priefl leading them: and from that time it was accounted unlawful to boil any meat with the water of this well.

The natives obferve St. Katherine's anniverfary ; all of them come to the well, and having drank a draught of it, they make the deffil round it fun ways; this is always performed on the fifteenth day of April. The inhabitants of this ifle are well proportioned ; they fpeak the Irim tongue only, and wear the habit of the iflanders; they are all Roman Catholicks, except one woman, that is a proteftant.

There is a church here on the eaft fide the ifle, dedicated to St. Donnan, whofe anniverfary they obferve.

About thirty yards from the church there is a fepulchral urn under ground; it is a big fone hewn to the bottom, about four feet deep, and the diameter of it is about the fame breadth; I caufed them to dig the ground above it, and we found a flat thin flone covering the urn : it was almoft full of human boncs, but no head among them, and they were fair and dry. I enquired of the natives what was beconc of the heads, and they could not tell ; but one of them faid, perhaps their head had been cut off with a two handed fword, and taken away by the enemy. Some few paces to the north of the urn there is a narrow paflage under ground, but how far it reaches they could give me no account.

The natives dare not call this ifle by its ordinary name of Egg, when they are at fea, but ifland Nim-Ban-More, i. e. the infe of big women. St. Donnan's well, which is in the fouth-wcft end, is in great efteem by the natives; for St. Donnan is the celebrated tutelar of this ifle. The natives do not allow proteftants to come to their burial.

The proprietors of the ine are Allan Mac-Donald of Moydort, and Allan Mac-Donald of Moron.

## St. Kilda, or Hirt.

THE, firft of thefe names is taken from one Kilder, who lived here; and from him the large well Tombir-Kilda has alfo its name. Hirta is taken from the Irifl Ier, which in that language fignifies weft ; this ine lies directly oppofite to the ifles of North-Vitt, Harries, \&cc. It is reckoned eighteen leagues from the former, and twenty from Harries. This ine is by Peter Goas, in a map he made of it at Rotterdam, called St. Kilder; it is the remoteft of all the Scots north-weft ines: it is about two miles in length, and one in breadth; it is faced all round with a fteep rock, except the bay on the foutheaft, which is not a harbour fit for any veffel, though in the time of a calm one may land upon the rock, and get up into the illand with a little climbing. The land rifes pretty high in the middle, and there is one mountain higher than any other part of the inland. There are feveral fountains of good water on each fide this ifle. The corn produced here is oats and barley, the latter is the largeft in the weftern infes.

The horles and cows here are of a lower fize than in the adjacent ifles, but the fheep differ only in the bigneis of their horns, which are very long.

There is an ancient fort on the fouth end of the bay called Dun-fir-Volg, i. e. the fort of the Volfcij: this is the fenfe put upon the word by the antiquaries of the oppofite ifles of Vift.

The ifle Soa is near half a mile diftant from the weft fide of St. Kilda; it is a mile in circomference, very high, and tieep all round Borera, lies above two leagues north of St. Kilda; it is near a mile in circumference, the molt of it furrounded with a high rock. The largett and the two leffier iffes are good fir pafturage, and abound with a prodigions number of fea fowl, fronn March till September; the Solan geefe are very numerous here, infomuch that the inhabitants commonly keep yearly above twenty thoufand young and old in there little flone houfe, of which there are fome hundreds for preferving their fowls, eggs, \&e. They ufe no lale for preferving their fowl; the eggs of the fe. wild fowl are preferved fome months in the athes of peats, and are altringent to fuch as be not accuftemed to eat them.

The Solan goofe is in fize formewhat lefs than a land goofe, and of a white colour, except the tips of the wings, which are black, and the top of their head, which is yellow ; their bill is long, limal pointed, and very hard, and pierces an inch deep iuto wood, in their defcent after a fifh laid on a board, as fome ule to catch them. When they feep, they put their head under their wings, but one of them keeps watch, and if that be furprized by the fowter (which often happens) all the relt are then eafily cauglit by the neek, one after another ; but if the centinel gives warning, by crying loud, then all the flock make their efcape. When this fowl fifles for herring, it flies about fixty yards high, and then defcends perpendicularly into the fea, but after all other fifh it defien Is a-Iquint : the reafon for this manner of pur uing the herrings is, becaufe they are in greater theals than any other fifh whatfoever.

There is a barren tribe of Solan geefe, that keep always together, and never mix among the reft that build and hatch. The Solan geefe come to thofe ifands in March, taking the advantage of a fouth-weft wind: before their coming, they fend a few of their number, as harbingers before them, and when they have made a tour round the ifles, they return immediately to the company; and in a few days after, the whole flock comes together, and flays till September. The natives make a pudding of the fat of this fowl, in the flomach of it, and boil it in their water-gruel, which they call brochan; they drink it likewife for removing the cough : it is by daily experience found to be an excellent vulnerary.

The inhabitants eat the Solan goofe-egg raw, and by experience find it to be a good pedoral. The Solan geefe are daily making up their nefts from March till September : they make them in the fhelves of high rocks; they fifh, hatch, and make their nefts by turns, and they amafs for this end a grent heap of grafs, and fuch other things as they catch floating on the water: the fteward of St. Kilda told me, that they had found a red coat in a neft, a brafs fun dial, and an arrow, and fome Molucca beans in another neft. This Sulan goofe is believed to be the fharpeft fighted of all fea fowls; it preferves five or fix herrings in its gorget entire, and carries them to the neft, where it fpews them out to ferve as food to the young ones: they are obferved to go a fifhing to feveral ifles that lie about thiry leagues diltant, and carry the fifh in their gorget all that way; and this is coufirmed ly the Englith hooks, which are found flicking to the fifh-bones in their nefls, for the natives rave no fuch hooks among them.

They have another bird here called Fulmar; it is a grey fowl, about the fize of a moor-hen: it has a ftrong bill, with wide nollrils; as often as it goes to fea, it is a certain fign of a weftern wind, for it fits always on the rock, when the wind is to blow from any other quarter. This fowl, the natives fay, picks its food out of live whales, and that it eats forrel; for both thofe forts of food are found in its neft. When any one approaches the Fulmar, it fpouts out at its bill about a quart of pure oil; the natives furprize
furprize the fowl and preferve the oil, and burn in their lamps: it is good againf rheu. matick pains and achs in the bones, the inhabitants of the adjacent ines value it as a catholicon for difeafes; fome take it for a vomit, others for a purge. It has been fuccefffully ufed againft rheumatick pains in Edinburgh and London: in the latter it has been latelyiufed to afluage the fwelling of a frained foot, a cheek fwelled with the toothach, and for difculling a hard boil ; and proved fucceffful in all the three cafes.

There is plenty of cod and ling, of a great fize, round this ine, the improvement of which might be of great advantage.

The inhabitants are about two hundred in number, and are well proportioned ; they fpeak the lrih language only; their habit is much like that ufed in the adjacent ines, but coarfer: they are not fubject to many difeafes; they contract a cough as often as any ftrangers land and ftay for any time anong them, and it continues for fome cight or ten days; they fay the very infants on the brealt are infected by it. The men are ftronger than the inhabitants of the oppofite weftern ifles; they feed much on fowl, efpecially the Solan geefr, puffin, and fulmar, eating no falt with then. This is believed to be the caufe of a leprofy, that is broke out among them of late: one of them that was become corpulent, and had his throat almolt hut up, being advifed by me to take falt with his meat, to exercife himfelf more in the fields than he had done of late, to forbear eating of fat fowl, and the fat pudding called giben, and to eat forrel, was very much concerned, becaufe all this was very difagreeable; and my advifing him to eat forrel was perfecly a furprize to him: but when I bid him confider how the fat fulmar eat this plant, he was at laft difpofed to take my advice; and by this means alone in a few days after, his voice was much cleare:, his appetite recovered, and he was in a fair way of recovery. Twelve of thefe lepers died the year after of this diftemper, and were in the fame condition with this man.

Both fexes have a genius for poefy, and compofe entertaining verfes and fongs in their own language, which is very emphatical. Some years ago, about twenty of their number happened to be confined in the rock Stack N'armin for fevcral daystogether, without any kind of food; the feafon then not favouring their endeavours to return home, one of their number plucked all their knives out of the hafts, wrought a hook out of each, and then beat them out to their former length; he had a fone for an anvil, and a dagger for a hammer and file: and with thefe rude hooks, and a few forry fifhing-lines, they purchafed fifh for their maintenance, during their confinement for leveral days in the rock. All the men in the ifle having gone to the ifle Boreray for purchafe, the rope that faftened their boat happened to break; and by this unlucky accident, the boat was quite loft, and the poor people confined in the ife from the middle of March till the latter end of May, without fo much as a cruft of bread; but they had fheep, fowl, and fifh in abundance. They were at a lofs how to acquaint their wives and friends, that all of them were alive; but to effect this, they kindled as many fires on the top of an eminence as there were men in number: this was no fooner feen, and the fires counted, then the women underitood the fignal, and were fo overjoyed at this unexpected news, that they fell to labour the ground with the foot-fpade, a fatigue they had never been accuttomed to; and that year's product of corn was the moft plentiful that they had for many years before. After the fteward's arrival in the ife about the end of May, he fent his galley to bring home all the men confined in the ine, to tieir fo much longed for St. Kilda; where the mutual joy between them and their wives, and other relations, was extraordinary.
The inhabitants are of the reformed religion; they affemble in the church-yard on the Lord's Day, and in the morning they fay the Lord's Prayer, Creed, and Ten Command-
vol. III.
ments :
ments : they work at no employment.till Monday, neither will they allow a ftranger to work fooner. 'The officer, or fteward's deputy commonly, and fometimes any of their neighbours, baptize their children foon after they are born; and in the following form: "A. I. I baptize you to your father and mother, in the name of the Father, Son, and Holy Ghoft." They marry early and publickly, all the natives of both fexes being prefent; the officer who performs the marriage tenders a crucifix to the married couple, who lay their right hands on it, and then the marriage is ratifid.

They obferve the feftivals of Chriftnas, Eafter, Good Friday, and that of All-Saints; upon the latter they bake a large cake, in form of a triangle, furrowed round, and it mult be all eaten that night. They are hofpitable, and charitable to ftrangers, as well as the poor belonging to themfelves, for whom all the families contribute a proportion monthly, and at every feflival each family fends them a piece of mutton or beef.

They fwear decifive oaths by the crucifix, and this puts an end to any controverfy; for there is not one infance, or the leaft fufpicion of perjury among them. The crucifix is of brafs, and about nine inches in length; it lies upon the altar, but they pay no religious worfhip to it. One of the inhabitants, was fo fincere, that, (rather than forfwear himfelf on the crucifix, he confeffed a capital crime before the minifter, and myfelf. They never fwear, or theal, neither do they take God's name in vain at any time; they are free from whoredom and adultery, and of thofe other immoralities that abound fo much every where elfe.

One of the inhabitants called Roderick, a fellow that could not read, obtruded a falfe religion upon the credulous people, which he pretended to have received from St. John the Baptift. It is remarkable, that in his rhapfodies, which he called prayers, he had the word Eli; and to this purpofe, Eli is our preferver. There is a little hill, upon which he fays John the Baptift delivered fermons and prayers to him ; this he called John's-Bufh, and made the people believe it was fo facred that if either cow or fheep did tafte of its grafs, they were to be killed immediately after, and the owners were to eat them, but never without the company of the impofor. He made them likewife believe that each of them had a tutelar faint in heaven to intercede for them, and the anniverfary of every one of thofe was to be neceffarily obferved, by having a fplendid treat, at which the impofter was always the principal perfon. He taught the women a devout hymn, which he faid he had from the Virgin Mary; he made them believe that it fecured any woman from mifcarriage that could repeat it by heart, and each of them paid the impoflor a fheep for it.

Upon Mr. Campbell's arrival and mine in St. Kilda, Roderick made a public recantation of his impofure; and being then by us brought to the ille of Harries, and afterwards to the infe of Skie, he has inade public coufeffion in feveral churches of his converfe with the devil, and not John the Baptift, as he pretended, and feems to be very penitent. Lle is now in Skie inle, from whence he is never to return to his native country. His neighbours are heartily glad to be rid of fuch a villian, and are now happily delivered from the errors he impofed upon them. The ille is the Laird of Mac-leod's property, he is head of one of the moft ancient tribes in the ines; he beflows the ife upon a cadet of his name, u hofe fortune is low, to maintain his family, and he is called fleward of it : he vifits the ife once every fummer, to demand the rents, viz. down, wool, butter, cheefe, cows, horfee, fowl, oil, and barley. The feward's deputy is one of the natives, and ftays always upon the place; he has free lands, and an omer of barley from each family; and has the honour of being the firlt and laft in their boat, as they go and come to the leffer ifles or rocks. The ancient meafure of oner and cubit continues to be ufed in this ife. They have neither gold nor filver, but barter
among themfelves and the flewards men for what they want. Some years ago the fleward deternined to exact a fheep from every family in the ifle, the number amounting to twenty feven; and for this he put them in mind of a late precedent, of their having given the like number to his predecefor. But they anfivered, that what they gave then, was voluntary, and upon an extraordinary occafion of his being wind-bound in the ine, and that this was not to be a cuftom afterwards. However the fleward fent his brother, and with a competent number of men to take the fheep from thein by force; but the natives arming themfelves with their daggers, and fifhing rods attacked the fteward's brother, giving him fome blows on the head, and forced him and his party to retire, and told him that they would pay no new taxes: and by this fout refiftance, they preferved their freedom from fuch impofition.

The inhabitants live contentedly together in a little village on the eaft-fide St. Kilda, which they commonly call the country; and the ifle Borreray, which is little more than two leagues diftant from them, they call the northern country. The diftance between their houfes is by them called the High.ftreet : their houfes are low, built of fone and a cement of dry earth; they have couples and ribs of wood covered with thin earthern turf, thatched over thefe with flraw, and the roof fecured on each fide with double ropes of ftraw or heath, poifed at the end with many ftones: their beds are commonly made in the wall of their houfes, and they lie on Itraw, but never on feathers or down, thor: ${ }^{\text {ii }}$ they have them in greater plenty than all the weftern ifles befides. The reafon for mating their bed-room in the walls of their houfes, is to make room for their cows, which they take in during the winter and fpring.

They are very exact in their properties, and divide both the fifhing as well as fowling rocks with as great nicenefs as they do their corn and grafs; one will not allow his neighbour to fit and fifh on his feat, for this being a part of his poffeffion, he will take care that no encroachment be made upon the leaft part of it : and this with a particular regard to their fucceffors, that they may lofe no privilege depending upon any parcel of their farm. They have but one boat in the ifle, and every man hath a fhare in it, proportionably to the acres of ground for which the pay rent. They are fout rowers, and will tug at the oar for a long time, without any intermifion. When they fail, they ufe no compafs, but take their meafures from the fun, moon, or ftars; and they rely much on the courfe of the various flocks of fea fowl : and this laft is their fureft directory. When they go to the leffer ifles and rocks to bring home fheep, or any other purchafe, they carry an iron pot with them, and each family furnifhes one by turns; and the owner on fuch occafions has a fmall tax paid him by all the families in the ifle, which is by them called the pot-penny.

There was another tax paid by each family to one of the natives, as often as they kindled a fire in any of the leffer inles or rocks, and that for the ufe of his fteel and flint ; and this was by them called the fire-penny:

This tax was very advantageous to the proprietor, but very uneafy to the commonwealth, who could not be furnifhed with fire on thefe occafions any other way. But I told them that the chryftal growing in the rock on the fhore would yield fire, if fruck with the back of a knife, and of this I hewed them an experiment; which when they fuw, was a very furprifing, and to them a profitable difcovery in their efteem, being fuch 2s could be had by every man in the iffe; and at the fame time delivered them from an endlefs charge : but it was very difobliging to the poor man who loft his tax by it.

The inhabitants of St. Kilda excel all thofe I ever faw in climbing rocks : they told me that fome years ago their boat was fplit to pieces upon the weft fide of Borrera ille, and they were force. to lay hold on a bare rock, which was fleep, and above twenty
fathom ligh ; notwithfanding this difficulty, fome of them climbed up to the top, and from thence let down a rope and plaids, and fo drew up all the buat's crew, though the climbing this rock would feem impoffible to any other except themfelves.

This little commonwealth hath two ropes of about twenty four fathoms length each, for climbing the rocks, which they do by turns; the ropes are fecured all round with cows' hides falted for the ufe, and which preferves them from being cut by the edge of the rocks. By the affillance of thefe ropes they purchafe a great number of eggs and fowls: I have feen them bring home in a morning twenty nine large bafkets all full of eggs ; the leaft of the bafkets contained four hundred big eggs, and the reft cight hundred and above of leffer eggs. They had with them at the fane time about two thoun fand fea fowl, and fome lifh, together with fome limpets, called patella, the biggeft I ever faw. They catch many fowls likewife, by laying their gins, which are made of horfe-hair, having a noofe at the diftance of two feet each; the ends of the rope at which the noofe hangs, are fecured by ftone.

The natives gave me an account of a very extraordinary rifque which one of them ran as laying his gins, which was thus: As he was walking bare.foot along the rock where he had fixed his gin, he happened to put his toe in a noofe, and inmediately fell down the rock, but hung by the toe, the gin being ftrong enough to hold him, and the ftones that fecured it on each end being heavy: the poor man continued hanging thus for the fpace of a night on a rock twenty fathom height above the fea, until one of his neighbours hearing him cry, came to his refcue, drew him up by the feet, and fo faved him.

Thefe poor people do fometines fall down as they climb the rocks, and perifh : their wives on fuch occafions make doleful fongs, which they call lanemtations. The chief topicks are their courage, their dexterity in climbing, and their great affection which they thewed to their wives and, children.
It is ordinary with a fowler, after he has got his purchafe of fowls, to pluck the fatteft, and carry it home to his wife as a mark of his affection ; and this is called the rock-fowl.

The batchelors do in like manner carry this rock fowl to their fweethearts, and it is the greateft prefent they can make, confidering the danger they run in acquiring it.

The richeft man in the ine has not above eight cows, eighty fheep, and two or three horfes. If a native here have but a few cattle, he will marry a woman, though fhe have no other portion from her friends but a pound of horfe-hair, to make a gin to catch fowls.

The horfes here are very low of ftature, and employed only to carry home their peats and turf, which is their fuel. The inhabitants ride their horfes (which were but eighteen in all) at the anniverfary cavalcade of All-Saints : this they never fail to ob. ferve. They begin at the fhore, and ride as far as the houfes; they ufe no faddles of any kind, nor bridle, except a rope of fraw which manages the horfe's head: and when they have all taken the horles by turns, the fhow is over for that time.

This ifle produces the fineft hawks in the weftern ifles, for they go many leagues for their prey, their being no land-fowl in St. Kilda proper for them to eat, except pigeons and plovers.

One of the inhabitants of St. Kilda being fome time ago wind-bound in the ifle of Harries, was prevailed on by fome of them that traded to Glafgow to go thither with them. He was aftonifhed at the length of the voyage, and of the great kingdoms as he thought them, that is ifles, by which they failed; the largeft in his way did not exceed twenty four miles in length, but he confidered how much they exceeded his own little native country.

Upon his arrival at Glafgow, he was like one that had dropt from the clouds into a new world; whofe language, habit, \&cc. were in all refpects new to him : he never imagined that fuch big houfes of fone were made with hands; and for the pavements of the ftreets, he thought it muft needs be altogether natural ; for he could not believe that men would be at the pains to beat ftones into the ground to walk upon. He ftood dumb at the door of his lodging with the greateft admiration; and when he faw a coach and two horfes, he thought it to be a little houfe they were drawing at their tail, with men in it ; but he condemned the coachman for a fool to fit fo uneafy, for he thought it fafer to fit on the horfe's back. The mechanifin of the coach-wheel, and its running about, was the greateft of all his wonders.

When he went through the flreets he defired to have one to lead him by the hand. Thomas Rofs, a merchant, and others, that took the diverfion to carry him through the town, atked his opinion of the High Church? He anfwered, that it was a large rock, yet there were fome in St. Kilda much higher, but that thefe were the beft caves he ever faw; for that was the idea which he conceived of the pillars and arches upon which the church ftands. When they carried him into the church, he was yet more furprifed, and held up his hands with admiration, wondering how it was poffible for men to build fuch a proligious fabric, which he fuppofed to be the largeft in the uni. verfe. He could not imagine what the pews were defigned for, and he fancied the people that wore mafks (not knowing whether they were men or women) had been guilty of fome ill thing, for which they dared not fhew their faces. He was amazed at women's wearing patches, and fancied them to have been blifters. Pendants feemed to him the moft ridiculous of all things; he condemned perriwigs mightily, and much mare the powder ufed in them: in fine, he condemned all things as fuperfluous he faw not in his own country. He looked with amazement on every thing that was new to him. When he heard the church-bells ring, he was under a mighty confternation, as if the fabric of the world had been in great diforder. He did not think there had been fo many people in the world as in the city of Glafgow; and it was a great myftery to him to think what they could all defign by living fo many in one place. He wondered how they could all be furnifhed with provifion; and when he faw big loaves, he could not tell whether they were bread, ftone, or wood. He was amazed to think how they could be provided with ale, for he never faw any there that drank water. He wondered how they made them fine clothes, and to fee flockings made without being firf cut and afterwards fewn, was no fmall wonder to him. He thought it foolifh in women to wear thin filks, as being a very improper habit for fuch as pretended to any fort of employment. When he faw the women's feet, he judged them to be of another fhape than thofe of the men, becaufe of the different fhape of their fhoes. He did not approve of the heels worn by men or women; and when he obferved horfes with thoes on their feet, and faftened with iron nails, he could not forbear laughing, and thought it the moft ridiculous thing that ever fell under his obfervation. He longed to fee his native country again, and pafionately withed it were bleffed with ale, brandy, tobacco, and iron, as Glaigow was.

There is a couple of large eagles who have their neft on the north end of the ifle; the inhabitants told me that they commonly make their purchafe in the adjacent ines and continent, and never take fo much as a lamb or hen from the place of their abode, where they propagate their kind. I forgot to give an account of a fingular providence that happened to a native in the ine of Skie, called Neil, who when an infant was left by his mother in the field, not far from the houfes on the north fide Loch-Portrie; an eagle came in the mean time, and carried him away in its talons as far as the fouth
fide of the Loch, and there, laying him on the ground, fome people that were herding fheep there perceived it, and hearing the infant cry, ran immediately to its refcue; and by good Providence found him untouched by the eagle, and carried him home to his mother. He is ftill living in that parifh, and by reafon of this accident, is diftinguifhed among his neighbours by the firname of Eagle.

## An Account of the Second-Sight, in Irifb called Taiß.

The fecond-fight is a fingular faculty of feeing an otherwife invifible object, without any previous means ufed by the perfon that fees it for that end; the vifion makes fuch a lively impreffion upon the feers, that they neither fee nor think of any thing elfe, except the vifion, as long as it continues : and then they appear penfive or jovial, according to the object which was reprefented to them.

At the fight of a vifion, the eye-lids of the perfon are erected, and the eyes continue ftaring until the object vanifh. This is obvious to others who are by, when the perfons happen to fee a vifion, and occurred more than once to my own obfervation, and to others that were with me.

There is one in Skie, of whom his acquaintance obferved, that when he fees a vifion, the inner part of his eye-lids turn fo far upwards, that after the objeat difappears, he muft draw them down with his fingers, and fometimes employs others to draw them down, which he finds to be the much eafier way.

This faculty of the fecond-fight does not lineally defcend in a family, as fome imagine, for I know feveral parents who are endowed with it, but their children not, and vice verfa: neither is it acquired by any previous conppact. And, after a Arict inquiry, I could never learn from any among them, that this faculty was communicable any way whatioever.

The feer knows neither the object, time, nor place of a vifion, before it appears; and the fame object is often feen by different perfons, living at a confiderable diftance from one another. The true way of judging as to the time and circumftance of an objet, is by obfervation; for feveral perfons of judgment, without this faculty, are more capable to judge of the defign of a vifion, than a novice that is a feer. If an object appear in the day or night, it will come to pafs fooner or later accordingly.

If an object is feen early in a morning (which is not frequent, it will be accomplifhed in a few hours afterwards. If at noon, it will commonly be accomplifhed that very day. If in the evening, perhaps that night; if after candles be lighted, it will be accomplified that night: the latter always in accomplifhment, by weeks, months, and fometimes years, according to the time of night the vifion is feen.

When a Chroud is perceived about one, it is a fure prognoftic of death : the time is judged according to the height of it about the perfon: for if it is not feen above the middle, death is not to be expected for the fpace of a year, and perhaps fome months longer; and as it is frequently feen to afcend higher towards the head, death is concluded to be at hand within a few days, if not hours, as daily experience confirms. Examples of this kind were fhewn me, when the perfons of whom the obfervations then made enjoyed perfect health.

One inflance was lately foretold by a feer that was a novice, concerning the death of one of my acquaintance; this was communicated to a few only, and with great confidence; I being one of the number did not in the leatt regard it, until the death of the perfon about the time foretold, did confirm me of the certainty of the predidtion.

The novice mentioned above is now a fkilful feer, as appears from many late inflances; he lives in the parifh of St. Mary's, the moft northern in Skie.
If a woman is feen ftanding at a man's left hand, it is a prefage that the will be his wife, whether they be inarried to others, or unmarried at the time of the apparition.
If two or three women are feen at once flanding near a man's left hand, fhe that is next him will undoubtedly be his wife firft, and fo on, whether all three, or the man be fingle or married at the time of the vifion or not; of which there are feveral late inftances among thofe of my acquaintance. It is an ordinary thing for them to fee a man that is to come to the houfe fhortly after; and if he is not of the feer's acquaintance, yet he gives fuch a lively defcription of his ftature, complexion, habit, \&cc. that upon his arrival he anfwers the character given him in all refpects.
If the perfon fo appearing be one of the feer's acquaintance, he will tell his name, as well as other particulars; and he can tell by his countenance whether he comes in a good or bad humour.
I have been feen thus myfelf by feers of both fexes at fome hundred miles diftance; fome that faw me in this manner, had never feen me perfonally, and it happened according to their vifions, without any previous defign of mine to go to thofe places, my coming there being purely accidental.
It is ordinary with them to fee houfes, gardens, and trees, in places void of all three; and this in procefs of time ufes to be accomplifhed: as at Mogftot in the ifle of Skie, where there were but a few forry cow-houles thatched with fraw, yet in a few years after, the vifion which appeared often was accomplifhed, by the building of feveral good houles on the very fot reprefented to the feers, and by the planting of orchards there.

To fee a fpark of fire fall upon one's arm or breaft, is a forerunner of a dead child to be feen in the arms of thofe perfons; of which there are feveral frefh inftances.

To fee a feat empty at the time of one's fitting in it, is a prefage of that perfon's death quickly after.

When a novice, or one that has lately obtained the fecond-fight, fees a vifion in the night-time without doors, and comes near a fire, he prefently falls into a fwoon.

Some find themfelves as it were in a crowd of people, having a corpfe which they carry. along with them; and after fuch vifions the feers come in fweating, and defcribe the people that appeared; if there be any of their acquaintance among them, they give an account of their names, as alfo of the bearers, but they know nothing concerning the corpfe.

All thofe who have the fecond-fight do not always fee thefe vifions at once, though they be together at the time. But if one, who has this faculty, defignedly touch his fellowfeer at the inftant of a vifion's appearing, then the fecond fees it as well as the firft and this is fometimes difcerned by thofe that are near them on fuch occafions.

There is a way of foretelling death by a cry that they call Taik, which fome call a Wràth in the Lowland.

They hear a loud cry without doors, exactly refembling the voice of fome particular perfon, whofe death is foretold by it. The laft inftance given me of this kind was in the village Rigg, in the ine of Skie.

Five women were fitting together in the fame room, and all of them heard a loud cry paffing by the window; they thought it plainly to be the voice of a maid who was one of the number ; fhe blufhed at the time, though not fenfible of her fo doing, contracted 2 fever next day, and died that week.

Things alfo are foretold by finelling, fometimes as follows: fifh or fleh is frequently finelled in a fire, when at the fame time neither of the two are in the houfe, or in any probability like to be had in it for fome weeks or months; for they feldom eat flefl, and though the fea be near them, yet they catch fifh but feldom, in the winter and fpring. This finell feveral perfons have, who are not endued with the fecond-fight, and it is always accomplifhed foon after.

Children, horfes, and cows fee the fecond-fight, as well as men and women advanced in years.

That children fee it is plain from their crying aloud at the very inflant that a corpfe or any other vifion appears to an ordinary fecr. I was prefent in a houfe where a child cricd out of a fudden, and being afked the reafon of it, he anfiwered that he had feen a great white thing lying on the board which was in the corner: but he was not believed until a feer who was prefent told them that the child was in the right: "For, (faid he,) I faw a corple and the fhroud about it, and the board will be ufed as part of a coffin, or fome way employed about a corpfe:" and, accordingly, it was made into a coffin, for one who was in perfect health at the time of the vilion.
That horfes fee it is likewife plain from their violent and fudden farting, when the rider or feer in company with him fets a vifion of any kind, might or day. It is obfervable of the horfe, that he will not go forward that way, until he be led about at fome diftance from the common road, and then he is in a fweat.
A horfe faftened by the common road on the fide of Loch-Skerinefs in Skie, did break his rope at noon-day, and run up and down without the leaft vifible caufe. But two of the neighbourhood that happened to be at a little diltance, and in view of the horfe, did at the fame time fee a confiderable number of men about a corpfe, directing their courfe to the church of Snifort; and this was accomplifhed withan a few days after, by the dea'h of a gentlewoman who lived thirteen miles from that church, and came trom another parin, from whence very few come to Suifort to be buried.
That cows fee the fecon'ffight appears from this; that when a woman is milking a cow, and then happen to fee the fecond-fight, the cow runs away in a great fright at the fame tine, and will not be pacified for fome time after.
Before I mention more particulars difcovered by the fecond fight, it may not be amifs to anfwer the objections that have lately been made againtt the reality of it.
Object. 1. Thete feers are vifionary and melancholy people, and fancy they fee things that do not appear to them, or any body elfe.
Anfw. The people of thefe ines, and particularly the feers, are very tempernte, and their diet is fimple and noderate in quantity and quality; fo that their brains are not in all probability difordered by undigetted fumes of meat or drink. Both fexes are free from hyteric fits, convulfions, and feveral other diftempers of that fort; there are no madmen among them, nor any inflance of felf-murder. It is obferved amoug them, that a man drunk never fees the fecond fight; and he that is a vifionary would difeover himfelf in other things as well as in that; and fuch as fee it are not judged to be vifionaries by any of their friends or acquaintance.
Object. 2. There is none among the learned able to oblige the wortd with a fatisfying account of thofe vifions, therefore it is not to be believed.

Anfw. If every thing for which the learned are not able to give a fatisfying account be condemned as impoffible, we may find many other things generally believed that muft be rejected as falfe by this rule. For inflance, yawnin!, and its influence, and that the loadfone attracts iron; and yet thefe are true as well as harmlefs, though we can
give no fatisfying account of their caufes. And if we know fo little of natural caufes, how nuch lefs can we pretend to things that are fupernatural?
Object. 3. The feers are impofors, and the people who belicve them are credulous, and eafily impofed upon.
An/w. The feers are generally illiterate and well-meaning pcople, and altogether void of defign, nor could I ever learn that any of them made the leaft gain by it, neither is it reputable among them to have that faculty: befides the people of the ines are not fo credulous as to believe implicitly, before the thing foretold is accompliflied; but when it actually comes to pafs afterwards, it is not in their power to deny it, without offering violence to their fenfes and reafon. Befides, if the feers were daceivers, can it be reafonable to imagine, that all the iflanders, who have not the fecond fight, fhould combine together, and offer violence to their underflandings and fenfes, to force themfelves to believe a lie from age to age. There are feveral perfons among them, whofe birth and education raife them above the fufpicion of concurring with an impofure, merely to gratify an illiterate and contemptible fort of perfons; nor can a reafonable man believe that children, horfes, and cows could be pre-engaged in a combination to perfuade the world of the reality of the fecond fight.
Such as deny thofe vifions give their affent to feveral frange paffages in hiftory, upon the authority aforefaid of hiftorians that lived feveral centuries before our time; and yet they deny the people of this generation the liberty to believe their intimate friends and acquaintance, men of probity and unquellionable reputation, and of whofe veracity they have greater certainty, than we can have of any antient hiftorian.
Every vifion that is feen comes exactly to pafs according to the true rules of obfervation, though novices and heedlefs perfons do not always judge by thofe rules. I remember the feers returned me this anfwer to my objection, and gave feveral inftances to that purpofe, whereof the following is one.
A boy of my acquaintance was often furprifed at the fight of a coffin clofe by his fhoulder, which put him into a fright, and nade him to belicve it was a forerunner of his own death, and this his neighbours alfo judged to be the meaning of that vifion; but a feer that lived in the village Knockow, where the boy was then a fervant, told them that they were under a great niftake, and defired the boy to lay hold of the firft. opportunity that offered; and when he went to a burial, to remember to act as a bearer for fome moments: and this he did accordingly within a feew days after, when one of his acquaintance died; and from that time forward he was never troubled with feeing a coffin at his houlder, though he has feen many at a diftance, that concerned others. He is now reckoned one of the exacteft feers in the parifh of St. Mary's in Skie, where he lives.
There is another inflance of a woman in Skie, who frequently faw a vifion reprefenting a woman having a fhroud about her up to the middle, but always appeared with her back towards her, and the habit in which it feemed to be dreffed refembled her own; this was a myftery for fome time, until the woman tried an experiment to fatisfy her curiofity, which was to drefs herfelf contrary to the ufual way ; that is, the put that part of her clothes behind which was always before, fancying that the vifion at the next appearing would be the eafier diftinguifhed: and it fell out accordingly, for the vifion foon after prefented itfelf with its face and drefs locking towards the woman, and it proved to refemble herfelf in all points, and the died in a little time after.
There are vifions feen by feveral perfons, in whofe days they are not acenmplifhed; and this is one of the reafons, why fome things have been feen that are faid never to
come to pafs, and there are alfo feveral vifions feen which are not underfood until they be accomplifhed.

The fecond fight is not a late difcovery feen by one or two in a corncr, or a remote ifle, but it is feen by many perfons of both fexes in feveral ifles, feparated above forty or fifty leagues from one another: the inhabitants of many of thefe ines, never had the leaft converfe by word or wrising; and this faculty of feeing vifions having continued, as we were informed by tradition, ever fince the plantation of thefe ifles, without being difproved by the niceft fecptic, after the ftricteft inquiry, feems to be a clear proof of its reality.

It is obfervable, that it was much more common twenty years ago than at prefent; for one in ten do not fee ic now that faw it then.

The fecond fight is not confined to the Weftern Ifes alone, for I have an account that it is likewile feen in feveral parts of Holland, but particularly in Bommel, by a woman, for which the is courted by fome, and dreaded by others. She fees a fmoke about onc's face, which is a forerumer of the death of a perion fo feen; and fhe did actually foretel the death of fevcral that lived there: fhe.was living in that town this laft winter.

The corpfes-candles, or dead-men's lights in Wales, which are certain prognoftics of death, are well known and attefted.

The fecond fight is likewife feen in the Ine of Man, as appears by this infance : Capt. Leaths, the chicf magiltrate of Belfant, in his voyage $\mathbf{1 6 9 0}$, loft thirteen men by a violent form, and, upon his landing in the Ifle of Man, an ancient man, clerk to a parihn there, told him immediately that he had loft thirteen men; the Captain inquiring how he came to the knowledge of that, he anfwered, that it was by thirteen lights which he had feen come into the church-yard; as Mr. Sacheverel tells us, in his late Defcription of the Ine of Man.

It were ridiculous to fuppofe a combination between the people of the Weftern Ifes of Scotland, Holland, Wales, and the Ine of Man, fince they are feparate: by long feas, and are people of different languages, governments, and interefts: they have no correfpondence between them, and it is probable, that thofe inhabiting the North-weft ifes have never yet heard that any fuch vifions are feen in Holland, Wales, or the Ine of Man.

Four men of the village Flodgery in Skie being at fupper, one of them did fuddenly let fall his knife on the table, and looked with an angry countenance; the company obferving it, inquired his reafon, but he returned them no anfiver until they had fupped, and then he told them that when he let fall his knife, he faw a a corpfe with the fhrouch about it laid on the table, which furprifed him, and that a little time would acconplifh the vifion. It fell out accordingly, for in a few days after one of the family died, and happened to be laid on that very table. This was told me by the mafter of the family.

Daniel Stewart, an inhabitant of Hole in the north parifh of St. Mary's in the Ille of Skic, faw at noon-day five men on horfeback riding northward; he ran to meet them, and when he came to the road, he could fee none of them, which was very furprifing to him, and he told it his neighbours: the very next day he faw the fance number of men and horfe coming along the road, but was not fo ready to meet them as before, until he heard them feak, and then he found them to be thofe that he had feen the day before in a vifion; this was the only vilion of the kind he had ever feen in his life. The company he faw was Sir Donald Mac--Donald and his retinue, who at the time of the vifion was at Armidal, near forty miles fouth of the place where the man lived.

A woman of Stornbay in Lewis had a maid who faw vifions, and often fell into a fwoon; her milheds was very much concerned about her, but could not find out any means to prevent her feeing thofe things: at lalt the refolved to pour fome of the water ufed in baptifm on her maid's face, believing this would prevent her feeing any mort fights of this kind. And accordingly fhe carried her moid with her next Lord's Da:, and both of them fat near the bain in which the water food, and after baptifm, before the minitter had conctuded the laft prayer, fhe put her hand in the bafin, took up as much water as fhe could, and threw it on the maid's face; at which frrange action the minifer and the congregation were equally furprized. After prayer, the minifter inquired of the woman the meaning of fuch as an unbecoming and diftracted action; fhe told him, it was to prevent her maid's feeing vifions: and it fell out accordingly, for from that time fhe never once more faw a vifion of any kind. This account was given me by Mr. Morifon miniller of the place, before feveral of his parifhioners who knew the truth of it. 1 fubmit the matter of fact to the cenfure of the learned; but for my own part, I think it to have been one of Satan's devices to make credulous people have an efteem for holy water.

John Morrifon of Bragir in Lewis, a perfon of unqueftionable fincerity and reputation told me, that within a mile of his houfe a girl of twelve years old was troubled at the f:equent fight of a vifion, refembling herfelf in ftature, complexion, drefs, \&c. and feemed to ftand or fit, and to be always employed as the girl was; this proved a great trouble to her: her parents being much concerned about it, confulted the faid John Morrifon, who inquired if the girl was inftructed in the principles of her religion, and finding the was not, he bid them teach her the Creed, Ten Commanduents, and the L.ord's Prayer, and that the fhould fay the latter daily after her prayers. Mr. Morifon and his family joined in prayer in the girl's behalf, begging that God of his goodnefs would be pleafed to deliver her from the trouble of fuch a vifion: after which, and the girl's complying with the advice as above, fhe never faw it any more.

A man living three miles to the north of the faid John Morrifon, is much haunted by a fpirit, appearing in all points like to himfelf; and he afks many impertinent queftions of the man when in the fields, but fpeaks not a word to him at home, though he feldom miffes to appear to him every night in the houfe, but to no other perfon. He told this to one of his neighbours, who advifed him to caft a live coal at the face of the vifion the next time he appeared: the man did fo next night, and all the family faw the action; but the following day the fame fpirit appeared to him in the fields, and beat him feverely, fo as to oblige him to keep his bed for the fpace of fourteen days after. Mr. Morifon minifter of the parifh, and feveral of his friends came to fee the man, and joined in prayer that he might be freed from this trouble, but he was ftill haunted by that firit a year after I left Lewis.

A man in Knockow, in the parifh of St. Mary's, the northernmoft in Skie, being in perfect health, and fitting with his fellow-fervants at night, was on a fudden taken ill, dropt from his feat backward, and then fell a vomiting; at which all the family were much concerned, he having never been fubject to the like before: but he came to hime felf foon after, and had no fort of pain about him. One of the family, who was accuftomed to fee the fecond fight, told them that the man's illnefs proceeded from a very ftrange caufe, which was thins: an ill-natured woman (naming her by her name) who lives in the next adjacent village of Bornfkittag, came before him in a very furious and angry manner, her countenance full of paffion, and her mouth full of reproaches, and threatened him with her head and hands, until he fell over as you have feen him. This woman had a fancy for the man, but was like to meet with a difappointment as to
his marrying her. This inftance was told me by the mater of the fanily, and others who were prefent when it happined.

One that lived in St. Mary's on the wist fide of the ine of Skie, told Mr. Mack. Pherfon the minifter, and others, that he faw a vition of a corple coming towards the church, not by the common road, but by a more rugged way; which rendered the thing incrediBe, and occafioned his neighbours to call him a fool; but he bid them have patience, and they would fee the truth of what he afferted in a fhort time : and if fell out accordingly; for one of the neighbourhood died, and his corple was carried along the fane unaccuftomed way, the common road being at that time filled with a deep finow. This account was given me by the minifter, and others living there.

Mr. Mack-Pherfon's fervant foretold that a kiln fhould take fire, and being fome time after reproved by his mafter for talking fo foolithly of the fecond fight, he anfwered that he could not help his feeing fuch things as prefented themfelves to his view in a very lively manner ; adding further, I have juft now feen that boy fitting by the fire with his face red, as if the blood had been running down his forehead, and I could not avoid fecing this: and as for the accomplifhment of it within forty-eight hours, there is no doubt, fays he, it having appeared in the day-time. 'The minifter became very angry at his man, and charged him never to fpeak one word more of the fecond fight, or if he could not hold his tongue, to provide himfelf another mafter; telling him he was an unhappy fellow, who ftudied to abufe credulous people with falfe predictions. There was no more faid on this fubject until the next day, that the boy of whom the feer Ipoke, came in, having his face all covered with blood; which happened by his falling on a heap of fones. This account was given me by the ininifter and others of his family.

Daniel Dow, alias Black, an inhabitant of Bornkittag, was frequently troubled at the fight of a man threatening to give him a blow: he knew no man refembling this vifion ; but the ftature, complexion and habit were fo imprefled on his mind, that he faid he could diftinguih him from any other, if he fhould happen to fee him. About a year after the vifion appeared firft to him, his mafter fent him to Kyle-Raes, above thirty miles further fouth-eaft, where he was no fooner arrived, than he diflinguifhed the man who had fo often appeared to him at home; and within a few hours after, they happened to quarrel, and came to blows, fo as one of them (l forgot which) was wounded in the head. This was told me by the feer's mafter, and others who live in the place. The man himfelf las his refidence there, and is one of the precifelt feers in the ifles.

Sir Normand Mack-Lcod, and fome others playing at tables, at a game called in Irih Falmar-more, wherein there are three of a fide, and each of them throw the dice by turns; there happened to be one difficult point in the difpofing of one of the table.men: this obliged the gamefter to deliberate before lie was to change his man, fince upon the difpofing of it, the winning or lofing of the game depended. At laft the butler, who stood behind, advifed the player where to place his man; with which he complied, and won the game. This being thought extraordinary, and Sir Normand hearing one whifper him in the car, alked who advifed him fo fkilfully? He anfwered, it was the butler; but this feemed more ftrange, for he could not play at tables. Upon this, Sir Normand aked hing how long it was fince he had learnt in play? and the fellow owned that he never played in his life, but that he faw the firit Browny reaching his arm over the player's head, and touched the part with his finger, on the point where the table-man was to be placed. This was told me by Sir Normand and othérs, who happened to be prefent at the time.

Daniel Dow above-named, foretold the death of a young woman in Minginis, within lefs than twenty-four hours before the time; and accordingly the died fuddenly in the
fields, though at the time of the prediction the was in perfect health; but the Mroud appearing clofe about her head, was the ground of his confidence, that her death was at hand.
'The fame Daniel Dow foretold the death of a child in his mafter's arms, by feeing a fpark of fire fall on his left arm ; and this was likewife accomplifhed foon after the prediction.

Some of the inhabitants of Harries failing round the ine of Skie, with a defign to go to the oppofite main land, were frangely furprized with an apparition of two men hanging down by the ropes that fecured the maft, but could not conjecture what it meant. They purfued the voyage, but the wind turned contrary, and fo forced them into Broadford in the ine of Skie, where they found Sir Donald Mack-Donald keeping a Sheriffs Court, and two criminals receiving fentence of death there: the ropes and maft of that very boat were made ufe of to hang thofe criminals. This was told me by feveral, who had this inftance froin the boat's crew.

Several perfons living in a certain family, told me that they had frequently feen two men ftanding at a young gentlewoman's left hand, who was their mafter's daughter: they told the men's naines; and being her equals, it was not doubted, but fhe would be married to one of them; and perhaps to the other, after the death of the firt. Sometime after a third man appeared, and he feemed always to fland neareft to her of the three, but the feers did not know him, though they could defcribe him exactly. And within fome months after, this man, who was feen laft, did actually come to the houfe, and fulfilled the defcription given of him by thofe who never faw him but in a vifion; and he married the woman fhortly after. They live in the inle of Skie; both they and others confirmed the truth of this inflance when I faw them.

Mack-Leod's porter paffing by a galley that lay in the dock, faw her filled with men, having a corpfe, and near to it he faw feveral of Mack-Leod's relations: this did in a manner perfuade him that his mafter was to die foon after, and that he was to be the corple which was to be tranfported in the galley. Some months after the vifion was feen, MackLeod, with feveral of his relations and others, went to the ine of Mull; where fome days after, Maclean of Torlofk happened to die, and his corpfe was tranfported in the galley to his burial-place, and Mack-Leod's relations were on board to attend the funeral, while Mack-Leod ftaid afore, and went along with the corpfe after their landing.

Mr. Dougal Mack-Pherfon, minifter of St. Mary's on the weft fide of Skie, having his fervants in the kiln, drying of corn, the kiln happened to take fire, but was foon extinguihed. And within a few months after, one of the minifter's fervants told him that the kiln would be on fire again flortly; at which he grew very angry with bis man, threatening to beat him if he fhould prefume to prophefy mifchief, by that lying way of the lecond fight. Notwithftanding this, the man afferted pofitively, and with great affurance, that the kiln would certainly take fire, let them ufe all the precautions they could. Upon this, Mr. Mack.Plierfon had the curiofity to inquire of his man, if he could guefs widhin what fpace of time the kiln would take fire? he told him before Hallowtide. Upon which, Mr. Mack. Pherfon called for the key of the kiln, and told his man that he would take care of the kiln until the limited day was expired, for none fhall enter it fooner; and by this means I fhall make the devil, if he is the author of fuch lies, and you both liars. For this end he kept the key ot the kiln in his prefs, unil the time wat over, and then delivered the key to the fervants, concluding his man to be a fool and a cheat. Then the fervants went to dry corn in the kiln, and were charged to have a lipecial care of the fire; yet in a little time after the k:In took fire, and it was all in a flame, according to the predietion, though the man mifook the time. He told his mafter,
mafter, that within a few moments after the fire of the kiln had been firf extinguifined, he faw it all in a flame again; and this appearing to him in the day time, it would come to pats the fooner.
John Mack-Normand, and Daniel Mack-Ewin, travelling along the road, two miles to the north of Snifort church, faw a body of men coning from the north, as if they had n corpfe with them to be buried in Snifort : this determined them to advance towards the river, which was then a little before them, and having waited at the ford, thinking to meet thofe that they expected with the funeral, were altogether dilappointed; for after taking a view of the ground all round them, they difcovered that it was only a vifion. This was very furprizing to them both, for they never faw any thing by way of the fecond fight before or after that tine. 'This they told their neighbours when they caine home, and it happened that about two or three weeks afier a corple came along that road from another parifh, from which few or none are brought to Suifurt, exeept perions of dittinction ; fo that this vifion was exactly accomplifhed.

A gentleman who is a native of Skie, did, when a boy, difoblige a feer in the ille of Rafay, and upbraid him for his uglinefs, as being black by name and naturc. As laft the feer told him very angrily, my child, if 1 an black, youll be red e'er In $n_{b}$. The mafter of the family chid hin for this, and bid him give over his twilith predictions, fince no body believed them; but next morning the boy being at play hear the houfes, fell on a ltone, and wounded hinfelf in the forehcead, fo deep, that to this day threre is a hollow fcar in that part of it.

James Beaton, furgeon in the ifle of North.Vift, toid me, that being in the ifle of Mull, a feer told him confidently, that he was fhortly to have a bloody forehead; but he difregarded it, and called the feer a fool. However :hiss James being called by fome of the Macleans to go along with them to attack a veffel belonging to the Earl of Argyle, who was then coming to poffe's Mull by force; they attacked the yeflel, and one of the Macleans being wounded, the faid James, while drefing the wound, happened to rub his foreliead, and then fome of his patient's blood Iluck to his face, which accomplifhed the vifion.

My Lord Vifcount Tarbat, one of Her Majeny's Secretaries of State in Scotland, travelling in the fhire of Rofs, in the north of Scotland, cane into a houfe, and fat down in an armed chair : one of his retinue, who had the faculty of feeing the fecond fight, fpoke to fome of my Iern's company, defiring them to perfuade him to leave the houfe; for, faid he, there is a great misfurtune will attend fomebody in it, and that within a few hours. This was told my lord, but he did not regard it : the feer did foon after renew his intreaty, with much eagernefs, begging that my lord might remove out of that unhappy chair, but had no other anfwer than to be expofed for a fool. Some hours after my lord removed, and purfued his journey; but was not gone many hours when a trooper riding upon the ice, near the houfe whence my lord removed, fell and broke his thigh, and being afterwards brought into that houfe, was laid in the arned I air, where his wound was dreffed, which accuplified the vifion. I heard this inflance from feveral hands, and had it fince confing $3: y$ inv lord $\mathfrak{b}$, $\boldsymbol{r}$, f .

A man in the parihh of St. Mary's in the 'at : oternefs in skie, called Lachlin, lay fick for the fpace of fome months, decayyng daily, infomuch that all his relations and acquaintance defpaired of his recovery. One of the parifhioners, called Archibald Mack-Donald, being reputed famous for his ikill in foretelling things to come by the fecond fight, afferted pofitively that the fick man would never die in the houfe where he then liy. This being thought very improbable, all the neighbours condemned Archibald as fooliih ryophet : upon which, he pafionately affirmed, that if ever that.fick man dies
in the houfe where he now lies，I fhall from henceforth renounce my part of heaven ； adding withal，the fick man was to be carricd alive out of the houfe in which the then lay，but that he would never return to it alive：and then he named the perfons that thould carry out the fick manalive．The man having lived fome weeks longer than his friends imagined，and proving uneafy and troublefone to all the family；they confider－ el that Archihald had reafon for his peremptory affertion，and therefore they refolved to carry him to a houfe joining to that in which he then lay：but the poor man would by no means give his confent to be moved from a place where he believed he hould never die；fo much did he rely on the words of Archibald，of whofe flill he had feen many demonfrations．But at laft his frlends being fatigued day and night with the fick man＇s uneafinefs，they carried him againt his inclination o another little houfe， which was only feparated by an entry from that in which he lay and their feet were fcarce within the threchold，when the fick man gave up the ghoft；and it was remark－ able that the two neighbours，which Archibald named would carry $\lim$ out，were ac－ tually the perfons that dill fo．At the time of the prediction，Arcliball faw bim carried out as above，and when he was within the door of the other houle，he fas him all whitc，and the fhroud being about him，occationed his confidenc as above mention al． This is matter of fact，which Mr．Danicl Nicholfon minifter of th parifh，and a conlid－ erable number of the parifhioners，are able to vouch for，ind ready to atter，il uccafion requircs．

The fame Archibald Mack．Dorald happened to be in the villag：Knockow one night，and before fupper told tie farily，that he had juft then feen the frangeft thing he ever faw in his life；to wit，a man with an ugly long cap，alway but that the ftrangeft of all，was a little kind of a harp which had，with four Atrings only，and that it had two har＇s ！oorns fixed in the front of it．All that heard this odd vifion，fell a laughing at Archibald，telling him that he was ureaming，or had not his wits about him ；fince he pretended to fee a thing that had me being，and was not fo much as heard of in any part of the world．All this could not a Archibald＇s opinion，who told them that they mult excufe him，if he laughed at the after the ac－ complifhment of the vifion．Archibald returned to his owm houfe，and ithin three or four days after，a man with the cap，harp，\＆c．came to the houfe，and the harp，frings， horns，and cap anfwered the defcription of them at firt view ：he fhook is head when he played，for he had two bells fixed to his cap．This harper was a poor man，and made himfelf a buffoon for his bread，and was never before feen in thofe parts；for at the time of the prediction，he was in the ille of Barray，which is above twetvy leagues diftant from that part of Skie．This flory is vouched by Mr．Daniel Martin，wnd all his family，and fuch as were then prefent，and live in the village where this happeucd．

Mr．Daniel Nicholfon minifter of St．Mary＇s in Skie，the parih in which Archibald Mack－Donald lived，told me，that one Sundiy after fermon at the chapel Ure，he took occafion to inquire of Archibald，if he fill retained that unhappy faculty of fecing the fecond fight，and he wifhed him to lay it alide，if poffible；for，faid he，it is no true character of a good man．Archibald was highly difpleafed，and anfivered，that he hoped he was no more unhappy than his neigabours，for feeing what they could not per－ ccive；adding，I had，fays he，as ferious thoughts as my neighbours，in time of hearing a fermon to day，and even then I faw a corple laid on the ground clofe to the pulpit， and I allure you it will be accomplifhed fortly，for it was in the day．time．Mr． Nicholfon and feveral parifhioners then prefent，endenvoured to difluade Archibald from this difcourfe；but he fill afferted thar it would quickly come to pafs，and that all his other reditions of this kind had cyer been accomplifhed．There was none in
the parifh then fick, and few are buried at that little chapel, nay fometimes not one in a year is buried there; yet when Mr. Nicholfon returned to preach in the faid chapel, two or three weeks after, he found one buried in the very fpot named hy Archibald. This fory is vouched by Mr. Nicholfon, and feveral of the parifhioners ltill living.

Mr. Daniel Nicholfón above-mentioned, being a widower at the age of forty-four, this Archibald faw in a vifion a young gentlewoman in a good drefs frequently ftanding at Mr. Nicholfon's right hand, and this he often told the parifhioners pofitively; and gave an account of her complexion, ftature, habit, and that fhe would in time be Mr. Nicholfon's wife : this being told the minitter by feveral of them, he defired them to have no regard to what that foolifh dreamer had faid; for, faid he, it is twenty to one if ever I marry again. Archibaid happened to fee Mr. Nicholfon foon after this llighting expreffion, however he perfifted ftill in his opinion, and faid confident'y that Mr. Nicholfon would certainly marry, and that the woman would in all points make up the character he gave of her, for lie faw her as often as he law Mr. Nicholfon. This tlory was told me above a year before the accomplifhment of it; and Mr. Nicholfon, fome two or three years after Archibald's prediction, went to the fynod in Boot, where he had the firlt opportunity of feeing one Mrs. Morifon, and from that moment fancied her, and afterwards married her. She was no fooner feen in the ifle of Skie, than the natives, who had never feen her before, were fatisficd that the did completely anfwer the character given of her, \&cc. by Archibald.

One who had been accuftomed to fee the fecond-fight in the ifle of Err, which lies about three or four leagues to the fouth-weft part of the ine of Skie, told his neighbours that he had frequently feen an apparition of a man in a red coat lined with bluc, and having on his head a Itrange fort of blue cap, with a very high cock on the fore part of it, and that the man who there appeared was kiffing a comely maid in the village where the feer dwelt; and therefore declared that a man in fuch a drefs would certainly debauch or marry fuch a young woman. This unufual vifion did much expofe the feer, for all the inhabitants treated him as a fool, though he had on feveral other occafions foretold things that afterwards were accomplified; this they thought one of the moft unlikely things to be accomplifhed that could have entered into any man's head. This ftory was then difcourfed of in the ifle of Skie, and all that heard it laughed at it; it being a rarity to fee any foreigner in Egg, and the young woman had no thoughts of going any where elfe. This ftory was told me at Edinburgh by Normand Mack-Leod of Graban, in September 1658, he being jult then come from the ifle of Skie; and there were prefent the Laird of Mack-Leod, and Mr. Alexander Mack-Leod advocate, and others.

About a year and a half after the late Revolution, Major Fergufon, now colonel of one of Her Majefty's regiments of foot, was then fent by the government with fix hundred men, and fome frigates, to reluce the illanders that had appeared for K. J. and perhaps the fimall ine of Egg had never been regarded, though fome of the inhabitants had been at the battle of Killicranky, but by a mere accident, which determined Major Fergufon to go to the inle of Egg, which was this : a boat's crew of the ille of Egg happened to be in the ifle of Skie, and killed one of Major Herguion's foldiers there: upon notice of which the M jor directed his courfe to the inl of Likg, where he was fuficiently revenged of the natives; and at the fame time, the maid above mentioned being very handfome, was then forcibly carrical on board one of the veffels, by fome of the foldiers, where the was kept above twenty.four hours, and ravifhed, and brutifly robbed at the fame time of her fine head of hair: the is fince married in the ife, and in good reputation; her misfortune being pitied, and not reckoned her cri.ne.

Sir Normand Mack-Leod, who has his refidence in the ifle of Bernera, which lies between the ille of Nurth-Vift and Harries, went to the Ille of sikie about bufnefs, without appointing any time for his return; his fervants in his abfence, being all together in the large hall at night, one of them who had been accuftomed to fee the fecond-fight, told the reft they mult remove, for they would have abundance of other company in the hatl that night. One of his fellow fervants anfwered, that there was very little appear. ance of that, and if he had feen any vifion of company, it was not like to be accomplifhed this night : but the feer infifted upon it, that it was. They continued to argue the improbability of it, becaufe of the darknefs of the night, and the danger of coming through the rocks that lie round the ifle: but within an hour after, one of Sir Normand's men came to the houle, bilding them provide lights, \&e. for his mafter had newly landed; and thus the prediction was imnediately accomplifhed.

Sir Normand hearing of it, called for the feer, and examined him about it ; $h=n$. fwered, that he had feen the fpirit called Browny, in human flape, come feveral $\mathfrak{s}$ and make a fhew of carrying an old woman that lat by the fire to the door ; and at laft feemed to carry her out by neck and heels, which made hinu laugh heartily, and gave oecafion to the reft to conclude he was mat, to laugh to without reafon. 'This infance was told me by Sir Normand himfelf.

Four men from the iffe of Skie and Harries having gone to Barbadoes, faid there for fourteen years; and though they were wont to fee the feeond fight in their native country, they never faw it in Barbadoes : but, upon their return to England, the firft night after their landing they faw the fecond-fight, as it was told me by feveral of their acquaintance.

John Morrifon, who lives in Bernera of Harries, wears the plant called Fuga Damomm, fewed in the neck of his coat, to prevent his leeing of vifions, and fays he never faw any fince he firlt carried that plant about him. He fuffered me to feel the plant in the neck of his coat, but would by no means let me open the feam, though I offered him a reward to let me do it.

A fpirit, by the country peole called Browny, was frequently feen in all the moft confiderable tamilies in the ifles and north of Scotland, in the flape of a tall man; but within thefe twenty or thirty years palt he is feen but rarely.

There were fpirits alfo that appeared in the fhape of women, horfes, fwine, cats, and fome like fiery balls, which would follow men in the fields; but there has been but few inftances of thefe for forty years pait.

Thefe fpirits ufed alfo to form founds in the air refembling thofe of a harp, pipe, crowing of a cock, and of the grinding of querns; and fometimes they have heard voices in the air by night finging Irifh fongs: the words of which fongs fome of my acquaintance fill retain. One of them refembled the voice of a woman who had died fome time before, and the fong related to her tate in the other world. Thele accounts I had from perfons of as great integrity as any are in the world.

## A bricf Account of the Alvantages the I/les afford by Sea and Land, anl particularly for a Fij/bing Trade.

THE North-veft Ines are of all other moft capable of improvement by fea and land; yet, by reafon of their diftance from trading towns, and becaufe of their langua e, which is lrifl, the inhabitants have never had any opportunity to trade at home or abroad, wh to acquire mechanical arts, and other fciences: fo that they are itill left to act by the force

$$

$$

$$
4 \mathrm{~s}
$$

of their natural genius, and what they could learn by obfervation. They have not yet arrived to a competent knowledge in agriculture, for which caufe many traats of rich ground lie neglected, or at leatt but meanly improved, in proportion to what they might be. This is the more to be regretted, becaufe the people are as capable to acquire arts or fciences as any other in Europe. If two or more perlons ikilled in agriculture were fent from the Lowlands to each parilh in the ifles, they would foon enable the natives to furnifh themfelves with fuch plenty of corn as would maintain all their poor and idle people; many of which for want of fubfiftence at home, are forced to feek their livelitood in foreign countries, to the great lofs, as well as difhonour of the nation. This would enable them alfo to furnifh the oppofite barren parts of the continent with bread ; and fo much the more, that in plentiful years they afford them good quantities of corn in this infant fate of their agricuiture. They have many large parcels of ground never yet manured, which, if cultivated, would maintain double the number of the prefent inhabitants, and increafe and preferve their cattle; many of which, for want of hay or ftraw die in the winter and fpring: fo that I have known particular perfons lofe above one hundred cows at a time, merely by want of fodder.
This is fo much the more inexcufable, becaufe the ground in the Weftern Ines is naturally richer in many refpects than in many other parts of the continent; as appears from feveral inftances, particularly in Skie, and the oppofite Weftern Mes, in which there are many valleys, \&c. capable of good improventent, and of which divers experiments have been already made; and befides, moft of thofe places have the convenience of frefl-water lakes and rivers, as well as of the fea, near at hand, to furnifh the inhabitants with fifh of many forts, and alga marina for manuring the ground.

In many places the foil is proper for wheat ; and that their grafs is good, is evident from the great product of their cattle: fo that if the natives were taught and encouraged to take pains to improve their corn and hay, to plant, inclofe, and manure their ground, drain lakes, fow wheat and peafe, and plant orchards and kitchen-gardens, \&c. they might have as great plenty of all things for the fuftenance of mankind, as any other people in Europe.
I have known a hundred families, of four or five perfons a-piece at leaft, maintained there upon little farms, for which they paid not above five fhillings fterling, one fheep, and fome pecks of corn per ann. each; which is enough to fhew, that by a better improvement, that country would maintain many more inhabitants than now live in the ifles.

If any man be difpofed to live a folitary retired life, and to withdraw from the noife of the world, he may have a place of retreat there in a finall illand, or in the corner of a large one, where he may enjoy himfelf, and live at a very cheap rate.

If any family, reduced to low circumftances, had a mind to retire to any of thefe inles, there is no part of the known world where they may have the products of fea and land cheaper, live more fecurely, or among a more tractable and mild people. And that the country in general is healthful, appears from the good flate of health enjoyed by the inhabitants.

I fhall not offer to affert that there are mines of gold or filver in the Weftern Ines, from any refenblance they may bear to other parts that afford mines, but the natives aflirm that gold duft has been found at Griminis on the weftern coaft of the ifle of North-Vift, and at Copveaul in Harries ; i: which, as well as in other parts of the illes, the teeth of the fheep which feed there are dyed yellow.

There is a good lead mine, having a mixture of filver in it, on the weft end of tha ifle of Ila, near Port Effock; and Buchanan and others fay, that the ifle Lifmore affords lead: and Slait and Strath, on the fouth-weft of Skie, are in ftone, ground, grafs, \&ic. exactly the fame with that part of lla, where there is a lead mine. And if fearch were made in the ifles and hills of the oppofite main, it is not improbable that fome good mines might be difcovered in fome of them.

I was told by a gentleman of Lochaber, that an Englifhman had found fome gold-duft in a mountain near the river Lochy, but could never find out the place again after his return from England. That there have been gold mines in Scotland is clear, from the manufcripts mentioned by Dr. Nicholfon, now Bilhop of Carlifle, in his late Scots Hiit. Library.

The fituation of thefe ifles for promoting trade in general appears advantageous enough: but more particularly for a trade with Denmark, Sweden, Hamburgh, Holland, Eritain, and Ireland. France and Spain feem remote, yet they do not exceed a week's failing, with a favourable wind.

The general opinion of the advantage that might be reaped from the improvement of the filh trade in thefe inles, prevailed among confidering people in former times to attempt it.

The firf that I know of was by King Charles the Firf, in conjunction with a company of merchants; but it nifcarried becaufe of the civil wars, which unhappily broke out at that time.
The next attempt was by King Charles the Second, who alfo joined with fome merchants; and this fucceeded well for a time. 1 am affured by fuch as faw the fifh catched by that company, that they were reputed the beft in Europe of their kind, and accordingly were fold for a greater price ; but this defign was ruined thus: the King having occafion for money, was advifed to withdraw that which was employed in the fifhery; at which the merchauts being difpleafed, and difagreeing likewife anong themfelves, they alfo withdrew their money: and the attempt has never been renewed fince that time.

The fetting a fifhery in thofe parts would prove of great advantage to the government, and be an effectual means to advance the revenue, 'jy the cuftoms on export and imporr, \&c.

It would be a nurfery of fout and able feamen in a very fhort time, to ferve the go. vernment on all occafions. The inhabitants of the illes and oppofite main land being very prolific already, the country would beyond all peradventure become very populous in a little time, if a fifhery were once fettled among them. The inhabitants are not contemptible for their number at prefent, nor are they to learn the ufe of the oar, for all of them are gencrally very dextrous at it: fo that thofe places need not to be planted with a new colony, but only furnifhed with proper materials, and a few expert hands, to join with the natives to fet on foot and advance a fifhery.

The people inhabiting the Weftern Illes of Scotland, may be about forty thoufand, and many of them want employment; this is a great encouragement both for fetting up other manufactories and the fifhing trade among them: befides a great number of people may be expected from the oppofite continent of the Highlands, and north; which, from a late computation, by one who had an eftimate of their number, from feveral minitters in the country, are reckoned to exceed the number of illanders above ten to one: and it is too well known, that many of them alfo want employment. The objection, that they fpeak only Irifh, is nothing: many of them underitand Englifh, in all
the confiderable iflands, which are fufficient to direct the reft in catching and curing fifh; and in a little time the youth would learn Englifh.
The commodioufnefs and fafety of the numerous bays and harbours in thofe infes, feem as if nature had defigned them for promoting trade: they are likewife furnifhed with plenty of good water and ftoncs for building. The oppofite main land affords wood of divers forts for that ufe. They have abundance of turf and peat for fuel; and of this latter there is fuch plenty in many parts, as might furnifh falt-pans with fire all the year round. The fea forces its palfage in leveral limall channels through the land; fo as it renders the defign more eafy and practicable.

The coalt of each ifle affords many thoufand load of fea ware, which, if preferved, might be fuccefsfully ufed tor making glafs, and likewife kelp for foap.

The generality of the bays afford all forts of thell-fifh in great plenty; as oyfters, clams, mufcles, lobfters, cockles, \&c. which might be pickled, and exported in great quantities. There are great and fimall whales of divers linds to be had round the iffes, and on the fhore of the oppofite continent; and are frequently feen in narrow bays, where they may be eafily caught. The great number of rivers both in the iftes and oppofite main land, atford abundance of falmon, which, if rightly managed, might turn to a good account.
The ifles afford likewife great quantities of black cattle, which might ferve the traders both for confumption and export.
Strath in Skic abounds with good marble, which may be had at an eafy rate, and near the fea.
There is good wool in moft of the illes, and very cheap; fome are at the charge of carrying it on horfeback, about feventy or eighty miles, to the hires of Murray and Aberdeen.
There are feveral of the illes that afford a great deal of very fine clay; which, if improved, might turn to a good account for making earthen-ware of all forts.
The moft centrical and convenient places for keeping magazines of cafk, falt, \&c. are thofe mentioned in the refpective ifles; as one at Loch-Maddy illes, in the ifle of North-Vift ; a fecond in the ifle of Hermetra, on the coalt of the illand Harries; a third in illand Glafs, on the coaft of Harries; and a fuurth in Stornvay, in the ille of Lewis.
But for fettling a magazine or colony for trade in gener.l, and fifhing in particular, the ine of Skie is abfolutely the molt centrical, both with regard to the inles and oppofite main land; and the moft proper places in this ifle are illand Ifa in Lochfallart, and Lochuge, both on the weft fide of Skie; Loch-Portric, and Scowfar on the eaft fide, and ifland Dierman on the fouth fide: thefe places abound with all forts of fifh that are caught in thofe feas; and they are proper places for a confiderable number of men to dwell in, and convenient for fetting magazines in them.

There are many bays and harbours that are convenient for building towns in feveral of the other illes, if trade were fettled among them; and cod and ling, as well as fith of leffer fize, are to be had gencrally on the coalt of the leffer, as well as of the larger ifles. I am not ignorant that foreigners, failing through the Weftern Ifles have been tempted, from the fight of fo many wild hills, that feem to be covered all over with heath, and faced with high rocks, to imagine that the inhabitants, as well as the places of their refidence, are barbarous; and to this opinion their habit as well as their language, have contributed. The like is fuppofed by many that live in the fouth of Scotland, who know no more of the Weftern Ines than the natives of ltaly: but the
lion is not fo fierce as he is painted, neither are the people defcribed here fo barbarous as the world imagines: it is not the habit that makes the monk, nor doth the garb in futhion qualify him that wears it to be virtuous. The inhabitants have humanity, and ufe frangers hofpitably and charitably. I could bring feveral inflances of barbarity and theft committed by ftranger feamen in the ifles, but there is not one inftance of any injury offered by the iflanders to any feamen or ftrangers. I had a particular account of feamen, who not many years ago fole catile and fheep in feveral of the ifles; and when they were found on board their veffels, the inhabitants were fatisfied to take their value in moncy or goods, without any further refentment : though many feamen, whofe lives were preferved by the natives, have made them very ungrateful returns. For the humanity and hofpitable temper of the inlanders to failors, I fhall only give two inflances: Capt. Jackfon of Whitehaven, about fixteen years ago, was obliged to leave his fhip, being leaky, in the bay within illand Glafs, alias Scalpa, in the ifle of Harries, with two men to take care of her though loaded with goods : the fhip was not within three miles of a houfe, and fepartted from the dwelling-places by mountains; yet when the Captain returned, about ten or twelve months after, he found his men and the veffel fafe.

Capt. Lotch lo!t the Dromedary of London, of fix hundred tons burthen, with all her rich cargo from the Indies; of which he might have faved a great deal, had he enrbraced the affiftance which the natives offered him to unlade her: but the Captain's fhynefs, and fear of being thought rude, hindered a gentleman on the place to employ about fevenry hands which he had ready to unlade her, and fo the cargo was lot. The Captain and his men were kindly entertainced there by Sir Normand Mack-Leod; and though among other valuable goods, they had fix boxes of gold duft, there was not the leaft thing taken from them by the inhabitants. There are fome pedlars from the flire of Murray and other parts, who of late have fixed their refidence in the ifle of Skis, and travel through the remoteft ifles without any moleftation; though fone of thofe pedlars fpeak no Irihh. Several barks come yearly from Orkney to the Weftern Ines, to fifh fir cod and liny: and many from Anitruther in the flire of Fife, came formerly to Barray and other inles to fifh, before the battle of Kilfyth; where moft of them being cut off, that trade was afterwards neglected.
The magazines and fifhing-boats, left by foreigners in the inles above mentioned, were reckoned fecure enough, when one of the natives only was left in charge with them till the next feafon; and fo they might be flill. So that if a company of frangers from any part fhould fettle to filh or trale in thefe ifles, tiere is no place of greater fecurity in any part of Europe; for the proprietors are always ready to affift and fupport all ftrangers within their refpective jurillietions. A few Dutch families fettled in Stornvay, in the inf of Lewis, after King Charles the Second's rettoration, but fome cunning merchants found means by the fecretaries to prevail with the King to fend them away, though they brought the iflanders a great deal of money for the products of their fea and land fowl, and taught them fometiing of the are of fifling. Had they ftaid, the iflanders muft cermindy have made confiderable progrefs in trade by this time; for the fmallidea of fifhing they had from the Dutch has had fo much effect, as to make the people of the little village of. Stornvay to (xeel all thofe of the neighbouring ifles and continent in the fithing trade ever fiuce that time.

For the better goverument of thofe ifles, in cafe of fetting up a fifhing trade there, it may perhaps be fuoud neceffary to erect the ifles of Skie, Lewis, Harries, South and North.Vitt, \&c. into a flerivalty, and to build a royal borough in Skic as the center, becaule of the people's great diltance in reviote ifles, from the head borough of the
flire of Invernefs. This would feem much more neceflary here than thofe of Boot and Arran, that lie much nearer to Dunbarton, though they be necellary enough in themfelves.

It may likewife deferve the confideration of the government, whether they fhould not make the ifle of Skie a free pert, becaufe of the great encouragement fuch immunities give to trade; which always ifflues in the welfare of the public, and adds ftrength and reputation to the government. Since thefe lles are capable of the improvements above-mentioned, it is a great lofs to the nation they flould be thus neglected. This is the general opinion of foreigners as well as of our own countrymen, who know them; but I leave the further enquiry to fuch as flall be difpofed to attempt a trade there, with the concurrence of the government. Scotland has men and money enough to fet up a fifhcry; fo that there feems to be nothing wanting towards it, but the encouragement of thofe in power, to excite the inclination and induftry of the people.

If the Dutch in their publick ediets call their fifhery a golden mine, and at the fame time affirm that it yields them more profit than the Indics do to Spain; we have very great resfon to begin to work upon thofe rich mines, not only in the illes, but on all our coalt in general. We have multitudes of hands to be employed at a very eafy rate; we have a healthful climate, and our fifh, efpecially the herring, come to our coaft in April or May, and in the bay in prodigious fhoals in July or Auguft. I have feen complaints from loch-Eflort in Skie, that all the fhips there were loaded, and that the barrel of herring might be had there for four-pence, but there were no buyers.

I have known the herring-filling to continue in fome bays from September till the end of January; and wherever they are, all other fifh follow then, and whales and feals in particular: for the larger fifh of all kinds feed upon herring.

> A bricf Defcription of the IJes of Orkncy and Shetliond, Eoc.

THE ifles of Orkney lie to the north of Scotland, having the main Caledonian Ocean, which contains the Hebrides on the weft, and the German Ocean on the eaft, and the fea towards the north feparates them from the ifles of Shetland. Pietland Firth on the iouth, which is twelve miles broad, reaches to Dungilbie-head, the moft northern point of the main land of Scotland.

Authors differ as to the origin of the name ; the Englifh call it Orkney, from Erick, one of the firl Pictifh Princes that poffeffed them : and it is obferved, that Piet or Pight in the Teutonick language fegnifies a fighter, The Irih call them Arkive, from the firft planter; and Latin authors call them Orcades. They lie in the northern temperate zone, and thirteenth climate; the longitude is between twenty-two degrees, and eleven minutes, and latitude fifty-nine degrees, two minutes: the compafs varies here cight degrees; the longeft day is about cighteen hours. The air is temperately cold, and the night fo clear, that in the middle of June one may fee to read all night long; and the days in winter are by confequence very fhort. Their winters here are commonly more fubject to rain than fnow, for the fea-air diffolves the latter. The winds are often very boifterous in this country.

The fea ebbs and flows here as in other parts, except in a few founds, and about fome promontories; which alter the courfe of the tides, and make them very impetuous.

The ifles of Orkney are reckoned twenty-fix in number; the leffer ifles, called Holms, are not inhabited, but fit for palturage : moft of their names end in a or $c y$, that in the Teutosick language fignifies water, with which they are all furrounded.

The main land, called by the ancients Pomona, is about twenty-four ling, and in the middle of it, on the fouth fide, lies the only town in Orkney, called Kirkwall, which is about three quarters of a mile in length; the Danes called it Cracoviaca. 'There has been two fine edifices in it, one of them called the King's lalace, which is fuppofed to have been built by one of the bifhops of Orkney, becaule in the wall there is a bifhop's mitre and arms engraven, and the bifhops anciently had their refidence in it.
The palace now called the Bifhop's, was built by Patrick Stewart, Earl of Orkney, Anno 1606.
There is a fately church in this town, having a fleeple crected on four large pillars in the mindle of it ; there are fourteen pillars on each fide the church: it is called by the name of St. Magnus's Church, being founded, as the inhabitants fay, by Magnus King of Norway; whom they believe to be interred there. The feat of Juflice for thefe ifles is kept here; the fteward, fheriff, and commiffary, do cach of them keep their refpective courts in this place. It hath a public fchool for teaching of grammar learning, endowed with a competent falary.
This town was erected into a royal borough when the Danes poffeffed it, and their charter was afterwards confirmed to them by King James the Third, Amp 1486. They have from that charter a power to hold Borough.Courts, to imprifon, to arreft, to make bye-laws, to chufe their own magiftrates yearly, to have two weckly markets; and they have alfo power of life and death, and of fending commiflioners to Parliamenr, and all other privileges granted to royal boroughs. This charter was dated at Edinburgh the laft day of March, 1486, and it was fince ratified by King James the V. and King Charles the II. The town is governed by a provo!t, four bailifis, and a common. council.

On the weft end of the main is the King's palace formerly mentioned, built by Robert Stewart Farl of Orkney, about the year 1574 . Several rooms in it have been curioully painted with fcripture ftories, as the flood of Noah, Chrift's riding to Jerufalem, \&c. and each figure has the feripture by it, that it refers to. Above the arms within there is this lofty infcription, Sic fuit, oft, $\mathcal{O}^{\circ}$ erit. This ifland is fruitful in corn and grafs, and has feveral good harbours; one of them at Kirkwall, a fecond at the bay of Kerfton village, near the weft end of the ifle, well fecured againt wind and weather; the third is at Deer-Sound, and reckoned a very good harbour ; the fourth is at Grahamfhall, towards the eaft fide of the ifle, but in failing to and from the eaft fide, feamen would do well to fail betwixt Lambholm and the main land, and not between Lambholm and Burray, which is flallow.

On the eaft of the main land lies the fmall iffe Copinfha, fruiful in corn and grafs; it is diftinguifhed by fea-faring men for its confpicuoufnefs at a great diftance. To the north end of it lies the IIolm, called the Horfe of Copinfha. Over againft Kerfton Bay lie the ifles of Hoy and Waes, which make but one iffc, about twelve miles in length, and mountainous. In this illand is the hill of Hoy, which is reckoned the higheft in Orkney.

The iffe of South-Ronallhaw lies to the eaft of Wacs, it is five miles in length, and fruitful in corn; Burray in the fouth end is the ferry to Duncanfbay in Caithnets. . A little fut ther to the fouth lies Swinna ifle, remarkable only for a part of Pightland.Firtt. lying to the weft of it, called the Vells of Swinna: they are two whirl-pools in the fed, which run about with fuch violence, that any vefiel or boat coming within their reach, go always round until they fink. Thefe wells are dangerous only when there is a dead calm; for if a boat be under fail with any wind, it is ealy to go over them. If any boat be forced into thefe wells by the violence of the tide, the boat-men caft a barrel or an.
oar into the wells; and while it is fwallowing it up, the fea continues calm, and gives the boat an opportunity to pafs over.
To the north of the main lies the ifle of Shapinfla, five miles in length, and has an harbour at Elwick on the fouth. Further to the north lie the ifles of Stronfa, five miles in length, and Eda which is four miles; Ronfa lies to the north-welt, and is fix niles long. The ifle Sanda lies north, twelve miles in length, and is reckoned the moot fruitful and beautiful of all the Orcades.
The ifles of Orkney in general are fruitful in corn and catle, and abound with fore of rabbits.

The fheep are very fruiful here, many of them have two, fome three, and others four lambs at a time; they often die with a difeafe called the Sheep-dead, which is occafioned by little a:imals about half an inch long, that are engendered in their liver.

The horles are of a very fmall fize, but hardy, and expofed to the rigour of the feafon, during the winter and fpring: the grafs being then farce, they are fed with feaware.

The fields every where abound with varicty of plants and roots, and the latter are geiacrally very large; the common people drefs their leather with the routs of Tormentil, nftead of bark.

The main land is furnifhed with abundance of good marle, which is ufed fuccefsfully by the hufbandman for manuring the ground.

The inhabitants fay there are mines of filver, tin and lead in the main land, SouthRonallhaw, Stronfa, Sanda, and Hoy. Some veins of marble are to be feen at Buckquoy, and Swima. There are no trees in thele in.s, except in gardens, and thofe bear no fruit. Their common fuel is peat and turl', of which there is fuch plenty, as to furnifh a falt-pan with fuel. A foutheaft and north weft moon caufe high water here.

The Finland fifhermen have been frequently feen on the coaft of this ifle, particularly in the year 1682. The people on the coatt faw one of them in his little boat, and endeavourd to take him, but could not come at him, he retired fo fpeedily. They fay the fifin retire from the coaft, when they fee thefe men come to it.

One of the boats, fant from Orkney to Edinburgh, is to be feen in the Phyficians Hall, with the oar he makes ufe of, and the dart with which he kills his fing.

There is no venomots creature in this commry. The inhabitants fay there is a fail there, which has a bright fone growing in it. There is ahundance of hell fifh here, as oyters, mufcics, crabs, cockles, \&c. of this latier they make much fine line. The rocks on the fhore aflord plenty of fea ware, as alga-marina, \&c.

The fea abounds with varicty of fith, but efpecially herring, which are much negleted fince the batte of Kilfith, at which time, the fifhermen from Fife were almont all killed there.

There are many fimall whales round the conf of this ine; and the amphibia here are oters and feals.

The chef product of Orkney that is yearly exported from thence, is corn, fifh, hides, tallow, butter, fkins of feals, otter-fkins, tamb finis, rabbit-fkins, flufts, white falt, wool, pens, town, feathers, hams, \&c.

Some $f_{\mathfrak{f}}$ rmiceti, and ambergreafe, as alfo the os cappier are found on the fhore of feveral ot thofe ifles.

This country affords plenty of fea and land fowl, as geefe, ducks, Solan geefe, fwans, lyres, and cagles, which are to ftrong as to carry away children. I here is alfo the cleck-gnofe; the fhells in which this fowl is faid to he produced, are found in feveral illes flicking to trees by the bill; of this kind I have feen many: the fowl was covered
by a fhell, and the head fluck to the tree by the lill, but I never faw any of them with life in them upon the tree; but the norives told me, that they had obferved them to move with the heat of the fan.

The Picts are believed to have been the firft inhabitants of thefe iffes, and there are houfes of a round form in leveral parts of the country, called by the name of licts houles; and for the fame reaton, the Firth is called Pighthand or Pentland Firth. Ou: hillor:ans call thefe ifles the ancient kingdom of the lidts. Buchanan gives an account of one Belus King of Orkney, who being defeated by King Liwen the lecond of Scotland, became defperate, and killed himbiff. The efligies of this Belus is engraven on a flone in the church of Birta on the main land. Bocthius makes mention of another of their kings, called Bimus, and by others Gehus, who being vanquithed by Claudius Cafar, was by him afterwards, togrether with his wife and family, carried captive to Reme, and there led in triumph, imno Cibriffi 4 :.

The liets pofiefled Orkney until the reign of Kenneth the fecond of Scotland, who fubdued the country, and annexed it to his crown. lirom that time Orkney was peaceably poffeffed by the Scots, until about the year 1099, that Donald Bane intending to fecure the kingdom to himfetf, promiled both thele and the Weftern Illes to Magnus King of Norway, upon condition, that he fhoufd fupport him with a competent force: which he performed; and by this means became matfer of there illes, until the reign of Alexander the third, who by his valour expelled the Danes. The Kings of Denmark did afterwards refign their title for a fum of money, and this refignation was ratified under the great feal of Denmark, at the marriage of King James the fixth of Scotland, with Anne Princefs of Denmark.

Orkney has been fron time to time a title of honour to feveral perions of great quality : Henry and Williaun Sinclairs were called Princes of Orkney; and Rothuel Hepburn was made Duke of Orkney: Lord George Hamilton (brother to the prefent Duike of Hamilton) was by the late King William created Earl of Orkney. The Earl of Morton had a mortgage of Orkncy and Zetland from King Charles the firf, which was fince reduced by a decree of the lords of Seffion, obtained at the inftance of the King's alvocate agraintt the earl; and this decree was afterward ratified by act of parliament, and the Eardom of Orkney, and Lordhip of Zetland, have fince that time been erected into a ftewartry. The reafon, on which the decree was founded, is faid to have been that the Earl's deputy feized upon fome chells of gold found in the rich Amflerdam thip, callod the Carlm.lan, that was hoit in 7etland 1664 .

There are feveral gentemen of eftates in Orkney but the Queen is the principal proprictor; and one hatf of the whole belongs to the crown, befides the late acceltion of the bithop's rents, which is about 9000 merks Scots per Annum. There is a yearly roup of Orkney rents, and he that offers highelt is preferred to be the King's fteward for the time; and as fuch, he is principal judye of the country. But this precarious Lafe is a pubbic tofs to the inlabitants, efpecially the poorer fort, who complain that they would be atlowed to pay money for their corn and meal in time of fcarcity; but that the flewatis carricd it offto other parts, and neglected the interell of the country. The interclt of the crown fuffers likewile by this means, for much of the crown fands lic walle: whereas if there were a conllant fteward, it night be much better managed, both for the crown and the inhabitions.

There is a tenure of land in Orkney, differing from any other in the kingdom, and this they call Udal Right, from Ulaus King of Norway, who after taking poffeflion of thofe iflands, gave a right to the iuhabitants, on condition of paying the third to
vol. 1 H .
4 r
fimfelf;
himfelf; and this right the inhabitants had lucceflively, without any charter. All tho lands of Orkney are Udal lands, King's lands, or feued lands.
'T hey differ in their meafures from other parts of Scotland, for they do not ufe the peck or firlet, but weigh their corns in Pilinores, or Pundters; the leaft quantity they call a Merk, which is eighteen ounces, and twenty-four make a Leilpound, or Setten, which is the fame with the Danes that a fone weight is with us.

## The ancicut State of the Church of Orkney.

THE churches of Orkney and Zetand incs were formerly under the government of a bilhop; the calbedral church was St. Magnus in Kirkwall. There are thisty-onc churches, and about one hundred chapels in the country, and the whole make up about eighteen parifhes.

This diocefe had feveral great dignitics and privileges for a long time, but by the fucceffion and change of many mafters they were leffened. Dr. Robert Keid, their bifhop, made an erection of leven dignities, viz. I. A provof, to whom, under the bifhop, the government of the canons, Sc. did belong; he had alloted to him the prebendary of Holy 'Trinity, and the vicarage of South Ronallhaw. 2. An arch-deacon. 3. A precentor, who had the prebendary of Ophir, and vicaras: of Stenuis. 4. A chancellor, who was to be learned in both haws ; to him was given the probendary of St. Mary in Sanda, and the vicarage of Sanda. 5. A treafurer, who was to keep the treafure of the church, and facred veftments, \&c. he was rector of St. Nicholas in Stronfa. 6. A fub-dean, who was parfon of Hoy, \&c. 7. A fub-chanter, who was bound to play on the organs each Lord's Day, and feftivals; he was prebendary of St. Colme. IH, erected feven other canonries and prebends; to which dignitics he alligned, befides their churches, the rents of the parlonages of St. Colme in Waes, and Itoly-Crols in Weltra, as alfo the vicarages of the parilh churches of Sand, Wick, and Stromnefs. He crected, telides thefe, thirteen chaplains; every one of which was to have twentyfour meils of corn, and ten merks of moncy for their yearly falary; befides their daily diftributions, which were to be raifed from the rents of the vicarage of the cathedral church, and from the foundation of Thomas Bifhop of Orkney, and the twelve pounds ratified by King James the Third, and James the Fivurth of Scotland. To thefe he adued a Sacrilt, and fix boys to bear tapers. The charter of the erection is dated at Kirkwall, Otober 28, $A_{n n} 1554$.

This was the flate of the church under popery. Some time after the reformation, Bilhop law being made Bifhop of Orkney, and the earldom united to the crown (by the forfeiture and death of Patrick Stewart Earl of Orkney,) he with the confent of his chapter made a contract with King James the Sixth, in which they refign all their ecclefiaftical lands to the crown; and the king gives back to the bilhop feveral lands in Orkney, as Honn, Orphir, \&c. and Ilis Majelly gave alfo the Commiffariot of Orkney to the bifhop and his fuccelfors; and then a competent number of perfons for a chapter were agreed on. This contract was made Anno 1614.

The ancient Monuments and Curigities in thefe Ifands are as follow:
IN the ifle of Hoy, there is the Dwarfie-fone between two hills, it is about thirtyfour feet long, and about fixtecn feet broad; it is made hollow by human induftry: it has a finall fquare entry looking to the eaft, about two feet high, and has a fone proportionable
 there is cut out a bed and pillow, capable of two perfons, lie in; $\pi$, the otheroppufite end there is a void face cut out refumbling a bed; an whove bot hefe there is a large hole, which is fuppofed was a vent for finoke. The common tratition is, that a giant and his wife made this their place of retreat.

About a mile to the welt of the main land at Skeal-houfe, there is in the top of high rocks many thoues difjofed like a flreet, about a quarter of a mile in length, and between twenty and thisty feet broad. They differ in figure and magnitude, are of a red colour ; fome refemble a heart, fome a crown, leg, thoe, laft, weaver's fhutte, \&c.

On the weft and caft fide of Loch.Stenuis, on the main land, there are two circles of large flone erceted in a dich; the larger, which is round on the north-weft fide, is a hundred paces dianeter, and fome of the ftones are twenty feet high, and above four in bradth; they are not all of a height, nor placed at an equal diftance, and many of them are fallen down on the ground.

About a little diftance further, there is a femi-circle of larger ftones than thofe menrionetabove. There are two green mounts, at the eaft and weft fide of the circle, which are fuppofed to be artificial ; and fibule of filver were found in them fome time atgo, which on one fide refembled a horfe's.floe, more than any thing elfe.
The hills and circles are believed to have been places defigned to offer facrifice in time of Pagan idolatry ; and for this reafon the people called them the ancient temples of the Gods, as we may find by Bocthius in the life of Manius. Several of the inhabitants have a tradition, that the fun was worlhipped in the larger, and the moon in the lefier circle.

In the chapel of Clet, in the inc of Sanda, there is a grave of nineteen feet in length; fome who had the curiofity to open it, found only a piece of a man's backbone in it, bigger than that of a horfe. The minifter of the place had the curiofity to keep the bone by him for fome time. The inhabitants have a tradition of a giant there, whofe flature vas fuch, that he could reach his hand as high as the top of the chapel. There have been large bones found lately in Wefra, and one of the natives who died not long ago, was for his Hature diftinguiflhed by the title of the Micle, or great Man of Waes.

There are crected fones in divers parts, both of the main, and leffer ifles, which are belicved to have been erected as monuments of fuch as diftinguifhed themfelves in battle.
There have been feveral itrange inftances of the effects of thunder here; as that of barning Kirkwall fteeple by lightning in the year 1670. At Stromnefs a gentleman had twelve kine, fix of which in a fall were fuddenly killed by thunder, and the other fix left alive ; and it was remarkable that the thunder did not kill them all as they food, but killed one, and miffed another. This happened in 1680, and is attefted by the minifler, and others of the parih.

There is a ruinous chapel in Papa Weftra, called St. Tredwels, at the door of which there is a heap of ftones; which was the fupertition of the common people, who have fuch a veneration for this chapel above any other, that they never fail, at-their coming to it, to throw a flone as an offering before the door: and this they reckon an indifpenlible duty enjoined by their anceftors.

Lady-Kisk in South-Ronalfhaw, though ruinous, and without a roof, is fo much reverenced by the native. that they chufe rather to repair this old one, than to build a new church in amenent place, and at a cheaper rate: fuch is the power of education, that thefo m $10 \cdot n$ cannot be cured of thefe fuperfluous fancies, tranfinited to them by their igant anceltors.

Within the ancient falric of Lady-Church there is a ftone of four feet in length, and two in breadh, tapering at hoth ends: this flone has engraven on it the print of two feet, concerning which the inhabitants have the following tradition: that St. Magnus wanting a boat to carry him over Pightland Firth to the oppofite main land of Caithnefs, made ufe of this thone inflead of a boat, and atienwards carried it to this chureh, where it continues ever fince. But others have this more reafonable opinion, that it has been ufed in time of Popery for delinquents, who were obliged to ftand barefoot upon it by way of penance. Several of the vulgar inhabiting the lefir ifles obferve the amiverfary of their refpective faints. There is one day in harveft on which the vulgar abftain from work, becaufe of an ancient and foolifh tradition, that if they do their work, the ridges will bleed.

They have a charm for Anpping exceffive bleeding, either in man or beaft, whether the caufe be internal or external; which is performed by fending the name of the patient to the charmer, who adds fome more words to it, and, after repeating thofe words, the cure is performed, tiough the charmer be feveral miles diftant from the patient. They have likewife other charms which they ufe frequently at a dittance, and that alfo with fuceefs.

The inhabitants are well proportioned, and feem to be more fanguine than they are; the poorer fort live much upon fifh of various kinds, and fometimes without any bread. The inhabitants in general are fubject to the fcurvy, imputed to the filh and falt meat, which is their daily food; yet feveral of the inhabitants arrive at a great age : a woman in Evie brought forth a child in the fixty-third year of her age.

One living in Keriton lately was one hundred and twelve years old, and went to fea at one hundred and ten. A gentleman at Stronfa, about four years ago, had a fon at a hundred and ten years old. One William Nuir in Weftra lived a hundred and forty years, and died about eighteen years ago. The inhabitants fpeak the Euglifh tongue: feveral of the vulpar fpeak the Danih or Norfe language ; and many among them retain the ancient Danith names.

Thofe of Dellruction are hofpitable and obliging, the vulgar are generally civil and affable. Both of them wear the habit in falhion in the Lowlands, and fome wear a feal thin for fhoss; which they do not few, but only tie them about thair feet with frimgs, and fometimes thongs of leather: they are generally ableand fout feamen.

The common people are very laboriuus, and undergo great fatigues, and no fmalt hazard in fithing. 'The intes of Orkncy were formerly libhle to frequent incurfons by the Norwegians, and thofe inhabiting the Weflern llles of Scotland. To prevent which, cach village was obliged to furnifla a large beat well manned to oppole the enenty, and upon their landing all the inhabitants were to appear armed; and beacons were fet on the top of the highef hills and rocks, to give a general warning on the fight of an approaching eneny.

About the year ${ }^{6} 6_{34}$, Dr. Graham being then bifhop of Orkney, a young boy called William Garioch, had fome acres of land, and fome cattle, \&c. left him by his father deceafed: be being young was kept by his uncle, who had a great defire to obtain the lands, \&c. belonging to his nephew; who, being kept fhort, llole a fetten of barley, which is about twenty-eight pound weight, from his uncle; for which he purfued the youth, who was then cighteen years of age, before the theriff. The theft being proved, the young man received fentenee of death; but going up the ladder to be hanged, he prayed earnelly that God woud iallict fome vifible judgment on his uncle, who ont of covetoufuefs had procured his death. The uncle happened atter this to be walking in the churchyard of Kirkwall, and as he food upon the young man's grave, the bifhep's
dog run at him all of a fudden, and tore out his throat; and fo he became a monument of God's wrath againft fuch covetous wretches. This account was given to Mr. Wallace minilter there, by feveral that were witheffes of the fact.

## Schetland.

SCHETLAND lies north eaft from Orkney, between the Goth and $\sigma_{1}$ ft degree of latitude; the diftance between the head of Sanda, which is the moft northerly part of Orkney, and Swinburg-hend, the moft foutherly point of Schetland, is commonly reckoned to be twenty or twenty-one leagues: the tides running betwixt are always impetuous, and fivelling as well in a calm as when a frefh gale blows; and the greatelt danger is near the lair llte, which lies nearer to Schetland than Orkney by four leagues.

The largef ine of Schetland, by the natives called the main-land, is fixty miles in length from fouth weft to the northeenf, and from fixteen to one mile in breadth. Some call thefe incs Hethland, others Hoghland, which in the Norfe tongue fignifies high-land; Schethand in the fame language fignities fea land.

This iffe is for the mof part mofly, and more cultivated on the Chore than in any other part ; it is mountainous and covered with heath, which renders it fitter for palturage than tillage. The inhabitants depend upon the Orkney ifles for their corn. The ground is generally fo boggy, that it makes riding impracticable, and travelling on foot not very pleafint; there being feveral parts into which people fink, to the endangering their lives, of which there have been leveral late inftances. About the fummer follice, they have to much light all night, that they can fee to read by it. The fun fets between ten and cleven, and rifes between one and two in the morning, but then the day is fo much the fhorter, and the nighe longer in the winter. 'This, together with the violence of the tides and tempellous feas, deprives the inhabitants of all foreign correfpondence from Ostober till April, and often till May; during which fpace, they are alto ether frateres to the reft of mankind, of whom they hear not the leaft news. A remarkable inftance of this happened after the late Revolution: they had no account of the l'rince of Orange's late landing in Fingland, coronation, \&c. until a fifherman happencd to land in thele ifles in the May following: and he was not believed, but indicted for high trealion for fpreading fuch news.

The air of this ife is cold and piercing, notwithlanding which, many of the inhabitants arrive at a great age; of which there are feveral remarkable initances. Buchanan in his Ilift. libe i. gives an account of one Latarence, who lived in his time, fome of whote oflipring do ftill live in the parifh of Waes; this man, after he arrived at one hundred years of age, married a wile, went out a fifhing when he was one bundred and forty jars old, and, upon his return, died rather of old age, than of any dittemper.
'He inhabitants give an account of 'airville, who arrived at the age of one hundred and cighty, and never trank any malt drink, diftilled waters nor wine. They fay that his lon lived longer than him, and that his grandehildren lived to a good age, and feldom or never drank any fronger liquors than milk, water, or bland.
'The difeafe that ailicts the inhabitants here molt is the fcurvy, which they fuppofe is occationed by their eating too much falt-fifh. There is a diftemper here called baftard fcurv, which difcovers iffelf by the talling of the hair from the peoples' eye-brows, and the falling of their nofes, sc. and as foon as the fymptoms appear, the perfons are remmed to the fiedds, where litule houfes are huilt for them on purpole to prevent infection. The principal caufe of this difemper is believed to be want of bread, and
feeding on fifh alone, particularly the liver : many poor families are fometimes without bread, for three, four, or five months togethers. They fay likewile that their drinking of bland, which is their univerfal liquor, and preferved for the winter as part of their provifions, is another caule of this diftenper. This drink is made of buttermilk mixed with water; there be many of them who never tate ale or beer, for their fearcity of bread is fuch, that they can fare no corn for drink: fo that they have no other than bland, but what they get from foreign veffels that refort thither every fummer to tifl.

The ifles in general afford a great quantity of feurvy-grafs, which, ufed difcreetly, is found to be a good remedy againf this difeafe. The jaundice is commonly cured by drinking the powder of thell-finails annong their drink, in the fpace of three or four days. They firft dry, then pulverize the finails; and it is obfervable, that though this duit thould be kept all the ywar round, and grow into vermine, it may be dried again, and pulverized for that wec.

The ifles afford abundance of fea-fowl, which ferve the inhabitants for part of their food during fummer and harveft, and the down and feathers bring them great gain.

The feveral tribes of fowl here build and hatch apart, and every tribe keeps clofe together, as if it were by combent. Some of the tefter ifles are fo cronded with variety of fea-fowl, that they darken the air when they Ay in great numbers. After their coming, which is commoniv in Fobruary, they fit very clofe together for fome time, till they recover the fatigue of their long tlight from their remote quarters; and after they have hatched their young, and time they are able to liy, they go away ogether to fome other uaknown pace.

The prople inhabining the leffer ills have abundance of eggs and fow, which contribute to maintain their families during the fummer.

The common people are generally very dextrous in climbing the rocks in queft of thofe eggs and fowl; but this exercife is attended with very great danger, and foncetimes prores fatal to thole that venture too far.

The moft remarkable experiment of this fort, is at the ille called the Nofs of Braffah, and is as follows: the Nots being about fixteen fathom dillant from the fide of the oppofite main ; the higher and lower rocks have two takes faftened in each of them, and to thefe there are ropes tied: upon the ropes there is an engine hung, which they call a cradle : and in this a man makes his way over from the greater to the lefler rocks, where he makes a confiderable purchafe of eggs and fowl ; but his return being by an afcent, makes it more dangerous, though thofe on the great rock have a rope tied to the cradle, by which they draw it and the man fife over for the moft part.
There are fome rocks here computed to be about three hundred fathom high; and the way of climbing them is, to tie a rope about a man's middle, and let him down with a batket, in which he brings up his eggs and fowl. The ifle of Foula is the moft dangerous and fatal to the climbers, for many of them perifh in the attempt.
The crows are verv numerous in Schetland, and differ in their colour from thofe on the main land; for the head, wings, and tail of thote in Schectand are only black, and their back, breatt, and tail of a grey colour. When black crows are feen there at any time, the inhabitants fy it is a prefage of approaching famine.

There are fine hawis in thele ifles, and particularly thofe of Fair the are reputed among the beft that we to be had any where ; they are ibferved to go far for their prey, and particularly for moor-fowl as far as the illes of Orkney, which are about lixteren leagues from them.

There are likenife many cagles in and about thefe ifles, which are very deftructive to the fheep and laubs.

This country produces little horfes, commonly called Shelties, and they are very fprighty, though the lealt of their kind to be fecn any where; they are lower in ftature than thofe of Orkncy, and it is common for a man of ordinary ftrength to lift a Sheltie from the ground; yet this little creature is able to carry double. The black are efteemed to be the molt hardy, but the pyed ones fetdom prove fo good : they live many times till thirty years of age, and are fit for fervice all the while. Thefe horfes are never brought into a houfe, but expofed to the rigour of the feafon all the year round ; and when they have no grafs, feed upon fea-ware, which is only to be had at the tide of ebb.
The ifles of Schetland produce many fheep, which have two and three lambs at a time ; they would be much more numerous, did not eagles deftroy them : they are likewife reduced to feed on fea-ware during the froft and finow.

## 7he lefir I/hes of Schathund are as folles:

The ife Trondra, which lies oppofite to Scalloway town on the weft ; three miles long, and two broad.

Further to the north-eaft lies the ifle of Whaliey, about three miles in length and as many in breadth; the rats are very numerous here, and do abundance of mifchicf by deftioying the corn.

At fome further diftance lie the fmall iffes called Skerries; there is a church in one of them. Thefe illes and rocks prove often fatal to feamen, but advantageous to the inhabitants, by the wrecks and goods that the winds and tiles drive afhore; which often fupply them with fuel, of which they are altogether dellitute. It was here that the Carmelan of Amfterdan was calt away, as bound for the Ealt Indies, amn. $166_{4}$. Among the rich cargo fhe had feveral chefts of coined gold, the whole was valued at 3,000,000 guilders ; of all the crew four only were faved. The inhabitants of the finall illes, among other advantages they had by this wreck, had the pleature of drinking liberally of the Itrong drink which was driven ahore in large cafks, for the fpace of three weeks.
Between Brafla-Sound and the oppofite main, lies the Unicorn, a dangerous rock, vifible only at low water; it is fo called ever fince a veflel of that name perifhed upon it, commanded by William Kiıkaldy of Gronge, who was in eager purfuit of the Earl of Bothwell, and very near him when his thip flruck.
On the eaft lics the inle called Fifholm ; to the north-eaft lies Little Rue, and on the weft Mickle Rue; the latter is eight miles in length and two in breadih, and has a good harbour.

Near to Elting lies the ifles of Vemantry, which have feveral harbours; Orney, Little Papa, Helifha, \&c.
'To the north-weft of the Nefs lies St. Ninian's Me; it has a chapel and an attar in it, upon which fome of the inhabitants retain the ancient fuperftitious cuftom of burning candle.

Papa-Stour is two miles in length; it excels any ife of its extent for all the convenieces of human life: it has four good harbours, one of which looks to the fouth, another to the weft, and two to the north.
The Lyra-Skerries, fo called from the fowl of that name that abound in them, lie near this ife.

Al:out fix leagues weft of the main lies the ine Foula, about three miles in length; it has a reck reniarkahle for its leight, which is feen from Orkney when the weather is fair ; it hath a harbour on one fide.

The ifle of Bralla lics to the eaft of Tingwall; it is five miles in lengti, and two in breath: fome parts of the coaft are arable ground, and there are two churches in it.

Further to the catt lie the fmall ine called the Nofs of Braffa.
The ife of Burray is three miles long, has good pallurage, and abundance of finh on its coalt ; it has a large church and feeple in it. The inhabitans fay that mice do not live in this inde when brought to it ; and that the earth of it being brought to any other fart where the mice are, they will quickly abandon it.

Haveroy ifle, which is a mile and a halt in Ingth, lies to the fouth-eaft of Burray.
The ifle of Yell is fixtecn miles long, and from cight to one in bradth; it lies northeaf from the main: there are three churches and feveral famall chapels in it.
'ithe ille of Hakalhie is two miles long; Samphrey ithe one mile long; Biggai ine is a mike and a half in length : all three lie round Yell, and are reputed among the beft of the leffer ifles.

The ife of Fetlor lics to the north-eaft of Yell, and is five miles in length, and four in breadth; it hath a church, and fome of the Pits houfies in it.

The ifle Unft is eight miles long, and is the pleafantelt of the Schetland ifles; it has three churches, and as many harbours; it is reckoncd the moll northern of all the Britifh dominions. The inhabitants of the inle Vaila fay that no cat will live in it, and if any cat be brought to it, they will rather venture to fea than ftay in the ifte : they fay that a cat was feen upon the ine about filty years ago, but how it came there was unknown. They obferved about the fame time how the proprictor was in great torment, and as they fuppofe by witcheraft, of which they fay he the: died. There is no account that any cat has been feen in the iffe ever fince that genteman's death, except when they were carried to it, for making the above-mentioned experiment.

The inhabitants fay that if a compafs be placed at the houfe of Udfa, on the weft fide of the ille Fetlor, the necdle will be in perpetual diforder, without fixing to any one ple; and that being trisi afierwards in the top of that hou!', it hat the fame effect. They add further, that when a veffel fuils near that houte, the needle of the compats is difordered in the fame manner.

There is a yellow fort of metal lately diforered in the ine of Uzia, but the inhabitants had not found a way to mele it, fo that it is not yot turned to any account.

## The ancicnt Court of Juftici

In thefe inlands was held in IIolm, in the parith of Tingu:all, in the middle of the man lanc. This II tm is aat ifland in the midule of a freth-water lake; it is to this day called the Law.'Tin', and the parih, in all probability, hath its name from it. The entrance to this Holm is by fome flones liad in the water; and in the Holm there are four great fones, upon which fat the judge, clerk, and wher oficers of the coms. The inhabiants that had law fuits attended a: fome diftance from the Holm, on the other fove of the lake; and when any of them was calied by the oftiver, be entered by the iteppind foncs; and being difiniffed, he return d the fame way. 'This was the practice of the Dancs. The inhabitants have a madition amony them, that after one had roceived fentence of death up on the Ifolu, he obtained a ramifion, providel he made has efape throw h the crowd of people on the lake fiste, and touched limewall ite eple befureany could lay hold on him. This thecple in thofe lays was an afjlun for malefators
and debtors to flec into. The inhabitants of this ifle are all proteftants; they generally fpeak the Englifh tongue, and many among them retain the ancient Danifh language, efpecially in the more northern ifles. There are feveral who fpeak Englifh, Norfe, and Dutch; the laft of which is acquired by their converfe with the Hollanders, that fifh yearly in thofe illes.

The people are generally reptited difireet, and charitable to ftrangers; and thofe of the beft rank are faflionable in their apparel.

Shetland is much more populous now than it was thirty years ago, which is owing to the trade, and particularly that of their filhery, fo much followed every year by the Hollanders, Hamburghers, and others. The increafe of people at Leraick is confiderable; for it had but three or four families about thirty years ago, and is fince increafed to about three hundred families; and it is obfervable, that few of their families were natives of Shetland, but came from feveral parts of Scotland, and efpecially from the northern and eaftern coafts.

The fifhery in Shetland is the foundation both of their trade and wealth; and though it be of late become lefs than before, yet the inhabitants, by their induftry and applica. tion, make a greater profit of it than formerly, when they had them nearer the coaft, both of the larger and leller inles; but now the grey fill of the largett fize are not to be had in any quantity without going further into the ocean. The fifh commonly bought by ftrangers here are cod and ling; the inhabitants themfelves make only ufe of the fmaller fifh and herings, which abound on the coaft of this ifle in vaft thoals.

The fifh called tuik abounds on the coaft of Braffa; the time for fifhing is at the end of May. This filh is as big as a ling, of a brown and yellow colour, has a broad tail ; it is better frelh than falted: they are commonly fold at fifteen or fixteen fhillings the hundred.

The inhabitants obferve, that the further they go to the northward the filh are of a larger fize, and in greater quantitics. They make great ftore of oil, particularly of the large grey fifh, by then called feths, and the younger fort fillucks: they fay that the liver of one feth affords a pint of Scots meafure, being about four of Englifh meafure. The way of making the oil is firlt by boiling the liver in a pot half full of water, and when it boils the oil goes to the top, and is fkimmed off and put in veffels for ufe. The fifhers obferve of late, that the livers of fith are lefs in fize than they have been formerly.

The Hamburghers, Bremers, and others, come to this country about the middle of May, fet up fhops in feveral parts, and fell divers commodities; as linen, mullin, and fuch things as are molt proper for the inhabitants, but more elpecially becr, brandy, and bread; all which they barter for fifh, ftockings, mutton, hens, \&c.: and when the iahabitants atk money for their goods, they receive it immediately.

In the month of June the Hollanders come with their fifhing-bufles in great numbers upon the coalt for herring; and when they come into the found of Braffa, where the herrings are commonly molt plentilul, and very near the fhore, they difpofe their nets, Sc. in order, but never begen till the twenty-fourth of June; for this is the time limited among themfelves, which is obferved as a law, that none will venture to tranfgrefs. This filhing-trade is very beneficial to the inhabitants, who have provifions and neceffaries imported to their doors, and employment tor all their people, who by their fifiing, and felling the varions products of the country, bring in a confderable fum of money yearly. 'Itw proprictors of the ground are confiderable gainers alfo, by letting their houfes, which fere as fhops to the feamen during their refielence here.

There have been two thouland buffes and upwards filhing in this found in one fummer; but they are not always fo numerous: they generally go away in Augult or. September.

There are two little towns in the largeft of the Shetland ifles: the moft ancient of thefe is Scalloway; it lies on the welt fide of the ille, which is the moft beautiful and pleafant part of it. It hath no trade, and but few inhabitants, the whole being about ninety in number. On the fouth-eaft end of the town flands the caftle of Scalloway, which is four flories high; it hath feveral conveniences and ufeful houfes about it, and is well furnifhed with water. Several rooms have been curioully painted, though the better part be now worn off. This ancient houfe is almof ruinous, there being no care taken to repair it. It ferved as a garrifon for the Euglifh foldiers that were fent hither by Cromwell. This houfe was huilt by Patrick Stewart Earl of Orkney, anno 1600. The gate hath the following infription on it : Parricius Orchadia et Zelandia comes. And underneath the inficription: Cujus fumdamen jaxume eft, don:us illa manebit; labilis è contra $f_{i} f$ fit arena perit. That houfe whofe foundation is on a rock flall ftand; but if on the fand, it fhall fall.
The inhabitants fay that ihis houfe was built upon the fandy foundation of oppreffion, in which they fay the earl exceeded; and for that and other crimes was executed.

There is a high ftone erected between Tingwall and Scalloway: the inhabitants have a tradition, that it was fet up as a monument of a Danifh general, who was killed there by the ancient inhabitants, in a battle againt the Danes and Norwegians.

The fecond and lateft built town is lerwick; it ftands on that fide of the found where the fifhing is: the ground on which it is built is a hard rock, one fide lics toward the fea, and the other is furrounded with a mofs, without any arable ground.

On the north is the citadel of Lerwick, which was built in the year 1665, in time of the war with Holland, but never completed; there is little more of it now left than the walls. The inhabitants, about thirty years ago, fifhed up three iron cannon out of a fhip that had been caft away near eighty years before; and being all over ruft, they made a great fire of peats round them to get off the rult; and the fire having heated the cannon, all the three went off, to the great furprize of the inhabitants, who fay they faw the ball fall in the middle of liralla Sound, but none of them had any damage by them.

There are many liats houfes in this country, and feveral of them entire to this day; the higheft exceeds not twenty or thirty feet in height, and are about twelve feet broad in the middle; they taper towards both ends, the entry is lower than the doors of houfes commonly are now, the windows are long and very narrow, and the fairs go up between the walls. Thefe houfes were built for watch-towers, to give notice of an approaching enemy; there is not one of them but what is in view of fome other; fo that a fire being made on the top of any one houfe, the fignal was communicated to all the reft in a few moments.

The inhabitants fay that thefe houfes were called burghs, which in the Saxon language fignifies a town or caftle fenced all round. The names of fortified places in the weftern infes are in feveral parts called Borg ; and the villages in which the forts ftand, are always named Borg.

The inhabitants of Orkney fay that feveral burying-places among them are called burghs, from the Saxon word burying.

It is generally acknowledged that the Piets were originally Germans, and particularly from that part of it bordering upon the Baltic Sea. They were called Pbightian, that is, fighters. The Romans called them Picti. Some writers call them Pictavi, either
from that name of Pbightizn, which they took to themfelves, or from their beauty; and accordingly Boethius, in his character of them, joins both thefe together: Quod orant corporibus robufiffimis candidifque; and Verftegan fays the fame of then.

The Romans called them Picti, becaufe they had their fhields painted of divers colours. Some think the name came from pichk, which in the ancient Scots language fignifies pitch, that they coloured their faces with, to make them terrible to their enemies in battle; and others think the name was taken from their painted habit.

This ifle makes part of the thire of Orkney ; there are twelve parihes in it, and a greater number of churches and chapels. Shetland pays not above one-third to the crown of what Orkney does.

The ground being for the moft part boggy and moorifh, is not fo productive of grain as the other ines and main land of Scotland; and if it were not for the fea-ware, by which the ground is enriched, it would yield but a very fmall product.

There is lately difcovered in divers parts abundance of lime-ftone, but the inhabitants are not fufficiently inftructed in the ufe of it for their corn land.

There is plenty of good peats, which ferve as fuel for the inhabitants, efpecially on the main.

The amphibia in thefe ines are feals and otters in abundance: fome of the latter are trained to go a fifhing, and fetch feveral forts of fifh home to their mafters.

There are no trees in any of thefe infes, neither is there any venomous creature to be found here.

There have been feveral ftrange fifh feen by the inhabitants at fea, fome of the fhape of men as far as the middle; they are both troublefome and very terrible to the fifhers, who call them Sea devils.

It is not long fince every family of any confiderable fubftance in thofe iflands was haunted by a fpirit they called Browny, which did feveral forts of work ; and this was the reafon why they gave him offerings of the various products of the place: thus fome when they churned their milk, or brewed, poured fome milk and wort through the hole of a fone, called Browny's ftone.

A minifter in this country had an account from one of the ancient inhabitants who formerly brewed ale, and fometimes read his bible, that an old woman in the family told him that Browny was much difpleafed at his reading in that book; and if he did not ceafe to read in it any more, Browny would not ferve him as formerly. But the man continued his readins notwithftanding, and when he brewed refufed to give any facrifice to Browny; and to his firft and fecond brewing mifcarried, without any vifible caufe in the malt; but the third brewing proved good, and Browny got no more facrifice from him after that.

There was another inflance of a lady in Unft who refufed to give facrifice to Browny, and loft two brewings; but the third proved good, and fo Browny vanifhed quite, and troubled them no more.

I fhall add no more, but that the great number of foreign fhips which repair hither yearly upon the account of filhing, ought to exeite the people of Scotland to a fpeedy improvement of that profitable trade; which they may carry on with more eafe and profit in their own feas than any foreigners whatever.

## A VOR.AGE TO ST. KILDA. <br> br m. Martin, Grat.* <br> PREFACE.

MEN are generally fond enough of novelty, not to fuffer any thing reprefented under that plaufible invitation to pafs unnoticed. A defcription of fome remote corner in the Indies thall be fure to afford us high amufement, whilft a thoufand thinge. much nearer to us might engage our thoughts to bet. r purpofe, and the knowledge of them ferve to promote our true intereft, and the hiftory of nature. It is a piece of weaknefs and folly to value things merely on account of their diftance: thus men have travelled far in fearch of foreign plants and animals, and continued frangers to the productions of their own climate. The following relation, therefore, I hope will not prove unprofitable or difpleafing, unlefs the advantages of truth and unaffeted fimplicity fhould prejudice it in the opinion of fuch as are more trifling and curious than folid and judicious.

The author, born in one of the moft fpacious and fertile iftes in the weft of Scotland, by a laudable curiofity was prompted to undertake the voyage, and that in an open boat, to the almoft manifeft hazard of his life, as the feas and tides in thofe rocky illands are more inconftant and raging than in moft other places. And he has been careful to relate nothing in the following account but what he afferts for truth, either upon his own particular knowledge, or from the conftant and harmonious teftimony given him by the imhabitants; people fo plain, and fo little inclined to impofe upon mankind, that perhaps no place in the world at this day knows inftances like thefe of true primitive honour and fimplicity; a people abhorring lying tricks and artitices, as they do the moft poifonous plants or devouring animals.

The author confefles he might have put thefe papers into the hands of fome capable of giving them, what they really want, a politer turn of phrafe; but he hopes for the indulgence of at leaft the intelligent reader, who will always fet a higher value upon unadorned truth in fuch accounts than the utmolt borrowings of art, or the advantages of refined languages.

$$

THE various relations concerning St. Kilda, given by thofe of the weftern iffes and continent, induced me to a narrow enquiry about it: for this end I applied myfelf to the prefent feward, who by his defeription, and the products of the ifland, which were brought to me, together with a natural impulfe of curiofity, formed fuch an idea of it in my mind, that I determined to fatisfy myfelf with going thither, it having been never hitherto defrribed to any purpofe; the accounts given by Buchaman and Sir Robert Murray being but relations from fecond and third hands, neither of thent ever having the opportunity of being upon the place. I attempted leveral times to vifit it, but in vain, until laft fummer, the laird of Mack-Leod heartily recommending the care of the inhabitants of St. Kilda to Mr. John Campbell, minilter of Harries, he went to St. Kilda, and I chearfully embraced the occafion; and accordingly we embarked at the ille Elay in Harries, May 29, 1697, the wind at S.E.

[^313]We fet fail with a gentle breeze, bearing to the weftward, and were not well got out of the harbour when Mr. Campbell obferving the whitenefs of the waves attended with an extraordinary noife beating upon the rocks, exprefled his diflike of it, being in thofe parts a prognoftic of an enfuing form; but the fame appearing fometimes in fummer before exceflive heat, it was flighted by the crew. But as we advanced about two leagues further, upon the coaft of the inle of Pabbay, the former figns appearing more confpicuoufly, we unanimoufly concluded a form approaching, which occafioned a motion for our return; but the wind and ebb-tide concurring, determined us to purfue our voyage, in hopes of arriving at our defired harbour before the wind or ftorm fhould rife, which we judged would not be fuddenly: but our fond imagination was not feconded with a good event, as will appear; for we had fcarce failed a league further, when the wind inclined more foutherly, and altered our meafures; we endeavoured by the help of our oars to reach the Haw-fker rocks, fome four leagues to the fouth coaft, which we were not able to effect, though we confumed the night in this vain expectation. By this time we fo far advanced in the ocean, that after a fecond motion fur our return it was found impracticable, efpecially fince we could not promife to fetch any point of Scotland; this obliged us to make the beft of our way for St. Kilda, though labouring under the difadvantages of wind and tide : our crew extremely fatigued and difcouraged without fight of land for fixteen hours; at length one of them difcovered feveral tribes of the fowls of St Kilda flying, holding their courfe foutherly of us, which (to fome of our crew) was a demonftration we had loft our courfe, by the violence of the flood and wind both concurring to carry us northerly, though we fleered by our compafs right weft.
The inhabitants of St. Kilda take their meafures from the flight of thofe fowls, when the heavens are not clear, as from a fure compafs, experience fhewing that every tribe of fowls bends their courfe to their refipective quarters, though out of fight of the ifle: this appeared clearly in our gradual advances; and their motion being compared did exactly quadrate with our compalis. The inlabitants rely fo much upon this obferva. tion, that they prefer it to the furelt compafs; but we begged leave to differ from them, though at the fame time we could not deny their rule to be as certain as our compafs. While we were in this ftate we difcovered the ifle Borera, near three league; north of St. Kilda, which was then about four leagues to the fouth of us; this was a joyful fight, and gave new vigour to our men, who being refrefhed with victuals, lowering maft and fail, rowed to a miracle. While they were tugging at the oars we plied them with plenty of aquavite to fupport them, whofe borrowed firits fo far wafted their own, that upon our arrival at Borera, there was fcarce one of them able to manage cable or anchor: we put in under the hollow of an extraordinary high rock, to the north of this ille, which was all covered with a prodigious number of Solan geefe hatching in their nefts; the heavens were darkened by their flying over our heads, their excrements were in fuch quantity, that they gave a tincture to the fea, and at the fame time fullied our boat and cloaths: two of them confirmed the truth of what has been frequently reported of their flealing from one another grafs wherewith to make their nefts, by affording us the following very agrecable diverfion, and it was thus: one of them finding his neighbour's neft without the fowl, lays hold on the opportunity, and fteals from it as much grafs as he could conveniently carry off, taking his flight towards the ocean; from thence he prefently returns, as if he made a foreign purchafe, but it does not pafs for fuch: for the owner had difcovered the fact before the thief had got out of fight, and too nimble for his cumning, waits his return, all armed with fury, and engages lim defperately. 'This bloody battle was fought above our heads, and proved fatal to the thief, who fell
dead fo near our boat that our men took him up, and prefently drefled and eat him; which they reckoned as an omen of good fuccefs in the voyage.

We propofed being at St. Kilda next day, but our expectation was fruftrated by a violent form, which almoft drove us to the ocean, where we incurred no finall rifque, being no ways fitted for it ; our men laid afide all hopes of life, poffeffed with the belief that all this misfortunc proceeded from the impoftor Roderick (of whom hereafter), who they beli, ved had employed the devil to raife this extraordinary ftorm againft Mr. Campbell, who was to counteract him. All our arguments, whether from natural reafor, or the providence of $\mathbf{G}$ od, were not of force enough to perfuade them to the contrary, until it pleafed God to comunand a calm the day following, which was the firft of June, and then we rowed to St. Kilda. As we came clofe upon the rocks, fome of the inhabitants, who were then employed in fetting their gins, welcomed us with a "God lave you," their ufual falutation, admiring to fee us get thither contrary to mind and tide; they were walking unconcernedly on the fide of this prodigious high rock, at the fame time keeping pace with our boat, to my great admiration, infomuch that $I$ was quickly obliged to turn away my eyes, left I fhould have had the unpleafant fpectacle of fome of them tumbling down into the fea; but they themfetves had no fuch fears, for they outrun our boat to the town, from thence they brought the fteward and all the inhabitants of both fexes to receive us: we approached the outmoft part of the low rock, called the Saddle; a parcel of the inhabitants were mounted upon it, having on their fect the ufual drefs on fuch occafions, i. e. focks of old rags fowed with feathers inftead of thread : our boat being come pretty near, it was kept of this rock with long poles; fome of their number coming by pairs into the fea rececived Mr. Campbell and me upon their thoulders and carried us to land, where we were received with all the demonftrations of joy and kindnefs they were able to exprefs; the impoftor Roderick endeavouring to outdo his neighbours, and placing himfelf always in the front of our attendants, difcovered his hypocrify. We all walked together to the little village where there was a lodging preyared for us, furnilhed with beds of flraw : according to the ancient cuftom of the place, the officer who prefides over them in the fteward's ablence fummoned the inhabitants, who by concert agreed upon a daily maintenance for us, as bread, butter, chcefe, mutton, fowls, eggs, fire, \&c. all which was to be given in at our lodging twice every day; this was done in a moft regular manner, each family by turns paying their quota proportionably to their lands : 1 remember the allowance for each man per dicm, befide a barley cake, was eighteen of the eggs laid by the fowl called by them Lary, and a greater number of the leffer eggs, as they differed in proportion; the largett of thefe eggs is near in bignefs to that of a goofe, the reft of the eggs gradually of a leffer fize.

We had the curiofity, after three weeks refidence, to make a calculation of the number of eggs beflowed upon thofe of our boat, and the fleward's birlin or galley; the whole amounted to fix thoufand eggs: the inhabitants were thrice our number, and muft confume a number of eggs and fowls in proportion. From this it is eafy to imagine, that a valt number of fowl muft reiort here all fummer, which is yet the more probable, if it be confidered that every fowl lays but one egg at a time, when allowed to hatch.

The inhabitants live together in a fmall village, carrying all the figns of an extreme poverty; the houfes are of a low form, and the Goors all to the north-eaft, to fecure them from the fhocks of the tempefluous fouth-wcft winds. The walls of the houfes are rudely built of fone, the fhort couples joining at the ends of the roof, upon whofe fides finall ribs of wood are laid, and thefe covered with ftraw; the whole fecured by ropes
made of twifted heath, the extremity of which on each fide is poifed with flone to preferve the thatch from being blown away. This little village is feated on a valley furrounded with four mountains, ferving as ramparts of defence, and are fo many amphitheatres, from whence a fair profpect of the ocean and ines may be feen in a fine day.
r his ifle is by the inhabitants, as likewife by all the weftern inlanders, called Hirt; Buchanan calls it Hirta; Sir John Narbrough, and all failors, St. Kilda; in fea maps it is called St. Kilder, particularly in a Dutch fea map from Ircland to Zealand, publifhed at Anfterdam by leter Goas in the year 1663 , wherein it is placed due weft betwixt fifty and fixty miles from the middle of the lewis, and the ifle anfwers directly to the fifty-eighth degree of northern latitude, as marked upon the ends of the map, and from it lies Rokol, a frall rock fixty leagues to the weftward of St. Kilda; the inhabitants of this place call it Rokabarra; this map contains the foundings of fome places near St. Kilda; thefe not exceeding twenty or thirty fathom; it contains only the larger ifle, and a part of the leffer ifles; this ifland is alfo called St. Kilda; by a company of French and Spaniards, who loft their hhip at Rokol in the year 1686, which they named to the inhabitants of St . Kilda, whofe latitude is fifty-feven degrees and three minutes.

The air here is fharp and wholefome; the hills are often covered with ambient white mifts, which in winter are forerunners of fnow, if they continue on the tops of the hills; and in fummer, if only on;the tops of the hills, they prognofticate rain; when they defcend to the valleys it is a prognoftic of exceffive heat. The night here about the time of the fummer folltice exceeds not an hour in length, efpecially if the feafon is fair, then the fun difappears but for a fhort face, the reflex from the fea being all the time vifible; the harveft and winter are liable to great winds and rain, the fouth-weft wind annoying them more than any other: it is commonly obferved to blow from the weit for the moft part of, if not all, July.

St. Kilda is two miles long from eaft to weft; in breadth from fouth to north one mile; and five miles in circumference. It is naturally fenced with one continued face of a rock of great height, except a part of the bay, which lies to the fouth eaft, and is well defended gencrally with a raging fea : this bay is half a mile in length, and as much in breadth; it is not common for any veffels to anchor within this bay, in cafe of a ftorm, as it might be dangerous for them; therefore they drop anchor at the entry, judging it the fecureft: the only place for landing, is on the north fide of this bay, upon a rock with a little declination, which is nippery, being covered with feveral forts of fea weeds; thefe, with a boifterous fea, render the place almoft inacceffible, the fea being feldom otherivife but under favour of a ncap tide, a northeeaft or weft wind, or with a perfect calnn; when thefe circumitances concur, the birlin or boat is brought to the fide of the rock, and all the inhabitants of both fexes are ready to join their united force to hale her through; for this end they have a rope faftened to the fore-part; and a competent number of them are employed on each fide; both thefe are determined by a cryer, who is employed on purpofe to warn them all at the fame minute, and he ccafes whenever he finds it convenient to give them a breathing.

At the head of the bay is a plain fand, only to be feen in fummer, the winter fea wahning it all off the fones; there is no landing upon this place with fafety, which the fteward has learned to his coft. There is a little bay on the weft fide of this ifle, all faced with an iron-colourcd rock; fome veffels take fhelter here, when the wind is at fouth or north-eaft ; there is a place of the rock here on the fouth fide the rivulet, where you may land, if a neap.tide or calm offer. The fea is very impetuous every where about this ifle; they fowed me large ftones which were lately removed out of
their
their place, and caf into the gallies' dock; 1 meafured fome of them which were in length fome feven, others cight feet, and three or four leet in breadth.

On the fouth part of the fouthocalt bay is a little old ruinous fort called the Down. It is evident from what has been already laid, that this place may be reekoned anong the itrongeft forts, matural or artificial, in the world; nature has provided the place with fore of ammunition for acting on the defenfive; that is, a heap of loofe fones in the top of the lill Oterveaul, directly above the landing-place; it is very eafy to difcharge sollies of this ammunition directly upon the place of landing, and that from a great eminence almoft perpendicular ; this I myfelf had occafion to demonftrate, having for my divertion put it in practice to the great Gatisfation of the inhabitants, to whom this defence had never hitherto occurred : but they are refolved to make ufe of this for the future, to kecp off the lowhanders, againt whom of hate they have conceived firong prejudices. A few hands may be capable of refilting fome hundreds by the above-mentioned weapons. The four great mountaias are faced on the fide towards the fea, with rocks of extraordinary height; the hill Conagir an the north fide, is not lefs than two hundred fathom perpendicular above the fea.

Around this ille are four arches or vaults, through which the fea paffes, as does the daylight from either fide, which is vifible to any, though at a confidorable diftance; fome of them reprefenting a large gate: two of thefe look to the fouth, and two north-wett; that on the point of the wef bay is fix fathom high above water, four in breadth, filty paces in length, the top two fathom thick, and very ftrong, the cattle feeding upon it.

There are feveral veins of different fone to be feen in the rocks of the fouthealt bay; upon the north fide of this rock is one as it were cut out by nature, refembling a terrace walk. The cryttal grows under the rock at the landing-place, this mutt be piereed a foot or two deep, before the cryflat can be had from the bed of fand where it lies; the water at the bottom is of a black colour; the largeft piece is not above four inches long, and about two in dameter, each piece fexangular.

Upon the welt fide of this ifle lies a valley with a declination towards the fea, with a rivulct running through the middle of it, on each fide of which is an afeent of half a mile ; all which piece of ground is called by the inhabitants, the female warrior's glen : this amazon is fanous in their traditions : her houfe or dairy of flone is yet extant; fome of the inhabitants dwell in it all fummer, though it be fonse hundred years old; the whole is built of ftone, without any wood, lime, earth, or mortar to cement it, and is in form of a circle pyramid-wile towards the top with a vent in it, the fire being always in the centre of the floor; the ftones are long and thin, which fipplies the defect of wood : the body of this houfe contains not above nine perfons fitting; there are thre beds or low vaults at the tide of the wall, which contains five men each, and are feparated by a pillar ; at the entry to one of thefe low vaults is a fone ftanding upon one end; upon this he is reported ordinarily to have laid her helmet ; there are two ftones on the other fide, upon which the is faid to have laid her fiword : they tell you the was much addicted to hunting, and that in her days all the fpace betwixt this ifle and that of llarric:, was one continued tract of dry iand. Some years ago a pair of large decr's horns were found in the top of Oterveaul lill, almoft a foot mender ground, and a wooden difh fult of deer's greafe. It is faid of this warrior, that the let loofe her grey-thounds after the deer in St. Kilda, making their courfe towards the oppofite illes. 'There are feveral other traditions concerning this famous amazon. But I thall trouble my reader with no more of them.

In this ifle are plenty of excellent fountains or fprings; that near the female warrior's houfe is reputed the beft: it is called 'Wou-bir-nim-beuy, importing no lefs than the well of qualities or virtues; it runs from eaft to weft, being fixty paces afcent above the fea: I drank of it twice, an linglifh quart each time; it was very clear, exceeding cold, light and diuretic ; I was not able to hold my hand in it above a few minutes for its coldnefs; the inhabitants of Harrics find it effectual againft windy cholice, gravel, and head-aches; this well hath a cover of ftone.
'There is a very large well near the town, called St. Kilder's Well : from which the ifland is fuppofed to derive its name; this water is not inferior to that above-mentioned; it runs to the fouth-ealt from the north-weft.
'There is another well within half a mile of this, named after one Conirdan, an hundred paces above the fea, and runs from north-weft towards the fouth-caft, having a fone cover.

Within twelve paces of this is a fmall excellent fountain, which thofe of Harries and St. Kilda will needs call by the author's name, and were then refolved to give it a cover of fone, fuch $a s$ is above defcribed.
'I'here is a celebrated well ifluing out of the face of a rock on the north fide of the eaft bay, called the Well of Youth, but is only acceflible by the inhabitants, no franger daring to clint the fleep rock; the water of it is received, as it falls, into the fea; it runs towards the fouth.caft. The tafte of the water of thofe wells was fo agreeable to me, that for feveral weeks after, the beft fountains in the adjacent ifles feemed to have loft their relifh. There is a rivulet running clofe by the town, and another larger beyond Kilder's Well; this laft ferves for wahhing linen, which it does as well without foap, as other water with; of this we had experience, which was a confirmation of what had been reported to us concerning this water: we fearched if in the brinks we could difcover any fuller's earth, but found none; we difcovered fome pieces of iron-ore in leveral places; this rivulet drops from the moffy ground in the top of the hills.

The whole ifland is one hard rock, formed into four high mountains, three of which are in the middle; all thinly covered with black or hrown earth, not above a foot, tome places half a foot deep; except the top of the hiils, where it is above three feet deep, and affords them good turf; the grals is very fhort but kindly, producing plenty of milk; the number of fheep commonly maintaincd in St. Kilda, and the two adjacent illes, does not excced two thoufand, and generally they are fpeckled, fome white, fome philamort, and are of a common fize ; they do not refemble goats in any refpect, as Buchanan was informed, except in their horns, which are extraordinary large, particularly thofe in the leffer ifles.
The number of horfes exceeds not eighteen, all of a red colour, very low, and fmooth Rinned, and are employed in carrying turf and corn, and at their anniverfary cavalcade, of which hereafter. The cows, which are about ninety in number, fmall and great, have their foreheads white and black, which is difceninle at a great diftance ; are of a low ftature, but fat and fweet beef; the dogs, cats, and all the fea-fowls of this ifle are fpeckled.

The foil is very grateful to the labourer, producing ordinarily fixteen, eighteen, or twenty fold; their grain is only bens, and fome oats; the barley is the largeft produced in all the wefternifes; they ufe no plough but a kind ef crooked lpade; their harrows are of wood as are the teeth in the front alfo, and all the relt fupplied only with long tangles of fea-ware tied to the harrow by the fmall ends; the roots hanging loofe behind, fcatter the clods broken by the wooden teeth; this they are forced to ufe for want of wood. Their arable land is very nicely parted into ten divifions, and thefe into fub-di.

$$
\text { vol, ils. } 4 \mathrm{x}
$$

vifions, each diatinguifhed by the name of fome deceafed man or woman, who were natives of the place; there is one fore called Multa 'lerm, another Multus Agris. The chef ingredient in their compofls is afhes of turf mixed with flraw; with thele they mix their urme, which by experience they find to have much of the vegetable nitre; they do not preferve it in quantities as elfewhere, bat convey it immediately from the fome tain to the athes, which by daily practice they find moft advamageons; they join alfo the bones, wings, and cutrils of their fer-fowls to their llaw; they fow ecry thick, and have a proportionable growth; they pluck all their bear by the roots in handfels, both for the fike of their houfes, which they thatch with it, and heir cows which they tike in during the winer ; the corn produced by this compon is perfectly free from any kind of weed; it produces much forrel where the compolt reaches.

The coatt of St. Kidda, and the leffer illes, are plentifully furnifhed with variety of cod, ling, mackard, congars, baziers, turbot, graylords, fythes; thefe laft two are of the fame kind, only difering in bignefs; fome call them black-mouths; they are as large as any falmon, and fomewhat longer ; there are alfo baiths, polloes, herring, and many more; mof of thefe are fifhed by the inhabitants upon the rock, for they have neither nets nor long lines. 'Their common pait is the limpets or patella, parboiled; they ufe likewife the leth of a fowl called by them Bowger, which the bith new the lefler ifles catch greedily; fonetimes they ufe the bowger's nefh, and the patella at the fame time upon one hook, and this proves fuccefsful alto. In the month of July a confderable quantity of mackarel run themfelves afhore, but alwas with a foring tide. The amphibia feen here, are the otters and feals; this later the inhabitants reckon very good meat; no fort of trees, not even the leaft thrub grows here, nor has a bee been ever isen here.

Levinis, a rock about fourteen paces high, and thirty in circumference, but marrower at the top, flands about half a leage to the fouthealt bay, covered with no kind of earth or grafs; a firing of frefh water illues out from the fide of it; this rock, by an ancient cuftom, belongs to the galley's crew: Betwist the weft point of St. Kilda, and the ifle Soa, is the famous rock Stacktomn, i. e. a Mifchicvous Rock, for it hath proved fo to fome of their number, who perifhed in attempting to climb it; it is mach of the form ani height of a fleeple; there is a very great dexterity, and it is reckoned no fmall piece of gallantry, to climb this rock, efpecially that part of it called the Thumb, which is to little, that of all the parts of a man's body, the thumb only cam lay holl on it, and that muft be only for the fpace of one minute; during which time his feet have no fupport, nor any part of his body touches the ftone, texept the thumb, in which minute he mutt jump by the help of his thumb, (the arility of his body concurring to raife him higher at the fame time) to a harp point of the rock, which when he has got hold of, puts him out of danger, and having a rope about his middle, which he calts down to the boat, by the help of this he brings up as many perfons as are defigned for fowling at this time; the foreman, or principal climber has the reward of four fowls beftowed upon him over and above his proportion; perhaps, one might think four thoufand too little to compenfate fo great a danger as this man incurs; but he has the advantage by it, of being recorded among their greatef beroes; as are all the foremen who lead the van in ectting up this fame Mifchievous Rock.

Within piffol-thot from this place is the ifte Son, a mile and an half in circumference, but contracted narrower toward the top, being a full half mile in difficult alcent all round, moit of it bare rock, fome parts of it covered with grafs, but dangerous to alo cend; the landing is alfo very hazardous, both in regard of the raging fea, and the rock that mult be climbed; yet the inhabitants are accuftomed to carry burthens both
app it and down, and of this I was once a witnefs. There is fcarce any landing here, ex e\%pt in one place, and that under favour of a weft wind and neap tide; the waves upon the rock difcover when it is accellible; if they appear white from St. Kilda, the inhabittants do not fo much as offer to launch out their boat, in order to land in Soa, or any other ine or rock, though thair lives were at ttake. This litte ille is furnifhed with an excellemt fpring, the grafs is very fivect, feeds five hundred fheep, each of which generally has two or three lambs at a birth, and every lamb fo fruifful, that it brings forth another betore itfelf is a year old. The fame is alfo obferved of lambs in the little ines adjacent to thofe of Harrics and North-Wift. The fleep in the ifle Soa are never milked, which difpoles them to be the mere prolific: there are none to catch them but the inhabitanty, whom I have feen purfue the fheep nimbly down the fleep defcent, with as great freedom as if it had been a plain field.
This ifle abounds with an infinite number of fowl, as fulmar, lavy, falk, bowger, \&c. : 'There was a cock buat fome two years ago came from a hlip for water, being favoured by a perteat calm; the men dilcerned a prodigious number of eggs upon the rocks, which tempted then to venture near the place, and at laft obtained a conpetent number of them; one of the feamen was indultrious enough to put them into his breeches, which he took ofl for that purpofe ; fome of the inhabitants of St. Kilda who happened to be in the ifle that day were fpectators of this diverfion, and were offended at it, being done without their confent; they therefore devifed an expedient, which at once robbed the feamen of their eggs and the breeches; it was thus: they found a few loofe flones in the fuperficies of the rock, foone of which they let fall down perpendicularly above the feamen, the terror of which obliged them quickly to remove, abandoning both breeches and eggs for their fafety; and the tarpaulin breeches were no fmall ornament in a place where all wore girded plaids.

About two leagues and a half to the north of St. Kilda, is the rock Stack-Ly, two hundred paces in circumference, and of a great heighth, being a perfect triangle turning to a point at the top; it is vifible above twenty leagues diftant in a fair day, and appears blue ; there is no grafs nor earth to cover it, but fometimes perfectly white with Solan geefe fitting on and about it. One would think it next to impofible to climb this rock, which 1 expreffed, being very near it; but the inhabitants affured me it was practicable, and to convince me of the truth of it, they bid me look up near the top, where I petecived a ftone pyramid-houfe, which the inhabitants built for lodging themfelves in it in Auguft, at which time the feafon proves incontant there; this obliges the inhabitants in point of prudence to fend a competent number of thofe to whofe fhare the lot falls; thefe are to land on this rock fome days before the Solan geefe take wing; if they neglect this piece of the-fight, one windy day may difappoint them of five, fix, or feven thouland Solan gowle, which this rock affords yearly. They are fo very numerous here, that they cannot be divided in refpect to their lands, as elfewhere; this therefore is the ralion why they fend here by lots, and thofe who are fent act for the public intereft, and when they have knocked on the head all that may be reached, they then carry them to a harp point, called the Cafting Point, from whence they throw them into the fea, for the height is fuch that they dare not throw them into the boat, until the boatmen cry crough, left the feat, which has a ftrong current there fhould carry them off, as it does fometimes, if too many are thrown down at once : thus by degrees, getting all in, they return home; and after their arrival every man has his flare proportioned to his lands, and what remains under the number ten, is due to the officer as a part of his yearly lalary. In this rock the Solan geefe are allowed to hatch their firt eggs, but it is not fo in the rocks next to be defcribed; and that for this reafon, that if all were allowed to
hatch at the fame time, the lofs of the product in one rock would at the fame time prove the lofs of all the reft, fince all would take wing pretty nearly at the fame time.

The ifle Borera lies near half a league from Stack-Ly, to the north-eaft of it, being in circumference one mile and an half; it feeds about four hundred heep per annum, and would feed more, did not the Solan geefe pluck a large fhare of the grals for their nefts.

This ine is very high, all rock, inacceffible except in a calm, and has only one place for landing, towards the fouth: in the weft end of this ine is Siallir-Houfe, which is much larger than that of the female warrior in St. Kilda, but of the fame model in all refpects; it is all green without like a little hill ; the inhabitants have a tradition that it was built by one Stallir, a devout hermit of St. Kilda; and had he indeed travelied the univerfe he could fcarcely have found a inore folitary place for a monaltic life.

There are about forty fone pyramids in this ine, for drying and preferving their fowl, \&c. Thefe little houfes are all of loofe fones, and feen at fome dittance; here is allo a furprizing number of fowl, the grafs as well as the rocks filled with them. The Solan geefe poffers it for the moft part; they are always mafters wherever they come, and have already banifhed feveral fpecies of fowl from this ine.

An earthquake was felt here in the year 1686, which lafted only for a few minutes; it was very anazing to the poor people, who were unacquainted with any fuch commotion before, or fince.

To the weft of Borer2 lies the rock Stack.Narmin, within pitol hot; this rock is half a mile in circumference, and as inacceflible as any of the above-mentioned; there is a poffibility of landing only in twu places; nor that but in a perfect calm, and after landing the danger in clinhting is very great. The rock has neither earth or grafs to cover it, has a fountain of good water iffuing out above the middle of it, running eafterly, and abounds with Solan geefe and other fowl; here are feveral fone pyramids, as well for lodging the inhabitants that attend the feafons of the Solan gecfe, as for thofa that prefeve and dry them. The fea rifes and rages extremely upon this rock: we had the curiofity, being invited by a fair day, to vifit it for pleafure, but we found it very hazardous; the waves from under our boat rebounding from off the rock, and mounting over our heads, we durt not venture to land, though men with ropes were fent before us; we thought it indeed hazard enough to be near this rock; the wind blowing freth, we had much difficulty to reach St. Kilda again. I remember they brought eight hundret of the preceding year's Solan geefe dried in their pyramids; after our landing, the geefe being calt together in one heap upon the ground, the owners fell to fhare out each man his own: at which I was a little furprifed, they being all of a tribe; but having found upon enquiry that every goofe carried a diftinguithing mark on the foot, peculiar to the awner, I was then fatisticd in this piece of fingularity.
'there is a violent current, whether ebb or flood, upon all the coafts of St. Kild,, the leffer incs and rocks. It is obferved to be more impectous with fpring than neap tides; there are eddes on all the coafts, except at a harp point where the tides keep their die courfe; the ebb fouherly, and flood northerly.

A touth ealt moon caufes high tide; the fpring-tides are always at the fuil and new mocn; the two days following they are higher, and from that time decreafie until the increale of the moon again, "ith which it rifes gradually till the fecond atter the full mon. Shis obfervation the famen find to hold true betwixt the Mule of Kantyre, and the Farrow Head in Stratimaver.

The land fowls produced here are hawks extriordinary good. eagles, plovers, crowe, wrane, tlone-chaker, craker, cuckoo; this lalt is faid very rarely to be feen here, and :tat upon extraordinary oecafions, fuch as the death of the proprictor Mack. Leod, the
fteward's death, or the arrival of fonie notable franger. I was not able to forbear laughing at this relation, as founded only upon tancy; which I no looner exprefled, than the inhabiants wondered at my incredulity, faying that all thei: anceflors for a feries of feveral a;es had remarked the truth of this obfervation and for a further confirmation appealed to the prefent fleward, whether he had not known this obfervation to have been true, both in his own and his father's tine, who was alfo fteward before him? After a paricular inquiry, he told me, that hoth in his own and father's lifetime the truth of the obfervation had been conflantly believed, and that feveral of the inhabitants now living have oblerved the cuck oo to have appeared after the death of the two laft proprietors, and the two laft Itewards, and alfo before the arrival of feveral Itran.. ", it was taken notice of before our arrival, which they afcribe to my coming there as the only ftranger, the minifter having been there before.

The fea fowl are, firt, gairfowl, being the fatelieft, as well as the largeft fort, and above the fize of a Solan goofe, of a black colour, red :about the eyes, a large white foot under each, a long broad bill; it fands Itately, its whole body cread, its wings fhort, flies vot at all; lays its egg upon the bare rock, which, if taken away, the lays no more for that year; the is whole-fnoted, and has the hatching fpot upon her breaft, i. e. a bare fpot from which the feathers have fallen off with the heat in hatching; is egg is twice as big as that of a Solan goofe, and is variouny fpotted, black, green, and dark; it comes without regard to any wind, appears the firit of May, and goes away about the middle of June.

The Solan goofe, as fome imagine from the Irifh word Sou'l.er, corrupted and adapred to the Scottill language, qui oculis irretortis à longinquo refpicit predam, equals a common goofe in bignels; is by mealure from the tip of the bill to the extremity of the foot thirty four inches long, and to the end of the tail thirty-nine; the wings extend very far, here being feventy-two inches diftance betwixt the extreme tips; its till is Ing, traight, of a dark colour, a little crook d at the point; behind the eyes the fkin of the fide of the head is bate of teathers, the cars fmall, the eys hazel-coloured; it hath four tocs, the foet and ligs black as far as they are bare; the plumage is like that of a grooie. The colour of the old ones is white all over, exceptiag the extreme tips of the winge, which are black, and the top of the lead, which is yellow, as fome think the effet of age. The young ones are of a dark hrown cellour, turaing white after they are a yar ond; its egg tomewhat le's than that of a lued grofe, fina lat each end, and calls a thick fourf, and has tithe or no yolis ; the inbabitants are accultomed to diunk it rav, heving from experience found it very pectoral and cephalic. The Solan geefe hatch by turns. Wh. 1 it returns from its fiching, it carries five or fix herrings in its gorget, a! entire and undigelted : upon its arrival at the nelt, the hatching fowl puts its head in the fifher's throat, and pulls out the filh with its bill as with a pincer, and that with very great noife, which I had occafion frequently to obferve. They continue to plack grals for their netts from their coming in Murch till the young fowl is ready to Hy in Augult or September, according as the inhabitants take or leave the firtt or fecond eggs. It is remarkable they never pluck gralis but on a windy day; the reafon the inhabitauts give fer this is, that a windy day is their vacation from fifhing, and they beflow it upon this employment, which proves fatal to many of them; for, atter their fatigue, they often fall alleep, and the inhabitants, taking the opportunity, are ready at hand to knock them on the head. Their food is herring, mackarel, and fyes. Englif hooks are ofien found in the ftomachs both of young and old Solan geefe, though noue of this kind are ufed uearer than the illes twenty leagues diftant; this mult happen either from
the filh pulling away the hooks in thofe illes and then going to St. Kilda, or by their being carried thither, by the old geefe.
5. The Solan geefe are always the fureft fign of herrings, for wherever the one is feen the other is never far off. "There is a tribe of barren Solan geefe which have no nefts, and fit upon the bare rock; thefe are not the young fowls of a year old, whire dark colour would foon diftinguifh them, but old ones, in all things like the ret?; thefe have a province, as it were, allotted them, and are in a feparate fate, having a lock two hundred paces diftant from all other; neither do they meddle with, or ap:proach to thofe hatching, or any other fowl; they fympathize and fifh together: this was told me by the inhabitants, and afterwards contirmed leveral times by my own oblervation.

The Solan geefe have always fome of their number keeping contry in the night, and if they are furprized, as it often happens, all the fock are taken one after another; but if the centinel be awale at the approach of the cro $1=$ fowlere, and hear a noife, it cries foftly, Gref, grog, at which the flock move not ; but if the centinel fees or hears the fowler approaching, he cries quickly, Bir, bir, wi.ach flould feem to import danger, fince immediately after the whole tribe take wing, leaving the fowler alons on the rock to return home re infecti, all his labour for that night being ipent in vain. Apollonius If yancus mirht have here found a large field of diverfion, who is fail to have travelled over many kingdoms, to learn the language of beants and birds.

Befides this way of tealing upon them in the night-time, they are alfo catched in common gins of horfe-hair, from which they fruggle lefs to extricate themfelves that anyother fow, nowithitanding their fize and frength; they are alfo canght in ta herring. loches with a board fet on purpode to float above water, upon it a herring fixed, which the goofe perceiving, flics up to a competent height, till finding himi in a fraight line above the fifh, bends his courfe perpencienlaty piercing the air, as an arrow from a bow, hits the board, into which he runs his bill with all his force, and is irrecoverably taken. '1he Solan goofe comes about the midule of March with a S. W. wind, warn foow, or ruin, and goes away, according as the inhabitants determine the time, $i$. $c$. by taising away or leaving its egg, whether at the firll, fecond, or third time he lavs.

The fuimar in bienefs equals the malls of the fecond rate; its wings very long, the ontride of which are of a greyifh white colour, the infide and breaft all white, a thick bill two inches long, crooked and prominent at the end, with wide noftrils in the middle, all of a pale colour; the upper mandible, or jaw, hangs over the lower on both fides and at the point, the feet pale, not very broad, with fharp toes, and a back toc; it picks food out of the Dacks of living whales, it, as is fad, ufes forrel with it, for both are found in its neff; it lays its eggy commonly the firt, ficond, we third day of May; which is larger than that of a Sulan goole egg, of a white colour, and very thin, the fhell fo very tender that it breaks in pieces it the fafon proves rainy; when the egg is once taken away it lays no more that year like other lowl; the young ones are hatched in the middle of June, and are ready to take wing before the twontieth of July; it comes in November, the fure meffenger of evil tidings, being always uccompanied with boifterous weft winds, great fnow, ram, or hail, and is the only fea-fowl that flays here at the year, except the month of September and part of octwer. The inhabitants prefer this, whether joung or old, to all other; the old is of a delicate tate, is a misture of fat and lean; the tefh white, no blood to be found but in the head and neck; the young is all fat, except the bones, having no blood but in the head; and when the
young fulmar is ready to take wing, upon being approached, ejeEts a quantity of pure oil out at his bill, and will be certain to hit any that attack him, in the face, though feven paces diftant; this he ufes of by way of defence, but the inhabitants take care to prevent it by furprizing the fowl behind, having for this purpofe a wooden dill fixed to the end of their rods, which they hold before his bill as he fpouts out the oil; they furprize hinn alfo from behind by taking hold of his bill, which they tie with a thread, and upon their return home they untie it -with a difh under to receive the oil: this oilis fometimes of a reddifh, fometimes of a yellow colour, and the inhacitants afd other iflanders put a great value upon it, and ufe it as a catholicon for difeafes, efpecially forpains in the bones, fitches, \&cc. fome in the adjacent ifles ufe it as purge, others as an cmetic ; it is hot in quality, and forcessits paffage through any wooden veflicl.

The fulmar is a fure prognofticator of the weft-wind; if it comes to land, no wett wind is to be expected for fome time, but if it keeps at fea, or goes to fea from the land, whether the wind blow from the fouth, north, or eaft, or whether it is a perfect calm, his kecping the fea is always a certain preflewe of an aproaching weft-wind; from that quarter he is obferred to return with his prey; its cagg is as large as that of a Solan goofe, white in colour, fharp at one ond, fomewhat blunt at the other.
The feraber, fo called in St. Kilda, in the Farro Inlands puffaet, in Holland the Greenland dove, lais a fmall bill fharp pointed, a little crooked at the end, and prominent; it is as large as a pircon, its whole body being black, except a white fpot on cach wing; its egg grey, farap at one end, and blunt at the oth.jr.
It comes in the month of March, and in the night-time, without regard to any wind; it is never to ba feen but in the night, being all the day either abroad at fifhing, or upon its neft, which it digs very far under ground, from whence it never comes in day-light; it picks its food out of the hiving whale, with which they fay, it ufes forrel, and both are found in its neft. 'The young puftin is as fat as the young fulmar, and goes away in Augult, if its firt ege be fpared.
The lavy, fo called by the inhabitants of St. Kilda, by the Welch guillem, is nearly as lig as a duck; its head and upper-ficle of the neck all downwards of a dark brown; the breaft white, the bill itraight and harp pointed; the upper chop hanging over the lower; its feet and claws black.

Its egg in bignefs is near to that of a goofe egg, fharp at one cond, and blunt at the other; the colour of it prettily mixed wish green and black; others of them are of a pale colour, with red and brown ftreaks, but the latter is very rare; this egg for ordinary food is by the inhabitants and others, preferred above all the eggs had here. This fowl comes with a fouth-weft wind, if fair, the twenticth of February; the time of its going away depends upon the inhabitants taking or leaving its firft, fecond, or third egg: if it flays upon land for the fpace of three days without intermifion, it is a fign of foutherly wind and fair weather, but if it goes to fea before the third expires, it is then a fign of a florm.
The bird, by the inhabitants called the falk, the razor-bill in the weft of England, the awk in the north, the inurre in Cornwall, alca hoori, is a fize lefs than the lavy; its head, neck, back, and tail black; the ininde toward the middle of the throat white, the throat under the elin of a dutky black; beyoud the noftrils in the upper jaw is a fur. row deeper than that in the couller-ncb; the upper chop crooked at the erd, and hangs over the lower, both having tranfverfe furrows. It lays its egg in May, its young take wing the middle of July, if the inhabitants do not determine its fay longer, by taking the egg, which in bignefs is nest to the lavy, or guillem egg, and is varioully fpotted, harp at $r$ • end and blunt at the other."

The bowger, fo called by thofe in St. Kilda, coulter-nel, by tione in the Farn Inands, and in Cornwall, poje, is of the fize of a pigeon, is bill fhort, broad, and compre "cia' fidewife, contrary to the bills of ducks, of a triangular figure, and ending in a fharp point, the upper jaw arcuate and crooked at the point ; the noftrils are long holes produced by the aperture of the mouth; the bill is of tivo colours, near the head of in ath colour, and red towards the point ; the liet are yellow, the claws of a dark blue; the whole back black, breaft and belly white. They breed in boles under ground, and come whilia a fouth-weft wind about the twenty-fecond of March, lay their egge the twentyiecond of A pril, and produce the fowl the twenty-fecond of May, if their firft egg be not taken away; it is tharp at one en! and blunt at the other.

The affilag is as large as a linnet, black bill, wide noftrils at the upper part, crooked at the point like the fulmar's. bill. It comes about the twenty-lecond of March, without any regard to winds, lays is egg about the twenticth of May, and produces the fowl towards the middle of October, then goes away about the end of November.

There are three iorts of fea-malls here : the firf of a grey colour, like a goofe; the fecond confiderabiy lefs, and of a grey colour ; and the third fort white, and lefs in fize than a tame duck; the inhabitants call it reddag; it comes the fifteenth of April wilh 2 fouth-weft wind, lays its egg about the middle of M.y, and goes away in the nonth of Auguft.

The tirma, or fea-pie, by the inl.abitants called trilichan, comes in May, goes away in Auguf: if it comes the beginning of May it is a fign of a good fummer, if later, the contrary is obferved. This fowl is cloven-footed, and confequently fwims not.

It is obferved of all the fea-fowls here, that they are fatteit in time of hatching, except the Solan geefe.

Every fowl lays an egg three different times, except the gair-fowl and fulmar, which lay but once: if the firlt or fecond ege be taken away, every fowl lays but one orber egg that year, except the fea-malls, and they ordinarily lay the thid egg, whether the firft and fecond eggs be taken away or no.

The inhabitants obferve, that when the April moon goes far in May, the fowls are ten or twelve days later in laying their eggs, than ordinarily they ufe to be.

The ishabitants likewife fay, that of thefe fowls there firlt come uver fome ipies, or harbingers, efpecially of the Solan geefe, towering about the illands where their nefts are, and that when they have nade a review thereof they fly away, and in two or three days after the whole tribe are feen coming. Whither the fowls fly, and where they fpend their winter, the inhabitants are utterly ignorant of.

The eggs are found to be of an aftringent and windy quality to it rangers, but, it feems, are not fo to the inhabitants, who are ufed to eat them from the nefl. Our men upon their arrival eating greedily of them became coltive ard feverif, fome had the hemorrheid veins fivelled; Mir Campbell and I were at no fimall trouhle before we could reduce them to their ordinary tempe, we ordered a glifter for then made of the rocts of fedges, frefh butter, and falt, which, being alminilterci, had its wilhed-for effeet; the inhabitants reckoned this an extraordinary performance, being, it fectus, the frift of the kind they had ever heard of.

They preferve their eggs commonly in the ftone puramids, feattering; the burnt afhes of turf under and about them, to defend them from the air, drynels being their only prefervative, and moifture their corruption; they pueferve them fix, feven, or eight months, as abovefaid, and then they becoine appetizing and loofening, efpecially thofe that begin to turn.

That fuch a great number of wild fowl are fo tame, as to be eafily taken by the rods and gins, is not to be much admired by any who will be at the pains to confider the reafon, which is the great inclination of propagating their fpecies; fo powerful is the natural affection for their offspring, that they choofe rather to die upon the egg, or fowl, than efcape with their own lives, (which they could do in a minute) and leave either of thefe to be deftroyed.
It deferves our confideration to reflect ferioully upon the natural propenfity and fagacity of thefe animals in their kind ; which, if compared with many rational creatures, do far outfrip them, and juftly obey the prefcript of their natures, by living up unto that inftinct that Providence has given them.
The inhabitants here are originally defcended of thofe of the adjacent ines, Lewis, Harries, South and North Viff, and Sky : both fexes are naturally grave, and of a fair complexion; fuch as are not fair are natives only for an age or two, but their offfpring proves fairer than themfelves.

There are feveral of them would be reckoned among beauties of the firft rank, were they upon a level with others in their drefs.

Both men and women are well proportioned, nothing differing from thofe of the ifles and continent. The prefent generation comes fhort of the laft in ftrengh and longevity. They fhewed us huge big fones carried by the fathers of fome of the inhabitants now living; any of which is a burthen too heavy for any two of the prefent inhabitants to raife from the ground, and this change is all within the compafs of forty years. But notwithftanding this, any one inhabiting St. Kilda is always reputed ftronger than two of the inhabitants belonging to the ille of Harries, or the adjacent inles. Thofe of St . Kilda have generally but very thin beards, and thofe too do not appear till they arrive at the age of thirty, and in fome not till after hirty-five; they have all but a few hairs upon the uppes lip, and point of the chin.

Both fexes tave a lifp, but more efpecially the women, reither of them pronouncing the letters $\mathrm{d}, \mathrm{g}$, or r . I remember a flory of a craker that lifped (two years ago) the boys of the place took notice of, and were pleafed to hear him, and to ape his cry; one of the fteward's men beholding then, enquired the meaning of their noife, which, he told them, was ridiculous; they returned anfwer, that it was worth his while to behold the fport of a lifping craker, whom they aped; but the man replied, that they played the fool, for the craker diverted himfelf in lifping after them, and charged them with that imperfection; the boys no fooner heard this, but away they ran, and left the craker to cry and lifp as he pleafed.

There are fome of both lexes who bave a genius for poetry, and are great admirers of mufic: the trump or Jew's harp is the only mufical inftrument they have, which difpofes them to dance mightily. Their fight is extraordinary good, and they can difcern things at a great diftance; they have very good memories, and are refolute in their undertakings, chafte, and honeft, but reputed jealous of their wives. They argue clofely, and with lefs pallion than other iflanders, or thofe inhabiting the high.lands on the continent.

They are very cunning, and there is fcarce any circumventing of them in trafic and bartering : the voice of one is the voice of all, being all of of a piece, one common intereft uniting them firmly together. They marry very young, the women at about thirteen or fourteen; and are nice in examining the degrees of confanguinity before marriage. They give fuck to their children for two years. The moft ancient perion among them at prefent is not above eighty years old.

Providence

Providence is very favourable to them in that they are not infefted with feveral dif. eafes which are fo predominant in the other pa:ts of the world: the diftemper that mof prevails here is the fpotted fever, and that too confined to one tribe, to whom this difeafe is, as it were, hecome hereditary; others are liable to fluxes, fevers, pleurifies, and the fpleen; for all which they have but a few.remedies: to get away their pleuretic diforders, they commonly lie upon a warm hearth, with the fide affected downwards; this they look upon as almoft infallible for difpelling the humour or wind that torments them. The fmall-pox hath not been heard of in this place for feveral ages, except in one inflance, of a fingle man who had been infected on the arrival of two of the fleward's retinue, who had not been well recovered of it.

The plants produced here are lapathu!: vulgare, the com non dock, fcurvy-grafs round, being large as the palm of the hand, millc-foil, burfa paf/oris, filver-weed, or argentine, plantane, fage, chicken-weed, forrel, long, or the conmon forrel, all-hail, or fiderites, the fea-pincl., tormentil, the fcurf upon the fones, which has a drying and healing quality, and is likewife ufed for dying. The inhabitants are ignorant of the virtues of thefe herbs; they never lad a potion of phyfic given them in their lives, nor know any thing of phlebotomy ; fo that a phyfician could not expect his bread in this commonwealth.
They have generally good voices, and found lungs; to this the Solan goofe egg fupped raw doth not a little contribute: they are feldem troubled with a cough, except at the fteward's landing, which is no lefs rare than firmly believed by the inhabitants of the adjacent ifles.

Thofe of St. Kilda, upon the whole, gave me this following account : that they always contract a cough upon the fteward's landing, and it proves a great deal more troublefome to them in the night-time, they then difcharging a great deal of phlegm; this indifpofition continues for fome ten, twelve, or fourteen days: the moft fovereign remedy againtt this difeafe is their great and belovel catholicon, the giben, i. e. the fat of their fowls, with which they ftuff the flomach of a Solan gonfe, in faflion of a pudding ; this they put in the infufion of oat-meal, which in their language they call brochan; but it is not fo effectual now as at the begiming, becaufe of the frequent ufe of it. I told then plainly, that I thought all this notion of infection was but a mere fancy, and that at leaft it could not always hold ; at which they feemed offended, faying, that never any before the minifter and myfelf was heard to doubt of the truth of it; which is plainly demonftrated upon the landing of every boat: adding further, that every $\mathrm{d} s$ fign was always for fome end, but here ihere was no room for any, where nothing could be propofed; but for the confirmation of the whole, they appealed to the cafe of infants at the breaft, who were likewife very fubject to this cough, but could not be capable of affecting it, and thereforc, in their opinion, they were infected by fuch as lodged in their houfes. There were farce young or old in the ifle whom I did not examine particularly upon this head, and all agreed in the confirmation of it. They add farther, that when any foreign goods are brought thuther, then the cough is of longer duration than otherwife. They remark, that if the fever has been among thofe of the feward's retinue, though before their arrival there, fome of tha inhabitants are infected with it. If any of the inhabitants of St. Kilsa chance to live, though but a fhort face, in the ines of Harries, Skie, or any of the adjacent ifles they become meagre, and contrict fuch a cough, that the giben mult be had, or elfe they muft return to their native foil. This giben is more fovereign for zemoving of coughs, being ufed by many other illanders than thofe of St. Kilda. They love to have it frequently in their meat as well as drink, by which too frequent ufe of it, it is apt to lofe its virtue: it was remarkable, that after
this infected cough was over, we frangers, and the inhabitants of St. Kilda, making up the number of about two hundred and fifty, though we had frequently affembled upon the occafion of divine fervice, yet neither young nor old anong us all did fo much as once cough more.

Some thirteen years ago the leprofy broke out among them, and fome of their number died by it; there are two families at prefent labouring under this difeafe. The fymptoms of it are, their feet beginning to fail, their appetite declining, their faces beconing too red, and breaking out in pimples, a hoartenefs, and their hair falling off from their heads: the crown of it exulcerates and blifters, and lafty, their beards grow thinner than ordinary.

This difeafe may in a large meafure be afcribed to their grofs feeding, and that on thofe fai fowls, as the fulmar and the Solan geefe; the latter of which they keep fo: the face of a whole year, without falt or pepper to preferve them ; thefe they eat roalted or boiled.

One of thefe lepers being with me one day at the Fulmar-rock, importuned me to give him a remedy for his difeafe : I began to chide him for his ill diet in feeding fo grofsly; but finding the poor fellow ready and implicitly difpofed to do whatever I fhould enjoin, 1 bid him take example from the fulmar, who, they fay, feeds fometimes on forrel: this was a very furprifing advice to him; but when he confidered that the fulmar required forrel to qualify the whale, he was the fooner perfuaded that his giben and goofe might require the fame: I advifed him further, to abfain from the giben and fat fowls, which was no fmall trouble to him, for he loved them exceedingly : I obliged him likewife to mount the hill Conagor, a mile in height, once every morning and evening, and he was very careful to comply with thofe injunctions for the fpace of three days; in which fhort time he made fome advances towards recovering his almoft loft fpeech and appetite, for his throat was pretty nearly flopped up. He continued this practice a week longer, by which means he mended confiderably; and 1 left him fully refolved to proceed in this practice, until he was perfectly reflored to his former ftate of health. I had the occafion to obferve another of thele lepers rave for fome minutes, and when he was recovered to his right mind, he worked at his ordinary employment.

The inhabionts are Chriftians, and much of the primitive temper, neither inclined to enthufiafm $n$ io Popery. They fiwear not the common oaths that prevail in the world; when they refute or deny to give what is alked of them, they do it with a flrong affeveration, which they exprefs emphatically enough in their language to this purpofe: "You are no more to have it, than if God had forbid it;" and thus they exprefs the higheft degree of paffion. They do not fo much as name the devil once in their lifetimes.

They leave off working at twelve o'elock on Saturday, as an ancient cuftom delivered down to them from their anceftors, and go no mere to it again till Monday morning. They believe in God the Father, the Son, and Holy Ghoot ; in a future ftate of happinefs and mifery, and that all events, whether good or bad, are pre-determined by God. They ufe a fet form of prayer at the hoilting of their fails: they lie down at night, rife again in the morning, and begin their labours always in the name of God. They have a notion that firits are embodied, and fancy them to be locally in rocks, hills, or whereever they lift, in an inftant.

Here are three chapels, each of them built with one end towards the eaft, the other towards the weft, the altar always placed at the eaft end : the firt of thefe is called Chrift Chapel, near the village; it is covered and thatched after the manner of their houfes; there is a brazen crucifix lies upon the altar, not exceeding a foot in length;
the body is completely done, diftended, and has a crown on, all in the crucified poflure; they have it in great reverence, though they pay no kind of adoration or worfhip to it; nor do they either handle or fee it, except upon the occafions of marriage, and fwtaring decifive oaths, which puts an end to all frife, and both thefe ceremonies are pub ickly performed. The church-yard is about an hundred paces in circumference, fenced in with a little flone wall, within which they bury their dead; and take care to keep it perfealy neat, void of any kind of naltinefs, nor fufter their cattle to have any accefs to it. The inhabitants, young and old, come to the church-yard every Sunday morning, the chapel not being capacious enough to receive them ; here they devoutly fay the Lord's Prayer, Creed, and Ten Commandments.
'Ihey obferve the feftivals of Chriftmas, Eafter, Good.Friday, St. Columba's Day, and that of All Saints; upon this they have an anniverfary cavalcade, the number of their horfes not exceeding eighteen; thefe they mount by turns, having neither faddle nor indeed a bridle of any kind, except a rope, which manages the hoife only on one fide ; they ride from the fhore to the houle, and when each inan has performed his tour, the fhow is at an end. They are very charitable to their poor, of whom there are not at prefent above three, and thefe carefully provided for by this little cominonwealth, each particular family contributing according to their ability for their neceflities; their condition is enquired into weekly, or monthly, as their occafions ferve, but more efpecially at the time of their feltivals, they flay fome fheep on purpofe to diftribute anong the poor, with bread proportionable; they are very charitable likewife to lirangers in diftrefs; this they had opportunity to exprefs to a company of Frenchmen and Spaniards who loft their Chip at Rokol in the year 1686, and came in in a pinnace to St. Kilda, where they were plentifully fupplied with barley-Lread, butter, cheefe, Solan geefe, eggs, \&c. Both feamen and inhajitants were barbarians one to another, the inhabitants fpeaking only the Irifh tongue, to which the French and Spaniards were altogether ftrangers. Upon their landing they pointed to the weft naming Rokol to the intabitants, and after that they pointed downward with their finger, fignifying the finking and perifhing of their veffel; they thewed them Rokol in the lea map, far welt of St. Kilda. This and much more the matters of thefe fhips told to a prieft in the next inland, who underfood French. The inhabitants acquainted me that the pinnace which carried the feamen from Rokol was fo very low, that the crew added a foot height of canvafs round it all, and began to work at it upon Sunday ; at which the inhabitants were aftonifhed, and being aighly diffatisfied, plucked the hatchets and other inftruments out of their hands, and did not reftore then till Monday morning.

The inhabitants had occafion to thew great kindnels to a boat's crew that was driven from the oppofite ine S. W., whither they themlelves were driven afterwards, and where they were rreated with no lefs civility and kindnefs than the above-mentioned had been by them; fo that it may be faid of them with great juflice, that their charity is as extenfive as the occafions of it.

The fecond of thefe chapels bears the name of St. Columba, the thirl of St. Brianan ; both buil after the manner of Chrift's chapel, having church-yards belongind to them, and are a quarter of a mile diltant from each oher.

They told me of a thip that dropped anchor in the mouth of the biy the preceding year, and that the Lowlanders aboard her were not Chriftians; I enquired if their interpreter, who they faill fooke bad Lrith, had owned this to be a truth. They antwered in the negative; but that they knew this by their practices, and that in thefe tirefe p.rticulars: the firt was the working upon Sunday, carrying feveral boats full of flones atboard for ballaft; the fecond was the taking away lome of their cows without any return for
them,
them, except a few Irih copper pieces; and the third was, the attempt made by them to ravifh their women, a practice altogether unknown in St. Kilda, where there has not been one inftance of fornication or adultery for many ages before this time. I remember they told me, 'hat the bribe offered for debauching the poor women, was a piece of broad money, than which there could be nothing lefs charning in a place where the imhabitants make no diltinction betwixt a guinea and a fixpence.
'Their marriages are celebrated after the following manner: when any two of them have agreed to take one another for man and wife, the officer who prefides over them fummons all the inhabitants of both fexes to Chrift's chapel, where being affembled, he cuquires publickly if there be any lawful impediment why thefe parties fhould not be joined in the bond of matrimony? And if there be no objection to the contrary, he then enquires of the parties if they are refolved to live together in weal and woe, \&c. After their aftent he declares them married perfons, and then defires them to ratify this their folemn promife in the prefence of God and the people, in order to which the crucifix is tendered to them, and both put their right hands upon it, as the ceremony by which they fwear fidelity one to another during their life-time.

Mr. Campbell, the minilter, married in this manner fifteen pair of the inhabitants on the feventeenth of June, who inmediately after their marriage joined in a country dance, with bagpipe for their mufic, which pleafed them exceedingly.

They bantize in the following manner: the parent calls in the officer, or any of his neighbours, to baptize his child, and another to be fponfor; he that performs the minifter's part being told what the child's name is to be, fays, "A. B. I baptife thee to your father and your mother, in the name of the Father, Son, and Holy Ghoft:" then the fponfor takes the child in his arms, as doth his wife as godmother, and ever after this there is a friendihip between the parent and the fponfor, which is efteemed fo facred and inviolable, that no accident, how crofs foever, is able to fet them at variance, and it reconciles fuch as have been at enmity formerly.

This ille belongs in property to the laird of Mack-Leod, head of one of the mof ancient fanilies of Scotland; it is never farmed, but moft commonly beftowed upon fome favourite, one of his friends or followers who is called Steward of the Ille. The prefent fleward's name is Alexander Mack-Leod, who pays yearly to his mafter an acknowjedgment of the various prolucts of this int. This fteward vifits St. Kilda every fummer, and upon his arrival he and his retinue have all the milk in the ifle beftowed on them in a treat ; there is another beftowed on them upon St. Columba's Day, the fifteenth of June; and we had a fhare of this fecond treat. The feward's retinue confifts of forty, fifty, or fixty perfons, and among them, perhaps, the moft meagre in the parifh are carried thither to be secruited with good cheer; but this retinue is now retrenched, as alfo fome of their ancient and unreafonable exactions.

The feward lives upon the charge of the inhabitants until the time that the Solan geefe are ready to fly, which the inhabitants think long enough; the daily allowance paid by them is very regularly exacted, with regard to their refpective proportions of lands and rocks. There is not a parcel of men in the world more fcrupuloully nice and punctilious in maintaining their liberties and properties than thefe are, being moft religioufly fond of their ancient laws and fatutes; nor will they by any means confent to alter their firlt, though unreafouable, conllitutions; and we had a pregnant inttance of this their genius for preferving their ancient cultoms; they have unchangeably continued thoir firft and ancient meafures, as the maile, amir, and cubit : this maile contains ten pecks; the anir, which they at prefent make ule of, is probably the Hebrew omer, which contains near two pecks; the cubit, or in their language, lave keile, i. e. an hand
of wood, is the diftance from the elbow to the fingers' ends; this they only ufe in menfur. ing their boats: the amir, or rather halfamir, as they call it, is compofed of thin boards, and, as they acknowledge, has been ufed thefe fourfcore years; in which tract of time it is confiderably fallen fhort of the meafure of which it was at firlt, which they themfelves do not alogether deny; the feward, to compenfate this lofs, protends to a received cuftom of adding the hand of him that meafurcs the corn to the amir fide, holding fome of the barley above the due meafure, which the inhabitants complain of as unreafonable: the fteward, to fatisfy them, offered to refer the debate to Mr. Campbell's decifion and mine, they themfelves being to propofe their objections, and two of his retinue, who were well fiilled in the cuftoms of the place, in the time of fome of the former flewards, being appointed to anfwer them, and he promifed that he would acquiefce in the decifion, though it fhould prove to his prejudice; but they would not atter that meafure if Mack-Leod did not exprefsly command it, being perfuaded that he could not attempt to do fo, as his and their anceftors had had it in fuch efteen for fo many ages. So great was their concern for this amir, that they unanimoully determined to fend the officer as envoy, according to the ancient cuflom, to reprefent their cafe to Mack-Leod; this was the refult of a general council, in which the matter of every family lias a vote, fince every family pays this officer an amir of barley per annum oo maintain his character.

This officer as fuch, is obliged to adjuut the refpective proportions of lands, grafs, and rocks, and what elfe could be claimed by virtue of the laft tack or leafe, which is never longer than for three years, condefcended to by the fteward; nay, he is obliged always to difpute with the fteward for what is due to any of them, and never to give over until he has obtained his demand, or put the fleward into fuch a pafion, that he gives the officer at leaft three ftrokes with his cudgel upon the crown of his head, which is the utinoft that is required of him by their ancient cuftoms. I faid to the officer who gave me this account, what if the feward fhould give him but one blow? he anfwered, that the inhabitants would not be fatisfied if he did not fo far plead as to irritate the fleward tc give both a iecond and a third: I had the farther curiofity to enquire of the feward himfelf if he was wont to treat the officer in this manner; who anfwered, that it was an ancient cuftom, which in hisshort time he had not had occafion to practife; but if he fhould, he would not confine himfelf to the number of three blows, if the officer fhould prove indifcrect.

The fleward beftows fome acres of land upon the officer for ferving him and the in. habitants; he gives him likewife the bonnet worn by himfelf upon his going out of the ifland; the feevard's wife leaves with the officer's wife the kercher or head.drefs worn by herfelt, and fhe beftows likewife upon her an ounce of indigo. The feward has a large cake of barley prefented to him by the officer at every meal, and it muft be made fo large as flall be fulficient to latisfy three men at a time, and by way of eminence it is baked in the form of a triangle, and furrowed twice round; the officer is likewife obliged to furuith the fteward with mutton or beef to his dinner every Sunday during his refidence in the illand.

Notwithitanding thefe reciprocal acts of kindnefs, this officer muft be allowed to go in quality of an envoy to Mack-L.eod againft the fteward upon extraordinary occafions; if the commonvealth have any grievances to redrefs, as that of the amir now depending; but the commifion given him is limited, the whole boat's crew being joined in commifion with him, and are a check upon him, left his dependence upon the feward night be apt to bias hiat. He makes his entry very fubmilfively, taking off his bonnet at a great diftance when he appears in Nack-Leod's prefence, bowing his head and hand low near to the ground, his retinue doing the like behind him one after another, mak-
ing, as it were, a chain ; this being their manner of walking both at home and abroad, for they walk not abreaft as others do ; and in making their purchafe among the rocks, :one leads the van, and the refl follow.

The number of people inhabiting this ife at prefent is about one hundred and eighty, who in the fteward's abfence are roverned by one Douald Mack-Gill-Colm, as their meiire, which imports an officer. This officer was anciently chofen, or at leaft approved of, by the people, before the fteward fettled him in his office, but now the flewards have the nomination of him abfolutely; he is prefident over them in all their debates, takes care that the lots be managed impartially, that none to whofe Chare they fall may have caufe to repine, whether it be for the fteward's fervice, or that of the commonwealth. The ufe of the lots, together with the crucifix, do mightily contribute to their peace and quiet, keeping every one within his proper bounds. It muft needs be a very odd cafe indeed that falls not within the compais of either of thefe two to determine. When any cafe happens which does not fall under the decifion of lots, and it is capable of being decided only by the oath of the parties, then the crucifix mult determine the matter; and if it fhould prove to be a cafe of the higheft importance, any of them are at liberty to refer it to his neighbour's oath, without any fufpicion of perjury, provided the ceremony of touching the crucifix with their right hand be obferved; and this is always publicly performed.
If any man is guilty of beating his neighbour, he is liable to a fine not exceeding the value of two fhillings Iterling; if any has beat his neighbour fo as to draw blood from him, he is liable to a fine, not exceeding four and fixpence. Thefe crimes are complained of by the officer to the fteward upon his arrival, who either exacts the whole, or difpenfes with the fines, as he judges convenient for their future quiet and peace.

They have only one common kiln, which ferves them all by turns, as the lots fall to their hare ; he whofe lot happens to be laft does not refent it at all.
The officer, by virtue of his place, is obliged through a point of honour to be the firt that lands in the leffer ifles and rocks, from whence they carry their fowls and eggs, and not without fome trouble too. This notion of honour expofes him to frequent dangers; and perhaps, it may not be unpleafant to defcribe it as I have feenit practifed; and it is thus: when they come as near to the rock as they think may confift with the fafety of the boat, which is not a little toffed by the raging of the fea, thofe, whofe turn it is, are employed with poles to keep off the boat, which is in great danger, in regard of the violence of the waves beating upon the rock, and they are to watch the opportunity of the calmeft wave; upon the firft appearance of which the officer jumps out upon the rock; if there may be any apparent danger he ties a rope about his midule, with one end of it faftened to the boat; if he has landed fafe, he then fixes his feet in a fecure place, and by the alliftance of this rope draws up all the crew to him, except thofe whofe turn it is to look after the boat ; but if in jumping out he falls into the fea, as his misfortune is fo to do fometimes, he is drawn into the boat again by that part of the rope that is fo faftened to it, and then the next, whofe turn it is, mult try his luck, the officer after his fall being fuppofed to be fufficiently fatigued, fo that he is not obliged to adventure his perfon again to a fecond hazard upon this occafion, efpecially as he is expofed to the greateft danger that offers upon their landing when they return back again to the ille, where the fea often rages, he being obliged then by virtue of his office to ftay in the boat, after the whole crew are landed, where he muft continue employing his pole, until the boat be either brought fafe to land, or fplit upon the rocks.

They furnih themfelves with ropes to carry them through the more inacceflible rocks; of thefe ropes there are only three in the whole ifland, each of them twenty-four $\mathrm{fa}_{\mathrm{a}}$ -
thoms in length; and they are either knit together and lengthened by tying the one to the other, or ufed feparately as occafion requires; the chief thing upon which the frength of thefe ropes depends, is cow's hides falted, and cut out in one long piece; this they twift round the ordinary rope of hemp, which fecures it from being cus by the rocks : they join fometimes at the lower end two ropes, one of which they tic about the middle of one climber, and another about the middle of another, that thefe may affift one another in cafe of a fall; but the misfortune is, that fometimes the one happens to pull down the other, and fo both fall into the fea; but if they efcape, as they commonly do of late, they get an incredible number of eggs and fowls.

The ropes belong to the comnonwealth, and are not to be ufed without the general confent; the lots determine the time, place, and perfons for ufing them ; they get together in three days a much greater number of fowls and eggs than their boat is able to carry away, and therefore what is over and above they leave behind in their tone pyramids: they catch their fowls with gins made of horle-hair, thefe are tied to the end of their fifhing-rods, with which the fowlers creep through the rocks indifcernably, putting the noofe over their heads and about their necks, and fo draw them inftantly; they ufe likewife hair gins which they fet upon plain rocks, both the ends faftened by a fone, and fo catch forty or fifty a day with them.

The inhabitants, I mult tell you, run no fmall danger in queft of thefe fowla and egge, infomuch that I fear it would be thought an hyperbole to relate the inacceflibletuefs, fteepnefs, and height, of thofe formidable rocks which they venture to climb. 1 myfelf have feen fome of them climb up the corner of a rock with their backs to it, making ufe only of their heels and elbows, without any other affiftance; and they have this way acquired a dexterity in climbing beyond any I ever yet faw: neceffity has made them apply themfelves to this, and cuftom has perfected them in it; fo that it is become familiar to them almoft from their cradles, the young boys at three years old begin to climb the walls of houfes : their frequent difcourfea of climbing, together with the fatal eud of feveral in the exercife of it, is the fame to them, as that of fighting and killing is with foldiers, and is become as familiar and lefs formidable to them, than otherwife certainly it would be. 1 faw two young men, to whofe fhare the lots fell in June laft, for taking the neft of a hawk, which was in a high rock above the fea, bringing home the hawks in a few minuted, without any affifance at all.

Their dogs are likewife very dexterous in climbling and bringing out from their holes thofe fowls which build their nefts far under ground, fuch as the feraber, puffinet, \&ec. which they carry in their teeth to their mafters, letting them fall upon the ground be fore them, though afleep.

The inhabitants fpeak the Irifh tongue only; they exprefs chemfelves flowly but pertinently, and have the fame language with thofe of Harries and other ines, who retain the lrim in iss purity.

Their habit anciently was of fheepfkins, which has been worn by feveral of the inhabitan's now living; the mien at this day wear a fhort doublet reaching to their wafte, about that a double plait of plaid, both ends joined together with the bone of a fulmar; this plaid reaches no further than their knees, and is above the wait girt with a leather belt; they wear caps of the fame colour and fhape with the capuchins, but fhorter; and on Sundays they wear bonnets; fome of late have got breeches, they are made wide and open at the knees; they wear cloth ftockings, and go without thoes in fummer; their lealher is dreffed with the roots of tormentil.

The women wear upon their heads a linen drefs, ftrait before, and drawing to a fmall point behind below the fhoulders, a foot and an half.in length, and a lock of about fixty hairs
hairs hanging down each cheek, to their breafts, the lower end tied with a knot; their plaid, which is the upper garment, is faftued upon their brealts with a lurge round buckle of brafs in form of a circle; the buckles anciently worn by the Itenario's wives were of filver, but the prefent fteward's wife makes no ute of ci.her this drefs or buckle. The wonen inhabiting this inle wear no thoes nor fockings in the fuamer itime: their ordinary and only thocs are made of the necks of Solan geefe, which they cut above the eyes, the crown of the head ferves for the beel. the whole ikin being cut clofe at the breatt, which end being fowed, the foot en'ers into i , as into a piece of nan row flocking; this fhoe does not laft above five days, and if the downy fide be nex: the ground, then not above three or four; however, there are plenty of them, fome thoufands being catched, or, as they term ir, folen every March.
Both fexes wear coarfe flannel fhirts, which they put off when they go to bed ; they thicken their cloaths upon flakes, or mats of hay iwitted and woven loge her in furall ropes; they work hard at this employment, firlt making ufe of their hands, and then of their feet; when they are at this work, they commonly fing the whols time, one of their number acting the part of a prime chantrefs, whom all the rell follow

They place the faces of their dead towards the catit wh they bury them, bewail their relations exceflively, and upon the feceations make doleful fongs, which they call haments. Upon the news of the lite lack-leod's denth, they abandoned their houfes, and mourned two davs in the fields. They aill a cow, or a theep, before the interment, unlefs it be in the fpring, when this at nony is, on account of the cattle being at that time poor and lean, deferred till they Decome fat.
'Their ordinary food is barlcy ar.' Some oat-bread toked with water : they eat all the fowl already defcribed, being dried ins their ftone-howes, without any falt or fpice to preferve them; and all their beef and mutton is eat freth, after the fame manner they ufe the giben, or fat of their fowls; this giben is by dialy experience found to be a fovereign remedy for healing of green wounds; it cured a cancer in an inhabitant of the inle of L.ewis, and a filtula in one Nicholfon of Sky, in St. Mary's parifh; this was performed by John Mack-Lean, furgeon, there: they boil the fea-plants, dulfe and nake, melting the giben upon them inftead of butter, and upon the roots of filver-weed and dock boiled, and alfo with their fcurvy-grafs ftoved, which is very purgative, and is here of an extraordinary breadth. They ufe this giben with their fifh, and it is become the common vehicle that conveys all their food down their throats. They are undone for want of falt, of which as yet they are but little fenfible; they ufe no fet times for their meals, but are determined purely by their appetites.

They ufe only t? $\quad$ afhes of fea-ware for falting their cheefe, and the florteft only, which grows in theas, is ufed by them; that being reckoned the mildeft.

Their drink is water or whey commonly: they brew ale but rarely, ufing the juice of nettle-roots, which they put in a difh with a little barley-meal dough ; thefe fowens, (i.e. flummery,) being blended together, produce yeft, which puts their wort into a ferment and makes good ale, which, when drank plentifully of, generally difpofes them to dance merrily.

They preferve the Solan geefe in their pyramids for the fpace of a year, litting them down the back, for they have no falt to keep them with. They have built above five hundred of thefe fone pyramids for their fowls, eggs, \&cc.

We made particular inquiry after the number of Solan geefe confumed by each family in the year before we came there, and it amounted in the whole to twenty-two thoufand fix hundred, which, they faid, was lefs than the ordinary number, a great many being loft by the badnefs of the deafon, and the great current into which they are
ouliged to be thrown when taken, the rock being of fo extraordinary a height, that they cannot reach the boat.
Ther is one boat fixteen cubits long, which ferves the whole commonwealth; it is very curioufly divided into apartments proportionable to their lands and rocks; every individual has his fpace diftinguifhed to a hair's breadth, which his neighbour cannot encroach fo much as to lay an egg upon it.

Every partner in fummer provides a large turf to cover his fpace of the boat, thereby defending it from the violence of the fun, which (in its meridian height) reflects inoft vehemently from the fea, and rock upon which the boat lies; at the drawing it up, both fexes are employed in pulling a long rope at the fore end; they are determined in uniting their ftrength by the crier, who is therefore excepted from his fhare in the labour.

There is but one 到el and tinder-box in all this commonwealth; the owner whereof fails not upon ever occafion to frike fire in the leffer ines, to go there, and exact three ebgs, or one of the leffer fowls from each man as a reward for his fervice; this by them is called the fire-penny, and this capitation is very unealy to then: ; I bid them try their cryftal with their knives, which when they faw it produced fire, they were not a little aftonifhed, and at the fame time accufing their own ignorance, confidering the quantity of cryftal growing under the rock of their coaft. This difcovery has delivered them from the fire-penny tax, and they are now no longer liable to it.

They have likewife a pot-peuny tax, which is exacted in the fame manner as the firepenny was, but is much more reafonable; for the pot is carried to the inferior ifles for the public ufe, and is in hazard of being broken; fo that the owners may juflly exact upon this fcore, fince any may venture his pot when he pleafes.

When they have beftowed fome hours in fowling about the rock, and caught a conpetent number, they fit down near the face of it to refrefh themfelves, and in the mean time they fingle out the fattelt of their fowls, plucking them bare, which they carry home to their wives or fweethearts, as a great prefent, and it is always accepted very kinclly froin them, and could not indeed well be otherwife, without great ingratitude, feeing thefe men ordinarily expofe themfelves to great danger, if not to the hazard of their lives, to procure thofe prefents for them.

In the face of the rock, fouth from the town, is the famous fone, known by the name of the Miltrels-Stone; it refembles a door exactly, and is in the very front ot this rock, which is twenty or thirty fathom perpendicular in height, the figure of it being difcernible about the diftance of a mile : upon the lintel of this door, every bachelorwoer is, by an ancient cuftom, obliged in honour to give a feecinen of his affection for the love of his miftrefs, and it is thus: he is to ftand on his left foot, having the one half of it over the rock, he then draws the right foot towards the left, and in this pofture, bowing, puts both his fifts further out to the right foot; after he has performed this, he has acquired no fmall reputation, being ever after accounted worthy the fineft woman in the world: they firmly believe this achievement is always attended with the defired liccefs.

This being the cuftom of the place, one of the inhabitants very gravely defired me to let him know the time limited by me for trying this piece of gallantry before I defigned to leave the place, that he might attend me: I told him the performance would have a quite contrary effect upon me, by robbing me both of my life and miltrefs at the fame moment, but he was of a contrary opinion, and infilied on the good fortune attending it; but I mult confefs all his arguments were too weak to make me attempt the experiment.

They take their meafures in going to the leffer illands from the appearance of the heavens; for when it is clear or cloudy in fuch a quarter, it is a prognoftic of wind or fair weather ; and when the waves are high on the eaft point of the bay, it is an infallible fign of a form, efpecially if they appear very white, even though the weather be at that time calm.

If the waves in the bay make a noife as they break before their beating upon the fhore, it is an infallible forerunner of a weft wind; if a black cloud appears above the fouth fide of the bay, a fouth wind follows fome hours afterwards. It is obfcrved of the fea betwixt St. Kilda and the illes Lewis, Harries, \&c. that it rages more with a north wind, than when it blows from any other quarter. And it is likewife obferved to be lefs raging with the fouth wind than any other.

They know the time of the day by the motion of the fun from one hill or rock to another; upon either of thefe the fun is obferved to appear at different times; and when the fun does not appear, they meafure the day by the ebbing and flowing of the fea, which they can tell exactly, though they fhould not fee the fhore for fome days together : their knowledge of the tides depends upon the changes of the moon, which they are likewife very exact in obferving.

They ufe for their diverfion fhort clubs and balls of wood; the fand is a fair field for this fport and exercife, in which they take great pleafure, and are very nimble ot it; they play for eggs, fowl, hooks, or tobacco; and fo eager are they for victory, that they ftrip themfelves to their fhirts to obtain it : they ufe fwimming and diving, and are very expert in both.

The women have their affemblies in the middle of the village, where they difcourfe of their affairs, in the mean time employing their diftaff, and fpinning in order to make their blankets ; they fing and jeft for diverfion, and in their way undertand poetry, and make verfes. Both men and woinen are very courteous; as often as they paffed by us every day, they faluted us with their ordinary compliment of "God fave you;" each of them making their refpective curtfies.

Both fexes have a great inclination to novelty ; and, perhaps, any thing may be thought new with them that is but different from their way of managing land, cattle, fowl, \&ec. A parcel of them were always attending the minifter and me, admiring our habit, behaviour, \&cc. In a word, all we did or faid was wonderful in their efteem; but above all, writing was moft aftonifhing to them : they cannot conceive how it is poffible for any mortal to exprefs the conceptions of his mind in fuch black characters upon white paper. After they had with admiration argued upon this fubject, I told them, that within the compafs of two years or lefs, if they pleafed, they might eafily be taught to read and write, but they were not of the opinion that either of them could be oblained, at leaft by them in an age.
The officer, in his embaffy in July laft, travelled fo far as to land on the continent next to Sky, and it was a long journey for a native of St. Kilda, for fearce any of the inhabitants have ever had the opportunity of travelling fo far into the world.

They obferved many wonderful things in the courfe of their travels; and think MackLeod's family is equivalent to that of an imperial court, and believe the King alone to be luperior to him : they fay his lady wore fo ftrange a lowland drefs, that it was inpoifible for them to defcribe it ; they admired glafs windows hugely, and a looking-glafs to them was a prodigy ; they were amazed when they faw hangings covering a thick wall of ftone and lime, and condemned it as vain and fuperfluous.

They reckon the ycar, quarter, and month, as in Great Britain. They compute the feveral periods of time by the lives of the proprietors and ftewards, of whofe greateft
actions they have a tradition, of which they difcourfe with as great fatisfaction as any hiforian reflecting on the Ciefars, or greatelt generals in the world.

Tiney account fiding one of the greatelt of earthly grandeurs, and told me with a Arange admiration, that Mack Leod travelled not on foot, as they fuppofed all other men did, and that they had feen feveral horfes which were kept on purpofe for hin to ride upon.

One of their number landing in the ifle of Harries, enquired who was the proprietor of thofe lands? They told him that it was Mack-Leod; which did not a little raife his opinion of him. This man afterwards, when he was in the ifle of Sky, and had travelled fome miles there, one day ftanding upon an eminence, and looking round about, fancied he faw a great part of the world, and then afked to whom thofe lands belonged? and when one of the company had acquainted him, that Mack-Lecd was matter of thofe lands alfo, the St. Kilda man, lifting úp his eyes and hands to heaven, cried out with admiration, "O mighty prince, who art maller of fuch valt territories !" This he expreffed fo emphatically in the Irifh language, that the faying from that time became a proverb whenever any body would exprefs a greatnefs and plenitude of power.

One of the things they admired mof was the growth of trees; they thought the beauty of the leaves and branches admirable, and how they grew to fuch a height above plants, was far beyond their conception: one of them, much aftonifhed, told me that the trees pulled him back as he travelled through the woods; and they refolved once to carry fome few of them on their backs to their boats, and take them to St. Kilda, but, upon fecond thoughts, the length of the jurney, being through the greateft part of the iffe of Sky, deterred them from this undertaking, for though they excel others in ftrength, they are yet but bad travellers on foot, being fo much unufed to it.

One of their number travelling in the ine of Sky to the fouth part of it, thought this a prodigious journey; and feeing in the oppofite continent the fhire of Invcrnefs, divided from Sky ony by a na:row fea, inquired of the company if that was the border of Encland.

One of the St. Kilda men, after he hat tiken a pretty large dofe of aqua vite, and was become very heavy with it, as he was slli.:ig into a fleep, and fancying it to be his laft, exprefled to his companions the great fatisfaction he had in meeting with fuch an eafy paffage out of this world; "For (faid he) it is attended with no kind of pain." In hort, their opinion of forcign objects is as remote from the ordinary fentiments of other men, as they are themfelves from all freign conve:

I muit not omit acquainting the readr, that the arcount given of the failor's rudenels to the inhabitants thas created great prejudices in then againtt feamen in general; and, though I endeavoured to bring them into fome gopinion of them, it will not be improper to fpeuk of the termas upon which the iniatitants are refolved to recenve ftrangers. They will admit of no number exceeding $1 / H$, and they too mult be unarmed, or the iniaditants will oppofe them with all their might; but if all aumber not exceeding the atuve, come peaceably, and with good defons, they may expect water and fire gratis, and what effe the place affords on the eafieit terms in the world.

The inhabitan's of St. Kilda are much happier than the generality of mankiad, being almoll the only ponple in the world who feel the fweetnels of true liberty: what the condition of the prople in the golden age is feigned by the pucts to be, that theirs really is, I mean, in innocence and fimplicity, purity, mutual love and cordial friendihip, free from fulicitons cares, and anxious covetoufnefs; from envy, deccit, and diffimulation; from ambition and pride, and the confequences :hat attend them. They are alto-
gether ignorant of the vices of foreigners, and governed by the dictates of reafon and Chriftianity, as it was firt delivered to them by thofe heroic fouls whofe zeal moved them to undergo danger and trouble to plant religion here in one of the remotelt corners of the world.
There is this only wanting to make them the happieft people in this habitable globe, viz. that they themfelves do not know how happy they are, and how much they are above the avarice and flavery of the reft of mankind. Their way of living makes them contemn gold and filver, as below the dignity of human nature; they live by the munif.cence of Heaven, and have no defigns upon one another, but fuch as are purely fuggefted by julice and benevolence.

There being about thirty of the inhabitants one day together in the iffe Soa, they efpied a man with a grey coat and plaid, in a fhirt, floating on the fea upon his belly, and faw likewife a mall pecking at his neck ; this vifion continued above a quarter of an hour, and then difappeared; but fhortly after, one of the fpectators chanced to fall into the fea, and, being drowned, refembled the forewaraing vifion in all things, and the mall w.s alfo feen upon his neck; this was told me by the fleward fome years before, and afterwards was confirmed to me by luch as were themfelves eye-witneffes of it.

None of the inhabita'ts pretended to the fecond fight, except Roderick the impoftor, and one woman, and the told her neighbours, that fhe faw, fome weeks before our coming, a boat (different from that of the fteward) with fome ftrangers in it, drawing near to their ifle.

## An Account of one Roderick, S'ppofed to bave bad Converfation with a familiar Spirit, and pretending to be fent by St. Jobn the Baptift, with new Revelations and Difcoveries.

AFTER our landing, the minifter and I , according to our firt refo'ution, examined the inhaluatits apart concerning the new pretended religion delivered to them by their falfe. prophet.

All of them, young as well as old, both men and women, unanimoufly agreed in the following account : they heartily congritulated the miniter's arrival, and at the fame time declared their abhorrence of the impoftor's delufions, and with repeated inftances begged for the Lord's fake that he might be for ever removed out of the ifle.

This impoftor is a comely, well-proportioned fellow, red-haired, and exceeding all the inhabitats of St. Kilda ia llrength, clis.bing, \&c. IIe is illiterate, and under the fame circumftances with his companions: for he had nut fo much as the advantage of everfeeing any of the Weftern Ines; all his converfation being with the fleward's retinue only, who were as ignorant of letters as himfelf.

In the eighteenth year of his ag, he took the iiberty of going to fifl on as lay (a practice altogether unknow $n$ in St. Kilda) ; and he aflerts, that in his return ho ird, a man in a lowland drefs, i.e. a cloak and hat, appeared to him upon the road; in this unexpected meeting, Roderick fell flat on the ground in great diforder; the man defired him not to be furprifed at his prefence, for that he was John the Baptift inmes dia.ely come from heaven with good tidings to the inhabitants of that place, who had been for a long time kept in ignorance and error ; that he had commilfion to inftruct Roderick in the laws of heaven for the edification of his neighbours: Roderick an. fwered, that he was no way qualified for fo great a charge; but the pretended Baptitt defired him to be of good courage, for that he would intantly make him capable for his tuifion, and then delivered to him the following fcheme, in which Roderick fo
mixed the daudable cuftoms of the church with his own diatolical inventions, that it became impofible for fo ignorant a people, to diftinguith the one from the other.
The firf and principal command he impofed upon then, was that of the Friday's fatt, which he enjoined with fuch frictnefs, as not to allow one of them to tafte any kind of food before night, no, not fo much as a fnuff of tobacco, which they love extremely; this bare faft, without any religious exercife attending it, was the firft badge and cognizance of his followers. He perfuared the people, that fome of their deceafed neighbours were nominated faints in beaven, and advocates for thofe who furvived; he told them, every one had his refpective advocate; that the anniverfary of every faint was io be commemorated by every perfon under whofe tutelage he was reputed to be. And this is obferved by treating the neighbours with a plentiful entertainament of beef or mutton, fowls, \&c. the impoftor himfelf being ever the chicf gueft at the feaft; from whence a fhare of the provifion was punctually fent to his wife and children; the number of fheep ordinarily confumed on thefe occafions was proportionable to the ability of him that beftowed them.

He impofed likewife feveral penances which they were obliged to fubmit to, under pain of being expelled from the fociety of his congregation, which he pretended to be founded upon no lefs authority than that of St. John the Baptift, and threatened to inflict the fevereft judgments upon thofe who fhould prove refractory, and not obey his injunctions.

The ordinary penance he impofed upon them, was making them fand in onld water, without any regard to the feafon, during his pleafure; and if there were more of them upon whom this feverity was to be inflicted, they were to pour cold water upon one another's heads till they had fatisfied his tyrannical humour. This diabolical feverity was evidence enough, that he was lent by him who is the "father of lies, and was a murderer from the begiming."
He commanded that every family fhould flay a fheep upon the threfhold of their doors, but a knife mult not fo much as touch it; he would have tiem only make ufe of their crocked fpades fur their inftruments to kill them with; for which, if duly confidered, there is nothing more improper, the edge with which he commanded the fheep's neck to be cut being almoft half an inch thick. Now this was to be done in the evening, and if either young or old had tafted a bit of the meat of it that night, the equivalent number of heep were to be flain the following day, after the former mamer.
He forbid the ufe of the Lord's Prayer, Crced, and Ten Commandments, and inftead of them prefcribed diabolical forms of his own. His prayers and rhapfodical for:ns were often blended with the names of God, our blefied Saviour, and the i:nnaculate Virgin; he ufed the Irifh word plerfathin, i. e. verfes, which is not known in St. Kilda, nor in the north-weft ifles, excep: to fuch as can read the Irifh tongue. But what feemed moft remarkable in his obfcure prayers, was his mentioning Eli, with the character of our preferver. He ufed feveral unintelligible wordi: in his devetions, of which he couid not tell the meaning himfelf; faying only that he had received them implicitly from St. John the Baptif, and delivered them before his hearers without any explication.

He taught tic women a devout hymn, which he called the Virgin Mary's, as fent from her $;$ this hymn was never delivered in public, but always in a private houfe, or fome remeie place, where no eye could fee them but that of heaven; he perfuaded the innocent women that it was of fuch merit and efficacy, that any one who was able to repeat it by heart would not die in child-bearing; and every woman paid a fleep to the impoftor for taching her the hymn.

The place and manner of teaching this hymn afforled him a fair opportunity of debaucbing many of the fimple women; and this fome of their number acknowledged to the minifter and me upon examination.
He prefcribed to all his auditory long rhymes, which he called pfalms; thefe he ordinarily fung at his rhapfodical F reachments.

He endeavoured to alter the common way of burying, viz. in placing the faces of the dead to the eaft, and would have perfuaded them to place them to the fouth, and that he might prevail the more with them fo to do, he fet the bodies of thofe of his own family who happened to die in that pofition : but the inhabitants would never follow his example in this, but continued their former practice.

He pelfuaded the women, that if in ail things they complied with his new revelation, they Chould be undoubtedly carried to heaven, and that in their journey thither they were to pafs through the firmament riding upon white horfes. Thefe and many more fuch whims he impofed upon the people, of which this is a fhort abftract.

This unhappy fellow, to confecrate his enterprize, pitched upon a liztle rifing fpot of ground, which he called John the Baptift's Bufh, upon which he faid thefe oracles were delivered to him. This buth was from that time forward believed to be holy grounce, and muft not be trod upon by any of their cattle; if by chance one of them happen to touch it, it was forthwith to be flain and eaten by Roderick and the owners; and if any proved refractory, and were refolved to fpare their cattle, a mof dreadful commination was iffued out againt them, of being thenceforward excluded from any further fellowAhip with him, until they fhould acknowledge their faults, and comply with his luxurious defires, which to difobey he made them believe was damnable. It was reckoned meritorious for any body to reveal thofe who had cranfgreffed the orders given by him.

This impoftor continued for feveral years without controul, to delude thefe innocent well-meaning people, until at laft his villainous defign upon the women was found out, which he intended to accomplifh under the makk of the devout hymn he taught them, and was firft difcovered by the officer's wife, who the impofior firlt made a profelyte of whis falfe doctrines, and after that would have debauched her from her conjugal fidelity. This woman was fo heroically virtuous, as to communicate his lewd defign to her hufband, who ordered the matter fo as to be in a room hard by at the tine he fuppofed Roderick would be coming, where he continued till this letcher began to carefs his wife, and then he thought himfelf obliged feafonably to appear to her refcue, and toldly reproved the impoftor for his wicked practices, which were fo widely contrary to his profeffion, and that upon the whole it appeared he had no true miffion.

The impoitor was very much furprifed at this une.zpected and fatal difappointment, which put him into an extreme diforder, infomuch that he alked the officer's pardon, acknowledged his crime, ant promifed never to attempt the like again. The officer continued to upbraid him, telling him he was inftigated by the devil ; that innocence and challity were always the effects of true religion, and that the contrary practices were countenanced only by falfe prophets; and that now no other proof vas wanting of his being a notorious deceiver : however the impoftor's great reputation prevailed with the officer a patch up a friendhip, for the continuance of which he condefcen'. A to be Roderick's fponfor at tie baptifm of one of his children ; of which ceremony ai sce sunt has been given: when there is no opportusiv of being fponfor to each othes, and it is thought neceffary to enter into bonds of fretedfhip at baptifm, the inhabitants of the weftern iffes fupply this ceremony by talting a drop of each other's blood.

Notwithftanding the friendhip thus patched up $t$ ", ween the officer and Roderick, the latter's mifcarriages got air, which adminiftered octanion to the mof thinking among.
them to doubt racis of his miffion; his father, who was reuted a very honef man, told him frequenly that he was a deceiver, and would come to a tatal end. Fr rhis im. poitere once prophefied that one of the inhabitants (whofe name I have $h$ ard) thould Le killed in a battic, to be fought in the inf of Harries, within a limited face of dian; the unhanking man reljing on this infallible orache, vemurel more defperately on the rock than ufual, fancying he could not fall, hat it fo hepmed an be tumbled over and was drowned, at which the inhatitants were a good deal adurned; but the in:poltor ftill continued in the exercife of his pretended mution.

One of the ishabitums called Muldonich, alias I, exve, confin.g. an to this man,
 the facred bufh, but Lewis refufed to comply wh the order for kilang the flo ep, and had the boldnefs to aver that it was an uncalonabie piece of worthip to dellory fo many catele, and deprive the owners o: their property, adding wintal, that he never hand any fuch thing practifal in any of the weflem inles upon a religions arcou't. The inpoflor infifted that the heavenly command was to be obferved by all his foliowers, adding the deadiul ilreatening asainft fuch as proved difobedient: bua leewis neverthetets remained ot hinate, chufing to be excludd foni fuch worf,., rather than kill his fiecp.

The fili, people expeted no lefs thata a treedy jn 'rmeni to befall this reculant ; but when mothig cofeed upon his difobedience, they all began to have a I is veneration for wh: fone that before; and began to think uithin themfelves that they might as w: I' i ive smened to run the fame rifque with Lew for the prefereation of their catle.

Thetrittitading this notorious villainy, the impoftor continued to maintain his anthosity, ill one night (for it was always at night that he kept his religious meetings), by a fpecial providence, a boy of the ine of Harries, (who had ftaid with his father a year in St. Kilda, and was employed in mending their boat) happened to go into the houfe where Roderick was preaching; the boy lurked in the dark, and gave his father an account of what he had heard, at leaft fo far as he could remember ; which the boy's father communicated to the fleward upon his arrival, who being highly concerned at the relation given him, carried Roderick along with him to the ifle of Skie before the late Nack-Leed, who forbid him from that time forward to preach any more, on pain of death.

This was a fenifble mortification, as well as difappointment to the impoftor, who had flattered himeif that Mack-Leod would hear him preach, and expected no lefs than to perfuade hin to become a profelyte, as he has fince confeffed.

This fellow afferts, that every night after he had affembled the people, he heard a voice inithout faying, "Come you out;" which when he heard, he had no power :o fay within; and that after his going forth, John the Baptift always met hin, and inftrueted him what he flculd fay to the people at that particular mecting. He fays, that St. Join ufed to repeat the difcourfe to him only once, which he owns he could fcarcely romembe: cne fentence of, and therefore he enquired of the laiat how to behave himfelf in this cafe; that the anfiwer was, "Go, you have it;" which the impoftor believing, was upun his return able to deliver fluently all he had heari, and would continue, after his oun way, for feveral hours together, to preach until he hai tulled moft of his hearere to fleep.

When the earthquake before-mentioned we wer, one of the inhabitants enquiry of him with admiration how the rock was mas tremble ? he anfiwered, that it " $\rightarrow$ the effect of oleafant mufick played by a devo bour : ed his love for mufick, bu. :ras

The impofor owned the truth of all this account, firft to the miniter and me, and then publicly after divine fervice, in the prefence of all the inhabitants, and fuch as were come to that place from the ine of Harrics. The minifter and congregation jointly prayed for repentance and pardon to this poor wretch, which when ended, we carried him and all the inhabitants to the bufh pretended to be facred; he hinifelf, leading the van, was commanded to demolifh that wall which he had ordered to be built round the faid buth (which otherwife would in a thort time have proved a purgatory, to have robbed them of all their goods), which he and the inhabitants did in the fpace of an hour; we made them fcatter the ftones up and down in the field, left their pofterity might fee fuch a monument of folly and ignorance. We reproved the credulous people for complying implicitly with fuch follies and delufions as were delivered to them by the impoftor; and all of them with one voice anfwered, that what they did was unaccountable; but feeing one of their own number and flamp in all refpects, endued, as they fancied, with a powerful faculty of preaching fo fluently and frequently, and pretending to converfe with John the Baptift, they were induced to believe his miffion from heaven, and therefore complied with his commands without difpute, and the rather, as he did not attempt to change their laws of neighbourhood.

They now regret their wandering, and hope that God may pardon their error, as what they did was with a defign (though a miftaken one) to ferve him.
They are now overioyed to find themfelves undeceived, and the light of the goipel reftored to them, as it was at firt delivered to their anceftors by the firf Chriftian monks, who had gone thither to inftruct them.

This impoftor is a poet, and alfo endued with that rare faculty of enjoying the fecond fight, which makes it the more probable that he was haunted by a familiar firit. It hath been obferved of him, before his impofture was difcovered, that fo often as he was employed by the fteward to go to, or return from, Harries, they were always expofed to the greateft dangers by violent forms, being at one time driven fifty leagues to the north-eaft, and by fpecial providence were at laft caft upon the little infe Rona, twenty leagues north-eaft of Lewis: the fleward's wife, and all his crew reflecting upon thefe dangers fince the difcovery of his impofture, could never be prevailed upon to receive him again into their boat. They often intreated Mr. Campbell and me not to admit him into our boat, but we did not yield to thefe fears, for we received and brought him along with us, and afterwards delivcred hin to the feward's fervants in the ille of Pabby in Harries, where he remains ftill in cuftody in order to his trial.

## AN ACCOUNT OF HIRTA AND RONA.

## Hirta.

THE ifland of Hirta, of all the ines about Scotland, tieth furtheft out into the fea, is very mountainous, and not acceffible but by clinbing. it is incredible what num. ber of fowls frequent the rocks there; fo far as one can fee the fea is covered with them, and when they rife they darken the fky, they are fo numerous; they are ordinarily catched this way: a man liss upon his back with a long pole in his hand, and knocketh them down as they fly over him. There be many forts of thefe fowls ; fome of them of ftrange fhapes, among which there is one they call the gare-fowl, which is bigger than a goofe, and hath eggs as big almoft as thofe of the oftrich. Among the other commodities they export out of the illand, this is none of the meanelt. They take the fat of thefe fowls that frequent the ifland and ftuff the fomach of this fowl with it, which they preferve by hanging it near the chimney, where it is dried with the fmoke, and they fell it to their neighbours on the continent, as a remedy they ufe for aches and pains.

Their fheep upon that ifland of Hirta are far different from all others, having long legs, long horns, and inftead of wool, a bluifh hair upon them; for the figuse and defcription it feems to approach in refemblance to the ovis Cbilenfis. Some natural hiftorians make mention of the milk of thofe fheep; they make butter and a fort of cheefe, which my Lord Regifter faith pleafes his tafte better than Holland cheefe. They have no falt there but what they make by burning of fea-tangle, which is very black. Their greateft trade is in feathers they fell; and the exercile they affect moft is climbing of fteep rocks: he is the prettieft man who ventures upon the moft inacceffible, though all they gain is the eggs of the fowls, and the honour to die, as many of their anceftors, by breaking of their necks; which Pliny obferves of thefe people, which he calls hyperborei.

## Rona.

THE ifland of Rona hath for many generations been inhabited by five families, which feldom exceed thirty fouls in all: they liave a kind of commonwealth among them, in fo far if any of them have more children than annther, he that hath fewer taketh from the other what makes his number equal, and the excrefcence of above thirty fouls is fent with the fummer boat to the Lewis to the Earl of Seaforth, their mafter, to whom they pay yearly fome quantity of meal fitched up in fheeps' fkins, and feathers of fea-fowls. They have no fuel for fire upon the ifland; but by the fpecial providence of God, the fea yearly cafts in fo much timber as ferves them : their fheep there have wool, but of a bluifh colour.

There is a chapt! in the midft of the inc, where they meet twice or thrice a day. One of the families is hereditary beddall, and the mafter of that ftands at the altar and prayeth, the reft kneel upon their knees and join with him. Their religion is the Romifh religion : there is always one who is chief, and commands the reft, and they are fo well fatisfied with their condition, that they exceedingly bewail the condition of tho.e, as fupernumerary, they muft fend out of the ifland.

## TO HIS GRACB JAMES DUKE OR RAMILTON.

 may it please your grace,UPON my return from Zetland, as bound in duty, I paid my refpects to your Grace, who was pleafed to alk if I had kept a diary ? which I acknowledged, but could not thew it, till the remarks therein contained were tranfcribed, which when done, your Grace fhould have them to glance at fome leifure hour. Thus your command giving rife to this undertaking, I have prefumed to make the dedication to your Grace.

The noble and! illuftrious family of Hamilton, the firf in the nation, flandeth in no need of panegyrics from me to fet forth its eminency. His Grace your father, was very infrumental in lettling the peace and quiet of this kingdom at the late merciful and wonderful revolution, as became a patriot of his country; under whofe prefidency, in the convention of eftates, the government of our church was reftored, which fince hath been confirmed by the fublequent parliaments.

In his furviving confort, your pious mother, thefe endowments and qualifications requifite in the confort of a prince hav eminently fhined forth, which will embalm her name to fucceeding generations: her like vife being fo very helpful to many afflicted ones, both in the former years of this church's $\sqrt{\prime \prime t}$ refs and trouble, and in the latter of great farcity and dearth, the knowing how vilu.ble are the bleffings of thofe who were ready to perifh.

Your Grace's honourable appearance for, and acknowledgment of, prefbyterian government in the laft feffion of parliament, was acceptable to many $;$ and I hop "nur Grace fhall never have caufe to repent of your continuing to favour the ancient gu*a* ment of this church, which as it is conform to the fcripture plan, fo the $\begin{gathered}\text { zord } \\ \text { hath been }\end{gathered}$ gracioufly pleafed to own and countenance it, in the great things he hath done for and by the minifters and profeffors thereof.

Among thefe things for which you ftand obliged to the wife conduct of providence, one is, that you have been fo well dirested in the happy choice of your conforts. Your prefent lady of a fweet and gentle temp $x$ carriage obliging and difcreet to all ; her loving to entertain pious and religious dincuurfe; her modeft and exemplary drefs : I wifh the may prove a bleffing to your illuftrious family, and be as Rachel or as Leah, which two did build up he thoufe of Ifrael.

Your noble brother Lord George hath been created, by our prefent gracious King, Farl of Orkney, for his heroick appearances, under the aufpicious conduct of our King, who was pleafed to take notice thereof, fome of thele being under His Majefty's view;

[^314]5 A 2
and in teftinony of his royal favour, dignify him with this honourable title, which in the years of ancient times hath blazoned the efcutcheons of kings.

The branches of your illuftrious family do fourifh in feveral parts of the nation, though God in his holy providence hath made lately a breach thereupon, to your grief, and the nation's lofs.

Your Grace's relation to the ancient and honourable family of Douglas, gives me occafion to : antion that old alliance betwixt that houfe and the princes of Orkney. Willisul Lort or Hiddifdale, commonly called the Black Douglag, by Egidia or Giles, daugher or King Robert II., had a daughter of the fame name married to Henry Sinclair, wfually Ayled Knight of the Cockle, of the Garter, and Prince of Orkney. To hina fucceeded his fon William Sinclair, married to Elizabeth Douglas, daughter to Archibald Earl of Douglas, firnamed Tineman; whofe titles were, Knight of the Golden Fleece and of the Cockle, Prince of Orkncy, Duke of Holdenburgh, Earl of Caithnefs, Lord Sinclair, Jori ? Niddiffale, Great Admiral of Scotland, \&rc.

My Lord, the knowieage of hiftory is that which the mof of men are taken with, as being both pleafant and ufeful; and it cannot but ftain the reputation of any, thoughable to give account of what is rare in other countries, if they be ignorant of their own, and places which depend thereupon, where things no lefs remarkable do occur, which may both exercife the ingenious, and edify the gracious inquirers. -

But above all, bleffed are they who make a religious improvement of natural oblerves, and ufe all arts and fciences as hand-maids to religion and piety. The knowledge of Chrift is the queen of fciences; hence a learned Piul "determineth to know nothing tut Chrift and him crucified;" and thofe who in all ages have been wife unto falvation, have preferred Chrin's crofs to the world's crown : and with Mofes, "reckoned his worlt things better than the world's beft." The knowledge of all other things without the knowledne of Chrin, is as a fhadow without the fubftance, and a body without the head, as fome have inflituted the comparifon; yea they are avoitol without mind and judgment : the cardinal virtues, as they are called, may be attain din in wo but in truth, Quid enim illis cum virtutibus qui Dei virtutem Clriftum ignorant". "ll the glory and grandeur of the world, laid in the balance with this piece of laving ...rowledge, is but as a grain weight to counter-balance a huge mountain: hence a notable faying of a truly noble lord, when fet upon by the Jefuits to change his religion, tempting lim with fplendid and rich offers, "Let their money (fiaith he) perih with them, who think all the glory of the world worth one day's communion with Jefus Chrift." And truly it is but fmall gain the molt painful and able fudent doth reap, if after all his labour in the records of antiquity and refearches of nature, and it may be through the maze of intricute difquiftion he lofe his foul, and notwithfanding of all his learning be thruit into hell, being forced to cry out on death-bed, as it is reported the learned Grotius once did, Ab aitam perdidi, opcrofe nibil ugendo.

My Iori, I hope it will not prove 'mlavory to your Grace that I have a little enlarged this epifte, in commending of Chrit and religion, which fo much tranfeendeth our commendation and praife, whence fo many advantages do accrue to us, and among others, when there are earty impreffions of piety on any, the confcience for ever after uferh to hang about ' lem, notwithflanding the tenor of their lives hath been affaulted with manifold ten'a as. That your Grace may fill continue to be a true tover of your country, and accalous aflerter of her rights and liberties, is and thall be the defire of him who is,

May it pleafe your Grare,

## PREFACE TO THE READER.

I SHALL not infift on an apology why I trouble the fweating prefs, though I might ufe and plead the common topics taken from the advice and importunity of others, and to provent the publifhing of fome of thefe remarks, excerpt from my papers, by fome into whofe hands they had fallen, after they had lien by me fevcral months.

There are feveral grave perfons in thefe ines of good and folid judgment, hoth minifters and others, who being better acquainted with the places of their ordinary refidence than it can be fuppofed I had occafion to be, might have publifhed fomething more valuable on this lead, and fet their remarks in a clearer light; as likewife fome of my dear brethren of the commifion might have done it to greater advantage. Yet the engagements that lay on me to tranfcribe the mof remarkable occurrences, and the folicitation of fome thereupon to publifh them, have fome way obliged me to make this appearance. However if others hereby hall be excited to Cerve the public, by giving 2 fuller and clearer defcription of thefe generally little known places, this eflay will not prove altogether unufeful; and if I had known that any intended to have publifhed fomething of this nature, the world had not been troubled with my fcribbling.
1 hope none will judge that I act without my line, in giving defcriptions of this nature, feeing all are called to "remember the works of the Lord and talk of his doings," as they have occafion : and all along I endeavour to keep in mind the character I bear, dropping fomething of a fpiritual improvement.
Our hiftorians, fuch as I have confulted, have given but a very brief and lame, and in fome things a falfe, account of thofe places, efpecially Zetland, which is unknown to the moft of the mation, if not that they have only heard there were fuch ifles as the Zetlandick. It is true, there is one Mr. Wallace, a late minifter in Orkney, who hath gratified the world by giving a defeription of the Orkney illes; but neither Zetland nor Caithnefs doth he meddle with: and as to Orkney, there are feveral things. which deferve their own remark he makes no mention of; and others have fallen out fince his time, which I have noticed: fo that, on the whole, the account now given even of Orkney will appear almoft new to any who fhall be pleafed to compare the two dcfrriptions together.
No doube but fuch as know thefe places will defiderate feveral things no lefs remark. . able than what are obfervel; but Itill my reader would rememb:r that this is but a diary tranfcribed. Yet this I may fay, as I have not willingly fuffered myfulf to be impofed on, fo neither have I impofed any thing on the credulous world, but delivered fuch things which either I was witnefs to, or had good ground to believe from perfons worthy of credit ; fo that if any thing appear queflionable, I have ordinarily in general given my author for it.
I fuppofe the judicious reader, in perufing the following fheets, will find things both curious and inftructive, affording matter of meditation to the wife obfervers of Providence.

As to any philofophical or philological obferves, as. I am unfit for, fo am I far from a , magifterial diatating of them to any, but foberly propofed my own fentiments, which if my reader do not relifh, he may follow his own.
Although the ftyle be not quaint and elegant, embellihed with the ornaments of art, yet 1 hope it will be found plain and intelligible; and though fometinnes obliged to exprefs myfelf in the dialect or idiotifm of the country, yet ordinarily fuch words and phrafes are fome way explained: fo when I fpeak of Orkney or Zetland, as not in Scotland, though depending thereupon, I exprefs myfelf as the country do.

As to the commiffions work I have not meddled hirewith, except when the thread of the hiftory did require me to touch it. However, hisis I may add, our weak endeavours for the advancement of the interef of our L.ord Jefus in thefe remote corners have not been found by fuperior judicatories altogether unfucceffful; and I fuppole is repents none of us of our voyage thither, however dangerous it did prove.

## A DESCRIPTION OF ORKNET, ĚC.

## INTHODUCTION.

I$\mathbf{T}$ is a principle generally acknowledged, that all men in their feveral ftations, according to their capacities, are carefully to Itudy the maintaining and promoting of the good and intereी of that kingdom, nation, or fociety, whereof they are members; for if it go not well with the public in common, it cannot reafonably be thought that the happinefs of any in particular can long continue, more than it can go well, with the feveral members of a natural body, when the body itfelf is diftrefled. It was this gencrous love and concern for their country that fo fignalifed the ancient Romans, and made them in a fhort time arrive to fuch a height of glory and honour: unto this did their philofophers, poets, and orators warmly excite their fellow-citizens, fo that the more or the lefs any laid out themfelves this way, their achievements accordingly were reputed noble and heroic, and their perfons renowned.

Yet much more will we find ourfelves bound to advance one another's good, if we look on ourfelves not only as men and members of the body politic, but as Chrifians and members of that body, whereof Chrift is the head; therefore our love of, care for, and fympathy with one another, is much commended in holy fcripture, which the apofle. well illuftrateth in feveral places by that appofite and elegant fimilitude of the members of a natural body, their confpiring to the mutual good of one another; and exprefsly commandeth, "Look not every man on his own things, but alfo on the things of others;" and the want thereof he doth heavily regret in the fame chapter: "For I have no man likeninded, who will naturally care for your ftate : for all feek their own, not the things which are Jefus Chrift's:" which felfifh and narrow fpirit, as it hath too much prevailed in all ages of the Chriflian church fince the days of the apofites; fo in none more than this of ours, as the learned Owen oblerveth, imputing the flame and the almoft suin of Cliriftianity thereunto. "The Lord Chrift (haith he) Lath ordained that the members of the fame church and fociety fhould mutually watch over one another, and the whole body over all the members unto their edification; and that the practice of it is fo much lof as it is, is the fhane and almoft ruin of Chrifianity."

But more efpecially thefe cloathed with authority civil or ecclefiaftic ftand obliged to this public care, minitters being as pilots or governors under Chritt to the fhip of the church, as magiftrates under God are to that of the fate. And the charge of minifters having a more immediate relpect to the foul and better part of man, they are called the more diligently to take heed thereto, and fo to fteer their courfe through the boiferous liea of this world, as that not only they themfelves at length may arrive and reft at the fair-havens of Immanuel's land, but that alfo through grace they may carry along many with them embarked on the fame bottom of the covenant, by the means of word and difcipline. Miniीers are ftewards, watchmen, fhepherds, bifhops, or overfeers, \&c.; all which do imply a charge to be difcharged by them for the good of others.

Minifters

Minifters may be confidered in a threefold relation. 1. As Chrifians related to Chrift, which is common to them with all believers. 2. As minifers, pind reated to that particular church or portion of the church in general, the infpecti : $n$ whereof is afligned to them, and in which more efpecially and immediately they arc cilled to labour. 3. As they fand related to the church national, whereof they are minitters, whofe good they are to endeavour, as God in his holy and wife providence fhall aiford them accefs. And that in all thefe refpects minifters may the more approve themfelves unto their great Lord and Mafter, according to his appointment, the apoftes' exanuple, and the practice of the church in all ages, they do aflociate themfelves unto councils, meetings, or affensblies, more or lefs general, that fo by common counfel and confent they may confult the intereft of the church of Chrift within their refpective diftrits and bounds; which as it hath been the laudable practice of other churches, fo of the church of Scotland, ever fince her firf reformation from popery.

For which ond the general affembly of this national church moved with zeal for the glory of God, hath travelled much fince the late happy Revolution in planting the north of Scotland, and, that they might not be wanting in vifiting the uttmoft bounds thereof, with the ifles thereto belonging, have deputed feveral commifions, who, rcpairing thither, might upon the place take under their confideration the concerns of the church of Chrif in thefe corners, and determine therein as they fhould fee caute, according to the word of God, and acts of affemblies of this church. Particularly one was fent to Caithnefs and Orkney, anno 1698, who did God and his church good fervice there.

In like manner the general affembly, anno 1700 , upon the defire of certain minilters in Zetland, and information of the flate of affiars in thefe remote iflands, found it neceffary to depute a commiffion thither, confifting of feven minifters and one ruling elder; with power not only to vifit and order the churches there, but likewife to concur with and affift the prefbyteries of Orkney and Caithnefs, as there floould be occafion.

Of this commifion the author, being one, defigns a brief defeription of thefe re markable parts; after a fhort journal of his voyage thither, with fome curlory obferves thereupon.

Chap. I.-Containing a brief fournal of our Voyage ir. .is to Orkncy, and thence to Zetland; as likewife of our Return from Zctland i.". . . Caithnefs; togcther with a jummary Account of the remarkable Dangers zue 7
ON Friday, April 12, 1700, about fix a c' $c$ ornurg we fet fail from I.eith for Orkney, the wind fair though faint, whic.. \& 1...rable to bear us up againit the tide, we dropt anchor two miles ealt of Inch-Keith, where we lay from ten till thrce in the afternoon, when a brikk gale arifing, we weighed anchor, and failed down the Firth, the fhip making fo good way, that before next morning at break of day we were paft Montrofs.

On Saturday the wind leffened, yet about fun fet we pal Peterhead, feering towards the point of Kinnair, leaving the Bridges of Ratray (a ridge of blind rocks) on our larboard. Next morning, being the Lord's Day, with a gentle wind, we made the beft of our way through Murray Firth, fpending the day in religious exercifes with the mariners and fome paffengers in company with us. When before Peterhead we faw the fins of a great fifh, about a yard above the water, which they call a pricker; alfo
about ten at night, a whale was feen by the help of moonlight, at a little diftance from our fhip, cafting forth the water in a hideous manner.
Next morning about feven o'clock we got fight of Orkney, and the wind blowing fomewhat harder than it had done the former night, in the afte: 'oon we paffed the eaft end of Pightland-firth, which, though ordinarily raging with the impetuous current of a fea, by reafon of the many tides meeting there, yet we found it nut fo; but in the midft of that part we paffed, dined upon deck, fo meeting with leatt danger, where we feared the greatef. We put into Holms-found, and arrived there about ieven at night, on the Monday after our fetting fail.

The fhip's crew told us, that though they had frequently friled thefe feas to and from Orkney, yet never had they a better or pleafanter voyage: which providential tavour was the more obfervable, the wind, next day after we landed, blowing frong from the north, and lafting feveral days. Which, if it had come on before we had accompinhea our voyage, we would not only have been blown back to fea, but thereby a tempelt arifing, we had been in no fmall danger. We defirel to look upon his as a fignal mercy, and a token for good.

We would have hired our bark to Zetland, but the mafter being under charterparty, was obliged to return with a fraught of victual to Leith, and not having the occafion of any other hip or bark, we were forced to hire one of thefe open boats of about fixty meils, which the $\mathbf{O}$ :kney men ufe for carrying vidual to Zetland, elfe we could not go for Zetland this feafon, though the minillers and others told us our pafige might prove dangerous.
-Our flay in Kirkwall, the chief town in Orkney, (affifting that prefbytery in fome of their affairs was from the 16 th to the 27 th of April, when with three minifters of this country on the commiffion, we took boat for Sanda, about thirty miles north-eaft from Kirkwall, and in our way to Zetland, having ordered our own boat to follow with the firft fair uind. We put off about two in the afternoon, the men rowing with fix oars about half way, when the wind rifing fon ething favourable, with a little fail and four oars we got over Stronza-firth. Though, as we came near our landing-place in Sanda, the increafing wind raifed the waves fo high, that fometimes they intercepted the fight of the ifland. Yet we all got fafe on fhore betwixt nine and ten at night. The mercy of our efcape was the more remarkable, that our hoat was thronged with paffengers, and fo ovell:aden that the water came almof to her brim; to that if the fea had not been finooth and calm when we paffed through Stronza. firth, we had been probably all loft: as thefe who had knowledge of thofe feas dill afterwards declare unto us.

We waited in Sanda for a wind from April 27 till May 9, when the wind prefenting, we went to the ine of Eda, lying a little to the weft of Sanda, where our boat was, but before we could get aboard, the wind hifted to foulh-caft and then to eaft and by fouth, which was too ferimp to fetch Zeland; hovever the wind now being very changeable, we judged it expedient for us to lic near our boat, alid lay hold on the firt occation: Io May 11, the wind at fruch-eaft, we put to fea, but fcarce well were we without the Red-head of F.da, when the wind proving contrary, we returned to Calf-found May 12, bcing the Lord s-Day we fpent in religious exercifes with the people of the ifle; in the evening the wind turning fair, we refolved next morning early to get aboard, if the wind neld. This laft night, atter ve reiurned to Calf-found, was terrible for wind and rain from the weft, the wind foon altering, after we had got in again to Calffound) with which we could not have kept the fea, in all probability. A great mercy then it was, that we were determined to return, and did ant kecp the fea, as fone advifed, for, though within half an hour after we had got into the found, the wind
turned fair, yet being too ftrong, the fea became foul and tempeftuous, which was not for our open boat.
Monday morning, May 13, about two o'clock, we were called to go aboard, which we did accordingly ; the wind at weit, or weft and by north, the gale was brifk, but not very great, which we were glad of, thereby expecting a fpeedy paflage: fo we with two other boats in company loofed, but fcarce were we a league without the heads, when we faw a florm of wind and rain making in the weft, whence the wind blew, whereupon one of the boatmafters in company advifed us to tack about, and endeavour to fetch Calf-found again ; which counfel we, judging to be fafe, accordingly effayed to follow it, but the wind and fea rifing more boifterous, and the current of the ebb being ftrong from the found, we could not by any means effectuate our defign, though we made feverai trips not without danger; the fea with its broken and fwelling waves threatening to fwallow us up every moment : the mariners flood by their fails, crying, this work was very dangerous; and at one time, as one of them obferved the boat had taken in about ten barrels of water, the pump was ftill kept going, we judged ourfelves to be loft men, and fome expreffed fo much. In thefe itraits we defired the boatmafter fitting by the helm, to lee if he could make any other harbour or bay; he anfwered, "God have mercy on us, for the fea we dare not keep, and there is not mother harbour in Orkney we can make;" the men were fatigued with the toil of their hard work, and almoft at the giving over. We thei knew to our experience the raeaning of that Scripture, PI. 107. 27. of feamen in a ftorn's being at their wit's end. Though the wind was fair for Zetland, yet we durit not hohd on our courfe, the fea not only being tempeftuous, but we had alfo feveral routs, or impetuous tides to pafs, and then the cbb was in the fen, which made them fo much the more dangerous. Thus flraitened, we thought it advifeable to go down with feme fail before the wind to the north end of Sanda, and endeavour to get into Otterfwich or Taphnels-bay ; we firft attempted Otterlwick, and left we fhould have been blown by the bay's mouth, we held fo near land, that the boat beat feveral times upon a rock, however we got in and dropt anchor on the weather-fide of the fhore.
We were all much refrefthed with this great deliverance from fo imminent a danger. When we had ridden fume hours at anchor; the wind and fea calmed. About feven at night, o.le of the boatmafters in company, who had entered the bay a little before us, weighed anchor and put to fea again. Some of our number were for lying ftill, till the weather was better fettled; others thought that feeing God ha! commanded a calm, that we had a favourable wind, that the iky appeared to be well fet and promifing, and that the other loadened boat had gone to fea before us, it might feem from thefe things Providence invited us to fea again : whereupon we put off, but before we had come the length of North Ronalilha, farce a league diftant from the bay we had been :n, the wind becane fo faint, that the mariners took them to their oars to help them through North Ronalfha Rouft, thence when we came to Detmis-Rouft, we made fome way with our fails without oars, the tide then turning and the flood begiming to run in the fea.
'Wueflay, May 14, about one or two in the morning, the wind fhifted to eent-foutheaff, then to eait, and our boatmafter telling us, that he was forced to fteer a northern courfe, elfe he could not bear fail, and fis holding on, not a ftome in Zetland he could hit, as he exprefled himfelf, we all judged it moit proper to return to Orkney: when we had tacked :bout, the wind thifted to north-ealt, a flrong gale, tozether with great mains, which caufed a rolling and a fwelling fea; (for rains here without winds do raife, or canker, (as they term it) the fea, and much more when wind and rain same on at
voll, Hit.
once;
once; however we got in fafely to Stronza-road, which was the readieft we could make. It was a happy providence that we then returned at that nick of time, for the flood not being all fpent, we were thereby likewife hallene! in our way, fo that within a few hours we came to our port, though, as was recl:oned, we were near midway between Orkney and Fair Ife. The form increafed with the day, and after our landings it was fo very grear, that we were obliged to keep within doors for feveral hours: and if then we had been at fea, it is terrible for us to think upon the dimal sftects which might have followed thereupon, for, without all peradventure, we had ectainly perihed, it the Lord by fome wonder of mercy had not refcued us, as indeed he had formerly done. "O that we would praife the Iord for his goodnefs, and for his wonderful works to the children of men;" and that fo long as we live, we may never forget the $1 \mathrm{~g}^{\text {th }}$ and 14 th days of May, wherein the Lord wrought a great deliverance for us.

Thus being difcouraged, we were in great perplexity, not knowing what to do, whether to make any further attempt, or to return home, re infccla, feeing God in his providence had fo crofled us hitherto, and it might be his mind we fhould not go forward. Upon thefe fluctuating and perplexing thoughts, we alked God's mind in the matter, after which nore light did arife, and we unanimoufly refolved yet to try what the Lord would do with us.

Frichy, May 17, between eight and nine in the morning, wind and fky promifing well, we put to fea, and paffed the Fair Ifle, about five afternoon, keeping it on our ftarboard, then our gale increafing, but continuing fair, at fouth-weft we made good way. About midnight we paffed Swinburgh head, the fouthernmolt point of land in Cetand, laving thence twenty-four miles fail up within land to Lerwick, whither we were bound. The wind growing more vehement, we lowered our manfail, and took in a riff; with the breaking of the day there arofe a mitt, whereby we could farce fee land, howerer we judged it fafeft to kecp as near it as we couid, and failed away by the coaft; but being to pafs through a found, having the ifle of Mufa on our farboard, and Burra Land on our larboard, our feamen miftuok the point of Mufa, taking another point in the mainland for it, and the mift lying on, we were almoit engaged in the hand, and fo would have fallon among the rocks, which they coning to fulpect held to fea, refolving to fail without the point, which they did with difliculty, the boat being fo clofe haled, and the blatt fo great, that the helin a-lee was fearce able to command her and keep her by the wind: which, when they had done, came to difoover their error. Hence failing through Mufa-found, we came to Brafla-found, and arrived at Lerwick on Saturday about four o'clock in the morning.

We had a quick paffage, failing about a hundred miles in nineteen or twenty hours time: efpecially confidering that we were not half an hour on fore, when a frong wind blew from the north, which if it had come on but a little fooner, we would have been driven back to fea. There is likewife another providence remarkable, that we had only an ordinary defirable grale, when we pafied the Fair lile, where always there goes a great rolling fea, but when within the heads of the land of \%etland we had it very ftrong, fo that fearcely we could have wrellled and held out againt it in the ocean.

We arrived in Zetland May 18, and, having brought to fome period and clofe our principal work there, we fet fail for Orkney, June 11, faluting and bidding heartily tarewell to the minifters, and fome gentlemen of the country, and to the moft confiderable inhabitants of lerwick, who kindly accompanied us to our boat. We deft Zetland Tuefday, June 11, about five afternoon, and having the wind at north-weft or north-weft and by north, we paffed the Start-head of Sanda about four next morning,
and, endeavouring to fet into Ketteltaft in Sanda, to put one of the minifters of that ifle alhore; out boat, through our boatmafter's insdvertency, fruck on a rock, without fuftaining any damage we knew ; but the wind not permitting to turn up to that road, we all came to Kirk wall, and arrived there before nine in the moorning. Our paffage from Zetland to Orinney was yet quicker than it was from Orkney to Zetland, we being but fixteen hours in running one hundred and twerty, or, as fome fay, one hundred and twenty-eight miles. Staying in Orkney a few days, we paffed Pightland-firth to Caithnefs, and having difpatehed our work in conjunction with the prefbytery there, we came home by land, repairing with joy to our leveral charges, where we may fet up our Eben-Ezer, faying " Hitherto hath the Lord helped us."

I think we are called ferioufly to reflect upon the manner of the Lord's dealings with us, we have been long detained and croffed in our way to Zetland, though we made feveral attempts to go forward; as to our commifion we were appointed by the general affembly of this church, and it being put upon us without any defire of ours, or inclination that way, we accordingly undertook our voyage, and came with a favourable gale to Orkney: it is true, that there are natural caufes of wind and rain, whereof we are to make a fpiritual improvement, efpecially when they do impede or promote our defign; moreover God's judgments are a great depth, and by the courfe of nature, in giving greater or leffer winds at his pleafure, he may carry on his more general works of providence, and yet thereby more efpecially intend the punilhment of the wicked, or the chaftifement of his people, which they are called to confider and improve: and as true it is, God in his wife fovcreignty, may fo deal with his people, for the trial of their faith and other graces, that they may be ftill and know that he is God, ruling as he pleafeth among the children of men : the devil alfo who is the prince of the power of the air may have an evil and malicious hand in things of this nature, efpecially when men purpofe to do good, which tends to the overthrow of his kingdom. O that what we have met with may be fo bleffed as to render us more zealous againft him and all fin, whereby his kingdom is eftabliihed in the world, "That we may fight with devils, and be more than conquerors through him who loveth us." I fay though thefe things and the like fometimes may and ought to be had a regard unto, yet I do humbly judge that upon thefe fo very dreadful dangers we have in great mercy efcaped, we are called to examine ourfelves, and fearch unto our fins as we are Chriftians and as we are minifters, for which the Loed may have a controverfy with us; our not being fo faithful in our perfonal and palloral work, in working our own and others falvation; our impatience in nor waiting the Lorl's time, but being too ansious to be in Zetland at any rate: and it is like in our not being fo fingle in our ends ini going as we ought to be, \&c. I condude this chapter as the Pfalmift doth Pf cvii. reflecting on the wonders of Providence, "Who is wif, and will obierve thofe things, even they fhall underftand the loving-kindnels of the Lors!"

## Cirap. II.-A Defrription of Orkncy, its Situation, Name, fryf Planters, Language, Manncris of the Pcople, Wholefomencs of the Air, Cornw, Esc.

TIIE Ines belonging to Scotland have commonly been divided into three claffes: the welfern, fattered in the 1,ucaledonian Ocean, on the weft, the Orkney and Zetlandick, both lying to the North of Scolland. is to the Weftern Ifles, though in number far exceeding both the ines of Orkney and Zethand, yet l take no totice thereof, in the fubfequent delcription : vur commifion not being doputed thither, fo only the
latter
latter thall I give fome brief account of, not intending to advance any thing, but what I have either found to te true from my own obfervation, or had by good information from fenfible and grave perfons worthy of credit: and fhall begin with Orkney, as order requireth, we firf landing there.

Orkney lies to the north of Scotland, bounded on the weft by the Deucaledonian oce.n ; on the ealt, by the German; on the north, by the fea, which divides Orl ey from Zetland; and on the fouth, by Pightland Firth, iwelve mila broad, from Dun-giflic-Head or Jolun: Groat's houfe, the northern-molt houfe in Scotland to Berwick in South Ronaldha, the fouthermof point of Orkney. It is commonly faid to be about the fifty-rinth degree of latitude at Kirkwall which lies within the country; though the fouthermmof point of South Ronaldfha, is diftant from the northermmoft of North Ronaldiha near a degree.

That Orkney or Orcades is the name of thefe inles is agreed in by ancient and modern writers, but of the etymology and whence the name is derived, none I fuppofe will be found to give a fatistying account. Some alledging it to come from Orcas which Ptolomy reckons to be a promontory of Caithnefs, oppofite to Orkney ; others from the Greek word :ipwis coercco, thefe illes breaking and reftraining the force of the raging waves : or from Hurricano, becaute of the boitterous winds and hurricanes which often blow in this coun.try : or from Er:ck or Orkenwald, or fome other Pictifh prince famous there at its firf plantation. Which derisations, fome of them at leaft cannot but appear far-fetcht to the thinking reader : and indeed many in givitug the realons of names, do rather pleafe their own curiofity than render a true account of their oricinal ; feeing the reafons generally of the ancient names of countries are buried in oblivion, through the want of writers, and neglect of the firf inhabitants, efpecially in thefe parts of the world, whercin learning more flowly advanced.

The firft planters, and poffeffers of the country feem to have been the Pidts, there being fevera! old houfes, both here and in Zetland, which to this day are called licts or Pight Houfes, and the Firth between Orkney and Caithnefs is itill called lipht-land Firth ; whereupon fome of our hiftorians, as Boethius, writing of the Illes of Orkney, doth obiferve, defign Orkney the moft ancient kingdon of the Piets; Orchades imfulte, antiquiffenum Pictorum rcruum a quibufdam noftrarum rirum firiptoribus vocitata. And we find mention made of the Kiang of Orkney, as Buchanan tells us of one Belus who having invaded Scotland was defeated and put to flight by Ewen II. King of Scots, killiag moft of his army, upon which Belus being much difecuraged and broken in lipite, defpairing of life, put hand in himfelf; and became his own exteutioner. Bocthius calls him Balus; B.llus auten Orchadum rex fractus animo, dijpersta falute, nc in buctiun potelatem venirct, manum fibi intufit. Amlinthe church of Brita at the Welk end of the maintand in Orkney, there is a long flone ye flanding erect, with the name Belus inferibed thereon in ancient charaters; probably this was the place of his interment. Alfo the minifter of samawich's shanfe is faid to have been the refatence of vale of the kings of licts, and therefore to this day is called Komifgar, or the King's Houle; and that part of the manle, which they fay fervect tor the palace of a king is fo lietle, though now kept in fome repair, that it contad not accommodate a fanily of an ordiany ratik; the frure thereof and contrivance of its two rooms or clambers one above and an-
 Boethins likewife tells of anotier King called baus, whom Chaudias Cetar basing fubdued ann Wrifo 43, he carricll him with his wite and chidden captive to Rome, and were led by him in riumph: Buchanan queftions the truth of this hiftory, Tacius affirming that purt of Binain then to have been altogether unkrow to the Rosnans, nec
temere tamen crediderim quod noftri tradunt fcriptores \&c. quod Tacitus affirmet ante Julii Agricole adventum, cam Britannia partem tiomanis omnino incognitam fuifc. But if Boethius his relation be true, the vanquifhing of Orkney hath been reputed fomething confiderable, feeing not to every conqueror was allowed by the Roman Senate, the glory of a triumph.

It is alfo probable the government of thefe ifles continued with the Pictifh Prince till the days of Kenneth II. King of Scots, 'a warlike prince, who having prevailed with his nobles contrary to their own inclination, by a notable piece of craft, to engage in a war againft the lichs, with an undannted valour and courage routed the lictifh army and wafted their country with fire and fword, purluing them to the Orkney Ifles, which he then annexed to the crown of Scotland, reigning from Orkney to Adrian's Wall Anno Dom. 854. Thence Orkney continued in the porffion of the Scots till the days of Donald Bane, about the year $1: 99$, who, that he might fecure the kingdom to himfelf, promifed the illes to Marnus King of Norway, if he would affi! him with a neceffary force; which offer Magnus accepting, the Norwegians became matters of the ifles, till Alexander III. about the year 1263 , recovered them by expelling the Norwegians; which. ever fince were poffiffed and difpoled of by war kings. To be brief, at length William Douglas Earl of Mortoun got a wadfet of Orkney and Zethand from King Charles I. which wadfet with all the rights, contracts, infetments, \&c, therento appertaining, was reduced by a decreet of the L.ords of Seflion, obtained at the inttance of his Majefty's Advocate againft William Douglafs alfo Farl of Mortoun, grand-child to the aforefaid Earl, Fubruary 1669, which decrect was ratified and confirmed by act of parliament the December following, erecting the Earldom of Orkney and Lordfhip of Zetland into a ftewartry to de called in all time coming the Stewarty of Orkuey and Zetland. The reafon commonly given, why the Earl of Mortoun hoft the wadlet, was becaufe fome chefts of gotd were fifed by the Earls Deputs in Zetland, got out of a rich fhip, called the Carmelan of Amblterdam, calt away there anno 1664; none of this gold coming to the King's treafury, though lome of it, as was alledged, came to the Earl's hands.
from our hiftory we may know, that Orkney and i.ctland have been reckoned fo great and confiderable a part of His Majelty's ancient kingdom, that for divers ages they oceafinsed much expence of blood and treafure, for the maintaining thereof againft the invation of foreigners, and recovering the lame out of their bands by arms and treaties. The tille likewie of thefe illes hath !lill been reputed honourable, hence it hath pleafol our prefent King to confer this tide of Earl of Orkney upon Lord George Hamilton, brother to his grace the Duke of Hamilton, for good lervices done by him to His, Majofty's perion and grovermment.

I proced to confiter the prefent fate of the country. The people here are perfonable and comely, and many of them, as I obierved, are of a ruddy complexion, which may be by reaton of the lea air and their frequent fith diet, fuch a colour and countenance, as our maniners ufe to have and retain for fome days after they are come from fea: they are generally hofpitible and civil, giving kind and humane entertainment to ftrangers, which we found to our experience. Both men and women ase fafhionable in their cloaths, no men here ufe plaids, as they do in our Highlands: in the North Illes of Sanda Weftra, ixc. Niany of the comatry people wear a piece of a din, as of a fal, commonly called a felch, calf or the like, for fhoes, which they fatten to their feet whith fings. 'rongs of leather. 'lheir houfes are in good order, and well furnilhed according to their qualities.

They !enerally feak linglifh, neither do : think they have fo much of the northern accent, as in many places of the north of Scutand, yet feveral of the lifes have fome
words and phrafes peculiar to themfelves. There are alfo fome who fpeak Norfe efpecially in the mainland, as in the parifh of Hara there are a few yet living, who can fpeak no other thing, this language not being quite extinct among them, fince the Norwegians whofe language it is, had this country in poffeffion. And though Caithnefs be near to Orkney, yet none in Orkney can fpeak Irifh, though the greateft part in Caithuefs can ; nor can any in Caithnefs fpeak Norfe, though fome in Orkney yet can do it.

The air, as it is piercing and cold, fo it is free and healthy; hence many arriv. at a good old age: one in Evie brought forth a child in the fixty third year of her age, as the ninilter who had enquired thereunto declared: a man in the parifh of Holm, who died not many years fince, lived with his wife in a conjugal fate above eighty years, as the prefent minifter of the place informed me: a gentleman in Stronfa, who died about two years fince, was begotten of his father when one hurdred years old, this was attelted by the minifters who knew the truth thereof, one William Muir in Weftra lived one hundred and forty yeare, and died about fixteen years ago, by a decay of nature's heat and vigour, incident to fuch an infirin decrepit age, without any ordinary ficknefs, as a gentleman in thefe bounds, well acquainted with him, told me. The difeafe they are moft obnoxious unto is the fcurvy, oceafioned; as is judged, by the fea air, fi.hes, faltmeats, Sic. It is obferved likewife that it is colder in the fummer time than it is with us in the fouth, but warmer in the winter, the fnow not ufing to lay long; for (befide other things that might be faid on this head, which alfo refpect other countries) in the fummer cold breezes come off the fea, which rempers the heat; and in the winter feafon the fawe breezes may qualify the extreme cold and froft, which ufeth to be greateft, when the air is moit quicficent, and leaft difturbed witin winds; the great motion allo of the rapid tides may contribute not a little thereunto.

Their ordinary grain are oats and barley, and though other grains fhould be fown, the product would not be great if any at all, they not taking with fuch a weak and cold foil, and the many brinifh blafts thefe ifles lay expofed unto. As for wheat bread it is rare and farce to be had, if not at Kirkwall and fome gentlemen's houfes, who bring the flour from Murray, or the fouth of Scotland. As for their oats and barley, the grain is lefs and blacker than it is with us: yea though they fhould bring good and fair feed from other countries, within a few years it would degenerate and become like their own; which is the reafon why their meal and bread are of fuch a black colour. Yet in fome places the meal is whiter, and faid to be better than in others. Their not being fo diligent i. xinnowing their corns, not having fuch good mills for grinding as we have may be partly the caufe thereof. In fome place alfo they ufe not to fhear their corn, but piuck it up by the roots, as we do the lint, becaufe of the fearcity of fodder to to their beafs, which corns, if not taken pains upon, will abound with fand and dult. Neverthelefs, for aught I hear or know, their bread and ale are wholefome, and the natives take well with them. I thought firlt when we landed in Orkney, their oat bread and helhes alfo had fome filh-tafte, but when we had tarried fome days there, we were not fo fenfible of it.

Thei: arable fround is better and more fertile than at firft to frangers appeareth, whence I heard isme gentlemen declare, it was wonderful to think how great the product of thefe ines is confldering the many barren monntains and much wafte ground that are in them. They dung their land for the moft part with fea-ware, which having gathered they futfer to rot, cither on the coafts, or by carrying it up to the land upon horfes or on their backs; they lay it in heaps, till the time of labouring approach; which is the reafon, why the thirts of the ifles are more ordinatily cultivated, and do more abound with corms, than places at a greater diflance from the fea, where they hive
not fuch gooding at hand. Their ploughs are little and light, having only one filt, and but little iron in them ; hence when at the end of the ridge, he who holds it lifts it up and carries it to the other fide of the ridge, and if he pleafe may carry it home on his fhoulders: the reafon they give of this is, that although fome of their ground be ftrong, yet their bealls are weak and unable to go through with a plough of any confiderable weight.

Their horfes, kine, fleep, lanbs, \&c. are of a leffer fize than with us, and are to be bought at an eafier rate, for a good cow which will be had for five pounds Scots, or four pounds, fixteen fhillings, at which price they are obliged to fell her at Kirkwall about Martiumals. A good wedder for twenty fhillings Scots. A hen for two fhillings or two fhillings and fix-pence, \&cc. The fheep here are generally wild, therefore when they would have them taken, they ordinarily do it by dozs trained for the purpofe, the owner of the fheep giving to the mafter of the dog two thillings Scots for each one that is taken, and if they be not fo wild but one fhilling. Some huibandmen told us, they would rather labour their land over again than take their fheep when they would have them wafhed and thorn; I faw a young man come from the bills wet and weary, having a long time purfuet one to kill for our ufe. Their kine are of divers colours, fome white, others of a pied, fome red, others red and white, \&c. So that I think; there are as many of thefe co'ours as are of a black. They have no rivers, no place of the land, being abovetwo or three miles diftant from the fea, therefore they draw water out of wells for theircattle, or chive them to lochs or lakes, fome whereof they have, or to fome finall. brooks which run from thefe lochs: which lochs likewife caufe their mills to go.

They have abundance of catte in many places, whereby is afforded them plenty of milk, which yieldeth much butter, fome whercof is very good, yellow and fweet, but that which is called Orkney butter at Edinburgh, is only their farm-butter, which they are obliged to pay to the taxmen or malters, whereof a quantity according to compact and agreement being gathered, they are at little or no trouble to make and keep it clean. Their fheep alfo are very fruitful, many of them having two, and fome three at a birth, which as Mr. Wallace late!y, fo Boethius of old did obferve, oves illic penc omnes geminas, immo trigeminos plercque partus celunt.

Fifhes of divers forts are taken in great plenty, yet not fo numerous as formerly, for now before they catch their ${ }^{1}$ great fifines as keeling, ling, \&c. they muft put far out into the fea with their little boats, and thereby undergo great danger, which in former times they uled to ret nearer the coalts: however fuch a number is taken, that, befide what for their own fupply, many are fent abroad to other countries for fale. Particularly there are grey fifhes, callicd filluks, fcarce half fo big as a herring generally, which fwim and are taken in great numbers upon the coafls, fo that fomctimes they foon fell one thoufand of them for fix or feven fhillings Scots. This fifh is pleafant to the tafte, and alfo they fay very wholefome, which feems to be confirmed by this, that in the late years of grat fcarcity, the poorer people lived upon then, almoft as their food, they often not enjoying a crumb of bread for many wecks. So our good God, on the fhutting of one door, opened another in his holy and wife providence for the relief of the poor.

Herrings do fwim here in abundance, which formerly occafioned feveral fhips frequenting thefe ifles, but fince the battle of Kilfyth, they lay that trade hath failed, many of the Enfter men, who were ordinary fithers upon thefe coafts, being killed there. When I was in Papa Weftra, they pointed out to me a holm upon the eart fide of the iff, where I faw the ruins of fome huts or little houfes, whereunto theie Enfter men fometimes reforted, during the herring fifling. A gentleman living in this iffe toll me, that the former year, 1699 , there was a great quantity of herring fperm or fpawn driven
ujon
upon the fhore, and lay there for fometime in heaps: which evidenceth that herrings in their feafon are yet on thefe coalts: though means be not ufed to take then.

Befide the many other excellent fifhes, as keeling, ling, fcate, turbot, and fometimes they fay fturgeon \&c., there are alfo many hell fifhes taken; as lobiters fold for an halfpenny or four pence Seots; oyfters, much bigger than with us, for four fhillings Scots per hundred; partens and muffels: and cockles in fo great plenty, that they make much good lime of their thells, befide which they have no other lime in Orkney, fave what they bring from the fouth.

They have plenty both of land and fea fowls: as eagles, hawks, ember-goofe, claikgoofe, dunter-goofe, folen-goofe, fwans, lyres, fcarffs, kettiwaiks, plover, muir-fowl, duck and drake, \&c. The king's falconer ufeth to go every ycar to the ines, taking the young hawks and falcons to breed, and every houfe in the comtry is obliged to give him a hen or a dog, except fuch as are exempted. The eagles do much hurt to the young ftore, falling down upon their lambs and hens, and taking them away with them to their nefts, killing and pulling out the cyes and hearts of their fheep; hence there is an act ftanding in the fteward's books, that whover fhall kill an eagle, flall have a hen out of every houie of the parifh, where he is killed; yet notwithflanding of this encouragement, I hear but of few killed, they fleeing high, and difpatching their prey fo quickly: 1 faw a young one in the palace of Birfa, almoft twice the bignefs of a goofe. though not a month old, it is a ravenous fowl, and would have run upon us if we had not kept it off with our ftaves; as to its colour, it is for the moft part black, and fomething of a yellow or golden colour about the head and in fone parts of the wings. It is to be obferved of the eagle, that he doth more deftruction in places at fome diftance from his nef than in thefe that are nearer it. Eagles, hawks, and fuch like fowls have their nefts ordinarily on fome high ragged rock, walled by the fea beneath, fome of which we faw as we had occafion to fail by them.

The ember goofe though not altogether fo big as our land groofe, yet it ufeth to weigh a flone weight. It hath fhort wings, not able to bear up he body for fleeing, hence it is never feen to fly, neither fit on any rock in the fea, as other fowls do, but hath its neft, wherein it hatcheth its egge, one or two at unce, und $r$ the water, at the foot of a rock, as they informed me hath been found. It is of a darkifh grcy colour, and white about the neck, of broad feet like our land goofe, and a long beck and though ever in the water, yet hath not, I think, fuch a ftrong fifh tafte, as the folen goofe. It is more dificult to get them fhot than other fca fowls, they being very quickfighted, and on the firft apprehenfion of danger get beneath the water: yca by reafon of their many feathers, they will receive a thot on their breaft, and it not penetrate: wherefore who would be at them, defign for their heads, or to fhoot them againft the feathers. The lyre is a rare and delicious fea fowl, fo very fat, that you would take it to be wholly fat; it is fomewhat lefs than a duck.

The fea fowls are fo mumerous, that a gentleman in Weftra told his minifter, that fonce years ago, he for his own part killed fo many, as afforded him fifty, fixty, and fome years one hundred flone weight of feathers, (whereby accrues to the owners more gain than by the flefh of the fowls) though for fome feafons palt he had taken but few; for it is obferved, that thefe fowls follow the fimall filhes, which are their ordinary food, hence the more fifhes, the more fowls, and when the fifhes forfake this and the other place, the fowls likewife do fo within a fhort time. Becamfe of this abundance of fowls, therefore it is, that the gentlemen and fome others have the rocks in feveral places civided among them, as they have their land. Which fowls they either kill by furall thot out of boats at the foot of the frequented rocks, or elfe men are let down by ropes from the top of
the rocks, who fearch for the nefts, taking the egge and what fowls they can apprehend. Many kinds of the fea-fowls are of a pied colour, fone of which are not to be found with us in the fouth.

There are here no partridges, but. plenty of muir-fowls, hence in forne ines they will take twenty, thirty, or forty pair in one day, the hills covered with heather, being ty nature fitted for their living and accommodation. Conies alfo do abound in moft of the ifles, but no hares are to be feen; fo that if any be brought into the country, as they fay hath been tried, they will not live and propagate as in other places. I hear of few, if any, venomous creatures in thefe ifles, as Boethius of old did obferve: Serpentes aut aliud aninal venenofium nullum, id quod de Hibernia quoque vcrum $f f$. No bees cither are here, there being no provifion proper for them, befide they would not take well with this cold climate.

No trees there are in this country, nor bufhes, fave a few in the bilhop's garden at Kirkwai, $\cdots$ hir are efteemed as a rarity, for when planted and taken care of, they fometimes grow up the height of their garden wall, but afterwards the; gradually go back and decay. This feveral gentlemen very defirous of having trees to grow declared, which then muft be imputed to the nature of the foil, and fharpnefs of the fea air, and nct to we floth of the inhabitants, as our hiftorian alferts: Nulla ufquan arbor ac ne frutex quiden prater ericam, nec id tam cali aut foli vitio quan incolarum ignavid, quod facile offenui.:ur ex arborum radicibus, qua pluribus in locis crmuntur. For though indeed it be true that roots, and fometimes bodies of trees, are found in moffes, yet this is rare, and only to be had in fome places; whereas gentlemen fay, they bring in exotic or foreign plants, they fow feed for nurferies, which ufeth to arrive at fome greater growth than what is planted, yet after all their pains and expence in ufing fuch proper means, fo conducive for obtaining their end, no perfection or bearing of fruit can be attained: and that trees, which yet are but fimall, and look dry and withered, do grow in the bithop's garden, may be becaufc of its inclofure, having the church on one fide, the town of Kirkwal on the other, and the bifhop's houfe on a third; which kind of fences ma.j keep off the cold breezes that come from the fea, and deftroy the growth of trees in other places.

Though there are no trees, and fo no fruits for the table, yet there is no lack of good roots for th- kitchen, as cabbage, carrots, parfnips, turnips, crummucks, artichokes, \&c.; all whin in uith to be bigger here than with us ordinarily, efpecially their artichokes excel; hence fome gentlemen do barrel and fend them out of the country for a prefent to therr friends: befides thefe, they have likewife varicty of herbs in the field, very beneficial to fuch as underftand their virtue and ufe.
Peats and turf are the ordinary fuel they ufe, which they have very good and in great plenty through the country, except in fome places, which do not fo abound therewith, as in Sanda they are obliged to bring peats from the adjacent inles, they not having in their own ile to fuffice them; and the ufual manner of agreement with the proprietor of the mofs is for fo much a day for fo many peats as a man can caft : and in fuch places where there is fcarcity of fuei, the poorer fort make ufe of dricd kine's dung, or tangles, which in fummer's heat they prepare for the winter's cold. They have a few falt-pans in fome places, where plenty of peats, which are very ufeful to the country: at fome times much timber, the wrecks of fhips caft away at fea, or broken on their nles, is drive. dhore, which the inhabitants feizing keep for burnwood, and if good and frefh (as fometimes fhips from Norway fivfer fhipwreck upon or nigh to thefe ifles), they make other ufes of it: I faw feveral chimney-pieces thereof. The more ignorant pecple conitruet this as a favourable providence to them, therefore they call thefe wrecks
vol. 111.
5 c
God's

God's fend, though not fo favourable to the poor mariners and now is who fuffer thereby.

Although the fea feemeth to favour them, by bringing fuch timber, and fometimes cafks and Alads of wine, brandy, \&c. to their doors, yet this turbulent fwelling fea, and ftrol ${ }_{3}$ current of a tide pays them lime form, for lrequently thereby their finall pofage or fifher-boats are calt away, fometines all in them perilhing, at other times mone faved with difficulty. And at all times it is lughly damperons for any not experienced with thefe feas to pafs through between the illes, though with fimall boats, becaufe of the many blind rocks lying there, upon which fometimes the inhatitants thenfelves do fplit, what through fome mittake, inadvertency, darknels of tie night, or otherwife.

The minifters inform us they are often in great danger in going to their churches from ine to ine, vifiting their pariftes, going to the pretbytery, \&c. Sometimes pale death, with its grim countenance, prefenting itfelf, and faring them in the face, as one drawn nut by the hair of the heal; another eleaping on the keel of the overwhelmed boat; fonctimes they are arrefled by a thorm in the ifles, and kept from their own families for fome weeks, even when the palluge will be fearee a mile or half a mile over. They tell us, in the ifle of Weltra, there was a murriage not long fince, where about and hundred perfons were convened from other ifles, and were detained for fix or feven weeks together, fo that the many of them daily faw their own houfes, yet they durlt not adventure to pafs over, till the falling wind and lea took off their confincment.

In every ifle there is a Wart or Ward hill, the highelt hill in the ifle, on the top whereof they ufed to kindle a fire when they faw an enemy approaching, or difcernced any danger, that fo they mighe alarm the neighbourhood, that the difperfed inhabitants of the country having thereby notice given thern might convene for thair fuccour, or be upon their own defence, which beacons on the tops of memtains the forpture makes mention of, as Ifa. xsx.17. And a late learned anthor alierteth, "That great flame with fmoke rifing up out of the city, which was appointed as a lign between the men of Ifraci and the lyers in wait, Julg. xx. 38,40 , feems to be meant by this."

Thase are feveral gentlemen in Orkney who have confiderable eftates, but the King is enf sicat proprietor, having about the one helf of the rents of the whole country; which : ats are let out to tax-men for fo muh per ammem, as is agreed upon at the pubid roup, who by their deputes gather in the revenuts of the crown, and being the King's ftewards, they are the principal judges of the country. The rents when collected, whether paid in money, meal, nats, barley, or butter, are ordinarily fent fouth, which caufeth a great grudge among the people, fome of then thereby being redacted to great fraits, not getting meal, barloy, or the like fometimes to buy, as in the late dearth, though then the product of thefe iffes, comparatively, were beyond that of many other places in the kingdom. 'The bitlop's rents amounting to eight or aine thoutind merks per annum, and fo more confiderable than the rents of feveral other bithopricks in the kingdom, now fince the abolition of prelacy coming in to the King's treafury, and at his difpotal, are allo fent fouth, and not confumed within the ifles, as they ufed formerly to be, when the bithops refided here, at which the people are likewife dillitisficd, and therehy, as fome better acquainted with their humours and inclizations do inform me, the prefbyterian government is made the lefs acceptable to many of them.

The people greatly cry out of the oppreflion they grodn under, by reafon of the frequent change of flewards their mafters, who being tax-men, and fo only to continue for fuch a definite time, each endeavours to gather in his rents, and that as foon as may be, which many of the poor people cannot get fo quickly given, whercupon feveral of them are put to doors, and all taken from then, which hath occafioned nuch of the King's
land now to be lying wafte and lee; whereas if they always had one maner, their circumitances might be much tetter, for fometimes ir for tatheth out that the hulbandman will gain as much in one year as viil compentate the lofs of anobere, the maiter likevife would be more enconaging to them, and concerned in their welfare, ans they havibg leafes fet them, would nore endeavou: the inproving of their grand, which now hay do not, they not linowing but the next year they may have a inew matler, whofe lints fuger may be thicker than his predeceffor's lens. Yet lat not my reader judge that I hereby intend the impeachant of any particular perfon or perfons whon have been tasmon there, or now are; but my defign is to fhew that this is the common compltint of the comintry roth in Orkney and \%edland.

The gent "erentell us hacy have anmer kind of howing hare th " is in other places, and the ! " have to their lands is that which they call : . .t tight ; a poffer. fion whic $1 \quad$ fucecflively heve without eifher charte': "ib, all their lands being : whll hands, or King's lands, or fewed tami. Alad! right is tand to be coll Ulaus King of Norway, who when he poffeffed the courtry gave to the imh. Wht to to much land, he always retaining to himfelf the third part, and enjoying anfe thereof.
Their meature is not the fame with ouses, they not tiang peck and firlot, but inftead thereof weigh their corns on pifmires or penallers. The leatl quanity is called a merk, which is eighteen ounces; twenty four merks make a leifyound or fetten, which with the Danes is that which we call a flone; fix fettens a meil, which is their holl; and cighteen meils make a chalder. Neither do they ufe pocks or facks as we do ; but cariy and keep their corns and meal in a fort of veffel made of fraw, bound about with ropes of the fame, called Cafies.

## Cinap. Ill. - Wherina the feerral Ifas and Parifocs leconging to Orkny are cnuncrated, and bricfly deficribed.

HAVING given fome defeription of Orkney in general, I fhall now give fome more particular account of the feveral illes thereunto belonging, which are divided into fuch as are inhabited, and fo are more commonly called ines; and fuch as are not inhabited, which they call Holms, only ufed for pafturage. The iffes are fais to be twenty-fix in number, viz. Powona, or the Maiuland, being much larger than any of the reft, Gramfey, Hoy, Swinna, South-Ronaldha, Burra, Lambholu, Wlotta, l'aira, Cava, Copinfha, Shapinfha, Damfay, Iuhallo, Gairfa, Roufa, Fagtetha, Stronla, Papa-Stronfa, Eda, North-Faira, Wefla, Papa-TVelra, Wyre, Sanda, and North-Ronaldfha. 'To which may be added l'ightand Skerries, it being fometines inhabited in the fummer-tine, and Wats, which in a lighn flream is divided from lloy, whe eunto it is joined by a low and narrow neck of land; as alfo the Call of Eda, it having a falt pan in it. It may be obferved that moft of the names of tiefe ines end in a cr cy, which in the Teutonick tonsue figuifieth water, to fhew that thefe ifles are pieces of hand furrom ted with water.

The firit is Pomona or the Mainland, faid to be twenty-four miles in langth from ealt to weft, and in fume places fix or cight miles broad; nigh to the middle whereof is the town of Kirkwal, about three guarters of a mile in length from fouth to north, the only renarkable town in all this country, and befite which there is no other royal burgh in Orkney or Zetland. The Danes, who had the Orcades long in poffeffion, called it Cracoviaca, which name Buchanan takes to be the fame with Kirkwal, but corrupted: Quod Dani Cracuviacam appelideant, nume nomine corrupho Kircua Sotis dicitur. It itandth upon the north fide of the ine, in a low and moitt ground; hence a minitter in this
country

country told me that in feveral places of their large church, where the more refpected burghers ordinarily bury their dead; they can fcarce dig two feet of earth but water will arife; fo that he hath feen when they interred the corple, they behoved to prefs them down in the water till the mold or earth was caft upon them. It is now much decayed as to trade and number of inhabitants, as many ancient burghs in this kingdom are. In it hath been two ftately edifices, the King's and the bifhop's palace : the former is now very ruinous, being the ancienteft of the two, built, as is thought, by fome of the bifhops of Orkney, it having the veftige of a bihop's mitre and arms engraven upon the wall that looks to the ftreet, and in which, it is faid, the bifhops of old had their refidence; the other, called the bifhop's palace, wherein the bifhops lately lived, was built by Patrick Stewart Earl of Orkney, anno 1606, fon to Robert Stewart, natural fon to King James V. This palace is alfo going to ruin, though with fome expence it could be kept in good repair.
$T$ he church is a very noble and large ftructure, having in it fourteen or fifteen ftrong pillars on each fide; the fteeple ftanding on four bigger and higher pillars in the middle of the church, wherein there are feveral old and good bells. In the eafter part only of this great church is divine fervice performed, which is furnifhed with good feats for accommodating the inhabitants, and other conveniencies proper for that end. It is commonly called St. Magnus Church, being built, or at leaft, as fome fay, the foundation laid by Magnus King of Norway, whom they report to have been buried here; though others fay he was buried in Eaglefha, an ille to the north of Kirkwal. There are many of this name of Magnus in this country.

At Kirkwal there is a fafe road; but fhips coming from the fouth cannot get fo eafily into it, by reafon that the fame wind which brings them to Orkney, often will not fuffer them to turn up to Kirkwal, they being obliged to encompafs a point of land ftretching to the north-ealt before they can make the road, fo that frequently they lie at Elwick or Deer-Sound, two anchoring places to the eaft or north-eaft of Kirkwal, until that the wind thall favour them.

On the Mainland good corns do grow in feveral places, though likewife there be much moorih ground; but the pleafanteft part of the ine I take to be the weft end thereof, about Birfa, Hara, Sandwick, and Stromnefs, where there are feveral fpots well furnifhed with grafs and corn. In the parihh of Birfa is the King's houfe, fituated on a plain champaign ground on the weft end of the Mainland, nigh to the fea or Deucaledonian ocean, which formerly when in order hatb had feveral pleafant and diverting avenues about it. At a large quarter of a mile's diftance to the fouth we faw the pleafanteft mixture of gowans, fo commonly called, or daifies white and yellow on every fide of the way growing very thick, and covering a confiderable piece of the ground, that ever we had occafion to fee. The palace was built in form of a court by Robert Stewart Earl of Orkney, about the year 1574; it is two fories high, the upper hath been prettily decorated, the ceiling being all painted, and that for the moft part with fchems holding forth fcripture hiftories, as Noah's flood, Chrift's riding to Jerufalem, \&cc. ; and the fcripture is fet down befide the figure: it was inhabited within thefe twenty years, but is now fatt decaying. When we entered the palace gate, we faw above it that infaription fo much talked of, and reputed treafouable by King James VI. : Robertus Steuartus filius Jacobi Vti. Rex Scotorum boc adificium infruxit; which infcription could not but offend the lawful heir of the crown, for it cannot well be thought that the Earl and all about him were fuch blunderers in the Latin tongue as to put down Rex inftead of Regis, if there had been no defign in it.. Within the palace we faw alfo the motto above his arms: Sic fuit, eft, et erit, which was a piece of too great arrogancy for any

man to affume that unto himfelf which properly belongs to the Son of God, whofe wife judgment is not unworthy of our remark, that now only it can be faid of his houfe and family, now extinet, fic fuit ; which that great King Nebuchadnezar knew to his experience, "That thefe who walk in pride God is able to abafe."

Among other pleafant places in this weft end of the Mainland we may take notice of Kirfal-Hill, a little to the eaft of the houfe of Brachnefs, in the parih of Sandwick, which is very large on the top, and plain almoft like a bowling. green, fo that nine or ten thoufand merr could eafily be drawn up in order thereupon; it is all over very green, without any heath or fuch like growing there, neither are there any rifing hillocks on it that we could difcern, as ordinarily are to be feen on other hills; and becaufe of its being fo very pleafant, the inhabitants about call it Chearful-Hill. Within a few miles alfo of the weft end of the Mainland is the Loch of Stennis, the largeft in Orkney, whereon are fome mills; fome trouts and falmon-gilfes are found in it and the brooks that run from it.

Befide Kirkwal-road, there are feveral other harbours or bays on the Mainland, wherein fhips can fafely lie; as one at Kerfon, a finall village at the weft end of the Mainland, much frequented by fhips going to the weft of Scotland or Ireland, or coming therefrom; another is at Holm's. Sound, towards the fouth-eaft fide of the ifle, to which fometimes barks do refort from the fouth; feveral fhips alfo going through Land from the fouth to the weft fea drop anchor here; and when they pafs they muft fail between Lambholm, a little ine in the found, and the Mainland; for the way on the other fide between Lambholm and Burra, though it feem more open, yet it is, they fay, fhallow and dangerous. But none I think will dare to fail through thefe ifes without fome meafure both of fkill and experience, elfe it will be to the hazard of their lives, and the lofs of fhip and cargo, there being feveral turnings, blind-rocks, and fhallows; wherefore many do judge it the fafeft courfe to keep the wide fea, and fo fail without the ifles, efpecially if the weather be not well fet and promifing. Another convenient road is at Deer-Sound, to the eaft of the Mainland, where a great bay commodious for navies to ride in. Some other harbours and bays alfo there are upon the Mainland; but thefe are the moft remarkable.
Nigh to the point of Deer-Nefs fome years ago was caft away a flip tranfporting fome prifoners to America, who were for the moft part weft-countrymen, apprehended, imprifoned, and then banifhed for adhering to prefbyterian principles: there were, as is faid, above an hundred who perifhed, being kept under the deck, and tied together by pairs, whereas if they had been at liberty, the greateft part, if not all, might have been faved, as a few were, then upon deck with the mariners. The country people here did, and do think, that the captain of the fhip willingly fuffered her to drive upon this point, and the men there to perifh; and if fo, it is probabie that others, thougin not aboard, have been concerned in this mifchievous defign, as the authors and abettors thercof.

In the Mainland are feven parihes, but thirteen kirks; for many minifters in Orkney have two and fome three kirks, wherein they ordinarily preach by turns: the firft is Deernefs and St. Andrew's, at the eaft end of the ifle, where two kirks, one at Decrnefs, and another at St. Andrew's, wherein their minitter preacheth by turns; here live the lairds of New-work and Tankernefs. Under this minifter's infpection alfo is Copinfha, a little ine to the eaft of the Main, wherein a few families, fome corn land and pafturage : it at a little diftance appears to be as an high rock confpicuous to feamen; but it declineth and lieth low towards the weft. To the north-eaft of it lieth a Holm, called the Horfe of Copiniha.
The next parifh is Holm, alfo on the eaft of the Main, to the weft of Deernefs and St. Andrew's, wherein is but one kirk; in this parifh liveth the laird of Graham's-Hall.

To their minifter's charge belongeth Lambholn, a little ifle to the fouth of the Main, wherein a family or two. North-weff from Holm the parifh and town of Kirkwal lieth, where one church, but they fhould have two minitters: a part of their charge is called the parifh of St. Ola. To the weft of Kirkwal is Orphir, where is but one kirk. To the north-weft of Kirkwal lieth Firch and Stennis, having two kirks, wherein their minifter preacheth per viccs, or by turns: to this parifh belongs Damfey, a little ine. To the north of Firth and Stennis is Evie and Rendal, having two kirks, wherein their minifter preacherh per vices. To this parifh belongeth Gairfey, a little pleafant ine, wherein liveth Sir William Craig, of Gairfey.

To the weft of Evie and Rendal is Hara and Birfa, where are two kirks, in which the minifter preacheth per vices; the King's houfe is in Birfa as abovelaid. Next to Birfa, to the fouth-weft, is Sandwick and Stromuefs, wherein are two kirks, which their miniller goeth to per vices. To Stromnefs belongeth Kerfon, where the bett harbour in Orkney, and by reafon it is daily increafing as to houfes and number of inhabitapts, (who are encouraged to dwell here upon the account of the many flips that do frequent this port, and often tarry for fome time) ; the minitter and geatemen concur in fupplicating judicatories competent, that Kerton with fome of the cuuntry adjacent may be erected into a parifh by itfelf, that to the inhabitants of the place, and itrangers reforting thereunto, may be ferved with preaching and other parts of the palloral work; their prefent church at Stromnefs being four miles diftant from them, wherein alfo they can have fermon but every other Sabbath. In Sandwick lives the laird of Brachnefs.

To the fouth of Stromnefs and Sandwick lieth Hoy and Wacs, which ordinarily make but one ifle, though fometimes by a high fream overflowing the low and narrow paffage whereby they are joined to one another, they are divided into two : the inf is about ten or twelve miles long from weft to eaft. Waes, at the caft end of the ine, is better inhabited than lioy, at the weft end thereof, it lying lower, and fo fitter for pafturage and labouring; whereas Hoy is more mountainous, only having fome houfes on the ikirts of the hills, by the coafts, and fome corn land about their houfes. The hill of Hoy is the higheft in Orkney, whence we have a fair profpect of all the circumjacont illes, as alfo of Caithnets, Stranaver, Sutherland, \&c. on the fouth fide of PightlandFirth, yet though it be fo high, it cannot hold true what lome do afort, that from this hill is to be feen the fun all the night over in the month of. June, $w \quad e$ is about the tropic of Cancer, for feeing the fun is for feveral hours feen abo thorizon the fhorteft day of winter, he muft necefinily be fo far depreffed the fhorteit night in fummer, fo that his body camot then be feen, though fomething of a clear light may be difcerned, as it were, accompanying the fun from his fetting to his rifing point, by reafon of the reflection and refraction of his rays upon and through the fea, he dipping fo little below their horizon. For the further illuftration of this, the minifters of the northern ifes of Orkney told me that in the month of June they will fee to read fmall print or write at miduight; and in December for fome days they can neither fee to read nor write unlefs that they light a candle, as one of then attefted from his experience. To the fouth of the entry into the Sound between Hoy and Kerfon in the Mainland is the Comb of Hoy, the higheft rock in (Irkney, looking to the weft or Deucaledonian Ocean, much frequented hy fea fowls.

The minilter of Hoy hath two kirks, one in Hoy, and another in Gramfey, a little pleafant :lle about a mile long, lying to the north of Hoy, between it and Keriton in the Mainland ; but thips that go through this Sound ufe to fail between Gramfay and the Mainland, the way between Gramkay and Hoy being very dangerous. The minifter of Waes hath two kirks, one in Waes, and another in Flotta, a pleafant little ifle, and as
capable of improvement as any inle in Orkney; Faira and Cava, alfo two other little ifles, are a part of his charge ; thefe ines lie to the eaft of Waes and Hoy.
Nigh to the eaft of Waes and Hoy lies South-Ronaldfha, five miles long from north to fouth, and about two broad in feveral plaies; it is the fouthernmof of all the ifles of Orkney, and very fertile and populous ; at the fouth-end thereof is Burwick, whence the ordinary paffage is to Duncian's-bay in Caithnefs over Pightland-firth. Their minifter hath three kirks, two in South-Ronaldiha, one at the fouth end of the ine, called our Lady's-Kirk, and another at the north end, called St. Peter's-Kirk. . He hath a third kirk in Burra, a pleafant little ine to the north of South-Ronald/ha, wherein is much corn-land and many rabbits; in this ife liveth Sir Archibald Stuart. To this parih belongs Swinna, a little ifle in Pightland-firth, of which more afterwards, when we come to difcourfe of Pightland-firth.

To the north of the mainland lies the Northern Ines, as Shapinfha to the north-eaft, four or five miles long, to this parifh belougs but one kirk. It hath a fafe harbour at Elwick, on the fouth of the ifle: here is the houfe of the found, which looketh well, and hath a pleafant fituation on a rifing ground, lying to the fouth.

To the north-caft from Shapinfha lieth Stronfa, about four or five miles long, it is well inhabited, and the grals and corns are good: Papa Stronfa is a little ifle over againft it towards north-eaft, wherein but one family, between Papa-Stronfa and Stronfa is a fafe harbour or bay, well fenced by promontories or capes of land: it is faid to be the beft north bound harbour in all the Northern Ines. Oppofite to Stronfa to northweft lies Eda, ahout four miles of length from north to fouth, it is full of mofs and moor, and but thinly inhabited: fome of the neighbouring ifes get their peat hence. In it a loch and mill. To the north-eaft of Eda is the calf, a holm fo called; between which and Eda is Calf-found, a convenient and fafe road. The minifter of Stronfa and . Eda hath two kirks, one in Stronfa and another in Eda, where he preacheth every third fabbath. To the weft of Eda lies North Faira, a little pleafant ifle, wherein a few familics.

On the caft fide of Eda ftands a houfe built by John Stewart Earl of Carrick, anno 1663. Some of whofe offspring are yet living in the neighbouring ifes, the occafion of his coming and living in this remote corner is reported to have been fome difcontent which fell out between him and his lady; he buile at a great expence twelve faltpans in the Calf of Edd, over agaiuft his houle, which for fome time were all at work, he defigning to have driven a foreign trade with his falt, but he dying after a few years abode there, the houfe and pans, not being kept in repair, went to ruin, fo that now only one falt-pit is ftanding. Thus his project died with himfelf.

To the north-ealt of Eda is Sanda, the pleafantelt, I thimk, of the Orkney IRes, nine or ten miles long from fouth to north, in many places a mile or a mile and a half, and in fome farce half a mile broad, having feveral tongues of land wafhed by the fea, hence fome to compare it to the thape of a lobfter: no place in the ine is high and mountaimots, and many foots of it are very plain, and even like a bowling-green, everywhere it is well furnifhed with grafs, and much good corn, faid to be the baft in Orkney; it alone payeth to the King forty-two chalders of victual, every one of which chalders is twenty-one bolls of our meafure; the whole ifle is but as one rich cuningar, or a cony-warren, for I never faw a greater number of conies running in any place than I did here; hence the heritors kill feveral hundreds of them yearly for their ufe. There are feveral bays for fhips, as Kitletoft, Otterfivick, and Taphnefs-bay. Some gentemen alfo who have coufiderable interefts, as Burgh, Lapnefs, \&c. : many fowls
frequent this ille, as duck and drake, plover, \&cc. fo that there is good fport for the fowler. The flirlings or flares are as numerous, I judge, as the fparrows are with us.

In Sanda are two minifters, one having one kirk called Lady-Kirk, on the caft fide of the ifle towards the north end thereof, in this ife are fome fober, knowing, and good pcople ; particularly in this Lady parifh, in the former Prefbyterian times, there was a goodly zealous minifler, Mr. Arthur Murray, who went fouth after the revolution, an. 1660, and died there, fome of the old people yet alive, who were under his minintry, cannot fpeak of him, without tears: "The righteous fhall be had in everlafting renembrance." The other minifter hath under his infpection three kirks, two in Sanda, Crofs Kirk, and Burnefs, and one in North-Rondalfha, an ifle to the north of Sanda, two or three miles long. Both thefe ines of Sanda and North. Ronaldfha lie low, and dangerous for feanen, who cannot difcover them at any diftance, efpecially in a mify day or dark night, till clofe upon them, and fo are ready to fuffer fhipwreck, as many do.

To the weft of Sanda lies Weftra, feven miles long, it is well inhabited, having much corn in it; here is Fitta-hill, where they fay the fairies are frequently feen, it is the higheft hill in all the northern ifles of Orkney. In the north end of this ife is the caftle of Noutland, built by Gilbert Balfour for the ule of James Hepburn Earl of Bothwell, married to Queen Mary the 27th of May, an. 1.567, in the abby of Holyroodhoufe, who fearing he fhould not always retain and enjoy his prefent grandeur, which the nobles envied him for, he likewife being fufpected guilty of the murder of my Lord Darnley, her former hulband, caufed to be built this flrong cafte, which upon a change of the feene, he might betake himfelf unto, fituated upon a high rock nigh to the Deucaledonian Ocean, having plain champaign ground about it; it is four fories high, and the loweft is Atrongly vaulted, above which is a high hall, having two air-holes through the arch, fo to give vent to the powder, if at any time they fhould be furprifed with a blaft, the walls are very thick, and all the free-fone for the building was brought from the fouth: the roof is flat and fenced with rails of fone, whence we have a fair view of the circumjacent country. There are feveral holes or flits in the building, not only to let in the light, but to gall an approaching enemy with fmall fhot, if at any time they fhould be attacked: but the Lord often taking the finner in his own craftinefs, fuffered him not fo to efcape, by fheltering himfelf in this neft. This cafte was never completed, for in one part thereof the walls are but half the height intended, and never hitherto covered with a roof, and be being purfued by the Lords of the congregation, never poffeffed it, or fo much as faw it, if not at a diftance, for he taking himfelf to fea with two or three flips came to Kirkwal in Orkney, and being driven thence by William Kircaldy of Grange, he fled to Zetland, where the purfuer had almoft overtaken him, if the pilot's fkill in thefe feas had not made a way to efcape, in holding down by the fide of a blind rock well enough known to the pilot, which the purfiner ignorant of fplit upon; which rock to this day is called the Unicorn, from the name of a hip that perihed upon it. Bothwell efcaped to Norway, where being apprehended, he was taken to Denmark, and calt into a filthy prifon, where he died after ten years imprifonment: his wicked life having this miferable end: "Though hand goin in hand the wicked fhall not go unpunifhed;" and ordinarily murder, (whereof he was fufpected to be guilty,) fo crieth from the ground, that it bringeth down remarkable and often tremendous judgments in time. There are feveral gentlemen's houfes in Weftra.

The minifter of Weftra hath three churches wherein he preaches per vices, two in Weftra, one at the weft end of the infe called the Weft-Kirk, and another nigh to the north end called the North-Kirk, the third church is in Papa-Weftra, a little ifle of three miles long from fouth to north; betwixt it and Weltra there is a convenient harbour for mips at Piriwa ; as alfo in the fane found a little to the north of this harbour lies a holin wherein there hath been a little chapel, whereof fome of the ruinous walls are yet to be feen. Papa:Weftra aboundeth with rabbits, and hath fome corn land, but not fo much as fome other ifles, it being hard and fony ground; it belongeth to a gentleman called Holland, and hath been reputed fannous for St. Trodwell's Chapel and Loch or Lake. To the eaft of this ifle lieth the Holm, where the Enfter men had thier huts as above.

To the fouth of Weflra lies Roufa, an iffe fix miles long, full of heathy hills, abounding with moor-fowls; there is not mucli corn in it, and but thinly inhabited. There is a loch and mill thereon that goeth ordinarily all the fummer over, which is rare in thefe illes. The minifter of Roufa hath two kirks, one in Roufa and another in Eglefha, a pleafant ine two miles long, where a church inuch frequented by fuperfitious people, with a high fteeple feen at a great diftance, where (as fome would have it) St. Magnus was buried. To his charge alfo belongs Inhallo, a little ine to the weft of Roufa, alfo Wyre a fmall inle.

Thus I have glanced at the defcription of the Orcades; moft of which I have had occafion to fee, wherein we fee there are feventeen parifhes; eight in the inainland, viz. Kirkwall, Holm, Deernefs and St. Andrews, Evie and Kendal, Firth and Stennis, Orphir, Bir!a and Hara, Sandwick and Stromnefs; and nine in the other illes, viz. South Ronaliha and Bura, Waes and Flotta, Hoy and Gramley, Shapinfha, Stronfa and Eda, Lady-Kirk in Sanda, Crofs-Kirk and Burnefs in Sanda, and North Ronalfha, Weftra and Papa Weftra, Roufa and Eglefha ; but there are thirty-one kirks; and thefe minifters look upon themfeives as more happily pofted, who have only one kirk, efpecially if they have not more kirks in feveral illes; this tending more to the edification of fhe people under their charge, and confequently to their peace and encouragement, they every Lord's Day difpenfing ordinances in the fame place, to the fame people, whereas thofe who have more kirks committed to them are fometimes obliged' to preach in one place and fonetimes in another, and the people generally frequent but their own kirk, efpecially if they be in different ifles, hence ordinarily they enjoy the ordinances only every other Sabbath, and in fome places but one of three, which cannot but obftruct the progrefs of the Gofpel among them. Befides it is uneafy, expenfive, and dangerous for them to travel from ine to ifle, and fometimes a form arifing they are neceffarily detained there. The flipends here are fimall, and for the moft part paid by the fteward or his depute, the king being the principal proprietor, yet they can live very well upon them, victuals being had at an eafy rate.

The people are generally tractable, fubmifive and refpectful to their minifters, which is very defirable and encouraging to thofe who labour among them, when true zeal enlargeth the defires, and puts an edge upon the fpirits of paftors in the difcharge of the lord's work for the good of fouls.

Chap. IV.-Some Things remarkable in Orkney, as ancient Monuments, Arange Providences, E゙c. are reprcfonted.
HAVING taken a view of the country in general, and the feveral ifles in particular, I fhall now divert my reader with fome things remarkable, not altogether unworthy of :
our obfervation, fuch as fome ancient monuments, Atrange accidents, and fome other things not only curious and delectable, but alfo profitable to the judicious; affording matter " of meditation to the wife obfervers of thefe things, who regard the works of the Lord, and duly ponder the operations of his hands, in the years of ancient and latter times."

The firf we take notice of is the ftone, called the Dwarfie Stone, lying in a valley between two hills, to the north of the Hill of Hoy, it is about thirty-four feet long, fixteen or feventeen broad, and eight thick, hollowed by the hand of fome mafon, as the print of the mafon-irons do yet thew; it hath a fquare hole for the entry, looking to the eaft, two feet high, with a fone proportionable flanding before this entry at two feet diftance, within at one end is hewen out a bed with a pillow, wherein two perfons may lie almoft at their full length ; oppofite to this, at the other end, is fomething alfo hewen out like a couch, between which bed and couch there is a large hole above about the bignefs of the entry, through which a perfon may come up to the top of the ftone, and might ferve for a vent to the fmoke, if fo be they had put any fire upon a hearth between the two beds. Beneath this ftone runs to the fouth a cold and pleafant fpring, which might afford drink to the inhabitants. Who hewed this ftone, or for what ufe it was, we could not learn, the common tradition among the people is, that a giant with his wife lived in this ine of Hoy, who had this ftone for their cafle. But I would rather think, feeing it could not accommodate any of a gigantic ftature, that it might be for the ufe of fome dwarf, as the naine feems to inport, or it being remote from any houfe might be the retired cell of fome melancholy hermit. The flone alfo may be called the Dwarfie Stone, per antiphrafin, or by way of oppofition, it being fo very great.

To the north-weft of this ftone is a high mountain of a feep afeent, called the Warthill of Hoy, looking to the north ; nigh to the top of which hill about mid-day, is feen fomething, and that at a good diftance, which glitters and fhines wonderfully, and though fome have climbed up and fearched for it, yet could find nothing; it fhines moft in the fummer time: the people talk of it as fome enchanted carbuncle; others take it to be a water that reflecteth the fun's rays, and fo caufeth fuch a fparkling and fplendor; but a gentleman who liveth nigh to this rock told us, that it thines moft in the greateft drought, when no water is near it.

At the weft end of the mainland, about a mile and a half to the weft of the houfe of Skael, on the top of high rocks, there is fomething like a flreet, near to a quarter of a mile in length, and between twenty and thirty feet in breadth, all laid with flones of different figures and magnitudes, of a reddifh colour: fome of which fones bear the image and reprefentation of a heart, others of a crown, others of a fhoe, a leg, a laft, a weaver's fhuttle, \&c. And that which renders it yet the more frange is, when thefe fonces are raifed many of them have the fame figure and flape below on the one fide, tiat they have above on the other; which flreet all beholders look on as very wonderful. I faw a part of the garden wall of the houfe of Skael, decored in the forepart thereof with thefe ftones, we intended to have fent a parcel of them fouth to our friends as a rarity, if they had not been forgot at our return from Zetland. Whether thefe ftones be fo laid and figured by art or by nature will be hard to determine. For there is no houfe thigh to this freet, neither are the ruins of any which formerly have been there to be feen. So puzzling are the works of God to the mont ingenious and accurate obfervers of P 'rovidence.
At the loch of Stennis in the mainland, in that part thereof where the loch is narroweft, both on the weft and eaft fide of the loch, there is a ditch, within which there
is a circle of large and high ftones erected : the larger round is on the weft fide, above one hundred paces diameter; the ftones, fet about in form of a circle within a large ditch, are not all of a like quantity and fize, though fome of them, I think, are upwards of twenty feet higla above ground, four or five feet broad, and a foot or two thick, fome of which fones are fallen, but many of them are yet flanding, between which there is not an equal diftance, but many of them are about ten or twelve feet diftant from each other. On the other fide of the loch over which we pals by a bridge laid with flones after the manner of a freet, the loch there being fhallow, are two ftones ftanding of a like bignefs with the reft, whereof one hath a round hole in the midft of it, at a little diftance from which ftoncs there is another ditch, about half a mile from the former, but of a far lefs circumference, within which alfo there are fome ftones fanding, formething bigger than the other flones on the weft fide of the loch, in form of a femicircle, I think, rather than of a circle, opening to the eaft, for 1 fee no ftones that have fallen there fave one, which when fanding did complete but the femicircle. Both at the eaft and weft end of the bigger round, are two green mounts, which appear to be artificial ; in one of which mounts were found, faith Mr. Wallace, nine fibule of filver, round, but opening in one place like to a horfe-fhoe.

It is moft probably thought that thefe were the high-places in times of pagan idolatry, whereon facrifices were offered, and that the two artificial mounts of earth ferved for the fame purpofe, or were the places where the athes of the facrifices were caft, as fome will have it. Boethius, in the life of Mainus King of Scots, obferveth, that the people called thefe huge ftones drawn together in the form of a circle, the ancient temple of the gods: Ut populus ad religionem moverentur, prifcis facris novas quafdam et folennes ceremonias fuperaddidit (Rex nimirum Mainus) diis immortalibus peragendas, ut imnenfis faxis variis in regionum locis (ut res expofcebat) in coronidem admotis, corumque maximo ad meridicm porrecto, cujus pro ara foret ufus : vichime ibi diis immortalibus facrificium cremarentur. Extgnt in rei fidem, vel boc noftro avo ingentia ea faxa ducta in circos, prifca deorum phana vulgus appellat. Many of the country do fay, that in the larger round the fun, and in the leffer the moon; was worfhipped by the old pagan inhabitants of thefe illes.

And indeed to build their altars of earth or unpolifhed fones feems to have been the cuftom of ancient times, and even of the firft ages of the Roman empire, as the learned Spencer endeavours to prove from Tertullian, Etf: a Numa concepta oft curiofitas fuperffitiofa, nondum tamen aut fimulacris aut templis res fivina apud Romanos conftabat. Frugi religio et pauperes ritus ct nulla capitolia certantia ca.i; fed temeraria de cefpite altaria, ct vafa adbuc Samia, et nidor cx illis, et Dcus ipfe nufquam. And further confirming the fame from Cluverius writing of the German antiquities. And concludes with giving the reafon why the Gentilee of old were fo taken with rude, undigefted, artlefs and unpolifhed altars and places of worfhip, becaufe they judged them more holy and more acceptable to the Gods: Gentes antiqua, faith he, natura vel traditione decta, naturalia omnia rudia licet et impolita, fanctiora et diis fuis gratiora crediderunt. And here in thefe monuments nothing like art or form: the ftones are not polifhed nor all of a like thicknefs, height or breadth, nor of an equal diftance from each other.
In the ifle of Sanda there is a chapel called the chapel of Clet, wherein there is a grave nineteen feet long, which when opened fome years ago, there was nothing found in it fave the piece of a back-bone of a man, greater than the back-bone of any horfe. This the minifter of the place declared unto me, who faw the grave opened, and meafured it from the head to the foot fone thereof, who alfo for fome time had the bone
in his cuftody. The vulgar tradition is that there was a giant there, who was of fo tall a fature that he could have ftood upon the ground and put the coptone upon the chapel, which no man now living by far could do.
'There are alf, bones found in Weftra between Tukey and the Weft Church, as great as horfe bones, as the minifter of Weftra informed nie. And fome there have been lately of a gigantic flature in thefe ines: as that man who died not long fince, whons for his height they commonly call the Meikle Man of Waes.

Through this country we find feveral obelifks, or very high and great fones fet up, as one in the ille of Eda, another on the mainland within a mile of Birfa, \&ec, they appear to be much worn, by the wafhing of wind and rain, which flews they are of a long ftanding, and it is very ftrange to think how in thefe places and times they got fuch large ftones carried and erected. Mirabile proficto quifquis ca fpcitaverit qua arte quibus corporis viribus hapides tanta mole in unum locum fuerint congefti. The reafon and end of their fetting up cannot be certainly known; however we may conjecture, that probably it was in remembrance of fome fumous battle, or hath been the ancient funeral monuments of fome renowned perfons, who have fallen in battle or been buried there. Several of which fones and monuments are to be feen in many places through Scotland, and in. Norway they are very common, as our travellers who have feen then inform me. And it is like thefe fones have been fet up by the Norwegians, when they poffefled this country.

In Scapha about a mile from Kirkwall to fouth-weft it is faid there was kept a large and ancient cup, which they fay belonged to St. Marnus King of Norway, who, firft inflructed them in the principles of the Chrittian religion and founded the church of Kirkwall, with which full. f fome ftrong drink their bifhops at their firf landing were prefented; which, if he drank out, they highly praifed him, and made themfelves to believe, that they fhould have many and fruittul years in his time. This Buchanan relates, and as Mr. Wallace obferveth, is till believed there, and talked of as a truth. Scypisum babont antiquum, faith Buchanan, quem divi Magni, qui primus ad cos Cbrifti doctrinam attulit, fuifi pradicant; is cum ita fupcret communium poculorum anplitudinem, ut $\grave{c}$ Lapithartun convivio reforvatus videri polfit, co fuos cpifiopos initio ad fe adventantes explorant: qui plenum uno bauftu ebiberit (quod admodum raro cvenit) miris cum laudibus profcquuntur, atque line velut lato augurio fequentium annorum proventum animis pracipiunt. The country to this day have the tradition of this, but we did not fee the cup, nor could we learn where it was. And indeed that which renders this the more credible is, that the Norwegiaus at prefent, as merchants and mariners informs us, have a cuftom like unto this, that is my come to pay them a vifit, efpecially if they be Arangers, they ufe to prefent them with a large cup full of drink, which they take not well if their guefts drink not out. They fay, fome of thefe cups will contain three mutchins, others a pint, and fome a quart of our meafure.
'The wind, and fea, in any form beats inoft tempeftuoufly and vehemently here upon the rocks : a little to the welt of Kercton in themainland, there is a rgck called the Black Craig of Stromnefs, about feventy fathom high; upon which in a florm the fea from the Deucaledonian ocean doth beat with fuch violence and force, that the waves, breaking thereupon, caufe the water to rife to the top of the rock like fnow, and fly like a white theet before the wind, blatting the corns for three or four miles behind the rock, if it fall out in, or a little before harveft; and this it doth likewife in feveral other places of the country, as fome gentlemen, who knew it to their experience, did declare. Yea fo great is the violence of thefe tempeftuous feas, that thereby fome great fones are caft out and ethers are worn, fo that large-caves in fome places run from the fea within the rock,
beneath the ground for fome confiderable way, I faw one of thefe at the eaft end of the mainland in the parih of Holm, it is all covered above with the rgek and earth, fave that within thefe few years fome of the rock and earth fell in, or was blown up (as they call it) in one uight, by a violent form blowing from fouth-ealt; hence now there is a hole in the hill above, like the eye of a coal-pit, which is terrible to look down into: there is another, fomething tike this in South-Ronaldiha. In thefe caves, doves and fea fowls in great numbers ufe to neftle.
Several ftrange filhes are here taken, or caft affore fometimes, which are, they fay, very beautiful to look upon, but we never had occafion to lee any of them. There are likewife a great number of little whales, which fivim through thefe ifles, which they call fpout-whales or pellacks, fome of which I have feen; and they tell us it is dangerous for boats to fall among them, left they be overturned by them : the former year anno 1699, there was thirteen of thefe whales driven on more npon Gairfay's Land, and eleven upon Eglefha's, about one time, as the gentlemen themfelves did inform me, of which oil is made, very beneficial to the mafters of the ground. 'The otters alfo, feals or felchs, and other fuch fea-creatures are very numerous, but now their number is fo much diminifhed, that not one of twenty is to be feen, and they have found feveral of them lying dead upon the fhore; fome hence obferving that the judgments of God, as to fearcity of fuitable provifions to thefe creatures, are upon the waters alfo.
The tides here are fo rapid that they will carry a fhip along with then, though the wind be contrary, if not very ftrong, and in going ainong thefe illes fcarce are they out of one tide when they are engaged in another; and in going from place to place they will find fometimes the fame flood for them, and at other times againft them, and fo with the ebb, efpecially there are fome impetuous tides which they call roufts, cauled by the ftrong current of a tide meeting with a narrow paffage; the quicknefs and rapidity of the tide, compenfing the narrownefs of the paflage, as it is in lanes, which fraitens the blowing wind, and makes the wind to blow fo much the harder, in a proportion to the preflure it fuffers by the ftraits of the lane; fo may we reafon concerning the roufts which run among the illes. I have feen fome of thefe roufts boil like unto a feething pot, with their high, white, and broken waves in a calm fummer day, when there was 110 wind blowing. At one time failing by the fide of Lafha Rouft between Sanda and the Calf of Eda, the rouft getting fome hold of us, turned about the head of our boat very quick: ly, and though there were four able young men rowing, befide the help we had by the fail, we could not without great difficulty make our way through it: they tell us, that if the greateft hhip in Britain fell into this rouft, where it is ftrongeft, it would turn her about at pleafure, and detain her till the tide fell weak, even though fhe had a right favourable gale. Thefe rcults are more dangerous in an ebb than in a flood, the ebb being obferved fill, catcris paribits, to make the fouleft and moft tempeftuous fea, and efpecially they will foam and rage, if the tide be running in the wind's eye: and when there is any form, they will caufe any fhip or boat to fland on end and be ready to fink her in the fall. Several of which roufts we had occafion to meet with, but the Lord brought us fafe through.

Though the general current of the tide be ftill the fame, from welt to eaft in a flood, and from eaft to weft in an ebb yet running with violence upon the land, they caufe a contrary motion in the fea next to it, which they call Eafter or Wefter Birth, according to its courfe. And there are fome things which have been obferved as very frange in the running of the tides, as that it flows two hours fooner on the weft fide of Sanda than it doth on the eaft : and at Hammonefs in the fame ine, both ebb and flood runs one way except at the beginning of a quick Aream, when for two or three bours the flood runs fouth; in North

Faira the fea ebbs "nine hours, and flows but three, but the reafons of thefe phenomena will not be fo intricate or hard to refolve, if we confider the fituation of thefe infes, where the tide feems to alter his courfe; for the flood coming from the weft to the weft fide of Sanda, it takes fome time before it can get about the points of the ife to the fouth fide thereof; fo in North Faira, the fea is more open whence the flood coineth, but the ebb runeth through feveral ifes, turning many points of land before it come to North Faira, which cannot but retard its motion: fo at Hammonefs in Sanda, the fituation of the place much determineth the running of the tide.

The rapid motion of thefe tides among the ines, and their meeting with one another makes it very dangerous, and fometimes more efpecially in a calm, fo a minifter there told us, that he was never nearer death in his life than in a dead calm when nigh to Weftra, for they faw the fea coming, which they thought would fwallow them up, and there being no wind they could not get out of the way, but God fo ordered it in his wife providence, that the fea or fivell of the fea which they feared broke on the fore-part of the boat, and fo they efcaped.

There are frequently Finmen feen here upon the coalls, as one about a year ago on Stronfa, and another within thefe few months on Weftra, a gentleman with inany others in the ine looking on him nigh to the thore, but when any endeavour to apprehend them, they flee away moft fwiftly; which is very flrange, that one nan, fitting in his little boat, hould come fome hundred of leagues from their own coafts, as they reckon Finland to be from Orkney; it may be thought wonderful how they live all that time, and are able to keep the fea fo long. His boat is made of feal. Mkins , or fome kind of leather, he alfo hath a coat of leather upon him, and he fitteth in the middle of his boat, with a little oar in his hand, fifhing with his lines: and when in a form he fees the high furge of a wave approaching, he hath a way of finking his boat, till the wave pafs over, lealt thereby he fhould be overturned. The fifhers here obferve that thefe Finmen or Finland-men by their coming drive away the fifhes from the coafts. One of their boats is kept as a rarity in the Phyficians-Hall at Edinburgh.

On the weft fide of Papa Weftra, between it and Weftra, there is an Holm, wherein once there was a little chapel, whereof fome of the fide-walls are now only flanding, in which they fay, there were feven fifters buried, who were nuns, and defired to lie in this hoim, about whofe graves this chapel was built: about a year ago, there were feen feveral times at mid-day, about twenty men walking on that holn, among whom there was one higher and greater than the reft, who fometimes food and looked unto the chapel, this my informer with a hundred people in the ifle of Papa faw, who could atteft the fame : after which appearance there was a boat caft away on that holm with four men in her, who were all loft.

In the links of Tranaby in Weftra, and of Skeal in the mainland, walhed from the welt by the Deucaledonian Ocean, fome places are difcovered when the fea wafheth away the fand, which fhews that fuch places have been cemeteries or burying places for their dead of old, of a fquare figure, and the fones are joined together by fome cement, when opened earth and fometimes bones are found in them ; the reafon fome do give of this is becaufe the way of interring dead bodies anoong many of the ancients, (as among the Saxons in the ine of Britain) was not in dcep graves, but under clods or turfs of earth made into hillocks. But none of thefe we had oceafion to fee. Concerning that rock called Lefs, furrounded with the fea, nigh to the Noup-head in Weftra, upon which fome fay, if any man go, having iron on him, the fea will inftantly rage, fo that no boat can come nigh to take him off, nor the fea be fettled till the piece of iron be caft into it ; when in Weftra we enquired about it, but found no ground for the truth thereof.

Mr. Wallace narrates a remarkable providence, which the minifters here confirmed to us as a truth; concerning four inen in Stronfa who ufed to fith together in one boat, among whom there was one John Smith whofe wife being defirous he Thould intermit his filhing for a time, he having purchafed a great plenty of fifh, which he not being fo willing to do, on a day the rifing before him ftopped the windows, and other places in the houfe, whereby light was let in, and fo went to the fields; the other three men after their ufual manner went to fea, whofe boat the faw overturned and themfelves perifh ; upon which the returned home to her hulband : and no doubt would have given the fad news of his neighbours perihhing, not without joy congratulating, that he was not this day in company with them : but upon her coming into her houle fhe had yet a more melancholy fight; her hufband lying dead, choaked in thac veffel, wherein they ufed to make urine.

An honeft man in Orkney told me that fome years ago, when he was coming home with timber and fome other things in his boat, from Innernefs, and was almoft the length of the ife of Eda, where he lived, the boat turned and lay upon her fide, but the fails being fpread in the water hindered the maft to go down, and her altogether to overturn much of what they had in went to the fea, and he with the other feamen in company fat upon the fide of the boat, and were fo for fone hours toffed up and down, whither the tide did drive them, they in the mean tine comforting and refrefhing one another with places of fcripture and notes of fermons, which lately they had heard, and fometimes putting up earneft prayers to God whom the wind and feas do obey; at length God not turning away his mercy from them, nor their prayer from him, gracioully gave ear unto their cry, and brought them all fafe afhore together with the boat on the weft fide of Sanda, much of the timber and what they had in being driven afhore to the very place before then. A great mercy when not only they, but their boat, and moft of their loadening, were faved. Some of thofe men whom I am acquainted with, and do judge godly, cannot fpeak of this delivorance but with great concernednefs and affection, which makes me to think this mercy not to have been caft of common providence, but a gracious return of their prayer.

The effects of thunder in this country are very furprifing; 1670 the fteeple of Kirk. wall was burnt with lightening: and anno 1680, there was a gentleman in Stromnefs in the weft end of the mainland had a ftall, wherein there were twelve kine, the thunder killed every other one, killing one and paffing another, fo that there were fix killed, and fix alive; this the minilters confirmed as a certain truth to their knowledge.

There was a man that died not many years ago, who when a child being left in the field, (the mother, as fome fay, fhearing at a little diftance from him) was taken up by an eagle, and carried from the parifh of Orphir, in the mainland, to the ifle of Waes over three or four miles of fea, but in God's good providence, the eagle being quickly purfued to his neft whither the child was taken, he was recovered without any hurt.

It was obferved that in thefe infes before the late dearth, there were feveral ftrange birds feen, fuch as they have not feen formerly nur fince. One of the minitters told me, that one bird frequented his houfe about that time for a quarter of a year, which was of a black, white, red and green colour: as alfo he faw another, all ftriped or fprainged on the back, which birds were beautiful to behold.

There was a monfter about feven years ago born of one Helen Thomfon fpoufe to David Martin, weaver, in North Ronallha, having his neck between head and fhoulders a quarter and an half of a yard long, with a face, nofe, eyes, mouth, \&cc. to the back, as well as before, fo that it was two faced, which monfter, came living into the world: this the minitter declared unto us having taken the atteltation of the women. prefent
prefent at the birth, he not being on the place at the time: and it is faid that a certain woman fhould have wifhed this upon the mother, whom fhe alledged had lyed upon her, in her wrath wifhing, that if fhe fpoke a lie the might bring forth a monfer, which accordingly came to pafs in God's holy and wife providence.

Some fay there are feveral mines of filver, tin, lead, \&cc. Alfo fome veins of marble and alabalter; Buchanan commends this country for white and black lead, of which there is to be had as good as in Britain. Sex diverfis in locis bujus infula, metalla funt plumbli albi and nigri tam probi quam usquam in Britannia reperiatur. As alfo feveral of fine fhells to be found on the fhore and rocks, but we had occafion to fee none of them, fave fome of thefe nuts, whereof they make finuff-boxes.

Chap. V.-Some Heatisnifla and Popibl, Rites, Charms, E'c. yet remaining in the Orkney Iflis, are glanced at.
BFFORE that I bring to a clofe my difcourfe concerning Orkney, I fall give an account of fome cuftoms yet prevailing among them, which can be conftructed to be nothing elfe fave the four dregs of Pagan and Popifh fuperfition and idolatry, yea and many of them fuch as the charms practifed by them to be the mere and woeful effects of pure devilry, and not the product of nature's operation.

But leaft I fhould be miltaken I judge it not amifs to premife, that not all nay nor the generality of Orkney are hereby impeached as guilty of thefe evils, for I know there are many judicious and wife men, and 1 hope fome real chriftians among them, who abhor and deteft fuch things as much as any, but hereby fome foolifh and filly ones are intended, whom, deceiving and being deceived, fatan leadeth captive at his will; nor yet that all the :ीes are alike lying under the charge, for there are fome of them, whofe inhabitants are gencrally more moral and difcreet : neither is it alledged, that fuch finful and corrupt cuftoms prevail as much now as formerly, for they are much away by what they were, and that even of late : nor is it denied but that honeft and faithful miniflers will labour to have them abolifhed every where, feeing alas! there is much horrid wickednefs and marifeft devilry too with us in the fouth, as well as with them in the north, fo that no part of the kingdom can plead, not guilty.

But my principal fcope and defign is to manifet the works of darknefs, and to thew how bufy the god of this world is in deluding and blinding poor fouls, and how ready we are to be his drudges and flaves; that fo thefe things, being wifely and ferioully confidered, all may be induced to make a Chriftian improvement thercof, both with refpect on themfeives and others, whom they are called to pity and pray for, "if peradventure God will give them repentance to the acknowledging of the truth, that they may be recovered out of the fnare of the devil ;" and more efpecially that the general affemblies, and other judicatories of this church as they are called, may be pleafed to continue their fatherly care over thefe northern ines, that though they be remote from them as to fituation, yet they may be near unto then as to a warm and kindly affection, which our church hath not been wanting in hitherto.

And firft we would take notice, that the old maxim "Ignorance is the mother of devotion," fo much cried up by the Papifts and their judicially blinded clergy, is fo far trom being the mother of devotion, that it is both the mother and nurfe of the moft Lamnable errors. Superfitions and delufions, as thefe ifles know to their fad experence; for ignorance of the principles of our holy religion doth greatly prevail among the commonalty, fo that as one of their minitters, not without fome concern and grief - Wor the fame, told me, not one of a hundred in fome of their parihes can read. How
this co detern indecd dreadf fchook mainte of inh their c rant f proph doctris is muc to give freque fchool nation laying others their for th that th
this comes to pafs, that the people fhould be fo grofsly ignorant I fhall not undertake to determine, it is comnonly imputed to their want of fchools, through the country, which indecd I will not fay, but is one great caufe thereof, and therefore that this fo very dreadful an evil may be effectually remedied, care fhould be taken by all concerned, that fchools be erected in every parih, and a competent falary provided for the mafter's maintenance and encouragement; and that allo in every inle where there is any number of inhabitants, fome perfon thould be appointed for the inftruction and education of their children; and until that fuch a courfe be taken, the people generally will be ignorant fill, and the minifters as to the preaching part, may complain in the words of the prophet, "Whom fhall we teach knowledge? and whom hall we make to underfand doctrine? them that are weaned from the milk, and drawn from the breafts." Forit is much about one to preach to auditors befotted with ftupidity and ignorance, as it is to give exhortation unto babes, therefore it is that our church in her affemblies hath fo frequently and ferioufly preffed the learning of children to read, and the providing of fchools for that end, paftors to be diligent in that initiating and neceffary work of examination and preaching catechetic doctrines, and the concurrence of parents with both in laying out themfelves for the inftruction of their children, as well by themfelves as by others; godly minifters well knowing that the fuccefs of ordinances and edification of their people, dependeth much thereupon, as the means which the Lord ufeth to blefs for the bringing in of his coct; knowledge being fo neceffary to the being of faith, that the latter is fometimes ixpreffed by the name of the former.
And feeing they retain not God in their knowledge, it is no wonder they begiven over to a reprobate mind, to do things which are not convenient; no wonder they frequent their old chapels for fuperftitious ends, of which the corrupt and purblind reafon of man hath been always very fond: no wonder that being in the dark without the lanthorn of the knowledge of fcripture revelation, they miftake their way, and by the ufing of charms and confulting of charmcrs, they "run to Beelzebub, inftead of having recourfe to the God of Ifrael." Which ignorance to be the caufe of thefe evils, will appear the more evidently, if we confider, that in thefe ines, where there is a greater meafure of the knowledge of God, there is not fuch a following of thefe horrid and hellifh pracices.

There are feveral old chapels in thefe ifles, which the people refort unto, but that which I heard of, as moft famous is St. Tredwel's chapel in Papa-Weftra, which they have fuch a veneration for, that they will come from other ifles in confidera: le numbers to it; fome of us having occafion to be on that ine, we faw this chapel, fituated on a. fmall low rock, within a loch commonly called St. Tredwel's Loch, to which we paffed by fteping foncs; before this chapel door there was a heap of finall ftones, into which the fuperftitious people when they conse do caft a fmall fone or two for their offering, and

- fome will caft in money; the chapel hath been but little, and is now ruinous, only fome of the walls are flanding, which the people are fo far from fuffering to be demolifhed, that they labour to keep them up, and though the proprietor of the ground hath fome way inclofed it, yet this proves not effectual to prevent the frequenting thereof. At the north-caft fide of the loch, nigh to the chapel, there is a high fone flanding, behind which there is another ftone lying hollowed in the form of a manger, and nigh to this there is another high fone flanding with a round hole through it, for what ufe thefe ftones ferved, we could not learn; whether for binding the horfes of fuch to them as came to the chapel, and giving them meat in the hollow fone, or for tying the facrifices to, as fome fay, in the times of Pagan idolatry, is uncertain.
This St. Tredwel's Loch, nigh to the caft end of which this chapel is, is held by the pcople as medicinal, whereupon many difenfed and infirm perfons refort to it, fome faying that
thereby they have got good; as a certain gendcman's fifter upon the inc, who was not able to go to this loch without help, yet returned without it ; as likewife a geritleman in the country who was much diftreffed with fore eyes, went to this loch, and wafhing there became found and whole, though he had been at much pains and expence to cure them formerly. With both which perfons he who was minifter of the place for many years was well acquainted, and told us that he faw them both before and after the cure. The prefent minifter of Weftra told me that fuch as are able to walk, ufe to go fo many times about the loch as they think will perfect the cure, before they make any ufe of the water, and that without fpeaking to any, for they believe that if they fpeak this will marr the cure: alfo he told that on a certain morning not long fince he went to this loch and found fix fo making their circuit, whom with fome difficulty he obliging to fpeak, faid to him they came there for their cure.

How it cometh to pafs that this loch hrould accomplifh the cure of any I leave to my reader to judge, whether it be by any medicinal or healing virtue in the water, which I incline not to think, the cure being fo circumftantiated, or if the force and ftrength of the imagination of the perfons afflicted may have any tendency that way, which fome judge hath its own influence in fome fuch like cafes; or rather by the aid and affiftance of Satan, whom God in his holy and wife providence may permit fo to do, for the further judicial blinding and hardening of thefe who follow fuch unwarrantable and unlawful courfes, God fo punifhing them by giving them up to fuch ftrong delufions: yet I hear, that when they have done all that is ufual for them to do, as going about the loch, wafhing their bodies or any part thereof, leaving fomething at the loch, as old clouts and the like, \&c., it is but in few in whom the effect of healing is produced. As for this loch's appearing like blood before any difatter befal the Royal Family, as fome do report, we could find no ground to believe any fuch thing.

Thefe chapels the people frequent, as for other ends, fo for prayer, they placing a kind of merit therein when performed in fuch places, and this they obferve nore than private retirements; and if they be under any ficknefs, or in any danger, as at fea, they will vow fo to do: and when they go to the chapels to pay the vows taken on, they ufed to lay feveral fones one above another, according to the number of vows which they made, fome of which heaps we faw in St. 'Tredwel's chapel; and none mult go empty handed, but leave behind them fomething, either a piece of money, or of bread, or a ftone, which they judge will be fufficient.

As at all times, when occafion offers, they obferve thefe fuperfitious practices, fo efpecially during Lent they will not neglect their devotions in fuch places; and on Eafter Sunday feveral boats will be feen going to them from other ifles: and though their minifters both privately and publicly have fpoken to them, yet they cannot get them to forbear and abandon thefe cuftoms. And the minitter of South-Ronalha told us, that many of the people in that ifle, efpecially fuch as live at the fouth end thereof nigh to the kirk, called Our Lady's Kirk, whereof, though now the walls only be ftanding without a roof, yet the very ftones thereof they reverence, and are not far from adoring; and fo tenacious are they, that when in rough weather he hath procured the conveniency of a barn to preach in, yet the people obliged him to come to this ruinous fabric, elfe many of them would not have heard: they are now about the puting of a roof on this church, which the gentlemen of the ifle are not inclined to, judging other places more commodious for it to be built in; but propofals of this nature do not relifh with the people, they being fo fuperfitioufly wedded to the place of its prefent fituation: whereupon the heads of families will rather by themfelves coutribute to the repairing of this old church, than fuffer a new one to be built in any other place of the ine, though lefs to their coft.

In this old aric of Our Lady's Church there is a ftone lying, about four feet long, and two fee: broad, but narrower and round at the two ends, upon the furface of which ftone there is the print of two feet, concerning which the fuperfitious people have a tradition that St. Magnus, when he could not get a boat on a time to carry him over Pightland-Firth, took this flone and fetting his feet thereupon paffed the Firth fafely, and left the fonc in this church, which lrath continued here ever fince; but as I think, and fome more judicious people do likewife fuggeft, it hath been a fone upon which, under popery, the delinquents ftood bare-footed fuffering penance. It is like when thus St . Magnus came over the Firth, it hath been at that time, when he was feen riding through Aberdeen, giving the firt account of the defeat of the Englifh at Bannockburn, and afterward was feen going over Pightland-Firth. And indeed both are alike deftitute of any fhadow of truth, credible only by thefe fuperfitious and filly ones whom the god of this world hath blinded.

Scveral of the ifles have their faints' days, which fome do fuperfitioufly obferve. There is one day in harveft on which the more ignorant, efpecially in Roufa, fay, if any work the ridges will blood. The lark fome call our Lady's hen : and fome fuch popifh dregs are to be found: the Lord preferve this land from popery's inundation; for as it is credible from what hath been faid, and fome better acquainted with this country did inform us, that if popery get footing again (from the fears of which in the good providence of God we were lately delivered) many of the inhabitants of thefe ifles would readily embrace it, and by retaining fome of thefe old popifh rites and cuftoms feem to bc in a manner prepared for it.

Next to glance at their charms, which I hall briefly do, and not give any account how they perform them, left thereby I fhould feem to point out to any how to try the experiment of this hellifh art and tremendous devilry, which I think I do fufficiently guard againf, not only by barely reciting there are fuch, but alfo by proper precautions adduced in this chapter.

They have a charm whereby they fop exceffive blooding in any, whatever way they come by it, whether by or without external violence. The name of the patient being fent to the charmer, he faith over fome words, (which I heard,) upon which the blood inftantly foppeth, though the blooding patient were at the greateft diftance from the charmer : yea, upon the faying of thefe words, the blood will ftop in the bleeding throats of oxen or fheep, to the aftonifhment of. fpectators; which account we had from the minifters of the country.

There is a charm likewife they make ufe of for the tooth-ach, whereof I had the foilowing inflance from an honeft man worthy of credit. Some years ago there was one who ufed this charm, for the abating the pain of one living in Eda tormented therewith, and though the action then was at a diftance, the charmer not being prefent with the patient, yet according to the moft exact calculation of the time when the charm was performed by the charmer, there fell a living worm out of the patient's mouth when he was at fupper: this my informer knew to be a truth, and the man from whofe mouth it fell is yet alive in the ifle of Sanda. Whether this worm was gencrated in the corrupted part, and fo fell out by the devil's means at the ufing of the charm, or the worm was brought by an evil fpirit aliunde to the mouth, and thence falling down, I fhall not determine.

Alfo when the beafts, as oxen, fheep, horfes, \&c. are fick, they fprinkle them with a water made up by them, which they call Fore-\{poken-water; wherewith likewife they fprinkle their boats when they fucceed and profper not in their fifhing: and efpecially on Hallow-even, they ufe to fein or fign their boats, and put a crofs of tar upon them, which my informer hath often feen. Their houfes alfo fome ufe then to fein.

They have a charm alfo whereby they try if perfons be in a decay or not, and if they will die thereof, which they call Calling of the Heart. Of this the minitter of Stronza and Eda told us he had a very remarkable paffage, in a procefs yet flanding in his feffion records.

Several other charms alfo they have about their marriage, when women in travail, when their cow is calving, when churning their milk, or when brewing, or when their children are fick, by taking them to a fmith (without premonilhing him) who hath had a fmith to his father and a fmith to his grand-father. And of feveral fuch like charms, we had an account from the minilters, as likewife how thefe charms were performed; but of thefe enough.

Although thefe charms fometimes, yet not always do they produce the defired effects; as in the inflance of ftaying of blood, one of the charmer's wives fell once a bleeding, which he by all his art was not able to ftop; whereupon he is faid thus to have expreffed himfelf: "I have flopped the bleeding of an hundred, and yet I cannot do it to my wife."

That fuch admirable effects upon the ufing of the charms are produced by the agency of demons, I think few, if any, will doubt, God fo permitting it to be in his holy and wife providence, for the further punifhment and judicial blinding of thofe who follow fuch unlawful courfes, and the devil thereby engaging his flaves more in his fervice: yet not always the effects defired and expected do follow, that all may know the devil is a chained one, and can do nothing without the permiffion of a fovereign God, who is Lord over all. Our affemblies, fenfible of the great fin and evil that is in ufing thefe charms, and confulting of charmers, have made feveral acts both againft the one and the other, ftrictly inhibiting and difcharging all fuch hellifh practices, and requiring all minifters diligently to fee to the obfervance and execution thereof.

Evil fpirits, alfo called fairies, are frequently feen in feveral of the ifles dancing and making merry, and fometimes feen in armour : alfo I had an account of the vild fentiments of fome of the people concerning them; but with fuch I hall not detain my reader, we haftening our voyage to Zetland.

## A DRSCRIPTION OF ZETIAND.

## Chap. VI.-The Country in gcneral defcribed. The Soil, Product, Manners of the People,

 Er. binted at.ZETLAND lies to the north-calt from Orkney, between the Gixtieth and fixty-firf degree of latitude, there being about twenty or twenty-one leagues betwixt the StartHead of Sanda, the northernnoft point thereof, and Swinburgh-Head, the fouthernmoft print of land in Zetland, over a very rolling and fivelling fea, wherein there conflantly runs the firong current of a ride, which caling the fea to rife with its fwelling waves, the whole paflage betwixt Orkney and Zetland is but as one continued rouft, or ftrong and impetuousticie, efpecially about the Fair-lle, flill fuch a great fea goeth, even in the greateft calm, that the boats are like to fling the mafts out of then ; and our boatmafter told us, that frequently when be had been paling the Fair-lic in a dead calm, the boat hath been fo toffed by the fwelling fea, that it would have taken in water on every fide: and I have heard the mariners often declare, that there is more hazard in thefe feas than in going to the Eatern or Weftern Indies. The Fair-Ifle (of which more afterward) is reckoned to be but eight leagues from Zetland, whercas it is about
twelve or thirteen leagues from Orkney; fo that we fhall confider it tigether with the ifes belonging to Zetland.

Zetland confifteth of more ines than Orkney, whereof fome are more, others lefs confiderable, befide many holns ferving for pafturage. The largelt of them is that which they call the Mainland, fixty miles long frons fouth or fouth and by weft, to north or north and by ealt : as to breadth not all alike; for though in fome places it be fixteen miles, yet in others it is fcarce one mile broad, it bing fo-interfected with voes, founds, or lochs, that it may be faid to co ifift of a great number of promontories or branches of land ftretching themfelves into the fea.

All this country, coufifting of fo many ifles goeth under one common name, called by fome Hethland, by others Zetland, and alfo Schetland. The etymology of which names is very uncertain, as was that of Orknev, fome affigning one reafon of the name, and others another at their pleafure : that which feemeth moft probable is, that this country is called Hethland, becaufe it is very mountainous, and rifeth high above the waters; fo a high land in Norfe is called Itoghland : it is called Zeland, or Zetland, becaufe of the great fea wherewith on all hands it is encompaffed, zee being fea in that language ; and called Schetland, becaufe of a kind of cuftom or tribute called Scat, which they paid to their Norwegian mafters when they were in poffeffion of this country, and the tribute or cuftom impofed upon the inhabitants of Norway to this day is called Scat ; and though Zetland be now annexed to the crown of Scotland, yet there is a certain rent or due which the genlemen and fome others here do pay yearly to the King or his Iteward, which is ftill called Scat. I fay, although we cantot be pofitive in determining the reafons of the name, yet it feems to be of a Norwe gian or Danifh original.

Seeing I have already had under confideration by whom Orkney was firf planted and inhabited. and how it hath been difpofed of hitherts, I judge it not very needful for me to add any more to that purpofe concerning Zetland; for it is more than probable that about the fame time, by the fame perfons, h th Zetland alli, been inhabited, feeing there are many more Picts looufes remaining there, and forne of them as to outward appearance in better cafe, than arc to be found in Ork ney, and always our hittorians in their defcriptions of thele northern ifles of Orkney and Zetland have reckoned them as under the government of the fame mafters; , herefore without further premiling preliminaries of this $n$ nture, I come to confider the prefent fate of the country.

Although the country be large, yet it is in many places but thinly inhabited, and that for the moll part upon the coafts, and indeed otherwife it cannot well be, for there are few, if any, places in Zetland but they are within two mi es of the fea, which they incline to dwell uigh unto, being more convenient for their fithing, and for the gooding of their land, which is ordinarily by fea-ware, hence it would be incommodious for them upon thefe accounts to be at a:y diltance from it. Befides, the country is generally moffy and nountainous, all covered over with heath, yo the far greater part thereof is as one great mofs or quagmire made up of water and carth blended together, which kind of ground would require much labour and expence to bring in either to be grazing or corn land, if at all in many places they could get it done; for from Scalloway on the weft fide of the Mainland, to Lerwick on the calt fide thereof, four miles over land, it is but a continued tract of mofs and moor, fo that there is not one houfe :ll that way, till we cone near unto Lerwick; whereas we would think that this piece of ground fhould be better inhabited than many others, confidering the great refort of ftrangers in the fummer time thercunto, if nature had not laid fuch inconveniences in the way, which would prove fo difficult to overcome.

The people are generally difcreet and civil, not fo ruftic and clownifh as would be expected in fuch a place of the world, which may be much owing to their converfe and commerce with flrangers, who repair to thefe ines in the fummer feafon, with whom the inhabitants do keep a conftant bartering or trade; which trading as it makes them the better to live, fo it may tend not a little to the cultivating of their manners. They are alfo very fafhionable in their cloaths, and the gentry want not their fine ftuffs, fuch as Holland, Hamburgh, \&c. do afford, fo that they are to be feen in as good an order and drefs as with us in the fouth: the boors, fiflers, and other country people alfo do go honeli-like and decent in their apparel, as becometh their ftation.

They alfo have always been in repute for holpitality, and indeed we have feen no other to contradict that which is fpoken fo much to their commendation and praife; for at any sime when we had occafion to vifit gentlemen, merchants, or others, we were always by them kindly entertained: and fo much are they faid to be given to this commendable piece of humanity, that if they do purchafe any thing from foreign merchants, which they put any value upon, fuch as wheat-bread, fome ftrong liquor, \&c. even the country people will not ufe it themfelves, but referve it for the entertainment of frangers. As for thofe old inhabitants of the Danifh blood, of whom it was faid, "that they were feeming fair, but really falfe, and fuperlatively proud," they are much worn out of this country; and if at any time Ships be driven afhore upon their coafts, the inhabitants ufe very kindly and humanely to treat the dillreffed company, of which humane treatment a thip belonging to the Firth had a late experience, being broke on the coaft there in December laft, as fome of the hip's company informed me. Such a kind and generous reception merchants and mariners meet not with in many places upon which they are unhappily caft, from whom better things would be expected. In the matters of Godand religion the body of the people are faid to be very ignorant, by thofe who know them better than we can be fuppofed to have had accefs to do, confidering the fhort time of our Itay and abode among them; which may be imputed to their want of convenient fchools for the inftruction of their youth in many places of the country; which alfo was alligned as the reafon why ignorance doth to much prevail in the Orkney ifles; which great evil, the mother and leader of many others, all thould labour to redrefs as they are feverally called and concerned, authority alfo interpofing their command, and not denying their countenance and encouragement thereunto.

Yet we mult fay, that the people do frequent the difpenfing of gofpel ordinances, and feem to hear with fome meafure of attention and reverence, and as appeared to us, not without fome ferioufnefs and concern upon their fyirits, which after hearing continued with fome, as we found by our converfe with them; which encouraged us to fet and keep up two week-day fermons at Lerwick during our ftay in the bounds, which the people thronged unto, thereby fhewing great refpect to the ordinances difpenfed by us; fo that mattors looked far otherwife than what was expected by ourfelves and many others before we came to this country. And indeed, atter conference upon this head, all of us judged that if things were got put into a better order, and fone evils removed, which I forbear to mention, knowing that they will come under the cognizance and confideration of others, who are in a capacity to redrefs them, there might be a harvelt throush grace.

Although there be a Latin fehool at Kirkwal in Orkney, yet there is none in all this country, which cannot but be very prejudicial to the inhabitants, the advancement of the education of their youth being thereby hindered, many pronifing and pregnant ingenys loft, and letters difoouraged; for geatemen are either obliged to keep their children at home, and fo they muft want that piece of learning which tends fo much to form and
polifh their minds, and to complete them as gentlemen, or elfe fend them to other countries where education is to be had, which many are averfe to do, not only becaufe of the charge and expence they will be at, but alfo of the fear they will be in, in fending their children over fea, and keeping them fo long at fuch a diftance from them. As for chaplains, though they could be had, which would be with difficulty in this corner, yet all gentlemen who have cliildren to educate cannot well bear the charges of bringing them over from Scotland, and keeping them with them for fo long a time: whereupon the minifters there are very defirous that the government may be addreffed for encouragement to fchool-mafters through the country, and particularly that a Latin fchool be fet up either at Lerwick or bcalloway.
Englifh is the common language among then, yet many of the people fpeak Norfe, or corrupt Danifh, efpecially fuch as live in the more northern incs; yea, fo ordinary is it in fome places, that it is the firft language their children fpeak. Several here alfo fpeak good Dutch, even fervants, though they have never been out of the country, becaute of the many Dutch flips which do frequent their ports. And there are fome who have fomething of all thefe three languages, Englifh, Dutch, and Norfe. The Norfe hath continued ever fince the Norwegians had thefe inles in poffeflion; and in Orkney (as hath been faid) it is not quite extinct, though there be by far more of it in Zetland, which many do commonly ufe.

It is obfervable that the names of the defeendants of the old inhabitants differ from the names of others now numerous anong them, for thefe only have a name without a firname, fave what is taken from their father's name, and by adding fon or daughter thereunto, c.eemp. gra. Agnes Magnus daughter; her own name is Agnes, her father's is Magnus, to which daughter is alded, which is the whole denomination or defignation under which fuch a woman goes : In Marion, Peter's daughter; Laurens, John's fon, \&cc., which they fay is yet the Dauif way of expreffing and diftinguilhing names: and for further clearing, if there be two men or women of the fame name, they ufe alfo to defign them by the places where they ordinarily refide, as Agnes Magnus daughter in Trebitter, that fo fhe may be difcriminated from another woman of the fance name living in another place. It is probable that hence flowed thefe firnames, fuch as Williamfon, Robertfon, Jamiefon, Davidfon, \&c., which do abound with us in Scotland. In fome words allo their pronunciation doth differ from that of ours; as for inftance, they often ufe to leave out the letter $b$ in their pronunciation, as if it did not belong to the word; fo three they pronounce as trec, thou as tou or tu, \&c. They have alfo fome Norifh words which they commonly ufe, which we undertood not till they were explained; fuch as air, which fignifies a land-bank; oy $y$ e, an inlet of the fea; voc, a creek or bay, \&c.: and thefe words are much ufed both in Zetland and Orkney.

It would appear that the country is now much better inhabited than formerly fome ages ago it hath been; for we hear but of few who leave this country, having once fixed their abode therein, though there be many who have lately come to it from Orkney, Caithnefs, Sutherland, Buchan, and other places, efpecially in the north of Scotland: fo that in all Lerwick, the molt confiderable town in the country, there are but very few whofe grand fathers have lived in thofe ifles. And in Lerwick itfelf, about thirty years ago, there were only four houfes, and fome years before there were none at all, though now there are between two and three hundred fanilies in it.

Thourh the ground be generally bad, and the climate cold, yet it is not unwholefome living here, as appears from the many vigorous old people that abound in the ifles, whofe health I think is rather more firm and found than with us; neither are they liable to fuch frequent ficknefs: whether this is to be imputed to the freenefs and purity
of the air, or to the quality of their diet, or the fobriety of their living, or to all there and the like, I fhall not judge: yet they tell us they ufed to live much longer in former ages than now they do; as of one Tairvile, who lived one hundred and cighty years, and all his time never drank beer or ale: his fon alfo and grand-children lived to a good old age, who feldom or never drank any other thing fave milk, water, and their coun-try-bland. It is faid alfo that this Tairvile's father lived longer than himfelf. There was alfo one Laurentius, in the patifh of Waes, whofe heir-oyes do yet live there, who arrived at a great are, whom Buchanan mentioneth that he lived in his time, marrying a wife afier the hundredth year of his age, and in the one hundred and fortieth went a fifhing with his litele boat when the fea was tempefluous. Salubritatis firmitudo in Laurrentio quodam noftra atate apparuit, qui poft centefimum ammum uxiorcm duxit : centefimum quadrigefimum annum agcns, feviffimo nure in füa naviculá pifcatum prodibat: ac uuper nulla vi gravioris morbi labefuctatus, fod fonio folutus dece/fit. l'or furely as all filful phyficians do grant there is nothing more conducive to the maintaining of a found and healthful conftitution than a fober and regular diet; whereas they who live otherwife, to feak with refpect to fecond caufes, do impair their health, and cut themfelves off often in the midn of their days; efpecially fuch as feed high, and indulge themfelves in drinking ftrong liquors, which tends to the exhanfing of that natural and innate heat, the fountain of our animal life; whereas it is obferved of all thefe who arrived at fuch a great age that they feldom, if ever, drank any ftrong liquor.

There is no ficknefs or difeafe this country is nore fubject unto than the fcurvy, as is Orkney likewife, which is occafioned doubtefs by their falt-meats, finhes, upon which many for the moft part do live, fea-air, \&c. : and fometimes this feurvy degencrates into a kind of leprofy, which they call a Baflard-fcurvy, and is difcerned by hairs falling from the eye-brows, the nofe falling in, \&c.; which when the people come to know, they feparate and fet them apart for fear of infection, building huts or little houfes for them in the field: I faw the ruins of one of thefe houfes about half a nile from Lerwick, where a woman was for fome years kept for this reafon. This battard leprofy they judge is caufed by the many grey fifhes, fuch as fillucks, piltocks, \&c. which they eat; for bread failing many of the people in the fummer-time, that often for four or five months they will not tafte thercof, thefe fithes are almoit their only meat, and efpecially the livers of thefe finhes, which are thought to be more unhealthful than the fifhes themfelves, and they much incline to ear, do occafion this. The drinking alfo of hot bland (which is a kind of a ferum of milk, of which more afterwards) together with thefe finhes, do beget fuch corrupt humours, to the diltempering of the body. Thefe fcorbutic perfons are more ordinarily in Dunrofsnfs and Delton, and more rare in other places, and that becaufe they have more grey filhes in thefe two parifhes than in others.

And it hath been obferved often by the inhabitants, that when in holy providence any ficknefs cometh upon, or breaketh up in, the country, it ufeth to go through them like a plague; fo that fince we came off the fimall-pox hath fized upon many, both old and young, and was fo univerfal, that upon one Lord's day there were ninety prayed for in the church of Lerwick, all fick of the fame difeafe; whereas when we were there a few weeks belore, there was not one that we knew lick thereof. 'They fay a gentlem in's fon in the country who had lately gone from the fiouth, and was under it when he came home, brought it with him, which very quickly fpread among the prople, the old as well as the young; and fo fad have been the delolating effects thereof, that one told me who arrived here lately from the place, that he verily judgeth the third part of the people in many of the ifles are dead thereof.

Although many of the inhabitants have each their particular trades and eniployments wherein more efpecially they lay out themfelves, and are taken up about, yet arc they all generally fome way acquainted with the fea, and can with fome dexterity and kiil attained by experience manage their boats, not only becaule of their frequent pafling from ine to infe, and going over the voes or lochs which lie in upon, and cut the Mainland, but by reafon of their great filhing, not only for their own ufe, but for the ufe of merchants who buy their fifhes, or give them the value in foreign commodities: hence moft of the inhabitants not only have fome pafturage for their cattle, and fome corn land about their houfes which they manure, but alfo their parts of buats for the end aforefaid. Yet there are many who follow no trade but their fifhing.
Befide their filh trade with foreign merchants, they do likewife drive a great trade with Orkney, from which every year feveral boats do pafs to Zetland loaden with corns, meal, malt, \&cc. upon the coming whereof they often wait for barley-feed, though the laft year they had a confiderable crop, fo that the barley-feed was fown before the boats came over. The Orkney men alfo bring fometimes ftockings, ale, and the like, which they know to be vendible here : hence every year confiderable fums of money go from 2 etland to Orkney; and fome have told me that moft of the money they have in Orkney is from Zetland. So great is the advantage that thefe ines do reap by their neighbourly commerce with one another, for as Zetland could not well live without Orkney's corns, fo neither could Orkney be fo well without Zethand's meney.

As Orkney have much of their money from Zetland, fo Zetland have all theirs from foreign nations and countries, whofe merchants traffic with them, as from Holland, Hamburgh, Breme, \&c. The Dutch money doth ordinarily pafs among them, as Itivers, half-ftivers, and fince the rates of the money were raifed in Scotland, many here have been confiderable gainers by the ducket-douns, which is the fpecies of money that the Hollanders bring more ordinarily with them.
The king's rents are but the third part of what they are in Orkney; for though this country be by far greater and more fpacious than Orkney, yet it is not fo well inhabited, neither is the ground fo good : thefe rents are paid to the taxmen in butter, oil, and money; the oil is made of the livers of fifhes, and is fent fouth for the making of foap, or is otherwife difoofed of, as may be moft advantageous. The bifhops had no rents from this country; and, though it belongs to the diocefe of Orkney, and is a confiderable part of that charge, yet we did not hear that ever any of thefe loul paftors of their diocefes, as fome are pleafed to call them, vifited thefe bounds.

There being fo little corn-land here, is the caufe why none of the revenues of the crown are paid in meal or corns, whereas in Orkney it is far otherwife, as hath been faid; for any corn-land they have is ordinarily but a few ridges nigh to the coafts, for at any diftance from the fea, and in many places alfo nigh unto it, there is unthing but a mofly and mountainous defert covered with hadder, and only fome places plenihed with a few kine, fheep, or helties, though in other places you will go fome miles and fee none. This mols and moor, which fo much aboundeth, renders tavelling very dangerous, even to the natives themfelves, and fo deep is it in many places and that in the fummer and droughty feafon, that horfes cannot pafs it, and men on foot not without difficulty and hazard: as in the ifle of Yell the minifter, in going to the church from his houfe, is obliged to go on foot eight miles alınot wading up to the knees. And indeed the eafieft and fafelt way of travelling is by fea in boats about the ikirts of the illes, which alfo is not without danger.

And though the greateft part of this country be thus moffy and moorifh, yet there are fome pleafant fpots in it well furnifhed with grafs and corn, as nigh to. Scalloway, vol. ill. 5 \% Uitnels,

Uftnels, \&ec. in the Mainland, fome places in the parifhes of Dunroffnefs alfo on the main, in the ine of Unft, \&c. Hence fome years they will have twenty-fold of increafi, but this is more rare, for at other times, in feveral places, they will fcaree have the double of their feed. They make much ufe of barley-bread, which appears to be fairer than their oat-bread, for their barley they take to be the bell grain, it agreeing better with the ground then oats. And as it is in Orkney fo is it here, if any white corn be brought unto the country for feed, it will foon degenerate and become like their own.

I think the kine and fheep are of a greater fize, than they are in Orkney, though their horfes be of a lefs; as for the fheep I take then to be little lefs than they are in many places of Scotland; they lamb not fo foon as with us, for at the end of May their lambs are not come in feafon; their harveft alfo is much later, for they judge it very early if they get their corns in againf the middle of October; they obferve that our feafons will be two months before theirs, but I do not think they difier fo much.

If their fheep were well kept, it would be very pleafint to behold them in flocks, they being of divers colours: Some of a pied, others of a brown, others of a brown and white, others of a black colour, fome alfo have black fpraings on their lacks, others on their foreheads; and fome fay they have as great a number of black fheep as they have of white; which diverfity of colours would render them very benutiful, if they were taken due care of; for they neither wafh nor clip their fheep, nor have they any theers for that end, but pull the wool off them with their hands; which as it is painful to the beaft, fo it makes them look not fo well favoured, but like thefe with us, whofe wool is fcratched with briars or thorns.
Their ordinary drink is milk or water, or milk and water together, or a drink which they call Bland, moft common in the country, though not thought to be very wholefome; which fo they make up, having taken away the butter from their churned milk, as likewife the thicker parts of this milk which remains after the butter is taken out, they then pour in fome hot water upon the fermm, whey, or the thinner part of the milk in a proportion to the milk. Which being done, they make ufe of it for their drink, kecping fome for their winter provifion : and this drink is fo ordinary with them, that there are many people in the country who never faw ale or beer in all their lifetime; the ale is rare among them, they making bread of much of their barley-grain, but the Famburgh beer both fmall and frong is to be had in plenty, though at a good rate, fix fhillings or eight fhillings our pint; which beer and other liquors, as alfo wheatbread the Hamburghers bring with them in the month of May for fale, hence fometimes liquors, as beer, ale, \&c. cannot be had for money, till the Hamburghers bring it.
The great confluence of ftrangers makes kine, fheep, hens, and almof all victuals to fell at a greater rate than in Orkney, for ofien when the bufhes are here, they will give double or triple for a Theep, or a hen, than it is to be bought in Orkney for; for the Hollanders with their bufhes being numerous on thefe coafts, they fend fometimes ahore to buy frefh meats, which if to be had, they will not want for the price.

They have fowls, efpecially fea-fowls, in great plenty, which do frequent the rocks, holms, \&c. which they take as they do in Orkney, and are very beneficial to the proprictors. There are alfo many eagles, which do great prejudice and hurt to the country ; for the lambs they will lift up in their claws, and take whole to their nefts, and falling down upon the fheep, they fix one loot on the ground and the other on the theep's back, which they having fo apprehended, they firf pick out their eyes, and then ufe the carcafes as they pleafe. All forts of duck and drake, dunter.geefe, cleckgeefe, ember-geefe, \&c. they have as in Orkney.

They have many crows, but neither here nor in Orkney are they of that colour which they are of with us; for their heads, wings, and tail, only are black, but their back and breaft from the neck to the tail are of a grey colour, and the country people look upon it as a bad omen, when black crows come to thefe ifles, they portending that a famine will Thortly enfue.

- There are many conies in fome places, but no hares, neither are there any moorfowls, which are numerous in Orkney; fome fay that a few from Orkney have been brought over for trial, but they could not live here : no poddocks or frogs are to be feen, though many in Orkney. Neither are there any rats to be found, except in fome illes, and thefe are greater than ordinary, and thought to come out of hips, when riding at anchor nigh to the thore, but they have mice in abundance. Neither are there are any venomous creatures in thefe illes. 'They have many otters, one of which was fo tamed that it frequently ufed to bring fifhes out of the fea to a gentleman's houfe in Hankahhic, as one told me who knew the truth thereof.
They have a fort of little horfes called thelties, than which no other are to be had if not brought hither from other places; they are of a lefs fize than the Orkney horfes, for fome will be but nine, others ten nives or hand-breadths high, and they will be thought big horfes there if eleven; and although fo fmall yet are they full of vigour and life, and fome not fo high as others often prove to be the ftrongeft, yea there are fome whom an able man can lift up in his arms, yet will they carry him and a woman behind him eight miles forward and as many back: fummer or winter they never come into a houfe, but run upon the mountains in fome places in flocks, and if at any time in winter the flo:m be fo great that they are fraitened for food, they will come down from the hills, when the ebb is in the fca, and eat the fea-ware, (as likewife do the fheep;) which winter form and fcarcity of fodder puts them out of cafe, and bringeth them fo very low, that they recover not their ftrength till about St. John's mafs day, the 24th of June, when they are at their beft : they will live till a confiderable age, as twenty-fix, twenty-eight, or thinty years, and they will be good riding in twenty-four, efpecially they will be the more vigorous and live the longer, if they be four years old before they be put to work. Thele of a black colour are judged to be the molt durable, and the pied often prove not fo good; they have been more numerous than now they are; the beft of them are to be had in Sanfton and Efton, alfo they are good in Waes and Yell, thefe of the leaft fize are in the northern illes of Yell and Unft.

The coldnefs of the air, the barrennefs of the mountains on which they feed, and their hard ulage may occafion them to keep fo little, for if bigger horfes be brought into the country, their kind within a little time will degenerate; and, indeed, in the prefent cafe we may fee the wifdom of Providence, for their way being deep and moffy in many places, thefe lighter horfes come through when the greater and heavier would fink down: and they leap over ditches very nimbly, yea up and down rugged moffy braes or hillocs with heavy riders upon them, which 1 could not look upon but with admiration, yea I have feen them climb up braes upon their knees, when otherwife they could not get the height overcome, fo that our horfes would be but little if at all ferviceable there.

The great filthing which they have upon the coafts makes the place defirable to the natives, and to be frequented by Itrangers, it excelling any other place of the King of Britain's dominions for herring, white and grey fihing; the white fifhing they call the killin and ling, \&ec. their grey the filluks and feths; there are alfo fometimes very ftrange fifhes here to be found, as about twenty-four years ago there came a great number of fimall thick fifhes into a voe on the fouth fide of Nefton; they were of a golden colour,
very pleafant to behold, they were about the bignefs of an ordinary trout, and all of an equal fize ; they being very numerous, the country made much ufe of them, who judged them very favoury; talting like a turbot; and never before or fince that tince were thefe fifhes feen in thefe feas, as my informer an old geutleman could remember. Their tuik is a rare fifh but more ordinary with then, of which more when we come to fpeak of their fifhling. Alfo many rare fhells are to be found on the coafts, but we had not time to inquire and look after them.

Through the ines for fewel they have good peats in abundance, though in foine places they are at a diftance from them, as thofe who live in the Skerries are obliged to bring them from other ines, as from Whalfey, and the paffage being dangerous many boats are caft away with them; fome alfo living in Dunrofnefs are at a lofs this way, they not having the mofs at hand, as generally they have in other places on the Main. Much broken timber alfo is driven athore upon thefe ines, fo that the inhabitants of the Skerries truft the one half of their provifion to this driven timber, and broken Chips in great quantity often caft ahore, partly through the many flips that fplit on thefe ines, and parily as the wreck of Chips caft away at fome diftance, which is brought here by the ebb from Norway, or other places lying to the eaft of Zetland.

There are no trees in this country more than in Orkney; we faw fome old white and weather-beaten ftocks ftanding in Scalloway; for whatever reafons may be alledged for trees not growing in Orkney, far more do I judge they will hold in Zetland, both with refpect to the air and to the foil; there are alfo at Scalloway fone goofe and rizzer-berry bufhes, which ufe every year to be laden with fruit, which are a great rarity in this place of the world.

- Many excellent herbs are found growing here, though little known or made ufe of: a certain Englifh phyfician and Ikilled botanift who was at Lerwick fome ycars ago, told our hoft, that there were many choice and rural herbs here not to be found in England. They have much fcurvy-grafs, God fo ordering it in his wife providence that juxta vencnum nafcitur antidotum, that feeing the fcurvy is the common difeafe of the country, they thould have the remedy at hand.

There is here much lime-ftone, (though for aught I heard not to be found in Orkney,) which in fome places they have but lately come to the knowledge of, as in Unit but about four years fince, and in other places they know not yet how to ufe it ; the parifh of Tingwal (they fay) coi:fifts almoft of lime-fone, they having few if any other ftones than fuch.

The fones wherewith they build are generally broad, and like flag.fones ; by reafon of which figure and Thape the ftones lying the more eafily, the builders are at lefs trouble in fitting them for the wall; and I have obferved that in fome houfes there is littlo lime, clay, or any fuch thing for cementing of the building, which renders their dwelling fo much the colder, the piercing air paffing through between the chinks of the ftones, which they have no need of under this cold and airifh clima - But fone of thefe houfes they may defignedly fo build, that the wind may have free porm though them for drying of their filles, which houfes fome call ikeos.

There are feveral fuperflitious cuftoms and praftices which the more ignorant people follow, fome of which we will have occafion to note in the fequel of this difcourfe, but not fo many did we hear of, as there in Orkney. But I hope the vigilance and diligence of our ci. wch in infpecting thefe ines, and putting all to their duty, will prove a bleffed mean, in th hand o: God, for the eradicating and utter abolifhing of thefe reliets of paganifm and in isiry.

Sailin fo man caft aw and and times b which t or the the fea them, a flans an canee, and in tf anan of his o fave or the land land for waiting

For comme boats d that tim who co from 0 which whereo prefent fears, f: and the them,

Thei to the feft the take th oufly rc burnwo Sound,

- Sailing about thefe coafts is often very dangerous; whence the waters prove graves to many of the inhabitants. While we were there in the month of May a boat was caft away going by the fhore to Dunroffnefs, and a man and his fifter therein perifhed, and another man in her was faved by geting upon the keel of the boat; and fonce times boats are caft away when not one faved. About the ines are many blind rocks, which the natives fometimes unhappily fall and break upon, either through a miftake, or the tide and wind driving them upon them: at other times the wind rifing caufeth the fea fo to fwell that the waves breaking upon their fmall boats are ready to overfet them, and fometimes do: alfo though the winds be not fo frong, there will come flans and blafts off the land as to their fwiftnefs and furprifal fomething like to hurrieanee, which beating with a great impetus or force upon their fails, overturns the boat, ard in a moment hurries them into eternity: by fuch a flan the Laird of Munas, a gentI man in this country is faid to have periihed the former year 1699, when within fight of his own houfe, and all that were in the boat with him, faid to be nine or ten perfons, fave one fervant who efcaped upon the kecl. I remember that night we came to the land of Zetland our feamen thought fit in their prudence not to fail too nigh the land for fear of fuch 'flans. "O to be as watchmen on our towers, looking out and waiting for the Lord's coning."

For this caufe it is, that during the winter feafon they have ordinarily converfe or commerce with none, except that thips be driven in by frefs of weather; for the open boats dare not come, and the clofe-decked not without danger, the fea commonly at that time being fo tempeftuous, the tides and roufts fo rapil, that they threaten all who come near them with being fwallowed up: therefore it is, as they tell us, that from October till April or May, they ordinarily fee no ftrangers, nor know any news, which makes the winter fo much the longer and wearifome unto them : an infance whereof we had, that the late Revolution, when his Highnefs the Prince of Orange our prefent King, was pleafed to come over to affert our liberties, and deliver us from our fears, falling out in the winter, it was May thereafter before they heard any thing of it; and that firft they fay from a fifherman, whom fome would have had arraigned before them, and impeached of high treafon becaufe of his news, as fome did inform us.

Their country lying very open, and in many places but thinly inhabited, expofeth them to the hofile incurfions of pirates in a time of war, as of late the French did much infeft their coafts, fome of their men landing did by fhot kill their kine and fheep, and take them away with them ; yea fometimes they fpared not the churches, but facrilegioufly robbed them, pulling down the timber thereof, as feats, \&c. and taking them for burnwood; fo they did to a church in North Mevan. But they never came into Braffa Sound, left they had been locked up within land, winds turning contrary.

In the month of June they have a clear light all the aight over, for at the darkeft hour thereof, you will fee clearly to read a letter; the fun fetteth between ten and eleven at night, and rifeth between one and two in the morning, but for this they have fo much the fhorter day and longer night in the winter.

## Char. VII. - A particular liew is given of the feveral Parißcs, and moft confiderable Ihes in Zctland.

THUS far having confidered the flate of the country in general, we come next to take fome particular view of the inles, which that I may the better and more methodically do, I thall lay before my reader the feveral parifhes, with fome brief defcription of the principal Ines thereunto belonging. For as to the number of the illes, I never heard an ex-
act account given thereof, there being many of them finall, wherein is only a family or two, and fo but little noticed.

The firlt is the parifh of Dunroffinefs on the Mainland to the fouth, and is the parifh which lies next to Orkney and Scotland, wherein are three churches, in which their s:ainter performeth divine fervice, Crofs-Kirk, Sanwich, and Fair Ine; in this parilh are feveral very good voes or harbours cominodious for flips to ride in. In this there is alfo wuch corn land, there ground bearing the richeft grain, in many places not fo mofly and covered over with heath, as other parifhes are, which makes them to have lefs fuel, though more corn. Much of the land here is fandell, and the fea alinoft yearly gaineth fomething on the lower parts thereof; the land lying fo low and fandy in many places, is convenient for conies, which abound here about the nefs or fouthernmoft point of land. In this parifh, there is a great fifhing, this fouthernmoft point hath two heads, Swinburgh Head, and Fitwalls Head, two high rocks feen by mariners coming from the fouth at a great diftance, which when difcovered they direat their courfe towards them.

To the north-weft of the Nefs lies'St. Ninian's ifle, very pleafant; wherein there is a chapel and an altar in it, whereon fome fuperfitious people do burn candies to this day. Some take this ine rather to be a kind of peninfula, joined to the main by a bank of fand, by which in an ebb people may go in the ifle, though fometimes not without danger.

The Fair Ifte belongeth to this parifh, lying eight leagues or twenty-four miles to the fouth, or fouth and by ealt of Swinburgh Head, by Buchanan it is called infula bella, the pleafant or pretty ifle. Though 1 do judge fair may be as well taken properly as appellatively, for the ille Faira or Fara, there being another ille lying to the north of this which they call North Faira which relates to another Faira by fouth; now there is no ine lying to the fouth of this North Faira, which hath any name that can be interpreted Faira, but this Fair ILe. Moreover I neither did fec, nor was I informed of any thing, that afford us any reafon why this ifle fhould be fo appellatively taken and denoninat ted bella or Fair. This Fair ifle rifeth high above the waters, and is feen by mariners at a great diftance; it is about a mile and a half long from fouth to north, and nigh to a mile in breadth, the fide thereof towards the weft is a continued ragged rock from one end to another, always beat upon by the impetuous currents of a fivelling fea; above this weft fide is the craig which they call the Sheep Craig, whereon there are no houfes nor corn land, but fheep ufe to feed: the fide, lying to the eaft, is lower, declining towards the fea ; there are in it two harbours, one upon the northern end, looking to Zetland, and another towards the fouthern point, but fhips or boats do not ordinarily refort thereunto, if not put to it, and better cannot do, for fo it hath been a fafe fhelter and refuge to many.

There ufe to be about ten or twelve families in it, but now they fay death hath almoft depopulated the inle, the fmall pox having lately raged there, and fwept away two thirds of the inhabitants, fo that there is not a fufficient number fpared to manage their fifingboats ; that gentleman's fon, above-mentioned, having touched here in his way to Zetland. They have good pafturage for theep and kinc, and fome corn land, and are very hofpital and kind. Their minitter ufeth to vifit them once in the year, in the fummer time, and flaying with them about a month, preaching, baptizing their children and doing other parts of his paftoral work; after which he returning to Zetland, they are without public ordinances till the next year's revolution.

The hawks, they fay, which are to be had in the Fair Ife, are beft in Britain, which ufe to fly to Zetland or Orkney for their prey, thefe being the nearef lands, and fometimes they will find moor fowts in their nefts, which they behoved to bring from Ork-
ney, feeing there are none in Zetland, and the neareft iffe they could liave them in was Stronza or Weflra, which is between forty and fifty miles of fea, over which at one flight they muft carry thefe fowls to their nefts.

Many fhips ufe to cruife about this Fair Ine in the fummer time, and by it the Holland's flect going to or coming from the Eaft-Indies, ufe to pals, though fometimes as in the late wars they failed by the north of Zetland, that they might be more free of danger. Ships alfo going to or coming from Norway or the eaft fea frequently pafs this way, when wind ferveth them fo to do: and this Fair Ine being feen by them at fourteen or fixteen leagues diftance, in a clear day it is as a myth or mark for directing their courfes.

The fecond is the parifh of Tingwall, lying on the eaft of the main to the north of Dunroffnefs, wherein are four churches, Tingwall, Whitenefs, Wifedale and Lerwick, but the minifter ufeth not to preach by turns at Lerwick, as he doth at his other three churches, he not finding himfelf obliged fo to do, it being but built lately at the expence of the inhabitants, however fometimes he hath fermon there, and baptizeth their children. Lerwick in this parihh is now become the principal town in the country, lying on the caft of the main at Braffa Sound, over againft the ifle of Braffa.

Lerwick is more than half a mile in length, lying fouth and north upon the fide of the found, and will confift of between two and three hundred families, it is but within thefe few years, that it hath arrived to fuch a number of houfes and inhabitants. It is becomefo confiderable, becaufe of the many fhips which do yearly frequent the Sound, whereby merchants and tradefmen are encouraged to come and dwell in this place, and not for the pleafantnefs of its fituation, or the fertility of the country about, for it is built upona rocky piece of ground, whercin they can have no ftreet, but a kind of a narrow paffage before their doors, betwixt them and the Sound, which in fome places will not admit of two men's going in a breaft, and at the back of the town there is a hill of black mofs, wherein they caft their pites, which in fome places cometh to their very doors, and no corn land is there about it, fave a little within the caftle, for near a mile of way.

Many of their houfes are very commodious to dwell in, moft of them being two fories high, and well furnified within, their inhabitants confift of merchants, tradefmen, and fifhers, who keep up a good trade with foreigners, from whom they buy much of their domeftic provifion, fome of them are perfons of a confiderable fock, which they have many ways to improve for their advantage. They are very civil and kind, of an obliging temper, which we had the experience of, during our abode among them; there are but few begging poor to be feen here, or in any place of the country, where we had occafion to be; there being a great fore of finall fifhes, for the fupply of their neceffity.

They have upon their own charges built a convenient church, at the back of the middle of the town, and furnifhed it with good feats high and low; they are at prefent a part of the parifh of 'Tingwall, but very defirous to be disjoined, and erected into a parifh by themfelves, that fo they may enjoy a minitter of their own : for the promoting of which good work, they are moot willing according to their ability to contribute for the fettling. of a fund for a flipend to a minifter, but not being in a capacity to give all, they refolved to make application to the government, for to have fome allowance out of the revenues of the bifhopric of Orkney, or otherwife as the wifdom of the government fhould fee meet, fo that there may be a competency made up.

Upon their application to us, we judging it moft convenient, yea neceffary, that this. town, with fome of the adjacent country fhould be erected into a parifh, cherifhed this their pious defign; telling them, that we intended to recommend it to the commifion of the gencral affembly: that they may interpofe with the lords and other honourable
members of the refpective judicatorics, before whom this affair fhall come, for the better effectuating the fame. For the town itfelf is confiderable, and the principal one in the country much frequented by the gentry; as alfo by ftrangers, in the fummer time. And their minifter preaching feldom here, they are ordinarily deftitute of gofpel ordinances; the people fcarce being able, in the fummer feafon, and almof impoifible for them in the winter, to travel to the next church, where their minifter preacheth : it being about four miles diftance from them, of exceeding bad way, as we knew when we did perambulate the bounds. Which want of ordinances maketh their cafe vcry fad and deplorable; it nurfeth ignorance, occafioneth much fin, efpecially horrid profanation of the Lord's Day by frangers as well as by inhabitants; and doth effectually obftruct the converfion of fouls; preaching of the word being a fpecial means of convincing and converting finners, and building them up in holinefs and comfort through faith unto falvation.

At the north end of the town is the caftle or citadel of Lerwick, begun to be built in the time of the Dutch war anno 1665 ; by vorkmen fent by authority from Scotland, for that end, but the work was never perfected, the workinen returning home anno 1667. At that time alfo three hundred foldiers were fent over, for the defence of the country, againft the hoftile incurfions of the Hollanders, and were quartered in places near to the fort, who likewife returned home about the fame time with the workmen: the garrifon could do much to command the Sound (for then there was no town here) fo that none durf land nigh unto then; the walls are yet in a good condition, high in fome places without, but filled up with earth within, whereon they raifed their cannon; in the weakeft part of the wall towards the north, there hath been a fally-port, dangerous to attack, by reafon of a deep ditch before it, fed by a fpring, into which the garrifon by cunning artifices might endeavour to draw the enemy, who, by the fratagems of war thus being brought on and enfared, did incontinently fink down into the Sound below them at the foot of the hill, whereupon the cafle is fituated: within the walls is a houfe of guard, which hath been two fories high, burnt by the Dutch, after that our foldiers had left the fort. Upon the walls towards the Sound are ftanding three iron cannons, one a fix, another a feven, and a third a ten-pounder, not left by thefe who kept garrifon, but fince that time within thefe thirty years taken out of the fea nigh to Whalfey, a hhip of force there being calt away about eighty years before, which guns the inhabitants of Lerwick lately mounted upon the walls of the cafle, whereby they might be in a capacity to defend themfelves againf the French privateers, who at any time fhould come up the Sound and affault them.

Between Lerwick and the iffe of Braffa on the eaft lieth a pleafant bay or found, commonly called Brafia Sound, famous for its bting fo fafe a road for fhips to anchor and ride in, and that in the greateft florm, being inclofed with land on every fide, except the entry thereunto from the fouth, which is half a mile broad, but within the found as a: lerwick it is a mile ; it hath ancther narrow paflage at the north end of it, but dangerous to go out or in at, becaufe of lome blind rocks therein. This found is the ordinary place to which the Holland buhes do refort in time of herring fifhing, who, before they put out their nets, (which mult not be, according to a law they have among themfelves, before the $24^{\text {th }}$ of June, ) ufe to come here and put themfelves Thips and nets in order, and the time by them appointed being come, they all go to fea together, fifhing near to this land: fometimes there have been feen in the Sound two thoufand, or two thoufand two hundred fail at once, and every year fome hundreds as five, fix, or ieven hundred. Yea fometimes fo thick do the fhips lic in the found, that they fay men
might go from one fide of the found to the other, ftepping from fhip to flip; and during their fifhing they will come in to the found for freh water, or other neceffary provifion, and return to fea again.

To this parilh of Tingwal alfo belongeth Scalloway, lying on the weft fide of the Mainland, four miles, which is the breadih of the country in that place from Lerwick. It was formerly the chief town in the country, and the feat of the preflyytery, enjoying by far a pleafanter fituation than Lerwick, about which is good grafs and corn, and fome meadow, betwixt which and the church of Tingwal is the Strath of Tingwal, two miles of hard, even, and pleafant way; they fay about Scalloway is as pleafant a foot as is in all this country. In all the towns there will be fearce eighty or one hundred perfons, there not being fuch encouragement by trade to live here as at Lerwick.

At the eaft or fouth-caft end of the town ftands the caftle of Scalloway, built anno 1600, by Pat:ick Earl of Orkney, fon to Robert Stewart alfo Earl of Orkney, who built the palace of Birfa formerly mentioned: above the gates, as we enter into the houfe, there is this infcription, Patricius Orcbadia $\xi^{\circ}$ Zetlandia Comes, and below the infcription this diftich, Cujus fundamen faxum cft domus illa manebit; Labilis è contra, $f_{i} f_{i t}$ arena perit. That houfe whofe foundation is on a rock fhall ftand; but if the fand it thall fall. The reafon of the infcription is reported to be this: the Earl greatly oppreffed both Orkney and Zctland; and particularly at the building of this houfe, his hand lay very heavy on the poor people, by caufing them in great numbers to be employed about the building, which could not but divert them from their ordinary work, as fifhing, \&c. whereby they provided futtenance for themfelves and families. After this, one Mr. Pitcairn, minifter of North Mevan, faid to be a godly and zealous man, coming to pay his refpects to the Earl, the Earl defired him to compofe a verfe, which he might put upon the frontifpiece of his houfe ; from this the ninifter took occafion to lay before the Earl his great fin of oppreffion, upon which the Earl's anger was incenfed, and in his rage he threatened him with imprifonment. However the Earl afterwards coming to fome compofure of firit, Mr. Pitcairn faid unto him, Well if you will have a verfe, I Thall give you one from exprefs words of holy fcripture, Luke vi; which verfe the Earl being pleafed with, caufedit to be infribed on the lintel above the gate, with Luke vi. added to the verfe, the minifter thereby infinuating that this houfe could not fand long, having fuch a fandy foundation as oppreffion. As indeed neither did it, for fhortly after the Earl being beheaded, the houfe was not taken care of, and is now become ruinous.

And herein the wife providence of God nay be obferved, that as the infcription on the gate of the palace of Birfa in Orkney did hold forth the ambition of the father, fo this infcription on the gate of the caftle of Scalloway in Zetland did thew the oppreffion of the fon; and though it may be many years fince the death of them both, yet the very houfes built by them, to make their honour and grandeur to appear, do yet ftand to their difhonour and infamy, and in a manner do bear witnefs againft them : fo truly verified in them, is that feripture, "That though the inward thoughts of great neen be that their houfes fhall continue for ever, and their dwelling places to all generations; neverthelefs they being in honour and not underfanding, are like the beafts that perifh. And the righteous thall be in everlafting remembrance: but the name of the wicked fhall rot.'

The houfe or cafle is three forics high befide kitchens and wardrobe, and hath in it many excellent chaubers, and other apartments writh their feveral conveniences; alfo there hath been much good painting, fome of which is yet to be feen, though much defaced; the chambers are high between floors, but efpecially the gallery or dining-room : in the kitchen there is a well in the fide of a wall, the water whereof is very good though
vol. IIt.
little ufed : the flates have for the moft part fallen from the roof, and are daily falling with every ftorm, fo that the timber, much of which 'is yet very good and frefl, is beginning to rot and confume, by the rain falling throush the houfe from floor to floor. The fone walls are yet in a good condition, they being confiderably thick; in the building are many free-ftones, is lintels, jams, \&ec. which they fay were brought from Scot. land. I give a more particular account of this houfe, be caufe built in this comery, and to fhew how tranfient, paffing, and perifhing, the glory and riches of the world are. In this caftle of Scalloway fome Englith foldiers for fome time kept garrifon, when theic army was in Scotland.

The church of Wifdale, which belongeth to this parin, is much frequented by the fupertitious country people, who light candles therein, drop money in and about it, go on their bare knees round it, and to which in their flraits and ficknefs they have their recourfe, yea fome are fo filly as to think, that if they be.in any diftrefs, though not at this church, yet if they turn their faces to it, God will hear them. One of the juftices told us, that though they have laid out themfelves to get thefe fupertitious conceits eradicated, yet they cannot get it altogether effectuated, but fill they continue among the people. A minifler alfo told me, that it was much frequented by women, who, when they. defire to marry, went to this church making their vows and faying their prayers there, fo affuring themfilves that God would caule men come in fuit of them; but this is not now fo much in ufe as formerly.

Before Scalloway lieth a litte ifle called Troudra two or three milcs long, wherein are a few families.

The third parifh is Nefton to the eaft of the Main, to which belongs four churches, two on the main, and other two in ifles; in Nefton is good harbouring and many grey fifhes.

To the north-eafl lies the inte of Whalfey, wherein is a cluurch, it is a aout three miles long and as many broad. Here are great rats and very numerous, which do infeft the ine, deftroying their corns and other goods.

From Whalfey to the eaft lies the Skerries, feveral broken ifles, wherein is a church, here are two good harbours, but dangerous to enter, by reafon of rocks that lie before them, but when in, thips will ride very fafely: there are no pites in them, but many fhips being caft away upon them, the inhabitants make ufe of the wreek for burn-wood, and alfo bring fome pites from Whalfey. Here was caft away that great and rich fhip, called the Carmelan of Amferdam, anno :064, when the war was between us and the Hollanders, computed to the value of $3,00=000$ of guilders, whercin were fome chefts of coined gold (of which more above in our defeription of Orkney,) and none of the men, as they report, were faved but four, who were on the top-matt, difcovering the land; but before they could give timely adverifement to the captain, the Ship Aruck on a rock, and the matt breaking by the deck, the top thereof tell on one of the fkerries, and fo thefe four men perifhed not with the refl of their company; they fay for twenty days after the inhabitams of the Skerries drank liberally of the ftrong liquors driven on thore in calks. It is fuid this fhip to sichly laden was bound for the Eafl-Indics.

In the way from Braffis Sound to Nefon, lies the blind rock called the Unicorn, the top whereof is feen at a low etb, upon which the hip called the Unicorn was call away, wherein was Willian Kircaldy of Grange, who, purluing the Earl of Bothwell, followad him foclofe, that they were within gen fhot of one another, but B thweil coming firf through Bralfa Sound got in a pilot, which Grange neglecting to do, they both lailed through the northern paffage of Bralfa Sound; and Bothwel's pilot having a great re-
ward promifed him, if they fhould efcape, ran down by the fide of this rock upon which the Unicorn did Spilt, and fo Bothwel got free of the danger he was in, by this hot purfuit. It is moft dangerous failing among thefe ifles wiihout a pilot.

The fourth parifh is Delton on the Main, whercin are two churches, it lieth north-eaft and fouth-eaft; here are many grey fithes taken, whereas in the northern ifles of Unit and Yell they lay out themfelves more for the taking of white fifh, as killing, ling, \&c.

On the eaft lies liiholu, to the north-caft Iittle Rue, and on the weft Meikle Rue, eight miles long, and two miles broad, wherein a good harbour. All thefe illes have their own advantages.

The fifih is Sanfting and Ening lying on the Main between Delton and Waes wherein are two kirks, one in Sanfting and another in Efting, The way in this parifh is very bad, and the people are faid to be among the pooreft and naughtieft in all the country; here is good pafture for fheep, and the beft wool; as alfo the beft thelties.

Nigh to Sanfting and Efting lie feveral fimall pleafant ifles, Vemantric, a pleafant ifle full of harbours, Oxncy, Papa Little, Hildefha, \&c.

The fixth is Waes on the main to the weft, to it belongs four churches, one in Waes, another in Sandnefs, the third in the ifle of Papa-ftour, and the fourth in the ifle of Fowla. To the fouth of Waes lieth the ifle of Vaila, wherein a cat will not live, of which more afterwards.

The ine of Papa-ftour is faid to be the pleafantef little ifle in all this`country, two miles long, and well furnifhed with fuel, grals, corn, rabbits, \&cc. In it are four good harbours, one to the fouth, two to the north, and one to the weff, nigh to this ifle lies the Lyra Skerries, fo called, becaufe the lyres (thefe fat fowls, fpoken of in our defcription of Orkney,) do frequent this Skerric.

Fouk lies about eighteen miles weft from the Main, it is about three miles long, wherein a high rock feen at a great diftance I have heard fay, that in a calm and clear day, they will fee it from Orkney: there is only one place in it for harbouring, which if you do not hit, you will be driven to the fea, what by wind and tide. Their corn land is all in one end of it ; and the inhabitants live moft by fowls and eggs, which are very numerous, and they are the beft climbers of rocks in all the country.

The feventh is North-Mevan on the Main lying to the north, wherein are three kirks, Hilfwick, Oloberry and North-Rhae, they report, the poople of this parifh to be difcrect and civilized, beyond their neighbouring parifhes; which, under God, is owing to the labours of Mr. Hercules Sinclair, fometime minifter there, reputed to be zealous and faithful: he, in his zeal againf fuperfition, razed Crofs-Kirk, in this parifh; becaufe the people fupcrftitioufly frequented it : and when demolifhed, belind the place where the altar flood, and allio beneath the pulpit, were found feveral pieces of filver in various fhapes, brought thither as offerings by afflicted people, fome being in the form of a head, others of an arm, others of a foot, accordingly as the officers were diftreffed in thefe parts of the body; as a friend of his, a prefent minifter in the country, did inform me. $O$ that the pains and expence thefe fuperftitious fouls have been at, might excite us the more dutifully to ferve and worfhip our God in fpiat and in truth'! There are allo many more people in this parifh, who can write and read, and give a tolcrable account of their proficiency in the knowledge of the principles of religion, than there are in others.

Before it lies Lamma a fnall pleafant ifle; as alfo another to the weft-north-weft.
The eighth is Brafla, an ifle to the eaft of Tingwal and Lerwick to which three churches do belong, two in Braffa, but only in one of them, they ufe to attend ordinances; the other being built nigh to the manfe, for their late old minifter's accommoda:
tion. Braffa is about five miles long and two broad, all covered with heather, except fome corn land by the coafts. Before Braffa to the eaft lies the Nofs of Braffa, a fmall ifle wherein is one family; it hath a high rock lying open to the eaft fea, and feen by mariners at a diftance.

The minifter of Braffa alfo hath a church in the ine of Burra, which he goeth to every fecond Sabbath, it lying nigh to the Mainland, weft-fouth-weft from Scalloway, fo that the minitter is obliged to travel from the eaft to the weft fide of the Mainland when he goeth to this his church. The ifle will be three miles long, divided in the middle into two fmallifes by a fea-break. The church is very large, and hath a high fteeple in it. To the fouth foutheeaft of Burra lies Haveroy, a mile and a half long. Both in Burra and Haveroy is good pafture, and about them good fifhing.

The ninth is Yell, an ifie north-eaft and by the eaft froni the Main, fixteen miles long, and as to breadth it is much like the figure 8, becaufe of the many creeks and voes which divide and cut the land, yet in fome places it is fix or eight miles broad: in it are three churches and many oul little chapels; it is more moffy than fome other illes, though there be in it fome good pafturage and corn land. To the eaft of Yell lies Hafkafhie, two miles long; to the fouth-weft Samphrey, one mile long; to the weft-fouth-weft Biggai, a mile and a half long, ail pleafant, and well graffed, having much fuel, and efpecially excellent for fifhing; for if the wind blow from the weft, the boats can lie on the eaft; if from the eaft, they can lie on the weft fide of thefe inles, and that nigh to the fhore.

To the eaft-north-eaft of Yell lies Fetlor, five niles long and four broad; in it fome chapels and Picts houles, as there are likewife in feveral other of the ifles. In this ife there is a church wherein the miniter of Yell preacheth every fourth Sabbath; it ufed formeriy to have been ferved by a preaching deacon, but the vicar by his diligence hath got the minifter of Yell alfo obliged to ferve in Fetlor, though Yell be more than fufficient for any one man to have the charge of.

The tenth parih is Unft, eight miles long, and four miles broad in many places; in it three churches; it is faid to be the largelt pleafant ifle in all this country: in it alfo three harbours, Uzia Sound, Balta Sound, and Burra Firth; here fome good corn land and pafturage; alfo feveral old chapels (of which more afterwards). A little ifle called Uzia lieth off Unft, a mile and a half long, as likewife feveral pleafant holms. Unft is the moft northern ifle in the King of Britain's dominions, under the fixty-firft degree of latitude.

Thus I have given fome account of the feveral parifles within the bounds of the ifles and country of Zetland, and hinted at, if not all, yet the greatelt part of the illes, the principal whereof are Unlt, Yell, Fetlor, Braffa, and Burra.

Whence we fee there is no minifter here, but hath at leaft two churches, wherein he difpenfeth gofpel ordinances, and fome of them hath three, and others four. Some of which churches are at a great diftance from one another, to travel to which is not only toilfome and dangerous to the refpective minifters, they alfo not having little manfes or houfes for their accommodation when they come to them; though often when forms do arife they will be detained in the iffes for fome time until they leflen: not only I fay is this troublefome to the minifters, but highly prejudicial to the people, among whom the work of the gofpel is greatly retarded (as we had occafion likewife to note concerning Orkney), few of the people ufing to repair to other churches when there is not public worhip at their own, which at moft will be but one of two Sabbaths, and in many places but one in three or four, and in fome not to be had for fome months, which as undoubtedly occafioneth great ignorance, fo many grofs fcandals, as adulteries, fornications,
fornications, \&c.; the faithful preaching of the gorpel doing much, if not to convince and convert, yet to moralife a people, and put a reftraint to thefe horrid enormities.

And though the difficulty would not be fmall, if at all it could be got done, to have minifers conftantly to preach in the feveral churches, even in the moft confiderable inles, yet there might be fome more minilters here than there are; four or five at leaft, to whom the tithes, if rightly employed, could afford a fufficient maintenance; as one minifter more in the parih of Dunroffnefs on the main, and another in the ife of Yell, \&c., which charges at prefent are very great, and cannot well be ferved hy the minifters they have. The tithes are farmed to vicars, a kind of inferior tackfmen, who in fome places do not only opprels the people, but are uneafy to the minitters, not paying them what they are obliged to pay till they pleafe, which often they will not do for fome years. The minifters, fuffering by this piece of injuftice, laid it before the commiffion, as one of their grievances, which they craved might be redreffed, and for that end application might be made to the government.

## Chap. VIII. - An Account of the ancient Monuments, Curiofitics, Atrange Providences, छoc. mof obfervable in the Ifles of Zetland.

THE works of creation and providence are all very wonderful, fought out of them who have pleafure therein, amongt which foome more ordinarily occur and are the fubject of our meditation, and others not fo commonly prefenting themfelves are the more furprifing and amufing: both which are to be had a due regard unto, they being either mediately or immediately, by or without fecond caufes, the work of the Lord, and the operation of his hands; and feeing there are fome things that deferve their own obfervation, which either I had occafion to fee or to hear of in Zetland, I fhall give a brief relation thereof, not denying but that there may be other things no lefs, if not more, obfervable there which we came not to the knowledge of.

The Picts houfes, which are frequent through this country, the inhabitants take much notice of, as being the ancienteft monuments they have, fome of which are more, others lefs ruincus; they are round, in the form of fome dove-cotes, or fometning like unto an egg bulging out in the middle, but narrower at the bottom, and yet more narrower at the top: they have a little door for an entry, at which a man of an ordinary flature could not enter without bowing, within which door there is a ftair going up between two fone walls, leading to the feveral apartments: inftead of windows they have flits, or long narrow holes in the wall, fuch as are in many of our old caftles for the conveyance of light unto them : they are ftrongly built, but the conveniency for dwelling hath been but litte; for their diameter is but about ten or twelve feet, and their height fcarce twenty or twenty-four. I think thefe Picts houfes are much like Arthur's oven upon the water of Carron, in Stirling-fhire.

Thele have been the domiciles or dwellings of the Picts, the old if not the firt inhabitants of this country, who were very numerous in the north of Scotland; and in Orkuey having their own kings, as hath been faid in our defription of Orkney. They are conveniently fituated through the ifles, each one being within the fight of another; hence in a few hours adverifements could be given by fire, or other figns they might condefcend upon, through the whole country, fignifying unto them any danger, that being thereby alarmed they might meet together, or be upon their own defence. Thefe houfes are allo called burghs, which in the old Teutonick or Saxon language fignifieth a town having a wall or fome kind of an enclofure about it; as alfo a cafte, for as one obferveth in his Dictionary, or explanation of our moft ancient Englifh words: "All
places
places that in old time had among our anceftors the name of borough, bury, or burug, were places one way or other fenced and fortified.. Whence it appears that thefe houfes have been cafles, or places of defence, to the licts, feeing it is generally acknowledged that both the Piets and the Saxons were originally defcended of the fame German nation, and fo might call their caftes by the fame name. I have alfo heard it obferved, that in Orkney feveral places, wherein of old they ufed to bury their dead, were called burghs; fo likewife thefe houfes in Zetland might ferve for the fame purpofe, from the Saxon word byring, or buriging, or borogeing, which we now call burying.

- I enquired if there was any place or hill here which they call Thule or Ule, if fo be we could receive any infor:nation or light from them concerning the Thule of the ancients; but they anfwered they knew noue of that name, only there was an ifle wherein a high hill called Foula, on the weft fide of the Mainland; but to fuppofe that ever the ancient Romans underfood Thule thereby, befide other things that might be alledged, it would be a manitef ftretching of, and an ofiering viofence to the word : but although what this place is hath been much controverted by ancient and modern authors, attempting the difcovery thereof, yet it is fenerally agreed upon that it is toward the north, and many take it to be one of the Britifh iffes; and a late author, in an lifay concerning the Thule of the Ancients, endeavoureth to prove it to be the north-eaft part of Britain, lying over-againll the ifles of Orkney, citing fome authors to this purpofe, as Conradus Celtes: Orcadibus qua cincta fuis Tyle et glaciadis infilla et Clandian, maduerunt fanguine fufo Orcades incalnit Pactorum fomguine 'I bule ; Scotorum cumulos. flevit glacialis lerne. And others who call Thule Britannicarum infuharum fiptentrionaliffenam, the molt northern of the Britilh ifles. Iceland alfo lays claim to it ; and the above cited author fuppofeth Iceland to be the Thule, but 1 judge without any thatow of truth ; for befide what is now faid, I greatly doubt if ever the Romans hal the knowledge of Iceland, their eagles never having come and been difplayed to the north of Scotland or Orkney: Imperii fuerat Romani Scoila limes, faith the great Scali rer. Ptolomy will have it to be among the illes of Zetiand: and Boeth, our hittorian, diftinguifheth between a firlt and a fecond Thule, calling lla the firtt, and Louifa the fecond, which are reckoned among the ifles called Ilebrides. So faith Boeth. "Ptolomeus inter Scloctblandicas infulas quac ultra Orchodes junt, aut proxime Norvegian fitam vult, band graquam propter immenfiom interapedinem intelligi potegt. Nos autcm Ilam primann Lcuifam Hobridun praftantiffimam focmdam Tbulen vocamus. But I incline to think, that although fome night defign a parricular place by the Thule, yet generaliy by a fynecdoche, ufual with the Roman authors, they might denote all thefe places remote from them to the north, and efpecially Britain, and the northern parts thereof, whither their arms did come.

In the parih of North.Mevan is Mons Ronaldi, or Rons Hill, the highef in all this country, from which fome do fay they will fee the body of the fun all the night over in the month of June; which cannot be for the realion alledged in our defeription of Orkney, why it could not be feen from the top of the hill of Hoy; though reafon and experience fhew they have a clearer lightit in Zetand in the night-time, during the fummer ieafon, than they can have in Orkney, Zetland being more than a degree to the north of Orkney, and confequently ay the farther north the fhorter nigut, till at length there be no night at all; fo that if it were polfible to fail holding a northern courle till we were under the pole, having, it for our zenith or vertical point, we would have a continual day without any night for feveral nonths, the fun all that time defcribing a circle almoft parallel to our horizon; I fiy almoft parallel, becaufe befide the diurnal, there is alto the amnal motion of the fun in the ecliptic. O how exact and beautiful an
orfer and fymmetry is to be feen in the works of God; they all fpeaking forth the goodnefs, wifdom, and power of their Maker.

What a wonderful creature is the fun, "coming forth as a degroon out of his chamber, and rejoicing as a ftrong man to run his race," abfolving every day his circuit round our terreftrial globe from eaft to weft, and travelling evèry year between his tropics 'the limits and boundaries prefcribed him of God, beyond which he is not to pafis), from fouth to north and from north to fouth, giving fhorter days to thofe who inhabit the middle of the earth under the torrid zone, they not being able to bear his longer continuance above their horizon, becaufe of his feorching heat, but longer to thefe who can better endure it under the temperate, and yet lingeft to thefe who live neareft to the frigid zones, or to the poles, whom his heat cannot prejudice, as it doth thefe who live under or near to the line or middile of the earth, on whom he darteth down his perpendicular rays; wherefore the wifdom of his Maker will have him. flay a thorter time above their horizon. How wonderful then in counfel and excellent in working is this God, whereupon not only his faints do Liefs him for the benefits wherewith they are loaden, but all his work's do praife hiin after their manner!-

There are feveral caves there or hollow places in and through the rocks; particularly there is one in the inle of Unft, entering from the fea at one fide of the ifle, and oppofite thereunto; on the other ficte there is another going in, as it were meeting the former, unto the end of any of which none will undertake to go, though it hath been attempted; the rage of the fea in thefe caverns of the earth, the failing of the light of day ${ }_{x}$ and the saggednefs of the rocks by which they muft pafs, making it terrible unto them, as alfo the thicknefs of the air, fomethimg amoying them; but the entries thereunto being oppofite one to another, giveth ground to judge that it is a continued cave from the one fide of the ine to the cther, though four miles broad; which cannot be thought to be artificial, but natural, wafhed through by the violence of the waves; and the lefs wonder it is for it fo to be, if we confider that if gutta cavat lapidem, much more rapidi ot tumidi fuclus carabunt, that if in a lhort time the drop will wear the fone, much more in the tract of fome thoufands of yearc, the raging and tempeftuous waves daily breaking on the rocks will produce this effect, and that more in fome places than in others, where the ruck will be more friable and brittle, and the force of the waves lefs broken by the bounding and fwaddling fand.

There is fomething lite unto this yet more furprifing in the ifle of Foula, on the weft fide of the Mainland, if it be true what is ftoried of it. In this ille, on the top of a hill, there is a hole, the mouth whereof may be (and fome lay now is) covered with a flateflone going downwards to the botton of the rock, which is faid to be of a great depth; particularly a Dutch hip-mater is reported to have made a trial thereof, for the gratifying his curiofity, by taking up a barrel of lines with him, which he let all down, and yet could not found the bottom : fome liay he let down two barrels, which is very won. derful, confidering a barrel of lines is reckoned to be leveral, fome fay nine, miles in length. What ean be the reafon of fuch a conveyance from the top of the rock to the b tom? and further, if we may give credit to what is faid, I camot poflibly imagine for that fuch a thing thould be done by art, we cannot well conceive the realon why, nor the manner how it could be done, and that nature floould have fuch an operation will be as difficuit to unfold.

That this country is geterally mofly, foft, and fpungy, hath been formerly told, as likewife that it is daugerous for people to travel through it, of which many inftances may begiven; I hall only name two, which ! had trom the miniters of the refpective buunds: one travelling in the ifle of Yell fell into fuch a molfy aud loofe piece of
ground, his horfe beneath him, furniture and all fank down, and was no more feen, and he himfelf with great difficulty fruggled out and was faved. And another in the parifh of Tingwal on the Main, not long fince, walking on foot not far from his own houfe, fell into fuch another place, wherein there did not appear to be any hazard and over which feveral times formerly he thought he had paffed with fafety, and fank down to the arm pits, but he by ftretching out his arms, keeping his head over the furface of the ground, by the help of his fervant then providentially with him, and a ftaff fixed in the ground, got wreftled out; fo dangerous is it travelling here even to the inhabitants.

On the weft fide of the ife of Fetlor, there is a place whereon a gentleman's houfe called Uafta, into which place or houfe if a mariner's needle and compafs be brought the needie refteth not in its poles, as it doth in other places, but hath a tremulous undulating motion, and fometimes turneth round, as fome fay, to all the points of the horizon; and a gentleman who was inquifitive to know the truth of this told me, that upon trial he found it to be fo, and further to try the experiment he took the compafs to the top of the houfe, where it had the fame effect. And one of the minifters of the northern ifles informed me, that if any thip or boat failed by, or came nigh unto that place, the fame did befal their compals. Alfo there is a little hill nigh to the fea on the weft fide of the ine of Whalfey, to which if the compafs be brought the flower ce luce, or that point which is ordinarily obverted to the north, turneth about to the fouth, but if the compais be removed the diftance of two or three feet from the top of the hill, there is no fuch effect produced : this the late miniter of the place affured me $0^{c}$, having tried the experiment.

The many wonderful properties and effects of the magnet or load-ftone, and of other things endued with, or which do partake of this magnetic virtue difeovered in thefe latter ages, hath defervedly raifed the admiration of philofophers, and awakened them to make a diligent inquiry and fearch. into the reafons of thefe frange phenomena. That the magnet hath two poles anfiwering to the poles of the wodd, to which it turneth itfelf; that the loadfone draweth iron unto it ; that iron brought unto and rubbed upon the loadfone receiveth from it that attractive, or as fome will have it, that impulfive virtue and power, sind other qualities lnherent in it (hence the invention of the needle, fo ufeful and neceffary to mariners for directing of their courfes;) that if there be two fpherical loadfones, they will turn to one another, as each of them doth to the poles of the earth, and if they be detained in a contrary pofition, they will flee from one another: and fo it is with the needle in the compafs, when a loadtone or piece of iron is brought unto it, the needle either cometh to, or fleeth from it according to its fituation, wherefore mariners are careful that no iron be in nor lying near unto their lightroom where the compafs ftandeth. That though you fhould take the needle from its beloved pole, yet when let alone and left to itfelf, it will incontinently move and take no reft until it return thereunto; thefe flrange and uncouth properties hath the loadflone, as likewife many others no lefs aftonifhing, reckoned up by its admirers, many of which are known to the rudeft and moft illiterate mariner; but to explain the nature of the loadftone, and to refolve and anfwer the propofals of nature upon the head, by giving the reafons of thefe admirable effects, boc opus, bic labor eff, this is the difficulty, which hath vexed many, and taken up the ftudies of the fageft and moft ingenious modern philofophers.
I hall not prefume to give the reafon of this ftrange phenomenon, the needle's leaving its reft at the pole and betaking itfelf to fuch a motion, whether tremulous and undulating, or circular round the points of the compafs, or the flower de luce, turuing
to the fouth. Only I would fuggeft two things, which if they tend not to clear whi is propofed, they will further hold out how wonderful the doadfone and its prope ice are. Firf, upon the ordinary fuppofition, whereby thefe properties are explained, hat the earth is as a great loadftone, on the furface and exterior parts whereof a great number of volatile fcrew-like particles, called the magnetic matter, do inceffantly move, travelling from pole to pole alongt the furface of the earth, whereby the poles of the loadfone and the point of the needle affected with its virtue, are obverted to the poles of the world; which fuppofition being made, we would know that this magnetic matter may not always have the fame motion, but in fome places it may be upward and perpendicular to the furface of the earth; fo that in thefe places where they thus move perpendicularly, the needle will not be determined to one point, more than to another of the horizon, this matter alike affecting all the parts of the needle by its perpendicular motion; which the ingenious Rohault alledgeth as the reafon why the compafo ferveth not the ufe of the Hollanders, when they have failed far to the north in order to find out a new and fhorter paffage to the Eaft Indies, their needle then not turning to the poles as it doth in other places, but alike to all the points of the horizon, the motion of the magnetic matter in thefe more northern places, being in lines perpendicular to the furface of the earth : and fo likewife it may fall out in other places, where a greater quantity of this magnetic matter rifeth from the earth.

A fecond thing that I would take notice of is that this magnetic matter in its paffage from pole to pole meets with feveral iron mines, into which it goeth afide, fo diverting its ftraight courfe between the poles, becaufe it finds an eafier paffage through the pores of the iron than by paffing through other places; hence the variation of the contpafs is judged to be, fo much talked of by mariners, in fome places greater, and in others lefs, accordingly as the magnetic matter is more or lefs determined by the feveral iron mines into which it turneth afide; now in fome places it may fo fall out, that there may be a greater quantity of iron through which the magnetic matter paffing, and from which it arifing, may caufe fuch a motion whereby the needle not only inclines not to one point more than to another in the horizon, but alfo by the magnetic matters afcending from and returning to the iron mines, it may produce fuch an irregular motion in the needle; and that there is a great quantity of iron in Zetland may be known by the remarkable variation of the compafs there, for, as mariners inform us, when they fail by the fouth end of Zetland they find the variation to be but one point, but when paffing the north end they find it varies two points, and upon this variation in directing their courfe to this or the other place, they make their reckoning: which is very obfervable, that in lefs than a degree of latitude (for no more will the length of the ines of Zetland be) it varies a point of the compafs, which mult be according to the reafon commonly afligned, becaule there is much iron in thefe infes, and more efpecially on the weft fide of the ine of Fetlor; for other places of the fame ine have no fuch influence on the compals.

That yet much if not the greatent part of the difficulty remains I readily grant, and leaves it to the fludy of the learned and curious, and indeed in many things to acknowledge our ignorance hath been reputed no fmall part of widdon, fo hard it is to folve and unriddle nature's fecrets, wherein the greateft lights have been benighted, the following often raifing the foundations of the doctrines of the former: how wonderful are the works of God, that in wifdom he hath made them all; and how narrow and fhaltow are our capacities, that we cannot find out the works of God, even the molt fenfible and obvious; how thankful alfo fhould we be to God, who hath vouchifed to
us the light of clearly revealed truths, which if taken heed unto fhall make us perfect, and lead unto glory.

There are in thefe ines many little chapels, now gentrally ruinous : as in the inlo of Unft there are twenty-four and upwards; in the ifle of Yell there are twenty-one, and many in other illes; Ifaw one of them in the parih of Tingwall, wherein alfo there are feveral more ; it would have contained fearce thirty people, as I judge, and though fo little, yet very great ftones were in the walls, which was itrange to me, how that in this country, where their beafts are weak, and they have not the help of machines, they got them lifted and laid. Thefe are faid to have been built by fuperftitious zealuts in the times of popery, or, as fome rather think, by fhip-wrecked feanien, who coming fafe to flory, have built them according to their vows made by them when in danger, which they dedicated to fo many feveral faints, whom they looked upon as the patrons of their refpective chapels. About which alfo men and women of old had their night walkings, which occafioned much uncleaunef8, but now fuch walkings are but little ufed.

About the walls of thefe old chapels are found fnails called fhell-fnails, which they dry and pulverize, mingling the duft with their drink for the jaundice, by which means thefe who labour under this ficknefs in three or four days' time will recover of the fame; but if they let this duft lie for a year without making ufe of it, it turneth into fmall living creatures or vermine, which they dry and bray over again, if they make any further ufe of it.

In Uzia an ille Iying nigh to Unft, there is a metal gotten having the colour of gold, which feveral of the Dutch merchants have taken with them to Hamburgh, and tried it there, but by the force of fire it did not become liquid, but crumbled into finall pieces; it is to be had there in great plenty. This fheweth there may be minerals in thefe ifles, though not known nor fearched for.

In the church-yard of Papa-Stour, in the parifh of Waes, lieth a fone five feet long, at the one end two, and at the other one foot broad, concave from the one end to the other, of which the common tradition goes, that this ftone came athore on that ine with a dead man tied to it, who lies buried there befide it. It appears to have been the grave-ftone of fome perfon of note in the country, which heweth they have alfo had that cuftom of laying at leaft fome of their dead in fuch large fones made concave, and cut out for the purpofe, which hath been frequent in many places with us in Scotland.

At a little diftance from Papa-Stour, hiss a rock encompafied with the fea, called Frau-a-Stack, which is a Danifh word, and ügnifieth our Lady's Rock, upon which are to be feen the ruins of a houfe, wherein they fay a gentleman did put his daughter, that fo the might be fhut up and fecluded from the company of men, but though a maiden when put in, yet the was found with child when brought out, notwithftanding of her being fo clofely !ent, but whether this cane to pafs by a golden flower (the mort powerful courthip) or not, the country hath loft the tradition: however it feemeth itrange, how a houfe fhould be built on fuch a bare and fmall rock, when fo many large and pleafant ifles were near unto it.

The three iron cannons formerly mentioned now lying in the citadel of Lerwick, being rufted by the fea, wherein they had lain for eighty years; the inhabitants of Lerwick to take off the ruit, and fo fit then for their ule, about nine years ago did fet a heap of peats about them, which they putting fire unto, the guns fo foon as they were warmed and hot, did all difcharge themfelves to the great furprife of the fpectators, and the balls, as fome obferved, went half over Brafla-found. Which defe:veth fome remark,
remay
remark, that the powder all that time fhould retain its elafic force, the water,' if at all, yet not fo infinuating itfelf with the powder as to wath it away, or much dininilh its virtue. Thefe who were eye-witneffes gave me this relation.

It is obfervable that the former year 1699, the fifhes had little or no liver, but fomething black in lieu thereof, which was a great lofs to the fifhers, they making their oil of thofe livers; as alfo the oxen, theep, fwine, \&cc. had little or no fat on theirlivers, which uleth not to be, there being a kind of confumption upon the livers of creatures both by fea and land; which mindeth me of Rom. viii. 22. "Man's fins making the creation to groan, and earnefly long as with an uplifted head, for a deliverance :" fo that if the creatures could fpeak with Baalam's alis, they would reprove the madnefs and fin of man.

There is a little inand on the weft fule of Waes, called Vaila, wherein there is no cat, neither will any ftay though brought in, as hath been done for trial, but will quickly be gone, they either dying, or betaking thenffelves to fea, they endeavour to fwim to the next inle: yei about fifty years ago there was one feen upon this ine, about. that time when a gentleman the proprietor thereof was tormented and put to death by the witches, but never any were feen ince, fave what were brought in for trial, as now faid. The reafon of this I could not learn from the minifters, who gave the information; it is like becaufe of the air, or the fmell of fomething upon the ifle, though not perceivable by the inhabitants, which agreeth not with the temper and conftitution of thefe animals.

About a mile from 'ling wall to the north, there is a hill called the Knop of Kebifter, or Luggie's Know, nigh to which hill there is a houfe called Kebitter, where a varlet or wizard lived, commonly defigned Luggie, concerning whom it was reported that: when the fea was fo tempeftuous that the boats durft not go off to the fifhing, he ufed to go to that hill or know, where in a hole into which he let down his lines and took' up any fifh he pleafed, as a cod or ling, \&c. which no other could do but himfelf: alfo when fifhing at fea, he would at his pleafure take up any roafted fifh with his line, with the entrails or guts out of it, and fo ready for his ufe : this was certainly done by the: agency of evil fipirits, with whom he was in compact and covenant, but the ceconomy of the kingdom of darknefs is very wonderful and little known to us. He being convitted of witcheraft, was burnt nigh to Scalloway.

As for witehes I did hear much of them, as if they abounded more in this than other countries, though I make no queftion, but that there are many fuch here thus deluded by the devil : there is not then fuch ground for what is fo conmonly talked by many' with us anent their devilry, which might have affrighted us if given heed unto, as if it were dangerous going or living there; though it is faid here there are many of this hellith famp in Inand, Lapland, and other places to the north of Zetland, which may occafion the miftake.

We faid before that there were but few rats, and that only in fome of the ines, and thought to come out of hips, but that they had mice in abundance; yet in the ifles of Burra and Hafkafhy un mice are to be found; yea if they take fome duft or carth out of thefe ines to other places where they are, they will forfake fuch places where the duft is laid. It may be for the like reafon, why no cats can or will live in Vaila.

Sometimes when the hips are lying nigh land, the rats willcome afhore, which when any of the Hollanders or others fec, they look upon it as fatal to the fhip out of which they come, portending that her end fome way or other will flortly approach; and likewife it is obferved, that thefe rats will not live above three or four years in that land to which they come. Some of our feamen tell us the like as to their fhips; it is talked alfor
that thefe creatures will leave houfes before any difmal accident befal them. What ground there is either for the one or the other I know not, but, if true, it will be hard I fuppofe to give the reafon thereof.

Not above forty or fifty years ago almoft every family had a Browny, or evil firit fo called, which ferved them, to whom they gave a facrifice for his fervice; as when they churned their milk, they took a part thereof and fprinkled every corner of the houfe with it for Brownys ufe; likewife when they brewed, they had a fone which they called Browny's Stone, wherein there was a little hole, into which they poured fome ${ }^{-}$ wort for a facrifice to Browny. My informer, a minifter in the country, told me, that he had converfed with an old man who, when young, ufed to brew, and fometimes read upon his Bible, to whom an old woman in the houfe faid, that Browny was difpleafed with that book he read upon, which if he continued to do, they would get no more fervice of Browny; but he being better infrueted from that book, which was Browny's eyefore and the object of his wrath, when he brewed he would not fuffer any facrifice to be given to Browny, whereupon the firft and fecond brewings were fpilt and for no ufe, though the wort wrought well, yet in a little time it left off working and grew cold; but of the third browft or brewing he had ale very good, though be would not giveany facrifice to Browny, with whom afterwards they were no more troubled. I had alfo from the fame informer, that a lady in Unli now deceafed told him, that when fhe firft took up houfe, fhe refufed to give a facrifice to Browny, upon which the firft and fecond brewings mifgave likewife, but the third was good; and Browny, not being regarded nor rewarded as formerly he had been, abandoned his wonted fervice. Which ceareth that Scripture, "Refift the devil, and he will flee from from you." They alfo had ftacks of corn which they called Browny's Stacks; which though they werenot bound with fraw ropes, or any way fenced as other facks ufed to be, yet the greateft form of wind was not able to blow any fraw off them.

Now I do not hear of any fuch appeara ices the devil makes in thefe inles, fo greatand fo many are the bleffings which attend a Gofpel difpenfation: the Brownies, fairies, and other evil fpirits that haunted and were familiar in our houfes were difmiffed, and fled at the breaking up of our Reformation, (if we may except hut a few places not yet: well reformed from popif dregs, as the heathen oracles were filenced at the coming of our Lord, and the going forth of his apoflles; fo that our firf noble reformers might. have returned and faid to their Mafter as the feventy once did; "Lord, even the devils are fubject to us through thy name." And though this reftraint put upon thedevil was far later in thefe northern places than with us, to whom the light of a preached Gofpel did more early thine, yet now alfo do thefe northern ifes enjoy the fruits of this reftraint.

About two years and a half or three years ago, there was a boat paffing with feveral gentlemen of the country in it, and by the way in the Voe of Quarf, through which they went, there appeared fomething unto them with its head above the water, which as they could difern, had the face of an old man, with a long beard hanging down; firft it appeared at fome diffance from them, and then coming nearer to their boat, they had a clear fight of it; the fight was fo very Arange and affrighting, that all in the boat were very defirous to be on land, though the day was fair and the fea calm; a gentleman declaring, (as a minifter in company with them, and faw this fight informed me, that he never faw the iike, though he had travclled through many feas.

I heard another remarkable ftory like unto this, that about five years fince a boat at the fifhing drew her lines, and one of them, as the filhers thought, having fome great fifh upon it, was with greater difficulty than the reft raifed from the ground, but when
naifed, it came more eafily to the furface of the water, upon which a creature like a woman prefented itfelf at the fide of the boat ; it had the face, arns, breafts, fhoulders, \&c. of a woman, and long hair hanging down the back, but the nether part frot below the breafts was beneath the water, fo that they could not underfand the fhape thereof; the two fifhers who were in the boat being furprifed at this frange fight, one of them unadvifedly drew a knife, and thruft it into her breaft, whereupon the cried, as they judged, "Alas!" and the hook giving way fhe fell backward and was no more feen: the hook being big went in at her chin and out at the upper lip. The man who thruft the knife into her is now dead, and, as was obferved, never profpered after this, but was fill haunted by an evil fpirit, in the appearance of an old man, who, as he thought, ufed to fay unto him, "Will ye do fuch a thing, who killed the woman?" the other man then in the boat is yet alive in the ifle of Burra. This a gentleman and his lady told me, who faid they had it from the baillie of that place to which the boat did befong: it being fo ftrange I inquired at feverals thereanent, which, though many were ignorant of, yet fome faid that they had heard thereof, and judged it to be very true.

That there are fea-creatures having the likenefs of men and women feems to be generally acknowledged by all who have inquired thereunto, they having found it confirmed by the teftimony of many in feveral countries, as their hiftories do bear. Hence are accounts given of thofe fea-monfters, the mermen and mermaids, which have not only been feen but apprehended and kept for fome time. And hence probably the fiction of the poets concerning the fyrens, hath had its rife; thefe enchanting fongfters, tranflated mernaids by our lexicographers, whofe fnare Ulyffes fo happily efcaped.

They tell us that feveral fuch creatures do appear to fifhers at fea, particularly fuch as they callfea-trowes, great rolling creatures tumbling in the waters, which, if they come among their nets, they break them, and fometimes take them away with them; if the fifhers fee them before they cone near, they endeavour to keep them off with their oars or long flaves, and if they can get them beaten therewith, they will endeavour to do it : the fimers both in Orkuey and Zetland are afraid when they fee them, which panic fear of theirs makes them think and fometimes fay, that itis the devil in the Shape of fuch creatures; whether it be fo or not as they apprehend, I cannot determine. However it feems to be nore than probable, that evil-firits frequent both fea and land.

A gentleman in the parifh of Dutroffncfs told one of the minifters in this country, that about five years fince a plough in this parith did calt up frefh cockles, though the place' where the plough was going was three quarters of a mile from the fea; which cockles the gentleman faw made ready and caten. How thefe flell fifhes came there, and floould be fed at fuch a diftance from their ordinary element I cannot kuow, if ethey have not been caft upon land by a violent florm, much of the ground of this parinh, efpecially what they labour, lying very low, and the fea hath been obferved in fuch forms both to calt out fones and fifhes; or if thefe cockles have been tound in fome deep furrow, from which to the fea there hath been a conveyance by fone fanall itream, upon which the fea hath flowed in fream tides, efpecially when there is alfo fome flom blowing. If only fhells were found, fuch as of oyfters and the like, the marvel would not he great, feeing fuch are found upon the tops of high mountains, at a greater dillance from thefea, which in all probability have been there fince the univerlal deluge; but that any thell-fifh thould be found at fome diftance from the fea and fit for ufe, is fomewhat.: wonderful and aftonifhing.
'Though no tortoifes ufe to be found in all thefe northern feas, yet in Urie firth; in', the parith of Northmevan, there was one found alive upon the fand in an ebb, the thell-
of it was given me as a prefent by a gentleman of the country, it is about a foot in length, and a large half foot in breadth. The inhabitants thought it fo frange, never any fuch thing having been found in thefe feas formerly, which ever they came to the knowledge of, that they could not imagine what to make of it, fome faying that it hath fallen out of fome Latt India fhip failing along by the coafts, which looks not fo probable.

There is a place in this country called the Neip, in the parifh of Nefton, looking to the eaft fea, where the parfon of Orphir in Orkney was killed; the fory is this: 「atrick Stewart, Earl of Orkney, as hath been faid, was a great oppreffor, enacting feveral fevere and cruel acts, whereof complaint was made to King James VI. And as it reported fome Zetlanders went to the King with their fkin-coats, laying the oppreffed condition of their country before him, wherewith the King was moved, yet although not only the Earl's honour and reputation withal was much fained and under a cloud, by reafon of his cruel and oppreflive ways, but his perfon was hated and abhorred by the people whofe fuperior he was; the parfon of Orphir did zealoufly fand in the Farl's defence, notwithflanding whereof the indiguation and kindled wrath of the exafperated people againtt the Earl increafing, the parfon' was forced to flee to Zetland for his fafety, upon which the people of Orkney not quieted, fome of them purfucd him thither; they fay the purfuers, were four brethren of the name of Sinclar, who coming to the Neip where the parfon had his ordinary refidence, they apprehended and dewitted him, one of the brethren taking a fop of his heart's blood. As for the Earl, being firf imprifoned at Dumbarton, he was thence brought to Edinburgh, where he was beheaded, anno 1614, for treafon and oppreflion.

There are alfo in this country, as well as in Orkney, many eagles, which deftroy their lambs, fowls, \&c. for the preventing of which, fome, when they fee the eagles catching or fleeing away with their prey, ufe a charm, by taking a ftring whereon they caft fome knots, and repeat a form of words, which being done, the eagle lets her prey fall, though at a great diftance from the charmer; an inflance of which I had from a minifter, who told me, that about a month before we came to Zetland, there was an eagle that flew up with a cock at Scalloway, which one of thefe charmers feeing, prefently took a Aring, (his garter as was fuppofed,) and calling fome knots thereupon, with ufing the ordinary words, the eagle did let the cock fall into the fea, which was recovered by a boat that went out for that end.

They tell a pleafant flory of an eagle and a turbot: about fix years fince an eagle fell down on a turbot, fleeping on the furface of the water, on the eaft fide of Braffa; and having faftened his claws in her, he attempted to fly up, but the turbot awakening, and being too heavy for him to tly up with, endeavoured to draw him down beneath the water; thus they fruggled for fome time, the eagle labouring to go up, and the turbot to go down, till a boat that was near to them, and beheld the fport, took them both, felling the eagle to the Hollanders then in the country. For they fay when the eagle hath faftened his claws in any creature, he cannot loofe them at his pleafure, but ufeth to eat them out, fo that the prey fometimes cometh to be a fnare to this rapacious fowl.

On the weft fide of the Mainland, there is a holm beionging to a gentleman in the parif of Northmevan, fo much frcquented by fuwl, that when fometimes they go into it in the fummer feafon, fowls of feveral kinds will fly fo thick above their heads, that they will cloud the very air, yet therein there are few or none during the winter, but in February they ufe to begin to come by pairs, and for two or three days after they firit come they will fit fo clofe, that alinoft they may be taken hold of, which is imputed to their being wearied after a long flight from fome far country : the proprietor of this
holm ly be $r$ fowls about.

holm may almoft every day in fummer take a bafket full of eggs out of it, and they fcarcely be mified, for it is fo well furnifhed, that none almoft can fet down a foot for young fowls or eggs, which are very ferviceable to this gentleman's houfe, and the country about.
To the eaft of Braffa is an ifle called the Nofs of Braffa, wherein a ragged rock looking to the fouth-ealt, the higheft in all this country, ferviceable to mariners for directing their courfe when failing to the weft from caftern councries, fome gentlemen told us that they verily think from the furface of the water to the top of the rock, it will be three hundred fathoms, upon which a great many fowls have their nefts, whofe eggs they take in the fummer time, as alfo fome of the fowls, by letting a man down from the top of the rock by a rope tied about his middle : before this iffe lieth a rock ragged on all fides, about one hundred fathoms high, from the furface of the water, but by reafon of its raggednefs and declivity, and its being furrounded with fea on all hands, it is fcarce pollible to climb it. Yet the owners of the inle, being defirous to be at the fowls and eggs numerous upon it, about one hundred years fince there was a man for the hire of a cow undertook to climb the leffer rock, and to faften two poles or flakes thereupon, which he accordingly did, but in the coming down, he fell into the fea and perifhed.

The way how they get into this leffer rock is oblervable, which is thus; oppofite to the two ftakes on the leffer, there are alfo ftakes faftened on the higher rock, it being but fixteen fathoms over betweer the rocks; to which ftakes ropes are faftened, reaching fron. rock to rock, the ropes they put through the holes of an engine called a cradle; all which being fo prepared, a man getteth into the cradle, and warpeth himfelf over from the Nofs, or the greater rock to the leffer, and fo having made a good purchafe of eggs and fowls bought at the expence of the danger of his life, he returns the fame way he went, thefe ropes hang not on all winter, but in the fummer time; in the month of June ordinarily, when the day is caln, they caft the ropes from the greater to the leffer rock ; which fo they do, they have firtt tome fmall rope or cordage, to which there is a fone faftened, and they keeping both the ends of this fmall rope in their hands, an able man throweth the ftone into the leffer rock, and when caft over the ftakes, they heave or lift up this fmall rope with a long pole, that fo the bought of the rope may be gotten about the fakes; which being done they draw to them the fmall rope till a greater tied to it be brought about alfo, and fo both ends of the greater rope they fecure by the flakes on the top of the Nofs, on which ftrong and greater rope the cradle being put, it runncth from rock to rock : eafily a man in the cradle goeth from the Nofs to the holm or rock, by reafon of its defecnt, but with greater difficulty do they return, therefore there is a fmall rope tied to the cradle, whereby men on the Nofs help to draw them back. I do ant hear that any where fuch another cradle is to be found; how many are the inventions which man hath found out!

This holin is much firequented by fowls more than any other place on the eaft fide of Zetland, as the other holm of Northmeran is on the weft fide; the fowls have their nefts on the holms in a very beautiful order, all fet in rows in the form of a dove cote, and each kind or fort do nefle by themfelves; as the fcarfs by themfelves, fo the kittiwakes, tominories, mawes, \&c. There is a fowl there called the fcutiallan, of a black colour, and as big as a wild duck, which doth live upon the vomit and excrements of other fowls whom they puriue, and having apprehended them, they caufe them vomit up what meat they have lately raken, not yet digefted. The Lord's works both of na: ture and of grace are wonderful, all ipeaking torth his glorious goodnels, wifdom and power.

Remarkable are the dangers, which many in thefe inles undergo in climbing the rocks for fowls and eggs, efpecially in Foula, where the inhabitants in the fummer tine do moft
lise by this kind of provifion, and are judged to be the beft climbers of rocks in all this country, for fome of them will. fatten a flake or knife, as fome fay, in the ground on the top of the rock, to which they tie a fimall rope or cord, and fo they will come down the face of the rock with this in their hand fixty, feventy, or eighty fathoms, and do return bringing up eggs and fowls with them; but indeed very many of them lofe their lives this way; yea it is obferved that few old men are to be feen there, they being fo cut off before they arrive at old age; many of them are weary of the dangers and hazards they daily incur, yet neither will they leave the place, nor give over thefe perilous attempts, all the fad inflances of their friends and neighbours perifhing, and death cannot have this influence to deter and affright then from undergoing the like hazards: at fo fnall a rate do they value their lives, that for a few fowls and eggs they will endanger them, whereas they might have as good and a much lafer living elfewhere : as this theweth both their folly and their fin, fo what fatigue and danger men will expofe themfelves ta, for the avoiding poverty and fraits, for the upholding this clayey tabernacle, which ere long swill moulder into the duft, and often not fo much for the fatisfying the neceffary cravings of nature, as the fuperfluous and infatiable defires of our lufts. Sometimes one man will fland on the top of the rock holding the end of the rope in his hand, and another will go down, which neither is without danger, as they tell us of one who thus holding his neighbour did let the rope llip, and down fell the climber into the fea, but providentially there being a boat near by, they got hold of hinn, and took him in, and fo came home before his neighbour, who judged him to have perifhed : the other man at length came home with great forrow and grief regretting the death of his neighbour, but he hearing that he was already come home, was not a little confounded and aftonifhed at the report, until that at meeting, the man in danger narrated the manner of his deliverance, which afforded unto them both great matter of refrefhment and joy.

In all this country there are only three towered churches, (i. e.) churches with towers on them, to wit. 'lingwall, on the Mainland, the church of Burra on the ille of Burra, and the church of treland a promontory belonging to the main, from the top of one of which towers you can fee another, built thcy lay by three fifters, who from their feveral towers could give advertifement to one another.

The ehurch of Tingwall ftandeth in a valley between two hills lying eaft and weft, and is about the middle of the Mainland. It was in this parifh, in a fmall holm, within a lake nigh to this church, where the principal feud or judge of the country ufed to fit and give judgment, hence the holm to this day is called the Law. Ling, (from which probably the parifh of Ting wall had its name:) we go into this holm by ftepping ftones, where three or four great fones are to be feen, upon which the judge, clerk and other officers of the court did fit. All the country concerned to be there flood at fome diftance from the holm on the fide of the loch, and when any of their caufes was to be judged or determined, or the judge found it neceffary that any perfon thould compear before him, he was called upon by the officer, and went in by thefe ftepping ftones, who when heard, returned the fame way he came : and though now this place be not the feat of judgment, there is yet fomething among them to this day, which keepeth up the memory of their old practice for at every end of the loch there is a houfe, upon whofe grafs the country men coming to the court did leave their horfes, and by reafon the mafters of there houfes did fuffer a lofs this way, they were declared to be fcot-free; hence at this prefent tinte, two places in the parifh of Sanfting do pay foot for the one, and Conningflourg in Dunrofnefs for the other; fcot is a kind of rent or due, which is yearly paid to the King or his taxmen, by the gentlemen and feveral others in the country. This court is thought to have been kept by the Dantes, whan they were in poffefion of
ccuntry. They alfo report that when any perfon received fentence of death upon the holm, if afterwards he could make his efcape through the crowd of poople ftanding on the fide of the loch, without being apprehended, and touch the fteple of the church of Tingwall, the fentence of deach was reprieved and the condemned obtained an indemnity : for this fleeple in thefe days was held as an afy lun for malefactors, debtors charged by their creditors, \&c. to flee into.
In the way between Tingwall and Scalloway, there is an ligh ftone ftanding in form of an obelifk as fome ancient monument, concerning which the people have various traditions, fome faying that in the Strath of Tingwall, where this ftone is erected, there was a bloody fight between the Ianes and the old inhatitants or natives of this country, and that the Norvegian or Danifh general was killed in this place, where the fone is fet up. Others report that one of the Earls of Orkney had a profligate and prodigal fon, who for this caufe being animadverted upon by his father, fled to Zetland, and here built a caflle or a Arong houle for himfelf within a loch at Stroma, withint two miles of Tingwall to the weft, the ruins whereof are yet to be feen: his father not being fatisfied with his efcape, and the way he took for his defence, fent from Orkney four or five men to purfue him, to whom he gave orders that they fhould bring his fon to him either dead or alive: the fon thercupon not finding himfelf fafe enough in his caftle, made his efcape from the caftle, where the purfuers lay in ambunh, but was overtaken by them in the Straith of Tingwall and killed there, whercupon this monument was erected. The purfuers took off his head, and carried it with then to his father, but in fo doing they wore fo far from gratifying of him, that he caufed them all to be put to death, notwithftanding of the orders given by him.

There is in the parifh of Tingwalla little off the way as we go from Lerwick to Scalloway, a fountain or fpring of very pure and plcafant water, which ruaneth through a great ftone in the rock by the paflage of a round hole, which if you ftop, the water forceth its way through the porcs of the fone in other places, the fone it feems being very poreus and fpungy.

One of the minifters told us of a monfter born the laft year in the parifh of Nefton, about nine or ten miles from Lerwick; that one day when he was coming to the prefbytry, and flandiug at the furry-fide over which he was to pafs, two women came to him acquainting him with fear and grief, that their neigbour near by had been travailling in child-birth under hard labour for three days palt, and had brought forth a monfter, which had upon its forehead like a perriwig o flof and hair, raifed and towered up, and by the fikes of the head there were like wies of fleth coming down : moreover it had two rows of teeth, with a mouth like a rat bit, deftinute of arms and legs; after the birth there was fome life in it, and it moved a little, but lived not long; the women allifting at the hirth for a time were afraid to touch it, it being fuech a frange and formidable fight. 'This minifter defired to fee it, but it was buried before he came. The fame wonam allo formerly had brought forth two monters, the firt whereof was a contufed and undigefled lump of helh; and the fecond had a mouth in its breaft.
We enquired concerning the woman, and they told us that they knew nething of feandal they could hay to her charge, but that hie had lived foberly all her life; only one of the minifters informed us that after fhe had brought forth the firf montter, he heard that for a yea's time thereafter, the ufcd to go bare footed to the church of Wiflate cvery Lord's Day, and pray there according to the vow he had made after the birth, think:n $y$ thereby, that this might atone for what was palt, and Frevent the like for the future. If this be
vol. 111 .
5 t
true,
true, God hath judicially punilhed her, by conceiving and bringing forth the two following monfters, each more wonderful and preternatural than the other.

Several adulteries came before the commiffion attended with heinous and aggravating circumftances. One inftance we had very remarkable of one James Mowat in the parifh of Northmevan, who had been lying in adultery with one Clara Tulloch, his wife being dead not many years fince. Between which Mowat and Tulloch there had leveral children been procreated, who were all idiots and fools, fo that they could not keep themfelves either from fire or water, or put their meat in their mouths, though there be one of them of twenty years, and others of them though younger, yet come to fome contiderable age; which fleweth the manifef judgment of God agaiult adulterers, he often ordering his providential difpenfations fo towards them, that they may read their fin in their punifl ment, as this wretched man was forced by the power of his fo far convinced confcience to confefs before the prefbytery, that he was fenlible the judgments of God were purfuing him, whereof he gave the faid fad inftance, as yet to be feen from the preflbytery's records. Another adulterer alfo did compear before us, who did continue in the commiffion of this his fin for many years, and doth bear in his face the flameful reproof thereof, and the juft marks of the Lord's indignation againt him for the fane. It is a very fad thing for any to be pining away both in judgments and fins.

A minifter here told me a pallage, not to be palfied without a remark of God's righteous judgment and holinefs; a certain woman in his parilh about ten years fince fell into adultery with an old married man; he to cover his villainy, advifed her to give way to another young man's finning with her, who then was in fuit of her and frequented her company, that fo if there were a child, fhe might father it upon this young and unnarried man; aecordingly, as was advifed, it fell out, the young man finned with her, and the being found with child, is fummoned to compear before the feflion, who having interrogated her concerning her uncleannefs, and who was the father of the child, the anfiwered that fhe never knew or had camal dealing with any, fave fuch a young man; but this covering could not ferve the turn in palliating their filthinels, God in his wife providence fo ordering it, that though there was the interval of five months between the uld and the young man's finning with her, yet when the time of her delivery came, fhe firftbrought foith a perfect child of nine months, and the day after another imperfect of four month, accoruing to the feveral times of the oht man, and the young man's finning with her. She being convinced that this was of the Lord, and that fhe could not hide her fins from Gou, though the fought to do it from men, the ingenuoufly acknowledged her guilt with buth, and for the feandal is now giving latisfaction in the parilh of Unit.

We had alfo the lanemable account of the tragical end of one Mr. Giibert Hendry adulterer, in repute, for his acutenefs of wit, and the many excellent poems he compofed: he being a marricd man had carmal converfe with another woman, at which his friends and well-wihers being greatly concerned, one of them laid hold of an opportunity to accoft and fit upon han, cameltiy intreating he might break off his unclean and debauched converfe with that woman, holding out unto bina his fin and mifery, and ufing what arguments he thought might prevail for that end, but he gave a deal ear unto all that was faid, and by no means would be dilluaded from haunting her company, yea, in contempt of the admonition and reproof, made as if he were quing to that woman's houfe the fame night, and fo parting from his friend, went in the evening ti) a water or loc! fide, where he walked for fometime alone, and then appeared a man in company with him all in black, and thus they contmued walking together till night, as
the people obferving did judge, and the next moruing this miferable wretch was found dead with his lrairs dafhed out, (though there were no fones near to the place where he lay), on a hill fide at a little diftance from the water, his head and fhoulders lying downward to the defeent of the hill, tis brains were featered, and the ground about hing was all troden, as if there had been (faith my informer), twenty men and horfes for twenty-four hours upon the fyot. It is not many years fince this fell out. So bad a recompence doth the devil give his valfals and flaves for their fervice, for whoremongers and adulterers God will judge, which judguents often he beginneth to inflict in this life, for the puivithment of the guilty, and the terror of all, and to fhew that he is of purer eyes than that he can behold fuch horrid iniquity; though the pouring out of the full vials of his wrath he referveth for the future, where their worm flall not die, nor the fire for ever be quenched.

The fignal detcat and wevthrow of the Spanifh Armada, that fuppofed and commonly (though arrogantly) called havincible Nawy, ano 1588, is famous in hiftory, which was efpecially catied by formy winds and tempefts, fome thereby finking at fea, others fplitting upon the coafts both of England and France, and efpecially upon the north of Scotland, Orkucy and Zethand; and the Fair 1ne had the honour of the Duke of Medina's bcing driven on fhore upon it, under whofe conduet this navy was; who after his fhipwreck came over to Dunroflinels in Zetland, as an old gentlewoman informed me; of whom fhe heard the country pcople fay who faw him, frequently fpeak, when fhe was a child; fo the Lord difperfed and broke this huge and formidable navy, that of a hundred and thirty fhips which fet out from Spain with provifion, ammunition, and other furniture exceeding great, fearce thirty returned ; the God of land and fea heard and an. fwered the prayers of his people in Britain, the curfe of God purfuing that hellifh enterprife, notwithaltanding of the infallible Popinh benediction on that invincible armada; for as our hiftorian Calderwood obferveth, "The rumour of the great Spanifh armada being blazed abroad, fervent were the prayers of the godly in Scotland, powerful and piercing were the fermons of preachers, efpecially in the time of faft, whereupon the Lord uttered his voice againft his, and his church's enemies, by terrible things in righteoufnefs; our coafts upon which many of that flect were caft away, and fome of the people in it begged from door to door, proclaiming aloud the glory of his juftice and power."

There are no weafels in all the northern ifles of Zetland, as I am informed, though numerous in the Mainland, which they report thus canc to pafs : the falconer having a power given him, to get a hen out of every houfe, once in the year ; but one year they refufing, or not being fo willing to give, the falconer out of revenge, brought the next year two weafels with him, which did generate and fpread, fo that now they are become very defructive to feveral gools of the inhabitants, whereof a gentleman our informer, told us he had killed feveral half an ell long.

## Chap. IX.-The Fi/h-Trade is mof confiderable, in Zetland.

OF all the things remarkable in Zetland, their fihh-trade is the moft confiderable, wherefore I have chofen to Ipeak of it by itfelf. Which I fhall labour to do, by fhew: ing what fifing they have in thefe feas, and what finhes they do moft aboind in, and have plenty of; and then hold out who are thefe who trade, and what adiantages do accrue thercby unto the inhabitants, with fome reflections upon the whole.
The fifhing here is much decayed by what it was, for now neither is there fuch a great number of fiftes taken, nor fo eafily can they be had, as formerly; for not above forty
or fifty years fince, the fifhers would have taken the great fihes, fuch as killen, ling, \&ec. in the voes or lochs, and that in great numbers, and fo were not neceffitated to underly fuch danger and toil in gring out to the fea, but could have lien before their own doors and drawn the filhes, which certainly was more fafe, caly, and convenient to them in many refpects; whereas now they are obliged to put out fome leagues unto the fea, and fo far often that they almoft fink the land, elfe they cannot have any fithing worth their expence and pains, which cannot but be very toilfome and dangerous, in cafe a ftorm thould arife and blow of the land, and fo put them to fea with their little boats or yawls, not able to keep long out againf the violent and fivelling waves; and io it hath fallen out to fome, who being tofled to and fro, whither tide and wind did drive them, have never feen land any more: and as it is dangerous, fo it is toillome, and cofts them much labour, feeing often they lie fome nights and days at fea, and not come athore.

The fifhing formerly being greater than what nowit is, occafioned, they fay, fome hundreds of more fhips to refort yearly unto this country than what now ufe to do, when fifhes cannot be had to ferve them; and indeed neither now are the fifhes fo fought after as fometime they have been, when they could eafily be had, many being willing rather to ftay at home and catch what they can about the coafts, which ordinarily are but the finaller fithes, than to undergo fuch hazards and toil in following the greater, which an Hamburgh merchant waiting for a lading comphined to me of.

Although when we inflitute the comparion between the former and the latter times, their prefent fifling will appear to be but fmall ; yet if we take it under view as it is in itfelf without fuch a refpect, we will find it to be very confiderable; for though in fome years it be greater than in others, yet every year many trading fhips are thereby laded, and this fame year 1700 the filhing is thought to be very good: an inftance whereof a merchant gave us, that in one week in the month of June there were taken by fome boa's belonging to one place, of Northmevan, four thoufand ling, all which were brought in for the loading of that thip wherein he vaas concerned: and another gentleman added, that fome other boats at a little diftance from thefe, drew about feven hundred. more; but this was fomething extriordinary, and ufeth not often to fall out that in one week they take fuch a number.

The fifhes that do moft abound here are killin, ling, \&c., which being falted and. dried, foreigners export them to other countries; of thefe, as hath bren taid, there is great plenty, but are not ordinarily taken near the land: as for haddocks, whitings, and. fuch leffer white filhes, they care not fo much for the feeking after, except what is for their own ufe, for flrangers ufe but fellom to buy them: and thefe greater fithes they get a greater quantity of in fome places than in others; as off Dunrofluefs, Northmevan, Unit, Yell, \&ic.

Great thoals of herring to fwim alfo in thefe feas, which are taken in the fumaner feafon, efpecially in the month of July and the begiming of Augult, for fometimes then they will come within a pemy-ftone caft of the fhore, and be fivimming fo thick, and. taken fo fait, that one boat will call upon another to come and help them, and take a part of their filhes. Thefe herrings taken here are reckoned to be very good, if not among the bedt, that are taken upon the ifes belonging to the King of Britain's dominiens; and as now faid of the white $f$ fh, fo it is of the herriugs, they frequent fome places more than others; as off Brafa to the eaft, and butween Brafla and Whalfey, or the Skerries, where the buffes do commonty lic, within tight of the land of Zetland. And whatever may be faid of Grotius his mate commune or :"bcrum, yet it holds here, for any have or take liuerty to come and filh in thefe fas, without any way acknowiedging that fovereignty whereunto thefe illes du belong.

There are likewife here a great many grey fifhes taken, which they call filluks and. feths, which are judged to be the fame kind of fifh, only the feths are a greater and older filluks, a thick and fat filh; for out of one liver of fome feths they will get a pint of our meafure of cil, with which oil the inhabitants pay part of their rents, and fell the reft unto merchants. The oil they get after this manner: they put the liver into a pot or pan half full of water, whi:... when feething, the oil by the force of the fire or boiling water is drawn from the liver, which fo being feparated, and fwimming above, they take or feum it off, and put in velfels for their ufe. Thefe feths are to be had about all the coalts, but more efpecially about Dumrofinefs, Delton, and fome other places. The filluks, as hath been obferved, are very numerous in ()rkney, but more rarely are the feths to be had there, though the fame kind of fifh; but in Zetland there is no fearcity of both.

Among the many other excellent fifhes which are here for to be had, there are the tuik, a rare, wholefome, and delicisus filh, no lefs plealant to the tafte than they are to the eye; fome of them are as big as ling, of a brown and yellow colour, with a broad tail ; when making ready for ule they fivell in the piu more than any other fifn; when made ready, their fifh is very white and clear; when new haled, they are much more pleafant to eat than when falted and dried, for then I think they lofe much more of their favour and relifh. They begin to finh for them about the end of May or beginning of June, and are taken to the ealt of the ille of Braffa, or between Braffa and Whalfey, opening to the coafts of Norway, and here only are they to be found, and more rarely in other places, except off Dunrofficfs, where alfo fometimes they are got. The fifhers. often go out about the beginning of the week, and not return home till the end of it, and the furthe: they go off to the fea they will get them the bigger, and in greater numbers They ufe to fell them to the IIamburghers for eight or ten pounds Scots the hundred, or fix fcore; and fome of them alfo are taken to other places, where they are much defired by fuch as know them.

Thofe who commonly frequent this country and trade with the inhabitants are Hamburghers, and fometimes Bremers and others, who come here ordinarily in the month of May or about the beginning of June, and in feveral places fet up booths or fhops, where they fell liquors, as beer, brandy, \&c., and wheaten bread, as that which they call cringel-bread, and the like; they alfo fell feveral forts of creme-ware, as linen, mullin, \&c. And the fe merchants feek nothing better in exchange for their commodities than to truck with the country for their filhes, which when the fifhers engage to, the merchants will give them either money or ware, which they pleafe, and fo the tifhers going to fea, what they take they bring once in the week or oftener, as they have occafion, and lay them down at their booth door, or in any other place where the merchant appoints them to be laid, and they being there numbered, the merchants account for them accordingly: thefe fifles, which are ordinatily great white fifhes, as killen, ling, and the like, the inerchants or their fervants having dried, they take them aboard of their thips. Several fuch Dutch booths are to be feen through the illes, as fix ordinarily in the ine of Unf, two in Yell, \&c.

The Hollanders alfo repair to thefe ifles in June, as hath been faid, for their herring fihing, but they cannot be faid fo properly to trade with the country, as to filh upon their coafts, and they ufe to bring all forts of provifions necellary with them, fave fome frefh victuals, as theep, lambs, hens, \&c., which they buy on fhore. Stockings alfo are brought by the country people from all quarters to Lerwick and fold to thefe fithers, for fonetimes many thoufands of them will be athore at one time, and ordinary at is with then to buy ftockings to themoliclves, and fome likewife do to their wives and children, which
which is very beneficial to the inhabitants; for fo money is brought into the country, there is a vent for the wool, and the poor are employed. Stockings alfo are bronght from Orkney and fold there, whereby fome gain accrues to the retailers, who wait the coming of the Dutch fleet for a market.

But elpecially much advantage doth redound to them from their trade with the Ilamburghers; for befides that they are furnifhed by them with provifions, what necellary what convenient, thefe merchants bring a confiderable fum of money with them, fo that, as one of their minifters told me, feven thips are ordinarily reckoned to have three thoufand fix hundred dollars aboard, which they leave behind them not only for filles, but alfo for feveral other things which are the product of the country, as butter, oil, \&.c.; and if any pleafe not to take their commodities, they prefently give them money upon receipt of their goods. The proprietors alfo, or matters of the ground upon which thefe booths are built, reap a confiderable gain, for fome of them will get twenty dollars per ammum for the ule of a houfe in the fummer feafon to be a booth; and I think twice or thrice the fum will build then.

Upon the whole of this chapter we may entertain thefe following reflections: firf, hence we may obferve the power, wiidon, and gooducfs of God; his power in that his hands have made this great and wide fea, wherein are things creeping innumerable; how many millions of great and fmall filhes are every year taken, yet the next we expeet to be ferved with as great a number; God giving thefe creatures the fea for their proper habitation, and providing fuitable provifion for them in that element, where neither feed-time nor harvelt, yet all thele wait upon him, and he giveth their meat in duc feafon. His wildom, in that wile and beautiful oeder to be obficred among thefe brutal creatures, the feveral kinds knowing their coming and their going time, and their loving to frequent one place of the water more than another, though both under the fance climate: their going forth all of then by bands, though they have no king, overfeet, or ruler, thefe fquammofa cobortes, though not governed by principles of reafon, yet by their natural inftinct being reafonably acted, each to their proper ends, for the maintenance and prefervation of their feveral kinds, give occafion to reafonable man to acknowledge, admire, and adore the infinite wifdom of his and their maker. Here alfo the goodnefs of God is to be oblerved in this, that all thefe are given for the fervice of man, that not only our tables fhould be furnithed with the creatures that breathe in the fane element with us, but alfo with thefe that live in another; and fecing all thefe are, as it were, facrificed for our ufe, fhould we not "prefent ourfelves fouls and bodies living facrifices holy and acceptable unto God, which is our reafonable fervicc." Secing that God hath made man to have dominion over the beatts of the field, the fowls of the air, and the fifhes of the fea, fhould we not gratefully thew forth his praife, and fay with all the wife obfervers of Providence, " $O$ Lord our Lord, how excellent is thy name in in all the earth?"
2. It is the filhing only which makes this country any way defirable, elfe it would be very unpleafant living there, as Boethius of old did obferve: Quormm opes unizerfa in fifcibus jole arcfuctis, quas quotamis ad cos accedentes Hollandi, Zelandi ac Germeni aliarun:que rcrum vulgarium permutatione mercantur. Yea, if we abftratt from their tifhingtrade, in many places there could not be any living at all, they not having fields either for corn land or grazing; but they trading in fifhes with foreign merchants, who import many goods for the more comfortuble living of the country, their coming in the furnmer is very.refrefhful to all the inhabitants, the thoughts and expetation of which in the winter doth not a little revive then, when they thall enjoy fome better fare than what their country doth afford, when Hemburgh liquors and commodities fhall be brought
to th of al
to their doors, which being expected and defired, may occafion fometines their taking of a larger ci:p, they knowing that the booths will not always ftand open.
3. It is to be oblerved, that till the further north we go the fifhes are to be had in greater abundance; in Zetland more than in Orkney; and in Iceland, to the north of Zetland, more than in either, the inhabitants there moftly living upon fifhes: and again we may notice, as there is not fuch a plenty of fifhes in Orkney as in Zetland, yet there is a grenter of corat ; and fo in Zetliand there is more corn than in Iceland, for in Iceland they have litte, if any, corn as the product of their country, as fome in Zetland did inform me, who have converfed with thele who have been there; therefore the commonalty generally make ufe of dried filhes beaten fimall inftead of bread, as Boethius hinteth at : Ulura Scbectlandicas alia quadan infula, qua pifces areffacios ac fole induratos piffillo contundunt, mxx adnifta aqua in paftillos componunt, atque ad focum torrent, qui illis panis cyt: which fheweth us the great wilidom of God in his great works of providence, who beftoweth not all bleflings upon every nation; but when he denieth or giveth lefs of one blefling to one nation or country, he alloweth them more of another ; which is alfo often obferved with refpect to particular perions. This variety likewile theweth the neceffity and advantage of one nation or kingdom's trading with another.
4. The filling-trade is yery lucrative and enriching to thofe who clofely follow it; it is commonly faid that it is the fifhing which firtt railed the Netherlands to that pitch of grandeur and weath which now they have arrived at: hence fome hiftorians call the fithery the Gold-mine of Holland, and that by their filhing efpecially in the Britith feas; and if it were not fo very gainful, what would make theme every year equip fuch a numerous tleet of feveral hundreds of buffes, under the guard and protection of their convoys, but that they know the Zetland feas makes their mills to go, ther fore they do fo warn.' $y$ purfue this trade, and encourage the undertakers thereof: and fo it is with the Hambarghers and other merchants, elpecially in the Hans Towns, who trading here during the fommer feafon, return home ia Augult or September, they not only with finhes terving their refpective cities, but by fending them allo up the country do make a good marker, which engageth and encourageth them to return every year and follow the fame tade.
5. The confideration of this great gain that doth redound to the trading merchants, hath of late animated fome gentemen and others in Ketland to enter into a fociety or company for trading in filhes; that whereas firangers make fuch a good hand with their filles, they may as well confult their own profit and gain, by promoting of that trade, which tendeth fo much to the emriching of ouhers, elpecially feeing they can do is with fir lefs trouble and expence when here at home, where the fifhes are to be had, which when taken and prepared may be fent abroad for fale to foreign markets; whereas the Hamburghers and uthers which come here are obliged to tarry from home through the fummer waiting for their ladia:g.
6. It hath been thought very ftrange by many that our own fifhing, for which we have fo great and fo inviting advantages beyond others, fhould yet be fo much neglected by ourfelves, and lett to the improvenent of Itrangers, who reap valt gain trom it. And as this delerves the confideration of the government, fo it might be expected that the late difyppoinment, in the boly and wife providence, of this nation's noble and generous attempt to have fetted a foregign plantation, for raiting us from the dunghill of contempt ans poverty, and advancing our wealth and trade, will excite both thefe worthy undertakers and others to employ their focks and endeavours in fearching after and diaging thele mines of the ocean nearer home, and profiting by thele bleflings which Providence has brouglit to our very doors, efpecially fince thereby not only would a
number of able feamen be yearly trained for the ufe and fervice of the nation, and th: nation thereby put in a better capacity for undertaking and fupporting greater projects of trade in the more remote parts of the world, but likewife hany poor people would be employed who are ready to ftarve. And it is more reafonable we fhould finh in our own leas, than for ftrangers fo to do ; and I do greatly queftion if the Hollanders, Hamburghers or others, would fo permit us to lifh in any feas fo nigh to their land, depending on their fovereignty, as we do the:n.

Aud for this end fhipping would be encouraged by the government, and trading mercliants, as he Hollanders, do, an inflance whereof we had when in Zetland: a Holland fhip cane into Brafla Sound from cruizing about the Fair Ine, waiting for the Eaft India Reet, having in her wine, brandy, vietuals, sce. for their ufe, that they might be refrefhed before they arrived at their port, and this the trating company neglect not ordinarily to do. which theweth they are great encouragers of trade; and for the encouraging of trade, tasations impofed upon fhipping hould be eafy, efpecially now when the trade is fo low, that many merchants and thip-maters, after they have hazarded their lives and their all, do return lofers home; for il otherwife, no wouder that all concerned in trade be difpirited and difcouraged in attempting any thing that is noble, which might tend to the nation's public good.

Chap. X.-Conserning Pighthend-Firth, the fiveral Tides whbich meet there, the Danger of Paflage, Eic.
THE noife that Pightland-Firth makes anong many whoonly have heard thercof, as being noted and famous for its danger to paffengers, and the caufes which concur to render it fo, awakened us more particularly to enquire concerning it, which we had opportunity to do in our return from Zetland by Orkncy to Caithnefs: and therefore feeing we paffed it in our voyage, 1 hall not altogether pafs it in this narrative, but communicate to the inquifitive what I know either from iny own or others' obfervation anent it.

This firth is commonly called PiAland, Pightland, or Penthland-Firth, doubtlefs from the licts whofe kingdom of old Orkncy was, divided by this firth from the continent of Scotland. Blaw, in his Atlas or Geograply, tells us of a certain tradition, fhewing how it came firt to be fo detominated; that the Piets on a time being defeated by the Scots, who purfued the victory unto Caithnefs and Dungilby-head, where the vanquifhed remnant, fo hotly purfued, not judging themelves fafe, were forced to take boats and go over the firth to Orkney; but the Orkney-men convening upon the alarm of their landing, did fo warmly receive them with a flarp conlict, that the Picts were obliged to retire and take themfelves to their boats again, with which they going off, and not acquainted with the ruming of the tides, they all perihed; upon whinh fad cataltrophe, fo fatal to the lictilh nation, this firth ever fince was called Pickiand, or Pightland-Firth. Buchanan calls it Penthland-lirth, as it is commonly pronounced, from one Penthus; but who this Penthus was, our hiftorian hath not been pleafed to innpart unto us: Nams Pentblandici montesect frctum Pcntblandicum a Pentbo non a Piđto compofita vidcri pofunt. Sone hiftorians relate that the Picts coming firlt out of Germany into Orkney, which they inhabited for a feafon, thence they patied over to Caithnefs and other parts of the north of Scotland; fo that heace this firth is called Pieland-Firth.

The firth is faid to be twelve miles broad, and I think they are but flort; but this may be abundantly compenfed by the danger of the paflage: it is bounded on the north by the intes of Orkney, and on the fouth by Dungifby-head in Caithnefis; to the weft is the Deucaledonian Ocean, whence the flood comes; and to the ealt is the German

Ocean, whence the ebb runneth. The landing.places are Burwick, the fouthernmoft point of South Ronaldha in Orkney, and Dungiby-head the northernmofl in Caithnefs, called alfo John Grott's' Houfe, the northernmof houfe in Scotland; the man who now liveth in it and keepeth an inm there is called Joln Grot, who faith this houfe hath been in the poffefion of his predeceffors of that name for fome hundreds of years; which name of Grot is frequent in Caitlinefs. 'Upon the fand by John Grot's houfe are found many fmall pleafant buckies and fhells, beautified with diverfe colours, which fome ufe to put upon a fring as beads, and account much of for their rarity. It is alfo obferved of thefe fells, that not one can be found altogcther like another; and upon the review of the parcel I had, I difcerned fome difference among them, which varicty renders then the more beautiful.
In the firth are the ifles of Swinna, Stroma, and Pightland-Skerries. From Burwick to the weft-north-weft lies Swinna, one of the illes of Orkney; a little ifle wherein are fone inhabitants, who have a good fifhing about the infe, but often with great danger, not only becaufe it is in Pightland-firth, where many tides do go, but becaufe of fome dangerous wells or whirlpools which are nigh unto it. From Burwick about five or fix iniles to the fouth-caft lies I'ightland-Skerries, dangerous to feamen; thefe Skerries being in the mouth of the firth to the caft, upon which both in ebb and flood there goes a great fea ; thercin is fome good pafture, but not inhabited, fave fometimes in the fummer feafon. In the firth alfo is the ifle of Stroma, a little pleafant ifle, abounding with corns, about a mile and an half long, and half, a mile broad, and though it be in the firth, yet it is not reckoned as one of the ifles of Orkney, becaufe of its vicinity to Caithnefs, from which it is but about two miles diftant, and this is the only inle which belongs unto Caithnefs, and is fill under the jurifdiction of the lords of that country.
Befides the illes there are fome fkerrics, as before Burwick; not half a mile from land, there is one feen at an ebb, upon which three years ago was caft away a fhip belonging to Aberdeen, and all the men in her, as they fay, were loft.

Although the fea in this firth floweth and ebbeth twice in the twenty.four hours, as it doth in other places, yet there is a meeting of many tides here, which running contrary one to another, caufe that great rage, and as it were a conflict of waters, which is terrible to behold, and dangerous to engage with : what is the number of thefe tides cannot well be condefcended upon, fome fay thirteen, others eighteen, and others twenty.four. Blaw, in his Geography, hinteth at this, and the reafon thereof, fhewing that the fia running among the Orkney Ifles, is thereby reftrained, and made to go, through the ifles as fo many water-fpouts, which meeting in this firth render it fo formidable and dangerous. But becaufe of the pertinency and elegancy of the hiftorian upon this head, I thall give his own words: Fretum boc navigantibus formidabile, nequc nifi fatis temporibus, quanquam pofitis ventis, trajectui opportunum. Caufa cft cum aftus maris quotidie a feptentrionibus incitctur in bis locis Orcbadas circumfufus iifque interfulus, bic primum object?u terrarum cocrcetur, unde vis illa immenfa aquarum multis canalibus injulas illas permcans, dein reliquo mari in bee frcto effifa, Luclantibus etiam maris Vcrgivii ct Orientalis undis formidabiles aquarum vortices cum fummo navium periculo creat. And indeed when we fee the many impetuous tides coming out into this firth, from among the ifles of Orkney, each bearing that courfe to which they are determined, by the land and ifes they wafh and beat upon, we will not judge it ftrange, that there fhould be fuch a meeting of tides in this firth; for, as fome exprefs it, "Every craig-lug makes a new tide :" and many craigs and lugs are there here.

Hence it is clear that the tide will run with a greater rapidity and force in fome places than in others; as when we pafs that part of the firth, where we meet with the
vol. 1 In.
5 *
tide
tide in the ebb running off the fides of Pightland Skerries from fouth-eaft, down into the Swelchie of Stroma, then the men muft ply their oars and work hard, left they be borne down into the Swelchie, a dangerous place. When alfo we are three or four miles from Caithnefs, there is another fuch rapid current coming from the fouth of Dungis-by-head out of Murray.firth running upon Stroma, both into the Swelchie on the north, and into the Merry-men of May on the fouth end of the inle. In our paffage through this current, for half an hour, we made not, as we could obferve, one foot of way, though there were four men tugging at the oars, and no wind blowing; and in all probability we had been carried down upon Stoma, if an able ma- a paffenger, had not taken an oar, fo that then there were three oars upon our ftarboard fide. Hence in fome places there is a faiff, and in others a foft running tide, which the boatmen being well acquainted with, they will fometimes reft from their hard labour and refrefh themfelves a little.

In our paflige we fee the currents before we engage with them, running like the torrents of fonme great rivers, and in fome places we will fee the waters fmooth, and rough round about ; the reafon wherefore of I know not, if it be not becaufe of fome tides meeting there, and, as it were, for fome time quiefcent in their centre, fomething like unto which I have obferved in the meeting of feveral rivers in one place,

In the firth are feveral places remarkable for their danger, as the wells of Swinna, whereof fome are on the ealt fide and others on the weft fide of the infe, they are like unto whirlpools, turning about with fuch violence, that if anv boat come nigh unto them, they will fuck or draw it in, and then turneth it about until it be fwallowed up: but thefe wells are only dangerous in a calun, and feamen or fithers to prevent their danger thereby ufe, when they come near them to caft in an oar, barrel, or fuch like thing, on which the wells clofing, they fafely pals over. The miniter of the place told me, that about twenty years ago there were two fifher-boats there, who coning nigh the wells, the men in the one boat feeing their danger, one of thefe men thus afraid took hold of the other boat by them, and both boats were fivallowed up. One of the minifters of Zetland told me, there were three of thefe boats, it fs falling out, that he paffed the firth the very day after they perifhed: yet notwithftanding of thefe dangers the filhers will not defift from filhing about thefe wells; for they obferve the nearer they come to them, the have the filhes both greater, better, and more numerous, fo the filhes draw the men, and the wells draw both.
Near to thefe Skerries before Burwick formerly mentioned, are alfo two or three wells, called the Wells of Tifiala, only dangerous in a flood, as the wells of Swinna are in an ebb; thele wells, as fome do judge, are caufed by an hiatus or gap in the earth below: further I would offer this confideration, that whereas all thefe wells are nigh unto ragged rocks, conftantly beat upon by the tides, there may be fome fecret conveyances of the water into caverns at the bottom of the rock, from which they may pals into fome other places, where they rife again, and that even in the fame firth, though fuch places be unknown, as it is Itoried of many rivers, which fall into and run many miles below the earth, and come out again in other places. But that which I judge to be more fimple, is that feveral tides running upon the rocks, and thence returning and meeting with other tides, caufe fuch a whirl as we fee behind mill-wheels, fome of the water coming from, and another part as it were appearing to return upon the wheel, which caufe fuch a whirl, and no more doth the whirls in the firth require a hiatus in the earth or a fubterraneous paffage, than the whirls in the mill's watercourfes: as for their fwallowing up of boats which are no more feen, this doth not prove it; for thefe boats may be broken beneath the water upon rocks or the like, and the
broken timber go to the fea, of which there is enough found caft afhore upon thefe ines. But many things of this nature are hidden to us, and we can only give our conjectures anent them.

There is alfo in this firth the Swelchie of Stroma, a very dangerous place at the north end of the ine of Stroma, where there is a meeting of feveral tides which caufech the water to rage and make a dreadful noife, heard at fome diftance; as likewife the fea-billows are raifed high, and appear white and frothy, very terrible to beho!d, efpecially if any form be lying on, falling unto which all paffengers carefully labour to avoid; as a gentleman related to me, that once he was in great danger, the feamen giving themfelves over for loft, thor ;ll three miles from the Swelchie, and that in a dead calm, when within two or three f. . of butts to Stroma, and thougl: fo near land, they had been carried down into and perifhed by this Swelchie, as they all laid their account, if the Lord had not fpeedily caufed a northern wind to blow, whereby they got hold of Stroma.

There is another dangerous place at the fouth end of this ine of Stroma, where is alfo a great contiit of water, called the Merry-men of May, fo called from the houfe of Mey, a gentleman's dwelling in Caithnefs, oppofite to this ifle, and called Merry-men becaufe of the leaping and dancing, as it wcre, of the waters there, though mirth and dancing be far from the minds of the feamen and palfengers, who fhall be fo unhappy as to fall in among them, efpecially when any fea is going.

Seeing from what hath been faid this firth is fo very dangerous to pafs, no wonder that the mariners and others be very careful to lay hold on the fittelt occafion for a fafe paffage, which they find to be a little before the turning of the tide, when it is beginning to ebb on the fhore, but the flood is yet running in the fea, then they ufe to go off, that fo when they are in or nigh unto the middle of the firth, the tide may be upon the turn, which caufeth for fonte time a ftill and quiet fea, (as to the running of the tides, and the feamen are not fo put to it, in wreftling eilher againft flood or ebb. Buchanan, fpeaking of thefe feas and the rapid tides, elegantly expreffeth himfelf: Dua funt tempeftates quibus ba anguftia funt fuperabiles, aut cunt aftuum relapfu ceffante undarum conflictu, mare tranquillatur, aut ubi pleno alveo equor ad fummum incrementi pervenit, languffente utrinque vi illa, quà undas concitabat, veluti reccptui, canente oceano procellis et vorticefis pelagi commoti molibus fe velut in fua caftra recipientibus.

Any wind, they obferve, will take them over from Burwick to Caithnefs, if tided right, and the wind not in fouth-weft, or nigh to that point, and fo from Caithnefs to Burwick if not in the north-eaft, or nigh to it. But the north-weft wind they call the king of the firth, not only, I judge, becaufe it will both take them from Caithnefs to Orkney, and from Orkncy to Caithnefs, but alfo becaufe if it blow any thing, it keepeth them up in an ebb from falling into the wells of Swinna, the Swelchie of Stronia, and the Merry men of Mey. By tiding right alfo they can come over by the help of oars, though there be no wind: and at any time, though they obferve not the tide, they can pals from Orkney to Caithnefs if it blow a good gale from north-eaft, and fo from Caithnefs to Orkney if the like blow from fouth-wefl. The boatmen who ufe to pafs the firth, from their experience know it beft, and can avoid the fwell of a fea, when perfons of greater fkill cannot do it.

At no time is there any anchoring in this firth, for if any through ignorance or otherwife attempt it, within a little time they mult either cut their cables, as fome have done, and be gone; or elfe if their anchors or cables break not, they will be ridden under : the experience whereof one of our fhips lately had, who cafting anchor even in
the mouth of the firth where the tides are not fo ftrong, their anchor within a little time broke, and they behoved to go fea.
In a form, efpecially if it blow from fouth-eaft, (which, they fay, in the firth. caufeth the greateft fea, and the tide be running in the wind's eye, the roaring and fwelling waves are very terrible, and mount fo high, that they could wafh, not only the deck, but the fails and topmafts of the biggeft fhips.
The houfe of Mey formerly mentioned, is a myth, lign, or mark, much obferved by failors in their paffing through this firth between Caithnefs and Stroma; for they carefully fix their eyes upon the lums, or chimney-heads of this houfe, which if they lofe fight of, then they are too near Caithnefs, and fo ready to run upon fand-banks, but if they get alfo fight of the houfe, then they are too near Stroma, and fo may fplit upon the rocks, which lie off the fouth end of Stroma.
Hence we fee, "They who go down to the fea in fhips, and do bufinefs in the great waters, thefe fee the works of the Lord, and his wonders in the depths; that he is a God glorious in holinefs, fearful in praifes, doing woriders; he caufeth the wind to blow, and the fea to flow at his pleafure; bounding the impetuous tides with the rocks and fand, faying, Hitherto thall ye come, and no further, and here fhall your proud waves be flayed; which though they roar yet fhall they not prevail." His goodnefs and power, putting a reflraint upon them; his wifdom and counfel directing their turning and returning for his own glorious ends. Glory to his name!

## Char. XI.-Concerning Caitbnefs, and what zee found to be moft remarkable there.

MY difcourfe upon Orkney and Zetland being extended beyond what either was intended or expected, I fhall therefore ftudy to be the briefer upon Caithnefs, as likewife fecing it is fuppofable, that it may be better known than any of the former, it being upon the fame continent with us. What then is to be faid thereupon, I thall difpatch and fum up in this one chapter.

Caithnefs is the northernmoft province or thire in Scotland, having Pightland-firth, whereby it is divided from Orkney on the north, the entrance to Murray-firth on the eaf, Sutherland and Strathnaver on the fouth, and the Deucaledonian Ocean on the weft. It is from that high hill called the Ord of Caithnefs, toward the fouth, whereby it is divided from Sutherland, to Dungifby-head, about thirty miles long, and from Thurfo on the weft fide to Wick on the eaft fide of the country twelve miles broad.

As we were much in the dark about the etymology of Orkney and Zetland, fo no lefs are we here in that of Caithnel's; upon which Blaw, in his Geography, giveth us this notandum: "Thai many names of places are fomething ftrange, whofe original feem to be neither Scottifh, Irifh, Danifh, or Norwegian, but unknown, uncertain, and moft ancient : fuch as Orbifter, Loyibftcr, Robafter, Trumbufter, and innumerable others, Caterum not. mulla lucorum nomina percgrinum quid fapere, quorum origo neque Scoti-: cum, Hibernicum, Danicum, aut Norvegicum quid referant, fed ignota, incerta, et vetufima originis videntur, qualia funt Orbifer, Loyibfter, Robafter, 'Trumbufer, et innumera aliua." And feeing fuch examples of names which are of an unknown original, as are given by the biftorian, do all end in fter, I would add that moft of the names of places in this country do end in fer or flar, and go, as between twenty and thirty in fter or ftar, and about twenty in go, as my informer, who had been for fome tine in the country, did, reckon them. Of old, Sutherland, faith the fane geographer, was called Cattey, and its inhabitauts Catteigh, and fo likewife was Caithnefs and Strathnaver; and in the Irifh,

Sutherland, to this day is called Catey, and its inhabitants Catigh ; fo that Catteynefs is no other than the promontory or cape of the Cattes or Sutherland, which promontory is fretched out from the eaft, (or rather the north) fide, faith the geographer of the mountain of the Ord, Adeo ut Cattey-nefs nibil aliud fit quam promontorium Catta feu Sutherlandia, quod promontoriun a latere Orientali montis ordi pratenditur. Thefe Cattaei are thought to be a people who arrived thither from Germany. Who would have more of this may confult the above-mentioned author. Buchanan will have it to be called Caithnefs becaufe of it being mountainous, but I know not if this reafon will hold, for the countries adjacent to Sutherland and Stranaver are more mountainous, and thereare few high hills or mountains in it, except at the fouth end thereof, where it borders with Sutherland, but if it fhould be lo called becaufe it is the nefs or promontory of the mountains, the land by north thefe mountains falling lower and running out in a promontory into the fea, 1 judge it would hold better, and be faid with greater reafon. Boethius alfo faith that this country of old was called Cornana, but the reafon thereof he giveth not.

The Earls of Caithnefs were among, the ancienteft in Scotland, and in former times have been very potent in this corner, as appears by the feveral old caftles and places of frength, which then they were in poffeffion of, but now their memory is almoft extinct. The late Earl George dying without ifue, the Laird of Glenorchy, now Earl of Breadalbane married the dowager, who having purchafed the Earl's eftate, the apparent heir judging himfelf thereby injured, did gather together fome of the country people to re$\cdots \cdots \mathrm{r}$ his right, but was defeated by Glenorchy ; from the field they went to the bar,
$\therefore$ Jebated the matter there, whereupon the Lords gave forth this fentence, that Glen.
sty fhould enjoy the eftate, but the heir fhould have the honours, and an aliment allowed him by Glenorchy during his life. The heir having died about a year ago, the heirefs his filter fucceeds to the honours, and is in a very mean condition; living in a place where the former Earls ufed to keep their hawks. So to this ancient and honourable family of the Earls of Caithnefs, there is almoft put in holy providence a period ainu ciofe: they who had four great houfes in this country like palaces for pleafure and convenience, and caftes for ftrength, now in their heirs enjoy none of them, three are ruinous, and one is poffeffed by a ftranger: as likewife there are feveral other ruinous houfes to be feen here, who have fpued out their poffeffors, fo confirming that common obfervation, "That fin committed by the inhabitants, is as gun-powder laid to the foundations of their houfes, which quickly overturneth them, when it pleafeth a righteous God to fire the train."

The late Earls of Caithnefs were of the name of Sinclair, of which name alfo are many gentlemen of the country, who have bought confiderable parts of the Earl's eftate; from the Earl of Breadalbane : before the Sinclairs, the Earls were of the name of Shine, and before them were the Haralds, and before the Haralds were the Olas as the tradition goeth; concersing which, and the manner of their fucceffion and the interruption made therein, the country talk feveral things which I fhall not trouble my reader with : only 1 fhall obferve what is related by Camden a judicious antiquary, "That of old the Earls of Caithnefs were the fame with the Earls of Orkney, but at length were divided, the eldeft daughter of one Mulathus being given in marriage to William de $S$. Claro, vulgo Sinclair, the King's pantler, his pofterity had this honour conferred on them, of being Earls of Caithnefs."

The country is fleafant and very fertile, abounding with grafs and corn, hence yearly there is a great quantity of victual exoorted, as anno 1695 , there were 16,000 bolls ems barked and taken out, for which (. it is much frequented by barks from the firth,

Clyde, and other places; for ordinarily when there is no fcarcity or dearth, the meal is fold here at three or four or at moft five nierks per boll the cattle and fifh alfo are to be had very cheap, as good kine often in the fhumbles, fuch as the country doth afford, for three or four thillings fterling, and fometimes they fay for two ; fo that as I have heard, fome of the more intelligent inhabitants obferve that here is the cheapeft inarket in the world: and the gentlemen can live better upon 1000 merks, than they can do in the fouth upon 4080 ner anmun, who nay improve their focks to as great if not a greater advantage, than in 5 other place in Scotland, for they may fave their rents, having within themfelves what provifion is neceffary for their table, and may fell out much ftore every year, what to the inhabitans in the country for their oun ufe, or for falting and fending abroad, and what to drovers who take them fouth : and it is oblervable that if any buy a piece of land, only what is arable is accounted for, as for what ferveth for pafture, they ufe not to take notice of, though upon that confideration they may value ti eir acres at a greater rate. In the way between Thurfo and Dunnot, we faw much low ground overblown with fand, for two miles back from the fea, which fermerly not many years fince was a pleafant ineadow.

There are ten parifles in this country, five of which can be ferved with minifters not having the Irifn language, few of the people there fpeaking it, but the other five cannot be fupplied otherwile than by miniflers underftunding Irifh; in fome of thete parihes there being very few who have any knowledge of our language, and fome of the minifters are obliged to preach both in Englifh and Irifh for the edification of all: fome of the parihes are very wide and populous, which tends to the increafe of ignorance anong many, the minifters not being able to overtake their work; fome churches alfo are ruinous, for when heritors are not friends to the work of God, or cannat agree among themfelves, as to the concerting of fuitable meafures, for putting or keeping things which concern the parih, in order; it ufeth to go ill with minitters as to their external accommodation and with churches as to their repair.

The two principal towns in the country are Wick and Thurio. Wick is a royal burgh, on the eaft fide of the country wafhed by the German Ocean at the mouth of Murray Firth, by the fide of v nich runneth a frnall river, at the mouth of the river there is a harbour for boats or barks to !ye in, which they come into at full fea, but this harbour is not fo much frequented, as another about a mile to the north-eaft of Wick, where they judge the boats do lie fafer. Oppofite to Wick lies Thurfo at twelve miles difo tance on the weft fice of the country, which though it enjoy not the privilege of a roval burgh, get it is more populcus thin Wick, and hath better buildings in it ; by the ealt fide of the town runneth a fmall river called the Water of Thurfo: they have the belt church in the country, well furnifhed and kept in good order.

In the water of Thurfo thare is good falmon filhing, which they take two ways, one is by crues or crels with crofied or barred doors going from the one fide oit the water to the other, fo framed that they fuffer the filmes to go $i$ but not to goout, out of which fometimes they will take feveral horfes burdens of fifl. The other way they take them is by a net, wherewith they fim a pool, which lieth a little below the crues, and is about a pair of huts in longth : they having fpread the net upon the bank, which is long enough to reach the breadth of the water, they go in with it, and one man on each Gide drawing it down the pool, it is followed with eighteen or twenty men, going in a breaft behind it, with long fiaves or poles in their hands; wherewith they $k=e p$ the net ro the ground, and loofe it when any way entangled; the pool in fome places will rife to the height of the breaft of the waders, but there is no danger. So they bring down the set foftity and warily to the mouth of an enclofure, which they call a Stem, into which
the fifies net and picape, they go could C who ba and goin hundre to be of winter is but al

 of the r of the)cry ; the ho prey.
the fiftes are driven, where the fifhers ftanding with this larger net, others take a leffer net and going therewith into the Stem, catch the fifhes fo enclofed, that fcarce one can eicape, for up the water they cainot run, becaufe of the larger net, and neither down can. they go, becaufe of the Stem, or fones laid together in form of a wall. We faw as we could conjecture at one draught upwards of three hundred good falmons taker, and thefe who have this filhing told us that three years age, they took five hundred at a draught, and going through the pool at the fame time with the net again, they caught other two hundred, which falmon for the moft part they falt in barrels and fend abroad. It is alfo to be obferved that the falmon keep this water of Thurfo all the year over, and in the winter feafon in frof and fnow if you break the ice, they are to be had. The pool is but about half a mile up the water from Thurfo.

There are feveral waters or rivers in the country as Thurfo, Wick, Dumbeth, Rice, Force, and Beradel, but they are all fm..ll, and indeed there is no great river all the way from Caithnefs, till we come to Nefs running by Invernefs in Murray, over which is a ftrong bridge lately built confifting of feven arches; which river is remarkable for this that it never freezeth, though the froft be moft vehement, yea if then you bring a horfe unto the river, the icicles will melt at his feet in the fpace of time that he is drinking: the river cometh from a loch called Lochnefs, which alfo hath the fame property, four or five miles to the weft of Invernefs. This river I make mention of though not in Caithnefs, it being the firft confiderable one, having any thing of a ftrong and regular bridge, which we paffed in our return.

There are fome trees here, but they are not fo oig as thefe which are further fouth, even in Sutherland, particularly upon the water of Beradel, there is a pleafant ftrath full of fmall wood. And there is a garden three or four miles to the fouth-weft of Thurfo very pleafant and well furnifhed with fruit trees, much comm.ended by the inhabitants.

The rocks by the coaits are much frequented by fowls of various kinds, as eagles, hawks, \&cc. fuch as in Orkney and Zetland, of which rocks there are long tracts; for whereas in Sutherland, Rofs, and Murray, the fea for the moft part is bounded with the fand, here it is bounded with the rocks, which it wafheth and beateth on, and that almoft round Caithnefs from the Ord to Dungifby-head on the eaft, and fo by DunnotHead, and Hoburn Head to Stranaver on the weft, except a few creeks or bays, feveral of which are very convenient for anchoring; efpecially in Scribifter Day, a little to the norti-weft of Thurfo, there is a good anchoring ground, where llips may fafely ride without the fear of hazard by wind or tide, the capes of land there making a fill fea, aud defending the fhips, which, as it were, fiee into their arms from raging and angry Pightland Firth: there are here alfo fome rocks lying a little oft the land, from which they are broken aud disjoincd, which thcy call Clets, the fame with the holms in Orkney and Zetland; thefe clets are almoft covered with fea-fowls. One way they take thefe fowls is pleafant, though with great danger; they take a line, upon the end of which they faflen fome fifh hooks, above the hooks there is alfo a pock faltened, and fo from the top: of the rock, they let down the line thus furuifhed with pock and hooks; ftriking the heads of the young fowls in their nefts with the pock, upon which the fowls do all gape and cry; as if it uere their dame coming with meat to them, and fo lifting the line they let the hooks fall into their mouths, which taking hoid of the fowls, they bccome their prey.

There are likewife feveral caves going from the fea within the rocks, in which the waves make a dreadful noife, luch caves we had occafion to take notice of in our difcourfe upon Orkney and Zetland.

Efpecially there is a kind of fowls called Snowflects, which refort to this country in great numbers in'February; they are about the bignefs of a fparrow, but exceeding fat and delicious; they fly in flocks, thoufands of themi together, many of which the inhabitants do kill and make ufe of. 'They ufe to go away in April, and are thought to come from the Weft Highlands. They have alfo a great plenty of moorfowls, plovers, as much if not more than in any place of Scotiand.

The induftry of the gentlemen here is to be much conmended, for although from Wick to Dumbeth which is twelve miles long, there be no harbour or bay, but a continued tract of ragged, hard and iron-like rocks wafhed by the fea, yet there are feveral harbours forced there by art, though denicd by nature, and paffages in nany places like fteps of ftairs made from the top of the rock to the bottom, where their finh-boats do lie, and by pafflages do bring their finhes up to the top of the rocks, where they falt and dry them in houles made for the purpofe, whereby great gain doth redound to the owners, fome making as much by their fifhes, as they do by their land-rent.

As in Orkney and Zetland there were feveral old chapels, which fuperfitious zealots did frequent, fo it is likewife in Caithnefs; the minifters told me there is one in Dunnot parifh, befide which there are about fixty heaps of ttones, which the people coining to, take with them a fone and throw it into the heap, bowing thenifelves alfo thereunto. Nigh to it iikewife there is a loch called St. John's Loch, concerning which there goes a fabulous tradition, that on St. Stephen's Day there was a pleafant meadow in that place, where now the loch is, and on St. John's Day thereafter, it was turned into this loch. There is alfo another in the parifh of Rhae, to which fome take their children if they be in diftrefs, and make two graves at the fide of one another laying the child between them, and fo they try if the child will recover; but the way how they know, I forbear to mention. But they fay there is a chapel in the parih of Konnefbie, the northernmoft parih of all this country, oppofite to Orkney, which is yet more frequented than any of the former, which fome wildly fuperfitious frequent on fome day about Candlemaif, going about it on their bare knees, and thence going to a water, they caft fome of it in handfuls over their heads, and from the water to an alehoufe, where they ufe to fill themfelves drunk; and when going to thefe, or at them, they can fcarce, even though threatened, be prevailed with to fpeak. To which hellifh rites fome are fo addiated that the miniters judge it next to impoffible, to get their. weaned and brought therefrom : but the vigilancy and pains of minitters efpecially of late, bath through the bleffing of God not been altogether without fuccefs. Which old chapels both here and in Orkney and Zetland, I think the government Thould caufe to be rafed, which might prove as the taking away of the neft egg.

The Earls of Caithnefs, as hinted at before, had feveral ftrong and convenient dwellings. One about a fhort half mile from Thurfo, called Thurfo by Eaft, now ruinous; it hath been built in the form of a court, and the gates have been decorated with cut fone work, and the gardens, avenues and office houfes have been coi.form to the fplendour of the houfe. An honeft country nian obferving the many great fins that had been committed about that houfe, is faid to have predicted to one of the late Earls its ruin and defolation, faying, "That the cup of fin was filling, and this houfe would fortly becone a den of dragons, (ufing the fcripture phrafe) and feeing there are no fuch creature among us, it thall be of foxes :" and accordingly it was oblerved that a fox haunted it when ruinous a few years after, which flayed there till about nine or ten years ago, when a part of the houfe was repaired. This I had from one of the minifters of the country, and another minifter told me that before he bore this character, he frequently flot rabbite there: within the walls of the houfe.

There are alfo other four cafles upon one bay, on the eaft fide of the country nigh to Wick, which belonged to thefe Earls. The bay is called Rice-13ay, and is two ot three miles broad, the entry whereof is to the eaft, but dangerous for hips to come inte, becaufe of the many ilind rocks that lie therein; upon the fouth fide of the bay next to Wick have been two lrong cafles, joined to one another by a draw bridge, called Catle Sinclaie and Gimego, the former hatli been the flrongeft houfe, bue the latier they ordinarily had their dwolling in ; their fituation is upon a rock disjoined from the land, envirned for the mont pait with the iea, to which caltes from the land they paffed alfo by a bridge which was drawn up ei ery night, whence there was no accefs to them. Ifound the year of God upon the lintle of a window in Cafte Sinclair to be 1607; which hath been the yar wherein this caftle was buitt, or at leaft repaired. Some account thefe two caftles to be but one, becaufe of their vicinity. They fay, there was much fin commited here, as drunkennefs, uncleannels, \&c. For which a righteous God hath turned them into a minous heap. Oppofite to Caftle Sinclair, and Girnero, on the other fide of the bay is Kice another calle, but alfo ruinous. On the weil fide of the bay is the cafle of liakergil, a ftrong houfe, at prefent poffeffed by a gentleman, who hath a great intereft in the country, but is not defcended of the family of Caithnefs. There arc alfo the ruins of the old caftle of Beradel to be feen, fituated on a rock near to the fea, at the mouth of a river of that name, to which alfo they have paffed from the land by a draw-bridge: fuch naturally ftrong fituations for their houfes they fought out of old, that they might be the more lecure, and fafe from all violence, nature as well as art contributing to their fortification.

About a flort half mile to the weft of Thurin are the ruins of an old caftie, wisere the bihop in the firft times of Popery is faid to have had his refidence, particularly there was one Adam faid to be laft bifhop who lived in that houfe, who having greatly oppreffed the people by his rigourous exacting of the tithes; the people complained thereof to the Farl, whò is faid in paffion to have anfwered then, "Go and feethe him, and fup him too if you pleafe," whereupon they went to the bifhop's lodging and apprehended him, and fetting his houfe on fire, they actually boiled him and fupped off the broth: which being known, enquiry was made for the barbarous actors of this tragedy ; and being apprehended were put to death, fo $\int$ Tering condign punifhment for this horrid villainy. And this Earl is not the only the bat perfon who hath given forth an inconfiderate fanicies, upon which barbarous and inhuman actions have enfued. Buchanan writeth 1...s to have been about the year :222 in the days of Alexander II. King of Scots; and faith only, "That they having killed the monk who attended him and his fervant, they wounded himfelf, and drawing him to the kitchen, they fet the houfe on fire about him." A little to the weft of this, is the houfe of Screbifter the refidence of the late tihops, where I think their lordfhips had but a mean accommodation; the revenues of the bifhoprick here are anong the fmalleft in Scotland, which they report this came to pafs, one of the bithops at the reformation fold the chureh's revenues far below their value [fome fay at thirteen milling Scots per boll,] to the Larl, knowing that but for a fhort tine he could enjoy the fame.

There is a hill in the parifl of Wick called Stony-Fill, the reafon of which denomination is faid to be this ; in the days of William King of Scots 1199, as Buchatan hath it, there was one Harald Earl of Orkney and Caithnets, who being offended at the bilhop, as having initnuated fomething to the King againft him, apprehended the bifhop, cutting out his tongue and putting out his cyes, which being reprefented to the King, he fent his forces into Caithnefs, and having defeated the Earl in feveral engagements, the Earl flying was purfued, and being apprehended, his eyes were firf put out, and then he
was hanged, and all his male children were emafculated upon this hill, which ever fince hath been called Stony-hill.

They told us, there are feveral high great ftones fet up through the country and that ordinarily on hills, about which are the rubbilh of other ftones, which have lerved for fome end there, and probably have been places of Pagan worfhip, as we obferved upon Orkney in the parifh of Bower, as we palled, we law an artificial mount ditched about of a fatll circumference, it is like for the fane purpofe. They have likewife the tradition of fome Piets houfes, which have been here of old, the rubbilh whereof is yet to be feen in the parifh of Latheran, as a genteman well acquainted with the country did inform me.

In the parih of latheran we faw the foundation of a houfe iaid to be laid by a baftard fon of the Farl of Cailhnefs, but never periected: it is sunded upon a riming ground nigh to the fea, where there is a fair profpect of Murray, where it is reported the gentleman had his miftrefs, who intended to build it there, that fo fhe might have a view of the houfe from Murray, and he at the houle might fee Murray.

Dunnot Head flretching out into Pightland-Firth. is about a mile in breadth, and feven miles in circumference, in it are feveral lochs, and fome good pafture for cattle, but no inhabitants; in it are to be had good mill-ftones, and it is thought there is a leadmine there. In feveral places in the parifh of Dumnot there will no rats live, and if earth be brought out thence to other places molefted by them, they will be quickly gone.

The Ord which divideth Caithnefs from Sutherland, is a high mountain, as the name Ord, which in Irifh fignifieth an height, doth imply; down which our way from Caithnefs to Sutherland doth lie, the road is but narrow, and the defcent fteep, and if any flumble thereupon, they are in hazard of falling down a precipice into the lea at the bottom of the rock, which is very terrible to behold, but who pafs it, for the more fecurity ufe to lead their horfes to the foot of the hill, which is about a fhort mile in length ; and no other way there is from Sutherland to Caithnefs, or from Caithnefs to Sutherland but this, exzept we go twelve miles about, but it might be made broader and fater with fmall expence.

It is obferved in Caithnefs as an infallible fign almof when they fee a mift or cloud lying down upon the foot of the hills, that then a drought will follow; but if fuch a milt or cloud be on top thereof, they thence certainly conclude there will be rain that day.

In the parifh of Halkirk there is - loch [as there are feveral lochs in the country], within which loch are the ruins of an old houfe built, they fay, by robbers, that they might be the more fafe and fecure from the fears of being apprehended. That which is molt ubfervable concerning this houfe, is, that there is not one foot of more ground, than what is within the circumference of the foundation, and upon which it flundeth, hence either the water of the loch hath wathed away the prominent rock, if there hath been any through walting time, or if there was no part of the rock without the circumferet.ce of the fuondation, it is wonderful to confider, how fo nigh to the water the foundation hath been got laid, the water about the houfe being of a confiderabie depth, and the extreme parts of the rock upon which the foundation flandeth, not to give way and fail under the weight of the building, which thofe who have feen this houfe, are furprized at. Upon the loch they have boats which come clofe to the walls of the houle, for the taking of fowls of divers kinds, as maws, herons, \&e. feveral thoufands of which do fruquent it, having their neth in the ruinous walls.

## A TOUR IN IRELAND;

# with <br> GENERAL ORSERVATIONS ON THE PRESENT STATE OF THAT KINGDOM: 

MADE IN<br>TIIE YEARS 1776,1777 , and 1778 ,<br>AND DROUGIIT DOWN TO THE END OF $\mathbf{t} \boldsymbol{7} 79$.<br>BrARTHUR YOUNG, ESQ. F.R.S.

Hunorary Member of the Societies of Dublin, York, and Manchelter; the (Esomical Society of Berne ; the Palatine Academy of Agriculture at Manheim; and the P'hyfical Society at Zurich *.

JUNE 19, 1776, arrived at Holyhead, after an inflructive journcy through a part of England and Wales I had not feen before. Found the packet, the Claremont, Captain Taylor, would fail very foon. After a tedious paffage of twenty-two hours, landed on the twentieth, in the morning, at Dunlary, four miles from Dublin, a city which much exceeded my expectation; the public buildings are magnificent, very many of the Itreets regularly laid out, and exceedingly well built. The front of the parlia-ment-houfe is grand, though not fo light as a more open finifhing of the roof would have made it. The apartments are facious, elegant, and convenient, much beyond that heap of confufion at Weftminfter, fo inferior to the magnificence to be looked for in the feat of empire. I was fo fortunate as to arrive juft in time to fee Lord Harcourt, with the ufual ceremonies, prorogue the parliament. Trinity college is a beautiful building, and a numerous fociety; the library is a very fine room, and well filled. The new exchange will be another edifice to do honour to Ireland; it is elegant, cott forty thoufand pounds, but deferves a better fituation. From every thing I faw, I was fruck with all thofe appearances of wealth which the capital of a thriving community may be fuppofed to exhibit. Happy if I find through the country in diffufed profperity the right fource of this fplendor! 'The common computation of inhabitants 200,000 , but I Mould fuppofe exaggerated: others gueffed the number 140 or 150,000 .

June 21, introduced by Colonel Burton to the Lord Lieutenant, who was pleafed to enter into converfation with me on my intended journey, made many remarks on the agriculture of feveral Irifh coumsies, and fhewed himfelf to be an excellent farmer, particularly in draining. Viewed the Duke of Leinfter's houfe, which is a very large ftone edifice, the front fimple but elegant, the pediment light, there are feveral good rooms; but a circumllance univalled is the court, which is lpacious and magnificent, the opening behind the houfe is alfo beantiful. In the evening to the Rotundi, a circular room, ninety feet diameter, an imitation of Ranelagh, provided with a band of mufic.

The barracks are a valt building, raifed in a plain thile, of many divifions, the principal front is of an immenfe length : they contain every convenience for ten regiments.

June 23. Lord Charlemont's houfe in Dublin is equally clegant and convenient, the opartments large, handfome, and well difpofed, containing fome good pictures, parti-

[^315]cularly one by Rembrandt, of Judas throwing the money on the floor, with a frong exprefion of guilt and remorfe; the whole group fine. In the fame room is a portrait of Ceffar Borgia, by Titian. The library is a moft elegant apartment of about forty by thirty, and of fuch a height as to form a pleafing proportion, the light is well managed, coming in from the cove of the ceiling, and has an exceeding good effect ; at one end is a pretty anti-room, with a fine copy of the Venus de Medicis, and at the other two finall rooms, one a cabinet of pictures and antiquities, the other medals. In the collection alfo of Robert Fitzgerald, Efq., in Merion-fquare, are feveral pieces which very well deferve a traveller's attention; it was the beft I faw in Dublin. Before I quit that city 1 obferve, on the houfes in general, that what they call their two.foomed ones are good and convenient. Mr. Latouche's, in Stephen's Green, 1 was gewn as a model of this fort, and I found it well contrived, and finifhed clegantly. Drove to Lord Charlemont's villa at Marino, near the city, where his.iordfhip has formed a pleafing lawn, margined in the higher part ty a well-planted thriving thrubbery, and on a rifing ground a banqueting-room, which ranks very high among the mof beautiful edifices I have any where feen; it has much elegance, lightnefs, and effect, and commands a fine profpect ; the rifing ground on which it fands flopes off to an agreeable acconif unyment of wood, beyond which on one fide is Dublin harbour, which here bas the appearance of a noble river crowded with thips moving to and from the capital. On the other fide is a Thore fpotted with white buildings, and beyond it the hills of Wicklow, prefenting an outline extremely various. The other part of the view (it would be more perfeet if the city was planted out) is varied, in fome places nothing but wood, in others breaks of profpect. The lawn, which is extenfive, is new grafs, and appears to be excellently laid down, the herbage a fine crop of white clover (trifolium repens), trefoil, rib-grafs (plantage lanceolata), and other good plants. Returned to Dublin, and made inquiries into other points, the prices of provifions, \&ce. (for which fee the tables at the end of the book). The expences of a tamily in proportion to thofe of London are, as five to eight.

Having the year following lived more than two months in Dublin, I am able to fpeak to a few points, which as a mere traveller I could not have done. The information I before received of the prices of living is correct. Fifh and poultry are plentiful and very cheap. Good lodgings almoft as dear as they are in London; though we were well accummodated (dirt excepted) for two guineas and an half a week. All the lower ranks in this city have no idea of Englifh cleanlinefs, either in apartments, perfons, or cookery. There is a very good foceety in Dublin in a parliament winter: a great round of dinners and parties; and balls and fuppers every night in the week, fome of which are very elegant; but you almoft every where meet a company much too numerous for the fize of the apartments. Iney have two affemblies on the plan of thofe of London, in Fithamble-freet, and at the Rotunda; and two gentemen's clubs, Anthry's and Daly's, very well regulated: I heard fome anecdotes of deep play at the latter, though never to the excefs common at London. An ill judged and unfuccefsful attempt was made to eftablifh the Italian opera, which exifted but with feareely any life for this one winer"; of courfe they could rife no higher than a contic one. La Buona Figliuola, la lirafcatana, and il Gctofo in Cimento, were repeatedly performed, or rather murdered, except the parts of Seftini. The houfe was generally empty, and miferably cold. So much knowledge of the flate of a country is gained by hearing the debates of a parliament, that I otien frequested the gallery of the Houte of Commons. Since Mr. Flood has teen tilenced with the viece-treafurerfhip of Ireland, Mr. Daly, Mr. Grattan, Sir William Uborn, and the prime ferjeant Burgh, are reckoned high among the Irifh
orators. I heard many very eloquent (peechesp but I cannot fay they fruck me like the exertion of the abilities of Irifhmen in the Englifh Houfe of Commons, owing perhaps to the reflection both on the feaker and auditor, that the attorney-general of England, with a dafh of his pen, can reverfe, alter, or entirely do away the matured refult of all the eloquence, and all the abilities of this whole affembly. Before I conclude with Dublin I Thall only remark, that walking in the ftreets there, from the narrownefs and populoufnefs of the principal thoroughfares, as well as from the dirt and wretchednefs of the canaille, is a moft uneafy and difgufting exercife.

June 24, left Dublin and palfed through the Phamix park, a very pleafing ground, at the bottom of which, to the left, the Liffey forms a variety of landfcapes: this is the moft beautiful environ of Dublin. Take the road to Luttrell's-town through a various fcenery on the banks of the river. That domain is a confiderable one in extent, being above four hundred acres within the wall, Irih meafure; in the front of the houfe is a fine lawn bounded by rich woods, through which are many ridings, four miles in extent. From the road towards the houfe they lead through a very fine glen, by the fide of a fream falling over a rocky bed, through the dark woods, with great variety on the fides of fteep flopes, at the bottom of which the Liffyy is either heard or feen indifinctly ; thefe woods are of great extent, and fo near the capital, form a retirement exceedingly beautiful. Lord Irnham and Colonel Luttrel have brought in the affiftance of agriculture to add to the beauties of the place, they have kept a part of the lands in cultivation in order to lay them down the better to grafs; one hundred and fifty acres have been done, and above two hundred acres molt effertually drained in the covered manner filled with ftones. Thefe works are well executed. The drains are alfo made under the roads in all wet places, with lateral fhort ones to take off the water inftead of leaving it, as is common, to foak againft the caufeway, which is an excellent method. Great ufe has been made of lime-Itone gravel in the improvements, the effect of which is fo confiderable, that in feveral fpots where it was laid on ten years ago, the fuperiority of the grafs is now fimilar to what one would expect from a frefh dunging.

Leaving Luttrel's town I went to St. Wolfan's, which Lord Harcourt had been fo obliging as to defire I would make my quarters, from whence to view to the right or left.

June 25, to Mr. Clement's, at Killadoon, who has lately built an excellent houfe, and planted much about it, with the fatisfaction of finding that all his trees thrive well; I remarked the beech and larch feemed to get beyond the refl. He is alfo a good farmer.

June 26, breakfafted with Colonel Marlay, at Cellbridge, found he had practifed hufbandry with much fuccefs, and given great attention to it from the pase of 1763 , which put a period to a gallant feene of fervice in Germany; walked through his grounds, which I found in general very well cultivated; his fences excellent; his ditches five by fix, and feven by fix; the banks well made, and planted with quicks; the borders dug away, covered with lime till perfectly flacked, then mixed with dung and carried into the fieldo ; a practice which Mr. Marlay has found of very great benefit.

Viewed lucan, the feat of Agmonditham Veley, Efq. on the banks of the Liffey; the houfe is rebuilding, but the wood on the river, with walks through it, is exceedingly beamiful. The character of the place is that of a fequettered fhade. Diftant views are every where thut out, and the objects all correfpond pertectly with the impreffion they were defigned to raife: it is a walk on the banks of the river, chiefly under a variety of fine wood, which riles on varied flopes, in fome parts gentle, in others fteep; fpreading here and there into cool meadows, on the oppofite fhore, rich banks of wood or thrubby
ground. The walk is perfealy fequeftered, and has that melancholy floom which thould ever dwell in furch a place. 'The river is of a character perfectly luited to the relt of the fcencry, in fome places breaking over rocks, in other filent, unter the thick thade of lpreading wood. Leaving lucan, the next place is Leixlip, a fine oue, on the river, with a tall, "hich in a wet fealon is confiderable. Then St. Wolltan's, belonging to the Dean of Derry, a beauiful villa, which is allo on the river; the groumls gay and open, though not without the advantage of much wood, difpofed with judgnent. A winding llunbbery quits the river, and is made to lead through fome dreffed ground that is presty and chearlul.

Mr. Co...olly's, at Cafte-town, to which all travellers refort, is the finct houfe in Irelansl, and not exceeded by many in Fingland; it is a large handfome edifice, fituated in the middle of an extenfive lawn, which is quite furrounded with fine plamations difpofed to the belt advanage : to the north thefe unite into very large woods, through which many winding walks lead, with the convenience of feveral ormamented feats, roous, \&ic. On the other fide of the houfe, upon the river, is a cottage, with a lhrubbery, prettily laid out; the houfe commands an extenfive view, bounded by the Wick. low mountiins. It confifts of feveral noble aparments. On the firlt floor is a beautiful gallery, eighty feet long, elegantly fitted up.

June 27, left Lord Harcuort's, and having received an invitation from the Duke of Leinller, paffed through Mr. Conolly's grounds to his Grace's feat at Cartown; the park ranks among the finelt in Ireland. It is a valt lawn, which waves over gentle hills, furrounded by plantations of great extent, and which break and divide in places fo as to give much variety. A large but gentle vale winds through the whole, in the bottom of which a fimall tream has been enlarged into a fine river, which throws a chearfulnefs through molt of the feenes: over it a bandfume ftome.bridge. Theres is a great variety on the banks of this vale; part of it confil's of mill and gentle flopes, part lleep banks of thick wood; in another phace they are formed into a large flurubbery, very elegantly laid out, and dreffed in the higheft order, with a cotlage, the feenery about which is uncommonly pleafing: and fartler on this vale takes a ftronger character, having a rocky bank on one fide, and the p flopes fattered irregularly, with wood on the other. On one of the mofl rifing gromads in the park is a tower. from the top of which the whole feenery is beheld; the park fireads on every fide in fine theets of lawn, kept in the higheft order by eleven hunded theep, frattered over with rich plantations, and bounded by a large margin of wool, through which is a riding.

Irom hence took the road to Summerhill, the feat of the Right ILon. H. L. Rowley: the country is chearful and rich; and if the Irilh calins contmue like what I have hitherto feen, I hill not hefitate to pronomee thair inhabitants as well off as moit Einglifh cottagers. They are buile of mud walis eighteen in hes or twe feet thick, and well thatched, which are far wamer than the thin clay wills in fingland. Here are fow cottars without a cow, and fome of them two. A bully full invaria ly of potatoes, and generaily turf for fuct trom a bog. It is true they have no always chimeys to thair cabins, the door ferving for that and window too: if their eyes are not affected with the fitoke, it may be an advantage in warmblh. Every cottage fiwarms with poultry, and molt of then have piss.

Went in the evening to I.ord Mornington's at langan, who is making many improvements, whinh be thewed me: his plantations are escontive, and he has formeda large water, having five or fix illands much varied, and promontories of hish land Gloot fo far into it as to torm almolt diftant lakes: the effict pleafing. There are abose a hundred acres under water, and his Lordflip has planed a comiderable addition $t$.) it. Returned to Summerrill.

June 20th, left it, taking the roat to Slaine, the country very pleafiant all the way; much of it on the banks of the Boyne, variegated with fome woots, phanted hedgerous, and gentle hills: the cabbins contime much the fame, ite fane plonty of pou'try, pigs, and cons. The cattle in the roal have thinir fore legs all tied togther with llraw to keep the mi from breaking into the fields; even fheep, and pigs, and goats are all in the fane bondage.

Lord Conymehan's feat, Shaine Cafle, on the Boyne, is one of me moft beautiful places I have feen; the grombls are very bold and various, rifing around the ca de in no've hills or beantiful incquatia's of firface, with an outline of flourifhing planamons. Un ler the cafte flows the Boyne, in a reach broken by illands, with a very fite fhore of rock on one fide, and wood on the other. Though the lower plantaions are ridings, which look upon feveral beautiful feones formed by the river, and take in the dittant country, exhibiting the mobleft visws of waving Cultinald hills, with the callle finely fituated in the midft of the planted domain, through which the Boyne winds its Leautio ful courfe.

Under Mr. Lambert's houfe, on the fame river, is a moft romantic and beautifulfpot; rocks on the fide, rifing in peculiar forms very bollly; the other Heep wood, the river bending fhort betneen them like a landilocked bafon.

Lord Conyngham's keeping up Slaine Cafte, and fpending great fums, though he rarely refides there, is an indance of maguificence not otten met wit!, while, it is fo common for abfentees to drain the kingdom of every filling they can, to contrary a conduct ought to be held in the eltimation which it juftly deferves.

June zoth, rode out to view the country and fome imprownents in the neshbourhood: the principal of which are thofe of Lord Chief Baro. : Foter, which I faw from Glafton bill, in the road from Slaine to Inudalk.

In converfation with Lord Longford I mide many inquiries concerning the flate of the lower claffes, and found that in fome refpects they were in good circumitances, in others indifferent; they have, generally fpaking, fuch plen'y of potatoes as always to command a bellyful; they have flax enough for all their linen, molt of them have a cow, and fome two, and fin wool enough for their cloaths; all a pig, and numbers of poultry, and in general ine complete family of cows, calves, hogs, poultry, and chilJren pig together in the cabin; fuel they have in the womolt plen'y; great numbers of familis are alfo fupported by the neigbouring lakes, which abound prodigioully with fifh: a chi'd with a packthread and a crooked pin wifl catch perch enough in an hour for the family to live on the whole day, and his Lordh:ip has feen five hundred children fifhing at the fame time, there being no tenacioulinefs in the proprictors of the lands about a right to the filh; befides pierch, there is phes upards of five feet long, beem, tench, trout of ten pounds, and as red as fathon, and fine eds; all thefe are favourable circumftances, and are very conficicuous in the numerous and nealthy families anong them.

Riverfe the medal : they are ill cloath $\times$, and make a wretched appearance, and what is worfe, are much oppreffed by many who make them pay too dear for keeping a cow, horfe, \&cc. They law a practice alfo of kepping accouts with the labourers, contriving by that means to lut the poor wretches have vary litile cafle for their year's work. This is a great opproflu", firmers and gendemen keeping accounts with the poor is a cruel abufe: fo many ta, swork for a cabin; fo many for a potatoe garden; fo many for keeping a horte, and fi, many for a cow, are clar accounts which a pour man can underftand well, but fariher it cught never to gon; and when he has worked out what he has of this fort, the reft of his work ought punctually to be paid him every Satur-
day night. Another circumftance mentioned was the exceflive practice they have in general of pilfering. They feal every thing they can lay their hands on, and I hould remark, that this is an account which has been very generally given me: all forts of iron hinges, chains, locks, keys, \&c. ; gates will be cut in pieces, and conveyed away in many places as faft as built; trees as big as a man's body, and that would require ton men to move, gone in a night. Lord longford has had the new wheels of a car flolen as foon as made. Good ficnes out of a wall will be taken for a fire-hearth, \&c. though a breach is made in get at them. In thort, every thing, and even fuch as are apparently of no ufe to them; nor is it eafy to catch them, for they never carry their itolen goods home, but to fome bog-hole. Turnips are ftolen by car loads, and two acres of wheat pluckt off in a might. In fhort, their piltering and fealing is a perfeet nuilance! How far it is cwing to the oppreflion of laws amed folely at the religion of thefe people, how far to the conduct of the gentlemen and farmers, and how far to the mi:chievous difpofition of the people themfelves, it is impofible for a paffing traveller to afcertain. I am apt to believe that a better fyftem of law and management would have good effect.: They are much worfe treated than the poor in lingland, are talked to in more opprobrious terms, and otherwife very much opprefied.
Left Packenham-hall.
Two or three miles from I.ord I.ongford's in the way to Mullingar the road leads up a mountain, and commands an exceeding tine view of Lech Derrevaragh, a noble water eight miles long, and from two miles to half a mile over; a vaft reach of it, like a magnificent river, opens as you rife the hill. Afterwards I paffed under the primcipal mountain, which rifes abruptly from the lake into the boldelt outline imaginable; the water there is very beautiful, filling up the fteep vale formed by this and the oppofite hills.

## Reached Mullingar.

It was one of the fair days. I faw many cows and beafts, and more horfes, with fome wool: the cattle were of the fame breed that I had generally feen in coming through the country.

July 5, left Mullingar, which is a dirty ugly town, and taking the road to Tulla. more, ftopped at Lord Belvidere's, with which place I was as much fruck as with any I had ever feen. The houfe is perched on the crown of a very beauiful little hill, half furrounded with others, variegated and melting into one another. It is one of the moft fingular places that is any where to be feen, and fpreading to the eye a beautiful lawn of undulating ground margined with wood. Single trees are fcattered in fome places, and clumps in others; the general effect fo pleafing, that were there nothing further, the place would be beautiful, but the canvas is admirably filled. Lake Ennel, many miles in leugth, and two or three broad, flows beneath the windows. It is fpotted with iflets, a promontory of rock fringed with trees fhoots into it, and the whole is bounded by diflant hills. Greater and more magnificent feencs are often met with, but no where a more beauiful or a more fingular one.

From Mullingar to Tulteface I found rents in general at twenty flillings an acre, with much relet at thirty fhillings, yet all the crops except bere were very bad, and full of weeds. About the latter named place the farms are generally from one hundred to three hundred acres; and their cuarfe, 1. Fallow. 2. Bere. 3. Oats. 4. Oats. 5. Oats. Great quantities of potatoes all the way, crops from forty to eighty barrels.

The road before it comes to Tullamore leads through a part of the bog of Allen, which feems here extenfive, and would make a noble tract of meadow. The way the road was made over it was fimply to cut a drain on each fide, and then lay on the gravel, which,
which, as faft as it was laid and fpread, bore the cars: along the edges is fine white clover.

In converfation upon the fubject of a union with Great Britain, 1 was informed that nothing was fo unpopular in Ircland as fuch an idea; and that the great objection to it was increafing the number of abfentees. When it was in agitation, twenty peers and fixty commoners were talked of to fit in the Britifh parliament, which would be the refident of eighty of the beft eftates in Ireland. Going every ycar to England would, by degrees, make them refidents; they would educate their children there, and in time become mere abfentees : becoming fo they would be unpopular, others would be elected, who, treading in the fame fteps, would yield the place ftill to others; and thus, by degrees, a vaft portion of the kingdom now refident would be made abfentees; which would, they think, be fo great a drain to Ireland, that a free trade would not repay it.

I think the idea is erroneous, were it only for one circumftance, the kingdoin would lofe, according to this reafoning, an idle race; of country gentlemen, and in exchange their parts would fill with hhips and commerce, and all the confequences of commerce; an exchange that never yet proved difadvantageous to any country.

Viewed Mount Juliet, Lord Carrick's feat, which is beautifully fituated on a fine declivity on the banks of the Nore, commanding fome extenfive plantations that fpread over the hills, which rife in a various manner on the other fide of the river: a knole of lawn rifes among them with artificial ruins upon it, but the fituation is not in unifon with the idea of a ruin, very rarely placed to effect, unlefs in retired and melan. choly fpots.

The river is a very fine one, and has a good accompaniment of well grown wood. From the cottage a more varied fcene is viewed, chearing and pleafing; and from the tent in the farther plantation a yet gayer one, which looks down on feveral bends of the river.

July 11, left Kilfaine : Mr. Bufhe accompanied me to Woodftock, the feat of Sir W. Fownes. From Thomaftown hither is the fineft ride I have yet had in Ireland. The road leaving Thomaftown leads on the eaft fide of the river, through fome beautiful copfe woods, which before they were cut mult have had a moft noble effect, with the river Nore winding at the bottom; the country then opens fomewhat, and you pafs moft of the way for fix or feven miles to Innifteague, on a declivity fhelving down to the river, which takes a varied winding courfe, fometimes lively, breaking over a rocky bottom, at others fill and deep under the gloom of fome fine woods, which hang down the fides of fteep hills. Narrow flips of meadow of a beautiful verdure in fome places form the fhore, and unite with cultivated fields that fpread over the adjoining hills, reaching almof the mountain tops : thefe are large and bold, and give in general to the fcenes features of great magnificence. Paffed Sir John Hafler's on the oppofite fide of the river, finely fituated, and Mr. Nicholfon's farm on this fide, who has very extenfive copfes which line the river. Coming in fight of Sir W. Fownes's, the fcenery is friking, the road mounts the fide of the hill, and commands the river at the bottom of the declivity, with groups of trees prettily fcattered about, and the little borough of Innefteague in a moft picturefque fituation, the whole bounded by mountains. Crofs the bridge, and going through the town, take a path that leads to a fmall building in the woods, called Mount Sandford; it is at the top of a rocky declivity almoft perpendicular, but with brufh-wood growing from the rocks. At the bottom is the river, which comes from the right from behind a very bold hanging wood, that feens to unite with the hill on the oppofite flore: at this pafs the river fills the vale, but it widens by degrees, and prefents various reaches, intermixed with little tufts of trees,
the bridge we paffed over is half hid. Innifteague is nixed with them, and its buildings backed by a larger woor, give variety to the feene. Oppofite to the point of view there are fome pretty inclofures, fringed with wood, and a line of cultivated mountain fides, with their bare tops limit the whole.

Taking my leave of Mr. Buthe, I followed the road to Rofs. Paffed Woodfock, of which there is a very fine view from the top of one of the hills, the houfe in the centre of a Iloping wood of five hundred Englifh acres, and hanging in one noble fhade to the river, which flows at the bottom of a winding glen. From the fame hill in front it is feen in a winding courfe for many miles through a great extent of inclofures, bounded by mountains. As I advanced the views of the river Nore were very fine, till I came to Rofs, where from the hill before you go down to the ferry is a noble fcene of the Barrow, a vaft river flowing through bold fhores, in fome places trees on the bank half obfcure it, in others it opens in large reaches, the effect equally grand and beautiful. Ships failing up to the town, which is built on the fide of a hill to the water's edge, enliven the fcene not a little. The water is very deep and the navigation fecure, fo that flips of feven hundred tons may come up to the town; but thefe noble harbours on the coaft of Ireland are only melancholy capabilities of commerce: it is languid and trifling. ' There are only four or five brigs and floops that belong to the place.

Having now paffed through a confiderable extent of country, in which the white boys were common, and committed many outrages, I fhall here review the intelligence I received coneerning them throughout the county of Kilkenny. I made many inquiries into the origin of thofe dillurbances, and found that no fuch thing as a :eveller or white boy was heard of till 1760 , which was long after the landing of Thurot, or the intended expedition of M. Conflans. That no foreign coin was ever feen among them, though reports to the contrary were circulated; and in all the evidence that was taken during ten or twelve years, in which time there appeared a variety of informers, none was ever taken, whofe teftimony could be relied on, that ever proved any foreign interpofition. Thofe very few who attempted to favour it, were of the moft infamous and perjured characters. All the reft whofe inter ti it was to make the difoovery, if they had known it, and who concealed nothing alfe, pictended to no fuch knowledge. No forcign money appeared, no arms of foreign conftruction, no prefumptive proof whatever of fuch a conncetion. They began in Tipperary, and were owing to fome inclofures of commons, which they threw down, levelling the ditcies, and were firf known by the name of levellers. After that, they begun with the tytheproctors, (who are men that hire tythes of the rectors, ) and thefe proctors either fcrewed the cottars up to the utmoft thilling, or re-lct the tythes to fuch as did it. It was a common practice with then to go in parties about the county, fivearing many to be true to them, and forcing them to join by menaces, which they very often carried into execution. At laft, they fet up to be general redreffers of grievances, punithed all obnoxious perfons who advancel the value of lands, or hired farms over their heads; and, having taken the adminiftration of juftice into their hands, were not very exact in the diftribution of it. Forced maflers to releafe their apirentices, carried off the daughters of rich farmers, ravifhed them into marriages, of which four infances $h_{\text {s }}$ ppened in a fortnight. they levied fums of money on the middling and lower farmers in order to fupport their caule, bv paying attornics, \&r. in defeading profecutions againt them; and many of them fubfifted for fome years whout work, fupported by thefe contributions. Sometimes they committed feveral confuderable robberies, breaking into houfes and taking the muney, under pretence of redrelfing grievances. In the courle of thefe outrages
they burnt feveral houfes, and deftroyed the whole fubftance of men.obnoxious to them. The barlaritics they committed were fhocking. One of their ufual punihments (and by no means the moft fevere) was taking people out of their beds, carrying them naked in winter on horfe-back for fome dillance, and burying them up to their chin in a hole filled with briars, not forgetting to cut off their ears. In this manner the evil exifted for cight or ten years, during which time the gendemen of the country took fome meafures to quell them. Many of the magittrates were active in apprehending them; but the want of evidence prevented punifhments for many of thofe who even fuffered by them had no fpirit to profecute. The gentlemen of the country had frequent expeditions to difcover them in arms; but their intellizence was fo uncommonly good by their influence over the common people, that not one party that ever went out in queft of them was fuccefsful. Government offered large rewards for informations, which brought a few every year to the gallows, without any radical cure for the evil. The reafon why it was not more effective was the neceflity of any perfon that gave evidence againft them quitting their houfes and country, or remaining expofed to their refentment. At laft their violence arofe to a height which brought on their fuppreffion. The popifh inhabitants of Ballyragget, fix miles from Kilkenny, were the firft of the lower people who dared openly to affociate againft them; they threatened defruction to the town, gave notice that they would attack it, were as good as their word, came two hund:ed ferong, drew up before a houfe in which were fifteen armed men, and fired in at the windows; the fifteen men handled their arms fo well, that in a few rounds they killed forty or fifty. They fled immediately, and ever after left Ballyragget in peace: indeed they have never been refilled at all without fhewing a great ;want of both fpirit and difcipline. It fhould however be obferved, that they had but very few arms, thele in bad order, and no cartuidges. Soon after this they attacked the houfe of Mr. Power in Tipperary, the hiftory of which is well known. His murder firirited up the gentlemen to exert themfelves in fuppreffing the evil, efpecially in raifing fubfcriptions to give private rewards to whocver would give evidence or infermation concerning them. The private diftribution had much more effect than larger fums which required a public declaration; and government giving rewards to thole who refifted ther, without having previoully promifed it, had likewife fome effect. Laws were paffed for punifhing all who affembled, and (what may have a great effect) for recompenfing, at the expence of the county or barony, all perfons who fuffered by their outrages. In confequence of this general exertion, above twent, wel capitally convited, and mott of them executed; and the goals of this and the three neighbouring counties, Crrlow, Tipperary, and Queen's-county, have many in them whofe trials are put off till next ailizes, and againtt whom fufficient evidence for conviction, it is fuppofed, will appear. Since this all has been quiet, and no outrages have been committed: but before l quit the fubject, it is proper to remark that what coincided very much to abate the evil, was the fall in the price of lands, which has taken place lately. This is confiderasle, and has much leffened the evil of hiring farms over the heads of one another; perhaps alfo the tythe-proctors have not been quite fo fevere in their extortions: but this cbfervation is by no means gencral ; for in many places tythes yet continue to be levied, with all thofe circumfances which originally raifed the evil.

July $15^{\text {th }}$, leaving Courtown, took the Arklow road; paffed a finely wooded park of Mr. Rams, and a various country with fome good corn in it. Flat lands by the coaft let very high, and mountain at fix fhillings or feven flillings an acre, and fome at eight fhillings, or ten faillings. Paffed to Wicklow, pretily fituated on the fea, ind
from Newrybridge walked to fee Mr. Tye's, which is a neat farm well wooded, with a river running through the fields.

Reached in the evening Mount Kennedy, the feat of Ceneral Cunninghame, who fortunately proved to me an inftructor as affiduous as he is able. He is in the midft of a country alinoft his own, for he has 10,000 lrih acres here. His domain, and the grounds about it, are very beautiful, not a level can ' : fcen, every fyot is tolfed about in a variety of hill and dale. In the middle of the lavn is one of the greateft natural curiofities in the kingdom; an immenfe arbutus tree unfortunately blown down, but yet vegetating, one branch, which parts from the body near the ground, and afterwards into many large branches, is fix feet two inches in circumference. The general buried part of the ftem as it laid, and it is from feveral branches throwing out fine young Shoots: it is a moft venerable remnant. Killarney, the region of the arbutus, boafts of no fuch tree as this.

July 15th, rode in the morning to Drum; a large extent of mountains and wood, on the General's eftate. It is a very noble fcenery; a vaft rocky glen; one fide bare rocks to an immenfe height, hanging in a thoufand whimfical, yet frightful forms, with valt fragments tumbled from them, and lying in romantic confufion; the other a fine mountain fide covered with fhrubby wood. This wild pafs leads to the botton of an amphitheatre of nountain, which exiibits a very noble fcenery. To the right is an immenfe fweep of mountain completely wooded; taken as a fingle object it is a moft magnificent cne, but its forms are picturefque in the higheft degree; great projections of hill, with glens behind all wooded, have a noble effec. Every feature of the whole view is great, and unites to form a fcene of natural magnificence. From hence a riding is cut through the ha: ging wood, which rifes to a central fpot, where the general has cleared away the rubbifh from under the wood, and made a beautiful waving lawn with many oaks and hollies fcattered about it ; here he has built a cottage, a pretty whin:fical oval room, from the windows of which are three views, one of diftant rich lands opening to the fea, one upon a great mountain, and a third upon a part of the lawn. It is well placed, and forms upon the whole a moft agreeable retreat.

July 17th. Toek my leave of General Cunninghame, and went through the glen of the downs in my way to Powerfcourt. The glen is a pals between two vaft ridges of mountains covered with wood, which have a very noble effect, the vale is no wider than to admit the road, a fmall gurgiing river almoft by its fide, and narrow nips of rocky and Mrubby ground which parts them: in the front all efcape feems denied by an immenfe conical mountain which rifes out of the glen, and feems to fill it up. The fcenery is of a moft magnificert character. On the top of the rioze to the right Mr. La Touche has a banqueting room. Paffing from this fublime fcene, the road leads through chearfil grounds all under corn, rifing and falling to the eye, and then to a vale of charming verdure broken into inclofures, and bounded by two rocky mountains, diftant darker meensains filling up the fcene in front: this whole ride is interenting, for withm a mile and a half of Tinnyhinct, (the inn to which I was directed,) you come to a delicious view on thie right, a fnall vale opening to the fea, bounded by mountains, whofe dark chath foms a perfect contrant to the extreme beauty and lively verdure of the lower fcene, confifting of gently fwelling lawns rifing from each other, with groups of trees betiveen, and the whole fo prettily fcattered with white farms, as to add every idea of chearfulnefs. Kept on towards Powerfcourt, which prefently came in view from the edge of a declivity. You look full upon the houfe, which appears to be in the molt beaviful fituation in the world, on the fide of a mountain, half way between its bare top, and an isriguous vale at its foot. In front, and fpreading among woods on either fide, is a

Iawn whofe furface is bcautifully varied in gentle declivities, hanging to a winding river.

Lowering the hill the fcenery is yet more agreeable, the nearinclofures are margined with trees, through whofe open branches are feen whole fields of the moft lively verdure. The trees gather into groups, and the lawn fwells into gentle inequalities, while the river winding beneath. renders the whole truly pleafing.

Breakfafted at the inn at 'linnyhinch, and then drove to the park to fee the water-fall: The park itfelf is fine; you enter it between two valt maffes of mountain, covered with wood, forming a vale fcattered with trees, through which flows a river on a broken rocky channel : you follow this vale till it is loft in a mof unconmon manner, the ridges of mountain clofing, form one great amphitheatre of wood, from the top of which, at the height of many hundred feet, burfts the water from a rock, and tumbling down the fide of a very large one, forms a feene fingularly beautiful. At the bottons is a fpot of velvet turf, from which rifes a clump of oaks, and through their ftems, branches and leaves, the falling water is feen as a back ground, with an effcet more picturefque than can be well imagined; thefe few trees, and this little lawn, give the finithing to the feene. The water falls behind fome large fragments of rock, and turns to the left, down a ftony channel, under the fhade of a wood.

Returning to Tinnyhinch, I went to Innifkerry, and gained by this detour in my return to go to the Dargle, a beautiful view which! hould otherwife have loft; the road runs on the edge of a declivity, from whence there is a moft pleafing profpect-of the river's courfe through the vale, and the wood of Powerfcourt, which here appear in large mafles of dark fhade, the whole bounded by mountains. Turr to the left into the private road that leads to the Dargle, and prefently gives a fpecimen of what is to be expested by a romantic glen of wood, where the high lands almoft lock into each other, and leave fcarce a paffage for the river at botton, which rages, as if with difficulty forcing its way. It is topped by a high mountain, and in front you catch a beautiful plat of inclofures bounded by the fea. Enter the Dargle, which is the name of a glen near a mile long. Come prefently to one of the fineft ranges of wood I have any where feen : : it is a narrow glen or vale formed by the fides of two oppofite mountains; the whole thickly fpread with oak wood, at the bottom (and the depth is immenfe), it is narrowed to the mere channel of the river, which rather tumbles from rock to rock than runs. The extent of wood that hangs to the eye in every direction is great, the depth of the precipice on which you ftand immenfe, which with the roar of the water at bottom forms a fcene truly interefting. In lefs than a quarter of a mile, the road paffing through the wood leads to another point of view to the right. It is the crown of a valt projecting rock, from which you look down a pri.ipice abfolutely perpendicula:, and many hundred feet deep upon the torrent at the botrom, which finds its noify vay over large fragments of rock. The point of view is a great projection of the mountain on this fide, anfwered by a concave of the oppofite, fo that you command the glen both to the right and left : it exhibits on both, immenfe fheets of foreft, which have a moft magnificent appearance. Fovond the wood, to the right, are fome inclofures hanging on the Pde of a hill, crowned by a mountair. I knew not how to leave fo interefting a fpot, the impreflions raifed by it are ftrong. The folemnity of fich in exient of wood unbroken by any intervening objects, and the whole hanging o... deciivities is alone great ; but to this the addition of a conftant roar of falling water, either quite hid, or fo far below as to be feen but obfcurely united to make thole impreffions 1 monger. No contraditory emotions are raifed; no ill judged iemples appear to enlives a rene that is gloony rather than gay. Falling or moving water is a lively object ; but this being
obfcure the noife operates differently. Colluwing the road a little further, there is anoiher bold rocky projection from which alio there is a double view to the right and left. - In front fo immenfe a fweep of hanging wood, that a nobler feene can hardly be imagined : the river as before, at the bottom of the precipice, which is fo fteep and the depth fo great, as to be quite fearful to look down. This horrid precipice, the pointed bleak mountains in view, whih the roar of the water, all confpire to raife gre great ens:tion of the fublime. You advance feare 'ly twenty yards before a prety fecre opens in the left, a diflant landfeape of inclofures, with a river winding between the folts to the fea. Pafling to the right, frefh fenes of wood appear; half way to the botor, one different from the preceding is feen; you are aimolt inclefed it wood, at loch to the right through fome low oaks on the oppoite bank of wood, with an edi; ;ing of trees through which the firy is feen, which added to an uncommon elegance in the out-line of the hill, has a moft pleafiag effect. Winding down to a thatched bench on a rocky point, yo: look upon an uncommon fcenc. Immediately beneath is a valt chufin in the rock, which feems torn afunder, to let the torent shrough that ames sumbling over a rocky wed far fank into a channel embofomed in wood. Above is a tange of yfonmy obfeure wools, whici half over fhatow it, and rifing to a valt height, extilude every jef. To the fif the wates rolls away over broken rocks: afcole truly romantic. Followed the path: it ic: me of water'sedge, at the botom of the glen, where is a new fene, in whici not a foygle tcomfunce hurts the principal character. In a hollow formed of rock and wond (every object ce:cluded but thofe and water) the torrent breaks forth from fragmente if rock, and tuables through the chafin, rocks bulging over it, as if ready to fall ino the chamel, and top the impetuous water. The flade is fo thick as to exclede the heavens, all is retired and gloomy, a browa horror breathing over the whois. it is a foot for melancholy to mufe in.

Return to the carriage, and quit the Dargle, which upon the whole is a very fingular place, different from all I have feen in England, and I think preferable to moft. Crofs a murmuring ftream clear as chryftal, and rifing a hill, leok bazk on a pleafing landfcape oi itclofures, which vaving over hills, end in nountains of a very noble character. Reach Dublin.

Juij 20. To Drogheda, a well built town, attive in trade, the Boyne bringing fhips to it. If was inarket day, and I found the quantity of corn, \&cc. and the number of people afieabled very great; few country narkets in England more thronged. The Rev. Mr. Niefbit, to whom recommended, abfient, which was a great lofs to me, as I had feveral enquiries which remained unfatisfied.

To the field o: battle on the Boyne. The view of the fcene from a rifing ground which looks down upon it is exceedingly beautiful, being one of the compleatef landfcapes I have feen. It is a vale, loofing itfelf in front between bold declivities, above which are !ome thick woods, and diftant country. Through the vale the river winds and forms an illand, the point of which is iufted with trees in the prettiell manner imaginable; on the other fide a rich fcenery of wond, among which is Doctor Norris's houfe. To the right on a rifing ground on the banks of the river is the obelik, backe. by a ary bold declivity ; purfued the road till near it, quitted my chaile, and walked to the frot it. It is founded on a rock which rifes boldly from the river. It is a noble pillar and admirably placed. I feated myfclf on the oppofite roct, and indulged the emotions which with a melancholy not unpleafing filled my bofors ".: I I reflected on the confequences that tad fprung from the vittory here obtained. ty was then ariumphant. May the viriucs of r pofterity fecure that prise w! the bravery of
their anceftors won! Peace to the memory of the Prince to whom, whatever might be his failings we owed that day memorable in the annals of Europe!

Returned part of the way, and took the road to Cullen, where the Lord Chief Baron Forter received me in the moft obliging manner, and gave me a varicty of information uncommonly valuable. He has made the greateft improvements I have any where met with. The whole country twenty-two years ago was a wafte fheep walk, covered chiefly with heath, with fome dwarf furze and fern. The cabins and people as miferable as can be conceived; not a proteftant in the country, nor a road paffable for a carriage. In a word, perfectly refembling other mountainous tracts, and the whole yielding a rent of not more than from three fhillings to four fhillings an acre. Mr. Forter could not bear fo barren'a property, and determined to attempt the improvement of an eftate of five thoufand acres till then deemed irreclaimable. He encouraged the tenants by every fpecies of perfuafion and expence, but they had fo ill an opinion of the land that he was forced to begin with two or three thoufand acres in his own hands; he did not, however, turn out the perple, but kept them in to fee, the effects of his operations.

To Dundalk, the view down on this town alfo very beautiful, fivelling hills of a fine verdure, with many rich inclofures backed by a bold outline of mountain that is remarkable. Laid at the Clanbralil Arms, and found it a very good inn. The place, like moft of the Irifh towns 1 have been in, full of new buildings, with every mark of increafing wealth and profperity. A cambrick manufacture was eftablifhed here by parliament, but failed; it was, however, the origin of that more to the north.
July 22. Left Dundalk, took the road through Ravenfdale to Mr. Fortefcue, to whom I had a letter, but unfortunately he was in the South of Ireland. Here I faw many good ftone and flate houfes, and fome bleach greens; and I was much pleafed to fee the inclofures creeping high up the fides of the mountains ftoney as they are. Mr. Fortefcue's fituation is very romantic on the fide of a mountain, with fine wood hanging on every fide, with the lawn beautifully fcattered with trecs fpreading into them, and a pretty river winding through the vale, beautiful in itfelf, but trebly fo on information, that before he fixed there, it was all a wild wafte. Rents in Ravenfdale ten fhillings, mountain land two hillings and fix-pence to five fhillings. Alfo large tracts rented by villages, the cottars dividing it among themfelves, and making the mountain common for their cattle.

Breakfafted at Newry, the globe, another good inn. This town appears exceedingly fiouribhing, and is very well built; yet forty years ago, I was told that there were nothing but mud cabins in it : this great rife has been much owing to the canal to LochNea"h. I crofled it twice, it is indeed a noble work. I was amazed to fee fhips of one hundred and fifty tons and more lying in it, like barges in an Englifh canal. Here is a confiderable trade.

Reached Ardmagh in the evening, and waited on the primate.
July 23. His Grace rode out with me to Ardmagh, and hewed me fome of the noble and fpirited works by which he has perfectly changed the face of the neighbourhood. The buildings ba has erected in feven years, one would fuppofe without previous information, to be the work of an active life. A lift of them will jultify this obक. צatul.

LIe has tiected a very elegant palace, ninety feet by fixty, and forty high, in which an unadores: fimpit ity reig. It is light and pleafing, without the addition of wings or beffer purts, which too frequ ntly wanting a fufficient uniformity with the body of the edifice, are unconnected with it in effect, and divide the attention. I arge and ample offices are conveniently placed behiad a plantation at a fmall dittance: around the
palace is a large lawn, which fpreads on every fide over the hills, and fkirted by young plantations, in one of which is a terrace, which commands a moa beautiful view of cultivated hill and dale. The view from the palace is much improved by the barracks, the fchool, and a new church at a diftance, all which are fo placed as to be exceedingly ornamental to the whole country.

The barracks were erected under his Grace's directions, and form a large and handfome edifice. The fchool is a building of confiderable extent, and admiribly adapted for the purpofe: a more convenient or a better contrived one, is no where to be feen. There are apartments for a mafter, a fchool-roon fifty-fix feet by twenty eight, a large dining room, and fpacious airy dornitories, with every other neceffary, and a lpacous play-ground walled in; the whole forming a handfome front: and attention heing p iid to the refidence of the mafter (the falary is four hundred pounds a year), the fchool flourifhes, and muft prove one of the greatef advantages to the country of any thing that could have been eftablifhed. This edifice entirely at the primate's expence. The church is erected of white flone, and having a tall fpire makes a very agreeable object, in a country where churches and fipires do not abound, at leat fuch as are wor h looking at. Three other churches the primate has alfo built, and done confiderable reparations to the cathedral.

He has been the ineans alfo of crecting a public infirmary, which was built by fubfeription, contributing amply to it himfelf.

A public library he has erected at his own expence, given a large collection of books, and endowed it. The room is excellently adłpted, forty-five feet by twenty-five, and twenty high with a gallery, and apartuents for a librarian.

He has further ornamented the city with a market-houfe and flambles, and been the direct means, by giving leafes upon that condition, of almolt new building the whole place. He found it a nelt of mud cabins, and he will leave it a well built city of fone and flate. I heard it afferted in common converfaion, that his Grace, in thefe noble undertakings, had not expended lefs than thirty thoufand pounds befides what he had been the means of doing, though not directly at his own expence.

In the evening reached Mr. Brownlow's at Lurgan, to whom I am indebted for fome valuable informatom. This gentleman has made very great improvements in his domain: he has a like at the bottom of a flight vale, and around are three walks, at a diftance from each other; the center one is the principal, and extends two miles. It is well conducted for leading to the molt agreeable parts of the grounds, and for commanding views of Loch Neagh, and the dittant country; there are feveral buildings, 2 temple, gre n -houfe, \&c. The moft beautiful feene is from a bench on a gently ivelling hill, which rifes almoft on every fide from the water. The wood, the water, and the green flopes; here unite to form a very pleafing landfcape. Let me obferve one thing much to his honour; he advances his tenants money for all the lime they chufe, and takes payment in eight years with rent.

Upon enquiring concerning the emigrations, I found that in 1772 and 1773, they were at the height; that fome went from this neighbourhood with property, but not many. They were in general poor and unemployed. They find here, that when previfions are very cheap, the poor fpend much of their time in whiky-houfes. All the drapers wifh that catineal was never under one penny a pounl. 'fbough farms are exceedingly divided, yet few of the people raife oatmeal enough to feed themelves; all go to market for fome. The weavers earn by co rfe linens one fhilling a day, by fine one fhilling and four pence, and it is the fame with the fpinners, the finer the yarn the more they earn; but in common a woman earns about three-pence. For corarie linens

## they

 thanthey do not reckon the flax hurt by fanding for feed. Their own flax is much better than the imported.

This country is in general beautiful, but particularly fo about the ftreights that lead into Strangford l.och. From Mr. Savage's door the view has great variety. 'To the left are tracts of hilly grounds, between which the fea appears, and the valt chain of mountains in the Ine of Man diftinctly feen. In front the hills rife in a beautiful outline, and a round hill projects like a promontory into the freight, and under it the town amidft groups of trees; the feene is chearful of itfelf, but rendered doubly fo by the fhips and herring-boats failing in and out. To the rigltt the view is crowned by the mountains of Mourne, which, wherever feen, are of a character peculiarly bold, and even terrific. The thores of the loch behind Mr. Savage's are bold ground, abounding with numerous pleafing landfeapes; the oppofite coaft, confifing of the woods and improvements of Cafte-Ward, is a fine fcencry.

Called at Lord Bangor's at Cafle Ward, to deliver a letter of recommendation, but unfortunately he was on a failing party to England; walked through the woods, \& c. The houle was built by the prefent Lord. It is a very handfome edifice with two principal fronts, but not of the fame architecture, for the one is Gothic, and the other Grecian. From the temple is a fine wooded feene; you look down on a glen of wood, with a winding hill quite covered with it, and which breaks the view of a large bay: over it appears the peninfula of Strangford, which confifts of inclofures and wood. To the right, the bay is bounded by a fine grove, which projects intoit. 1 fhip at anchor added much. The houfe well fituated above feveral rifing woods, the whole feene a fine one. I remarked in Lord Bangor's domains, a fine ficld of turnips, but unhoed. There were fome cabbages alfo.

Belfaft is a very well built town of brick, they having no fone quarry in the neigh. bourhood. The ftreets are broad and ftrait, and the inhabitants, amounting to about fifteen thoufand, make it appear lively and bufy. The public buildings are not numerous or very ftriking, but over the exchange Lord Donneg.t is building an affembly room, fixty feet long, by thirty broad, and twenty-four high; a vervelogant room. A card room adjoining, thirty by twenty-two, and twenty-two high; aroom of the fame fize. His lordfhip is alfo building a new chuch, which is one ut the lighteft and moft pleafing I have any where feen: it is feventy-four by fifty-four, and thirty high to the cornice; the ifles leparated by a double row of columns; nothing can be lighter or more pleafing. The town belongs entirely to his lordflip. Rent of it 2000l. a year. His eftate extends from Drumbridge, near Liburne to Larne, twenty miles in a right line, and is ten broad. His royalties are great, containing the whole of Loch Neagh, which is I fuppofe the greateft of any fubject in Europe. His eel fifhery at Tome, and Port-New, on the river Ban, lets for 500 l . a year; and all the fihherics are his to the leap at Colraine. The eftate is fuppofed to be $31,0 c o l$. a year, the greateft at prefent in Ireland. Innifhoen in Donnegal is his, and is $11,000 \mathrm{l}$. of it. In Antrim, Lord Antrim's is the moft extenive property, being four baronics, and," andred and feventythree thoufand acres. The rent 80001 . a year, but re-let for 64,000 . a year, by tenants that have perpetuities, perhaps the crueleft infance in the world of careleffnefs for the interefts of pofterity. The prefent Lord's father granted thofe leafes.

I was informed that Mr. Ifanc, near Belfaft, had four acres, Irifh meatiure, of frong clay land not broken up for many years, which being amply manured with lime rubbifh end fea fhells, and fallowed, was fown with wheat, and yield 871. gs. at gs. to 12 s . per Alfo that Mr. Whitley, of Ballindery, near Lifburne, a tenant of Lord Hertforc as rarely any wheat that does not yield him eighteen pounds an acre. The tillage of the neighbourhood for ten miles round is doubled in a few years. Shall cxport vor. 14.
one thoufand tons of corn this year from Belfalt, moft of it to the Wen Indies, particu. larly oats.

Auguft 1, to Arthur Buntin's, Elq. near Belfaft ; the fuil a fiff clay ; lets at old rents 10s., new one 18s., the town parks of that place 305.400 os . ten miles round it 10 os . to 20 ., average $1_{3}$ s. $A$ great deal of flax fown, every countryman having a little, always on potatoe land, and one pow ; the; ufually fow each family a buthel of feed. Thofe who have no land pay $\cdots$. mers $20 s$. rent for the land a bufhel of feed fows, and always on potatoc innl.' Litey plant many more potatoss than they eat, to fupply the market at Belfan; manure for them with all their dung, and fome of them mix dung, earth, and lime, and this is found to do better. There is much alabafter near the town, which is ufad for Atucco phailter ; fells from 11. 1s. to 25 s. a ton.

In my way to Antrim, viewed the bleach-green of Mr. Thomas Sinclair ; it is the
 and that watering on the grafs was quite left off. inir. sincl ir himielf was not at home, or I hould probably have gained fone intelligesce that might have been uleful.

Crofled the momains by the new road to Antrin, and found them to the fumnits to confift of exc: ding good loan, and fuch as would improve into good meadow. It is all thrown to $\cdots$. linte adjoining farms, with very little or any rent paid for it. They make no other ufe of it than turning their cows on. lity they do not improve; a work more profitable than any they could undertake. All the way to Antrim lands let at an average at 3 s . The linen manufacture fpreads over the whole country, confequently the farms are very fmall, being nothing but patches for the convenience of weavers.

From Antrim to Shanes Caftic the road runs at the end of Loch Neagh, commanding a noble vietw of it; of fuch in extent that the cye can fee no land over it. It appears like a perfect fea, and the fhore is broken fand-banks, which look fo much like it, that one can hardly believe the water to be frelh. Upon my arrival at the caltle, 1 was moft agreeably faluted with four men hoeing a ficld of turuips round it, as a. preparation for grafs. Thefe were the firft turnip-hoers I have fectin in Ireland, and I was more pleafed than if I had feen four emperors.

The cafle is beautifully finated o.l the lake, the windows :mmanding a very noble view of it ; and this has the finer eftee, as the woods are contiderable, and form a fine accompaniment to this noble inland fed.

Rode from Mr. Iefly's to view the Giant's Cauleway. It is certainly a very great euriofity, as an object for fpeculation upon the manner of its formation ; whether it owes its origin to fre, and is a fpecies of lava, or to crythalization, or to whatever caule, is a point that has employed thentrention of men much more able to decide upon it than 1 am ; and has been fo often treared, that nothing I could fay could be new. When two bits of thele bafaltes are rubbed together quick, they emir a confiderable feent like burnt leather. The feenery of the Caufeway. nor of the adjacent monntains, is very magnificent, though the clius are bold; but cir a confide ble difance rlace is a ftrong difolition in the rocks to run into pentagonal cylinders, and evenat bridge, by Mr. Lefy's, is a rock in which the fame difpofition is plainly vifble. I believe the Caufeway would have fruck me mon if I a ad nut fern the prints of Staffa.

Returned to Leily-hil; and Auguft 5th rted for Cokraine. 'There the Right Hon. Mr. Jackfon affited me with the great, olite cis in procmus; the imelligence I I wifhed about the falmon-fifhery, which is the greatelt in the kingdon, and viewed both fifheries hove and below the town, very pliatantly fituated on the river Ban. The falmon spawn in all the rivers that run into the Ban about the beginning of Auguit, and as foon as they have done fiwim to the fea, where they ftay ull Junuary, when they begin
to return to the frefh water, and continue doing it till Auguf, in which voyage they are taken; the nets are fet in the middle of January, but by act of parliament no nets nor weirs cann be kept down after the 12 th of Augult. Sll the fifheries on the river Ban let at Goool. a year. From the fea to the rock above Coleraine, where the weirs are built, belongs to the London companies; the greatelt part of the reff to l.ord Donnegal. The ed fifheries let at 1000 l a year, and the falmon fifferies at Coleraine 1000 . The eels mate periodical voyages, as the falmon, but inftead of fpawning in the frefh water, they so to the fea to fpawn, and the young fry return againf the ftream; to euable them to do which with greater eafe at the leap, fraw ropes are hung in the water for them; when they return to fea they are taken : many of them weigh nine or ten pounds. The young falmon are called grawls, and grow at a rate which I hould fuppofe farce any filh commonly known equals; for within the year fome of them will come to fixtern and eighteen pounds, but in general ten or twelve pounds: fuch as cfcape the firl! year's fifhery are falmon; and at two years old will generally weigh twenty to twenly.five pounds. 'This year's fificry has proved the greateft that ever was known, and they had the largeft hawl, taking $\mathbf{4} 42$ falmon at one drag of one net. In the jear $175^{\circ}$ they had 882 , which was the next greateft hawi. I had the pleafure of feering 370 drawn in at once. They have this year taken four hundrel tons of fifh; two hundred fold frefl at a penny and three-halfpence a pound, and two hundred falted, at 181 . and 201 . per ton, which are fent to London, Spain, and Italy. The filhery emplovs eighty men, and the expences in general calculated to equal the rent.

The linen manufacture is very general about Coleraine, coarfe ten hundred linen. It is carried to Dublin in cars, one hundred and ten miles, at 5 s. per cwt. in fummer, and 7s. 6d. in winter.

From Limmavadly to Derry there is very little uncultivated land. Within four milcs of the latter, rents are from 12s. to 20s.; mountains paid for but in the grofs. Reached Inerry at night, and waited two hours in the dark before the ferry-boat came over for me.

Augult 7 , in the morning, went to the bifhop's palace to leave my letters of recommendation; for I was informed of my misfortune in his being out of the kingdom. Ife was upon a voyare to Stalfa, and had fent home fome of the fones of which it confills; they appeared perfectly to refemble in fhape, colour, and fuell, thofe of the Giant's Couleway.
Auguft 8, left Derry, and took the road by Raphoe to the Rev. Mr. Golding's, at Clonleigh, who favoured me with much valuable information. The viev of Derry, at the dillance of a mile or two, is the moft picturefque of any place I have feen; it feenis to be built on an iffand of bold land rifing from the river, which fipeads into a fine bafon at the foot of the town; the adjacent country hilly ; the feene wants nothing but wood to make it a perfect-landfcape.
Auguft 11, Ifft Mount Charles, and pafing through Donnegal, took the road to Ballyifhannon ; came prefently to feveral beautiful tandicapes, fwelling hills, cultivated, with the bay flowing up among them: they want nothing but more wood, and are beautiful without it. Afterwards likewife to the left they rife in various outlines, and clic away infenfibly into one another. When the road leads to a full view of the bay of Donnegal, thefe finiling fpots, above which the proud mountains rear their heads, are numerous, the hillocks of almolt regular circular forms ; they are very pleafing, from form, verdure, and the water breaking in their vales.

Before I got to Ballyfhamon, remarked a bleach-green, which indicates weaving in the neighbourhood. Viewed the falmon-leap at Ballyhannon, which is let for 4001 .
a year.
a year. The feenery of it is very beautilul; it is a fine fall, and the coaft or 'iec river very bold, confilting of perpendicular rocks, with grafs of a beatififul verdure to the very edge : it projects in listle promontories, which grow longer as they approach the fea, and open to give a fine view of the ocean. Befow the fall in the middle of the river is a rocky inand, on which is a curing houfe, inftead of the turret of a ruined cafte, for which it feems formed. 'The town pretily fituated on the rifing ground on each fide of the river. - To Sir James Caldwell's; croffing the bridge, ftopped for a view of the river, which is a very fine one, and was delighted to fee the falmon jump, to mean unufual fight: the water was perfectly alive wilh them. Rifing the hill, look back on the town; the fituation beautiful; the river prefents a noble view. Come to Belleek, a little village, with one of the finelt water-falls I remember any where to have feen; viewed it from the bridge. The river in a very brond theet comes from behind lome wood, and lreaks over a bed of rocks, not perpendicular, but flelving in various direaions, and foams away under the arches; after which it grows more filent, and gives a beautiful bend under a rock, crowned by a fine bank of wood. Reached Caftle Caldwell at night, where Sir James Caldwell received me with a politenei's and cordiality that will make me long remember it with pleafure.

Auguft 15, to Belleife, the charming feat of the Earl of Rofs. It is an ifland in Loch Earne, of two hundred Irihh acres, every part of it hill, dale, and gentle declivities: it has a great deal of wood, much of which is old, and forms both deep fhades and open chearful groves. The trees hang on the llopes, and confequently flew them. felves to the beft advantage. All this is exccediagly pretty, but it is rendered trebly fo by the fituation: a reach of the li ke paffes before the houle, which is fituated near the banks anong fome fine woods, which give both beauty and flelter. This theet of water, which is three miles over, is bounded in front by an illand of thick wood, and by a bold. circular hill, which is his lordhip's deer park; this hill is backed by a confiderable mountain. To the right are four or five fine clumps of Jark wood; fo many iflands which rife boldly from the lake, the water breaks in ftraits between them, and forms a fcene extremely picturefque. On the other fide the lake flretches behind wood, in a ftreight which forms Belleifle. Lord Rofs has made walks round the ifland, from which there is a confiderable variety of profpect. A temple is built on a gentle hill, commanding the view of the wooded iflands above-mentioned; but the moft pleafing profpect of them is coming out from the groto: they appear in an uncommon beauty; two feem to join, and the water which flows between takes the appearance of a fine bay, projecting deep into a dark wood: nothing can be more beautiful. The park hill rifes above them, and the whole is backed with mountains. The hoine feene at your feet alfo is pretty; a lawn fcattered with trees that forms the margin of the lake, clofing gradually in a thick wood of tall trees, above the tops of which is a diftant view of Cultiegh mountain, which is there feen in its proudeft folemnity.

They plough all with horfes three or four in a plough, and all abreaft. Here let it be remarked, that they very commoniy plough and harrow with their horfes drawing by the tail : it is done every feafon. Nothing can put them befide this; and they infift that take a horfe tired in traces, and put him to work by the tail, he will draw better:quite fref again. Indignant reader! this is no jeft of mine, but cruel, Alubborn, barbarous truth. It is fo all over Cavan.

At Clonells, near Cafle-rea, lives O'Conner, the direct defcendant of Roderick O Connor, who was King of Connaught fix or feven hundred years ago; there is a monument of him in Rofcommon church, with his feeptre, \&c. I was told as a certainty, that this family were here long before the coming of the Milefians. 'The pof-
feflions, for fanily havi and O'Brie fents of cat involved in Another lavin; he li a year, will cafe with hi rough, Mr. drefs was c ther's fon Mr. O'Har: the remains dants of the

Dined at where I fop half over,
feflions, formerly fo great, are reduced to three or four hundred pounds a year, the fanily having fared in the revolutions of fo many ages, much worle than the O'Niel': and O'Brien's. The cominon people pay him the greateft refpect, and fend him prefents of cattle, \&c. upon various oceafions. They confider him as the prince of a people involved in one common ruin.

Another great family in Connaught is Macdermot, who calls himfelf Prince of Coolavin; he lives at Coolavin, in Sligo, and though he has not above one hundred pounds a year, will not admit lis children to fit down in his prefence. This was certainly the cale with his father, and fome aflured me even wilh the prefent chief. Lord Kingroorough, Mr. Ponfonby, Mr. O•Hara, Mr. Sandford, \&e. cane to fee him, and his addrefs was curious: "O'Hara! you are welcome; Sandford, I an glad to fee your mother's fon (his mother was an O'Brien) : as to the reft of ye, come in as ye can." Mr. O'Hara, of Nymphsfield, is in poffeflion of a confiderable eftate in Sligo, which is the remains of great poffeffions they had in that country: he is one of the few defcendants of the Milefian race.

To Lord Kingfon's, to whom I had a letrer, but unfortunately for me he was at Spaw. Walked down to Longford Hill, to view the lake; it is one of the moft delicious feenes I ever beheld, a lake of five miles by four, which fills the bottom of a gentle valley almoft of a circular form, bounded very boldly by the mountains. Thofe to the left rife in a nohle flope; they lower rather in front, and let in a view of Strand mountain, near Sligo, above twenty miles off. 'To the right, you look over a fmall part of a bog to a large extent of cultivated hill, with the blue mountains beyond. Were this. little picee of bog planted, the view would be more complete; the hill on which you. fland has a foliage of well-grown trees, which form the fouthern fhore. You look down on fix illands, all wooded, and on a fine promontory to the left, which hoots far into the lake. Nothing can be more pleafing than their uncommon variety; the firft is frall, (Rock ifland) tufted with trees, under the flade of which is an ancient building, once the refidence of Macdermot. The next a mixture of lawn and wood; the third, which appears to join this, is of a dar:er flade, yet not to thick but you can fre the bright lawn under the trees. Houfe illand is one fine thick wood, which adr: ${ }^{-}$. iot a gleam of light, a contraft to the filver bofom of the lake. Church ifland is at " diftance; this is alfo a clump, and rifes boldly. Rook ifland is of wood; ; the centre, and fhews a lawn with a building on it. It is impoflible to inna?: pleafing and chearful fcene. Paffed the chapel to Smithfield Hill, which is ground, quite furrounded with plantations; from hence the view is chang promontory appears very bold, and over its neek you fee another woou moft picturefque fituation. Nothing can be more picturefque than Rock iflanc, it: s:ra overhung with ivy. The other iflands affume frefh and varied outlines, and form upon the whole one of the moft luxuriant feenes I have met with.

The views of the lake and environs are very fine as you go to Boyle; the woods unite: into a large mafs, and contraft the bright theet of water with their dark flades.

The lands about Kington are very fine, a rich, dry, yellow, fandy loam, the fineft foil that I have feen in Ireland, all grafs, and covered with very fine bullocks, cows, and Theep. The farms rife to five hundred acres, and are generally in divifious, parted by ftone walls, for oxen, cows, young catte, and fheep feparate. Some of the lands will carry an ox and a wether per acre; rents 15 s. 1020 s .

Dined at Boyle, and took the road to Ballymoat; croffed an immenfe mountainy boge where I fopped and made enquiries; found that it was ten miles long, and three and a half over, containing thirty-five fquare miles; that lime-fone quarrics were around
and in it, and lime-fone gravel in many places to be found, and ufed in the lands that join it : in addition to this I may add, that there is a great road croffing it; thirty-five miles are twenty-two thoufand tour hundred acres. What an immenfe field of improve. ment! nothing would be eafier than to drain it; valt tracts of land have fuch a fall, that not a drop of water could remain. Thefe tailly bogs are extremely different from any I have feen in England. In the :noors in the north, the hills and mountains are all covered with heath, like the Irifh bogs, but they are of various foils, gravel, fhingle, moor, \&cc., and boggy only in fpots; but the Irifi bog hills are all pure bog to a great depth, without the leaft variation of foil ; and the bog being of a hilly form, is a proof that it is a growing vegetable mafs, and not owing merely to fagnant water. Sir Laurence Dundafs is the prineipal proprictor cithis.

Reached Ballymont in the evening, the fidence of the Hon. Mr. Fitzmaurice, where I expected great pleafure in viewing a manfactory, of which I heard much fince I came to Ireland. He was fo kind as to giv me the tollowing account of it, in the moft liberal namer:
" Twenty years ago the late Lord Shelbu me came to Ballymoat, a wild uncultivated region, without induliry or civility, and the eople all Roman Catholics, without an atom of a manufacture, not even fipinuing. h order to change this itate of things, his Lordihip contracted with people in the north in bring proteltant weavers, and eltablifh a manufafory, as the only means of making the change he wiflod; this was done, bur falling into the hands of rafcals, he loft 50001 . by the bufinefs, with only feventeen proteftant families, and twenty-fix or twenty-feven looms eftablifhed for it. Upon his death, Lady Shelburue w: fhed to carry his fcheme into execution, and to do it, gave much encouragement to Mr. Wakefieh, the great Irifh fachor in London, by granting advantagcous leafes. unter the contract of building and colonizing, by weavers from the north, and carrying on the mamuactory. He found about twenty looms, working upon their own account, and made a confiderable progefs in this for five years, raifing feveral buildings, cottages for the weavers, and was going on as well as the variety of his bufinefs would admit, employing fixty loons. He then died, when a ftand was made to all the works for a year, in which every thing went much to ruin. Lady Shelburne then employed a new manager to carry on the manufacture upon his own accomn, giving hini very profitable grants of lands, to cneourage him to do it with firit. He continued for five years, cmploying fixty looms allo; but his circumftances failing, a freh flop was put to the work.
"Then it was that Mr. Pitzmaurice, in the year 1774, determined to exert himfelf ir puhning on a manufactory, which promifed to be of fuch effential fervice to the whole country. To do this with eifect, he law that it was neceffary to take it entirely into his own hands. He could lend money to the manager to cable him to go on, but that would be at belt hazardous, and eould never do it in the complete manner in which he wifhed to eflablifh it. In this period of conderation, Mr. Fitzmaurice was advifed by his friends never to engage in to complex a butinets as a manufacture, in which he mult of necelity become a merchant; alfo engage in all the hazard, irkfomenefs, \&e. of commerce, fo totally different from his birth, education, ideas, and purfuits; but tired with the inactivity of common life, he det rmined not only to turn anan ${ }^{\text {checturer }}$, but to carry on the bufnefs in the moft fipinted and vigorous manner that was pollible. In the firft place, be took every' me ns of making himbelf a conplete mafter of the bufinefs; he went through various manufactures, enquired into the minutix, and took every meafure to know is to the botom. This he did fo repeatedy, and with fuch
as thorough a mafter of it as an experienced manager; he has wove linen, and done every part of the bufinefs with his own hands. As he determined to have the works complete, he took Mr. Stansfiedd the engincer, fo well known for his improved fawmills, into his pay; he fent him over to Bullymoat, in the winter of 1774, in order to erect the marthinery of a bleach-mill, upon the very bett conftruction; he went to all the great mills in the north of Ireland to infpect them, to remark their deficiencies, that they might be improved in the mills he intended to erect. This kiowledge being gained, the work was bergu, and as water was neerflary, a great bafon was formed by a dam acrofs a valley, by which mems thity-four acres were floated, to ferve as a rcfrivoir for ary fealons to fecure plenty at all tines."

Augult 3o, rode to Rofshill, four miles off, a beadland that projeets into the bay or Newport, from which there is a moit beautiful view of the bay on both fides; I counted thirty iflands very ditinctly, all of them cultivated uader corn and potatoes, or. paltured by cartle. At a dillance Clara rilies in a very boll and pieturefque ftyle; on the left Crow Patrick, and to the right other mountains. It is a view that wants nothing but wood.

September 5, to Irumoland, the fat of Sir Lucius O'Brien, in the county of Clare, a gentleman who had been repeatedy affideous to procure me every fort of infornation. 1 lhould remark, as I have now left Galway, that that county, from entering it in the road to Tuam tull leaving it to-day, has been, upon the whole, inferior to moft of the parts I have travelled in Ireland in point of beauty: there are not mountains of a maguitude to make the view flriking. It is perfectly free from woods, and even trees, except about gentlemen's houfes, nor has it a variety in its face. I do not, however, fpeak without exception; I palfed fome tracts which are cheerful. Drummoland.has a pleafing varicty of grounds about the houfe; it ftands on a hill gently rifing from a lake of twenty-four acres, in the middle of a noble wood of oak, afh, poplar, \&c. thre beautiful hills rife abore, over which the plantations fpread in a varied manner; and thefe hills command very fine views of the great rivers tergus and Shannon at their juntion, beang each of them a league wide.

Thre is a view of the Shannon from Limerick to Foynes Illand, which is thirty miles, with all its bays, bends, illands, and fettile thores. It is from one to three miles broad, a moft noble river, deferving regal navies for its ornament, or, what are better, flets of merchantmen, the cheerful ligns of far extended commerec, inflead of a few mificrable filling b ais, the only canvals that twelled upon the feene: but the want of commerce in the ports is the misiontune not the fault of Irsland. Thanks for the deficiency to that illiberal fipitit of trading jealondy, which has at times athuated and difgraced fo many nations. The profpect has a nuble outline in the bold mountains of Tipperary, Cork, Limerick, and kirry. The whole view mugnificent.

At the foot of this hill is tise cafle of Bumatty, a very large enfice, the feat of the O'Briens, princes of Thomond; it ftands on the bank of a river, waich falls into the Slannon near it. About this cafte and that of Rofmanader, the land is the beft in the county of Clare; it is worth 11. 13s. an acre, and fats a bullock per acre in fummer, befides winter feed.

10 Linerick, through a chearful country, on the banks of the river, in a vale furromoded by dithant mountains. That city is very fincly fituated, party on at illand formed by he shannon. the new part, called Newrown Perv, trom Mr. Dery the fpaker, whe owns a confiderable part of the city, and reprefonts it in parkannont, is well built. The houss are new ones, of brick, large and m right lines. lien is a con munication with the rett of the town by a handlome bridge of three large arthes,
crectud
crected at Mr. Pery's expence. Here are docks, quays, and a cuftom-houfe, which is a good building, faces the river, and on the oppofite banks is a large quadrangular one, the houfe of induttry. This part of Limerick is very chearful and agreeable, and carries all the marks of a flourifhing place.

The exports of this port are beef, pork, butter, hides, and rape.feed. The imports are rum, fugar, timber, tobacco, wines, coals, bark, falt, \&cc. The cuftoms and excilt, about fixteen years ago, amounted to 16,000l., at prefent 32,0001 . and rather more four or five years ago.

Whole revenue - 1751 —f 16,000
1775 - 51000

Price of Provifions.

Wheat, is. id. a fone. Ba.ley and oats, $5 \frac{3}{2}$ d. 106 d .
Scotch coals, 18 s. , Whiteliaven, 20 s.
A boat ioad of turf, 20 tons, 45 .
Salmon, three halfpence.
Trout, 2 d . very fine, per lb .
Eels, ad. a pound.
Ratbits, 8 d . a couple.
Wild ducks, 20d. to 2 s. a couple.
Land fells at twenty years' purchafe. Rents were at the higheft in 1765 , fell fince, but in four years have fallea 8 s . to ics. an acre about Limerick. They are at a fland at prefent, owing to the high price of próvifions from pafture. The number of people in Literick are computed at thirty two thoufand ; it is exceedingly populous for the fize, the chieff freet quite crowded; many fedan chairs in town, and fome hackney chaifes. Affemblies the year round, in a new affembly-houfe built for the purpofe, and plays and concerts common.

Upon the whole, Limerick muft be a very gay place, but when the ufual number of troops are in town much more fo. To fhew the general expences of living I was told, of a perfon's keeping a carriage, four horfes, three men, thiree maids, a good table, a wife, three childret, and a nurfe, and all for 500 l . a year :

Oyfters, 4d. to is. a 100.
Lobtters, 1 s. to 1 s .6 d ., if good.
$A b$

A barrel of beef or pork, 200lb. weight. Veffels of 400 tons can come up with fpring tides, which rife fourteen feet.

September 9, to Caltle Oliver; various country, not fo rich to appearance as the corcaffes, being fed bare: much hilly fheep-walk, and for a confiderable way a full third of it potatoes and.corn: no fign of depopulation. Juft before I got to the hills a field of ragwort (finefio jacoboca) buried the cows. The firt hill of Cafle Oliver interefting. After rifing a mo:ntain to high that no one could think of any houfe, you come in view of a vale, quite filled with fine woods, fields margined with trees, and hedge plantations climbing up the mountains. Having engaged myfelf to Mr. Oliver, to return from Killarney by his houfe, as he was confined to Limerick by the aflizes, I flall omit faying any thing of it at prefent.

September 16, to Cove by water, from Mr. Trent's quay. The view of Lota is charming; a fine rifing lawn from the water, with noble freading woods reaching on each fide; the houfe a very pleafing front, with lawn fhooting inio the woods. The river forms a creek between two hills, one lota, the other opening to another hill of inclofures well wooded. As the boat leaves the fhore nothing can be finer than the view behind us; the back woods of Lota, the houfe and lawn, and the high bold inclofures towards Cork, form the fineft fhore imaginable, leading to Cork, the city appearing in full view, Dunkettle wooded inclofures, a fine fweep of hill, joining Mr. Hoare's at Factory-hill, whofe woods have a beautiful effect. Dunkettle-houfe àlmoft Joft in a wood. As we advance, the woods of Lota and Dunkettle unite in one fine mafs. The fheet of water, the rifing lawns, the houfe in the moft beautiful fituation imaginable, with more woods above it than lawns below it, the weft fhore of Loch Mahon, a very fine rifing hill cut into inclofures, but without wood, land-locked on every fide with bigh lands, fcattered with inclofures, woods, feats, \&c. with every chearful circumfance of lively commerce, has altogether a great effect. Advancing to Paffage the fhores are various, and the fenery culivened by fourfcore fail of large 'hips; the little port of Paflage at the water's edge, with the hills rifing boldly above it. The channel narrows between the great ifland and the hills of Paflage. The fhores bold, and the hhips fcattered about them, with the inclofures hanging behind the mafls and yards, picturefque. Paffing the ftreights a new bafon of the harbour opens, furrounded with high lands. Monk's-town-cafle on the hill to the right, and the grounds of Ballybricken, a beautiful intermixed feene of wood and lawn. The high fhore of the harbour's mouth opens gradually. The whole fcene is land-locked. The firft view of Hawl-bowling-ifland and Spike-illand, high rocky lands, with the channel opening to Cove, where are a flect of hips at anchor, and Roftellan, Lord Inchiquin's houfe, backed with hills, a feenery that wants nothing but the accompaniment of wood. The view of Ballybricken changes; it now aypears to be unfortunately cut into right lines. Arrived at the hip at Cove, in the evening returned, leaving Mr. Jefferys and family on board for a voyage to Havre, in their way to l'aris.

Dunkettle is one of the molt beautiful places I have feen in Ireland. It is a hill of fome hundred acres broken into a great variety of ground by gentle declivities, with every where an un lulating outline, and the whole varied by a confiderable quantity of wrod, which in fome places is thick enough to take the appearance of clofe groves, in others fpreads into feattered thickets and a variety of fingle groups. 'This hill, or rather clufter of hills, is furrounded on one fide by a reach of Cork harbour, over which it looks in the mof advantageous manner; and on the other by an irriguous vale, through
 can unite to form pleafing landicapes for the views from Dunkettle grounds; in fome
places narrow glens, the bottoms of which are quite filled with water, and the fleep banks covered with thick woods that fpread a decp fhade; in others the vale opens to form the fcite of a pretty chearful village, overhung by hill and wood: here the fhore rifes gracually into large inclofures, which fpread over the hills, ftretching beyond each other; and there the vale melts again into a milder variety of fields. A hill thus fituated, and confiting in itlelf of fo much variety of furface, mult neceffarily command many pleafing views ; to enjoy thefe to the better advantage, Mr. Trent (than whom no one has a better taft', both to difcover and defcribe the beauties of natural fcenes, is making a walk around the whole, which is to bend to the inequalities of the ground, fo as to take the principal poins in view. The whole is fo beautiful, that if I was to make the regular detour, the defcription might be tro minute ; but there are fome points which gave me fo much pleafire that I know not how to avoid recommending to others that travel this way to taife the fame fatisfaction: from the upper part of the orchard you look down a part of the river, where it opens into a regular bafon, one corner ftretching up to Cork, loft behind the hill of Lota, the lawn of which breaks on the fweling hills among the woods; the houfe obfcured, and therefore feeming a part of your home fcene; the lofing the river behind the beautiful projection of Lota, is more pleafing than can be expreffed. The ether reach, leading to the harbour's mouth, is half hidden by the trees, which margin the foot of the hill on which you fand; in front a noble range of cultivated hills, the inclofures broken by flight fpots of wood, and prettily varied with houfes, without being fo crowded as to take off the rural effect. The feene is not only beautiful in thofe common circumflances which form a landfeape, but is alive with the chear ${ }^{r}$. Inefs of thips and boats perpetually moving. Upon the whole, it is one of the moft luxuriant profpects I have any where feen. Leaving the orchard, pafs on the brow of a hill which forms the bank of the river of Glannire, commanding the oppofite woods of Lota in all their beanty. Rife to the top of the high hill which joins the deer-park, and exhibits a fcene equally extenfive and beautiful; you look down on a vale which winds almof around at your feet, fininhing to the left in Cork river, which here takes the appearance of a lake, bounded by wood and hills, and funk in the botton of a vale, in a ftyle which painting cannot imitate: the oppofite hills of Lota, wood, and hawn, feem formed as objects for this point of view: at your feet a hill rifes out of the vale, with higher ones around it, the margins fanttered wood; to the right towards Rivertown, a vale; the whole backed by cultivated hills to Kallahan's field. Milder feenes follow: a bird'seeye view of a fimall vale funk at your feet, through which the river flows; a bridge of feveral arches unites two parts of a beautiful sillage, the meadow grounds of which rife gently, a varied furface of wood and lawn, to the hills of Riverltown, the whole furrounded by delicious fweeps of cultivated hills. 'To the left, a wooded glen rifing from the vale to the horizon, the feenery fequeftered, but pleafing; the oak wood which hangs on the decr-park hill, an addition. Down to the brow of the hill, where it hangs over the $1:$ ver, a picturefque interelting fipot. The inclofures of the oppofite bank hang beautifully to the eye, and the wooded glen winds up the hill. Returning to the houfe I was ronducted to the hill, where the grounds flope off to the river of Cork, which opens to view in molle reaches of a magnitude that fills the eye and the imagimation: a whole country of a character tru.j magnificent, and behind the wiading vale which leads ietwern a feries of hills to Gla mire.

## Pictures at Dinkettle.

A St. Michael, \&xc. the fubject confufed, by Michael Angelo. A St. Francis on wood, a large original of Guido. A St. Cecilia, original of Romanelli. An affumption of the Virgin, by L. Carracci. A quaker's meeting, of above fifty figures, by, Egbert Hemfkerk. A fea view and rock piece, by Vernet. A fmall flagellation, by Sebaftiaa del Piombo. A Madonna and Child, fmall, by Reubens. The crucifixion, many figures in miniature, excellent, though the mafter is unknown. An excellent copy of the famous Danae of Titian, at Monte Cavallo, near Naples, by Cioff of Naples. Another of the Venus of Titian, at the Tribuna in Florence. Another of Venus blinding Cupid, by Titian, at the Palazzo Borghefe in Rome. Another of great merit of the Madonna Della Sedia of Raphael, at the Palazzo Pitti in Florence, by Stirn, a German, lately at Ron :. Another of an holy family, from Raphael, of which there are faid to be three originals, one at the-king's palace in Naples, one in the palais royal in Paris, and the third in the collection of Lord Exeter, lately purchafed at Rome. A portrait of Sir latrick I'rent, by Sir P. Lely. An excellent portruit of a perfon unknown, by Dahl.

September 17, to Caflemartyr, the feat of the Earl of Shannon, one of the inoft diftinguifhed improvers in Ireland ; in whom I found the moft earnefl defire to give me every fpecies of information, with a knowledge and ability which enabled him to do it moft effectually. Paffed through Midulleton, a well-built place, which belongs to the noble Lord to whom it gives title. Caftlemartyr is an old houle, but much added to by the prelent Earl; he has built, befides other rooms, a dining one thirty-two feet long by twenty-two broad, and a drawing one, the beft rooms I have feen in Ireland, a double cube of twenty five fett, bing fifty long, twenty-five broad, and twenty-five high. The grounds about the houfe are very well laid out ; much wood well grown, confiderable lawns, a river made to wiad through them in a beautiful manner, an old caftle fo perfectly covered with ivy as to be a picturelque object. A winding walk leads for a confiderable diftance along the banks of this river, and prefents feveral pleafing landfcapes.
From Roftellan to Lota, the feat of Frederick Rogers, Efq. I had before feen it in the highelt perfection from the water going from Dunkettle to Cove, and from the grounds of Dunkettle. Mrs. Rogers was fo obliging as to thew me the back grounds, which are admirably wooded, and of a fue varied furface.

Gct to Corke in the evening, and waited on the Dean, who received me with the moft flatering attention. Corke is one of the moft populous places I have ever been in; it was market-day, and I conld fcarce drive through the ftreets, they were fo amazingly thronged: on the other days the number is very.great. I hould fuppofe it muft refemble a Dutch town, for there are many canals in the ftreets, with quays before the houfes. 'The beft built part is Morrifon's Ifland, which promifes well; the old part of the town is very clofe and dirtv. As to its commerce, the following particulars $I$ owe to Robert Gordon, Eiq. the furveyor general :

Avcrage of ninctcen $\Upsilon_{\text {ears' }}$ Export, ending Marcl 24, 1773.

Average prices of the nineteen ycars on the cuftom books. All exports on thofe books wir ented at the value of the reign of Clarles II.; but the imports have always 10 per - Ct on the fworn price added to them. Seventy to eighty fail of fhips belong to Corke. Average of thips that entered that port in thofe nineteen years, eight hundred and fevery two per annum. The number of people at Corke muftered by the clergy by hearth-money, and by the number of houfes, payments to miniller, average of the three, fixty-feven thoufand fouls, if taken before the ift of Scptember, after that twenty thoufand increafed. There are feven hundred coopers in the town. Barrels all of oak or beech, all from America: the latter for herrings, now from Gottenburgh. and Norway. The excife of Corke now no more than in Charles the Second's reign. Ridiculous!

Bullocks, 16,000 head, 32,000 barrels; 41,000, hogs; 20,000 barrels. Butter, 22,000 frkins of half a hundred weight each, both increaie this ycar, the whole being

> 240,000 firkins of butter,. $120,0 c 2$ barrels beef.

Export of woollen yarn from Corke, $300,00 c 1$. a year in the Irifh market. No woo: fimugled, or at lealt very litute. The wool comas io Corke, \&c. and is delivered our to combers, who make it into balls. Thele balls are bought up by the French agents at a valt price, and exported; but even this does not anount to $40,00 c \mathrm{l}$. a jear.
Pricis.

Beef, 2 Is. per cwt., never fo high by 2s. 6d.; Pork, दुos., never higher than 18s. 6d: oxing to the army demand. Slanghter dung, 8d. for a horfe load. Country latourer, 6d., about town, icd. Milk, feven pints a penny. Coals, $3^{s}$ s. 8 d . to 5 s . a barrel, fix: of which make a ton. F.ggs, four a penny.

Corke labourers. Cellar ones, twenty thoufind; have is. id. a day, and as much bread, beef, and beer as they can eat and drink, and feven pounds of offals a week

## YOUNGS TOUR IN IRELAND.

for their families. Rent for their houfe, 40s. Mafon and carpenters' labourers 10d. a day. Sailors now 3l. a month and provifions: before the American war 28s. Por. ters and coal-heavers paid by the great. State of the poor people in general incomparably better off than they were twenty years ago. There are imported eighteen thoufand barrels annually of Scotch herrings, at 18s. a barrel. The falt for the beef trade comes from Litbon, St. Ube's, \&xc. The falt for the filh trade from Rochelle : for butter linglifh and Irih.
Particulars of the woollen fabricks of the county of Cork received from a manufacturer. The woollen trade, fcrges and camblets, ratteens, frizes, druggets, and narrow cloths, the laft they make to 10 s . and 12 s . a yard ; if they might export to 8 s . they are very clear that they could get a great trade for the woollen mancfactures of Corke; the wool comes from Galway and Rofcommon, combed here by combers, who earn 8s. to 10s. a week, into balls of twenty-four ounces, which is fpun into worlteds of twelve fkains to the ball, and expored to Yarmouth for Norwich; the export price; 301 a pack, to 33 l . never before fo high ; average of them 261. to 301 . Some, they work up at home into ferges, fuffs, and camblets; the ferges at 12 d. a yard, thirty-four inches wide; the fluffs fixteen inches, at 18 d ., the camblets at $9 \frac{1}{2} \mathrm{~d}$. to 13 d . ; the fpinners at od. a ball, one in a week; or a ball and half 12 d . a week, and attend the family befides; this is done moft in Waterford and Kerry, particularly near Killarney; the weavers earn is. a day on an average. Full threc-fourths of the wool is exported in yarn, and only one-fourth worth worked up. Half the wool of Ireland is combed: in the county of Corke.

A very great manufacture of ratteens at Carric-on-fure, the bay worfted is for ferges, fhalloons, \&c. Woollen yarn for coarfe cloths, which latter have been loft for foms years, owing to the high price of wool. The bay export has declined fince 1770, which declenfion is owing to the high price of wool.

No wocl fmuggled, not even from Kerry, not a floop's cargo in twenty years, the price too high ; the declenfion has been confiderable. For every eighty-fix packs that are exported, a licence from the Lord Lieutenant, for which 201 . is paid.

Froin the act of the laft feffions of Great l3ritain for exporting woollen goods for the troops in the pay of Ireland, Mr. Abraham Lane, of Corke, eftablifhed a new inanufackure of army cloathing for that purpofe, which is the firft at Corke, and pays 401. a week in labour only. Upon the whole there has been no increafe of woollen manufacture within tweity years Is clearly of opinion that many fabricks might be worked up here much cheaper than in France, of cloths that the French have Wat the Englifh out of; thefe are, particularly, broad-cloths of one yard and half-yard wide, from 3 s . to 6 s . 6d. a yard for the L.evant trade. Frizes which are now lupplied from Careaffone in Languedoc. Frizes, of twenty four to twenty-feven inches, at $10 . \mathrm{d}_{\text {. }}$ to 13 d . a yard. Flamnels, twenty-feven to thirty-fix, from 7d. 10 i4d. Serges of twenty-feven io thirty-fix inches, at 7 d. to 12 d . a yard; thefe would work up the coarfe wool. At Ballynalloe Cair, in July, 200,000l. a year bought in wool. There is a manufactory of knit-Itocking by the common women about Cork, for eight or ten miles around; the yarn from 12 d. to 18 d . a pair, and the worlted, from 16 d . to 22 d . and carn from 12 d . 1018 d . a week. Befides their own confumption, great quasitities are fent to thenorth of Ireland.

All the weavers in the country are confined to towns, have no land, but finail gardens. Bandle or narrow linen, for home confumption, is made in the wettern part of the county. Generally fpeaking, the circumftances of all the manufacturing poor are better than they were twenty years ago. The manufactures have not declined, though
the exportation has, owing to the increaled home confumptions. Bandon was once the the feat of the fuff, camblet, and thag manufacture, but has in feven years declined above three-fourths. Have changed it for the manufacture of coarfe green linens, for the Lǫndon market, from 6d. to gd. a yard, twenty feven inches wide; but the number of manufachures in general much leffened.

Rode to the mouth of Cork harbour; the grounds about it are all finc, bold, and varied, but fo bare of trees, that there is not a fingle view but what pains one in the want of wood. Rents of the tract fouth of the river Caragoline, from 5 s. to 30 s . average, ios. Not one man in five has a cow, but gencrally from one to four acres, upon which they have potatoes, and five or fix fheep, which they milk, and fpin their wool. Latour 5 d . in winter, 6d. in fummer; many of them for three months in the year live on potatoes and water, the reft of it they have a good deal of fifh. But it is remarked, at Kinfale, that when jprats are moft plentiful, difeafes are moft common. Rent for a mere cabin 10s. Much paring and burning ; paring twenty-eight men a day, fow wheat on it and then potatoes; get great crops. The foil a fharp foney land; no limeflone fouth of the above river. Manure for potatoes, with fea weed for 26s., which gives good crops, but lafts only one year. Sea land much ufed, no hells in it. Farms rife to two or three hundred acres, but are hired in partnerfhip.

Before I quit the environs of Cork, I nuft remark, that the country on the harbour, I think preferab'e, in many refpects tor a refidence, to any thing I have feen in Ireland. Firt, it is the molt foutherly part of the kingdom. Second, there are very great beauties of profpect. Third, by much the moft amimated, bufy feene of thipping in all Ireland, and confequently, fourih, a ready price for every product. Fifth, great plenty of excellent fifh and wild fowl. Sixth, the neighbourhood of a great city for objects of convenience.

September 25. Took the road to Nedeen, through the wildeft region of mountains that I remember to have feen; it is a dreary, but an interefting road. The various horrid, grotefque, and unufual forms in which the mountains rife. and the rocks bulge; the immenfe beight of fome diftant heads, which rear above all the nearer fcenes, the torrents roaring in the vales, and breaking down the mountain fides, with here and there a wretched cabin, and a fpot of culture yielding furprife to find human beings the inhabitants of fuch a feene of wildnefs, altogether keep the traveller's mind in an agitation and fufpence. Thefe rocks and nrountains are many of them no otherwife improvea le than by planting, for which, however, they are exceedingly well adapted.

Sir John Cetthurft was fo obliging as to fend half a dozen labourers with me, to help my chaife up a mountain fide, of which he gave a formidable account : in truth it deferved it. The road leads directly againft a mountain ridge, and thofe who mate it were fo incredibly tlupid, that they kept the ftrait line up the hill, inf ead of turning afide to the right, to wind around a projection of it. The path of the road is worn by torrents into a channel, which is blocked up in places ty huge fragments, fo that it would be a horrid road on a level; but on a bill fo fteep, that the beft path would be difficult to afcend. it may be fuppofed terrible: the labourers, two pafling flrangers, and my fervant, could with difficulty get the chaife up. It is much to be regretted that the direction of the road is not charged, as all the reft trom Cork to Nedeen is good enough. For a few miles towards he latter place the country is flat on the river Kemmare, much of it gond, and under grafs or corn. Paffed Mr. Orpine's at Ardtilly, and another of the fame name at Killowen.

Needen is a little town, very well fituated, on the noble river Kenmare, where flips of one hundred and fifty tons may come up: there are but three or four good houfes.

Lord Shelburne, to whom the place belongs, has built one for his agent. There is a vale of good land; which is here from a mile and a half to a mile broad; and to the north and fouth, great ridges of mountains faid to be full of mines.

At Nedeen, Lord Shelburne had taken care to have me well informed by his people in that country, which belongs for the greateft part to himfelf, he has above one hundred and fifty tho: ${ }^{\text {and }}$ d Irifh acres in Kerry; the greatelt part of the barony of Glanrought belongs to inm, moft of Dunkerron and Ivragh. The country is all a region of mountains, inclofed by a vale of flat land on the river; the mountains to the fouth come to the water's edge, with but few variations, the principal of which is Ardee, a farm of Lord Shelburne's: to the north of the river, the flat land is one-half to three quarters of a mile broad. The mountains to the fouth reach to Bear-haven, and thofe to the north to Dingle-bay; the foil is extremely various; to the fouth of the river all are fand fones, and the hills loam, ftone, gravel, an.l beg. 'To the north there is a flip of lime-fone land, from Kilgarvon to Cati u-cufh, that is fix miles eaft of Nedeen, and three to the weft, but is not more than a quarter of a mile broad, the reft including the mountains all fand fone. As to its rents, it is very difficult to tell what they are; for land is let by the plough land and gineve, twelve gineves to the plough land; but the laticr denomination is not of any particular quantity: for no two plough lands are the fare: The fize of farms is various, from forty acres to one thoufand, lefs quantitics go with cabins, and fome farms are taken by labourers in partnerilhip.

Soon entered the wildeft and moft romantic country I had any where feen; a region of fteep rocks and mountains, which continued for nine or ten miles, till I came in view of Mucrafs. There is fomething magnificently wild in this Itupendous fcenery, formed to imprefs the mind with a certain fpecies of terror. All this tract has a rude and favage air, but parts of it are ftrikingly interefting; the mountains are bare and rocky, and of a great magnitude; the vales are rocky glens, where a mountain-ltream tumbles along the roughelt bed imaginable, aind receives many torrents, pouring from clefts, half overhung with fhrubby wood; fome of thefe ftreams are feen, an:l the roar of others heard, but hid by valt maffes of rock. Immenfe fragments, torn from the precipices by forms and torrents, are tumbled in the wildeft confufion, and feem to hang rather than reft upon projecting precipices. Upon fome of thele fragments of rock, perfectly detached from the foil, excep in the fide on which they lie, are beds of black turf, with luxuriant crops of heath, \&c. which appeared very curious to me, having no where feen the like; and I obferved vary h in the mountains, much higher than any cultivation is at prefent, on the right $h$ - ud, flat and cleared fpaces of good grafs among the ridges of rock, which had probably been cultivated, and proved that thefe mountains were not incapable from climate of being applied to ureful purpofes.
From one of thefe heights, I looked forward to the lake of Kllarney at a confiserable diffance, and backward to the river K nmare; came in view of a fmall part of the upper lake, footted with feveral iflands, and furrounded by the moft tremendous monntains that can be imagined, of an alpect havage and drendful. From this feene of wild magnificence, I broke at once upon ali the glories of Killamacy; from an elevared point of view I looked down on a confiderable part of the lake, which gave me a fpecimen of what I might expect. The water you command (which, however, is only a part of the lake) appears a bafon of two "t three miles round ; to the left it is inclofed by the momutains you have paffed particularly by the Turk, whole outline is uncom. monly noble, and joins a range of others, that form the moft magnificest fhore in the world : on the other fide is a rifing fenery of cultivated hills, and Lord Kenmare's park and woods; the end of the lake at your feet is formed by the rovt of Mangerton,
on whofe fide the road leads. From hence I looked down on a pretty range of inclofures on the lake, and the woods and lawns of Mucrufs, forming a large promontory of thick wood, fhooting far into isw. The mot ative fancy can fkatch nothing in addici: 1. Illands of wood beyoud feem to join it, and reaches of the lake, breaking partly between, give the moll lively intermixture of water: fix or sen ifies and iilets form an accompaniment, fome are rocky, but with a flight vegetaifu, others contain groups of trees, and the whole thrown into forms, which would furnifh new ideas to a painter. Farther is a chain of wooded iflands, which alfo appear to join the mainland, with an offispring of lefter ones fattered around.

Arrived at Mr. Herbert's at Mucrufs, to whole friendly attention I owed my fucceeding pleafure. There have been fo many deferiptions of killarney writen by gerrthemen who have refided fome time there, and feen it at every fexfon, that for a pafling traveller to attempt the like, would be in vain; for this reaton I fhatl give the mere journal of the remarks I made on the fpot, in the order I viewed the lake.

September 27, walked into Mr. Herbert's beautiful grounds, to Oroch's hill, in the lawn that he has cleared from that profufion of fones which lie under the wall; the feene which this point commends is truly delicious; the houfe is on the edge of the lawn, by a wood which covers the whole peninfula, fringes the flope at your fect, and forms a beautiful fhore to the lake. Tomis and Glena are valt mounainous mafles of incredible magnificence, the outline foft and eafy in its fwells, whereas thofe above the cagle's neft are of fo broken and abrupt an outline, that nothing can be imagined more favage, an afpect horrid and fublime, that gives all the impretlions to be wihhed to allonifh rather than pleafe the mind. The 'Turk exhibits noble featares, and Mangerton's huge body rifes above the whole. The cultivated tracts towards Killarney, form a fhore in contraft to the terrific fcenes I have juft mentioned; the diftant boundary of the lake, a valt ridge of diftant blue mountains towards Dingle. From hence entered the garden, and viewed Mncrufs abbey, one of the moft interelting feenes I ever faw; it is the ruin of a confictrabe abbey, built in Henry the Vith's time, and fo entire, that if it were more fo, thos, the building would be more perfect, the ruin would be lefs pleafing; it is half oficurel the thade of fome venerable afh irees; ivy has given the picturefque circumittance, which that plant alone can confer, while the broken walls and ruined turrets throw over it

> The laf mouruful graces of decay ;
heaps of fculls ani bones fcattered about, with nettles, briars, and weeds fprouting in tufs from the loofe ttones, all unite to raile thofe melancholy impreffions, which are the merit of fuch feencs, and which can fcarcely any where be felt more conpletely. The cloilters form a difinal area, in the center of which grows the molt prodigious yew tree 1 ever beheld, in one great flem, two feet diameter, ind fourteen feet high, from whence a valt head of branches fpreads on every fide, fo as to perform a perfect canopy to the whole fpace ; I looked for its fit inhabitant, it is a fput where

The mopiug owl doth to the moon complain.
This ruin is in the true ftile in which all fuch buildings ?hould appear; there is not an intruding circumftance, the hand of drefs has not touched it, netancholy is the impreffion which fuch feenes thould kindle, and it is here raifed moft powerfully.

From the abbey we pafied to the terrace, a natural one of grafs, on the very flore of the lake; it is irregular and winding; a wall of rocks broken into fantaltic forms by the waves: on the other fide a wood, confilting of all forts of plants, which the climate
can proted, and through which a variety of walks are traced. The view from this terrace confifts of many parts of various characters, but in their different Itiles complete; the lake opens a fpreading thect of water, fpotted by rocks and inlands, all but one ortwo wooded, the outlines of them are lharp and diftinct; nothing can be more fuiling then this fcene, foft and mild, a perfect contraft of beauty to the fublimity of the mountains which form the flore: thele rife in an outhe, fo varied, and at the fame lime fo mag. nificent, that nothing greater can be imagined ; 'Tomys and Glerú exhibit an immenfity in point of magnitude, but from a large hanging wood on the flope, and from the fmeothnefs of the general furface, it has nothing favage, whereas the mountains above and near the eagle's nelt are of the mof broken outlines; the declivities are bulring rocks, of immenle fize, which feom ' and in horrid forms over the lake, and where an opening anoong them is caught the fame rude character rear their threatening heads. From different p. ace thefe fenes are viewed in numberle? varietiss.

Returned to breakfatt, and pur 'Terbert's new road, whith he has traced through the peninfula to Dynis ifland, ciouza manner through a great varicty ul ground, rocky woods, lawns, icc. that nothing can be more pleating; it paffes through a remarkable feene of rocks, which are covered with woods ; from thence to the marble quarry, which Mr. Herbert is working ; and where he gains varicty of marbles, green, red, white, and brown, prettily veined; the quarry is a fhore of rocks, which furround a bay of the lake, and forms a fcene, confifing of but few parts, but thofe ftrongly marked; the rocks are bold, and broken into night caverns; they are fringed with feattered trees, and from many parts of them wood fhoots in that romantic manner, fo common at Killarney. Full in front, Turk mountain rifes with the proudeft outline, in that abrupt magnificence which fills up the whole fpace before one, and clofes the licene.

The roall leads hy a place where copper-mines were worked; many hafts appear; as much ore was raifed as fold for twenty-five thoufand pounds, but the works were laid afide, more from ignorance in the workmen, than any defects in the mine.

Came to the opsaing on the great hake, which appears to advantage here, the town of Killarncy on the noriheaft there. Look full on the mountain Glena, which rifes in very bold manner, the hanging woods fpread half way, and are of great extent, and uncommonly beautiful. Two very pleafing feenes fucceed, that to the left is a fimall bay, hemmed in by a ncek of land in front ; the immediate flore rocks, which are in a picturefque ftile, and crowned entirely with arbutus, and other wood; a pretty retired feene, where a vanity of objects give no fatigue to the cye. The other is an admfrable mixture of the beatiful and fublime: a bare rock, of an almoft regular tigure, projects from a headland into the lake, which, with much wood and highland,fforms one fide of the feene, the other is wood from a rifing ground only; the lake open between, in a Theet of no great extent, but in front is the hanging wood of Glená, which appears in full glory.
Mr. Herbert has built a handfome Gothic bridge, to unite the peninfula to the ifland of brickeen, through the arch of which the waters of the nowth and fouth lake flow. It is a fpan of twenty feven feet, and ferenten ligh, and over it the road leads to that ifand. From thence to Brickeen noarly finifhed, and it is to be thrown acrofs a bottom into Dynifs.

Returned by the northern path through a thick wood for fome diftance, and caught a very agreeable view of Ath lland, feen through an opening, inclofed on both fides with wood. Purfued the way from thefe grounds to Keelbeg, and riewed the bay of キol. III.

Photographic Sciences

the Devil's Intand, which is a beautiful one, inclofed by a fhore, to the right of very noble rocks in ledges and other forms, crowned in a friking manner with wood; a little rocky ifet rifes in front; to the left the water opens, and Turk mountain rifes with that proud fuperiority which attends him in all thefe fcenes.

The view of the promontory of Dindog, near this place, clofes this part of the lake, and is indeed fingularly beautiful. It is a large rock, which fhoots far into the water, of a height fufficient to be interefting, in full relief, fringed with a fcanty vegetation; the fhore on which you fland bending to the right, as if to meet that rock; prefents a circular fhade of dark woon: Turk ftill the back ground, in a character of great fublimity, and Mangerton's loftier fummit, but lefs interefling outline, a part of the feenery. Thefe views, with others of lefs moment, are connected by a fuccelion of lawns breaking among the wood, pleafing the eye with lively verdure, and'relieving it from the fatigue of the fupendous mountain feenes.
September 28. Took boat on the lake, from the promontory of Dindog before-mentioned. I had been under a million of apprehenfions that I flould fee no more of Killarney; for it blew a furious ftom all night, and in the morning the bofom of the lake heaved with agitation, exinibiting few marks but thofe of anger. After breakfait it cleared up, the clouds difperfed by degrees, the waves fubfided, the fun fhone out in all its fplendor; every feene was gay, and no ideas but plealure poffeffed the breaf. With thefe emotions fallied forth, nor did they difappoint us.

Rowed under the rocky flore of Dindog, which is romantic to a great degree. The bafe, by the beating of the waves, is worn into caverns, fo that the heads of the rocks project confiderably beyond the bafe, and hang over in a manner which makes every part of it interefting. Following the coaft, open marble quarry bay, the fhore great fragments of rock tumbled about in the wildeft manner.

The ifland of rocks againft the copper-mine fhore, a remarkable group. The flore near Cafemilan is of a different nature; it is wood in fome places, in unbroken maffes down to the water's edge, in others divided from it by fmaller tracts of rock. Come to a beautiful land-locked bay, furrounded by a woody flore, which, opening in places, hews other woods more retired. Tomys is here viewed in a unity of form, which gives it an air of great magaificence. Turk was obfcured by the fun thining immediately above him, and calting a flream of burning light on the water, dilplayed an effect, to deferibe which the pencil of a Claude alone would be equal. Turn out of the bay, and gain a full view of the Eagle's Neft, the mountains above it, and Glená, they form a perfegt contraft, the finf are rugged, but Glemímild. Here the flore is a continued wood.
Pals the bridge, and crofs to Dynifs, an illand Mr. Herbert has improved in the mont agreeable manner, by cutting walks through it, that command a variety of views. One of thefe paths on the banks of the channel to the upper lake, is fketched with great tafte; it is on one fide walled with natural rocks, from the clefts of which floot a thoufand fine arbutus's, that hang in a rich foliage of flowers and farlet berries; a turf bench in a delicious foot ; the feene clofe and fequeftered, juft enough to give every pleafing idea annexed to retirement.

Palling the bridge, by a rapid fream, came prefentiy to the Eagle's Neft: having viewed this reck from places where it appears only a part of an object much greater than iffeif, I had conceived an idea that it did not deferve the applaufegiven it, but upon. coming near, I was much furprized; the approach is wonderfully fine, the river leads directly to iss foot, and does not give the turn till immediately under, by which means the ricw is much more grand than it could otherwife be; it is nearly perpendicular,
and rifes in fuch full majefty, with fo bold an outline, and fuch projecting maffes in its centre, that the magnificence of the object is complete. . The lower part is covered with wood, and featered trees climb almoft to the top, which (if trees can be amifs in Ireland) rather weaken the imprefion raifed by this noble rock; this part is a hanging wood, or an object whofe character is perfect beauty; but the upper fcene, the broken outline, rugged fides, and bulging maffes, all are fublime, and fo powerful, that fublimity is the general impreffion of the whole, by overpowering the idea of beauty raifed by the wood. This immenfe height of the mountains of Killarney may be eftimated by this rock; from any diftant place that commands it, it appears the loweft crag of a vaft chain, and of no account; but on a clofe approach it is found to command a very different refpect.

Pafs between the mountains called the Great Range, towards the upper lake. Here Turk, which has fo long appeared with a figure perfectly interefting, is become, from a different pofition, un urmeaning lump. The reft of the mountains, as you pafs, affume a varied appearance, and are of a prodigious magnitude. The fcenery in this channel is great and wild in all its features; wood is very fcarce; valt rocks feem toffed in confution through the narrow vale, which is opened among the mountains for the river to pafs. Its banks are rocks in an hundred forms; the mountain fides are every where fcattered with them. There is not a circumftance but is in unifon with the wild grandeur of the feene.

Coleman's Eye, a narrow pafs, opens a different fcenery. Came to a region in which the beautiful and the great are mixed without offence. 'I he inlands are moft of them thickly wooled; Oak ifle in particular rifes on a pretty bafe, and is a moft beautiful object : Mac Gilly Cuddy's reeks, with their broken points; Baum, with his perfect cone ; the Purple mountain, with his broad and more regular head; and Turk, having affumed a new and more interefting afpect, unite with the oppofite hills, part of which have fome wood left on them, to form a fcene uncommonly ftriking. Here you look back on a very peculiar fpot; it is a parcel of rocks which crofs the lake, and form a gap that opens to diftant water, the whole backed by Turk, in a file of the higheft grandeur.

Come to Derry Currily, which is a great fweep of mountain, covered partly with wood, hanging in a very noble manner, but part cut down, much of it mangled, and the relt inhabited by coopers, boat-builders, carpenters, and turners, a facrilegious tribe, who have turned the Dryades from their ancient habitations. The cafcade here is a fine one; but paffed quickly from hence to feenes unmixed with pain.

Row to the clufter of the Seven Illands, a little archipelago; they rife very boldly from the water upon rocky bales, and are crowned in the moot beautiful manner with wood, among which are a number of arbutus's; the channels among then opening to new fecnes, and the great amphitheatre of rock and mountain that furround them, unite to form a noble view.

Into the river, at the very end of the lake, which winds towards Mac Gilly Cuddy's Recks in fanciful meanders.

Returned by a courfe fomewhat different, through the Scven Inands, and back to the Eagle's Neft, viewing the fcenes already mentioned in new pofitions. At that noble rock fired three cannon for the echo, which indeed is prodigious; the report does not confitt of direct reverberations from one rock to another with a paufe between, but has an exact refemblance to a peal of thunder rattling behind the rock, as if travelling the whole feenery we had viewed and loft in the immenfity of Mac Gilly Guddy's Reets.

Returning

- Returning through the bridge, turn to the left round Dynifs ifland, under the woods of Glena; open on the cultivated country beyond the town of Killarney, and come gradually in fight of Innisfallen and Rofs Inand.

Pals near to the wood of Glená, which here takes the appearance of one inmenfe fweep hanging in the moft beautiful manner imaginable, on the fide of a valt mountain to a point, fhooting into the great lake. A more glorinus fcene is not to be inagined. It is one deep mafs of wood, compofed of the richeft fhades perfectly dipping in the water, without rock or frand appearing, not a break in the whole. The eye paling upon the Theet of liquid filver fome diftance, to meet fo entire a fiveep of every tint that can compofe one vait mafs of green, hanging to fuch an extent as to fill not only the eye but the imagination, unites in the whole to form the moft noble fcene that is any where to be beheld.

Turn under the north fhore of Mucrufs; the lake here is one great expanfe of water, bounded by the woods defcribed, the iflands of Innisfallen, Rofs, \&c. and the peninfula. The fhore of Mucrufs has a great variety ; it is in fome places rocky, huge maffes tumbled from their bafe lie beneath, as in a chaos of ruin. Great caverns worn under them in a variety of ftrange forms; or elfe cuvered with woods of a variety of thades. Meet the point of Ardnagluggen (in Englifh where the water dafhes on the rocks) and come under Ornefcope, a rocky headland of a moft bold projection hanging many yards over its bafe, with an old weather-beaten yew growing from a little bracket of rock, from which the fpot is called Ornefcope, or yew broom.

Mucrus gardens prefently open among the woods, and relieve the eye, almoft fatigued with the immenfe objects upon which it has fo long gazed; thefe fofter fcenes of lawn gently fwelling among the fhrubs and trees, finifhed the fecond day.

September 29, rode after breakfaft to Mangerton Cafcade and Drumarourk Hill, from which the view of Mucrufs is uncommonly pleafing.

Pafs the other hill, the view of which I defcribed the 27th, and went to Colonel Huffy's monument, from whence the fcene is different from the reft ; the fore ground is a gentle hill, interfected by hedges, forming feveral fmall lawns. There are fome fcattered trees and houfes, with Mucrufs abbey half obfcured by wood, the whole chearful and backed by Turk. The lake a triangular form, Rofs illand and Innisfallen its limits, the woods of Mucrufs ati inlands take a new pofition.

Returning, took a boat again towards Rofs ine, and as Mucrufs retires from us, nothing can be more beautiful than the foos of lawn in the terrace opening in the wood; above it the green hills with clumps, and the whole finilhing in the noble group of wood about the abbey, which here appears a deep flade, and fo fine a finilhing one, that not a tree fhould be touched. Sowed to the eaft point of Rofs, which is well wooded, turn to the fouth coalt. Doubling the point, the moft beautiful fhore of that inand appears; it is the well-wooded environs of a bay, except a fmall opening to the caftle; the woods are in deep fhades, and rife on the regular flopes of a high range of rocky coaft. The part in front of Filekilly point rifes in the middle, and finks towards each end. The woods of Tomys here appear uncommonly fine. Open Innisfallen, which is compofed at this diftance of the molt various fhades, within a broken outline, entirely different from the other inlands, groups of different maffes rifing in irregular tufts, and joincd by lower trees. No pencil could mix a happier affemblage. Land near a miferable roon, where travellers dine-Of the ine of lunisfallen, it is paying no great compliment to fay, it is the moft beautiful in the Xing's dominions, and perlanps in Europe. It contains twenty acres of land, and has every variety that the range of beauty, un-
mixed
mixe undu
mixed with the fublime, can give. The general feature is that of vood; the furface undulates into fwelling hills, and finks into little vales; the flopes are in every direction, the declivities die gently away, forming thofe flight inequalities which are the greateft beauty of dreffed grounds. The little vallics let in views of the furrounding lake between the hills, while the fwells break the regular outline of the water, and give to the whole an agreeable confulion. The wood has all the varisty into which nature has thrown the furface; in fome parts it is fo thick as to appear impenetrable, and fecludes all farther view; in others, it breaks into tufts of tall timber, under which cattle feed. Here they open, as if to offer to the fpectator the view of the naked lawn; in others clofe, as if purpofely to forbid a more prying examination. Trees of large fize, and commanding figure, form in fome places natural arches; the ivy mixing with the branches, and hanging acrofs in feftoons of foliage, while on one fide the lake glitters among the trees, and on the other a thick glocm dwells in the rec ffes of the wood. The figure of the ifland renders one part a beautiful object to another ; for the coaft being broken and indented, forms bays furrounded either with rock or wood: flight promontories fhoot into the lake, whofe rocky edges are crowned with wood. Thefe are the great features of lunisfallen; the flighter touches are full of beauties eafily imagined by the reader. Every circumftance of the wood, the water, the rocks, and lawn, are characteriftic, and have a beauty in the affemblage from mere difpofition. I mult however obferve, that this delicious retreat is not kept as one could wifh.

Scenes that are great and commanding, from magnitude or wildnefs, fhould never be dreffed ; the rugged, and even the horrible, may add to the effect upon the mind: but in fuch as Innisfallen, a degree of drefs, that is, cleanlinefs, is even neceffary to beauty. I have fpoken of lawn, but I hould obferve, that expreffion indicates what it ought to be, rather than what it is. It is very rich grals, poached by oxen and cows, the only inhabitants of the ifland. No frectator of tale but will regret the open grounds not being drained with hollow cuts; the ruggecinefs of the furface levelled, and the grafs kept clofe thaven by many fheep inftead of beafts. The buthes and briars, where they have encroached on what ought to be lawn, cleared away; fonc parts of the ifle more opened; in a word, no ornaments given, for the feene wathts them not, but obftructions cleared, ruggednefs fmoothed, and the whole cleaned. This is what ought to be done; as to what might be made of the illand, if its noble proprietor (Lord Kenmare) had an inclination, it admits of being converted into a terreftrial paradife, lawning with the intermixture of other thrubs and wood, and a little drefs, would make it an example of what ornamented grounds might be, but which not one in a thoufand is. Take the ifland, however, as it is, with its few imperfections, and where are we to find fuch another? What a delicious retreat! an emperor could not beflow fueh an one as Innisfallen; with a cottage, a few cows, and a lwarm of poultry, is it pofible that happinefs fhould refufe to be a gueft here?

Row to Rofs Callle, in order to coatt that ifland ; there is nothing peculiarly ftriking in it; return the fame way around Innisfallen: in this little voyage the thore of Rofs is one of the moft beautiful of the wooded ones in the lake; it feems to unite with Innisfillen, and projects into the water in thick woods one beyond another. In the middle of the channel a large rock, and from the other fhore a little promontory of a few fcattered trees; the u hole fcene pleafing.

The fhore of Innisfallen has much varicty, but in general it is woody, and of the beautiful character which predominates in that ifland; one bay, at takig lave of it, is exceedingly pretty, it is a fenicircular one, and in the centre there is a projecting knole of wood within a bay; this is uncommon, and has an agrecable effect.

The near approach to Tomys exhibits a fweep of wood, fo great in extent, and fo rich in foliage, that no perfon can fee without admiring it. The mountainous part above is foon excluded by the approach; wood alone is feen, and that in fuch a noble jange, as to be greatly flriking; it juft hollows into a bay, and in the centre of it is a chafm in the wood; this is a bed of a confiderable flream, which forms O'Sullivan's cafcade, to which all frangers are conducted, as one of the principal beauties of Killarney. landed to the right of it, and walked under the thick fhade of the wood, over a rocky declivity, clofe to the torrent ftream, which breaks impetuoully from rock to rock, with a roar that kincles expectation. The picture in your fancy svill not exceed the reality; a great Itream burits from the deep bofom of a wooded glen, hollowed into a retired recefs of rocks and trees, itfelf a mof pleafing and romantic fpot, were there not a drop of water: the firt fall is many fect perpendicularly over a rock, to the eye it immediately makes another, the bafon into which it pours being concenled; from this bafon it forces itfelf impetuoufly between two rocks: this fecond fall is alfo of a confiderable height ; but the lower one, the third, is the moft confiderable, it iffues in the fame manner from a bafon hid from the point of view. Thefe bafons being large, there appears a fpace of feveral yards between each fall, which adds much to the pieturefque feenery; the whole is within an arch of wood, that hangs over it; the quantity of water is fo confiderable as to make an almoft deafening noife, and uniting with the torrent below, where the fragments of rock are large and numerous, throw an air of grandeur over the whole. It is about feventy feet high. Coaft from hence the woody fhores of Tomys and Glená, they are upon the whole much the moft beautiful ones I lave any where feen; Glená woods having more oak, and fome arbutus's, are the tiner and deeper hades; 'Tomys has a great quantity of birch, whofe foliage is not fo luxuriant. The reader may figure to himfelf what thefe woods are, when he is infomed that they fill an unbroken extert of fix miles in length, and from half a mile to a mile and a half in breadth, all hanging on the fides of two valt mountains, and coming. down with a full robe of rich luxuriance to the very water's edge. The acclivity of thefe hills is fuch, that every tree appears full to the eye. The variety of the ground is great; in fome places great fwells in the mountain fide, with correfponding hollows, prefent concave and convex mafies; in others, confiderable ridges of land and rock sife from the fweep, and offer to the aftonifhed eye yet other varieties of fhade. Smaller mountains rife regularly from the immenfe bofom of the larger, and hold forth their fylvan heads, backed by yet higher woods. To give all the varietics of this immenfe feenery of foreft is impofible. Above the whole is a prodigious mafs of mountain, of a gently fwelling outline and foft appearance, varying as the fun or clouds change their pofition, but never becoming ugged or threatening to the eye.

The variations are beft feen by rowing near the fhore, when every ftroke of the car gives a new outline, and frefh tints to pleafe the eyc: but for one great impreflion, row about two miles from the fhore of Glena; at that ditlance the inequalities in the furface are no longer feen, but the cye is filled with fo immenfe a range of wood, crowned with a mountain in perfect unifon with itfelf, that objects, whofe character is that of beauty, are here, from their magnitude, truly magnificent, and attended with a moft forcible expreffion.- Returned to Mucrufs.

September 30 . This morning I had dedicated to the afeent of Mangerton, but his head was fo cnhlrouded in clouds, and the weather fo bad, that 1 was forced to give up the feheme: Mr. Herbert has meafured him with very accurate inftruments, of which he has a great collection, and found his height eight hundred and thirty-five yards above. the level of the fea. The Devil's Punch-bonl, from the defeription I had of it, mult
be the crater of an exhaufted volcano: there are many figns of them about Killarney, particularly valt rocks on the fides of mountains, in ftreams, as if they had rolled from the top in one direction. Brown fone rocks are alfo fometimes found on lime-quarries, toffed thither perhaps in fome valt eruption.

In my way from Killarney to Caftle Inland rode into Lord Kenmare's park, from whence there is another beautiful view of the lake, different from many of the preceding ; there is a broad margin of cultivated country at your feet, to lead the eye gradually in the lake, which eahibits her iflands to :his point more diftinctly than to any other, and the back grounds of the mountains of Glená and Tonys give a bold relief.

Upon the whole, Killarney, among the lakes that I have feen, can fcarcely be faid to have a rival. The extent of water in Loch Earne is much greater, the iflends more numerous, and fome fcenes near Caftle Caldwell of perlhaps as great magnificence. The rocks at Kefwick are more fublime, and other lakes may have circumitances in which they are fuperior ; but when we confider the prodigious woods of Killarney; the im. menfity of the mountains; the uncommon beauty of the promontory of Mucrufs, and the inle of Innisfallen; the character of the iflands; the fingular circumftance of the arbutus, and the uncommon echoes, it will appear, upon the whole, to be in reality fue perior to all comparifon.

Before I quit it I have one other obfervation to make, which is relative to the want of accommodations and extravagant expence of ftrangers refiding at Killarney. I fpeak it not at all feelingly, thanks to Mr. Herbert's hofpitality, but from the accounts given me: the inns are niferable, and the lodgings little better. I an furprifed fomebody with a good capital does not procure a large well.built inn, to be erected on the immediate fhore of the lake, in an agreeable fituation, at a diltance from the town; there are very few places where fuch an one would anfwer better, there ought to be numerous and good apartments. A large rendezvous.poom for billiards, cards, dancing, mufic, \&c. to which the company might refort when they chofe it; an ordinary for thofe that liked dining in public; boats of all forts, nets for fifhing, and as great a variety of amufements as could be colletted, efpecially within doors; for the climate being very rainy, travellers wait with great impatience in a dirty common inn, which they would not do if they were in the midft of fuch accommodations as they meet with at an Englifh Spa. But above all, the prices of every thing, from a room and a dinner to a barge and a band of mufic, to be realonable, and huag up in every part of the houfe: the relort of frangers to Killarney would then be much increafed, and their ftay would be greatly prolonged; they would not view it polt-hafte, and ily away the firft moment to avoid dirt and impofition. A man witn a good capital and fome ingenuity would, 1 think, make a fortune by fixing here upon fuch principles.

The fate of the poor in the whole county of Kerry reprefented as exceedingly miferable, and owing to the conduct of men of property, who are apt to lay the blame on what they call land pirates, or men who offer the highefl rent, and who, in order to pay this rent, mult and do re-let all the cabin lands at an extravagant rife, which is afiigning over all the cabins to be devoured by one farmer. The cottars on a farm cannot go from one to another, in order to find a good mafter, as in England; for all the country is in the fame fyltem, and no redrefs to be found: fuch being the cafe, the farmers are enabled to charge the price of labour as low as they pleale, and rate the land as high as they like. This is an evil which oppreffes then cruetly, and certainly has its origin in its landords when they fet their farms, fetting all the cabins with them, inflead of keeping them tenants to themfelves. The opprefion is, the farmer valuing the labour of the poor at fourpence or fivepence a day, and paying that in land rated

## 848

much above its value: owing to this the poor are depreffed; they live upon potatoes and four milk, and the poorelt of them only falt and water to them, with now and then a herring. Their milk is bought; for very few keep cows, fcarce any pigs, but a few poultry. Their circumflances are incomparably worfe than they were twenty years ago; fir they had all cows, but then they wore no linen: all now have a little flax. To thefe evils have been owing emigrations, which have been confiderable.

To the weft of Tralee are the Mahagree iflands, famous for their corn products; they are rock and fand, focked with rabbits; near them a fandy tract, twelve miles long, and one mile broad, to the north, with the mountains to the fouth, famous for the belt wheat in Kerry : all under the plough.

Arriving at Ardfert, Lord Crofly, whofe politenefs I have every reafon to remember, was fo obliging as to carry me by one of the fineft flrands I ever rode upon, to view the mouth of the Shannon at Ballengary, the fcite of an old fort: it is a vaft rock, feparated from the country by a chafm of prodigious depth, through which the waves drive. The rocks of the coaft here are in the boldent ftile, and hollowed by the furious Atlantic waves into caverns in which they roar. It was a dead calm, yet the fwell was fo heavy, that the great waves rolled in and broke upon the rocks with fuch violence as to raife an immenfe foam, and give one an idea of what a florm would be, but fancy rarely falls fhort in her pictures. The view of the Shannon is exccedingly noble; it is eight miles over, the mouth formed by two headlands of very high and bold clifts, and the reach of the river in view very extenfive : it is an inmenfe fcenery: perhaps the nobleft mouth of a river in Europe.

Ardfert is very near the fen, to near it that fingle trees or rows are cut in pieces with the wind, yet about Lord Glendour's houfe there are extenfive plantations exceedingly flourifing, many fine aht and beech; about a beautiful Ciftertian abbey, and a filver fir of forty eight ycars rrowth, of an immenfe height and fize.

October 3, left Ardfert, accompanying Lord Crofby to Littowel. Called in the way to view Lixnaw, the ancient feat of the Earls of Kerry, but deferted for ten years palt, and now prefents fo melancholy a fcene of defolation, that it flocked me to fee it. Every thing around lics in ruin, and the houfe itfelt is going faft off by thieving depredations of the neighbourhood. I was told a curious anecdote of this eftate, which fhews wonderfully the improvement of Ireland: the prefent Earl of Kerry's grandfather, Thomas, agreed to leafe the whole eflate for 1500 l a year to a Mr. Collis for ever, but the bargain went off upon a difpute whether the money fhould be paid at Cork or Dublin. Thofe very lands are now let at 20,000 . a year. There is yet a good deal of wood, particularly a fine afh grove, planted by the prefent Earl of Shelburne's father.

Proceeded to Woodford, Robert Fitzgeralu's, Efq., paffing Liftowel bridge, the vale leading to it is very fine, the river is broad, the lands high, and one fide a very extenfive hanging wood, opening on thofe of Woodford in a pleating ftile.

Woodford is an agreeable ficene; clofe to the houfe is a fine winding river under a bank of thick wood, with the view of an old caltic hanging over it.

In ${ }^{1765}$, Mr. Fizzgerald was travelling from Conftaninople to Warfaw, and a waggon with his baggage heviiy laden overlet ; the country people harncfled two buffaloes by the horns, in order to draw it over, which they did with eafe. In fome very inftructive converfation I had wih this gentleman on the fubject of his travels, this circumftance particularly ftruck me..

October 4 , from Wondford to Tarbat, the reat of Edward Leflie, Efq., through a counery rather dreary, till it came upon Tarbat, which is fo much the contrary that it
appeared to the highoft advantage; the houfe is on the edge of a beautiful lawn, with a thick margin of full grown wood, hanging on a fteep bank to the Shannon, fo that the river is feen from the houle over the tops of this wood, which being of a broken irregular outine has an cffect very ftriking and uncommon; the river is two or three miles broad here, and the oppofite coalt forms a promontory which has from Tarbat exadly the appearance of a large ifland. To the eaft, the river fwells into a triangular lake, with a reach opening at the diftant corner of it to Limerick: the union of wood, water, and lawn forms upon the whole a very fine feene; the river is very magnificent. From the hill on the coaft above the ifland, the lawn and wond appear alfo to great advantage. But the fineft point of view is from the higher hill on the other fide of the houfe, which looking down on all thefe feenes, they appear as a beautiful ornament to the Shannon, which fpreads forth its proud courfe from two to nine miles wile, furrounded by highiands; a fcenery truly magnificent.

The ftate of the poor is fomething better than it was twenty years ago, particularly their cloathing, cattle, and cabins. They live upon potatoes and milk; all have cows, and when they dry them, buy others. They allo have butter, and moft of them keep pigs, killing them for their own ufe. They have alfo herrings. They are in general in the cottar fyttem, of paying for labour by affiguing fome land to each cabin. The country is greatly more populous than twenty years ago, and is now increafing; and if ever fo many cabins were built by a gradual increafe, tenants would be found for them. A cabin and five acres of land will let for 41. a year. The indultrious cottar, with two, three, or four acres, would be exceedingly glad to have his time to himfelf, and have fuch an annual addition of land as he was able to manage, paying a fair rent for it ; none would decline it but the idle and worthlefs.

Tythes are all annually valued by the proctors, and charged very high. There are on the Shannon about one hundred boats employed in bringing turf to Limerick from the coalt of Kerry and Clare, and in fifhing; the former carry from twenty to twenty-five tons, the latter from five to ten, and are navigated each by two men and a boy.

October 5, pafed through a very unentertaining country (except for a few miles on the bank of the Shannon) to Altavilla, but Mr. Bateman being from home, I was difappointed in getting an acount of the palatines fetled in his neigbourhood. Kept the road to Adair, where Mrs. Quin, with a politenefs equalled only by her underftanding, procured me every intelligence I wifhed for.

Palatines were fetled here by the late Lord Southwell about feventy years ago.
They preferve fome of the Terman cuftoms: fleep between two beds. They ap. point a burgomafter, to whom they appeal in cafe of all difputes; and they yet preferve their language, but that is declining. They are very induftrious, and in confequence are much happier and better fed, cloathed, and ladged than the Irifh peafants. - We muft not, however, conclude from hence that all is owing to this, their being independent farmers, and having leafes, are circumftances which will create induftry. Their crops are much better than thofe of their neighbours. There are three villages of them, about feventy families in all. For fome time after they fettled they fed upon four crout, but by degrees left it off, and took to potatocs; but now fubfift upon them and butter and milk, but with a great deal of oat bread, and fome of wheat, fome meat and fowls, of which they raife many. They have all offices to their houfes, that is, flables and cow-houfes, and a lodge for their ploughs, \&c. They keep their cows in the boufe in winter, feeding them upon hay and oat fraw. They are remarkable for the goodnefs and cleanlinefs of their houfes. The women are very induftious, reap the corn, plough the ground fometimes, and do whatever work may be going on;
vol. Hu. 5 ?
they
they alfo fpin; and make their children do the fame. Their wheat is much bet ter thant any in the country, infomuch that they get a better price than any body elfe. Their induftry goes fo far, that jocular reports of its excefs are fpread: in a very pinching feafon, one of them yoked his wife againlt a horfe, and went in that manner to work, and finithed a journey at plough. The induftry of the women is a perfect contraft to the Irifh ladies in the cabins, who cannot be perfuaded, on any confideration, even to make hay; it not being the cultom of the country; yet they bind corn, and do other works more laborious. Mrs. Quin, who is ever attentive to introduce whatever can contribute to their welfare and happinefs, offered many premiums to induce them to make hay, of hats, cloaks, ftockings, \&c. \&c. but all would not do.

Few places have fo much wood about them as Adair: Mr. Quin has above one thoufand acres in his hands, in which a large proportion is under wood. The deer park of four hundred acres is almoft full of old oak and very fine thorns, of a great fize; and about the houfe, the plantations are very extenfive, of elm and other wood, but that thrives better than any other fort. I have no where feen finer than valt numbers here. There is a fine river runs under the houfe, and within view are no lefs than three ruins of Francifcan friaries, two of them remakably beautiful, and one has moft of the parts perfect, except the roof.

In Mr. Quin's houfe, there are fome very good pictures, particularly an anunciation, by Dominicino, which is a beautiful piece. It was brought lately from Italy by Mr. Quin, junior. The colours are rich and mellow, and the hairs of the heads inimitably pleafing; the group of angels at the top, to the left of the piece, are very natural. It is a piece of great merit. The companion is a Magdalen ; the expreffion of melancholy. or rather mifery, remarkably ftrong. There is a gloom in the whole in full unifon with the fubject. There are, befides thefe, fome others inferior, yet of merit, and two very good portraits of Lord Dartry, (Mrs. Quin's brother,) and of Mr. Quin, junior, by Pompeio Battoni. A piece in an uncommon flyle, done on oak, of Ether and Alafuerus: the colours tawdry, but the grouping attitudes and effect pleafing.

Caftle Oliver is a place almoft entirely of Mr. Oliver's creation; from a houfe, furrounded with cabins and rubbifh, he has fixed it in a fine lawn, furrounded by good wood. The park he has very much improved on an excellent plan; by means of feven feet hurdles he fences off part of it that wants to be cleaned or improved, thefe he cultivates, and leaves for grafs, and then takes another fpot, which is by much the beft way of doing it. In the park is a glen, an Englifh mile long, winding in a pleafing manner, with much wood hanging on the banks. Mr. Oliver has conducted a ftream through this vale, and formed many little water-falls in an exceedingly good tafte, chietly overhung with wood, but in fome places open with feveral little sills, trickling over flones down the flopes. A path winds through a large wood and along the brow of the glen; this path leads to an hermitage, a cave of rock, in a good tafte, and to fome benches, from which the views of the water and wood are in the fequeftered Ityle they ought to be. One of thefe little views, which catches feveral falls under the arch of the bridge, is one of the prettielt touches of the kind I have feen. The vale beneath the houfe, when viewed from the higher grounds, is pleafing; it is very well wooded, there being many inclofures, furrounded by pine trees, and a thick fine mafs of wood rifes from them up the mountain fide, makes a very good figure, and would be better, had not Mr. Oliver's farher cut it into vitas for fhooting. Upon the whole, the place is highly improved, and when the mountains are planted, in which Mr. Oliver is making a confiderable progrefs, it will. be magnificent.

In the houfe are feveral fine pictures, particularly five pieecs by Seb. Ricci, Venus and Eneas ; Apollo and Pan; Venus and Achilles; and Pyrrhus and Andromache, by Lazzerini ; and the rape of the Lapithi by the centaurs; the laft is by much the fineft, and is a very capital piece; the expreflion is ftrong, the figures are in bold relief, and the colouring good. Venus and Achilles is a pleafing picture; the continence of Scipio is well grouped, but Scipio, as in every picture I ever faw of him, has no expreffion. Indeed chaftity is in the countenance fo pafive a virtue as not to be at all fuited to the genius of painting; the idea is rather that of infipidity, and accordingly Scipio's expreffion is generally infipid enough. Two fine pieces, by Lucca Jordano, Hercules and Anteus; Sampfon killing the lion : both dark and horrid, but they are highly finifhed, and friking. Six heads of old men, by Nagori, excellent ; and four young women, in the character of the fealons.

Octaber 9, left Cafte Oliver. Had I followed my inclination, my fay would have been much longer, for I found it equally the refidence of entertainment and inftruction Paffed through Kilfeunan and Duntreleague, in my way to Tipperary. The road leads every where on the fides of the hills, fo as to give a very diftinct view of the lower grounds; the foil all the way is the fame fort of fandy reddifh loan I have already defcribed, incomparable land for tillage : as I advanced it grew fomething lighter, and in many places free from gravel. Bullocks the flock all the way. Towards Tipperary I faw vaft numbers of fheep, and many bullocks. All this line of country is part of the famous golden vale. To Thomas-town, where I was fo unfortunate as not to find Mr. Matthew at home; the domain is one thoufand five hundred Englifh acres, fo well planted, that I could hardly believe myfelf in Ireland. There is a hill in the park from which the view of it, the country and the Galties, are ftriking.

October 12th, to Lord de Montalt's, at Dundrum, a place which his Lordßhip has ornamented in the modern ftyle of improvement: the houfe was fituated in the nidft of all the regular exertions of the laft age. Parterres, parapets of carth, ftraight walks, knots and clipt hedges, all which he has thrown down, with an infinite number of hedges and ditches, filled up ponds, \&c. and opened one very noble lawn around him, fcattered negligently over with trees, and cleared the courfe of a choaked up river, fo that it flows at prefent in a winding courfe through the grounds.

October 13, leaving Dundrum, paffed through Cafhel, where is a rock and ruin on it, called the rock of Cafhel, fuppofed to be of the remoteft antiquity. Towards Clonmell, the whole way through the fame rich vein of red fandy loam I have fo often melltioned: I examined it in feveral fields, and found it to be of an extraordinary fertility, and as fine turnip land as ever I faw. It is much under fheep; but towards Clonmell there is a great deal of tillage.

The firt view of that town, backed by a high ridge of mountains, with a beautiful fpace near it of inclofures, fringed with a fcattering of trees, was very pleafing. It is the beft fituated place in the county of Tipperary, on the Sure, which brings up boats of ten tons burthen. It appears to be a bufy populous place, yet I was told that the manufacture of woollens is not confiderable. It is noted for being the birth-place of the inimitable Sternc.

To Sir William Oborne's, three miles the other fide Clonmell. From a character fo remarkable for intelligence and precifion, 1 conld not fail of mecting information of the moft valuable kind. This gentlemen has made a mountain improvement which demands particular attention, being upon a principle very different from common ones.

Twelve years ago he met with a hearty looking fellow of forty, followed by a wife and fix children in rags, who begged. Sir Willian quettioned him upon the feandal of a man in
full health and vigour, fupporting himfelf in fuch a manner: the man faid he could get no work: "Come along with me, I will thew you a fpot of land upon which I will build a cabin for you, and if you like it you thall fix there." The fellow followed Sir William, who was as good as his word: he buile him a cabin, gave him five acres of a heathy moun-tain, lent him four pounds to fock with, and gave himl, when he has prepared his ground, as much lime as he would come fir. The fellow flourifled; he went on gradually ; repaid the four pounds, and prefently became a lappy little cottar : he has at prefent twelve acres under cultivation, and a fock in trade worth at leaft 8ol., his name is John Conory.

The fuccefs which attended this man in two or three years, brought others who applied for land, and Sir William gave them as they applied. The mountain was under leafe to a tenant, who valued it fo little, that upon being reproached with not cultivating, or doing fomething with it, he affured Sir Williant, that it was utterly impracticable to do any thing with it, and offered it to him withour any deduction of rent. Upon this mountain he fixed them; gave them terms as they came determinable with the leafe of the farm, fo that every one that came in fucceffion had florter and forter tenures; yet are they fo defirous of fettling, that they come at prefent, though only two years remain for a term.

In this manner Sir Willian has fixell twenty-two fanilies, who are all upon the improving hand, the meaneft growing richer; and find themfelves fo well off, that no confideration will induce then to work for others, not even in harveft : their induftry has no bounds; nor is the day long enough for the revolution of their inceffant labour. Some of them bring turf to Clonmell, and Sir William has feen Conory returning loaded with foap alhes.

He found it difficult to perfuade them to make a road to their village, but when they had once done it, he found none in getting crof's roads to it, they found fuch bencfit in the firft. Sir William has continued to give whatever lime they come for ; and they have defired one thouland barrels among them for the year 1766, which their landlord has accordingly contracted for with his lime-burner, at ind. a barrel. Their houfes have all been built at his expence, and done by contract at 61. each, after which they raife what little offices they want for themfelves.

October 15 , left New Town, and keeping on the banks of the Sure, paffed through Carrick to Curraghmore, the feat of the Earl of Tyrone. This line of country, in point of foil, inferior to what I have of late gone through : fo that I confider the rich country to end at Clonmell.

Einigrations from this part of Ireland principally to Newfoundland; for a feafon they have 181 . or 201 . for their pay. and are maintained, but they do not bring home more than 71 . to att. Some of them ftay and fettle; three years ago there was an emigration of indented fervants to North Carolina of three hundred, but they were ftopped by contrary winds, \&c. There had been fonsething of this conflantly, but not to that amount. 'The oppreffion which the poor people have molt to complain of, is. the not having any tenures in their lands, by which means they are entirely fubject to their employers.

Manufactures here are only woollens. Carrick is one of the greateft manufucturing towns in Ireland. Principally for ratteens, but of late they have got into broad-cloths, all: for home confumption ; the manufacture increafes, and is very flourifhing. There are between three and four hundred people employed by it, in Carrick and its neighbourhood.

Curraghmore is one of the fineft places in Ireland, or indeed that I have any where feen. The houfe, which is large, is fituated upon a rifing ground, in a vale furrounded:
by very bold hills, which rife in a variety of forms and offer to the eye, in rifing through the grounds, very noble and flriking fcenes. Thefe hills are exceedingly varied, fo that the detour of the place is very pleafing. In order to feeit to advantage, I would advife a traveller to take the ride which Lord Tyrone carried me. Jaffed through the deer-park waod of old oaks, fpread over the fide of a bold hill, and of fuch an extent, that the fcene is a truly foref one, without any other boundary in view than what the fems of trees offer from mere extent, retiring one behind another till they thicken fo much to the eye, under the fhade of their fpreading tops, as to form a diftant wall of wood. This is a fort of feene not common in Ireland, it is a great extent alone that will give it. From this hill enter an ever-green plantation, a fcene which winds up the deer-park hill, and opens on to the brow of $i t$, which commands a moft noble view indeed. 'The lawns round the houfe appear at one's feet, at the bottom of a great declivity of wood, almoft every where furrounded by plantations. The hills on the oppofite fide of the vale againft the houfe, confitt of a large lawn in the center of the two woods, that to the right of an immenfe extent, which waves over a mountain fide in the fineft manuer imaginable, and lead the eye to the fcenery on the lett, which is a beautiful vale of rich inclofures, of feveral miles extent, with the Sure making one great reach through it, and a bold bend juft before it enters a gap in the hills towards Waterford, and winds behind them; to the right you look over a large plain, backed by the great Cummeragh mountains. For a diftinct extent of view, the parts of which are all of a commanding maguitude, and a variety equal to the number, very few profpects are finer than this.

From hence the boundary plantation extends fome miles to the weft and north-weft of the domain, forming a margin to the whole of different growths, having been planted, by. degrees, from three to fixteen years. It is in general well grown, and the trees thriven exceedingly, particularly the oak, beech, larch, and firs. It is very well fketched, with. much variety given to it.

Pafs by the garden acrofs the river which murmurs over a rocky bed, and follow the riding up a feep hill, covered with wood from fome breaks, in which the houfe appears perfectly buried in a deep wood, and come out, after a confiderable extent of ride, intothe higher lawn, which commands a view of the fcenery about the houfe; and from the brow of the hill the water, which is made to imitate a river, has a good effect, and throws a great air of cheerfulnefs over the fcene, for from hence the declivity below it is hid; but the view, which is the moft pleafing from hence, the fineft at Curraghmoor, and indeed one of the moft ftriking that is any where to be feen, is that of the hanging wood to the right of the houfe, rifing in fo noble a fiweep as perfectly to fill the eye, and leave the fancy fcarce any thing to with: at the bottom is a fmall femicircular lawn around which flows the river, under the immediate thade of wry noble oaks; the whole wood rifes boluly from the bottom, tree above tree, to a valt height, of large oak, the maflies of fhade are but tints of one colour, it is not chequered with a variety, there is a majeftic fimplicity, a unity in the whole, which is attended with an uncommon iupreffion, and fuch as none but the molt magnificent fcenes can raile.

Defeending from hence through the roads, the riding croffes the river, paffes through the meadow, which has fuch an cffect in the preceding ficene, from which alfo the view is very tine, and leads home through a continued and an extenfive range of fine oak, partly on a declivity, at the bottom of which the river murmurs its broken courfe.

Befides this noble riding, there is a very agreeable walk runs immediately on the banks of the river, which is perfect in its fyle; it is a fequeftered line of wood, fo nigh on the declivities in fome places, and fo thick on the very euge in others, overfpreading the river, that the character of the feene is gloom and melancholy, heightened by the
noife of the water falling from flone to fone; there is a confiderable variety in the banks of it, and in the figures and growth of the wood, but none that hurts the im. preffion, which is well preferved throughout.

October 17, accompanied Lord Tyrone to Waterford; made fome inquiries into the fate of their trade, but found it difficult, from the method in which the cuftom-houfe books are kept, to get the details I wifhed; but in the year following having the pleafure of a long vifit at Ballycanvan, the feat of Cornelius Bolton, Efq., his fon, the member for the city, procured me every information I could wifh, and that in fo liberal and polite a manner, that it would not be eafy to exprefs the obligations I am under to both. In general, I was informed, that the trade of the place had increafed confiderably in ten years, both the exports and imports. The exports of the products of pafturage, full one-third in twelve years. That the Itaple trade of the place is the Newfoundland trade; this is very much increafed; there is more of it here than any where. The number of people who go paffengers in the Newfoundland flips is amazing: from fixty to eighty fhips, and from three thoufand to five thoufand annually. They come from moft parts of Ireland, from Corke, Kcrry, \&c. Experienced men will get 181 . to 2 jl . for the feafon, from Marcl to November; a man who never went will have five to feven pounts, and his paffage, and others rife to 20 . the paffage out they get, but pay home two pounds. An induftrious man in a year will bring home twelve to fixteen pounds with him, and fome more. A great point for them is to be able to carry out all their flops, for every thing there is exceedingly dear, one or two hundred per cent. dearer than they can get them at home. They are not allowed to take out any woollen goods but for their own ufe. The thips go loaded with pork, beef, butter, and fome falt; and bring home paffengers, or get freights where they can: fometimes rum. The Waterford pork comes principally from the barony of Iverk in Kilkenny, where they fatten great numbers of large hogs; for many weeks together they kill here three to four thoufand a week, the price fifty fhillings to four pounds each; goes chiefly to Newfoundland. One was killed in Mr. Penrole's cellar, that weighed five handred weight and a quarter, and meafured from the nofe to the end of the tail, nine feet four inches.
There is a foundery at Waterford for pots, kettles, weights, and all common utenfils; and a manufactory by Meffieurs King and Tegent, of anvils to anchors, twenty hundred weight, \&c. which employs forty hands. Smiths carn from $6:$, to 2.4 s . a week. Nailors from 10s. to 12 s . And another lefs confiderable. There are two fugai-houfes, and many falt-houfes. The falt is boiled over lime-kilns.

There is a fifhery upon the coaft of Waterford, for a great variety of filh, herrings particularly in the mouth of Waterford harbour, and two years ago in fuch quantitics there, that the tides left the ditches full of them There are fome premium boats both here and at Dungarvon, but the quantity of herrings barrelled is not confiderable.

The butter trade of Waterford has increafed greatly for feven years paft; it comes from Waterford principal y, but much from Carlow; for it comes from twenty miles beyond Carlow, for fixpence per hundred. From the ift of January 1774 to the ift of Jnuary 1775 , there were exported fifty-nine thoufand eight hundred and fifty-fix calks of butter, each, on an average, one hundred weight, at the mean price of 50 . Revenue of Waterford, 1751. 17,0001.; 1776, 52,000l. The flaughter trade has increafed, but not fo math as the butter. Price of butter now at Waterlord 58 s . ; twenty years' averuge, 42 s . Beef now to 25 s , average, twenty years, 10 s , to 18 s . Pork now 3 cs., average, twenty years, 16 s , to 22 s . Eighty fill of flips now belonging to the port, twenty years ago not thinty. They pay to the captains of ©hip of two
hundred tons 51 . a month ; the mate 3 l. 10s. Ten men at 40 s ., five years ago only 27s. Building fhips, iol. a ton. Wear and tear of fuch a hip 201. a month. Ship provifions 20s. a month.

The new church in this city is a very beautiful one; the body of it is in the fame file exactly as that of Belfaft already defcribed : the total length one hundred and feventy feet, the breadth fifty-eight. The length of the body of the church ninety-two, the heighth forty; breadth between the pillars twenty-fix. The ine (which I do not remember at Belfaft) is fifty-eight by forty-five. A room on one fide the ftecple, fpace for the bifhop's court, twenty-four by eighteen; on the other fide, a room of the fame fize for the veftry; and twenty-eight feet fauare left for a fteeple when their funds will permit. The whole is light and beautiful: it was built by fubfcription, and there is a fine organ befpoke at London. But the fineft object in this city is the quay, which is unrivalled by any I have feen; it is an Englifh mile long; the buildings on it are only common houfes, but the river is near a mile over, flows up to the town in one noble reach, and the oppofite fhore a bold hill, which rifes immediately from the water to a heighth that renders the whole magnificent. This is fcattered with fome wood, and divided into paftures of a beautiful verdure, by hedges. I croffed the water, in order to walk up the rocks on the top of this hill ; in one place over againft Bilberry quarry, you look immediately down on the river, which flows in noble reaches from Granny cofle on the right pait Cromwell's rock, the fhores on both fides quite ftecp, cfpecially ti:~ zock of Biberry. You look over the whole town, which here appears in a triangular form; befides the city the Cummeragh mountains, Slein a-man, \&c. come in view. Kilmacow river falls into the Sure, after flowing through a large extent of well planted country; this is the fineft view about the city.

From Waterford to Paffage, and got my chaife and horfes on board the Countefs of Tyrone packet, in full expectation of failing inmediately, as the wind was fair, but I foon found the difference of thefe private veffels and the pofl-office packets at Holyhead and Dublin When the wind was fair the tide was foul; and when the tide was witis them the wind would not do; in Englifh, thete was not a complement of paffengers, and fo I had the agreeablenefs of waiting witi. my horles in the hold, by way of reft, after a journcy of above one thoufand five hundred miles.

Ottober 18, after a beafly night paffed on fhip board, and finding no figns of departure, walked to Ballycanvan, the feat u: Cornelius Bolton, Efq.; rode with Mr. Bolton, jun. to Faithleghill, which commands one of the finett views I have feen in Ireland. There is a rock on the top of a hill, which has a very bold view on every fide down on a great exteat of country, much of which is grafs inclofures of a grod verdure. This hill is the center of a circle of about ten miles diameter, beyond which higher lands rife, which, after fpreading to a great extent, have on every fide a back ground of mountain : in a northerly direction mount Leinfter, between Wexford and Wieklow, twenty-fix miles off, rifes in feveral heads far above the clouds. $\Delta$ litte to the right of this, Sliakeiltha (i. $c$. the woody mountain), at a lefs diftance, is a fine object. 'To the left, Tory hill, only five miles, in a regular form varies the obitline. To the caft, there is the long mountain, eightecn miles dittant, and feveral leffer Wexfor: bills. Io the fouth-ealt, the Saltecs. To the fouth, the ocean, and the colines about the bay of Tramore. To the weft, Monavollagh rifes wo thoufand one hundred and fixty tect above the level of the fea, eighteen miks off, being part of the great range of the Cummaragh mountains; and to the north-weft Slinaman, at the diftance of twenty four miles; fo that the outline is every where bold and diftinct, though diftant. Thefe
circumfances would alone form a great view, but the water part of it, which fills up the canvafs, is in a much fuperior fyle. The great river Sure takes a winding courfe from the city of Waterford, tbrough a rich country, hanging on the fides of hills to its banks, and dividing into a double chamel, forms the leffer inland, both of which courles you command diftinctly; united, it makes a bold reach under the hill on which yous ftand, aid there receives the noble tribute of the united waters of the Barrow and Nore, in two great channels, which form the larger ifland; enlarged by fuch an acceffion of water, it winds round the hill in a bending courfe, of the freelt and molt graceful outline, every where from one to three miles acrofs, with bold thores, that give a fharp ouline to its courfe to the ocean; twenty fail of hips at Paffage gave animation to the fcene; upon the whole, the boldnefs of the mountain outline, the variety of the grounds, the vaft extent of river, with the declivity to it from the point of view, altogether form fo unrivalled a fcenery, every object fo commanding, that the general want of wood is almoft forgotten.

Two years after this account was written I again vifited this enchanting hill, and walked to it, day after day, from Ballycanvan, and with increafing pleafure. Nir. Bolton, jun. has, fince I was there before, inclofed forty acres on the top and fteep flope to the water, and began to plant them. This will be a prodigious addition; for the flope forming the bold fhore for a confiderable fpace, and having projections from which the wood will all be feen in the gentle hollows of the hill, the effect will be amazingly fine. Walks and a riding are tracing out, which will command frefh beauties at every ftep; the fpots from which a variety of beantiful views are feen are numerous. All the way from Ballycanvan to Faithleg, the whole to the amount of one thoufand two hundred acres, is the poperty of Mr. Bolton.

Farms about Ballycanvan, Waterford, Scc. are generally fmall, from twenty and thirty to five hundred acres, generally about two hundred and fifty, all above two hundred acres are in general dairies; fome of the dairy ones rife very high. The foil is a reddifh fony, or flaty gravel, dry, except low lands, which are clay or turf. Rents vary nuch, about the town very high, from 5l. gs. to gl. but at the diftance of a few miles towards Paffage, \&c. they are from 205. to 4 cs . and fome higher, but the country in general does not rife fo high, ufually 10 s to 20 s. for dairying land.

The poor people fpin their own flax, but not more, and a few of them wool for themfelves. Their food is potatoes and milk; but they have a confiderable alliftance from fifh, particularly herrings; part of the year they have alfo barley, oatent, and rye bread. They are incomparably better off in every refpect than twenty years ago. Their increafe about Ballycanvan is very great, and tillage all over this neighbourhood is increafed. The rent of a cabin ics., an acre with it, zos. 'lhe grafs of a cow a few years ago 20 s ., now 25 s . or 30 s .

An exceeding good practice here in making their fences is, they plant the quick on the fide of the bank in the common manner, and then, inftead of the dead hedge we ufe in England on the top of the bank, they plant a row of old thorns, two or three feet high, which readily grow, and form at once a moft excellent fence. Their way affo of taking in fand-banks from the river deferves notice: they flake down a row of furzes at low water, laying fones on them to the height of one or two feet; thefe retain the mud, which every tide brings in, fo as fill up all within the furze as high as their tops. I remarked on the frand, that a few boat loads of ftones laid carelef:ly had had this effect, for within them I meafured twelve inches deep of rich blue mud left behind them, the fame as they ufe in manuring, full of fhells and efferveliced ftrongly with vinegar.

 Befid a har to $1 s$ cod,Among the poor people, the fiflermen are in much the beft circumfances; the fifhery is confiderable; Waterford and its harbour lave fifty boats each, from eight to twelve tons, fix men on an average to each, but to one of fix tons, five men go. A boat of eight tons coffs 401., one of twelve, 60 . To each boat there is a train of nets of fix pair, which cofts from 4l. 4s. to 61. 6s. ; tan them with bark. Their only net fifhery is that of herrings, which is commonly carried on by flares. The divifion of the fifh is, firt, one-fourth for the boat; and then the men and nets divide the reft, the latter reckoned as three men. They reckon ten maze of herrings an indifferent night's work; when there is a good take, forty maze have been taken, twenty a good night; the price per maze from 18. to 7 s . average 5 s. Their take in 1775, the greateft they have known, when they had nore than they could difpofe of, and the whole town and country ftunk of then, they retailed them thirty-two for a penny: 1773 and 1774 good years. They barrelled many; but in general there is an import of Swedifh. Befides the common articles I have regiftered, the following are, pigeons, is. a couple; a hare, 1 s . ; partridges, 9 d . ; turbots, fine ones, 4 S . to 10 s. ; foals a pair, large, 1 s .6 d . to is. ; lobftrrs, 3 d. each ; oylters, 6s. per hundred ; rabbits, Is. to is. 4 d . a couple; cod, is. each, large ; falmon, 1 d. to 2 d .

A very extraordinary circumftance I was told, that within five or fix years there has been much hay carricd from Waterford to Norway, in the Norway flips that bring deals; as hay is dear here, it proves a moft backward ftate of hufbandry in that northerly region, fince the neighbourhood of fea-ports to which this hay can alone go, is generally the beft improved in all countries.

October 19, the wind being fair, took my leave of Mr. Bolton, and went back so the fhip; met with a frefh fcene of provoking delays, fo that it was the next morning, October 20, at eight o'clock, before we failed, and then it was not wind, but a cargo of paffengers that fpread our fails. Twelve or fourtcen hours are not an uncommon paffage; but fuch was our luck, that after being in fight of the lights on the Smalls, we were by contrary winds blown oppofite to Arklow fands: a violent gale arofe, which prefently blew a form that lafted thirty-fix hours, in which, under a reefed mainfail, the fhyp drifted up and down wearing, in order to keep clear of the coafts.

No wonder this appeared to me, a frefh-water failor, as a ftorm, when the oldeft men on board reckoned it a violent one; the wind blew in furious gufts; the waves ran very high ; the cabin windows burft open, and the fea pouring in fet every thing afloat, and among the reft a poor lady, who had fpread her bed on the floor. We had however the fatisfaction to find, by trying the pumps every watch, that the flip made little water. I had more time to attend thefe circumftances than the reft of the paffengers, being the only one in feven who efcaped without being fick. It pleafed God to preferve us, but we did not caft anchor in Milford Haven till Tueflay morning the 22d, at one o'elock.

It is much to be wifhed that there were fome means of being fecure of packets failing regularly, inftead of waiting till there is fuch a number of paffengers as fatisfies the owner and captain ; with the poft-office packets there is this fatisfaction, and a great one it is; the contrary conduct is fo perfectly deteftable, that I hould fuppofe the fcheme of Waterford ones can never fucceed.

Two years after, having been affured this conveyance was put on a new footing, I ventured to try it again; but was mortified to find that the Tyrone, the only one that could take a chaife or horics, (the Counteis being laid up,) was repairing, but would fail in five days; I waited, and received affurance after affurance that the would be ready on fuch a day, and then on another; in a word, I waited twenty-four days before I failed; moderately fpeaking, 1 could by Dublin have reached Turin or Milan as foon

[^316]as I did Milford in this conveyance. All this time the papers had conflant advertifements of the Tyrone failing regularly, infead of letting the public know that the was under a repair. Her owner feems to be a fair and worthy man, he will therefore probably give up the fcheme entirely, unlefs affifted by the corporation with at leaft four fhips more, to fail regularly with or without paffengers; at prefent it is a general difappointment : I was fortunate in Mr. Bolton's acquaintance, paffing my time very agreeably at his hofpitable manfion; but thofe who, in fuch a cafe, thould find a Waterford inn their refource, would curfe the Tyrone, and fet off for Dublin. The expences of this paffage are higher than thofe from Dublin to Holyhead : I paid,

1777. Upon a fecond journey to Ireland this year, I took the opportunity of going from Dublin to Mitchelfown, by a rout through the central part of the kingdom which I had not before fufficiently viewed.

Left Dublin the 24 th of September, and taking the road to Naas, I was again ftruck with the great population of the country, the cabins being fo much poorer in the vicinity of the capital than in the more diftant parts of the kingdom.
To Kildare, croffing the Curragh, fo famous for its turf. It is a fheep walk of above four thoufand Englifh acres, forming a more beautiful lawn than the hand of art ever made. Nothing can exceed the extreme foftnefs of the turf, which is of a verdure thao charms the eye, and highly fet off by the gentle inequality of furface. The foil is a fine dry loam on a ltoney bottom; it is fed by many large flocks, turned on it by the occupiers of the adjacent farms, who alone have the right, and pay very great rents on that account. It is the only confiderable common in the kingdom. The fheep yield very little wool, not more than 3 lb. per fleece, but of a very fine quality.

From Furnefs to Shaen Caftle, in the Queen's County, Dean Coote's; but as the hulbandry, \&cc. of this neighbourhood is already regiftered, I have only to obferve, that Mr. Coote was fo kind as to thew me the improved grounds of Dawfon's Court, the feat of Lord Carlow, which I had not feen before. The principal beauties of the place are the well grown' and extenfive plantations, which form a fhade not often met with in Ireland. There is in the back grounds a lake well accompanied with wood, broken by: feveral iflands that are covered with underwood, and an ornamented walk paffing on the banks which leads from the houfe. This lake is in the feafon perfectly alive with wild-fowl; near it is 2 very beautiful fpot, which commands a view of both woods and water, a fituation either for a houfe or a temple. Mr. Dawfon is adding to the plantations, an employment of all others the moit meritorious in Ireland. Another work, fcarcely lefs fo, was the erecting a large handfome inn, wherein the fame gentle-
man intends eftablifhing a perfon who fhall be able to fupply travellers, poft, with either chaifes or horfes.

From Shaen Cafle to Glofter, in the King's County, the feat of John Lloyd, Efq. member for that county, to whofe attention I owe the following particulars, in which he took every means to have me well and accurately informed. But firt let me obferve, that I was much pleafed to remark, all the way from Naas quite to Rofferea, that the country was amongft the fineft I had feen in Ireland, and confequently that I was fortunate in having an opportunity of feeing it after the involuntary omiffion of laft year. The cabins, though many of them are very bad, yet are better than in fome other counties, and chimneys generally a part of them. The people too bave no very miferable appearance; the breed of cattle and fheep good, and the hogs much the beft I have any where feen in Ireland. Turf is every where at hand, and in plenty; yet are the bogs not fo general as to affect the beauty of the country, which is very great in many tracts, with a fcattering of wood, which makes it pleafing. Shaen Caftle ftands in the midft of a very fine tract. From Mountrath to Glofter, Mr. Lloyd's, I could have imagined myfelf in 2.very pleafing part of England; the country breaks into a variety of inequalities of hill and dale; it is all well inclofed with fine hedges; there is a plenty of wood, not fo monopolized as in many parts of the kingdom by here and there a folitary feat, but fpread over the whole face of the profpect : look which way you will, it is cultivated and chearful.

The Shannon adds not a little to the convenience and agreeablenefs of a refidence To near it. Befides affording thefe forts of wild fowl, the quantity and fize of its fifh are amazing : pikes fwarm in it, and rife in weight to fifty pounds. In the little flat fpaces on its banks are fmall but deep lochs, which are covered in winter and in floods; when the river withdraws, it leaves plenty of fifh in them, which are caught to put into ftews. Mr. Holmes has a fmall one before his door at Johnftown, with a little ftream which feeds it ; a trowling-rod here gets you a bite in a moment, of a pike from twenty to forty pounds. I eat of one of twenty-feven pounds fo taken; I had alfo the pleafure of feeing a fifherman bring three trouts, weighing fourteen pounds, and fell them for fixpencehalfpenny a piece. A couple of boats lying at anchor, with lines extended from one to the other, and hooks in plenty from them, have been known to catch an incredible quantity of trout. Colonel Prittie, in one morning, caught four fone odd pounds, thirtytwo trouts: in general they rife from three to nine pounds. Perch fwarm; they appeared in the Shannon for the firft time about ten years ago, in fuch plenty that the poor lived on them ; bream of fix pounds; eels very plentiful. There are many gillaroos in the river, one of twelve pounds weight was fent to Mr. Jenkinfon. Upon the whole, thefe circumftances, with the pleafure of fhooting and boating on the river, added to the glorious view it yields, and which is enough at any time to chear the mind, render this neighbourhood one of the moft enviable fituations to live in that I have feen in Ireland. The face of the country gives every circumftance of beauty. From Killodeernan-hill, behind the new houfe building by Mr. Holmes, the whole is feen to great advantage. The fpreading part of the Shannon, called Loch Derg, is commanded diftinctly for many miles; it is in two grand divifions of great variety : that $t$, the north is a reach of five miles leading to Portumna. The whole hither thore a. fcenery of hills, checkered by inclofures and little woods, and retiring from the eye into a rich diftant profpect. The woods of Doras, belonging to Lord Clanrickard, form a part of the oppofite fhore, and the river itfelf prefents an ifland of one hundred and twenty acres. Inclining to the left, a vale of rough ground, with an old caftle in it, is backed by a bold hill, which intercepts the river there, and then the great reach of fifteen miles, the bay
of Shcriff, fpreads to the eye, with a magnificence not a little added to by the boundary, a flarp outline of the county of Clare mounsans, between which and the Duharrow hills the Shannon finds its way. Thefe hills lead the eye ftill more to the left, till the Keeper meets ir, prefenting a very beautiful outline that finks into other ranges of hill, uniting with the Devil's Bit. The home fcenery of the grounds, woods, hills, and lake of Johnftown, is beautiful.

Dancing is very general among the poor people, almoft univerfal in every cabin. Daucing-matters of their own rank travel through the country from cabin to cabin, with a piper or blind fidler, and the pay is fixpence a quarter. It is an abfolute fyftem of education. Weddings are always celebrated with much dancing; and a Sunday rarely palles without a dance; there are very few among them who will not, after a hard day's work, gladly walk feven miles to have a dance. john isonot fo lively, but then a hard day's work with him is certainly a different affair from what it is with Paddy. Other branches of education are likewife much attended to, every child of the pooreft family learning to read, write, and caft accounts.

There is a very ancient cuftom here, for a number of country neighbours among the poor people, to fix upon fome young woman that ought, as they think, to be married; they alfo agree upon a young fellow as a proper hubband for her; this determined, they

- fend to the fair one's cabin to inform her that on the Sunday following " fhe is to be horfed," that is, carried on men's backs. She muft then provide whifky and cyder for a treat, as all will pay her a vifit after mafs for a hurling match. As foon as fhe is horfed, the hurling begins, in which the young fellow appointed for her hufband has the eyes of all the company fixed on him : if he comes off conqueror, he is certainly married to the girl ; but if another is victorious, he as certainly lofes her, for the is the prize of the victor. Thefe trials are not always finifhed in one Sunday, they take fometimes two or three, and the common expreffion when they are over is, that "fuch a girl was goal'd." Sometimes one barony hurls againt another, but a marriageable girl is always the prize. Hurling is a fort of cricket, but inftead of throwing the ball in order to knock down a wicket, the aim is to pafs it through a bent ftick, the ends ftuck in the ground. In thefe matches they perform fuch feats of activity, as ought to evidence the food they live on to be far from deficient in nourinment.

In the hills above Derry are fome very fine flate quarries, that employ fixty men, The quarrymen are paid $3^{\text {s. a }}$ a thoufand for the flates, and the labourcrs 5 d . a day. They are very fine, and fent by the Shannon to diftant parts of the kingdom; the price at the quarry 6 s . a thoufand, and at the fhore 6s. 8d. Four hundred thoufand flates are raifed to pay the rent only, from which fome eftimate may be made of the quantity.

Mr. Head has a practice in his fences which deferves univerfal imitation; it is planting trees for gate-pofts. Stone piers are expenfive, and always tumbling down; trees are beautiful, and never want repairing. Within fifteen years this gentleman has improved Derry fo much, that thofe who had only feen it before would find it almoft a new creation. He has built a handfome ftone-houfe, on the flope of a hill rifing from the Shamnon, and backed by fome fine woods, which unite with many old hedges well planted to form a woodland fcene, beautiful in the contraft to the brigit expanfe of the noble river below : the declivity on which thefe woods are, finihics in a mountain, which rifes above the wholc. The Shannon gives a bend around the adjoining lands, fo as to be feen from the houfe both to the weft and north, the lawn falling gradually to a margin of wood on the fhore, which varies the outline. The river is two miles broad, and on the oppofite fhore cultivated inclofures rife in fome places almoft to the mountain top, which is very bold.

It is a very fingular demefne; a fripe of very beautiful ground, reaching two miles along the banks of the river, which forms his fence on one fide, with a wall on the other. There is fo much wood as to render it very pleafing, alding to every day by planting all the fences made or repaired. From feveral little hills, which rife in dif. ferent parts of it, extenfive views of the river are commanded quite to Portumna; but thefe are much eclipfed by that from the top of the hill above the flate quarry. From thence you fee the river for at leaft forty miles, from Portumna to twenty miles beyond Limerick. It has the appearance of a fine bafon, two miles over, into which three great rivers lead, being the north and fouth courfe and the bay of Skeriff. The reaches of it one beyond another to Portumna are fine. At the foot of the mountain Mr. Head's demefne extends in a fhore of rich woodland.
October 7 th, took my leave of Mr. Head, after pafling four days very agreeably. Through Killaloe, over the Shannon, a very long bridge of many arches; went out of the road to fee a fall of that river at Caftle Connel, where there is fuch an accompaniment of wood as to form a very pleafing feenery; the river takes a very rapid rocky courfe around a projecting rock, on which a gentleman has built a funmer-houfe, and formed a terrace: it is a llriking fpot. 'To Limerick. Laid at Bennis's, the firf inn we had flept in from Dublin. God preferve us this journey from another!

It is not uncommon, efpecially in mountainous countries, to find objects that much deferve the attention of travellers entirely neglected by them. There are a few inftances of this upon Lord Kingfborough's eftate, in the neighbourhood of Mitcheltown; the firf I fhall mention is a cave at Skeheenrinky, on the road between Cahir and that place: the opening to it is a cleft of rock in a lime-ftone hill, fo narrow as to be difficult to get into it. I defcended by a ladder of aboui twenty fteps, and then found myfelf in a vault of a hundred feet long, and fifty or fixty high : a fmall hole on the left leads from this a winding courle of I believe not lefs than half an Irifh mile, exhibiting a variety that Itruck me much. In fome places the cavity in the rock is fo large, that when well lighted up by candles (not flambeaux, Lord Kinglborough once flewed it me with them, and we found their fmoke troublefome) it takes the appearance of a vaulted cathedral, fupported by maffy colunns. The walls, cieling, floor, and pillars, are by turns compofed of every fantaftic form; and often of very beautiful incruftations of fpar, fome of which glitters fo much, that it feems powdered with diamonds; and in others the cieling is formed of that fort which has fo near a refemblance to a cauliflower. The fipar formed into columns by the dropping of water has taken fome very regular forms; but others are different, folded in plaits of light drapery, which hang from their fupport in a very pleafing manner. The angles of the walls feem fringed with icicles. One very long branch of the cave, which turns to the north, is in fome places fo narrow and low, that one crawls into it, when it fuddenly breaks into large vaulted fpaces, in a thoufand forms. The fpar in all this cave is very brilliant, and almoft equal to Priftol ftone. For feveral hundred yards in the larger branch, there is a deep water at the bottom of the declivity to the right, which the common poople call the river. A part of the way is over a fort of potter's clay, which moulds into any form, and is of a brown colour; a very different foil from any in the neighbouring country. I have feen the famous cave in the Peak, but think it very much inferior to this; and Lord Kingborough, who has viewed the Grot d'Aucel in Burgundy, fays that it is not to be compared with it.

But the commanding region of the Galties deferves more attention. Thofe who are fond of feenes in which nature reigns in all her wild magnificence, fhould vifit this ftu-* pendous chain. It confifts of many valt mountains, thrown together in an affemblage
of the moft interefting features, from boldnefs and height of the declivities, freedom of outline, and variety of parts, filling a fpace of about fix miles by three or four. Galtymore is the higheft point, and rifes like the,lord and father of the furrounding progeny. From the top you look down upon a great extent of mountain, which fhelves away from him to the fouth, eaft, and weft ; but to the north the ridge is alinoft a perpendicular declivity. On that fide the famous golden vale of Limerick and Tipperary fpreads a rich level to the eye, bounded by the mountains of Clare, King's and Queen's counties, with the courfe of the Shannon, for many miles below Limerick. To the fouth you look over alternate ridges of mountains, which rife one beyond another, till in a clear day the eye meets the ocean near Dungarvon. The mountains of Waterford and Knocknaldown fill up the fpace to the fouth-eaft. The weftern is the mofl extenfive view; for nothing ftops the eye till Mangerton and Macgilly Cuddy's Reeks point out the fpot where Killarney's lake calls for a farther excurfion. The profpect extands into eight counties, Cork, Kerry, Waterford, Limerick, Clare, Queen's, Tipperary, King's.

A little to the weft of this proud fummit, below it in a very extraordinaryhollow, is a circular lake of two acres, reported to be unfathomable. The defcriptions which I have read of the craters of exhaufted volcanoes, leave very little doubt of this being one; and the conical regularity of the fummit of Galtymore fpeaks the fane language. Laft of this refpectable hill, to ufe Sir William Hanilton's language, is a declivity of about one quarter of a mile, and there Galtybeg rifes in a yet more regular cone, and between the two hills is another lake, which from pofition feems to have been once the crater which threw up Galtybeg, as the firft mentioned was the origin of Galtymore. Beyond the former hill is a third lake, and eaft of that another hill; I was told of a fourth, with another correfponding mountain. It is only the mere fummit of thefe mountains which rife above the lakes. Speaking of them below, they may be faid to be on the tops of the hills; they are all of them at the bottom of an almoft regularly circular hollow. On the fide next the mountain top are walls of perpendicular rocks, in regular $\operatorname{ftrata}$, and forne of them piled on each other, with an appearance of art rather than nature. In thefe rocks the eagles, which are feen in numbers on the Galties, have their nefts. Suppofing the mountains to be of volcanic origin, and thefe lakes the craters, of which I have not a doubt ; they are objects of the greatelt curiofity, for there is an unufual regularity in every confiderable fummit, having its correfponding crater; but without this circumftance the fcenery is interefting in a very great degree. The mountain fummits, which are often wrapped in the clouds, at other times exhibit the freef outline; the immenfe fcooped hollows which fink at your feet, declivities of fo valt a depth as to give one terror to look down; with the unufual forms of the lower region of hills, particularly Bull hill, and Round hill, each a mile over, yet rifing out of circular vales, with the regularity of femi-globes, unite upon the whole to exhibit a fcenery to the eye, in which the parts are of a magnitude fo commanding; a character fo interefing, and a variety fo friking, that they well deferve to be examined by every curious travelier.

Nor are thefe immenfe outlines the whole of what is to be feen in this great range of mountains. Every glen has its beauties; there is a confidcrable mountain river, or rather torrent, in cvery one of them; but the greateft are the Funcheon, between Sefang and Galiymore; the Limeftone river, between Galtymore and Round hill, and the Groufe river, between Coolegarranroe, and Mr. O'Callaghan's mountain; thefe prefent to the eye, for a tract of about three miles, every varicty that rock, water, and mountain can give, thrown into all the fantaltic forms which art may attempt in orna-
mented grounds, but always fails in. Nothing can exceed the beauty of the water, when not difcoloured by rain, its lucid tranfparency fhews, at confiderable depths, every. pebble no bigger than a pin, every rocky bafon alive with trout and eels, that play and dafl among the rocks, as if endowed with that native vigour which animates, in a fuperior degree, every irhabitant of the mountains, from the bounding red deer, and the foaring eagle, down even to the filhes of the brook. Every five minutes you have a waterfall in thefe glens, which in any other region, would fop every traveller to admire it. Sometimes the vale takes a gentle declivity, and prclents to the eye, at one ftroke, twenty or thirty falls, which render the fcenery all alive with motion; the rocks are toffed about in the wildeft confufion, and the torrent burfs by turns from above, beneath, and under them; while the back ground is always filled up with the mountains which ftretch around.

In the weftern Glen is the fineft calcade in all the Galties; there are two falls, witha bafon in the rock between, but from fome points of view they appear one; the rock over which the water tumbles is about fixty feet high. A good line in which to view thefe objects is either to take the Killarney and Mallow road, to Nitchelfown, and from thence by Lord Kingflorough's new one, to Skeheenrinky, there to take one of the Glens, to Galtybeg, and Galtymore, and return to Mitchelfown by the Wolf's' track, 'Temple hill, and the Waterfall: or, if the Cork road is travelling, to makeDobbin's inn, at Ballyporeen, the head quarters, and view them from thence.

Having heard much of the beautics of a part of the Queen's County, I had not before feen, I took that line of country in my way on a journey to Dublin.

From Mitchelfown to Cafhel, the road leads as far as Galbally in the route already travelled from Cullen; towards Cathel the country is various. The only object deferving attention, are the plantations of Thomaftown, the feat of Francis Mathew, Efq.; they confift chiefly of hedge-row trees in double and treble rows, are well grown, and of fuch extent as to form an uncommon woodland fcene in Ireland. Found the widow Holland's inn, at Cafhel, clean and very civil. Take the road to Urlingford. The rich fheep paftures, part of the famous golden vale, reach between three and four miles from Cafhel to the great bog by Botany Hill, noted for producing a greater variety of plants than common. That bog is feparated by only fimall tracts of land, from the ftring of bogs which extend through the Qucen's County, from the great bog of: Allen; it is here of confiderable extent, and exceedingly improveable. Then enter a low marfhy bad country, which grows worfe after palling the fixty-fixth mile ftone; and fucceflive bogs in it. Breakfaft at Johnftown, a regular village on a night eninence, built by Mr. Hayley; it is near the Spaw of Ballyfpellin. Rows of trees are planted; but their heads all cut off, I fuppofe from their not thriving, being planted too old. Immediately on leaving thefe planted avenues, enter a row of eight or ten new cabins, at a diftance from each other, which appear to be a new undertaking, the land about. them all pared and burnt, and the athes in heaps.

Enter a fine planted country, with much corn and good thriving quick hedges for many miles. The road leads through a large wood, which joins Lord Athbrook's plantations, whofe houfe is fituated in the midtt of more wood than almoft any one I have feen in Ireland. Pafs Durrow; the country for two or three miles continues all inclofed with fine quick hedges, is beautiful, and has fome refemblance to the beft parts of Effex. Sir Robert Staple's improvements join this fine tract ; they are completed
in a moft perfect manner; the hedges well-grown, cut, and in fuch excellent order, that I can fcarcely believe myfelf to be in Ireland. His gates are all of iron. Thefe fylvan feenes continue through other feats beautifully fituated, amidft gentle declivities of the finel verdure, full grown woods, excellent hedges, and a pretty river winding by the houfe. The whole environs of feveral would be admired in the beft parts of England.

Crofs a great bog, within fight of Lord De Vefcey's plantations. The road leads over it, being drained for that purpofe by deep cuts on either fide. I hould apprehend this bogy to be among the moft improveable in the country.

Slept at Ballyroan, at an inn kept by three animals, who call themfelves women; met with more impertinence than at any other in Ireland. It is an execrable hole In threc or four miles pais Sir John Parnel's, pretpily fituated in a neatly dreffed lawn, with nuch wood about it, and a lake quite alive with wild fowl. -
l'als Monftereven, and crofs directly a large bog, drained and partly improved; but all of it bearing grafs, and feems in a fate that might eafily be reduced to rich meadow, with only a drefling of lime. Here I got again into the road I had travelled before.

I muft in general remark, that from near Urlingford to Dawfon Court, near Monftereven, which is completely acrofs the Queen's County, is a line of above thirty Englifh miles, and is for that extent by much the moft improved of any I have feen in Ireland. It is generally well planted, has many woods, and not confilling of pateles of plantation juft by gentlemen's houles, but fpreading over the whole face of the country, fo as to give it the richnefs of an Englifh woodland feene. What a country would Ireland be, had the inhabitants of the reft of it improved the whole like this!

## PART II.

## SECTION I. - Scil, Face of the Country, and Climatc.

TO judge of Ireland by the converfation one fometimes hears in England, it would be fuppofed that one half of it was covered with bogs, and the other with mountains filled with Irifh ready to fly at the fight of a civilized being. There are people who will fmile when they hear that, in proportion to the fize of the two countries, Ireland is more cultivated than England, having much lefs wafte land of all forts. Of uncultivated mountains there are no fuch tracts as are found in our four northern counties, and the North Riding of Yorkfhire, with the eaftern line of Lancafter, nearly down to the Peak of Derby, which form an extent of ahove a hundred miles of wafte. The moft confidcrable of this fort in Ireland are in Kerry, Galway, and Mayo, and fome in Sligo and Donnegal. But all thefe together will not make the quantity we have in the four northern counties; the vallies in the Irifh mountains are alfo more inhabited, I think, than thofe of England, except where there are mines, and confequently fome fort of cultivation creeping up the fides. Natural fertility, acre for acre over the two kingdons, is certainty in favour of Ireland; of this I believe there can fearcely be a doubt entertained, when it is confidered that fone of the more beauiful, and even beft cultivated counties in England, owe almont every thing to the capital art and indultry of the inhabitants.

The circmuftance which frikes me as the greatef fingularity of Ireland, is the rockinefs of the foil, which floould feem at firft fight againit that degree of fertility; but the
conerratry is the fact. Stone is fo general, that I have great reafon to believe the whole inland is one vaft rock of different ftrata and kinds rifing out of the fea. 1 have rarely heard of any great depths being funk without meeting with it. In general it appears on the furface in every part of the kingdom, the flatteft and moft fertile parts, as Limerick, Tipperary, and Meath, have it at no great depth, almoft as much as the more barren ones. May we not recognize in this the hand of bounteous Providence, which has given, perhaps the moft foney foil in Europe to the moifteft climate in it ? If as much rain fell upon the clays of England (a foil very rarely met with in Ireland, and never without much ftone) as falls upon the rocks of her fifter iffand, thofe lands could not be cultivated. But the rocks are here cloathed with verdure ; thofe of lime.fone with only a thin covering of mould, have the fofteft and moft beautiful turf imaginable.

Of the great advantages refulting from the general plenty of lime-tone and limefone gravel, and the nature of the bogs, 1 fhall have occafion to fpeak more particularly hereafter.

The rockinefs of the foil in Ireland is fo univerfal, that it predominates in every fort. One cannot ufe with propriety the terms clay, loam, fand, \&cc. it muft be a foney clay, a foney loam, a gravelly fand. Clay, efpecially the yellow, is much talked of in Irelands but it is for want of proper difcrimination. I have once or twice feen almoft a pure clay upon the furface, but it is extremely rare. The true yellow clay is ufually found In athin fratum under the furface mould, and over a rock; harf, tenacious, ftoney, ftrong loams, difficult to work, are not uncommon; but they are quite different from Englifh clays.

Friable fandy loams, dry but fertile, are very common, and they form the beft foils in the kingdom for tillage and Theep. Tipperary and Rofcommon abound particularly in them. The moft fertile of all, are the bullock paftures of Limerick; and the banks of the Shannon in Clare, called the Corcafes. Thefe are a mellow, putrid, triable loam.

Sand which is fo common in England, and yet more common through Spain, France, Germany, and Poland, quite from Gibraltar to Peterburgh, is no where met with in Ireland, except for narrow lips of hillocks, upon the fea coalt. Nor did I ever meẹt with, or hear of a chalkey foil.

The bogs, of which foreigners have heard fo much, are very extenfive in Ireland: that of Allen extends eighty miles, and is computed to contain three hundred thoufand acres. There are others alio, very extenfive, and fmaller ones fcattered over the whole kingdom; but thefe are not in general more than are wanted for fuel. When I come .to fpeak of the improvement of wafte lands, I fhall defribe them particularly.

Befides the great fertility of the foil, there are other circumftances which come within my fphere to mention. Few countries can be better watered, by large and beautful rivers; and it is remarkable, that by much the fineft parts of the kingdom are on the banks of thefe rivers. Witnefs the Sure, Blakwater, the Liffy, the Boyne, the Nore, the Barrow, and part of the Shannon, they wafh a fcenery that can hardly be exceeded. From the rockinefs of the country, however, there are few of them that have not obftruetions, which are great impediments to inland navigation.

The mountains of Ireland give to travelling that interefting variety, which a flat country can never abound with. And at the fame time, they are not in fuch number as to confer the ufual charafter of poverty, which attends them. I was either upon or very near the moft confiderable in the kingdon. Mangerton, and the Reeks, in Kerry; the Galties in Corke; thofe of Mourne in Down; Crow Patrick, and Nephin in Mayo,
thefe tre the principal in Ireland, and they are of a character, in height and fublimity, which mould render them the objects of every traveller's attention.
-"Relative to the climate of Ireland, a fhort refidence cannot enable a man to fpeak much from his own experience; the obfervations I have made myfelf confirm the idea of ita being vaßly wetter than England; from the 2oth of June to the 2oth of October, I kept a regifer, and there were, in one hundred and twenty-two days, feventy-five of rain, and very many of them inceffant and heavy. I have examined fimilar regifters I kept in England, and can find no year that even approaches to fuch a moilture as this. But there is a regifer of an accurate diary publifhed, which compares London and Corke. The refult is, that the quantity at the latter place was double to that at London. See Smith's Hif. of Corke.

From the information I received, I have reafon to believe, that the rainy feafon fets in ufuahy about the firf of July, and continues very wet till Septeniber or Uetober when there is ufually a dry fine featon of a month or fix weeks. I refided in the county if corke, \&c. from October till March, and found the winter much more foft and trilcs, thail ever 1 experienced one in England. I was alfo a whole fummer there (1778), and it is fair to mention, that it was as fine a one as ever 1 knew in England, though ty 110 ineans to hot. I think hardly fo wet as very many I have known in Fingland. The tops of the Galty mountains exhibited the only fnow we faw; and as to frofts, they were fo llight and rare that I believe myrtles, and yet tenderer plants, would ha"e furvived without any covering. But when I fay that the winter was not remarkable for being wet, 1 do not mean that we had a dry atmofphere. The inches of rain which fell in the winter I fpeak of, would not mark the moifture of the climate. As many inches will fall in a fingle tropical thower, as in a whole year in England. See Mitchel's PreSent State of Great Britain and North America. But if the clouds prefently difperfe, and a bright fun thines; the air may foon be dry. The worft circumftance of the climate of Ireland, is the conflant moiffure without rain. Wet a piece of leather, and lay it in a room where there is neither fun nor fire, and it will not in fummer even be dry in a month, I have ktwown genitemen in Ireland deny their clinate being moifter than England, but if they have eyes let them open them, and fee the verdure that cloathes their rocks, and compare it with ours in England - where rocky foils are of a ruffet brown however fweet the food for theep. Does not their illand lie more expofed to the great Atlantic; and does not the weff wind blow three fourths of a year? If there was another ifland yet more weftward, would not the climate of Ireland be inproved? Guch perfons fpeak equally againt fact, reafon, and philofophy. That the moiture of a climate does not depend on the quantity of rain that falls, but on the powers of. aerial évaporation, Dr. Dobfon has clearly proved. Pbil. Tranf. vol. lxvii. part i. P. 244.

## Oppreffion.

BEFORE 1 conclude this article of the com tabouring poor in Ireland, I muft
 their cloaths, or their food; the fuborigutic) ut ac lower clatles, degenerating into oppreffion, is not to be overlooked. The poor in all countries, and under all governments, are both paid and fed, yet there is an infinite difference between them in difficrent ones. This inquiry will by no means turn out fo favourable as the preceding articles. It muft be very apparent to every traveller through that country, that the habouring poor are treated with hardmefs, and are in all refpects io little confidered,
that their want of importance feeme a perfect contraft to their fituation in England, of which country, comparatively feaking, they reign the fovereigns. The age has itnproved fo much in humanity, that even the poor Irifh have experienced ita influence, and are every day treated better and better ; but ftill the remnant of the old manners, the abominable dittinction of religion, united with the oppreffive conduct of the little country gentlemen, or rather vermin of the kingdom, who never were out of it, altogether bear fill very heavy on the poor people, and fubject them to fituations more mortifying that we ever behold in England. The landlord of an Irifh eftate, inhabited by Roman Catholics, is a fort of defpot who yields obedience, in whatever concerns the poor, to no law but that of his will. To difcover what the liberty of the people is, we muft live among them, and not look for it in the fatutes of the realm : the language of written law may be that of liberty, but the fituation of the poor may fpeak no lan. guage but that of lavery; there is too nuuch of this coneradiction in Ireland; a long feries of oppreffions, aided by many very ill-judged laws, have brought landlords into a habit of exerting a very lofty fuperiority, and their vaffal into that of an almoft unlimited fubmiffion: fpeaking a language that is defpifed, profefing a religion that is abhorred, and being difarmed, the poor find themfelves in matiy cales flaves even in the bofom of written liberty. Landlords that have refi. $d$ much abroad are ufually humane in their ideas, but the habit of tyranny natural "contracts the mind, fo that even in this polifhed age there are inftances of a fevere carnage tow ards the poor, which is quite unknown in England.

A landlord in Ireland can fearcely invent an order which a fervant, labourer, or cottar dares to refufe to execute. Nothing fatisfies him but an on nited fubmiffion. Difrefpect, or any thing tending towards faucinefs, he may punit vith his cane or his horlewhip with the moft perfect fecurity, a poor man would ha his bones broke, if he offered to lift his hands in his own defence. Knocking down is poken of in the country in a manner that makes an Englifhman ftare. Landlords of confequence have affured me that many of their cottars would think thenfelves honoure by having their wives and daughters fent for to the bed of their mafter; a mark of Eary that proves the oppreflion under which fuch people muft live. Nay, I have hean aneedores of the lives of people being made free with without any apprehenfion of the plitice of a jury. But let it not be imagined that this is common ; formerly it happened every dey, but law gains ground. It muft frike the moft carelefs traveller to fee whote Arings of cars whift into a ditch by a gentlenan's footman to make way for his carriage; if they are overturned or broken in pieces, no matter, it is taken in patience; were they to complain they would perhaps be horfe-whipped. The execution of the lawe thes very much in the hands of juftices of the peace, many of whom are drawn from the mort illiberal clafs in the kingdom.' If a poor man lodges a complaint againft a gentleman, or any animal that choofes to call ittelf a gentleman, and the juftice iffues out a fummons for his appearance, it is a fixed affront, and he will infallibly be called out. Where man:ners are in confpiracy againt law, to whom are the oppreffed people to have recourfe? It is a fact, that a poor man having a conteft with a gentleman muft-but I am talking monfenfe, they knov their fituation soo well to think of it ; they can have no defence but by means of protection from one gentleman againlt another, who probably protects his valfal as he would the freep he intends to eat.

The colours of this picture are not charged. 'To affert that all thefe cafes are common, would be an exaggeration, but to fay that an unfeeling landlord will do all this with inpunity is to keep flrictly to truth: and what is liberty but a farce and a jefe, if
its bleffinge are received as the fivour of kindnefs and humanity, inftead of being the inheritance of Right?

Confequences have flowed from thefe oppreffions which ought long ago to have put z ftop to them. In Eingland we have heard much of White-boys, Steel-boys,' Oak-boys, Peep-of-day-boys, \&c. But thefe various infurgents are not to be confounded, for they are very different. The proper diftinction in the difcontents of the people is into Proteftant and Catholic: All but the White-boys were among the manufacturing Proteftants in the north. The Whiteboys Catholic labourers in the fouth : from the beft intelligence I could gain, the riots of the manufacturers had no other foundation hut fuch variations in the manufacture as all fabrics experience, and which they had themfelves known and fubmitted to before. The cafe, however; was different with the White-boys; who being labouring Catholics met with all fhofe oppreffions I have defribed, and would probably have continued in full fubmiffion had not very feveretreatmient in refpect of tythes, united with a great fpeculative rife of rent about the fame time, blown up the flame of refiftance; the atrocious acts they were guilty of made them she object of gemeral indignation, acts were paffed for their punifhment which feemed calculated for the meridian of Barbary; this arofe to fuch a height that by one they were to be hanged under circumftances without the common formalities of a trial, which; though repealed the following feffion, marks the fpirit of punifhment; while others remain yet the law of the land, that would if executed tend more to raife than quell an infurrection. From all which it is manifelt that the gentlemen of Ireland never thought of a radical cure from overlooking the real caufe of the difeafe, which in fact tay in themfelves, and not in the wretches they doomed to the gallows. Let them change their own conduct entirely, and the poor will not long riot. 'Treat them like men who ought to be as free as yourfelves: put an end to that fytem of religious perfecution which for feventy years has divided the kingdom againft itfelf; in thefe two circumftances lies the cure of infurrection, perform them completely, and you will have an affectionate poor, inftead of oppreffed and difcontented vaffals.
A better treatment of the poor in Ireland is a very material point of the welfare of the whole. Brition Empire. Events may happen which may convince us fatally of this truth; if not, oppreffion muft have broken all the fpirit and refentnent of men. By what policy the government of England can for fo many years have permitted fuch an abfurd fyftem to be matured in lreland, is beyond the power of plain fenfe to difcover.

## Emigrations.

BEFORE the American war broke out, the Irih and Scotch emigrations were a contant fubjeat of converfation in England, and occafioned much difcourfe even in parliament. The common obfervation was, that if they were not ftopped, thofe countries would bervined, and they were generally attributed to a great rife of rents. Upon going over to Ireland I determined to omit no opportunities of difcovering the canfe and extent of this emigration, and my information, as may be feen in the minutes of the journey, was very regular. I bave only a few general remarks to make on it here.

The fpirit of emigrating in Ireland appeared to be confined to two circumftances, the prefbyterian religion, and the linen manufacture. I heard of very few emigrants except among manufacturers of that perfuafion. The Catholics never went, they feem not only tied to the country but almoft to the parifh in which their anceftors lived. As to tho emigration in the north it was an error in England to fuppofe it a novelty which
arote forty ye they cal thips, country trade w the line and ga howeve fold the them tc ed on concluf
arofe with the increafe in rents: The contrary was the fact, it had fubfifted perhaps forty years, infomuch that at the ports of Belfaft, Derry, \&c. the pafenger trade, as they called it, had long been a regular branch of commerce, which employed feveral fhips, and confifted in carrying people to America. The increafing population of the country made it an increafing trade, but when the linen trade was low, the pafenger trade was always high. At the time of Lord Donnegall's letting his eftate in the north the linen bufinefs fuffered a temporary decline, which fent great nuubers to Ainerica, and gave rife to the error that it was occafioned by the increafe of his rents: the fact, however, was otherwife, for great numbers of thofe who went from his lands actually fold thofe leafes for confiderable fums, the hardfhip of which was fuppofed to have driven them to Ainerica. Some emigration, therefore, always exifted, and its increafe depended on the flutuations of linen; but as to the effect there was as much error in the conclufions drawn in England as before in the caufe.
It is the misfortune of all manufactures worked for a foreign market to be ::enn an infecure footing, periods of declenfion will come, and when in confequence ui them great numbers of people are out of employment, the beft circumftance is their enlifting in the army or navy; and it is the common refult; but unfortunately the manufacture in Ireland (of which I fhall have occafion to (peak more hereafter) is not confined as it ought to be to towns, but fpreads into all cabins of the country. Being half farmers, half manufacturers, they have too much property in cattle, \&c. to enlift when idle; if they convert it into cafh it will enable them to pay their paffage to America, an altennative always chofen in preference to the military life. The confequence is, that they mult live without work till their fubftance is quite confumed before they will enlif. Men who are in fuch a fituation that from various caufes they cannot work, and won't enlift, fhould emigrate, if they fay at home they mult remain a burthen upon the community; emigration fhould not, thercfore, he condemned in flates fo ill governed as to poffess. many people willing to work, but without employment.

## SECTION II.-Roads-Cars.

FOR a country, fo vert far behind us as Ireland; to have got fuddenly fo much the ftart of us in the article of roads, is a fpectacle that cannot fail to frike the Englifh traveller exceedingly. But from this commendation the turnpikes in general muit be exclurded, they are as bad as the bye-roads are admirable. It is a common complaint, that the tolls of the turnpikes are fo many jobs, and the roads left in a ftate that difgrace the kingdom.

The following is the fyftem on which the crofs-roads are made. Any perfon, wifhing. to make or mend a road, has it meafured by two perfons, who fwear to the meafurement before a jultice of the peace. It is defcribed as leading from one marketrown to another (it matters not in what direction), that it will be a public good, and that it will require fuch a fum per perch of twenty-one feet, to make or repair the fame; a certificate to this purpofe (of which printed forms are fold), with the blanks filled up, is figned by the meafurers, and alfo by twol perfons called overfeers, one of whom is ufually the perfon applying for the road, the other the labourer he intends to employ as an overfeer of the work, which overfeer fwears alfo before the juftice the truth of the valuation. The certificate, thus prepared, is given by any perfon to fome one of the grand jury, at either of the affizes, but ufually in the fpring. When all the common. bufinefs of trials is over, the jury meets on that of roads; the chairman reads the certificates, and they are all put to the vote, whether to be granted or not. If re-
jected, they are torn in pieces and no further notice taken; if grantel; they are put on the file.

This vote of approbation, without any farther form, enables the perfon who applied for the prefentment immediately to conftruct or repair the road in queftion, which he muft do at his own expence; he muft finifh it by the following aftizes, when he is to fend a certificate of his having expended the money purfuant to the application; this certificate is figned by the foreman, who alfo figns an order on the treafurer of the county to pay him, which is done immediately. In like manner are bridges, houfes of correction, gaols, \&c. \&c. built and repaired. If a bridge over a river which parts two counties, half is done by one and the other half by the other county.

The expence of thefe works is raifed by a tax on the lands, paid by the tenant; in fome counties it is acreable, bit in others it is on the plough land, and as no two plough lands are of the fame fize is a very unequal tax. In the county of Meath it is acreable, and amounts to one fhilling per acre, being the higheft in Ireland; "but in general it is from three-pence to fixpence per acre, amd amounts of late years through the whole kingdom to one hundred and forty thoufand pounds a-year.

The juries will very rarely grant a prefentment for a road which amounts to above -fifty pounds, or for more than fix or feven thilings a perch, fo that if a perfon wants more to be made than fuch a fum will do, he divides it into two or three different meafurements or prefentments. By the act of parliament all prefentment-roads mult be twenty-one feet wide at leaft from fence to fence, and fourteen feet of it formed with ftone or gravel.

As the power of the grand jury extends in this manner to the cutting now roads where none ever were before, as well as to the repairing and widening old ones, exclufive, however, of parks, gardens, \&c. it was neceflary to put a refriction againf the wanton expence of it. Any prefentment may be traverfed that is oppofed, by denying the allegations of the certificate; this is fure of delaying it until another alfizes, and in the mean time perfons are appointed to view the line of road demanded, and report on the neceffity or hardfhip of the cafe. The payment of the money may alfo be traverfed after the certificate of its being laid out; for if any perfon views and finds it a manifeft impofition and job, he has that power to delay payment until the caufe is cleared up and proved. But this traverfe is not common. Any perfons are eligible for afking prefentments; but it is ufually done only by refident gentlenen, agents, clergy, or refpectable tenantry. It follows neceffarily, that every perfon is defircus of making the roads leading to his own houfe, and that private interett alone is confidered in it, which I have heard eljected to the meafure; but this I muft own appears to me the great merit of it. Whenever individuals act for the public alone, the public is very badly ferved; but when the purfuit of their own interelt is the way to benefit the public, then is the public good fure to be promoted; fuch is the cafe of prefentment of roads: for a few years the good roads were all found leading from houfes like rays from a center, with a furrounding face, without any communication; but every year brought the remedy, until in a fhort time, thofe rays pointing from fo many centers met, and then the communication was con:plete. The original act paffed but leventeen years ago, and the effect of it in all parts of the kingdom is fo great, that I found it perfectly practicable $t 0$ travel upon wheels by a map; I will go here; I will go there; I could trace a route upon paper as wild is fancy could diclate, and every where I found beautiful roads without break or hindrance, to enable tre to realize my defign. What a figure would a perfon make in England, who fhould attempt to move in that mamer, where the roade, as Dr. Burn has well oblerved, are almont in as bad a ftete as in the time of Philip and

Mary. land. expunc their a always

Mary. In a few years there will not be a piece of bad road except turnpikes in all Ireland. The money, raifed for this firtt and moft important of all national purpofes, is expended among the people who pay it, employs themfelves and their teams, encourages their agriculture, and facilitates fo greatly the improvement of wafte lands, that it ought always to be confidered as the firt ftep to any undertaking of that fort.

At firf, roads, in common with bridges, were paid out of the general treafure of the county, but by a fublequent act the road tax is now on baronies; each barony pays for its own roads. By another act juries were enabled to grant prefentinents of narrow mountain roads, at two fhillings and fixpence a perch. By another, they were empowered to grant prefentments of footpaths, by the fide of roads, to one fhilling a perch. By a very late act, they are alfo enabled to contract at three-halfpence per perch per annum from the firtt making of a road, for keeping it in repair, which before could not be done without a frefh, prefentment. Arthur King, Efq. of Moniva, whofe agriculture is defcribed in the preceding minutes, and who at that time reprefented the county of Galway, was the worthy citizen who firf brought this excellent meafure into parliament: Ireland, and every traveller that ever vifits it ought, to the lateft time, to revere the memory of fuch a diftinguifhed benefactor to the public. Before that time the roads, like thofe of England, remained impaffable, under the miferable police of the fix days ${ }^{*}$ labour. Similar good effects would here flow from adopting the meafure, which would eafe the kingdom of a great burthen in its public effect abfolutely contemptible; and the tax here, as in Ireland, ought to be fo laid, as to be borne by the tenant, whofebufinefs it is at prefent to repair.
Upon the imperfections of the Irih fyften I have only to remark, that juries hoould, in fome cafes, be more ready than they are to grant thefe prefentments. In general, they are extremely liberal, but fometimes they take filly freaks of giving none, or very few. Fxperience having proved, from the general goodnefs of the roads, that abufes cannot be very great, they fhould go on with fpirit to perfect the great work through-out the kingdon; and as a check upon thofe who lay out the money, it might perhaps be advifeable to print county maps of the prefentment roads, with correfponding lifts and tables of the names of all perfons who have obtained prefentments, the fums they reciived, and for what roads. Thefe fhould be given freely by the jurymen, to all their acquaintance, that every man might know, to whe ch careleffnefs or jobbing the public was indebred for bad roads, when they had paid for good ones. Such a practice would. certainly deter many.

At eleven million forty-two thoufand fix hundred and forty-two acres in the kingdom, 140,000l. a year amounts to jult three-pence an acre for the whole territory: a. very trifing tax for fuch an improvement, and which almoft ranks in public eafe and benefit with that of the pof-office.

## SECTION III. - Mamers and Cuffoms.

> Quid leges fine moribus, Vana proticiunt!

IT is but an illiberal bufinefs for a traveller, who defigns to publifi remarks upon a country to fit down cooly in his clofet and write a fatire on the inhabitants. Severity of that fort muft be enlivened with an uncommon fhare of wit and ridicule, to pleafe. Where very grofs abfurdities are found, it is fair and manly to note them; but to enter into character and difpofition is generally uncandid, fince there are no people but might
be better than they are found, and none but have virtues which deferve attention, at leaf as much as their failings; for thefe reafons this fection would not have found a place in my obfervations, had not fome perfons, of much more flippancy than wifdom, given very grofs mifreprefentations of the Irifh nation. It is with pleafure, therefore, that I take up the pen on the prefent occafion; as a much longer refidence there enables me to exhibit a very different pi\&ture; in doing this, I thall be free to remark, wherein I think the conduct of certain claffes may have given rife to general and confequently injurious condemnation.

There are three races of people in Ireland, fo diftinct, as to frike the leaft attentive traveller : thefe are the Spanifh which are found in Kerry, and a part of Limerick and Corke, tall and thin, but well made, a long vifage, dark eyes, and long black lank hair. The time is not remote when the Spaniards had a kind of fettlement on the coalt of Kerry, which feemed to be overlooked by government. There were many of them in Queen Elizabeth's reign, nor were they entirely driven out till the time of Cromwell. There is an illand of Valentia on that coaft, with various other names, certainly Spanifh. The Scotch race is in the north, where are to be found the feature which are fuppofed to mark that people, their accent and many of their cuftoms. In a diftrict near Dublin, but more particularly in the baronies of Bargie and Forth in the county of Wexford, the Saxon tongue is fpoken without any mixture of the Irith, and the people have a variety of cuftoms mentioned in the minutes, which diftinguifh them from their neighbours. The reft of the kingdom is made up of mongrels. The Milefian race of lrih, which may be called native, are fcattered over the kingdom, but chiefly found in Connaught and Munfter; a few confiderable families, whofe genealogy is undoubted, remain, but none of them with confiderable poffeffions except the O'Briens and Mr. O'Neil; the former have near twenty thoufand pounds a year in the family, the latter half as much, the remnant of a property once his anceftors, which now forms fix or feven of the greatef eftates in the kingdom. O'Hara and M•Dermot are great names in Connaught, and O'Donnohue a confiderable one in Kerry; but I heard of a family of O'Drifchal's in Corke, who claim an origin prior in Ireland to any of the Milefian race.

The only divifions which a traveller, who paffed through the kingdom without making any refidence could make, would be into people of confiderable fortune and mob. The intermediate divifion of the fcale, fo numerous and refpectable in England, would hardly attract the leaft notice in Ireland. A refidence in the kingdom convinces one, however, that there is another clafs in general of fmall fortune,-country gentlemen and renters of land. The manners, hebits, and cuftoms of people of confiderable fortune are much the fame every where, at leaft there is very little difference between. England and Ireland, it is among the common people one mult look for thofe traits by which we difo criminate a national charader. The circumftances which ftruck me moft in the common Irifh were, vivacity and a great and eloquent volubility of fpeech; one would think they could take fnuff and talk uithout tiring till doomfday. They are infinitely more cheerful and lively than any thing we cominonly fee in England, having nothing of that incivility of fullen filence with which fo many Englifhmen feen to wrap themfelves up, as if retiring within their own importance. Lazy to an excefs at work, but fo firitedly active at play, that at hurling, which is the cricket of favages, they fhew the greatelt feats of agility. Their love of fociety is as remarkable as their curiofity is infatiable; and their holpitality to all comers, be their own poverty ever fo pinching, has too much merit to be forgotten. Pleafed to enjoyment with a joke, or witty repartee, they will repeat it with fuch exprefion, that the laugh will be univerfal. Warm friends and revengeful
enemies; they are inviolable in their fecrecy, and inevitable in their refentment; with fuch a notion of honour, that neither threat nor reward would induce them to betray the fecret or perfon of a man, though an oppreffor, whofe property they would plunder without ceremony. Hard drinkers and quarrelfome; great liars, but civil, fubmiflive, and obedient. Dancing is fo univerfal among them, that there are every where itinerant dancing-mafters, to whom the cottars pay fixpence a quarter for teaching their familics. Befides the Irifh jig, which they can dance with a molt luxuriant expreflion, minuets and country-dances are taught; and I even heard fome talk of cotillions coming in.

Some degree of education is alfo general, hedge fchools, as they are called, (they might as well be termed ditch ones, for 1 have feen many a ditch full of fcholars, are every where to be met with where reading and writing are taught ; fchools are alfo common for men; I have feen a dozen great fellows at fchool, and was told they were educating with an intention of being priefls. Many flrokes in their character are evidently to be alcribed to the extreme oppreflion under which they live. If they are as great thieves and liars as they are reported, it is certainly owing to this canfe.

If from the loweft clafs we rife to the higheft, all there is gaiety, pleafure, luxury, and extravagance; the town life at Dublin is formed on the model of that of London. Every night in the winter there is a ball or a party, where the polite circle meet, not to enjoy but to fiveat each other; a great crowd crammed into twenty feet fquare gives a zeft to the agréments of fmal! talk and whit. There are four or five houfes large enough to receive a company commodioufly, but the reft arc fo fmall as to make parties deteftable. There is however an agrecable fociety in Dublin, in which a man of large fortune will not find his time heavy. The file of living may be guefled from the fortunes of the refident nobility and great commoners; there are about thirty that poffefs incomes from feven to twenty thoufand pounds a year. The court has nothing remarkable or fplendid in it, but varies very much, according to the private fortune or liberality of difpofition in the lord lieutenant.

In the country their life has fome circumfances which are not commonly feen in England. Large tracts of land are kept in hand by every body to fupply the deficiencies of markets; this gives fuch a plenty, that, united with the lownefs of taxes and price 3 , one would fuppofe it diflicuit for them to fpend their incomes, if Dublin in the winter did not lend affiftance. Let it be confidered that the prices of meat are much lower than in England ; poultry only a fourth of the price ; wild fowl and fiff in vaftly greater plenty; rum and brandy not half the price ; coffee, tea, and wincs far cheaper; labour not above a third; fervans' wages upon an average thirty per cent. cheaper. 'That taxes are inconfiderable, for there is no land-tax, no poor-rates, no window-tax, no candle or foap-tax, only half a wheel-tax, no fervants-tax, and a variety of other articles heavily burthened in England, but not in Ireland. Confidering all this, one would think they could not fpend their incomes; they do contrive it however. In this bufinefs they are afifiled by two cuftoms that have an admirable tendency to it, great numbers of horfes and fervants.

In England fuch extenfive demefnes would be parks around the feats for beauty as much as ule, but it is not to in Ireland; the words deer-park and demefine are to be dillinguifhed; there are great demefnes without any parks, but a want of tadte, too common in Ireland, is having a decr-park at a dittance from the boufe; the refdence furrounded by walls, or hedges, or cabins; and the lawn inclofure fattered with ani.mals of various forts, perhaps three miles oil. The fimall quantity of conn proportioned to the totalacres, flews how litte tillage is atended to even by thote who are the bef. able to carry it on; and the column of turnips proves in the cicarth maner, whar
the progrefs of improvement is in that kingdom. The number of horles may almoft be efteemed a fatire upon common fenfe; were they well fed enough to be ufeful, they would not be fo numerous, but I have found a good hack for a common ride fcarce in a houfe where there were a hundred. Upon an average, the horfes in gentlemen's ftables throughout the kingdom are not fed half fo well as they are in England by men of equal fortune; yet the number makes the expence of them very heavy.

Another circumftance to be remarked in the country life is the miferablenefs of many of their houfes; there are men of five thoufand a year in Ireland, who live in habitations that a man of feven hundred a year in England would difdain; an air of neatnefs. order, drefs, and propreté, is wanting to a furprifing degree around the manfion; even new and excellent houfes have often nothing of this about them. But the badnefs of the houfes is remedying every hour throughout the whole kingdom, for the number of new ones jult built, or building, is prodigioufly great. I hould fuppofe there were not ten dwellings in the kingdom thirty years ago that were fit for an Englifh pig to live in. Gardens were equally bad, but now they are running into the contrary extreme, and wall in five, fix, ten, and even twenty Irih acres for a garden, but generally double or treble what is neceffary.

The tables of people of fortune are very plentifully fpread; many elegantly, differing in nothing from thofe of England. I think I remarked that venifon wants the flavour it has with us, probably for the fame reafon, that the produce of rich parks is never equal to that of poor ones; the moifture of the climate, and the richnefs of the foil, give fat but not flavour. Another reafon is the fmallnefs of the parks, a man who has three or four thoufand acres in his hands, has not perhaps above three or four hundred in his deer-park, and range is a great point for good venifon. Nor do I think that garden vegetables have the flavour found in thofe of England, certainly owing to the climate; green peas I found every where perfectly infipid, and lettuce, \&c. not good. Claret is the common wine of all tables, and fo much inferior to what is drank in England, that it does not appear to be the fame wine; but their port is incomparable, fo much better than the Englifh, as to prove, if proof was wanting, the abominable adulterations it muft undergo with us. Drinking and duelling are two charges which have long been alledged againt the gentlemen of Ireland, but the change of manners which has taken place in that kingdom is not generally known in England. Drunkennefs ought no longer to be a reproach, for at every table I was at in Ireland I faw a perfect freedom reign, every perfon drank juft as little as they pleafed, nor have I ever been afked to drink a fingle glafs more than I had an inclination for; I may go farther and affert that hard drinking is very rare among people of fortune; yet it is certain that they fit much longer at table than in England. I was much furprifed at firft going over to find no fummons to coffee, the company often fitting till eight, ninc, or ten o'clock before they went to the ladics. If a gentleman likes tea or coffee, he retires without faying any thing; a ftranger of rank may propofe it to the mafter of the houfe, who from cuftom contrary to that of England, will not ftir till he receives fuch a hint, as they think it would imply a defire to fave their winc. If the gentlemen were generally defirous of tea, I take it for granted they would have it, but their flighting is one inconvenience to fuch as defire it, not knowing when it is provided, converfation may carry them beyond the time, and then if they do trifle over the coffee it will certainly be cold. There is a want of attention in this, which the ladies fhould remedy, if they will not treak the old cuftom and fend to the gentlemen, which is what they ought to do, they certainly fhould have a falver frefh. 1 mult however remark, that at the politeft tables, which are thofe of people who have refided much out of Ireland, this point is conducted exactly as it is in England.

Duelling was once carried to an excefs, which was a real reproach and fcandal to the kingtom; it of courle proceeded from exceffive drinking ; as the caufe has difappeared, the effect has nearly followed; not however entirely, for it is yet far more common among people of fathion than in England. Of all practices a man who felt for the honour of his country, would wifh fooneft to banifh this, for there is not one favour. able conclution to be drawn from it : as to courage nobody can queftion that of a polite and enlightened nation, entitled to a fhare of the reputation of the age; but it implies uncivilized manners, an ignorance of thofe forms which govern polite focieties, or elfe a brutal drunkennefs; the latter is no longer the caufe or the pretence. As to the former, they would place the national character fo backward, would take from it fo much of its pretence to civilization, elegance and politenefs of manners, that no true Irifhman would be pleafed with the imputation. Certain it is, that none are fo captious as thofe who think themfelves neglected or defpifed; and none are fo ready to believe themfelves either one or the other, as perfons unufed to gond company. Captious people, therefore, who are ready to take an affront, muft inevitably have been accuftomed to ill company, unlefs there fhould be fomething uncommonly crooked in their natural difpofitions, which is not to be fuppofed. Let every man that fights his one, two, three, or half a dozen duels, receive it as a maxim, that every one he adds to the number is but an additional proof of his being ill educated, and having vitiated his manners by the contagion of bad company; who is it that can reckon the moft numerous rencontres? who but the bucks, bloods, landjobbers, and little drunken country gentlemen? Ought not people of fafhion to blufh at a practice which will very foon be the diftinction only of the moft contemptible of the people ? the point of honour will and muft remain for the decifion of certain affronts, but it will rarely be had recourfe to in polite, fenfible, and well-bred company. The practice among real gentlemen in Ireland every day declining is a ftrong proof that a knowledge of the world corrects the old manners, and confcquently its having ever been prevalent was owing to the caufes to which I have attributed it.

There is another point of manners fomewhat connected with the prefent fubject, which partly induced me to place a motto at the head of this fection. It is the conduct of juries; the criminal law of Ircland is the fame as that of England, but in the execution it is fo different, as fcarcely to be known. I believe it is a fact, at leaft I have been affured fo, that no man was ever hanged in Ireland for killing another in a duel : the fecurity is fuch that nobody ever thought of removing out of the way of juftice, yet there have been deaths of that fort, which had no more to do with honour than ftabbing in the dark. I believe Ireland is the only country in Europe, I am fure it is the only part of the Britifh dominions where affociations among men of fortune are neceffary for apprehending ravifhers. It is fcarcely credible how many young women have even of late years been ravihed, and carried off in order (as they generally have fortunes) to gain to appearance a voluntary marriage. Thefe actions, it is true, are not committed by the clals I am confidering at prefent; but they are tried by them, and acquitten. I think there has been only one man executed for that crime, which is fo common as to occafion the affociations I mentioned; it is to this fupine execution of the law that fuch enormities are owing. Another circunftance which has the effect of fcreening all forts of offenders, is men of fortune protecting them, and makiug intereft for their acquittal, which is attended with a varicty of evil confequences. I heard it boafted in the county of Fermannagh, that there had not been a man hanged in it for two and twenty years; all I concluded from this was, that there had been many a jury who deferved it richly.

Let me, however, conclude what I have to obferve on the conduct of the principal people refiding in Ireland, that there are great numbers anong them who are as lib ral in all their ileas as any people in Europe; that they have feen the errors which have given an ill character to the mamers of their country, and done every thing that example could effect to produce a change: that that happy change has been partly effected, and is effecting every bour, intomuch that a man may go into a vaft variety of families which he will find actuated by no other principles than thofe of the moft cultivated politenefs, and the moft liberal urbanity.

But I muft uow come to another clafs of people, to whofe conduct it is almoft entirely owing, that the character of the nation has not that luftre abroad, which I dare affert it will foon very gencrally merit: this is the clafs of little country gentlemen "; tenants, who drink their claret by means of profit rents; jobbers in farms; bucks; your fellows with round hats, edged with gold, who hunt in the day, get drunk in the evening, and fight the next morning. I thall not dwell on a fubject fo perfectly difagreeable, but remark that thefe are the men among whom drinking, wrangling, quarreling, fighting, ravihhing \&c. \&c. \&c. are found as in their native foil ; once to a degree that made them the peft of fociety; they are growing better, bui even now, one or two of them got by accident (where they have no bufinefs) into better company are fufficient very much to derange the pleafures that refult from a liberal converfation. A new Spirit; new falhions; new modes of politenefs exhibited by the higher ranks are imitated by the lower, which will, it is to be hoped, put an end to this race of beings; and either drive their fons and coufins into the army or navy, or fink them into plain farmers like thofe we have in England, where it is common to fee men with much greater property without pretending to be gentlemen. I repeat it from the intelligence I received, that even this clafs are very different from what they were tiventy years ago, and improve fo faft that the time will foon come when the national character will not be degraded by any fet.

That character is upon the whole refpectable: it would be unfair to attribute to the nation at large the vices and follies of only one clafs of individuals. Thofe perfons from whom it is candid to take a general eftimate do credit to their country. That they are a people learned, lively, and ingenious, the admirable authors they have produced will be an eternal monument ; witnefs their Swift, Sterne, Congreve, Boyle, Berkeley, Steele, Farquhar, Southerne, and Goldfinith. Their talent for eloquence is felt, and acknowledged in the parliaments of both the kingdoms. Our own fervice both by fea and land, as well as that (unfortunately for us) of the principal monarchies of Europe fpeak their fteady and determined courage. Lvery unprejudiced traveller who vifits them will be as much pleafed with their chearfulnefs, as obliged by their hofpitality; and will find them a brave, polite, and liberal people.

 BY THE REV. WILLLAM HAMILTON, A. M. F.T.C.D.
## LETTER I.

## DEAR SIR,

Portrufh, July 20, 178.4.

MY natural curiofity, and the wih I had to trace the whole extent of the Bafaltes of this country, induced me to make a fhort voyage, fone daysago, to the ifland of Raghery *, which lies fix or feven miles off the north coalt of Antrim, oppofite to Ballycalle bay.

I enjoyed a good deal of pleafure in examining that little fpot, which to me was almoft a new kingulom; and if an account of it can at all contribute to amufe an idle hour of yours, I hall more than double my own gratification.

Though the ifland be not very remote, yet its fituation, fo much expofed to the northern ocean, and the turbulence of its irregular tides, have thrown fuch difficulties in the way of landlinen, that few have vifited it but from neceffity; and fome curious arrangements of the columnar bafaltes, with which it abounds, have never been noticed, except by the inhabitants.

The chalky tciffs of Raghery, crowned by a venerable covering of brown rock, form a very beautiful and picturefque appearance as one fails toward them; and if the turbulence of the fiea do not reffrain the eyes and fancy from expatiating around, luch a ftriking fimilitude appears between this and the oppofite coaf, as readily fuggefts an idea that the in ind might once have formed a part of the adjoining country, from whence it has been difunited by fome vislent fhock of nature.

You, to whom demonftration is familiar, will naturally wonder to fee two fhores, feven or eight miles afunder, to expediticuliy connected by fuch a flender and fanciful middle termas apparent fimilitude; and yet the likenefs is fo flrong, and attended with fuch peculiar circumftances, that I do not entirely defpair of prevailing even on you to acknowledge my opinion as a probable onc.

It does not appear unreafonable to conclude, that if two pieces of land, feparated from each other by a chafin, be compofed of the fame kind of materials, fimilarly ar-- ranged at equal elevations, thefe different lands might have been originally connected, ant the chalim be only accidental. For let us conccive the materials to be depofited by any of the elements of fire, air, earth, or water, or by any caufe whatever, and it is not likely that this caufe, otherwife gencral, fhould in all its operations regularly fop flort at the chalm.

* Rachlin, Rachrin.
$\dagger$ White lime-fone.

The materials of which the inand of Raghery is compofed, are accurately the fame as thofe of the oppofite fhore, and the arrangement anfivers fo clofely, as almolt to demonftrate at firf view their former union. But to explain this more clearly, it will be - neceffiary to give you a general fketch of this whole line of coaft.

The northern coaft of Antrim feems to have been originally a compact body of lime. ftone rock, confiderably higher than the prefent level of the fea; over which, at fouse later period, extenfive bodies of vitrifiable flone have been fuperinduced in a fate of foftnefs. The original calcarious fratum appears to be very much deranged and inturrupted by thefe incumbent mafies. In fone places it is deprefled greatly below its ancient level-fhortly after it is borne down to the water's edge, and can be traced under its furface-by and by it dips entirely, and feems irretrievably loft under the fuperior mafs-in a fhort fpace, however, it begins to emerge, and after a fimilar variation recovers its original height.
In this manner, and with fuch repeated vicifitudes of elevation and depreffion, it purfues a courfe of forty miles along the coalt, from Lough Foyle to Lough Larne.

It naturally becomes an objeet of curiofity to enguire what the fublance is from which the lime-ftone feems thus to have fhrunk, burying iffelf (as it were in terror) under the covering of the ocean : and on exmmination it appears to be the columar bafaltes, under which the lime-ftone fratum is nev:: found, nor indeed does it ever approach nearer to it without evident figns of deraigement.

Thus for example : - the chalky cliffs may be difcovered a little eaftward from Portrufh ; after a fhort courfe, they are fuddenly depreffed to the water's edge under Dunluce caftle, and foon after loft entirely in paffing near the bafalt hill of Dunluce, whoie craigs near the fea are all columnar. At the river Buth the lime-Itone recovers, and ikims for a moment along the level of the fea, but immediately vanifhes on approaching toward the great bafalt promontory of Beagore, under which it is completely loft for the face of more than three miles.
E.aftward from thence, beyond I'infeverick caftle, it again emerges, and rifing to a confiderable height, forms a beautif:: barrier to White Park bay and the Ballintoy fhore. After this it fuffers $a$ temporary deprelfion near the bafalt hill of Knockfoghy, and then ranges along the coaft as far as Ballycafle bay.

Fairhead, flanding with magnificence on its maffy columns of bafaltes, again exterminates it; and once again it rifes to the eaftward, and purfues its devious courfe, forning, on the Glenarm fhores, a line of coaft the moft fantaltically; beautiful that can be imagined.

If this tedious expedition has not entirely worn out your patience, let us now take a view of the coaft of Raghery itfelf, from the lofty fummit of Fairlead, which overlooks it. Weftward, we fee its white cliffis rifing abruptly from the ocean, correfponding accurately in materials and elevation with thole of the oppofite fhore, and like them crowned with a venerable load of the fame vitrifiable rock. Eaft vard, we behold it dip to the level of the fea, and foon give place to many beautiful arrangements of bafalt pillars, which form the eaftern end of the ifland, and lie oppotite to the bafaltes of Fairhead, affording in every part a reafonable prefumption that the two coalts were formerly connected, and that each was created and deranged by the fame caufes extenfively operating over both.
But it is not in thefe larger features alone that the fimilitude may be traced; the more minute and accidental circumftances ferve equally well to afcertain it.

Thus an heterogeneous mafs of freeftone, coals, iron ore, \&cc. which forms the eaft fide of Ballycaftle bay, and appears cuite different from the common foffils of the coun-
try, may be traced alfo directly oppofite, running it Raghery, with circ mitances which alnoft demonftrably afcertain it to be the fance win.

What I would infer from hence is, that this whole waft has uı tergone confiderable changes in the courfe of fucceffive ages; that thofe abrupt promuntories, which now run wildly into the ocean, in proud defiance of its boitterous waves, have been rendered broken and irregular by fome violent convulfion of nature; and that the ifland of Raghery, ftanding as it were in the midlf between this and the Scottifh coaft, may be the furviving fragment of a large tract of country which at fome period of time has been buried in the deep.

But I fhall wave this tedious fubject for the prefent, and endeavour to compenfate for the drynefs of this letter by fome account of the ftate and fingularities of this little intand.

In the mean time, I muft entreat you will be fo candid as to give me timely notice whenever my letters become dull and unentertaining-I fhall otherwife lofe my labour to very bad purpofe, as the chief object of them is to amufe you.

1 am, dear Sir, with the greateft refpect, your affectionate, \&c.

## LETTER II.

## DEAR SIR,

Portrulh, July 27.
THE remarkable hazinefs which has prevailed in our atmofphere, during the whole of this fuinmer, both by fea and land, has been very unfavourable to views along the coaft, and even in the fhort trip I made to Raghery, gave me reafon to be apprehenfive of miffing our courfe, as the rapidity of the tide foon carries a veffel clear of the inand. However, with the affitance of a gleam from the meridian fun, we got fafely acrofs the clannel in the face of two or three hours.

Raghery is near five miles in length, and about three quarters of a mile in breadth; toward the middle it is bent in an angle oppofite to Ballycaltle, and forms a tolerable bay, affording good anchorage, in deep water with a fiff clay bottom; but a wefterly wind raifes fuch a heavy fwell all along this coaft, that few vefiels can ride out a gale from that quarter.
Its tides are very remarkable. Here it is that the great body of water which flows from the ocean during the flood tide, to fupply the north part of the Irifh channel, is firt confined and broken in its courfe; and a large portion of it is returned near the welt end of the inland, in a counter tide, which fupplies all the loughs and bays for the fpace of thirty miles, running toward the weft, along the counties of Antrim, Derry, and Donegall; while in the mean time the true tide of flood runs toward the eaft, at the diftance of a few miles from the coaft, parallel to the former.

From fuch eddies as this, many fingular irregularities arife, and in feveral places the tide from the weftward (or the flood tide, as they denominate it) appears to flow nine hours, while the ebb continues only three.

Seamen, who are accuftomed to navigate along this coaft, know well how to ufe thefe different ftreans to good purpofe. For example: a fhip leaving Dublin with the flood tide (which contes into the Irifh channel from the fouthward) may with a leading wind reach the county of Down ; there the veflel will fall in with the northern tide of ebb, juft then beginning to return to the ocean. With the affitance of this current, and the fame leading brecze, the fhip may fetch the ifle of Raghery; where a judicious pilot, inftead of oppofing the returning tide of flood, may drop into a northern eddy, which
will carry him as far as Lough Swilly; where the true tide of cbb will again receive him, and bear his thip out of the weftern necan.

Thus by prodent management may he enjoy the advantage of four difierent fireceffive tider, all favourable to his voyage.

The wellern winds (which prevail here during far the greater part of the year) fweeping with an uninterrupted blatt over the Atlantic Ocean, roll a moll fornidatle wave along this coalt, of which I had fome experience in crofling to the ifland. The day was uticommonly flill, not a breath of wind to rufle the water, and yet a heary majeclic fiwell, ever heaving forward feemed to threaten ruin to our boat, and frequently hid from view even the lofty promontory of lairhead. Prom this unrulled furface, however, there was not the flighteft danger to be apprehended, and our veffel rofe and defended on the ghaty wave with entire fecurity. How changed was this feene in the courte of a feew hours! The moment that the ebb began to return to the osean, rufhing in oppofitiont to this weftern fwell, all was confufion and tumult. The long wave which had jult be fore rolled fornard in filent majelty, was now fretted and broken into a tempethous fea, which the flouteft boats dare not encounter, and even the beft hips wifh to atoid.

This alternate feene of peace and war takes place twice every day, and it is by attention to this circumallance that the paflage is made with tolerable fecurity.

The little Ikiff in which I mavigated was built of very fight materials, and did not feem to me well calculated to buffet thefe formy feas. I obfersed that we had received a good deal of water into it; and on exprefling my uncalinels that there was no - vifible means of throwing it out, one of the men inftantly took off his brogue, with which he foon cleared the veffiel of water, and pur it on his foot again without feeming to feel the flightefl inconvenience from the wetnefs of it; leaving me quite at eafe on the fubject of pumping the veffel.

Raghery contains about twelve hundred inhabitants, and is rather over peopled, as there is no confiderable manufacture which might give employment to any fuperfious hands *.

The cultivated land is kindly enough, and produces excellent barley. In a plentiful year fix hundered pounds worth of this grain has been exported from it. The craigy pafturage fattens a fuall, but delicious breed of theep. Even its inholipitable rocks fupply to the hand of induftry a rich fource of weallh, in the fea-weed it affords for the manufacture of kelp, which, under an indulgent landlord, often goes near to pay the whole rent of the ifland $t$.

[^318]The horfes, as well as the fheep, are fmall in kind, but extremely ferviceable, and fure fouted beyond conception. Of this I had a frong proof in a little expedition which I made through the ifland with Mr. Gage, the hofpitable proprictor of it. You muft know it was but the other day the people of Raghery recollected that a roat night be fome convenience to them, fo that in our excurfion we were obiged to follow the old cuftom of riding over precipices, which would not appear contemptible, even to : man that enjoyed the full ufe of his legs.

It feems my horfe; though fifteen or fixteen years old, had never before felt a bridle in his month, and after many attempts to flake it off, in a very critical fituation, on the top of a very rugged precipice, he refufed to proceed one ftep further, while this incumbrance impeded him. Having no other refource I was obliged to comply, and was carried over an exceeding dangerous heap of rocks, with a degree of caution which amazed me in the midft of my terrors.

It is fomewhat fingular that this ifland fhould not contain any native quadruped, except thofe univerfal travellers the rats ", and the little threw moufe which is fometimes found. But the various tribes of foxes, hares, rabbits, badgers, \&cc. for which it might affiod excellent fhelter, and which abound on the oppofite fhore, are here unknown. A few brace of hares indeed were lately introduced by the proprietor, which bid fair to produce a large increafe.
$\Lambda$ good many ycars ago, Lord Antrim gave orders to his huntfman to tranfport a couple of foxes into the ifland, for the purpofe of propagating that precious breed of animals. But the inhabitants affembled in confternation, and having fubfcribed each a hank of yarn, 'prevailed on the huntman to difobey orders. However he was fharp enough to take the hint, and for fome years paid his annual vifit to Raghery, for the purpofe of raifing a regular tribute, to fave the poor iflanders from thofe defolating invaders.

The inhabitants are a fimple, laborious and honeft race of people, and poffefs a degree of affection for their illand which may very much furprife a ftranger. In converfation they always talk of Ireland as a foreign kingdom, and really have fcarcely any intercourfe with it except in the way of their little trade. A common and heavy curfe among them is-" May Ireland be your hinder end."

From this amor patrica arifes their great population, notwithftanding the perils which attend their turbulent coaft, as they never entertain a thought of trying to better their fortune, by fettling in any of the neighbouring towns of Ancrim.

The tedious proceffes of civil law are little known in Raghery; and indeed the affection which they bear to their landlord, whom they always fpeak of by the endearing name of malter, together with their own fimplicity of manners, renders the interference of the civil magiltrate very unneceflary. The feizure of a cow or a horfe, for a few days, to bring the defanlter to a fenfe of duty; or a copious draught of falt-water from the furrounding occan in criminal cafes, forms the greater part of the fancions and punifhments of the ifland. If the offender be wicked beyond hope, banifhment to Ireland is the dernier refort, and foon frees the community from this peitilential member.

In a fequeftered ifland like this, one would expect to find bigoted fuperftition flourifh fuccefsfully under the aufpices of the Romifh church; but the fimplicity of the iflanders does not foiter any uncharitable tenets, and, contrary to one's expectation, they are

[^319]neither grofly fuperfitious, nor rank bigots, but have been known to hold the unchriftian doctrines of their late Spanilh prieit in great contempt; nay, in cafes of neceffity they do not fcruple to apply for afliftance to the Proteftant minifter. Of their good will to the eftablified church, they give an amual proof which one rately finds in any other part of Ireland': the minifter's tythe amounts to about rool. per annum, and when the iflanders have got in their own harveft, they give the parfon a day with their horfes and cars, and bring the entire tythe home to his farm yard.
The chief defideratum of the illanders is a plyyfician, the want of whom they feem to confider as their greatelt misfortune, though their maiter appears to be of a very differat fentiment; and indeed the remarkable population of Raghery makes much in favour of his opinion.

Small as this fipot is, one can neverthetefs trace two diferent characters among its inhabitants. The Kenramer, or weftern end, is craggy and mountainous, the land in the vallies is rich and well cultivated, but the coalt dellitute of harbours. A fingle native is here known to fix his rope to a ftake driven into the fummit of a precipice, and from thence, alone, and unaflitled, to fiving down the face of a rock in queft of the nefls of fea fowl. From hence activity, bodily ftrength, and felf-dependence, are eminent among the Kenramer men. Waut of intercourie with ftrangers has preferved many peculiarities, and their native Irifh feems to be the univerfal language.
The Uhet end, on the contrary, is barren in its foil, but more open and well fupplied with liete harbours; hence its inhabitants are become fifhermen, are accuftomed to make fhort voyages, and to barter. Intercourfe with flrangers has rubbed off many of their peculiarities, and the Englifh language is well underttood and generally fpoken among them.

This diftinction I fear may feem foolinhly fpeculative, confidering the diminutive object of it, and yet I affure you it is a matter of fact; and the inhabitants themfelves are fo well aware of it, that in perilous fituations different offices and flations are appointed to each, according as he is an Uhet or Kenramer man.

* Raghery has formerly been as it were a ftepping fone between the Irifh and Scottifh coalts, which the matives of each country alternately ufed in their various expeditions, and for which they frequently fought.
A number of finall tumuli were lately opened in a little plain about the middle of the ifland, probably the monuments of fo many heroes who in former ages had fallen honourably in this very field of batile. The chief himfelf lay in a fone coffin, and befide hin an earthen veffel ftood, which, by the refiduum ftill vifible, feemed formeriy to have contained an offering of blood, or tome perifhable animal fubftance. Within the tumuli lay a confiderable number of human bones, the remains of more ignoble men who inight have fallen by the like fate of war.

Brazen fwords, and fpear heads of the fame metal, found in this plain, bear ftrong evidence of the bloody feenes which have been tranfaced here in remote ages. A large filver fibula was found in one of the rumuli, which is depofited in the mufeum of Trinity college, Dublin; the workmanhhip is good, and argues confiderable fkill in the arift.

The traditions of the country do not go beyond the obfcure period of Scottifh and Danifh incurfions, which have alternately ravaged and depopulated the inand. The memory of a cruel maflacre, perpetrated by a Scottifh clan (I think the Campbeils) remains fo ftrongly impreffed on the minds of the prefent inhabitants, that no perfon of that name is allowed to fette in the ifland.

During the difturbances in Scotland, which fucceeded the appointment of Batiol to the crown of that kingdom, Robert Bruce was driven out and obliged to take flhelter, with a friend of his, in the ille of Raghery *. However his enemies purfued him even to this remote fpot and forced him to embark in a litule fikiff, and feek reluge on the ocean. The remains of a fortrefs are yet vifible on the northern angle of the ifiand, celebrated for the defence which this hero made in it, and fill known by the name of Robert Bruce's caftle. The antiquity of this building is therefore not nuch lefs than five hundred years; it may indeed be confiderably older, as the time which Bruce fipeat in Raghery was fcarcely fufficient for the purpole of erecting it.

One thing concerning this caltle is worth remarking, that the lime of which it is built, has been burned with fea coal, the cinders of which are ltill vifible in it, and bear fo ftrong a relemblance to the cinder of the Ballycaltle coal, as makes it extremeiy probable that our information concerning the colleries of that place were far from being an original difcovery. Indeed there is reafon to believe that they were both well known, and extenfively wrought at a period of time when few people imagine the civilization or finances of this kingdom were equal to fo expenfive an undertaking $\dagger$.

But this is a curious fubject, and I fhall take fome other opportunity of giving you more information when you may not be fatigued with fo large, and I fear fo tecious a letter.

## LETTER III.

DEAR SIR,
Portrulb, July 30.
IN my return from Raghery, I fent a few days at Ballycaflle, a town pretty con. fiderable in this part of the world, which has been almolt entirely the creation of one man, a Mr. Boyd, who died fome years ago.

According to the Perfian fyitem of moral duties $\dagger$, it is likely Ireland cannot boalt of an individual who has more fully difcharged his truft than old Mr. Boyd;--not poffeffed of any coufiderable fortune, not fupported by powerful natural connexions, nor endowed with any very fupcrior talents, this man opened public roads, formed a harbour, built a town, ettablifhed manufactures, and lived to fee a wild and lawlefs country become populous, cultivated, and civilized. In the mof literal fenfe his foul feems to have animated this little colony; in him it enjoyed life and ftrength, and with him all vigour and animation perihed. By an ill-judged diftribution of his fortune, and various untoward and unforcfeen accidents, the nantactures of glafs were neglected, the breweries and tanneries were mifmanaged, the harbour became choaked with fand, and even the collieries (from particular circumfances) are not wrought with fuch firit as the prefent

[^320]proprietor would wifh to exert. In fhort, this gentleman confructed a moft excellent machine, but unfortunately left it without any permanent principle of motion.

The eaftern fide of Ballycafle terminates in the bold promontory of Fairhead. Between this and the town lie the collierics, in an abrupt bank which overlangs the fea. Ships, however, cannot derive much advantage from this circumftance, as the unfheltered fituation of the place, and the prevailing weftern winds, make a delay on the coalt extremely dangerous, and renders it difficult to embark the coals.

The different foffils which generally lie above the coal, are till, or flate-coal, iron ore, and freeftone *.

It unfortunately happens that thefe beds (like moft of the foffils of this kingdom which are formed in layers) dip, or underlie, to the fouthward; hence it follows, that when an horizontal adit, or level, has been puhed forward to the bed of coal, from the fteep bank which faces toward the north, the men, in following the mine, are obliged to work downward, and have no means of carrying off the water; whereas if the dip of the beds were in the contrary direction, (that is, toward the north,) the work muft be all up hill, by which the loaded waggons would have an eafy defcent outward, and all the water muft conftantly flow off toward the fea.

In my laft letter I mentioned fome reafons which might induce one to think that thefe collieries were wrought at a very remote period of time; but an accidental difcovery has lately put that matter beyond doubt, and has laid open a very curious circumfance. in the ancient hillory of this country.

About tweive years ago the workmen, in pufhing forward a new adit toward the coal, unexpectedly broke through the rock $\dagger$ into a cavern. The hole which they opened was not large, and two young lads were made to creep, in with candles, to explore this new region. They accordingly went forward, and entered an extenfive labyrinth branching off into numerous apartments, in the mazes and windings of which they were at latt completely loft. After various vain attempts to return, their lights were extinguifhed, and they fat down together in utter defpair of an efcape from this dreary dungeon. In the mean time, the people without in the drift were alarmed for their fafcty; frefh hands were employed, a paflage was at laî made for the workmen, and the two unfortunate adventurers extricated after a whole night's imprifonment.

On examining this fubterranean wonder, it was found to be a complete gallery which had been driven forward many hundred yards to the bed of coal ; -that it branched off into various chatnbers where the miners had carried on their different works;-that pillars were left at proper intervals, to fupport the roof; in fhort, it was found to be an extenfive mine, wrought by a fet of people, at leaft as expert in the bufinefs as the prefent generation. Some remains of the tools, and even the bafkets ufed in the works, were difcovered, but in fuch a flate, that on being touched they immediately fell to powder.

[^321]The antiquity of this work is pretty evident from hence, that there does not remain the moft remote tradition of it in the country; but it is ftill more ftrongly demonfrable from a natural procefs which has taken place fince its formation, for italactite pillars had been generated, reaching from the roof of the pit to the floor; and the fieds and fupports were found covered with fparry incruftations, which the prefent workmen do not obferve to be depofited in any definite portion of time.

The people of this place attribute thefe works to the Danes; but a very fight confideration of the matter mult fatisfy any one that this opinion is ill founded. The Dants were never peaceable pofieffors of Ireland, but always engaged in bloody wars with the natives, in which they were alternately vistors and vanquifhed. Like the eaftern defecndants of Ilhmael, they food at perpetual bay with all the world, their hand againft every man, and every man's hand againf them.

It is not furely to the tumultuary and barbarous armies of the ninth and tenth centuries, whofe harveft of wealth and power could only be expected from the rapid and hazardous ravages of war, that we are to attribute the flow and toilfome operations of peace which are carried on only where population, civilization, and trade flourih in an extreme degree.

While Ireland lay yet proftrate and gafping under the fatal wounds received in a bloody ftruggle of two hundred years, againft thofe northern invaders, the Englifh, under Henry II. made their fuccefsful inroad, and cafily eftablifhed themfelves in a feeble and diftracted country; from which time, till the beginning of the prefent century, this ifland prefents nothing to our view but a wafteful fcene of nifery and defolation. That thefe colleries could have been wrought during this period feems extremely improbable. We are all along execrated by the Englifh writers as a nation of barbarians, and our country curfed as a wildernefs of forefts and bogs. It is not then to be fuppofed that a favage people fhould ranfack the bowels of the earth for coal, while their woods and bogs afforded fuch abundant fuel to their hand.

Upon the whole, during the dreary interval of near a thoufand years, from the eighth to the eighteenth century, it is in vain to look for the laboured works of induftry and peace, in a kingdom where war was the only trade, and where all property turned on the edge of the fword *.

## LETTER IV.

DEAR SIR,
Portrufb, Auguft 3.
IN riding from Ballycaftle to Portrufh, I went a fhort way off the beaten road, to fee a whimfical little fifhing rock, connected to the main land by a very extraordinary \#ying bridge; it is called Carrick-a-rede, (or the rock in the road,) and lies fomewhat eaftward from Ballintoy, on a moft romantic fhore. I was quite delighted with the picturefque appearance of this little fanciful fifhery, of which I muft beg leave to give you a fhort account ; however, as I am a great adrocate in favour of Mr. Locke's fyltem of a dictionary of pictures, in preference to a dictionary of tedious deferiptions, I thall inclofe you a drawing of Carrick-a-rede, from a fketch which my draftiman made on the fot.

At a particular feafon of the year the falmon fifh come along the coaft in queft of the different rivers in which they annually caft their fpawn. In this expedition the fifh ge-

[^322]nerally fwim pretty clofe to the fhore, that they may not mifs their port; and the fifhermen, who are well aware of this coafting voyage of the falmon, take care to project their nets at fuch places is may be moft convenient for intercepting them in their courfe.
It fo happens that Carrick-a-rede is the only place on this abrupt coalt which is fuited for the purpoie. Here then, or no where, mult be the fifhery; but how to get at the rock is the quefion. A chafin full fixty feet in breadth, and of a depth frightful to look at, feparates it from the adjacent land, in the hottom of which the fea breaks with an uninterrupted roar over the rocks; the ifland itfelf is inacceffible on every fide except one fpot, where under the fhelter of an impending rock, a luxuriant herbage flourifhes; but the wildnefs of the coalt, and the turbulence of the fea, make it very dificult to land here.
In this perplexity there is really no refource, except in attempting to throw a bringe of ropes from the main tand to the ifland, which accordingly the fifhermen every yearaccomplifh * in a very fingular manner: two ftrong cables are extended acrofs the gulph by añ expert climber, and faftened firmly into iron rings mortifed into the rock on both fides ; between thefe ropes a number of boards, about a foot in breadth, are laid in fucceffion, fupported at intervals by crofs cords; and thus the pathway is formed, which, though broad enough fo bear a man's foot with tolerable convenience, does by no means hide from view the pointed rocks, and raging fea beneath, which in this fituation exhibit the fatal effects of a fall, in very ftrong colouring: while the fwingings and undulations of the bridge itfelf, and of the hand rope, which no degree of tenfion can prevent in fo great a length, fuggeft no very comfortable feelings to perfons of weak nervcs. Upon the whole, it is a beautiful bridge in the fcenery of a landfcape, but a frightful one in real life.

The mode of filling on this coaft is different from any 1 have feen, perhaps it may be new to you:

The net is projected directly outward from the fhore, with a flight bend, forming a bofom in that direction in which the falmon come: from the remote extremity a rope is brought obliqucly to another part of the fhore, by which the met may be fwept round at pleafure, and drawn to the land; a heap of finall ftones is then prepared for each perfon: all things being ready, foon as the watchman perceives the fifh advancing to the net, he gives the watch-word $\dagger$ : immediately fome of the fifhermen feize the oblique rope, by which the net is bent round to inclofe the falmon, while the rett keep up an inceflant cannonade with their ammunition of fones, to prevent the retreat of the fifh till the net has been completely pulled round them; after which they all join forces, and drag the net and fifh quietly to the rocks.

The falmon fiflerics on the fea-coaft, and in the rivers of the north of Ireland, have fometimes been very productive, affording a valuable cargo for the Italian markets during the time of lent: the abundance of filh may in fome meafure be inferred from hence, that fourteen hundred falmon (as I am informed) have been taken in the river
Bana at once hauling the net; and what is almoft equally remarkable, near one thoufand were caught at the fucceeding haul. At prefent, however, the fifheries are but fcanty, and it is the prevailing opinion, that too great fuccefs of the river fifheries has nndone them, by deftroying the mother falmon, which thould be allowed free paflage through the rivers to caft their fpawn.

[^323]Now that I am got upon the fubject of fifhing, let me tell you of an-amufing inftance of fagacity which I had an opportunity of feeing a fhort time ago, in a water-dog of this country, who had become a moft excellent fifher :

In riding from Portrufh to the Giant's Caufeway with fome company, we had occafion to ford the river Bufh, near the fea; and as the fifhermen were going to haul their net, we ftopped to fee their fuccefs: As foon as the dog perceived the men to move, he inflantly ran down the river of his own accord, and took poft in the middle of it, on fome fhallows where he could occafionly run or fwim, and in this pofition he placed himfelf, with all the eagernefs and attention fo Atrongly obfervable in a pointer dog, who fets his gane:-We were for fome time at a lofs to apprehend his fcheme, but the event fatisfied us, and amply juftified the prudence of the animal; for the fifh, when they feel the net, always endeavour to make directly out to fea. Accordingly one of the falmon, efcaping from the net, ruhhed down the ftream with great velocity, toward the ford, where the dog food to receive him at an advantage. A very diverting chafe now commenced, in which, from the fhallownefs of the water, we could difcern the whole track of the fifh, with all its rapid turnings and windings. After a fmart purfuit the dog found himfelf left confiderably behind, in confequence of the water deepening, by which he had been reduced to the neceflity of fwimming. But inftead of following this defperate game any longer, he readily gave it over, and ran with all his fpeed directly down the river, till he was fure of being again fea-ward of the falinon, where he took poft as before in his pointer's attitude. Here the fifh a fecond time met him, and a frefh purfuit enfued, in which, after various attempts the falmon at laft made its way out to the fea, notwithftanding all the ingenious and vigorous exertions of its purfuer.

Though the dog did not fucceed at this time, yet I was informed that it was no unufual thing for him to run down his game; and the fifhermen affured me that he was of very great advantage to them, by turning the falmon toward the net ; in which point of view his efforts in fome meafure correfponded with the camnonade of fones which I mentioned at Carrick-a-rede.

During the whole of the chafe this fagacious animal feemed plainly to have two objects in view ; one to feize his game, if poffible, and the other, to drive it toward the net when the former failed; each of which he managed with a degree of addrefs and ingenuity extremely interelling and amazing.
It is fomewhet unaccountable that mankind Thould look with fo much horror and difguft on any remute fimilitude, which fome of the brute creation bear to the human perfon and features, and yet dwell with pleafure on much nearer approaches toward their prerogative faculty of reafon. At leaft thus much I am certain of, that we faw the exertions of this creature with infinite delight, and our regard for him feemed to increafe in proportion as our idea of his excellence increafed. Perhaps it may be, that a concioufnefs of decided fuperiority in the latter cafe, makes us obferve the ingenuity of lower animals, without the allay of any uneafincfs from an apprehenfion of rivalflip.

## LETTER V.

dear sir,

## Portrufin, Augiyt 6.

YOU would hardly belicve how little remains of Trih hiftory, language, or cuftoms, are to be traced in this paft of the country: the revolutions which it has undergone, in confequence of forfeitures to the Englifh, and the encroachments of the Scots, have overturned every remnant of its original flate.

During the time that the Englifl were endeavouring to eatend their pale, in every direction from the metropolis of the kingdom, over a defperate but difunited enemy, the Scottith clan of MacDonalds, who by an intermarriage had got footing in Ireland, began their ravages on the northern coalt of Antrim; and by the powerful fupport which they received from Cantire, and the wettern ines of Scotland, eftablifhed their dominion over a tract of country nearly forty miles in length.

As the people of thofe days generally followed the fortune of their chief, the greater part of the native Irifh who furvived thefe bloody ficenes, tranfplanted themfelves elfewhere, while the Scots remained peaceable poffeflors of the field; hence the old traditions and cuftoms of the country were entirely loft; and the few who fpeak the Celtic language at all ufe a kind of mixed dialect, called here Scotcls liflo, which is but innperfectly underftood by the natives of either country.

The prefent poffeffors are in general an induftrious thrifty race of people. They have a great deal of fubftantial civility, without much courtefy to relieve it, and fet it off to the beft advantage. The bold ideas of rights and privileges, which feem infeparable from their Prefbyterian church, renders them apt to be ungracious and litigious in their dealings. On the whole, the middling and lower ranks of people in this quarter of the kingdom, are a valuable part of the community: but one muft eftimate their worth as a miner does his ore, rather by its weight than its fplendor.

There are three or four old caftles along the coaft, fituated in places extremely difficult of accefs, but their early hiftories are for the greater part loft. The moft remarkable of thefe is the caftle of Dunluce, which is at prefent in the poffeffion of the Antrim family. It is fituated in a fingular manner on an ifolated abrupt rock, which projects into the fea, and feems as it were fplit off from the terra firma. Over the intermediate chafm lies the only approach to the caftle, along a narrow wall, which has been built fomewhat like a bridge, from the rock to the adjoining land; and this circumftance muft have rendered it almoft impregnable before the invention of artillery. It appears, however, that there was originally another narrow wall, which ran acrofs the chafm, parallel to the former, and that by laying boards over thefe, an eafy paffage might occafionally be made for the benefit of the garrifon.

The walls of this caftle are built of columnar bafaltes, many joints of which are placed in fuch a manner as to fhew their polygon fections; and in one of the windows of the north fide, the architect has contrived to fplay off the wall neatly enough, by making ufe of the joints of a pillar whofe angle was fufficiently obtufe to fuit his purpofe.

The original lord of this caftle and its territories, was an Iriih chief, called M•Quillan, of whom little is known, except that, like mof of his countrymen, he was hofpitable, brave, and improvident; unwarily allowing the Scots to grow in ftrength, until they contrived to beat him out of all his poffeffions.

In the courfe of my expeditions through this country, I met with an old manufcript account of the fettlement of the Scotch here, of which I Thall give you a fhort extract. It will ferve in a good meafure to thew the barbarous flate of the inhabitants in the fixteenth century, and the manner in which property was fo readily transferred from one mafter to another.

The manufcript is in the hands of the MacDonalds, and therefore mot likely fpeaks rather in their favour.
"About the year 1580, Coll. MacDonald came with a parcel of men from Candire to Ireland, to affif Tyrconnel againf great O'Neal, with whom he was then at war.
" In paffing through the Root * of the county of Antrim, he was civilly received and hofpitably entertained by Mac Quillan, who was then lord and mafter of the Root.
". At that time there was a war between Mac Quillan and the men beyond the river Bann; for the cuftom of this people was to rob from every one, and the ftrongeft party carried it, be it right or wrong.
"On the day when Coll. Mac Donald was taking his departure to proceed on his journey to Tyrconnell, Mac Quillan, who was not equal in war to his favage neighbours, called together his militia, or gallogloghs, to revenge his affronts over the Bann; and Mac Donald, thinking it uncivil not to offer his fervice that day to Mac Quillan, after having been fo kindly treated, fent one of his gentlemen with an offer of his fervice in the field.
" Mac Quillan was right well pleafed with the offer, and declared it to be a perpetual obligation to him and his pofterity. So Mac Quillan and the Highlanders went againt the enemy, and where there was a cow taken from Mac Quillan's people before, there were two reftored back : after which Mac Quillan and Coll. Mac Donald returned back with a great prey, and without the lofs of a man.
"Winter then drawing nigh, Mac Quillan gave Coll. Mac Donald an invitation to ftay with him at his cafte, advifing him to fettle himfelf until the fpring, and quarter his men up and down the Root. This Coll. Mac Donald gladly accepted; and in the mean time feduced Mac Quillan's daughter, and privately married her; on which ground the Scots afterward founded their claim to Mac Quillan's territories.!
" The men were quartered two and two through the Root ; that is to fay, one of Mac Quillan's gallogloghs and a Highlander in every tenant's houfe.
" It fo happened that the galloglogh, according to cuftom, befides his ordinary, was entitled to a meather $\dagger$ of milk as a privilege: this the Highlanders efteemed to be a great affront ; and at laft one of them afked his landlord, ' Why do you not give me milk as you give to the other ?' The galloglogh immediately made anfwer, 'Would you, a Highland beggar as you are, compare yourfelf to me, or any of Mac Quillan's gallogloghs?'
" The poor honeft tenant, (who was heartily tired of them both) faid ' Pray, gentlemen, I'll open the two doors, and you may go and fight it out in the fair fields, and he that has the victory let him take milk and all to himfelf.'
"The combat ended in the death of the galloglogh; after which (as my manufcript fays) the Highlander came in again and dined heartily.
" Mac Quillan's gallogloghs immediately affembled to demand fatisfaction; and in a council which was held, where the conduct of the Scots was debated, their great and dangerous power, and the difgrace arifing from the feduction of Mac Quillan's daughter, it was agreed that each galloglogh Thould kill his comrade Highlander by night, and their lord and mafter with them; but Coll. Mac Donald's wife difcovered the plot, and told it to her humband. So the Highlanders fled in the night time, and efcaped to the inand of Raghery.
"From this beginning, the Mac Donalds and Mac Quillans entered on a war, and continued to worry each other for half a century, till the Englifh power became fo fuperior in Ireland, that both paries made an appeal to James I., who had juft then afcended the throne of England.

* A term by which this north-weft part of the county of Antrim is always denominated.
$\dagger$ A veffel commonly ufed by the old Irifl, formed out of one fulid picce of wood, and moft commonly of a triangular fhape.
VOL. III.
" James had a predilection for his Scotch countryman, the Mac Donald, to whom he made over by patent four great baronies, including, along with other lands, all poor Mac Quillan's poffeffions. However, to fave fome appearance of juftice, he gave to Mac Quillan a grant of the great barony of Enihowen, the old territory of © ${ }^{\circ}$ Dogherty, and fent to him an account of the whole decifion by Sir John Chichefter.
" Mac Quillan was extremely mortified at his ill fuccefs, and very difconfolate at the difficulties which attended the tranfporting his poor people over the rivor Bann, and the Lough Foyle, which lay between him and his new territory. The crafty Englifhman, taking advantage of his fituation, by an offer of fome lands which lay nearer his old dominions, perfuaded him to cede his title to the barony of Enifhowen. And thus the Chichefters, who afterwards obtained the title of Earls of Donegall, became poffeffed of this great eftate; and honeft Mac Quillan fetled himfelf in one far inferior to Enifhowen.
"One ftory more (fays the manufcript) of Mac Quillan. The eftate he got in exchange for the barony of Enifhowen was called Clanreaghurkie *, which was far inadequate to fupport the old hofpitality of the Mac Quillans. Bury Oge Mac Quillan fold this land to one of Chichefter's relations, and having got his new-granted eftate into one bag, was very generous and hofpitable as long as the bag lafted. And fo (continues the manufcript) was the worthy Mac Quillan foon extinguilhed."

I thould not have obtruded the account of the downtall of this Irih chief, but that it affords fo good a reafon for the utter obliteration of every ancient record and monument in this part of the country; and will plead my excufe for not adding.fomewhat to our collection of Irifh antiquities.

## LETTER VI.

DRAR SIR,

## Portru/h, Augu/t 13.

A FEW days ago, as I rode acrofs the head-land of Bengore, a fudden fhower of rain falling very heavily, compelled me to take fhelter in a little cabin, which ftands on a wild fpot in the middle of that promontory, ion a piece of land called in the Irih language Aird, from the loftinefs of its fituation. A well-looking young woman fat by the firefide fpinning at her wheel, with a parcel of children playing round her; but, notwithftanding her induftrious employment, the houle bore evident marks of poverty and diftrefs about it.

As the rain fill continued, I had an opportunity of afking feveral queflions concerning the fortunes of this poor family, the hiftory of which forms fuch a fimple, melancholy tale, that I cannot help repeating it to you, though methinks you will accufe me of having-brought it forward very mal a-propos.

The original adventurer who fettled in this folitary fpot was called Adam Morning, a name which he got from fome accidental circumftance, and is defcribed by the peafants of the neighbouring hamlet as a clever fellow, and an honeft man. He held his little farm, which had never before been cultivated, at the fmall rent of five pounds per amum, hoping foon to make it a valuable tenure by the probable effects of his induftry; and on this he built the cottage which I have juft mentioned, fuited to his infant powers, but fo contrived as to admit of an addition, whenever his fuccefs in improving this barren foil hould entitle him to encreafe 'his comforts.

[^324]By hard labour he foon reclaimed fo much of the land as enabled him to fow a moderate quantity of grain; but when the toils of the year were almoft over, and a plentiful harvelt promifed to reward his induftry, a violent form, which was feverely felt over the whole kingdom, blafted his golden hopes, and the entire produce of his farm was only fixteen barrels of oats, out of twenty-four which he had fowed.

This was a fevere blow to our enterprifing farmer, but his refolution was not thus haftily to be vanquifhed ; means were found to pay his rent, a fecond crop was fowed the enfuing year, and his land again prefented the cheering profpect of approaching plenty. Once more an inclement feafon, bearing heavily on the unfheltered fituation of his new fields, mocked his expectation, and the entire reward of the year's labour amounted only to a fmall increafe of grain, little exceeding what he had fowed.

Few men in this lowly fphere of life would have borne up againt fuch rude and repeated fhocks of adverle fortune; but the firit of our humble adventurer difdained to yield to misfortunes which were merely cafual, and which no degree of prudence could have guarded againft. His perfeverance was ftill unfhaken, his health continued vigorous, and the land yet promifed to repay him, would Providence but fmile on his endeavours. New ways were therefore devifed to fave his finking.credit; every nerve was exerted to pay his rent, and try the fortune of another year.

There is a fmall bay in the promontory of Bengore, called Port na Spania *, from the wreck of one of the celebrated Spanifh armada, which was here dafhed to pieces. It is entirely furrounded by a monftrous precipice between three and four hundred feet high, and is acceffible only by one narrow approach, which is far the moft frightful of all the hazardots paths on this whole coatt.

By the tenure of his farm the poffeflor was entitled to a quarter of this little bay, amounting to about twenty or thirty fquare yards of wild inhofpitable rock $\dagger$.

Here Adam and his family, ftruggling againft their diftreffes, laboured hard to fupply their wants by cutting the fea-weed from the rocks, and manufacturing it into kelp, which the linen bleachers of the country bought up at a good price; while in the mean time the farm was rifing faft, and Ceres began again to fmile propitious.

One morning, as Adam and his wife were defcending down the dangerous path, to purfue their daily toil, while they were talking of their growing hopes, even while the cheerful profpect was fmiling in their view, a fudden flip tumbled hin headlong from the precipice, and dafhed him to picces on the rocks below $\downarrow$.

His fon David, the heir of his humble fortunes, had juft then returned from the Weft Indies, (till crippled under a wound which he received in the fervice of his country, on board a man of war, but prepared to affilt the diftreffes of his father with the little prize-money which had fallen to his fhare during his voyages.

The tar had married a pretty young woman before he went to fea, (the fame whom I faw bufied in fpinning, but inftead of returuing to a quiet happy family, he found nothing at home but mifery and diftrefs, and faw himfelf almont entircly adrift in the world, with a mother, a wife and children to maintain. The death of his father had brought all the hungry creditors forward, fo that he became heir only to the poor cot-

[^325]tage itfelf, and the naked land which furrounded it. However, it was his inheritance, and as fuch he would not part with it.

The prize-money which he had got on his cruize was, for the convenience of carriage (as his wife told me), moftly converted into plate, that is, he returned home with a filver watch, a large pair of filver knee and fhoe buckles, and fuch other little matters of ornament, as the vanity of a failor, who pays a vifit to his old friends after a long abfence, commonly delights to exhibit. With thefe David fet out for the firlt fair that happened in the neighbourhood, to buy a horfe, which was abfolutely neceffary for the cultivation of his farm; but he was not in his own element: a jockey foon fell in with him, and the tar gave his filver watch, the chief fortune of the fanily, for a jaded horfe, which he afterward found, on enquiry, old enough to have feen the days of Lord Hawke and Confians, being upwards of twenty years of age.

Our young farmer, alarmed at the marks of debility which too manifefly fhewed themfelves in his new horfe, and terrified left he might haftily give him the flip, and die, in his hands, fet out with all expedition to try his fortune at market once more; where, with the afiftance of another piece of plate, he foon bartered his antiquated fteed, and, under the influence of his late misfortune, purchafed a colt, almoft as unferviccable from his youth, as the former had been from extreme old age.

Thefe calamities of the fon were little lefs ruinous than thofe of the father, but with this difference, that the misfortunes of the latter being fuch as no human forefight could have prevented, he was univerfally eftemed and pitied by the neighbourhood; while every body laughed at the fimplicity which involved poor David in his diftreffes. .

However, fome peafants of the next village, pitying his fituation, adnuitted him into what is here called a neigbour dealing, that is, he was allowed to join his colt in the team with threc of their horfes, and the plough was alternately employed in each man's farm; by this means David has been enabled to till his inheritance, and this year a harvel of rich hope feems to promife a reward-whether it fhall or not, refts with Providence.

Such is the fimple unadorned hiftory of this poor family, affording an artlefs affecting picture of the accidents and diftreffies of humble life, which I am fure will intereft your feelings, and make you forget the tedioufnefs of this digreffion from my main fubject.

## LETTER VII.

DEAR SIR,
Portrufh, Auguft 20.
IT is a pleafing, as well as an intercfting purfuit, to obferve the gradual advancement of mankind in any particular object of enquiry; to trace the wild fhoot of infant philofophy, from the natural foil in which it has grown, rank and uncultivated, to the garden of fcience, where it blooms in all the improved beauty and vigour which the hand of art and induftry can add to it. In this point of view, a little hiftory of the opinions which have prevailed concerning the curious combination of pillars in this neighbourhood, called the Giants' Caufeway, may perhaps afford you fome amufement ; ${ }^{\circ}$ and if it do not bring with it much folid information concerning the operations of nature, yet it may be pleafant enough to fee the various attempts which men have made to explain them.

I he native inhabitants of the coaft, as they were the earlieft obfervers of this wonder, fo were they the firt to account for its production; and however rude and fimple their theory may be, yet a little confideration will fatisfy us that it does not deferve the igno.
minious appellation of being grofsly barbarous and abfurd. The Caufeway was obferved by the fifhermen whofe daily neceflities led them thither for fubfiftence, to be a regular mole, projecting into the fea, which anfwered for feveral convenient purpofes; on clofer infpection, it was difcovered to be built with an appearance of art and regula rity fomewhat refembling the works of men, but at the fame time exceeding every thing of the like kind which had been feen : and it was found that human ingenuity and perfeverance, if fupported by fufficient power, might be abundantly adequate to its production.

The chief defect in this firmple analogy feems to have been the want of ftrength equal to the effect; but this was foon fupplied in the traditions of a fanciful people, and Fin ma Cool *, the celebrated hero of ancient Ireland, became the giant under whofe forming hand this curious ftructure was erected.

It was afterward difcovered, that a pile of finilar pillars was placed fomewhere on the oppofite coalt of Scotland, and as the bufinefs of latitudes and longitudes was not at that time very accurately afcertained, a general confufed notion prevailed, that this mole was once continued acrofs the fea, and comected the Irifh and Scottifh coafts together.

Near the end of the laft century, when this kingdom began to revive from its misfortunes under the regulations of William III., the fpirit of enquiry, which the Royal Society of London had juft then called forth, began to bufy itfelf about this fingular and original wonder. At this period we find, among the papers of the Society, a letter from Sir Richard Buckly to Dr. Lyfter, on this fubject, dated in the year 1693 , of the merits of which you may judge by the following extract:
" Concerning the Giants' Canfeway :-Prolixity in a philofophica! defcription I am fure you will pardon, for I was very exact in getting it from a perfon that was rei compos, perhaps peritus; a fcholar, a mafter of arts in Cambridge, and a traveller, who went on purpofe with the bifhop of Derry to fee it, \&c.
"This whole Caufeway (fays the fcholar) confifts of pillars of perpendicular cylinders. The pillars do not confift of joints, as you were informed, but each cylinder is one folid picce, only indeed in breaking, it breaks crofswife, and not length wife, which we commonly call Iplitting; and all the fones that rife up on the frand are all cylinders, though of never fo many different angles, for there are alfo four-fquared upon the fame fhore $\dagger$. That the cylinders do not confift of joints is evident from hence, that the pieces fo broken off have their bottom as often convex or concave, as flat or even."

Thus has this intelligent traveller demonlrated that thefe pillars have no joints, from the very circumftance which of all others renders their articulation moft curious and furprifing.

In confequence of the information which this gentleman gave of the want of joints, people began to compare thefe pillars with the regular foffils then beft known, the eutrochi, afterix, and the rock chryltal, which, on a diminutive fcale, feemed to bear refemblance with the larger maffes in the Giants' Cauleway; and to this end a number of queries were drawn up by Sir Richard Bulkley, which, with their anfwers by Doctor Samuel Foley, are publifhed in the Philofophical Traufactions of that period.

Such are thefe following :
"Are any of the pillars hexagons, or fquares? or be they pentagons only?

- Mr. Mac Pherfon's more modern Fingal.
+ With all due deference to this Cambridge matter of arts, who fo feientifically deferibes thefe fourfquated cylinders, he malt have made fome very unaccountable mittake, or elfe matters have been frangely altered fince his time, for there is not now a fingle pillar to be found in the whole Caufeway which is not clearly feparable into very many diftinct joints.
"Have the tops of the pillars any gravings or friate lines on them?
" Is the fuperficies caniculate or otherwife grooved?" \&c. \&c.
All which queries, though truly enough anfivered, yet produced very little ufeful information ; being entirely directed to the mere exterior appearance of the Caufeway itfelf, without paying any attention to the general features of the coaft, to the attendant foffil fubftances, or even to the nature and chemical properties of the ftone itfelf, which is utterly different from thofe foffils with which it was then compared. However, the Britifh philofophers feem to have purfued the analogy of this feecies of cliryftallization with very great confidence; fo that the authors of the late appendix to their Eincyclopredia, have endeavoured to give it an air of probability, by delineauing many of the bafalt pillars as terminating in pyramids, like the common rock cryftal, and fome fpecies of falts ${ }^{\circ}$.

To thefe anfwers a fketch was added, of which an engraving is publifhed in the Philofophical Tranfactions, entitled "A Draught of the Giants' Caufeway, which lies near Bengore Head, in the county of Antrim, by Chriftopher Cole, A. D. 1694." Of this drawing and its imperfections, the account which Doctor Foley himfelf gives will be the beft deicription: "He tells me he has not drawn the Giants" Caufeway as a profpect, nor yet as a furvey or platform, for this he thought would not anfwer his defign; and that he has no name for it but a draught, which he took after this fort. He fuppofed the hills and Caufeway to be epitomifed to the fame height and bignefs the draught flews them, and this he fancied the moft intelligible way to exprefs it."

Doctor Thomas Molleneux was the firft perfon who tock any very confiderable pains to procure information concerning the Giants' Caufeway, and we have reafon to lament that the neceflary attendance of his profeffion prevented hin from making his obfervations in perfon, for which he feems to have been well qualified: however, his intelligence was the beft that had yet been collected. It was found that this fpecies of fone was not confined to the Giants' Caufeway alone, bue might be difcovered in the mountain of Dunmull; nay that it was certainly of the fame fpecies with the lapis mifneus, or bafaltes of Stolpen, in Saxony, of which a flight defeription had been given by Agricola, in his Hiftory of Foffils.

By the influence of this gentleman in the Dublin Society, that body employed a painter of fome eminence to make a general fketch of the coaft near the Caufeway; but neither the talents nor fidelity of the artift feem to be at all fuited to the purpofe of a philofophical landfcape.

An engraving of this is publifhed under the following title:
" A true Profpect of the Giants' Caufeway, near Bengore Head, taken from the North-weft, by Edward Sandys, A. D. 1696, at the Expence of the Dublin Society.
"Right Hon. Sir Cecil Week, Knt. Prefident.
"Rev. Dr. Ahe, Bifhop of Cloyne, Wm. Molleneux, Efq., Vice-Prefidents."
In this true profpect, the painter has very much indulged his own imagination, at the expence of his employers, infomuch that feveral tall pillars in the fteep banks of this fanciful feene appear loaded with luxuriant branches, fkirting the wild rocky bay of Port Noffert, with the gay exhibition of flately foreft trees. In the back ground he

[^326]difcovered a parcel of rude and ufelefs materials, which his magic pencil foon transformed into comfortable dwelling-houfes, and for chimuies he has happily introduced fome detached pillars of bafaltes, which, from their peculiar fituation, and the name given to them by the peafauts of the country, naturally excited the attention of this extraordinary artiff. And thus were concluded the labours of the laft century, concerning this curtious work of nature.

From that period the bafalt pillars of this kingdom paffed almof unnoticed for half a century, and feem to have been viewed cautioufly, and as it were at a diftance, by men of fcience, who appeared now to engage with an object which had hitherto entirely baffled the attempts of every theorift.

In the year 1740, Mrs. Sufannah Drury made two very beautiful and correct paintings of the Giants' Caufeway, which obtained the premium appointed for the encouragement of arts in Ireland; and thele drawings being foon after engraved by the hand of an eminent artift, and publifhed, the attention of the world was once again directed toward this antiquated fubject.

Shortly after this, Doctor Pococke, a gentleman of confiderable induftry in philofo. phical purfuits, made a tour through the county of Antrim, and was the only perfon who appears to have taken a general view of the coaft, of which he has given a curfory defrription. But not content with a plain hiftory of matters of fact, the learned Doctorventured to fart a new theory of his own, which I fear will not ftand the tef of a critical examination: to fay the truth, it is little elfe than the doctrine of the atoms of Epicurus in a modern drefs ${ }^{*}$.

He conceives that the bafaltes might once have been fufpended in a watery medium, either in folution, or as a kind of mud : that at certain times, accidental fits of precipitation took place, in fuch manner as to form a range of fhort cylinders, whofe upper ends fhould chiefly be convex : that as thefe joints became fomewhat folid, a fecond fit of precipitation took place, forming a fecond range of incumbent joints, which muft generally be concave, adapted to the convexity of the lower order, and thus, by fucceffive fits of precipitation, he fuppofes a fet of erect cylinders might be generated in contact with each other. Now a fet of cylinders can touch only in right lines, and therefore muft leave empty fpaces between them; but the pillars being yet foft, and yieldingto the increafing preffure from above, fhould, he imagines, dilate, and fpread themfelves. out fo as to fill up the vacuities. And thus he conceives may the polygon articulated. pillars, of the Giants' Caufeway, be generated.

I fhall not delay you by any commentary on this unhappy theory, only to obferve, that a more accurate enquiry would have difcovered horizontal and even curved pillars, for the production of which this caufe is utterly inadequate $\dagger$.

Such is the hiftory of the Giants' Caufeway, and fuch have been the labours of the learned, and their various opinions concerning its flructure, in which, whatever may have been already accomplifhed, much certainly remains to be done, towards a judicious

[^327]arrangement of a fufficient number of materials, whercon to build any general theory to fatisfy a reafonable mind with refpect to its formation.

In my laft letter I mentioned that the extent of country contiguous to the Caufeway, through which all the varieties of this fpecies of fone prevailed, was much greater than had been imagined : and within thefe few years it has been difcovered abroad, that the bafaltes is a common foffil through every part of the world, there being few kingdoms where it may not be found under one fhape or another. Hence it has come to pafs that the obfervations of men of fcience in diffant places have been united on this fubject; different theories have been compared together; and more general analogies fuggefted, on which to build fome rational cunjectures, concerning the caufe that might have produced thefe wonderful pillars.

It is fomewhat fingular, however, that during thefe enquiries abroad, all appeals which have been made to the Giants' Caufeway, in favour of any particular fyftem, have always proved fallacious; and ftill more extraordinary, when one confiders that thefe errors fhould have principally arifen from the extreme pains employed in defcribing it, particularly from thofe two accurate and beautiful drawings executed by Mrs. Drury, which have really been a ftumbling block to moft of the foreign writers on this fubject. Thus Monf. Demareft, the ingenious father of the volcanic theory of bafaltes, ftrangely imagines that the Caufeway has been a current of lava erupted from the fide of a conical mountain, though there is not a mountain of any fort in its vicinity, nor one of that particular hhape within a great many miles of it. 'The truth is, that gentleman faw thefe much celebrated drawings, and has miftaken the fegment of a fhelving cape, at whofe bafe the pillars ftand, for a portion of a conical hill cut down in the direction of its axis; and this error has been confirned by the prevailing cuftom of putting thofe pictures together in the fame frame; fo that the two fegments, flanding back to back, exhibit the appearance of an entire conical mountain, fuch as Mr. Demareft defcribes*.

It was alfo obferved by foreigners, that in every drawing and defcription of the Giants' Caufeway, particular attention was paid to the circumftance of its projecting into the fea; hence a crude and indefinite opiaion was adopted by many writers, that the pillars of bafaltes were produced by the refrigeration of a liquid body of lava, in confequence of being fuddenly plunged into water. Such is the theory of a Mr. Rafpe, who has publifhed an account of the valley of Heffe Caffel, in Germany, and fuch are the fentiments advanced by Monf. de Luc, in his excellent Letters addreffed to the Queen of England, in which he gives as his opinion, that the ancient volcanos were formed in the ocean, where the fudden cooling of the melted uafs (not to count on the prefence of the marine falt) might have determined a regularity of figure in the cooling body $\dagger$.

Though this opinion does with much ingenuity allign a reafon why the bafaltic pillars are not produced at this day, as they were formerly, yet a little confideration will fhew that it ought not haftily to be adopted, fince general experierce teaches us that all

[^328]iumultuary caufes are only adapted to produce tumultuary effects : every fpecies of regular figure produced by cryftallization, or any mode whatever analogous to it, being always more perfect, in proportion as length of time and reft have allowed the different particles to unite gradually ; indeed a moment's reflection muft fatisfy any one, that the furious encounter of a river of liquid fire with the waters of the ocean, fo far from being fuited to form the neat and elegant arrangement of our pillars of bafaltes, can only tend to introduce confufion and irregularity. But in truth, any arguments derived from the particular fituation of the Giants' Cauleway will be found extremely erroneous, becaufe the circumftance of its ftanding in the fea is purely accidental ; fimilar pillars being often difcoverable on the fummit of the higheft grounds in its neighbourhood, many hundred feet above the level of the beach.

- fhall no longer weary your patience by a more minute account of the opinions to which this celebrated Caufeway has given birth, but fhall haften to a general view of the bold volcanic theories that have been advanced to explain the production of the pillars of bafaltes.

## LETTER VIII.

DEAR SIR,

$$
\text { Portrufh, Auguf } 24 .
$$

THE vicinity of the little filhing village of Portrufh to the Giants' Caufeway, has afforded me, during my ftay here, ample opportunity to vifit that curious work of nature, and to examine, with a good deal of attention, the features of the adjoining country, which has hitherto been very imperfectly known.

The Caufeway itfelf is generally defcribed as a mole or quay, projecting from the bafe of a fteep promontory, fome hundred feet into the fea, and is formed of perpendicular pillars of bafaltes, which ftand in contact with each other, exhibiting an appearance not much unlike a folid honeycomb. The pillars are irregular prifins, of various denominations, from four to eight fides *; but the hexagonal columns are as numerous as all the others together:

On a minute infpection, each pillar is found to be feparable into feveral joints, whofe articulation is neat and compact beyond expreflion, the convex termination of one joint always meeting a concave locket in the next; befides which, the angles of one frequently fhoot over thofe of the other, fo that they are completely locked together, and can rarely be feparated without a fracture of fome of their parts.
The fides of each column arc unequal anong themfelves, but the contiguous fides of adjoining columns are always of equal dimenfions fo as to touch in all their parts.

Though the angles be of various magnitudes, yet the fum of the contiguous angles of adjoining pillars, always makes up four right ones. Hence there are no void fpaces among the bafaltes, the furface of the Caufeway exhibiting to view a regular and compact pavement of polygon ftones.
The outfide covering is foft, and of a brown colour, being the earthy parts of this Aone nearly deprived of its metallic principle by the action of the air, and of the narine acid which it receives from the fea $\dagger$.

[^329]
## 89:

Thefe are the obvious external characters of this extraordinary pile of bafaltes, obferved and defcribed with wonder by every one who has feen it. But it is not here that our admiration fhould ceafe; whatever the procefs was, by which nature produced that beautiful and curious arrangement of pillars fo confpicuous about the Giant's Caufeway, the caufe, far from being limited to that fpot alone, appears to have extended through a large tract of country, in every direction, infomuch that many of the cominon quarries' for feveral miles round, feem to be only abortive attempts towards the production of a Giant's Caufeway.
From want of attention to this circumfance, a valt deal of time and labour have been idly fpent in minute examinations of the Caufeway itfelf; in tracing its courfe under the ocean, purfuing is columns into the ground, determining its length and breadth, and the number of its pillars, with numerous wild conjectures concerning its original; all of which ceafe to be of any importance, when this fpot is confidered only as a fmall corner of an immenfe bafalt quarry, extending widely over all the neigh. bouring land.

The leading features of this whole coaft are the two great promontorics of Bengore and Fairhead, which fland at the diftance of eight miles from each other; both formed on a great and extenfive fcale; both abrupt toward the fea, and abundantly expofed to obfervation, and each in its kind exhibiting noble arrangements of the differunt ffecies of columnar bafaltes. $^{2}$
the former of thefe lies about feve: miles weft of Ballycafle, and is generally defribed by fcamen, who fee it at a diftance, and in profile, as an extenfive beadland, running out from the coaft to a confiderable length into the fea; but, ftrift; *anwing, it is made up of a number of leffer capes and bays, each with its own pre. . . ne, the tout enfemble of which forms what the feamen denominate the headland o. $\because$ gore.

Thefe capes are compofed of a variety of different ranges of pillars, and a great number, of ftrata; which, from the abruptnefs of the coalt, are extremely confpicuous, and form an unrivalled pile of natural architecture, in which all the neat regularity and elegance of art is united to the wild magnificence of nature.

The inoft perfect of thefe capes is called Ilealkin, of which I fhall attempt a defeription, and along with it hope to fend a drawing which my drafifman has taken from the beach below, at the rifk of his neck; for the approach from thefe promontories down to the fea, is frightful beyond defcription, and requires not only a flrong head, but very confiderable bodily activity to accomplifh it.
The fummit of Pleafkin is covered with a thin grafly fod, under which lies the natural rock, baving gencrally an uniform hard furface, fomewhat cracked and hivered. At the depth of ten or twelve feet from the fummit, this rock begins to affume a columnar tendency, and forms a range of mally pillars of bafaltes, which fland perpendicular to the horizon, prefenting, in the fharp face of the promontory, the appsarance of a magnificent gallery or colonade, upward of fixty feet in height.

This colonade is fupported on a folid bafe of coarle, black, irregular rock, near fixty fect thick, abounding in blebs and air holes, but though comparatively irregular, it may be evidently obferved to affect a peculiar figure, iending in many places to run into regular forms, refembling the fhooting of falts and many other fubftances during a halty cryftallization.

Under this great bed of ftone flands a fecond range of pillars, between forty and fifty feet in height, lefs grofs, and more harply defined than thofe of the upper itory, many of them, on a clofe view, emulating even the neatnefs of the coltuns in the

Giants' Caufeway. This lower range is borne on a layer of red ochre fone, which ferves as a relief to fhew it to great advantage *.

Thefe two admirable natural galleries, together with the interjacent mafs of irregular rock form a perpendicular height of one hundred and feventy feet; from the bafe of which, the promontory, covered with rock and grafs, flopes down to the fea for the fpace of two hundred feet more, making in all a mafs of near four hundred feet in height, which in beauty and variety of its colouring, in elegance and novelty of arrangement, and in the extraordinary magnitude of its objects, cannot readily be rivalled by my thing of the kind at prefent known $\dagger$.

Though there are but two complete ranges of piliars which appear in any of the promontories, yet is not improbable that there may be many more in fucceffion, at various depths under ground; and this opinion is confirmed by columnar marks which may be traced in feveral rocks that lie in the fea. The Caufeway itfelf, which is fituated at the bafe of ene of thofe promontories, on the level of the beach, is one of thofe columnar beds that has been accidently ftripped and wafhed by length of time and ftorms.

The pillars of this whole headland appear naturally to affect a perpendicular fituation, and in the few places where they lie in an inclined pofture, it feems to be the effect of fome external caufe, which has deranged them from their original difpofition. Indeed where the forms of cryftallization are imperfect, they may be feen to fhoot in various directions, and fometimes in irregular curves, but in moft of thefe inftances the columnar outline is very rude and unfinifhed.

It is worth remarking, that the ranges of pillars are more perfect in proportion as they lie deeper under ground; the fecond range in Pleakkin is evidently better finifhed than the upper one, and contains much fewer irregularities in the grain of its ftone; while the pillars of the Caufeway, which runs into the fea itfelf, have ftill a greater fharpnefs in their figure, and are more clofe and uniform in their texture.

Such is the general outline of this great headland, which affords objects extremely interefting to every one who may winh to ftudy Nature in her bold and uncommon works.

At the diftance of eight miles from hence (as I mentioned before) the promontory of Fairhead $\ddagger$ raifes its lofty fummit more than four hundred feet above the fea, forming the caftern termination of Ballycaftle bay. It prefents to view a vaft compact mafs of rude columnar fones, the forms of which are extremely grofs, many of them being near one hundred and fifty feet in length, and the texture to coarfe $\oint$, as to refemble black fchorle ftone, rather than the clofe fine grain of the Giants' Caufeway bafaltes. At the bafe of thefe gigantic columns, lies a wild wafte of natural ruins, of an enormous lize, which in the courfe of fucceffive ages have been tumbled down from their foundation by florms, or fome more powerful operations of nature. Thefe maffive bodies have fometimes withfood the fhock of their fall, and often lie in groupes and clumps

[^330]of pillars, refembling many of the varieties of artificial ruins, and forming a very novel and friking landfcape.

A favage wildnefs characterizes this great promontory, at the foot of which the ocean rages with uncommon fury. Scarce a fingle mark of vegetation has yet crept over the hard rock to diverfify its colóuring, but one uniform greynefs clothes the fcene all around. Upen the whole, it makes a fine contralt with the beautiful capes of Bengore, where the varied brown fhades of the pillars, enlivened by the red and green tints of ochre and grafs, caft a degree of life and cheerfulnefs over the different objects.

Though 1 have particularly defcribed the bafalt pillars of thefe two magnificent promontories, yet there are many other fimilar arrangements through this country, which, though lefs worthy of admiration as great objects, yet become extremely interefting when one wifhes to fearch minutely into the natural caufes which might have produced thefe extraordinary pillars.

The mountain of Dunmull, lying between Colerain and the river Bufh, abounds in this fpecies of ftone, particularly at the craigs of Iflamore, where two different ranges of columns may be difcovered; and at moft of the quarries which have occafionally been opened round the mountain. They may be feen alio at Dunluce-hill, near the caftle of Dunluce : in the bed of the river Bufh, near the briage of Bufhmills: on the fummit of the mountain of Croaghmore: in many parts of the high land over Ballintoy: in the ifland of Raghery, and varicus other places, through an extent of coaft about fifteen miles in length, and two in breadth *.

I fhall not at prefent delay you with a minute defcription of each of thefe, but may, in the courfe of my letters, take an opportunity to mention the general character of the face of this country, and any fingularities worthy of notice, in the forms and fituation of its bafaltes. Yours, \&c.

## LETTER IX.

DEAR SIR,
Portrufh, Akguf 13.
IN my laft letter I defcribed the external character of the Giants' Cauleway pillars, which will abundantly ferve to difcriminate the columnar bafaltes from any other fofil of a different fpecies at prefent known. But as this ftone does not always appear in its prifinatical form, it will be convenient to take notice of fome other properties, not immediately derived from its figure, by which we fhall be enabled to diftinguifh it in thofe inflances where it inay be difpofed in more rude and irregular mafiss.

The bafaltes of the Giants' Caufeway $\dagger$ is a black, ponderous, clofe-grained fone, which does not effervefce in any of the mineral acids.

Its fpecific gravity is to that of water, nearly in the proportion of 2.90 to 1.00 , and to that of the fineft marble, as 2.90 to 2.70 .

Though its texture be c apact, it is not abiolutely homogeneous; for if ground to a fmooth furface, its bright jet-black poilh is disfigured by feveral fuall pores.

- Beyond this tract, which abounds in perfect pillars, an attentive obferver will be able to trace the far.e fpecies of foffils in very dilant parts of the country, as far as the northern flore of Loughneagh, and the mountains of the county of Derry ; in many places of which imperfect columnar torms may be obferved, fo that the great caufe which generated this fpecies of flone, has been exerted though a frace of inore than forty miles in length and twenty in breadtio ; that is, tinrough above eight hundred tquare m.les.
$t 1$ have intentionally confined this account to the flone of the Giants' Canfeway, becaufe it feems an perfect in its kind as any hitherto difcovered, and may in fome meafure ferve for a llandard, with which to compare other flone of the fame fpecies.

It ftrikes fire imperfectly with a fteel.
When expofed to a moderate heat in a common fire it affumes a reddifh colour, which is more vivid on its natural outfide covering, and lofes about ${ }_{3}$ 'r part of its weight ".

In a more intenfe heat it readily melts, and is, as the chymifts exprefs it, fufible per fe.

With the affiftance of an alkali flux it may be vitrified, and forms an opaque glafs of a black or bluifh colour.

Its principal component parts are iron in a metallic ftate, combined chiefly with filiccous and argillaceons earths.

Its metallic principle may be demonftrated by a very fimple experiment : let a fmall fragment of bafaltes, in its natural ftate, be brought into contact, or very near to a good magnetical needle, and it may be made to detain the needle at a confiderable diftance from its meridian. Let this fragment be touched by a magnet and it will acquire pretty ftrong polarity, cupable of attracting or repelling the needle, at the diftance of an inch or more. From hence it is proved to contain iron in a metallic ftate, becaufe the calx of that metal is incapable of producing any magnetical phrenomena whatever.

To determine the quantity and quality of each conftituent part, requires a very fow and laborious operation, which would be almoft equally tedious in the defcription. I fhall therefore juft mention the refults from the experiments of that able chymift, Sir Torbern Bergnan, whofe authority you will not readily queftion :

From thefe elements we inall eafily be enabled to accoant for feveral of its properties.

Hence it comes to pafs that its fpecific gravity is fo confiderable, exceeding that of many ftones, which, when polifhed, appear much more compact, the quantity of phlogifticated iron eafly making compenlation.

We fee alfo why it anliwers fo well for a touchftone, the hardnefs of its iron particles eafily rubbing and fretting off the parts of any fofter metal which may be applied to it, and its black ground ferving to difplay thefe to gieater advantage.

Hence too arifes its fufibility without addition; for though flint, clay, and calcarious earth, are feparatcly refractory, in any degree of artificial heat, yet when mixed together they are readily fufible, and ftill more eafily when united with phlogitticated iron.

From the metallic ftate of its iron element we are enabled to infer, a priori, that the columns of the Giants' Caufeway are all natural magnets, whofe lower extremity is their north pole, and the upper extremity their fouth pole. For having ftood during many ages in a perpendicular pofition, they muft have acquired that polarity which is peculiar to all iron fubfances in a fimilar fituation; and like natural magnets, eve:y fragment,

[^331]when broken, will have its north and fouth pole. And this I have found true by experience ; each pillar of the Giants' Caufeway, and each fragnent of a pillar, which I applied near to the needle, having its attractive and repellent point.

Hence likewife it follows that the great capes in the neighbourhood of the Caufeway, muft poffefs a fimilar property; and, accordingly, in the femicircular bays of Bengorehead, I have often for:ad the compafs very much deranged from its meridian.

The magnetifm of thefe capes may perhaps be an object of fome curiofity; it might be well worth inquiring, how far fuch maffes of phlogifticated iron within the earth may produce thofe fudden and unaccountable deflexions of the needle, which are always inconvenient, fometimes fo dangerous to feamen; and wheher that fill more myfterious and inexplicable phænomenon of the annual variation, may not arife from the gain or lofs of the principle of metallicty, which in the flow and regular courfe of nature, may poflibly take place by the various action of heat and moiture.
We have proof fufficient on a diminutive fcale, that iron may by a variety of artificin! means lofe or gain that principle on which alone its magnetical proparty depends; and the decompofition of the bafaltes enables us to afiru, with reafonable certainty, that fuch changes do actually take place in nature, and that the magnetical phrnomena of the promontory of Bengore, for inflance, nuft now be difierent from what it was fome ages ago, or from what it will be fome ages hence: it may, therefore, deferve confideration, how far this analogy could be purlued with refpect to the whole mafs of the earth, particularly as we have evidence of the exiltence of a natural agent aburdantly adequateto this effect, I mean fubterranean fire, whofe extenfive dominion is indifputably proved by thofe numerous volcanoes that have been difcovered in fo many diftart pals of the world, and whofe fources muft lie at very confiderable depths below the furface of the earth, if we may argue from the valt quantity of different fubftances which they have vomited forth in their various eruptions.

From a knowledge of thefe elementary parts of the bafaltes, we are furnifhed with an analogy tending to throw fome light on the regularity of its torm. One of its principles is found to be filiccous earth, and we have very numerous proofs that this fubfance does, in other infances which come within our obfervation, frequently affect a regular figure, variable however under various circumftances. Thus rock cryftal, which is a very pure finty earth, is commonly difpofed in the form of hexagonal prifms, the denomination of fides which chiefly provails among our bafaltic pillars. Thus variety of cryfallizations are found to take place in the metal of glafs-houfes, where the furnạ, has been fuffered to cool gradually.
Iron is another of the principles which enter into the bafaltes; and this metal is found to cryfallize in regular figures, when all fit circumftances concur to permit the due arrangement of its parts. This is fometines difeoverable in the ores of that metal, and may be obferved to take place imperfectly even in our founderics in what is commonly called the grain of calt iron, geneally prefenting to view a friated apparance: but, in cafes where the pains and ingenui.; of the chemitt has been exerted to exhibit this phanomenon more decifively, very regular cubical figures have been produced, clearly afcertaining the exitence of this tendence toward a peculiar difpofition of its parts.

In truth, the particles of every fubftance in nature appear to poffefs private laws and affinities, whercby they proceed to unite, and to arrange themelves in regular forms, when all things neceflary combine to affif this tendency; that is, when by any means whatever, the particles are removed to a fufficent diftance, and afterwards fuffered to approach flowly and regularly according to their various laws of action.

Thus it appears to be in the cafe of faline fubftances, which have been held in folution in a watery medium; for if by the uniform evaporation of the fluid, or any other flow and regular caufe whatever, time and fpace be allowed in which the diffolved particles may exert, without difturbance, their private laws of affinity, thele particles will be found to affect an arrangement peculiar to that fpecies of body to which they helong. Thus again, all bodies which have been diffolved by the mediun of heat, when fuffered to cool equably, and without the rapid afllux of frefh portions of air, do univerfally exhibit a peculiar difpofition of parts, of which inftances enough occur in every fpecies of metal, in fulphurs, in glafs, and, in fhort, in all fubftances capable of a perfect fufion.

Since therefore we have fufficient evidence, in fuch infances as come within the reach of human powers and obfervation, that the elementary parts of the bafaltes do affect a fpecitic form of cryftallization, and that this form is always more and nore perfect, ill proportion as our experiments are made with greater regularity, and on a larger fcale, it may not appear unreafonable to purfue the fame analogy in the extenfive operations of nature, where thofe laws, which are but imperfectly exerted in our diminutive experiments, may act with full and undifturbed vigour, capable of producing the beautiful fymmetry and arrangement of a Giants' Cauleway. And though crytals have probably never been produced from any fimple fubftance, precifely anfwering to the articulated bafalt pillars, yet no very inportant objection can be derived from hence, fince it is well known that elements which feparately form \{pecific cryftals, may, when united, confticute hy their compound laws, bodies different from either figure. Thus melted glafs, through which fcorix of iron had been accidentally mixed, was found to affect a columuar flape *.

Thele are the chief matters worthy notice, which have come under my own immediate obfervation with refpect to the perfect ftone of the Giants' Caufeway. I fhall next mention fome of the leading varietics of its different fpecies.

Firf, With refpect to form and magnitude : the pillars of the Caufeway are fmall, not very much exceeding one foot in breadth, and thirty in length, fharply defined, neat in their articulation, with ennvex or concave terminations to each joint. In many of the capes and hills they are of a larger fize, more imperfect and irregular in their figure and articulation, having often flat terminations to their joints: at Fairhead they are gigantic magnitude, fometimes exceeding five feet in breadth, and an hundred in length; oftentimes apparently deftitute of joints altogether. Through many parts of the country this fpecies of ftone is entirely rude and unformed, feparating in loofe blocks, in which ftate it refembles the fone known in Sweden by the name of Trappe.
Secondly, With refpect to fituation : the pillars at the Giants ${ }^{\circ}$ Caufeway fland on the level of the beach, from whenice they may be traced through all degrees of elevation, to the fiummit of the higheft grounds in the neighbourhood, as at the old fort of Dunmull, and on the top of Croaghmore, fix hundred feet at leaft above the level of the fea.
Thirdly, With refpect to difpofition and arrangentent: At the Caufeway, and in molt other places, they fand perpendicular to the horizon; in fome of the capes, and particularly near UThet harbour in the ifle of Raghery, they lie in an oblique pofition; at Doon Point, in the fame ifland, and along the Ballintoy fhore, they form a varicty of regular curves.

The little point of Doon is indeed extremely curious, containing at once perpendicular, horizontal, and bending pillars. Its bafe refembles a mole compofed of erect co-

[^332]lumns like thofe of the Giants' Caufeway ; over the extremity of this mafs others appear in a bending form, as if they had nid over in a ftate of fofinefs, capable of accomanodating themfelves to the courfe of their defeent, and thus afliming the figure of various curves, in confequence of the action of gravity; over all, feveral pillars are difpofed in att horizontal pofition, fuch as would accord with an hypothefis of their having juft reached the brink of the defeent where they were fuddenly arrefted, and became rigid, lying along with their extremities pointing out toward the fea.

Fourthly, With refpect to colour and grain: the Giants' Caufeway fone is black, clofe, and uniform; its varieties of colour are blue, reddifh, grey; and of grain, all that can be fuppofed from extreme finenefs, to the coarfe granulated appearance of a ftone which refembles imperfect granite, abounding in cryfals of fchorle, chiefly black, though fometimes of various colours.

Fifthly, With refpect to texture: we muft obferve, that though the Giant's Caufeway ftone be in general compact and homogeneous, yet it is remarkable that the upper joint of each pillar, where it can with certainty be afcertained, is always rudely formed and cellular *: the grofs pillars alfo, in the capes and mountains, frequently ab und in thefe air holes through all their parts, which fometimes contain fine clay and cther apparently foreign bocies: and the irregular bafaltes, beginning where the pillars ceafe, or lying over them, is in general extremely honey-conbed, containing in its cells cryftals of zeolyte, little morfels of brown clay, fometimes very pure fteatite, and in a few inftances bits of agate.

The foffils attendant on the bafaltes are, Firf, Extenfive layers of red oclire, varyiny in all degrees from a dull ferruginous colour, to a bright red, anfwering well for coarfe paint.

Secondly, Veins of iron ore, fometimes very rich, commonly of a brown or reddifh caft, at other times of a changeable blue colour.

Thirdly, Steatites, generally of a greenifh foapy appearance, more rarely of a pure white; it raifes an imperfect faponaceous froth when agitated with water.

Fourthly, Zeolyte, of a bright and purcf white colour; in maffes varying in weight from a grain to a pound; generally difpofed in cavities of the cellular bataites; often affecting a cryftallization, in which the fibres radiate out from one center, in fome infances refembling a beautiful fpangled appearance of thiftle down. The moft remarkable property of this foffil is that it forms a gelatinous mixture in the courfe of a few hours with any of the mineral acids, moft readily with fpirit of nitre $\dagger$.
lifthly, l'eperino fonc, a friable matrix of iudurated clay and iron, ftudded with little morfels of zeolyte, and other fubftances. It is often of a reddifh burnt colour, correfponding accurately with the peperino ftone of Iceland.

Sixthly, l'umice-ftone, of a deep black colour, containing iron not entirely dephlo. gilticated, but ftill capable of acting on the needle; fometimes found on the fhore of the illand of Raghery.

[^333]The following foffils feem to have exilted in their prefent form, independent of, and perhaps antecedent to the bafaltes.

Firt, Chalky Limeltone: the whole country appears to have been originally formed of this fibitance, to the height of feveral hundred feet above the prefent level of the fea. It lies in beds nearly parallel to the horizon, and contains fome farce petrifactions, particularly belemnites, more rarely afterix.

Secondly, Flints: thefe are difpofed in great abundance, and in various flapes, through the chalky limeftone; fometimes, however, they are found loofe through the ground; at other times they may be difcovered among the bafaltes *: but in all thefe inftances the limeftone appears to be their proper matrix, from whence they have been only accidently difperfed; for the veretable mold (in which they are never found, except near the limeflone) molt commonly abounds in calcarious earth, as if it had been principally formed by the decompofition of that fubfance, while the harder texture of the fints, fuffering little change, were feattered in their original fate irregularly through it. As for the bafaltes, it only contains them at or very near to the place of contade: with the inferior mafs of calcarious flone, bits of which fill continue to adhere to the flints in many parts. 'The fubflance of the flints too feems to have undergone fome change in this fituation, their tranfparency, hardnefs, and colour being often confiderably altered.

Tiirdly, Sandfone: a great mafs of this forms the eaftern fide of Ballycaftle bay, and in one part the bafalt pillars of Fairhead reft on it.
Fourthly, Pit-coal: it lies in beds between the layers of fandtione at Ballycafte, and appears to continue under the fea to the ifland of Raghery.
Fifthly, Martial Vitriol: this is formed among the coal-pits, by the union of the fulphureous acid of the coals with a fratum of iron.

Sixthly, A very fingular range of calcarious phofphoric rocks; thefe lie on the fhore of the iftand of Raghery, nearly where the vein of the Ballycaftle coals might be fuppofed to reach. Clofe to the fhore it refembles a hard white limeftone, of a blueifh caft; a little further inland it becomes fofter, and whiter; by and by it affumes the appearance of a calcarious fand-ftone; in each of which ftates it proluces a vivid yellowifh light when fprinkled on coals, or a hot iron. It does not emit a fulphureous fimell in - burning, nor does it difcolour vitriolis acid in folution $\dagger$.

I have here given you a fummary of the principle varietics of the bafaltes and its attendant foffils; perhaps you will fay that my brevity does not help to make me intelligible, but to this I muft anfiwer lirft, that if foffils cannot be afcertained by a few general characteriftics, a more laboured defcription of minute circumftances will do little elfe than perplex any perfon who is not a very good mineralogit, in which caic we have no refource but in actual obfervation. And fecondly, that fuch circumftances as I have here nentioned, will probably aftord a foundation broad enough on which to build any analogical realoning that may be derived immediately from the nature of the fubftances themfelves.

As I flould be forry to have given you the trouble of reading this letter only for the unprofitable labour of learning uncommon names, which would certainly be the cale did this account terminate the fubject; I fhall, in my next letter, candidly apply fuech arguments ats can be derived from the mature and propertics of thefe follits, to explain

[^334]the volcanic theory of the production of the bafaltes; at the fame time, however, I hope to be able to ftate, with equal honefty, fuch objections as feem moft fubltantially to militate againft this favourite hypothefis; leaving it to your own excellent judgment to decide on a fubject, where, as Sir Roger de Coverly would obferve, "much might be faid on both fides."

## LETIER X.

DEAR SIR,
Portruft, Auguf 3 8.
THERE are few things that can affec a contemplative mind with more furprize, than the numerous and fignal changes which appear to have taken place in the form and arrangement of our earth, at fome very diftant age. It is ${ }^{\circ}$ a fubject which has at all times engaged the attention of mankind, and certainly conftitutes the moft interefting department of natural hiftory.

From the frequent and unequivocal veltiges of marine productions, which are found in the midft of our moft extenfive continents, and on the fummit of feveral of the loftieft mountains, fome philofophers have been incisced to attribute the formation of the prefent habitable world, to the violent and tumu.iuary fury of the ocean, agitated by fome uncommon caufe ": Whild otherst have thought, that the gradual but uncealing efforts of its heaving billows were abundantly adequate to account for thefe appearances on more common principles.

But variety of natural phenomena occur to an attentive oblerver, which are deemed incapable of being reaionably explained by thefe hypothefes; whether we regard the general features and elevation of many of our continents, or the nature and fituation of the foffils which they contain.

Hence it has come to pafs, that a new and more powerful principle, efteemed entirely equal to thofe effects, has been adopted, and many of the moft furprifing phamomena of nature are held to be explicable by the potent agency of fubterraneau fire:

To this latter caufe the formation of our pillars of bafaltes has been attributed. with fome appearance of probability; and though much has been faid on this fubject with vaguenefs and indecifion, concerning the manner of their production, yet the principal facts that have been adduced in favour of the general opinion are worthy of attention, and open to view a very novel and important object of enquiry.

The firft perfon who took a decided part in favour of the volcanic theory of the bafaltes was M. Defmareft, a French gentleman, whofe memoire on that fubject may be feen in the publication of the Royal Academy of Sciences for the year 1771 . Mr. Defmareft made a tour through the county of Avergne, one of the fouthern provinces of France in the neighbourhood of the Rhone, where he difcovered many piles of bafaltes, with more variations of magnitude, figure, and arrangement, than was at that time known about the Giants' Caufeway in Ireland. By his means a gengraphical furvey was made of this part of France, and a map delineated in which the direction of the mountains, and the fituation of its bafaltes, were fuppofed to be accurately projected.

From this map, and his own perfonal obfervations of the rature of the foil, and the general fpecies of its foffis, he conceived that this country had once been ravaged by fubterranean fire, of whofe watteful dominion undeniable veftiges ftill renained; ard that the bold inequalities of its furface, its hills and vallics, were formed by vaft heaps of

[^335]$\dagger$ Dufon, \&c.
12
fcorixe
fcorix, and different melted fubflances, which had iffued from its volcanic mountains, fpreading thenifelves in every direction from thefe flaming centers.

He imagined alfo, that many of thefe melted torrents might be traced through their whole extent, from the fide of the great volcano which gave them birth in the nountains of D'or, to their remotelt extremitics where they terminated in banks of prifinatical bafaltes. From all thefe circumftances he concluded, that the bafaltic colunns were formed by the gradual refrigeration of a mafs of fluid lava, during its llow progrefs over the fubjacent foil, and that moft of its varieties of fhape and fituation might naturally be attributed to the different interruptions of its courfe, or to the alterations introduced by the fucceffive ravages of volcanic lire *.

After Mr. Defmareft many writers both foreign and domentic purfued this interefting fubject with great ardor. Among the Englifh authors we are principally indebted to the labours of Sir William Hamilton, whofe valuable collection of facts relating to thofe places which are at this day the feat of living volcanos, afford the fureft rules of judg. ment concerning fuch countries as do yet bear ftrong marks of a volcanized appearance without any direct evidence of the exiftence of fubterranean fire.
But the perfon to whom we owe the moft ample conspilation of inaterials immediately relating to the bafaltes, is Monfieur Faujas de St. Fond, who has lately publiihed a voluminous work on the extinct volcanos of Viverais and Velay, counties adjoining to Auvergne, which had before been defcribed by Mr. Defnareff. In this work the author has given a particular memoir on the bafaltes, to which he has annexed delcriptions, and engravings of the moft remarkable banks and mountains of bafaltic columns in thefe tivo countries. But what renders his work fill more valuable, are the minute and accurate accounts which it contains of the attendant foflils, particularly zoolyte fchorl, and puzzolane earth; becaufe we are from thence enabled to decide whether thefe fubftances be univerfally connected with the bafaltes, or are only the accidental attendants of it in a few particular counties; and where fuch foffils are found together, we have it in our power to eftimate fairly the force of thofe arguments derived from their nature and connection in any one comutry, by confidering candidly, how far they fhould weigh with us in thofe inftances which come immediately under our own particular obfervation.

In my laft letter I enumerated the chief varieties of the bafaltes and its attendant forfils, as they occur in the northern parts of Ireland; and I fhall now briefly flate to you fuch arguments as may be derived from them, in proof of the ancient exiftence of fubterranean fire in their neighbourhood.

Firf, The bafaltes itfelf is efteemed to be nothing elfe than lava; and its varieties are attributed entirely to accidental circumftances attending its courfe, or the manner of its cooling.-In fupport of which opinion it is affirmed that the bafaltes agrees moft ac-

[^336]curately with the lava in its elementary principles *, in its grain, in the fpecies of the forcign bodies which it includes $t$, and in all the diverfities of its texture $\ddagger$.

Secondly, The iron of the bataltes is found to be in a metallic tlate capable of acting on the magnetical needle. The fame is true of the iron contained in the compact lava.
'thirdly, The bafles poffeffes the seraarkable property of being fufible per fe; this property is alfo common to the lava and molt volcanic fubllances.

Fourthly, The balates is a foreign fubftance, fuperinduced on the original limeftone foil of the country, in a ftate of foftnefs capable of allowing the flints to penetrate confuderably within its lower furface.-It is hardly necelfiry to add, that the lava is an extrancous mats, overfjrealing the adjoining foil in a fluid flate; that it is often born on a limeftone bale, or that flints and other hard matters do frequently penetrate into its fubllance. In fhort, the circumftances of agreement are fo numerous, and fo clear, as to create a very realionable prelumption that they are one and the fane fipecies of fubflance.

But the evidence derived from the nature and properties of the attendant foffils, feens allo to contribute largely in fupport of this opinion.

Thofe extentive beds of red ochre, which abound among our bafaltes, are fuppofed to be an iron earth reduced to this thate of a calx by the powerful action of heat; for fuch a change may be produced on iron in our common furnaces, provided there be a fufficient afflux of frefh air; and the bafaltes itfelf in fuch circumftances is eafily reduceable to an impure ochre, exactly fimilar to that found at Bengore. This phenomenon is alfo obferved to take place more or lefs in the prefent living volcanos, particularly within their craters, and is therefore held to afford a prefumptive argument of the action of fire in the neighbourhood of the bafaltes.

I remarked to you the frequent bits of zeolyte which abound in the county of Antrim, and thefe, though not the immediate product (as far as I know) of any living volcano, are yet thought to countenance the general fyltem, becaule zeolyte is found in countries where fubterrancous fire is fill vifible, and where' there is great reafon to apprehend that the whole foil has been ravaged by that principle. Thus it abounds in Iceland, where the flames of Hecla yet continue to blaze §; and in the Itle of Bourbon, which is faid to bear undeniable marks of a voleanic character $\|$; this fubftance is therefore fuppofed to arife from the decompofition of the volcanic products, in places whofe fires have been long fince extinct.

- This will appear pretty evident, from flating the prodects of each fublance according to the analyfio of that able chynint, Sir Toobern Bergman : Bafaltes 100 parts.

| Contains |  |

[^337]Cryftals of feorl appcar in great plenty among many kinds of our bafiltes, and thefe, though not abfolutely limited to volcanic comtries, yet being found in great abundance among the Italian "lavas, in circumftances exactly correfponding to our's, are thought to fupply at good probable argument in the prefent inftance.

The fublance which I mentioned under the name of peperino fone, is believed to be the undoubted offspring of fire ; it has frequently the burnt appearance and fongy texture of many of the volcanic products, and agrees accurately with the peperino of Iceland and Bourbon iflands, which fill coutain burning mountains.

Puzzolane earth is not immediately found in that Itate in Ireland, but it is difcovered among the bafaltes of France, and there is very little doubt that our bafaltes, if pulverized, would agree with it in every refpect ; that is, it would produce a fine fharp powder, containing the fame elementary parts, and moft probably anfwering all its valuable ufes as a cement $\dagger$. l'uzzolane earth is found in the Canary iflands, which are efteemed to have other characteriftics of the effects of fire ; it is met in abundance through all the volcanized parts of ltaly; it is never difcovered except in places which have other ftrong marks of the ravages of fire.

The dilcovery of this earth is therefore thought to add great weight to the many other proofs which have been mentioned in favour of the general lyftem.

Pumice-fone is a fubftance lo generally acknowledged to be the product of fire, that I need not be at any trouble to enforce it ; indeed it bears the character of a cinder fo obvioufly in its exiernal af pearance, that one muft be convinced at firt view of its original. This foffil is fometimes four.: on the fhore of the ifland of Raghery, among the rounded ftones on the beach of the La $\ddagger$, and being fuppofed an unequivocal teft of the action of fire, is imagined to complete all that could be defired in this kind of reafoning.

Such are the internal ig wents in fuppore of the volcanic origin of the bafaltes, immediately derived from the iature and properties of that fubfance and its attendant foffils compared with other fubflances which are the certain products of fire; and it muft be confeffed, there appears throughout fuch a remarkable coincidence of circumftances, as raifes a ftrong prefumption in favour of the opinion that they have been produced by fimilar caufes; but there flill remains other external proofs, which when . added to the former are fuppofed to form a demonftration almoft as perfect as the nature of fuch analogical reafoning will allow.

In the beginning of this letter I mentioned that Meffrs. Definaref and Faujas de St. Fond had defcribed the bafaltic provinces of France, its containing momntains, whofe exterior appearance was fuch, that they readily pronounced them to be extinct volcanos. One of thefe, on the banks of the river Ardefche, called the Montagne de la Coupe, feems to exhibit the proofs of its origin in characters peculiarly clear and diftinct. It is of conical "im, exactly correfponding in thape with the prefent living volcanic mountains, and the them it contains a large crater nine hundred and fifty feet in dianeter, and fix hundred feet in depth g . The fubftances that have been difcovered through all

[^338]its parts, particularly in a deep ravine formed on one fide by torrents, bear a ftrong refumblance to many of the Vefuvian products. In fine, the volcanic features of this mountain are fo ftrongly marked, that an accurate account of it would afford no very unfuitable defcription of Vefuvius itfelf during the intervals of its cruptions. Now the Montagne de la Coupe contains at its bafe abundance of bafaltic pillars, which have been expofed to view on one fide by the inpetuous torrents of this mountainous country, particularly of the river Ardefche, whofe banks are formed of columnar bafaltes. And thus are two characters of a bafaltic and volcanic mountain efteemed to be decifively united in the Montagne de la Coupe *.

There are three living volcanos at prefent known, within whofe neighbourhoods the bafaltes, and molt fpecies of its ufual attendant follils, have been obferved. The firlt is fituated in the inland of Bourbon, off the fouthern coaft of Africa $\dagger$; the fecond is Atma $\ddagger$ in the iiland of Sicily, and the third is Hecla in the ifland of Iceland $\$$. To which it may be added, that the bafaltes is found in the volcanized parts of Italy, as at Bolzena H, and other places; though not (as far as I have been informed) any where immediately contiguous to Vefuvius. Thus (fay the naturalifs) do the argument derived from the fituation of this fpecies of foffil, with refpect to mountains which yet continue to burn, coincide with thofe other clear and fatisfactory proofs, which were drawn immediately from its nature and properties, in proof of its volcanic origin.

In addition to what has been here ftated I fhall mention another plaufible argument in fupport of the opinion, deduced in fome meafure a priori.

It is well afcertained by experience, that there are vaft beds of pyrites difperfed through the interior parts of the earth at all depths; and it is a certain fact, that this compound fubflance may, by the accidental affufion of a due quantity of water, become hot, and at length burn with great fury. This, therefore, is one principle to which we may, with the ftrongeft probability, attribute the origin of fubterranean fire, more effe. cially as the prefent living volcanos do actually pour forth in abundance all the component parts of the pyrites, the chief of which are fulphur, iron, and clay. Now among the fuperinduced fubflances of the county of Antrim (and I believe the fame may be faid of every other bafaltic country) it is certain that the quantity of iron and clay, diffufed through almoft every fpecies of foffil, amounts to more than one half of the whole materials, fo that two of the principal elements of the pyrites are ftill found here, reduced
I in many inftances to a ftate of flag or fcoriz; and the third principle, namely the fulphur, cannot in the nature of things be expected to remain, becaufe fulphur does in a great meafure perih during the act of inflammation; and what might perchance efcape or be fublimed, would no doubt have long fince periflhed by deconpofition, in conlequence of being expofed to the air.

Thus in fuct every part of the pyrites which could reafonably be expected to furvive, does at this day actually exift in form extremely fimilar to the products of Atma, Vefuvius, and Hecla, the three moft celebrated volcanos of Europe.

[^339]
## LETTER XI.

DEAR SIR,
Portrufh September 3.
NOTWITHSTANDING the numerous and fpecious arguments which are urged in defence of this volcanic theory of the bafaltes, yet many difficulties and objections have been raifed again!t it by men of excellent underftanding; fome of thefe are of confiderable force, and as I do not wifh to dictate any opinion to you, but rather modeftly to offer what information has come in my way on the fubject,' I fhall candidly fate thofe objections, together with the moft reafonable anfwers. It is faid, that this theory does rafhly attribute fome of the moft regular and beautiful phrenonena of nature to one of the moft tumultuary and irregular caufes that can be imagined; afcribing the exquifite arrangement of a Giants' Caufeway, which almoft emulates the laboured works of defign, to the blind fury of a burning volcano.

This objection, which is pretty ftrong in itielf, has certainly received very confiderable fupport fron, the various unfucceffful attempts that have been made to explain the manner in which the pillars of bafaltes were produced: one perfon * wildly atributing their: formation to the refrigeration of a current of lava, fuddenly plunged into the ocean: another oblcurely hinting that fome occuli quality in the fea falt might have had its thare in the bufinefs: a third $\dagger$ fuppofing, contrary to experiense, that the melted mals of lava night in its liquid ftate have been capable of a confiterable diffufion or folution in water, by which means the particles had an opportunity of arranging themfelves in regular cryftalizations: a fourth $\ddagger$ conceiving that the bafaltes was originally a bed of iron and other fubftances, gradually moiftened, and foftened in the freams of water heated by fubterranean fire and afterwards affuming its regular figure during the time of drying and hardening.

It is pretty plain, that none of thefe indefinite explanations can at all fatisfy a thinking mind, and as an unfortunate argument generally tends to encreafe the apparent weaknels of a caufe, in defence of which it is brought forward, it has hence come-to pals, that many perfons of good fenfe have held the whole volcanic fyftem to be extremely fallacious.

In truth, there feems to be but one operation of nature, which affords any rational principle of analogy, by which we can attempt to explain the formation of the bafaltic pillars. It is certain that the particles of molt bodies, when removed from each other to a proper diflance, and fuffered to approach gradually, affume a peculiar form of arrangement, as if the parts of each fpecies of matter did, independent of their general properties of cohefion and gravity, pofiefs alfo private laws and affinities tending to produce thefe fpecific forms. However, let the caufe be what it may, the fact at leaft is fuffitiently certain : and it does not appear to be a matter of any importance by what me. dium the particles are difunited, provided only, that a fuflicient feparation, and a gradual approximation, be allowed to take place.

Thus, whether bodies be diffolved by fire, or by a watery medium, the phenomena of cryftalization is equally obfervable when proper art has been applicd to render its effects vifible.

I mentioned, in a former letter, that the bafaltes was capable of a very perfect fufion, and that two of its elementary parts were fuch, as, by experience, we know to poffefs the property of cryflalization by fufion, both in their feparate an 1 combined fates.

- Mr. Rafpe,
$\dagger$ Mr. Kirwan.
$\ddagger$ Bergnan.

Since therefore the bafaltes, and its attendant foffils, bear ftrong marks of the cffects of fire, it does not feem unlikely that its pillarsimay have been formed by a procefs exactly analogous to what is commonly denominated cryfalization by fufion.

The only apparent fpecific difference between the bafaltic cryftals, and thofe which are produced in our diminutive elaboratories, feems to be in the complete difunion of the pillars, and in the articulated form which they fometimes exhibit. But this will not appear to be a matter of any importance, when we reflect, that in natural operations of the fame kind, but differing in magnitude, the fame proportions are commonly obferved between the different parts: thus, the fame ratio which the diameter of a bafaltic pillar bears to the diameter of one of our diminutive cryfalizations, will the interval between the pillars of bafaltes bear to the interval between the parts of our cryftal; and whoever will take the trouble to calcalate this diftance will find it fo very finall, as eafily to admit the different furfaces within the limits of colefion ; fo that no feparability of cryftals into joints can poflibly take place, from their fmallnefs, though they often bear marks which might lead one to inagine them capable of difunion.

If this reafoning be allowed to have weight, the objection derived from the irregularity and confufion of a volcanic caufe will not appear unanfwerable. For though, 'uring the moments of an eruption, nothing but a wafteful fecne of tumult and diforder be prefented to our view, yet, when the fury of thofe flames, which have been fruggling for a paffage, has abated, every thing thear returns to its original ftate of reft, and thofe various melted fubltances, which but juit before were in the wilden ftate of chaos, will now fubfide, and cool with a degree of regularity utterly unattainable in our claboratories, and fuch as may eafily be conceived capable of producing all the beauty and fymmetry of a Giants' Caufeway.

A fecond objection arifes from lience, that the currents of lava which have iffued from Nitua and Vefuvius, within the memory of man, have never been known to exhibit this regularity of arrangement. It is therefore faid that experience does abundantly prove the fallacy of the volcanic hypothefis.

In reply to this we are told, that it is not in the erupted torrents of thefe volcanos we are to look for the phenomena of aytailization, but in the interior parts of tue mountains thenswes, and under the iertace of the carti, where the metallic particles of the lava have not been dephlogifticated by the accefs of frefh air, and where perfeet reft, and the moft gradual diminution of temperature, have permited the parts of the melted mafs to cxea their proper laws of armagnem, fo as to atheme the form of eolumar lava: that we muft wait, until thofe volancic mountains which at prefent burn with fo much fury, thall have completed the period of their exiftence; matii the immenfe vaults, which now lie within their bowels, no longer able to fupport the incumbeat weight, fhall fall in, and difclofe to vien the wonders of the fubterrancan world: and then may we expect to belohld all the varieties of cryalization, luch as needs take place in thefe claboratorits of Nature; then may we hope to fee banks and caul ways of bataltes, and all the bold and uncommon beautics which the abrupt promon sof Autim now exhilit.

It is Atated as a third objection, that, aceorling to this hypothefis, the bafaltes muft have benn reduced to a perfect flate of lludity, in order to perme the phamemena of crifaliontion to take place, but, that theere is no reafon for believing it "we could have bech :... , ted to any intenfe action of fire, to as to be reducel to a flate of thin fufion, becaufe it dons not comain air holes, like the lava, mor pollos thole marks of vitrification, which attend a very moderate heat in our laburaturics.

The firt part of this objection is ill founded, though advanced by Wallerius, and other eminent mineralogifts. All the bafaltes, which I have ever feen, does, in one part or another of its fubftance, always exhibit air holes; and it is remarkable that even the pillars of our Giants ${ }^{5}$ Caufeway, which are fingularly compact, have their upper joints conflantly more or lefs excavated, fo that this part of the argument does rather plead in defence of the volcanic origin of the bafaltes.

With refpect to the want of all marks of vitrification, we are to confider that fubftances in fufion are very differently affected, in proportion as they are nore or lefs expofed to the accefs of frefh air, the prefence of this element being abfolutely necefitiry in order to deprive a body of its phlogitton.

Thus, metals which may be readily vitrified by expofure to heat, and the free afflux of air, will yet bear the moft intenfe action of fire in clofe veffels, without being deprived of that principle on which their metalliety depends, and are thercfore in this fituation incapable of being vitrified. The bafaltes may therefore have been fubjected to a very great degree of heat, within the bowels of the earth, and yet fhew no marks whatever of vitrification, and hence it may be explained, how it comes to pals that the iron principle of the bafaltes ftill retains its phlogiton, acting fo fenfibly on the magnetical needle.

A fourth objection is derived from hence, that in many of the countries where the bafaltes moft abounds, there are no traces whatever of thofe bold and decifive features which conftitute the diftinguifhing characterific of a volcanic mountain ; its lofty pointed form, its unfathomable crater, and many other circumftances that ftrike the fenfes very forcibly at Ætna and Vefuvius.-The bafaltes, therefore, is affirmed to be a foffil extenfively fpread over the furface of the earth, and where it is found in the neighbourhood of volcanic mountains, it is faid we fhould fuppofe thefe to be accidentally raifed on a bafaltic foil, rather than to have created it.

It muft be confeffed that volcanic mountains are not always found to attend the bafaltes, at leaft there do not appear any direct veftiges of them in the neighbourhood of the Giants' Caufeway in Ireland.

But the advocates of the fyttem are not much embarraffed with this difficulty; according to them, the bafaltes has been formed under the earth itfelf, and within the bowels of thofe very mountains, where it could never have been expofed to vicw, until by length of time, or fome violent fhock of nature, the incumbent miafs mult have undergone a very confiderable alteration, fuch as fhould go near to deftroy every extcrior volcanic feature. In fupport of this it may be obferved that the promontories of Antrim do yet bear very evident marks of fom violent convulfion which has left them flanding in their prefent abrupt fituation; and that the ifland of Raghery, and fome of the weftern ifles of Scotland, do really appear like the furving fragments of a country, great part of which night have been buried in the ocean. It is finthry added, that though the exterior volcanic character be in a great meafure loft in th balahic countries, yet this negative evidence can be of litile avail fince the few inft where the the features have been preferved afford a fufficient anfwer to this objection.

Thus the Montagne de la Coupe in France ftill rears its pointed top to the ficavens, retains its deep crater, and bears every characteriftic of its volanic origin ; and this mountain is obferved to ftand on a bafe of bafaltic pillars, not difoned in the tumultary heap into which they muft have been thrown by the furious action of a voleanic eruption tearing up the natural foil of the country, but arranged in all the regularity of a Giants' Caufeway, fitch as might be fuppofed to refult from the cryftalization of : bed of melted lava, where reft, and a gradual refrigeration, contributed to render the phamomenon as perfet as potible.

VOL. III.
6 A
rimh'。

Fifthly, It is obferveci by Monfiear Fauias de St. Fond, that at the foot of the mounttain of Merinc, in the province of Velay, a range of bafaltic pillars flands fupported on a ted of foffil coal, with a very thin fratum of clay not more than a few inches thick interpofed; now, that this inflammable body of coal could have remained uninflamed under a mafs of melted lava, thirty feet thick, feems highly improbable, and therefore it is evident, fay the adverfaries of the fyftem, that the bafaltes could not have derived its origin from fire

In anfwer to ' is plain and weighty objection, it is affirmed, that no fubftance in nature can be confumed by fire without the accefs of atmofpheric air ; that fire may be paffed through inflammable air itfelf, without exciting actual inflammation, undefs the atmofphere lend its affiftance. Hence it cannot appear frange that a bed of coal might have furvived in the neighbourhood of a volcano, and even under a mafs of fluid. lava, which, by rening on it, would prevent every poffible approach of frect air, fo abfolutely neceflary to its being inflamed. It is certain that coal may be expofed to the violent action of fire, in a clofe veffel, without being confumed, or even fuffering any material alteration, and therefore it is beiieved that this particular inftance ought not to be held of weigh: fuficient to overiurn a fyftem, in fupport of which fo many reafonabla and almoft certain proofs concur.

Such are the difficulties which are thought to embarrafs the volcanic theory of the ba. faltes. In your excellent judgment I am certain they will bear their juft value, found. ed on an extenîve knowledge of nature and her operations. But among the generality of mankind their weight will be exceedingly various. in reafonings concerning natural phenomena, the ftandard of truth is extremely vague and equivocal. Climate bears here a more powerful influence than can well be imagined; fo that it is not uncommon to find an opinion univerfally adopted by the iuhabitants of one country, while thofe of the neighbouring kingdom fhall join as univerfally to seprobate it.

Thus the Necpolitans, accultomed from their infancy to the wild fcenes of horror and defolation which abound in a foil ravaged ty volcanic fire, and to fee as it were a new world fuddenly raifed on the ruins of their country, have their warm imaginations filled with the giganicic idea of this powerful priaciple, which to them appears adequate to the production of every thing that is great and ftupendous in nature. How diferent are the fenfations and opinions which prevail in the native of our temperate ifland! To him the found of thunder is uncommon, an carthquake is almoft a prodigy, and the fury of the fubterrazean fire is utterly unknown. He beholds nature purfue her calin and fteady courfe with an uniformity almolt minterrupted; he views the fame objects unchanged for a long feries of years; the fame rivers to water his grounds, the fame mountains fupply Socd for his flocks, the fame varied line of coaft continues through many fucceffive ages $\mathfrak{n}$ bound this country, and to fet the foaming ocean at defiance: hence he naturally proceeds to extend his ideas of. regularity and ftability over the whole world, and ftands utterly uninfluenced by thofe arguments of change in the earth, which to the innabitant of a warmer climate appear abfoiutely decifive.

In this manner are the prevailing opinions, evea among the philofophers of moft countries, generally founded on partial analogies; and it requires a vigorous mind, as we.I as an extenfive and clear underflanding, to prevent our being milled by the fpecious arguments and dangerous conclufions which have been derived from fuch deceifful fources, many of them plainly tending to multiply falfe opinions, and to fubvert the only true principles of re!igion and morality.

## LETTER XII.

DEAR SIR,
Portrull, September 10.
IF the volcanic theory of the bafaltes be well founded, and no doubt many of the arguments in favour of it are extremely plaufible, a fcene of horror is prefented to our view, which mult furely fill us with aftonifhment; fince on this fyitem it will be found, that there is hardly a country on the face of our globe which has not at fome time oother been wafted by the fury of fubterranean fire.

If, again, thofe apparent veftiges of marine productions, which are obferved indifcriminately fcattered through the earth, at all depths below the furface, and on the fummits of its ligheft mountains, be efteemed fufficient proofs of the prefence of the ocean in thofe places, a fcene, no iefs wild and uncommon than the former, rifes before our imagination; in which the products of the equator and the poles appear to be jumbled together in a manner incapable of being explained by any of the kno wnanalogies of nature.

From obfervations fuch as thefe, where in truth every thing is inexplicable, many of the modern philofophers, chiefly indeed of the French nation, have become warm admirers of the old brute atoms of Epicurus, or the myfterious plattic prisciple of the Stoics, forming to themfelves fyftems of nature, in which an intelligent caufe feems to be of all others the leaft neceffary; fyftems in which blind deltiny alone is the a\&tive fpring of life and motion.

Thus are the fources of religion and morality effectually cut off at one blow, and mankind deprived of thofe prefent bleffings, and that moft delightful hope of future happinefs, which they fondly inagined to be rightly fo : nded on their natural inftincts, and fupported by the faireft deducions of reafon.

It is the bufinefs of natural hiftory to collect, as extenfively as poffible, all the phrenomena of nature, to compare fuch of them as bear any reafonable fimilitude, and from their general analogies to derive conclufions winich may benefit our fellow-creatures, either as difcoveries ufeful in common life, or as fpeculative truths fuited to improve and enlarge the underftanding. In this point of view it is a fcience which merits the honourable praife of mankind, and is certainly inferior to none in the copious fources of delight and improvement which it may afford to a rational mind.

Surely it is mof unaccountable, that a ftudy, which in this character appears fo lovely and engaging, thould neverthelefs have been purfued upon fuch perverfe principles, and with fuch mifguided views, as to lead to confequences equally falfe in their own nature, and ruinous to the welfare of any fociety where they may become univerfally prevalent.

I have been accidentally led to make a few reflections on this fubject, by the perufal of fome foreign wisters on natural hiftory, who have unfortunately applied the proofs of thofe inexplicable changes which may poffly have taken place in the earth, and indeed all their negative knowledge of nature, for the purpofe of difproving the exiftence of its admirable author; as if arguments derived from the depths of human ignorance, could, with any reafon, be efteemed capable of overturning fuch pofitive truths as the facultics of mankind are entirely adequate to apprehend.

When ir in choofe to build their opinions on things which they at rightly underftand, rather than on truths wite come clearly within their congehenfion, it can hardly hoppen that they will not : n : into very grofs miftakes; becaufe, as the number of errors on any fubjegt is plainly without limits. the chance is little lefs than infinite, that fuch reafoners will fall into the unfal mable abyfs of foirusiond.

$$
l \therefore 2
$$

Such

Su it has been the fate of the author of a French work, Sur lir Natire, and indeed of every iollowei of that pernicious' fchool of modern philofophy, which, rejecting all confideration of final caules, and defpifing thofe fimple and obvious analogies that lead to the mof ufeful and fatisfatory truths, has chofen rather to purfue others, which neither its difeples, nor the roft of mankind, are in any refpect fuited to inveftigate *.

Perhaps an example may ferve to rewder momere intelligible, and to point out the general fallacy of this unhappy fpece of reatining,

There can be no duabt that the thefrese, with all is prefent improvements, is the refult of a moft happy application of unormons frill and ingenuity, contriving and combining all the varinus pats and nuvenesis of that cuit as mochine, for the excelcellent purpofe of affilinisy $v$ tion.

- In proportion as thefe movernents were gradually invented and applied to ufe, during a long herics of years; when each fuccefive difcovery was brought to the utmoft extent of its prefectics, wankind then oblerved that the human eye, in a very fuperior maner, enjoyed that particular advantape which thoy the i iought for with fo much art and induftry, exhibiting e. view s perfect achromatic intrument of vifion, adapting itfolf with lurgrifug facility to the different brightnefs of its objects, and to a vaft variety of diflances.

At the left, a defect was difovorel in ile'telcicopes, arifing from the fpherical figure of the glafes; in confequence of which the focus of thofe rays which tatl near the limb of the fidis, and of fuch as pafs near to its center, do not coincide. This defect, atter various fruitlefs attempts to obviate it, has for many years been given up by the noil iagenious as irremediable $\dagger$. But though men have, in this inflance, found that theye are bouids placed to their utmoft fkill and ingenuity, yet have they learned this ufeful truth, that there are no difcoverable limits fet to the powers of that admirable Caufe which formed the human eye; this error being there entirely corrected, in the curious conftruction of the cryflallinc humour, the principal refracting lens of the organ of vifion; which gradually increafing in denfity from the limb toward the middle, does by this wonderful variation of its refrative power in one refpect, counteract the errors which would have arifen from the other confideration.

This happy union of different parts and movements, as well in the natural as in the artificial machine, each attaining its own particular end, and all together without confufion or interference, compleating one greater and more excellens effect, this, I fay, reafonalle men demominate a work of defign; and as they affirm that the telefoope is an inftrument formed to affilt vifion, in confequence of various means duly conneeted, by an insifible caufe : (for it is plain that there is fome moving principle in man, which is neither eyes, ears, hands, or head, neither the tout cn cmble of all thefe nor in any refpect the olject of our fenfes:) fo do they believe that the human eye is an infrument made for the ufe of men, by an exceeding apt combination of intermediate caufes, wonderfinly and moft unaccontably connected together, by one great, wife, and good caufe; who is neither the eye itfelf nor any part of its mechanifm, nor at all

[^340]the object of our fenfes, but only vifible to us through the beauty and wifdom of the works of creation, in the fame manner as thought and intellige.ace in man are known to us through thofe motions and effects daily produced before us, which we do always fuppofe to refult, originally, from a principle in fome fort refembling our own miads:

From hence, and a thoufand other fimilar analogies, for apprehending which our faculties are aduirably fuited, matkind have reafonably inferred the exiftence of one fuperior, intelligent, good Being, who is every where prefent; whom we fee, and feel, and hear, every moment of our lives, in the vifible works of nature, as we do in particular circumftances hear and feel, and fee other beings whom we denominate men.

To this reafoning, which does not in any refpect appear uncandid or delufive, the author of the treatife Sur la Nature warmly objects. - What! the eyes made for vifion, which in many inftances fail and b come blind?-The teeth and jaws made to grind food, which fo often loofe, and refufe to perform their office? --'The earth formed to fupport its inhabitants, while it contains volcanos which may have defroyed them by fire? Or an ocean, which has overwhelmed them under its waters?

Thefe are fome of the objections of that extraordinary writer, and this the general mode of argument, unhappily adopted on the continent by too many of thofe who have obtained the honourable title of philofophers: a falle fpecies of realoning, in which the pofitive parts of human knowledge are moft fophittically fupplanted by what is purely negative; in which a man is required to judge of the truth of what he knows, by thofe other parts of nature where he is avowedly ignorant.

From principles fuch as thefe the Chriftian religion has been haftily rejected; becaufe the population of America, and the accidental qualities of its inhabitants, could not inmediately be explained by fpeculative men, who had no other data whereon to reafon except the imaginary extent of their own genius, together with an entire ignorance of the fituation of that continent, and the qualities of its inhabitants *.

From the fame deceitful fource of reafoning this beautiful world, fo aptly formed, fo wifely moved, fo bointifully and yet fo varioully adapted to maintain its different inhabitants, that the native of cvery country from the equator to the poles, finds caufe to blefs his fituation, and to boaft of comforts unknown in other climates. 'This curious Atructure, the delight and wonder of the beft and wifeft men in every age, has been condemed by a few prelumptuous fophifts, as the work of blind deftiny, acting through the prefent elements of nature, becaufe there are many of its principles and movemems of whofe ule they are ignorant; becaufe there appear to be vefliges of the ravages of fire, 'or the inundations of the ocean, which they are not able to explain.

It is mofl eertain, that the lavs of motion which now exift, could have produced this world in the begiming, neider are they capable of continuing it for ever in its prefent flate.

The interior ftructure of the earth, whereby its various foffil fubftances, though differing exieedingly from each other in fpecific gravity, though not arranged according to any regular law of fituation, do yet conltitute a world felf-balanced, a fphere whofe cantre of

[^341]gravity coincides with its centre of magnitude（without which all its motions muft have been in an extreme degree irregular），evidently demands a firf caufe，which neither ae．s blindly，nor of necefity．A blind principle is not wont to labour in defiance of all chance；neither do mechanical caufes ufually produce their effects in contempt of the eftablifhed laws of matter and motion．

The gradual afcent of our continents from the fhores of the ocean，toward their mediterranean parts，fo neceffary for collecting the rains of heaven，and giving birth and courfe to thofe rivers which beautify and fertilize the earth：this exterior form， without which the vapours of the fea would have afcended to the clouds in vain，plainly requires the interference of fome principle fuperior to any of the known elements of nature．Whatever the followers of Epicurus may think of thefe elentents，no reafon－ able man will believe that the waves of the ocean could have created a country whofe foil lies far above the level of its waters；or that the fury of volcanic eruptions could have produced an effect，fo general，that we are rather led to infer the calual exiftence of former volcanoes in particular places，becaufe of fome apparent univerfal interruption to this regularity of form．

The projectile force by which the earth was in the beginning made to move round the centre of light and heat；its diurnal rotation，duly diffufing this light and heat over the furface；the inclination of its axis to the plane of the ecliptic，whereby the tropical climates receive fewer of the fun＇s rays，while the inhabitant of che polar circle enjoys a much larger fhare＊：all thefe effects，far furpaffing the prefent powers of nature， moft aptly combined together，working in concert without interference or diforder，for the attainment of one great，and good，and excellent end，clearly prove that this world has been produced by one powerful，intelligent，and benevolent principle，utterly unlike to any mechanical caufe which now does exift，or that can be conceived to exift．

Mechanical caufes，fuch as we are acquainted with，evidently tend to deftroy the prefent form of the world；and thereby afford the ftrongeft proof that it is not by its conftitution immortal．

Sir Ifaac Newton has demonflrated，that the perturbing forces which take place in the folar fyftem，muft in due time deftroy the planetary motions，unlefs the firft mover of all things fhall chufe to interfere．And it is fufficientl，evident，that the flow but certain operations of heat and cold，together with the continued action of the air and ftorms，are capable of breaking and clianging the moft firm bodies，even the hardet rocks；while the numerous rivers on the earth＇s furface，and the waves which wafh its fhores，perpetually labour to bear all tiafe fubftances into the bottom of the ocean， and thereby to reduce all things to a level fituation．

Since then the earth yet continues to circulate with regularity round the fun，not－ withtanding the perturbing forces of the planets；fince all the countries on its furface Itill retain their elevated form，in oppofition to thofe boa？ted mechanical caufes，that labour inceflantly to defiroy it ；fince its impetuous rivers which purfue their courfe toward the ocean，have not yet fmoothed thofe abrupt and precipiceous cataracts，over which they rufh with fuch unbridled fury，it is plain，either that the world，as we now fee it，is but of a fhort duration；or dfe，that fome faving hand has interfered to retard the progrefs of caufes which in fufficient length of time muft needs produce their effects．

If we caft our eyes over the annals of the world，we fhall find in the hiftury of the human race a clear and decifive evidence in favour of thofe general truths which our religion teaches，concerning the duration of the carth and its inhabitants．The evident
marks wonde inform oble v all hif alfirm the pla

The thoufa beyon writin nity o adopt ever r millior
marks of novelty in all thofe arts and fciences that are the offspring of experience: the wonder and terror with which the earlier philofophers (though in other refpects well informed men) were wont to behold many of thofe natural appearances, which longer oble vation has mewn to be neither uncommon nor dangerous: the general defect of all hiftories and traditions antecedent to a certain period at which the Jewifh writings affirm the world to have been deftroyed by water : thefe cogent circumitances afford the plaineft proof that the human race has not exitted here for many ages.

There is not now a nation on the earth, neither has there been one for thefe two thoufand years paft, whofe remote traditions extend, wilh any degree of probability, beyond that memorable period of the univerfal deluge, which is recorded in the facred writings; fo that whatever Monf. Voltaire and others may affert concerning the eternity of the world, its motions, or its inhabitants, they will find but few rational men to adopt his wild fy ftem of aftronomy, or who can be perfuaded to believe that the fun ever rofe in the weft, or that the Babylonians made obfervations on that luminary fome millions of years ago, when it was at the north pole *.

Perhaps you will fay, that fuch language as this is filly and childifh, beneath the name of philofophical, and unworthy of any anfwer - yet I can affiure you it is the general language of that miferable fchool of modern philotophy, which fearches for the moft unknown motions in nature, to explain thofe that are beft known; which breaks fragments from the fun by chance, and then myfterioully forms them into habitable worlds; - which makes the ocean to act where it is not $\dagger$;-which quotes the fables of Ovid, or the :ales of the Egyptians, as its beft authority in natural hiftory $\ddagger$;-which utterly rejects the delightful and profitable purfuit of final caufes $\S$; -and holds the moft precious moments of life to be well employed in endeavours to difcover the thoughts and amufements of trees and flones $\|$.

If this be wifdom, we, my friend, have reafon to boalt that we are not wife : if thefe be the vaunted fruits of freedom of thought, we have good caufe indeed to rejoice that we are not free; that we ftill retain our dependance on a wife and bountiful Providence; and have not yct fallen into that univerfal anarchy of opinion, where each individual labours to enthrone and to auve cvery wild phantom of his own wandering imagination, juft as folly or caprice may chan eto direct his choice.

    \# Sir Patrick Murray founded here in 1271 a ennent of Mathurines.
    § Where a mutual and moft ardent and meft virtuous affection reigns, it is fometimes preferable to be united by death, than torn from each other by life.
    II This is the laft inflance of thefe frantic exccutions in the north of Scotland, as that in the fouth was at Pailley in 1697, where, among others, a woman, young and handfome, fuffered, with a reply to her enquiring friends worthy a Roman matron : being akied why fie did not make a better defence on her trial, anfwered, "My perfecutors have deftroyed my henour, and my life is not now worth the pains of defending." The latt inflanee of national credulity on this head was the ttory of the witches of 'Therfo, who tornenting for a long time an honeft fellew under the ufual form of cats, at latt provoked him fo, that one night he put them to Alight with his broad fword, and cut of the leg of one l-fs nimble than the reit; on his taking it up, to lis amazenent he found it belonged to a female of his own fpeeies, and next morning difcovered the owner, an old hag, with only the companion leg to this. 'Ilee horrors of the tale were confiderably abated in the phace I heardit, by an unlucky enquire made by one in company, viz. TIt what part would the old woman have fufered, had the man cut off the ca:: iail? But thefe relations of aluolt obfolete fupertitions, mult never be thought a refection on chis country, as loug as any memory remains of the tragical end of the poor people at Tring, who, within a few miles of our capital, in 575 t , fell a facritice to the belief of the common people in witches; nr of that ridiculous impolture in the capital itfelf, in 1762 , of the Cock. lane ghot, which found credit with all ranks of people.

Perhaps the whales had till this year deferted thofe feas ; for Marten, p. 185 of his voyage to Spitzbergen, remarke, "That thefe animals, either weary of their place, or fenfible of their own danger, do often change their harbours"
    $\dagger$ This ine is oppofite to Leith. By order of council, in 1497 , all venereal patients in the neighbourhood were tranfported there, ne quid detrimenti ret publica caperet. It is remarkable, that this diforder, which was thought to have appeared in Europe ouly four years before, fhoukd inake fo quick a pregretis. The hormor of a difeafe, for which there was then fuppofed to be no cure, mull have occafioned this atten. tion to thop the contagion; for even half a century after, one of the firt monarchs of Europe, Irancis I. fell a vidtim to it. The order is fo curious, that we have given it a place in the Appendix.

[^185]:    " In the moof northern part of Scotland, called Lora Reay's country, not far from Tongue, and near the head of the river which runs into the Noth Sea at Loch Sribol, is the remains of a fone tower, which I apprehend to be a Druidic work, and to be the greatelt pitce of antiquity in this innad. It is furprifing that it is folittle known even to the natives of that country: I don't remember to have ever feen it mentionel in any book whatever, nor do I recollect whether Mr. Permant has received any information cont. cenning it. This towst is called by the neighbouning inhabiants, the Duste of Dornadilla. It is of a circular form, and now nearly refenbling the frufturn of a cone: whether, when perfect, it terminated in a point, I cannot pretend to guefa; but it feems to have been formerly higher, by the rubbifh which, lies ronnd it. It is built of none, without cement, ind I take it to be between 20 and 30 feet high ftill. 'I'he entrance is by a vely low and narrow door, to pafs through which one is obliged to thoop much : but, perhaps, the ground may have becu raifed fince the firf erection.
    " When one is got in, and placed in the centre, it is open over head. All rownd the findes of the walld are ranged fone fhelves, one above another, like the faeives in a circular beaufait, leaching from near the botton to the top. The flouse which cumpofe thefe fhelves are furported chie!ly by the flores which

    $$
    \text { VOL. 111. } \quad \mathrm{Y}
    $$

    forra

[^186]:    form the walls, and which project ali pound juf in that place where the thelves are, and in no others: each of the fhelves is frparated into feveral divilions as in a book-cafe. There is fome remains of ans awkward flair-cafe. What ufe the fielves could be applied to I cannot conccive. It could not be of any military ufe from its fituation at the bottom of a tloping hill, which wholl; commands it. 'Ihe mosll learned amung the inhabitans, fuch as the gentry and clergy, who all ferek the Irifl language, cond give no information or traditint concerning its ufe, or the origin and meaning of its name. But fome years fuce 1 happened, at an auction of bnoks in London, to look iuto a French book, containing Gaulifi antiquitisa, and there I faw a prof of the remains of a Druidic temple in lirance, which greatly retembles the tower $!$ am fpeakig of, having like Aelves in it. And, reading a late pamplike on the antiquity of the lrifh language,
     mears a wand itwh, io that aldorn would mean the round llone of the priefle: $1 a$ is of, and Di in Goal: at page 45 , he tay, in the !ett lise, wila means a place of devotion; fo that Dorn-na Di-ulla will fienity the round llone phice of the woraip of God; or perhaps it might allude to fome ronad none prelenvel withira as af facred cmblim of disinity. As 1 am mot acquainted with the Irifh langnape, if any of your cone. fonden's cangive any be ter account, either of the natme of fuch hruidic temples, or of this mame in particular, it will, fahape, te acceptable to viliess as we!l as your humble fervant."

[^318]:    - Prom a cenfers funce ledd by the prieft of the inand. in order to lay a tax of one fhilling on each perfen above the age offixtecu years, fur the purpofe of erecting a mafe-houfe it apecars chat the numbers amount to eleven handred; there are one huthed and forty families, which almoft average at the rate of eighe perfons to each fanily. The cenfus has prochuced a great deal of nuealinefs in the inhad, from an opinion shat one gerfore will die duting the year in eadh family fos numbered
    + This year an hunded tens of kelp have been exported from Raghery, which was bought be the hinen Heachersen the nort of Ireland, at 515 s . per ton, the whole amounting to note than $2: 1$ The aunual rent of lac innd is but col. 'I his entire manufacture is cartied on by wonen ant dildren, while the men are enpluyed in more hazandons fervices. At low water the featweed is cut hom the ricks, and fpread out before the fun to dry: at night it is made up in little panct, which are opened and fluken cut again whenever the weather permits; this prowess is continned tll the weed tecomen drye enough to to
     the weed is cantionfy ant gradually burned. During this poocfs the vegerable fat, and every thing not capable of being eality diffinated by the fire, melos, and contefees in one mafs ut tie bontom of he liing ant 10 this thate is is exported, no means having been yet eflallifhed here, or in any patt dif a joinuing coall, to purify the alkaline falt from the vatious mixtures of marine falt, \&c. with which is abounds.

[^319]:    * I had fome hope that the native hack rat of this kingdom, might have fecured a retreat in this fequeftered ifland, but in vain, their powerful northern enemies, with the crnelty of the old Danes, but with mone fuccets, have uterly exterminated the natives, and the rat of Norway has completely extended his walteful dominion over Raghery.

    VOL. 11 .

[^320]:    * "Rex ipfe cum uno plerumque comite, interim folus, per loca maxime inculta percrrabat, et cum ne :e quidem fibi tutus a civium perfidia et hollium erodelitate videretur, in Nhudas, ad veterem quendam amicum tranfinifit." It is probabic this cuas the time when Bruce came in Raghery, Buchanan's Hitt. Scot. Fordun, Barbour, \&c. fpecially mention his refidence in Rachlin. J. P.
    It may perhaps be imagiaed that the coals have been brought from Britain; but a little refection with nuew that to be extremely improbable, cven fo late as the time of Robert Buce. It was but jutt then that the Englith themfelves had difcovered the ufe of fea-coal as a fuel ; and we fiud in the lime of Edward I . that, diter being thied in London, they were immediately probibited on a hatty opinion, that the vapour was nuxious to the health of the inhabitants. It is not therefore to be readily belicesed, that at this early period England could lave had any extenfive export trade in coals: or, if fo, it muft have been to fome populous and civilized conatry, to fome fafe harbour, to a great and commerciad town; but, at the time we fyeat of she Britifh charte do not lay duwn a fingle village in ail this line of coalt.
    $\dagger$ "Faire un enfart, et labouer un chanip." Vide Montefquicn's Perfian Letters.

[^321]:    - I was very much pleafed with the difcovery of a natural procefs among thefe foffils, not very unlike our artificial one for making crytals of artificial vitriol. You krow that martial or green vitriol ia a falt formed from the calx of iton united to the vitriolic acid, and that the component patts of fulphur are phlogitton, or the principle of inflammability, united to the vitriolic acis. It fo happens that a thin layer of iron ore lies immediately over a bed of coal; in the places where this is expofed to the air and weather, the fulphur of the coal becomes decompofed, lofing its phlogitton, while its other principle, namely the vitriolie acid, uniting with the calx of the iron, forme cryttala of green vitriol, which lie in confderable quantity bet ween the two layers.
    $\dagger$ The adit is carsied along the fide of a courfe of hard rock, which cuts all the layers of coal, running north and fouth in a direction perpendicular to the horizon, It is called here a Gaur or March, and I apprehend is the fame as what the Cornif miners call a Crofs Goffan.

[^322]:    *. Some extraneous remarke on Irih antiquities are omitted.

[^323]:    - This bridge is only thrown acrofs during the time of the falmon fifhery, which is carried on in the fummer months.
    $\pm$ At Portrufh the word is tarrying.

[^324]:    - It is in another place called Claneaghguikie.

[^325]:    * The path of defcent to Port na Spania lies in the land of a peafant who is not entitled to any part of the fea coalt, but he receives, as a tull on his highway, cevery third hundred of kelp manufactured pelow; and this path, dangerous as it is, yet being the ouly one, makes it neceflary to comply with the demand.
    $\dagger$ 'The whole bay generally produces about four tons of kelp, which is fuld at the rate of from five to fir pounds per ton.
    $\ddagger$ This melancholy accident happened in the fummer of 1783 , when I was in this neighbourhood.

[^326]:    - This reprefentation of the pilars has probably been taken from a drawing of the bafaltes of Saxony, fent many years ago to Gefuer, togcther with a defcription of that fpeciea of tone by Kentiain. This drawing contains many errors, and among the reft exhibits pillars of bafaltea with conical terminations.
    $t$ This bay liee immediately eaftward from the Cauleway. I have here written the name nearly as it is pronounced ty the natives, who have fearee any knowledge of the Irifh language; but the proper mode of writing it thould be Port ua Bfatbach, which fignifies the Giauts' Port.

[^327]:    * " Ille cenfet, in infinito inani, in quo nihil nee fummum, nee infimum, nee medium, nec ultinum, nec extremum fit: ita ferri ut, concurfionibus inter fe coherefcant : ex quo efficiantur, ca quax fint, quxque cornantur omia."
    $\dagger$ Mr. D'Acofta, who has publifined this account of Doctor Pococke's in his Hiftory of Foffils, ftrangely ranges the bafaltes among the clafs of marbles, or floues allied to marbles, with which it has not any one common feature of refemblance, except that it will receive a polifh; fo that he might with equal propriety have claffed it with any other hard fubftance in nature. In truth he feems to be very ill informed on the fubject imagining this to be the only fone of the kind ever difcovered, and is in amaze to think how far it may extend into the fea.

[^328]:    * "Je tirai de cette conformité reconnu un confequence que la force de l'analogie m'autorifoit a tirer: cette confequence me fit voir, dans la Chaufee de Géans, et dans toute le maffes prifmatiques que fe mont:ent fur le bord efcatpes de la mere en Ireland, et un mot dans le fommet tronques, q'on y'appercoit, l'ouvrage des eruptions, d'un ou de plufieur volcans qui fe font eteint, comme ceux des Auvergne."-See Monf. Demarefts Memoir on the Bafaltes of Auvergne, in the volume of the Freach Acadeny for 1771.
    t"Or, on voit me caufe de plus, dans les volcans ancients, que dans les modernes, pour produire cet effet ; c'eft de s'ctre forméz dans la mer, ou, fans compter la prefcens du fel, l'attouchment feul de l'eau, en produfant un condenfation plus fubite, a pu etre un cinconflance determinante.". De Lac leetres a la Keine de Grande Bretagne.

[^329]:    * Monfieur Fanjas de St. Fond took much pains to fearch for pillars of nine fides among the bafaltes of Vivarais, in confequence of the acconnt which Mr. Mollenenx and Monfieur de Life gave, that fuel were to be found; but there is little doubt that both thefe gentlemen were miftaken, as none of that denomination are to' be difcovered at the Giants' Cauleway or its neighbourhood. Indeed octagomal pillars are very rarely to be met with.
    $\dagger$ This coating comtains iron which has loft its phlogiton, and is nearly reducel to a flate of calx; for with a very moderate heat it becomes a bright red ochre colour, the attendant of an iron earth.
    vol. Ill.
    $5 \mathbf{Y}$
