TOTHE

MERCHANTS, TRADERS,

AND

MANUFACTURERS,

O F

GREAT BRITAIN.

A BOUT the year 1749, an effort was made by the late Arthur Dobbs, Efq. and feveral other patriotic gentlemen, to lay open the trade to Hudfon's Bay, fo that the people of these kingdoms at large might partake of it. Application was accordingly made to the House of Commons; and during the investigation of the business, many petitions were presented to the House from the trading part of the nation, praying that the exclusive right, held by charter, by the Company, might be annihilated. The at-A tempt tempt, however, was not crowned with the fuccefs it deferved. The intereft of the Company unfortunately prevailed, and they have ever fince remained in quiet possefilion of their extensive territories, to the great injury of this country, its trade, and manufactures.

To make good this affertion, I humbly fubmit the following fheets to the public; and fhall efteem myfelf happy, if my endeavours to promote the general good, by pointing out an avenue to national advantage, which has too long been engroffed by an injurious monopoly, fhall procure for me their patronage, and be the means of remedying the evils I have thus made known.

EDWARD UMFREVILLE.

LONBON, JUNE 17th, 1789.

ø

Prefatory Advertifement.

I N the year 1771, I entered into the fervice of the Hudfon's Bay Company, in the capacity of writer, at the Salary of fifteen pounds a year; and continued in that employ eleven years. But two of their principal fettlements being taken by the French in 1782, when I was made prifoner, and, upon their reftoration to the Company, fome difagreement arifing in point of falary, I quitted their fervice.

Being thus difengaged, in April 1783, I made a voyage to Quebec, with a view of acquiring a knowledge of the manner in which the Fur trade was carried on from that quarter; and here I remained for four years; during which time I made the ftate of the country; and the trade of it, my peculiar ftudy.

By fo long a refidence in that part of the world, I flatter myfelf I am, in a great mea-A a fure, fure, acquainted with every interesting particular relative to it; and shall lay them before the public with that truth and impartiality which ought to guide the pen of every person who attempts to inform.

Of all the authors who have wrote on this extensive country, few have given a just and difinterested account of it. Some feem to be actuated by prejudice, whilft others, either through want of good information, or a proper knowledge of the fubject, have led their readers into error, by misrepresentation. Among the best writers, we must rank Ellis and Robson; the former as a philosopher, and ingenious reasoner; the latter as a candid, true, and impartial writer, and who, by having refided in the country, obtained a fund of knowledge of his fubject which enabled him to inform with confidence. For my part, I shall only attempt to lay before the public fuch particulars as the above authors had not an opportunity of acquiring a knowledge of, and this I shall do in a plain anadorned manner, humbly trusting that it will be read with candour, and animadverted on with good nature.

The

The geographical part of my fubject I ihall touch very lightly on, as the extent of the country and its boundaries are fufficiently known. My intention is to exhibit to the world the value of the fettlements under confideration, and how far they are capable of improvement; pointing out at the fame time, the deftructive effects of a baneful monopoly, which has fubfifted ever fince the year 1670.

It is a matter of reproach to the Hudson's Bay Company, and they have never been able to wipe off those fevere censures and accusations, which all the writers on this country have fo justly fixed on them, upon account of it, that they do not augment and make a greater national advantage of their trade, as it is capabable of fo much improvement. At a time when the defection of our American colonies, has put a stop to the confumption of fo confiderable a part of our manufactures, is it not fomewhat extraordinary that no perfon has yet represented the benefits which would accrue to this country, from exploring and examining the countries about Hudson's Bay? The laying open the trade to the induf-A 3 trious trious adventurers of this nation, would be an act worthy a patriotic administration; as it would be the means of enriching the commercial interests of the kingdom, and giving bread to many who are now pining in distress, particularly to that useful part of the community, who defend our country from infult, and our property from depredation, and who encounter with fortitude every species of danger for the public good; I mean the British Seamen, numbers of whom we see daily pining in distress for want of employment.

The Hudson's Bay Company employ annually two ships and a sloop, to take out fundry articles of merchandize, and bring home their peltries. The burthen together of these three vessels falls short of fix hundred tons, having on board about seventy-five men, who together with about two hundred and forty perfons residing in the country, make the whole number of men in their employ to amount to 315. What an infignificant consideration what a pitiful service, to be in the hands of a few individuals, by whom others are excluded, that would long fince have have rendered this part of the globe a valuable gem in the British empire; —but such is the effect of exclusive monopolies; which, when not established on a beneficial foundation, are the bane of national affluence.

Though the extent of the country from North to South is pretty well known, yet to the Westward we are not fo well informed. I have myself travelled as far as 120 degrees of Longitude, from the meridian of London, through many different nations of Indians, and have always found them friendly, and ready to receive our commodities with avidity.

In fpeaking of the inland country too much cannot be faid in commendation of it. Every fpefpecies of food neceffary for the fupport of man, is to be procured in the greatest plenty. The climate is much milder than on the Sea coast, and nothing feems to be wanting to the convenience and accommodation of its inhabitants. On the Sea coast, which the Hudson's Bay Company folely posses, though nature has been less kind, yet the country is not half so bad as it has been represented: the climate, A 4 though though cold, is extremely healthful, and our countrymen ufually enjoy a remarkable good state of health, during their refidence there. I can for my own part aver, that I refided there eleven years without knowing the least. ailment. If a stranger was to visit these parts, he would be induced to think, by the debilitated state of the natives, that he was in a country uncommonly unfavourable to the human species : but the use of spirituous liquors, and not the climate, is the caufe of this misfortune; they drink to fuch excess, that it is rather more furprizing any should be left alive to tell the tale, than that they should be found emaciated, decrepid, and flothful. It is a melancholly reflection that the poor devoted Indians are by this means confiderably diminished in number, their minds are debased, their fpirits dejected, their bodies enervated, and they are thereby rendered unfit to fupport their families, at a time of life when the tender age of their offspring flands in most need of fupport,

I have given an account of the country and its inhabitants on the Sea coaft, diftinct from the the inland territories, not only on account of my having refided there first, but likewife, as the climate, foil, and productions are fo different. In giving a description of the climate on the Sea coaft, I have introduced a journal of an accident which befel three unfortunate men, on their duty at York fort, which will in fome measure exemplify the feverity of the weather in that country during the winter feafon. A gentleman who refided there in the capacity of Surgeon, gathered the account from the furvivor, at different times, and in confequence of it, made many useful experiments at York, and Albany Forts, which proved highly acceptable to the learned and ingenious.

To give a full and comprehensive account of Hudson's Bay, particularly the natural history thereof, describing the animal creation, and the feathered tribes, which are here in great abundance, would require more time than I can possibly spare, was I capable of the undertaking. Being under the necessity of going abroad, I have been obliged to confine myself to the useful part of the subject; in doing doing which I have advanced nothing but what I know to be true, either from my own experience, or the narration of fome intelligent perfon whofe veracity I can depend upon.

A BRIEF ACCOUNT, &c.

A BRIEF ACCOUNT

Of the CLIMATE, SOIL, &c. of the Country on the Coafts of Hudson's BAY, &c.

YORK FORT, where I refided eight years, lies in the lat. of 57 deg. 2 min. N. long. 93 deg. W. from London, as determined by Mr. Philip Turner. a Gentleman employed by the Company to make aftronomical observations within the limits of Hudíon's Bay. The air is very falubrious and healthy, especially during the intenfe cold in the winter months; and in the fummer, though we find it much hotter than in England, yet Europeans-in general enjoy a state of health, unknown to the inhabitants of more temperate climes. The atmosphere is clearest and most ferene in the coldeft weather, and the most piercing cold is felt at fun rifing. A good Fahrenheit's Thermometer frequently flood at 50 degrees below the cypher in the month of January; whereas in fummer, the mercury would very frequently afcend to 90 deg. above the cypher, making a difference of 140 de-

140 degrees between the extremities of heat and cold. From November to the Vernal Equinox, British, and even French spirits, rum, and the like, will freeze to the confistence of honey. When exposed without doors, in the fpace of four hours, English brandy, contained in cafks of 110 gallons each, will be often found too thick to run through a large brafs cock. We have cellars that are eight or ten feet deep, under the guard-rooms where the people live, and where there is a daily and almost perpetual fire; yet even in this repofitory, I have feen the London porter fo frozen, that only a few gallons could be got out of a whole hogfhead; the remainder has been converted to ice feveral inches thick, which, when thawed, had not the leaft ftrength remaining. I have feen a cafk of water put into the open air, and in 48 hours it has burft the In an hour's time, the air condenses cafk. fo thick on the windows, that it is impoffible to difcern an object on the other fide; and it likewife adheres in large quantities to the wainscotting on the infide, as well as to the cieling of the rooms. The frost is never

out

(12)

out of the ground; even in fummer it is thawed but about four feet below the furface: and in the thick woods, the warmth of the atmosphere gets no lower than two feet. The intenfeneis of the cold is beyond expression, and its effects are frequently productive of the most tragical events. The poor natives take every precaution to guard against its consequences; but notwithstanding their utmost care, they frequently fall. a prey to its feverity. Unhappy, indeed, is the fate of those poor creatures, who meet with this kind of death! After enduring great torment for a confiderable time, the cold at length feizes the vitals, when the unfortunate person soon expires. Women have been found frozen to death, with a young infant, likewife frozen, clasping its arms round the mother's neck ; others have been found dead, and the babe ftill alive.

The first year I wintered in Hudson's Bay, afforded an opportunity of describing the melancholy effects of the cold in the persons of three of our Factory men, whose names were John Farrant, James Tomson, and James Ross. The The following account was gathered at times from the latter, who furvived his unfortunate companions.

On Monday, January the 6th, 1772, thefe three men fet out in the morning in order to hunt partridges, and to collect fresh provisions for the Factory, as is the custom of the country. They were to stay three weeks; at the conclusion of which time they were to return with what they had procured. In the early part of their journey they had a river to cross, about three miles over, which was not compleatly frozen at the time they reached it. Near this river, they flept the first night, intending to cross it the next morning.

Tuesday the 7th. About eight or nine o'clock in the morning they proceeded to cross the river, but they had not walked far on the ice before they perceived the smoke of open water below them, and that they went very fast down the river; which convinced them that they were adrift. This they found to be the case, and that the ice they they were on was a large fmooth field. They had two dogs with fleds with them, and the ebb tide carried them out to fea.

Wednefday the 8th. The tide of flood brought them into the fame river, but not fo high as the place from whence they had been first carried. The weather hitherto had been very mild, and it had showed a little during the night. In their baggage was fome cake they had baked the day before they left the fort, and a bottle with near a quart of gin; of this they took a little now and then.

Thursday the 9th. The weather still continued remarkably mild and clear. They were again driven up the river with the flood, but not fo high as yesterday, as the tides were falling off. As the piece of ice they were upon did not, during its thus driving up and down the river, come near the shore, they were obliged to continue on it, and were driven out again with the ebb. The cake and gin was not yet expended, and they slept flept together in a leathern tent upon the ice.

Friday the 10th. The weather mild as before, with fmall breezes of wind from the S.E. quarter. A little fnow fell in the night. The flood brought them again into the river, and this day they exerted themfelves very much to gain the shore. In hopes of doing this Rofs took his gun, powder. and fhot, blanket, and a little bag containing materials for kindling a fire; Farrant took only a beaver coat. Tomfon was for anxious to gain the fhore that he would flay for nothing. One of the dogs accompanied them, the other flayed with the fleds. After wandering about over the ice with the greatest anxiety for the major part of the day, they found their utmost endeavours ineffectual; they therefore turned about to go to their fleds; but, to add to their misfortunes, they faw the fleds pafs them on another piece of ice, and the dogs eating and tearing the tent, &c. without their being able to come at them. Their little flock of cake was expended this day. The ebb tide now carried

(16)

ried them far out into the bay, fo that they loft fight of the land, and wild geefe and other fea fowls hovered over them in great numbers. Rofs and Tomfon lay under the blanket, and Farrant used the beaver coat.

Saturday the 11th. The weather, though colder than any of the preceding days, was yet very moderate for this frigid time of the year. The wind S.W. a moderate froft, the night over-cast, but the day clear. The unhappy men had feen land to eastward, and again to the northward. When the flood made, they drew nearer to the land, and the ice clofing about high water, afforded them hopes of once more getting on fhore; but the attempt did not fucceed. John Farrant this day had the misfortune to fall into the water, in stepping from one piece of ice to another; he was nearly carried under, before his miferable companions could drag him out. Rofs having a clean shire in his bag, they put it upon Farrant, and belted the beaver coat about him : afterwards, being nearly spent, he lay down; while

while Rofs and Tomfon gathered pieces of fhelving ice, which they placed round him, as a barricade against the weather. They had a piece of fugar left, and half of it was all they subsisted on that day.

Sunday the 12th. Though it was very warm all the day, yet it was very difagreeable, as it blew very hard from the N.E. and much fnow fell, which caufed it to drift much during both the day and night. The piece of ice they were upon had grounded before day-break; and when the flood made, the water began to come upon it, fo that they were obliged to call upon Farrant to rife; but death had freed the poor man from his troubles. Rofs and Tomfon continued on or near the fame piece until the water had fallen away. While they fat weeping by the corps, a feal came upon the ice; it did not meddle with the body, but looked very stedfastly on them; Tomson desired Rofs to shoot it, but he refused, faying, " I myfelf may foon be dead." They afterwards went from piece to piece, but the weather being thick, they knew not what conrle course to take. The fugar which remained was their food this day, and now their whole stock was expended.

Monday the 13th. A ftiff gale of wind fill continued from N. to N.N.W. with thick drifting weather; the morning was mild, but as night approached it grew very sharp and cold. Tomfon and Rofs walked again amongst the rough ice. The hands of the former were swelled to such a fize, that even with the affiftance of his comrade, he could not force them into his mittens; his face was also much tumified, and he became delirious; for on Rofs telling him, that in two days they would reach the Factory, he answered, what ----, naming a village in the Orkneys, to which he belonged. The flood confined them to the fame piece of ice, and here poor Tomfon died, just as the moon funk below the horizon.

Tuesday the 14th. The gale was quite abated, but the cold increased, and though very rimy, yet the fun shone early in the morning. The water flowed upon the ice B 2 that

that Rofs remained on, and foon after it drove a large piece over Tomfon's body, upon which Rofs with difficulty got. The ebb running out, and the fun becoming visible, he directed his course by it, and after walking all the day over the rough ice, he reached the fhore at the back of the Factory Island, where a path is cut strait, from high water mark, to the Factory. The unfortunate man imagining himfelf on the eaftern fhore, mistook this opening for fome river or creek on that coaft, fo walked up till he came to a place which he remembered. Here he found his mistake, and returning back immediately, ftruck into a right path. He now broke down some sticks, and endeavoured to kindle a fire, but without effect. In this attempt he froze his fingers; he had benumbed them before in exchanging mittens and affifting Tomfon: his feet were likewife benumbed before he reached the fhore. This night he lay on a few flicks, he had broken down for that purpofe.

Wednefday

Wednefday the 15th. The weather this day was very moderate. He fet out for the Factory, but his extreme weaknefs made him fall feveral times, which filled his mittens with fnow, and froze his fingers folid. Though the diftance was no more than four miles at fartheft, it was feven o'clock in the evening when he arrived at the gates, where he fired his gun off to make himfelf heard. The extremity of his nofe was frozen, but he was perfectly fenfible on his arrival. One of the dogs came home with him, having ftaid by him all the time.

The packet for Churchill went from the Factory but the day before; had the factorymen but followed the track of these natives, all then would have been well; but the decrees of Providence are unsearchable. The other dog was flightly wounded by a setting gun on the eastern shore. Poor Tomsfon declared the day before his death, that he could have lived much longer had he had provisions to eat.

The

The unfortunate furvivor was obliged to fuffer amputation on most of his fingers and toes, and his nose was much mutilated. But Mr, Hutchins, who was then furgeon at York Fort, effected a fine cure by preferving him; and the man now lives comfortably in Orkney, the place of his nativity. On hearing of his misfortune, a fubscription was set on foot for his fupport at every place in the Company's settlements. The people liberally contributed according to their feveral abilities; and the Company, actuated by the laudable example set by their fervants, allowed him an annuity of 201. for life.

Before I leave the fubject of this unfortunate man, I cannot help remarking, that his ingratitude was confpicuous to a great degree; notwithstanding his mates in the Factory, chiefly his poor countrymen, affected by his misfortunes, had fo liberally contributed towards his support, he had not the fensibility to thank any one of them for their humanity, though the greatest part of his benefactors had no more than 61, a year.

In

In the coldest weather the atmosphere is the most ferene. Throughout the day the air is generally filled with icy particles, which are fmall beyond conception ; these are driven about in the direction of the wind, and adhere to every thing which happens to be in the way of their progrefs. In the evening the stars begin to shine with refulgent lustre; and the contemplative mind is ftruck with reverence and awe, to fee the Aurora Borealis darting with inconceivable velocity to all parts of the heavens. Very few winter nights pass in Hudson's Bay, without this phænomenon making its appearance; fometimes the irradiations are feen of a very bright red, at other times of a pale milky colour, undulating with every beauty it is poffible to conceive or defcribe.

In the winter feason, it frequently happens that the air is fo full of watery vapours, that the fun will be obscured for several weeks together. This is occasioned by the rime, which ascends from the open fea water, and being condensed by the cold, is driven by the wind to a considerable dif- B_4 tance. tance. I have feen the trees, &c. fifty miles off to leeward, covered over with it.

During the cold ferene weather in the winter, innumerable flars fhine forth with inconceivable brilliancy; and, added to the beautiful appearance of the moon, make a most reverential and splendid appearance; Parhelia likewise become vifible, which is a fure indication of intense cold; and Paraselenes or mock moons appear, when the vapours arising from open water become condensed by the frost.

The foil at Churchill Fort, which lies in lat. 59 deg. oo min. is generally rocky near the fea coafts, very dry, and bare of vegetables. There are no woods within feven miles of the fhore, and confequently, the Factory is much exposed to the incleimency of the weather, especially in the winter feason. The woods here are confiderably smaller than at York Fort; the trees of which they confist are junipers, pines, poplars, and willows, but so infignificantly fmall, that it is with some difficulty the winter's winter's fire-wood is procured for the Factory; and the farther the traveller proceeds to the Northward, the barer he will find the earth of every kind of vegetable. The inhabitants likewise become fewer; till at length not the leaft herb is to be feen, nor any trace of human steps observed, in the frigid waste. At Churchill the winters are very long, and the cold intenfely fevere. About the latter end of October, the fhortening of the days, the coldness of the weather, and other indications, proclaim the proximity of winter; and from that time to the middle of May, this part of the world is buried in froft and fnow. During this period, the utmost precaution is frequently ineffectual to repel the feverity of the feason. Many kinds of birds and animals become white; and feveral perfons have unfortunately loft their lives in travelling over these unhospitable regions. Notwithstanding all this, when the genial rays of the fun begin to extend to these parts of the globe, vegetation is exceedingly quick. The trees shoot up with furprizing celerity, and the Factory people are foon able to

to gather the produce of a little garden ftuff, put into the ground about the middle of June.

Much the fame may be faid of the climate of York Fort, excepting that difference to be expected from a more foutherly fituation. The fun rifes on the shortest day at 8h. 48m. 12sec. Very little can be faid in commendation of the foil at the Company's northerly fettlements. It is of fo loofe and clayey a nature, that the banks of the river are continually falling down through inundations and deluges; and it is very unfit for agriculture, even if the climate would admit of it. A tolerable quantity of creffes, radifhes, lettuces, and, cabbages, may, however, be procured, with proper cultivation; and, in a favourable seafon, even pease and beans; but these so feldom come to any perfection, that they are effeemed a kind of luxury.

The face of the country is low and marshy, and at a little distance off, seems to present to the eye a fine prospect of tall pines pines and junipers; but upon a nearer approach you find yourfelf most egregiously deceived. The pine trees, which are of different kinds, are but small; near the seacoasts they generally run knotty, and are unfit to be used in the structure of good buildings. The same may be said of the juniper trees, growing in the same situation.

But on leaving the marshy ground, and retiring inland to the fouthward, the trees are of a more stately growth; and about Moofe and Albany Forts, they are found of all diameters. Here the climate is much more temperate than at York Fort and Churchill Settlement. Potatoes, turnips, and almost every species of kitchen garden fuff, are reared with facility; and no doubt corn might be cultivated, if the lords of the foil had patriotifm enough to make this extensive country of any fervice to Great-Britain. But it has been an invariable maxim with them for many years past, to damp every laudable endeavour in their fervants, that might tend to make these countries

tries generally beneficial to the Mother Country. This conduct will appear very extraordinary to those, who are unacquainted with the self-interested views of the Company. They imagine, that if it was known to the nation, that the lands they posses were capable of cultivation, it might induce individuals to enquire into their right to an exclusive charter; it is therefore their business to represent it in the worst light possible, to discourage an inquiry, which would shake the foundation of their beloved monopoly.

But to return.—Throughout the woods to the fouthward the ground is covered with a very thick mols, among which grow various kinds of fmall fhrubs, bearing fruit, fuch as goofeberries, currants, ftrawberries, rafberries, cranberries, with many others too tedious to mention. A herb, which the natives call Wee fuc a pucka, grows very plentifully in all parts of the country. The Indians make use of it by way of medicine; it makes a very agreeable tea, and is much used here both by Europeans and natives, not not only for its pleafant flavour, but for its falutary effects. Its virtues are many; it is an aromatic, very ferviceable in rheumatic cafes, ftrengthens the ftomach, relieves the head, and alfo promotes perfpiration. Outwardly, it is applied to gangrenes, contufions, and excoriations; in the latter cafe the powder is made use of. Another herb of much utility to the natives grows likewise here; this they call Jack ash a puck. They mix it with their tobacco to reduce its ftrength.

The Manners, Customs, &c. of the Indians.

Having given a brief account of the climate, foil, &c. of the country, it will not be unfeafonable to fay fomething of the people who inhabit it. The Hudfon's Bay Indians were originally tall, properly proportioned, ftrongly made, and of as manly an appearance as any people whatever. This, however, was before their commerce with Europeans had enervated and debafed their minds and bodies, by introducing fpirituous liquors among them, and habituating

(30 -)

ating them to fevere courses of drinking. They are naturally much addicted to this fatal cuftom; but when it is encouraged and enforced by those who call themselves an enlightened people; it certainly is not only blameable, but highly criminal. Were common sense but made use of to direct the conduct of those who are benefited by the trade carried on with the Indians, felfinterest and good policy would teach them to discourage, as much as possible, a habit fo prejudicial to them, and fatally destructive to these miserable people. They are generally of a benevolent disposition, and easy to be perfuaded by perfons who underftand their language; but as a most unconscionable. gain is got by trading in spirits with them, it is not to be supposed the factors will ever be induced to put a ftop to this unchristian practice. An Indian will barter away all his furs, nay even leave himfelf without a rag to cover his nakedness, in exchange for that vile unwholesome stuff, called English brandy. If by fuch exceffive intoxication they only irreparably injured their own constitutions, and debilitated their race, the consequences,

confequences, though pernicious, would not be fo dreadful as they ufually are; but during their intoxication not only fresh quarrels ensue, old grievances are also renewed, and death is frequently the confequence of former bickerings, which but for this stimulator had been buried in oblivion.

The following tragical inftances of the baneful effects of these poisonous distillations, happened, among many others, under my own knowledge. Excess of liquor frequently makes Europeans merry and gay; but with the Indian it has a contrary effect : at this time he recollects his departed friends and relations; he laments their death very pathetically with tears; and if near the graves any of of them, will fometimes runout and weep at them. Others again will join in chorus in a fong, although unable to hold up their heads; and it is not uncommon for them to roll about the tent in a fit of frenzy, and frequently into the fire. On these occasions some quarrel is fure to take place, and fome ancient difagreement is revived. They fometimes have the

the precaution to order the women to remove all offenfive weapons out of the tent; but as they cannot part with their teeth, it is not unufual to fee fome of them the next morning without a nofe. Sometimes they come off with the loss of an ear, or joint of a finger. In these affrays no regard is paid to relationship, brothers and fifters often engaging each other. After one of these rencounters, an Indian entered the Fort one morning, and defired to be admitted to the furgeon; as foon as he got into his apartment, he faluted him in broken English with " Look here, man, here my nofe," at the fame time holding out his hand, with half his note in it, which he wanted the furgeon to put on again, for they have a great opinion of the faculty. The man's nephew, it feems, had bit it off, and he declared, that he felt no pain, nor was finfible of his lofs, till awaking the next morning he found the piece laying by his fide.

A few years fince, a party of Indians came down to trade, and the first day of their

their arrival, as their invariable cuftom is; got drunk. In this state of inebriation, as two of them were ftruggling together, one of them finding that he could not difengage himfelf from his antagonift, fnatched a bayonet out of its cafe, and stabled him in the breaft. On hearing a noife, fome perfons went into the tent to learn the caufe; when they found the unhappy man in a most desperate state, his lungs protruding through the wound; as large as a man's hand, at each respiration. A tent was pitched for him within the Factory works, and every affistance was given him by the English, but he died on the fifteenth day.

At another time three Indian men were fent with a packet from York Fort to Churchill River. The first thing to be done after they arrived at the place of destination, was, as usual, to get dead drunk. There happened to be an Indian here, who had formerly borne some animosity to one of these packet-men, but which had never been thought of when reason possible the C fenses: fenfes: the fumes of the liquor, however, revived, with peculiar acrimony, the revenge which lay buried in his bofom. After difcourfing together for fome time, and irritating each other with bitter retorts, the man who fuppofed himfelf injured went into the Factory, and procured a bayonet from the Governor, with which he very foon put a period to the existence of his unhappy adversary. The deceased left a wife and eight children.

(34)

I could recount upwards of forty inflances of a fimilar kind, which occurred to me whilft I was in Hudfon's Bay, where revenge, and deftruction, marked the fleps of the drunken favage; but the above inftances will fufficiently flew the iniquity and evil tendency of fupplying the Indians with fpirituous liquors, and encouraging the immoderate ufe of them. By this diabolical commerce the country is impoverising the inhabitants, the trade of courfe imperceptibly declines, and this extensive fettlement is in a great measure prevented from from rivalling many of our other foreign establishments.

The natives of Hudson's Bay are a people of a middle fize, of a copper complexion, their features regular and agreeable, and few distorted or deformed persons are seen among them. When young they have exceffive large bellies, which is to be attributed to the enormous quantity of food they devour; but as they grow towards puberty this part decreases to a common fize. Their conflitutions are ftrong and healthy, and their diforders few; the chief of thefe is the dyfentery, and a violent pain in the breaft, which the English call the Country Diftemper. The latter is supposed to proceed from the cold air being drawn into the lungs; which impeding the veffels from fpreading throughout that organ, hinders the circulation. and renders refpiration extremely painful and difficult; yet I never heard of any dying of it. The venereal difeafe is also very common among them, but the fymptoms are much milder than in Europe, perhaps owing to their Cà diet,

.....

diet, which is void of fpices, or falt, and of fpirituous liquors, when from the Factory. They feldom live to a great age, but enjoy all their faculties to the laft.

In their dispositions they are mild, affable, and good-natured, when fober; but when intoxicated they are loft to every focial quality, and discover the greatest propensity to quarrelling, theft, and the worft of vices. When we view the fair fide of their characters, we find them kind, courteous, and benevolent to each other, relieving the wants and neceffities of their diftreffed brethren with the greatest good-nature, either by counfel, food, or cloathing. The good effects of this excellent difpolition are frequently experienced by themfelves; for, as in their mode of life no one knows how foon it may be his own fate to be reduced to the verge of extremity, he fecures for himself a return of kindness, should he experience that vicifiitude. On the other hand, they are fly, cunning, and artful to a great degree; they glory in every species of furacity and artifice, especially when the theft

theft or deception has been fo well executed as to efcape detection. Their love to their offspring is carried to a very great height. From the flate of childhood to maturity they feldom or never correct their children, alledging, that when they grow up they will know better of themfelves. Neither is this indulgence made a bad use of when reflection succeeds the irregularities of youth; on the contrary, fentiments of reverence, gratitude, and love, link their affections to the authors of their being; and they feldom fail to give the utmost affistance to their aged parents whenever their imbecility requires it.

With respect to their corporeal abilities, they are almost without exception great walkers; they patiently endure cold, hunger, and fatigue; and bear all misfortunes with admirable fortitude and refignation, which enables them bravely to encounter the prospect of ill, and renders the mind ferene under the prefiure of adversity. As their country abounds with innumerable herds of deer, elks, and buf-C 3 faloes,

(38)

faloes, they frequently make great flaughter among them; and upon these occasions they have no regard to futurity, or providing for an unfuccefsful day. Whether they happen to be pining under the grafp of pinching neceffity, or enjoying themfelves in all the happiness of health and plenty, they kill all they can, having an incontrovertible maxim among them, which is, " the more they kill, the more they have to kill:" and this opinion, though diametrically oppofite to reafon or common fense, is as pertinaciously held by them, as his tenets are by the most bigotted enthusiast. Indeed, they too frequently find it to their coft to be grounded on folly, as they fometimes fuffer extreme hunger through it; nay, many have been starved to death, and others have been reduced to the fad neceffity of devouring their own offspring.

As a great part of the Factory provisions confifts of geefe killed by the Indians, the English fupply them with powder and shot for this purpose, allowing them the value of a beaver skin for every ten geess they kill;

kill; accordingly, after the Indian has got this fupply, he fets off from his tent early in the morning into the marshes, where he fets himfelf down, with a degree of patience difficult to be imitated, and being sheltered by a few willows, waits for the geefe. They shoot them flying, and are fo very dexterous at this fport, that a good hunter will kill, in times of plenty, fifty or fixty in a day. Few Europeans are able to endure cold, fatigue, hunger, or adverfity in any shape, with an equal degree of magnanimity and composite to that which is familiar to the natives of this country. After being out a whole day on a hunt, exposed to the bleakeft winds and most penetrating cold, and that without the least thing to fatisfy the calls of nature, an Indian comes home, warms himfelf at the fire, fmoaks a few pipes of tobacco, and then retires to reft. as calm as if in the midft of plenty; but if he happens to have a family, he cannot always boast of this equanimity; when reduced to extremity, his affection for them predominates over his philosophy, if it - C 🛦 ·might

1

might be fo called, and it gives way to the most pungent forrow.

A blind and unconquerable fuperfittion bears a principal fhare in the character of these unpolished Indians. By this he is induced to impute every occurrence of his life to supernatural causes. His good or bad success in hunting, the welfare of his friends and family, his duration in this mortal state, &cc. all depend upon the capricious will and pleasure of some invisible agent, whom he supposes to preside over all his undertakings: for instance, one man will invoke a conspicuous star, another a wolf, one a bear, and another a particular tree; which he imagines influences his good or ill fortune in this life.

In the fpring of 1779, fome Indians, who were employed in the vicinity of York Fort in the goole hunt, were fo influenced by these superstitious ideas, that they believed the Devil, with hideous howlings, frequented their tent every night. They came to the Factory quite dejected, and told

told the Governor a lamentable tale, fetting forth, with pathetic energy, the diffresses they were exposed to from this visitation of the Father of Iniquity. So overcome were they by their apprehensions, that they kept large fires continually burning all night, and fleeping only in the day-time. One of them declared that he had fired his gun at him, but unluckily miffed him. He defcribed him to be of human shape, going about with cloaths, and taking prodigious ftrides over the fnow. The Indians believed that he came in quest of some of their families, a part of which must be facrificed to affuage his anger. A little brandy, however, properly applied, had a wonderful effect; for after going through a course of enebriation for two days, all the fears that the Devil had occasioned were entirely diffipated. It proved afterwards, that the formidable enemy that had caufed fuch a panic among them, was nothing more than a night owl, which had frequented this place. This bird, by the fhrieks and difmal noife which he makes in the night, frequently caufes fuch apprehenfions

fions in the minds of the Indians, that it works upon their imaginations to fuch a degree, as to induce them to believe the Devil is really and fubftantially prefent.

Exclusive of these superstitious ideas, the religious fentiments of these people, though confused, are in many respects just. They allow that there is a good Being, and they fometimes fing to him; but not out of fear or adoration, for he is too good, they fay, to hurt them. He is called Kitch-e-man-e-to, or the Great Chief. They further fay, there is an evil Being, who is always plaguing them; they call him Whit-ti-co. Of him they are very much in fear, and feldom eat any thing, or drink any brandy, without throwing fome into the fire for Whit-ti-co. If any misfortune befals them, they fing to him, imploring his mercy; and when in health and profperity do the fame, to keep him in good humour. Yet, though obsequious fometimes, at others they are angry with him, especially when in liquor; they then run out of their tents, and fire their guns in order to kill him. They frequently perfuade

perfuade themfelves that they fee his track in the mofs or fnow, and he is generally defcribed in the moft hideous forms. They believe that both the good and the bad Being have many fervants; those of the former inhabiting the air, but those of the latter walking on the earth. They have likewife an opinion that this country was once overflowed; an opinion founded on meeting with many fea shells far inland.

They have no manner of government or fubordination. The father, or head of a family, owns no fuperior, nor obeys any command. He gives his advice or opinion of things, but at the fame time has no authority to enforce obedience: the youth of his family follow his directions, but rather from filial affection or reverence, than in confequence of any duty exacted by a fuperior. When feveral tents or families meet to go to war, or to the Factories to trade. they choose a leader, but it is only voluntary obedience they pay to the leader fo chofen; every one is at liberty to leave him when he pleafes, and the notion of a commander

commander is quite obliterated as foon as the voyage is over. Merit alone gives the title to diffinction; and the poffession of qualities that are held in effeem is the only method to obtain respect. Thus a perfon who is an experienced hunter; one who knows the communication between the lakes and rivers; one who can make long harangues; is a conjurer; or if he has a family; fuch a man will not fail of being followed by feveral Indians, when they happen to be out in large parties; they likewife follow him down to trade at the fettlements: he is, however, obliged to fecure their attendance upon this occasion by promifes and rewards, as the regard paid to his abilities is of too weak a nature to command subjection. In war a mutual refentment against their enemies forms their union for perpetrating their revenge. Perfonal courage, patience under hardships, and a knowledge of the manners and country of their adversaries, are the qualifications fought after in the choice of a leader. They follow him, whom they have thus chosen, with fidelity, and execute his projects with alacrity; but their obedience

(44)

obedience does not proceed from any right in the leader to command, it is folely founded on his merit, on the affection of his followers, and their defire of fubduing their enemies. These sentiments actuate every breast, and augment the union; while in more civilized nations such a compact is effected by submission to the laws of government.

Some years fince, the Company being informed that the Indians frequently brought fine pieces of copper to their fettlements on Churchill River, they took it into confideration, and appointed a perfon, with proper affistants, to furvey and examine the river where this valuable acquifition was fuppofed to be concealed. The perfon employed in this business gives the following account of his expedition, which will defcribe the Indian method of going to war. These are his words: "In 62 deg. 57 min. N. " latitude, and 18 W. longitude, from " Churchill River, is where we built our " canoes in 1771; there many Northern " Indians joined us, and finding we were " intended

" intended for the copper mine river, that " fummer, between 70 and 80 ftout fellows " agreed to accompany us, with no other " intent than to kill the Efquimaux. I ufed " my best endeavours to perfuade them from " this defign, but to no purpose; for, in-" flead of my advice having the defired ef-" fect, they imputed it to cowardice. That " being a character I always despised, I was " obliged to fum up my beft endeavours, to " retrieve my then fading honour; and told " them, I cared not if they made the name " of an Esquimaux extinct, and though I " was no enemy to them, yet if I found it " neceflary for my own fafety, or for the " fafety of those who were with me, that " I should not be afraid of an Esquimaux. " This declaration caufed great shouts of " fatisfaction. They then began to prepare " their targets, or shields, as soon as pos-"fible. Their targets are made of boards " three feet long, two broad, and 3-4ths " of an inch thick, and fo flung on the left " arm, as to be of no hindrance in loading " and firing their guns. Our war imple-" ments being all ready, we fet out on our · expedi-

(46)

"expedition, and by the 21st June, were " in lat. 68 deg. 54 min. N. and 22 deg. " 21 min. W. from Churchill. Here we " agreed to leave all the women, and every " other incumbrance. Accordingly, after " ftaying a few days to kill as many deer and " buffaloes as would ferve them till our re-" turn, we proceeded again, and arrived at " the copper river on the 13th July; and, " as I found afterwards, about 40 miles " from it's entrance. On our arrival, the " Indians dispatched three men before, as " fpies, to fee if any Efquimaux were tent-" ing about the river. On the 15th of the " fame month, as I was continuing my " furvey towards the mouth of the river, " we met the three spies above-mentioned, " who informed us of five tents of Esqui-" maux being on the West fide of the "river, and by their comparison of the " diftance, I judged it to be about twelve " miles off. On their receiving this news, " they would pay no more attention to my " furvey; but their whole thoughts were " immediately engaged in planning the best " method how to fteal on them in the night, " and

" and kill them while afleep. After having " all their apparatus ready for the enfuing " flaughter, they began to invoke their dif-" ferent patronizing agents by the follow-"ing fuperflition. All the men painted " the front of their targets, fome with the " image of the Sun, others with the Moon, "others with different kinds of birds and " beafts of prey, and fome with the images " of imaginary fairies, which, according " to their filly imaginations, inhabit the " elements. By strict enquiry into the cause " of this fuperstition, I found that each " man had the image of that agent painted " on his target which he relied on for fuc-" cefs in the enfuing enterprize. Some " were contented with a fingle reprefenta-" tion, while others (doubtful of the qua-" lity of any fingle being) would have their " targets covered to the very margin, with " a group of hieroglyphics quite unintelli-"gible. This piece of fuperstition being " compleated, we then began to advance " towards the Esquimaux. The number " of our company being fo far fuperior to "the five tents of Efquimaux, portended no.

"no lefs than a total maffacre, unlefs kind " Providence should work a miracle in their "favour. It was about ten o' clock in the morn-" ing, when they made their attack upon their " unhappy enemies, whom they found fast " alleep. In a few minutes the havock was " begun, myfelf flanding neuter in the rear. " Prefently a feene, truly fhocking, pre-" fented itself to my view; for as the Ef-" quimaux were furprized at a time when " they thought themselves in the midst of " fecurity, they had neither power nor time " to make any reliftance. Men, women " and children ran out of the tents flark-" naked; but where could they fly for fhel-" ter? They foon fell a facrifice to Indian " fury. The shricks and groans of the expir-" ing were truly horrible; and it was much "increased by the fight of a young girl, " about 18 years old, whom they killed fo " nigh to me, that when the first spear was " ftuck into her, fhe fell down, and twifted " herfelf about my legs; and it was fome " difficulty for me to difengage myfelf from " her dying grasps. As the Indians pur-" fued her, I folicited for her life; but this D ' was

" was fo far from being granted, that I was "" not fully affured of my own being entirely " in fafety, for offering to fpeak in her be-" half. When I begged her life, the fellows " made no reply, till they had both their. " fpears through her, and fixed into the " ground. They then looked me fternly in " the face, and began to upbraid me, afk-" ing if I wanted an Esquimaux wife? at " the fame time paying no regard to the " fhrieks of the poor girl, who was then " twining about the fpears like an eel: in-" deed, I was obliged at last to request them. " to be more expeditious in difpatching her " out of her misery, otherwise I should be " obliged in pity to affift in that friendly " office, by putting an end to a life fo mor-" tally wounded. The terror of mind I " must inevitably be in from such a situa-" tion, is easier to be conceived than de-" fcribed. When this horrid work was " compleated, we observed feven more tents " on the opposite fide the river. The " people belonging to them appeared to " be in great confusion, but did not "offer to make their efcape. The In-" dians fired many thot at them across the " river,

* river, but the poor Esquimaux were fo " unacquainted with the nature of guns, " that when the bullets ftruck the rocks, " they run in bodies to fee what was fent " them, and feemed curious in examin-"ing the pieces of lead they found flat-" tened on the rocks, 'till at last one man " was shot through the calf of the leg, " after which they immediately embarked " in their canoes with their wives and chil-" dren, and paddled to a fhoal in the river: "After the invaders had killed every foul " they could get at, they began breaking " the ftone kettles and copper work, which " the Efquimaux make use of instead of iron. "When this was done, they affembled on " the top of a high hill, calling out Tima, " Tima, by way of derifion to the furviv-" ing Esquimaux. We then went up the " river about half a mile, to the place where " our tents and baggage were, with an in-* tent to crofs over and plunder the other " feven tents. It taking up a confiderable " time for all to crofs the river, and being " entirely under cover of the rocks, the " poor Esquimaux, whom we left on the D 2 " fhoal:

" ihoal, thought we were gone about our " bufinefs, and had returned to their tents " again. Accordingly, the Indians ran " on them, but they having their ca-" noes ready, they all embarked, and " reached the fhoal above-mentioned, ex-" cept one man, who, being over attentive " in tying up his things, he had no time to " reach his canoe, fo fell a facrifice to their " favage ferocity, for they made his body "like a strainer. After the Indians had " plundered these tents of every thing " worth their notice, they threw the tent " poles into the river, broke their ftone " kettles, and did all the damage they could, " to diffrefs the poor furvivors. We found " an aged woman spearing falmon a short " distance up the river, whom they bar-" baroufly butchered, every man having a " thrust at her with his spear."

Thus finishes this Gentleman's account of the War Expedition of the Indians by whom he was accompanied, which furnishes us with no bad idea of the manner in which they carry on these excursions. I must here

(52)

here observe, that his abilities were every way adequate to the important undertaking he was engaged in, that of determining the truth of a copper-mine being up the country. He was two years in fearch of this valuable repository, which no doubt might prove of great confequence, were it profecuted with a laudable fpirit of industry; but the Company, I must again repeat, damp every enquiry tending to exhibit the value of the territories they exclufively enjoy. Their trade, in its present state, is a matter of small confequence to this nation. Their views are narrow and felfish, and their whole constitution is inveloped in fecrecy and obfcurity.

The Indian's method of dividing the time, is by numbering the nights elapfed, or to come; thus, if he be afked how long he has been on his journey, he will anfwer, "fo many nights." From this nocturnal divifion, they proceed to the lunar or monthly divifion, reckoning twelve of thefe in the year, all of which are exprefive of fome remarkable event or appearance, that hap-D 3 "pens pens during that revolution of the moon. For instance-

(54)

JANUARY, They call Kee-sha-pou-ur-tecan-um, by reafon of the intense cold found at this time.

month.

FEBRUARY, Sha-peshem, or the old moon. MARCH,

April,

MAY,

JUNE,

JULY,

AUGUST,

Nis-cau-peshem, or the Goose moon.

Mee-kee-fu-a-pefhem, or the

Eagle-moon ; becaufe thefe birds visit their coasts in this

- Atheek-a-pefhem, or the Frog moon.
- Opineou-a-pechem, because most birds are now laying their eggs.
- Opus-cou-a-peshem, because the geefe are now moulting their feathers.
- Opo-ho-a-peshem, because the birds are now beginning to fly.

SEPTEM-

(55])

SEPTEMBER, Wuf-ker-ho-a-pefhem, becaufe the deer are now fhedding their horns.

OCTOBER, We-fac-a-peshem, because it is the Rutting season with the deer.

NOVEMBER, As-kut-ta-te-fu-a-pefhem, this implies that the rivers are now frozen over.

DECEMBER, Pou-watch-e-can-a-fifh-a-pefhem, becaufe the feverity of the frost makes the brush fall from the pine-trees.

Their method of computing numbers is rather abstrufe, as they reckon chiefly by decades; as follows:---Two tens, three tens, &c. Ten tens, or an hundred tens. A few units over or under, are added or fubtracted. Thus, 32 in their tongue is expressed. Thus, 32 in their tongue is expressed. by faying 3 tens and 2 over;---37 would be expressed by faying, 3 tens and 7 over, or 4 tens wanting three. If they reckon any large number, a skin or stick is laid down for every ten, and afterwards D 4 tied tied in a bundle, for the aggregate of the whole.

Before the Canadian merchants purfued the Fur Trade with fuch diligence as they now do through the Lakes, and had penetrated into the interior parts of Hudson's Bay, a great number of Indians used annually to come down to the Company's Settlements to trade their skins. And though the Company have now in a great measure lost the benefit of this lucrative traffic, it may not be amiss to mention the manner in which the Indians prosecute their voyages to the Factories.

In the month of March, the Upland Indians affemble on the banks of a particular river or lake, the nomination of which had been agreed on by common confent, before they separated for the winter. Here they begin to build their cances, which are generally compleated very soon after the river ice breaks. They then commence their voyage. but without any regularity, all striving to be foremost; because those who who are first have the best chance of procuring food. During the voyage, each leader canvasses, with all manner of art and diligence, for people to join his gang; influencing some by presents, and others by promises; for the more canoes he has under his command, the greater he appears at the Factory.

Being come near their journey's end, they all put afhore; the women to go in the woods to gather Pine-brush for the bottom of the tents; while the leaders source together, and regulate the procestion. This being settled, they re-embark, and soon after arrive at the Factory. If there is but one Captain, his fituation is in the center of the canoes; if more, they place themselves on the wings; and their canoes are distinguished by having a small flag holfted on a stick, and placed in the stern.

When they arrive within a few hundred yards of the Fort, they difcharge their fowling-pieces, to compliment the English; who,

who, in return, falute them by firing two or three small cannon. The leaders feldom concern themfelves with taking out the bundles, but the other men will affift the wo-The Factor being informed that the men. Indians are arrived, fends the trader to introduce the leaders with their lieutenants, who are ufually their eldeft fons or neareft relations. Chairs are placed for them to fit down on, and pipes, &c. are introduced. During the time the leader is fmoking, he fays very little, but as foon as this is over, he begins to be more talkative; and fixing his eyes immoveably on the ground, he tells the Factors how many canoes he has brought, what Indians he has feen, alks how the Englishmen do, and fays he is glad to fee them. After this the Governor bids him welcome, tells him he has good goods and plenty, and that he loves the Indians, and will be kind to them. The pipe is by this time removed, and the conversation becomes free.

During this vifit, the Chief is dreft out at the expence of the Factory in the following ing manner: a coarse cloth coat, either red or blue, lined with baize, and having regimental cuffs; and a waistcoat and breeches of baize. The fuit is ornamented with orris lace. He is also prefented with a white or check fhirt; his flockings are of yarn, one of them red, the other blue, and tied below the knee with worfted garters; his Indian fhoes are fometimes put on, but he frequently walks in his flockingfeet; his hat is coarfe, and bedecked with three offrich feathers of various colours, and a worfted fash tied round the crown; a fmall filk handkerchief is tied round his. neck, and this compleats his drefs. The Lieutenant is also presented with a coat, but it has no lining; he is likewife provided with a fhirt and a cap, not unlike those worn by mariners.

The guests being now equipped, bread and prunes are brought and fet before the Captain, of which he takes care to fill his pockets, before they are carried out to be shared in his tent; a two gallon keg of brandy, with pipes and tobacco for himfelf

felf and followers, are likewife fet before He is now conducted from the him. fort to his tent in the following manner: In the front a halbard and enfign are carried; next a drummer beating a march; then feveral of the Factory fervants bearing the bread, prunes, pipes, tobacco, brandy, &c. Then comes the Captain, walking quite erect and flately, fmoaking his pipe, and converfing with the Factor. After this follows the Lieutenant, or any other friend, who had been admitted into the fort with the leader. They find the tent ready for their reception, and with clean pine brush and beaver coats placed for them to fit on. Here the brandy, &c. is depolited, and the Chief gives orders to fome refpectable perfon to make the ufual diftribution to his comrades. After this the Factor takes his leave, and it is not long before they are all intoxicated; when they give loofe to every species of diforderly tumult, fuch as finging, crying, fighting, dancing, &c. and fifty to one but fome one is killed before the morning. Such are the fad effects of the vile composition they

they are furnished with upon these occafions.

After continuing in a flate of intoxication, bordering on madnefs, for two or three days, their mental faculties return by degrees, and they prepare themfelves for renewing the league of friendship, by fmoaking the calimut. The ceremony of which is as follows : A pipe made of stone is filled with Brazil tobacco, mixed with a herb fomething like European box. The ftem of the pipe is three or four feet long, and decorated with various pieces of lace, bears claws, and eagles talons, and likewife with variegated feathers, the spoils of the most beauteous of the feathered tribe. The pipe being fixed to the ftem and lighted, the Factor takes it in both his hands, and with much gravity rifes from his chair, and points the end of the stem to the East, or fun-rife, then to the Zenith. afterwards to the West, and then perpendicularly down to the Nadir. After this he takes three or four hearty whiffs, and having done fo, prefents it to the Indian leader.

leader, from whom it is carried round to the whole party, the women excepted, who are not permitted to fmoak out of the facred pipe. When it is intirely fmoaked out, the Factor takes it again, and having twirled it three or four times over his head, lays it deliberately on the table; which being done, all the Indians return him thanks by a kind of fighing out the word Ho.

Though the above ceremony made use of by the Indians, in fmoking the calimut, may appear extremely ridiculous and incomprehensible, yet when we are made acquainted with their ideas in this refpect, the apparent abfurdity of the cuftom will vanish. By this ceremony they mean to fignify to all perfons concerned, that whilft the fun shall visit the different parts of the world, and make day and night; peace, firm friendship, and brotherly love, shall be established between the English and their country, and the fame on their part. By twirling the pipe over the head, they further intend to imply, that all perfons of the two nations, wherefover they may be, fhall

shall be included in the friendship and brotherhood, now concluded or renewed.

After this ceremony is over, and a further gratification of bread, prunes, &c. is prefented, the leader makes a fpeech, generally to the following purport:

" You told me last year to bring many " Indians to trade, which I promifed to " do; you fee I have not lied; here are a " great many young men come with me; " use them kindly, I fay; let them trade " good goods; let them trade good goods, " I fay! We lived hard last winter and " hungry, the powder being fhort measure " and bad; being fhort measure and bad, " I fay! Tell your fervants to fill the " measure, and not to put their thumbs " within the brim; take pity on us, take " pity on us, I fay ! We paddle a long way " to fee you; we love the English. Let " us trade good black tobacco, moift and " hard twifted; let us fee it before it is " opened. Take pity on us; take pity on " us, I fay! The guns are bad, let us " trade

" trade light guns, finall in the hand, and " well fhaped, with locks that will not " freeze in the winter, and red gun cafes. " Let the young men have more than " meafure of tobacco; cheap kettles, thick, " and high. Give us good meafure of " cloth; let us fee the old meafure; do " you mind me? The young men loves " you, by coming fo far to fee you; take " pity, take pity, I fay; and give them " good goods; they like to drefs and be " fine. Do you underftand me?"

As foon as the Captain has finished his speech, he, with his followers, proceed to look at the guns and tobacco; the former they examine with the most minute attention. When this is over they trade their furs promiscuously; the leader being fo far indulged, as to be admitted into the trading room all the time, if he defires it.

The principal things neceffary for the fupport of an Indian and his family, and which they ufually trade for, are the following : a gun, a hatchet, an ice chizel, Brazil tobacco, knives, knives, files, flints, powder and shot, a powder horn, a bayonet, a kettle, cloth, beads, and the like.

A concife Account of the TRADE to HUDSON'S BAY, with the Method purfued by the COMPANY in carrying it on.

THE first adventurers procured a charter from King Charles the Second, for an exclufive trade to these countries, which is dated May 2, 1670. Prince Rupert was their first Governor; the Duke of Albemarle, Lord Craven, Lord Arlington, and feveral other noble perfonages, constituted the first committee. The tenor of this charter is as full, ample, and comprehenfive, as words can well make it; and, as if they fuspected the intrusion of some adventurers on their territories, to participate in this valuable trade, the most fevere penalties, with forfeiture of property, are laid on all those, who shall haunt, frequent, or trade upon their coafts; how E far far their fucceffors have been entitled to these exclusive immunities, or how far their confined manner of carrying on the trade has proved beneficial to the country, I shall endeavour to point out; humbly submitting the observations I shall make, to the candour and impartiality of my readers.

The first traders to these parts acted upon principles much more laudable and benevolent, than their fucceffors feem to have been actuated by. From feveral letters which I have read of an early date, they appear to have had the good of the country at heart; and to have endeavoured by every equitable means, to render their commerce profitable to the mother country. Their instructions to their factors were full of fentiments of Christianity, and contained directions for their using every means in their power, to reclaim the uncivilized Indians from a state of barbarism, and to inculcate in their rude minds the humane precepts of the gospel. They were at the fame time admonished to trade with them equitably, and to take no advantage of their

their native fimplicity. They were further inftructed to explore the country, and to reap fuch benefit from the foil and produce thereof, as might redound to the intereft of the Englifh nation, as well as contribute to their own emolument. And laftly; they were directed to be particularly careful in feeing that the European fervants behaved orderly, and lived in fobriety and temperance, obferving a proper veneration for the fervice of God, which was ordered to be collectively performed at every feafonable opportunity.

These were injunctions worthy the exalted stations and rank in life of those who had the first direction of the affairs of the Company; and reflected much honour on their characters, as men and christians: and had these praise-worthy establishments been adhered to, the country granted them might at this day have been an ornament to the state, and a gem in the imperial diadem.—But mark the contrast.

E 2

Instead

Instead of encouraging the trade, by a mild, equitable, and engaging deportment towards the natives ;---inftead of ingratiating themfelves by affability and condefcenfion with a harmless people, they use them with undeferved rigour, caufing them frequently to be beat and mal-treated, although they have come fome hundreds of miles in order to barter their skins, and procure a few neceffaries to guard against the feverity of the approaching winter : and this is one reafon why the trade of York Fort has fo materially declined of late years; the decrease has chiefly arisen from the cruel treatment the Indians generally receive from the Factors.

I refided feven years under one of the Governors of that fettlement, during which time, I can with the greateft truth declare, that the trade yearly decreafed, and that entirely through his repeated bad treatment of the Indians. At a time when the inhabitants of this part of America are annually diminishing, from the exceflive use of spirituous liquors, and the distempers incident

incident to the climate; -at a time when they have near them, as rivals in the trade, more industrious and fuccessful adventurers. (I mean the Canadian traders;) it certainly would be more commendable and politic in the Company's fervants, to endeavour to gain the affections of the Indians, by every exertion in their power; more especially by condefcention, by fair dealing, and by cultivating reciprocal amity between the Company and all the nations they trade with. Another reafon why the Company's trade is fo very infignificant, is a total want of fpirit in themfelves, to push it on with that vigour the importance of the contest deferves. The merchants from Canada have been heard to acknowledge, that were the Hudson's Bay Company to profecute their inland trade in a fpirited manner, they must be foon obliged to give up all thoughts of penetrating into the country; as from the vicinity of the Company's factories to the inland parts, they can afford to underfel them in every branch.

To

To explain this emulation between the Company and the Canadian traders, it will be neceffary to go back a few years, and review the state of the Company in the year 1773. About that time the Canadian traders from Montreal, actuated by a laudable fpirit of industry and adventure, and experiencing the pecuniary advantages that refulted from their exertions, had become fo numerous and indefatigable at the head of the rivers which lead to the Company's fettlements, that the trade of the latter was in a great measure cut off from its ufual channel. The Indians being fupplied with every thing they could with for at their own doors, had no longer occafion, as they hitherto had done, to build canoes, and paddle feveral hundred miles, for the fake of cultivating a commerce with Europeans; in which peregrination they were frequently exposed to much danger from hunger; fo much fo, that at one time, feven canoes of upland Indians perished on their return to their own country.

Ever

(71)

Ever fince the above period, the Canadian adventurers have annually increafed in the upland country, much to their own emolument, and the great lofs of the Company; who, it may be faid, are fleeping at the edge of the fea, without fpirit, and without vigour or inclination to affert that right, which their exclusive charter, according to their own account, entitles them to.

It is true, they have at this time a few establishments in the interior country; but these are carried on in fuch a languid manner, that their exertions have hitherto proved inadequate to the purpose of supplanting their opponents. Though the factors on this employ repeatedly urged the abfolute neceffity of allowing the fervants inland, an additional stipend, it was not till the year 1782, that they could be prevailed upon to give them fifteen pounds per annum; while the Canadian merchants gave their labouring hands from thirty to forty pounds per year. This ill-timed parfimony, is in the higheft degree impolitic : E 4

litic; for they are obliged to leave a confiderable quantity of furs inland every year, for want of men to navigate the canoes; and as thefe fkins are much accumulated by the next year's trade, they have always furs to a very confiderable amount, dead and unprofitable on their hands.

In the next place, their employing Indians for this purpose, helps to compleat the measure of their stupidity; for, after the natives have traded their furs, they are paid to the value of twelve beaver fkins for every bundle taken down to the Factory, and the fame for every bundle of goods brought back. In this manner are they employed for near fix months in the year, and thereby prevented from attending to their hunting excursions; in which, during the time they are thus engaged, they might have collected a good quantity of furs. This is not all ;---as they fuppofe the Company cannot do without them, they fet a great value on their fervices, and omit no opportunity of letting the factors know,

(73)

know, that they are able to form a proper estimate of their confequence.

To obviate these difficulties, the traders from Montreal employ all Canadian servants, who are in every respect better adapted for the service than the indolent Indians.

The Company fignify to their Factors, that they have an indifputable right to all the territories about Hudson's Bay, not only including the Straits and Bay, with all the rivers, inlets, &c. therein, but likewife to all the countries, lakes, &c. indefinitely to the weftward, explored and unexplored. They therefore ftigmatize, the Canadian merchants with the infulting epithets of pedlars, thieves, and interlopers; though the quantity of furs imported by themfelves bears no comparison to those fent from Canada. If this unbounded claim, to which they pretend, be founded upon justice, why, in the name of equity, do they not affert these pretentions by a proper application to Parliament to remove the industrious pedlars, whom they would feem to look upon with

with fuch ineffable contempt, and prevent their any longer encroaching on their territories; but the flock they received from the parliamentary application of the patriotic Mr. Dobbs, in the year 1749, has given them a diftafte to parliamentary inquiries. They know the weaknefs of their claim, and the inftability of their pretenfions; it is therefore their intereft to hide from an inquifitive and deluded nation, every inveftigation which might tend to bring to light the futility of their proceedings.

If the Canadian traders can adduce any profit to themfelves by profecuting this inland bufinets, what are not the Hudfon's Bay Company enabled to do, with every advantage on their fide? The former pay their fervants four times the falary which the latter do; the difficulties and dangers they have to encounter are much greater; the diffance from Montreal to the interior country is immenfe; fo that when put in competition with the advantages and conveniences of the Hudfon's Bay Company, they will not admit of the flighteft comparifon. parifon. The goods which the latter land in the country in August, are realized in London the enfuing autumn; whereas the Canadian merchants are always two years in advance; the goods which are fent from Montreal in May, making no returns in the London market till two years afterwards.

Notwithstanding they have fo many obftacles to furmount, the following account of the furs imported from Canada in 1782 will shew of what value this trade is to the nation, and the indefatigable industry of those who carry it on. According to the Hudson's Bay Company's method of bringing all kinds of furs into beaver, the total amount of the skins imported, by this valuation is 281,493, which fold for 127,4231. 7s. 5d. By this calculation it appears, that the Hudson's Bay Company do not import, from all their settlements, so many furs in four years, as these poor pedlars do in one.

Ig

(76)

In the course of the inquiry in 1749, it appeared by papers laid by the Company before the Honourable House of Commons, that their original stock had been from time to time augmented, as underneath.

1676. Oct. 16. It appeared by their books that their flock then was 10,500 1690. Sept. The fame being trebled, is 31,500 1720. Aug. 29. Their flock being again trebled, is 94,500 A fubfcription was then taken at 10 per cent. amounting to - - - 3,150 Dec. 23. which being doubled, is - 6,300

If these accounts are faithful, and we are not to suppose a fet of gentlemen would attempt to impose a fallacy on that august Assembly, the dividends of the Hudson's Bay Company must have been very small indeed; as will appear from the following recapitulation of expences, &c. from 1739 to 1748 inclusive.

	£•	5.	d.

If then they could not afford to divide more than this, in the very zenith of their prosperity, how inconfiderable must their gains have been of late years, fince the Canadian traders have penetrated the interior country! Their expences have increased in a threefold proportion, and their importations have have decreased at least one third fince the above period.

By way of elucidating this affertion, I fhall just state the difference of maintaining York Fort at present, and the expences attending the same at the time the above enquiry took place.

York Fort at this time has four fubordinate fettlements; at which fettlements, conjointly, the Company allow 100 fervants, whofe wages amount to about 1860l. per annum; befides a floop of 60 tons, that makes a voyage once a year between York Fort and Severn Factories. To difcharge these expences, they receive upon an average from them all about 25000 fkins. In the year 1748, the complement of men at that fettlement was no more than twenty-five, whose wages amounted to 470l. per annum, and the trade then flood at 30,000 fkins one year with another. The other establishments which the Company maintain in the Bay, have fuffered the like proportional F change,

change, all decreafing in trade, and bearing additional incumbrances.

It must be observed, that the calculations in the annexed Table, with many others, were compulsively produced before the Houfe of Commons. It is not the inclination of the Company, that the minutest matter relating to their trade should be exposed to public view. They do not even allow their factors to know what the furs fell for in London, for fear that inquisitiveness, to which mankind are prone, should lead them to speculate, and draw inferences on matters which the lords of the foil deem their own feparate prerogative. But the station I was in while I refided in the Bay, enabled me to know for a certainty, that the quantity of furs imported of late years has fallen very fhort of their former imports; though it is allowed they fell better now than at a prior period.

As it was the ardent with of Arthur Dobbs, Efq. and his friends, by inflituting this parliamentary inquiry, to lay the trade open to the nation at large; fo it was equally the

the defire of the Company still to enjoy those profits, by which they had benefited themfelves for fo many years. To accomplish this flattering end, they left no ftone unturned, no evidence unproduced, which might tend to confirm them in this monopoly. Accordingly, the testimony of feveral witneffes was not admitted, there being reafon to believe that they had been tampered with by the Company. It is not then to be fuppofed, that any papers were laid before the Committee of the Houfe of Commons, but fuch as helped to fupport thefe pretensions, invalidate the testimony of their opponents, and fcreen from the infpection of the people the evil of their proceedings, as a commercial Company.

To exhibit at one view a flate of their feveral establishments in the Bay at prefent, I subjoin the following table.

Notwithstanding this pretended Standard is in itfelf fufficiently hard upon the Indians, and difcouraging to the trade, yet the Factors, and the Company, in conjunction, do not think it fo; for out of this a pernicious overplus trade must be raifed; which, as Mr. Robfon justly observes, is big with iniquity, and striking at the very root of their trade as a chartered Company. It is intended to augment the emoluments of the Governor, at the expence of justice and common honesty. It oppresses the Indian, who lives a most wretched life, and encounters a variety of difficulties, cold, hunger, and fatigue, to procure a few necessaries for himself and indigent family.

This Overplus trade, as it is called, is carried on in the following manner; for inftance; fuppofe an Indian would trade 11b. of glass beads, it is fet down in the standat 2 beaver skins; but the confcientious trader will demand 3, or perhaps 4 beaver skins for it; if the Indian ass for a blanket he must pay 8 beavers; and if he would purchase a gallon of brandy, he must give after after the rate of 8 beaver fkins for it, as it is always one half, and fometimes two thirds water. The confequence of this griping way of trade is in the end very hurtful to themfelves, as the Canadians, in the interior country, underfell them in every article.

If this were the only means which the traders purfued in dealing fo unjuftly by the natives, fo many ingenuous and wellinformed writers would not have taken up their pens to expose the Company and their their fervants, upon account of this unconfcionable profit on their goods. It is worthy of notice, that among all those who have written on the fubject, not one has attempted to vindicate the Company from the numerous and just complaints, which have from time to time been alledged against them. It would be unreafonable to fuppofe they all are influenced by prejudice, or actuated by chimerical illufions : No ! the love of truth, and a facred regard for their country, appears to me to be the only fource from

from whence iffue fuch repeated complaints of mifconduct.

It is to obferved, that the Beaver Skin is the meafure by which the Company value every kind of peltry, &c. in trading with the Indians, as will be feen by the following comparative valuation, which is annually inferted in their Account Books, but which is no more adhered to than the preceding flandard.

A VALUATION, &c.

Here

Here again the factor has an ample field to outdo the natives in cunning; and to exhibit an unprincipled propenfity to augment his own private and perfonal emolument. For inftance, a quart of brandy by the Company's standard, should be valued at one beaver fkin, but by being one half water, the price is made two beaver skins, which is equal in trade to a wolf, wolverin, or cat fkin; but the trader will inform the Indian, that each of these skins is but of the same value as one beaver; fo that after he has gained one beaver by the iniquitous adulteration, he gains another in the fame article by trading it for any fkin that is valued at one more than the beaver skin.

The fame unfair dealing is practifed throughout every branch of the trade, fo that it would be fuperfluous to produce other examples. Let it fuffice to ftate the value of a gallon of English spirits in London, and the return it makes at the fame market. The Company pay at the rate of 20d. a gallon; this, according to the foregoing manner of trading, produces eight beaver skins, weighing weighing about 10lb. which, at the medium of 12s. per lb. amounts to 6l. fterling;—a very confiderable profit truly on the fum of 1s. 8d. But even this is fometimes exceeded; for fuppofing a gallon of brandy traded for otter fkins, the gains are ftill more confiderable, the return then will be about 8l. fterling. A four-penny comb will barter for a bear's fkin, which is worth 2l.

From all which it appears, that the enormity of their transactions in trade is as inconfishent with their characters as merchants and Christians, as it is diametrically opposite to found policy.

The Governors have a cuftom of trufting the natives in the fall of the year with goods to the amount of a certain number of beaver fkins, which they are to repay with furs in the fpring of the year, when the river ice breaks up. But it fometimes fo happens, that the Indian has had bad luck in hunting; misfortunes by death, or other cafualties may have happened to his family; or perhapshe has fallen in the way of the Canadian traders, the temptation

of

of whole fpirituous liquors he has not been able to refift, and confequently he had parted with his furs for their commodities, which he could get much cheaper than at the Company's fettlements ;---in this cafe, when the unfortunate Indian arrives at the Factory, which he is neceffitated to vifit or ftarve, he is reduced to fuch poverty, that perhaps he has not a rag to cover his nakedness, or the least property to procure one neceffary article. Though this misfortune falls very heavy on the distressed Indian, the sole existence of whose family depends upon his being provided with hunting accoutrements, fuch was the obduracy of the Governor of York Fort, before referred to, that whenever it happened, he was fo far from fympathizing with the unhappy favage, that he frequently not only upbraided but beat them most cruelly. This, however, was ufually productive of no good effect; for the Indian, not infenfible to the injury he had received, went away burning with revenge, and ready to retaliate, whenever it might be in his power.

In confequence of this tyrannical ulage, the trade gradually fell off, where the above above perfon refided, and through his mifconduct, the intereft of his mafters, has been much injured; the Indians taking their furs to other fettlements. Upon these occasions, by far the greater part of them reforted to the Canadians trading inland, by which means the trade was diverted to another channel, and the oppresser as well as the Company paid dear for his unseafonable flights of passion.

The Indians are a free people, inhabiting a country of vaft extent; which country they fay is their own, and that we come to them for the fake of trade. They are exceedingly. fusceptible of injuries received, and not very prone to forgiveness; consequently this man was but little efteemed by them. Nor was he more respected by those who were fo unfortunate as to ferve under him. His difpofition was vindictive and unfociable, to the last degree. English as well as Indians felt the weight of his oppreffive temper, which diffused its corroding effect to every object. Domestic happiness was a stranger to his table, and his mefmates lived a most unhappy

unhappy life, under the rod of this unrelenting tafk-master.

Another fevere stroke which the Company has lately fuftained, will be an infuperable bar to their rifing to their former profperity, for many years to come, were there no other obstacle in the way; I mean the ravages which the small-pox has made among the Indians. That epidemical and raging diforder has fpread an almost universal mortality throughout the country in the interior parts of Hudíon's Bay, extending its destructive effects through every tribe and nation, fparing neither age nor fex. It is fuppofed that it was introduced among them by fome of their war parties during the fummer of 1781; and by the fall of the year 1782, it had diffused itself to every known part of the country.

The diftreffes of the Indians by this vifitation have been truly deplorable, and demand the tribute of pity from every humane perfon. As the fimall-pox had never before been among them, and they were utter ftrangers to the malignity of its infectious property, they they at first imagined it to be no more than a fimple breaking out on the skin which would disappear of itself; but it was not long before they had every reason to entertain very alarming apprehensions. Numbers began to die on every fide; the infection spread rapidly; and hundreds lay expiring together without affistance, without courage, or the least glimmering hopes of recovery; for when an indian finds himself fick, he refigns himself up to a state of infensible stupesaction, which hinders him from using even those means that may be in his power, towards removing the cause of his malady.

And as the uncertainty of a favage life is fuch, that perhaps he may be one day exulting in the midft of plenty, and the next day pining under the diffrefs of penury and want; to add to their affliction, they were now deprived of all manner of fupport.

Without the leaft medicinal help, or that common aid which their cafe demanded, a prey to hunger and difeafe, these forlorn Indians lay in their tents expiring, under the accumulated weight of every scourge which human nature

nature can experience. Wolves and other wild beaft infefted and entered their habitations, and dragged them out, while life yet remained, to devour their miferable morbid carcafes; even their faithful dogs, worn out with hunger, joined the ferocious wolves in this unnatural depredation. Heads, legs and arms, lay indifcriminately fcattered about, as food for the birds of the air and the beafts of the mountains : and as none were buried, the very air became infectious, and tended to waft about the baneful contagion. Such has been the fate of many of the tribes inhabiting these parts, and which has nearly terminated in their extinction. Of course the trade of the Company must have experienced a very confiderable diminution.

It is worthy of remark, that this diforder proved more deftructive among the Indians, than was ever known to be the cafe among civilized people; by the most moderate calculation, it was computed that scarce one in fifty furvived it. But what is still more worthy of attention is, that those among them them who were defcended from Europeans, had much milder fymptoms, and generally recovered.

A FEW REFLECTIONS on the COMPANY'S Trade, shewing in what manner it may be Improved to the Advantage of the Nation.

AS I have been very unreferved in my remarks on the Company, and reprobating their confined manner of carrying on their trade, it is but reafonable that I should point out those means by which it may be improved, either to the advantage of the community at large, or for the more confined emolument of the prefent posses.

I own it may appear prefumptuous in me, were I to pretend to dictate to a fet of gentlemen, who, by having this bufinefs immediately under their care, know, or at leaft ought to know, every fource from whence a profit is to be drawn, or emolument raifed, in the extensive country to which they claim a right. right. I must however beg leave candidly to lay before the public fuch circumstances relative to the country and the trade, as I know to be grounded in truth, even though I do not entertain the most distant hope of feeing them ever benefited by the numerous treasures which lie absorbed in this uncultivated waste.

It will, I doubt not, feem very mysterious to the generality of people, that this country should posses riches in itself, and the Company not turn them to their advantage, when they alone are to reap the benefit of their exertions. People will naturally be led to conclude from their conduct, that what writers have faid on this fubject is devoid of truth, and mere chimeras; but this is for want of knowing the peculiar views of the Company, their affection for their long foftered monopoly, and that fingular obscurity which invelops their whole constitution; all which it is the purpose of my present publication to lay open.

To unravel this affertion which appears fo problematical, it will be necessary to exhibit the

the line of conduct which has been invariably purfued by the Company for many years past. They do not, I am well assured, entertain the least doubt, but if the country they poffers was properly explored by perfons of ability, valuable discoveries might be made : but this they think may be fo far from redounding to their interest, that it might have a contrary effect, by encouraging adventurers to petition for liberty to partake of these discoveries, and thereby occafion an inveftigation to take place, which would probably shake the foundation of their charter. This is not all; as their Company confifts at prefent but of feven perfons; this fmall number wifely think, that fo long as they can fhare a comfortable dividend, there is no occasion for their embarking in additional expences, in order to profecute difcoveries which might transpire to the world, and endanger the whole.

Nothing is more clear to me than that these gentlemen follow their trade to Hudson's Bay, without any legal authority from the three estates of the realm. The act of Par-G liament liament which made them a Company for feven years only, has long fince expired, and from that period it has never been renewed. But even fuppofing their first and only charter, granted by King Charles the Second, was intended to incorporate them for ever, they have undoubtedly forfeited every just pretenfion they could draw from thence, by the ill use they have made of this royal favour.

The limits of the Bay and Straits (as before obferved) comprize a very confiderable extent; the foil of which, in many parts, is capable of much improvement, by agriculture and industry. The countries abound with most kinds of Quadrupeds, &c. whole fkins are of great value. The numerous inland rivers, lakes, &c. produce fish of almost every species; and in the feas in and about the Straits, and the Northern parts of the Bay, white and black whales, fea-horfes, bears, and feals, are killed in great numbers by the Esquimaux; whose implements for this purpose are exceedingly simple. What advantage might not then arise to the nation from this branch of the trade alone, were it laid open! If If able harpooners were fent on this employ, with proper affiftants, I will venture to fay, that greater profits would accrue from this fifthery, than from all the peltry at prefent imported by the Company. The difcovery of numberlefs fine harbours, and an acquaintance with the furrounding country, which at prefent is entirely unknown to us, would, in all likelihood, be the confequence of thefe feas being more frequented than they are.

If it be objected to this, that the valt quantities of ice in the Straits mult impede a veffel from making difcoveries; I anfwer, that many years the ice is fo infignificant in quantity as not to obftruct the paffage of the fhips in the leaft; and in those feasons when it is thickeft, it is diffolved and disperfed in the ocean long before the return of the ships in September.

Even in the very confined manner in which the Company carry on this trade, it is far from being inconfiderable, though their fhips feldom ftop but a very flort time for the purpose of trading with the Efquimaux; and G 2 it it frequently happens, that by reafon of foggy or windy weather, those people are prevented from coming down to the ships, and confequently the trade is lost for that year; for none of them are seen by the English on their return to Europe. The articles which the Company receive from the Esquimaux are, whale-bone, seal-skins, ivory, and oil, for which they exchange darts, spears, knives, and even old nails and iron hoops; but as oil constitutes a principal part of the food of these favages, they are not very forward in offering it to sale.

I hope that what I have advanced on this fubject, will be fufficiently convincing to every unprejudiced and impartial perfon, that the Company have not made fuch efforts in thefe territories for the good of the nation, as they were by their original Charter required to do; and I here beg leave to repeat, that uninfluenced by prejudice, or actuated by interefted views, I have no profpect but the good of my country, which is very fenfibly wounded by every reftraint that is laid on its commerce.

Having

Having thus pointed out fome of the means by which the Trade to this country might be improved, I shall proceed to confider how far those inland regions, which are comprehended in the general denomination of Hudson's Bay, are improveable.

It is very well known, to those who have any acquaintance with this fervice, that before the Canadian Merchants penetrated into the interior parts of Hudson's Bay, the Company never allowed their fervants to go inland, for fear a private trade should be carried on by them with the natives. Indeed, there was no necessity for these peregrinations, by a people, who, for obvious reasons, wished to confine themselves to the edge of the fea; as the Indians ufed annually to come down from the interior country to barter their furs at the Settlements. But fince the Canadian Merchants have taken this step, the Company have been under the neceffity of following their example, or tamely fuffering the whole of the Fur Trade to fall into their hands. So languid, however, have been their efforts G 3 hitherto

hitherto for this purpofe, that their opponents have found no impediment arife from their exertions, though, as already obferved, they are obliged to transport their merchandize to a much greater diffance.

When we recollect that this country has been' in the hands of an incorporated Company for upwards of one hundred and thirteen years; and compare the few discoveries that have been made during that period with those made in other parts; -when we reflect how little we are acquainted with its foil or productions, and how ignorant we are with refpect to its capability of improvement ;---when we further confider that no care has been taken to cultivate a reciprocal friendship with remote nations of Indians; but on the contrary, that those we are already acquainted with have been vitiated by the introduction of fpirituous liquors, and difgusted by illulage; fuch reflections naturally excite in the bosom of every one that has the good of their country at heart, a wifh that fo extenfive and improveable a country were in the poffeffion of those who would take more

pains

pains to render it more beneficial to the mother country.

The inland parts produce wild rice and Indian corn; and when our people have fown any of the feed of thefe, it has come up as promifing as in the cultivated gardens of Canada. The animals of this extensive inland country are buffaloes in great numbers, goats, wild horfes, moofe, and different species of deer. Those of the carnivorous kind are wolves, wild cats, wolverins, badgers, bears, beavers, otters, &c. &c. Every fort of fish, of the most delicious flavour, are likewife found in the rivers and lakes.

The Indians, being a most indolent people, and as devoid of curiofity as the Lords of the Soil, the country may lay unexplored, uncultivated, and unknown, to eternity, without the interposition of fome virtuous members of the community, who shall have patriotifm enough to adopt, and influence sufficient to carry into execution, fuch plans as may be thought most adviseable for extending the trade, and thereby G_4 augmentaugmenting the expenditure of the manufactures of Great Britain.

If we look into hiftory we shall find, that fince the discovery of this country, uninhabited States have grown populous, uncultivated regions have been made fertile, and colonies, unknown at that time, have become independent and flourishing. But this country, and this country alone, seems neglected and forgotten; for though it has been known to us for upwards of a hundred years, it is almost in as rude and unimproved a state as the forlorn and inhospitable climes which furround the Poles.

With humble fubmiffion to the fuperior judgment of the refpectable fet of Gentlemen who prefide over this country, it appears to me highly probable, that if they had fettled pofts at convenient diftances in the interior parts to the Weftward, the event would not only have proved very lucrative to themfelves, but to the kingdom; for it might have been the means of making alliances with powerful nations of Indians, even fo far acrofs acrofs the country as California; who would confequently at this day gratefully acknowledge the power and fuperiority of the British empire, and have made no inconfiderable addition to her commerce. But it answers the felfiss ends of this Company to entertain different fentiments.

Some Account of the Company's Officers in the Country, as well the Governors, as inferior Servants.

The chief perfon in command at each Settlement is called the Governor of the Fort. Sometimes he has one to act under him, who is termed The Second. Thefe, with the Surgeon and the mafter of the floop, conftitute a council, who are to deliberate together in all cafes of emergency, or on all affairs of importance; fuch as the reading the Company's General Letter; inditing an anfwer to it; the encroachments of the Canadian traders; or the milbehaviour of the fervants. In thefe Councils very little regard gard, however, is paid to the opinion of the fubordinate members, who rather wish to obtain the Governor's smiles by acquiescence, than rouse his resentment by freely delivering opposite sentiments.

The Governors are appointed for either three or five years, and have from fifty to one hundred and fifty pounds per year, with a premium upon the trade, which fluctuates according to its rife or fall. These gentlemen generally reign as absolute in their petty commands as Eastern Nabobs; and the inferior fervants are exceedingly diligent in cultivating their favour, as they have it in their power to make the lives of those who are under them as unhappy as they pleafe; for it is out of any of the fervants power to return home 'till the next arrival of the fhips, and then if the diffatisfied perfon infifts upon going, his unkind master takes care to fend home fuch a character with him, as shall enable the Company to withhold his wages; the voice of an inferior fervant being but of little avail, when opposed to that of the Governor and his Council.

While

While I refided in the Bay, I had an opportunity of being acquainted with many. gentlemen in the ftation of Governors; and during that time could fingle out feveral whofe affability and capacity merited a better employment. Some have I known who defpifed fervility and unworthy deeds; but this was only for a time, and while young in their ftations. A continual courfe of power and uncontrouled command has made them abfolute, and impatient to the afperity of contradiction.

I refided under two of these gentlemen, each of whom had enjoyed the superior command for about thirty years; they refembled each other so much in their conceptions, in their dispositions, and in the general tenor of their deportment, that nature seemed to have cash them in the same mould; a proof that austerity is affuredly acquired by a series of absolute command.

Mr. Robion complains of a Govornor at Churchill Fort, in his time, who had a thousand times rendered himself unworthy of

(108)

of fociety. His acquaintance with them was not, however, fo general as mine has been. I have known a man not only defpifed in every part of the Bay for the inveteracy of his difpolition, but his bad name had even extended acrofs the Atlantic, and reached the Orkney Illands, the place from whence the Company ufually hire their fervants. Here the malevolency of his difpolition was held in fuch abhorrence, that those people (as remarkable for their poverty as the honefty of their intentions) unanimoufly refused to visit the unbleft fpot where he refided.

1

The unconquerable turbulency of this gentleman's temper rendered his life a prey to remorfe and corroding inquietude, which embittered his days, and made his time truly deplorable. Intoxication was his fole delight; and this muft be gratified even at the expence of common prudence; for his propenfity to inebriation was fuch, that at the time the French took York-Fort, having no common fpirits at hand, he applied to the furgeon for fpirits of wine, which he drank drank to raife his courage. A truly noble courage it must be, to require so fevere a stimulator.

As the Governor above referred to rendered himfelf fo peculiarly hateful to all around him, and was befides fo inftrumental in reducing the Company's trade, he having driven the Indians away by his bad treatment of them; I hope I fhall be excufed for adding to what I have already faid on fo unworthy an object the following fact, which will further elucidate his character, and conclude my animadverfions on it.

The Company engaged with a poor man to ferve them in their fettlements as a Taylor, at eight pounds per year. It was the peculiar misfortune of this industrious man, who had a large family, to be under the command of the above perfon; confequently his life was doomed to be a fcene of uninterrupted anxiety. Such was the ufage the poor man received, that he would not ftay his contracted time out, but went home to his native country. From thence he wrote to the Company, repre-

representing in the most humiliating and affecting manner, the cruel treatment he had received from the Bay Governor; he informed them, that the blows he had received would be the cause of unhappiness to him to the latest period of his life, as he was thereby unable to get a livelihood at his bufinefs; upon which account he humbly folicited a fmall confideration, to compenfate in fome meafure for the injury he had undefervedly fustained in their fervice. Though it would have been an act of the greatest charity to have liftened to the prayer of this poor man's petition, yet, fo great is the partiality of the Company to their chief officers in the country, that no attention was paid to the petition; and, indeed, an inferior fervant, may apply for redrefs till he is tired, before any notice will be taken of his complaints, or the flighteft reprimand given to the authors of his mifery.

When a Governor takes it into his head to have an averfion to any particular perfon under his command, he has fo many ways in his power of rendering him miferable, that

(ÌIÓ)

that he will be foon tired of his fituation, and find his life too unhappy to be borne with any degree of equanimity and compofure. Without a friend to confole him, or to alleviate the hardships of adversity; without any scenes of amusement, or objects to divert the attention, and exhilerate the fpirits; he will find that he drags on an uncomfortable existence, without tasting any of its enjoyments; that he lives in a flate of indifference and anxiety; that his mafter, who is his enemy, has it in his power not only to blaft his prefent peace of mind, but by his influence to hurt his character in future. Such is the life of a fervant to this Company, who unguardedly falls under the difpleasure of the Governor.

It may naturally be fuppofed, that those gentlemen whom the Company intrust with the charge of their Factories, are perfons of fome ingenuity; and if not endowed with a liberal education, yet that they can read, write, and understand common accounts. Though any perfon would conceive these qualifications as effentially neceffary, (112)

fary, yet the first perfon I ferved under was a remarkable instance of the contrary. This respectable perfonage was incapable of 'casting up a' question in simple addition; the numerical figures were hardly known to him; nor could he intelligibly write his own name. His understanding likewise was, in every acceptation of the word, most contemptible; and yet this worthy member of fociety enjoyed the honourable appellation of one of the Hudson's Bay Company's Governors.

But notwithstanding the Gentlemen at home place fo much reliance on their fupetior officers while in the country, the deference immediately vanishes when they arrive in London; for a Governor may attend the Hudson's Bay House, and walk about their Hall for a whole day, without the least notice being taken of his attendance. To exemplify this fact, I shall mention an instance that happened within my own knowledge, and to a person who was not of the above description.

A gen-

A gentleman of tried probity, who had ferved the Company with remarkable fidelity and fuccefs for upwards of feventeen years, came home in 1782, with a view to fpend the remainder of his days in his native country, and to enjoy himfelf a little, after a long and painful fervitude. U on his arrival he was in hopes at least to be introduced to the Gentlemen he had ferved fo long, and to find his conduct approved by those who had reaped the fruits of his industry; but this fmall favour was denied him; and he went into the country, without finding these reasonable expectations gratified; nor could he be very well pleafed with the fupercilious conduct of his late masters.

The labouring fervants, as before obferved, are all procured from the Orkney Iflands, at the rate of fix pounds per year; the Captains of the fhips engage them, and, if poffible, for five years. Each fervant figns a contract on his entrance into the fervice, but he is not allowed to have a copy of it, for fear the fecrets of the Company fhould gain admittance into the world; fo that as H

(114)

it contains a deal of matter, and the fervant probably cannot read, it is impossible for him to know the substance of his agreement one day afterwards.

In this contract he is bound to ferve for three, four, or five years, and not to return home until this term is expired, unlefs recalled by the Company. He engages during his return home, though no feafaring-man, to do the duty of watch and ward on board the ship in which he returns, and that without any pay for the fame. He is further bound, in the most folemn manner, not to detain, secret, harbour, or posses any skin, or part of a skin, on any pretence whatever; but on the contrary, he is to fearch after, and detect all perfons that may be difposed to engage in this species of peculation. On detecting any fuch he is to expose their perfons, and inform the Governor of their breach of contract; but if, contrary to their agreement, any perfon should be found hardy enough to conceal any kind of peltry, or infringe his contract in the smallest degree, he or they fo offending are not only to forfeit

feit all the wages that may be due to them, but are to pay to the Governor and Company two years pay, or the amount thereof; though all this may be done quite unknowingly by the most faithful fervant, unless forwarned of it by having a copy of his agreement.

When a fervant's time is expired, and he is returning home; before he be permitted to go on board the fhip, the Governor in perfon fees that every thing is taken out of his cheft, and even his bed examined, for fear it should contain any private trade. The fame circumfpection is used when a perfon writes to his friends in England for a few necessaries which he cannot well do without. In this cafe the box, or package, in which his things are inclosed must first be fent to the Hudson's Bay House, and undergo a careful examination, for fear it fhould contain any thing used in private trade; and I have known more inftances than one or two, where a fervant has been refufed a few shirts and stockings, for fear they should be converted to this use.

An acquaintance of mine had his box loft at the House of the Company, through the negligence of the clerks. After it had paffed the usual examination, it was allowed to be shipped and sent out. When the owner found it did not arrive, having sufficient proof of its being lost under their roof, he wrote a fubmiffive letter to the Company, requesting an indemnification for his loss; but fo far was he from having this reafonable requeft complied with, that one of the gentlemen at the board made the following fignificant remark on his letter ; " Damn the fellow, does he think that we want to wear his clothes." An obfervation that would have done little honour to a fifh porter within the purlieus of Billingfgate.

During the time any Indians may be at the Settlements trading with their furs, the Factory gates are kept continually flut; and it is the employment of one perfon to watch that no one goes out, for fear he fhould carry on a private trade with the Indians: fo that all the fervants in the Forts fometimes remain imprifoned like birds in a cage, for a week a week together; and even if a perfon wifnes to take a walk on a Sunday afternoon, when there are no natives trading, he must first go to the Governor, and humbly supplicate his permission, before he can walk one quarter of a mile in order to recreate himfelf.

The provisions allowed the fervants are, taken altogether, but of the middling kind; fome of it is very good wholefome food, and other kinds of it are of fo bad a quality, as fcarce to be digeflive on a canine stomach. Great quantities of venifon and geefe are falted for the use of the Factories during the fpring and fall of the year. This provision will fometimes remain three or four years in the cafks unopened; after which it becomes fo compleatly putrified, rancid, and devoid of taste, that a perfon might as well expect nutriment from the shavings in a carpenter's shop. So difgusted are the fervants at it when it arrives at this state, that by way of contempt they term it " falted horfe flefh."

Among

Among fuch a variety of complaints juftly inftituted against the Company, and those who act under their directions, I am happy to have it in my power to mention one particular in which they merit commendation; and this is the moderate price they fix on fome European commodities, which they fell to their fervants; who, as they have fuch low wages, would not otherwise be able to furnish themselves with necessary conveniences for the climate. The following articles are thus rated;

Brafs Kettles, 2s. 6d. per lb.—Soap, 1s. 6d. ditto.—Sewing twine, 1s. 6d. ditto, —Tobacco, leaf, 1s. 6d. ditto.—Tobacco, English roll, 3s. 6d. ditto.—Tobacco, per yard.—Duffels, 4s. ditto.—Flannel, 1s. 6d. ditto.—Guns, 30s. each.—Shirts, 4s. 6d. each.—Blankets, 8s. each.—Shoes, 5s. 6. per pair.—Stockings, 3s. per pair.— Writing paper, 1s. per quire. — English Brandy, 5s. per gallon, &c.

The chief employments of the inferior fervants in the fettlements, is carrying logs of wood, wood, walking in fnow-fhoes, fledging the fnow out of the Factory avenues, and hunting; and notwithftanding the inconveniences before recited, after a perfon has been a few years in the fervice, he generally imbibes a love for the country, unlefs difcouraged by the bad ufage of his fuperiors.

The hunting part of his duty he generally follows with pleafure and avidity; befides the recreation he receives from the fport on those excursions, he takes delight in being from the Factory during them, as then he becomes his own master, and is free from the inspection of a too watchful overseer. Notwithstanding the customs of this country, as at prefent established, are rather forbidding, and feem to discourage us from wishing to live in fo frigid a clime, yet, as already observed, though cold, it is exceeding healthy; and there have been many who have lived here feveral years not only comfortably, but happy; and have enjoyed a better state of health perhaps than they would have done in a lefs inhofpitable country,

H 4

I cannot

(120) I cannot leave this fubject without re-

prefenting the loft flate a youth is in, who is unfortunate enough to be bound apprentice to the Hudfon's Bay Company.—The unfortunate young man is perhaps the only fon of a tender and affectionate parent, who, thinking to forward the happiness of his child, articles him to this Company for feven years: I have known an instance where a boy has been bound for fourteen years.

On his arrival in the country, he knows nobody. His masters who fent him out, and to whom he is to look for fupport, are now many hundreds of miles diftant. The Governor is quite indifferent about him, he having fervants of his own. The confequence of this is, the boy affociates with the common men, forms connections with them, and becomes habituated to their cuftoms, which his tender years are not able to guard against. The education given him by his parents is now foon obliterated; he imbibes fresh vices daily; contracts a love for fmoaking, drinking, and fwearing; and in a word, becomes a reprobate. His employment

ployment confifts in cleaning the Governor's knives and fhoes, running on errands for the cook, and cutting down and carrying heavy logs of wood, much beyond his years and ftrength. In the mean time, no care is taken to inculcate the precepts of religion and virtue in his mind, or even preferve those principles and knowledge he may have brought in the country. Every step that would make him a man fit for the world, and a useful member of fociety, is totally neglected.

I would afk the Hudson's Bay Company what an apprentice of their's is fit for, after having ferved them for feven or fourteen years? whether he has obtained a knowledge of any art or bufinefs that will enable him to get a creditable living in the world, or to fupport himfelf when the ftrength and vigour of youth are exhausted ?---I will defy them to point out any, that has been thus acquired; as his constant employment has consisted of every species of drudgery and subordinate labour: fo that on his returning home, his indulgent parents, instead of finding him instructed instructed in any thing that is praise-worthy, are lamentably convinced, that he is a proficient in nothing but idleness, swearing, and debauchery.

It may be argued by the abettors of the Company, (if they have any) that after the period of the apprentice's indentures is expired, he has an opportunity of rifing in their fervice, if by good behaviour he has merited fo much favour; that from his apprenticeship, he may be made a writer at 15l. per year, from thence be raifed to an affistant at 251. per year, afterwards a fecond at 401. per year; and from thence to the exalted station of a Governor, at 1501. per year. To this I would reply, that I am enabled to fay, from the eleven years fervice which I paffed through in their employ, that the prospect of ascending this important ladder is very faint indeed. But even allowing the youth to be fortunate enough, by affiduity or favour, to fucceed to promotion in this fervice, he is not even then exempt from labour and menial duty; for every perfon in the Factories, except the Governor

Governor and furgeon, must occasionally go to hard work; and should he object to this usage, and beg for milder employment, in the most submissive terms, it will have no effect on the Governor, who in all probability, will not only increase the difficulties of the complainant, by every feries of severe treatment, but send him home to the Company with a bad character; representing that he is unfit for their service, having refused his duty.

Such is the usual progress of the servitude of their apprentices; and so little is the probability of the young men reaping any advantage from it.

1+

It being fo nearly connected with the fubject I am upon, I shall subjoin the following account of the taking of the Hudson's Bay Company's settlements by the French, as it was published in the Morning Chronicle of April 1783.

" To the Editor of the Morning Chronicle and Daily Advertizer.

" SIR,

York Fort.

"As I have not observed in any of the news-papers an account of the capture of the Hudson's Bay Company's fettlements, except a translation of Monf. La Perouse's letter to the French Marine Minister, I am induced to lay before the public the following facts, founded upon truth, and recorded by my own experience.

"The first notice we had of an enemy's being on the coast, was on the 20th of August, 1782, in the evening, at which time the Company's ship was lying in the roads, and and had been there five days, without having the leaft intimation of this event, although Monf. La Peroufe, by his own account, had been founding Port Nelfon river on the 18th. The next day, August 21, the weather being extremely fine and calm, it afforded the enemy an opportunity to land their men with fafety, which they attempted in fourteen boats, provided with mortars, cannon, fcaling ladders, and about three hundred men, exclusive of marines.

"Our number of men confifted of fixty Englifh and twelve Indians, who behaved extremely well to us, and evinced their regard to us by every exertion in their power. The defence of York Fort confifted of thirteen cannon, twelve and nine pounders, which formed a half-moon battery in the front of the Factory; but it being thought probable that the enemy might come in the night, and turn thefe guns against us, they were overset to prevent the French from taking this advantage. On the ramparts were twelve fwivel guns mounted on carriages, which might have annoyed the enemy (126)

enemy in the most effectual manner. Every kind of fmall arms were in plenty and good condition within the Fort. We had likewife ammunition in great flore, and the people feemed to be under no apprehension. A fine rivulet of fresh water ran within the flockadoes; there were also about thirty head of cattle, and as many hogs, with a great quantity of falt provisions of different kinds.

"Aug. 22. Two Indian fcouts were fent to obtain intelligence; who returned in about three hours, and gave it as their opinion, that the enemy must be nigh hand, as they heard feveral guns fired in the vicinity of the Fort. About fun fet we could plainly difcern a large fire behind us, about a mile and a half diftant, kindled by the French, as we supposed to refresh themselves before their attack the next day.

"Aug. 23. It was observed at day light, that the Company's ship had taken the advantage of a fine breeze at S.W. and prudently shaped her course for England, unperceived by the enemy. About 10 0'clock this this morning the enemy appeared before our gates; during their approach a moft inviting opportunity offered itfelf to be revenged on our invaders, by difcharging the guns on the ramparts, which muft have done great execution; but a kind of tepid flupefaction feemed to take poffeffion of the Governor at this time of trial, and he peremptorily declared he would fhoot the first man who offered to fire a gun. Accordingly, as the place was not to be defended, he, refolving to be beforehand with the French, held out a white flag with his own hand, which was answered by the French officer's shewing his pocket-handkerchief.

"Under the fanction of this flag of truce, a parley took place, when the Governor received a fummons wrote in English. In this fummons two hours were granted to confult about our fituation; but this indulgence was made no use of, and the place was most ingloriously given up in about ten minutes, without one officer being confulted, or a council assembled; fo that this Fort, which might have withstood the united efforts

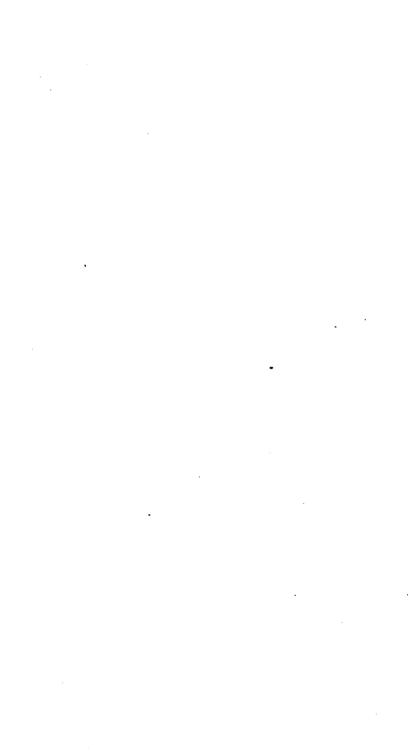

(128)

forts of double the number of those by which it was affailed, in an attack with fmall arms, was furrendered to a halfstarved wretched group of Frenchmen, worn out with fatigue and hard labour, in a country they were entire strangers to. From the nature of their attack by the way of Port Nelfon River, they could not ufe their mortars or artillery, the ground being very bad, and interspersed with woods, thickets, and bogs, by which they were fo roughly handled in the course of their march, that I verily believe they had not fifty pair of shoes in their whole army. The difficulties of their march must appear very confpicuous, when it is confidered, they were a whole day in marching feven miles.

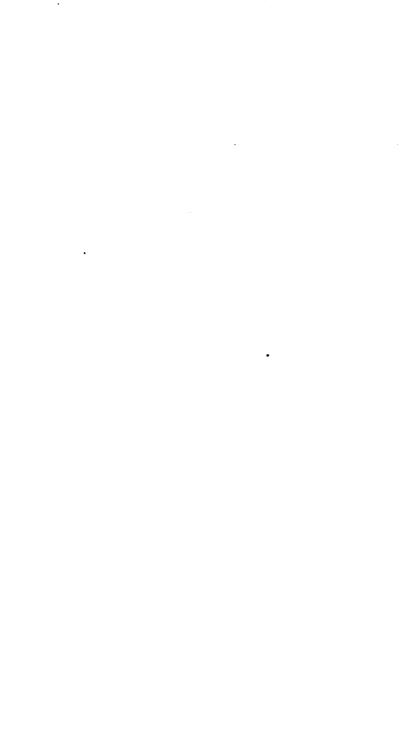

"On the whole, I cannot help thinking, that if the place had been commanded by a perfon of refolution and good conduct, and one who had his country's good at heart, it might have been defended against an attack with musquetry.

. When

" When it is confidered that the enemy's ships lay at least twenty miles from the Factory, in a boilterous sea, at a dangerous time of the year, and confequently could not co-operate with their troops on shore, but with the greatest difficulty and uncertainty; and even this depended folely on propitious winds and weather :---when it is further confidered, that their troops could receive no fupplies but what came from the ships; and that cold, hunger, and fatigue, which had taken possession of their bodies, was hourly working in our favour :---when it is likewife confidered, that the Factory was not in want of any one article which would enable it to withstand an attack with mufquetry; and that the people shewed no fign of fear, difmay, or dejection, but quite the reverse :--- I fay, when all these material circumstances shall be confidered by the impartial reader, he will undoubtedly look with indignation on the pufilanimity of the English Governor, who, with all these advantages on his fide, furrendered without firing a gun. The poor Indians were fo affected T

affected at our captivity, that they expreffed their forrow by fighs and tears.

" Whatever opinion the French might entertain of us on account of our timidity, it is but justice to fay, that they behaved to their eafy acquired prifoners, with that politenefs which is peculiar to their nation. Monf. Le Perouse, the commander of Le Sceptre, was an honour to his nation, and an ornament to human nature. His politenefs, humanity, and goodnefs, fecured him the affection of all the Company's officers; and on parting, at the mouth of Hudson's straits, they felt the fame fensation which the dearest friends feel in an interview preceding a long feparation. His humane disposition was more particularly conspicuous in leaving a repolitory of ammunition, &c. for the poor Indians, who otherwife must have experienced great inconveniences and diftrefs.

"Though the French fuftained no loss from us during their attack of York Fort, yet, through the feverity of the climate, and their

(134)

their own inexperience, they loft five large boats, a confiderable quantity of merchandize, and fifteen foldiers, who were drowned in Hay's river, after the place was furrendered.

"The Company fuffered great lofs by the capture of this place; which had remained in their pofferfion unmolefted fince the peace of Utrecht. The whole of the fhip's outward bound cargo was entirely burnt and deftroyed, together with a confiderable quantity of provisions, ftores &c. which had been collecting for about feventy years.

" If the above account finds a place in your entertaining paper, I shall embrace the first opportunity of sending you an account of the capture of Prince of Wales Fort."

Churchill

(136)

Churchill River.

MR. EDITOR,

" According to my promife I now fend you the account of the capture of Prince of Wales, or Churchill Fort, on the N.W. coaft of Hudfon's Bay, which I received from a gentleman, who was upon the fpot at the time, and on whofe veracity I can depend.

"The French visited this place before York Fort, on account of its Northern fituation, and the general prevalency of winds from that quarter, thinking to take the advantage of them in going to the Southward. Accordingly the three ships appeared before the Fort on August 8, 1782, at a time when the Governor was very busy trading with some Indians who were just arrived: but the sight of such unexpected visitors did not fail to engage the attention of the Factory people, who were not used to see so

" At

"At this time, which was about fix o'clock in the evening, the enemy had caft anchor within five miles of the Fort, and in a little time afterwards appeared very industrious in founding the river, even within mulquet shot of the place; and I have heard the Governor declare, that their officers went about the Factory avenues, fhooting birds, with the greatest indifference; a convincing proof that they did not conceive themselves to be in much danger. The Fort at this time mounted forty-two cannon, fix, twelve, and twenty-four pounders, was provided with ammunition in great plenty, and the Factory was not in immediate want of provisions of any kind. The ftrength of the Fort itfelf was fuch as would have refifted the attacks of a more confiderable force; it was built of the strongest materials, its walls were of great thickness, and very durable, it having been forty years in building, and attended with great expence to the Company. In fhort it was the opinion of every intelligent perfon, that it might have made an obstinate resistance when attacked, had it been as well provided in

in other refpects; but through the impolitic conduct of the Company, every courageous exertion of their fervants must have been confidered as imprudent temerity; for this place, which would have required four hundred men for its defence, the Company, in their confummate wisdom, had garrifoned with only thirty-nine.

"About three o'clock in the morning Aug. 9, the enemy began to difembark their troops, at a place called Hare-Point; from whence they marched in a regular manner towards the Factory, until they arrived within about four hundred yards, when they made a halt, and fent two officers from the main body, with a fummons to the Governor to furrender the place. The Governor and two of his officers met them half way, when all difficulties that obstructed the negotiation were fpeedily overcome, to the fatisfaction of both parties. In confequence of this verbal agreement, the French, to the amount of about four hundred men entered the Fort, at fix o'clock in the morning, when the British flag flag was lowered, and a table cloth from the Governor's table hoifted in its flead.

"Every part now exhibited a fcene of devastation and ruin; for the licentious foldiery, finding they were not reftricted by a capitulation, began to plunder whatever came in their way. It must, however, at the fame time be acknowledged, that the officers took every opportunity to depress this fpirit in the common foldiers, with great humanity and addrefs; politely fympathizing with the fufferers in the inevitable diffreffes attending the fortune of war. The remainder of this, and the following day, were fpent in demolishing the works belonging to the fortifications, shipping on board fundry articles of ftores, provisions, and a valuable quantity of peltry, which if the Company had received would have indemnified them for all their other loffes conjointly.

" On the 11th, the three fhips fet fail for York-Fort; but about five o'clock in the morning, a fail was observed apparently steering for Churchill, which was now in flames.

I 4

One

One of the frigates was ordered to chace. The experience of her commander was, however, fo inadequate to the tafk of coping with the fkill of the Englifh Captain, that if he had perfevered he would probably have been led into fuch a labyrinth of fhoal water and rocky ground, as might have made him repent his vifit to Hudfon's Bay. Accordingly the Frenchman gave up the purfuit about feven o'clock in the evening, after firing a bow chace from an eighteen pounder, which he found had no other effect than, if poffible, to make the Englifhman go fafter than before.

" I would just remark, that Churchill Settlement was by much the best ever erected in Hudson's Bay. The Company usually have their Factories built with logs of pine, which are squared, and laid one upon another; but this building was entirely of freestone; the artillery was in admirable condition; and the fortifications were most skilfully planned under the inspection of the ingenious Mr. Robson, who went out in 1742 for that purpose.

" While

"While the trade of the other fettlements had been upon the decline for fome years, this place had in general held its former medium, and of late years confiderably in-Notwithstanding the advantages creafed. of fo flourishing a fettlement to the Company, their extreme parfimony would not permit them to have above one man to a gun, even in the midst of a precarious war. What folly could be more egregious, than to erect a fort of fuch extent, strength, and expence, and only allow thirty-nine men to defend it? The force which the French fent into Hudson's Bay was more than fufficient to reduce every place in the country, weakly defended as they were. This place, in particular, with fo few men, was totally incapable of withstanding the well-directed efforts of fo ftrong an armanent, especially as the depth of water in the river would admit the largest ships to lie very near the Fort; and bombs may be used with great effect.

"Notwithstanding the Governor must have been sensible of his inability to make an (142)

an obstinate defence, his conduct was in some respects highly reprehensible. In the first place, he should have fent an express to York Fort, over land, by the Indians, with information of an enemy's arrival. Had he done fo, the people at that fettlement would have had five days more at leaft to prepare themfelves for fo unexpected an event. Secondly, he should have destroyed the papers of the master of the floop, who was then to the Northward upon a trading voyage. By the possefion of these papers, the enemy acquired a complete description of York Fort, with an account of its weakness on the land fide, which induced them to try their fuccefs that way. Thirdly, his timidity in quietly fuffering a known enemy to be founding the river, as it were, under his nofe, without opposition, was not, I think I may venture to fay, confistent with that fortitude which ought to actuate a Briton, in the fervice of his country.

(143)

REMARKS and OBSERVATIONS made in the Inland Parts of Hudson's Bay during Four Years Refidence in those Unknown Regions.

In June 1783, I landed at Quebec; and in May 1784, I left the city of Montreal, to penetrate into the interior parts. This we did in canoes made of birch-rind, of about four tons burthen each, and navigated by eight Canadians, who are, without doubt, the beft qualified for this very laborious navigation, which is continually obftructed by fhoals, rapids, and the moft tremendous cataracts. In about one month we arrived at the falls of St. Mary, which form a junction of the lakes Superior and Huron.

As the fur merchants in Canada began to be alarmed this year, on account of the partition line eftablished by the late peace, apprehending that the key of the interior country, fituated on the bottom of lake Superior,

(144)

perior, would thereby fall within the American boundary, I was pitched upon to purfue an unknown tract in order to explore another paffage into the interior country, independant of the old one known by the name of the Great Carrying-Place. I accordingly fat out for that purpofe, and fucceeded in my expedition much to the fatisfaction of the merchants; but as the Americans have not yet been able to obtain poffeffion of thofe Western posts on the lakes, ceded to them by the late peace, the traders fill continue the old route.

When the goods arrive at the Great Carrying Place, they are embarked in Canoes of fmaller dimenfions, the navigation being ftill more intricate; and here they meet the winterers who are returning with furs traded in the courfe of the preceding winter. Not lefs than one thoufand Canadians and Europeans are employed by the merchants in this bufinefs, who are incorporated under the firm of the North-Weft Company, befides perhaps as many more who go to Detroit on the fur trade, and return to Montreal with beaver beaver skins, deer skins, &c. to a great amount. Upwards of four thousand packs are produced from the whole trade annually, which confumes a great quantity of British merchandize, of the most inferior quality, and which perhaps would hardly find a market elsewhere.

In the following remarks on the inland parts, a great fimilarity will be found between the Indians living on the coaft of Hudfon's Bay, and those inland, termed the Nehethawa Indians: in fact they were originally the fame people, but as numbers have receded from the fea coast to partake of a more fruitful clime, they have fuffered fome alteration in their manners and customs.

Of

(146)

Of the FACE of the Country, its Soil, CLIMATE, and NATURAL PRODUC-TIONS.

I paffed the winters of the years 1784, 1785, 1786, and 1787, on a large river, which empties itfelf by many branches into that lake which is laid down in maps by the name of lake Bourbon. This lake was improperly fo called by the French, when in pofieffion of Canada; but its real name is the Cedar lake, and it is thus named by the Indians, on account of that kind of wood being found thereon.

In the year 1787, when the following remarks were made, I winter'd in the computed latitude of 55 deg. N. and Latitude 120. deg. W. from the meridian of London. I cannot fufficiently lament the opportunity I have loft of giving to a certainty the geographical fituation of the place, for the want of neceffary inftruments. As this cannot be repaired, I must endeavour to compensate for it by communicating such facts as as have come to my knowledge, either thro' the channel of perfonal experience, or confidential information.

The course of the river was nearly east, and I wintered about feven hundred miles above its discharge into the cedar lake. Its current is very regular, and in the whole diftance, we have but one place where the paffage is in the least impeded by rapids; and even this place is very trifling, and eafily paffed with proper care. Every part of this river, where the channel is wide, is much incommoded by fand banks and fhoals. The fhores and bed of it are muddy, and confequently the water is very dirty. What I have often thought worthy of obfervation during my flay here, has been the very fudden and rapid rife of the water in the river during the fummer months, and this without any apparent caufe, or extraordinary rains. In the Summer of 1786 I observed the water to rife ten feet perpendicular in the fpace of twenty-four hours; thence it fubfided gradually to its usual height; and then rapidly rofe as before. This rifing of the water drowns all the Country about the bottom

(148)

bottom of the river, where the banks are uncommonly low; and it frequently happens, that the people who navigate the traders canoes are obliged to fleep in them, for want of a place to put afhore.

This river has feveral kind of fifh in it, and flurgeon in the fpring of the year are in great plenty. Its diffance above us is not known; but by Indian information, we learn, that it is formed from a great number of fmall rivers which iffue from an extraordinary ridge of Rocks, called the Stony Mountain.

This mountain is the moft remarkable place in the country, and appears to be the barrier between the Indians that trade with us and those who trade with strangers on the other fide. I have been told that it is seven days journey before you arrive at it. We are unacquainted with its extent at prefent, but it seems to have a North and South direction. It is faid that all the rivers on the East fide of the mountain have an easterly course, and those on the West fide take a westa wefterly courfe; the latter must evidently fall into the South feas.

About two hundred and feventy miles below where I wintered, or about four hundred and thirty miles from its mouth, two branches unite in one; of thefe one is called the South branch, and the other the North branch. As I am the best acquainted with the latter, 1 confine myfelf particularly to it in this defcription.

I must not omit one particular relating to this river, which is the great quantity of Coal conveyed down by the current. I am of opinion that abundance of this mineral must be in the country above us, as a perfon once brought me down a piece he had taken from the earth, where it was piled up in heaps. And it was in every respect fimilar to that brought to London from the North of England and Scotland. He told me that he asked the Indians the use of it; and on their expreffing their ignorance, he put fome of it in the fire which burnt violently to their great aftonishment. However, plenty it may be inland, it is certain there is K no

(150)

no want of it near the river, from the great quantity left on the shoals. What other treasures may be concealed in this unknown repository, or what valuable ores may be intermixed with the coal, I will not take upon me to determine.

All the lower country near the river for a confiderable diftance, affords no other wood than willows, and a few fmall poplars. The land is exceeding marfhy, and abounds with all kinds of aquatic birds in the fpring and autumn. Higher up, the banks of the river are fteeper, and pines become frequent, which are intermixed with a few infignificant elm and birch trees.

All these countries are well stored with moofe, beavers, otters, &cc. but the red deer, jumping deer, and buffalo, are not to be found till you are confiderably higher up the river, where the country becomes more open, and fo free from woods, that in many places fearce a fufficiency can be procured to make a temporary fire for travellers, who are obliged instrate thereof to use buffalo dung. During the winter, distant journies become dangerous, as the the tempestuous weather often raises fnow drifts. Difficulties arising from thence are not to be obviated by strangers, but the natives feldom meet with any accidents through these obstructions, their innate knowledge of the country guiding them unerringly to the spot they would wish to reach.

Many fpacious lakes are to be found in the inland parts. Most of these abound with fish, especially when joined to a river; but the natives seldom or never look after them, and the greater part of those Indians who came to our settlements to trade, will neither eat fish, water-fowl, nor any amphibious animal.

How far the foll of this boundlefs country may be favourable to the culture of vegetables, I am not enabled to advance. Experiments, which fhould be our only guide to knowledge in thefe matters, never having been much made ufe of: but if the opinion of an unexperienced perfon, could be of any weight, I think I may venture to fay, that many. parts would admit of cultivation. K 2 The The Hudson's Bay Company fervants have tried Indian corn and barley, by way of experiment, which came to perfection; Potatoes, Turnips, Carrots, Radishes, Onions, &c. have been lately reared, and found as good as those in Canada; and indeed, in forming a comparison between the two countries, the advantage feems to incline to the one I am describing. It is true we are fituated a few degrees more to the Northward, and about fifty degrees to the Weftward of Quebec, but in the four years experience I have had, I have not yet found a winter fo fevere, as one I paffed near Montreal, where the weather is generally fomething milder than about Quebec. The cold fets in, and the river ice breaks up, much about the fame time as it does there.

The fruits which fpontaneoufly fhoot up, are not in fuch great variety in the wilderneffes of Canada, as in the country I am fpeaking of. The natives collect vaft quantities of a kind of wild cherries and bring them in for fale. The Hudfon's Bay people make an excellent beverage of them, which is grateful to the tafte, and is an excellent antifcorbutic. Rafpberries, ftrawberries, currants, cranberries, and an infinity of other kinds which I know not the names of, are to be found every where. So that a perfon, without the help of ammunition, may in the fummer feafon procure a very comfortable fubfiftence, were he bewildered, and alone. Should any one be in this fituation, almost every pond of water would furnish him with eggs of ducks, &c. and every thicket with a fatiety of delicious fruit.

In vallies and humid fituations, the grafs grows to a great height, which fattens our horfes in a fhort time; but the buffalo ufually makes choice of hilly, dry ground, to feed on, the blades of grafs on which are fmall, fhort and tender. When a numerous herd of these animals stay any length of time in one place, the ground is absolutely barren there for the remainder of the seafon, the grafs being eat off as close as if shaved with a knife.

It

It may not be amifs in this place, to mention fomething of the fnakes and frogs, which take up their refidence in the ponds of this country. Thefe ponds become putrid after a long drought. The fnakes are of a green colour, with longitudinal white lines from the head to the extremity of the tail. They are fo very inoffenfive, that the Indians frequently play with them, and will tie them in knots round their necks, Whether thefe reptiles, like the frogs, lie in a torpid ftate during the winter, I cannot fay, but I have frequently found their fkins dried by the fun, which were hollow, but in other refpects they were complete.

The frogs refume their existence and faculties in the month of May; when the genial warmth of the fun invigorates them afresh. At this time they vent forth a most hideous croaking, day and night, and they are particularly chearful in rainy weather. The appearance of the frogs gives name to the month of May among the Nehethawa Indians.

The

The climate is very perceptibly milder here than in the parts on the fea coaft. The fnow is not half fo deep, neither are the hottest days in fummer fo fultry. On the other hand, the animals in the upper country are not fo liberally fupplied with warm cloathing, as those of the lower country. The martins and other peltries of course are not fo valuable. Nature, who fupplies all her children according to their feveral necessities. makes a wide difference in the covering of the brute creation, proportioning it to the feverity of the weather they have to refift; even the partridge in the lower country is not neglected; his legs and feet being covered with feathers in the fame manner as the body. If a man is frozen in the upper country, it is owing to his not having taken proper care of himfelf; whereas upon the fea coaft, with every necessary precaution, a man will frequently have his nose, face, or finger-ends skinned.

The heavens, in cold winter nights, do not exhibit that luminous appearance, which, as before remarked, is observable on the sea K 4 coast;

(156)

coaft; nor do the ftars fhine with that refulgent luftre. The Aurora Borealis is not fo common nor fo brilliant; the Parhelia and Parafelenes are lefs frequent. Fogs in the winter, are unknown; whereas upon the coaft, the fun will be obfcured for weeks together; and every tree, &c. to leeward, will be encrufted over with this unwholefome effluvia, which the cold converts into rime.

In fhort, the two countries will admit of no comparison: one is temperate and healthy, the land is dry, pleafant, and fertile in fpontaneous productions, and the animal creation is various and excellent for the fupport of man: in it, a perfon who could live retired, might pass his days with ease, content, and felicity, and if he did not enjoy an uninterrupted state of health, it would not be the fault of the air he lived in.

On the other hand, the lower country is one endless bog, where the favage animals themfelves are fometimes constantly swampt. The The fineft fummer's day will begin with a foorching heat, and terminate with a cold eafterly fea fog. The weather ufually incident to autumn and midfummer, is experienced in their different extremes during the fhort fpace of twelve hours. The inhabitants frequently fall a prey to the feverity of the froft. The whole country furnishes but one fpecies of quadruped fit for the fupport of man; and the Europeans are accurfed with an afflicting epidemical diforder, which they very emphatically term the "The Country Diftemper."

Of the ANIMALS, &c. of this Country.

A Defcription of the BUFFALO, and BUFFALO POUND.

OF all the numerous tribes of quadrupeds in this extensive country, the Buffalo undoubtedly merits a primary description; not only on account of its being the most numerous, but likewise for the great utility every every part of it might be converted to, if ever this tract should be established.

From the nofe to the root of the tail, a full grown male is about ten feet long; the hair on the back is of a brown colour, but on the legs, neck, and head is inclinable to black; from the lower lip, to the breaft, a tuft of hair hangs down about a foot long; on the hinder part of the neck is an exuberance of flefh, or hunch, which is efteemed the moft delicious part of the animal, and which much augments an appearance that is at beft moft hideous.

The male Buffalo is exceeding ferocious when wounded, efpecially in the copulating feafon, and frequently proves fatal to the Indians themfelves. They herd together in those space space plains, which it is probable extend to the South Seas. The female admits the male in July, and brings forth in the month of March or April following. The horns are black, curved inwards, and about a foot long; they fometimes fall off from the old females, but the males retain them them to the laft. The weight of a full grown male is about one thousand pounds English, and the flesh, at least of the Cows, equally esteemed with our European beef. The old Bulls have no hair on them fummer or winter, for which reason they seek the woods; yet are nevertheless fometimes frozen in severe seasons. Altogether, the Buffalo is of an appearance truly frightful; the Bulls in particular; which the great quantity of hair about the head, and the hunch contributes much to augment.

Should this inland country ever be eftablifhed, and manufacturers fettled therein, every part of this animal would turn to account: as for tallow, hides, hair, horns and hoofs. They might alfo be tamed to the plough; and that with the greateft facility, by taking them young in the month of April or May, which a man who is fwift of foot may do without the affiftance of a horfe.

The

(160)

The Buffalo Pound.

The Indians have various ways of killing the Buffalo; one of which is by cautioufly approaching them when feeding. The hunter upon this occasion lies on his belly, and will fometimes fire his gun forty or fifty times without raising the herd. They also purfue them on horseback, and shoot them with arrows and guns. But the means by which the greatest numbers are taken, is by making a pound, which is constructed in the following manner:—

" They are either of a circular or fquare form, and differ according to the manner of the nation by whom they are made. The fquare ones are composed of trees laid on one another, to the height of about five feet, and about fifty on each fide of the fquare. On that fide at which the animals are intended to enter, a quantity of earth is laid, to the height of the conftruction, fo as to form a hill of an easy ascent of about twenty feet. This done, a number of branches of trees

Plan of a Bulfalo Pound. South Lefar In just AT W K-7 La silli

Paus 160

• · • -.

trees are placed, from each fide of the front, in a strait line from the raifed hill, for about one hundred feet in length, continually increafing in width, fo that though the inward ends of these lines of branches are no more more than fifty feet afunder, the exterior end will exceed two hundred feet. After this, a number of poles, nearly fifteen feet long each, are placed at about twelve feet diftance from each other, with a piece of Buffalo dung on the top, and in a ftrait line from the boughs abovementioned. At the foot of each pole a man lies concealed in a Buffalo fkin, to keep the animals in a ftrait direction to the pound. These poles are placed alike on each fide, always increasing in breadth from one fide to the other, and decreafing in the fame proportion as the animals approach the pound. Every preparation being now made, three or four men fet off on foot to find a herd of Cows; for the Bulls they think not worth their trouble. These they drive easily along, till they arrive within the vicinity of the pound, when one man is difpatched to give notice to the other Indians, who immediately affemble on horfeback on each fide the herd, keeping

keeping a proper diftance, for fear of frightening the animals. By this means they are · conducted within the exterior line of poles. It frequently happens that they will endeavour to go out; to prevent which, the men who are placed at the foot of each pole, shake their fkins, which drives the herd to the oppofite fide, where the others do the fame: fo that at last they arrive at the pound, and fall in headlong one upon another, fome breaking their necks, backs, &c. And now the confusion becomes fo great within, that though the height of the building shall not exceed five feet, none will make their efcape. To elucidate this description of the Buffalo-Pound. I have roughly iketched the annexed diagram.

The Moose.

This animal is numerous, according to the fituation of places they frequent; and mountainous land is ufually made choice of by them. The hair is inclinable to black. The full-grown Moofe, is about the fize of a large horfe, with lofty palmated horns, which fall fall off in December or January. They engender in the month of September or October, bring forth in May, and have from one to three at a birth. The Moofe eats no grafs, but fubfifts chiefly on the young branches of willows and poplars. They are not very plenty in the parts I have defcribed, and it is but feldom that above two are met with in one place. The meat of the Moofe is juftly efteemed for its excellence.

The RED DEER.

The Red Deer is next in fize to the Moofe, but it is not equal to it in its delicious flavour, on account of the peculiar quality in the fat, which turns cold fo very faft, that a perfon muft eat it the inftant it is taken from the fire; and even then the mouth is fometimes lined with a greafe of the confiftence of tallow. The hair is of a reddifh colour. The rofe buds are much efteemed by the Red Deer, which, with young willows, poplars, and grafs, conftitute its food. The female receives the male, and brings forth at the fame time with the Moofe, and produces

(164)

produces one and fometimes two at a time. The horns are not palmated like that animal, but are round, branched and lofty, and fall off in March. Thefe animals are very numerous in most parts of the country, and they affociate in herds; it is not uncommon to find five or fix hundred in a place, but they are not to be met with in the open spacious plains where the Buffalos refort.

JUMPING DEER.

This animal, though not half the fize, of the Red Deer, is not the smallest of the species. The one under defcription receives its name from the fingular manner of its courfe; this is by a continual fucceffion of jumps, which they perform with amazing celerity, fpringing at the diftance of fifteen or fixteen feet at each jump. It is a fmall clean-made animal, exceeding lively and gay, and is of a brown colour intermixed with grey hairs. Its food confifts of grafs, of the fallen leaves of the poplar, the young branches of different kinds of trees, and the mofs adhering to the pines. The horns are about two feet long, and refemble those of the preceding animal.

animal, except in fize; they fall off in the month of April. This handfome animal ruts in November, brings forth in May, and has one and fometimes two at a birth. It is needlefs to add that the flefh is delicious. There are two kinds of the Jumping Deer, one of which has a very flort tail like the reft of the fpecies, whereas the other kind has a tail about a foot long, and covered with red hairs.

Арія-то-снік-о-внівн.

I am not fufficiently converfant in the fcience of Zoology to give this beautiful animal its proper name in the English language; perhaps it has never yet been defcribed in natural history. The French people refident in these parts, call it the CUBLANC, from a white mark on its rump. A more beautiful creature is not to be found in this or perhaps any other country. Extreme delicacy of make, and exact similarity of proportion, are observable in all its parts. No animal here is fo fwift of foot : not the fleetest horse or dog can approach it. They herd together in L large

(166)

large droves, but fometimes three or four only are found in a place. Its horns are not offified like the other fpecies, nor are they branched. Both male and female have them, but they never fall off: they refemble more the horns of the Goat than those of the Deer fpecies. They feed upon most kinds of grass, and the tender twigs of trees. The whole length may be about four feet and a half; the legs are white and slender; the reft of the body of a light red, with a white fpace on the rump.

At the Stony Mountain and parts adjacent, other cornuted animals are found which are entirely unknown to us here. People that I have converfed with on this fubject, who have been there, defcribe a kind of Goat; and alfo an animal which refembles our Sheep, the horns of the male of which bear a great fimilarity to those of the Ram. I have feen large ladles made of these horns, fome of which would contain two quarts of water. Without doubt, if the inland parts were explored by a perfon of ingenuity, many useful diffeoveries might be made in every branch of Nature's operations, as well relating ing to the vegetable as the animal world; but unfortunately those mercantile gentlemen who have hitherto been sent into this Terra incognita have been so very intent upon the pecuniary emolument, arising from the trade they are engaged in, as intirely to neglect every effort to obtain a knowledge of the country and its productions; though such an undertaking would be attended with little or no expence, and would certainly redound much to their honour, if not to their profit.

Having given a brief account of fuch of the four-footed tribe as contribute to the fupport of the inhabitants of the country, it will be neceffary to mention the carnivorous animals to be met with; as alfo the amphibious ones. Under the former head we have Bears, two fpecies of Wolves, Lynxes, Foxes, Wolverins, &c. but as thefe have frequently been very particularly defcribed, I fhall give but a concife account of each, viz.

BEARS are of three kinds;—the black, the red, and the grizzle Bear. The former is the leaft offentive, and, when taken young, L 2 the

the most docile and fusceptible of kind usage. As to the other kinds, their nature is favage and ferocious, their power is dangerous, and their haunts to be guarded against. The numbers of maimed Indians, to be feen in this country, exhibit a melancholy proof of their power over the human species. A Canadian, laft fummer had his arm lafcerated in a dreadful manner by one of these destructive animals: yet if a man is mounted upon a good horfe, he may attack one with fuccess; nor will they always fall on a perfon unprovoked. They feed upon berries, roots and flesh. In fummer they travel about, but in winter they live in a state of inanimation in some recefs under ground, and fuftain nature by fucking their paws.

WOLVES are exceedingly numerous in this inland country; where they find a plentiful fubfiftence from the carcafes of wounded Buffalos, and others which are left and killed by the natives. They are taken in traps and fnares. The Indians likewife fhoot them in the following manner: A Buffalo being killed, and cut in pieces over night, the Indians

dians appear at the place the next morning on horfeback, where they find the Wolves to over-gorged with eating, as to be incapable of retreating, fo that they become an eafy prey to the hunters. The Wolf is very voracious, and will confume an enormous quantity of food in a fhort time; but then he will go a confiderable time without any kind of fubfistence whatever. The skin becomes in feafon about the beginning of December; and the winter hair begins to fall off about the latter end of March, after the feafon of copulation is over. They are not fo large as those found on the fea shore at Hudson's Bay, nor are their fkins fo well covered with a warm fur. The Wolves are poffeffed of much cunning and addrefs in procuring food : in particular they will chace the Red Deer in a direct course to a precipice, when that creature being on full fpeed, and not forefeeing its danger, falls down with great force, and is inevitably killed, or prevented from making his escape.

LYNXES are fometimes met with in the upper country, but fo rarely that I cannot with L 3 any any propriety rank it among the quadruped inhabitants of it.

Foxes are not found here in fuch plenty or variety as on the fea coaft, and it is needlefs to add, that the fur is of an inferior quality. There is a fpecies of fmall Red Foxes here which is not an inhabitant of thefe frigid regions. They fubfift on mice, and any kind of carrion which the fagacity of their fmell may guide them to. The fœcundity of the Fox is remarkable, notwithftanding which, they are not numerous.

WOLVERINS are fcarce in these parts. This beaft is as much addicted to peculation and cunning as any of the carnivorous animals whatever. He chooses rather to attempt the destruction of the trap than to enter into it. No Indian hoards of provisions are secure from his discovery. He ascends trees with the greatest facility; and if he is not able to destroy the whole of the repository, he will hide the rest in as many places as there are pieces in the hoard.

I juft

I just mention these animals, rather to fignify that they are natives of this country, than to attempt a description of them, which is already well known. For the same reason it is necessary to add, that the Fisher, Martin, Mink, Badger, American and Alpine Hares, Ground and Wood Squirrels, Ermines, Musk Rats, &c. are found here.

The amphibious animals are Beavers and Otters. The ingenuity of the former in building their houses, stopping the current of rapid Creeks, and felling large trees, cannot be fufficiently admired. The Beaver is of a very docile difpolition, and when taken young and properly brought up, may be made to difcover a very faithful and affectionate regard for his keeper. I once poffeffed a young male which, after a month's keeping, would follow me about like a dog; and when I. had been absent from him for a couple of hours, he would fhew as much joy at my return as one of the canine fpecies could pof-It was embarked on board a fhip fibly do. in Hudson's Bay, and arrived in England; but L 4 was

(172)

was foon after killed by an Efquimaux dog, which was likewife fent home as a curiofity.

BIRDS local and migratory.

Those who winter with us, are a few species of the Hawk and Owl genus, the Butcher-bird, the Magpye, and Raven, the Pheasant and two kinds of Partridges: but where I wintered we had not any of the Ptarmigans which are so numerous on the sea-coast of Hudson's Bay. A few of them are however to be found more to the fouthward, though of a diminutive fize.

The country being fo well flored with animals of the larger kind, to fupply its inhabitants with food, it is but feldom the feathered game are diffurbed. Notwithftanding which they are far from being numerous: and what is very remarkable, and exhibits at once the foftering hand of the God of nature, is—That in those parts of the country, where the larger animals are the most rare, Partridges, Rabbets, &c. are in the greatest plenty; whereas in those parts where the

¥

(173)

the Moofe, Deer, and Buffalo are innumerable, fearce any are to be found.

In the month of April birds of paffage begin to vifit these countries. Of the migratory tribe the Eagle is the first seen, and from which the month of March takes its name among the Ne-heth-aw-a Indians.

There are two fpecies of fwans. Geele are in all the variety to be found in any other country; as the large Grey-goole, Canada Geele, Snow Geele, Laughing Geele, &c. Ducks, Loons, and every other kind of aquatic birds that are to be met with in America, are likewise found here.

An ornithological defcription of these different species would not only intrude upon my daily avocations, but is an undertaking to which I candidly acknowledge my abilities are not adequate. All I have proposed to myself in committing these remarks to paper, is to inform those who wish to be informed, that the inland parts of Hudson's Bay is a fine country ;—is amply supplied by nature

(174)

Nature with most things fufficient for the fupport of man and beaft, either in a wandering or fettled state,-and that it is a part of the world which has long, too long, been neglected by those whose duty to their country, ought to have urged them to explore it. If this had been done, manifold would have been the advantages which would have refulted from their laudable refearches. Had this been done, the diftance to the fouthern ocean long e're this might have been afcertained ;---alliances have been formed with unknown nations of Indians;-the productions of the country been known;—and perhaps the certainty of a north-weft paffage developed.

Among the birds of paffage, who vifit us in the fpring are many of the fmall vocal kind; which for beauty and diverfity of plumage, and the fweetness of their notes, may vie with those of more hospitable climes. many of these little fongsters I have never feen any where else. I believe we have feveral non-descripts, and perhaps fome which are peculiar to this country in the fummer. Among (175)

Among the rarely-found birds here, the Humming Bird deferves a place.

FISH.

All the fifh we were able to procure in the winter were caught in lakes, but in the fpring of the year, the river is known to abound with exquisite Sturgeon. Thofe taken in the lakes were Jack, Guiniads, Perch, and a very bony fifh termed by the English in these parts a sucker; all which are excellent in their kinds. The method of fishing in the winter feason, when nature is bound up by the durable chains of intenfe froft, is by letting down a net under the ice, which is done without much difficulty, even though the ice fhould be fix feet thick. An excellent fish in taste, and in appearance much like a Herring, was caught in the river with a hook and line in great numbers. On the whole, fifh are not fo numerous in the inland parts, as in those waters which join to the fea: however, if the finny creation are fcarce, nature has made up for this deficiency

deficiency by fupplying a redundancy of the larger animals, which furnish both food and raiment for the inhabitants of the country.

Of the Indians, their Customs, &c.

The Indians who come to our Tradinghouses in the parts before described, are the only ones we have any acquaintance with, and even our knowledge of these, it must be owned, is very imperfect. Those who have hitherto resided here, have been too much actuated by the impetuous desire of accumulating wealth, to allot a small portion of their time to the advancement of useful knowledge, and indeed, to speak the truth, I have not yet met with one who had any more ingenuity than inclination to apply himself to a subject which had no immediate profpect of advancing his pecuniary concerns.

On the other, or western fide of the Stony Mountain are many nations of Indians, utterly unknown to us, except by Indian information, which we cannot enough rely on to

(176)

to justify us in advancing for facts, what may, perchance, be founded in error and misrepresentation. All I can say for certainty is, that a principal nation of these Indians is known to us by the name of the Snake Indians. That all the other Indians we have received an account of go to war against them every fummer. In these war excurfions many female flaves are taken, who are fold to the Canadian traders, and taken down to Canada; contrary to the maxims of the Hudfon's Bay people, who never buy them nor give any encouragement to this kind of traffic. It may be faid that this commerce encourages the Indians to make war on each other for the fake of felling the captures: but this is not the cafe. It is no more in the power of the traders to hinder them from going to war, than it is of the Governor of Michilimacinac, who does all in his power annually to prevent it: and as for. the captives they are rather happy in the change than otherwife; for if the conquerors had no profpect of making a profit by them, they would be all killed when taken; but by being conveyed to Canada they are taught the

the principles of religion, and become useful members of fociety.

That there are European traders fettled among the Indians from the other fide of the Continent is without a doubt. I myfelf have feen horfes with Roman capitals hurnt in their flanks with a hot iron. I likewife once faw a hanger with Spanish words engraved on the blade. Many other proofs have been obtained to convince us that the Spaniards on the opposite fide of the Continent make their inland perigrinations as well as ourfelves; but I have have been told by one of these flave women, that it is not peltry they come principally in queft of.

Those Indians from whom the Peltries are obtained are known to us by the following names, viz.

> The Ne-heth-aw-a Indians: The Assime-poetuc Indians: The Fall Indians. The Sussee Indians. The Black-feet Indians: The Paegan Indians: The Blood Indians:

(179)

Of the NE-HETH-AW-A Indians.

This is the name they give to themfelves, and their language. They are fcattered over a very extensive country, for which reason they do not appear to be numerous, but were the different tribes to be collected, this nation would hold much greater influence among the others than they feem to do .---I am of opinion, that the Ochipawa Indians, defcribed by Carver, and inhabiting the countries to the fouth-eaftward, fprung from the fame original flock with the Ne-hethaw-as. The great affinity of their language feems to confirm this conjecture; for a perion acquainted with the principles of one language, can without difficulty make himfelf understood to those who speak the other. These two nations have always been in strict alliance with each other, and many of the Ochipawas live in a promiscuous manner among the Ne-heth-aw-as, and upon very friendly terms with them, their country being infinitely fuperior to many of their northern neighbours, who inhabit a much colder track, and are poor in the extreme.

Of

Of all the different nations in these parts; whom the Europeans have found out to vend their commodities to, the one under defcription is become the most familiar. Their country being the loweft down on the river I have mentioned before, they have been the longest acquainted with us, and confequently they are the most debauched, inervated, and corrupted. For, as I have more than once observed, we have hitherto wofully experienced that the favage race have always acquired more bad qualities than good ones from their intercourfe with Europeans.----This nation in particular become annually more difficult to deal with. Fraud, cunning, Indian fineffe, and every concomitant vice, is practifed by them, from the boy of twelve years of age, to the decrepid and infirm old man of four-fcore. Nothing is more applauded by them than fuccefsful peculation: Drunkennefs and theft are diftinguished accomplifhments among all the nations; but this people stands foremost as the most degenerate.

It must, however, be understood, that the foregoing general outline of the Indian character

(180)

racter relates more particularly to their overreaching in trade; for where that is not concerned, you will find inftances of honefty and fidelity among them which would do honour to a people governed by the wifeft laws, and reftrained from the commission of every enormity by the force of religion.

If the Savage commits murder, robbery, or any other crime of an injurious nature, the pangs of a guilty conficience may probably upbraid him with the perpetration of the fact; yet he is fo far from fearing corporal danger from that fociety whole peace he has difturbed, that he will range through the wilds of a pathlefs country, and feek a fubfiftence in whatever part he chooles, without fear of retaliation; for the country being extensive, he finds out a fpot to live in unmolefted, . where the offended party cannot, or dare not, go in queft of him:

This instance of Savage liberty is just mentioned to exemplify to us that though the Indian is guilty of taking away the life of a fellow creature, though he glories in the commission of dexterous thest, and will with-

out

out remorfe exercife every injuftice on his neighbour with impunity; yet, as he is not reftrained by divine or human laws from thefe acts of outrage, nor does the idea of temporal and eternal punifhment excite compunction in his mind, furely thefe enormities are not of fo deep a dye as if committed by a man, whofe mind is enlightened, and who is fuppofed to have a more juft fenfe of the claims of fociety and the injunctions of religion.

As I cannot too deeply imprefs the idea, I must again repeat that the greatest pest ever sent into any country to render miserable its devoted inhabitants, never could exceed the destructive introduction of spirituous liquors among the Indians. Almost every imperfection of their natures, and every misery they undergo, may be traced up to this baneful fountain. It is, during the time of inebriation that the murderer lifts the bloody knife, or tomohawk, against the parent or friend; it is, during this temporary madness, that long-passed injuries and forgotten jealousses are recalled from oblivion; it is during this fatal intoxication, that orphans and widows

are

are made friendlefs, and the only fupport of a large family laid low in an inftant. Their unconquerable attachment to fpirituous liquors keeps them in endlefs poverty; for to obtain it they even fell the miferable cloathing off their backs.

It is to be lamented that this evil feems rather to gain ground than otherwife; and can never be effectually remedied, but by the concurrence of the Traders conjointly. It would certainly be a laudable undertaking; and the advantages reverting to themfelves from it would be manifold. Their property and fervants would be more fecure, the Indians by increasing in numbers would procure a greater quantity of skins, and the wars which usually subsist between the different Tribes, would be less frequent and bloody.

As a remarkable inftance of the honefty and fidelity which is yearly experienced from thefe Indians, Imention the following.—TheHudfon's Bay traders who take up goods into the interior parts, annually, have occasion to employ Indians, as well in carrying up the ar-M 2 ticles (184.)

An Indian with his wife will embark in his canoe four packs or pieces of fixty or feventy pounds each; which he takes down through rivers and lakes unfrequented, and known perhaps only to himfelf. In doing this it often happens that no other cance is in company, and he confequently has the faireft opportunity poffible of going off with the property committed to his care, which probably would enable him to live in affluence for years to come. Nor would there be any poffibility of the owners difcovering his retreat if he choofes to abfcond. And yet, notwithstanding the temptation is fo great, after a trial of fifteen years, it is a well-known fact, that not an inftance has transpired of any embezzlement being made: on the contrary, the whole of these little cargoes are delivered up with as much punctuality, as if their future welfare depended on their honefty. The only reward for this fingular fervice, which is a very confiderable faving to the Company, is the value

value of fix beaver fkins, paid for each pack or piece, and the further gratification of a fmall quantity of English brandy; which they receive on their arrival at the settlement.

(185)

The Indians in the interior country are well made, and well featured; they are of a copper complexion, and few difforted or deformed objects are found among them. Their conftitutions are naturally hale and diforders few. The Venereal difeafe is known to them, but the malady is not fo virulent as in our hemifphere, and it is eafily overcome with roots of their own difcovery which they apply themfelves. I have not yet heard of any dying of the diforder. They are more inclined to be of a lean habit of body than otherwife; a corpulent Indian is a much greater curiofity than a fober one. This may in a great measure be imputed to the wandering flate of life they lead, which requires much action, and frequent change of fituation.

They are very friendly to those who act with propriety towards them; especially when far distant from the Trading-houses. M 3 Every Every winter the fervants of the Traders will be fcattered all over the country among different bands, and come in to their employers in the fpring, without the least violence being offered to their perfons or effects.

An Indian's drefs is composed of a pair of flockings made of leather, dreft fine and pliable like shammy; a fort of loofe jacket, with fleeves of the fame kind ; and over all he throws a dreft Buffalo skin or a blanket. The hair of the young men is tied in different forms, and their faces fometimes painted according to their different fancies, but the men advanced in years, feldom paint their face, or tye their hair. The drefs of the women differs not very materially from that of the men. When they can get cloth, they make a pair of fhort flockings of it, alfo a kind of close coat and fleeves of the fame, with a blanket or Buffalo fkin over all. Caps are very feldom worn either by male or female ; but a dreft Fisher or Otter skin is frequently put round the heads of the men, the major part of which hangs down the back.

The

The young men employ the greatest part of their time in the care of their horses, and in dress and play. The country being so fuperabundantly supplied with animals for food, little of their time is required to procure it. In the summer season they either go to make war on their enemies, or stay at home in a state of ease and inaction.

In their war excursions, the old men, women and children stay behind in a place of fafety; while the younger part of the tribe cautiously approach the confines of their enemy's country. During their approach they make no fires, for fear of their adversaries difcovering the star of their adversaries difcovering the star of their adversaries difin the night than in the day, that the darkness may favour their attack.

When the encampment of the enemy is difcovered, they lie in ambufh for the remainder of that day, and when they fuppofe all wrapt up in fleep, the flaughter is began with a ferocity that Indian fury could alone infpire. Men, women and children all fall promifcuoufly to fatiate the warrior's revenge, and M 4 compendate compenfate the loss of deceased friends; none are spared but young girls, who are taken captive and fold to the Canadian Traders, and become thereby more happy than their flaughtered parents had ever been.

Notwithstanding the warrior uses fo much addrefs to find his enemy unprepared, yet it fometimes happens that he is difcovered, and a fafe retreat becomes impracticable. In this dilemma both parties fight with great bravery, each fide being provided with coats of mail, made of many folds of dreft leather, which are impenetrable to the force of arrows : they have also shields, made of undrest Buffalo hides, which they shift about in the time of action with admirable dexterity and skill. If but one man is killed, the engagement is at an end, and the lofing party betake themfelves to flight, to lament their lofs at leifure. Some campaigns are wholly employed in stealing horfes, and in committing depredations on each others property; but the invader often pays with his life for his temerity.

Their

Their horfes are of great fervice to the Indians in these expeditions, and are much efteemed by them. Many of the men fhew more affection for their horses than for their wives. The horfes bred here are varioufly coloured, like our English horses, and about the fize of those found in the north of Scotland and the Scottish isles. They were originally imported by the Spaniards on the western fide of the Continent, and it is but lately that they have become common among the Nehethawa Indians. Many broils and animofities among the natives, originate from a defire of being in possession of these animals. One party generally commences hostilities by stealing the horses of their adverfaries, and they in return retaliate; fo that at length a mutual refentment takes place, and war becomes absolutely necessary.

The religious ideas entertained by the Indians of these parts, like those before defcribed, appear to be very abstructe and confused. They feem to allow of a Supreme Being who dwells above, and whom they fuppose to be the author of every blessing they

they enjoy. They do not however invoke him to protect them, for they fay he is too good to caufe them any harm. On the other hand, the evil fpirit they admit of, is held by them in abhorrence and fear. They imagine that through his malevolence and contrivances, they are perpetually haunted by misfortunes; and they conceive, that he grudges them whatever they enjoy. They therefore will not partake of any thing they fet a value on, without first throwing a part into the fire for the evil fpirit. Many other fuperstitious ideas are very prevalent amongst them; but they are too fimple to merit notice. The undulating motion of the Aurora Borealis, is fuppofed by them to be their departed friends, who are rejoicing in the regions of the bleffed. From this idea they feem to have apprehensions of a future state.

The Nehethawa Indians, like the tribes before mentioned, meafure numbers by decads, as one ten, two tens, three tens, &c. and 49 would be expressed by faying 4 tens and 9, or 5 tens wanting one.

They

They divide the year into thirteen moons, which are all expressive of fome remarkable event at the time. The first moon in the following list came in on the 12th of December 1784, and was called by them Pou-arch-e-kin-e-shifth.—It is fo named

from the wind blowing the brush from the pine tree.

Ke-sha-peshem-or the Old Moon.

- Me-ke-fu-a-pefhem—or the Eagle Moon; from thefe birds appearing about this time.
- Nis-cau-peshem-or the Goose Moon.
- A-theck-a-peshem—or the Frog Moon; the frogs beginning to croak about this time:
- O-pin-e ou-wa-o-peshem so called on account of birds laying their eggs about this time.
- O-bas-ka-wa-ho-a-peihem—on account of young birds being fledged at this time.
- O-pus-ko-a-pefnem—on account of birds molting their feathers.
- O-po-ho-a-pefhem—on account of birds taking their flight about this time.

O-noch-

- O-noch-a-ha-to-a-peshem—on account of all the animals of the deer kind rutting at this time.
- O-poon-a-ha-to-a-peshem-on account of the rutting feason being over.
- Cus-cut-ta-no-a-peshem—on account of the rivers freezing at this time.
- A-theck-a-peu-a-peshem-on account of the cold causing rime to adhere to the trees.

This Indian method of computing time is very palpably founded in error, and cannot be made to answer to our year, or twelve callender months, which bring round the year exactly. Whereas the Indian computation by moons falls short eleven days; confequently the moon which appeared on the 12th of December 1784, would appear about the first of that month in the following year, and fo on, having annually a retrograde motion of eleven days. Whether it be to remedy this, or, what is more probable, that they really think the year confists of thirteen lunations, certain it is, they thrust in another moon. They do not, however,

however, agree among themfelves, relative to the number of days each moon contains.

The language of these people is concise, fmooth, and infinuating; and so copious, that by one word, they will express an idea, which would require three or four words to explain it, in the French or English tongues. A sufficiency is soon acquired to make onesself understood, but to speak it with a sum propriety, requires time and attention.

Juglers and itinerant doctors are held in great reputation and reverence by the Indians, who impute to divine infpiration, the bungling performance of a few legerdemain tricks. It is not uncommon for thefe juglers to pretend to dive into the abyfs of futurity; to foretel the fuccefs of a war expedition; and very gravely to point out the place where the enemy are to be found. Thefe gentry are always possified of more property than the others, every one making them prefents for administering their medicines, which consist of a variety of powdered roots, &c. The bag in which the holy medicine (194)

medicine is deposited, is held in particular veneration, and it would be an unpardonable facrilege for any woman to touch it; for which reason the men in their journies bear themselves the facred repository.

Some of these curious performers of deception will pretend to lay eggs, and swallow wooden pipe stems, as large as walking sticks. They will tell you very feriously, that they are able to make rum, tobacco, cloth, &c. but whenever we put their dexterity to the trial, we always discovered the deception. We took care always not to let them know that we had done so, for fear of lowering them in the esteem of their credulous followers, which would have been very mortifying to the ingenious performer.

It is now time to fay fomething of the other nations in the lift; but the account I have to give must be very concise, as we are almost unacquainted with their customs constitutions, &c. Our knowledge of the Nehethawas, as I hinted before, being the most perfect; the preceding account is more particularly particularly applied to that nation. The whole of the information I have been able to obtain in regard to the reft, is too fuperficial to induce me to attempt a minute defoription of them.

Assinnee Poetuc.

This nation is thus named by the preceding one, which fignifies in their language, the Stone Indians. In the maps of North America, where the refidence of these incognita is faid to be, a nation of Indians is marked down, called the Affinneboils; and this is the name by which the Canadian French, still continue to call them. But it is a certain fact, that when the French poffeffed Canada, they never named any nation of Indians with propriety. The laft defcribed people they termed Crees; but their reason for doing fo is only known to themfelves, unlefs it was from the Ochipewas calling them Criftineaux; which may probably be the cafe.

The

The nation under description is a détached tribe from the Naudawiffees on the river Milliffippi, mentioned in Carver's Travels, who anciently feparated from the general ftock, on account of some intestine commotion. At prefent these tribes are declared enemies to each other; yet their language, from the best information, has undergone no material alteration. The Affinee Poetuc are pretty numerous, and are fcattered over a great extent of country. They bring many peltries to the traders, and are a principal fupport to the commerce. A large party of these Indians used to go down annually to York Fort on the coaft of Hudson's Bay; but fince the Hudfon's Bay and Canada traders have penetrated fo far inland, they are too well supplied with the things they want, on the spot, to perform a voyage for long, and attended with fo many inconveniencies. In those days, however, they were much better off than they are at prefent; as they, like too many other tribes, are degenerating daily, through the frequent use of fpirituous liquors, and other debeucheries.

Thefe

These Indians have always been in strict alliance with the Nehethawas.

FALL INDIANS.

This nation is thus named by us, and by the Nehethawa Indians, from their inhabiting a country on the Southern branch of the river, where the rapids are frequent. As they are not very numerous, and have a harfh, gutteral language peculiar to themfelves, I am induced to think they are a tribe that has detached itfelf from fome diftant nation, with which we are not as yet acquainted.

In this people another inflance occurs of the impropriety with which the Canadian-French name the Indians. They call them gros ventres, or big-bellies; and that without any reason, as they are as comely and as well made as any tribe whatever; and are very far from being remarkable for their corpulency.

2-22 - 22

They

(198)

They feem not yet to be initiated into the manner of hunting beavers, dreffing the fkins, and killing the fmall peltries, for they bring nothing to us but wolves, which they take by a variety of contrivances.

Though we have interpreters for all the other Indian languages, none as yet have been able to attain a competency of this to make themfelves underftood; and the general method of conversing, is by speaking the Black-foot tongue, which is agreeable, and soon acquired.

The Susee Indians.

Though this nation have a language intirely to themfelves, and which no others can learn, they are very few in number, being no more than a fmall tribe which has feparated from the main body, and now harbour in fome country about the Stony Mountain, where they keep to themfelves, for not many have as yet appeared at any of the tradinghoufes. Those who occasionally visit us are a crafty crafty deceiving fet, much given to theft and intoxication. Though their tribe is fmall, they cannot live in amity with their neighbours; for the last fummer, a number of them fell upon an encampment of Blood Indians, whom they were at peace with, and most of the men being absent, they inhumanly butchered several women and children, which it was expected would be feverely revenged the first opportunity.

These Indians are lazy and improvident; they bring us very few peltries, and those ill dreft. Wolves skins are their chief commodity. Their women are the most ordinary of any I have seen, but they are all liberal of their favours, when a person has wherewithal to pay for them. They retain a close alliance with the Nehethawas, rather to profit by their protection, than for any mutual esteem, substisting between them. Their language is equally disagreeable and difficult to learn; it rather resembles the confused cackling of hens, than the expression of human ideas; yet one of our interpreters has attained a sufficiency of it

N 2

to answes the purpose of trading with them.

The BLACK-FOOT, PAEGAN, and BLOOD INDIANS.

These Indians, though divided into the above three tribes, are all one nation, fpeak the fame language, and abide by the fame laws and cuftoms. For what reafon they are thus denominated. I have not been able to difcover, but they go by no other name among the Nehethawas. They are the most numerous and powerful nation we are acquainted with; and by living on the borders of the enemies country, are the principal barrier to prevent their incursions. War is more familiar to them than the other nations, and they are by far the most formidable to the common enemy of the whole. In their inroads into the enemies country, they frequently bring off a number of horfes, which is their principal inducement in going to war.

Thefe

(200)

These people are not fo far enervated by the use of spirituous liquors, as to be flaves to it; when they come to trade they drink moderately, and buy themfelves neceffaries for war, and domestic conveniences. They annually bring a good quantity of fkins to the traders, but a greater number by far of wolves. All these tribes have a custom peculiar to themselves, which is the cutting off the joints of their fingers, beginning with the little finger, and taking off a joint as often as superstition prompts them. I have not been able to learn for certain the caufe of this fingular cuftom, nor did I ever observe any but the old men, that had their fingers thus mutilated.

They behave very friendly to thole of our people who pals the winter with them, and none of them have as yet received any injury under their protection either in their perfons or effects. The people of this nation will eat no kind of water-fowl, amphibious animal, or fifh. Their chief fubfiftance is the flefh of buffaloes, the deer fpecies, and likewife vegetables. Their lan-N 3 guage guage is not very grateful to the ear of a ftranger, but when learnt, is both agreeable and expressive.

I have been at fome pains to procure a fpecimen of the languages of the aforementioned nations, and have fucceeded in all, except that of the Snake-Indians. The annexed table may perhaps be acceptable to those who are curious in that line. The exact orthography of the words, according to an Englishman's pronunciation, may be depended on, having received them with great care, from the mouths of the natives themselves.

It firikes me as a matter of no fmall curiofity to obferve the multiplicity of genuine Indian languages to be met with in this weftern hemifphere; perhaps not half of them are mentioned in the given fpecimen. I know of other tribes to the fouth-eaftward and northward of us, who fpeak other languages, but have not been able to obtain certain intelligence of them.

Before the fatal attack of the fmall pox, which broke out in the year 1781, all these nations of Indians were much more numerous than they are at present. By this dreadful visitation, which, as before observed, was general throughout the Indian country, it is computed that at least one half of the inhabitants were fwept off by it.

A brief ACCOUNT of the present STATE of the TRADE, carried on among the aforefaid INDIANS.

Trade with the beforementioned Indians, is carried on by the fervants of the Hudfon's Bay Company, and alfo by feveral merchants from Canada. The extraordinary perfeverance of the latter, through numberlefs difficulties, augmented by continual carrying-places, extenfive lakes, and rapid rivers, have penetrated into this diftant country in order to fupplant the Hudfon's Bay Company, who formerly divided very confiderable profits from the N 4 exclusive exclusive monopoly of this lucrative branch of trade. At prefent these profits are confiderably diminished; for while their expences are augmented in a ten-fold proportion, upon an average of former years, their imports of furs are confiderably leffened, and their exports of fundry articles of merchandize are increased, they being obliged to trade upon a higher standard than heretofore, to keep pace with their opponents, who would otherwise outsell them.

In entering on this account it will be needful to repeat many circumftances that have already been noticed. But as the further elucidation of the fubject requires it, I hope the apparent tautology will be excufed.

Twenty years ago the Governor of York-Fort, which was the Company's principal eftablifhment in the Bay, annually fent home at least thirty thousand skins, and maintained no more than twenty-five men, at very low wages; at present that place has upwards of one hundred men at it, who have increased falaries, and it fends home no more than twenty twenty thousand skins, upon an average, from itself and four subordinate settlements; and these are procured at an expence, which a few years back would have been looked upon as next to an annihilation of their commercial existence.

It is an uncontrovertable fact, that fince the French have evacuated Canada, the fur trade from the inland parts of Hudson's Bay, has been carried on to a greater extent than ever it was before; for the Company, who till. then confined themfelves to the fea-shore. knew nothing of the numerous nations inland; and these again knew as little of them: that the Company, notwithstanding they had obliged themfelves by their charter to explore the whole of their territories, confined themfelves within a fmall circle. They confequently did not exert their influence to procure peltries, or to augment the confumption of British manufactures, by any other methods than through the channel of a very few Indians, comparatively speaking. Thefe Indians however, brought down enough to enrich a few individuals, whofe intereft

intereft it was to prevent too great an influx of furs, which would not only lower the price at market, but probably open the eyes of an injured commercial people. In the days I am alluding to, the port of York Fort was furrounded with nations of Indians entirely unknown to the traders of the Company; and they would have remained in the fame ftate of ignorance to this day, had they not been awakened from their reveries by the unfurmountable perfeverance of a few Canadian merchants, who found them out, through obftacles and impediments attended with more danger and perfonal hazard than a voyage to Japan.

Since that time their affairs have undergone a material change in these parts. The Canada merchants annually send into the interior country, for the Indian trade, about forty large canoes of about four tons burthen each, a confiderable part of which goods are conveyed to those Indians who used to fend their furs down to Hudson's Bay, by the Indian carriers, which did not amount to half the quantity at present procured. So that by this inteference of the Canada traders, it it is evident, that many more peltries are procured and imported into England, and a greater quantity of its manufactures confumed than heretofore; and when it is further confidered, that these goods are of a very inferior quality, which perhaps would hardly find a fale elsewhere, this extension of the trade will appear an object not very inconfiderable.

By the profecution of this commerce from Canada, the Hudfon's Bay Company found themfelves effectually fupplanted on the feafhore, the natives being fupplied inland with every conveniency for war and domeftic uses. This induced the Company, in the year 1773, to begin their inland voyages, fo that the Canadians from Canada and the Europeans from Hudson's Bay met together, not at all to the ulterior advantage of the natives, who by this means became degenerated and debauched, through the exceflive use of fpirituous liquors imported by these rivals in commerce,

lt

It however must be owned, that the Hudfon's Bay traders have ingratiated themfelves more into the efteem and confidence of the natives than the Canadians. The advantage of trade is evidently on their fide; their men, whole honefty is incorruptible, being more to be depended upon. In proportion to the goods imported, the Company export a greater quantity of furs, and thefe in better prefervation, and confequently more valuable. Their unfeasonable parsimony has hitherto been proved very favourable to their Canadian Opponents; as the accumulated expences attending fo diftant an undertaking would overbalance the profits of the latter, if the exertions of the Company were adequate to the value of the prize contended for.

The Hudson's Bay fervants being thus more in possession of the effect of the natives, they will always have the preference of trade as long as this conduct continues. Another great advantage in their favour is, that the principal articles of their trading goods are of a superior quality to those imported ported from Canada. I would not by this infinuation infer, that the goods fent inland from Canada are not good enough for the Indian trade; no, I well know that the worft article imported is good enough; but while they have to contend with people who fend goods of a fuperior kind, they evidently lie under a difadvantage, and it is my opinion, that it would be for the intereft of the Canada merchants to fupply goods of an equal if not fuperior quality to their adverfaries, at every poft where they have thefe formidable rivals to oppofe them.

The great imprudence, and bad way of living of the Canadian traders have been an invincible bar to the emolument of their employers. Many of these people, who have been the greatest part of their lives on this inland service among favages, being devoid of every focial and benevolent tie, are become flaves to every vice which can corrupt and debase the human mind; such as quarrelling, drunkenness, deception, &cc. From a confirmed habit in bad courses of this nature, they are held in abhorrence and

(210)

and difgust, even by the Indians, who finding themselves frequently deceived by specious promises, never intended to be performed, imagine the whole fraternity to be impregnated with the same failing, and accord-, ingly hold the generality of the Canadian traders in detestation and contempt.

On the contrary, the fervants of the Hudfon's Bay Company, imported principally from the Orkney Ifles, are a clofe, prudent, quiet people, ftrictly faithful to their employers, and fordidly avaricious. When these people are scatterred about the country in fmall parties among the Indians, the general tenor of their behaviour is conducted with fo much propriety, as not only to make themfelves effeemed by the natives, and to procure their protection, but they alfo employ their time in endeavouring to enrich themfelves, and their principals, by their diligence and unwearied affiduity. Bv this prudent demeanor among the Indians, notwithstanding they have annually exposed. themfelves to all the dangers incident to the trade, for fifteen years past, they have nof

not fuftained the lofs of a man; and the principal advantage of the Company over the Canadian traders, is more to be attributed to the laudable efforts of their fervants, than even to the fuperior quality of their goods.

While the Canadian fervants are fo far from being actuated by the fame principles, that very few of them can be trufted with a fmall affortment of goods, to be laid out for their masters profit, but it is ten to one that he is defrauded of the whole by commerce with Indian women, or fome other fpecies of peculation. By this and various other means which lower them in the eyes of the natives, as before observed, they are become obnoxious to the Indians, their faith is not to be relied on, nor their honefty confided in; fo that fcarce a year elapses, without one or more of them falling victims to their own imprudence, at a time when fatal experience should teach them, that a conduct guided by caution and difcretion ought to be the invariable and uniform rule of their behaviour.

It

It must be owned, that many of these people are possible of abilities capable of aggrandizing their masters, and promoting their own welfare. They are very apt at learning the Indian languages, and acquiring a knowledge of the necessiry Indian ceremonies, as well as customs to be observed in profecuting the trade; but in the whole course of my observation, I have scarcely found one of them, who, for his abilities, honesty, integrity, and other necessary qualifications, could be intitled to the denomi-

nation of a good and faithful fervant.

It cannot, however, be denied, but that they are excellent canoemen, and labour with furprizing dexterity, and inimitable patience, in their long inland voyages; and even when their provisions fail them, they bear their misfortunes with fortitude. But at the fame time it must not be admitted that they are the only people on the face of the earth; who are capable of performing these voyages and undergoing the fatigues of them. Though fuch may be the fentiments of their employers, let these gentlemen for a while look

look round them, and furvey without prejudice the inhabitants of our own hemifphere, and they will find people who are brought up from their infancy to hardships, and inured to the inclemency of the weather from their earlieft days; they will alfo find people, who might be trufted with thousands, and who are too much familiarized to labour and fatigue to repine under the preffure of calamity as long as their own and their masters benefit is in view. I will further be bold to fay, that the prefent fervants of the Hudfon's Bay Company may be led as far inland as navigation is practicable, with more ease and satisfaction to the owners than the fame number of Canadians. The former would be always honeft, tractable, and obedient, as well from inclination, as from fear of losing their pecuniary expectations; whereas the latter being generally in debt, and having neither good name, integrity, nor property to lofe, are always neglectful of the property committed to their charge, and whenever difficulties arife, there is never wanting fome among them to impede the undertaking.

I have

O

(214)

I have been led into the foregoing digreffion, from the frequent encomiums I have heard paffed on the Canadians, as the only people for this bufinefs; but having had four years experience of the general tenor of their conduct, I thought myfelf entitled to give my fentiments on the fubject, and to fay fomething in regard to thefe Meffieurs Voyageurs.

The Canadian merchants have formed themfelves into a United Company, and carry on a very extensive business over an . unlimited extent of country, among Indians, who are hostile and declared enemies to each other; and this branch of the Canada trade is by no means the leaft valuable appendage to that province. This Company alone, without counting those adventurers who trade in the parts which be adjacent to the Miffiffipi, &c. annually procure above one thousand packs of fine peltry, each weighing ninety pounds. They find employment for a great number of men under the denomination of guides, voyagers, clerks, interpreters, &c.; befides which, they give bread

bread to a number of neceffitous artifts and labouring people about Montreal, who fubfift principally by the continuation of this commerce.

In the year 1787 they obtained out of this river three hundred and three packs.

During the fame year the Hudfon's Bay traders had twenty canoes of twelve packs each - - 240 And twenty Indian canoes carrying four packs each, at feventy pounds 80 Which were equal to two hundred and forty-nine French.

So that if the Canada traders had the commerce of this river entirely to themfelves, they would draw as much from it, as would be equal to one half of their prefent returns. The fame year the Canada merchants tranfported into the fame river fix hundred pieces of goods about ninety pounds each ; whereas the Hudfon's Bay people fent no more than two hundred and forty pieces of about feventy pounds each; which plainly points out to us O_2 the the great æconomy which is used on one fide, and the enormous expenditure on the other.

It may be urged that the plan purfued by the Canada merchants, requires a great part of their goods for the use of the men. This appears an argument of confequence; yet to obviate it, we must confider, that the difference in the force of English brandy, and what is called high wines, will more than overballance the reduction advanced to the men; for a keg of British spirits, when adulterated for service, will only make three kegs, whereas a keg of high wines when mixed for the Indian trade, will make five kegs; so that what it requires to mix thirty kegs for them, we with ours can have fifty kegs.

Since I have embarked in the Canadian employ I have frequently obferved a profule expenditure of goods made to Indians, for very frivolous ends, or more properly for no end at all; which to my certain knowledge is not practifed in the other fervice. This practice is productive of nothing, but the corruption of the Indians, and the tempoporary

(216)

(217)

porary flattering promifes of those who receive them; for, as I have already observed, the advantages of trade annually preponderates on the fide of the Hudson's Bay Company.

Those who feel the weight of this expenfive undertaking, must certainly join with me in acknowledging, that a frugal æconomy is not only commendable, but necessary, in the expenditure of their property; perhaps had this plan been pursued, some of those gentlemen who still continue the business, might at this day have enjoyed their ease and independence, by the fruits of a commerce, which has obtained for the Hudson's Bay Company the reputation of being one of the richest incorporated bodies in England.

The maxim of fuffering the Canadian traders to run fo deeply in debt, appears to be founded in error, and prejudicial to the affairs of their employers. These fellows, who are lost to every principle of moral rectitude, become loosened from all attachment to the service; they are intent on nothing but their own peculiar ease and convenience; O 3 they they are careless of the property entrusted to them, unambitious in the performance of their duties, impatient of all order and decorum, disobedient to the instructions, and insulting to the perfons, of those who employ them. They cannot be trussed in any trading party, for they will expend the goods they have with them on women and trifles, imagining themselves out of the reach of all law; and there seems to be very few worthy of truss among them, but such as have wages in their employers hands.

My good wifnes for the profperity of the Canadian fervice is fuch, that I cannot help fubmitting with all due deference to fuperior abilities, the following expedients which occur to me, but which, most probably may never be put in execution.

To make the Company truly refpectable, and at the fame time to put in it their power to render the province of Canada of greater confideration to the mother country than it is, they should be legally admitted to the rights, immunities, and privileges of a chartered tered Company; and if it were practicable, they fhould be united with the prefent Hudfon's Bay Company, as we have feen an old and new East India Company united and incorporated in one joint body of merchants. And perhaps fuch a junction might not be unacceptable to the Hudson's Bay Company, who, for fo many years, have tasted the fweets of monopoly.

I am fully perfuaded that nothing is required but intereft and proper application to bring about fome plan of this nature. The magnitude of the object would juftify the experiment; and I have no doubt but that many refpectable perfons would be found to patronize an adventure, which would put the proprietors in possibilities of a greater extent of territory than what is inhabited by all the Christian States in Europe.

I again repeat, that great improvements are to be made, and much wealth acquired from the feas about Hudfon's Bay; and likewife that full as much remains to be done inland; but while affairs are carried on in those parts of the globe, upon the fame footing they O_4 are are at prefent, there is a probability that all thefe countries will remain as utterly unknown to the world, for ages to come, as the regions within the Polar Zones.

I am fufficiently aware of the intereft, application, time, perfeverance, and expence neceflary to bring about a matter fo difficult and complicated in all its parts, as the important matter above hinted at; but a thing once begun is more than half compleated; and it behoves those who are peculiarly concerned therein, and know the utility of the object, to make that beginning. No period, in my opinion, can be more favourable than the prefent. When fo many fair provinces have been wrested from the mother country, on the fame continent, it is our duty to point out every feafible method by which the parent ftate may cherish and bring to perfection the remainder.

JOURNAL

(220)

(221)

JOURNAL of a JOURNEY from MONTREAL to New York, in the year 1788.

On the 14th of May, 1788, I left my wintering ground, where I had been about four years; on the 8th of July arrived at the Great Carrying-place on Lake Superior; on the 15th of September reached Montreal; and on the 25th of the fame month I took my departure from that city to travel to New York.

September 25, 1788, I left Montreal, in company with a gentleman defirous of purfuing the fame rout. About four in the afternoon we traverfed over to La Prairie, a fmall village about two miles above Montreal.

26th, Hired a cart and two faddle horfes, to proceed with our baggage towards St. John's, through a wretched country, the roads being very bad, and the land very unpromifing. The town of St. John's, which is

(222)

is eighteen miles diftant from La Prairie, makes a very formidable appearance. Here were to be feen a ship of eighteen guns, and another of twenty-two, with several other small craft, which were employed in Lake Champlain during the late war. A ship called the Washington, of 16 guns, also lies here, and which was taken from a part of the American army under the command of General Arnold. The same day we took boat, and proceeded about five miles on the lake.

27th. The wind being unfavourable, we went but fifteen miles, and then made for the fhore, and put up at the houfe of a Mr. Barran, a ferjeant in the 44th regiment. His houfe was very prettily fitted up in the Englifh ftile, and is by much the neateft I have feen among the country fettlers.

28th. Left the house of our very hospitable landlord, but the wind being still contrary, we did not proceed above fix miles.

29th.

29th. The wind becoming favourable, we made a good firetch in the Lake untill twelve at night, which brought us to Ticonderoga. We had passed by Crown Point in the night.

30th. From Ticonderago we proceeded about thirty miles farther to Skeenfborough, the effate of General Skeene, which he was obliged to abandon on account of his adherence to the royal caufe. Here a faw-mill and four house are erected.

Lake Champlain is about one hundred and fifty miles in length from St. John's to Skeenfborough. Its direction is about N.W. and S.E. and it is feldom above two miles wide, except at the wideft part, the middle of it, which is computed to be twenty miles over. About twentyeight miles from St. John's is the extent of the Britifh territories in this quarter; all the remainder of the lake belongs to the United States. At fourteen miles from St. John's is Ifle au Noix, a fmall ifland, very well adapted to command the channel of the lake, but it is at prefent in a ruinous ftate. It ftill however retains

(224)

retains a fmall garrifon, part of the 60th regiment, for the fake of regulating the trade between Canada and the United States. Exclufive of this garrifon, there is a brig, mounting eight carriage guns, flationed within the American lines for the fame purpofe.

As we passed Crown Point in the night I can fay nothing of that ancient French fortress. Ticonderoga is a rocky point, and by its fituation effectually commands the passage of the lake. It appears to have once been a place of confiderable strength, but it is at this time much neglected.

Immediately opposite is Mount Independence; a lofty point, where fome fortifications have formerly been erected. Between these two forts the Americans built a temporary bridge to impede the passage of the King's troops from Canada; but the forts being evacuated on the approach of the troops, the bridge was fawn very leifurely in pieces.

A traveller in paffing thro' lake Champlain, is rather diftreffed, when he lands, with the variety variety of currency in the country; for on the Canada end of the lake the dollar is valued at five fhillings; on the North fide, which is in the ftate of New York, it is reckoned at eight fhillings; and on the South fide, which is in the ftate of Vermont, at fix fhillings.

October 1. Agreed with a Mr. M'Kinly, for the ufe of his waggon from hence to Albany, being feventy four miles, for eight dollars. We went from Skeen borough to Fort Ann, through the woods, on horfe-back, a tract of twelve miles, where we found our waggon; and proceeded the fame day to Fort Edward, twelve miles farther, through a very good road.

2d. Continued our route, and put up at Still Water. Had there good accommodations, and a civil, agreeable landlady.

3d. About nine in the morning we arrived at Albany, through a most agreeable country. From Skeensborough to Fort Ann, the road is exceeding bad, and leads through a tract very little cultivated. The peasants

are

(226)

are very intelligent and improve their farms with apparent industry. The land produces in great abundance Indian corn, potatoes, water mélons, pumkins, &c. and the finess timber I ever beheld. As we advanced towards Albany the roads became better, the ground more cultivated, and the buildings made a more respectable appearance.

From Fort Edward towards Still Water the appearance of every thing ftrikes the eye of a ftranger with pleafure, as he beholds a beautiful country under the hand of improvement; a Briton, however, in paffing, cannot but fympathize with the unfortunate General Burgoyne, and his brave followers, who unhappily became captives at Saratoga.

At Still Water we faw a regiment of American militia manœuvring, to the apparent fatisfaction of their officers, but in our opinion they cut a forry appearance indeed! Their guns were old and rufty, and the cloathing of this motly troop, confifted of every fhape and colour, that was ever known or invented. Some wore cocked hats, fome flapped flapped hats, and fome no hats at all. The major part of them, being just taken from the plough, stooped down as though they were admiring their shoe-strings. Some were clad in waistcoats without sleeves; but by much the greater part of them had their carcases inclosed in horseman's coats, similar to those worn by Hackney-coachmen.

We paffed the house and mills of General Scuyler. They have been lately rebuilt, having formerly been deftroyed by General Burgoyne's army. The water of Hudson's river was very low, and we croffed it four times in our waggon, between Albany and the New City. Albany is computed to contain five hundred houfes, mostly of brick, fome of which are tolerably well built. The greater part of the inhabitants are low Dutch. It has an English church, a presbyterian meeting houfe, and another for the Dutch. It is but a folitary place, and the people do not feem to be very fociable. At the time I was there, no hard money was to be got; and paper money fuffers a difcount of eight per cent. all over the province.

October

October 4. We left Albany and embarked on board a floop configned to New York, but had not continued the voyage above three miles, before the veffel got aground on the fhoals, where we remained four days in much diftrefs, ftriving every tide to difengage ourfelves without effect.

7th. We left the vefiel, and embarked on board another, called the Arabia, ——— Wyncoop, master.

8th. We this day paffed the new Town of Hudfon, about thirty miles below Albany. This town is a ftanding monument of human induftry, being entirely built fince the conclufion of the war. It is beautifully fituated on an elevated fituation, has many excellent buildings, and bids fair to rival Albany for trade, in a few years; particularly on account of its being fituated below the fhoals. It cannot contain lefs than two hundred houfes, the firft ftone of which was laid in 1784.

A very excellent floating machine is erected for the purpose of drawing up the fand from the

the bed of the river, but the contractor for the job has made very little progrefs, notwithstanding it is two years fince the commencement of the undertaking.

The famous Hudfon's river, which we find fo much extolled in defcriptions of this country, appears to me not to merit the praife given of it. The diftance from New York to Albany is one hundred and fixty miles, and no farther is this river navigable for veffels of any burthen : and even in this diftance, veffels drawing eight foot water meet with much difficulty in certain places.

8th. and 9th. We had light airs, which prevented us from making much way. The country is all along beautifully fettled, and makes a pretty appearance from the water. Chefnuts, walnuts, and apples, are fo plenty, that travellers help themfelves *en paffant* without ceremony. Cyder is the ufual drink among the country people, but I cannot fay much in its commendation. The peafantry, as I remarked before, are hofpitable, intelligent, and inquifitive, but are rather grip-P ing ing on travellers, particularly the Low Dutch.

10th. This day we had a fine breeze of wind which foon conveyed us to the city of New York; a place too well known to require any defcription here.

FINIS.

(230)

BOOKS printed for C. STALKER.

INSWORTH'S Latin and English Dictionary. 4to. A new edition, with great additions and amendments, 11. 75.

2. Ainfworth's ditto, 8vo. 9s. bound.

3. Johnfon's British Poets, 68 vols. with copper plates, with prefaces, 101. 45.

4. Johnson's Dictionary, in I vol. 8vo. 8s. bound.
