DRESENT .

HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL.

()N the recommendation of the Honorable the Minister of Customs, and in pursuance of the provisions of the 11th Section of the Act 81 Vic., Cap visions of the 11th Section of the Act 81 Vic., Cap v., intituied: "An Act respecting the Customs," His Excellency in Counch has been pleased to order, and it is hereby ordered, that the following regulations respecting the coasting trade of the Dominion, be and the same are hereby adopted and established.

Certified.

WM. H. LEE, Clerk of the Privy Council.

COASTING REGULATIONS.

1. Vessels and boats employed solely in the transport of goods or passengers from one port or place to another port or place within the limits of the Dominion of Canada, shall be deemed to be ougaged in the coasing trade, and shall be subject to the regulations conventing the some

another port or place within the limits of the Dominston of Canada, shall be deemed to be engaged in the coasting trade, and shall be subject to the regulations governing the same.

2. Nous but liftlish registered vessels and boats, wholly owned by British subjects, can lawfully be engaged in the coasting trade of the Dominion of Canadia, and the names of such vessels or boats and the names of their ports of registry, shall be distinctly painted on the stern of the said vessels or boats.

3. Such vessels and boats, may, without being subject to cutry, or clearance as required by law, for vessels trading between ports in the Dominion of Canada, as woil as with loving ports, carry goods the produce of Canada, or goods duty free, or goods duty paid or passengers from any ports or places in the Provinces of Untario and Quebee, to any other ports or places in the said Province, or from any ports or places in the Said Province, or from any ports or places in the said Province, or from any ports or places in the said Province, or from any ports or places in the said Province, or from any ports or places in the said Province, or from any ports or places in the said Province, or from any ports or places in the said Frovince, provided always that the uwners or masters of such vessels or boats, shall take out a license for the season for that purpose from a Collector of Customs in Canada, and that the owners or masters in taking out the said license shall enter into Bonds of \$500, conditioned that such vessels or boats shall keep, or cause to be kept, a cargo book intense in shall not be employed in the foreign trade, and provided also that the master of every such vessel or boat shall keep, or cause to be kept, a cargo book intense, in which book shall be entered at the port of Indiag, an account of all goods taken on board the goods therein, as also of the goods towen on the packages, the quantities, the description in due between the intense in the said cargo book, the respective days upon which any such goods shall be

from the port of lading and of arrival at the port of unlading.

4. The master of any such vessel or boat shall produce his incense and cargo book to any Officer of Customs, whenever the same shall be demanded and answer all questions put to him, and such Officer of Customs shall be at liberty to note any romark on the cargo book which his may deem proper, and if the cargo book shall not be kept in the manner hereby required, and the particulars of all cargo ladeu and unladea, duly noted therein, the goods and vessel shall be tortested, and the master shall incur the penalty of \$100.

be toriotted, and the master shall incur the penalty of \$100.

6 Before any coasting vessel or boat shall depart from any port of lading in any one of the Provinces of the Dominion, not Tanada for any other port in the and Dominion, not in the said Province of departure, an account or report with a duplicate thereof, in the form or to the effect following, and signed by the master, shall be delivered to the Collector, who shall retain the duplicate and return the original account or report shall be the clearance of the vessel or boat for the vo, ago, and the transfer and pass for the goods expressed therein, except for goods under bond or goods inable to excise or internal resease duty, which shall require the entries and warn ints for landing to be agned by the proper officers is required by law, and it any such account or ropor, be fasee the master who signed it shall forlet the sam of \$100.

Collector of Customs for the Port of

6. Within twenty four hours after the arrival of any coasting vessel or boat at the port of discharge which requires a freisier as above described, and before any goods shall be unladen, the transire with the name of the plees or wharf where the lading is to be discharged, noted thereon, shall be delivered to the collector, who shall note thereon the date of the delivery; and if any of the goods on board such coasting vessel or boat shall be subject to any customs duty the same shall not be unladen until the entry has been made at the Custom House, and a warrant granted for the landing thereof; and if any of the goods on board such vessel or boat be subject to any duty of excise or Internal Révenue the sameshall not be unladen, without the authority or permission of the proper officer of excise; but no entry shall be required at the Custom House for any goods brought coastwise the produce of Customs or Excise, have already been paid or which are duty free.

are duty free.

7. Vessels and boats employed in the coasting trade and that shall not have taken out a license for carrying goods, and obtained a cargo book as above provided, shall report inwards and outwards at the nearest port to their place of arrival or destination and require clearances whenever they depart from any port or place within the Domision of Canada, and nedsult of their so reporting the vessel or cargo, the master shall in such cases be subject to the pensity of \$100 for departing and arriving without due entry inwards or outwards as the case may be. Provided that when a vessel shall sail from any place where there is no Custom thouse, or officer of Customs, it shall be sufficient for the carrying out of this regulation that the owner or master of such vessel, do, as soon afterwards as possible, forward to the nearest Custom House a similar report in duplicate, or lodge the same at the first port at which he shall touch where there is a Custom House Officer.

8. Goods under a removal bond from one Canadian port to another Canadian port, may be carried in any British registered vessel or beat, trading coastwise with a proper liconase and cargo book upon such goods being properly entered in the cargo book and in the account or transfer, in duplicate, in Collector at the port from which such goods are removed, being required to forward by mail, to the Collector of the port for which the goods are destined all the particular and description of the goods so forwarded, and the packages shall be properly marked in red as now provided, but no goods under bond shall be carried in any coasting vessel or boat until the master has do livered an account in duplicate or transire to the Collector of Customs at the port or place in Canada when a sound provided to the carried coastwise on Studys or holdsday, a unless to obe an induped or water borne to be shipped to be carried coastwise on Kundays or holdsday, and in the case of shape of the same shall be reflect and the master of the proper of the sone burthe

THE TRADE REVIEW

Intercolonial Journal of Commerce.

MONTREAL, FRIDAY, AUGUST 14, 1868.

The Business Office of the "Trade Review" is removed from No. 4 Merchants' Exchange to No. 58 St. Francois Xavier Street, Room No. 5, Up Stairs.

BANK HOLIDAYS AND BILLS OF EXCHANGE BILL.

BILL, with the above title, introduced in the Imperial Parliament by Sir Colman O'Loghlin, and ed through the House of Commons, was practically killed in the Lords by its suspension at a very late period of the session. The object of the Bill was to give to all public holidays by proclamation of the Queen, the same character as regards the payment of notes, &c., as that of Sundays and legal holidays, viz, making notes falling due on such days not payable until the day following. It also provided for the abolition on all notes and bills of exchange drawn after January 1st, 1869, of the three days known as "days of grace." We should be glad to see the nec visions of this Bill made law in Canada, as regards both objects in view. At present, on all holidays by proclamation, except for thanksgiving, notes falling due must be paid, so that the Banks are obliged to keep open, and business men compelled to attend to their Bills payable instead of being at liberty to enjoy their holidays. As to "days of grace," they are a relic of comparative barbarism, and answering no useful purpose whatever, ought to be abolished once and for ever.

THE SILVER MOVEMENT.

WE notice from our exchanges that the silver movement, to which we referred in a late issue has been very general throughout the Province of Ontario, and appears likely to extend still farther, unless it should happen to break down through its own inherent weakness.

One result of the movement is the driving of small silver, taken only at ten per cent. discount by the merchants who have joined in the movement, from Toronto and other points where it had accumulated to Montreal from which it had almost disappeared. It is now being bought by the brokers here at six per cent., and sold to go into general circulation at 51 per cent. While our city retailers are willing to take dimes and half dimes at par, this rate of discount will probably not increase until as much has been put into circulation as can well be absorbed. After that point MONTREAL SAW WORKS.

has been reached, if this small silver still continues to flow from the western Province, the rate of discount may go to eight or even ten per cent., as there is little profit to be obtained by shipping it to New York much under that rate, and the trouble of counting it is very great.

Large silver is also being bought in Toronto for Montreal account, and at a loss to Toronto as compared to the price which that city originally paid for it.

These are the immediate and apparently the desirable and proposed effects of the movement so far as Ontario is concerned. Let us for a moment consider what will be the effects, say a month or two later. when the crops have to be moved. What currency is to take the place of the silver, and where is it to come from? The answer of course will come readily from everybody that the banks will furnish a currency of their own bills. But we must remember that the silver heretofore used for that purpose must have amounted to \$4,000,000 or \$5,000,000, and to increase their circulation by that amount in addition to its ordinary increase at this time of the year would necessitate a very considerable additional reserve of coin on the part of the banks. Now this coin must be gold, silver not being a legal tender, and to obtain gold in place of silver, the latter would have to be shipped out of the country altogether and sold. It is very easy to suggest such a shipment, and very easy too to make trial of it successfully in small amounts; but we know there is no market within practicable reach which would accept, let us say, as much as \$1,000,000 of silver coin. New York might take at a discount of eight or ten per cent. as much as \$100,000, but only in case that amount could be sold in Eugland profitably, and there the demand is now only from the jewellers for manufacturing purposes, and consequently limited. If our banks are willing to buy up the United States silver coin and send it abroad no matter what direct loss it may entail upon them, well and good; they may be able to make increased profits out of the country through their increased circulation, and the brokers may find their occupation greatly gone. But we do not think the banks will be willing to stand a heavy immediate loss on so large a sum, and silver coin will, we imagine, still remain in circulation. We are ourselves of opinion that the farmer will continue to sell his wheat or his barley either for bills or silver as may be offered to him, provided the price he gets is otherwise to his taste, and to him it makes little difference whether he takes \$1.56 in silver or \$1.50 in current funds for his bushel of grain; and if \$1.44 were the current price in bills, why should the farmer be prevented from taking \$1.50 nominally in silver coin? In one city a committee of working-men, in making their report to a

meeting, showed their appreciation of this principle by suggesting the starting of a co-operative store, which would they thought to a great boon to the working classes: "and from that they could regulate "the prices of the goods to their own advantage, in such a way that the value of either silver or gold "would be to them a secundary consideration," &c

We cannot see that except as regards the trifling commission to brokers for doing the work of handling the eliver, it makes any difference to the retailer whether he takes the coin at par and adds the four or five por cent. advance to his goods to cover the loss in converting it or whether he sells his goods for current funds at a less price. Nearly all storckeepers are new willing to allow four or five per cent. where their accounts are paid in current funds, and we do not believe that they are ignorant of the mode of covering themselves loss in taking uncurrent money It is true that if the termer or the tebourer were to be paid in current funds at as high a rate as he is now paid in eliver worth only 950 or 960 to the dollar, then the storekeeper might expect to receive a benefit by the absence of silver from circulation at par; but no one will, we think, differ from us on this point, and affirm that a bushel of wheat will bring as much nominally in gold as it will to silver; nor will a laborer receive more than his employer can afford to pay him, whether that be paid in gold or sliver. Everything finds its level, the reass being based on gold, the legal tender, competition is sure, sooner or later, to bring this about, so that neither does the merchant lose if he sells his goods for silver, nor, after competition regulates the price, will be gain more than his normal rate of profit though he receives no hing but gold for his wares.

We are aware that our views on this question are generally speaking unpopular, but we are nevertheless tolerably certain they are correct; and buman nature. In Ontario will prove to be of a different kind to any with which we have come in contact, if the sliver movement dow being carried out lasts autil the trees, now ciothed in green, shall have become giorsous with the fuces of autumn.

PEAT AS FUEL.

BUBLIC attention has recently been directed through the columns of the daily press to the manufacture of peat, and its use as fuel, to supersede to some extent the more generally employed articles of wood and coal. The manufacture of peat and its preparation for market in Canada is principally engaged in at Lapigeonniere, 25 miles from identical, be Mr Hodges, and at the Welland Canal, by the Peat Company. The process of manufacture at both piacos is similar, though there is a good dear of differonce in the machinery used and the modes of handling the raw material. In both places, the peat is ground up in a machine, and afterwards dried, but at Lapigconniere, the peat is cut by a floating machine, which digs a canal for itself, and grinds up the material which it removes, afterwards to be spread on the ground, partially dried, and afterwards out tuto blocks, ready after some further exposure to the auto be u. J a- fuel. At the Welland Lanai Works, the machine and amonary, and the pear has to be carried to it, bu' after grinding it comes out in regular sized blocks, astead of being spread on the ground to ary The process employed by Mr. Hodges is no believe the be t in use, and the most economical of time and behour, but we believe, that in use at Welland is also uccessful, and the peat turned out an excettent article of fuel.

Touching the economy of peat as fuel, experiments have recently been made on the Grand Frank Rail-way between Montreat and Brockvitte which give results very satisfactory, and shew that under community conditions a ten of peat of 2 240 ibs, whi do much more work than a cord of wood of 3,712 lbs. The actual results were —

By this statement it will be perceived that peat is not only superior to wood, weight for weight, by overlife per cent., but also that a ton of the former draws her strains nearly 16 per cent. further than a cord of the latter. The consumption of their in Landa is cory great, especially so in severe winters like the last when in Montren the price of ordinary wood rose as a tigh as \$12 to \$15 per cord, and the manufacture of any thing which suit telp to meet the demand for fire

becomes of national importance. Year after year, the supply of wood is decreasing and the cost of getting it to market becomes greater, and we shall be very glad to learn that in all parts of the Dominion, wherever peat beds in convenient localities exist, manufactories are being started, a product of general use turned out, and employment given to a large number of men who might otherwise be idio.

ABOUT SUMMER TRIPS.

All wirk, and no play, makes Jack a dull boy."-Old Save

RUE present is the season of business quiet. To use the words of many traders, "there's little doing." The spring and summer trade may be said to be over. and that of the fell not begun. Each sear during this period-particularly among importing houses-bustnote becomes sluggish, merchants have time to look about them, and clorks and parture have comparatively easy times of it. It is interesting to note what a change is taking place in the way the "dog days" are now being spent in Canada by business men as compared with a very low years ago. Ten years ago even. how very soldom was the holiday trip ever thought of? Toll, toll, toll!-was the order of the day. Many merchants kept grabbing away year after year until they began to have almost the colour of the cottons they cold, and nearly forgot how the green fields, the clear waters and the bright skies of the country looked Now a days there's quite a change, and we have no besitation in adding, a great improvement. When the heated term comes, and "there's little doing," the sensible man of business now allows himself that relaxation for a few weeks which is so necessary for the recuperation of his health and spirits. Some take a trip across the "big herring pend," as the Atlantic is often called, another steps across the lines to see how Uncle-Sam is getting along, a third takes his family down the St, Lawrence to the Saguenay, or to the Maritime Provinces to see our " Blue Nose" Courtus and breathe the fresh ocean air, then some are off for a sail up Lake Superior, and nearly everybody goes "somewhere." Do you approve of this, Mr. Recrew," we fancy we hear some close-fisted, sour-looking individual enquire. "Never," Mr Grab-all, "were we more certain of being correct in our life." We declare it to be not only a great advantage both to mind and body for any person to take a week or two's relaxation from the toils and cares of hustress when trade is slack, but that it is economy in a great many instances. In other words, the man who acts thus, is likely to enjoy better health, to have broader views, and to make more money, than he who never leaves his shop from one year's end to another, and who if he does obtain wealth, very often loses his health and all taste for its enjoyment. That there are many instances of the latter kind in Montreal and other parts of Canada, we are well assured; and we must say that, as a general rule, a more miserable and foolish class of people does not exist. The course of true wisdom is to look after business sharply and perseveringly when trade is brisk, to leave no stone unturned to secure success, but, at the same time, make it a rule, when time is not so precious, to leave for a short time the heat and dust of the city and endeavour to strengthen mind and budy ero the bustle of the busy season again bigins. We are glad to see the change which is taking pisce in Canada in this respect. I It is a good ago. It indicates that our business penthe are getting better off it affords evidence that ! broader and more liberal riews are beginning to obtain and we anticipate from it the happiest results.

OUR NORTH WEST COUNTRY.

ARTICLE III

the voyageur as the steamer anchors opposite Dog Lake Road, which is the second stopping place in Thunder Bay Four or five frame buildings meet the eye at this point, one of which was crected fast year fir the engineers who surveyed the Government road, and two others—a small grocery and a groggery—only nipped the shell this last spring. They are sliusted on a pretty place of ground ri ing back from the limpld waters of the bay, and it requires no great stretch of imagination to thing bundreds of emigrania passing this embryo village each week in summer on their way to the Rod River District.

when in Montrest the price of ordinary wood rose as for a distance of six and a half miles, but was not pronigh as \$12 to \$15 per cord, and the manufacture of ceeded with this season in consequence of " want of anything which with the consequence of " want of funds". A grant of \$53,000 was made by the late Pro-

vince of Canada, and if this be all spent, as it is rumoured, the country has certainly received very little returns for its money. Having walked oversoveral miles of it, we are able to vay with certainty, that it is a very ordinary mud road, and many would be giad to get a contract at \$1,000 per mile! Fiffy thousand dollars for six miles; therefore, seems outrageous somebody also seems to have "blundered" with regard to the location of the road, for the water in the bay opposite is quite shahow, the Aigoma having to take in wood by . owe at a distance of about 400 yards from the shore. Extensive pleas would have to be constructed to make the road available, whilst at Fort William and other points, the water is almost of sufficient depth to enable voseds to load from the chore

The only farmes on the Dog Lake read is named Brown. He is a Frenchman from near Montreal. He came up to Fort William with the North-West Transportation Company nine years ego. He is 60 years of age, but hale and hearty. He has cleared about 12 or 15 acres simply with a hoo and an axe—and fire. He has new spring wheat, peas, potatoes, meions, onlone, and young apple trees, all growing nicely, and as forward as in Quebec. Some of the land is beautifully cultivated, and all with his faithful hoo! There is considerable land in this neighborhoud fit for extisement, and the day caupot be far distant when the shores of this beautiful bay will be thickly populated

About three miles farther down the bay, the principal mouth of the liaministagui river is reached, and a short distance up the stream Fort William can he This is one of the principal trading posts of the Hudson's Bay Company, and like that of Michipicston, consists of a number of moderately-sized buildings painted white, and surrounded by a level and wellbuttivated patch of ground. A Mr. McIntere is the agent. Up the Kaministaqui two miles further, is a Roman Carbollo Indian Mission, the stream, which is very pretty, being fined with small cottages and wigwams all the way up. The banks of this river are unsurpassed for agricultural purposes - in fact, the whole locality around Fort Wil lam is charming in the extreme Grains, fruits, and regetables of all kinds, are growing there to perfection, quite equal to the same articles grown in this Province. How far the good land extends, it is difficult to determine, but there is said to be a considerable quantity of it. That which has been surveyed, is reported to have been nearly all taken up by speculators. If correct, this is deaply to be regretted, as it will retard settlement.

Those who take an interest in the progress of the Dominion Westwards, could not do tetter than visit this region. The trip is a heautiful one, abounding in pic aresque scenery, and it will open the eyes of many to the present importance and great future of the North West both on account of mineral and agricultural resources.

Wha' the Lake Superior region wants is simply dereloument. It abounds in mineral dealth, but this wealth is useless so long as it remains undiveloped. The first July of the Government is, to adopt a mining and land policy of the most liberal and possible character. The Mining Law, passed by the Untario Local Loveramont, is a disgrace to the statute-book it might have passed master a century ago. It is altogether behind the spirit of the presentage. It is untversally denounced by all our North-Western inhabitants, and has already calculed mining operations to a large extent Its immediate repeal is neccessary, and instead thereof, every facility should be given to induce the commencement of mining operations at every possible point. Whilst care is taken not to allow speculators to take up large blocks of land, actual mingra abould be allowed not only small blocks as numinal prices, or no price at all, but every other reasonable one suragement show I be offered to induce them to enter in and possess the land.

If taxes on mining lands requires to be imposed, let them not be imposed mainly on the minuts who are doing so much for the development, and contributing so largely in other ways to the revenues, of the Dominion, but let them fall on those greedy and unenterprising speculators who all hold up large tracts of country, and who are a siting until the enterpresendably the losses—of more enterprising men enable them to realise fortunes.

Another absolutely accessary step is, for the covernment to proceed camediately to oppn up communication between Fort William and Bed River. Assurant this is done, the great back of the trade of that important condity, now done at Sc Paule and other places of Minnesota, will naturally flow to Canada.

The Lake Superior district will at once rise into importance. A large traffic will immediately spring up along the whole route, mining will receive an immense impetus, villages will grow up as if by magic, and our North-Western country begin to assume that importauce which nature designed it to have. It is to be hoped that no narrow-contracted statesmanship-no penny-wise and pound-foolish economy-will longer bar the way to the opening up of a good waggon-road to the Red River district, for, assuredly, every week we are without communication is a scandal to Canadian enterprise and a heavy loss to the country.

Our whole North-Western country is worthy of far more interest than either our legislators or others have evinced in it. There is no good reason why our North Shore of Lake Superior should not equal the American in bustle and activity. All that is wanted is, enterprise on the part of our Government in assisting settlement and opening up communication, and that the press earnestly direct public attention to the wealth which lies there waiting development. Let us hope that neither of these things will longer be want-

GOVERNMENTAL TELEGRAPHY.

THE passage of the Electric Telegraph Bill by the English Parliament, will secure to the people of the United Kingdom the great boon of cheap transmission of telegraphic messages; uniformly cheap without regard to distance sent. The price to be paid the various Telegraph Companies has been fixed, and nothing now remains but for Parliament to vote the money necessary to complete the purchase. As we have already informed our readers, the telegraphie will be worked in connection with the Post Office system, whereby much labour will be saved, and great economy obtained both in the salaries of employees and in the item of rents, as existing Post Offices will furnish nearly sufficient accommodation. It is believed, and with justice, that the lowering of the tariff will have the immediate effect of very greatly increasing the revenue, similar action in Switzerland and Belgium having been followed by a much more general use of the wires than had existed previously to the adoption of the reduced scale of prices.

We have always advocated a reduction in postage to a point even lower than that now in force, on the ground that a large and compensating increase would be sure to take place; the objection to this is based on the sparseness of our population when compared with the long distances mail matter has to be carried. This objection has some weight, but it would be quite different in the matter of telegraphing, where it would be no more costly to send a despatch over a single wire 500 miles long, then over one ten miles, or even one mile. If the practical and prudent statesmen of England with all possible information at their command, and after the widest discussion in parliament and the press, have decided on the principle of Government Telegraphy, we see no reason why our Government should not follow a similar course, and that too without delay, so that the cost of acquiring the lines already in operation may be as light as possible.

The chief objection, or at least that most likely to be a popular bugbear, in giving Government control of the telegraph wires rests on the fears entertained that at critical times-contested elections for example -they would have it in their power to become acquainted with the contents of messages to the detriment of the parties interested. There is an easy mode of preventing this by the use of cypher messages on a principle now general, which while perfectly simple, can be varied indefinitely, and for which each individual using the wires can have his own key. This cypher it is utterly impossible for any one to decypher without the key, as the same letter in the despach has varied significances according to its chance position.

Another objection to placing the wires in Government hands is that they will not be worked as economically as in the hands of a company whose proprietors had a direct interest in the profits. We do not consider that this objection, though plausible, has much weight. The Post Office Department is on the whole well managed, with a due regard both to efficiency and economy. Officia's who can be depended upon to despatch mails can also be trusted with the transmission of messages, and as the same men in a majority of cases, now employed throughout the country in the various Post Offices, will be employed as operators as soon as they can learn the art, there

will be very little room for extravagance in the management of the department.

A great advantage gained by a Government system would be that lines would be built, where though much needed, they might for some time not be remunerative. Private companies of course would only open offices at points where the business would at least pay expenses; whereas under the principle we are advocating, lines would be built and put in operation as speedily as practicable, and all parts of the country would be brought into instantaneous communication with all other paris.

That the Companies now owning telegraph lines in the Dominion have made profits enormously beyond what people in general have any idea of, is a fact easily demonstrated Take the Montreal Telegraph Company for example. A moderate half-yearly dividend only has been paid to shareholders, but a very large extent of its line now in operation has been built not out of the capital but out of profi's, and today the capital stock of that company has an actual much beyond its nominal value, and shares are almost impossible to purchase, even at a high premium Under a Government system these large profits would be given back to the country in general, and just so fast as was found to be practicable, the tariff would be reduced, and in the same proportion would the boon of rapid transmission of intelligence be given to an increased number of our people.

DART'S FREIGHT COMPUTATIONS.

D. Appleton & Co., New York: B. Dawson & Son, Montreal.

HE above is the title of a very useful work, one especially valuable to shipping houses, transportation and railway companies, warehousemen &c. It gives in a clear manner, easy of reference, the exact amount of freight or storage on any measurement from one cubic inch to four thousand feet, at rates from twenty five cents to twenty dollars per ton of forty cubic feet, and equivalent rates per foot measurement. We have tested a number of the calculations and find them in every instance perfectly accurate. We commend the work to the notice of those interested.

GRAND TRUNK RAILWAY AGITATION,

A SPECIAL GENERAL MEETING.

(From Herapath's Journal.)

THE Board have arranged, we hear, to call a special general meeting of the Proprietors for the 27th of August to consider the question of giving the Proprietors a list of themselves.

We believe this is the first instance on record of such a thing being done—a special meeting called to authorise the Lirectors to give the Proprietors the list reterred to.

we cannot think that there is the least necessity for such a step. As there is nothing in the Company's Acts to prevent the Directors from granting such a list, surely they could give it. Nay, it is a question in our mind whether the Proprietors could not demand it, it being, we imagine, in this country, a very common right for partners to know who their co-partners are. To all intents and purposes the Grand Trunk is an English Company, sithough the railway is situated in Canada. The Board sit in London, the Secretary's office is in London, and the general meetings of Proprietors are held in London. The half-yearly reports are issued in London.

While we should have liked to see the Directors grant the list to the respectable body of Proprietors who have demanded it, and then if necessary ask the general authority of the next meeting to grant, to any Proprietor a similar list, on paying the expense of it, we think Messrs. Creak, Ritter, Hartridge and Co, do quite right in pressing for the list, for without it they are powerless, excepting for mere agitation, which is mischievous unless it means something.

The list once granted, the Directors will have to mind their p's and q's in future.

The special meeting on the 27th of August will doubtless be purely pro formá, the Directors having promised their co-operation in procuring from the Proprietors their authority to furnish the list. Still it is a meeting which every Proprietor Should attend who possibly can, and we hope Mr. Watkin will be in the chair.

The committee are highly respectable and large Proprietors. What they want is for the benefit of the

the chair.

The committee are highly respectable and large. Proprietors. What they want is for the benefit of the Company, and although the voting powers of the Company are against a general body of Proprietors we doubt not that the agitation on the main question—the management of the property—will result in favor of the committee. The scale of voting is our votes for every £100 of all stocks (preference or ordinary) in the Company. The same for the bonds at special meetings, the bonds having (we think) to be previously lodged with the secretary for that purpose.

This scale of voting gives an advantage to large holders, It is usual for the number of votes belonging to any one individual to be limited, and to decrease per £100 or £1,000 of capital beyond a certain amount,

so that a man with a million of capital will not possess much voting power over another with £100,000 or even £10,000 of stock. In the Grand Trunk, however, there appears to be no such limitation, and therefore the big holders on "the other side of the table" may come down to a poll with tremendous force. One or two large holders may thus set at naught the will of a whole full meeting. The Grand Trunk Proprietors must muster strong if they mean to fight and win; but we are in hopes that no fight will come off; that to prevent it the Directors will accede to all the just wishes of the committee, and we feel convinced that the committee will not ask for more than they have a right, as large bona fide Proprietors to demand. prietors to demand.

prietors to demand.

It is very evident from what has already taken place that the committee mean to persevere in the just course they have adopted, and it is also pretty clear that the public augur well of the reforms they will carry, since the several securi ies of the Company have lately risen materially in market value.

ECONOMIC MINERALS.

THE COAL MINES, CLAY DEPOSITS AND POTTERIES OF PICTOU.

CORRESPONDENT of the Toronto Globe who recently visited New Glasgow, furnishes the following to that paper, respecting the coal formation, and clay deposits of Pictou:-

and clay deposits of Pictou:—

The coal formation is in the shape of a long trough or basin of from two to three miles in breadth, one edge being at New Glasgow and the other two miles further south. The same seams appear to cross on both sides of the basin. Cut an onion in two and you can find (if your tears will permit you, a good illustration in one half of it of the section of coal basin, so far as the successive layers, strata or seams of shales, coal and sandstone occur—the cut portion of the onion representing the surface of the ground. At New Glasgow the strata dips southerly towards the centre of the basin, while at the Albion mines which are on the southern side of the basin, the seams dip in the same direction.

The lower seams are of immense size, being the

in the same direction.

The lower seams are of immense size, being the largest bituminous seams in the world. The main seam is not less than 33 feet in vertical thickness. These large seams are overlaid by a great thickness of shale, some which are highly bituminous—there being a seam on the marsh of the George McKay, area 4 feet of which yields 40 gallons ot oil to the ton, while 3 feet yields as much as 60 gallons. The oil is used for lighthouses, lubricating machinery, &c., and commands a good price. The seam in question has not yet been turned to account.

of which yields 40 gallons of oil to the ton, while 3 feet yields as much as 60 gallons. The oil is used for lighthouses, lubricating machinery, &c., and commands a good price. The seam in question has not yet been turned to account.

Above or on those overlying shales we find some smaller upper seams which are of admirable quality, in this re-pect excelling the larger seams. They average from three feet to seven feet. They are very near the surface, and can be worked more cheaply than the lower seams. I paid a visit to a slope within three quarters of a mice from the town, which has been sunk by Mr. Lawson, on an area belonging to the Montreal and New Glasgow Coal Company. The slope is only down to a depth of 50 or 60 feet, and is worked without a steam engine, and not more than \$1.000 has been spent. Yet it is in working order, and likely to pay well. The coal being near "the crop." is a little sulphury, but it is capital steam coal. After looking at the incipient works, I went to where I saw a huge oven blazing away, and I found myself at the Crown Brick and Pottery Company's Works. These have been commenced by an English gentleman, Captain Dawson, who, with a few friends, has become the pioneer in what is destined to be the most important branch of manufacture in the New Glasgow, having attracted attention of parties in Staffordshire, where they have nothing to compare with the New Glasgow olays, he was induced to embark in this undertaking and he brought out some first class artizans: I was shown by his moulder, a very intelligent Shropshire man, some "biscuit ware," as it is called before it is glazed. These showed the natural tints of the clay, a very beautiful pale rose colour, and a delicate buff coloured clay being specially attractive. The Company intend to make a superior class of breakfast and dinner sets. They are also manufacturing fire of their turning their attention t, the exocrt of their

and dinner sets. They are also manufacturing fire bricks, &c.

I urged upon one of the proprietors the importance of their turning their attention to the export of their fire-clay to Montreal and Toronto, where it would command a large price paying more per ton than even the rich gold quartz of the Province, after deducting the expense of working, &c. It is a singular fact these deposits of clay are very partial, the quality of the same seams of olay in other localities being defective from the presence of irea, and other causes—but the company in question have some hundreds of acres underlaid by their seam, amply sufficient to supply pottery for the whole of America for a century to come. Near their works I was shown a seam of coal which overlies the fire-clays which they use, so that they raise their fuel and their raw material from the same pit, and within a few hundred yards of the railway and of a shipping place. Mr. Otler, of Toronto, accompanied me in my visit to the works. We suggested to Captain Dawson the propriety of sending specimens of his ware and of his clays to Toronto and Montreal, and the probability that any further capital which might be required to enlarge the operations of the company might be procured as readily there as in England

As the market for these manufactures must be in Canada West, it would certainly be far more advantageous to have the Canadias than English capital levels of the procured as readily there as he works. Already orders enough to keep the works busy for some payers to come have been offered—and the day is not far distant when

English pottery will be driven out of our markets by Our own manufactures.

The large amount of breakage and the heavy expenses for insurance, freight, &c., would give the Nova Scotlan potteries advantages that would even cuable inferior articles to compete with English ware; but the Staffordshire men whom I saw at work expect to turn out work that will equal in quality the best imported articles.

imported articles.

The manufactory is particularly interesting, for there is every reason to hope that some of these days we shall have your grain products coming to Pictou. in propellers, which will carry back pottery and coal to the West. You must bestir yourselves to improve your canal system, for we are in reality as much interested in having cheap intercommunication with you, as you are in our being able to supply you with products that will create a trade and supply your procedlers with refurn freights. ropellers with return freights.

IMPLICIT CONFIDENCE.

(From Herapath's Journal.)

TIBE doctrine of implicit confidence in boards of directors is precisely that which in past times has led to so much evil in the railway world, yet it is still taught, not so generally as it was, it is true, but it is still taught, and shawholders are treated as liftle children by their directors. "Be particular what directors you appoint, but when you have appointed them, have faith in their counsels, follow with docility in their footsteps, sfillmans, or otherwise." This is still taught, and patiently listened to by shareholders who have suffered under it! But the parties who teach it are egregiously mistaken if they think that the shareholders of the present day are the fools of former times, and will allow implicit faith to proofed to any dangerous extent. We tell the would-be autocrats of the railway interest that they mistake their men, and noting so are scarcely wise in their generation. It is were well to a surviving like a systematic usuration of shareholders prerogatives will be resisted, out the usurper, be he high or low, hurled from his tone. rectors is precisely that which in past times has

and the neurper, be he high or low, hurled from his t rone.

It is very well for shareholders to be on their guard as to whom they trust to form their boards of management, but implicit faith in any board is a dangerous luxury. It is pleasant to appoint a board and then consider there is nothing more to be done on the part of proprietors; that having appointed what they consider a good board, nothing remains demanding attention—all will go well. But let us ask a plain question—who have caused the mass of the mischief in the railway world? The all-powerful directors, those who were idolised by their shareholders, and trusted to a degree that no ordinary partner trusts another partner. These have d ne what they listed, and while they reigned they ruled absolutely, made fortunes, and—ruised the great interests entrusted to their charge, or nearly so. We care not who the man is—it he attempt sny of the old despotic games he earns the watchful attentions of his proprietors, and on the first opportunity he deserves to be ousted from office. We want boards of directors who will carefully attend to tweer duti-s and who have sufficient knowledge of railway affairs to be able in directing them. But each a board must not treat their proprietors casenmies or children. They should consider themselves not as mariers of the proprietors, but as their managing partners, liable to have their acts canvassed, and instead of veiling their proceedings in secrecy, they should be derirous to have them known.

THE INTERCOLONIAL BAILWAY.

(From Herapath's Journal.)

MHIS live is to be made, after all, but it has been delayed so long that an American competitor, delayed so long that an American competitor, called the Eur pean and North American line, has been established, or so far made that in self-defence it must be complited. The Intercolonial will doubtless beat the Anierican line, which is only a coaster; nevertheless it would have been much better for Canada and the Intercolonial line itself if the steps for the construction of the Intercolonial had not been so properly that construction and any of the property of the construction of the Intercolonial had not been so properly that construction are and support were given to and the Intercolonial line itself if the steps for the construction of the Intercolonial land not been so protracted that countenance and support were given to the Yankee scheme in Engiand. To what extent Englishmen advanced their money in aid of the American competitor we know not, but for their own sakes we trust they did not go very deep, and will take an early opportunity to let the Americans have their own bonds at an advantage, we mean at a lower price than the English investors gave for them; or of course at a premium, that is an advantage to English investors, if the bonds will fetch a premium. The Intercolonial will, as soon as it is made out the American coaster into ribbons. Nearly all the traffic from Haliax to Quebea, Montreal, Ottawa, Toronto, Detroit, &c., will pass up the Intercolonial and over the Grand Trunk. Before the Intercolonial is made this traffic may take the American route, that is coastwise to the Grand Trunk, at or near Portland, (America,) and thence via the Grand Trunk to Montreal, &c; but the moment the Intercolonial is ready to carry traffic the Canadian Company will doubtless transfer this Canadian traffic to their own lines.

The European and North American line gives the Grand Trunk a second string to their bow, and so far possibly the Grand Trunk Proprietors should feel not displeased at the brave construction now going on from St John westward, which with its connections will certainly make a line from Haliax to Montreal, ac. But there can be no mistake as to where the Grand Trunk's heart is. It is naturally enough with the "Intercolonial," becan eit will bind Nova Scotta, New Brunswick, and Canada Into one interest; be-

cause it will save the Grand Trunk from the necessity cause it will save the Grand Trunk from the necessity of giving up the eastern end of their line, upon which there is at present a very small traffic. It the Intercolonial is to be made, the Grand Trunk will continue to work this eastern end of their line, the Intercolonial joining it at its eastern extremity; but if the Intercolonial Railway were not made, we venture to predict that the Grand Trunk Directors would have to give up the working of the Eastern section or their seats.

Intercolonial Railway were not made, we venture to predict that the Grand Trunk Directors would have to give up the working of the Eastern section or their seats.

A great deal has been said about the thinness of the traffic the intercolonial will have. Certainly the traffic case does not look very strong The line, however will be of national importance to Canada, and will mike a traffic, perhaps much larger than people imagine. Before the Lancaster and Carlisle line was undertaken great fears were entertained that it would not pay. It was therefore made with a view to economy, under the expectation of loes resulting from its construction. Lo and behold it is the best railway property in England, not because it has the largest traffic. but b cause it was made so carefully and economically. This will probably be the result of the 'Intercolonial.' Under the guarantee it will cost little. Every £100 of capital raised for it will be obtained on the cheapest terms, and fearing loss when the line opened every £100 will be made to go far in the construction of the line. When it is opened, however, what have we? A line direct from Halifax all through British territory to Quebec, Montreal, Toronto, &c.; a line that will enable communication with Canada, through Canada, all the year round, and from a port (Halliax) the noblest and hest in the country and which is the nearest to England. This all-important trunk line will have no traffic worth speaking about! So say people who would not like to see it made. The eastern end of the Grand Trunk (east of Quebec) has a very small traffic now, because it goes nowhere. It will go somewhere when the "Intercolonial" is at work. It will go to Halifax, and Halifax is already a great place. Instead of all Canada being communicating with numerous important places in America.

As far back as the year 1838. Lord Durham gave a highly favourable report upon the Intercolonial railway in these words:—

"The formation of a railroad from Halifax to Quebec would entirely avoid some of the lead

SPECULATIONS AS TO THE PRICE OF GOLD.

OVERNMENT Securities are unusually fluctuating and unsettled. New doubts have been thrown around this class of investments by the announcement of the financial policy of the Democratic party and by indications that the majority in Congress are by no means unanimous in accepting what seems to be the obvious intent of the financial plank of the Chicago platform. The bondholders, as a rule, are reluctant to believe that Congress will ultimately either tax the bonds or attempt any compulsory method of reducing the interest on the debt. and, therefore, they still hold their securities with steadiness; although very sensitive to any movements unfavourable to their interests. It is not to be inferred from the fact of the late agitation of financial questions having had comparatively little effect in the way of depreciating bonds that the bondholders look with favour upon these schemes; they have not yet learned to view the matter in any other light than as so much bidding for support in the election, and hold their bonds firmly because they have confidence in the ultimate substantial honesty of Congress. The price of Governments has been advanced during late weeks, upon the extraordinary ease in money; and it is to be expected that, as the rate of interest advances in connection with the usual commercial demand for loans, there will be considerable realizing upon bonds and a reaction in prices.

There appears to be a very general impression that gold is likely to work up to a higher premium. Indications are not wanting that our foreign trade is approaching a crisis, the character and importance of which are but partially appreciated. Owing to the deficiency of our home production, we have, for the last five years, imported foreign products largely in excess of the ordinary means of payment, viz.: produce and the precious metals; and the resulting deficiency has been set off by the remittance of United States Securities to the extent of \$700,000,000, or, say, one-third of our whole gold interest debt. Beyond the reinve OVERNMENT Securities are unusually fluctuat-I ing and unsettled. New doubts have been thrown

considering the immense sum of our obligations held abroad, that this demand will be hereafter renewed. The important fact, however, is that, while this means of settlement is failing us, we are not proportionately reducing our imports; and there is reason to fear that we may not resort to a prudent curtailment of our foreign purchases until compelled by the pressure of a crisis. From the latest official returns, it appears that the imports of the United States for the first four months of the current year, were only \$11.47.000 less than for the same period of last year; while the exports of produce were \$25,400.000 (gold value) less than then; the result being that, during these months, we have had to ship \$5,900.000 how now specie than last year. Again, the imports at New York, for last month, were only \$55,00.000 how those of June. 1867; while the exports of produce and merchandise were \$3,900,000 less than then, and the shipments of specie \$5.900,009 more. It is owing to the fact that we are no longer able to bridge over the deficiency of our produce expor's by the remittance of bonds that we have found it necessary to ship at New York, from January 1st to July 1011 \$55,200,000 of 1867, and \$18,300,000 in 1866. It is very clear that, unless there be a speedy rectification of this uneven movement of our foreign trade, the supply of gold in the country must be depleted to an extent very serious indeed. And yet, where are the signs of any counteraction of this dangerous course of affairs? The remedy is the less likely to be prompitly applied from the fact that the bulk of our importations consi to of the more staple and escential products, while the raceipts of those goods on which contraction is most easy have already been much reduced. The imports of dry goods, for instance, at this port, for the last six months, are only \$37,900,000 cases of spices than for the same time of 1807, showing, in this class of imports, an important contraction. The obstacle to curtailment is that it has to be effected upon tex,

SHEEP FARMING IN TURKEY.

(From the Lond n Field)

THE British Consul at Adrianople gives some interesting details of the sheep and goat farming in that villayet. He gives the number of sheep at 4 512,000, and of goats at 778,000, the tax on which, at the rate of four plastres each, yielded £171,297 in 1867. Nevertheless it is estimated that 20 per cent. profit is obtained by sheep husbandry. The tax produced £10,596 more in the year 1 67 the previous year,

duced £10,596 more in the year 1 67 the previous year, and for the last tou year there appears to have been a steady increase in the number of she p.

The peculiarity of the shepherd's work in the dirtict is the process of milking the sheep and the goats, large quantities of butter and cheese being made from the m.lk of these animals and sent into Constantinople, whence also the sheep and lambs are sent from the district or villayet of Adrianople for local consumption. The total cost of a flock consisting of 1 800 ewes. 150 rams and 50 goats, is stated to be 90,500 piastres, the cost of keep, a.c., being 31, 00 piastres, and the total value of the produce, exclusive of the skins, was 56,910 piastres—112 piastres being equal to one pound sterling. There is an active market for the skins of the lambs and goats which are salted and packed for the French and English markets.

are saited and packed for the French and English markets.

The two most prominent breeds which are considered by the natives as distinctly local, are the Kavirjik, which bears some affinity to the demi-Merinos and the Karsbash, which are black faced, and not unlike the sheep in Mac do its and Thessaly. The wool of the former is most estermed, being long, soft, and elastic, and twisted in ringlets, which gives the name to the breed.

Half-yearly Meeting of the Compony-Important Negotiations going on for the Transfer of their Territory.

THE half-yearly meeting of the Hudson's Bay Company was held on Tuesday; the Earl of Kim-

Company was held on Tuesday; the Earl of Kimberley in the chair.

The Chairman, in moving the adoption of the report, expressed regret at the loss of their late Governor Sir E. Head, and bore testimony to his very high merits. He had the disadvantage of addressing the meeting for the first time with a reduced dividend. The far trade was a very fluctuating one, in addition to which they had met with certain losses, which had been fairly and fully written off. One question was low far the expectations held out to them on the formation of the present company had been fulfilled? He understood they were promised an average dividend of 4 per cent. In the first year they had 4½ per cent, in the second 4½ per cent, in the third 5½ per cent, in the fourth 4½ per cent, and now they had 3 per cent. They must look at the average (cries of "No. no!") and if they did they would find the average dividend exceeded 4 per cent. There were important negotiations going on as to the company's territorial rights, in respect of which he had to speak with some reserve. He had a very strong belief in favor of their claims, and hoped they would the fairly and fully supported by the Government in the matter. He would devote himself to their interests and the committee would do everything in their power to maintain the company's rights.

Sir C. M. Simpson, seconded the motion for the

devote numer to their metrics and the monid do everything in their power to maintain the company's rights.

Sir C. M. Simpson, seconded the motion for the adontion of the report.

Mr. Thorpe complained of the manner in which the affairs of the company had been managed, and hoped the proprietors would support him in a resolution to the effect that the territorial rights of the company be not parted with for less than £1,300,000.

Sir C. M. Simpson stated that the average income of the company mentioned in the prospectus was £81 000, but they had obtained an average of £92,000, and had divided £435,000, which admitted of an average dividend out of the profile of trade, goods, and stock, for which the company had paid £1,000,000 of the estate and territorial rights, which had produced them very little.

the estate and territorial rights, which had produced them very little.

After some observations by Mr. Newmarch, Mr. C. Ely. Mr. Maxwell, Mr. Quiiter, one of the auditors, and other proprietors, the report was adopted and the dividend of 4s per share was declared.

At the request of Mr. Potter, a director, and several shareholders, Mr. Thorpe withdrew his proposed resolution, and the proceedings closed with a vote of thanks to the chairman and directors.

EAST TO WEST.

(From the Hamilton Spectator.)

URING the next (welve months it is certain that a remarkable revolution... remarkable revolution will take place in the

DURING the next (welve months it is certain that a remarkable revolution will take place in the commercial world, and that the Western hemisphere will have began to compete with Europe, for the possession of the trade of China and the East, with far greater effect than ever before. The two oceans will be united by the iron links of railway communication, and a great portion of the trade between Europe and Asia will most certainly be conveyed across this continent between New York and Fan Francisco, in addition to the large commerce which aiready has aprung up between New York and Boston, and China and Japan. As an instance of the saving to be effected in time and space by the new route, it is worthy of notice that the distance by sea from Canada to the principal tea markets is upwards of 14 000 miles, while by the new route across the Pacific Ocean to San Francisco, thence by railway to New York and so to Canada, the distance is only 8.250 miles. a saving of nearly 6,000 miles being thus effected. In spite of the objection which many people have to sending tess, &c., by railway, it is obvious that when so large a raving in time and distance is effected, this route issure to commend itself to public favour.

If does not appear as if British statesmen had yet come to understand that the Americans are thus stealing a march upon the British people nor have they yet become alive to the fact that, Britain's commercial supremacy, which, so far as India and China are concerned, has hitherto been undisputed, is very seriously menaced. Possibly it will not be until the Pacific railway is opened and in running order that the politicians and capitalists of the mother country will rouse themselves from the lethargy into which long continued success and prosperity have lulled them, and look around for some means of competing with our enterprising neighbours for the carrying trade of Asia. If they rely upon the objection which merchants have to transhipment and to sending freight to the Americans, and be dependent upon the go

Fortunately for us, and still more fortunately for the merchants of Britain, it happens that at this time every branch of American industry is severely taxed, and shir-building is rendered almost impossible by the cost of material and of workmanship, so that in spite of the great advantage which the opening of the

Pac'fic railroad will afford to the Americans, they will Pac'fic railroad will afford to the Americans, they will not be able to take the leading p'ace in the commercial race just yet. But it does not follow that American energy and perseverance will always be cramped and clogged in the same manner. On the contrary, when wiser men assume the reins of power, when the expenses or Government are reduced, and the South is no longer held in the Union by force, the enterprise of the great Yankee nation will develop itself with greater vigor and force than ever, and then Great Britain will find out what she has lost and what the United States have gained.

is no longer held in the Union by force, the enterprise of the great Yankee nation will develop itself with greater vigor and force than ever, and then Great Britain will find out what she has lost and what the United States have gained.

It is gratifying to know, however, that there is a chance of contending successfully with the United States, not only for the trade of the East, but for the best, and most popular road across the continent. From Halifax to Vancouver's Island the distance by the route proposed would be several hundred miles shorter than the American road, and it lies through a far loss difficult and far more fruiful country. Instead of passing through dreary wastes and arid deserts, as the Pacific Railroad does for a considerable portion of the way, the Canadian Inter Oceanic Railroad would traverse a country almost the whole of which is by climate and soil exactly fitted for settlement. Another point which deserves consideration is, that the canadian line would not have to pass through a country peepled with h stile tribes of Indians as the American line does, and would not, therefore, be compelled to maintain a small army of regular soldiers for the purpose of detending the trains from being pillaged, and the passengers from being scalped. The people of Great sritain may depend upon it that the only way of maintaining their hold upon Eastern trade and preventing the Americans from taking the first place, is to go to work immediately and build a railway from the Western Loundary of Canada to the Red River settlement, and as on to British Columbia Railway from the Western Loundary of Canada to the Red River settlement, and as on to British Columbia Railway from the Western Loundary of Canada to the first place, is to go to work immediately and build a railway from the Western Loundary of Canada to the first place, is to go to work immediately and build a railway from the Western Loundary of Canada to the first place, is to go to work immediately and build a railway from the whole commence of Br

FOREIGN SPECULATION.

(From the U. S. Economis'.)

HE general duliness of trade in Europe has caused a flow of money to the financial centres of Europe almost beyond precedent, and the consequent low rates of interest are producing a very active speculation in securities. In London, the lessons of the panic of 1866 are not yet forgotten, and consequently speculation there is conducted with much caution and conservatism. But even there very large amounts have been and are now being invested in new enterprices. Heavy loans have been made to India for railroad and other purposes, and a large amount has been employed on home railroad debentures, notwithstanding the depressed condition of that interest. The foreign loans offered there have also been on an extensive scale. At the date of our latest mail advices, there were proposals on the London market for nearly 20,000,000 sterling of loans on foreign and colonial account, of which the following are the details: a flow of money to the financial centres of

Russian Railway Loan, £320,000, at 5 per cent offered

Russian Kanway Loan, 2020,000, at o per concluded at 731 per cent, amply guaranteed.
Egyptian Loan, 48,800,000, to run thirty years, 7 per cent. interest subscription price, 731 per cent.; secured by the Alexandria customs duties, and salt

revenues.
Honduras Railway Loan, £1,000,000.
Suez Canal Loan, £4,000,000
Swedish Government Loan, £1,500 000, 5 per cent.; price, 88½ per cent.

Bonds of the West Wisconsin Railway Company, £800.000, seven per cent., run fifteen years, offered at

venty. Canadian International Railway Loan, £3,000,000

of bonds.

In Germany, however, speculation has been subjected to no such check as occurred in London two years ago. On the contrary, the financing establishments, after the character of the French Credit Mobiler, have given full swing to their speculative instincts and have fostered an extent of speculative operations perhaps never before equalled in allusion to this condition of things, the London Daily News remarks: remarks:

remarks:—

"For the time being a speculative mania existed in Austria and South Germany, which in a minor degree recalls the maduess in this country of 1815 and 1846—railway, omnibus, and all sorts of companies are brought forward in quick succession—subscribed two or three times over, and are quoted on the Vienna Bourse and elsewhere at high premiums. The end of all this is very clear, and a mere question of time, reaction, and ruinous collapse, such as we suffered in 1847 and 1848. These German markets during such a

mania may probably disregard all prudential considerations, and blindly rush into foreign loans without exacting the conditions which can alone render them sife securities in periods of war or adversity." It is of direct importance to Americans that they should duly estimate this condition of things. It is doubtless very much owing to this state of affairs that Germany has taken such an enormous amount of our bonds, and that we are still sending them there, about \$10,000,000 having been shipped duing the past month.

of our bonds, and that we are still sending them there, about \$10,000 having been shipped dung the past month.

It is of much interest to us to consider what may be the effect of the reaction from this speculative furore. Will all our Bonds then be wanted? Germany has probably \$600,000.000 of our bonds, taken within the last few years under the circumstances of a general commercial inactivity. In the event of a revival of business, calling for capiral for industrial enterprises, will the Germans remain satisfied to carry their present large amount of our bonds? In the event of a collapse of speculation, with failures a mong operators carrying our bonds, or rather having them carried by bankers, what would be the effect upon the value of gold and bonds on this side? We do not pretend to intimate that there is any immediate; but it is very clear that our foreign bankers interested in these speculations stand upon the crust of a volcano, and that we are constantly liable to the wildest dicturbance in gold and bonds from an explosion of these dangerous elements. The danger is all the greater from the fact that our exports of specie this year have been double the average ratio, and that the supply in the Treasury is reduced to a point which forbids the Treasury coming to the help of the market in the event of a drain from this cause. Our importers are deeply concerned in this condition of affirs, and they would act prudently in especially protecting their interests.

SEMI-ANNUAL REVIEW OF THE BOSTON BOOT AND SHOE MARKET.

(From the Hide and Leather Reporter.)

ONFIDENCE in the future was not one of the conditions with which the Boston boot and shoe

ditions with which the Boston boot and shoe manufacturers and dealers commenced the year 1868. Everywhere, in commercial circles, an atmosphere of distrust and uncertainty prevailed, to a degree which rendered even the most moderate business calculations but little better than a chance speculation, and it is not strange, therefore, that the production for the past half year has been kept well within the demand. The stock of goods on hand on the 1st of January was quite limited, and was principally made up of heavy work. Prices were, generally, a little below those ruling for the same class of work at the corresponding period of the previous year, and it was believed that this difference in favor of buyers would prevail throughout the season. Before the lst of February, however, the trade, which had been gradually increasing, had so broke the assortments in market that there was an advance on desirable qualities, and no disposition to take extensive orders for future delivery at the then prevailing prices. The activity with which the business had opened in several of the large Eastern shoe towns also contributed to give firmness to the market, and the constantly increasing trade, as the spring advanced, sustained the upward tendency.

A decided preference has been manifested during the past season for machine-sewed goods, in comparison with pegged work, as the former has been generally, of better style and finish, beside wearing equality well, and with more comfort for the feet. Ladies' cheap heeled kid slippers, buskins, and the lighter kinds of mock welt leather boots, as well as lasting goods, were also in fair request the greater part of the season, while ordinary pregged work was neglected. In styles there has been nothing particularly new, slight variations in the cut of uppers and trimmings cousti uting the only noticeable ch nge. "Box toes" have been largely made, but the medium round style has had the preference. Narrow square toes were sold, at one time, to some extent, but the demand was not general,

ment together to discourage the idea of bringing so unnatural a shaped boot or shoe into fashion, and it is now but seldom seen.

The labor question, which has constituted so important a portion of the problem of successful business experience thus far during the year, has been met, in the shoe trade generally, in the most commendable spirit, and with the best resuits. There have been a few "strikes," it is true, but, compared with the great number of hands employed, disturbances of this nature bave, happily, been rare. The employers have, in nearly every instance, anticipated the reasonable demands of their work, the additional cost thus paid for labor having been added to the price of the goods.

We cannot, in closing this brief review of the trade for the first six months of the year 1-68, too carnestly commend the careful management and conservative spirit which have marked the operations of both manufacturers and dealers during that period. It was only by such a course that a profitable business could be transacted and the happy means seems to have been reached. The stock has at no timb been excessive, the production has been large, from the constant employment of modern improved facilities, and the result has been that, notwithstanding the steadily advancing prices of goods, the shipments of boots and shoes from the Boston market, for the first six months of 1868, by rail and sea, as shown by our tables, give an excess of more than sixty thousand cases over those of any similar period in former years. We think that, sonsid ring the general duliness which has prevailed in learly every other branch of business; this result is highly creditable to the trade.

PROSPECTS OF THE GRAIN TRADE.

(From the U. S. Reonomist)

WE have now reached a period at which we are able to estimate with a reasonable degree of accuracy, the probabilities as to the supply and value of breadstuffs during the next few months. After three years of searcity, naturally resulting from war in the Old World and New, we have had two seasons of good crore; and the harvest on which we are now entering will make a third. The high prices of breatstuffs have naturally induced farmors in all the grain growing countries to extend their production, and this year, with favorable weather, the harvest is likely to be as bountiful, the world over, as in the most abundant of past years. As to the extent of our own crops there can be no question that they will equal; if not exceed, the most abundant of former periods. Advices from Europe, also, are generally equally favorable. England will have more than an average crop. The latest secounts from London asy the harvest in the Southern countries has already begun. For some of the crops the weather has been too dry, but the general recult its likely to be beyond the averaga. Barley and oats will be Bad crops, and the latter article has in consequence advanced is per unarter during the present week. The roots crops will also be deficient. But so far as wheat is concerned the crop accounts are still very favorable, and it seems very clear that the yield of produce will be above the in the Old World and New, we have had two seasons crop accounts are still very favorable, and it seems very clear that the yield of produce will be above the

on the Continent, the prospect is generally tavorable. In France the wheat crop is up to the average and in Germany the crops generally are represented as being large.

Under these prospects, the question is, what is likely

and in Gormany the crops ge-stally are represented as being large.

Under these prospects, the question is, what is likely to be the value of grain in this country? It is estimated that we may have a surplus of 56 million bushels of wheat, and nearly twice that quantity of corp, so that, after allowing reasonably for a certain amount to make up the deficiency in stocks, it is very clear that we must have a large amount to export. With a large supply coming into the English markets from European countries, it is very clear that prices there must materially decline. The London Permanst, in the following remarks, presents some very pertinent considerations on this question:

"Everything confirms the view which we took some weeks since as to the price of wheat. There will be a gradual fall to an extreme price, but there will not be a sudden tall to an extreme price, but there will not be a sudden tall to an extreme price. The prospect is in one respect materially better for the consumer than might have been expected. The harvest is a fortnight carlier than usual, and this year, when sic cks are so short, the earliness of the harvest is much more important than usual. The shortness of stocks is the main cause which will maintain prices, and an early harvest enables us to do with less stocks. Every week that the harvest is quickened has been estimated to be equal to 580,000 quarters saved in the stock. In all years this is important, but this year, when the existing supply is so deficient, the quickness of the reinforcement is invaluable.

A much lower range of wheat prices than we have had for two years is overwhelmingly probable for next year. And if there were an existing stock of the ordinary magniture a rapid fall would be certain, but then if there had been the usual stock in the cause will prevent an instant fall to an excessively low price We are not bold enough to make prophecies in figures, oven when made upon full data such antici pations must be uncertain, and in the corn frade the data are never full. Bu

turing to foretell, we give it as an op, 'n worth consideration'

Perhaps the prices here intimated may a considered a very moderate estimate, but even this no spect holds, out a probability of nail in the English markets of 20 per cent. On surplue, whatever it may be, will have to be sold in the Liverpool market, and must come down to the prices there current, and the price at which we can sell the surplus will determine the value of our entire crop. The farmers would do well to look there probabilities fairly in the face. If they hold back their produce in consequence of declining prices, they may delay the shipment of our surplus for a few weeks or months, but ultimately they will suffer from a decline much more extreme than would otherwise have occurred. Year after year has the West adopter the policy of keeping back its supplies until the close of navigation, compelling England to supply her wants from Kurope, the result being that in the Spring the surplus is rushed to the reaboard, and, under the pressure of receipte, prices fall, and Liverpool is enabled to make its own prices upon the grain we are obliged to realize upon. As a rule an early market is always the best for the farmer, and especially so in the periods of abundant crops. At the recent annual meeting of the European and North American Railroad, at Bangor, Me, a vote was passed authorizing the directors to issue bonds.

WILLIAM B. HAMILTON.

(From the Shoe and Leather Reporter.)

HE prestige of New England in former years in the business of manufacturing boots and shoes was quite a different thing from that undoubted superiority in the making of the cheaper class of goods which she now onjoys. The manufacture of ready-made goods was first established there, and it was only following out the natural order of things, in chrilicryears, when the spirit of competition in business was less conspicuous than at present, that the enterprise of Now England citizens should enable them for years to keep possession of the entire trade which they had thus founded. In the course of time, however, rival establishments sprang up in different portions of the country, many of them directed by Masuchusetts brains, and turnished with capital from the same trate, until now a well conducted shoe manufactory may be assured of success in almost any part of the Western, Southern or Middle States.

The introduction of ready-made boots and shoes into Canads was a slow process, and the successful establishment of the manufacture was still more tardy and cofficialt, and that the business has been at last successfully and prosperously carried on is due in no small measure to the business capacity and energy of Mr. Hamilton, of the firm of Childs and Hamilton, of Toronto.

William B. Hamilton was born in Montreal in July. business of manufacturing boots and shoes was

oronto. William B. Hamilton was born in Montreal in July, 22, and is of Lish Protestant patents. The facilities William B. Hamilton was born in Montreal in July, 1823, and is of Lish Protestant parents. The facilities for education in Lower Canada were never of a very light order, and, as his parents were only in moderate circumstances, he commenced, at the age of 13, to learn the trade of a carpenter, which was his father's business. He soon left this employment to become a shop-boy, and afterwards cierk, in a clothing store in 1848, he formed a co-partnership with Mr Edward Evaus, a clothler in Montreal, and then went to Toronto to establish and superintend the business of a branch house.

branch house.

One of the first acquaintances of Mr Hamilton on arriving at loronto was Mr. Champion Brown, of the firm of Brown & Childs, who were the pioneers of the boot and choe business in Canada, and connected with a house conducted by the same firm in Montreal. An acquaintance with Miss Elmira Brown, a sister of Mr. Champion Brown, resulted in her marriage to Mr. Hamilton, from which they have since had five children.

Champion Brown, resulted in her marriage to Mr. tiamniton, from which they have since had live children.

On the return of Champion Brown to Montreal, in 1825 Myron Brown and Edward Childs, both from Massachusetts, took charge of the house in Toronto, under the style of Childs & Brown. On the withdrawal of Myron Brown, in 183, Mr. Hamilton became a member of the firm, and the business has been, from that time to the present, conducted under the firm name of Childs & Hamilton.

It was most fortunate for Mr. Hamilton that, in thus embarking in a business with which he had no previous acquaintance, he was associated with so excellent and disinterested a friend as Mr. Edward Childs proved to be. Mr. Hamilton had almost everything to learn, but Mr. Childs was so thoroughly conversant with every department of the trade that the firm lacked nothing from want of a practical knowledge in the conduct of its affairs. As a consequence, the business, both in sales and manufactures, rapidly increased until May, 1831, when a severs check was experienced in the death of Mr. Childs.

After this unfortunate event Mr. Hamilton took the sole charge and direction of affairs. His task-was no light one, considering the short time he had been connected with the trade, but under his hands the business has continued to grow and prosper, until it is now second to that of uo other house in the province.

Although the establishment is conducted under the old firm name, Mr. Hamilton is the sole proprietor. The business which he entered as a strauger eight years since has now uo more apt and ready follower, as the numerous competitors who have entered the field against him can testify; but it has required a patience, a business tact, z persevering energy, which not every man possesses, and we are happy to know that the handsome competence thus acquired by Mr. Hamilton is the serviced by Mr. Hamilton is but the roward of deserving business enterprise and capacity.

A PLEA FOR SHEEP.

SHEEP husbandry is one of the most ancient and honorable occupations

When properly managed, the keeping of sheep, as a rule, is as profitable as any other kind of farm busness that can be named. The last two years have been an exception, but it may be attributed in a great measure to the change of values, brought about by a sudden termination of the late war. As we consume overy kind of woollen fabrio, from herse blankets up to superfine broadcloths, so do we require every kind of wool, from the coarsest to the finest.

Wool growers located in the vicinity of large towns, derive greater profit from long-woolled sheep, raised for mutton and wool, than from the sale of wool alone from Saxony and Merino sheep; while, on the other hand, wool growers in our far western and southwestern States, where pasturage is plentiful and cheap, or, in fact, any section of country remote from a mutton market, or where transportation forms at important item in the cost of placing it in the market, it is advisable to keep sheep for wool alone, and when that is the case, Saxen and Merino, with their various crosses, are preferable on account of their being better adapted to run together in large flocks.

In England, the long-woolled or mutton sheep have almost entirely supplanted the breeds, although great efforts were made by King George III. to introduce the pure Merino, but it was a failure, because the English were a mutton-cating nation, and the farmers preferred to raise and bring to perfection these breeds of sheep yielding the best mutton, wool being a secondary consideration. In carrying out this folject, the English breeders unconsciously produced a brighthaired and long stapled wool, of which the English manufacturers were not slow to take advantage, and the result was that for over fifty years they almost monopolized the manufacture of goods requiring long stapled wools has been carried on in the United States, increasing in importance from year to year, until at the present time twelve million pounds annually are used for that purpose I have mentloned these facts to show that no kind of

MONEY MARKET.

STONE) continues in abundant supply, all really good paper being readily done at 7 per cent, and we have heard of transactions at lower figures. On Orst-class securities, loans could be effected at 6 per cent for 60 or 90 days, and at as low as per cent on call. Storling Exchange is in good supply, but firm at quotations, say 109] to 110 for 60 day Bank Drafts on Lon. don. In New York the Exchange market during the early part of the week was lower and less firm, best bills offering as low as 1091. It has partially recovered, however, and 1091 is now asked. Gold Drafts on New York have been in demand, and transactions have taken place at par to 1-16 per cent premium.

Gold in New York has declined somewhat from the highest point reached last week, namely 150. On Tuesday, under the influence of the decline in foreign exchange, it sold as low as 1451, but since then it has again advanced, the latest quotations being 147. The tendency of the gold market is decidedly upward, and the speculators for an advance seem to be working on the safest side.

Silver is abundant, owing partly, if not entirely, to to the movement in Ontario, which has caused a considerable quantity of dimes and half dimes to be ship-ped to this market We quoto balves and quarters 47 to 43, and dimes and half dimes 53 to 6 per cent discount.

The following are the latest quotations of Sterling Exchange, Ac:-

UR market during the past week has been almost devoid of interest, the want of life usual at this season of the year being more noticeable than ordinary, there being only a from hand-to-mouth demand from the local trade. In some articles, however, a good feeling has been displayed, and the general tone of the market is healthy, and prices well sustained.

TEAS -Greens of all descriptions of high grades have had fair attention, though sales have been only limited, the lots at present in market being in few hands and held at high figures, while buyers are un. willing to pay high prices for large lots. Twankage, however, are well orquired for, especially good samples, for which full prices are readily given. Grades, say worth 871c to 40c are very scarce, and much asked for. Japans of all grades flud ready buyers at full prices. Blacks in fair demaud.

(OFFEES.- Have been in much better demand, Laguayene, having been entirely cleared out of first hands. Cape has also had a good enquiry Marucaibo (which is exceedingly scarce) Java and Plantation Ceston are now asked for, and holders appear somewhat firm in their views Mocha of really good quality is also well enquired for.

SUGARS .- Since our last report, the market has received a decided check in consequence of the dec'ine in the premium of gold in New York from the high figures of last week. The stock of raw sugars in that city being also somewhat large, bas caused would-be buyers to hesitate before supplying themselves. Still with the feelings at present displayed by holders here, prices have not so far given way on raws to the extent which tright have been anticipated. The recent alteration in the refinery price list has somewhat affected the market, still it would be impossible to give quatetions, as prices are strictly nominal. The higher grades are scarce, more especially Vacuum Pan and bright Porto Rico, 1 or which in lots to suit the local trade, pierious prices are readily paid.

Molarska.-In brisk demand. Lots lawly arrived have been sold at full prices, the principal lots being Barbadoes Syrup, which sold freely at from 36c to 89c; good clayed also commanding 850 to Sc. A small cargo-300 puncheons—of Centrifugal arrived this week, has been placed at 22 ic to 25c. All lots now in market and arriving are well looked for, and full prices readily paid.

lisu .- At auction in the early part of the week, dry table cod brought \$4 60 to \$1 621 per qui, at which pieces it found ready purchasers, being very scare in the market Hake is also scarce, and held firmly for from \$3 to \$3.25. Herrings-Good split of last fall, are scarce, but prices are nominal the season baving hardis as yet commenced, and lots arrived hardly worth mentioning.

FRUIT -Continues to receive good attention, and sales, more particularly for our local trade, of Layers and Bunch Muscatols have been readily made at our last quotations, and the feeling on the part of holders white. Valentias are hardly obtainable. Figs and Note of all kinds remain as before.

Rice - Is in good demand, though the teeling is a nille more in favour of buyers. Lots now coming forward, taken ex wharf, can be bought at for . racan, \$4 40 to \$4 CO. Rangoon, \$4.85 to \$4 45 7 Patna of other Rice offering. The lots now in market are readily placed, the sales this week amounting to about 700 bags.

Srices -Remain unchanged with ordinary enquiry. Numers continue to be well looked for, especially medium samples. Cassia also scarce and well enstred for.

Salt -Since our last there has been an arrival from sea at Quebec, and one or two barge I ads bave reached this market. Holders are still inclined to bold out for long figures, the prices a-ked for Liverpool coarse ex wharf being now Cot, to Ville, and ex store Tic.

THE HARDWARE TRADE.

Calem & Caverhill, trus & Evans. Evan John Henry. Eal, for & Ca. Irad W. H.

Morland, Watsun & Co. Mulholland, & Baker. Robertson, Jaz. Round, John & Sons. Waddell & Pearce.

CENERAL business is very quiet, and wholesale it transactions in heavy goods have been only to a Limited extent.

Pic Inon.-Is firm, as lots arrived are all yarded, and it is expected that lots to arrive will command letter prices. No transactions of moment are reported, orders from the West being limited at figures below current rates.

Ban Inon.-Is in very full and complete stock, and for large lots can be bought 10c. below our crotations.

Beer Inon.-The market is well supplied, and prices fevour bayers.
Boilen Plazes,—Are a little firmer, as the amort

Boiler Platia.—Aro a little firmer, as the exert wort is becoming less complete.

Carada Plati.—Aro in over stock, and offering is to lee below our quotations for large lots it as that a - are it im and stocks small, but there is the complete of the many stocks are firm at the complete of the complete

THE BOOT AND SHOE TRADE.

McLaren, W. & Co.

THERE has been quite a marked improvement in trade; orders are coming in more freely, and the teeling in general is more buoyant.

MONTREAL PRODUCE MARKET.

4km & Kirkjutrick Illack & Locke. Buck Robertson & Co. Converse, Colsop & Lamb Crawford, James.

Dawos Brothers & Co-Hennan, M., & Co-Hobson, Thomas, & C Mitchell, Robt. Raphadl, Thomas W. M. & Co.

PLOUR.-Since the date of our last our market has been extremely quiet, sales being mostly restricted to the local and immediate wants. The stocks of the higher grades have at length been reduced to about the requirements of the trade, and more show of demand exists, and prices have slightly improved. though not quotably higher. The exceptional rates demanded for Strong Supers have forced consumers into using a less costly article, and the extreme rates of last week are no lenger obtainable, best branda being now offered at \$8 and only taken in broken lots as needed for the day's consumption. Canada Supers from good to ordinary range down to about \$7: Weiland Canal may be quoted at \$6.70 to \$6.80: city brands %6 65 to \$6.75, and Western \$6.60 to \$6.70 But rates generally, owing to the very wide range in Canada Supers, are so imaginary that it is impossiblo to convey an impression of what any given quality would actually bring, rates obtained even for the same article being various, according to the fancy of the buyer No. 2 and the lower grades are in excess, and move with difficulty within the range of quotations. Bags-Of choice quality command \$3 50 tc \$3 55, but ordinary to common is very irregular.

OATSIPAT .- Is in retail demand: former rates roling. CORNERAL-Is offered in quantity at S4, without finding buyers; retail lots going at \$1 to \$4.10, accordng to buantity.

GRAIN.-IPheat-Receipts since our last have been mostly on millers' account, and few transactions can be noted, \$1.52} for a couple of cars U C Spring being abtroported transaction. Course Grains - Are purely nominal.

PROVISIONS .- Pork-The market continues quiet at unchanged rates, small sales alone being made for immediate consumption. Culmeals are record freely suplied, and prices are a shade easier, holders being desirous of reducing stock preparatory to receiving supplies of new. Lard is very scarce, and retail packages command 16c to 17c. Butter-Montreal buyers who bave operated pretty freely in Ontario are now bringing on supplies and the market is fully stocked with the several kinds. Considerable shipments have been made, but mostly, it is presumed, on owner's a count. Rates are quotably unchanged, but much less competition exists, and to effect sales in quantity lower rates would have to be taken.

Asues .- Pots have been pretty active during the week, but close quiet at quotations. Pearls were duli toward the close, when, to fill a few orders, there was more competition, and prices worked up to \$5.55 for good rates.

Many wool growers in the vicinity of Auburn, believe that wool producing will ultimately crass entirely in that region, for the reason that other branches of farming are so much more prefusable. It is estimated that it costs at least \$5 per annum to keep one sheep, and calling the average yield of each sheep five pounds of wool, we can see at forty cents per pound, the highest paid at Auburn, there remains \$5 which must be realized from the increase of the fieck, in order to make them pay their way.

CANADIAN NAVIGATION CO'Y

Royal Mail Through Line for Beauharnois, Cornwall, Prescott, Brockville, Gananoque, Kingston, Cobourg, Port Hope, Darlington, Toronto, & Hamilton.

DIRECT WITHOUT TRANSHIPMENT.

THIS Magnificent Line, composed of the following FIRST-CLASS IRON STEAMERS, leaves the Canal Basin, Montreal, EVERY MORNING (Sundays excepted), at NINE o'clock, and Lachine on the arrival of the Train leaving Bonaventure Station at NOON, for the above Ports, as under, viz.:

| SPARTAN | Cant. | FAIRGRIEVE | on | Mon days. |
|---------|-------|------------|----|-----------|

| PASSPORT | " | SINCLAIR | " | Tuesdays. |
|----------|---|----------|---|-----------|
|----------|---|----------|---|-----------|

" Wednesdays. KINGSTON FARRELL " Thursdays. GRECIAN KELLY

" Fridays. MAGNET SIMPSON

CORINTHIAN " " Saturdays. DUNLOP

Connecting at Prescott and Brockvills with the Railways for Ottawa City, Kemptville, Perth, Arnprior, &c.

At TORONTO and Hamilton, with the Railways for Collingwood, Stratford, London, Chatham, Sarnia, Detroit, Chicago, Milwaukee, Galena, Greea Bay, St.

And with the steamer City of Toronto, for Niagara, Lewiston, Niagara Falls, Buffalo, Cleveland, Toledo, Cincinnati, &c.

The steamers of this line are UNEQUALLED, and from the completeness of their present arrangements, present advantages to travellers which none others can afford. They pass through all the rapids of the St. Lawrence, and the beautiful Scenery of the Lake of the Thousand Islands by daylight.

The greatest despatch given to Freight, while the rates are as low as by the ordinary boats. Through rates over the Great Western Railway given.

Through Tickets, with any information, may be obtained from D McLean, at the Hotels; Robert McEwan at the Freight Office, Canal Basin; and at the office, 73 Great St. James Street.

ALEX. MILLOY.

Agent.

SUSSCRIBE TO THE WEEKLY TELEGRAPH. TOLONTO.

A Popular Paper at Popular Pri ONLY ONE DOLLAR PER YEAR.

It contains more news and general reading matter than either the Weekly Globe or Leader, at one half the price.

THE people who want to read the cheapest and best
Weekly in the Dominion should enclose one
Dollar for a year's subscription to the Toronto
Weekly Telegraph,—a splendid Family Paper. It
contains Interesting Miscellany, Reliable Market and
Cattle Reports, copious Telegraphic Reports, attractive News, Selections, and the useful information
than can be found in any other paper.
As A Folitical Paper it utters its opinions
fearlessly, avoids vulgar, sensations, and becomes at
onco a high-toned and popular paper.
The Eugenerman News is harofully selected and
condensed, and its Canadian and American News is
full and complete from all parts of the continent.
The Family Department contains readable
advices on the Easthons. Foreign and Domestic
Gossip, Tales, Sketches, Poems, Wit, Humor, Science
and Art.

Its Commercial Department is admitted to con-HE people who want to read the cheapest and best

and Art.

ITS COMMERCIAL DEPAREMENT is admitted to contain a more reliable Market Report, fuller Grain, Produce, Cattle, Lumber, Dry Goods, Hardware, and Groceries Reports, than is to be had in any of the so called large weeklies published in Toronto.

SEND FOR A SPECIMEN COPY.

OUR CLUB RATES.

Strictly in Advance.
