Chairman:—H. GERVAIS—Montreal, St. James.

House of Commons Debates

SECOND SESSION—ELEVENTH PARLIAMENT

HOUSE OF COMMONS.

THURSDAY, November 11, 1909.

The parliament which had been prorogued from time to time to the 11th day of November, 1909, met this day for the despatch of business.

The SPEAKER took the Chair at Three o'clock.

Mr. SPEAKER. I have the honour to inform the House that I have received the following communication from the Secretary of His Excellency the Governor General:

Office of the Governor General's Secretary,
Canada,

Ottawa, 10th November, 1909.

SIR,—I have the honour to inform you that His Excellency the Governor General will proceed to the Senate Chamber to open the Session of the Dominion Parliament on Thursday, the Eleventh instant, at Three o'clock, p.m.

I have the honour to be, sir,
Your obedient servant,
J. HANBURY-WILLIAMS, Colonel,
Governor General's Secretary.

The Honourable,
The Speaker of the House of Commons.

A message was delivered by Capt. Ernest J. Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Excellency the Governor General desires the immediate attendance of your honourable House in the Chamber of the Hon. the Senate.

Accordingly the House went up to the Senate Chamber.

And the House being returned.

CONTROVERTED ELECTIONS.

Mr. SPEAKER. I have the honour to inform the House that I have received from the Hon. Mr. Justice Langelier and the Hon. Mr. Justice Jetté, two of the judges selected for the trial of election petitions, pursuant to The Dominion Controverted Elections Act, a certificate and report relating to the election for the electoral district of Lotbinière, by which the said election was declared void.

In conformity with chapter 7, section 70, of the Revised Statutes, I issued my war rant to the Clerk of the Crown in Chancery to make out a new writ of election for the said electoral district.

I have also the honour to inform the House that I have received from the judges selected for the trial of election petitions, pursuant to the Dominion Controverted Elections Act, certificates and reports relating to the elections:

For the electoral district of Quebec Centre;
For the electoral district of Quebec West;
For the electoral district of Montmorency;
For the electoral district of Portneuf;
For the electoral district of Peterborough West;
For the electoral district of Quebec county.

by which the said election petitions were severally dismissed and the sitting members declared duly elected.

VACANCIES.

Mr. SPEAKER. I have the honour to inform the House that during the recess I have received communications from several members notifying me that the following vacancies had occurred in the representation, viz.:

Of Hon. William Lyon Mackenzie King, C.M.G., member for the electoral district of North Waterloo, upon the acceptance of an office of emolument under the Crown, to wit, Minister of Labour;

Of François Octave Dugas, Esq., member for the electoral district of Montcalm, by the acceptance of an office of emolument under the Crown;

Of Wilbert McIntyre, Esq., member for the electoral district of Strathcona, by decease;

Of Hon. Robert Franklin Sutherland, member for the electoral district of North Essex, by the acceptance of an office of emolument under the Crown;

Of William Samuel Calvert, Esq., member for the electoral district of West Middlesex, by acceptance of an office of emolument under the Crown;

Of Alexander K. Maclean, Esq., member for the electoral district of Lunenburg, by resignation.

I accordingly issued my several warrants to the Clerk of the Crown in Chancery to make out new writs of election for the said electoral districts, respectively.

NEW MEMBERS.

Mr. SPEAKER. I have also the honour to inform the House that during the recess the Clerk of the House has received from the Clerk of the Crown in Chancery, certificates of the election and return of the following members, viz.:

Of Hon. William Lyon Mackenzie King, C.M.G., for the electoral district of North Waterloo;

Of David A. Lafortune, Esq., for the electoral district of Montcalm;

Of Edmond Fortier, Esq., for the electoral district of Lotbinière;

Of James McCrie Douglas, Esq., for the electoral district of Strathcona.

MEMBERS INTRODUCED.

Hon. William Lyon Mackenzie King, C.M.G., member for the electoral district of North Waterloo; introduced by Rt. Hon. Sir Wilfrid Laurier and Hon. Geo. P. Graham.

David A. Lafortune, Esq., member for the electoral district of Montcalm; introduced by Rt. Hon. Sir Wilfrid Laurier and Hon. L. P. Brodeur.

James McCrie Douglas, Esq., member for the electoral district of Strathcona; introduced by Rt. Hon. Sir Wilfrid Laurier and Hon. Frank Oliver.

FIRST READING.

Bill (No. 1) respecting the administration of Oaths of Office.—Rt. Hon. Sir Wilfrid Laurier (Prime Minister).

THE SPEECH FROM THE THRONE.

Mr. SPEAKER. I have the honour to inform the House that when the House did attend His Excellency the Governor General this day in the Senate Chamber, His Excellency was pleased to make a speech to both Houses of parliament. To prevent mistakes I have obtained a copy, which is as follows:

Honourable Gentlemen of the Senate:

Gentlemen of the House of Commons:

In again meeting you at a season most convenient for the despatch of business, it is with great pleasure that I congratulate you on the prosperous condition of the country.

The present year, which is now rapidly drawing to a close, has been a period of steady and progressive growth. Immigration has poured into the new settlements of the north and of the west, in a copious and well ordered stream, drawn from the best elements of the British Isles, the United States and Continental Europe. Trade and commerce have made rapid advances in all directions. The revenue has almost completely regained what it had lost in the recent period of depression. Most remarkable has been the rapid recovery from the financial embarrassment which for a short time was the cause of anxiety amongst business men. In nearly every branch of business there has been a revival of activity which gives assurance of continued progress and prosperity.

Two members of my government attended the Imperial Conference called by His Majesty's government, on the question of defence. A plan was adopted after consultation with the Admiralty, for the organization of a Canadian Naval Service, on the lines of the resolution of the House of Commons, of the 29th of March last. The papers will be immediately brought down and a Bill introduced accordingly.

The new convention between His Majesty and the President of the French Republic, respecting the commercial relations between France and Canada, having been approved by the French Legislative Chambers, you will also be asked to confirm it.

The construction of the Transcontinental railway has made substantial advance during the year. The western division has been extended 66 miles beyond Edmonton, completing a total distance of 861 miles west of Winnipeg. Contracts have been let for 399 miles in the Mountain division; good progress was made on this work. The eastern division is now open for traffic from Winnipeg to Lake Superior Junction and thence, by the Grand Trunk Pacific branch, to the lake itself. The whole of the work between Winnipeg and Moncton is now under contract.

The board of engineers entrusted with the preparation of plans for the reconstruction of the Quebec bridge has sufficiently advanced its work to permit of tenders being invited for the substructure.

The exploratory surveys for a railway from the western wheat fields to Hudson Bay were pushed energetically during the whole of last summer. It is hoped that a report of the operations will be placed before you at an early date.

In order to improve the facilities already afforded the public by the government railways, and to enhance their value as part of the great transportation system of Canada, a Bill will be submitted to you for the purpose of enabling the Minister of Railways, on the recommendation of the Government Railways Managing Board, and subject to the approval

of parliament, to lease any line or lines connecting with the Intercolonial railway.

A measure will be submitted to you for the purpose of rendering more effective the present legislation respecting combinations which unduly enhance prices.

Bills will also be introduced respecting banks and banking, insurance, navigable waters, and other matters.

Gentlemen of the House of Commons:

The accounts of the last year will be laid before you.

The estimates for the coming fiscal year will be submitted for your approval at an early date.

Honourable Gentlemen of the Senate:

Gentlemen of the House of Commons:

I pray the Almighty Lord that He may guide and bless your deliberations, and that they may bear fruit in a further increase of our country's prosperity and well-being.

Right Hon. Sir WILFRID LAURIER (Prime Minister) moved:

That the speech of His Excellency the Governor General to both Houses be taken into consideration on Monday next.

He said: I ask for Monday at the request of several members who are not prepared to commence the debate to-morrow.

Motion agreed to.

SELECT STANDING COMMITTEES.

Right Hon. Sir WILFRID LAURIER moved:

That a special committee be appointed to prepare and report, with all convenient speed, lists of members to compose the select standing committees of this House under rule 10, said committee to be composed of Sir Wilfrid Laurier, and Messieurs Borden, Paterson, Fielding, Haggart (Lanark), Pardee and Taylor (Leeds), and that portion of rule 10 limiting the number of members of the said committee be suspended in relation thereto.

Motion agreed to.

REPORT PRESENTED.

Report of the Joint Librarians of Parliament.—Mr. Speaker.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. Before the House adjourns, I would like to mention, what I have already intimated privately to the Prime Minister, that to-morrow, probably on the motion to adjourn, we would like to discuss some delays in judicial appointments in the province of British Columbia.

I would like to ask the Prime Minister when we may expect to have laid upon the table of the House the report of the proceedings of the recent Defence Conference; also whether there are any documents relating to the treaty with the French Republic which have not been brought down, and which ought to be brought down; also whether the government has in its possession any reports or information which ought to be laid upon the table of the House touching the operation of the recent United States tariff, more especially as it may possibly be affected by any treaty obligations into which the country has entered or may propose to enter; also whether there are any documents or any information of any character touching the position of the Waterways Treaty which the government propose to lay upon the table of the House.

I would like also to inquire whether or not the report of the resignation of Mr. Hugh D. Lumsden as chief engineer of the Transcontinental Railway is correct, and whether the government intend laying the papers touching that matter upon the table of the House.

Sir WILFRID LAURIER. I do not know whether my memory will be equal to the task laid upon me by my hon. friend (Mr. R. L. Borden). He seems to be in an inquisitive mood. With regard to the conference which took place in London, I cannot tell him when the correspondence will be laid on the table, but I hope it will be early next week. As to the treaty, I am not aware of any such correspondence. As to the United States tariff, perhaps the Finance Minister (Mr. Fielding) can give my hon. friend some information.

Hon. W. S. FIELDING (Minister of Finance). As to the French treaty, all the papers having any bearing on the subject were submitted to the House last session Nothing has occurred since that time. At the moment, I am not aware of any papers on the subject to be laid before the House, but I will make inquiry, and if there are any, I will bring them down. As to the American tariff, there is no correspondence on that subject. Each of us may have his own impression as to what the effect of the tariff may be on Canadian affairs. But, inasmuch as we are not able, at present, to forecast what may be the judgment of the United States government in regard to the interpretation and application of the tariff, we did not think it expedient that the government should at present take any action or make any statement on the subject. The proper course, we thought, would be to await the action which the United States government, in its wisdom, may see fit to take with regard to the minimum and maximum tariff.

Sir WILFRID LAURIER. As to the Waterways Treaty, the matter is under ad-

visement. At the moment, there is no correspondence to be laid before the House, though there may be later on. With regard to the resignation of Mr. Lumsden, I will call the attention of the Minister of Railways (Mr. Graham) to the matter and probably an answer can be given to my hon. friend (Mr. R. L. Borden) to-morrow.

Motion agreed to, and House adjourned at 3.50 p.m.

HOUSE OF COMMONS.

FRIDAY, November 12, 1909.

The SPEAKER took the Chair at Three o'clock.

REPORTS PRESENTED.

Report of the Department of Public Works for the year ending March 31, 1909.—Hon. Wm. Pugsley.

Report of the Department of Railways and Canals, report of the Board of Railway Commissioners, and report of the Transcontinental Railway Commission, for the same year.—Hon. Geo. P. Graham.

Report of the Postmaster General, and report of the Department of Trade and Commerce, for the same year.—Sir Wilfrid Laurier.

Report of the Auditor General (vols. i and iii). Report of the Superintendent of Insurance, and the Public Accounts of Canada, for the same year.—Hon. W. S. Fielding.

Report of the Minister of Agriculture, and report of the Experimental Farms, for the same year.—Hon. Sydney Fisher.

Report of the Department of Inland Revenue. Report of Inspection of Weights and Measures, and report on Adulteration of Foods, for the same year.—Hon Wm. Templeman.

Report of the Department of Customs for the same year.—Hon. Wm. Paterson.

Report of the Department of Justice, for the same year.—Hon. A. B. Aylesworth.

Report of the Department of Labour, for the same year.—Hon. Mackenzie King.

Report of the Department of the Interior, report of the Department of Indian Affairs, and report of the High Commissioner for Canada, for the same year.—Hon. Frank Oliver.

Report of the Department of Marine and Fisheries, and report of Steamboat Inspection, for the same year.—Hon. Sydney Fisher (for Hon. L. P. Brodeur).

Sir WILFRID LAURIER.

ADJOURNMENT—JUDICIAL APPOINTMENTS IN BRITISH COLUMBIA.

SIR WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN, Mr. Speaker, before the House adjourns, I would like to bring to the attention of the government and the House, a matter connected with the administration of justice in British Columbia, which I would have considered worthy of presenting to you, Mr. Speaker, as a matter of sufficient public importance to justify me in moving specially the adjournment of the House if this oportunity had not been afforded. I think we all admit and realize that the power of appointment to public office in this country, or in any country possessing representative institutions, is a trust to be exercised in the public interest, and in no wise for party interest or for party consideration. That principle, whether it is acted upon or not, is recognized in every country in the world which possesses a government and institutions analogous to those which we happily have in Canada. The legislature of British Columbia in 1907 passed an Act constituting a court of appeal for that province. I do not propose to refer to that statute at any length. The second section enacted as follows:—

There shall be and there is hereby constituted a provincial court, to be called the Court of Appeal, which shall consist of a chief justice, who, as long as the present Chief Justice of British Columbia continues to hold such office, shall be styled the Chief Justice of the Court of Appeal, and three other judges to be called justices of appeal.

Section 6 provided as follows:—

The Court of Appeal hereby constituted shall be a superior court of record, and, to the full extent of the power of the legislature of the province of British Columbia to confer jurisdiction, there shall be transferred to and vested in such court all jurisdiction and powers, civil and criminal, of the Supreme Court of British Columbia and the judges thereof, sitting as a full court, that were held and exercised prior to the passing of this Act and all other appellate jurisdiction and appellate powers, statutory and otherwise, and howsoever arising or conferred, that have heretofore been held or exercised by the Supreme Court sitting as a full court.

Then it went on to enumerate more particularly the jurisdiction to be vested in the court of appeal so constituted. Section 14 of the statute provided for the sittings of the court, and declared that it should hold four sittings in each year, and it gives the day on which each sitting should commence, the first sitting of the court being fixed for the first Tuesday in January, and so on throughout the year. This section also provided that, in addition to the above sittings, the court of appeal might hold special

sittings, either at Victoria or Vancouver, for hearing any appeals that might be heard at the next regular sitting at either of such places. And finally, section 30 of the Act provided that the Act should not come into force until a day to be fixed by the Lieutenant Governor in Council. That enactment was followed by a necessary Act of the Parliament of Canada, which is chapter 10 of the Acts of this parliament for 1908. Sections 1, 2 and 4 of that Act provide that certain jurisdiction which had heretofore been conferred upon and was to have been exercised by the Supreme Court of British Columbia, sitting as a full court, should thereafter be exercised in the province of British Columbia by the court of appeal as constituted by the Act of the province of British Columbia to which I have alluded. Section 3 of the Act made provision for the salaries of the judges, and section 5 provided that the Act should not come into force until the Act of the legislature of British Columbia which I have already quoted from had been brought into force; and thereupon this Act of the Parliament of Canada should come into force upon a day to be named by proclamation of the Governor general in Council.

I am informed that communication was sent to this government as far back as the month of May, 1909, to the effect that the Act of the legislature of British Columbia from which I have quoted would be brought into force by proclamation of the Lieutenant Governor in Council on the first day of September, 1909; and I presume that intimation was given to this government in order that they might make the necessary arrangements for the appointment of judges and of a chief justice; so that as soon as possible—immediately, if possible, upon the proclamation of the British Columbia Act—the court should be constituted and proceed to carry out the jurisdiction and perform the duties which were imposed upon it by the British Columbia statute and by the statute of the Parliament of Canada of 1908.

The Act of the legislature of British Columbia to which I have alluded to was accordingly brought into force by the proclamation of the Lieutenant Governor in Council on the first day of September, 1909. I have the British Columbia Gazette containing the proclamation in my hand, but I do not suppose there will be any conflict as to the fact. It appears that although the Act was proclaimed on the first day of September, 1909, and although by the statute of British Columbia the jurisdiction of the Supreme Court of that province sitting as a whole court has been transferred to that court of appeal, there have been up to the present time no appointments to the positions which were necessary in order that that court should be fully constituted so as to proceed with the performance of its very important duties. In the first place, I would like to ask the government why it is, that there has been this extraordinary delay on their part after they had received, as I am informed, full notice and information as far back as the month of May last, six months ago, that the Act would be brought into force on the 1st of September last? I would further ask the government why it is that the confusion and the embarrassment and the delay to public business and the uncertainty in matters of legal procedure which must necessarily result from their inaction in that regard have been allowed to come to pass? I may say that there have been very unpleasant rumours prevailing in the province of British Columbia, especially of late, as to the reasons which have influenced the inaction of the government. There have been rumours to the effect that gentlemen who are taking a very active part in provincial politics at present, and whose names have been mentioned as possible judges to be appointed under the statute, have had some sort of intimation or some sort of understanding that their claims to positions upon the bench of that court would be very favourably considered by this government in a certain contingency. Now, any rumour of that kind is a decidedly unpleasant thing, and I am sure every man in this House will agree that any such condition would be absolutely a disgrace to the administration of justice in Canada. I would first inquire from the government whether or not there has been directly or indirectly any promise made to, or any understanding with, any of these gentlemen who are now actively engaged in the provincial campaign in British Columbia, as to the recognition of their claims when the appointments come to be made to this court of appeal? In addition to that, I have to ask that a definite and explicit answer shall be given to the question: why, when the province of British Columbia has constituted a court which in the judgment of the people of that province is necessary, and why when this parliament has been advised of that action and has taken the necessary steps to place upon the statute-books of Canada the enactment to which I have alluded, why is it that in view of all these circumstances the government of this country has allowed no less than ten or eleven weeks to elapse during which legal business, so far as the Court of Appeal in British Columbia is concerned, has to remain at a complete standstill, or to be in such a state of confusion and uncertainty as to be absolutely detrimental to the public interests of the province? Under these circumstances I thought it no more than right that I should bring to the attention of the House and of the government the matters to which I have alluded thus briefly. I do venture to think

that it is a subject upon which the answer of the government should be given categorically, fully and explicitly so as to reassure, if possible, public opinion not only in British Columbia but throughout the Dominion in regard to these important matters.

Hon. A. B. AYLESWORTH (Minister of Justice). Mr. Speaker, with the general observation with which the hon. gentleman opened his remarks, and as to the impropriety and undesirability of making any question affecting the constitution of the courts or appointments to judicial offices matters to be bandied about between one political party and another in this country, I am sure every one who listened to him will cordially agree. And, but for the observations which at a later period of his remarks fell from his lips one might have been in doubt whether the point of the statement with which he opened was directed towards this government or towards the provincial government of British Columbia. This legislation under which the court of appeal of that province was established is now some two years and six months gone; it became the law of the province of British Columbia as long ago as April, 1907. And, one who has followed the course of public affairs in the province of British Columbia might have been given rather to wonder why there was such extraordinary delay—to quote the words of the hon. gentleman—in the putting into force of this statute which presumably the legislature of British Columbia when it passed it, thought provided for wants which the province then had and of which the province itself felt the need. The provincial statute establishing the court of appeal was passed in April, 1907, and assented to on the 25th of that month. The parliament of this Dominion happened to be then in session, but it prorogued two days later, on the 27th of April, 1907, and long before any official notification of the passing of this particular statute could reach us at Ottawa. I am free to say—I wish to conceal nothing—I am free to say that during the spring of 1907 I had the pleasure of a personal interview with the First Minister of British Columbia, then on his road to the old country, and I was perfectly aware some weeks before this parliament prorogued on the 27th of April, 1907, that legislation of this character was under consideration in the legislature of British Columbia, and that in all probability it would become law when the assent of the Lieutenant Governor was given to the statutes of that session. But I had not seen a copy of the statute, and knew nothing of its provisions except what was conveyed to me in the personal interview to which I refer. I suppose accordingly no one would attribute any blame to this House, at any rate, or to the parliament of the Dominion, in the circumstance that there was no legislation by the Dominion parliament during the session of 1907 to supplement that of the province of British Columbia. It was impracticable that it should be so. I do not think that any one in British Columbia expected that it would or that it could be done. If there were no other reason why this parliament could not act during the session of 1907, the circumstance that the legislature of British Columbia chose to postpone the putting into force of their legislation until a proclamation bringing it into force should be issued, was in itself a sufficient reason why this parliament could not be blamed, at any rate, if it did not pass the necessary legislation providing salaries for the judges of the new court during the session of 1907.

During the session of 1908, and notwithstanding that the Act of the provincial legislature establishing the court had never yet been brought into force, this parliament passed its legislation providing for salaries to the judges of the new court, and providing that the legislation of this parliament in turn should not become effective until a proclamation to that effect was issued by the Governor General in Council; and as far as the department of which I have charge is concerned, I might, I think, offer a sufficient answer to the observations of the hon. gentleman, by stating that I am not in a position to make recommendations for the appointment of judges in British Columbia until the Act of this parliament providing for their salaries has been brought into effect by His Excellency. But I am taking no such position. So far as I am concerned I am perfectly willing to assume responsibility for any delay in issuing the proclamation by His Excellency in Council bringing into force the Dominion Statute providing for the payment of salaries to the judges of the court of Appeal in British Columbia.

Now how stands the matter as far as dates are concerned? In April, 1907, the court was constituted in British Columbia, the statute not made effective or brought into force. In 1908 this parliament provided the salaries, the statute not brought into force. The statute of this parliament was assented to in July 1908. If there had been any crying need for this new court in British Columbia, if the five judges they already had were unable to cope with the business of the court so that they needed four additional judges, one would suppose that those who were charged with the responsibility for the administration of justice in that province would at least have acted then with promptness, and when the salaries had been provided by the necessary legislation of the Dominion parliament; and when nothing remained but the bringing into force of the provincial Act consti-

tuting that court, and the appointment of judges to that court, one would suppose, if there were necessity for prompt action, we should have had something done during the summer months of 1908. We had nothing done.

The hon. gentleman refers to unpleasant rumours on the subject at the present time. I wonder if he heard any rumours twelve months ago. I wonder if he heard during the summer of 1908 and rumours that these judicial positions were being made pawns in the political game, that the government of British Columbia were waiting in hope that the elections of October, 1908, might bring a change of government at Ottawa. That delusion was dispelled on the 26th of October last by the electors and yet the government of British Columbia did nothing toward bringing this Act into force. Months passed, nothing was heard about the matter. The hon. gentleman says he is informed that this government was informed as long ago as May last that this statute would be brought into effect on the 1st of September then following. The information which the hon. gentleman has, so far as I am aware, is slightly inaccurate. I do not know to what he alludes. So far as I am aware, there has been nothing in the way of an official letter, or a private letter, or of anything in writing, to any member of this government. I do not know what may have passed in the way of conversation between any of my colleagues and any gentleman from British Columbia. I know only of what passed with regard to myself, and that is simply this: That last spring, I think in April, possibly in May, but somewhere about either the end of April or the early part of May, the attorney general of British Columbia was in the city of Ottawa on his way to the old country. He called upon me, we discussed this subject; he left me with the statement that this statute would be proclaimed on the following day, that he had made all arrangements for bringing it into force before he left Victoria, and that he was going straight to the telegraph office to send a telegram which would lead to the issue of the proclamation, and that I might look for the Act being brought into force within the next few hours. I thought that it would be so, I expected it would be so. I was here for some few weeks after that date, quite expecting I would hear any morning that this statute had been brought into force. Nothing was said to me about the 1st of September as a date when this Act would be brought into force, I had no idea when it would be done, but that it was going to be done, as I understood, forthwith. And when weeks passed, and months passed, and I heard nothing, and when although not in this country during the summer, I was in reasonably close touch with the progress of Canadian affairs and heard and saw nothing in the newpapers or otherwise of any bringing into force of this statute, I honestly thought that the opinion which I had previously in my own mind, whatever it was worth, namely, that this statute would never be brought into effect, was the correct one. I had the impression, which the event has demonstrated was entirely erroneous, I admit, but I had the impression that instead of going on and constituting a new and independent court of appeal calling for four additional judges, practically doubling the number of their judges in the province of British Columbia, a substitute arrangement increasing the number of the present judges of the existing court would be adopted, and that this statute would be either repealed or allowed to become a dead letter. I remained under that impression, no doubt I had no foundation for it, but it simply rested as a matter of my own inference and deduction until I returned to this country some four weeks ago. I was told then, perhaps the first day I was back in the office, certainly within a day or two, that the British Columbia Statute constituting the court of appeal for the province had been proclaimed, and had been brought into effect as from the 1st of September.

Then, my delay at any rate in acting in this matter counts from that time, and I must bear any responsibility that may rest upon me for the circumstance that, since I reached Canada some four weeks ago and up to the present time, I have not made any recommendation for the appointment of judges to this court or any recommendation that our Dominion statute providing for the salaries of the judges of this court should be brought into effect by proclamation. That, of course, is more or less a formal step which can be taken at any time and which, it seemed to me, there was no necessity should be taken until I was prepared to make my recommendation of the individuals who should constitute the new court. Now, in that respect, I wish to be entirely frank and open with this House as I have been in my communications with the attorney general of British Columbia on the subject. I received a telegram from him some ten days or so after I had returned calling my attention to the fact that under the British Columbia statute the first sitting of the court of appeal would take place on the first Tuesday in the month of November—the second day of November instant. I looked at the statute to verify my recollection. I saw that the statement was entirely accurate. But side by side with that provision of the statute, I noticed the provision which the hon. gentleman (Mr. R. L. Borden) has referred to to-day, that the court of appeal, when constituted, could hold a special sitting at any time it pleased. The regular sittings are to be on the first Tuesday of the months as I recollect it—of January, May, September and

November of each year; but special sittings at either Vancouver or Victoria may be held at any time. Accordingly, it was manifest that if there was no court in existence on the second of November, 1909, but if the court was brought into existence by the Dominion proclamation and by the appointment of judges at any day thereafter prior to the next regular sitting of the court, the new court could go to work immediately upon the judges being sworn in, if it saw fit to do so. I wrote at once to the Attorney General of British Columbia pointing this out, as I regretted any embarrassment that the delay of even one day would cause in what, I suppose, may be called public business—in the private business of the litigants to be accurate. I am sorry that should be the case. Delay in any litigation is always an injury to the suitor, and, indirectly, to every interest connected with it. But I was not ready to make the recommendations of the individuals which it was my duty as Minister of Justice to make to His Excellency in Council, and I stated to the Attorney General of British Columbia with complete frankness, exactly the position I was in in the matter. It is not, I think, desirable that such things as the personnel of a court should be made—at any rate beforehand—a matter of public discussion. It is not, in that view, desirable that I should go into the same particularity on this occasion that I did in writing a letter—which, while not a private letter, was more or less of a confidential character—to the attorney general of the province; and I will simply say this with regard to the contents of my letter to him; I pointed out that my own view was that it would make for the increased confidence of the public of the province in the new court of appeal if it were not to be composed altogether of new men without previous judicial experience; that it would be in the best interest of the administration of justice in the province that some of the members of the new court of appeal should be men who already had had judicial experience in the province, and that if that course were taken, while the new court of appeal would be constituted, there would be a breaking up of the present or existing court for the trial of causes, and that, unless appointments were contemporaneously made to the vacancies which promotion would cause, there would be vacancies on the bench for the trial of causes, a greater embarrassment to the business of litigants by the inability to carry on all the assizes or sitttings for trial which might be appointed to be held during the time when the positions of judgeships might be vacant. I have not had any answer to my communication. I do not know whether my ideas in the matter commended themselves to the attorney general or not. I have no doubt he has many other things to think of at the present moment than such details as I am referring to, and I have no astonishment to express that I have not received an answer. But in the absence of an answer I adhere entirely to the view I expressed in that letter, that it would be an inconvenient thing to make appointments to the court of appeal until I was in a position to make my recommendations for all the appointments that were to be made, and that it was in the true interest of the general public, and, in the interest of the administration of justice in the province, that no appointment at all should be made until I was ready to make all the appointments. And I am not yet ready to do so. I could name one man; I could name more than one man; for that matter I could name many more than the number of judges to be appointed—who are men, I think, fully qualified and eminently fit for the position. But the appointment of judges to any court, especially to a superior court, and more especially to a court of appeal for a province, is a matter about which, I think, any one charged with the responsibility of making the recommendations or selections ought to go reasonably slow. And the head and front of my offending in this matter is that I have now delayed some four weeks in the consideration of what course should be taken as to these appointments and that I am proposing to delay still a little longer. But I trust that before the end of the present month these appointments will be made and the court of appeal for British Columbia enabled to start upon its work. In the meantime, the situation is that which I have described. And, if the province of British Columbia and those in charge of the administration of its affairs can wait patiently with this statute on their books for a period of two years and four months before they choose to bring it into force, I think the delay between a court of appeal sitting on the 2nd of November and possiblv of the second day of December is not one for which this government or the Department of Justice can properly be held in any way to blame.

Mr. MARTIN BURRELL (Yale-Cariboo). I do not intend to detain the House for more than a moment or two in the discussion of a subject which is so largely legal in its bearing as the one now before the Chair. It is with some diffidence that any layman must rise in this House to touch upon matters that affect directlv the legal profession, for on this floor one has the felicity of finding lawyers in front of him, lawyers behind him, lawyers to right and to left of him ready to volley and thunder. It is, however, of some advantage occasionally to get members of my own profession, that is the farmers, as, after all, not only

are they allied to the basic industry of the country, but I do believe that in some of these legal matters the assistance of the farming fraternity would tend at least towards simplicity, efficiency and the necessary cheapening of the processes of law. I think, therefore, that the House should not have in its membership too great a quantum of lawyers, and it is perhaps well that a farmer and not a lawyer should come to this House from North Essex.

The question raised by the leader of the opposition (Mr. R. L. Borden) has, I think, been well raised. It is felt by everybody in British Columbia, be he litigant or non-litigant, that we have suffered very much from the law's delay. It is hard enough, Heaven knows, for the average individual to get into the clutches of the law, and it is very much harder for him to be eating out his soul with anxiety while a decision is pending. Our position is very much harder at the present moment when we have absolutely and literally no court of appeal existing in the whole province and have not had since the first of September when this proclamation came into force. I do not wish to dilate on the remarks of the Minister of Justice (Hon. A. B. Aylesworth) as to the delay on the part of the province in proclaiming this matter, but we have heard it stated, and I have every reason to believe that it is true, that due notice was given to the Minister of Justice here as long ago as last May, that it was the intention of the province to proclaim this Act on September 1, or at the end of August and, ipso facto, therefore, there would be absolutely no way in which a man in British Columbia could appeal because there would be no court of appeal until judges were appointed by the Dominion government. The Minister of Justice (Hon. A. B. Aylesworth) has, it is true, expressed his wish not to see judicial matters mixed up in politics, and yet he took on himself, I think rather illogically, rather unnecessarily and perhaps in a somewhat undignified way, to state that this Act was not proclaimed by the government of the province of British Columbia because it was hoped that after the election of 1908, the government of Canada might be of a different political complexion. If that is so, and if the Minister of Justice, taking that lofty idea, thought he could attack a province for delay on account of political reasons, it was evidently and abundantly clear that he should have taken particular pains to keep himself clear of the criticism which he might incur by leaving a whole province void of a court of appeal when some of the gentlemen who may be on that court are now taking part in an election campaign against the present provincial government. The Minister of Justice (Mr. A. B. Aylesworth) has stated that he very much regrets the delay, that he has not been ready to decide on the personnel of the court and he does not wish to discuss that question in the House. That is a sentiment in which we would probably all agree, but I would point out to him that the personnel of the bench has been very freely discussed all through the province of British Columbia by Liberal newspapers, and name after name has been bandied about in those newspapers as the names of gentlemen who are to fill positions on this court of appeal. So far has it gone that some time ago despatches were published in the chief Liberal newspapers announcing that the appointment would shortly be made of the late leader of the Liberal opposition in British Columbia, a gentleman who has the unfailing respect of all people in British Columbia, Liberals and Conservatives, and that gentleman and his friends seem to have attached such full credence to that report that he retired from the leadership of the Liberal party in British Columbia and, to his credit, is not taking any part in the campaign now in progress. I do not know that this can be said of several other gentlemen whose names have been mentioned. The Minister of Justice (Hon. A. B. Aylesworth) says that these matters should be kept entirely free from party political influences Unfortunately it does not always come with the best grace from the Minister of Justice, when we have had in the past in British Columbia the spectacle of judges shortly before an election, before their resignations had been accepted, taking part in party politics, and then stepping down from the bench into the party arena. In 1907 we had an extraordinary spectacle when a gentleman who had been in party politics in British Columbia and who had been rewarded by being appointed to the important position of governor of the Yukon—I refer, of course, to Mr. W. W. B. McInnes, a very energetic and strong champion of the Liberal cause—went up to the Yukon, and behold Mr. Henderson stepped down from his position on the bench, went into party politics, was defeated in 1907, and was rewarded by being appointed to Mr. McInnes' place as governor of the Yukon while the Dominion government compensated Mr. McInnes by putting him on the bench. When we have such an extraordinary shuffle as that, well may the Minister of Justice (Mr. A. B. Aylesworth) say that the judiciary ought to be above party politics. I would like to re-emphasize the fact that at this time every man in British Columbia is in this position that if he wants to appeal a case, he cannot appeal it simply because we have no such thing as a court of appeal in British Columbia, and have not had since September 1. The Minister of Justice (Mr. A. B. Aylesworth) concluded his remarks by saying that he knew of a great many gentlemen who would make very excellent judges. Possibly he does, possibly we all do, but he says although he

knows of many qualified for the position, he intends to go a little slowly, to wait a little longer, and he added significantly that he would probably make the appointments before the end of the month. It is an extraordinary coincidence that the British Columbia elections are to take place on November 25. There is no doubt in my mind that when these elections are decided it will be far easier for the Minister of Justice to give the awards. It leads to the suspicion that in some cases it may be a party decision and that these gentlemen will decide it according to the political merits of the case, but not judicially. I think we are justified in coming to some such conclusion as that. It is unfortunate that whatever delays may have occurred, even assuming that there was delay in proclaiming the Act on the part of the provincial government, in view of the fact that the Minister of Justice has taken this high stand, he did not immediately put a court of appeals into effect by proclaiming it and by appointing judges before the heat of an election campaign and so relieved himself and his party from any criticism of this kind.

Mr. W. S. MIDDLEBRO (North Grey) Mr. Speaker, the Minister of Justice (Mr. A. B. Aylesworth) gives as a reason why the Act was not brought into force promptly that he believed the provincial government did not intend to bring the Act into force until after the elections in October, 1908. I scarcely think that is the kind of reason the Minister of Justice should give to this House, but if that were so then, on October 28 last, the Minister of Justice (Mr. A. B. Aylesworth) knew that all ideas of that kind had been dissipated and the only reason for delay would be that he would think the British Columbia legislature would not bring the Act into force until after the following general election. It has been urged that because the British Columbia legislature remained inactive for a period of two years and four months there was therefore no great urgency for bringing the Act into force and appointing the judges. But the point that we desire to make, and practically the only point, is that the Minister of Justice knew, or he should have known—I have no doubt that he did know—that the minute the British Columbia Act came into force it abolished all machinery for appeals in that province. The Attorney General of the province of British Columbia away back last May desired the Minister of Justice to know that the British Columbia Act was going into force because he knew that just so soon as that Act was brought into force, if there were no judges immediately appointed, the whole machinery of the appellate court of British Columbia would be completely clogged. It is no justification for the Minister of Justice to say that at the time that the Act came into force he was away in Europe. There should be some person in his department who could at once bring into force the Act providing for the salaries of the judges. The fact that the Act was passed two and a half years ago is all the more reason why this government should be prepared now to appoint the judges. They recognized the existence of the British Columbia Act when they passed the Act in 1908 and they must have believed that the Act providing for the creation of the court was going to be brought into force. They passed that Act fixing the salaries of the judges of the particular court in question and they must have come to the conclusion that the Act constituting the court was going to be brought into force. The Minister of Justice says to-day on the floor of this House that he has more applicants for these positions in British Columbia, competent and willing to fill the positions, than the four or five positions to be filled. That being the case I ask him why he does not appoint the judges forthwith. This is not the first time that a question of this kind has been brought before the House, because, in January, 1907, a similar charge was brought against the Minister because of his failure to fill a position on the bench in Nova Scotia. On that occasion what was the answer of the Minister of Justice? His answer was: I do not believe that any inconvenience is being suffered by litigants in Nova Scotia because of there being only six judges instead of seven. He said: I do not believe the absence of one judge is an impediment to the administration of justice in Nova Scotia; if I did I would immediately appoint another judge. But, in this case in British Columbia we have not a single judge appointed and the whole machinery of justice, as far as the appellate court in British Columbia is concerned, is completely clogged. The answer would be that there being no judge in British Columbia who could carry on the appellate court work, there should be an immediate appointment. In what position will some of these litigants be placed? It is true that the court is constituted, but it is an inanimate thing until the judges are appointed. If a litigant desires to apply to the court of appeal for leave to appeal, there are no judges to hear the appeal and these appeals have, in many cases, to be made within a limited time. A criminal may be lying in jail waiting for leave to appeal to the court and he remains in jail because the government have failed to appoint these judges. For these reasons I say that there has been no sufficient reason shown why these judges should not have been appointed. It is, as my hon. friend from Yale-Cariboo (Mr. Burrell) says, a curious coincidence that these appointments are not going to be made until after the provincial general elections. Is the Minister of Jus-

tice going to make up his mind within the next ten or fifteen days? Has he not all the material and all the information now upon which he is going to make these appointments, or is he going hereafter to British Columbia for information to enable him to select the men whom he is going to appoint immediately after the next provincial election?

Mr. AYLESWORTH. Mr. Speaker, I would like to make a correction of a statement that I understand the hon. gentleman has attributed to me. I understand that he attributed to me the statement that I had more applicants for these positions than there are positions to be filled. I said nothing of the kind and I beg to assure the hon. members of this House that there is not an applicant for one of these positions that I would think of recommending.

Mr. MIDDLEBRO. Perhaps I did not make it clear, but what the hon. gentleman did say, I think, was that he could name more good men suitable for these positions than there were positions to fill.

Motion agreed to, and House adjourned at four o'clock p.m.

HOUSE OF COMMONS.

MONDAY, November 15, 1909.

The SPEAKER took the Chair at Three o'clock.

CONTROVERTED ELECTION.

Mr. SPEAKER. I have the honour to inform the House that I have received from the Hon. Mr. Justice Pelletier and the Hon. Mr. Justice Lemieux, two of the judges selected for the trial of election petitions pursuant to the Dominion Controverted Elections Act, a report relating to the election for the electoral district of Montmagny, by which the said election petition was dismissed and the sitting member declared duly elected.

MEMBER INTRODUCED.

Edmond Fortier, Esq., member for the electoral district of Lotbinière, introduced by Sir Wilfrid Laurier and Hon. L. P. Brodeur.

REPORT PRESENTED.

The Forty-second Annual Report of the Department of Marine and Fisheries relating to Marine.—Hon. L. P. Brodeur.

ADDRESS IN ANSWER TO HIS EXCELLENCY'S SPEECH.

Sir WILFRID LAURIER moved:

That the order for the consideration of the motion for an address to His Excellency the Governor General in reply to his speech at the opening of the session be now called, and that the same until disposed of have precedence over all other business except the introduction of bills and questions.

Motion agreed to.

Mr. A. ECREMENT (Berthier). (Translation.) Mr. Speaker, custom will be my excuse for being so bold. Custom requires that some young, unexperienced member be entrusted with the task of commenting the speech from the Throne. It affords an opportunity for teaching him a lesson which may turn out to be profitable to him; besides, it affords an opportunity for the House to show indulgence, the greatest virtue of men and especially of leaders of men.

I feel deeply grateful for the honour bestowed upon me, and which the electoral district of Berthier, whose representative I am, is especially entitled to claim for itself. But I have good reason to hesitate at undertaking such a task, considering that I am expected in the course of a few minutes to review a series of questions which it will take the House the whole session to dispose of.

Bound as I am to merely give a very general idea of the government's policy, I should certainly be in fear of minimizing its importance by too summary a judgment, were I not aware that experienced and leading politicians are to follow me up and take occasion of this period of peace and tranquility, to deal fully with these great undertakings referred to in the speech from the Throne.

Such a task is not always congenial to a beginner; many difficulties are in his way, some of which are personal to himself; a youth is often taken to task for being youthful. But if years impart experience, youth endows one with a capacity for work and a willingness to work; and I would feel some satisfaction if though everything else might be wanting, the quality of sincerity was found to inspire my utterances.

It is customary, Mr. Speaker, at the opening of each session, to review briefly the general condition of the country. It would be unbecoming on my part to break away from the custom generally followed, and particularly at a time when complying with the usage cannot but be an agreeable task, since, as several of my predecessors have done, I am bound to submit a favourable report.

On the other hand, however pleasant the task of pointing out the really good features in a policy, I must say that it is not solely with the object of eulogizing the government that I intend showing the connection between the wisdom of the policy they propound and the satisfactory state of business.

We have just emerged from a very trying period of depression. Our neighbours to the south have been severely shaken up;

and, while I am not called upon to set forth the influences which have brought this about, it will be in order to recall how disastrous the effects of this crisis have been and how well founded were our apprehensions in this regard. However, things did not turn out as we had surmised, and the depression from which the United States suffered did not affect our country possibly to the same extent as it did most European countries, some of which, such as Germany, show heavy deficits in their finances, while others, such as England, are trying to find out some means of making the revenue meet the expenditure, at the very moment when our Minister of Finance is reducing taxation and announcing large surpluses.

While it was inevitable that so great a disturbance in the financial condition of such an extensive country as the United States, should in turn have a depressing effect on the general business of our country, on the other hand our business and financial institutions were not imperilled in consequence; they victoriously withstood the storm. Now, if it is only a matter of fairness to praise very highly the foresight and wisdom of our business men under the circumstances, we should also be frank enough to acknowledge that a large share of these happy results is attributable to this government.

Let us be frank about it, no country would have been able to withstand such a crisis, if the management of its public affairs had not on the whole been sound, if it had not been protected against sudden changes in the financial world by means of a strong and secure financial organization, the result of several years of political effort, of several years of administrative forethought, with the object of warding off all possible danger and ensuring an ever increasing prosperity.

The main factor in the continuance of that prosperity has been an ever increasing tide of immigration, kept under strict control and particularly well selected. No one will deny that such prosperity is an actual fact. It would be an easy matter for me to quote figures which are familiar to you; they are very telling, and in that respect would prove useful to me; but preferably I shall follow the advice of a leading member of the party opposite and for once endeavour to find proofs other than statistics as evidence of our country's progress. The fact to which I refer has not been sufficiently insisted upon, it having only slowly come to light, though of late in a striking fashion: I mean the expansion of Canada abroad, outside of its own boundaries.

We have reached a point in our history when nature, vanquished by us, is freely giving up its treasures; all classes of society are equipped and ready to win the battle in the economic field. We are making the best of our own resources.

From now on, Canada will attract more and more the attention of foreign peoples who concern themselves with all our country may do, or think, or wish. Thinkers have their eye on Canada; its products, its possibilities, its resources are discussed, estimated and its future commented upon.

'Among new countries,' writes a leading economist, 'Canada is the one which most attracts attention.' 'It is a country whose progress cannot be impeded,' writes a former minister in the French cabinet. And you are familiar with the following quotation from another author particularly well informed in a book intituled 'Le Canada et les deux races': 'In a near future, no doubt, the Dominion's economic progress will be enormous and largely comparable with that of its gigantic neighbour, the United States.'

In connection with this parallel between our country and the United States, I may be allowed to state with what deep sense of regret we who had enjoyed the happy condition of things created by the treaty of 1854 and that of Washington, witnessed the setting up of that wall at the prompting of the protectionist spirit of our neighbours, the outcome of which action will be to induce us to seek elsewhere other openings for our products. Such is the great work to which our government is devoting itself when endeavouring to develop means of transportation throughout the country. There is possibly no other means whereby to the same extent the development of the country could be brought about, or enforced, if I may so express myself.

It is not incumbent on me to deal anew with the matter of the Transcontinental railway. Nearly fifteen hundred miles of that railway will soon have been completed, a gigantic undertaking to which the right hon. gentleman has had the glory of attaching that name which so often led us to victory.

That question, as well as that of the reconstruction of the Quebec bridge,—the promise of which, given to us as solace on a day of mourning, is now being fulfilled,—should be kept apart from party strife and considered as a national undertaking. It should be looked upon solely as a masterful and beneficent attempt to improve conditions and with which sectional views or prejudices should not be allowed to interfere. We are to-day in possession of the marvellous results secured by the Caandian Pacific railway, not only as a business proposition, as a business concern, but as a means for the country's development.

In connection with the proposed Hudson Bay railway, what wonderful things might be accomplished through the building of a new line running across the Laurentian highlands, somewhere north of Berthier and reaching Montreal,—since according to experts that would be the easiest route,—at the same time putting the commercial me-

tropolis in touch with that great inter-ocean line of railway! What wonders would it not do, from the standpoint of immigration, agriculture, industry and colonization generally, throughout those unexplored districts. It would be a repetition of what the Canadian Pacific railway accomplished in the Canadian west, which is largely indebted to that company for its development.

Promoters and business men are anxious for a settlement of this question. What has been done in the past should be our surest guide for the future, and I cannot insist on it too strongly, our future prosperity lies in the development of our means of transportation. Right here I may be permitted, Mr. Speaker, to quote an opinion recently expressed by an eminent engineer, and which I select purposely among others, because I take it to indicate clearly, notwithstanding its brevity, not only the desirability, but the necessity of such development. 'The ability of the manufacturer and business man, the wealth and resources of a country, however great, are not sufficient by themselves to ensure success. It is, furthermore, necessary that the public means of transportation to the distributing points should have their full development. Under certain circumstances, the reduction in the cost of transportation may become the main factor towards cheap products.'

It is that same progressive policy which has induced the Minister of Marine (Mr. Brodeur) to exert himself to the fullest extent with a view to developing that means of transportation which has been so aptly termed 'the St. Lawrence undertaking,' and also with a view to pushing ahead the deepening of the channel to a uniform depth of thirty-five feet. Thus better lighted and made still safer, that route, 110 miles shorter than that connecting New York and the Great Lakes, will challenge all competition and carry the ocean, as it were, to the very heart of the continent. The outcome will be that underwriters will have to cut down their rates and exporters to ship their goods through our territory and over our waterways. If I dilate somewhat on that point, it is on account of its evidencing on the part of the government an unrelenting desire to improve and make perfect that public means of transportation.

Parliament is to be called upon to consider in the course of this session a Bill amending the Banks Act, and another amending the insurance laws. Both sides of the House agree as to the desirability of such legislation. That will dispense me with going into an examination of the provisions of these Bills, the wisdom of which all readily acknowledge, resting as they do on an uncontrovertible principle of equity and justice. That, of course, does not detract in any way from the credit due to the government for the spirit of fairness shown under the circumstances.

That same spirit of fairness will be instrumental in putting a stop to the formation of illegal trusts and monopolies, an abuse which has been going on for some time past and which should not be tolerated in this country.

Let me now take up another point in the speech from the Throne; that of naval defence. I quite realize that this is in many respects a difficult, I might say, a thorny question, considering the rather extreme view of it taken by some people. At this turning point in our history, one cannot but be moved by what the historian terms the uncertainty of human events. It was to be expected, then, I was going to say it was unavoidable, that numerous objections should be forthcoming and a diversity of opinions expressed following on the announcement of the carrying out of that measure which the Canadian people have been considering for years past. However, as Guizot puts it, 'One must keep up with the times and with the trend of events, and be courageous enough to speak out the whole truth to one's countrymen and contemporaries.'

We claimed and obtained from England the right to conclude our treaties. That monument dedicated to the business interests of our country and over whose frontispiece we read the Franco-Canadian treaty, a treaty which we will be called upon to ratify in the course of this session, is not the less advantageous. We boast, and rightly so, of being in full possession of the privileges of democracy; we occupy in the business world a most enviable position; we proclaim through the mouths of our public men, here and in foreign lands, that Canada is large enough, rich enough and proud enough to cease remaining a colony and to become actually a nation. Notwithstanding which we would leave to others the task of protecting our frontiers, our territory, that growing trade and the routes followed by it, those coasts where our fishermen and merchants have shelters and safe harbours. We would close our ears to that mysterious voice which entices youthful nations to take the necessary means for ensuring their growth, from the material as well as from the moral standpoint! No, our statesmen, anxious for the welfare of Canadian interests as well as for the welfare of the interests of the mother country, for over a century the defender of our rights and franchises, our statesmen, I say, have been urged solely by a sense of national pride and self-respect, when, after listening to the various views voiced from divers quarters, they set aside the proposals of those who were favourable to a direct contribution towards the support of the Imperial navy, as well as the senseless grop-

ings of others, and come out with a distinctly Canadian policy.

The creation of that navy which will offer new openings to Canadian youths and further opportunities for the display of energy and ability by our Canadian workmen, will as we are assured, be Canadian-built, Canadian in its uses, and Canadian in its management Let us hope further that it will lead to the establishment on Canadian soil of large shipyards wherein, to meet the pressing needs of the Canadian trade, merchantmen will be built either through a grant from the Dominion government or the imposition of a duty on ships built in foreign lands.

'There is no escape from destiny,' once said the victor of the world, on board the 'Northumberland.' So it is with nations as with individuals. It is then a task worthy of our leaders to make to-day preparations for the future, unflinchingly, though at the same time unostentatiously. To-morrow all adverse opinions, all criticisms, will give way to admiration at the enviable position our country will occupy, with greater liberty and independence.

Such are, Mr. Speaker, the proposals of the government. They one and all spring from the same inspiration, and it is one that makes for progress. Indeed the great mainspring of all government projects, which persists under a variety of forms, is a desire to do right, and whenever possible to do better still.

I am quite ready to acknowledge that youth is apt to be carried away by deceptive appearances, but there is no deception in believing that improvement is always within reach, providing there is proper guidance, there is no deception in hoping for one's country a constantly brighter and greater future. There is no deception possible for whoever follows that venerable and glorious leader, supported by his colleagues, sustained by the House, working hand in hand with the whole Canadian people, all united in one common expectation. Then, satisfied as to the necessity of developing unceasingly our powers, we will have the satisfaction of seeing Canada play a more important part, not only on the continent of America, but among the nations of the world in whose company it has just been admitted, conscious of its strength and justly proud of its youthful activity.

I have the honour to propose that an humble address be presented to His Excellency the Governor General in answer to the speech from the Throne.

Mr. G. W. KYTE (Richmond, N.S.). Mr. Speaker, we are living under parliamentary institutions, absolutely free from imperial interference, and it therefore appears desirable that we should from time to time be reminded of the source from which we have our being as a parliamentary body. And about the only material and substantial evidence of the tie that binds us to the motherland was presented to us on Thursday afternoon, as it is annually presented to us at the ceremony of the opening of parliament. According to ancient usage and custom, His Majesty's dutiful Commons, attended at the Senate Chamber and there learned from the speech of His Excellency the causes for which parliament was summoned. According to usage, equally ancient and respected, we are required to acknowledge this speech in a suitable reply. The honour and distinction of seconding the motion of my hon. friend from Berthier (Mr. Ecrément) that an humble address be presented to His Excellency has fallen upon me. I thank the right hon. the leader of the government for so honouring me, and I assure him that I have accepted the task, as I trust I shall accept every other serious duty in life, with a full sense of its responsibility. The mild and balmy weather we have enjoyed since our arrival at the capital and the lingering tints of autumn remind us that we have been invited to the discharge of our duties somewhat earlier than usual. Surely to begin earlier is to end earlier and my hope is that we shall have completed our labours before the melting winter's snows have overflowed the Chaudière; and I trust that diverse councils or overmuch speaking may not shame my expectation.

In His Excellency's speech he dealt with many important subjects, but it is my purpose to limit my observations to three or four. The first subject that appeals to me is that of immigration. I have always felt that Canada can never expect to achieve her destiny until her vast prairies and important stretches of land shall be peopled by a sufficient and contented population. Last year, I am happy to say, was a year unique in our history as respects the number of immigrants who landed on our shores. I am not going to inflict upon this House any statistics, and I trust the House will pardon me if I indulge one statistical quotation.

The number of immigrants arriving in Canada for the fiscal year, ending 31st March, 1909, was as follows:

IMMIGRATION FOR FISCAL YEAR, ENDED MARCH 31, 1909.

Great Britain	52,901
Continent	34,175
United States	59,832
	146,908
From Great Britain—	
England and Wales	37,482
Scotland	11,810
Ireland	3,609

The following are the figures of immigration for the six months ending September

30 last, compared with a similar period of the previous year:

	6 mos. to Sept. 30, 1909.	6 mos. to Sept. 30, 1909.	Increase.
Ocean ports..	64,447	.....	
From United States..	56,486	.....	
Total....	120,933	100,471	20 p. c.
Estimate for the whole year	175,000.		

Now, Sir, while we in this country are always willing to open our doors to the best immigration that comes to us from Europe —from England, from Ireland, from Scotlan and from the other countries who have contributed to our population for many years, there is a peculiar interest involved in the immigration which we receive from the United States. That is an immigration which is not forced upon us by reason of undesirable or unhappy social conditions at home or by reason of any inability on the part of these people to find profitable employment in their own country. They come to us voluntarily because they believe that in the great Canadian northwest there is a future which far exceeds the prospects that lie before them anywhere else in the world. I would ask our friends from the west to treat well these immigrants from the United States. Their coming here is a repayment to some extent of the debt which the United States owed to Canada for many years by reason of the immigration they received from Canada under less happy conditions than those which exist at the present time. This is to us a notable and glorious fact. Instead of the tide of migration setting from Canada, and the maritime provinces to the United States as it was heretofore, to-day the tide of migration is from the United States to Canada. In the United States Canadians found comfortable, prosperous homes; they found the doors of opportunity in every walk of life open to them. There was no position in the social, intellectual and industrial life of that great country to which a Canadian was not welcome or to which he might not aspire. I trust that the same will hold good with regard to the immigrants coming into this country from the United States. They are worthy of the warm welcome which Canadians will always give them, and let us hope that while immigration comes to us from the United States it will always be of the quality and class that characterized the immigration from that country into Canada during the last twelve months.

I do not propose to make reference to the question of finance and trade; these were dealt with by my hon. friend from Berthier. But there is one matter mentioned in His Excellency's speech which has a great fascination for me—the subject of railways. I am pleased that the day has come when the government can afford to undertake the projection of a new railway into the great west. I observe that surveys and plans have been completed for the Hudson Bay railway, and, in the ordinary course of things, I would expect that the policy that the government enunciated some time ago in that regard would be carried out and that the construction of a railway to Hudson bay will be one of the undertakings of the not far distant future. But while we rejoice that the people in the west are receiving what was coming to them and what belongs to them in the matter of railways, I am glad that the government have not overlooked the position of affairs in the maritime provinces. It was my privilege last session to support the resolution of my hon. friend from Westmorland (Hon. H. R. Emmerson) with respect to the absorption of certain branch railways by this government. I had scarcely hoped that the efforts of my hon. friend, who has conducted a vigorous and persistent campaign all along the line on that subject, would have borne fruit so early. The suggestion of his Excellency that the government would take power to lease certain branch railways is a fulfilment of the dearest and best expectations of my hon. friend from Westmorland and myself. I do not purpose going, this afternoon, into the question of the Intercolonial or setting forth the reasons why the people of the maritime provinces may reasonably look forward to a degree of railway development greater than they have heretofore enjoyed. There is a great field for the exercise of the benevolent policy on the part of the government outlined in that paragraph of his Excellency's speech. I trust that the government will carry out this policy vigorously; and while I cannot hope that they will enter into the purchase or leasing of all the railways that it is desirabe the Intercolonial should control in the near future, I would hope they will make an early start and that one or two branches connecting with the Intercolonial may be acquired at an early day.

One other question referred to in the speech from the Throne appears to me as having great importance, the question of enhanced prices of certain manufactured goods. I notice that his Excellency has referred to that, and intimates that the government intend to propose further legislation to prevent the enhancement of prices of goods that may be the subject of combines. I must confess to a fear that there is an activity abroad in the combining of industrial enterprises that bodes no good to the consumer in this country. We have from time to time been informed through the newspapers that large and

important industrial enterprises are being absorbed by larger enterprises, or are being combined into what are called mergers. And there is already some evidence that the result of these combinations and mergers is to enhance prices very materially as regards certain lines of goods necessarily consumed by the people of this country. Far be it from me to detract from the energy or enterprise of these captains of industry who, by their talents for organization, their financial genius and splendid optimism, have consummated what are known in this country as mergers but are known in other countries by harsher and less delectable appellations. It is our duty to study public questions and evolve policies on public issues in the light of the past history of other countries similarly circumstanced with ourselves, and I believe that the time has come to limit to some extent the exercise of those talents for promoting mergers recently so much in evidence in this Dominion. 'Predatory wealth' is a term that happily, so far has had no meaning or application in relation to our industrial finances and I conceive it to be the duty of parliament in so far as it may properly do so by legislation to make it absolutely impossible for that opprobrious expletive ever to become engrafted upon the language of this country.

There is only one other question that I should refer to, and that is the question of naval defence. That question has already been dealt with by my hon. friend from Berthier, but, as it is an important one, perhaps the House will pardon me even if I go over ground that he has covered. The resolution passed unanimously by this House on the 29th of March last calls for action on the part of the government for the purpose of crystallizing that resolution into an active and vigorous policy with respect to naval affairs in this country. I confess that I was in a haze as to what was best for Canada to do. Not being a military or naval man, I had to exercise such judgment as I was able to arrive at after having heard the speeches of the leaders of the House on that occasion. But I wanted to know also what naval experts thought of the policy of this country and through it of the policy of the Imperial government, and I was pleased to learn, some months after this resolution was passed, that Lord Charles Beresford had delivered himself on that question. Speaking at the Australian annual banquet in the city of London, on June 29 last, Lord Charles Beresford said:

> The government was wise to ask a conference to assemble in this country to discuss this all-important matter. There was no doubt that the question of imperial defence was in the minds of the Dominions, because they had shown us at home that they thought we were getting a bit sleepy, not looking facts in the face, and the fact was further emphasized by the offer of money for the purpose of building what were called Dreadnoughts, but which he preferred to call battleships. . . . The great object was to help one another, and he thought the best way was for the Dominions to make proposals for defending themselves.
>
> The best investment for the colonies was to build cruisers with which to protect their trade routes. * * * * * * * * * * * * * * * * * * *
>
> The vessels should be under the administration and control of the Dominions, but in case of war ready to join the imperial fleet.

I confess that I was glad to observe that Lord Charles Beresford agrees with the policy of this House as regards the vote given on the 29th of March. I am pleased to see that the government felt called upon to make some practical move as regards the policy that was adopted on that occasion, and I observe that that resolution has been strictly adhered to. There appears to be some difference of opinion in this country as to what particular form Canada's assistance to naval defence should take, but so far as the hon. members of this House are concerned I think there will be no difference of opinion in view of the vote that was given here last session on that subject. Now, I have no strong views with regard to this question. A cash contribution is an alternative proposal: but it appears to me that that savours somewhat of feudalism, a spirit that we got away from hundred of years ago. I think Canada would do well to move slowly in this regard, to form the nucleus of a navy for its own coastal protection and for its own purposes as regards naval defence in co-operation with the imperial navy should occasion arise for co-operation with the stronger force. When the proposals come down, I have no doubt, there will be a discussion on the question, and, perhaps, with more light upon the subject we may all be disposed to give some further expression to our particular views in that regard.

Now, Mr. Speaker, history affords us many instances of alliances having been formed among nations for the purpose of mutual assistance and support, to repel the attacks of other powers, and to assist each other in aggressive warfare. These alliances, however, having been based upon no higher law or nobler sentiment than fear on the one hand or hate on the other, if we except those sordid and selfish instincts, that frequently coveted the territory of some weak and unoffending neighbour, fell apart when self interest or expediency demanded new combinations; and the countries that were to-day leagued together, to-morrow sought new allies to conquer and destroy their friends of yesterday. The policy of the government as regards naval defence foreshadowed in His Excellency's

speech, is the opening of a new and striking chapter in the world's history. Great Britain, the foremost nation in the world, with her lusty and vigorous daughters, four other nations in vigour, promise and resource—Canada, Australia, New Zealand and South Africa—united together in a quintuple alliance for the protection and enfranchisement of the British race in every quarter of the globe. In this alliance, fear, or hate, or covetousness will have no place. It will be held together by ties of blood and kinship, by devotion to British institutions, and by the recollection of what Great Britain has done to uplift the burden of oppressed mankind in every region and every clime, bonds that are enduring and indestructible.

Mr. Speaker, I beg to second the motion of the hon. member for Berthier (Mr. Ecrement) that an humble address be presented to His Excellency.

Mr. R. L. BORDEN. Mr. Speaker, before proceeding to discuss the motion which has been presented to the House, I would like in the first place to express the sympathy of those sitting to your left for the family and friends of Dr. Wilbert McIntyre, late member for Strathcona, a gentleman whose fairness, whose courtesy and whose genial disposition endeared him to every member of this House, on whichever side of the Speaker he sits. Speaking for every one on this side of the House, as I am sure I can also speak for every one on the other side of the House, we tender to the family and friends of the late Dr. McIntyre our most sincere and hearty sympathy. His death is a loss, not only to this House, but to the whole country; because, in addition to the qualities to which I have alluded, he was a man of more than ordinary ability, and one who devoted himself with the greatest possible industry to every public question that came up for the consideration of parliament.

Now, Mr. Speaker, I desire to congratulate in no purely formal manner the hon. gentleman, (Mr. Ecrement) who moved the address of His Excellency, and who did so in very happy terms and with great eloquence; also my hon. friend from Richmond (Mr. Kyte), who spoke with very great ability, and for the most part very happily.

With respect to the growing time which has been alluded to, I notice a distinct difference in the tenor of the speech which has been put into the mouth of His Excellency from that which we heard last year. I noticed in the gracious speech of His Excellency last year, that attention was called to a world wide depression, and it was indicated to us that this world wide depression had in some inevitable way been extended to our own country. There was a suggestion that the depression was prevailing throughout the world, and that no effort of any government could possibly have prevented it from reaching Canada. But this year I do not observe any reference whatever to the world wide prosperity which is enjoyed by every civilized country at this moment, the inference of course being that the great advance and growth which have been happily manifest in Canada, and the rapid recovery from the depression of last year, are altogether due to the fact that we have upon the treasury benches of Canada today that wonderful aggregation of ability and talent which now presides over our destinies. Well, I suppose there must be a difference in the way in which you look at it one year and the way in which you look at it in another year. But, after all, those of us who give intelligent consideration to such matters know that world wide prosperity and world wide depression are beyond the control of any government, or of any combination of governments. We are happy indeed that Canada in the past eight or ten years has had her full share in the world wide prosperity, we are glad of it, we rejoice in it, and we trust that it will long continue.

But there were one or two matters in connection with the growth of this country as to which I did not observe any allusion in the remarks, either of the hon. gentleman who moved the address or of the hon. gentleman who so ably seconded it. It has been a growing time in Canada, and it would be strange indeed if Canada did not share in this world wide prosperity. But have any of these hon. gentlemen considered the way in which the public expenditure of Canada has been growing in recent years? I have some figures that were made up for me not long ago, and they were of so startling a character that I sent for the public accounts, because I did not believe that they could be correct. I did not realize that the public expenditure of this country had grown to such an extent. But I found upon examining the public accounts that the figures given to me were correct. I found that, taking the ten years from 1886 to 1896, the aggregate revenue of this country amounted to $371,000,000, in round numbers. I found that, taking the ten years from 1900 to 1909, inclusive, the aggregate revenue of this country amounted to $692,500,000; in other words, I found that during the past ten years the present administration have received from the people of this country—because the money could come from no other source—$321,500,000 more than was received by the late Conservative administration during the last ten years they were in power. I imagined to myself what a good,

stalwart Liberal of the old school might say, coming to this parliament or coming into this House to-day, having regard to the pledges and to the declarations of principle which he had heard on so many public platforms before 1896, when he learned that in ten years $321,500,000 had been collected by this government in excess of what the people had paid to the Conservative administration during a similar period before 1896. Well, he would say in the first place that he was glad the revenue had been so abundant, but he would say also, 'When our friends went into power, when we assumed the reins of office in 1896, there were $258,000,000 of public debt in this country. We had complained of the growth of that public debt, we had deprecated it, and I have not any doubt but that out of the $321,500,000 of surplus excess of revenue which the Liberal ministry has received from the people of Canada in the last ten years, the whole of that public debt has been wiped out.' Well, then, he would be told: 'No, it has not been all wiped out.' He would say: 'At least $200,000,000 must have been wiped out, because that would leave $121,500,000 excess of revenue to supply all the growing needs of this developing country.' He would be told: 'No, $200,000,000 have not been wiped out.' 'Well, then,' he would say, 'surely $100,000,000 of the public debt must have been wiped out, because that would leave to the Liberal leaders who are in power to-day $221,500,000 to supply the needs of the rapid growth and development of this country. He would be told: 'No, the public debt of this country has not been decreased as much as that;' and if he seemed to be a man of robust health, capable of standing the shock, he would be told that the public debt of this country has been increased by nearly $66,000,000. I did not observe any allusion to this somewhat rapid and remarkable growth in the speech of either the mover or seconder of the address.

But, it does seem to me, Mr. Speaker, that these are figures which call for some comment, and they are figures which have already evoked some expression of opinion from great financial authorities outside of Canada. I may be told, perhaps, that the National Transcontinental railway undertaking has absorbed a very large amount of this. I have taken the trouble to look into that and I find that, excluding the Quebec bridge, about $52,000,000 was expended up to the 31st March last in connection with the National Transcontinental railway, and that, including the Quebec bridge, a little more than $58,000,000 has been expended in connection with that undertaking. So you can put the National Transcontinental railway out of the matter altogether by deducting the amount expended upon it from the increase in the debt, and you will find, after balancing the accounts in that way, allowing $58,000,000 of debt for expenditure upon the National Transcontinental railway, that you have $321,500,000 of excess revenue beyond that which was received from the people of this country in the period of ten years before 1896, and you still find that the gentlemen who occupy the treasury benches to-day have spent the whole of that enormous sum and have also increased the public debt by $7,000,000. Not only that, but $46,000,000 in the increase of the public debt to which I have alluded took place in the past year, and inasmuch as we have spent only $52,000,000 up to date upon the National Transcontinental railway we can foresee from the figures brought down by the government themselves that between $100,000,000 and $150,000,000 still remain to be expended upon that gigantic undertaking before it shall have been completed.

Passing from this question of the expenditure upon the Transcontinental railway itself, I do not observe a reference in the speech from the Throne to the probable date of the completion of the undertaking; nor do I observe, in the speech from the Throne, any reference, or any information whatever, as to the date at which the Quebec bridge will be completed. I think that these are matters upon which we might well be enlightened by the Prime Minister when he comes to address the House. We know that very severe comments have been made by the late president of the Grand Trunk Railway Company, Sir Charles Rivers Wilson, who has spoken in very indignant tones and in very severe language as to the extraordinary delay which has taken place in the work of construction between Winnipeg and Quebec. I would like to know, if possible, at what date the government expect that the road will be completed, and at what date they expect the Quebec bridge will be completed. Have they any reasonable idea, which they can vouchsafe to the House as measurably correct, as to when either of these events will take place; and if, as we assume the event will be, the Transcontinental railway from Winnipeg to Quebec and the remaining portion of the line from Quebec to Moncton will be first completed, what do they propose to do with these portions of the road during the period when the Quebec bridge will be still in process of construction? We are all aware in this country that traffic, once routed in a particular direction, is very difficult to move, and we are all aware that the traffic coming over the National Transcontinental railway may get routed in directions which are not thoroughly in the

interests of the people of this country; at all events, not in the interest of the great maritime ports of Canada. I think the matter to which I have directed the attention of the government is one of considerable importance, and I do trust that we will have from the Prime Minister, when he comes to address the House, some reliable information as to these very important questions.

I did not observe any reference in the speech from the Throne to the waterways treaty. The Prime Minister was good enough to tell us a day or two ago that the matter is still under the consideration of the government. If it is still under the consideration of the government I cannot reasonably expect any very definite information to-day, but I think the decision of the government, as soon as it is made, should be announced to the House in order that there may be an opportunity for debate, because I still adhere to the view which I expressed last session, and, I think, the previous session as well, that this treaty, inasmuch as it involves, to a certain extent at least, territorial rights, ought not, according to the modern and, I think, the better British practice, to have been entered into without having been made subject to the ratification of this parliament. Inasmuch as that course was not pursued it is only right and absolutely in the public interest that we should have all the information in regard to it as soon as possible.

I remember also, that the Prime Minister, at the concluding session of the imperial conference of 1907, proposed to the conference a certain famous resolution. I do not know whether many hon. gentlemen in this House can remember it thoroughly or not because the matter seems to have faded pretty well out of the public view in the meantime. As a matter of fact it concerned what was called the All-red line and the Liberal press throughout the country heralded the idea of the All-red line as one which had sprung in full armour, like Minerva from the brain of Jove, from the brain of the Prime Minister of this country. So, a resolution was introduced in the concluding days of the session of 1908—I think it was—the matter was placed before parliament for its consideration and the resolution, in the terms proposed by the government, was eventually passed. During the last session of parliament I asked for some information as to the position of, and as to the progress, if any, which had been made in this affair, and, as far as I recollect from the reply of the Prime Minister, it did not seem that any great progress had been made up to that time in that direction. It is possible that some progress has been made in that direction and if so I have no doubt the Prime Minister will give to this House all such information as may be available in that regard.

Allusion is made in the speech from the Throne to the French treaty. I do not desire to say one single word in regard to it which would in any way embarrass the government in its consideration of what appears to be a very difficult question. I have under my hand the tariff recently adopted by the United States of America. Every hon. gentleman in this House who has given any consideration to this question at all knows the terms of the second section of the American tariff of 1909. The second section of that tariff provides that the rates set forth in section 1 of the Act shall be the tariff to be levied in the United States upon goods coming from all foreign countries together with 25 per cent ad valorem in addition thereto unless the President of the United States shall after taking into consideration the fiscal measures of other countries, come to the conclusion that the United States has in every respect reciprocal and fair treatment from such other countries, and shall make proclamation accordingly. In the absence of any such proclamation by the President of the United States—and, of course, he has to depend, as we understand, for his advice in that regard, upon a board of experts whom he has appointed—every article exported from Canada to the United States, or from any other country to the United States, shall be subject not only to the tariff set forth in section 1 of the Act but to 25 per cent ad valorem as well. I do not to-day propose to enter into any debate upon the bearing of the treaty with the French Republic, but I shall venture to bring to the attention of the government a consideration of our relative trade with France and with the United States during the past three years. Our aggregate imports from France during the past three years amounted to $24,798,756; our aggregate imports from the United States during the same period amounted to $546,622,404 or about 25 times greater than those from France. Our exports to France during the same period of three years amounted to $6,392,400 and our exports to the United States during the same period amounted to $285,146,337 or nearly fifty times as much. Under these circumstances I must confess that a consideration of the French treaty will involve some matters of serious import, and when that treaty does come to be considered I trust we shall have from the minister in charge of it some definite information as to what effect its ratification may have in connection with the probable effect of the United States tariff.

The hon. gentlemen who moved and seconded the address made some reference to the paragraph in the speech from the Throne which alludes to the subject of

naval defence, and which is in the following language:

Two members of my government attended the imperial conference called by His Majesty's government, on the question of defence A plan was adopted after consultation with the admiralty, for the organization of a Canadian Naval Service, on the lines of the resolution of the House of Commons, of the 29th of March last. The papers will be immediately brought down and a Bill introduced accordingly.

I was a little in doubt during some portion of the remarks of my hon. friend from Richmond (Mr. Kyte) as to whether Canada was still a portion of the British empire, but I trust nothing has occurred since we entered the House of Commons to-day to lead us to the conclusion that we are not still a part of that great empire. I am glad to believe that Canada still floats the British flag. The hon. gentleman (Mr. Kyte) rather adopted a tone which would lead one to think that he was speaking of four or five absolutely independent nations who for convenience might see fit to enter into a joint alliance for purposes of defence. I shall not discuss the naval question this afternoon; it will be time enough to do that when the government proposals are brought down. I do not propose even to allude to some rather remarkable speeches which have been made by members of the cabinet, if the public press is to be trusted. I do not yet know whether the gentlemen in question have been properly reported, but I have heard that at least in one case the minister disclaims the language attributed to him. All I have to say is that if those eminent Liberal journalists who have been proclaiming that I am entirely in favour of the government proposals, imagine that any such proposals as those which have been outlined in at least one of these speeches will meet the approval of hon. gentlemen on this side of the House, they are labouring under an entire misconception. I neither oppose nor denounce these proposals because I do not know what they are. We are very happy indeed to say to His Excellency the Governor General, that we thank him very much for his gracious speech, but in doing so we do not concede for one moment that we are restricting our right of action in any way in respect to whatever proposals the government may see fit to make. Like the other proposals of the government, reasonable and fair consideration will be given to them, and the sooner they are brought down the better. In fact, the sooner we get to work the better, because I entirely agree with my hon. friend from Richmond that we should all endeavour to expedite the work of parliament this session, as at every session. We are ready to begin work as soon as possible. Let the government get their committees appointed, let them bring down their measures, let them come on with their work and we will work as hard as they to expedite the public business.

In the brevity of my speech I am at least giving an earnest of my desire to expedite the business of the House, but I cannot conclude without congratulating the Minister of Labour (Mr. Mackenzie King) upon his elevation to the cabinet. Might I remind the House that this is the sixth occasion on which the Prime Minister has gone outside of the House of Commons for a cabinet minister, and it is the fifth occasion on which he has gone outside of parliament altogether to make a selection. We on the opposition benches had nothing to say about that. Indeed the Prime Minister explained the situation to us two years ago when he said that he always endeavoured to select the best man, and inasmuch as he could not find the best man, or a sufficiently good man within the ranks of his supporters in the Commons, he was naturally obliged to go outside. But, these hon. gentlemen who have been passed over need not imagine that their usefulness is gone for they will still be required to vote for the Newmarket canal and things of that kind. In that way they will be able to contribute to the fighting strength of the Liberal party, if not from the treasury benches, from the benches immediately behind. I trust the Prime Minister will be good enough to furnish the House with information on the matters to which I have alluded so that we may get down to business and begin the actual work of the session as early as possible.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Mr. Speaker, when in the month of May last this House was prorogued, it was understood that the government would endeavour to so shape its course that the session of parliament would be called to meet for the despatch of business in the early part of November. Parliament has been called at the appointed time according to that programme, and in this as in all other instances the government has faithfully discharged its duty. Of course, for this we have received very little credit but with this government virtue is its own reward, and its ambitions no other. Meeting thus early in the season I agree with my hon. friend from Richmond (Mr. Kyte) that we should see the blessing of a prorogation early next spring. Indeed there is no reason why parliament should not be prorogued long before the melted snows have passed over the Chaudière Falls. And if I may be permitted to recall a recent utterance of my hon. friend the member for North Toronto (Mr. Foster) on this subject he stated, if I am correctly informed, that if the government brought

down its measures promptly, the session would be reasonably short. That is not, I think, the proper way to put the matter. The session will be reasonably short if the opposition is not unreasonably verbose; but I confess, after experience, that I have my doubts as to that, though I may be mistaken. If we find that the opposition have had a change of heart, that they have turned over a new leaf, and that, in addition to the art of speaking, of which I know they are masters, they have learned the art of stopping speaking, then I will be the first to proclaim the fact to a grateful people.

I must extend my congratulations to my hon. friend the leader of the opposition. He has set a good example, which I hope will be followed by those behind him. I must also offer to him my very sincere thanks for the generous manner in which he has spoken of our departed friend, the late Dr. McIntyre. Nothing could be too good to say of Dr. McIntyre. He was one of those rare men, who, to a brilliant intellect joined a kind heart, and he had nothing but friends on both sides of the House. I also appreciate the generous compliment which the hon. leader of the opposition paid to my friends, the mover and the seconder of the address. Indeed, in the course of a long experience it has not been my fortune to hear on such an occasion utterances at once so brief, so pertinent and containing so much matter.

I am afraid that I cannot meet all the requests that my hon. friend has made to me. I cannot discuss all the questions he has raised. I do not see any occasion at present for discussing the prosperity of the country. We are prosperous, and we do not grudge the prosperity of other nations, because we claim that Canada is more prosperous than any other country.

Neither do I propose to discuss at present the expenditure of the country. My hon. friend has stated that during the ten years in which we have been in office we have taken from the public $321,000,000 more than the Conservative party took from them in the same length of time. I do not dispute this, but I have not observed because of this any discontent on the part of the people of Canada. It has been an easy task for my hon. friend the Minister of Finance to get money from the people. My hon. friend the member for North Toronto recalls the days when he was Minister of Finance, and he will agree with me that he was sleeping on a bed of thorns, whereas my hon. friend the Minister of Finance is sleeping on an easy pillow. He has no difficulty in getting the money he requires, because he has a wealthy population to draw upon, whereas my hon. friend the member for North Toronto was drawing money from an impoverished people. If ever there was a period in the history of Canada when the people were contented and happy, it is this period in which we live.

Neither do I feel called upon at this moment to discuss the question of the completion of the Transcontinental railway. I can leave this to a future time, when my hon. friend the Minister of Railways will give all the particulars to my hon. friend. The same remark applies to the question of the Quebec bridge. But before I leave the point raised by my hon. friend as to the completion of the railway, I would observe that the remarks of Sir Charles Rivers Wilson, the President of the Grand Trunk railway, were hardly justified and have been falsified by the event. He complained that the line from Winnipeg to the Lake Superior branch of the Grand Trunk Pacific had not been completed, and that therefore this year the railway could not serve to carry the crops of the Northwest to Lake Superior. I am happy to say that since the words of Sir Charles Rivers Wilson were uttered, the railway has been completed and opened for traffic, and that at this moment wheat is being carried over it from the prairie provinces to Lake Superior.

With regard to the waterways treaty, we have about made up our minds on all points except one, which requires some further consideration, and it will be our duty if we come to a conclusion on this point during the present session, as I hope we shall, to communicate it to parliament as soon as it is arrived at.

I have nothing to say at present on the French treaty. According to my own view, neither the French treaty nor anything in the legislation of Canada can be construed as an act of discrimination against the United States, and therefore the article in the American Tariff Act does not apply.

My hon. friend has not discussed the question of naval defence, which is the very question which I think on the present occasion should be discussed, for this reason, that the policy which was adopted unanimously by this House last session has been singled out for attack in quarters from which we had reason to expect support. Last session, when the House unanimously came to the conclusion that Canada should organize a Canadian naval service in cooperation wtih the British Admiralty, we informed parliament that we were going to send to Great Britain two members of the cabinet for the very purpose of discussing that question with the admiralty. Shortly afterwards, His Majesty's imperial government called a conference of all the self-governing colonies for the purpose of discussing the larger question of imperial defence. Two ministers of the cabinet, as we informed the House were appointed to attend that conference, my hon. friend the Minister of Marine and Fisheries (Hon. L. P. Brodeur) and my hon. friend the Min-

ister of Militia (Sir Frederick Borden). They went as soon as the session was over. They attended the imperial conference and also had a protracted and careful conference with the admiralty, and they came to a conclusion, which will be placed before the House at an early day. My hon. friend from Jacques Cartier (Mr. Monk) who was not heard on this question during the last session, has been heard since, and he complained of the silence maintained by the government. He not only complained but deprecated that the report of the conference had not been laid before the public, and in somewhat harsh and violent terms, interpreted this silence as concealing some nefarious intention. He asked, with some excitement, why this secrecy? I am happy to say to my hon. friend from Jacques Cartier that there has been no secrecy, and if there had been, who would have been hurt? Certainly not my hon. friend, because on this question he does not want any action to be taken. I have only to tell him that no action can be taken on the report of the conference until the papers are brought down, and therefore there is no reason why his happiness should be marred. There has been no secrecy, for this reason. My hon. friend knows that it is a rule between several parties, that when a conference takes place the report of it is not made public without the consent of all the parties to it, and I can tell my hon. friend that the papers will be brought down here and in Great Britain on Wednesday of this week. Perhaps, as suggested by my hon. friend opposite, it would be better to wait until the papers are brought down, but I think, on the contrary, we should now have a word or two on the subject. If we had reason to believe that the policy laid down here last session is to be adopted now by the opposition, as it was adopted then, there would be no reason to utter a single word. But it appears that it is not a happy family which we have to-day sitting on the other side. It appears that it was not the angel of peace, with words of persuasion and conciliation, which presided over their recent deliberations, but rather the demon of discord:

> 'With ruin upon ruin, rout on rout,
> Confusion worse confounded.'

Let me recall to the House the enacting part of the resolution passed last session. It was in these words:

> The House will accordingly approve of any expenditure designed to promote the speedy organization of a Canadian Naval Service, in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

Sir, this resolution is clear cut. There is

no ambiguity about it. It is as precise as words can make it. Parliament stands there unanimously committed to the policy that Canada shall organize a Canadian naval service, to act in co-operation with the British admiralty, and to be organized for the purpose therein declared, namely that the superiority of Britain on the high seas shall be maintained. Nothing could be clearer. This resolution was not adopted as a snap vote, but deliberately and unanimously. The motion of my hon. friend from North Toronto (Mr. Foster) upon which it was based, had been on the Order Paper more than six weeks when it came up, and therefore nobody was taken by surprise. Yet the ink of that resolution was scarcely dry when we heard whisperings on the other side that the policy therein laid down did not altogether suit the party. These whisperings became murmurs, and the murmurs have now turned into ominous rumblings. I must give the generalissimo of the forces and his first lieutenant the credit of having, up to the present, stood manfully by their guns, whatever they may do afterwards, but behind them, in the rank and file, there are some young bloods clamouring for something more spectacular, and high up in the councils of the party, in the very staff itself, there is at least one who, like Lucifer, has said 'non servism', I shall not serve, and who like Achilles, has spurned the authority of Agamemnon, and has withdrawn sulking under his tent. In the first category we have my hon. friend from Lethbridge (Mr. Magrath) who at least has the courage of his conviction and who has come out openly and somewhat ostentatiously with the declaration that nothing will satisfy him except a contribution in money from the Canadian into the British treasury and of such an amount as will at least build a Dreadnought. I understand a similar position has been taken by my hon friend from Macleod (Mr. Herron) whom I do not see in his seat. I understand it is taken also by my hon. friend from Qu'Appelle (Mr. Lake), and by a good many sitting opposite who voted for the resolution of the House last year but have changed their minds and now want something else.

I have this to observe, that this question is not a new one. It was debated last year, and parliament then came to the unanimous conclusion that the help should not be in the form of a money contribution but in an organization of a Canadian naval service. The question is far older than last year. It is one that has come up before on many an occasion. It was debated at the conference in London in 1902 and the resolution then adopted, seven years ago, was exactly the resolution adopted by this House, last March. That resolution was to the effect that the assistance to be given

the motherland by Canada would not be in the form of a money contribution which was then asked but respectfully declined—but in the form of an organization of our own forces. I may be permitted to recall again the paper which was placed before the conference by the Canadian ministers who attended the conference of 1902.

At present Canadian expenditures are confined to the military side. The Canadian government are prepared to consider the naval side as well. . . . In conclusion the ministers repeat that, while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purpose of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures shall be so directed as to relieve the taxpayer of the mother country from some of the burdens which he now bears; and they have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities. and under the advice of experienced imperial officers, so far as this is consistent with the principle of local self government, which has proved so strong a factor in the promotion of imperial unity.

This paper was placed before the British empire and before the Canadian people seven years ago. At that time we were sharply taken to task by certain portions of the Conservative party, although our action was never challenged on the floor of this House. We were taken to task on the ground that we should not have an organization of our own but give a contribution to the mother country. The example of Australia was quoted against us. At that time Australia was paying a certain proportion of its revenue to the imperial exchequer for the purpose of aiding the imperial navy. The contribution, if I remember rightly was in the neighbourhood of £200,000. This contribution enabled the government of the mother country to maintain in the Pacific an imperial squadron; and we were told that this policy, which Australia was following out, was the one we should adopt. But time has shown that we were in the right since Australia itself has now come to our policy and is no longer contributing to the imperial treasury but is organizing a squadron of her own in her own waters.

There is in the Toronto 'News' of a recent date a suggestive article upon this point. It is not an editorial article but simply a news paragraph giving the context of the Bill introduced in the parliament of Australia after the conference which took place last summer in London. Australia no longer contributes to the British treasury but has come to what I may call the Canadian plan of having a force of her own. According to the Toronto ' News ':

The adoption of the Australian Defence Bill recently introduced in the Commonwealth parliament will mean building operations on such a scale that by 1912 the Commonwealth fleet will relieve and replace the present imperial squadron in Australian waters.

Henceforth this will be replaced by a squadron built and maintained by Australia. It is to be composed as follows:—

The new fleet is to consist of one armoured cruiser of the ' Indomitable ' class, three armoured cruisers of the ' Bristol ' class, and six destroyers with the necessary complement of submarines. . . . Its annual cost is estimated at $3,750,000.

The difference between $2,000,000 and the actual annual cost is to be provided by the imperial government until Australia can assume this entire burden. The new arrangement will save Great Britain from $1,500,000 to $2,000,000 annually.

The service will cost $3,750,000 a year. But the whole of that burden is not to be carried by the people of Australia; it is to be divided between Australia and Great Britain, Australia to assume $2,000,000 a year and the remainder to be contributed by Great Britain. Under this arrangement it is no longer Australia which contributes to the imperial treasury, but the imperial treasury which contributes to Australia. Nor is that all. There was great excitement last March when the news was flashed across the ocean that New Zealand was to contribute a Dreadnought to the imperial navy. Even there in New Zealand also public opinion has been moving. I find again in the Toronto 'News', which seems to give special attention to these matters, an important announcement with regard to New Zealand. New Zealand was given as an example for Canada and other self-governing dominions to follow and copy, but it now appears that New Zealand is coming to the policy of Canada. The Toronto 'News' says:

When the German peril first became acute, New Zealand unhesitatingly offered to donate a Dreadnought to the British admiralty. But, according to the arrangement agreed upon at the defence conference in London, the lesser Britain in the southern seas is to spend its money in providing the Pacific with an ' Indomitable.'

It goes on to say that the ' Dreadnought ' which is to be contributed by New Zealand is to be put in Chinese waters, and proceeds:—

This is the situation to-day, but the Wellington correspondent of the London 'Morning Post' reports a tendency towards a gradual change of opinion in favour either of a local navy or of joint action with Australia. The leader of the opposition in parliament thinks that some arrangement may still be made whereby the two southernmost British commonwealths may work together in defending themselves and the empire. One Wellington newspaper sees nothing to stimulate local sentiment in the placing of New Zealand's ' Indomitable '

upon the Chinese coast, and envies Canada and Australia the fleets which they are to possess, man and operate.

It is not for me to offer any suggestions to my hon. friends on the other side, but I may venture to ask them to reflect upon this—that if the British empire is to remain strong as it is to-day, it will not be by compelling the daughter nations to revolve as satellites around the mother country but by allowing every daughter nation to develop itself to the fullest extent possible so that it may add strength to the whole.

Now, I have presented to the House one side of the opinion amongst hon. gentlemen opposite. There is also another side. I have presented the side of the ardent; now I come to consider the side of the supine. But if I qualify those who are inactive by applying to them the word 'supine,' I use a term that is not sufficiently strong. If I were to do them justice, I think I should be obliged, if I may do so without violating parliamentary propriety, to borrow a term from American political slang and say that these gentlemen are of the party of the 'stand-patters.' The chief of that class is my hon. friend from Jacques Cartier (Mr. Monk).

Mr. F. D. MONK (Jacques Cartier). Does my right hon. friend (Sir Wilfrid Laurier) think it quite right to discuss this question, referring to papers in the case and not give those papers to parliament? I do not think it is at all fair.

Sir WILFRID LAURIER. It is just as fair for me to answer the speech of my hon. friend the member for Jacques Cartier as it was for him to make that speech before the papers are laid before the House.

Mr. MONK. But it is an ordinary rule of debate that an hon. member should not, in speaking in this House, refer to papers that are not before the House.

Sir WILFRID LAURIER. And it would have been well for the hon. gentlemen not to speak outside of parliament until he had the papers before him. The hon. gentleman (Mr. Monk) might have told his hearers that there had been an occasion when he might properly have spoken. He might have spoken last session when this resolution was before the House and when others spoke though he did not. He has changed his mind apparently. At a banquet which was tendered him in the town of Lachine, in the division of Jacques Cartier, he might then have told his friends that he had lost a good opportunity of thundering his objections to this policy last session. I recollect that my hon. friend was in his seat on the 29th of March last. He did not speak—he stood pat even then; he did not offer any objection, nor did he by speaking express approval. But on the more recent occasion to which I allude he did not hesitate to speak, and spoke apparently by the book. He gave a wealth of objections against the policy adopted here last session, and in which he was a participator in that he did not challenge a vote upon the question. He voted for the resolution, but, having voted for it, without more information than he has to-day he chooses to attack the policy of the government, the policy of his own party, and to declare that he will not stand by it. That was what the hon. gentleman did just eight days ago to-day.

Mr. MONK. I rise to a point of order. I submit to you, Mr. Speaker, that it is not competent for my right hon. friend to discuss a subject referred to in a speech from the Throne and in that connection to refer to documents which are to be produced unless those documents are laid upon the table of the House.

Sir WILFRID LAURIER. I am not discussing any question which is not properly before the House; I am discussing a resolution passed by parliament last session and an attack made upon that resolution by my hon. friend eight days ago to-day.

Mr. MONK. I would like to have your ruling on the point, Mr. Speaker.

Mr. SPEAKER. It is the well-known practice that if reference is made to documents, those documents must be produced.

Sir WILFRID LAURIER. What reference have I made to documents? I would have much preferred that my hon. friend (Mr. Monk) should not discuss this question until the papers are before the House; but when he chooses to attack the policy of a resolution passed in this House, speaking in the province of Quebec and attempting to arouse prejudice there, I have the right to refer to it here. The speech which he delivered——

Mr. MONK. I do not think that such an imputation should be made by my right hon. friend unless he is prepared to point out what language of mine was designed to arouse prejudice.

Sir WILFRID LAURIER. I will tell the hon. gentleman at once. The hon. gentleman told the audience which he addressed eight days ago to-day that our project of building a navy would cost annually $20,000,000. I say that that is an appeal to prejudice. If it was not, what was it? My hon. friend will be glad to know, I am sure, when those papers are brought down, that he was altogether astray. My hon. friend will be glad to know that his assertion was not only astray, but was three or four times astray, and I presume that when he sees the papers they will cause him no little surprise. Then, to undeceive the good electors of Jacques Cartier who, since his speech have been unable to sleep

on account of the nightmare which it caused them, he will be glad to tell them that these tall figures are altogether wrong, that they are merely the imaginings, the dreamings, the vapourings, the vagaries of the hon. member whom they have unwisely entrusted with their confidence. But that was not the only thing he said. My hon. friend also said that if we were to build a navy we would be drawn thereby into European wars. Need I say to my hon. friend that whether we have such a navy or not, we do not lose our right to self-government; that if we do have a navy, that navy will go to no war unless the parliament of Canada, including the hon. gentleman, choose to send it.

My hon. friend also blamed the government for proposing to begin the organization of a naval force. What is the object of that force, what is the occasion? We never had one before, and why should we have one now? he says. It is true, we never had a naval force before. I remember a time when we had no railways, when we had no public school system But at the present time we have railways and we have school systems. And if now we have to organize a naval force it is because we are growing as a nation; it is the penalty of being a nation that we have to bear. Sir, I know of no nation having a sea coast of its own which has not thought it advisable to have a navy of its own. I know no nation which has a large sea coast but no navy. I speak under correction—there is one, I think Norway, and even that country has some naval defence. But Norway will never tempt the invader; there is nothing in Norway to tempt an invader. But Canada has its coal mines, its gold mines, its wheat fields, and its vast wealth may offer a temptation to the invader; and that is the reason, as was stated last year by the hon. member for North Toronto, that the time has come when we should move on. It was proposed that we should either make a money contribution or that we should do what would organize a naval force of our own. We have proposed to adopt the latter course.

There is one thing, however, on which I can agree with my hon. friend—perhaps he will permit me to agree with him. I am always glad to agree with him when I can do so. He told his electors of Jacques Cartier:

> This is a Canadian question, we must view it from a Canadian standpoint primarily.

In this I quite agree with my hon. friend, it is a Canadian question, and we should deal with it as a Canadian question primarily. But there is something more than that. My hon. friend was right in saying this, but he did not go far enough, there is something else. We are Canadians, but we are something else also, we are British subjects. We have to consider this subject, not only from the standpoint of our status as Canadians, but we have to approach it from the standpoint of our status as British subjects. It is conceivable that the interests of Canada and the interests of the mother country may vary upon some questions. That has happened in the past, and it may happen again. When that happened in the past it was the part of statesmanship to reconcile the conflicting interests, and if they happen to clash again it will be the part of statesmanship to reconcile them again on broad lines. But I am happy to say that, in so far as I can see, at all events—and in this matter I express my own opinion—in the present instance there is no clashing of interests between Canada and the mother country. Whatever is done for Canada will benefit the mother country; whatever is done for the mother country, will benefit Canada. Let me say also to my hon. friend that if we have duties to perform as Canadians, we have also duties to perform as British subjects. If we have rights, privileges, and responsibilities as Canadians, we also have rights, privileges and responsibilities as British subjects. But my hon. friend, in discussing this question, ignored altogether that side of it, he discussed it from the Canadian point of view alone. He should have gone further and should have discussed it from the point of view of our status as British subjects. We have to recognize our duties and responsibilities in that double capacity. When we approached this question and declared to the British authorities, as we did in 1902, that we would relieve them from the necessity of looking after the defences of our coasts which they had hitherto done, we were performing our duty as British subjects, and when we declared that we would undertake that task ourselves and keep it under our control, we were performing our duty as Canadian citizens.

I have to say to my hon. friend that I hold in my hand at the present moment a letter which I received a few days ago from a friend who was a visitor in the city of Rome, wherein is narrated an incident which throws a striking light upon the rights and privileges connected with our British citizenship. My hon. friend knows that there is in the city of Rome a Canadian college built a few years ago by priests of the Society of St. Sulpice of Montreal, and maintained by them for the education of young Roman Catholic students in theology. At the date of my friend's letter, on the 16th of October, the city of Rome, like many other cities in continental Europe, was in the throes of a violent commotion, occasioned by the execution of Professor Ferrer, in Barcelona. Riots were imminent at different points of the city. The Spanish embassy at the Quir-

inal, the Spanish embassy at the Vatican, and the Austrian embassy had to be guarded by strong detachments of the Italian army. Streets and public squares were filled by an infuriated mob swearing vengeance, yelling and hurling threats at convents and religious communities of all descriptions. My friend asked the reverend father superior of the college if he was not apprehensive of danger for the Canadian college. Mark the answer. I commend it especially to my hon. friend from Jacques Cartier.

'Non, j'arborerai le drapeau britannique, si nous sommes attaqués. Le drapeau britannique est notre talisman ici.'

'No,' said the reverend father superior, 'I will hoist the British flag if we are attacked. The British flag is our talisman here.'

Sir, it is impossible not to be struck by the similitude of events which occurred something like 1900 years ago and which occurred again almost identically in our own day. Nineteen hundred years ago, at the time when the empire of Rome had reached the summit of its power, Paul of Tarsus, in the course of his labours as an apostle of Christ, was attacked by a mob; his life was in imminent peril. He bethought himself of His Roman citizenship; he had only to utter the words 'I am a Roman citizen.' This was his talisman, and at once he was safe from the mob. Now in our days, only last week, in the city of Rome, once the mistress of the world, whose name alone carried such prestige, a disciple of Paul of Tarsus labouring also in the cause of Christ, is also attacked by a mob. He bethinks himself that he is a British subject. He bethinks himself that he belongs to an empire which, for power, majesty and prestige can rival the empire of Rome in its palmiest days. And, as his talisman, he unfurls the British flag, the moment the noble colours are spread to the breeze over the famous city the mob is awed, all danger is past. I have to make this remark to the hon. member for Jacques Cartier. Wherever there are rights, wherever there are privileges, there are likewise duties and responsibilities and, so long as we enjoy the rights and privileges of British citizenship, so long we must, we shall, we will assume and accept all the responsibilities that appertain to British citizenship. These are the sentiments with which we should approach this question. I say 'we.' What do I mean? I mean Canadians of all origins, of all races, of all nationalities. I mean Canadians from the east and from the west. I mean Canadians of all the provinces, and above all—Canadians of the province of Quebec who claim the honour of being descended from a race which has always stood foremost in chivalry, in enthusiasm and in idealism.

Mr. W. F. MACLEAN (South York). Mr. Speaker, I do intend, notwithstanding the invitation of the right hon. Prime Minister (Sir Wilfrid Laurier), to discuss this naval question on this occasion, but just before I come to that, in view of what the hon. the leader of the opposition (Mr. R. L. Borden) and the Prime Minister said, and as something in the way of a just appreciation of the late member for Strathcona (Mr. McIntyre), I wish to pay him one great and substantial tribute in regard to his public conduct last session in this parliament. I raised a question on that occasion as to the capitalization of the Canadian Pacific railway. I thought that a great injustice was being done to the country. I pointed that out, and the hon. member for Strathcona, and the hon. member for Assiniboia supported me in that position. I think I can make the fact clear to the House by reading a very short quotation from a prominent English paper, London 'Truth.' London 'Truth' is noted for its financial articles, which are always written in the first person. In the issue of the 13th October this appears:

A week ago I referred to the likelihood of an early issue of shares by the Canadian Pacific. The official announcement has been made, Sir Thomas Shaughnessy intimating at the meeting held last week that the company would issue $30,000,000 of new shares to those registered on November 15th in the proportion of one new share for every five held. It is officially stated that the price of issue will be $125. There was a little disappointment in places at the company's departure from its former practice of making new issues at par, but the market was prepared for the board's change of policy in view of the opposition to issue at par lately encountered by the company in the Canadian parliament a matter with which I dealt at the time. It seems to me that the company's action achieves the object not often obtained of pleasing both sides. By issuing the shares at $125, instead of par, the board gains $7,500,000 of capital, and conciliates the Canadian trading community, while it is still able to offer the shareholders a handsome bonus.

The member for Strathcona has put this to his monument—and the people of the Northwest will appreciate it—that a year ago he raised his voice in this country against a capitalization in connection with the Canadian Pacific railway that was against the public interest, he stated his view in this House, he was supported by the hon. member for Assiniboia and myself, and the result is that the Canadian Pacific railway, in spite of itself and its intentions, has to-day $7,500,000 in its treasury for the building of branch lines in the Canadian west if it chooses to so employ that money. If there were more

men from the west who would stand up in this House as that hon. gentleman did on that occasion there would be better treatment for the farmers of the west in regard to the transportation question.

Now, Mr. Speaker, I wish to come to this question of naval defence. While I may not add anything new to the question, or throw any great light upon it, still I do want to get the House down to the actual situation, whatever it may be, in discussing it, especially in view of statements that have been made on recent occasions by members of this House and statements that are now being made in the press by correspondents who, in some way, seemed to think that Canada has no duty to perform in this matter. If I deal for a few minutes with some things that we all know, I intend to deal with them largely for the information of the country, and, I think also, for the information of some hon. gentlemen who are to-day members of this House. While I say this I wish to put in a plea now for the very fullest discussion of this question. There must be freedom of discussion upon this question. Every side must be heard, every province must be heard, every citizen of Canada must be heard on so important a matter. But I do trust, and I am confident that out of this discussion there will come a policy upon which the whole of the Canadian nation can be united. I believe that when we come to our final action it will be the action of a united nation and assist that desirable result. I wish to try and make clear what I conceive to be a few of the basic principles of the situation. The first thing I wish to establish—and it requires sometimes to be established, although the Prime Minister and the leader of the opposition have admitted it to-day—is that Canada is an integral portion of the British empire. The Prime Minister alluded to it to-day, but you often hear people discussing this question who seem to evade that issue. One way in which I wish to establish that, and I think I can establish it, is to take this little book, the British North America Act, and see what it says in reference to this subject. In its opening paragraph, or preamble, it says:

> Whereas the provinces of Canada, Nova Scotia and New Brunswick have expressed their desire to be federally united into one Dominion under the Crown of the United Kingdom of Great Britain and Ireland, with a constitution similar in principle to that of the United Kingdom. . . .
>
> Be it therefore enacted and declared by the Queen's Most Excellent Majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled.

Then the Act follows. What does that mean? It means that to-day this country is under the British Crown and that the House of Commons of this Dominion of Canada was organized and created by the parliament of the United Kingdom of Great Britain and Ireland. When you read some of these discussions that take place in the country you discover that they evade the whole fact that we are a creation of the parliament of the United Kingdom and that we are under the British Crown. If you go on in the Act for two or three sentences more you will read the following:

> Provisions of this Act referring to Her Majesty the Queen extend also to the heirs and successors of Her Majesty, Kings and Queens of the United Kingdom of Great Britain and Ireland.

Article 9:

> The executive government and authority of and over Canada is hereby declared to continue and be vested in the Queen.

Clause 15 reads as follows:

> The commander in chief of the land and naval militia, and of all naval and military forces, of and in Canada, is hereby declared to continue and be vested in the Queen.

Article 17:

> There shall be one parliament for Canada, consisting of the Queen, an Upper House styled the Senate, and the House of Commons.

Therefore, in this constitutional Act which creates the Dominion of Canada it is most clearly set out that Canada is a part of the British empire, and that this parliament is the creature of the parliament of the United Kingdom of Great Britain and Ireland. Let me read the oath that every soldier who joins the Canadian militia takes; and I suppose the same oath will be taken by the members of our naval force now:

> I, A B, do sincerely promise and swear that I will be faithful and bear true allegiance to His Majesty.

And every member of this parliament takes this oath:

> I do swear that I will be faithful and bear true allegiance to His Majesty King Edward.

The royal titles—and now I come to a point which is very significant—the royal titles as used in all our official documents read:

> Edward VII, by the Grace of God of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the seas, King, defender of the faith, Emperor of India.

And to-morrow were a declaration of war made against our King it would be against Edward the Seventh of Great Britain and Ireland, and the British Dominions beyond the seas, which of course would include Canada. War against Great Britain means war against Canada. Were the German Emperor to declare war against Great Brit-

ain to-morrow, even before the declaration were made public it might be the policy of the German empire to have her ships in front of Halifax and on the way up the St. Lawrence to Quebec, just as the Japanese fleet has destroyed the Russian fleet before any overt declaration of war was made. Canada is an integral part of the British empire, Canada belongs to the King of Great Britain and Ireland and of the British Dominions beyond the seas. Canada is subject to any attack that England herself may be subject to, and the people of this country should understand that they are of the empire, that they are with it; that they are exposed to the same hostility as any other part of the empire may be subject to, and that it is their duty to be prepared to defend that empire and in defending it to defend ourselves. But there is still more striking language in a document which is not set out in any of the statutes but which was prepared by a committee of this House some years ago and the form of which was agreed to with unanimity. The people of this country do not know so much of that document as we who are members of this House because it is the form of prayer used daily at the opening of our proceedings here and it contains the political and religious creed of the great bulk of our people. There are two or three petitions in it that I wish to bring before the House and before the people of the country and I read them with the utmost reverence. The prayer reads:

> Most heartly we beseech Thee with Thy favour to behold His Most Gracious Majesty King Edward, and so replenish him with the grace of Thy Holy spirit that he may always incline to Thy will and walk in Thy way, endue him plenteously with heavenly gifts; grant him in health and wealth long to live; strengthen him that he may vanquish and overcome all his enemies;
>
> Most gracious God we humbly beseech Thee as for the United Kingdom of Great Britain and Ireland and His Majesty's other Dominions in general so especially for this Dominion that Thou would'st be pleased to direct and prosper, to the advancement of Thy glory, the safety, honour, and welfare of Our Sovereign and his Dominions.

So in this daily prayer this House recognizes that Canada is a part of the empire; we pray for its prosperity; we pray that peace may prevail in it, and that His Gracious Majesty should vanquish and overcome his enemies. And, not withstanding that, there are men writing in the press of this country who say that in some way Canada can be of the British empire and yet not recognize the responsibilities that are set out in the oath of office in the British North America Act and in other official documents. It surprises me that any one who professes to be a Canadian can say that Canadians are not responsible for the defence of the empire. And what is there about the British empire that interests us? First of all the British North America Act confers upon us the British system of government as the system which is best suited to us, and which we believe is best suited for government generally. It is better than the autocratic system of Germany, it is superior to the system of the United States; and as England is the mother of free parliaments, and as we are the beneficiaries of this grand system of government, why should we not defend it? But more than that, the British empire stands to-day the hope of humanity and the greatest factor in the progress of the world that history has ever known. The British empire is to-day the hope of the oppressed people of all continents; it is the hope of the struggling people in Europe, in South America, in all countries on the globe where the aspirations of the people are for higher things. The greatest calamity that could befall the world—worse than the decay of the Roman empire, which fell because it probably deserved it—would be that the British system of government should be in any way confined in its scope for good and its mission to promote the welfare of the human race. Another thing, under the British system has developed that blessing of freedom to express public opinion which really governs the world to-day and which flourishes throughout the British empire as in no other. We as Canadians, in our own interest, and in the interest of humanity as well, are bound to recognize our duty as subjects of the empire and to assume our responsibilities, whatever they may be, for its defence.

Now, Sir, in view of the fact that the mother country has called our attention to the state of her defences and of our own, we are just now at the parting of the ways. We must choose whether we are to be of the British empire or not. There may be four courses open to us, but there are only two of any great concern. In the first place, we may say that Canada shall remain one of the partnership of free self-governing British states working together for common purpose and mutual defence. I believe that is what we will say. Or we may cut ourselves adrift and become a separate nation and pursue our own policy irrespective of all external conditions. Or we may sink our individuality and become a portion of the United States. Or, as a fourth possibility, we may remain within the empire while refusing co-operation, which to me is unthinkable because unpatriotic and repulsive to the people of this country. We must do one of two things; we are at the parting of the ways, and we have before us only the choice of Heracles, to choose the course that is with virtue, with honour, and with duty, or the contrary. Our choice must be whether we are to be with the empire or to separate from

the empire. There are people in this country who support both of these ideals, and neither is repulsive to any one, as they are on the line of progress. Some day this country may drift into complete independence, which would not be contrary to the rights of the people; but as long as this country is a part of the empire, and as long as that relation is what is set out in all these constitutional documents, and as long as we swear these oaths of fealty and loyalty and devotion to the crown of Great Britain, we must choose one of two courses, either to be of the empire or to be not of the empire. Then, if we choose to be of the empire, we must assume our responsibilities, and assume them in a generous way. There are certain incongruities that attend on a declaration of this kind. Some of them have been stated in the press and in debate in the country, and there is something to be said for them. One of these incongruities is this, that if the mother country chose to pursue a policy that brought her into wars or made her less competent to defend herself, we might be dragged into wars due to the neglect or the bad judgment of the mother country. The very German scare of the present time is based on the fact that England, by pursuing a certain fiscal policy, has given her markets to Germany and her work to the work-people of Germany. While the British people are told that it is cheap bread they want, it is really work that they want, and they would have that work and that bread if England changed her fiscal policy. I wish to say, as a citizen of this country and a member of this House, that inasmuch as Great Britain has intimated to us that she desires our assistance, I claim the right to discuss and criticise the present policy of the British government. My sympathy is entirely with the present government in their desire to bring about social reform, which is badly needed in Great Britain; but there is also needed a substantial tariff reform in the direction of keeping the British market for the British people and keeping the work of England for the working people of England instead of sending it abroad; and the one man that England and the empire needs to-day is the man who has force enough to tell the British people that their duty is to go on both in the work of social reform and in the work of tariff reform, and that with these two things they will get right at home that revenue which will make them strong and competent to resist any invasion that might threaten.

In view of the propositions which I have laid down, it is the duty of Canada to-day to come to the assistance of the empire; because this day of freedom which dawns so slowly and which we all speak so well of may be suddenly eclipsed, and the day of conscript nations, the day of feudalism, the day of warlordism may be revived, and humanity and human progress may be thrown back for centuries. In the face of these things it is our duty to find out what our responsibilities are and to live up to them. England has given free parliaments and free institutions to the world. Our system is modelled on the British system and we are proud of it; and if we intend to work it out to better results, we must assume our responsibilities. The imperishable glory of the United Kingdom of Great Britain and Ireland is the monument she has erected on this North American continent, and in that I include with Canada the great republic to the south of us. That is a monument unequalled in the history of the world. The most wonderful democracy this world has ever seen is on this North American continent, and it is the creation of the people of England. The English people having erected such a monument, can any man say, even a citizen of the United States, much less a Canadian citizen, that he would for one moment fail in his duty to uphold that monument and maintain that democracy? Those who would attack the British empire would attack that democracy of this continent of America if they could, and dominate it with warlordism and feudalism. So that the issue at stake is not a small one, but a vital one—the greatest issue that has ever come before the Canadian people. We are at the parting of the ways; we must choose one thing or another, and I know that we will choose a policy which will be a policy of honour and will be in support of the mother country; and when this nation, as a united nation, works out that policy and settles what it will be, it will receive the support of every province of Canada, notably that of the province of Quebec.

Now, I want to come to the question of what our policy should be. Should it be one of building a navy or should it be a contribution to the old country in helping it to carry on its navy. It could possibly be both. If war should break out to-morrow, our policy would have to be the first, and we should give a generous grant, because we could not possibly, in that event, hope to build a navy in time to help the empire in its day of stress. I recall now a proposition to establish shipyards in this country. Some years ago I happened to say on the floor of this House—I do not know that I got a great deal of support—that what Canada required to do in the development of a national policy was to establish a great naval industry in the maritime provinces, and in the basin of the St. Lawrence, and that we could not start too soon. Canada is growing into one of the great commercial naval countries of the world. It lies between the two great continents of Asia and Europe, so that all the traffic be-

tween these countries must pass through it. Therefore, Canada is bound to have a great mercantile marine. An evidence of that is the way in which our great railway companies are developing mercantile marines. The Canadian Pacific railway has become the owner of an enormous fleet, the Grand Trunk Pacific and the Canadian Northern propose to go into the same business, we have the Allan steamship line and other great lines which centre in the old country and we shall require an immense Canadian marine on the Pacific. This will involve an enormous amount of shipbuilding in this country. There are to-day enough ships required for the trade of this Dominion to occupy a half dozen shipyards. Let us establish these in the basin of the St. Lawrence, in the maritime provinces and British Columbia as well. On that ground alone we should have these great shipbuilding yards in this country. There is only one way in which to get them quickly, and that is to offer inducements to the great firms of England, Ireland and Scotland to come over and establish shipyards for the building of a British Canadian mercantile marine. They could then be used for the building of Canadian ships of war should that be required. I am not afraid to assume the responsibility of creating a Canadian navy for the defence of Canada or for the assistance of the empire, or even of giving a contribution to aid the empire should the day of peril come. No Canadian will object to that. We hear it said that if we give a contribution we should control the distribution of it. I do not quite agree in that doctrine. We are free to give it if we choose. We are free to give the mother country $10,000,000 or $20,000,000 forthwith for the maintenance of the integrity of the empire and are thereby not departing from the principle of controlling our own expenditure. In hundreds of ways we give grants of money, the expenditure of which we never control. That is altogether different from our paying taxes and having no control over the expenditure of these taxes. When we imposed taxes on our own people, the people have control over the expenditure through their representation in parliament. But if a tax should be imposed on us by a British parliament—which it is perfectly free to do—we should be justified in refusing to pay unless we had our say in the disposal of the money. But there is nothing unpatriotic or unconstitutional or humiliating to Canadians if they choose to give a substantial contribution to the British parliament for the purpose of defending the empire. That might be the quickest and easiest way to settle the difficulty, and it might make any nation, who might contemplate an attack on the British empire, think twice before doing so. To my mind, and I think I express the opinion of the bulk of Canadian people, there would be nothing wrong in this government giving immediately a grant of money to help the mother country and in establishing a navy, if necessary. But the fundamental requisite of a navy is that it must be efficient and removed absolutely from politics in so far as that can be done. Efficiency in their navy is the one thing which the people of the empire think they have. There have been scandals in that navy, but these have been removed, and the finest service in England, in fact in the world to-day is the British navy.

On my own behalf and on behalf of the people I represent, and I think largely on behalf of the people of Canada, I am prepared to say that we are British as well as Canadians. We are part of the British empire and are prepared to assume all our responsibilities as such, whatever they may be, for the purpose of maintaining the integrity and the honour of the empire and the integrity and honour of the Canadian people.

Hon. GEO. E. FOSTER (North Toronto). There are one or two points on which I wish to say a few words in connection with the address in reply to the speech from the Throne. There is one omission—an omission which I did not look for especially this year. Neither in the speech from the Throne or the address in reply is there any allusion to the bountiful crops with which we have been favoured. Up to the present the government has rather prided itself on being in a sort of partnership—silent though it may be—with Providence, and on previous occasions they have acknowledged that partnership and been rather proud of it. What has happened in the meantime I do not know, but I do know that in this particular year, if you take quantity, quality and value, there has been a record crop throughout the Dominion and certainly there never was a year in which bounteous crops and good prices were so essential to the prosperity of the country. But strange to say, the government—for what reason I do not know—have omitted any mention of that fact and have tried to produce the impression that it is all owing to a prospective Hudson Bay railway, a present and much enduring Grand Trunk Pacific railway, immigration and other things, combined with that virtue which is always present with the government and for which my hon. friend took credit to himself this afternoon; these have been the causes, and these alone, which have produced this great prosperity of the country according to the right hon. gentleman. Let us ask ourselves what the prosperity of this country would have been if, instead of having a bounteous crop

of good quality and with good prices ruling, we had had a very poor or indifferent crop? Why is it that my right hon. friend has thrown Providence overboard and now takes all the credit to himself and his government for the prosperity of the present year? Hon. gentlemen opposite who have spoken have talked—very guardedly I must say—of the finances of the country. They have referred to the fact that the times of depression seem to have passed and that the revenue seems to be increasing. And they have also dwelt—though lightly—upon the fact that there was a surplus for the year, of, I think, a million dollars. Now, we have a piece of business machinery of great extent, of immense cost and of diversified powers, to wit the Intercolonial railway. When I look at the accounts of the Minister of Railways, I find that in the year 1908 there was a deficit in the operation of the Intercolonial railway of a little over $800,000. And I find that, in order to have no more of a deficit, some $3,800,000 of money borrowed in the market or taken from the taxpayers has been expended on the Intercolonial railway and charged to capital account. Now I call the special attention of the Minister of Finance to this because it illustrates the vicious system of book-keeping under which he gets surpluses from current revenue—even though small surpluses. At the end of the last fiscal year, the Intercolonial had sixty express and baggage cars, 140 refrigerator cars, 7,096 box cars, 1,199 hoppers, 414 locomotives and other kinds of rolling stock amounting in all to 12,539. An almost infinitesimal appropriation has been made for the purchase of new cars out of revenue account, the vast majority of the purchases of cars having been charged to capital. The life of a car is given by some authorities as ten years, while some say fifteen and others try to stretch it out to twenty. Take whichever you please. According to the canons of railway administration, and according to all honest methods of railway book-keeping, the current wear should be paid for out of current account. But instead of ten or fifteen per cent of this immense number of cars having been replaced out of current account, no less than 619 have been replaced out of capital with a very small number indeed replaced out of current account. For instance, there were 414 locomotives at the end of the fiscal year 1908. Not a single locomotive bought last year was charged to current account, while twenty-nine have been bought out of borrowed money and charged to capital. Only an infinitesimal amount of the whole replacement has been charged to current account.

Now, Sir, I say that a charge of $1,300,000 to capital account for rolling stock for the Intercolonial last year is a charge that ought not to have been made, but the current year's wear should have been replaced out of current account. That it was not so replaced is an illustration of the way in which surpluses are made for the Minister of Finance and of the tremendous evils which are allowed by the Minister of Railways. In thirteen years during which these gentlemen, business men they have called themselves, have been running a railway, a proposition that we are all familiar with, they have had deficits, acknowledged by in that time of $3,500,000 net, besides they have spent a little over $2,500,000 a year on capital account for the railway. And this period of thirteen years, be it noted, is the prime period of Canada's growth, development and business enlargement. Suppose that the directors of any other railway of equal size in this Dominion or anywhere else, after thirteen years during which railways generally were prosperous, had to acknowledge to their shareholders that they had made a deficit within that time of $3,500,000 net, besides spending $33,000,000 of borrowed capital in an attempt to bridge the chasm between expenditures and earnings, what would those shareholders think? And what should the Dominion of Canada think of men who make such a record in running a railway, which, if run on business principles, would pay every dollar of its expense and yield a profit for every mile of its operation? In the past thirteen years every great railway system in the world almost has added to its dividends, and many of them have added largely. And this so-called business government, in its management of the Intercolonial, has succeded in running up a bill against the people od $3,000,000 of borrowed capital besides mulcting them in a deficit of $3,500,000. What is the reason? The right hon. gentleman gave the reason in Toronto many years ago. He says it is not because the ministers are to blame, it is the vicious system which prevails in the administration. Why, in thirteen years, has my right hon. friend not changed the vicious system? Is it because he does not believe in changing vicious systems? Is it because from his knowledge of humanity he thinks there is some gain on the other side by having the vicious system, some gain in power or otherwise? But whatever it may be, it stands, not to the credit, but to the discredit of this government, that when other roads of equal, and many of them of lesser, opportunities have shown good profits and increased dividends and have paid interest on their borrowings, this road is in the position I have shown. So much with reference to that.

I want now to call the attention of the Finance Minister to the position as regards the United States tariff and the French treaty. I would not do this so strongly as I propose to do, were it not that the speech from the Throne intimates that

the French treaty is to be ratified. Then if the French treaty is to be ratified, I imagine that the Minister of Finance and the Minister of Customs have made up their minds as to the probable incidence of the United States tariff upon Canada. Have they made up their minds? Do they know how that will affect the commerce of Canada? My right hon. friend, in his happy go lucky way, stated that he had read it and he could not see any discrimination in it. Will my right hon. friend say that he has that from conversation with people in authority in the United States who had given him to understand that it is not meant to discriminate against Canada provided that Canada's operations go on as they are now, plus the addition of the French treaty? I do not think he will. In fact, it is impossible to tell.

But when you look at the spirit of that legislation in so far as it has been actually declared, what do we find? You take printing paper, you take pulp wood, and what is the design as actually carried out in the enactments of that treaty in force to-day? The design was that that it would discriminate against Canada with reference to chemical pulp and mechanically ground pulp and printing paper. And so you have the enactment, and you must read the spirit and intent therein; you have the enactment that on print paper, in the first place, there is a duty according to value of so much per pound. When it is worth 2¼ cents and less, the duty is 3 and 1-16th cents per pound; when it is 2¼ to 2½ cents, the duty is 3 and 1-10th cents per pound, and so on graded up. That is the minimum duty with reference to any country which puts a restriction of any kind on the exportation of wood out of which the pulp for paper is made. And what country is aimed at, and what country is meant? Canada, and Canada alone. The discrimination is that 1-10th of a cent per pound is added in the case of that country, and to that is also added the amount of the export duty, if any export duty is put upon pulpwood. Now that reads the intention of Congress into the actual item in the tariff.

There is no contingency about it. And how about wood pulp? Wood pulp in the general tariff is free, wood pulp against a country which has any restriction on the exportation of pulp wood into the United States is placed at 1-12th of a cent per pound. To what country is that directed? To the Dominion of Canada. But in addition to that, there is to be added the export duty on the pulp wood, or the equivalent of that export duty, whatever it may be. So here are two actually finished sections of the United States tariff, and their plain intent is to influence if possible Canadian legislation, and certainly to influence Canadian commerce.

What else has been actually placed in the tariff? If you look at page 80, section 2, you will find a general section. Now what is that general section? Not that something may come into force on the 31st day of March, but that on the 31st day of March, whenever it does come, and the very moment it comes, 25 per cent extra is added to every article which is imported from Canada into the United States. Now that is an actuality which, on the 31st of March, according to the enactment of the United States Senate and House of Representatives and President, will take place. So Canada will wake up on the 31st day of March and find that 25 per cent is added to the general, or as it is afterwards called, the minimum tariff. As the section reads, I believe it is open to the interpretation that the 25 per cent is not only to be added to the dutiable articles that are imported from Canada, but that 25 per cent is placed upon every article in the free list, because it says upon all articles that are imported into the United States. Now I am not going to be dogmatic or certain about it, but it reads that way, and in talking it over with an eminent United States politician not a fortnight ago, he told me that his reading of it was that it did refer to both, to the non-dutiable and to the dutiable list.

Now why or when will that be taken off? There is a power to release it. Mind you, Mr. Speaker, it goes on automatically and certainly on the 31st day of March, but there is a power to release it. Sometimes it is said that that power is the President. In one way it is the President, and in another way it is not the President. The President of the United States, according to their legislation, has not the power to make a decision of himself, a decision which is personal or of his own pleasure. It does not depend in that way upon the President of the United States. The President of the United States comes to his decision on facts which are furnished him by an expert commission which is already appointed, and which has to work out the case in every one of these different countries. Now that is a very different thing. One may say that President Taft is well disposed to this country. I believe that, I hope he is. But it does not make a fig's difference whether President Taft is well disposed or not. His commission is already appointed, and if it reports that Canada does discriminate in any way by tariff duty, by regulation, by charge, by expense added in any way, these constitutes the facts. The facts are presented to the President, and all that the President can do is to issue or not issue his proclamation according as those facts are represented. These facts will be looked into, marshalled,

and will be presented in the line of the tariff incidence of the United States Congress when it finished its work. Now these are things which actually exist and with the large trade which is involved between us and the United States and the small trade which is in question as between us and some favoured nation countries it is these things which make the gravity of the situation and, to my mind, it is a very serious matter. Now, when does the Finance Minister propose to find out what the attitude of the United States will be in reference to it? I do not know. He may have sources of information that I do not know anything of, but, it seems to me, that he will not know until after the 31st March. When the 31st March comes and these duties of 25 per cent go on over and above the rates then established, action will be taken sooner or later by the President upon the facts presented to him and we will not know what will be the mind of the United States or what will be the incidences of this tariff until that date has passed, until these facts have been presented, and until the President issues his proclamation in accordance with these facts.

I refer to this matter because I think it is necessary that the members of the House shall have the whole of these facts before them. This is a most grave and serious juncture to which we have come, and it needs very careful treatment. There are some other clauses in the tariff to which I will only refer. One is a discriminating clause providing for ten per cent additional duty on imports in other than United States vessels. This has a bearing upon Canada. If a country outside of Canada desires to export into the United States through Canada the non-contiguous country is shut off from doing that without the payment of this ten per cent additional. How will that strike some of our Canadian commerce? For instance, if articles meant for the United States start from the far East, come to Canada and approach the American border there is an importation from a non-contiguous country through a contiguous country, and it seems to me under that tariff item that it is bound to pay the ten per cent additional. More than that, there is a tonnage tax. For 25 years there has been no tonnage tax upon Canadian vessels on the great lakes going into the ports of the United States and none, of course, on our side—an arrangement agreed to long ago. This tariff enacts that a tonnage tax shall be put on absolutely of a certain amount; I think it runs at two cents per pound, but not greater than ten cents in any year, from a country contiguous to the great lakes and from some other countries. Otherwise it is larger. All these are indications which show that the purpose of the United States tariff was to make all the advantage possible for the United States and as little as possible for Canada, and, in the light of that, we must make up our minds that the facts will be very carefully looked into and that the President will issue his proclamation in accordance with the facts. The ground work, which is the last thing I wish to call the attention of the government to, is a mighty broad one:

That whenever, after the 31st day of March, 1910, and so long thereafter as the president shall be satisfied, in view of the character of the concessions granted by the minimum tariff of the United States, that the government of any foreign country imposes no terms or restrictions, either in the way of tariff rates or provisions, trade or other regulations, charges, exactions, or in any other manner, directly or indirectly, upon the importation into or the sale in such foreign country of any agricultural manufactured, or other product of the United States, which unduly discriminate against the United States or the products thereof, and that such foreign country pays no export bounty or imposes no export duty or prohibition upon the exportation of any article to the United States which unduly discriminates against the United States or the products thereof, and that such foreign country accords to the agricultural, manufactured, or other products of the United States treatment which is reciprocal and equivalent, thereupon and thereafter a proclamation may issue, &c., &c.

That is broad. Unduly discriminates against the United States. Discriminates in what way? Gives a greater advantage to an article coming from another country than from the United States. It may be held that this discriminates. You have a resolution of parliament that we, sometimes by proclamation shall call into effect an enactment that upon goods coming into Canada there shall be a less duty if they come in by Canadian ports than if they come in through United States ports. Could we carry that out and not be within the conditions which would bring the results of discrimination if we thereby gave a preference to St. John, Halifax and Quebec as against Baltimore, New York, Boston and other American cities? The extraordinary width of it, the inclusiveness of it, and the evident intention which is beyond contingency and already in force make a very serious problem for us to consider as to what is to be done in face of the possibility of a tremendous dislocation of trade. I am not one who believes that, our position being right, we should recede one inch because another country legislates in its tariff for its own advantage. We legislate for our own advantage and that is the only ground that we can take. But, at the same time, when such an immense amount of commerce is at stake, it becomes very important we should know where we are before we go any farther. Now, just one moment more,

if the House will allow me. No, I do not think I can take up any other subject, but I want to have one word with the right hon. the Prime Minister on the way in which he tried to do two things. The spirit of mischief was in him when he tried to raise ructions on this side of the House in reference to the subject of naval service—the spirit of arch-mischief which befitted the politician rather than the statesman. There was also present another spirit, which would have done credit to Saul of Tarsus when he became Paul the Apostle and which animated him when he made his argument to the men on his own side to stand by his policy.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. ALEXANDER HAGGART (Winnipeg). Mr. Speaker, I have not in the past trespassed very much on the time and patience of the House nor shall I to-night. Members from a small and distant province, are no doubt inclined to be influenced by their environment and are likely to become provincial or perhaps parochial, and when such an important document as His Excellency's speech is presented to them it may be that they read it for something which more particularly affects the part of the country whence they come. In the speech of His Excellency I find one short paragraph which refers to the Northwest country and to the province of Manitoba, and in that paragraph the Hudson Bay railway is spoken of as follows:

> The exploratory surveys for a railway from the western wheat fields to Hudson bay were pushed energetically during the whole of last summer. It is hoped that a report of the operations will be placed before you at an early date.

Here we are apprised that an exploratory survey, whatever that may mean, is in preparation and there is an expression of hope that we may see the report before long. To the older members of this House the name 'Hudson Bay Railway' is no doubt a chestnut, because it bobs up regularly from time to time and in the west it enters into our municipal and political life. Many years ago when the Conservatives were in power a railway to the Hudson bay was projected by two or three different companies, and at one time it got so far that forty miles of rails were laid in a northwesterly direction towards Lake Manitoba, but eventually these rails became streaks of rust. The Liberals of that day, perhaps very properly so, poked fun at the Conservatives and they said: Give us a chance; we will not simply talk about the Hudson Bay railway we will build it. The year 1896 came and with it the Liberal government. At the first by-election in Winnipeg after the Liberals came to power the late Mr. Jameson was a candidate in 1897. The slogan at that election was: Vote for Jameson, for progress, for the Laurier government and the Hudson Bay railway. After the death of the late Mr. Jameson the late Mr. McCreary was a candidate and the cry was the same. The people accepted his assurance and they elected him, but no Hudson Bay railway came. Then we had Mr. Puttee. True he was a labour candidate but he had the united support of the Liberals of Winnipeg and whether or not he had authority he also promised the Hudson Bay railway. Then, Mr. Bole, the member for Winnipeg in the late parliament made the Hudson Bay Railway a plank in his platform and when he was elected we thought that perhaps the whole project would die a natural death and that we would never hear of it again. From 1896 until the last election we have had a succession of Liberal candidates in Winnipeg and with them the Hudson Bay railway was a name to conjure with. It was determined apparently that the Hudson Bay railway should be one of the planks in the platform of the Liberal government at the late election. Let us see what the man who builds the railways, the Minister of Railways, says about it. Of course, when he spoke the dissolution of parliament was pending, and for the announcement of his policy he chose a public meeting in the town of Galt, Ontario. There the people could have very little interest in the project because it was calculated to take the traffic away from Ontario around by the northern seas. Although the Minister of Railways spoke in Ontario he was in reality speaking to the people of Manitoba and the Northwest over the wires and through the press. He said:

> It is going to be built and built right away.

That is very positive language. Last year I heard the hon. gentleman deliver an address on another great public undertaking, the Newmarket canal, and as I had the opportunity of seeing him and listening to his voice I was not able to come to the conclusion to whether he was serious or joking. Not having the good fortune to hear him at Galt I cannot say whether he really meant what he said when he told the people that the Hudson Bay railway would be built and built right away. But that assurance to the people of the Northwest was not sufficient, and so another little blast came to us from away in the further west. The Minister of the Interior (Mr. Oliver) was in Alberta or Saskatchewan doing service for his party and addressing a meeting he said:

I call attention to the robustness of the statement:

> If you want the Husdon Bay railway you must support the Liberals. If you don't want it the Conservatives are good enough for you.

And if that were not sufficient to insure the support of the people of the west, no less a person than the right hon. the Prime Minister was called upon to say something about the Hudson Bay railway. He was speaking to the people who reside on the banks of the Niagara river and the Welland canal; people who have no interest in the Hudson Bay railway because it would take traffic away from the St. Lawrence route. But, he also desired to reach the ears of the people in the Northwest over the wires and through the newspapers. And the right hon. gentleman, after telling the people of Wellington, that the Hudson Bay railway was not much use to them as it was an alternative route, he urged them to be broad minded and he told them that whatever is good for any part of the Dominion is good for the whole Dominion, and he says:

We have undertaken the construction on another railway—the Hudson Bay railway. The Hudson Bay railway I am sure does not appeal very much to the people of Welland county. It concerns more the people of the west. But I say to you, gentlemen of Ontario, and you will agree with me, that what concerns one portion of the community concerns every part of the community. Now, we have come to the conclusion that this railway is a necessity owing to the condition in which our fellow citizens in the west are placed. This railway will give an alternative or optional route. At the present time all the wheat as soon as it is tracked is sent out to Lake Superior. We want to provide another railway by Hudson bay. There will then be the present route and the Hudson bay route and the man who raises wheat and cattle will have two outlets for his production. We have been asked: 'Are you not going to hurt the trade of the St. Lawrence if you do that?' Oh ye of little faith! the trade of Canada is too great even for these two outlets. What we see coming will be more than sufficient for both of St. Lawrence and the Hudson bay routes. We have come to the conclusion that the time to build this railway is now; not to-morrow, but now; and we have surveyors in the field.

Of course, at the time the statement was made by the Prime Minister there was a red hot election pending in the west. The 'Manitoba Free Press'—you have no doubt heard of that paper; it has an annex to its building in the shape of a splendid post office—the 'Manitoba Free Press' a journal which expresses the sentiments of the Liberals of the west and is supposed to be the personal organ of the ex-Minister of the Interior, commenting on this statement of the Prime Minister, said:

This is one of the most important announcements to the west that has ever been made by the Canadian government and it will be received with acclamation by the people of the prairie provinces.

But, even the declaration of the Minister of Railways and of the Prime Minister was not considered sufficient and so the ex-Minister of the Interior in accepting the nomination of the convention at Brandon which was then the centre of an exciting electoral contest, declared that the Hudson Bay railway was a paramount issue in that election and he closed his speach with these words:

The Prime Minister proposes to build for these provinces the Hudson Bay railway. It is a fitting culmination to the policy of progress and development which the government has followed during these years. That pronouncement was a very material factor in inducing me to become a candidate for this constituency in this election, because I felt and feel now that the time has come when we men from the west have succeeded in proving that the Hudson Bay railway is no chimera, no foolish project, but one which the people of the west are bound to see carried into effect, and the time to do it is now. So, therefore, if the people of the Northwest give Sir Wilfrid Laurier their endorsement at this election, then in three or four years we may expect to see trains running to Hudson bay.

Mr. SPROULE. What was the date of that?

Mr. ALEX. HAGGART. That was delivered on the 22nd day of September, over a month prior to the election on the 26th of October. We did not expect that the government would last session be able to fulfil all the promises and make good all the assurances they had given to us in the last election; but we expected that we would be given a little more this session than the expression of the hope that in a short time we would get the report of the exploratory survey.

That leads me by an easy stage to the consideration of another question which is very closely associated with that of the Hudson Bay railway. That railway will we hope, sometime run through a territory which is appurtenant to the province of Manitoba, and which we have long hoped would become a part of that province. For the benefit of the new members who are not conversant with the history of Manitoba, let me say that that province was created in the year 1870. It was a very small province, extending for about a hundred miles from north to south and about as many miles from east to west, with Winnipeg in the centre with about 17,000 people. We had a constitution which was sufficient for the government of almost half a continent. We had a Lieutenant-Governor, a senate and a legislature. We got rid of the senate, and I will state, for the benefit of the hon. member for Lincoln and Niagara (Mr. Lancaster) how we did so, with promptness, neatness and despatch. The senate consisted of seven members, four constituting a majority. Jobs were created for those four at salaries a little better than the indemnity of a senator, and those four, very much to the disgust of the minority, voted the sen-

ate out of existence. It was evident, at the time of the formation of Manitoba, that its boundaries were only temporary. It was felt that it would never do to make a checkerboard of those Northwest territories and multiply provincial governments; and during the first legislature of Manitoba application was made to this parliament for the extension of the boundaries of the province and for further financial assistance. Mr. Alexander Mackenzie turned this application down, for the reason that the northwestern boundary of the province of Ontario had not been defined. In 1881, however, the boundaries of Manitoba were extended. It was known at that time that the boundaries had not been defined, but it was believed and expected by nearly every one that the northwestern boundary of the province of Ontario was the meridian which cuts the junction of the Ohio and Mississippi rivers which, if produced northward, would cut the northern shore of Lake Superior to the east of Fort William and Port Arthur. At once there was a conflict of authority. Both Ontario and Manitoba claimed jurisdiction over the disputed territory. A reference of the dispute was made to the Privy Council. Manitoba had hoped she would have all the Lake of the Woods, Thunder Bay and Rainy River country from which the province of Ontario has reaped rich revenues in timber dues and mining licenses. But the decision of the Privy Council was against Manitoba, the boundary between the two provinces was declared to be the line running north from the northwest angle of the Lake of the Woods, making the territory of Manitoba 73,000 square miles, which is not one-third of the size of either Saskatchewan or Alberta. It was thought, at the time of the formation of those new provinces, that it would be an opportune time to increase the boundaries of Manitoba and settle for all time the whole question, by making the three provinces as nearly equal in size and importance as possible. Manitoba was turned down. The provinces of Alberta and Saskatchewan were created and were given a reasonable financial assistance for their development, and I have no doubt it is being wisely expended. But there is no reason why the province of Manitoba should not have received the same treatment. Manitoba did the pioneer work in the early days when it was a question whether or not agriculture was a profitable occupation in that country. Manitobans were living in the Northwest and Manitoba was there as a province when it took the price of two bushels of grain to transport the third bushel to market. Manitoba solved the transportation problem. She mortgaged her future for the purpose of getting reasonable rates and running lines of railways all over the province. She could not help herself without incidentally benefiting the other provinces to the west. Manitoba should be treated as she has been. We all at this distance of time appreciate the efforts made by the late Sir John A. Macdonald in bridging over the great commercial and geographical weakness of this Dominion; I refer to the vast expense of wilderness between the towns and villages of Ontario and Quebec and the fertile plains of the west. A belt of iron was thrown across that wilderness, which was the first link that was forged. We appreciate too the policy of Sir John A. Macdonald in ruthlessly disallowing railway charters for lines running from Manitoba in the direction of Duluth and Chicago. He was determined that the channels of commerce should be worn wide and deep before our railways should be subject to competition and our trade directed towards American cities. We realize the wisdom of that policy now. There was fierce opposition to the disallowance of those charters at the time, but we now appreciate that it was for the benefit of the province and the whole Dominion. But, Sir, there are other bonds which bind together the provinces of this Dominion more firmly perhaps that the steel bands of a railway, and that is the knowledge experience and the satisfaction that every province has been fairly treated by this Dominion, and that there has been no discrimination, no penalizing, no suspicion even of anything of the kind, because that would bode no good for the Dominion. That seems to have been fully recognized at the close of the last parliament, for we find that on the 13th day of July, 1908, the right hon. the Prime Minister moved a series of resolutions with reference to the Manitoba boundary, which resolutions conceded the right of the province of Manitoba to the extension, and the right hon. gentleman, in support of those resolutions, spoke in these words:

> The case of Manitoba seems to be particularly pressing. Manitoba has the smallest territory of all the western provinces, and it is a matter of public notoriety that there is in Manitoba a sentiment of disappointment, almost akin to irritation, that the province has not been as liberally endowed as the adjoining provinces of Alberta and Saskatchewan, which were carved out of territory of which the boundaries of the province of Manitoba could have been increased. We all sympathize with this sentiment and there is no reason that I can see why this desire for increased territory should not be gratified.

The right hon. the prime minister there admits that there is cause for irritation, and that that cause has not been removed. Well, if it be not removed the irritation may develop into a chronic sore, into positive, absolute hostility, and if there be any reason for it, must there not be delin-

quency in some quarter in connection with this business?

At the opening of the first session of this parliament, the greeting of the hon. the first minister to the members from Manitoba was certainly not a pleasant one. I do not think that the right hon. gentleman would have greeted us in that way if he had known the real facts. He told us that we are here by virtue of stuffed lists, Sir, the reverse is the fact. We are here by virtue of honest lists, but when we learned the source of the right hon. gentleman's information, we were not surprised. I shall not say a word about the ex-Minister of the Interior, as it would be contrary to the rules to say anything that might be offensive to a member of this House, but I will say that in Manitoba he had a lot of the rankest registration scamps to be found anywhere at work in any province. And when he resigned as attorney general and left Manitoba, he left us as a legacy his election law, and that law was a beauty and was beautifully administered. The lists for Manitoba were a disgrace. At great expense of time and trouble we had those lists revised before a judge, and the result of that revision, which occupied about three weeks, was to strike off about 3,000 names of bogus voters. There were about 900 names of men put on the list by the revising judge who had been improperly left off. After we had cleaned the lists, we were not very long in cleaning out those who were responsible for them. We are not here by virtue of stuffed lists. The people had before them these matters I have spoken of and the result was they elected members to sit on this side. The people had, right under their very eyes, the maladministration of the Department of the Interior, and if the hon. gentleman had been out there during the election, he would have had ample evidence to satisfy him that it was not stuffed lists but a strong political club in the hands of an honest, intelligent and indignant electorate which returned the Conservative party in that province.

Mr. THOMAS S. SPROULE (East Grey). In offering a few observations on the address, I wish in the first place to congratulate the mover and seconder on the very creditable way in which they discharged the important duty assigned them. Few could take exception to the manner in which they presented the case from their standpoint. Certainly if brevity is the soul of wit, they set a good example to members of this House. The right hon. the Prime Minister told us that he cherished the hope that this would be a short session, and in that opinion he was strengthened by the first speech of my hon. friend the leader of the opposition. Let me tell the right hon. gentleman that the length or brevity of a session depends very much more on the government than on the opposition. If the government, when parliament meets, have their work well in hand, if they bring down promptly the returns to which the House is entitled, if they lay on the table without delay the departmental reports and other information which the House requires in order to intelligently perform its work, then the opposition will assist the government to the best of its ability to shorten the session. But on the other hand, if the government bring down their measures only half digested and are unable to reach a conclusion regarding them for weeks, if they allow them to remain day after day on the Order Paper without doing anything, they have no right to blame the opposition for extending the session. That, however, is a state of things to which we have become accustomed under the present government.

We can all express our congratulations and gratitude to his Excellency the Governor General for the information he has given us in the speech from the Throne. We are grateful to him for the assurance that the country is prosperous. Of course, we may know more or less about the condition of the country ourselves, but such information is always pleasant coming from the high source it does, having been put into the mouth of his Excellency by his constitutional advisers, who of course have at their disposal the means of ascertaining the country's condition. But will the government tell us to what extent that prosperity is due to any act of theirs? What have they done during the year to account for that prosperity? It may be reasonable to assume that they desire to impress the people in some way or other with the conviction that that prosperity is due to something the government has done. At any rate they have not given Divine Providence any consideration for that prosperity at all; and since the government has not given any credit to Providence, we must presume that it wishes to have all the credit itself.

We are assured that immigration is pouring into the country in a well directed stream from the best elements of the British Isles, the continent of Europe and the United States. But the government forgot to put into the speech from the Throne the fact that the North Atlantic Trading Company has gone out of existence. During many years it was claimed that the influx of immigration was due to the efforts of that company, but we have now the assurance from the highest source that, even since that company has ceased to exist, immigration has been pouring into Canada in a well directed stream, composed of some of the

best elements of the British Isles, continental Europe and the United States. I am pleased to believe that we are getting a fair share of immigrants, and more care is being taken with regard to the quality of those who come to this country. Year after year, when we pointed out that in immigration quality was to be considered rather than quantity, and when we raised objection to the character of many of the immigrants coming to Canada, we were assured that none but the very best were coming to this country, farmers and farm labourers—not artisans or mechanics—the very cream of the British Islands and of continental Europe. And this notwithstanding that the Doukhobors were coming, the Galicians, the Finlanders and the people of almost every benighted country in the world. At last the government themselves were obliged to take note of the complaints concerning their immigrants that were being complained of in every part of the country. They were even obliged to deport many of them, and the reports laid before the House disclosed the fact that they have sent back thousands of these immigrants within the last few years. We have been endeavouring for the past ten years to convince them that there was urgent need for the improvement in the selection of immigrants, and it was said over and over again that the class who were coming were of the very best—that we could not expect or hope for better. But, after a time there was the admission on the part of the government that this was not correct, and now they boast of how many of these immigrants they have sent back.

We feel grateful to His Excellency for the assurance he has given us that trade and commerce have made rapid strides during the year and that in every direction the commerce of the country is expanding. One would have thought that commerce would almost have come to a standstill when Mr. W. T. R. Preston decided to leave Japan, packed his gripsack and commenced to hunt another job. He seemed to be the one man depended on by the government to regulate everything wherever he went and in whatever line he happened to be engaged. He endeavoured to do that with regard to immigration in the old country, and when he went to Japan he had not been there very long before he was in trouble with the officials in regard to trade with that country. We were told that he had revolutionized commerce so that Canada would develop immensely by reason of her increased trade with these great oriental peoples numbering 450,000,000. In a short time, he was obliged to leave, and he is now away hunting a new field. Notwithstanding this, we are told that trade is rapidly developing, and for this we certainly should be grateful.

We are told that the construction of the Transcontinental Railway has made substantial advance during the year. And very reasonably might have been added, so has the debt. For one of the greatest increases in the debt of this country for the last forty years has been made in the last year or year and a half. The government have been pushing on the Transcontinental railway and expending money right and left. We know that the statement has been made, and, I think, established to the satisfaction of almost every business man in this House that a great deal of that money was improperly expended, that there was overcharging, that there was wrong classification, extravagance, improper making of contracts and graft in connection with almost every part of this business. This was emphatically denied two years ago. Complaint was made by Mr. Hodgins, the engineer, and there was an inquiry, and a whitewashing report handed to this House by the majority of the committee engaged in the work. Notwithstanding that, we have the undeniable fact that the very parties who above all others interested in this matter, the railway company themselves, declare that there was over-classification, that there was improper expenditure, and I understand they intend to go into the courts in order to establish the fact. This is exactly what was brought out by the evidence in the committee, notwithstanding the whitewashing of the commissioners by the report. But that is not all. I have here the report of the Auditor General, and I notice that that officer raises objections. There is correspondence between the Transcontinental Commission and Mr. Fraser, the Auditor General, on the subject. One of the letters of the Auditor General reads as follows:

Audit Office, Ottawa, Jan. 25, 1909.

Sir,—I have not received a reply to my letter of Jan. 5, re payments to M. P. & J. T. Davis and Macdonell & O'Brien on the Hogan & Macdonell contract for 'excavation of foundations, solid rock,' at three times the schedule rate for solid rock.

'Three times the rate.' That was practically the contention of Mr. Hodgins, viz., that by the improper classification of the material, the contractor was being paid three times as much as he was entitled to. But the government contended, and established to the satisfaction of the majority of this House, that there was nothing wrong about it. In another letter, the Auditor General says that not only three times the schedule rate was paid, but that three times the amount done was charged up in progress estimates given. That is another device for paying out to their favourite friends more money than the country ought to pay for this work. And that is going on to-day.

And what did the commission do when the Auditor General asked for information? They practically told him that it was impertinent on his part to ask such questions, and they passed a resolution refusing to give him the information. This is the beautiful commission that is spending so much money. And the Auditor General was obliged to go to the Justice Department, and he is sustained by that department after being turned down by the Transcontinental Railway Commission. So, if the road is being built rapidly, the money is being spent rapidly. There is nothing about this in the speech from the Throne. Nor have we further information concerning this correspondence of the Auditor General, yet it is something concerning which we should be well informed in order to deal with this question.

We often hear this government boast that they are a business government. I think one of the speakers to-day referred to that. In the speech from the Throne we are kindly told that the engineers of the Quebec bridge have sufficiently advanced this work to permit of tenders being invited for the substructure. Now, this business government started to build that Quebec bridge many years ago, and when the matter was first broached in this House they told us that they were prepared not only to do a great work but to do it wisely and expeditiously. They got a corporation of their own to commence the building of it—a corporation that put up $63,000 in all to build a bridge that will cost over $9,000,000 and then took out $64,000 in salaries, and finally handed over to the country for several millions a bridge that had fallen and was lying at the bottom of the river. We are now told that the engineers are prepared to invite tenders for the substructure.

The government expressed the hope that this session would be a short one, but they have not given this House a word of information with regard to these plans, what kind of a bridge is going to be built, where it is to be put, whether they can use the substructure of the old bridge or not, whether it is to be a cantilever bridge, a swing bridge, or what not. And we are going on to commence the construction of another bridge which will cost in all probability $8,000,000 or $9,000,000, without any of this information.

But we are told this is a business government. This business government started in with a great undertaking which was going to be a valuable outlet of the Transcontinental Railway, which was to be ready in 1910 or 1911. But there is not a single stroke of that work done yet. This business government has spent $6,500,000 of the country's money, and there is nothing in the world to show for it except the twisted iron in the bottom of the river. I say there has been more money squandered, sunk in that undertaking by this business government than was spent on all the parliament buildings at Ottawa up to the last few years—on the three great blocks, and the Langevin block—all these cost less than $7,000,000, and no more than was squandered in that undertaking by this government on that Quebec bridge. Let the people of Canada know these things, and ask themselves where this business government has justified its name. Where is their intelligence with respect to economy? What wisdom and prudence have they shown, when all this money has gone, and Canada has nothing to show for it to-day but the wreck of the bridge that is lying in the bottom of the river?

His Excellency thought we ought to feel grateful because we are starting out in another undertaking of the same kind. Well, we are obliged to thank His Excellency for the information that exploratory surveys for a Hudson Bay railway have been pushed expeditiously during the summer. As my hon. friend from Winnipeg (Mr. Haggart) says, that is an old question which has been running on like the famous lawsuit of Jarndyce vs. Jarndyce, ever since this government came in. I remember when it was first started and we were told that there was going to be a fine outlet for the grain of the west, and what a wonderful change it was going to work when this government built the Hudson Bay railway. Every year they were going to commence it, especially when an election was coming on in the west, then they were ready to commence operations. They were not going to be like their predecessors, they were in earnest. Well, now, after being in power fourteen years they tell us through the mouth of His Excellency that exploratory surveys have been pushed energetically during the whole of last year and he expresses the hope that they will be able to lay a report on the table during the present session. I suppose that will be all, and next year we will have something more in the speech from the Throne about it. Well, we all feel very grateful for the assurance that we will get the papers, because there are many lines in which papers are very useful, and give us information which we might otherwise have to make a long fight to obtain.

Now we have another piece of valuable information, and that is that the government intend to introduce a Bill to give them power to lease or purchase branch lines connected with the Intercolonial railway, that road in the operation of which they have had such large deficits every year, notwithstanding the fact that all that goes into the building of that road, nearly all of it, is charged to capital account instead of to the earnings of the road every

year. It is not a paying concern. But the leasing of these branch lines, we are told, is going to make it very profitable to the people living in the vicinity, and in the interest of the whole country as well. Now if they manage the branch lines as well as they have managed the road since they have come into power, I do not think the country will have much cause to congratulate itself. Yet we are told from time to time that these branch lines have never paid, that they are a bill of expense to the owners, that they are in a dilapidated condition, and that many of them can never pay. It must therefore be a consoling piece of information to the House and the country to be told that we will lease these branch lines from the owners and give them a substantial amount of money for them and add them to a road that has never yet paid, and will be still less likely to pay with these additional burdens tacked on.

We have another piece of information which is valuable, and that is that the government propose to introduce a Bill with regard to combinations in restraint of trade. We heard a great deal about that many years ago. The government, through the mouth of their Finance Minister, told this House, I think in 1897, that the only effective way to deal with combinations in restraint of trade was through free trade, and the government took power in a Bill to take off the duty from any article when it was the subject of a combination formed in restraint of trade; that article was then to come in free. I remember bringing this subject up in two successive sessions. I remember the arguments that were addressed to this House by Mr. Garrow; who is now a judge on the bench. He tried hard to induce the government to punish those parties who were engaged in combination in restraint of trade to the detriment of the consumer and to the detriment of all interested parties. But the government said it could not be done, that the only proper way to control them was by ascertaining where there was a combination in restraint of trade, and to take the duty off the articles so effected, and allow them to come into the country free. Now application was made to the government to do that in the leather combine. Mr. Garrow brought that up. I brought it up two sessions afterwards, but the government refused to do anything. They let that combine continue its operations to the detriment of Canada, to the detriment of the consumer, and they did nothing to prevent it. But I will tell you what they did do. There was a law put upon the statute-book many years ago by the late member for West York, the Hon. N. Clarke Wallace to punish those who were combining in restraint of trade. The government so amended that Bill that they made it useless. It provided that wherever people combined to enhance values or raise prices, they became amenable to the Criminal Code and could be punished. But the government amended that Bill by providing that wherever it was proven that a combination unduly enhanced values or increased prices, they should be punished, but they threw the onus of proof upon the complainant. We were told by the high authority of the late Sir Oliver Mowat himself that the Bill was practically no good, because you could not go into court and prove what was unduly enhanced value. I made an effort two years in succession to get that Bill amended and leave it as it was at first, so that it might be of some value and that you might start a prosecution under it. I succeeded at last; for some reason the government were kind enough to allow me to get this amendment through the House, and shortly afterwards these combines were attacked, and parties went into court to punish them, and what was the result? The government took up that Bill, amended the law again, put it back where it was before, these prosecutions stopped and they have never gone on from that day to this. That from a business government that was going to do something to prevent combinations in restraint of trade! Did they ever step in that direction except with reference to paper? Did they ever undertake an inquiry in regard to that subject although the allegations were made to them by their own friends over and over again that in various lines combines were detrimentally raising prices to the consumers of this country? Did they take any interest in it? — none whatever except in that one case. In that I believe they did in a partial way and they are entitled to commendation for what they have done. I would suggest though, that, whatever that Bill may be, it should be something that will be effective rather than something to be paraded before the public and telling the people what wonderful things they are going to do, but which the experience of future time will prove they never will do. They have had it in their power to restrain these combinations and they have made no effert to do it except in the one instance I have cited; therefore, we have the right to reach the conclusion that they are no more likely to do it in the future than in the past. But, they parade this before the country to-day as something they are going to do for the benefit of the country and for which the country ought to be devoutedly thankful.

I would like to say one word in regard to a report I see of the speech of the hon. Minister of Railways and Canals (Mr. Graham) in Montreal on Saturday. I shall read his own words. Speaking of Canada he says:

They could and did legislate for themselves and make their own treaties with other nations, and it was probable that in the near

future Britain would discontinue the practice of sending a representative of the Crown to them.

I presume a Governor General. I think the people of Canada will be greatly startled——

Mr. GRAHAM. Will my hon. friend (Mr. Sproule) allow me? Having been a newspaper man myself, I very seldom rise to a point of order or ask for any correction. As a matter of fact, I never made such a statement or referred directly or indirectly to anything that could be construed into such a statement.

Mr. SPROULE. Then I think the Minister will thank me for giving him this early opportunity to make that denial which I accept with all pleasure. I was going to go on and read another portion in reference to naval defence, but if he denies that in advance, I will not read it.

Some hon. MEMBERS. Oh, oh.

Mr. SPROULE. The same speech. His memory cannot be so bad but that he must remember what he did say or some of the subjects that he spoke about. If he will be good enough to tell us what he did say, we would like to hear from him. Well, he does not take the opportunity of denying it.

Mr. GRAHAM. I have not heard it yet.

Mr. SPROULE. He says that:

In his opinion they would be making a huge mistake by presenting either ships or money to Britain. He was most strongly opposed to contributing one dollar towards any fund, unless they retained the right to decide as to how that dollar was to be expended. They should manage their own affairs in their own way.

Then, let the Canadian people know that no matter what the emergency may be, the Minister of Railways and Canals is opposed to giving one dollar, or one ship, or one cent towards the assistance or support of the mother country unless we have the right to expend the money just as we like ourselves. Then he goes on to say:

—and he was sure that Britain would not attempt to deprive them of the right to do so. A great deal had been both said and written regarding the possibility of war with Germany but he could not conceive of any reason why Canada should be disturbed on this account.

Mr. GRAHAM. I think it is very proper that I should set my hon. friend right for fear that he would say that I did not——

Mr. HUGHES. Set yourself right, not my hon. friend right.

Mr. GRAHAM. Not myself. It would not be so hard to set myself right as some other people, but I accept the task even of setting them right. As a matter of fact, the reference which my hon. friend has read has been broadened very much. I made it very clear, speaking for myself, that I was not alarmed about the German war scare and that, notwithstanding whether there ever had been a German war scare or not and altogether outside of it, Canada had a duty to perform.

Mr. SPROULE. The hon. gentleman ought to be grateful to me because they have read this all over the country and I have given him an opportunity of setting himself right. He sat in this House all day and did not deny it, did not say a word about it; I have given him an opportunity of putting himself right and I think he should be grateful. If it went out to the world that it was none of our business, that we were not interested in the German war scare, that we did not care a continental about Great Britain, what would the people think of our loyalty to the British empire of which they hear so much? I have read this at the present time for the purpose of giving the hon. gentleman an opportunity of either denying it or admitting it. He has chosen to deny it. I accept the denial which he has made with all respect to him. Part of it he has not denied or said anything about and therefore I assume it is correct.

Well, Mr. Speaker, I do not wish to continue this debate longer. There are some other subjects touched on which we will have an opportunity of dealing with when we have certain papers before us and we will be in a position to deal with them more intelligently. I can only express the hope, that the government, in their desire for a short session, will facilitate the work of this House, as they ought to do to assist us in making a short session, by giving parliament the information which parliament requires and which it ought to have as soon as any subject is brought to this House, or when any important subject is to be dealt with, and which information, whether they have it in their departments or elsewhere, ought to be put in the possession of the House at the earliest possible moment.

Mr. E. N. LEWIS (West Huron). Mr. Speaker, I was disappointed at failing to see an allusion in the speech from the Throne to a matter which, it was currently reported, would be made the subject of investigation by a committee of this House. I refer to the question of the revision of the procedure of the House. I believe, Sir, that a great majority of the voters of Canada would be pleased to know that the rules of procedure of the House of Commons are to be revised with the purpose of expediting business. There has been for some years a strong feeling

amongst our constituents that matters drag too slow here, with in consequence great loss of time and money. I at one time, thought that the trouble was in the length and frequency of speeches, while this is certainly responsible for part of the delay, I feel that the procedure is at fault. Long windedness should cure itself when we remember that with very few exceptions all the long speech makers of last parliament were defeated. In fact, Mr. Speaker, we are like a mechanic trying to do business with tools fifty years behind the times. In the older hemisphere I admit that a succession of merchants may carry on business in same stand and under same methods for hundreds of years with success, but, Sir, in this new land a merchant who has made a competency by the time he is sixty-five will lose it all in the next ten years if he keeps on the the same old way Our rules were founded on those of the mother of parliaments, but, Sir, I regret to say we have not kept pace with her in the changes of same; some suitable to this country, some not. It is a striking fact that amendment of procedure was almost from the beginning to end treated without party spirit, not as an issue between two great parties, but as a problem for House of Commons as a whole (Redleigh, page 125-6). In proof of above statement that the great majority of Canadians wish shorter sessions I say that newspapers of all classes and politics have advocated same and from the Atlantic to to the Pacific. I quote a few to prove this. The Regina 'Leader,' Halifax 'Herald,' Seaforth 'Expositor, Manitoba 'Press,' had column editorials all in favour.

I find in different countries that the procedure on budget legislation is as follows: In Belgium, explanations to items added to estimates. In France, a committee on budget, general report. In Germany, a committee of thirty-three, who examine the papers and ask for further explanation when needed. In the Netherlands, five separate committees of chamber examines estimates. Each of these five named to draft report. In Spain, budget committee standing thirty-five in all, majority report made to House with any alterations decided on. In Peru budget must be presented to congress within fifteen days after assembly, it is then referred to a committee. It is already on 'Hansard' how few Bills we pass for the time occupied in comparison with other countries, and when comparing our legislation with Great Britain's, we must bear in mind that Great Britain has only one parliament for all and we have provincial houses to take off a great part of the work. The United States congress lasts on an average five and a half months. During the second season of the 58th congress, 20,074 Bills and resolutions were introduced and 4,904 measured and 3,992 Acts passed both Houses. (See Reinsch on American legislatures. pages 300-1, while in the sessions of the Canadian House of Commons for 1908 lasting nearly eight months seventy-seven Public Acts and 173 Private Acts were passed. The difference is greatly accounted for by the procedure. In the 58th Congress there were fifty-five standing and ten select committees in the Senate of the United States varying in size from three to seventeen, and there were sixty-one standing committees in the House of Representatives varying from five to nineteen.

The newspapers throughout Canada from Halifax to Vancouver, newspapers of both sides of politics I am glad to say, commenting on my remarks on this subject last session, all favoured shorter sessions and greater despatch of business. I quote the following:—

'Toronto Mail':

There is no doubt a disposition to address parliament at too great length.

'Victoria Colonist':

There is such a thing in political archery as drawing the bow too far.

'Wingham Times':

Foreshadows a Bill to amend present rules of parliamentary procedure with a view to expediting transaction of public business and preventing waste of time in useless debate.

'Halifax Herald':

The extraordinary length of the sessions of parliament and the consequent enormous expense has often been the subject of comment and the need of reform has been recognized.

'Globe', June 25, 1909:

Parliament with a great four years off has a splendid chance this year of showing that it is a business institution and not merely a voice.

'Globe', July 18, 1908:

The 4th session, 10th parliament, longest on record, 234 days, but the actual business was in a large measure compressed into the final six weeks.

'Toronto News':

Inflexible rigidity is one of the grave defects of machinery of government. The British constitution readily adapts itself to changing conditions.

'Canadian Presbyterian':

There is no good reason for any member speaking more than once on any one topic when a Bill is in Committee of the Whole.

Parliamentary oratory is at present a by word for prolixity, diffuseness and resulting tediousness, compression would tend to improve it.

'Globe', June 18, 1908:

Day after day is wasted because a few members abuse to the extreme their privilege of speaking again and again in the committee of reply.

'Saturday Night' says:

We fiddle with a programme that is petty and peanutty.

'Toronto Star', April 17, 1909:

With the growth of Canada the business of parliament has outgrown the old procedure. The House of Commons ought to be able to agree upon some businesslike way of doing its business.

'Manitoba Free Press', February 23, 1909:

Such an outrageous wasting of the time of parliament at enormous cost to the country should be made impossible by the adoption of rules of debate and procedure such as no other parliament in the world is without, the indemnity to the member being only a fraction of the daily expense of having parliament in session.

I have, Mr. Speaker, taken the liberty to draft a few rules which I believe if adopted would result in saving the time of parliament. These rules are very simple and I shall submit them for consideration.

Rule No. I. Answers to all questions to be in writing and to be laid on the table and not read, or, be printed in the orders of the day or on 'Hansard.'

This will not prevent the answers being explained in the House if necessary.

Rule 2. Estimates to be first brought before committee consisting of all members. The committee will sit in committee room on Monday, Tuesday, Wednesday, Thursday and Friday, from 10 a.m. to 1 p.m., and if necessary while House is sitting. All non-contentious items to be brought up in bulk in the House and contentious ones separate, but this not to prevent any item to be challenged in the House.

This is the rule in the English parliament. The system followed in the Canadian parliament in reference to the estimates is absurd. The minister is supposed to explain them but in reality he may not know anything about them and so his deputy sits next him and the accountant sits next him again and the information is transmitted backward and forward and a great deal of time is lost. If the minister happens to be a gentleman who is friendly to every one in the House his items go through with a rush, but otherwise he is bothered considerably and in the end the items go through without any real explanation being offered. I submit, Sir, that the business way to do this is to have a committee of the House sitting every day of the session at ten in the morning. Let the minister give notice a week ahead that his estimates will be brought up at a certain date and then let him be prepared with his clerks and with his documents to give the information and let every hon. member if he wishes be allowed to ask questions. Then, the items which were not contentious should be passed in the House en bloc. The contentious items could be discussed, and in that way months of the time of the House would be saved. These are the other rules I submit:

3. A member only to be allowed to speak once to any item brought up in Committee of the Whole House.

4. The Speaker to be authorized to prevent members from repeating themselves or reiterating other members speeches.

5. The Speaker to allow quotations, referred to in members' speeches to be placed on 'Hansard' without being read, if he sees fit.

6. Where a member makes a motion for papers, letters, documents, to be brought down and the government grant the motion, no discussion is then to be allowed in advocacy of the motion.

7. A set time should be decided on for bringing down of the estimates each session and so many days allotted to each department similar to the English practice (page 109 Redleigh.)

8. Wednesday evenings to be utilized for work.

Rule 7 is in force in the English parliament, and although I have doubts as to whether it would work here, I have added it. As to the rule about sitting on Wednesday evenings, my contention is that we come here to work and if there is one evening to be taken for play or recreation it should not be Wednesday evening. It is the only evening in the week outside of Thursday that all the members are here and as we all know well most of the estimates are put through on Friday night when very few members are present. I submit that either Monday night or Friday night should be the night set apart for social gatherings or rest if rest is needed. Now, Sir, I have given notice to-day of eight Bills to be introduced by me. They are Bills which I introduced last session and as some parts of those were adopted last session I only propose to ask the consideration of the House to such provisions as were then not adopted. I have been found fault with for introducing too many Bills in parliament, but I cannot suggest any possible way by which less of the time of the House would be taken than by putting my ideas in the concrete form of a Bill. Every one knows that a private member cannot have legislation passed in this House, nor do I consider that it is the province of a member of the opposition to put legislation on the statute-book. His first duty in this House is to criticise the administrative acts of the members of the government, in whose hands the people of the country have placed the government for the time being. Let me mention some of these Bills: The Bill respecting load lines on ships; the Bill respecting injuries

to persons due to motor vehicles; the Bill to provide for the government inspection of vessels not now inspected; the Bill respecting wireless telegraphy on ships; the Bill respecting offensive weapons and capital offences; the Bill respecting assaults against the person; and the Bill respecting the saving of daylight. If I desired to pick out two or three from these, I could not do so, because they are all good. Now, I desire for a few moments only to refer to what concerns more and comes closer to the plain people than anything else under the sky, that is, the enormous increase in the cost of living. Wages are much higher than they were ten years ago. Still the dollar to-day will not buy much more than half what it would then. I propose to suggest a reason and also a remedy, and to bear me out in my contention I propose referring to some reliable and prominent newspapers. I contend that the chief cause of the great increase in the cost of living is the high prices carried by the combines which are fostered under the present customs law. Shortly after the change of government in 1896 the free trade Finance Minister took the tariff out of politics by substituting for protection the words 'tariff for revenue only,' and there the tariff has virtually remained ever since. Now, Sir, I do not propose going into a discussion of the tariff or whether the Finance Minister was right or wrong, but I do consider that under the circumstances the Conservative opposition are not bound to stick to protection and be called high protectionists. In fact, Sir, I think that under the circumstances certain parts of the tariff should be lowered, and I propose bringing in a resolution to that effect respecting agricultural implements. While it may be necessary in the interests of certain manufactured articles that a combine or merger, as it is sometimes called, of factories or corporations should be, it may be necessary or beneficial in the interest of those institutions, still, Sir, I contend that where the people of Canada through its government protect the combine or merger from outside competition, then the same government acting for the same people should see that said combine or merger does not unduly charge said people for its goods. Shortly after the accession to power of the present government the Finance Minister spoke on this question, and I believe he proposed trying to remedy any evils by orders in council; but he finally realized what work this would be and how anything he did might be misinterpreted, and he desisted and ever since has only referred complaints to the remedy under the Criminal Code. There is no question as to this remedy being under the circumstances futile and a dead letter; and I quote the hon. the Finance Minister's own words:

Toronto Star, March, 1909:

> I venture to say that if you attempt to reach combines by the ordinary procedure of law, without any other penalty than that enforceable by the courts of law, you will have great difficulty in reaching them. The efforts made in other countries to reach combines in that way have not been very successful.

This is the great truth which is now being pressed upon the government in vain. He asserted:

> Even with the amendments we are now making, the element of protection will remain in the tariff to a considerable extent. One of the evils to the protective system is that it inevitably leads to the formation of combines in our country as the recognition of the fact, by manufacturers and others who may engage in forming combines for unduly enhancing the prices of commodities, that the duty on like articles imported into the country can be removed by order in council.

There is no combine or merger of the people, and this remedy could not be utilized without such.

There is one way, and one way only, and I submit an adequate way of remedying this great grievance, and a way which will be of great benefit to the government and country in other ways. I refer to a permanent commission of men skilled for the purpose, men above politics, who will bring their whole energies and time to the study of the intricate question and do full and fair justice between the producer and the consumer. To-day if a producer thinks an alien is importing goods and in any way evading the duty or part of the duty by under-valuation or otherwise, all he has to do is to report the matter to the nearest customs officer, and immediately the whole machinery of the government is investigating the offence; but if a consumer or retail dealer believes he is charged unjustly or that there is a combination in restraint of trade, he has to fight it himself, which is an impossibility. Why should it cost the newspapers $2,000 to fight this paper combine? It cost thousands to prosecute the plumbers' combine in Toronto. The advice of such a commission to the government on tariff legislation, apart from combines, would be invaluable. How can any finance minister, no matter of what party, give adequate research and thought to tariff charges or making when you consider all his other duties? There is no question that the corporations and trusts have the United States legislative bodies in their iron grasp, which once closed is hard to open. Don't let us fall into the same error.

I speak, Sir, on behalf of the consumers of Canada, and I say to the manufacturers that my only desire is to see a body of

skilled, reliable and impartial men appointed to see that the manufacturers and consumers both get fair and honest treatment. There is no use in my taking up the time of the House in specifying articles which the combines charge too much for. Their number is many. There is hardly an article, from leather to wash goods, from rubber to tacks, that it would not pay to have the charges for investigated.

The 'Toronto Star,' November 13, 1908, says:

A protective tariff established with the aim of building up Canadian industries and employing Canadian workmen at fair wages soon becomes an instrument for furthering trade combinations and conspiracies to rob the consumer, the speculator follows the settler and lives upon his labour.

'Toronto Star', February 3, 1909:

Tack combine in trade war. Effect on general commercial conditions is wholly bad, after driving out opposition by low prices, prices are raised too high.

'Toronto Star', February 17, 1909:

Grange meeting at Forest asked Dominion government to investigate at cost of government charges made re combines and remedy. Combine is the modern robber baron.

'Goderich Signal':

Decidedly uneasy feeling among old time Liberals at position re combines taken by Mr. Fielding. 'Huron Signal' goes so far as to say, that the fact that it was even necessary to present such a request constitutes a disgrace to the government. The 'Signal' contends that the government should have acted of its own motion without waiting for a request to perform the duty, which it has by formal enactment laid upon itself.

The 'Kingston Standard' says private persons cannot afford the cost to fight a combine. If any one tries, he is a marked man. It cost newspaper men $2,000 to fight the paper combine.

The 'Toronto Globe':

Two things should be done; those found guilty of extortion in connection with the combines should be punished and the tariff conditions which favour unjust combines should be changed.

'Star,' February 3:

It has come to a pretty pass in this country that if a man may not sell or may not buy where and how he pleases, but such is the fact. Commercial and social life is being strangled by this exercise of privilege on the part of guilds controlling the supply of the necessaries of life. It has come to pass that no man can go into any business without the consent of his rivals, and agreement to conduct it as they dictate.

One retail merchant says the domestic combine on which owing to the tariff on imports, I am forced to depend for supplies, could put me out of business to-morrow and I simply dare not be quoted in opposition to what these combines are doing, said one dealer.

'Toronto Star', February 10:

Circular to retailer reads won't deal unless your buy from no one else and sell at our prices.

'Toronto Star,' February 13:

Canada's Combine Law a delusion and a sham.

United States case quoted says, 'a combine is an illegal organization and cannot invoke law.'

'Toronto Star', February 6, 1909:

One, well informed in regard to the situation, has estimated that the advanced price list will result in the collection of between three and four hundred thousand dollars more from the users of woodenware in Ontario than was collected last year on the same volume of business. Over 25 per cent above American prices.

The 'Toronto Star' says:

The speech of Y. M. McLean, of South Huron, in the House of Commons, was an able argument for a more effective use of the tariff law for the suppression of combines. The tariff law provided that on proof of the existence of a combine in any article, the government may reduce or remove the duty on that article. It is a good law, but it is a dead letter because the means of enforcement are not provided.

I had purposed, Mr. Speaker, making some reference to naval matters; but as the government are going shortly to bring down their policy on this subject, I shall wait in the hope that when they do bring it down I shall be so satisfied with it that I shall not be able to say anything. It is not a matter of politics. It is a matter affecting the whole of Canada for all time.

But, Mr. Speaker, there are other elements of national strength besides armies and navies. The most important element of all is the fibre of the race. A new nation derives its whole character and has its whole future determined by its first settlers, unless subsequent immigration is so extensive as to submerge the original population. It needs little study to see of what great value to a people a national type is. The absence of a national type is a loss to every man, woman and child. The question of the effect of large foreign immigration is not between us and the immigrants, but between our children and grandchildren and theirs. We are trustees for the future. We are laying the foundation for the last great nation; it rests with us how well built those foundations will be, and what kind of men shall inherit the country after we are gone. Two Englishmen, George Washington and Alex-

ander Hamilton, founded the United States and from 1776 to 1830 it grew from less than four million to almost thirteen million people, an unprecedented increase of 227 per cent and wholly out of the loins of their own people. They acquired a national type and characteristics of a strong, sturdy, moral self-reliant people. The height, weight, and chest measurement was steadily rising. Since 1880 these measurements are all decreasing, and the moral, physical and mental average lowering, due wholly to the immense immigration of people from inferior races, the small birth rate among native citizens and the great birth rate among foreigners. Up to 1880 the bulk of immigrants came from the sturdy races of northwest and western Europe—Scandinavians, Germans, French, Anglo-Saxons, good physique being the rule, and loathsome and contagious diseases extremely rare. In immigration heredity is far more important than environment or education. With the congestion of population in the great cities of western Europe, too many people are ill fed, ill clothed, ill sheltered and in consequence physically and morally weak. There is this to be said, however, of the Keltic race; men and women when lifted out of squalid poverty and despair into a broad land, where there is food and clothing for those who labour, invariably do well, after the shaking up and down of a Canadian winter and summer, they take a new lease of life and breathe in the air of freedom and ambition.

Now, Mr. Speaker, I contend. that we should profit by the example and lesson taught by a nation which has gone through what we are now face with. A nation founded by men of the same fibre as Canadians and grown up under similar conditions and climate. I, of course, refer to the United States. I hand in, Sir, a map from a United States standard work, showing where the undesirable immigrants that have lowered the average standard of United States inhabitants come from, and I give notice that I propose introducing to this House a Bill prohibiting all immigration from Europe south of 44 degrees North latitude and East of 20 East longitude, and from Turkey in Asia. The United States native birth rate before 1830 increased the population fast enough. The birth rate was lowered among native Americans by the immense immigration, so sets out Hall on immigration and its effects upon United States issued in 1907. Why should we not keep for our own descendants and old country relations this fair heritage of ours, and be as Goldwin Smith savs a contented people dwelling in a land of milk and honey.

The above remarks were carefully compiled some weeks ago. Since coming here, I happened to see in the reading room on the first page of ' Life,' the first social paper of the United States, a picture representing metaphorically what I have been saying. There is a great purple land with a great rock close to the ocean. On that rock stands a noble figure of a red man, one of the original owners of the soil. Behind him stands a tall man, with a goatee, with straps on his boots, and with the usual hat worn by Uncle Sam. Uncle Sam lifts his foot and pushes the red man off the rock. Then I turn to the other page, where I see standing on the same rock the same tall man with the goatee and the straps on his boots, and behind him crouched the figure of a man wearing old clothes and with a beard and a hooked nose—the same type of which seventy-five thousand were starving in New York last winter, and that man lifts his foot and kicks Uncle Sam off the rock and is left standing there alone. Let such immigration be absolutely prohibited. We have the power to do it. There is no better asset to Canada or any other country than a strong, sound immigrant from our own stock. The best citizens we have are those of our own race, and I ask why, instead of doing as President Falconer says we are doing, going too fast—why should we not go a little slower and keep this country for our own people and the descendants of the people from whom we sprang. I have given considerable thought to this matter. (I am not here simply giving my own idea but those expressed by experts and students and official reports). It is sometimes thought proper to relieve the discussion of a serious subject by indulging in a lighter vein and I would ask the House to indulge with me while I tell this story. The province of Ontario some years ago called on its county clerks to say how many farm labourers were required in each county. The replies, of course, came in. Middlesex wanted so many and Oxford so many, and so on. But in one county the county clerk happened to be away and his wife was doing his work and she wrote back: we do not want any, we grow our own. I submit that no better policy could be followed. Military and naval matters are all right in their way, but there are other things besides ships. Drake's guns would not have barked so loudly or strong had it not been for the men behind them, the fibre of the men is what counts. That is what we have to look to—the fibre of the men. An immigrant's heredity counts before environment or education. There is one great race trouble to the south, and that is race suicide. I would submit a solution for that great difficulty, one which is likely to affect this House in the near future, which is fast coming here except to the province of Quebec.

There is the question of woman suffrage, which is on the way and is bound to reach

us. Mrs. Pankhurst is on the road. I have a precedent for the remedy I propose, and it has come to me from a high ecclesiastical dignitary. While the spinsters of Canada have a right to vote on their own land, if the married women should come to the government and ask for the ballot, instead of putting a tax on bachelors or giving a bounty to large families, I would say give the women the right to vote if they carry out the duty they owe to their country as women and wives, on the clear principle, well defined, of 'No Babies no Ballots.'

Motion (Mr. Ecrément) agreed to.

Sir WILFRID LAURIER moved:

That the said address be engrossed and be presented to His Excellency the Governor General by such members of this House as are of the honourable the Privy Council.

Motion agreed to.

SUPPLY.

Hon. W. S. FIELDING (Minister of Finance) moved:

That this House will on Thursday next resolve itself into a committee to consider of a supply to be granted to His Majesty.

Motion agreed to.

WAYS AND MEANS.

Mr. FIELDING moved:

That this House will on Thursday next resolve itself into a committee to consider the ways and means for raising the supply to be granted to His Majesty.

Motion agreed to.

On motion of Sir Wilfrid Laurier, House adjourned at 9.35 p.m.

HOUSE OF COMMONS.

TUESDAY, November 16, 1909.

The SPEAKER took the Chair at Three o'clock.

RAILWAY ACT—AMENDMENT.

Mr. E. A. LANCASTER (Lincoln and Niagara) moved for leave to introduce Bill (No. 2) to amend the Railway Act. He said: This Bill is made necessary by the construction put upon section 340 of the Railway Act by the Ontario Court of Appeals in a case decided this last year. That section is the one that provides that the shipper shall not be bound to accept anything less than his ordinary and actual damages unless he signs a contract which must be approved by the Railway Commission. The Court of Appeals said they could decide whether one contract was like another, and that where they differed in some respects the shipper was bound by the contract he signed notwithstanding it had not received the sanction of the board. In my opinion the law of 1903 was intended to make the jurisdiction of the board absolute as regards these railway contracts and did not intend that any court should exercise that jurisdiction in any respect. I introduce this Bill so that the intention of the Act be made clear and distinct. It also provides that where the railway company insists on a higher rate of freight in order to guarantee against full loss, but wants the shipper to take lower rate and lower liability the company must allow the shipper the choice of paying the higher rate of freight and being fully protected against loss if he wants to, and not compel him to accept a reduced liability without any option.

Motion agreed to, and Bill read the first time.

RAILWAY ACT—AMENDMENT.

Mr. LANCASTER moved for leave to introduce Bill (No. 3) to amend the Railway Act. He said: This Bill is to limit the appeals from the Board of Railway Commissioners. At present it is very doubtful that any time limits exist. Any party who accepts an order from the Board of Railway Commissioners may appeal against that order to the Supreme Court.

Now, I think the House will agree with me at once when I say that orders made by the commission are supposed to be carried into effect immediately ; they are not made unless there is immediate necessity for making them. And, as it has been found that the commissioners feel that they must grant leave for appeal almost at any time and under almost any circumstances, I wish, by this Bill to limit that kind of appeal. The very object of appointing the Railway Commission was to give speedy justice in railway matters, and, where a difficulty arose, to apply the remedy as promptly as possible. The purport of that part of the Bill relating to this matter is that the board should not grant leave to appeal after thirty days from the making of their order. If any party, whether railway company or any other, feels himself aggrieved by an order of the commission and desires to appeal, it is reasonable that he should make up his mind within thirty days and make application for appeal. The second provision of this Bill is that leave to appeal to the Supreme Court should not be granted unless some doubtful question of law is involved and unless serious injury or loss will result from immediate compliance with the order sought

to be appealed from. It should not be available for delay only. That, I think, will commend itself to the judgment of the House. The third provision is that no appeal, even though leave be granted, should lie if it is not proceeded with within sixty days—that is, within thirty days after leave to appeal is granted, the party should proceed and not have the delay, as they may now, without any time limit whatever.

Motion agreed to, and Bill read the first time.

RAILWAY ACT—AMENDMENT.

Mr. LANCASTER moved for leave to introduce Bill (No. 4) to amend the Railway Act. He said: This Bill relates to the subject of level crossings. The legislation of last session, I think will be found, when subjected to more careful scrutiny than was possible in the last days of the session, to be unjust to the extent at least to which I propose to amend it. The Bill of last session provides that a railway, if incorporated after a certain time, must protect the crossings whether upon the level of the highway or otherwise entirely at their own expense. I propose to amend section 238a, as amended last session, by adding the following:

And where the railway has been constructed before the passing of this Act and is permitted by the board to pass over any highway crossing at rail level, the municipality shall not be ordered to pay any portion of the cost or expense of protecting such crossing unless and except it is otherwise provided by agreement, approved by the board, between the company and the municipal corporation.

That, I think, speaks plainly for itself, and it is not necessary for me to take up time or weary the House by explaining it further.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). I have no desire to take up time at this stage. I think it is evident, however, that the proposed amendment is subversive of one of the principles of the Bill passed last session. It clearly makes it impossible for the board to divide the cost among the parties interested. Under the Act as it is now, it is left to the discretion of the board to say whether the municipality shall pay anything or not.

Mr. LANCASTER. In some cases.

Mr. GRAHAM. It leaves it to the discretion of the board.

Mr. LANCASTER. In some cases only.

Mr. GRAHAM. This Bill will be subversive of that principle. I am utterly opposed to it, as I understand it.

Motion agreed to, and Bill read the first time.

Mr. LANCASTER.

RAILWAY ACT—AMENDMENT.

Mr. W. B. NORTHRUP (East Hastings) moved for leave to introduce Bill (No. 5) to amend the Railway Act. He said: This is precisely the same Bill that I introduced last year and that passed its first reading, but was among the innocents slaughtered owing to the shortness of the session. Under the existing law, if a contract is entered into between a municipality and a railway, and the railway receives subsidies under the contract but afterwards breaks the obligations it enters into under the contract, the corporation of the municipality can apply to the board and obtain relief. But, as the law stands, if the railway which has received the benefit happens to have sold out to another railway, which then has the property and enjoys that benefit, there is no relief to be obtained through the board because the board has no jurisdiction in relation to the matter over the company that did not make the contract. This Bill places it in the power of the board to consider such questions either at the instance of the railway, the Crown, the corporation or an individual.

Motion agreed to, and Bill read the first time.

RACE TRACK GAMBLING.

Mr. H. H. MILLER (South Grey) moved for leave to introduce Bill (No. 6) to amend the Criminal Code respecting the matter of race track gambling. He said: The object of the Bill is to amend sections 226, 227 and 235 of the Code with a view to suppressing and preventing, as far as possible, not the betting but the business of betting and gambling upon race tracks.

Motion agreed to, and Bill read the first time.

FIRST READING.

Bill (No. 7) respecting the units of electrical measure—Mr. Templeman.

INTERNAL ECONOMY COMMISSION.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) delivered a Message from His Excellency the Governor General.

Mr. SPEAKER read the message, which was as follows:

GREY:

The Governor General transmits to the House of Commons an approved minute of council appointing the Honourable William Stevenson Fielding, Minister of Finance, the Honourable Louis Philippe Brodeur, Minister of Marine and Fisheries, the Honourable Wm. Paterson, Minister of Customs, and the Honourable Wm. Pugsley, Minister of Public Works, to act with the Speaker of the House of Commons as commissioners for the pur-

poses and under the provisions of the 11th Chap. of the Revised Statutes of Canada, 1906, intituled 'An Act respecting the House of Commons;'

Government House,
Ottawa, 15th November, 1909.

REPORT OF COMMISSIONERS OF TRANSCONTINENTAL RAILWAY.

Mr. R. L. BORDEN. Before the notices of motion are taken, I would like to ask the Minister of Railways and Canals why it is that we cannot have the report of the Commissioners of the Transcontinental Railway in printed form at the commencement of the session. The report which was brought down last session was in typewritten form, and I think the printed form was only completed a few days or a few weeks ago. I have seen nothing in printed form until very recently. The one that has been brought down this session was in the same form, there is only one copy of it, and it is not available for the use of the members of the House generally who would like to examine it. I do not see any reason why it should not come down in printed form like the report of every other department of the government.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals). I think the observations of my hon. friend are quite reasonable. It never struck me in that light before. The commissioners have been practically doing their own work and submitting it to me, and I have submitted it to the House. I will try and see if we cannot make some arrangement by which the report will be printed in advance. It comes in regular form before me, and I present it to the House.

Mr. R. L. BORDEN. In the meantime will the minister be good enough to move that the rule be suspended, and that this be printed immediately?

Mr. GRAHAM. I move that the rule of the House on printing be suspended as regards the report of the Commissioners of the Transcontinental railway, and that the said report be ordered to be printed forthwith.

Motion agreed to.

RESIGNATION OF CHIEF ENGINEER LUMSDEN, TRANSCONTINENTAL RAILWAY.

Mr. R. L. BORDEN. I made an inquiry of the Prime Minister a day or two ago with regard to the resignation of Mr. Lumsden, formerly chief engineer of the Transcontinental railway, and it was intimated by the Prime Minister at the time that the answer would be given by the Minister of Railways at an early date. Perhaps it might be convenient to give it now.

Sir WILFRID LAURIER. There is an order on the paper to-day, and as soon as it is reached it will be granted at once.

Mr. R. L. BORDEN. I wish to know whether the report of the resignation of the chief engineer is correct.

Sir WILFRID LAURIER. It is correct.

INLAND REVENUE ACT—AMENDMENT.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, That it is expedient that the Inland Revenue Act be amended as follows: That Section 76 be repealed and the following substituted therefore:

'76. The person in whose favour a license is granted for an excise bonding warehouse, not included in the description of the premises in respect of which a license has been issued to him under this Act, shall, upon receiving such license, pay to the collector the sum of fifty dollars.'

He said: I may say that His Excellency has been informed of the purport of the resolution.

Mr. J. HAGGART. What change does that make?

Mr. TEMPLEMAN. It will increase the amount paid for licenses for bonded warehouses from $20 to $50.

Motion agreed to.

QUESTIONS.

COST OF NEWMARKET CANAL.

Mr. WALLACE asked:

How much was estimated for the Newmarket canal in 1909, and how much was expended each month since December, 1908?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. No special vote was taken for the Newmarket branch. The chief engineer allotted for the Holland River Division of the Trent Canal in 1909-10 $50,000 out of $1,000,000. Amount expended each month since December, 1908, as follows:

1909.	Contractor's Estimates.	
March	$12,440 00	
May	2,050 00	
June	1,690 00	
July	2,960 00	
August	11,040 00	
September	8,000 00	
October	10,690 00	
		$48,870 00

1909	Engineering pay-lists.	
January	$731 95	
February	547 00	
March	574 01	
April	535 72	
May	536 74	
June	816 20	
July	683 37	
August	742 86	
September	903 00	
October	820 80	
		6,891 65
		$55,761 65

COST OF MARKHAM POST OFFICE.

Mr. WALLACE asked:

What was the cost of lot for the Markham post office building and furnishings?

Hon. WM. PUGSLEY (Minister of Public Works):

Site	$1,004 79
Furnishings	1,744 59

COMMISSIONERS OF INTERCOLONIAL RAILWAY.

Mr. PAQUET asked:

1. What are the names of members of the Government Railways Managing Board, appointed to administer the affairs of the Intercolonial Railway?
2. What is the date of their appointment?
3. Where do they reside?
4. What are their salaries?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The members of the government railways managing board, are—Mr. M. J. Butler, C.M.G., Deputy Minister Railways and Canals, chairman, Mr. David Pottinger, I.S.O., Mr. E. Tiffin, traffic manager and Mr. F. P Brady, general superintendent.

2. April 20, 1909, by order in council, copy of which is attached hereto.

3. Mr. Butler, resides at Ottawa, the three other members at Moncton, N. B.

4. Mr. Butler without salary, Mr. Pottinger, Mr. Tiffin and Mr. Brady, $6,000 per annum, each.

The following is a certified copy of a report of the Committee of the Privy Council, approved by His Excellency the Governor General on the 20th April, 1909:

On a memorandum, dated the 16th April, 1909, from the Minister of Railways and Canals, representing that he has, for some time past, had under most careful consideration, the various complicated questions involved in the operation of the Government Railways, both from the financial and administrative points of view, and, as the result, has concluded that a change in the present method of management is desirable.

The Minister directs attention to the following facts:

The Intercolonial railway was built as a government road, in pursuance of the requirements of the British North America Act of 1867, Sec. 145; and without amendment of this Act, must retain that characteristic.

It was opened for traffic on the 1st day of July, 1876, between Halifax and Rivière du Loup; its length, including the Pictou and Windsor branches, and the line from St. John to Point du Chêne (Shediac) being 745 miles.

By various extensions, purchases, and leasing arrangements its length, in the year of 1907-8, reached a total of 1,448·62 miles—the cost of operating being $9,157,435.53. Its traffic comprised 4,134,046 tons of freight and 2,789,371 passengers.

The Prince Edward Island railway was taken over by the government on the 29th of December, 1873, under the express provisions of the Imperial Order in Council of the 26th of June, 1873, admitting Prince Edward Island into the Dominion.

At the time of the original opening of the Intercolonial railway for traffic, and the taking over of the Island railway an organization was adopted, which, with some modifications, has remained in force up to the present day, notwithstanding the changed conditions, and the expansion of the road and its operations. The official placed in immediate charge is a general manager, who is also in charge of the Prince Edward Island railway, under the title of 'General Manager, Government Railways.'

By section 49 of the Government Railways Act, R.S.C., 1906, chapter 36, it is provided as follows:

The Governor in Council may, from time to time, make such regulations as he deems necessary,

(a) for the management, proper use and protection of all or any of the government railways, including station houses, yards and other property in connection therewith;

(b) for the ascertaining and collection of the tolls, dues and revenues thereon;

(c) to be observed by the conductors, engine drivers and other officers and servants of the minister, and by all companies and persons using such railways;

(d) relating to the construction of the carriages and other vehicles to be used in the trains on such railways.

The minister considers it expedient and recommends that, in pursuance of the above statutory provision, the following be fixed as the organization to be in force on and after the 1st of April, 1909, for the government railways—the Intercolonial railway and the Prince Edward Island railway—as at present constituted, and as the same may hereafter be extended or modified; such organization to be in supercession of the existing organization:

1. The position of general manager of government railways to be abolished.

2. A Board, to be constituted under the name, 'The Government Railways Managing Board.'

3. The said Board to consist of four persons, namely: Mr. M. J. Butler, Deputy Minister and Chief Engineer of the Department of Railways and Canals, who shall be chairman of the Board; Mr. David Pottinger, I.S.O.; Mr. E. Tiffin, the present traffic manager, he

retaining that position; Mr. F. P. Brady, of Montreal.

4. The said Board to supervise and direct all departments of the railways owned by the Government of Canada.

5. The duties and powers of the said Board to be as hereunder defined, namely:

They shall have the powers usually vested in the executives of railway corporations.

They shall prepare, subject to the Government Railways Act, and the Provident Fund Act, and, with the approval thereto of the Governor in Council first obtained, carry out, rules and regulations as follows:

(a) For the organization of the staff and officials of the railways.

(b) For the conditions of employment in the railway service.

(c) For the purchasing of supplies and the sale of materials.

(d) For the ascertaining and collection of the railway tolls, dues and revenues.

(e) Those to be observed by the conductors, engine drivers and other officers and servants, and by all companies and persons using such railways.

(f) Those relating to the rolling stock to be used in the trains on such railways.

6. They shall meet for the transaction of business at least once a month and shall keep regular minutes of each meeting.

7. They shall report to the Honourable the Minister of Railways and Canals, monthly, and shall also make a special and comprehensive report at the end of each fiscal year, on the expenditures and receipts of the government roads; and on all occurrences and transactions of importance; and shall, further furnish such reports as may be, from time to time, required of them by the Department of Railways and Canals.

The Minister further recommends that the salaries payable to the several members of the said Board above named, be fixed as follows: to Mr. Butler, no salary as a member of the Board, and to Mr. Mr. Pottinger. Mr. Tiffin and Mr. Brady, $6,000 a year each.

The Minister also recommends that, with the exception of Mr. Butler, whose departmental duties render such provisions inapplicable, the appointees be required to devote the whole of their time to the official duties attached to their positions.

The Committee submit the same for approval.

F. K. BENNETTS,
Assistant Clerk of the Privy Council.

The Honourable
The Minister of Railways and Canals.

IMMIGRATION AGENTS IN FRANCE.

Mr. PAQUET asked:

1. Who are our immigration agents in France, and what are their salaries?

2. Who are our immigration agents in Belgium, and what are their salaries?

3. Have we immigration agents in the other countries of Continental Europe? If so, what are their names and salaries?

4. Has the government appointed a successor to Mr. J. E. Cyr, immigration agent in France? If so, what is his name and salary?

Hon. FRANK OLIVER (Minister of the Interior):

1. Paul Wiallard, $3,000 ; Pierre Foursin, $1,000 ; Emile Belanger, $900.

2. D. Treau de Coeli, $1,500.

3. No.

4. No.

BELLEVILLE AND NORTH HASTINGS RAILWAY.

Mr. NORTHRUP asked:

1. Has the government yet found a remedy for the grievance which the hon. the Minister of Railways and Canals on the 10th February, 1908, in this House, admitted did exist by reason of the failure of the Grand Trunk railway to operate the branch of the old Belleville and North Hastings railway from Madoc to Eldorado?

2. Is the government aware that on that date the hon. the Minister of Railways, speaking of that and similar grievances, stated to this House: 'We are anxious to find a remedy so that this will not occur again; the people have a grievance not only on account of the subsidies voted by this House, but on account of the votes by the municipalities throughout Ontario and its other provinces. There is a weakness in the law that ought to be remedied, and I assure the House that I am trying to find out the method to remedy this grievance. I will say further that I will not be satisfied until I do find some way. I do not believe that a railway company has a right to take money of the people of Canada and then not carry out its contract, any more than it would have the right to take my money and not carry out a contract entered into with me?'

3. Is the government aware that such remedy has not yet, after the lapse of nearly two years, been discovered by the Minister of Railways, or if discovered has not been applied, as the grievance still exists?

4. Has such remedy been discovered? If so, why has it not been applied? If not discovered, is the Minister of Railways still searching for it, or does he now believe that no remedy can be found?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals).

1. Since date mentioned, the statute 7 and 8, Edward VII, C. 61, has been passed and reference may be made to section 8 of that statute.

This was amended by statute 8 and 9, Edward VII, C. 32, section 1.

2. The words quoted in the question are to be found at different places on pages 2815 and 2816, 'Hansard,' 1907-8, but consist of three separate extracts not spoken in the order quoted, and from which intervening sentences are omitted.

Debate on the amendment, statute 8 and 9, chapter 32, section 1, is to be found on pages 6202-3-4-5-6-and 7, 'Hansard,' 1909.

3 and 4. It is hoped that the legislation above mentioned will provide an efficient remedy in preventing a recurrence of any such grievances as is stated.

ARMED VESSELS ON THE GREAT LAKES.

Mr. WORTHINGTON asked:

1. Is the information as to the armament and crew of the United States training or war ships 'Yantic,' 'Hawk,' 'Fern,' 'Dorothea,' 'Don Juan,' 'Essex,' 'Sandoval' and 'Nashville,' which the Prime Minister stated to the House on the 30th April, 1908, was being obtained by the Department of Militia, yet available? If so, what is the extent and nature of the armaments, and the strength of the crews?

2. Does the government consider that the tonnage and armament of these vessels has any relation to the Rush-Bagot agreement of April, 1817?

3. Was the question of the admission of these vessels to the Great Lakes submitted to the Militia Council for the views of the military advisers of the Minister of Militia and Defence previous to the requests of the government of the United States being acceded to?

4. Was the imperial government requested to submit the question of the admission of these vessels to the Great Lakes for the views of the Imperial Defence Committee previous to the requests of the government of the United States being acceded to?

Rt. Hon. SIR WILFRID LAURIER (Prime Minister).

1. The government does not think that the information in question and obtained by the Department of Militia should now be made public, pending diplomatic action on the same.

2. Yes.

3. All applications were considered by the Governor in Council.

4. No.

COST OF ROYAL MINT.

Mr. FOSTER asked:

1. What is the total cost of the Royal Mint, to date?

2. What amount is estimated as necessary to complete it, including the refinery?

Hon. Mr. PUGSLEY (Minister of Public Works).

1. $544,052.78.

2. Estimated cost of refinery building.. .. ..$35,000
Estimated cost of equipment.... 32,000

$67,000

ADDITIONS TO BOARD OF ENGINEERS, QUEBEC BRIDGE.

Mr. MONK asked:

1. Has the government, since last session, added any new members to the Board of Commission of Engineers in connection with the reconstruction of the Quebec Bridge?

2. Why has the government so increased the said board?

3. Who are the new nominees, what are their functions, and what is the rate of their remuneration?

Mr. GRAHAM.

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1 and 2. No new members have been added to the board, but under the provisions of the order in council, two engineers were called in consultation for the substructure and two engineers were called in consultation in connection with the designing of the superstructure.

3. For the substructure, Messrs. Noble, of New York, and Holgate, of Montreal. For the superstructure, Messrs. Johnson, of Montreal, and Wolfell, of New York. As to the consulting engineers of the substructure, the customory rate of $50 per day. The consulting engineers of the superstructure have not yet billed the government for their work.

BOARD OF ENGINEERS, QUEBEC BRIDGE.

Mr. MONK asked:

1. When were the members of the new Board of Engineers of the Quebec Bridge appointed?

2. When did they hold their first meeting?

3. Has the board or any of its members made any report upon the reconstruction of said bridge to date?

4. Have any plans been prepared and handed in to the government?

5. What is the remuneration of said original three members of said board?

6. What is the total amount paid to date by the government for the maintenance of said board or commission?

7. Have any actual works been executed in respect to reconstruction of said bridge? If so, what works?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. No new members were added to the Board of Engineers.

2. First meeting of the board with Messrs. Holgate and Noble took place July 2, 1909. The first meeting of the board with Messrs. Johnston and Wolfell took place Sept. 7, 1909.

3. Yes, monthly reports.

4. Plans have not been completed, but are well advanced.

5. $1,000 per month.

6. Paid to October 31, 1909—$97,631.67.

7. No actual work has been executed other than plans, specifications, soundings and borings, etc.

DRY-DOCK AT PORT ARTHUR.

Mr. BOYCE—by Mr. Geo. Taylor—asked:

1. Was any application made for the subsidizing of a dry-dock and ship-building yard at Port Arthur? If so, on what date, and by whom was the application made?

2. What were the dimensions of the proposed dry-dock and ship-building yard?

3. Has the department any information as to what site, if any, has been chosen for such dry-dock and ship-building yard?

4. If so, has the department approved of such site for the purposes of granting subsidies under the Act?

5. For what distance and to what depth will dredging be required to be done to permit of easy approach to dry-dock for vessels desiring to use the dock?

6. Has the department ascertained, or has it been reported to the department, that it will be necessary for the proper maintenance of the dry-dock that a break-water be built in Thunder bay in front of the dock to protect it? If so, have any plans for dredging approaches to dry-dock, and for the erection of breakwater, been prepared or approved by the minister? If so, what is the estimated cost of each work?

7. What is the estimated cost of the dry-dock and ship-building plant to be erected in Port Arthur as represented by the applicants for subsidy, and at what amount has the capital been adjusted or fixed by the department for purposes of subsidy?

8. What subsidy has been granted to such dock, and upon what terms?

9. Has the department any information as to what persons are promoting the building plant at Port Arthur?

Hon. WM. PUGSLEY (Minister of Public Works): An application for a subsidy has has been received from the Western Dry Dock and Shipbuilding Company, Limited, for a dry-dock at Port Arthur; but the department is at present unable to furnish the information asked, as all papers, plans, etc., concerning the application have been forwarded to the resident engineer at Port Arthur to be reported upon.

DRY-DOCK AT SAULT STE. MARIE.

Mr. BOYCE—by Mr. George Taylor—asked:

1. Was any application made for the subsidizing of a dry-dock and ship-building yard at Sault Ste. Marie? If so, on what date and and by whom was the application made?

2. What were the dimensions of the proposed dry-dock and ship-building yard?

3. Has the department any information as to what site, if any, has been chosen for such dry-dock and ship-building yard?

4. If so, has the department approved of such site for the purposes of granting a subsidy under the Act?

5. Will any dredging be required to be done for approaches to the dry-dock as proposed? If so, for what distance and what depth, and what is the estimated cost of it?

6. What is the estimated cost of the dry-dock and ship-building plant to be erected at Sault Ste. Marie as represented by the applicants for subsidy, and what amount has the capital been adjusted or fixed by the department for purposes of subsidy?

7. Has the department approved of the plans submitted by the applicants for subsidy? If so, when were such plans approved of?

8. If such plans have not been approved of as to site of dry-dock, or the dry-dock itself, what objections have been raised against the same, and have such objections been met by promoters?

9. Is it the intention of the department to subsidize a dry-dock and ship-building plant at Sault Ste. Marie?

10. Is the department aware that a substantial bonus for such dry-dock has been granted to the promoters of the said dry-dock by the council of the corporation of the town of Sault Ste. Marie after submission to, and approval of such by-laws by the ratepayers of said town, by an overwhelming majority on the 8th March last.

11. If the department has not already approved of the plans of the dry-dock and shipbuilding yard at Sault Ste. Marie, what is the cause of the delay in giving such approval?

Hon. WM. PUGSLEY (Minister of Public Works).

1. (a) Yes. (b) 11th June, 1909. (c) The Sault Ste. Marie Dry Dock and Shipbuilding Company, Limited.

2. The dock is to be 620 feet long, 53 feet wide in the bottom and 85 feet wide at the top and to have at least 17 feet 6 inches of water on the mitre sill, at low water.

3. Yes.

4. 6 (a), 7, 8, 9, and 11. The whole matter is now being reported upon by the resident engineer.

5. No.

6. (b) The company is entitled to ask for an annual subsidy of 3 per cent on the total cost for 20 years, provided the plans are approved by the department and the work is carried out as designed.

10. Yes.

SEA GULL DOCK.

Mr. BOYCE—by Mr. George Taylor—asked:

1. Who was the superintendent in charge of the work of construction at Sea Gull dock on St. Joseph Island, in Lake Huron?

2. When was he employed, at what rate, and for what period of time was he paid?

Hon. WM. PUGSLEY (Minister of Public Works):

1. T. A. Armstrong.

2. (a) and (c) October 9, 1908, to March 31, 1909. (b) $3 per working day.

CEMENT MERGER.

Mr. BRADBURY asked:

1. Has the attention of the government been called to the cement merger that has taken place, by means of which the Canada Cement Company, Limited, has taken over ten of the largest cement companies of Canada with a capital of $30,000,000 and that on account of this merger the price of cement to the consumer has been very much increased?

2. Is it the intention of the government to take action to protect the public against this merger, which threatens to be a huge combine, thereby increasing the cost of cement, which is almost a necessity to-day in great works?

Hon. W. S. FIELDING (Minister of Finance). The government are aware from information in the public press, that a number of the cement manufactories of the Dominion have been consolidated under one large company. Whether this consolidation has unduly enhanced the price of cement is a disputed point.

The law provides two methods of dealing with combinations which unduly enhance prices. One of these, in the case of dutiable articles, is by abolition or reduction of customs duties, after the facts have been established by judicial inquiry. It is proposed to introduce, during the present session measures to make this portion of the law more effective. The other method is under the Criminal Code, the administration of which comes under the direction of the Attorneys General of the several provinces.

SOUTH AFRICAN WARRANTS.

Mr. W. J. ROCHE asked:

1. What number of warrants have been issued to date for South African veterans' services?
2. What number of warrants have been filed for land personally by veterans?
3. What number of substitutes have been registered?

Hon. FRANK OLIVER (Minister of the Interior):

1. 6,645.
2. 420.
3. 2,498.

LIFE-SAVING STATION IN BAY OF FUNDY.

Mr. DANIEL—by Mr. Crocket—asked:

1. Is there a life-saving station in the Bay of Fundy? If so, where, and what is its equipment?
2. Who has charge of the boat and equipment?
3. Is there a crew provided for the boat? If not, how is a crew obtained when the services of the boat are required?
4. Is it the intention of the government to provide a crew for this boat?
5. Was this life-boat used on the occasion of the recent wreck of the SS. 'Hestia'? If not, why not?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes. At Westport, Brier Island, there is a subsidized motor boat and crew. There is a Beebe-McLellan life boat at Seal Cove, Grand Manan, with coxswain in charge, but no established crew.
2. At Westport Mr. Bowers, the owner of the boat. At Seal Cove Mr. T. C. Benson, the coxswain.
3. Not at Seal Cove. Volunteers have to man the boat at present.
4. Yes, if not at present station, at some more suitable locality.

Mr. BRADBURY.

5. No. When the fishermen at Seal Cove, nine and a half miles distant, heard of the wreck, they set out in their sailing fishing boats, with which they rescued the survivors. It was not a case then for a life boat and beyond the beat of the Seal Cove Station.

PASSAGE OF TRAINING SHIPS THROUGH CANALS.

Mr. EDWARDS asked:

1. Referring to the passage of United States warships or training vessels through the St. Lawrence canals to the Great Lakes, to what department was each application of the United States government referred?
2. Did the department to which the application was referred take steps in each case to consult other departments interested? If so, what departments were so consulted, and have records of such consultations been preserved?

Right Hon. Sir WILFRID LAURIER (Prime Minister): Every application was dealt with by the Governor in Council on the report, either of the Minister of Railways and Canals, or of the Secretary of State.

OLD PROPRIETOR LIGHT.

Mr. DANIEL—by Mr. Crocket—asked:

1. When was the government or any of its departments informed that the light in the buoy on the Old Proprietor rock in the Bay of Fundy was out, and that the whistle of said buoy was also defective?
2. Is the government or the Department of Marine and Fisheries aware that this light has not been operating during the whole or greater part of the past summer?
3. Why has this gas automatic whistle buoy been allowed to remain so long in this defective condition?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1 and 2. The St. John agency of the department was advised January 22, 1909, that light was out. The acting agent thereupon notified the shipping interests and advertised in local papers on January 25 that light was out. The department at Ottawa was not aware of the irregularity. Whistle was found defective November 7, 1909.

3. On account of adverse weather conditions, also press of work in connection with more important aids to navigation.

POWASSAN-NIPISSING MAIL ROUTES.

Mr. ARTHURS—by Mr. Kidd—asked:

1. Have requests by petition or otherwise been received for a change in the existing mail route between Powassan and Nipissing and Restoule? If so, from whom?
2. Has the Post Office Inspector made a report on the said proposed changes?
3. If a report has been made recommending a change, why has such change not been made?

Right Hon. Sir WILFRID LAURIER (for the Postmaster General):

1, 2 and 3. The department having been advised that the arrangements for the mail service between Powassan, Nipissing and Restoule were not satisfactory, the matter was referred to the inspector for inquiry. He recommended a rearrangement of the services, which the department authorized, but a largely signed petition having been received from the district protesting against the change, the matter has been held in abeyance until further inquiry is made by the inspector.

MOTIONS AGREED TO WITHOUT DISCUSSION.

A copy of the contract for the dredging of the Napanee river during the summer of 1909; name of the contractor who had the contract; names of the engineers in charge of the work and the inspector; the depth and width of the channel after dredging; the length of time taken to complete the work; the total amount of money expended on the work; whether the work was done by day work or by the yard; and the prices paid by day or by yard.—Mr. Uriah Wilson.

For a copy of all reports, letters, communications and documents touching or relating to the resignation of Hugh D. Lumsden from his position as chief engineer of the National Transcontinental railway, including a copy of all letters, communications or reports of the said Hugh D. Lumsden to the Prime Minister, touching or relating to his resignation, or to the affairs of the National Transcontinental railway.—Mr. R. L. Borden.

For a copy of all correspondence, documents and papers of every description not already brought down touching the recent treaty with the French Republic, or any modification therein.—Mr. R. L. Borden.

For a return showing in relation to each dog-fish reduction plant or establishment for the reduction of dog-fish erected by or for the government or maintained in whole or in part by the government, (a) the cost of construction, (b) the cost of maintenance for each year, (c) the location, (d) the quantity of dog-fish treated thereat in each year, and (e) the amount realized from the sale of or the disposal in each year.—Mr. R. L. Borden.

For a copy of all orders in council at present in force with reference to immigration; also a copy of all regulations in force at the present time in connection with immigration in Canada.—Mr. Uriah Wilson.

WATERWAYS TREATY.

Mr. R. L. BORDEN moved:

For a copy of all correspondence, reports, documents and papers not already brought down touching the treaty with the United States of America known as the Waterways Treaty, or any modification thereof.

Sir WILFRID LAURIER. Stand.

Mr. R. L. BORDEN. Do you wish this to stand?

Sir WILFRID LAURIER. The matter is still under consideration and if my hon. friend will renew the motion at a later date I will be happy to bring down the papers.

Mr. R. L. BORDEN. Very good.

Motion allowed to stand.

WHARFS IN JACQUES CARTIER COUNTY.

Mr. F. D. MONK (Jacques Cartier) moved for:

A copy of all petitions addressed to the government or any member thereof, as well as of all letters, correspondence and reports in the possession of the government, and having reference to repairs required at two wharfs built by the government and situated at Ste. Geneviéve and Isle Bizard, in Jacques Cartier County, P.Q.

He said: These two wharfs were constructed by the Dominion government in the year 1888, on the river which runs north of the island of Montreal from the Lake of Two Mountains to the St. Lawrence at the lower end of the island. The two wharfs cost about $35,000; one was located on the Island of Montreal in the parish of St. Geneviève, and the other on an island in the lake of Two Mountains in the parish of Isle Bizard. The wharfs were built opposite each other and some years ago the provincial government, with the consent of the federal government, I have no doubt connected these wharfs by a steel bridge, the wharfs themselves forming the abutments of the bridge. These wharfs were originally built because they were useful, the river there is navigable at certain seasons of the years and there is considerable traffic in the district. No doubt the federal government acquiesced in the construction of this bridge and at all events on several occasions, since the bridge was erected the federal government has repaired the wharfs. So far as I have been able to discover the wharfs were not deeded over to the municipality or to the Quebec government when the bridge was built, and I believe they remain the absolute property of the federal government. In 1904 the wharfs were in a bad state and this parliament voted $2,800 for repairs. Mr. Hyman was then Minister of Public Works and I sent him an estimate prepared by contractors of repute showing that this vote was insufficient and that it would be necessary to expend four or five thousand dollars to place either wharf in proper condition. Mr. Hyman wrote me that the vote in question was the only amount available, that they would expend it, and that if further repairs became necessary they would no doubt be attended to by the government.

At the present time the condition of these two wharfs is deplorable. The wharf on the St. Geneviève side, owing to the spring freshets and the piling up of the ice has almost completely given way, and the other wharf is also in need of extensive repairs. If these wharfs, the property of the Dominion government, are to be preserved at all, they must be attended to at once. The bridge itself cost $40,000 and should the wharfs give way there will be a combined loss to the provincial and federal governments which it would take $100,000 to replace. The situation from the point of view of the provincial government is this: we have a law in the province of Quebec in regard to the steel bridges constructed under the Mercier administration.

Under that law, 56 Victoria, the supervision of these steel bridges is vested in the provincial government. Bridges joining two parishes in the same county are to be repaired by the county, bridges leading from one county to another are to be repaired by both counties, bridges in the same parish are to be repaired by the municipality of the parish, and the inspector of government public works is authorized by that statute, if he finds repairs necessary, to notify those who are responsible for those repairs, and, if they are not executed, to execute them himself at the expense of the parties responsible. The condition of this bridge has been investigated by the provincial government, and a notice has been served upon the interested parties to repair the bridge. Nothing has been done. I myself applied to the local government to avail themselves of the provision of the statute which says that if the repairs are not made, then the government makes them and recovers the cost thereof from the parties responsible. But, so far as I can see, the objection of the local government is this: We will not repair the bridge with the prospect that in the spring the piers belonging to the Dominion government will be carried away and the bridge will be lost, it is for the Dominion government to do its duty and repair these piers, when they will be in a fit and proper condition, we will attend to the bridge. Now, I have had some correspondence with my hon. friend the Minister of Public Works in regard to this matter, and my hon. friend has always answered my letters with his proverbial courtesy and offered to have the matter looked into. In his last communication my hon. friend stated that there was no money available for these urgent repairs. I think I pointed out to my hon. friend that this was a case of urgency, and that the government had power to make the repairs, and should make them while the water in the river is low, which is the only time at which the repairs can be made. But nothing, so far as I know, has been done, and I ask for this correspondence with the view of bringing this question to the notice of the House. It seems a great pity that a valuable asset such as these piers are, should be allowed to be lost, because I can state, so far as my information goes, that next spring's freshets will carry off at least one of these piers. It is all the greater pity, as the government has allowed the provincial government to place a valuable bridge upon these piers without charging that government or any other authority with the maintenance of this public work. It is a Dominion public work, it is in danger, and I think it calls for the immediate attention of the government.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, in the interesting address which my hon. friend has delivered in support of this motion, he has, I think, forgotten one very important point, that is, to inform the House as to what quantity of shipping resorts to these wharfs and therefore to what extent they are useful for purposes of navigation. If he had done so, my hon. friend from North Toronto (Mr. Foster), who was Minister of Finance when these wharfs were built in 1888, might have felt it his duty to make some explanations to the House of the rather extraordinairy coincidence which led to the building of two wharfs on that river, the one being directly opposite the other, and why the government of that day saw fit to expend some $35,000, ostensibly for the building of wharfs, which apparently, from the remarks of my hon. friend, were intended to constitute the piers for a steel bridge which the provincial government of the day were induced to erect upon these piers. If my hon. friend who represents St. Antoine division (Mr. Ames) were here, I have no doubt that on hearing the remarks of my hon. friend, he would feel it his duty to repair at once to the site of these wharfs with his camera and have them photographed to show what kind of wharfs were erected in 1888, when the hon. member for North Toronto was Minister of Finance. It is true, I had correspondence with my hon. friend who has just taken his seat, and I promised him, as I felt it my duty to do, to look carefully into his representations and see whether I could meet his views. There is a difficulty, because I have taken, and with the approval of my colleagues, somewhat strong ground against a continuance of the practice of allowing wharfs to be utilized as substructures for bridges. In some cases this has been done, and we have been attacked pretty strongly for it by some of our friends on the opposite side of the House. But the case which my hon. friend has brought to the attention of the House is about the worst case that has come under my notice. It is quite true, I told my hon. friend that I had no appropriation available for the purpose,

I have not at present any appropriation available for the purpose, and I am not quite sure that the maintenance and repairs of what is in reality the substructure of this bridge ought not to be attended to by either the provincial or the local authorities. However, if my hon. friend will be content to have the motion amended by adding the words, ' and also all the correspondence concerning the construction of those wharfs and of their use as piers for a bridge,' I shall be very glad to have the correspondence brought down, and I will then give further careful consideration to the question of making expenditures for the repairs of these alleged wharfs, but what are in reality bridge piers.

Mr. SPEAKER. Will the hon. gentleman consent to amend his motion as suggested?

Mr. MONK. I do not mind, Mr. Speaker. My hon. friend the Minister of Public Works is as pleasant and oily in his words as he is in his letters. From the correspondence which I had with my hon. friend, I understood that he had given some attention to this matter and looked at it in a serious way, and intended to examine whether, this being really government property, the government had a right to allow it to perish without repairing it. My hon. friend does not seem to have paid any attention whatever to that point. He is satisfied with a comment upon the circumstances which existed at that very distant period when these piers were built.. Would it not rather be proper for my hon. friend to declare whether the government intends keeping these wharfs as its own property or abandoning them to the provincial govenments or the parties to whom they are useful? Does he not think he might have given a few moments to that point, which is the only serious one in the matter. In 1904, either he or his predecessor took an entirely different view and repaired these wharfs. Why will not the present minister do that to-day? In 1904, no question was raised as to where or what was the origin of this public work. The local member for the county then happened to belong to the same political faith as my hon. friend and urged that the work be done. It was done. But because this year the local member does not belong to his political faith, my hon. friend takes an entirely different view, and has not even taken the trouble to make up his mind as to whether we would say to the people that the federal government does not think it ought to keep these works and is prepared to deed them to the provincial government, or that the provvincial government having repaired that bridge and having placed it upon these piers, should take over the whole business. He has not thought of that at all, but has indulged in a few pleasantries at the expense of my hon. friend from Toronto, because forsooth, some twenty years ago, other considerations entered into the construction of these piers which neither my hon. friend nor I know anything about. Certainly from the admirable letters my hon. friend wrote me, one would judge that they were written by some courtier of the court of Louis XIV., and I could not imagine from them that he would get up here and state that he would not repair the piers or allow any one else to repair them. That is indeed a very sad disappointment. As regards the amendment suggested by my hon. friend, I have no objection whatever. There is navigation there, and these wharfs were constructed because they were required for that locality, and they are in a locality which pays one fourth of the taxes in the Dominion. I refer to the Island of Montreal. But this government has built wharfs since where there is no navigation at all. They built a wharf at Disraeli, and we have evidence that the cows are now browsing around it. I am not blaming my hon. friend or the government, but I say that if sins have been committed in the past, they have been very admirable imitators.

Motion as amended agreed to.

RIVER DES PRAIRIES.

Mr. MONK moved:

For a copy of all petitions addressed to His Excellency the Governor General of Canada, or to the government, or any department thereof; also, of all letters, correspondence of all kinds, and all reports had by the government in reference to the navigation, cleaning and deepening of the river known as River des Prairies, following along the northern boundary of the Island of Montreal.

He said: This is a motion for copies of petitions which have been sent in to the government during the past year in connection with some works required in the River des Prairies, which is the river where the wharfs mentioned a few moments ago were constructed. In this case, however, the works asked for interest not only the county of Jacques Cartier but the county of Laval, where a supporter of my hon. friend has been elected, which gives me great confidence that this motion will be given greater consideration than the one just disposed of. This river runs from the Lake of Two Mountains through these two counties down to the St. Lawrence at the lower end of the Island of Montreal. It has been very carefully examined and surveyed by the Georgian Bay Canal Survey Commission. The government therefore, is in possession of all the necessary information, not only for the execution of the Georgian Bay canal but also for the comparatively insignificant work referred to in this motion. The projected Georgian

Bay canal will either, according to the survey and report of the engineer, pass by way of Lachine, where the Lachine canal now runs, or else, coming down the Ottawa, go through the River des Prairies from end to end, and join the St. Lawrence a few miles below the city of Montreal but in the port of Montreal. This latter alternative, which is less costly than the other, presents many other advantages. At any rate the government are possessed of the necessary information to determine whether the work of cleaning up this river and opening it to a certain amount of navigation can be accomplished. I may say that the River des Prairies on the northern side of the Island of Montreal is the resort of a very large number of summer residents, who have large interests in the city of Montreal and pay heavy taxes. Moreover there are along that river thriving villages requiring a great deal of building material and other traffic which could be carried much more cheaply and conveniently by boat than by any other way. The work of deepening this river to the extent of three or four feet, removing the boulders, and making it navigable for vessels of small draught, would entail in reality very little expenditure and prove extremely beneficial and advantageous to the whole locality. I sent these petitions to the Minister of Public Works and always got very gracious and courteous acknowledgments of the resolutions passed by the different municipalities. There was a resolution unanimously adopted by the municipality of Cartierville, an important and flourishing village in the county of Jacques Cartier, and also one from the municipality of Ahuntsic, a little below Cartierville, which called on the government to do what is required in order to facilitate navigation by small vessels from Sault aux Recollets or from the Lake of Two Mountains to Montreal or Ottawa. The municipality of Ste. Geneviève also passed a resolution calling on the government to have this work executed, and I will read a letter which I received from the boating club of Cartierville—a very important sporting association, and very much interested in this matter. The club expresses the desire that parliament should be made acquainted with the contents of this letter. I may say that the government has executed works of dredging in the county of Vaudreuil presumably for public purposes but in reality to accommodate private interests. There was dredging in the county of Vaudreuil, asked for by the member for that county, to facilitate the approach to an icehouse belonging to a private individual.

Mr. PUGSLEY. My hon. friend (Mr. Monk) has been misinformed.

Mr. MONK.

Mr. MONK. No, these facts are well known. If the hon. gentleman (Mr. Pugsley) will come with me to the place I will show him that it is quite evident that the work was done for private purposes. The hon. gentleman must remember also that dredging was done around some of the islands in Vaudreuil to benefit men politically important, friends of the hon. minister, who owned islands in that locality. They wanted their islands enlarged by dredging the lake and placing the dredged material on the island. In fact the domain of these owners has been extended by my hon. friend's dredging. And I think dredging of the same kind was done in Nicolet.

Sir WILFRID LAURIER. Long ago.

Mr. MONK. No, not long ago. In fact, my right hon. friend (Sir Wilfrid Laurier) knows that it is going on now. Thev are dredging across the river St. Lawrence opposite the county of Nicolet, in quicksand or clay, at a point where the current of the St. Lawrence is so rapid that, as everybody in that section knows, the trench dug by the dredge is filled up in forty-eight hours. But the dredge returns every year and continues digging in this trench which is filling up as it is made. This, no doubt, has emboldened my young friends of the Cartierville Boating Club to think that, if dredging is done in the way I have indicated, it might be done for the purpose of affording facilities of navigation for their club and the residents of the locality. This is the letter of the club:

Cartierville Boating Club,
Montreal, Sept. 23, 1909.

Mr. F. D. Monk, K.C., M.P,

Dear Mr. Monk, as you are doubtless aware, the Rivière des Prairies is shallow and rocky in many places between Cartierville and Lake of Two Mountains and has practically no navigable channel for anything larger than a canoe in many places and at low water not even a canoe can be paddled up the worst of the shallows.

Your two hundred and fifteen fellow-members of the Cartierville Boating Club, many of them owning motor boats as well as canoes and skiffs are thus restricted from using the upper portion of this beautiful river and the Lake of Two Mountains except at highwater, and I have been asked to write to you saying that they earnestly request that you will bring to bear all the influence possible.

Very little influence, I am afraid, with my hon. friend or his government.

In order to have our government take the necessary steps to have the river made navigable under low water conditions for boats of say four to five feet draft.

Mr. PUGSLEY. Does the hon. member (Mr. Monk) say that a canoe cannot float on these shallows now, and that he wants five feet of cutting done in solid rock?

Mr. MONK. There is no solid rock, and to deepen the river to five feet would not be very costly, while it would enable motor boats and small craft to go up that river to the Lake of Two Mountains which affords access to great stretches of navigation. Certainly there is more water there than in the Newmarket canal.

Our club may now be considered a body of some importance in aquatic matters about the Island of Montreal. Its members consist for the most part of rising young business and professional men of Montreal and Westmount, and the summer residents of Cartierville, together with some of the well-known men of affairs in the vicinity, such as:—Hugh Paton, president, Shedden Forwarding Co., J. C. King, of Warden, King, Limited, E. W. Barlow, of Barlow, Mongenais & Co., J. A. Bremner, of Alex. Bremner, Bleury St., C. E. Hanna, secretary of the Dominion Textile Co., Limited, S. C. Jones, of S. C. Jones & Co., Importers, H. F. Stearns of the Dominion Wadding Co., and many others.

The Club stands for clean sport in its best sense, and is doing everything in its power to further the interests of boating particularly, and, in its small way, the welfare of Canada generally.

We would ask you then, as one of its members, as well as the county's official representative, to put the club's request before parliament at your first opportunity and to do your utmost to have this matter put through.

Will you please be good enough to write to me saying what we may expect you to do for us.

Awaiting your reply, I am, sir,
Yours very truely,
F. B. Brown,
Honorary Sec.-Treasurer.

Now, I will send my reply as soon as my hon. friend the Minister of Public Works (Mr. Pugsley) states that, as this work is not very costly, as he has all the information necessary in his department, and as the interests are worthy of consideration, he will have that work executed next summer and give satisfaction to this large number of interested parties.

Hon. WM. PUGSLEY (Minister of Public Works). I do not think I can properly allow the remarks of my hon. friend (Mr. Monk) to pass without some observations from me, especially in view of the fact that he has made the statement that this work will be one of very trifling cost and suggests that therefore I ought to do it as a matter of course. I am quite sure that my hon. friend has been misinformed with regard to the cost. The river, at the point at which the department is asked to dredge it, is very rocky and is full of boulders. As the petition states—and I think my hon. friend (Mr. Monk) stated also—at present at times, there is scarcely water enough to float a canoe. The department is asked to dredge so that there shall be a navigable channel with four or five feet depth of water. I may say, I am having the matter inquired into. I have been very strongly pressed to do this work, not only by my hon. friend, but by the hon. gentleman representing the constituency of Laval (Mr. Wilson). But I may say to my hon. friend from Jacques Cartier that, if the doing of this work had to depend entirely upon the fact that it would be of some advantage to the boating club to which my hon. friend refers, and whose members have appealed to him so strongly as a fellow-member, I am afraid I should not be able to look upon it favourably. I do not think that the money of this country should be expended, in very large amounts at all events, for the purpose of improving navigation in order simply to accommodate those who are members of boating clubs and desire to use small motor boats, rowboats and the like. But the hon. member for Laval has put the case upon a very much stronger ground. He stated that in the locality and along this river for a number of miles there is a community of very prosperous farmers who would find it of very great advantage in getting their produce to market if there was navigation upon this river.

Mr. MONK. I think I stated that also.

Mr. PUGSLEY. That is an argument that has impressed me, and by reason of that argument having been presented, I have directed the resident engineer to make a report; and, if it is found reasonably possible, at a moderate expense, to give navigation which will enable the farmers better to take their produce to market and thus cheapen the cost of transportation, I shall be very happy indeed if I can meet their request. Of course, I can make no promise until we have the report of the engineer and a very complete estimate of the cost of the proposed dredging work.

Motion agreed to.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. MONK. Are we not going to proceed with the business? This is government day, there are matters that we could advance to-day.

Sir WILFRID LAURIER. My hon. friend is very impatient, it seems to me. There is no business on the paper that could come before the House at the present moment. There was a motion to be introduced by the Minister of Inland Revenue, which will come up to-morrow.

Mr. MONK. This is government day, and for my own part I am ready for business, and anxious to advance it. It is only half past four o'clock. There is not a single

piece of government business ready for us to attend to; I think that fact ought to be insisted upon. For my own part I am not satisfied, and I would like to proceed with the business for which we have been summoned to parliament.

INDIAN LANDS IN THE PROVINCE OF ALBERTA.

Mr. J. HERRON (Macleod). Before the House adjourns, I wish to bring before the House a matter which I consider urgent, and of considerable public importance. It affects more particularly the Department of the Interior, and I am sorry the Minister of the Interior is not in his place; he is probably not far away. He is aware of the fact that I was going to bring this matter up. It refers to the disposal of some Indian lands in the province of Alberta.

Mr. SPEAKER. It is not quite regular for the hon. member to introduce a discussion on this question. We have laid down the rule that it is only in cases of urgency that a matter can be brought before the House on a motion to adjourn. If we allow a discussion to a motion to adjourn, another rule requires a formal motion for the purpose of bringing up the question. I would like the opinion of the House on this point.

Mr. R. L. BORDEN. I think the amendment you refer to was one restricting the rule that a motion to adjourn is always in order. That rule was found to be somewhat subject to abuse, and it was therefore restricted. Thus, the right to move a question for the discussion of a particular subject on a motion to adjourn the House, is qualified; it exists only on certain conditions. I do not think that that particular restriction has any bearing on a debate which may take place when the Prime Minister or member of the government who is leading the House, actually moves that the House shall adjourn.

Sir WILFRID LAURIER. With all deference to your position, it seems to me that the interpretation of the rule given by my hon. friend the leader of the opposition is correct. The object of the rule is not to interrupt the business of the House by a motion to adjourn.

Mr. HERRON. I shall take up the time of the House but for a few moments. I desire to refer to a sale of land occupied by Indians, that was advertised to take place on the 24th of this month. The reserve is situated between Macleod and Pincher Creek, where I live. The quantity of land is something less than a township. A majority of the Indians on the reserve that own the land are required to give their consent to a disposal of any portion of the land. Be that as it may, I am not thoroughly posted. It is claimed that when the first vote was taken half of the Indians on this reserve did not know the vote was to be taken to dispose of their land. It seems the majority was not sufficiently large to authorize a disposal of the land. It is alleged that the Indians were induced in some way to leave the reserve and be absent when the second vote was taken, and the second vote did not carry by a sufficient majority. A third vote was therefore necessary, and it is also alleged that some inducements were offered to some of the Indians who opposed the selling of the land to be absent, and on the third vote the proposition was carried. Now the sale is advertised to take place on the 24th of this month, and the Indians are apparently making a pretty vigorous protest, that is those who were opposed to the selling of this land. For my own part I am not prepared to say whether it would be a good thing for the Indians to dispose of a portion of their land or not at the present time. I think it would be rather to their advantage to sell the land. But that is not for me to say here to-day. I desire to draw this matter to the attention of the Minister of the Interior in order that he may be acquainted with the facts. Perhaps they may be serious.

Hon. FRANK OLIVER (Minister of Interior). I am sorry the hon. member has not seen fit to ask for the production of the papers in this matter, because had the papers been before the House, there would have been an opportunity for all members on both sides to acquaint themselves with the actual facts of the case. However, as the question has been brought forward by my hon. friend; and as it happens I am personally familiar with the facts to a considerable extent, I may take the opportunity of placing them before the House, with the hope, however, that later on my hon. friend will move for the papers, and that they will be placed before the House.

Mr. HERRON. I have moved for the papers.

Mr. OLIVER. As the hon. gentleman has said, the Indian reserve in question is situated between the two towns of Macleod and Pincher Creek, in Southern Alberta. The reserve is a very large one, and it is occupied by about 500 Indians. It is much larger than that number of Indians are entitled to under the treaty. But the reserve having been set apart for that band, they exercise proprietary rights in regard to the whole area. This band as well as several others in Southern Alberta, have made considerable progress towards self support. They have emerged from the condition of absolute dependence on the government, and to a great extent they now earn their own living, either by working for wages amongst the farmers and others

outside of the reserve, or by rearing stock and cultivating land within the reserve. Recently the development of agriculture in Southern Alberta has been such that it has borne in upon the minds of these people the possibilities that there are in the raising of crops upon their reservation, and they have from time to time approached officials of the department with the request that they be outfitted with the necessary implements and seed which would enable them to cultivate on a larger scale than at present.

Although the conditions of farming are perhaps not as arduous in the west as they are in the east, still farming requires capital; there must be motive power and machinery to break up the land, sow the crop and harvest it. The Indians could not be placed in a position to carry on farming operations without an expenditure of money. Their land has become very valuable by reason of the increase of settlement in the vicinity and it did not seem to the department reasonable that parliament should be asked to vote large sums of money to supply the Indians with a farming equipment when these Indians in their own property had ample means to supply their requirements. The matter has been under discussion for some time and naturally there are differences of opinion among the band on the subject. A member of the band who had a good farming outfit, with stock and a house, would naturally not be in favour of disposing of any of the land, whereas a member who had no equipment or cultivation would naturally be inclined to view the proposition with favour. The question was brought before the band as provided by the Indian Act, the proposition being to sell for the benefit of the band, a certain portion of the reserve on the side towards the town of Macleod. That proposition was not received with favour by the band. It was then proposed to surrender another portion of the reserve and this too was not received with favour. A third proposition was made for the surrender of a portion of land on the northwest portion of the reserve, which lay across the Old Man river from the portion of the reserve that was principally occupied by the Indians and this proposition was received with favour by the band. On a vote being taken, a majority of 12 of those present voted in favour of the sale of that portion of the reserve. This vote having been taken and it being considered by the department to be in the interests of the band that this land, which was of practically no value to the Indians, should be utilized to outfit them so as to enable them not only to earn their own living but to actually become profitable producers in the country, the surrender was accepted and means were taken to dispose of the property to the best advantage. Some 35 sections of land are involved. I visited the land myself. It is to a large extent very desirable land and no doubt will produce at the sale which is advertised to take place on the 24th of this month, a very substantial amount, which will certainly be sufficient to so equip the Indians as to enable them to support themselves on the portion of the reserve which they retain. That is our belief and in that belief we have been prepared to go on with the sale. When the papers are laid before the House they will show that there is no foundation for any suggestion of impropriety on the part of the department in the matter.

There is, as I have said, a difference of opinion between the Indians who have an equipment and the Indians who have not, but apparently the Indians who have not are in the majority, and as the law says that the majority shall rule, I see nothing else but to go on with the sale as has been intended. I held council with the Indians myself for some five hours and heard arguments on both sides very thoroughly threshed out, and I certainly was of the opinion that, the surrender having been made, the sale should be carried out.

ST. JOHN RIVER VALLEY RAILWAY.

Mr. O. S. CROCKET (York, New Brunswick). Mr. Speaker, before the House adjourns, I would ask the Prime Minister (Sir Wilfrid Laurier) if the government have yet considered the proposal which was made to a sub-committee of the cabinet consisting of himself, the Minister of Railways (Hon. G. P. Graham), and the Minister of Public Works (Hon. Wm. Pugsley), in April last by a delegation from New Brunswick for the construction of a railroad from Grand Falls to the city of St. John by the valley of the St. John river and, if so, what decision has been arrived at? The right hon gentleman (Sir Wilfrid Laurier) will remember that there was a very large delegation representing all the river counties of the province and that they represented to the sub-committee of the cabinet that they had the assurance of the government of New Brunswick that the Governor in Council of that province would undertake to guarantee bonds of any company undertaking the construction of that railway to the extent of $25,000 a mile, provided this government would agree to take over the line on completion and operate it as part of the Intercolonial system on the basis of a rental of forty per cent of the gross revenue. The delegation asked for an early reply in order that the necessary legislation might be put through the New Brunswick legislature at the last session, which was then expected to prorogue in the course of a few days. I remember the Prime Min-

ister stating that he considered the proposal a very definite one and intimating that a reply would be given in a very short time. Notwithstanding that assurance, I understand that there has since been no official communication to the government of New Brunswick, or to any other authority, in reference to the action of the government, and I would like to know now if the matter has been considered, and if so, what decision has been arrived at.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, the Prime Minister has desired that, as this is a matter affecting more particularly the province of New Brunswick, and as I am very familiar with what has taken place, I should reply to the request of my hon. friend (Mr. Crocket) for information. I may say to him that no proposal was made to this government by the government of New Brunswick, but a proposal was made on behalf of a company which, we were informed, was incorporated by the legislature of New Brunswick. The members of the company were present, and I think also some officials of the province, particularly the Provincial Secretary, the Hon. Mr. Fleming. It was stated at that time that the company had the assurance of the provincial government that they would ask from the legislature of the province authority to guarantee the bonds of the railway company to the extent of $25,000 a mile, provided the Dominion government would agree that the Intercolonial railway should operate the line as a part of the government railway system and would pay over to the province forty per cent of the gross earnings. The government took the matter into consideration and a short time afterwards the government were informed that the hon. member for Carleton, New Brunswick (Mr. Carvell) had received a telegram from the company stating that they were desirous of having a reply to the proposals which had been submitted. The member for Carleton (Mr. Carvell) interviewed the Prime Minister, the Minister of Railways, and myself, and possibly other members of the government, and as a result of that interview he wired, as he was authorized to wire, to the company, that before giving—I am now stating the effect of the telegram, I do not profess to give the exact words.

Mr. CARVELL. I have the telegram here.

Mr. PUGSLEY. This is the telegram which the hon. member for Carleton sent to the secretary of the company:

Ottawa, April 28, '09.

J. J. Winslow, Fredericton, N.B.

Before the Dominion government can give positive answer they require information as to details of proposition. They suggest that the local government pass legislation authorizing guarantee subject to conditions that the Dominion government make satisfactory agreement to operate.

F. B. CARVELL.

Mr. CROCKET. By whom was the member for Carleton authorized to convey that information?

Mr. PUGSLEY. I have stated that that was sent after consultation by the member for Carleton with the Prime Minister, the Minister of Railways, and myself, and the member for Carleton was authorized to send that telegram in answer to a telegram from the secretary of the company, addressed not to the government but to the member for Carleton.

Mr. CARVELL. I have the telegram sent to me.

Mr. PUGSLEY. This is the telegram dated April 27, 1909; from the secretary of the company to the member for Carleton:

'Fredericton, N.B., April 27, 1909.

F. B. Carvell, M.P., Ottawa.

We are credibly informed that local government will not introduce legislation guaranteeing bonds Valley railway unless prior assurance is received that Dominion government will operate road on completion. Would it be possible for you to obtain this assurance and wire us at once, as House rises Thursday or Friday.

J. J. F. WINSLOW, Secretary.'

The member for Carleton upon receiving that telegram saw the Prime Minister, the Minister of Railways, and myself, and he was authorized to send to Mr. Winslow the telegram of April the 28th, which I have read to the House. I may say that subsequently I received communications from the mayor of Fredericton, who is the president of the company, and I submitted the correspondence to the Prime Minister and also to the Minister of Railways, and as a result of the interviews I had with my colleagues I made it very plain and clear to the company that before this government could give a definite answer it would be necessary that a definite proposition should be submitted on behalf either of the company or of the provincial government. I called the attention of the company to the fact that an ofler to merely construct a road without specifying what was to be the standard of construction, what the grades, what the weight of rails, what the kind of bridges and culverts, what the equipment of the road, and without specifying these, to ask this government to agree that the road should be operated upon the basis of paying over to the provincial government 40 per cent of the gross earnings, was too indefinite a proposition for this government to consider.

Mr. CROCKET. Would the minister allow me a question right there? Does the

minister remember the Prime Minister, the Minister of Railways, or himself, making any intimation to the delegation that such details as these would be required before this government would consider the proposal? Not a question indicating any such suggestion was asked by one of them. On the contrary the Prime Minister as already pointed out, described the proposal as a definite one which would have to be considered by the cabinet and intimated that an answer would be given in the course of a few days.

Mr. PUGSLEY. I have not stated it was asked at the conference referred to, but I have stated that it was asked in a telegram which the member for Carleton sent, and I have also stated that it was asked distinctly and clearly in the letters which I wrote to the secretary and president of the company. These letters I wrote not only upon my responsibility as the minister representing the province, but also after a conference and also a full understanding with the Prime Minister and the Minister of Railways. I may say, Mr. Speaker, that no legislation was introduced into the New Brunswick legislature by the provincial government, and no proposition has yet been made by the provincial government in response to the suggestions made by the member for Carleton and which were afterwards made by myself in the letters to which I have referred.

Mr. CROCKET. I would like to ask the minister if the government took the proposition that they would not consider the proposal until it was put in the form of a statute.

Mr. PUGSLEY. Not at all. I hope I made myself clear to the hon. gentleman. What I stated was that before this government would consider the proposal as to whether or not the Intercolonial would operate this railway upon the basis of paying over to the province 40 per cent of the gross earnings, they must know the character of the road which it was proposed to build, what would be the grades, what the description of bridges, what the weight of the rails, and what the equipment, in order that they might determine intelligently whether or not the road could be operated upon the percentage basis proposed.

Mr. CROCKET. One other question: Has not the government of New Brunswick asked for a conference with a sub-committee of the Council to discuss these matters to which the minister has referred?

Mr. PUGSLEY. I may say that the government of New Brunswick has not directly asked for a conference, but the railway company has written to me asking that I would arrange for a conference. I have written back to the president of the company to say that I was authorized by my colleagues to state that when a definite proposition along the lines which I have indicated was submitted to the government, I would be most happy to arrange the earliest date possible for a conference, but that until a definite proposition was submitted, I was unable to see what would be the advantage of a conference.

Motion agreed to, and House adjourned at 4.55 p.m.

HOUSE OF COMMONS.

WEDNESDAY, November 17, 1909.

The SPEAKER took the Chair at Two o'clock.

INTEREST ACT AMENDMENT.

Mr. H. H MILLER (South Grey) moved for leave to introduce Bill (No. 8) to amend the Interest Act. He said: The effect of this Bill will be to compel mortgagees to accept payment of overdue principal on mortgages on real estate upon receipt of one month's notice or one month's interest in lieu of notice.

Motion agreed to, and Bill read the first time.

PERSONAL EXPLANATION—RULING OF MR. SPEAKER ON DEBATE ON MOTION TO ADJOURN.

Right Hon. Sir WILFRID LAURIER (Prime Minister). By your leave Mr. Speaker, I should like to call the attention of the House to an incident which took place yesterday. On motion to adjourn, a debate was started by my hon. friend from York, N. B., (Mr Crocket) and you, Sir, expressed the opinion that such a debate was irrelevant on a motion to adjourn. This opinion of yours was questioned by my hon. friend the leader of the opposition (Mr. R. L. Borden) and I agreed with the hon. gentleman in the opinion he expresed. On looking into the matter I find that your opinion was the correct one, and that so far as I am concerned, I was in the wrong. The point has been decided several times, I find, in this parliament. In 1899, Mr. Speaker Edgar ruled as follows, as reported in 'Hansard' of May 29 of that year :

If the hon. member wishes my ruling, I may say, that I have stated to the House several times my view of the motion to adjourn. There are three kinds of motion to adjourn the House ; I mean to say that they have three different effects. One is a motion to adjourn the House made while a debate is going

on. That is in order to give a member who has already spoken in that debate, or any other member, an opportunity to speak again on the subject under discussion. Another kind of motion to adjourn the House is the motion that is made by the government to close the sitting of the House. That is really not a debatable motion. The other kind of motion is such a one as has just been made by the hon. member for York, N.B., that is a substantive motion to adjourn the House in the interval of the proceedings, which motion may be moved by an hon. member in order to bring up a particular important or unimportant public question.

I may say that we have a new rule with regard to private motions, which was adopted eight years ago. In 1901, on February 18, Mr. Speaker Brodeur also decided the point, and his opinion is recorded in these words:

I may tell the hon. member that on the motion for the adjournment of the House, the only question to be discussed is whether the House should adjourn now or not. When the orders of the day are called, if a formal motion for adjournment is made, not by a member of the Cabinet, but by some other hon. member, in order to bring up a question for discussion, he has a right to discuss that special question; but on the motion for the adjournment of the House, which is the one made now, I do not think there can be any debate except on the question whether the House should now adjourn or not.

I understand that this opinion has been expressed twice by Speakers of the House, so it was come to after careful consideration with the Clerk of the House, at that time Sir John Bourinot, who, as we know, was quite an authority on the subject. Therefore, Mr. Speaker, I regret that I questioned your ruling, and I confess that you were in the right and I was in the wrong.

Mr. R. L. BORDEN. So far as I am concerned, I am not at all convinced by the Prime Minister.

Sir WILFRID LAURIER. I am not surprised at that.

Mr. R. L. BORDEN. I am not surprised that my right hon. friend is not surprised, because he has never been able to convince me. My idea, which I submit with all deference, is that any hon. member can argue that the House should not be adjourned until he has obtained some information upon a public question which he presents. That seems to me to be a very reasonable view. The proposal is that the House shall adjourn. The hon. member who desires to discuss an important subject says: 'It is not desirable to adjourn the House at present, but it is time for the government to give information upon a particular point as to which I desire information, and I do not consent that the House shall adjourn until I have obtained that information.' In that way he is arguing strictly and definitely upon the point of immediate adjournment; and with all deference to the views which have been expressed by Mr. Speaker Edgar and Mr. Speaker Brodeur, and with all deference to the opinion which has been vouchsafed by the Prime Minister and by Mr. Speaker, I would like to look a little into the English authorities to ascertain whether that point cannot be made good.

QUESTIONS.

DISMISSAL OF EMPLOYEES ON INTERCOLONIAL RAILWAY.

Mr. PAQUET asked:

1. How many employees of the Intercolonial have been dismissed since the appointment of the commissioners charged with the administration of the affairs of this railway?

2. How many employees of the Intercolonial have been dismissed at Montreal and Campbellton since the establishment of the commission?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). I want to ask the hon. gentleman to be patient in regard to answers to questions of this character. It will take days to get this information. It has to come from Moncton, and sometimes from various other stations along the line. But I have asked for the information by wire.

NATIONALITIES OF IMMIGRANTS TO CANADA.

Mr. FOSTER—by Mr. Geo. Taylor—asked:

What is the total number of persons from the five largest national contributors who have settled in Canada for each year from 1890 to 1909, inclusive?

Hon. FRANK OLIVER (Minister of the Interior). The total number of persons from the largest five national contributors who have settled in Canada for each year from 1897 to 1909, inclusive:

—	British Isles.	United States.	Galicia.	Italy.	Russia.
1897....	11,383	2,412	3,917	†	†

Note.—The particulars asked for are not of record prior to 1897.

GRAND TRUNK PACIFIC—COST OF SECTIONS.

Mr. FOSTER—by Mr. Geo. Taylor—asked:

1. What is the cost per mile to date of the Grand Trunk Pacific from Winnipeg to Edmonton?
2. What amount per mile is estimated to complete this section?
3. What is the same information as respects the section from Winnipeg to Lake Superior Junction?
4. What is the exact mileage of each section?
5. What has been expended to date on the Moncton-Quebec section?
6. What is estimated as necessary to complete this section, and what is the exact mileage?
7. What has been expended to date on the section from Edmonton to Prince Rupert, and what is now estimated as necessary to finish it?
8. What is the exact mileage of this section?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). This question is divided into three parts. I could give reply to a portion of it now, but I would prefer if the member for North Toronto could wait until to-morrow, when I will answer it altogether.

WATER LOTS ON ST. CHARLES RIVER.

Mr. MONK asked:

1. Are the two water lots on the St. Charles river situate in front cadastral lots Nos. 582A and 583B, of the parish of St. Roch, in the county of Quebec, the property of the Quebec Harbour Commissioners, under the statutes governing that body?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). We have written to Quebec to get the information, and it has not yet reached us.

INDIANS OF ST. PETER'S BAND.

Mr. BRADBURY asked:

1. Has the attention of the government been called to any dissatisfaction on the part of the Indians of St. Peter's band regarding the manner in which it is alleged they claim to have been improperly treated by speculators or others in the matter of the land allotted to them by the government in connection with the surrender of their reserve at St. Peter's? If so, is it the intention of the government to take such action in the premises as may prevent any injustice to the said Indians?
2. Has the government been made aware of any claim on the part of the said Indians that they have been deceived into signing away their lands for less than one-third of their real value?
3. If so, is it the intention of the administration to take proceedings to punish any parties that may be proved guilty of such deception of the Indians?

Hon. FRANK OLIVER (Minister of the Interior):

1. The attention of the government has been called to dissatisfaction on the part of several Indians of the St. Peter's band in regard to non-payment of the purchase price of their lands, but inasmuch as the Indians refused to allow a clause to be inserted in the surrender preventing alienation without the consent of the department, and thereby assumed to deal with their allotments as ordinary citizens, the enforcement of any agreement for the sale rests with the courts and not with the Indian Department. Section 103 of the Indian Act provides that Indians may sue for debts due them or in respect of any tort or wrong inflicted upon them, or to compel the performance of obligations contracted with them.
2. No.
3. Answered by No. 2.

WRECK OF STEAMER 'HESTIA'—CONDITION OF LIGHTS.

Mr. MONK asked:

1. Is the Proprietor Ledge buoy in the Bay of Fundy listed officially as having both a light and a fog signal?
2. For how long before the wreck of the steamer 'Hestia' was the buoy marking these dangerous ledges without a working light or fog signal?
3. Had the defective condition of this buoy been reported to the department? If so, on what date, and by whom?
4. What officer of the department had charge of said buoy, light or automatic whistle?
5. What period of time elapsed between the report received at the department on the condition of said buoy and the giving of the orders to repair?
6. Why was not the buoy in working condition at the time of the wreck of the steamer 'Hestia'?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes.

2 and 3. St. John agency of the department was advised January 22, 1909, by the lightkeeper at Gull Cove that the light was out. The acting agent thereupon notified shipping interests and advertised in local papers on 25th January that light was out. The department at Ottawa was not aware of the irregularity. Whistle was found defective 7th November, 1909.

4. The buoy in question is part of the equipment under the care of the St. John agency of the department.

5 and 6. Light was reported out January 22, 1909. On January 23 and subsequent dates, orders were given by the acting agent, to relight, which orders were not carried into effect on account of adverse weather conditions also press of work in connection with more important aids to navigation.

WATER SUPPLY FOR DOMINION GOVERNMENT BUILDINGS.

Mr. HUGHES—by Mr. George Taylor—asked:

1. Does the supply of water for the Dominion government buildings come from the Ot-

tawa city supply? If so, how many gallons daily are consumed?

2. How many persons use or are privileged to use the water?

3. Is the government aware that an analysis of Ottawa city water pronounce it contaminated?

4. Have the government experts yet investigated the system of purifying water by ozonization in use in Lindsay, Ontario? If not, will the government have an inspection made?

Hon. WM. PUGSLEY (Minister of Public Works):

1. (a). Yes.

(b). As there are no meters on the supply, this question cannot be answered.

2. About 3,500 persons are privileged to use the water.

3. No. The department has received no notification from the Ottawa city health officer.

4. No information in the department.

VACANCY ON BOARD OF RAILWAY COMMISSIONERS.

Mr. ROCHE asked:

Is it the intention of the government to fill the vacancy on the Board of Railway Commissioners, caused by the death of the late Mr. Greenway? If so, when will the appointment be made?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

The matter is still under consideration.

EXTENSION OF BOUNDARIES OF MANITOBA.

Mr. ROCHE asked:

Is it the intention of the government to introduce a Bill for the extension of the boundaries of the province of Manitoba during the present session of parliament?

Right Hon. Sir WILFRID LAURIER (Prime Minister). By a resolution adopted in this House on the 13th of July, 1908, this House authorized the extension of the boundaries of the province of Manitoba, out of the Northwest Territories, to an extent therein specified. On the 26th of February last the Prime Minister sent to the government of Manitoba for their consideration a Bill to increase the boundaries of Manitoba as defined in said resolution. Until the government of Manitoba has signified its acceptance of these boundaries, and until the Dominion government and the provincial government have come to an understanding as to the financial conditions consequent thereon, the government has no authority to introduce any legislation to give effect to the above resolution.

MAIL CARRIAGE—GRENVILLE STATION TO GRENVILLE VILLAGE.

Mr. PERLEY asked:

1. How many times and on what dates during the last fifteen years has the Post Office Department called for public tenders for carrying the mails between Grenville station and Grenville village, in Quebec?

2. When does the present contract expire?

3. Is it the intention of the department to advertise for fresh tenders for the renewal of the service? If not, why not?

Right Hon. Sir WILFRID LAURIER (for the Postmaster General):

1. Twice—12th November, 1897, and 27th October, 1905.

2 On the 31st December, 1909.

3. No. The present courier was offered and has accepted a renewal for a further term of four years.

VETERINARY SERVICE IN BRITISH COLUMBIA.

Mr. J. D. TAYLOR asked:

1. Have there been since the 1st January, 1909, any vacancies in the Dominion Veterinary service for British Columbia?

2. If so, what persons, if any, have been appointed to fill such vacancies; and what have been the dates of their respective appointments and the dates upon which they have entered upon the duties of their office?

3. Is the staff complete at present?

4. Is there an official list of men eligible for appointment, by reason of having passed the required examination or otherwise? If so, is it the intention that preference shall be given to those whose names appear on said list?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Yes, there was one vacancy caused by the resignation on April 30, 1909, of T. Bowhill, F.R.C.V.S., who was engaged in a pathological investigation of the disease known as Red Water in cattle, and who occasionally also acted as a veterinary inspector.

2. Inspector Tamblyn, who has been in the service for nearly five years, was transferred from Midway to perform the inspection duties above referred to. Dr. Seymour Hadwen, of the Pathological staff of the Health of Animals Branch, who at the time of Mr. Bowhill's resignation was on leave for the purpose of taking a special course of instruction in Europe, was, in October last, sent to Vancouver to carry out the investigation of Red Water.

3. Yes.

4. (a) Yes (b) Yes, except in the case of persons who, to the knowledge of the department, are unsuitable for the proper performance of the official duties required.

ARMED VESSELS ON THE GREAT LAKES.

Mr. HUGHES—by Mr. Taylor—asked:

1. What war vessels or training ships has the United States government upon the Great Lakes?

2. What war vessels or training ships have State governments upon the Great Lakes?

3. What are the armament, tonnage and men of each?

4. Which of these ships passed the Canadian canals?

5. Did any pass without permission of the Canadian government?

6. Where are these vessels located?

7. Has the province of Ontario any training ships on the Great lakes.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I informed my hon. friend from Sherbrooke (Mr. Worthington) yesterday that, pending diplomatic action, it was not desirable to bring the information to the House at this moment.

SOUTH AFRICAN SCRIP.

Mr. HUGHES—by Mr. Taylor—asked :

Has the government under contemplation the amendment of the law relating to the issue of South African scrip during this session, so as to recognize a considerable number not technically entitled under the present law to scrip?

Hon. FRANK OLIVER (Minister of the Interior). No.

CANADIAN FLAG.

Mr. JAMESON asked:

1. Is there an officially authorized Canadian flag? If so, what is the design thereof, and when did same receive official saction?

2. If not, is it the intention of the government to take necessary measures to provide a distinctive ensign?

3. Will the proposed Canadian navy fly the British or Canadian flag?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. The red ensign of His Majesty's fleet, defaced with the Canadian coat of arms in the fly. Authorized by Admiralty warrant of the 2nd February, 1892, to be used on board vessels registered in the Dominion, and, the blue ensign of His Majesty's fleet, defaced as above, for use on board vessels belonging to or permanently in the service of the Dominion. This flag is authorized by the King's Regulations, no special warrent being required.

2. Answered by No. 1.

3. The matter is under consideration by the Admiralty.

VISIT OF GENERAL SIR JOHN FRENCH.

Mr. HUGHES—by Mr. Taylor—asked :

1. Has the government any data regarding a visit to be paid to Canada during 1910 by General Sir John French?

2. If so, is it intended to have as many militia camps as possible inspected by General French during his visit?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). There is no official information on this subject yet.

DISCOVERY OF PETROLEUM IN THE WEST.

Mr. HUGHES—by Mr. Taylor—asked:

1. Has the government any reliable data that petroleum has been found in commercial quantities in the Canadian Northwest? If so, what are the details?

2. Does the government charge a royalty on each gallon of oil produced in the Northwest?

3. Is a pipe line now under construction from near Fort MacMurray to Edmonton?

Hon. FRANK OLIVER (Minister of the Interior):

1. While evidence, which would appear to be reliable, has been obtained to show that petroleum in considerable quantities has been discovered in the Canadian Northwest, it would appear that further development will be necessary to establish the discovery of this product in large quantities.

2. The regulations provide that a royalty, at such rate as may from time to time be specified by order in council, will be levied and collected upon the sales of the petroleum. No royalty, however, has yet been fixed or collected.

3. The department has no information.

THE ROSS RIFLE.

Mr. WORTHINGTON asked :

1. Was a special issue of rifles made to the last Bisley team from Canada or to any of the members thereof? If so, of what manufacture, the mark thereof, was such issue a free issue, or was it made on repayment; how many rifles of that mark were manufactured, and on issue to Canadian corps, or rifle associations, on the date of sailing of the Canadian Bisley team from Canada, giving names of corps or associations and number on issue to each?

2. How many have been since manufactured, and to whom issued?

3. Was any certificate given to this Bisley team or any member thereof that the issue of rifles with which they were supplied was the service weapon of Canada, and was on issue to certain corps of the active militia? If so, by whom was such certificate given and what was the nature thereof?

4. Are all parts of the Ross rifle now manufactured in Canada or British possessions? If not, what parts are now manufactured outside of Canada; where manufactured, in what stage of manufacture when imported and are customs duty paid thereon?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. Yes. Ross Rifle Mark II**. Issue made in regular way, in accordance with the regulations, the rifles remaining government property.

8th Royal Rifles—10; Bisley Team—25, being the first rifles delivered of the order for 500 of the same mark.

2. 465 issued as follows:—23 to permanent units, 87 to non-permanent units, 2 to rifle associations, 10 to school of musketry, 3 to Dominion Rifle Association, 12 to individuals, 328 in ordnance charge, being distributed to best shooting regiments in each district at the discretion of the D.O.C.

3. No.

4. The manufacture of these rifles is proceeding on the same lines as during the past few years, all the work being perform-

ed and the material procured in Canada so far as possible.

CHARGES AGAINST MAJOR AND CAPT. DELARONDE.

Mr. WORTHINGTON asked:

1. Have any charges of malfeasance of office been laid against any officers of No. 5 Company, Canadian Army Service Corps? If so, against whom?
2. Was any court of inquiry convened in the matter of any such charges? If so, by whose order was such court convened, and what instructions were issued for its guidance?
3. Do any such charges constitute indictable offences under the Criminal Code or under the Militia Act?
4. Was it established before any such court that public moneys have been paid out by the Militia Department upon fraudulent claims, vouchers, or pay-lists?
5. If so, what steps have been taken by the government to recover moneys so paid out upon fraudulent claims?
6. What steps have been taken to send persons charged with such offences for trial as provided by statute?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. Yes, against Major Stuart E. de la Ronde, sr., and Captain Stuart E. de la Ronde, jr.
2. Yes, a Court of Inquiry was convened by the District Officer Commanding Military District No. 4. The only instructions issued to the court for its guidance were, that it was assembled for the purpose of inquiring into and reporting upon certain charges made against Major Stuart E. de la Ronde, Sr., and Captain Stuart E. de la Ronde, Jr., No. 5 Company, C.A.S.C., by Lieut. A. A. Pinard and Lieut. C. D. Spittal, No. 5 Company, C.A.S.C.; that the evidence was to be taken on oath, and that witnesses would be warned to attend.

3, 4, 5, 6. The whole case is under the consideration of the Department of Justice.

ARMED VESSELS ON THE GREAT LAKES.

Mr. EDWARDS moved:

For a copy of all orders in council, reports, documents, correspondence and papers from January 1, 1897, to January 1, 1907, relating to the passage of United States warships or training ships through the St. Lawrence canals and the Great Lakes; also, for a copy of all orders in council, reports, documents, correspondence and papers on the subject from March 30, 1908, to the present time.

Right Hon. Sir WILFRID LAURIER (Prime Minister). There is no objection at all to the first part of the motion which reads as follows:

For a copy of all orders in council, reports, documents, correspondence and papers from January 1, 1897, to January 1, 1907, relating to the passage of United States warships or training ships through the St. Lawrence canals and the Great Lakes.

There is no objection to that being granted. I would ask my hon. friend not to press the other portion of his motion which reads as follows:

Also, for a copy of all orders in council, reports, documents, correspondence and papers on the same subject from March 30, 1908, to the present time.

The reason is that this matter is now the subject of diplomatic action. I, therefore, move to strike out the last part and I suggest that the motion as amended be adopted.

Mr. EDWARDS. I have no objection in view of the explanation of the right hon. gentlemen. Perhaps later on, after the information has been brought down, the latter part of the motion may be adopted.

Motion as amended agreed to.

PROPORTIONAL REPRESENTATION.

Mr. F. D. MONK (Jacques Cartier)—moved:

That a Select Committee of this House be appointed to investigate the different systems of proportional representation adopted or suggested elsewhere, as an improvement upon our present method of election, with power to extend said inquiry to all the various forms of the proportional representation, laws proposed or in force; and with power to send for persons and papers, and to report from time to time.

He said: This is a motion which was presented to the House last year and was adopted in the form in which it was now renewed. There was something in the beginning of the motion presented last year which my hon. friend the Minister of Finance (Mr. Fielding) desired to be changed. There was a modification made in the motion and I present it now in the form in which it was finally carried by the House last year. The motion last year was adopted, I think, at a late date in the month of March and very soon after the motion had been adopted before the committee was named, or the motion could be acted upon, it became evident that the session was going to be considerably abridged for various reasons. In consequence of that, after having conferred with my right hon. friend the Prime Minister (Sir Wilfrid Laurier) it was determined to take no action upon the motion of last session, it being considered that there would be no time for the committee to sit and take evidence before prorogation. There were at that time additional reasons for deferring the inquiry. There had been a movement in England for the constitution of a commission of inquiry into the question of electoral reform generally and particularly into this ques-

tion of proportional representation and pending the report of that commission, it was thought advisable that we should not proceed with our inquiry. Since that date a royal commission of eight members has been named in England with Lord Richard Cavendish as chairman. That commission has concluded the taking of evidence and I have no doubt that within a month the final report of that commission will be in the hands of the public in England. Through the courtesy of the members of the commission I have been furnished with advance sheets of the evidence so that that evidence will be available for our own committee. At the same time an investigation was in progress in France having for its object specifically proportional representation. That commission has since made its report and if I am not mistaken it is being considered at this moment by the legislature of France. Recent papers publish reports of the debates upon the report of the commission which is very full and there is a very remarkable speech by Mr. Paul Deschennels, one of the members of the commission. Thus, our committee will now have the advantage of having before them the results of these two very important investigations.

After the explanations which I gave towards the close of the last session, it will not be necessary for me to again set out the merits of this question. Several members of the House at that time took some interest in the question and I shall not take up the time of the House by traversing the same ground again. Since the adoption of this motion at the last session there have been a great many discussions on this subject which has become a very burning question in England, France and other countries, particularly in the United States, and all that has been written upon the subject will be available for this committee. I have also ascertained that there are witnesses in this country who are experts in the matter of proportional representation and would be able to give evidence of local interest and of a local character showing how the system might advantageously be applied in this country. There are men who have studied the question in all the provinces and who will be easily available to give evidence before that committee as to the utility of proportional representation in our own country. The subject has great actual interest and invites attention, and I feel that we should take it up so as to gather all necessary information on it.

Proportional representation, as the House knows, has been adopted in New Zealand, Tasmania and Australia, and it is embodied as a principle in the new constitution of the South African confederation, and will probably have in practice a greater expansion than it is designed to have by the constitutional enactment recently adopted in the imperial parliament.

It is very necessary for us to be equipped with that information and to have before us all the evidence which would enable the House to take up the question as a practical question. We are all aware of the abuses that exist in connection with the present electoral system, the 'one man, one constituency' system, with the plural majority only. We have adopted many laws since I have been in parliament to correct these abuses, but, so far as I am aware, the legislation designed for that purpose has not been at all productive of the results that we anticipated. I submit to the House that the real remedy lies in a radical change of our electoral system which would root out the cause of the evils, which as long as the cause remains will continue to exist in this country. I therefore submit this proposal with confidence to the House.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Mr. Speaker, if I understand aright, the action of my hon. friend (Mr. Monk) this session is more diligent than his action of last year. I understand that the reason for not proceeding with this committee last session, although it had been granted, was partly because he wanted to have the benefit of the information which was being collected in Great Britain. That information has not yet been collected, the report of the commission to which the subject has been entrusted has not yet been made or received.

Mr. MONK. Only the evidence.

Sir WILFRID LAURIER. Only the evidence. And although we have not yet received the report of the English commission my hon. friend (Mr. Monk) now suggests that we should adopt the motion. I have no objection to that, although we may have to wait for some time if we are to have the benefit of British experience before the committee. As to this I have nothing to say; we assented to the motion last year and we are prepared to assent to it this year also. It so happened last year that when my hon. friend (Mr. Monk) brought his motion I could not be in the House. I had looked into the question for my own information and had come to the conclusion in my own mind that there was some merit in the system of proportional representation which he suggests. I have not the figures which I had collected last year, but if I remember them aright, so far as the province of Ontario is concerned, if at the last election we had had the system of proportional representation there would be more Grits in this House than there are to-day. Of the total vote cast in Ontario outside of the city of Toronto in

1908, there was a majority of Liberal electors and yet the result was to give a majority of representation in the province outside of the city of Toronto to the Conservative party of some five members. The Conservative majority from Ontario in this House is now about ten. Five are elected by Toronto, the other five being from different parts of the province and yet, if I remember aright, there was a large majority of Liberal votes over Conservative votes in the province outside of Toronto. Thus the result was to give to my friends on the other side of the House—on the wrong side of the House—a majority of five. In Toronto we could not carry one single seat, Toronto is a very fine city—I have the greatest admiration for the city itself and for the people of Toronto. The people of Toronto are a fine people, they are educated and progressive in a great many ways, but I regret to say that in political matters they seem to be hopelessly blind. It is perhaps more their misfortune than their fault and I sympathize with them. And, although the majority of the people of Toronto are on the wrong side of politics I am glad to say there is quite a proportion of Grits in that city, but they cannot succeed in electing a single member to this House. Probably it is in view of this that my hon. friend (Mr. Monk) takes such a warm interest in the question, and I would be inclined to agree with him that such a condition of affairs as exists in Toronto should cease. Now, the question of proportional representation is not new in this country and it is not new in Ontario. Some twenty years ago the government of Sir Oliver Mowat passed a Bill which embodied this principle and as a consequence Mr. Joseph Tait, a gentleman well known to my hon. friends on the other side of the House, was elected as a Liberal member for the Ontario legislature, but although one would think such laudable legislation would have the support of gentlemen opposite, that law was repealed and there is no longer a Liberal member from Toronto in the Ontario legislature any more than there is in this parliament. From what little attention I have been able to give to the subject of proportional representation I think that while it may be satisfactory in countries with the governmental systems of Switzerland and the United States, it may not altogether be adapted to nations under the British system of parliamentary and responsible government. However, I am not prepared to discuss that question now ; I like to approach it with an open mind, and we have no objection to the committee being granted.

Sir WILFRID LAURIER.

Mr. R. L. BORDEN (Halifax). I have given a little attention to the subject and while no doubt the result of proportional representation is fairer in one way, yet, it may possibly lead to a difficulty in carrying on government by party where the popular vote is pretty nearly equally divided. For example, if the system had prevailed in Canada previous to the last general election the Prime Minister would to-day find himself sustained by a majority in this House of about three members instead of 47 or 48. No doubt the same consideration would apply to the conditions before 1896, when the Conservative government was in power with a substantial majority, although the popular vote was pretty equally divided. I have no doubt that my hon. friend (Mr. Monk) has considered that difficulty. The government of the country must be carried on by one party or the other, and where the popular vote is nearly equally divided the system of proportional representation might lead to difficulty. Now, I wondered a little why the Prime Minister did not tell us of some of the results in the province of Quebec under our present system of representation. We have eleven members on this side from that province. Their quality is so excellent that I am bound to say that in that respect the Conservative vote of 130,000 in Quebec is very ably represented. But, if these 130,000 Conservative voters in Quebec had proportional representation, instead of having eleven Conservatives in this House we would have 28 or 30. Of course, if that illustration had occurred to my right hon. friend he would have mentioned it. I sympathize with the right hon. gentleman with regard to Toronto; I think he himself has told us that while the people of that city are on all occasions prepared to cheer for him, they are not prepared to vote for him, and I am inclined to think that condition will continue in the future notwithstanding that he did lay out the electoral divisions in Toronto in the firm hope that he would elect three supporters; an aspiration of his which has not been satisfied and as to which I tender him my sincere sympathy. However, the subject of proportional representation is well worthy of consideration by this House and I do not doubt that in its consideration we will receive a great deal of assistance from the report and evidence on the subject which are shortly to be presented to the Imperial House.

Mr. RICHARD BLAIN (Peel). I would direct the attention of the House to the fact,—and especially I would direct the attention of the Prime Minister to it—that one of the Conservative members from Toronto in the Ontario legislature had a majority greater than the combined majorities of all the Reformers who were elected to that legislature at the last election.

Mr. F. D. MONK. When I spoke in the House on this subject last year I presented a statement compiled by an expert mathematician—a statement which was endorsed by other experts—showing how many members, under a system of proportional representation should be assigned to each province on each side of the House. I will be frank enough to say that although I sent my right hon. friend a copy of my speech on that subject, I doubt if he did me the honour of reading it. As regards the situation in Toronto; there is no doubt that proportional representation would remedy the very unfortunate state of affairs there from the point of view of the Prime Minister. I believe there are in Toronto a few Grits, but since I have been in parliament I have never seen them represented here. Whereas under a system of proportional representation some relief would be given, and might possibly have the advantage of having one representative in this House. The chief advantage of proportional representation is that it provides representation for a minority who, under the single member constituency system, are never represented in this House. Some have never been since confederation and have naturally lost all interest in public affairs. The question raised by my hon. friend the leader of the opposition is one of great importance and which has been considered by all those who have carefully studied it. Under the system, which is being promoted by the English proportional representation league, there might be some danger of the contingency referred to by my hon. friend. That league promotes the idea that every man should have one vote. In a constituency where there are several members to be elected, he has but one vote and gives that to one candidate, but he indicates on the ballot what are his second, third and fourth preferences. There is no party under that system. You have a certain number of candidates and the elector has but one vote with the preference I have indicated. On the continent, however, they have the list system. In Finland, where they have proportional representation, they have the list system, also in Belgium, New Zealand and Tasmania, and where you have the list system, you also have the party system, and there is no danger of that happening which my hon. friend the leader of the opposition apprehended a moment ago. The moment you introduce election lists, you have parties, and when you have parties, you have almost the certainty that there will be a sufficient majority for one party to enable it to govern. As a matter of fact, proportional representation has existed in Belgium, Finland and other countries for several years, and its results have been most satisfactory. These countries would never dream of reverting to the old system which they consider obsolete and manifestly unjust. The difficulty pointed out by my hon. friend has not so far been felt in any of these countries. In each there has always been a sufficiently strong majority to enable government to be carried on without difficulty.

My right hon. friend Sir Wilfrid Laurier has said that the system has been tried in this country. In that he is wrong. There was a time when they had in Toronto a system different from the present, but which was not at all proportional representation. In fact, it was a denial of it. There were three members for Toronto and each elector had two votes. That what was called a limited vote which, like the cumulative vote—another system of that kind—was absolutely in contravention of what is known as proportional representation. The name is unfortunately very long, but in France and Belgium they have a much shorter name. The main object of proportional representation is to provide that the people shall be faithfully represented in parliament, but under the present system such faithful representation is not obtained. Under the present system, parliament is not at all a mirror of the wishes of the people. I am extremely gratified that my right hon. friend has seen fit to accept this motion, but when he says that there is some merit in this great movement, characteristic of modern times, to reform the electoral system all over the world, he greatly depreciates its value. This is not merely a movement in which there is some merit. All writers everywhere are agreed that the present system has fallen short of what was expected. When a deputation in England waited on Mr. Asquith and asked for this commission, the prime minister replied that a point on which everybody was agreed was that the present system is unjust and arbitrary and a remedy must absolutely be found. Under those circumstances, we ought to try and take our place among the advancing nations which seek improvement.

Motion agreed to.

SEGREGATION OF PENITENTIARY CONVICTS.

Mr. F. D. MONK (Jacques Cartier) moved:

Whereas it appears from our published criminal statistics, that crime is increasing alarmingly among the young, and

Whereas it has been proved by experience and testimony that the placing together of all classes of convicts in our penal institutions is highly detrimental to the improvement and reclamation of the younger offenders; and

Whereas it is now strongly asserted and believed that classification and segregation of convicts undergoing punishment according to their ages, aptitudes, degree of criminality and prospects of moral improvement have been productive of most beneficial results:—

Resolved, that it is desirable to ascertain by the appointment of a special commission or by reports obtained upon the subject from wardens and inspectors, what means could be adopted in Canada to insure a judicious classification and segregation of the convicts in our penal institutions and reformatories.

He said: Last year, towards the close of the session, I drew the attention of the House and the government to this matter on the second reading of the Bill to amend the criminal law. The object of that Bill was to create a new offence, and I thought the opportunity a favourable one to call the attention of the government to the fact that for a number of years we have been increasing the number of offences under the criminal law, but have neglected to pay sufficient attention to the convicts themselves. The object of this motion is to point out the necessity of improving our penal system in accordance with modern ideas. The House is no doubt aware that all criminal statistics to-day establish the fact that crime is increasing all over the country. In spite of what we call our advancing civilization, in spite of the millions that have been spent for some years past in the improvement of education, primary education particularly, and in spite of the apparently great results that we have attained in that line, crime is increasing in an alarming degree. And another point of importance is that it is increasing particularly among the young. In speaking on this subject last year, I pointed out that, of a convict population in our country of about 1,400, there were over 800 under the age of thirty, and of these a very large proportion are under the age of twenty-two. And this ratio of the young to the whole criminal population is increasing rather than decreasing. What can be the cause it is difficult to say. The reports of the parole officer of this government are very carefully prepared, and the House will find that that officer seems to attribute the increase of crime, and especially among the young, to the temptations that are met with in our large cities. For crime in the rural districts is not on the increase, whereas the majority of the convicts come from our larger cities, and the larger the city the more crime seems to increase there. Montreal, for instance, seems to furnish almost the entire convict population of our great penitentiary, but in the rural districts there does not seem the same temptation or provocation to crime. I have not yet had opportunity to examine carefully this year's report on penitentiaries, but in the brief examination I have given it, I have been unable to find the exact statistics of the ages of the convicts. Still, I venture to assert that the proportion of the young will be about the same as last year. The convict population in our country has increased to over 1,600 this year from 1,400 last year.

Mr. MONK.

Our present system of penitentiaries is obsolete—it has been universally condemned. If one reads the modern authors on penology, or follows the reports of the great prison congresses that have taken place—seven or eight have been held already, and one is to take place next year in Washington—he must know that the system of herding together all criminals, young and old, hardened and accidental, as in our penitentiaries, is absolutely condemned. In speaking on this subject last year, I quoted several authorities. I shall not take up the time of the House in quoting them again or even in giving others, for upon this question all authorities are agreed. Tallack, who is the standard author in England on penal systems, was among those I quoted last year, as well as a number of leading authorities in the United States. I referred to a very able article in 'The Month,' the review on penitentiaries, going to prove that the system which we now follow in this country is absolutely condemned, and that throughout all the countries of the world they are endeavouring to change it, and in France, England, Belgium and the United States these changes are being successfully made. In these countries there is classification. When a man arrives at the penitentiary, his antecedents are looked into, his own idiosnycrasies are studied, everything is taken into consideration, and he is not herded with other criminals indiscriminately, but men of experience decide where he is to be put. It is a fact well known to every person who has had experience in penitentiaries that the hardened malefactors in these institutions contaminate those who come amongst them. It is also a fact, a very sad one, that this contamination spreads very rapidly amongst the young, those who, but for its influence, might easily be saved. All authors on these subjects tell us that the old system of penitentiaries is a hotbed of vice in which those who might be saved are made criminal for life. The question is whether we ought not to follow the example of other nations and try to adopt the system of segregation and classification. This system does not exist in our penitentiaries at present. When I brought this matter to the attention of the House last year, the Minister of Justice pointed out that some steps had been taken by the government to remedy this deplorable state of affairs. A year or two ago parliament passed the Juvenile Delinquents Act, to which reference is made in this year's report of the parole officer. That Act is a step in the right direction, there is no doubt. But, in the first place, it applies only to delinquents under the age of sixteen. There is a vast number of convicts who are outside the influence of this Act. In the second place, this Act, to be called into effect, re-

quires the co-operation of the province. And, although the provinces of the Dominion are slowly moving in the right direction, Manitoba alone, up to the present time, has conformed to the conditions of the Act and established a Juvenile Delinquents' Court. And, as I have suggested, the criminally inclined who are over the age of sixteen and who, up to the age of thirty, you may say, in many cases might be reclaimed and prevented from becoming hardened criminals, cannot be reached by this Act—I speak of the class who in England are called juvenile-adult criminals, a class that is increasing every day. So, the idea which prevailed up to the middle of last century that the prison should be a dungeon where all who were guilty of offences against society should be herded together and treated without judgment or discrimination and almost without charity, is now entirely exploded. And, with an increase of crime which is mysterious and abnormal, and which goes on especially among the young, I think we should make a great effort in this country to adopt the improved methods suggested. I pointed out last year that the next great prison congress was to take place in 1910, and, under special invitation of the American government, it is to be held in the city of Washington. Probably more than forty nations will be represented at that congress. I suggested that it would be very important for us to be represented at that convention and to try to benefit by the information which the convention will bring out and the admirable lessons it is certain to teach.

The idea that I have tried to bring out is not new in Canada. I am informed that Sir John Thompson, when Minister of Justice, had in mind a project under which classification and segregation should take place. The idea of Sir John Thompson at that time was to have a penitentiary for extremely young and easily reclaimable convicts at Alexandria, I believe, and at the penitentiary at St. Vincent de Paul the government would put the more difficult cases, and finally, those for whom there is no improvement possible would have been placed together in the penitentiary at Kingston. But that idea was never carried out so far as I know. When I spoke of segregation, I would like to remind the House that it is not solitary by any means. Solitary confinement is one of the harshest punishments that can be inflicted upon any convict, and certainly leads to no improvement whatever. But by the word 'segregation' is meant the placing of a convict who may be reclaimed under special conditions and in special circumstances, where every possible effort will be made to restore him to a proper moral condition, and then send him back to society a cured man, if I may use that expression.

Now in the United States that system has been largely experimented upon, and adopted with the most beneficial results. Everybody has heard of the great penitentiary at Elmira, in the state of New York. The results obtained there by careful scientific application of modern principles have been marvellous. As much as eighty per cent of the convicts there have been liberated, and have actually turned out to be excellent citizens. That is an established fact to be found in the statistics referring to that penitentiary. In the Massachusetts female reformatory—and female convicts, as the House knows, are very likely to become recidivists—the results have also been extraordinary. So it seems to me that the government ought to take steps in that direction here. During last summer I visited the penitentiary at St. Vincent de Paul, I have visited several establishments of that kind, both in Europe and on this continent, and I wish to say that the penitentiary of St. Vincent de Paul appeared to be one of the cleanest and the best equipped penal institutions I have ever seen. But as I say, I was informed that there is no provision there for segregation. In fact, getting information from the leading officials there, I was told that they could themselves see every day the unfortunate results of the herding together of criminals, and that a change might be effected without much expense. Classification and segregation according to modern teachings could be carried out at that penitentiary, with some cost at first, of course, but no very great cost. It is right to remind you, Mr. Speaker, that statistics in the United States establish that once the change is made, the cost of maintenance is not greater than under the old system, and in some cases indeed it is less. So that the objection of expense does not exist.

Now, Sir, as to the remedy. I suggest in this motion that the government should obtain a special report from its inspector, from the parole officer, and from the wardens, on this particular point. They are all experienced and competent officers, and if their attention was drawn particularly to this matter in their report they could give ample information to the government and to the House. I submit that the question is important enough, the change contemplated is great enough, to warrant the government in instituting a Royal Commission, naming one commissioner at least who is an expert in these matters, and there are some in this country, who would fully investigate the whole subject, visiting the penal establishments in the United States that are the most advanced in the world, some of them, upon this particular subject. Then it seems to me it would be in order for us to improve our present

system, and endeavour to diminish in some degree the dreadful increase of crime which is referred to in every report.

Hon. A. B. AYLESWORTH (Minister of Justice). I am sure that every one will agree thoroughly with my hon. friend in his view of the importance of the subject he has brought to the attention of the House to-day. As I am quite willing that the resolution he has proposed should be adopted, I might content myself with a silent acquiesence in his proposition. But the nature of the subject he has discussed, and the circumstance that the penitentiaries of the Dominion are under the charge of the department of which I am the head, make it seem necessary, at all events not improper, that I should say a word or two on this motion.

Every one who has thought about it at all, I think, will recognize that the whole question of dealing with prisoners in our penal institutions is one of very great practical difficulty, and such thought as I have been able during the last few years to give to the subject, has led me about to this position, that the only men who are able to deal with such a subject at all satisfactorily, are the practical men who are in charge of our prisoners; and that there is not very much use in attempting to theorize upon present conditions or to deal practically with questions that one is not thoroughly acquainted with. I have no doubt whatever that very great advantage would result from obtaining the fullest possible information on this subject, and the resolution which is in your hands being one directed to the obtaining of such information, I think it well it should be passed, as it is only a question, if it is a question at all, of the means by which we should get before us the information that is desired. When that information is before us, we should all be in a much better position, I think, to discuss the question of what changes, if any, ought to be made in the management of those institutions, than by any possibility we could be at the present time.

But let me point out one or two considerations that occur to me in dealing with what is here proposed. I will assume, every one must agree, that the reformation of the offender ought to be, and is, one of the objects, perhaps some may think a principal object, in imposing upon him the sentence of the court. I suppose every one would agree also in the view that, ordinarily speaking, it is the beginner in crime who will be the most likely to receive benefit of a reforming character from recognition of the fact that crime it attended with consequences that are unpleasant when punishment is inflicted. There is certainly less hope of reforming the conduct or the character of the hardened offender.

If one remembers the division of our penal institutions between the jurisdiction of the provinces and of the Dominion, it will be seen that, taken in the large, the hardened offenders are those that we in the control of the Dominion penitentiaries have to deal with. Every criminal who is sentenced to two years or more of imprisonment, is liable to be sentenced to the penitentiary —is ordinarily, if not always, sent to the penitentiary. The young and the new offenders are, in almost each instance, unless the offence is very unusual in its character, sent to jails, to reformatories, to provincial prisons which are entirely under the control of the provincial authorities and there, more certainly than in the penitentiaries, would be room for the application of the principles which are indicated in this resolution and which my hon. friend has been advocating.

Of course, I do not mean to say that you can draw any hard and fast line and put all the criminals upon one side or the other of that line. The man who was seeking to classify would have to do it according to his best judgment of the character of the offender coupled, I suppose, with some consideration, at any rate, of the nature of the offence for which he was under sentence and there certainly are to be found many hardened old offenders who have behind them a long career of crime in the provincial institutions, happening to be convicted of some trivial or smaller offence and so punished by a sentence of less than two years' imprisonment. One can readily see, if there is communication between prisoners, the danger that my hon. friend adverts to from the younger and less experienced man coming under the influence of some one, who, perhaps, from entirely false ideas of things, he rather looks up to as a model or hero in crime. In our penitentiaries there is certainly less room for that. There are plenty of first offenders in the penitentiary, men who, perhaps, commit but one crime in their lives. The crime may be very serious in its consequences—forgery, manslaughter, or arson —some offence which does not arise from the fact that the man has become a hardened criminal, but is the one slip or the one instance in the whole life of the man where he has gone wrong. That man serves his time and very possibly returns to society and becomes a reputable citizen. That particular kind of man certainly does no harm to the others in the penitentiary and very likely is not much harmed, if at all, by those who are there along with him. He very likely feels himself above those who are there as men who have entered upon lives of crime, who are habitual criminals and there is the less danger of his being injured by association with these or the more hardened class. But, it must not be forgotten, in thinking about this

subject, that there is not supposed to be any communication at all between convicts, one with another, in our penitentiaries. Each convict has a separate cell, each man goes about his work during the day under the continual supervision of a guard who has charge of a gang of convicts and whose duty it is to see that there is no communication between them. According to the regulations of these institutions and according to the efforts of those in charge there is not intended to be, and there is not supposed to be, any room for the pollution of the morals of one by the degradation of another. There is absolute segregation, individualization and no communication supposed to go on of any character whatever. The practical work of classifying would be, as I have tried to indicate, a matter, certainly, of very considerable difficulty. It might be a very desirable thing. It would certainly be a desirable thing if there was going to be the injury that I have adverted to by communication between different sets of prisoners or by individuals meeting in any sort of social intercourse. That, however, is something that is prohibited. While we have in our six penitentiaries under Dominion control some 1,500 to 1,600 men the great majority of these convicts are not in for a first offence, and a very large percentage of them are men who have made up their minds to live by criminal courses and are entitled by their behaviour to be regarded as habitual criminals. These are men who are not likely to be reformed, even if benefited at all, by anything in the way of classification or segregation that possibly could be applied to them. The wider field for the operation of the principles of penology to which my hon. friend has adverted is with the more juvenile offenders, with those who are in the provincial jails, in the various reformatories and in institutions of that character which are under the control of the provincial legislatures altogether. In speaking of this subject under similar circumstances last session, or the session before, I reminded the House of the fact that we had taken one step, perhaps not a very great step, but yet an important one, in the direction which my hon. friend desires in the passing of our Juvenile Offenders Bill. But, it seems rather a comment upon the usefulness of that measure and upon the pressure which was exerted by many benevolent and right minded people to procure its passage when I say that only in one community in this whole Dominion has advantage been taken of the provisions of the Bill and that the city of Winnipeg is the only place in Canada where that Act, though it was passed two years ago, has been put into force and where they are enjoying the benefit of it, if it be a benefit. With regard to the practical course to be taken in this matter, in order to secure the information, I would suggest to my hon. friend that probably the best way to obtain it would be by the experience of the wardens and the inspectors. We have our six penitentiaries each with its warden and deputy warden. If there were a meeting between the six wardens, the two inspectors, and possibly the six deputy wardens, with an interchange of ideas on this subject, I think that probably all the information and suggestions towards any practical course which could be advanced would be obtained equally well as, and possibly better than, by the appointment of a commission. I would suggest to my hon. friend that the words providing for the appointment of a special commission might be eliminated from the resolution which would be left as an expression of the opinion of this House that it is desirable to ascertain by means of reports on the subject from the wardens and inspectors whether or not some such practical course as my hon. friend desires might, with advantage be taken.

Mr. SAM. HUGHES (Victoria). I would suggest that as both the warden and the deputy warden are executive officers, who naturally view matters from the standpoint of discipline it might be well to take officers of the institution who look on the other side of life. Why should not the chaplain be in a better position than the deputy wardens or even the wardens for this reason that the executive officers are often inclined to look on the harsher side of the prisoner.

Mr. AYLESWORTH. I think it would be better to have the chaplain than the deputy warden, because it might be difficult to spare the warden and the deputy warden at the same time.

Mr. MONK. The point mentioned by the Minister of Justice that in the penitentiaries convicts are not allowed to have intercourse with one another is true. The rule is there, They are not supposed to speak to each other and certainly at St. Vincent de Paul the discipline is as carefully preserved as it possibly can be. But the answer to that is that they do communicate, that 500 men guarded, I suppose, by about 20, communicate unceasingly, and the wicked contaminate those who might be preserved. That is a fact in every penitentiary in the world. How it is done it is very difficult to know, but they find means to communicate and the evil work goes on. It is true, as the Minister of Justice (Mr. Aylesworth) says, that a large part of the work devolves upon the provinces. Some provinces I think have advanced upon others in the care of their

criminals, particularly the young, but we have the penitentiary population under our care and I pointed out last year that out of 1,400 convicts 800 were under 30 years of age, and probably 500 or 600 were admittedly being contaminated. We have the care and the responsibility for these prisoners and I do not think that the fact that the treatment of criminals is divided between the two jurisdictions exempts us from our share of improvement. When I was at St. Vincent de Paul the high officials there told me that in spite of every precaution communication took place without the knowledge of the officials and the Catholic chaplain who has been there for thirty years, an old college mate of mine, told me that that is the grave, the serious point, the contamination of those who are not particularly wicked. I see my hon. friend from Victoria (Mr. Hughes) is not here at the moment. Our views on religious matters apparently coincide because I was going to suggest that possibly the chaplains in the penitentiaries might be added to those who might be called on to report because everything that has been said in the penitentiary reports in favour of improvement has come from the chaplains. Last year two Anglican chaplains pointed out the desirability of this improvement, and as a matter of fact the danger of evading the task in the case of the wardens, inspectors and others, experienced although they may be, is that they are naturally inclined to be conservative in the sense that they do not desire any change. Mr. Beauchamp, prefect or warden of the penitentiary of St Vincent de Paul told me his own views had tended towards reform. But they the officials might be disposed to desire the maintenance of the status quo, otherwise I would be quite prepared to adopt the minister's suggestion, and I hope that before next year, or at any rate next year when parliament meets we can have a full report from all these gentlemen upon this subject and that we will endeavour to make some progress.

Motion as amended agreed to.

INLAND REVENUE ACT AMENDMENT.

House in committee on the following proposed resolution:

Resolved, that it is expedient that the Inland Revenue Act be amended as follows:—That section 76 be repealed and the following substituted therefor:—

76. The person in whose favour a license is granted for an excise bonding warehouse, not included in the description of the premises in respect of which a license has been issued to him under this Act, shall, upon receiving such license, pay to the collector the sum of fifty dollars.—Mr. Templeman.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue). The object of this resolution is to increase the fee paid for bonding warehouse licenses from $20 to $50. We find in the department that there are many demands for the establishment of bonding warehouse licenses all over the Dominion. We have granted them in every case. In many of the small towns throughout the west and in the east as well where liquor is sold, for the advantage altogether of the liquor dealer, a bonding warehouse is required and is granted. The result is that we have an official in the Inland Revenue Department to supervise that bonded warehouse—his salary is small it is true but in some cases it reaches $400 or $500—and the revenue received from that particular place is so small as not to warrant the department in granting a license. The object of the department in increasing the license from $20 to $50 is not so much to increase the revenue as to be a deterrent on those who ask for bonded warehouses. These bonded warehouses are essentially for the convenience of the dealers and we think the convenience is of sufficient importance to justify us in asking him to pay a slightly larger fee.

Mr. JOHN HAGGART. What is the total number of bonded warehouses?

Mr. TEMPLEMAN. Two hundred and seventy or 280 in the Inland Revenue Department, and many of these are in very small places. The utility of these bonded houses is not as great as it was prior to the change in the tax on tobacco. The revenue on tobacco is now paid upon the raw material almost entirely and as the excise duty is small, very little is transferred from one bonded warehouse to the other.

Mr. R. L. BORDEN. This only affects the inland revenue?

Mr. TEMPLEMAN. Yes.

Mr. GEORGE TAYLOR (Leeds). I would suggest to the minister that instead of making a flat rate of $50 per license he should have a graded rate depending upon the importance of the bonded warehouse. Why should the poor fellow in a small village who wants a bonded warehouse be compelled to pay as high a fee as the man in the large city who does a business of probably more than $100,000 a year? The system in the smaller places is that the customs officer looks after the Inland Revenue business and gets a small increase in his salary for so doing.

Mr. TEMPLEMAN. In the case of distillers the fee for their bonded warehouse is included in their license fee which is $250.

Mr. GEORGE TAYLOR. I still think that the rate should be graded and that the poor man should not have to pay the same fee as the big dealer.

Mr. TEMPLEMAN. The graded system is in eflect in the Customs Department, but the smallest fee for a bonded warehouse in that case is $60 a year while the highest is $480, and in the Customs Department the grading is according to the number of hours per day that the officers have to work. I am advised that such a system would not be practical in the Inland Revenue Department. We have licenses issued in some of the very small places where the revenue has gone down to less than we pay the officer in charge, and I do not think it is in the public interest that we should encourage the establishment of such licenses. If a person really wants a bonded warehouse I do not think that $50 a year is too much to pay for the convenience.

Mr. R. L. BORDEN. If it is to be regarded from the standpoint of the man who receives the license rather than from the standpoint of the department, then there is a great deal to be said in favour of the system of grading the fee which has been advocated by my hon. friend from Leeds. A man doing business of half a million dollars per year could better afford a fee of $500 than a man doing a business of $5,000 per annum could afford a fee of $50.

Mr. TEMPLEMAN. There is just about the same work in passing $100,000 worth of liquor in a bonded warehouse in Montreal, as there is in passing $1,000 worth in a smaller place. I do not think it would be advisable to grade the fee according to the value of the alcohol ex-warehoused or according to the amount of revenue collected. I would point out that the minimum charge is $50 and that if you are going to charge relatively a higher rate of license for the large places, you will have to increase the fee to $200 or $300 for a bonded warehouse in the larger cities. The Customs Department fixes a fee according to the time devoted by the officers to the duties of that particular work. The amount is not arbitrary but varies according to the number of hours per day required in each bonded warehouse. We could not learn until the end of the year how much time the officers devoted to the work, and I am advised it would be difficult to work out any scheme differing from the flat rate.

Mr. R. L. BORDEN. I do not quite understand why it would be more difficult in the Department of Inland Revenue than that of Customs. I do not see why what is suitable to the Customs Department should not also be suitable to the Department of Inland Revenue. However, the minister will perhaps give us more information when he brings down his Bill.

Resolutions reported, read the first and second time and agreed to.

Mr. TEMPLEMAN moved for leave to introduce Bill (No. 9) to amend the Inland Revenue Act.

Motion agreed to, and Bill read the first time.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing the descriptive nomenclature and mark of the different manufactures or issues of the Ross rifle; the dates of issue thereof; description of changes from preceding manufactures or issues; the Corps, Rifle Associations or Rifle Teams to which issues of Ross rifles have been made, showing number issued, date of issue, and designation or mark thereof; and the detailed disposition of the Mark I pattern of this rifle.—Mr. Worthington.

For a copy of all accounts, vouchers, correspondence, reports and other papers, not already brought down in connection with the survey of the St. John river channel between Fredericton and Woodstock, N.B. — Mr. Crocket.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. What business tomorrow?

Sir WILFRID LAURIER. If opportunity offers we will take up government business if the Bills are printed.

Motion agreed to and the House adjourned at 4 o'clock.

HOUSE OF COMMONS.

THURSDAY, November 18, 1909.

The SPEAKER took the Chair at Three o'clock.

MESSAGE FROM HIS EXCELLENCY—ESTIMATES FOR 1910-11.

Hon. W. S. FIELDING (Minister of Finance) delivered a message from His Excellency the Governor General.

Mr. SPEAKER read the message as follows :

GREY.

The Governor General transmits to the House of Commons, estimates of sums required for the service of the Dominion for the year ending on the 31st March, 1911, and, in accordance with the provisions of 'The British North American Act, 1867,' the Governor General recommends these estimates to the House of Commons.

Government House,
Ottawa, 18th Nov., 1909.

On motion of Mr. Fielding, His Excellency's message, together with the estimates, was referred to the Committee of Supply.

SELECT STANDING COMMITTEES.

Sir WILFRID LAURIER presented to the House the report of the special committee appointed to prepare lists of members to compose the Select Standing Committees of the House, as follows:

No. 1.

ON PRIVILEGES AND ELECTIONS.

Messieurs

Aylesworth,
Barker,
Barnard,
Borden, (Halifax),

Pardee,
Pugsley, and
Smith (Nanaimo).—16.

On motion of Sir Wilfrid Laurier the report was adopted.

PRINTING OF PARLIAMENT.

Sir WILFRID LAURIER moved:

That a message be sent to the Senate to acquaint their honours that this House will unite with them in the formation of a Joint Committee of both Houses on the subject of the printing of parliament, and that the members of the Select Standing Committee on Printing, namely, Messrs. Allen, Bickerdike, Bristol, Douglas, Fowke, Gervais, Gordon (Nipissing), Henderson, Hughes, King, Lavergne, Maclean (South York), McColl, McIntyre, McLean (Huron), Magrath, Martin (Montreal, St. Mary's), Nantel, Pardee, Rhodes, Taylor (Leeds), Taylor (New Westminster), Verville, White (Victoria, Alta.), and Wilson (Lennox and Addington), will act as members, on the part of this House, on the said Joint Committee on the Printing of Parliament.

Motion agreed to.

LIBRARY OF PARLIAMENT.

Sir WILFRID LAURIER moved:

That a message be sent to the Senate to inform their honours that this House has appointed Messrs. Aylesworth, Beland, Borden (Halifax), Sir Frederick Borden, Bristol, Brodeur, Daniel, Doherty, Foster, Sir Wilfrid Laurier, Lemieux, Lewis, Monk, Pardee, Pugsley, and Smith (Nanaimo), a committee to assist His Honour the Speaker in the direction of the Library of parliament, so far as the interests of the House of Commons are concerned, and to act on behalf of the House of Commons as members of a joint committee of both Houses on the Library.

Motion agreed to.

LOAD LINES ON SHIPS.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 10) respecting load lines on ships.

Some hon. MEMBERS. Explain.

Mr. LEWIS. The Bill which I now wish to present to the House has for its purpose the cessation of those regrettable, fatal and avoidable accidents which happen to ships on the coastal waters of Canada and on the Great Lakes. During the past few years there have occurred many such. I instance the wrecks of the Asia, Jones, Bannockburn and others on the Great Lakes which have occasioned great loss of life and property, caused principally by overloading. This Bill is founded on the English Plimsoll Act and also upon a clause with respect to the loading of ships engaged in the maritime coasting trade of Canada, with which I am not so familiar as with the conditions on the Great Lakes, but this feature of the Bill is founded on a Bill presented to the House some sessions ago by Mr. Lawrence, of Nova Scotia. There was some exception taken to a clause in a similar Bill by the large transportation companies, which provided that lists of passengers and crews should be placed in the hands of customs officer, harbour master or wharfinger, before a vessel left port after the 15th day of September and before the 15th day of April in each year, the period to which this Bill only applies. I have changed that clause by expunging from it the provision with reference to ferry steamers, river steamers and excursion steamers. Otherwise it follows upon the lines of the English Plimsoll Act. Clause eight seeks to prevent too much loading on deck in the fall and winter.

Motion agreed to, and Bill read the first time.

WIRELESS TELEGRAPHY ON VESSELS.

Mr. LEWIS moved for leave to introduce Bill (No. 11) respecting wireless telegraphy on ships.

Some hon. MEMBERS. Explain.

Mr. LEWIS. This Bill is simply following out legislation brought down in the mother of parliaments and also in the parliament of the large country to the south of us in reference to wireless telegraphy on ships. There is no hon. gentleman in this House who, after having read of that accident to the steamship 'Britannia' last year, and of the great loss of life which was prevented by the use of wireless telegraphy, will not be disposed to vote for this Bill. Since last year wireless telegraphy has been introduced on many lake vessels by the Lake Trust and other vessel owners.

Motion agreed to, and Bill read the first time.

Mr. LEWIS.

QUESTIONS.

INTERCOLONIAL RAILWAY EMPLOYEES.

Mr. PAQUET:

1. How many employees of the Intercolonial have been dismissed since the appointment of the commissioners charged with the administration of the affairs of this railway?
2. How many employees of the Intercolonial have been dismissed at Montreal and Campbellton since the establishment of the commission?

Hon. GEO. P. GRAHAM:

1. There have been 503 employees of the Intercolonial railway dropped since the appointment of the Managing Board.

There have been three employees dismissed at Montreal and thirteen at Campbellton since the establishment of the Managing Board.

Mr. STANFIELD:

1. How many employees of the Intercolonial railway have been superannuated since the appointment of the Government Railways Managing Board at each of the following places: Truro, Halifax and Stellarton?
2. How many employees of the Intercolonial railway heve been dismissed since the appointment of the Government Railways Managing Board at each of the following places: Truro, Halifax and Stellarton?

Mr. GRAHAM:

1. Since the appointment of the Government Railways Managing Board there have been six (6) employees of the Intercolonial railway placed on the Provident Fund at Truro, nineteen (19) at Halifax, and three (3) at Stellarton.
2. Since the appointment of the Government Railways Managing Board, there have been thirty-eight (38) employees of the Intercolonial railway dismissed at Truro; one hundred and forty-seven (147) at Halifax; and fifteen (15) at Stellarton.

NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. JAMESON:

1. How much money has been expended to date by the National Transcontinental Railway Commission, exclusive of sums paid to contractors having construction of road bed under contract?
2. How many employees of the commission are there at present?
3. What do their salaries aggregate?

Mr. GRAHAM:

1. $18,118,133.58.
2. $1,434.
3. $108,133.74 per month.

Mr. MONK:

1. At what date was the contract entered into or signed for the construction of the section of the National Transcontinental railway from Winnipeg to Superior Junction?
2. What was the amount of the said contract?

3. Who was the contractor, what was the time fixed for the completion of the works?

4. Is the construction finished, and is the line ready for operation? If not, when will the said section be ready for use?

Mr. GRAHAM:

1. May 15, 1906.

2. The estimated amount was $13,010,-398.92.

3. John D. McArthur, of Winnipeg. Time for completion Sept. 1, 1907.

4. All work is not finished so as to discharge contractor; but track is laid and trains are being run. Contractor expects to have the road completed and hand it over by next spring.

Mr. HENDERSON:

1. Has the western section of the National Transcontinental railway, extending from Winnipeg to Superior Junction, been opened for traffic?

2. If so, when was said western section so opened for traffic?

3. How many bushels of wheat have there been carried over said section up to the 10th November, 1909?

4. How many car loads of cattle have been carried over said section during said time?

Mr. GRAHAM:

1. All work is not finished so as to discharge contractor, but track is laid and trains are being run.

2. Trains went over said line about 6th day of November, instant.

3. Ten carloads.

4. No information.

Mr. MONK:

1. What are the dates of the different contracts for construction of the National Transcontinental railway from Superior Junction to Quebec?

2. What is the time fixed in said contracts for the termination of the works, and what is the price or consideration to be paid the contractor in each case?

3. What is the mileage covered by each contract and is the contractor in each case within his time limit for the execution of the part contracted for?

Mr. GRAHAM:

1 and 2.

Contract No.	Date of Contract.	Date of Completion.
10	May 15, 1906.	Sept. 1, 1907.
11	March 15, 1907.	Sept. 1, 1908.
12	Sept. 19, 1908.	Dec. 31, 1910.
13	Sept. 19, 1908.	Dec. 31, 1910.
14	March 14, 1907.	Sept. 1, 1909.
15	March 28, 1908.	Sept. 1, 1910.
16	Oct. 29, 1908.	Dec. 31, 1910.
17	Oct. 29, 1908.	Dec. 31, 1910.
18	March 28, 1908.	Sept. 1, 1910.
19	Sept. 19, 1908.	Sept. 1, 1910.
20	Sept. 19, 1908.	Sept. 1, 1910.

3.

Contract No.	Mileage.	Whether within Time Limit.
10	About 159 miles	No.
11	" 45 "	No.
12	" 107 "	Time not up.
13	" 114·97 "	"
14	" 150 "	No.
15	" 100 "	Time not up.
16	" 104·24 "	"
17	" 100 "	"
18	" 75 "	"
19	" 126 "	"
20	" 24·13 "	No.

None of these are lump sum contracts. The contractor is paid according to schedule of prices embodied in the contract.

OWEN SOUND PUBLIC BUILDING

Mr. MIDDLEBRO:

1. What is the total cost of the Owen Sound public building site, furniture, fixtures, and all other cost to date?

2. What amount will still be required to complete same?

3. What amount thereof is for extras, and what are the particulars of such extras?

4. What amount has been expended and will yet be required to be expended in respect of fittings and furniture?

5. From whom were such fittings and furniture purchased, were tenders asked therefor, and was the lowest tender accepted in each case?

6. Have any appointments of mail carriers for street delivery in Owen Sound or other persons been made in consequence of proposed street delivery in Owen Sound? If not, why not? If so, what are the names of such and salary?

7. When will the post office be removed to said public building, and when will street delivery commence?

8. What is the age limit for entry to service as mail carriers on street delivery?

Hon. WM. PUGSLEY:

1. $93,255.78.
2. About $9,000.
3. Additional story.. .. .. $8,950
   Electric wiring.. 275
   Addition to fittings.. 458
   Sink.. 38
   Total.. .. .. $9,721
4. Fittings, paid $2,702
   Furniture, paid.. .. ..
   Total.. .. .. $2,702
   Fittings, unpaid $2,855
   Furniture, unpaid.. 876
   Total $3,731

5. The fittings were advertised for, and the lowest tender, that of J. T. Schell, accepted. The furniture ordered from R. Breckenridge-Horton, departmental store, at a fixed price for each article ; shades from Goldblatt; boxes, sorting cases and bag rack, from Office Specialty Company; brass grills and plates from Rubenstein Brothers at prices agreed upon.

Sir WILFRID LAURIER (for the Postmaster general):

6. Free delivery of letters can only be established in places where the houses have been properly numbered and the streets labelled at intersecting points, and as these requirements have not yet been completed at Owen Sound, the department has not been in a position to put the service in operation. The municipal authorities have been asked to notify the department as soon as the necessary arrangements in connection with the numbering of the houses and labelling of the streets are completed.

7. As soon as the building is ready for occupation and taken over from the contractors by the Public Works Department.

8. Thirty years.

EXPORT LICENSES.

Mr. LANCASTER :

1. Have any licenses been issued by this government for export of any power, or fluid, or gas, under the statute, chapter 16 of the statutes of 1906-7, since those mentioned by the Minister of Inland Revenue in answer to question on page 360 of the House of Commons Debates on 9th December, 1907?

2. If so, what are the respective dates, amounts or quantities, and terms of such licenses, and the kinds of power or fluid for export, and from what places, and the names of the licensees?

Hon. WM. TEMPLEMAN :

1. Yes. Old licenses have been renewed. No new licenses have been issued since answer above referred to.

2. On the 1st of April, 1909, a license was granted to ' The Maine and New Brunswick Electrical Power Co., Ltd.,' Aroostook Falls, N.B., to export during current fiscal year, electrical energy not to exceed one thousand (1,000) kilowatt years.

On the 1st of April, 1909, a license was granted to ' The Ontario Power Company of Niagara, Falls, Ont., ' to export, during the current fiscal year, electrical energy not to exceed forty-five thousand (45,000) kilowatt years.

On the 1st of April, 1909, a license was granted to ' The Canadian Niagara Power Company,' Niagara Falls, Ont., to export during the current fiscal year, electrical energy not to exceed thirty-nine thousand one hundred and sixty-five (39,165) kilowatt years.

On the 13th April, 1909, a license was granted to ' The Electrical Development Co. of Ontario, Ltd.' Niagara Falls, Ont., to export, during current fiscal year, electrical energy not to exceed thirty-four thousand three hundred and sixteen (34,316) kilowatt years.

All these licenses are for a period ending on the 31st March, 1910. The quantities given in the licenses do not amount to one-third of the total possible output of the licensees respectively.

INDUSTRIAL CONDITIONS.

Mr. VERVILLE :

1. What has been the increase in wages for mechanics, year by year, from May, 1900, to May, 1909, in different industries?

2. What was the percentage year by year for the same period?

3. What has been the average number of days worked yearly in different industries for the same period?

4. What has been the increase in production in percentage for the same period?

5. What has been the difference in the cost of living year by year, for the same period?

6. What has been the increase in number of mechanics in Canada yearly for the same period?

Hon. MACKENZIE KING :

1. The Department of Labour has in course of preparation a special report on wages changes and the cost of living in Canada during the past decade. Until this report and the statistical tables and diagrams which will accompany it, are completed, it will not be possible to give the information in the detail requested.

2. Answered by the answer to No. 1.

3. The Dominion census having been taken periodically and not annually, it is not possible to give returns showing annual averages or percentages for the period mentioned.

4. Answered by the answer to No. 3.

5. Answered by the answer to No. 1.

6. Answered by the answer to No. 3.

NEW BRUNSWICK COAL AND RAILWAY COMPANY ACCOUNTS.

Mr. FOSTER:

What has been done up to date to forward the process in the Court of Equity of the province of New Brunswick begun by the Minister of Public Works, as declared in his speech of May 5, 1909, in the House of Commons, as follows: ' I yesterday instructed my solicitors, the legislature being prorogued only a few day ago, to issue a summons in the Supreme Court in Equity of the province of New Brunswick, making the New Brunswick Coal and Railway Company, and the other parties defendants, so as to bring all parties before the court for the purpose of having an accounting as to the receipts and expenditures made by that company and for the purpose of having a decree made as to the state of its accounts? '

Sir WILFRID LAURIER: I regret that I am unable to see that this inquiry has any relation to the public affairs of the Dominion. The lawsuits of members of parliament can hardly be considered proper subjects for question in this House.

TEMPORARY LOANS SINCE JUNE 1, 1909.

Mr. FOSTER:

What temporary loans have been made since June 1, 1909, from what banks and at what rate of interest?

Hon. W. S. FIELDING. None.

IMPORTATIONS OF INCUBATORS.

Mr. WHITE:

What was the total number of incubators and brooders, respectively, imported into Canada from the United States during the fiscal year ending March 31, 1909, and what was the total cost of each?

Hon. WM. PATERSON: This information is not immediately available, but if the question is allowed to stand as a notice of motion I shall expedite it as far as possible.

Mr. SPEAKER. Stand as notice of motion for a return.

LETTER RATE, BARRIE AND ALLANDALE.

Mr. LENNOX:

1. Has the Postmaster General received a resolution of the municipal council of the town of Barrie, urging upon the Department of Justice of providing that letters posted in Allandale, the 6th ward of the town of Barrie, and delivered at the principal post office in the town, and vice versa, will be transported for one cent?

2. What conclusion has the minister come to, or is the matter under consideration?

Sir WILFRID LAURIER (for the Postmaster General):

1. Yes.

2. The drop letter rate of postage, one cent per ounce, is limited by statute to letters which are not transmitted through the mails, but simply posted at and delivered through the same post office, and as Allandale and Barrie are two separate post offices the rate in question does not apply to letters passing between them. The municipal authorities at Barrie have been advised of the statutory requirements in regard to the application of the drop letter rate.

TRENT VALLEY CANAL SURVEY.

Mr. LENNOX:

In connection with the Trent Valley Waterways system has the report of the survey between Kempenfeldt bay and the Georgian bay been completed and filed in the department?

Mr. GRAHAM: Yes, a report has been received on the estimated cost of canalizing one of the proposed western outlets of the Trent canal,—that is from Kempenfeldt bay, Lake Simcoe, to and via the Nottawasaga river to (Nottawasaga bay) Georgian Bay, and has been filed in the department.

DEVIL'S ELBOW—BRADFORD CHANNEL.

Mr. LENNOX:

1. Has the government decided to construct a channel from Devil's Elbow, on the Holland river, to a point in the neighbourhood of Bradford Railway station, as petitioned for, or not to construct it?

2. Has the government taken this matter into its serious consideration? If so, with what result?

3. Has the government obtained a report on this proposed work, or any estimate of its cost? If so, what is the estimated cost?

4. Will the minister lay the papers upon the table of the House?

Mr. GRAHAM:

1. No decision has yet been reached by the department.

2, 3 and 4. Answered by No. 1.

TEMPORARY POST OFFICES FOR TOURISTS.

Mr. S. SHARPE:

1. How many temporary post offices for the benefit of tourists were established in Canada during season of 1909?

2. What was the cost of each office in respect to salary of postmaster and carrying of the mails, respectively?

3. What was the revenue from each office?

Sir WILFRID LAURIER (for Postmaster General):

1, 2 and 3.—

Name of Office.	Service.	Revenue.	Salary.
Cedar Croft.....	Daily, no cost.	$30.50.	$25.00.
Kawartha Park...	Daily, cost $30.00.	$58.00.	$29 00.
Midlothian Wharf	Tri-weekly, no cost.	$19.25.	$25.00.
Ojibway Island...	Tri-weekly, no cost.	$61.00.	$31.00.
Rigaud Sur le Lac.	Daily, $20 for two months.	$5.00 for two mos.	$12.00.

ROCKY MOUNTAINS FOREST RESERVE.

On the orders of the day being called.

Hon. GEO. E. FOSTER (Toronto). Mr. Speaker, before the orders of the day are called, I beg to call the attention of the Minister of Agriculture (Mr. Fisher) to the report of the Select Standing Committee on Forests, Waterways and Water-powers. One of the recommendations of that committee is as follows:

In view of these facts, therefore, your committee begs to recommend that immediate action be taken to enlarge the boundaries of the National Parks or Forest reserves and that a single continuous forest reserve be created from the International boundary line to the northern watershed of the Peace river, embracing so far as possible the land upon the east slope of the mountains as shown in the accompanying tracing which has been prepared by the Forestry Branch of the Department of the Interior.

I find that no tracing has been included in the report and consequently we seem not to have the plan which was in the minds of the committee.

Hon. SYDNEY FISHER (Minister of Agriculture). The tracing in question is a production of the Department of the Interior which was submitted to this committee last session. I shall inquire from the clerk of the committee. Perhaps it was not kept on file but I will see that it is placed within reach of the members of the House.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all applications, petitions, letters, telegrams, documents, plans, specifications and correspondence with reference to, and in any way concerning the application for subsidy for the building of a dry-dock and ship-building yard by certain persons, or company, at or in the vicinity of the town of Sault Ste. Marie, Ontario.—Mr. Boyce.

For a copy of all correspondence and papers respecting the application by the United States Immigration Service to the Minister of the Interior, for the deportation of one Mrs. Goby, an alleged immigrant to the United States of America from Canada, entering at the port of Sault Ste. Marie, Michigan, together with a copy of all orders, decisions, reports and returns regarding any action taken thereupon by the Department of the Interior. —Mr. Boyce.

For a copy of all applications, petitions, letters, telegrams, documents, plans, specifications and correspondence with reference to and in any way concerning the application for subsidy for the building of a dry-dock and ship-building yard by certain persons, or company, at or in the vicinity of the town of Port Arthur, Ontario.—Mr. Boyce.

For a return giving the names and addresses of all immigration agents at the present time employed by the government in Great Britain, the Continent of Europe, and the United States on salary, the amount of salary paid to each, the amount of other perquisites paid to each, if any; the names and addresses of all immigration agents at the present time employed by the government in the above countries on commission, the amount of such commission, the rate of commission per immigrant, the amount of other perquisites paid to each: the names and addresses of all special immigration agents in the above countries appointed during the fiscal years 1908-9 and up to 1st November, 1909, the date of the appointment of each, the address of each at the time of his appointment, the amount of salary, commission, or other perquisites paid to each, and the length of time served by each in respect of such appointment.—Mr. U. Wilson.

For a return showing the number of fatal accidents resulting from the use of explosives in the construction of railways and other public works in Canada, reported to either the Department of Railways and Canals, the Department of Public Works, or the National Transcontinental Railway Commissioners, within the past three years; the nature of investigation, if held, after each accident; and what precautions have been taken to prevent or minimize the number of accidents from the use of explosives on construction work in Canada under control of government officials.—Mr. Robb.

For a copy of all orders in council, correspondence, documents and papers of every description relating to the proposed sale or disposal of any part of the Peigan Indian reserve in the province of Alberta, including any advertisement of such sale and record of the proceedings, whether by vote or otherwise, under which any of the Indians on said reserve purported to give their consent thereto. Also a return showing the actual number of Indians on said reserve entitled to vote or elect in respect of such proposed sale, and all other information in the possession of the department or its officials relating to or in any way referring to the proceedings in connection with such proposed sale.—Mr. Herron.

THE FRENCH TREATY .

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to approve of the Supplementary Convention respecting the commercial relations between Canada and France, entered into at Paris on the 23rd day of January, 1909, by plenipotentiaries appointed by His Majesty and by the President of the French Republic, a copy of which was on the eighth day of March, 1909, transmitted to the House of Commons by His Excellency the Governor General.

He said: With your permission, Mr. Speaker, I would suggest that it would probably be more convenient for the House to discuss this subject, should discussion be found necessary, when the Bill is printed. We might pass the resolution through committee as the foundation for the Bill that is to be introduced, but not proceed further with the matter until the Bill has been distributed; in the meantime any information on the subject that is to be given will be brought down.

Mr. E. A. LANCASTER (Lincoln and Niagara). I wish to go on record as not being bound by the resolution even if it is passed, because I am against the resolution.

Mr. F. D. MONK (Jacques Cartier). May I ask if the government has any communication—

Mr. FIELDING. I would suggest that it would be better to go into committee, and I can better answer questions there.

Motion agreed to, and House went into committee on the resolution.

Mr. MONK. In view of what has been said regarding the effect of this treaty on our relations with the United States in connection with the new tariff, I would ask whether the government has endeavoured to ascertain in any way what interpretation the American authorities will put upon this treaty as affecting our position under that tariff. Has any communication taken place between this government and that of the United States on that point?

Mr. FIELDING. There has been no such communication. Our view, as stated the other day, is that our proper course is to await the determination of events. I hardly think it seemly that we should approach the government of the United States in the matter. I have reason to believe, however—this comes to me unofficially—that the United States government would not be in a position to give us information on the point at present. I have reason to believe that the American tariff commission which will advise the president has not yet come to a determination on the subject. However, as I said, we have not had any official communication with them on the matter.

Mr. W. F. MACLEAN. Is the Minister of Finance (Mr. Fielding) aware whether any decision come to by the president of the United States under the powers conferred upon him in this matter is subject to revision by the Supreme Court of the United States?

Mr. FIELDING. My impression is that it is not, but I would not answer definitely. It is not a point to which I have given particular attention.

Mr. MONK. I do not wish to retard the report of the committee, but I think the point of my question still remains. I do not see anything particularly 'unseemly' in our inquiring of a friendly nation in what way they would interpret the favour we are giving to the French government under this treaty. Surely international relations admit of such a course between peoples at peace. We are granting a special favour to the French nation on certain specified articles, and a great many people express a doubt whether the result of that very moderate favour to the French nation will not be to affect very considerably our commercial relations with the United States through our being in consequence placed under the highest United States tariff. That is the difficulty, as I understand it. Surely, before we ratify a treaty some tentative effort might be made to find out how that would be interpreted.

Mr. FIELDING. I think it is hardly correct to say that we are granting a favour to the French nation. If it be a favour, it is for a favour in return. I think our American neighbours, on principle, do not interpret that as discrimination. Of course, I have no right to speak on their behalf. I think the statement I have made that, even if we had sought information of that kind from the United States government, they are not in a position to give it, is correct, and I base my statement on information gained through the press and elsewhere. The United States authorities have not yet determined their action. I do not think we should assume that that action will be adverse to us; on the contrary, we should assume that it is the right of Canada to regulate its own commercial affairs. We have no reason to suppose that the American government will approach the matter in an unfriendly spirit; quite the contrary; I think we have every reason to believe that it will be the desire of that government to interpret the tariff favourably toward Canada. However, the matter may be more fully discussed at a later stage and, in the meantime, I think the House might well reserve its judgment.

Mr. FOSTER. I have no objection to the resolution passing, on the understanding that it does not bind the House, certainly this side of the House, as to the action to be taken when the Bill comes before us. But I would like to know whether the Finance Minister proposes to press his Bill, to be based on this resolution, to a conclusion before any information is got as to what will be the course of the United States tariff with reference to Canada in this matter. I quite agree with the Minister of Finance that he cannot get that information now. If he were to appeal for it a dozen times, I do not think he could get it. That comes in a certain course, as I explained the other day. A commission of experts has been appointed, and that commission will take up the tariff legislation of different countries, inquiring into the facts, and into the facts alone. It will report the facts to the President, who cannot act until that report is before him. This report of the commission, as I understand it, will not be political in any way, it will not take into account the matter of policy but simply the facts of the case. If the commission report, with reference to a given country, that it gives advantages discriminating against the United States, it will be for the President to decide as to his course in the matter. As I pointed out the other day, I think it is abundantly clear that the decision of the President will not be a personal decision

in any way; it will not be a decision by the President that, looking at it from his own standpoint, and as far as he is concerned he will apply or will not apply the surtax to the country in question. It seems to me that his is the duty of making a decision according to the facts presented, just as a judge or jury would give decision on whatever question came before them. Therefore, if the Minister of Finance determines to press this to a conclusion before we know what will be the attitude of the tariff commission or the President in this case, I think he will be taking a very grave step, and that he ought to wait more definite information before we are asked to take that final step. The present treaty with France is a very contracted one. It gives concessions upon a very small number of articles, but the treaty which has been arranged by the Minister of Finance and the Minister of Marine is much more extended and has an area and scope much wider, as applied to the United States in this matter, than the old treaty. While the President of the United States or the tariff commission might not think that the old treaty had any particular discrimination against the United States, they might come to a very different opinion with reference to the present treaty.

Mr. FIELDING. There is no disposition on the part of the government to press this matter unduly, and we shall be willing to grant a delay in the procedure at the request of any hon. gentleman on either side who may desire better opportunity of studying the question. But if I understand my hon. friend rightly he wants us to wait until next April in order to find out what the United States will do. I do not think we ought to wait on the action of the United States. I think we have clearly made it understood in this parliament that Canada, while paying great deference to her great neighbour, is no longer willing to be dependent on the action of the United States in tariff matters. The sentiment of our people is that we shall quietly and deliberately work out our own commercial policy. If that policy be acceptable to our powerful neighbour, we are all the more pleased; but if it should not, much as we might regret the fact, I do not see why that would justify our taking a different policy. I do not see why we should depart from any line of action which we deemed advantageous in our own interests because that might not be agreeable to the great republic. We must play our own part fairly, open and above board, and after having entered into negotiations with the French government, after having persuaded them to accept this treaty, after having become in honour bound to the French government to present it to the House, we do not think it would be proper to wait until the 1st of April next in order to find out whether it will be acceptable to our neighbours to the south.

Mr. LENNOX. The sentiment which the Minister of Finance has just expressed has evoked very hearty applause from his followers, but this is not a matter for sentiment or hysterics. It is one of cool business. The proposition may or may not be good, so far as the French treaty is concerned, but that is no reason why we should go it blind on this occasion. When the French treaty was before this House for consideration previously, we had not the information as to the action of the United States which we now have. We have now, in their statutes a clear cut expression of the policy of the United States. It is not impossible for this government, long before April next, to ascertain what must be the action of the United States regarding the tariff now under consideration. The language of the American statute is pretty clear. Unless the President of the United States, after taking into consideration the fiscal measures of any other country, comes to the conclusion that the United States is receiving in every respect reciprocal fair treatment, the 25 per cent additional duty is automatically imposed. If it be rather unfortunate, if, by reason of the fact that, as the Minister of Finance has suggested, this government urged upon France the adoption of this treaty although it entails great sacrifices upon this country, we are to press this matter through without looking to the results. Putting sentiment aside and looking at this as a matter of business, whatever our representatives may have done twelve months ago, it is our duty now, before finally concluding this treaty with France, to ascertain what will be the effect of its going into operation. I am not saying that I am opposed to it, but I say that we must look at it as a business proposition and ascertain whether, as regards trade with other countries, it will be to our commercial benefit. If this House is of the opinion notwithstanding the efforts of the two gentlemen who went to France, notwithstanding what assurances they gave or what persuasion they used, that the adoption of the treaty would not be commercially beneficial to us, we should not ratify it. I think that the government should, in the first place, submit to the Minister of Justice the question as to the reasonable construction of the American statute, whether that might involve the addition of 25 per cent duty on imports from Canada to the United States, should this French treaty go through. In such an event the exports from Canada to the United States would be exceedingly limited.

Mr. MONK. It seems to me that my hon. friend the Minister of Finance has become

unduly excited. Commercial treaty making is a business affair, not a question of knuckling under to any other nation or giving up our independence. We leave that kind of business to our hon. friends opposite, but we have blundered enough in this French treaty so far that we do not want any further mistakes. Everybody I am sure wants the treaty, but we would like to know how we stand. My hon. friend went to France, he dealt with business men, who soon ascertained that he had forgotten we had a treaty with Switzerland and that was the cause of the whole delay. What happened? When the Americans made a treaty with Japan they inserted four or five words in their treaty which preserved them against Japanese immigration. We made a treaty and it was suggested to us by the Foreign Office in England that we should guard ourselves in a similar way. We did not do it, and the error we committed in that instance must have cost us over £50,000, and led to the invasion of British Columbia by the Japanese. That was another mistake. Now here—and I think it is just as well that these things should be stated before the Bill come up, because it will shorten discussion on the Bill—my hon. friend lays this matter before parliament. He has no legal opinion to lay before the House as to the effect of the ratification of this treaty upon our relations with our neighbours in the United States. There is no legal opinion. I asked my hon. friend if he had taken the trouble to inquire from the official representative in Washington what would happen if we ratified the treaty. Will we suffer this immense inconvenience or not? My hon. friend the Minister of Finance does not seem to me to have any information on that point. He mentioned that the matter would have to go before the commission. My hon. friend from North Toronto (Mr. Foster) says, that the commission having examined the matter, will report to the President, whose action thereupon will be in the nature of ministerial action, not political action. But surely it is fair that we should know what our position will be before we finally ratify that treaty. I am very desirous that we should multiply our commercial relations with France. But we must not forget that our commercial relations with the United States are far more vast, far more considerable; and we must not jeopardize the one in order blindly to carry out the other which is less important. I think that when the matter comes up upon the Bill, my hon. friend the Minister of Finance should have the legal question elucidated before us by the legal advisers of the Crown; and I still believe, in spite of what has been said, that inquiries should be made from our representative at Washington as to what would probably happen in that case.

Mr. FIELDING. It is quite true that there has been some blundering in connection with the French treaty, but the blunder, I regret to say, has been very largely on the part of the hon. member for Jacques Cartier (Mr. Monk). The hon. gentleman led up an attack upon the treaty, alleging that it was something which gave France an undue advantage. He discovered his blunder.

Mr. MONK. I did not say that to-day. I said we granted favours.

Mr. FIELDING. But I am talking of the discussion of this French treaty some time ago when it was brought before parliament. The hon. gentleman, in a variety of ways, has endeavoured to make this House believe that the treaty was one in which the interest of Canada was sacrificed, and undue favour shown to France.

Mr. MONK. I beg my hon. friend's pardon, he is quite mistaken.

Mr. FIELDING. That was the ground of his repeated hostility to the treaty. If he did not mean that, what did he mean?

Mr. MONK. I never was hostile to the treaty. I will not allow my hon. friend to make mistakes of that kind.

Mr. FIELDING. The hon. gentleman says he is not hostile. One is reminded of the old lines:

> It is all very well to dissemble your love,
> But why did you kick me down stairs?

If the hon. gentleman was in favour of the French treaty he took a queer way of showing it to this House. Again and again my hon. friend, by question, by suggestion, gave the House to understand that it was a treaty in which the interests of Canada were sacrificed. Does he not virtually say that to-day?

Mr. MONK. I deny that absolutely.

Mr. FIELDING. Then the hon. gentleman discovered that this treaty, which was so favourable to France and so unfair to Canada, after it had been ratified by the Canadian parliament, was held up for months and was not ratified and approved by the French legislative bodies because they thought is was too favourable to Canada; and then my hon. friend discovered his blunder. He regarded this treaty as too favourable to France, and we thought it was a fair treaty. And again and again, in the legislative chambers—

Mr. MONK. Mr. Chairman, I rise to a point of order. I do not think my hon. friend has a right to make that statement when I deny it.

Mr. FIELDING. If my hon. friend will take the trouble to-morrow to read what he did say in the 'Hansard,' perhaps he

will find that he went further than he imagined. For the present I may say, and repeat, that the hon. gentleman again and again, in this House, by question, by suggestion, by a variety of ways, impeded—

Mr. MONK. Order.

Mr. FIELDING. What is the matter? Does the hon. gentleman say that he did not oppose the treaty?

Mr. MONK. Never.

Mr. FIELDING. Never questioned it?

Mr. MONK. My hon. friend should take my denial.

Mr. FIELDING. I accept my hon. friend's statement. I advise him to read the 'Hansard,' that is the best advice I can give him.

Mr. MONK. The hon. gentleman will not read the 'Hansard' to that effect.

Mr. FIELDING. I did not bring it here to-day because I did not imagine that my hon. friend would for a moment doubt the accuracy of what I have said. However, let that pass. Then my hon. friend discovered his blunder a little later. After the course he had pursued in relation to this treaty, when it came to be ratified, if I am not mistaken, he did not vote against it.

Mr. MONK. Voted for it, and supported it also.

Mr. FIELDING. Well, that is a kind of support in regard to which I would say: save us from our friends. Then there is another point. My hon. friend said trouble arose in connection with this treaty because it was discovered that Switzerland was a favoured-treaty-country, and that that fact had not been ascertained. My hon. friend said that it was a blunder. Well, if it was a blunder it was a blunder that he had better lay at the door of the hon. member for North Toronto; because when the first French treaty was brought down in this parliament the question as to the countries that were entitled to the favoured-nation treatment was brought up, and a list of countries under the favoured-nation-treaty was given, and Switzerland was not one of them. So my hon. friend will see that there was doubt as to what was the application of this treaty to Switzerland. That doubt was entertained not only by the Liberal government but entertained by the government of the Conservative party. Now I am glad to be able to say that there is no party interest in this matter. My hon. friend suggests that there is in some way, he suggests some party feeling, some excitement. I am glad to be able to tell him that on behalf of the Conservative party the true note in this matter has been spoken by a distinguished member of that party in another place, a gentleman whose name it is not necessary to mention, and speaking in a place which I must not mention. He said :

He called attention to the reports that the Franco-Canadian treaty was likely to result in the United States maximum tariff being imposed against this country. The evident spirit behind the American tariff was one which could not be admired. It was designed among other things to prevent an improvement of the trade relations between Canada and the mother country, or any other country. He observed that Canada had developed her trade in the face of hostile American legislation, and he hoped that the Canadian government would not humiliate the Dominion by approaching the United States to ask the benefit of the minimum tariff.

I think that is a truer national note than has come from the hon. member for Jacques Cartier.

Mr. NORTHRUP. I think that the members of this House on both sides are under a deep debt of gratitude to the Minister of Finance for the clear, explicit and unmistakably frank expression he gave this House as to the ground on which the government intend to proceed with regard to this French treaty. We have had many other measures brought down by the government on which the members on this side of the House were perfectly satisfied that the principle on which the government was determined to proceed was that unhappy principle which the Minister of Finance so frankly avowed a few moments ago to-day. For the first time in the history of this House, a minister of the Crown has stood before parliament, speaking of a matter of tremendous importance to this country, a matter that means an immense deal for the weal or for the woe of thousands and thousands of business men of this country, and the Minister of Finance has frankly said that the government did not propose to be influenced in the slightest by such considerations as the weal or woe of the people of Canada, but that they proposed to do exactly as they saw fit, regardless of all considerations of Canadian interests. It was rather singular, too, that the Minister spoke, not hastily, not without a complete understanding, not without a precedent to guide him in the right path, for within a moment or two after he had so spoken, speaking of this and the other French treaty, referring to the manner in which another, and perhaps I may say, a wiser government have acted, he frankly admitted that the treaty had been held up for many a long day. Why? Because, at the other end of the line, the other contracting party suspected that the treaty was too favourable to Canada and therefore was not sufficiently favourable to France. One would have thought, particularly when the hon. gentleman knew that the nation with which

he was dealing had held up the treaty to calmly consider it and would not assent thereto until the authorities were perfectly satisfied that the treaty was in the interest of France, that the Canadian Finance Minister might have had sufficient interest in the people of this country, sufficient regard for the wishes of the people and sufficient regard for the opinion of this House to at least say: We will get all the information we can and when we have obtained all the information we can we will ratify or refuse to ratify as may be in the interest of Canada. Supposing it should be the case that the effect of ratifying this treaty is to expose us to the maximum tariff of the United States. Let us assume, for a moment, this, because, surely, the Prime Minister will not claim that there is sufficient advantage to be gained by Canada, not even the little trade we do, but the increased trade that we may do with France under this treaty to justify the tremendous loss which would be inflicted on Canada by virtue of the imposition of the maximum tariff of the United States. Although the Finance Minister would not dream of saying that if the American maximum tariff were to be applied it would not be a far greater injury than the French treaty would be a benefit to us, he calmly tells us: I do not know whether it will be applied or not and I do not propose to wait to find out. I think the business men of Canada might well ponder that utterance of the Minister of Finance and perhaps some of them will come to the conclusion that if times do happen to improve a little in one year as compared with another it is not owing to any extraordinary astuteness or financial ability on the part of the government who are managing the affairs of this country.

Mr. FOSTER. Before the motion is adopted I would like to make a few more remarks. I do not think there is anything in the discussion of this question except a mere discussion of business matters. I do not know why the Minister of Finance should go off at a tangent and indulge in something which is not far removed from high-faluting as to the tremendously martial and vigorous stand that he is going to take against the United States. He was not going to be coerced—not much. He would stand by his guns as long as the guns had ammunition and he could keep on firing them! It was not necesary to the discussion of this question to go into that part of it. One is tempted to ask whether the Finance Minister was always as patriotic and decided over these matters in connection with the United States as he is to-day.

Mr. FIELDING. Always.

Mr. FOSTER. Well, what disappointment has he received that has so soured him upon his former friends and confederates. At one time he was hand in glove with prominent persons in the United States declaring, as my right hon. friend the Prime Minister declared, that they would nail to the masthead a certain flag written upon which was that Europe might go hang, Great Britain might go hang, and all the other colonies of Great Britain might go hang, but that they would hang together until they had brought about the adoption of their policy of continental union, or unrestricted reciprocity, coupled with discrimination against Great Britain and every colony of Great Britain. Those were the guns that he was ready to stand by at that time. Now they are very different guns and he is behind them. But this, after all, is a mere pop gun. The Minister of Finance knows exactly what it means, if he has thought of it at all. On one side you have a possible treaty with France, involving a trade altogether of only about $10,000,000 a year. On the other hand, you have a decided juncture of circumstances in connection with our trade in the United States which trade amounts to $270,000.000 per year. There is hardly a trader from Vancouver to Sydney who has not more or less intimate trade relations with the United States of America on which he makes profits, from which he gets gains and in the prosecution of which he has his capital employed. If the minister puts through any treaty so small as this, or even though it were larger, and the decision of the United States, through their commission and the president, is that in the end it discriminates against the United States he knows that the exact statement in the clause of the United States tariff is that thereupon 25 per cent is added to the duty on every article which goes from this country to the United States. That is a very serious thing. What happens as the next step? This country would certainly be acting outside of and recreant to its duty, should the United States put on that surtax of 25 per cent, if it did not follow suit with the surtax which is allowable and which is possible under the law which we have in Canada. What would that mean? It would mean a tremendous disturbance and dislocation of business amounting to $270,000,000 per year as between us and the United States. I am just as strong as the Minister of Finance in this statement, and on this ground that if, after all the facts of the case were understood this parliament of Canada comes to the conclusion that it is in the interest of this country to legislate in a certain way, then it should legislate in that way whether the United States puts 25 per cent or 50 per cent upon our imports.

But, I hold it to be the height of absurdity and childishness for the Minister of Finance of Canada to refuse a fair delay in the adjudication of this House upon this treaty until we can find out all the facts of the case so that this House will know whether or not, if it does carry out the French treaty, it will be face to face with the condition to which I have referred in connection with the trade of the United States. If after we have all the information we believe that it is best for us to do so, we have the right to do so, notwithstanding anything that may be contained in the tariff of the United States. All we ask is that until we get that information, until a reasonable time at least is allowed for the getting of that information, this House shall not be pressed to come to a conclusion with reference to this treaty. This treaty has been held up now for about two years and nothing very harmful has happened. It would not hurt things materially if it were hung up for two, three or four months more. In two, three or four months more we certainly would know the attitude of the United States and then we could legislate with our eyes open upon the wide basis of all the facts. I am told —it goes through the papers at least—that the commission which has now been organized and which is at work in the United States, has instructions to take up the case of Canada first of all the countries and it is within the range of possibility that they will conclude their investigation into the facts in reference to Canada in a short period, and then the decision of the President may be found out. That is all. There is no need of going into heroics about it, there is no use of being ultra-patriotic as the Minister of Finance has tried to be, getting up and shooting off his ammunition and artillery all at once in our faces. By and by if we are pressed to the worst of it I will even stand behind him and furnish the ammunition for him to shoot off as far as my vigour goes, if we find, after the facts have been ascertained, that it is right and politic for us to take a certain course.

Mr. ARMSTRONG. I sincerely hope that the Finance Minister will not attempt to force this House to take definite action at the present time on the French treaty, as in 1897 he forced this House to denounce the German treaty, which has resulted in twelve years of practical commercial war with Germany. That country last year imported two billion dollars worth of goods, one billion dollars worth of food products, three hundred million dollars worth of just such products as we are producing on the farms of Canada. We are practically driven out of the German market, whereas last year the Argentine Republic sold to Germany $116,000,000 worth of goods, Australia $48,000,000 worth, and the United States $214,000,000 worth, against a paltry million dollars worth from Canada. Canada has been practically driven out of Germany, the second best market in the world, because of the action of this government in regard to the German treaty. On that occasion, Sir Charles Tupper urged the hon. gentleman to stay his hand, but in vain. The hon. gentleman is taking a similar position today with regard to the French treaty, which may result in the United States placing on goods from Canada a surtax similar to the one placed on goods from Canada going into Germany. I sincerely hope that the Finance Minister will wait until we learn definitely what position the United States is going to take in the matter.

Mr. MIDDLEBRO. May I ask the Finance Minister one question? If he were today absolutely sure that the ratification of this treaty would entail an extra duty of 25 per cent on all Canadian products going to the United States, would he proceed with the ratification of this treaty?

Mr. FIELDING. I wish to answer all questions frankly; but on a great international question it is the part of wisdom not to answer too broadly. If the question of my hon. friend implies that we are bound to be governed in our commercial policy by the action of the United States government or the United States congress, or that we must wait to learn what the United States government or the United States congress will do on any tariff matter before we mould our own policy, I cannot subscribe to any such doctrine.

Mr. MIDDLEBRO. The Finance Minister has not answered my question. The reason I put it is this. Unless he can answer it in the affirmative, and say that he would still ratify this treaty even if he discovered subsequently that the effect of ratifying would be to entail an extra 25 per cent duty on Canadian products going to the United States, he has no right to ask us to ratify the treaty. I am fair to say that I believe that if he absolutely knew to-day that the ratification of the French treaty would bring this result, recognizing the vast injury that would be done to this country as compared with the trifling benefit we would receive by the ratification of the French treaty, I think he would hold his hand.

Mr. FIELDING. If the United States government were to take the course my hon. friend suggests, they would have more to lose by it than Canada.

Mr. GEO. TAYLOR. I do not think we should deal with this question at all from a party standpoint. The members of this

House, on both sides, are sent here to work for the best interest of their constituents, and of the country as a whole. We are practical business men sent here to attend to the business of the country. Now, with regard to this question, we sent two of our ministers to France, a country that is doing a small trade with Canada, to see if we could not enlarge that trade. They made a treaty which is subject to the ratification of the representaives of the people of this country. When making that treaty, they believed that they were acting in the best interest of the country. But since that time things have changed. The congress of the United States has passed certain legislation which applies to all countries, but most directly to Canada, in which they say to us, if you give any other country better terms than you give us, we will increase the tariff against you 25 per cent. How will that affect us? The Canadian farmer will have to pay an increase of $1 on every ton of hay, $10 on every horse, from $1 to $2 on every sheep or lamb he sends to that country. How can the farmers support a government that makes a bargain for getting a little trade with France by which it loses a great trade with the United States? I say it is the duty of the government to stay their hand until we see what our neighbours are going to do. It is the duty of every member of this House, on either side, to say to the government, we will not ratify that treaty until we see what action the United States government will take.

Mr. NORTHRUP. I think every allowance should be made for the Minister of Finance, for this is one of those unfortunate questions which touch that autonomy which has of late become such a red rag to hon. gentlemen opposite. The moment any question touches that autonomy, these hon. gentlemen seem to lose all sense of perspective. It might do for somebody in a small township council to talk as the Minister of Finance has been talking this afternoon, but it hardly accords with the dignity of this House. The hon. gentleman talks about our being governed by the United States. Let us use the English language in something of the sense in which it is understood by everybody except the hon. gentleman. Nobody has suggested that this House should be governed by the United States. The proposition is that this House should legislate exactly as it thinks in the best interests of Canada. That is not being governed by the United States. The hon. gentleman is being governed by the United States through a fear he seems to have that somebody wants to interfere with his prerogative; but as there are six or seven million people in this country, and only two of those went as delegates to France, and are personally interested in having this treaty go through, right or wrong, it would be well to balance the interest of the rest of the six or seven million people against the exclusive interests of these two. If the Finance Minister can show that we are in any sense being governed by the United States in the proposition laid down, namely that this House should know what it is doing, that it should get all the information possible before it decides, then the more we have of such government by the United States the better.

Mr. TURRIFF. If this House followed the suggestion made by hon. gentlemen opposite, it would be simply extending an invitation to the Congress of the United States to put on that extra 25 per cent duty. I believe that if we want to prevent the United States from taking the action suggested by hon. gentlemen on the other side of the House that we ought to go on right now and conduct our business exactly as we would if the American tariff were not now under revision.

Mr. LANCASTER. Does the hon. gentleman not believe that the United States will put that extra duty on if they think it is to their interest to do so.

Mr. TURRIFF. I do not think there is one chance in ten thousand of their putting it on because for every dollar they hurt us, they will hurt themselves four.

Mr. LANCASTER. If you give that information to the Finance Minister it will help us on.

Mr. T. CHISHOLM. Will the Finance Minister (Mr. Fielding) say if it is still provided by the French treaty that absinthe and imitation brandies should be brought into this country at a reduced rate?

Mr. FIELDING. If those articles were expressed in the treaty, of course nothing has occurred to change them; but my hon. friend is mistaken; the treaty does not provide for a reduction of duty on the articles he has referred to. Except for one small paragraph in regard to cattle the treaty is precisely as it was when it was last discussed, and I think my hon. friend will find he is mistaken on this point.

Mr. T. CHISHOLM. Those articles were mentioned in the last treaty, they are in the list yet.

Mr. FIELDING. I think my hon. friend will find he is mistaken.

Mr. T. CHISHOLM. I have it and I shall show it to the hon. minister.

Mr. FIELDING. I will be glad if my hon. friend will show it to me.

Mr. J. A. CURRIE. I am of the opinion, and I know that a great many other busi-

ness men in this country are of the opinion that this trade treaty policy which has been adopted by the government is entirely wrong and that we should have one tariff for every country. Then if there is any change to be made or any particular article to be imported from any country the tariff on that article could be lowered. By making treaties with everybody we will some day find ourselves in the position of a certain old gentleman who had an animal and every one told him what to do with it; we will be making treaties for every one else and have nothing left for ourselves. I would strongly counsel delay in the matter of this or any other treaty at present for a more cogent reason than any that has been advanced to-day. An election will be held in Great Britain at an early date, and one of the great questions before the people there is whether Great Britain shall change her free trade policy and adopt a protective policy, and if she adopts a protective policy, whether a preference will be granted to the colonies. It is useless to talk hypocritically, the fact remains that the people of this country, especially the farming community, would like to see a mutual preference between Great Britain and Canada. Such a preference would benefit the farming community and every one else in the country. But if we adopt a great many treaties with various countries, and continue that policy, the day will come when we cannot take advantage of a preference offered us by Great Britain unless we denounce treaties with France, Japan and other countries. The House will remember that when we offered a preference to Great Britain it could not be put into effect until certain trade treaties which Great Britain had with foreign countries had been denounced. Within the next two or three months we will know exactly the position of the British parliament for the next four years and think that this parliament should hesitate and should delay taking action on any of its trade relations with any other country and tieing ourselves up for a period of years with any country until we know what our position is going to be in reference to a preference with England. I think that is a strong argument for delay, and one which should appeal to every member of this House who would like to see us obtain some slight advantage in the markets of the mother country. Any small trade advantage that would be offered to us, would certainly not be offered by Great Britain to France or any other foreign country, and for that reason the clearer we keep our hands from treaties with other countries, by simply adopting one single tariff for every country, the safer will be the ground on which we stand. We will then be on the safe ground on which this country stood for many years and on which the foundations of its greatness were laid. We are now departing from that policy, adopting the principle of trade treaties with every country so that articles from one country are admitted at a lower rate of duty than from another country. The effect of that is that articles are being sent from countries against which we have a high tariff through countries enjoying a reduced tariff, so that the Customs Department has constant trouble in reference to this question of the country of origin. The Customs Department claims that articles are sent to Great Britain from Germany and other countries, given a coat of lacquer or varnish, and passed through the Canadian customs as British. Such cases of fraud will occur and no one can prevent them; it is human nature to try and get the best of the customs.

In view of the serious aspect of the question in relation to Great Britain and the probability that we will have to consider a preference from the mother country possibly before the end of this session, I believe it would be advisable for us to delay any consideration of any trade treaty with any foreign country until we know just where we stand in relation to Great Britain.

Mr. CROCKET. What is the object of the Minister of Finance (Mr. Fielding) in presenting this resolution at this particular time? I understood him to intimate that there would be no objection to allowing the Bill when it is brought down to stand for any length of time at the request of any member. Personally I look on this resolution as committing the House to the statement that it is expedient to approve of this treaty, and my own view is that I would not care to support the ratification of this treaty if I thought it would bring into effect the provision of the United States tariff subjecting Canadian goods to the extra 25 per cent duty. I have no hesitation in saying that if that is likely to be the effect of the ratification of this treaty I would vote against it, and when the Finance Minister is not able to give the House any more definite statement than he has given upon this point I do not think we should be called on to commit ourselves by the adoption of this resolution at this time. Has the Finance Minister consulted the Justice Department on this question? As I understand it, it is a matter almost entirely of legal interpretation and it seems to me that before he calls upon the members of this House to approve of the resolution he ought to be able to make some more definite statement as to its probable effect in reference to the application of the United States tariff.

Mr. FIELDING. I am afraid the Justice Department would hardly undertake to in-

terpret the American law. The debate has taken a broader form than I anticipated. I suggested that it would be a convenience for the House to adopt the resolution pro forma in order that the Bill might be introduced and be available for discussion, so that the whole matter could be gone into at a later stage. The hon. member for North Toronto (Mr. Foster) nodded his assent and I presumed there was no objection to that suggestion. I did not expect there would be any debate at all. What I intended was that the resolution should be adopted, as is usually done, and then, when a Bill founded on it is introduced, we can discuss the matter on its merits. I have no objection to any reasonable delay being given to enable any hon. gentleman on either side to become better informed, but I am not prepared to wait until the first of April next in order to ascertain what might be the American view.

Sir WILFRID LAURIER. Passing over for a moment, the important observations of my hon. friend for North Simcoe (Mr. Currie), may I observe that this discussion has proceeded under a misconception. If I understand the point raised, it is that this treaty, if adopted, might possibly be interpreted by the United States as discriminatory against it under article 2 of their tariff and cause the American government to impose an extra ad valorem duty, of 25 per cent on Canadian goods. The point taken is that any favour given under the proposed French treaty could be considered by the Americans as discrimination against them. I do not see how they can take that position; but if that point be well taken, it applies equally to our present relations with France, because we have in force now a treaty with France which admits certain goods at a preferential rate. If there be discrimination in the new treaty, there also is in the existing treaty, so that even if we should not ratify the treaty now submitted, we shall still be in the same position as regards our American neighbours in April next as we will be if we adopt the proposed treaty.

Mr. R. L. BORDEN. No one desires that this country should take any undignified position with regard to its right to control its own tariff, but it must be borne in mind, notwithstanding what my hon. friend the Prime Minister says, that the ratification of this treaty may possibly have some bearing upon more than half our total foreign trade. That is a very important consideration. Possibly there might be a distinction between a treaty already in existence and one which we might enter into after the tariff with the United States has been framed and we have had notice of it. I do not think it would be advisable to take the position stated by my hon. friend the Minister of Finance, that we should not have any regard whatever to the attitude of other countries in fiscal matters. The best evidence that such a position is not a good one is the fact that when the French Senate refused to ratify this treaty in its original form, this government modified it in order that it might receive the sanction of the Senate. This government took into consideration the attitude of the French Republic, when they signed a second treaty modifying very materially the position of affairs as compared with the first. I do not think we should be in any undue haste. In the old days, my right hon. friend the Prime Minister, the Minister of Customs and their colleagues, were rather inclined to censure the Conservative administration for having taken what they deemed to be a very harsh and forbidding attitude in connection with our trade relations with the United States and were wont to inform the people that if a more conciliatory and courteous attitude had been adopted, our trade relations with our neighbours might have assumed a very much better condition. I believe that the men at the head of affairs in the United States to-day are of a friendly disposition to this country. I do not believe for one moment that they would be inclined to adopt any harsh attitude or take any unfriendly measures towards this country in any respect. I venture to think it might be worth while to have some reasonable delay. This treaty can be ratified at any time up to the close of the present session. There is no reason for undue haste. I do not think that either members of the government or private members are prepared to say that there may not come to us later on, before the close of the session, some information that might be of use to us in reaching a conclusion as to what the best interests of the country demand.

Hon. WM. PATERSON (Minister of Customs). What are the circumstances? A year ago a treaty was negotiated, through the British commissioner and the Canadian ministers, with France. This treaty was signed by the British commissioner as well as the Canadian ministers. It came to this parliament and this parliament ratified it. Every member in the House voted for it.

Mr. LANCASTER. No.

Mr. PATERSON. I believe a few did vote against it. It was however ratified by a very large majority on both sides. Since then some little change has taken place which involves this treaty coming back to this parliament for sanction. Have we changed our views since last session? If that were the case, it might be something to consider. But that is not the ground taken by the hon. member for North Toron-

to (Mr. Foster). Is it that the bargain is not a good one? There is no pretense of anything of the kind. My hon. friend from Jacques Cartier says it is a good treaty.

What is the true course in order to conserve the dignity of this parliament, even looking at the matter from the point of view of the leader of the opposition? France having agreed to this treaty and signed, this parliament having agreed to it and ratified it last session, a slight amendment that no one, I venture to say, considers of the least importance, must be ratified, thus making it necessary that the treaty should come back here. It is true, the whole question of acceptance or rejection of the treaty is before us now. Have our views been changed in any degree as to the beneficial effect of the treaty? If so, that is a point worthy of consideration. But, because there has been legislation by a foreign nation, acting within its rights and acting in its own interest, is it a very dignified position for this parliament to take to say that, though we entered in good faith into this treaty with the republic of France, we will, on the question of the ratification of this slight amendment, change our whole course? Should we maintain our dignity by saying that, because there are suspicions or doubts that the legislation of a foreign country may receive a certain interpretation, we will be swerved from what we have agreed is our duty in the matter? Also, I would ask hon. members who have spoken on this subject if they think that speaking of action on the part of a foreign government and crying it from the house tops is likely to make that government yield you any better terms? That, I think, is worthy of consideration. Will you strengthen the position of this parliament by such a course? Will you add to its dignity?

Mr. LANCASTER. Your position will be stronger if you do not tie your hands by passing the treaty.

Mr. PATERSON. Our position with whom?

Mr. LANCASTER. With the people you are speaking of. You will prevent them from accomplishing that object.

Mr. PATERSON. We prevent them from accomplishing that object if we do not ratify the treaty?

Mr. LANCASTER. Yes, if there is anything in your argument.

Mr. PATERSON. The hon. gentleman (Mr. Lancaster) then, is in favour of our throwing aside this treaty for fear the United States may take the course of action which is in his mind at this time. If that is the hon. gentleman's position and the position of his friends, the matter is one for them to consider. The hon. member for East Lambton (Mr. Armstrong) referred to action taken by this House in relation to the German treaty. He seemed to think that we had done a wrong thing in that matter. I believe that, to this day, the hon. gentleman is the only member of this House who has found fault with the action then taken. I have not heard another member on either side venture to say that Canada did not take a dignified stand at that time or that the action taken was not in the interest of the people of this country. It is true, there was a dislocation of trade for the time being. And I quite agree that you cannot wholly ignore the legislation of other countries. But, when you come to frame your tariff you take these matters into consideration and decide upon your action in the interest of the Canadian people under the circumstances. But, when the hon. member (Mr. Armstrong) speaks of our action in relation to the German treaty as though it had been a disaster, I cannot so view it. It is true that trade was interrupted and forced into new channels, and that is inconvenient, to say the least of it. If the United States, legislating in their own interest, enact laws by which trade is disturbed and turned into new channels, we must meet the changed conditions, there is no doubt about that. We would have to legislate in that matter, as we are bound to do in every matter, in the interests of the Canadian people. And so we are brought right back to the point from which we started. If the hon. member takes the position that, if the Americans were to tell us that we would come under their highest tariff if we dared to put this treaty through he would throw the treaty over, not because he objects to the treaty but because pressure has been brought to bear upon him, I can only say that that does not seem to me a maintenance of the dignity of this parliament upon which the leader of the opposition dwelt so strongly. It would be a matter much to be regretted if we were put under the maximum tariff of the United States. It certainly would dislocate trade temporarily, and the trade is a very large one indeed. Our trade with the United States is greater than with any other country, not even excepting Great Britain itself. And, looking at it from the point of view of the United States, our trade with them is by no means insignificant. I believe that Canada is the third nation in the importance of its trade with the United States. You cannot disturb such a volume of trade, import and export, without inconvenience and difficulties resulting. Nations have to consider that: no doubt they will; and no doubt they will act as they may seem in their best interest under the circumstances as they exist. I confess that I am rather amused by what some hon. members opposite have said with regard to our export trade. They say that if we have to pay so much more for our sheep and cattle exported to the United

States, it will be injurious to us. That is true, but I may say for the comfort of these gentlemen that I do not think our great agricultural exports will go to the United States, or that they go there now, It is true the market for some of these exports is found there, but the market is very limited indeed. And, speaking in round numbers, the imports from the United States are about double the exports to that country. And some of these hon. gentlemen who have spoken in favour of delay have often lamented that there are so many manufactured goods from the United States imported into Canada. They say that $40,000,000 of manufactured goods are imported from the United States into Canada, all of which goods should be manufactured in this country. They ask, why do not you put up your tariff and shut them out? But to-day they are wonderfully concerned about the matter because there is a prospect of higher duties being put on. That is wholly within our own domain; we determine what duty should be put upon certain imports into our country, just as the Americans determine what shall be paid on imports into their country from Canada and elsewhere.

When you come to the exports of Canada, we do a trade with them as well as an import trade; there is no doubt about that. And that would be a matter, as I said before, of consequence in a trade so large between two friendly nations such as they are. But shall we on that account submit to have our legislative hands tied, and not carry out in good faith an agreement that was made, and a treaty that was made between this country and the republic of France? Are we prepared to do that? That is the way we must look at it now. If you are prepared to carry it out, no matter what may be the action of any other nation, why may you not as well carry it out now as at any other time? What will be gained by waiting? No one can tell. It has been said that the President of the United States has experts who will inform him on the conditions of trade between all the countries and the United States, and that he will be the judge, and he will judge, as the hon. member for North Toronto says, on the facts that will be laid before him. Well, what are the facts that will be laid before him? What, if you do not pass this treaty at all, will be the fact that will be laid before him with reference to our treaty with France? They will have to report that Canada has a treaty with France in existence. She has not denounced it. True, she is repealing it in another Bill that is before parliament; but in the meantime it is in force. They report that fact, they cannot report any more than that. If we pass this treaty they will have to report the same. What will be the action of the United States in reference to that? The United States is a great nation, a dignified nation. The United States, as I understand it, have always held that it is not to be considered a violation of the favoured-nation doctrine, if they considered themselves under it, when they chose to give to another nation certain favours for certain favours received. They have always taken that ground. In my judgment they will have to change their whole past procedure if they decide to penalize us because we have made a treaty with France in which we get advantage for advantage. They have their treaties. Would they ask from other nations, would they take away from other nations the liberty that they claim for themselves? They have a treaty with Cuba at the present time, I believe; they have had treaties that we did not participate in, a limited number, a treaty with Germany, and with France also. That has been their course all through. They have always taken that stand, and I see no reason why they should depart from that policy at the present time. If that be so, why should there be any hesitancy on our part? Again, I say, even if there were in our minds a thought that they would reverse their mode of dealing, and the ground which they have taken in dealing with other foreign nations, even if they were to reverse their policy entirely in that respect, what should Canada do? Should we not go on and carry out a treaty solemnly ratified in large part, as it was a year ago, before this question ever arose in the United States? I am not blind to what the effect would be on Canada's trade under certain conditions. But it seems to me that the dignity of this parliament, alluded to by the leader of the opposition, would call upon us to go on. We are acting within our rights, we are doing what we consider to be for the benefit of the people of this country. And should another country take the view that we should be penalized because we have exercised our own rights, not encroaching on the rights of any one else, what is the course we should pursue even then? Is it not to maintain a dignified course, and go on with our legislation, while having due regard to the rights of our neighbours, making Canadian interests our paramount motive, as they are bound to be.

Mr. W. F. MACLEAN. It occurs to me in this discussion that we cannot find out what the attitude of the United States government will be unless we pass the treaty. The public men who are charged with a certain duty in connection with this matter in the United States do not deal with hypothetical cases; and it strikes me that unless we pass the treaty, we cannot ascertain what the action of the United States will be. I must also add, in view of what has been said here this afternoon, that if we are to have our freedom of action interfered

with by some kind of legislation in the United States, this country will be paralysed in anything we may wish to do. We will be told that if we go in for preferential trade within the empire there is a clause in the tariff of the United States that will interfere with our freedom of action in that regard; and if we admit that contention, why, we can do nothing. In order to preserve our freedom of action, I say we must fix the Canadian policy from the point of view of Canadian interests, and it would not be wise for us to show by our action that Canadians are to be intimidated in their policy. As one who believes in a national policy for this country, I say we ought to be prepared at all times to take our own part, and fight it out. Now, if we are to incur discrimination by this United States tariff, I do not think it will be on account of the French treaty, but rather on account of the patriotic action of this country in proposing, if we do so, to put export duties on our raw materials going into the United States, in order to secure that they may be worked up in this country. It is our action in regard to saw-logs in Ontario, and our action in regard to pulpwood in Quebec and elsewhere, which may bring upon us this threatened action of the United States. I, for one, am not prepared to abandon that patriotic stand the provinces have taken in regard to pulp-wood and saw-logs, even if the United States were to threaten us with a surtax that they are able to impose by their tariff law. So, while I acknowledge that we should not embark thoughtlessly in a course that will injure us, still I contend that we cannot ascertain what the United States will do until we pass the treaty. If we say that we will do nothing in this country for fear of incurring some tariff punishment from the United States, then we have parted with our freedom of action. Let me say again that if we are to incur the surtax, it will be not so much because of our action in regard to the French treaty as because it is proposed in this country to adopt the patriotic policy of trying to have our raw products worked up as much as possible in our own country, instead of letting them be worked up in the United States.

Mr. R. L. BORDEN. One word with regard to an observation that fell from the Minister of Customs. He has argued that the dignity of this parliament makes it necessary for us to ratify the French treaty as amended. I would not be inclined, however, to concur in that. Parliament did not make the treaty, the Crown made the treaty and the treaty, as far as Canada was concerned, was made subject to the ratification of this parliament. The government of the French republic made that treaty on the part of France subject to the ratification of the French parliament. The French parliament saw fit, in its wisdom, to declare it would not ratify that treaty without a certain amendment. It was entirely within the right and dignity of the French parliament to take that course. It is equally within the right and dignity of this House of parliament to say that it will not ratify the treaty with that amendment.

Mr. PATERSON. With this distinction, that we had ratified it once and they had not.

Mr. R. L. BORDEN. We never ratified the treaty in its amended form as far as I am aware.

Mr. PATERSON. It is a very slight amendment.

Mr. R. L. BORDEN. My hon. friend the Minister of Customs says that it is a very slight amendment. It was not regarded as a slight amendment by the French parliament because they declared that they would not ratify the treaty without it. If it were sufficient to justify that refusal of action on their part it might be sufficient to justify a refusal of action on our part. In neither case would we be departing from our right; in neither case would we be infringing the dignity of parliament.

Mr. PATERSON. If it was for that reason that they rejected it.

Mr. R. L. BORDEN. Certainly; and I suppose it might be added that we would have the right to take into consideration the conditions as they are to-day.

Mr. THOS. CHISHOLM. I rise to give a little information to the minister who framed this treaty. I am surprised that he does not know what is in it. This is a 'Convention respecting the commercial relations between Canada and France.' It is an official document issued by the King's Printer. I find at page 37, 'French products enjoying the benefit of the intermediate tariff.' If the products that are enumerated under this head are not going to get any benefit, why does it say 'enjoying the benefit'? If they are not to be brought in at a lower rate why is it put in that shape? I turn over to see page 38 and I find there a reference to absinthe. Absinthe is dope. It represents knock-out drops. There is not a man in this House that does not know what that means. Absinthe is one of the greatest curses in France. Medical men say in France that it is sending more men to the asylums than all the other causes put together. I spoke and voted against this treaty simply because of that one article being included in the treaty and I thought the government would have taken steps to have had it eliminated. Are the people in France unable to find a market for that product at the present time? They have prohibited it in the

French army and the medical men of France met in convention and asked that the use of this poisonous drug be prohibited in France. I suppose they have no market for it without sending it to us poor Canadians? I see that 'imitations of brandy' are included in item 156. I had better read that item and the committee will see the kind of products that are being brought into this country at a reduced rate, or rather enjoying the benefit of the minimum tariff.

Ethyl alcohol, or the substance commonly known as alcohol, hydrated oxide of ethyl or spirits of wine, n.o.p., gin of all kinds, n.o.p., rum, whisky and all spirituous or alcoholic liquors, n.o.p., amyl alcohol or fusel oil, or any substance known as potato spirit or potato oil; methyl alcohol, wood alcohol, wood naphtha, pyroxilic spirit or any substance known as wood spirits or methylated spirits, absinthe—

Will the minister take notice there?

—arrack or palm spirit, brandy, including artificial brandy and imitations of brandy, n.o.p., cordials and liqueurs, all kinds, n.o.p., mescal, pulque, rum shrub, schiedam and other schnapps; tafia, angostura, and similar alcoholic bitters or beverages; and wines, n.o.p., containing more than 40 p.c. of proof spirit.

Spirits and strong waters of any kind, mixed with any ingredient or ingredients.

That is what is being brought into Canada. I object to the treaty on the ground of bringing these things into Canada and giving them any benefit at all and that is the reason why I voted against the treaty. I did so also for other reasons. I saw that the maximum and minimum tariff were the same and that while a number of things were enumerated as coming into this country and getting the benefit of the minimum tariff there was really no benefit, the maximum and minimum tariff in France being exactly the same on horses, cattle, peas, oats and other grains. The House was misled. It did not understand it. I am sure that hon. members did not know that these knock-out drops were being brought in at a reduced rate or they would not have supported the measure.

Mr. FIELDING. I am afraid that my hon. friend from Huron (Mr. Chisholm) must have been misled by somebody when this matter was before parliament at an earlier stage, because he certainly has an erroneous conception. He did not get it from this side of the House, and if he was led into error he must blame some one else. Let us understand what is the point of difference between my hon. friend and myself. We must connect his present observations with those that occurred a few minutes ago. He stated that by this treaty we were introducing brandy and absinthe at reduced rates. That is the point of difference between my hon. friend and myself, that is the basis of his whole speech. He is wrong. This treaty does not provide for the introduction of brandy or absinthe or any one of these things at a reduced rate. When I tell my hon. friend that, the whole foundation of his case is gone.

Mr. THOS. CHISHOLM. At page 37 we have in schedule 'B,' 'French products enjoying the benefit of the intermediate tariff.' What does that mean? If they are enjoying the benefit of the intermediate tariff are they not coming into this country at a reduced rate? I think the fair inference is that they are to come in at a reduced rate.

Mr. FIELDING. I would have supposed that instead of being in doubt or being led astray for a couple of years on this subject my hon. friend would have taken the trouble to have turned to the Canadian tariff and found out what the benefits were under the intermediate tariff; because, if, instead of being in this doubt and of voting wrongly, my hon. friend had turned to the Canadian tariff, item 156, I think it is, he would have found that the intermediate tariff and the general tariff are the same and that there is no reduction at all.

Mr. THOS. CHISHOLM. That is so, and that is where the deception comes in in this whole treaty. I ask that absinthe be totally prohibited.

Mr. FIELDING. That is another question.

Mr. THOS. CHISHOLM. Why this deception? Why should it state that articles are receiving the benefit of the treaty when they are receiving no benefit whatever? Why do you say that cattle are to be allowed in under the intermediate tariff, when the maximum and minimum tariff are the same? If my hon. friend will read the speeches I made a few years ago he will see what I said on the subject then.

Mr. FIELDING. My hon. friend has confessed that he voted against the treaty because he was persuaded that we were bringing in brandy and absinthe at reduced rates. That is the important ground upon which he voted against the treaty. My hon. friend ought now to vote for the treaty and put himself right, because I have shown that he is entirely mistaken. The intermediate tariff and the general tariff on brandy and absinthe are the same and when our French brethren get the benefits of the intermediate tariff on brandy and absinthe they get nothing they were not enjoying now, because there is no reduction in the intermediate tariff on these articles.

Mr. THOS. CHISHOLM. If there is no benefit why do you put it in at all?

Mr. FIELDING. When I was young I used to think that there were lots of things that needeed explanation, but now that I am getting old I have come to the conclusion that for pretty nearly everything in life there is a reason if you will only look for it. The reason here is very simple. There is a number of articles on which we in Canada are to receive the benefit of the minimum tariff in France. But if he looks carefully into it, he will discover that in several cases there is no benefit at all, because the general and the minimum are the same. These are not fixed rates of duty. At any moment France might adopt a minimum tariff which would fix reduced duties on grains or other articles; and if it gave any country in the world the benefit of those reduced duties, Canada could claim them and get them, Then the French government turn around and say to us: If at any time you reduce the duty on brandy to any country, we want the benefit of that reduction, and we agree to give it to them.

Mr. THOS. CHISHOLM. Why not prohibit the importation of absinthe entirely?

Mr. FIELDING. That is not a question that arises under the French treaty at all.

Mr. BRODER. Would you be at liberty to prohibit it while this treaty is in existence?

Mr. FIELDING. Most certainly we would. All we would not be permitted to do would be to admit absinthe or brandy from any other country on more favoured terms than from France. If we wished to prohibit its importation altogether, not from France alone, but from all countries, we would have a perfect right to do so.

Mr. ARMSTRONG. Does not this treaty make a reduction in the duties on wines coming from France to Canada?

Mr. FIELDING. Yes.

Mr. SAM SHARPE. Is there any provision, either in the treaty or in the proposed Bill, for the termination of the treaty after notice from the government?

Mr. FIELDING. Yes, there is the same provision as in the present treaty, that we can determine the treaty on giving reasonable notice.

Mr. SPROULE. I would have thought, with regard to absinthe, that we would have done as we did with regard to oleomargarine coming from the United States—prohibit the importation entirely while the treaty was being made.

Mr. FIELDING. My hon. friend from Huron (Mr. Chisholm) may have a misconception, which the House also may have received from him, that there is some special enactment in this treaty with regard to absinthe. That is not so. Absinthe is one of many articles which are grouped together under one number in our customs tariff, and the French treaty simply provides that, with regard to that whole group of items, whatever benefit may accrue to any country from Canada shall accrue to France.

Mr. LANCASTER. Does the Minister of Finance say that there is no provision in this treaty to prevent the coming into this country of wines that may be doctored with absinthe and other noxious substances, to come into competition with Canadian wines?

Mr. FIELDING. The treaty makes no change with respect to wines, except as to the rates of duty. The effect of the importation of wines on the public health is another question. Under our tariff we admit wines at certain rates of duty. We provide in the treaty that certain wines of low spirit, commonly called light wines, may be imported at lower rate. As to whether or not they may be doctored, the same question can be asked with regard to the importation of wines from any other country.

Mr. LANCASTER. For that and other reasons, I was of the opinion a couple of years ago that this treaty was not in the interest of Canada. I am still of the same opinion, because I have heard nothing from the Finance Minister to-day to convince me to the contrary. Therefore, I want to protest against this resolution passing or being reported.

Resolution reported, read the first and second time, and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 12) respecting a certain supplementary convention between His Majesty and the President of the French Republic.

Motion agreed to, and Bill read the first time.

PREVENTION OF PESTS TO VEGETATION.

Mr. FISHER. moved that the House go into Committee to-morrow to consider the following resolutions:

Resolved, that it is expedient to pass an Act to prevent the introduction or spreading of insects, pests and diseases destructive to vegetation; providing for the granting of compensation for matter destroyed for this purpose, the appointment of inspectors for the enforcement of the Act, and penalties for its contravention.

Motion agreed to.

On motion of Sir WILFRID LAURIER, House adjourned at 5.35 p.m.

HOUSE OF COMMONS.

FRIDAY, November 19, 1909

DEATH OF MR. BARR.

The SPEAKER took the Chair at Three o'clock.

Right Hon. SIR WILFRID LAURIER (Prime Minister). Mr. Speaker, I have just been informed within the last few minutes that we have lost one of our colleagues in the person of Dr. Barr, member for Dufferin. This news, I am sure, will come as a shock to all the members of this house. It is another example of how slight is the thread by which we hold our tenure of life. Yesterday Dr. Barr, to all apearances, was in perfect health. It so happened that I met him in one of the corridors of the House, we had a friendly chat together and nothing at that time could have indicated that he had not before him a long tenure of life. Now, he is no more. Dr. Barr was always a very much respected member of this House and we on this side join heartily with his friends on the other side in tendering to his family a sincere expression of our condolence in their bereavement.

Mr. R. L. BORDEN (Halifax.) Mr. Speaker, I thank the right hon. the Prime Minister (Sir Wilfrid Laurier) for the very kind words he has used in regard to the very sudden death of one of our colleagues. Dr. Barr was apparently in the best of health yesterday and last night. He spent the evening in the society of some members on this side of the House apparently in the best of health and spirits. During the forenoon it was found that he had passed away. I desire to add my word of appreciation with respect to his services as a public man. He had had a very long career in public life. He was conscientious, earnest and indefatigable in the performance of his public duties, and feel sure that every member of the House will join most sincerely and earnestly in the expression of sympathy which has just fallen from the lips of the Prime Minister.

CRIMINAL CODE—AMENDMENT.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 13) respecting injuries to persons due to motor vehicles.

Sir WILFRID LAURIER. Explain.

Mr. LEWIS. Mr. Speaker, this Bill has reference to damage done on the highway by a vehicle which was not known at the time the Criminal Code was instituted. This is a vehicle which is under the complete control of the man who is managing it—the chauffeur—and in this respect differs from a vehicle drawn by horses. I refer to motor vehicles. There is a precedent for the Bill I am now asking leave to introduce. I have a report here in which it is stated that the British parliament is alarmed at the destruction of life and at the damage to roads occasioned by motor vehicles. As part of the explanation of this Bill I would mention that while there was not one passenger killed on the railways of the United Kingdom in the years 1907 or 1908, there were 101 killed in New York alone by motor vehicles, and there were 5,616 motor accidents in the United Kingdom 248 of which were fatal. I have some expressions of opinions here from the newspapers with regard to this Bill and I shall hand them into 'Hansard' without taking up the time of the House in reading them.

Montreal Daily 'Witness,' Wednesday, May 5, 1909.

Highway Assault.

We have decisions by courts of competent jurisdiction that the person on foot has the right of way, at least upon recognized crossings. This is common law and common sense. As things stand the motor car is on the same level as the horse and vehicle before the law, but there is an essential difference; when a horse runs away there is some excuse for the frightened animal. The machine is guided in all its motions by human hands. The driver of it is, therefore, with few exceptions—for machines have been known to 'run amuck'—responsible for its conduct.

Toronto 'Saturday Night,' May 15, 1909.

Take warning, ye motorists. Get over the excessive speed habit. Be alive to the rights of the other fellow. Put yourself in the place of the farmer for a few moments. Look the problem square in the face from his view point, and then see if you do not curse the automobile speed fiend, as the farmer now curses him.

Big sentence for motorist—Gets from 1 to 20 years and $500 fine for killing child.

Seattle, Wash., June 14.—Guy C. Stratton, a prominent lumberman, whom a jury convicted of manslaughter on the charge of having run over and killed 7-year-old Henrietta Johnson, while speeding his automobile, has been sentenced by Judge Frater, of the Superior Court, to an intermediate term of from one to twenty years in the state penitentiary, and to pay a fine of $500.

This is the first conviction for manslaughter under the provision of the state automobile law. The defence gave notice of appeal.

The 'Globe,' Toronto, Wednesday, October 20, 1909.

The British parliament is considering the advisability of building special tracks for motor vehicles and separating the two kinds of road traffic. Roads constructed for ordinary vehicles are destroyed by the automobiles, and the two kinds of traffic require radically different methods of road building.

Confiscate the cars of wicked motorists—Duke of Northumberland advocates this plan—keep them for, say, six months.

London, Nov. 14.—I do not believe that you will ever get over the difficulties unless you have, for certain definite offences, the right to confiscate the car for so many months. The speaker was the Duke of Northumberland, and, in view of the road casualties we have again to record this week, his Grace's remarks would seem to have the fullest justification.

Clinton 'News-Record,' June 3, 1909—The Auto question not yet settled.

Seventy-seven persons were killed by automobiles in New York alone during the past twelve months.

The cause of many of these killings is found in the reckless driving of high-powered engines through crowded thoroughfares by men intoxicated either with the speed of motion or in the ordinary way. Women, children and the aged should be free to go and come without fear of being run down by an engine capable of travelling fifty miles an hour, and which may be in the hands of a drunken driver.—Sun.

The Auto Nuisance in England.

It is not only in Ontario rural districts and villages that the auto has made a nuisance of itself. The same thing has occurred in England. As a result a petition to the Queen is now being signed for presentation by the women of English villages in the following terms:—

'We women of England humbly beseech your Majesty to help us to get some relief from the motor cars. We are sure Your Majesty cannot know how much we suffer from them. They have made our lives a misery. Our children are always in danger, our things are ruined by the dust, we cannot open our windows, our rest is spoiled by the noise all night. If they could be made to go slow through the villages it would be a great thing; but we are only poor people, and the great majority of those who use motor cars take no account of us. We do not know what to do, so we appeal to Your Majesty to use your great influence on our behalf.'

The 'Huron Expositor,' Seaforth, Friday, July 23, 1909.

The automobile, which is becoming more common every day, is still a terror to many travellers on the public highways with horse vehicles. Some of those in charge of these machines are commendably careful and considerate, and with such there is not much danger. Others, however, are just as reckless and inconsiderate and evidently seem to care little how much trouble or danger they occasion. These latter should be sharply looked after and severely punished. We heartily agree with the Montreal 'Star' when it says: If the owners and drivers of automobiles will not observe the common decencies of life while they are on the public roads, then the community must treat them like the dangerous criminals they make themselves, and let them see that the resources of society are not yet exhausted in dealing with men who take their pleasure at other men's peril. We would arrest and send to prison a reckless fool who should fire a rifle down a public highway upon which vehicles and pedestrians might easily be, and there is no reason why we should deal more tenderly with those who charge down these same peopled highways with immense cars.

Motion agreed to, and Bill read the first time.

FIRST READING.

Bill (No. 14) respecting offensive weapons and capital offences.—Mr. Lewis.

CANADA SHIPPING ACT—AMENDMENT.

Mr. J. H. SINCLAIR (Guysboro) moved for leave to introduce Bill (No. 15) to amend the Canada Shipping Act.

Some hon. MEMBERS. Explain.

Mr. SINCLAIR. The purpose of this Bill is to avoid the unnecessary inspection of Canadian ships. Under the present regulations Canadian ships are practically subject to two inspections each year. A ship has to be inspected by Lloyds' inspector in order to obtain qualification for insurance, and when she arrives in a Canadian port she is also subject to inspection by the Canadian government inspector. In England the Board of Trade accepts Lloyd's inspection as quite sufficient. Everybody knows that Lloyd's inspection is the best inspection in the world and that a second inspection is absolutely unnecessary if the ship holds a certificate from Lloyd's. This inspection is an expensive piece of business for the owner of the ship. It means the cooling down of the boilers, the cleaning out of the hold, the taking the coal out of the bunkers; it means that the ship may be several days in the dock, and it often costs thousands of dollars. As Lloyd's inspection is accepted by the British Board of Trade, and Great Britain being the greatest shipping country in the world, I see no reason whatever why Lloyd's inspection should not be accepted by the Canadan government. My Bill provides that a ship holding Lloyd's certificate of inspection, shall not during that year be subject to a second inspection by Canadian officials when she arrives in a Canadian port.

Motion agreed to, and Bill read the first time.

SEED CONTROL ACT.

Hon. SYDNEY FISHER (Minister of Agriculture) moved for leave to introduce Bill (No. 16) to amend the Seed Control Act.

Some Hon. MEMBERS. Explain.

Mr. FISHER. The use of alfalfa has become so general in the country that it is thought well to include alfalfa seed amongst the seeds to be affected by this Act. The Bill also provides for the inclusion of certain other seeds. There are some minor amendments to facilitate the working of the Act.

Motion agreed to, and Bill read the first time.

INTERCOLONIAL RAILWAY CONNECTING LINES.

Hon. G. P. GRAHAM (Minister of Railways) moved for leave to introduce Bill (No. 17) to authorize the government of Canada to acquire by lease lines of railways connecting with the government railways.

Mr. R. L. BORDEN. Explain.

Mr. GRAHAM. The object of this Bill, in short, is to give the minister power to enter into negotiations to lease any line or lines or part of a line that may be thought by the board of management to be of benefit to the Intercolonial railway. One provision of the Bill is that such railway must be leased on the report of the managing board, that it must be certified to by the chief engineer of the government as being in a safe and proper condition for operation, and that no such lease shall be operative until ratified by parliament?

Mr. J. D. REID. Do I understand the minister to say that he can enter into a lease and practically purchase a railway without first submitting the lease for the approval of parliament?

Mr. GRAHAM. Oh, no; the lease does not become operative until it is ratified by parliament.

Mr. J. D. REID. That is better.

Motion agreed to, and Bill read the first time.

BANK ACT—AMENDMENT.

Mr. S. SHARPE (North Ontario) moved for leave to introduce Bill (No. 18) to amend the Bank Act.

Mr. FIELDING. Explain.

Mr. S. SHARPE. The object of the Bill is to provide that all stock on which no dividend has been claimed for upwards of six years shall be transferred to the government as trustees; that dividends on that stock which have not been paid for upwards of six years shall also be transferred to the government as trustees, and that balances remaining unclaimed in a chartered bank for upwards of six years shall be transferred to the government as trustees. The Bill also provides that should any person afterwards establish a legal right to these balances or to the stock the government will pay the accumulated interest at the rate of three per cent.

Motion agreed to, and Bill read the first time.

GOVERNMENT RAILWAY EMPLOYEES' PROVIDENT FUND.

Hon. GEO. P. GRAHAM moved for leave to introduce Bill (No. 19) to amend the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act. He said: the object of this Bill is to reduce the time of service required before an employee of either of these lines is entitled to be placed on the provident fund. During the past few months one of the strongest arguments made in favour of certain employees who have been dropped from the service has been that they were dropped just a short time before they would have been permitted to be placed on the provident fund, thus losing what they had paid in. This Bill is to obviate what might in a measure be an injustice to these old employees.

Motion agreed to, and Bill read the first time.

THE IMPERIAL DEFENCE CONGRESS.

Hon. GEO. E. FOSTER (North Toronto). Before the orders of the day are called, I would like to ask the Prime Minister one or two questions with reference to the papers brought down as to the conference in London. In looking them over, it seems to me that they are incomplete. For instance, I was very anxious to find out what was the position taken by New Zealand and the position taken by Australia in reference to the provision that should be made for aiding in the imperial defence. I find nothing in the papers which gives any information as to that. The other day the Prime Minister spoke of what New Zealand and Australia were going to do and read an article from a newspaper. That, he knows is not the best kind of information for us to go on. I supposed that when these papers came down, we would see accurately, as we see in the case of Canada, what Australia and New Zealand proposed to do. It struck me that this paper was prepared for consumption in Canada, and therefore that the parts relating to Australia and New Zealand were not included. I may be wrong in that. The other point on which I would like to ask for further information, if it can be brought down, is this: I find that there are in that report allusions to the admiralty trying to meet, as far as they could, the wishes of Canada; but I do not find in these papers any expression of what the wishes of Canada were; and that is somewhat vital, I think, to an understand-

ing of the whole question. Are there not some lacunas which might be filled up?

Sir WILFRID LAURIER. All the papers, as far as I know, and I think I am correctly informed, have been brought down, with the exception of the deliberations of the imperial conference So far as we are concerned, we have no objection to these being brought down, but I understand that objections come from other parties. The deliberations of the imperial conference, comprising all the self-governing dominions—New Zealand, Australia, South Africa and Canada—have not been given to the public.

Mr. FOSTER. Then Australia and New Zealand will get information from the papers laid on the tables of their houses which we have not got?

Sir WILFRID LAURIER. No. There was a separate conference with the admiralty by Australia and one by New Zealand.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). We did not get permission to bring down the papers with regard to Australia and New Zealand. I suppose we might inquire from the imperial authorities whether there would be any objection to bringing down those papers. The papers brought down are those which have been sent here by the imperial authorities. The proceedings of the imperial conference and the papers laid before the conference are secret, and cannot be brought down.

Mr. R. L. BORDEN. I understood that the papers already brought down were the proceedings of the conference. By the word proceedings, does the hon. gentleman mean the oral deliberations of the conference?

Sir WILFRID LAURIER. Yes.

Mr. R. L. BORDEN. These are not before us at all?

Sir WILFRID LAURIER. No.

Mr. R. L. BORDEN. The only things before us are some written documents put in on one side and on the other?

Mr. BRODEUR. I may explain more fully the situation. There were, of course, in the conference some discussions, which, as may be seen from the papers, were private; and at the close of the conference it was decided that they should not be published, but should be kept secret. As a result of that decision, the papers laid before the conference and also the proceedings of the conference have not been brought down. It was understood that a statement should be made by the Prime Minister of England and a synopsis or précis of the documents would be prepared by the Colonial Office, and this has been brought down.

Mr. FOSTER. If I may be allowed, I would like to get this matter clear. It seems to me that in these papers we get the general conclusions of the conference, and then we get the results of the modification of the general plan laid down as between Canada and the admiralty. It seems to me that New Zealand and Australia will look for, and will undoubtedly get, the same laid upon the tables of their houses of parliament. They are not secret documents. It is only supposed that we do not want to know anything about them, and therefore they were not included in what was sent to Canada. But it does seem to me that, as we are all colonies together, it is very important for us to know what position New Zealand and Australia have taken, and there would be not the slightest objection, I am sure, to our getting that information.

Sir WILFRID LAURIER. Let me explain again that the conference was between the imperial government and the governments of the self-governing dominions. It was decided that the oral discussions should not be brought down. Then, there was a separate conference between the admiralty and Canada and offers between the admiralty and the other colonies. We brought down the papers relating to the conference with Canada. I understand that what my hon. friend wants is the papers relating to the conferences with Australia and New Zealand. We have no objection, and we will at once wire for them.

Mr. FOSTER. Then, the recommendations of the Canadian government or the expression of their wishes, are entirely in the hands of the government here. Have they any objection to bringing these down?

Mr. BRODEUR. I suppose it was in the discussion which took place at the conference.

Mr. FOSTER. It might have been a memorandum.

Mr. BRODEUR. No, there was no memorandum prepared by the Canadian representatives. The only thing was some wishes which were expressed in the discussions before the conference.

Mr. J. D. REID. From the return brought down, it is quite evident that the government have their scheme already prepared. Is it the intention to bring the Bill down at an early date or to hold it over until after the holidays?

Sir WILFRID LAURIER. We intend to bring it down at an early date.

Mr. R. L. BORDEN. There is a good deal of inquiry for the report. I do not know

how many copies have been prepared, but I would suggest that a sufficient number of copies should be prepared to have it generally available.

Sir WILFRID LAURIER. I think two thousand copies have been prepared, but I shall speak to the Secretary of State about that.

REPORT PRESENTED.

Supplementary report of the International Waterways Commission, 1909.—Sir Wilfrid Laurier.

PROTECTION OF VEGETATION FROM PESTS.

House in Committee on the following proposed resolution :

Resolved, that it is expedient to pass an Act to prevent the introduction or spreading of insects, pests and diseases destructive to vegetation; providing for the granting of compensation for matter destroyed for this purpose, the appointment of inspectors for the enforcement of the Act, and penalties for its contravention.—Mr. Fisher.

Hon. SYDNEY FISHER (Minister of Agriculture). The object of the Bill to be founded on this resolution is to provide against the introduction into Canada of various insect pests which are prevalent in other countries but from which, so far, we in Canada have been fortunately free. It is also intended to provide that where insect pests or infectious diseases exist in Canada precautions may be taken to prevent their spread. The House will remember that we have in Canada an Act known as the San José Scale Act, which was adopted by this parliament some seven or eight years ago for the purpose of protecting this country against the introduction of that well known pest. That Act was aimed simply at the introduction of the pest from abroad and provision was made at first for the absolute prohibition of the importation of vegetable matter, trees or shrubs, from countries infested with the San José scale. Afterwards provision was made for the importation of such things from those countries under conditions which would still protect this country. That Act has worked very well and from its inception until to-day we have been able to trace no instance of the existence of San José scale in Canada to an importation from abroad. Unfortunately before the Act was passed there was a little San José scale in Canada.

Last spring we were informed of the existence of an insect pest in France commonly called the brown tailed moth. We were informed that shipments of nursery stock were coming to this country which were infested with the eggs of that very injurious insect. We had no power to deal with the matter. We, however, took what precautions we could and owing to the information obtained from the Customs and from shippers we were able to find out where the importations of nursery stock from France were coming in, and with the co-operation of importers we were able to examine something like 1,500,000 stock obtained from France and on that we found a very considerable number of the eggs of that insect, probably, in the aggregate, millions of eggs, and these, with the concurrence and the forbearance of the owners, we were able to destroy. There was, however, at first, a very decided objection on the part of the importers to having their stock examined, delayed or destroyed. I must say that they acted with great consideration and public spirit after they were impressed with the dangers existing and the importance of the work. Still, at any time any one of those importers would have been quite within his rights in refusing to permit the action of our entomologists.

Under these circumstances it seemed necessary to provide a further safeguard to the orchardists and fruit growers of Canada and to the people generally who have property that might be injured in this way. I therefore examined the cognate legislation in other countries and in the provinces of Canada. I found that in British Columbia they have an Act in very good form which has been in operation for some time, I think, very successfully. In Ontario they have two Acts, one aimed directly at the San José scale and another more general Act which provides for certain precautions or regulations but comparatively little advantage has been taken of these Acts. In Nova Scotia there is an Act on a very small scale. In many of the American states there are Acts of this character, but I do not think there is any Federal law in the United States. They have experienced difficulties there owing to the Acts being State and not Federal Acts. In Great Britain a good many years ago, I think in 1887, an Act was passed to protect Great Britain against the ravages of the potato beetle, and quite recently, I think in 1907, a general Act very much of the same character as I am now proposing was passed in Great Britain to protect that country against the dangers from which I am now proposing to try to protect Canada. The present Act follows largely the lines of the British Act, giving power to the department to make investigations and to the Governor in Council to pass regulations dealing with the niceties of the case. Hon. gentlemen who are familiar with entomology or the insect diseases and pests which attack our agricultural products well know that the character of the pests varies greatly and therefore the treatment that would be required to guard against one pest would be quite different from that required

in the case of another, and consequently the regulations dealing with any particular danger or menace would have to vary according to the character of the danger. Under these circumstances I find it impossible to embody in the Act the details of regulations. I have therefore found it necessary, as it has been found necessary in Great Britain and other countries where Acts of this kind are on the statute-book, to ask for authority to deal with each individual outbreak or menace by regulation made by order in council at the time, without waiting for special legislation in regard to it. This is the substance of the Act and the reason for it; I can give more detailed explanations when the Bill itself is under consideration.

Mr. MARTIN BURRELL. I understand that the Minister of Agriculture (Mr. Fisher) is aiming at two things—first the prevention of the import of these pests and the other power to deal with these pests within the limits of the Dominion. Do I understand that he will specify the pests under order in council?

Mr. FISHER. Yes.

Mr. BURRELL. Of course, the hon. minister is thoroughly familiar with the various legislative and administrative efforts in this same direction which have been made by the provinces. I take it that he agrees that the provincial and Dominion powers in these matters are concurrent. And I suppose he has tried to avoid any clash with the legislation already existing and the administrative steps already taken by the provinces to safeguard the interests of their own people in this matter. May I suggest that those interested in the various provinces be given an opportunity to examine the details of the Bill before it becomes law.

Mr. J. E. ARMSTRONG. I would ask the Minister of Agriculture whether this Bill would conflict with the measures passed by the local legislatures of any of the provinces?

Mr. FISHER. There is no such intention. I said, in the remarks I have just made, that there were laws on this subject in British Columbia and Ontario. I shall be very sorry indeed to have any clash with the working of those Acts. There is no doubt that, under our constitution, there is concurrent jurisdiction between the provinces and the Dominion on these subjects And there is certain work which can be done better under a Dominion law, because that law applies to all the provinces, whereas each provincial Act covers only the territory of the province by whose legislature it is passed. In the working of this Act, I should be disposed to be very careful not to overlook the operation of any provincial Act and certainly not to clash with anything in those Acts that tends to the accomplishment of the general object sought. I think that in every province the people will be quite aware of the danger of the spread of pests of this kind from one province to another, which spread can only be dealt with by a federal law. I would say, in answer to the hon. member for Yale Cariboo (Mr. Burrell) that the Bill is ready, and I propose to introduce it to-day on the passage of this resolution. It can then be printed, and I will not proceed with it until members have had an opportunity to examine it, and, if necessary, to communicate with those whom they desire to consult concerning it. At the same time, I would like to have it pushed forward as rapidly as possible consistent with the public interest.

Mr. ARMSTRONG. Why not add a clause dealing with foul seeds?

Mr. FISHER. That is another Act altogether, the Seed Control Act.

Resolution reported, read the first and second times and agreed to.

Mr. FISHER moved for leave to introduce Bill (No. 20) to prevent the introduction or spreading of insects, pests and diseases destructive to vegetation.

Motion agreed to, and Bill read the first time.

SUPPLY—EXPENDITURE ON CIVIL GOVERNMENT.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Supply.

Hon. GEO. E. FOSTER (North Toronto). Before you leave the Chair, Mr. Speaker, I wish to make a few remarks on the subject of the civil government expenses, which, I understand, it is proposed to take up to-day. I was talking not long ago with a very intelligent man, who takes as deep and continuous an interest in the public affairs of this country, probably, as any other man in it, and, in looking over some figures of our expenditures, or rather estimates of expenditure as set forth in the main estimates, and contrasting them with the expenditures of previous years, he made the statement that he would not have believed it to be true were it not before him in a most incontrovertible way. That is, he expressed his utter astonishment that expenditures in these lines had gone to the limit to which they have. I believe that this is by no means an isolated case. I believe that the people of this country, for whatever reason, have not any adequate idea, in the first place, of the extraordinary large dimensions to which these expenditures have grown, or in the second place of the extraordinarily rapid rate at which these expen-

ditures have increased. It may be that the members of His Majesty's opposition are at fault for not having put these matters before the people. Certainly, some things are different now from what thew were before. While we were in government and the party on that side were in opposition, every Liberal and Grit paper, large and small, printed repeatedly in large letters, kept constantly before the people, the increasing expenditures of the country, until, by daily repetition, by almost hourly reveiw, the people had it impressed upon them that there was a dangerously large expenditure and a dangerously rapid increase in that expenditure. But that large and influential portion of the press is to-day absolutely, or almost absolutely, silent with regard to the growing expenditure of Canada. There are no more large headlines in these papers, no more reiterated expressions in large figures and bold-faced type warning the people of danger, notwithstanding the rapid increase of expenditure that is taking place. Our own press—I mean by that the press that generally voices the opinion of the Liberal-Conservative party may have failed in this respect, as we as members of this House may have failed, and that may be a good reason why the country as a whole is not alarmed.

The great convention of 1893 made a unanimous proclamation that they viewed with alarm the large and growing expenditures of the country, and the rapidly increasing debt of the country. To-day the people do not seem to be alarmed. That condition is not prevalent in the country, it seems, and my view of it is that the people, in a time of comparative prosperity and of large dealings, have had their minds more upon their own business than upon the business transacted under the administration of the Dominion government, and consequently have not taken time to inform themselves with respect to this matter. Well, I think it is the part of His Majesty's opposition in this House, partly, outside the House more than in it, and of the press which is favourable to our view of the question, to see to it that these expenditures are brought before the people, that they are understood by the people, and then, if the people absolutely desire that that shall be the rule, why the people are the arbiters in the final decision of the question. And so I am going to take up this matter of civil government expenditures, and just for a moment place two or three facts before the House in the hope that they will get to the country, that they may form an impression, and that at least the minds of the people shall be directed to what is going on so that they may form their own conclusions whether they consider it to be proper expenditure or not.

When these gentlemen sitting opposite were in opposition, there was nothing about which they thundered and volleyed with more persistence and vehemence than the increase and quantity of the expenditures upon the different services of the country. If there was one subject more than another to which they paid especial attention, it was the item of civil government expenditures. They talked about the number of people that filled the corridors and were placed in the offices in the city of Ottawa; they talked about the extravagant salaries that were paid; they talked about the useless men and women that were employed, and they made it a strong point that if they came into power they would reduce this civil government expenditure, they would root out the useless officers, and they would put in just a sufficient number to carry on the work, and that they would effect notable economies.

Now what has happened? In 1883-4, civil government cost this country $1,084,417; thirteen years afterwards, in 1895-6, when the Liberal-Conservative government went out of power, civil government cost this country $1,396,628, an increase of $312,211, or a little over thirty per cent; thirteen years afterwards, in 1907-8, civil government cost this country $2,088,416, an increase of $691,788, or a little over fifty per cent. In 1908-9, civil government cost $3,283,265; in 1909-10, it cost, according to the estimates, $4,537,074; in 1910-11, civil government costs according to the estimates, $4,703,707.

Now I say it is absolutely startling that on this hill, and surrounding it, for civil government alone, nearly $5,000,000 is taken out of the taxpayer's contribution that he has to lay before the government each year for the expenditures of this country. No man can convince me that it is necessary that $5,000,000, or anything near it, should be spent in order to get a fair and effective service in the offices and departments here in Ottawa. It is absolutely unthinkable that such is necessary, or that such ought to be the case.

Now, I want to be absolutely fair. In 1908-9 there were seven months in which the civil government estimates bulked larger, because a number of those that had been employed and paid out of contingencies in the different departments were brought into the civil service, and after September 1, 1908, went then into the civil government list. That makes it somewhat larger. But I purposely took the year before that, when no such translation had taken place, and showed that at that time there had been the large increase up to $2,088,416, while from 1908-9 when the Civil Service Act was in force throughout the whole year, the increase is a startling one. In 1908-9, $3,283,000; in 1909-10, under the same conditions, $4,538,000; in 1910-11, under the same conditions, $4,703,407, an

increase in this last year of pretty nearly $160,000.

Now that is a statement which I think ought to make even ministers thoughtful; it ought to make every good citizen who believes in economical administration thoughtful. But when you take into consideration with that the increase of the expenditures in every other department, brought up last year to $127,000,000, whereas in 1896 it was about $41,000,000, those things all put together, I think, ought to give pause to the business people of this country, and to every good citizen, and at least ought to set him thinking.

Here is a list of civil government expenditures as provided for in the estimates for 1910-11:

CIVIL GOVERNMENT EXPENDITURES.

Estimates for 1910-1911

		$	$
Gov. Gen's. Secty.... ..	14	20,000	40,600
Privy Council..	20	35,137	7,400
Justice..	53	103,498	11,000
Militia..	98	127,000	10,000

In all.....			4,436,337
Add Ministers and Governors..			267,066
Grand total.			$4,703,403

I do not think that needs any comment

Mr. FOSTER.

and I do not wish to add anything in the way of comment except to make a plain presentment of this one single branch of government expenditure. Take into account the necessary increase owing to increased business, take into account, if you like, the increased salaries which came into vogue in 1908, take into account the progress of the country and when you have done all that there still is a mighty big margin of, I believe, absolutely unnecessary and wasteful expenditure which is taking place under the shadow of this parliament on the hill at Ottawa in the departments. There is a way by which this may be tested. I challenge the government to test it. They have appointed their own Civil Service Commission, men of their own choosing; there is authority in the Civil Service Act to authorize the Civil Service Commission to make an inquiry into the different departments and report as to whether they are sufficiently manned, or over-manned and whether the services rendered are equal to the salaries that are paid. This then can be tested. Let the ministry avail themselves of the power which they have in the Act and at least give to the people in the country, even though it be through officers appointed by themselves and consequently supposed to be favourable to themselves, a little chance to know whether or not they are paying too much for the work which goes on on the hill at Ottawa.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, I do not think that my hon. friend (Mr. Foster) ever need accuse himself of any lack of duty in the matter of calling attention to the increase in the expenditures of this government. I want to do him the justice, if it be justice, to say that in every session when he has been amongst us he has discharged that duty. The only difference that I can recall is that in previous sessions my hon. friend has deferred his arraignment until the close of the session while this time he has been good enough to give it to us at the beginning, which perhaps will make for the expediting of public business and I have no fault to find with him on that score. My hon. friend, while referring particularly to the civil service has generalized with regard to the increased expenditure of the country. I would only remind him that some changes have come over the condition of the country during the period to which he has referred. He refers to the expenditure on the civil service in 1883 and then he points out what the increase had been down to 1895. He says that it had been some thirty per cent. Then he compares it with the very large increase of recent years. Well, we cannot very well challenge the accuracy of my hon. friend's figures, but it appears to me that

there are some other things which he ought fairly to have introduced into the discussion.

Now, the business of the country may be measured in various ways. The revenue of the country is one measure, and increased revenue means increased cost of collection. Increased revenue is usually followed by increased expenditure and increased expenditure involves increased cost of management in every department of the government. Had my hon. friend looked at it from that point of view he would be obliged to tell us that in the year ending the 30th June, 1883, the revenue of the country was thirty-five and three-quarter millions, that in the year ending the 30th June, 1905, the revenue had actually fallen short and the country was making no progress. It was a period of comparative stagnation, and so for the year ending the 30th June, 1895, the revenue was less that $34,000,000 and the highest revenue of any of the years my hon. friend cited was about $38,000,000. If my hon. friend is going to make comparison as between two periods, one period showing stagnation all along the line, a period when the Northwest territories were not being filled as they are to-day, a period when little or no growth was taking place in Canada, then my hon. friend should have told us of these conditions and compared them with the prosperous conditions of the country when the revenue has grown to more than $96,000,000. My hon. friend (Mr. Fisher) reminds me that according to the hon. gentleman's own statement his government increased the expenditure of the civil service more than 30 per cent at a time when the country was in a condition of stagnation. While it is true that we have increased the expenditure we have increased it only to meet the expansion of the business of the country. I am quite sure that upon careful examination it will be found that the expenditure has only kept pace with the growing needs of Canada. Then, turning from the civil service the hon. gentleman made reference to the general expenditure, I would remind him that while he and hon. gentlemen opposite are ready to condemn the increased expenditure generally, yet when you come to deal with matters of detail, with very rare exceptions the cry of gentlemen opposite is not for less expenditure but for more. They are very human on that side of the House. Some hon. gentleman who sits on the Speaker's left, goes home to his constituents and he discovers that in this growing time the post office accommodation in his town is insufficient, and he comes back to this House and he is quite as ready as any Liberal to say it is time that a new post office should be built.

Mr. SCHAFFNER. They cannot get it though.

Mr. FIELDING. They get it in many cases. Never was there a time in the history of this parliament when the opposition were so well treated in the matter of public expenditures as they are to-day. Why, Sir, it is a matter of notoriety that in the days when the Conservatives were in power the counties which did not return supporters to them could get little or nothing. We know that by our experiences in the eastern provinces. But, in the estimates now on the table of the House it will be found that constituencies that do not support the government are treated most generously and liberally, and that the needs of the public are considered without reference to the question of politics at all. There is only one way to consider the question of the expenditures of civil government and that is to take each department on its own merits. The hon. gentleman (Mr. Foster) speaks of the enormous increase that has been made to the staff of the Interior Department. We grant there has been an increase there but we say that it measures the expansion of Canada in the northwest. Would the hon. gentleman (Mr. Foster) compare the cost of managing the Interior Department to-day, with its abundant revenue, with the tremendous immigration coming into the country; would he compare it for one moment with the Department of the Interior in the days of stagnation when the Conservatives were in power? If he looks at it in that light I am sure that his sense of fairness will compel him to admit that there is just cause for the very large increase in the public expenditure in relaton to the civil service. I do not know the details respecting every department of government; but I am not prepared to say that the hon. gentleman can find of no instance where a department is over-manned. There are many departments in which you have old officials, men who have served the country well in their day and generation, but who to-day are not able to do very much work. We, from a sense of fairness and in appreciation of the services rendered by these old employees retain them in the service when we are not able to get as much work out of them as we would out of younger men. Probably my hon. friend could find that here and there he could economize by getting rid of those old and faithful servants, but I think the hon. gentleman himself would rather bear the responsibility of some enlargement of the expenditure in this respect than treat these old officials in a harsh way. There is another thought, and that is that the hon. gentlemen on the opposite side of the House are generally disposed to increase the expenditure on the civil service rather than to reduce it, because we frequently

have had complaints from them that the public officials are not sufficiently paid, and I know of no proposal to increase the salaries of civil servants at Ottawa that was not warmly advocated by the hon. gentleman (Mr. Foster) or by those who sit near him. It is rather too late to arraign the government for this large expenditure on the civil service, unless we are prepared to take due account of the tremendous change that has come over Canada; of the enormously increased public business, of the great increase in our revenue, and the thousand and one things which devolve upon the government to-day and which did not devolve upon the government of some few years since. When the people take into consideration not merely the increased expenditure but the increased business and the increased prosperity of Canada, the conclusion I believe will be reached by them that we have been simply keeping pace with the growth of the country.

Motion agreed to, and the House went into Committee of Supply.

Department of Agriculture—Salaries (including George F. O'Halloran) $6,000, $359,175.

Mr. ARMSTRONG. Does this include payment for those who will be engaged in the census?

Mr. FISHER. It includes an additional vote for the extra labour entailed in Ottawa in the coming year. I will possibly have to get an amendment of the Civil Service Act to enable me to employ extra help of a temporary character in the city of Ottawa. The extra work on the census will not commence in the city of Ottawa until well on in the coming fiscal year. This, of course, does not include any work done outside the city of Ottawa. Under the present Civil Service Act I cannot employ temporary clerks for work of that kind for more than a few months in the year. When the staff comes to be formed for the compilation of the census, it may be requisite to employ a number of extra clerks in the city of Ottawa for one or two years. To enable me to do this, there will have to be an amendment made to the Civil Service Act or to the Census Act.

Mr. FOSTER. I notice that there is provided for here an additional clerk in the first division, subdivision A.

Mr. FISHER. In the organization of the department I find that I shall have to have certain work in the department, which is increasing very materially, done under an officer who will have responsibilities and duties which will justify his being placed in that position.

Mr. FOSTER. What is the work?

Mr. FIELDING.

Mr. FISHER. First of all, dealing with the correspondence and other matters connected with the International Institute of Agriculture in Rome, obtaining information regarding Canada for that institute, and receiving and dealing with the information procured from that institute for the service of the people of this country. It is proposed that that same officer shall have charge of the correspondence of the department, which is at present under the special charge of the office of the deputy minister. There is also the question of the distribution of the hundreds of thousands of documents sent out from the department. These are now being sent out from the different branches, and there is a duplication, which is unnecessary and adds to the expense. I think one officer ought to have charge of that. There are also other details which have not been worked out.

Mr. FOSTER. It does not seem to me that the minister has made a very good case for having a $2,800 to $4,000 man for that work. What is it that we send to or get from the International Association? I suppose that it is certain kinds of information that all the countries connected with it send. I notice that generally some person goes to it, and his expenses are paid by the country. What would it be necessary for this man to do with reference to that?

Mr. FISHER. The object of the institute is to collect information, chiefly on agricultural and statistical subjects, from the different countries which adhere to it, and file it in the office of the institute, so that it will be available to the various countries in a concise and complete form. That will be done in Rome by the staff there.

Mr. FOSTER. That you do not pay for?

Mr. FISHER. No. The information sent from Canada to Rome—all kinds of information with regard to statistics, the reports of various departments, the work of the different provinces, and the agricultural development of the country—has all to be prepared and sent forward. There has to be constant communication between the headquarters of the institute in Rome and this country.

Mr. FOSTER. It is statistical information?

Mr. FISHER. Largely statistical, but scattered through a very large number of publications in Canada, and obtained from many sources. As a matter of fact, the work in Rome is all done in the French language, while a great deal of this statistical information in Canada is obtained from English sources. The work is very considerable, much larger than I expected,

and it will no doubt increase in the future. At the same time, I think it is a necessary and very useful work, and we shall get a direct return in the information of the same character which we shall receive from other countries, and which, if we were not a member of the institute, we would not get. The work as yet has not been thoroughly established. We have not been receiving any information, although we have been sending large quantities of information. There is a great deal of correspondence, which comes to us altogether in the French language, and this has to be dealt with here by somebody who understands that language.

Mr. FOSTER. It is plain to me, from what the minister says, that any bright business man with an aptitude for figures, could gather and collate that information. It is not necessary to have a $4,000 man for that or for receiving the correspondence from Rome. It is not expert correspondence, but only clerical. If the minister desired to be economical, it seems to me that he could get a man to do that in a class lower than the highest class in the service. For instance, I think you could get a man in the class from $1,600 to $2,100 who would do that and do it excellently. A man who would know French would probably be of French descent. I do not think it is impossible to get a man at that price, but even if it was, could you not get one in the class from $2,100 to $2,800? Why should it be necessary to appoint a man of the very highest class who, within a few years, will be getting $4,000? It does not seem reasonable to me.

Mr. FISHER. My hon. friend minimizes both the value and the difficulties of this work and also ignores the other work that will be given into the charge of that officer. He will have other duties and will have to direct and control the lower officials in charge of the work. He will have a considerable staff under his guidance and under these circumstances it is right to appoint an officer of this class. It is true that in the course of time he will reach $4,000, the maximum of his class, but he will begin at $2,800.

Mr. ARMSTRONG. When will his information be before the House and will it be printed in English or in French?

Mr. FISHER. French is the official language of the institute, and I presume that anything that goes out from it will be in that language, but we would distribute the information in both the languages which are official in this country. At the general meeting of the institute in December I expect to hear that the organization has been completed. It has been in progress of creation during the year, and as soon as it is in thorough order the information ought to be gradually available to the different countries.

Mr. FOSTER. How large and how expensive will the staff under this officer be?

Mr. FISHER. For the particula work of the institute I do not know that he will require more than two or three, but, as I said, this is not the only work to be assigned to him. It is hoped that he will be able to do the general correspondence of the department and also a large work in the distribution of what I may call the literature of the department. We send out annually between half a million and three quarters of a million of documents from the department, and I have found difficulty and in some respects inefficiency, although I do not like to use such a harsh word, in the way in which at present these bulletins, reports and documents are sent out, emanating as they do from all the branches of the department. I want to bring this distribution under one office, and I propose to place that work in charge of this new officer. The work requires an officer of considerable standing and authority in the department.

Mr. FOSTER. Is it to be a promotion or a new officer?

Mr. FISHER. A promotion, the position will be filled by Mr. Doherty in the division below.

Mr. FOSTER. What salary is he now receiving?

Mr. FISHER. I think about $2,300.

Mr. FOSTER. And you propose to give him $2,800?

Mr. FISHER. He is raised to that position.

Mr. FOSTER. Would he not be able to do that work on $2,300? Would he be any less effective?

Mr. FISHER. I cannot say that he would be less effective, but at the same time he is not doing anything like as important work as he will be doing when placed in charge of this larger and more important work.

Mr. FOSTER. Is there no officer in that class now under whom the work could be placed?

Mr. FISHER. No.

Mr. FOSTER. And the Minister thinks Mr. Doherty would not be at all efficient if he did not get the rise?

Mr. FISHER. I think that the rise is a just recognition of the importance of the work.

Mr. FOSTER. What does the Minister expect to get from that institute? He has been airy and flying around, perhaps he would descend to particulars.

Mr. FISHER. I have explained on several occasions what we expect to get from the institute. In the first place, we will take our position among other nations whose interests in agriculture are large, and I am conceited enough to think that the interests of agriculture in Canada are very large. We will get information and give information to an organization of an international character which has been started for the purpose of acting as I have explained as a sort of receiving house for the agricultural information of the world and the redistributing of that agricultural information and statistical information in connection with the production of the world to all the countries taking part in the institute. That information will be of great value in more than one way. First of all, in a purely statistical way it will give information of the amounts of production in the different countries and the condition of the produce and crops. This information to a certain extent will be of use in dealing with the markets for these agricultural products. One of the chief aims of those who instituted this organization was to be able to get authoritative and accurate accounts of the crop production. At the present time there is no doubt that many of the reports that appear in the newspapers and even in some of the official statements of great corporations are tinged by a desire sometimes for personal gain, sometimes to make the market in regard to these great stable products of the world, and it is hoped that the reports of the International Institute will be of a sufficiently authoritative character to be able to counteract that kind of thing.

There is another direction in which it is hoped this institute may be of value. There is constantly going on to-day, in all the most important countries of the world, scientific research into agricultural problems. The discoveries resulting from that research in each country are made known to the people of that country. But the people of Canada know little of what is going on in other countries, and those of other countries do not know all that is going on in Canada. There will be an interchange of information with regard to all problems of agriculture, which to-day are more scientifically studied than they used to be years ago. By this institute the investigations made and practical work going on in all the great agricultural countries will be made of benefit to the farmers of Canada. Until the machinery is in working order and results are shown, I grant you, we should get no benefit from this expenditure. But when we have the organization and machinery to do the work, the results will be worth many times the cost.

Mr. ARMSTRONG. What is Canada's share of expense in Rome, and what is the total expense for this country?

Mr. FSHER. Our contribution to be expended in the institute at Rome is about 12,000 francs ($2,315) a year. Then we have an item in the Estimates, about $10,000 to provide for our representation there and for incidental expenses. This will be besides any expenditure under civil government in the department here for procuring this information. A good deal of information has come through the various documents already in existence. I could not tell my hon. friend (Mr. Armstrong) just what was spent last year. The item under consideration does not relate exactly to that. But I will have the facts ready for the hon. member when the item relating to that expenditure is before the committee.

Mr. ARMSTRONG. There will be some officials in addition to the expenditure here?

Mr. FISHER. At present, I am not asking for any addition to the staff of my office. There is a rearrangement of the staff as I have suggested. There are one or two vacancies in my civil government estimates here, some of which may have to be filled for the purpose of completing the staff. I could not say at the moment how many or which of them.

Mr. FOSTER. There is an additional clerk in the second division, subdivision 'A.'

Mr. FISHER. That is to provide for the promotion of one of the patent examiners. The younger examiners are in the lower division, and, when they render efficient service, they are promoted.

Mr. FOSTER. Who is to be promoted, and what is he receiving now?

Mr. FISHER. Mr. Bonnell. He is receiving $1,200. He was transferred from the Interior Department to mine at that salary.

Mr. FOSTER. And what salary will he receive?

Mr. FISHER. $1,600.

Mr. FOSTER. You are making an increase of $400?

Mr. FISHER. Yes. We try the patent examiners in the lower division; and if they prove satisfactory they are promoted to the other.

Mr. FOSTER. What experience has Mr. Bonnell had in the Patent Department?

Mr. FISHER. He was, I think, a draughtsman in the Topographical Branch of the Interior Department, and he was transferred to the Patent Branch because of education and special qualifications. He is a graduate of applied science of Toronto University and took a post-graduate course with the Westinghouse Electrical Manufacturing Company of Pittsburg. I may say that I appoint no patent examiners except those who have scientific degrees from one or the other of the universities.

Mr. FOSTER. He has only been there a few months. He received no pay from the Agricultural Department last year?

Mr. FISHER. He was transferred some time during last summer. He will be promoted in the ensuing year, after he has been a year in the department at this work.

Mr. FOSTER. Then, there are three less in the next division. One goes up from that division, I suppose?

Mr. FISHER. Yes. In the framing of the estimates last year, we included enough for one or two vacancies, thinking we would require the clerks. But we have stricken these out.

Mr. FOSTER. There is an extra in the third division.

Mr. FISHER. Yes, taking the place of one of those struck out.

Mr. FOSTER. And two extra in the next, subdivision 'B' of the third division.

Mr. FISHER. Yes, that is the lowest division. We have to make provision for bringing in clerks for the work of the department.

Mr. FOSTER. Are you making provision for two new clerks there?

Mr. FISHER. Yes.

Mr. FOSTER. The minister (Mr. Fisher) may have been present at a discussion in this House as to the advisability of employing too many of one family in the Civil Service. On page D—5 of the Auditor General's Report, about half the column is taken up with two family names. There are five Browns. These may or may not be of one family.

Mr. FISHER. I do not know myself, but my accountant tells me they do not.

Mr. FOSTER. Then there must be another family just above that, the family of Bradleys.

Mr. FISHER. Well, one of those left the department this year.

Mr. FOSTER. Why?

Mr. FISHER. Resigned.

Mr. FOSTER. So that leaves only two?

Mr. FISHER. Yes.

Mr. FOSTER. I just called the Minister's attention to it, because it looked to me like a family affair.

Mr. ARMSTRONG. Will the Minister give us the number of employees in each branch of his department, and the actual salaries paid?

Mr. FISHER. I do not think I have that here just now. The arrangement is in the subdivision under the Civil Service Rules. I can go over the list according to the branches, but I have not got that under my hand just now.

Mr. FOSTER. In the matter of travelling expenses, I see Mr. Doherty has $328 for travelling expenses—in what capacity does he travel?

Mr. FISHER. That is his travelling expenses as the minister's private secretary.

Mr. FOSTER. Did any good come of the Minister's going to Rome?

Mr. FISHER. Yes, I think so.

Mr. ARMSTRONG. What is the total cost to the country of the expedition to Rome?

Mr. FISHER. I can look that up in the Auditor General's Report. Of course my own travelling expenses come out of the Minister's travelling expenses in contingencies. I think it was somewhere in the neighbourhood of $500.

Mr. FOSTER. Much less than other men charge.

Contingencies, $13,500.

Mr. FOSTER. How much was spent in contingencies last year?

Mr. FISHER. We had the same vote, I suppose nearly all of it was spent. We calculate very closely.

Mr. FOSTER. In D—20 you appear to have spent $15,574. If you had the same vote you must have over expended.

Mr. FISHER. So far as I can make out, the explanation is that in the salaries at Ottawa there was an overdraft in consequence of a mistake in the time of the change of salaries from the outside service to the new arrangement of the inside service. I confess the explanation does not seem to me very clear. There is nothing in the Auditor General's Report which explains it.

Mr. FOSTER. The Minister might look into that.

Mr. FISHER. I will. I would like to draw attention to the fact that the whole increase of civil government in my department amounts to only $650.

Mr. FOSTER. What was the whole increase last year?

Mr. FISHER. Except for the change from the outside to the inside service about equal.

Mr. ARMSTRONG. Are any of the officials of the Experimental Farm carried under this head?

Mr. FISHER. Yes, all of them.

Mr. ARMSTRONG. How many officials?

Mr. FISHER. We would have to pick their names out from this list.

Mr. ARMSTRONG. Any increase in the number over last year?

Mr. FISHER. Yes, I have appointed two gentlemen to succeed the late Dr. Fletcher, one as an entomologist and the other as a botanist. Dr. Fletcher was both an entomologist and a botanist. The work has increased very much, and I did not think I could get one man qualified to do both classes of work. They get $2,100 each.

Mr. ARMSTRONG. Is it true that the Minister imported an expert from England?

Mr. FISHER. It is true that through the Civil Service Commission two gentlemen imported from England are now in those two offices. I applied to the Civil Service Commission to look into the recommendations and qualifications of the applicants, and they recommended these two men to me. I did it through the ordinary course of the Civil Service Commission.

Mr. ARMSTRONG. Had we no men in Canada sufficiently capable to fill those two positions, in the estimation of the Minister?

Mr. FISHER. The Minister did not express any opinion or estimation. There were between 20 and 30 applicants, some Canadians, some from the United States, some from Great Britain and some from India. We advertised for applications, and the applications, qualifications and everything of that kind were submitted to the Civil Service Commission, who, in conjunction with Dr. Saunders, examined the qualifications, and recommended these two men to me.

Mr. SCHAFFNER. I would like to ask the Minister if he believes that the very best work it is possible to do in the interest of the farming community is being done at the Experimental Farms. I am asking this question very much in earnest, because I live comparatively near the Experimental Farm in Brandon. The present government, I believe, did not have the locating of that farm, and I am of opinion that it is not in the proper place. An experimental farm, I understand, should have for its object the making of experiments in grains and other matters in connection with farming. If I am right in that conception, of an experimental farm, then I think that land should be selected for the purpose which is as nearly as possible like most of the land in that neighbourhood. I think that is a very fair conclusion. I do not think that ten or even five per cent of the land in Manitoba is similar to that upon which the experimental farm at Brandon is located.

Mr. FISHER. I do not wish to interrupt my hon. friend and I would like to hear what he has to say in regard to the introduction and location of experimental farms, but what we are dealing with at the present time is civil government. My hon. friend is quite within his rights if he wishes to discuss the question of experimental farms, it is a very interesting question and I would like to have it discussed at length at the proper time.

Mr. SCHAFFNER. I believe the question is as important as the minister states, but if he thinks it better not to continue this discussion I will leave it over until some other time when I hope we will have a thorough discussion as to the places where these farms are to be put.

Mr. FISHER. I invite the hon. gentleman to take up the discussion when the item for experimental farms is on because I am quite in sympathy with what he has said and I would be only too glad if we could have a thorough discussion on the question. I look upon this as one of the most important services in the government.

Mr. ARMSTRONG. Would the minister give us the names of the two men who were imported and the salaries they are receiving, and would he tell us whether he took into consideration the question as to whether it was possible to promote any men who were in these branches previous to the time when it was necessary for these positions to be filled?

Mr. FISHER. There was only one branch before, that of the entymologist and botanist. I consulted Dr. Saunders as to the possibility of a promotion. He said that he would recommend the obtaining of men who were thoroughly scientifically trained and that there was no such officer in the branch The gentleman who was appointed entymologist is Mr. Hewitt who comes from the University of Manchester where he was lecturing on entymologist and botany and who had the highest recommendations and diplomas possible to be obtained in that branch of science. I may also say he was intimately concerned in and was consulted about the drawing up of the law which was

passed not long ago in England to deal with insect pests. The gentleman who was appointed botanist is Mr. Gussow, originally a German, but who had been working in England, in the Kew Experimental gardens, with the famous Dr. Carruthers, head of the botanical work of the Department of Agriculture in England. He has the highest diplomas from German and British institutions, he has had scientific training and long experience in that kind of work and he carried with him recommendations from Dr. Carruthers of most positive and flattering character. They are to receive $2,100 a year each in subdivision B of the first division. I have an explanation in reply to the question which was asked by my hon. friend; I find that the item referred to which my hon. friend quotes at $15,000 was a part of the expenditure of the same year out of an appropriation in the estimates of $22,000 and not of $5,000.

Department of Inland Revenue—salaries, $100,912.50.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue). The only increases are statutory increases.

Mr. FOSTER. There is an extra clerk in the first division of subdivision B.

Mr. TEMPLEMAN. Yes, we have created an extra clerkship for the purpose of promoting the accountant, Mr. Campeau, who is at present at the maximum of the lower division and who is getting $2,800. We purpose recommending him for subdivision A of the first division.

Mr. FOSTER. Why is that done?

Mr. TEMPLEMAN. Mr. Campeau is an official of the department, having served 35 years, and he is a competent man. This is putting him on an equality with the accountants in the other departments.

Mr. FOSTER. Is there work for him to do?

Mr. TEMPLEMAN. Yes, the chief accountant in the Inland Revenue Department is a very important official of the department.

Mr. FOSTER. Is the accountant's branch made up of the seven clerks in the first division subdivision A and the first division, subdivision B?

Mr. TEMPLEMAN. They are not necessarily all in the accountant's branch. Mr Campeau is now in the first division, of subdivision B, and we propose to promote him. That will make one vacancy. We are creating one more clerkship for the purpose of promoting two clerks from subdivision A of the second division to subdivision B of the first division.

Mr. FOSTER. Who are being promoted?

Mr. TEMPLEMAN. We have not decided yet. We are creating the vacancies. We have considered that probably two of the best clerks at the head of the subdivision 'A' of the second division will receive the promotion. We are doing the same with regard to the next division. The vacancies created by these promotions will be filled by promotions from the lower division. In the second subdivision 'B' there is no change. There are four increases in the third division, subdivision A. This is simply making provision for promotion from the classes below under the Civil Service Act. There is an increase of two over the total employees of the department last year—44 instead of 42. The work of the department has been increasing. Last year we passed the Commercial Feeding Stuffs Act which comes into force the 1st of January and the Patent Medicine Act, which entailed additional work, and we are providing for two extra clerks if required. They are not yet appointed.

Mr. FOSTER. The minister has not given much information or reasons. He sets out with the idea that it is his duty to deplete the lower division and get the men into the higher division as quickly as possible. He has taken half from the third division, subdivision B, and put them into a higher division. There is something to be said in favour of promoting men, but if the minister is going to bestow all his activity in putting people up from lower divisions to higher divisions, he will soon have no lower divisions at all. What salaries are these four in the third division, whom he proposes to put into subdivision A, now getting? and what work are they doing?

Mr. TEMPLEMAN. There are no promotions from third division, subdivision A.

Mr. FOSTER. What about third division, subdivision B?

Mr. TEMPLEMAN. The hon. gentleman said that I was striving to promote from one division to another. Well, there are no promotions from third division, subdivision A, but I propose to move some from subdivision B to subdivision A of the third subdivision.

Mr. FOSTER. What are the reasons you are promoting these four?

Mr. TEMPLEMAN. These clerks are largely statistical and are doing very good work. They are now receiving the maximum of the salary in their class and are deserving of promotion. Several of them have been a long time in the service. It is proposed to promote them and give them the minimum salary of subdivision B, to be strictly in accord with the spirit and intention of the Act. They can only get

their promotions on the recommendation of the deputy minister and the approval of the commission.

Mr. FOSTER. Would the minister give me the names of the four who are to be promoted?

Mr. TEMPLEMAN. Their names are Yetts, Lyon, Allen and Lewis. They are the senior clerks in that division.

Mr. FOSTER. How long has Mr. Yetts been in the service?

Mr. TEMPLEMAN. Since 1895. Mr. Lewis came in on the reorganization of the service, but was employed temporarily before that for about two years. Mr. Allen has been in the service about two years and Mrs. Lyon about two years.

Mr. FOSTER. Will the minister kindly give me the names of the four left in possession, and state how long they have been in the service?

Mr. TEMPLEMAN. Arthur Robert came into the service in 1901, Ekins in 1907, Teevens in 1907 and Cantin in 1908.

Mr. FOSTER. If you are going to recompense those who have been longest in the service, Mr. Yetts, who came in in 1905, has a fair claim to promotion. You have promoted one who has been only two years doing temporary work, while Robert, who has been eight years in the service, and is I suppose at the maximum of his staff, is left. What is it debars him?

Mr. TEMPLEMAN. It is all a question of the ability of the clerks. Those I have named are, in the opinion of the deputy minister, the ones most efficient and most worthy of promotion at the present time. The whole matter of promotion is absolutely in the hands of the deputy minister, subject of course to the Civil Service Commission.

Mr. FOSTER. I do not know the clerks myself, and cannot pass any opinion on them. In that respect I suppose I am pretty much in the same position as the minister, who says he leaves all the promotions to his deputy. I am inclined to think that he has sometimes ideas of his own on the subject. If he left it entirely with the deputy, I am inclined to think that the proper ones would be apt to get promoted.

Department of Inland Revenue—contingencies, $8,000.

Mr. FOSTER. I see that B. C. Nicholas has an account of $609.30 for travelling expenses. Who is B. C. Nicholas?

Mr. TEMPLEMAN. He is my private secretary.

Mr. FOSTER. Does not the minister think it would be more the square deal not to shoulder off on Mr. Nicholas the charge of $609 for flaunting around the country when it is really the minister who has been doing it? The only justification for paying Mr. Nicholas $609 for travelling expenses is that he has been on some official business. Was he on some official business, or was he accompanying the minister?

Mr. TEMPLEMAN. My hon. friend will probably see in the Auditor General's Report a small charge for travelling expenses for the minister.

Mr. FOSTER. That is what I complain of. The minister is a larger man, and why does he not bear his own expenses?

Mr. TEMPLEMAN. I hope the hon. gentleman does not accuse me of charging to my private secretary a sum of money which I have expended—because that is the suggestion. The travelling expenses of my private secretary were incurred on a visit to Nova Scotia and on a visit to British Columbia, accompanying me in both cases. I assume that the difference in our expenses is due to the fact that, like my hon. friend, I travel on a pass while my private secretary does not.

Mr. HENDERSON. Does the minister not travel in a special private car, in which his private secretary would travel also, at no expense to the country beyond the cost of hauling the car? I would be surprised to find the minister travelling in an ordinary car such as we common mortals on this side of the House travel in. In the west during the last summer I did not find any of the ministers travelling otherwise than in a special car.

Mr. FISHER. You did not look very hard then.

Mr. HENDERSON. The Minister of Public Works (Mr. Pugsley) looks at me because I found him travelling as a pilgrim in the pilgrim car.

Mr. PUGSLEY. I was delighted to meet you too.

Mr. HENDERSON. I was delighted to meet the minister because he treated me to a very nice dinner. I had a foretaste of what may happen some day when members on this side of the House will have an opportunity of going on pilgrimages. Surely the Minister of Inland Revenue is not going to travel in a less gentlemanly way than the Minister of Public Works or the Minister of Militia or the Minister of Agriculture.

Mr. FISHER. Did the Minister of Agriculture travel through the west in a private car?

Mr. HENDERSON. I did not see him in one.

Mr. FISHER. Or anywhere else

Mr. HENDERSON. Possibly he does not. I think when he went to Halton to try to induce the farmers there to elect a doctor from Toronto to represent them, he travelled in a very plain way and tried to show himself as the friend of the farmer. I may be mistaken, possibly the Minister of Agriculture does not travel in a special car, but I would be surprised if a minister from British Columbia would come down here and go down to Nova Scotia and not travel in a special car. I thought that every one of the ministers had a private car. Perhaps the minister can explain whether he actually did travel in a private car and that may explain how it was that the expenses of his private secretary were so large as compared with his own.

Mr. TEMPLEMAN. If it is of any interest to the House I have no objection to stating the facts. I do not think the hon. gentleman will find very excessive travelling expenses against either my private secretary or myself. I was in Nova Scotia on one occasion on an official visit but I was not in a private car, I paid my Pullman car accommodation to the Intercolonial railway and my private secretary did the same. I was in British Columbia a year or two ago in company with Mr. Brock, director of the Geological Survey, visiting all the mines. On that occasion I had the use of a government car, an old private car which was very useful, indeed, as we stopped at all the small places from the Crowsnest to the west end of the Columbia & Western and the Victoria & Eastern road. Without a private car it would have been absolutely impossible to have visited very many of the small mining towns of British Columbia. On my last visit to the west I travelled as my hon. friend from Halton (Mr. Henderson) travelled and paid my Pullman fare as he did. I met him in Vancouver and I do not think he saw me in a private car. I do not think the ministers generally, travel in private cars to any extent, but I would certainly do so if I thought it necessary. It was sometimes necessary in my case, not only in order to be able to live in the car, but to receive visits from persons interested, for instance, in mining.

Mr. FISHER. I would not have interjected anything if the hon. member for Halton (Mr. Henderson) had not said that he met ministers in the west who had been travelling in private cars. I happen to be one of the ministers who spent a good deal of time in the west this summer and I asked him if he met me in a private car. If I had felt it to be in the interest of the public to carry a private car with me I would have done so. As a matter of fact I find it more convenient not to have one, and generally do not have one. I do not think that on any trip around the country I have taken a private car. I can understand that ministers may find it more convenient to do so and if they do find it more convenient I think they should take the car.

Mr. DANIEL. Perhaps the Minister of Railways would explain how the expense of hauling private cars over other lines than government lines is met. Do the ordinary railways charge so much a mile for hauling a private car or do they haul it free of expense?

Mr. GRAHAM. When a minister takes an official car he makes his own arrangement with the railways as to its transportation. The Minister of Railways on account of the position he holds, is entitled to free transportation on any railway in Canada and he gets free transportation for his car on any railway in the United States as well. My department is under compliment to the railways for hauling a car, in fact I have been censured several times modestly by managers of railways because I did not take my car, as they always took theirs. When any other minister takes a car he makes his own arrangements for its transportation.

Mr. HENDERSON. What is that arrangement?

Mr. GRAHAM. I do not know.

Mr. DANIEL. The Minister of Public Works travels sometimes in a private car. Perhaps he would inform the House how the expense of hauling the car is arranged with other railways than the Intercolonial railway.

Mr. PUGSLEY. In the accounts of my department it will not be found that any charge has been made for the transportation of my not private but official car. I never travel in a private car. The car is an official car where I transact the business of my department when I travel, but as far as possible I very much prefer to travel in an ordinary Pullman. It is very much more expensive to the Minister to get a car from the Department of Railways than to travel in an ordinary Pullman. I find that we have to pay for all our food and even to pay the laundry bills and in going a comparatively short distance as to St. John and other places in New Brunswick I have found it very much more expensive to engage a car from the Railway Department than to travel in the Pullman and pay my own expenses, and ordinarily I take the Pullman. During the last summer I made an official visit to the Northwest. It became necessary for me to stop off at a great many different places where public works are either under construction or in contemplation. I found that I could not possibly attend to that work without having an official car, and I did arrange to have it. And the Canadian Pacific railway very

kindly transported the car free of charge over its railway—it extended me that courtesy. The same was done by the Canadian Northern.

Mr. DANIEL. I do not think that anyone objects to the Minister of Public Works or any other minister, when on public business that requires it, using an official car. But I was a little surprised to find, from the statement of the Minister of Public Works (Mr. Pugsley), that in such cases the minister was called upon to meet the expenditures for food, laundry, etc., used in his private car. Have I understood it aright?

Mr. PUGSLEY. That is the case.

Mr. DANIEL. I was under the impression that I had seen in the Auditor General's Report on several occasions charges for supplies on private cars. I do not say that any of these was in connection with the private car of the Minister of Public Works, as I do not remember. But I am a little surprised, and I think other members of the House will be surprised, to find that the minister himself pays these expenditures for provisioning and other charges in connection with his official car out of his own pocket.

Mr. PUGSLEY. That not only includes all supplies of every kind for the minister himself, but for every person who is travelling with him, and also the attendants upon the car. So, all the expenditures of every kind in the way of supplies, laundry and so on are paid by the minister who is travelling.

Mr. DANIEL. And the minister makes no claim for that on the public treasury?

Mr. PUGSLEY. Unless he might do it in the way of travelling expenses. I do not say he does.

Department of Labour—Salaries, $32,300; Contingencies, $12,000.

Hon. MACKENZIE KING (Minister of Labour). I may mention that there is a clerical error in the explanation of this item of salaries. In the fourth line, relating to second division, subdivision 'A', it is stated that there are two clerks at $800. That should read one clerk at $800. Then, in the sixth line, referring to third division, subdivision B, instead of one clerk at $800, it should be two at $800. This is a mere reversal of the figures and does not add to the total.

Mr. FOSTER. It seems to me that, if it appears in the estimate as third division, subdivision B, one clerk at $800, the minister cannot make it two. I should be inclined to think that could only be done by a supplementary estimate.

Mr. KING. It will not change the total amount asked for, but merely reverses the figures.

Mr. ARMSTRONG. Are any of these employees now in the eastern provinces making an investigation of the coal strike?

Mr. KING. The deputy minister of the department has made a full investigation into the situation there and has prepared a careful report on the whole situation, which report I shall be glad to lay on the table of the House in the course of a day or so.

Mr. ARMSTRONG. How long is it since that report was completed?

Mr. KING. It is some weeks since it was prepared.

Mr. ARMSTRONG. And will it be placed on the table at an early day?

Mr. KING. I think I can promise it for Monday possibly.

Mr. CROCKET. How many employees are there in the Labour Department at Ottawa?

Mr. KING. At present nineteen.

Mr. FOSTER. I see that there are two extra in the second division, subdivision A. Will the minister explain that?

Mr. FIELDING. The details are given on page 26 of the estimates.

Mr. FOSTER. But what we want is the reason.

Mr. KING. That is the item I called attention to. There should be only one clerk at $800. That provides for an additional clerk one with a knowledge of French.

Mr. FOSTER. But there is an addition of two besides.

Mr. KING. One is a stenographer and the other is accountant.

Mr. FOSTER. At what salary does the stenographer enter?

Mr. KING. At $500. The additional clerk to take the position of accountant is provided for in in the second division, subdivision A, a clerk at $1,200. Heretofore the accounting of the department has been carried on by the accountant of the Post Office Department. But now that the Department of Labour has been given a separate standing in the service, it is proposed to have an accountant of its own.

Mr. FOSTER. But there are two additions in the third division, subdivision B. One is a stenographer at $500 and what is the other?

Mr. KING. A stenographer at $800, one with a knowledge of French to assist in the correspondence.

Mr. FOSTER. Why does he enter at the maximum of his class?

Mr. KING. I think it would be impossible to find a clerk at less than $800 who would carry out the work satisfactorily. Something more than the ordinary routine work is required of the one in this position.

Mr. FOSTER. But the schedule provides that in this class they commence at $500 and go up to $800. If clerks are to be appointed at the maximum, you might as well have no Civil Service Act at all.

Mr. ARMSTRONG. Would the minister (Mr. King) be good enough to give us a general idea of what these officials in the department are doing?

Mr. KING. It would take some little time to outline, even in a very general way, the work of the officials of the department. But I may say that the department publishes a monthly journal, the 'Labour Gazette'. Several officers conduct investigations and compile reports and statistical tables relating to strikes and lockouts, changes in the rates of wages the cost of living, industrial accidents, and like subjects. The services of others are made necessary by the Industrial Disputes' Act, establishing boards under that Act, carrying on correspondence and the preparation of the reports sent by the different parties concerned. There are also officers whose duty it is to prepare schedules of wages for insertion in public contracts—the fair wage officers. They travel in different parts of the Dominion and investigate what are fair rates of wages to be paid for the different classes of labour on works being carried on for the government. Then there is a great deal of correspondence in the department itself, in the nature of answers to inquiries in regard to industrial questions in this country, wages changes, and a great variety of subjects. There is also a great deal of correspondence from other countries and from individuals, as to the working of the Industrial Disputes Investigation Act. Then there are other officials of the department who are engaged in the work of translating, as the 'Labour Gazette' is published in French as well as English. There are also clerks who have to keep track of the expenditures, and the amounts derived from the sale of the 'Labour Gazette', subscription lists and such work as newspaper offices are obliged to do. There is also a library in the department under the charge of a clerk.

Mr. ARMSTRONG. Do contingencies include the cost of printing the 'Labour Gazette'?

Mr. KING. No.

Mr. DANIEL. Does this item include payment of correspondents of the 'Labour Gazette' all over the country?

Mr. KING. No, that comes under the general estimates. The cost of printing and publishing the 'Labour Gazette' includes the amounts paid to correspondents.

Mr. DANIEL. How many copies of the 'Labour Gazette' are issued, and to whom are they issued?

Mr. KING. The department has a list of paid subscribers numbering, I think, about 9,000. Then there is a free list, including secretaries of the trade unions, boards of trade, members of both Houses of parliament, labour departments in other countries, and societies with which we exchange periodicals. Altogether about 14,000 copies of the 'Gazette' are issued each month.

Mr. DANIEL. What is the revenue obtained from paying subscriptions?

Mr. KING. The revenue as given in the Auditor General's Report last year is $1,669.82. The amount charged for the 'Labour Gazette' is 20 cents per annum. Bound copies of the 'Labour Gazette' are sold at 50 cents a copy. The revenue of the department is derived from the sale of bound copies, and from the sale of individual copies, and the general subscriptions.

Mr. ARMSTRONG. Where is the "Labour Gazette' printed?

Mr. KING. The department obtains the 'Gazette' from the King's Printer. There have been times when the Printing Bureau has been much crowded, and the King's Printer has found it necessary to have his own arrangements. But as far as our department is concerned, we deal with the King's Printer.

At six o'clock committee took recess

After Recess.

Committee resumed at eight o'clock.

Mr. CROTHERS. I see that there is $600 here for 'Allowance for private secretary.' Why it is necessary to make that allowance? Why could not a clerk in the department do the work of a private secretary?

Mr. KING. The other clerks of the department have their specific duties to perform and therefore they are not available for this work. The secretary is a very hard worked official. His time is not his own. Regular clerks work the prescribed hours only. He gives virtually his entire time to the duties he has to perform. My secretary, Mr. Francis W. Giddens has frequently worked with me four nights in a week from seven until twelve o'clock, and I would like to say of him that a more faithful or efficient officer in the discharge of his duties is not to be found in the public service.

Mr. J. D. TAYLOR. I would like to call the attention of the minister to the fact that a great many Japanese who were American citizens came over from the United States during the recent fishing season and obtained employment in the fisheries in British Columbia waters. I would like to ask the minister how it was that these Japanese, who were American citizens, came to be employed in Canada. It occurred to me that probably the Department of Labour, being alive to the interests of that class of labour and having seen this statement reported in the press, and had got busy and ascertained why these men had obtained this employment thus depriving a certain number of Canadian fishermen of the livelihood that they were entitled to. Perhaps the minister could tell me if he has any information on that subject?

Mr. KING. In regard to that I would say that any department of government would hardly find it expedient to act on reports that appear in the press from time to time. This particular report of which the hon. gentleman has spoken did not come to my notice. Had the matter been as serious as it appears to have been, the parties, one would think, would have been sufficiently interested to have notified the department of a case of that sort and requested an investigation. If a notification of that kind were to come to the department an investigation certainly would be proceeded with, if it fell within the scope of the department's work. It is quite possible that in the case which has been mentioned these men may have been employed in violation of some existing Act, in the event of which there would have been redress in the courts, but without the particulars having been presented to the department in a formal way I hardly think the department would have been justified in proceeding of its own accord.

Mr. J. D. TAYLOR. I might ask the minister whether that would come within the scope of the duties of the local correspondents, whether they are supposed to take cognizance of a thing of that kind.

Mr. KING. Correspondents are expected to report on matters in their districts of interest to the department, correspondents are not informants expected to notify the department of the violations of any existing laws; they are to send in records of the actual happenings in their district so as to furnish statistical and descriptive records.

Mr. J. D. TAYLOR. There is a correspondent at Vancouver and another at Westminster and this matter was very conspicuous in the press there. It seems to me the Labour Department could not be more usefully employed than in taking up a matter of that kind which is not the business of any person in particular who is not in the government service. How are the correspondents of the 'Labour Gazette' appointed? Are they recommended by the labour organizations or by the political organizations.

Mr. KING. The department has sought to secure as correspondent some person who is thought to be persona grata to the industrial classes, not necessarily the labour element alone, but employers as well. Before any appointment has been made the department has as a rule ascertained from different sources the standing of those to be appointed. In some instances recommendations has been made by the member, in which cases further communication may have been had with other parties to ascertain the standing of the person recommended. The appointments are not made as political appointments at all. I am not aware of any having been so made and I should be very sorry to see them made for that reason

Mr. J. D. TAYLOR. Would the minister consider it the duty of the department, now that attention has been called to the matter, to find out how these Japanese who are American citizens, came to be working in Canada under the guise of British subjects and having licenses issuable only to British subjects. Will the minister investigate and endeavour to protect the labourers on the Fraser river?

Mr. KING. I should like to look carefully into all the circumstances to see whether it properly comes within the jurisdiction of the department to do what the hon. gentleman suggests. If on investigation I find that to be so I will certainly be pleased to follow it up.

Mr. J. D. TAYLOR. Is it a fact that the 'Labour Gazette' is printed in an office outside of the Government Printing Bureau?

Mr. KING. At present I understand that is the case. The pressure of work has been such that the King's Printer found it impossible to print the 'Labour Gazette' at the Bureau, and he made an arrangement with an outside office to do the printing.

Mr. J. D. TAYLOR. What office?

Mr. KING. I understand that the Ottawa 'Free Press' is where the 'Gazette' is being printed at the present time. The King's Printer has made an arrangement, I understand, having in view what he regarded as the best arrangement to make.

Mr. J. D. TAYLOR. I presume the King's Printer called for tenders?

Mr. KING. I presume so, but it not being in my department I cannot say.

Mr. J. D. TAYLOR. This 'Labour Gazette' according to the imprint is printed by 'C. H. Parmelee, Printer to the King's Most Excellent Majesty' and on it there is a union label. I find that on a copy of the estimates which I have in my hand there is no union label. Does that explain the different fashion of printing these two official documents?

Mr. KING. Some nine or ten years ago when the 'Labour Gazette' was first published the union label was put on as an indication that the work was being performed under fair conditions. I understand that the Government Printing Bureau was an open shop, but notwithstanding that, the conditions were such that those controlling the label authorized the Printing Bureau to use it on the 'Labour Gazette.' As it was a publication which was circulating largely among the working classes it was thought advisable to have the label put on it under these circumstances, and there does not seem to be any reason to discontinue the practice.

Mr. J. D. TAYLOR. That is, that in the case of a publication circulating largely among the labouring classes the union label is attached in order to lead the labouring classes to believe that the government printing is carried on under the conditions called for by the appearance of that union label, whereas as a matter of fact the government printing is not carried on under these conditions, and the government printing office is not what they call a fair office, to take the expression used by the minister.

Mr. KING. I do not remember having used the expression 'fair' office.

Mr. J. D. TAYLOR. My hon. friend beside me tells me that the expression used by the minister was 'open shop.' I believe the open shop is not recognized by union labour as the ideal condition.

Mr. KING. I think that many trade unionists would prefer to have the closed shop, but I do not think that trade unionists necessarily hold that because a shop is an open shop the conditions may not be as fair as they are in a closed shop. The conditions that are important to labour are the hours of labour, the wages paid, and the sanitary conditions under which the employees work; all of these conditions are excellent at the Government Printing Bureau. That being so those who are interested in seeing such conditions furthered by means of the label were quite agreeable that the label should be put on the 'Labour Gazette' when it was printed at the Government Bureau notwithstanding that the Bureau was not a closed shop.

Mr. R. L. BORDEN. I understand the minister to say that the label was attached as an indication that the work was performed under fair conditions.

Mr. KING. That is exactly what I said.

Mr. R. L. BORDEN. Does not the union label usually mean that the shop is not an open shop?

Mr. KING. It usually does mean that, but not always.

Mr. R. L. BORDEN. This is one illustration. Are there any others?

Mr. KING. I think there are others.

Mr. R. L. BORDEN. Could the minister name one?

Mr. KING. I could not name one at the moment, but I have no doubt that with a little research I could find one.

Mr. J. D. TAYLOR. Last session I asked the then Minister of Labour whether he would be kind enough to use his influence with the Postmaster General to have the fair wage clause inserted in all postal contracts. I suppose that, owing to the relationship then existing between the Minister of Labour and the Postmaster General, he handed that matter over to his successor. I would like to ask the present Minister of Labour whether he has discussed that with the Postmaster General, and whether there is any prospect of the fair wage clause being attached to contracts of the Post Office Department.

Mr. KING. My present impression is that the fair wage clause forms a part of every contract of the Post Office Department. In connection with contracts for postal supplies, such as letter carriers' uniforms and the like, the Department of Labour has been asked to approve of schedules of rates of wages of firms tendering for this class of work before the Post Office Department would make the contract, and I believe that in some cases contracts have been refused by the Post Office Department because of the unwillingness of some firms to pay what were regarded as fair and reasonable wages.

Mr. J. D. TAYLOR. Are we to understand that the Postmaster General submits all mail to the Minister of Labour and receives from him an opinion whether they provide for the payment of fair wages for the work performed?

Mr. KING. I was speaking with reference to supplies furnished to the Post Office Department. I had not in mind the question of carrying the mails. I have no doubt, however, that the desire of the Postmaster General would be to see that a fair rate of wages was paid to everybody engaged in that work, and if it became apparent that such was not the case, I am sure that he would be willing and glad to confer with the Department of Labour on the subject.

Mr. J. D. TAYLOR. I would ask the Minister of Labour to be good enough to take that up with the Postmaster General, because I know that in my part of the country the pay of the Post Office Department for services of that kind is most miserable, and does not at all approximate to what in our country is considered fair wages. I am sure that he could not do a more popular act than to secure the reform I have suggested from the Post Office Department.

Department of Labour — contingencies, $12,000.

Mr. R. L. BORDEN. Is there any increase in that?

Mr. KING. There is an increase, which however is more apparent than real. Heretofore the amount of money required for purposes included under the head of contingencies has been voted in the miscellaneous vote, which covered the entire expenditure of the Department of Labour. This year the amount has been separated so as to bring the contingencies under one head. Against an increase of $10,550 there should be offset a reduction of $7,400 in the vote being asked this year as compared with 1909-10, which makes a net increase of only $3,150. Such items as printing and stationery, sundries and clerical and other assistance, will hereafter be paid out of contingencies, in conformity with the practice in other departments. I might say that the staff is larger than before. The minister's office and the minister's secretary's office come into consideration in this connection, as well as expenses for travelling on the part of the fair wage officers and other officers connected with the administration of the Industrial Disputes Act and other measures There is also an additional amount put in to enable the department to purchase necessary books and periodicals.

Department of Customs—salaries, $244,975.

Mr. R. L. BORDEN. I suppose the minister thinks the increase is worthy of a little explanation.

Hon. WM. PATERSON (Minister of Customs). The committee will observe that we are proposing to have six additional clerks. We propose to put them in the second division, subdivision B, ranging from $800 to $1,600, starting them at the minimum. There are statutory increases amounting to $4,525; and there is the proposed promotion of six officers from the third division B, to the third division A. Three of these now receive $800 and three $750. They will be promoted to the minimum of subdivision A, namely, $900. That means increases of three at $100 and three at $150, a total of $750. But we are not asking for that much more money, because certain officers have replaced other officers at lower rates of salary. For instance, a vacant clerkship in the second division B, of an estimated salary of $800, caused by the death of Mr. Rochester in December, was filled by the appointment of T. L. Burns in the third division at $750, resulting in a decrease of $50. Then, a vacant clerkship in the second division B, at an estimated salary of $800, caused by the resignation of F. A. Cleminson in September, 1908, was filled by the appointment of Mr. Ryder in the third division B at $750, making a decrease of $50. A new clerkship in the second division B at an estimated salary of $800, was filled by the appointment of John Nolan in the third division at $750, making another decrease of $50. A vacant clerkship in the second division B, caused by the death of R. McConnell in June, 1909, his estimated salary being $1,250, was filled by the appointment of H. L. Carson in the same division at a minimum salary of $800, making a decrease of $450. Then, Mr. Finnigan, a clerk in the second division, subdivision B, whose estimated salary last year was $1,150, was transferred to the outside service at the port of London, on October, 1, 1909. This vacancy is estimated to be filled by the appointment of a clerk in the same division at a minimum salary of $800. There is a decrease there of $350. Mr. Methot, a clerk in the second division, subdivision B, whose estimated salary for 1909-10, was $1,200, was replaced by Mr. A. B. Sowter, an officer of the outside service at Winchester, B.C., who came in at $1,000, a decrease of $200. A vacancy in the third division, subdivision A, caused by the resignation of J. N. Cram, whose estimated salary was $950, was filled by the appointment of Mr. A. S. Ogilvy at the minimum salary of $500, a decrease of $450. Of the amount provided for flat increases, $23,900, the sum of $800 was unused, $600 in the second division and $200 in the lower grades. As the estimates for 1909-10 were prepared on the basis of officers who were transferred from outside votes receiving their statutory increases from the first of April, whereas they were only granted those increases from the first of October, there was an over-estimate of $1,275. Allowing for these reductions, we have $3,675 as the net increase that we are providing for. The six additional officers we propose to bring in, and for whom we provide $4,800 are expected to be required, perhaps, in the statistical branch, owing to the operation of the French treaty. Of course, we must keep a detailed record of that trade for statistical purposes. Hitherto, under the more limited treaty that has been in existence, there was not much work involved, but the new treaty with its wider scope will make necessary additions to the staff of the Statistical Department.

Mr. R. L. BORDEN. I do not understand that. Why should it be so?

Mr. PATERSON. We shall have to open another set of books and have a special column in our returns because of the treaty. With the few articles coming in under the old treaty, the clerks could note these entries as they came to them and make up their tables with comparatively little labour. But now this special column will have to be added, and we shall be able to give, month by month, in our unrevised statement, statistics with reference to that trade.

Mr. R. L. BORDEN. I would like to understand the minister's theory on this subject. What is it that makes the preparation of these statistics more difficult? Suppose there were no treaty at all, and you had exactly the same amount of imports and exports, would these additional assistants be required? I ask purely for information.

Mr. PATERSON. I do not wonder that the hon. member (Mr. R. L. Borden) asks the question for I asked it myself when the proposition first came before me The same idea occurred to me that, I suppose, is in the mind of the hon. member—that if more goods come in from France there might be so many less come in from other countries. But, under the old treaty, when an invoice came before our statistical officers, they could pick out the articles coming under the treaty, as they were few, and by merely keeping a running memorandum, it was easy to sum them up. But now that the French treaty will embrace a very large number of articles, and with other nations as well as France receiving the benefit of this most favoured nations treatment, there will be many shipments coming in under the treaty—most of them from France, of course, but some from other countries, making it necessary to keep, day by day, a regular tabulated record which will show the workings of the treaty.

Mr. R. L. BORDEN. I do not know whether I understand it yet. Is it because the officers are obliged to apply a third tariff, the intermediate tariff, or is it because the government anticipate a larger importation, or both?

Mr. PATERSON. It is the intermediate tariff.

Mr. R. L. BORDEN. That is, you have a third tariff?

Mr. PATERSON. Yes, I should have said that.

Mr. R. L. BORDEN. The minister thinks it really necessary to have these additional officers?

Mr PATERSON. I questioned it, just as the hon. member does. It was explained to me. But I further put my officers under promise that unless they found these additional officers to be necessary, they are not to be put on. My officers promised that unless these men are required they will not be put on. Of course these work with other clerks, certain officers take the port of Montreal, others the port of Toronto, and the work will be divided in that way. It may be that we will not have to put on six men.

Mr. R. L. BORDEN. There is a very simple alternative, to repeal the intermediate tariff.

Mr. PATERSON. Oh, yes, but what a misfortune that would be.

Mr. R. L. BORDEN. To these men who would not get their appointments. As far as the country is concerned, it would be far quicker.

Mr. HENDERSON. Is it proposed to have a separate column for every country that will enjoy the same privileges as France enjoys or will all countries that come under that intermediate tariff be thrown together? If so I do not see that it will afford us much information as to the extent to which our trade with France will be improved under this French treaty.

Mr. PATERSON. The intention is to have on the margin the countries for which goods are imported as they are in the general tariff in the trade and navigation returns now. We will apply the same thing to the intermediate tariff so that you will see what other countries are participating and to what extent the trade with France has developed.

Mr. HENDERSON. Then we will have to go all through the trade and navigation returns to see what that increase is.

Mr. PATERSON. Unless we do it for you. We have summaries and we will try and do that.

Mr. R. L. BORDEN. What is the meaning of the increase in contingencies?

Mr. PATERSON. Under the Civil Service Act we are empowered to employ clerical and other assistance temporarily as for instance in the case of the illness of an official but without such a vote as this there is no provision for paying these extra clerks. I cannot say that all or any of this will be expended.

Mr. R. L. BORDEN. The commissioner recommends it, does he?

Mr. PATERSON. Oh surely.

Department of Railways and Canals—Civil government, salaries including M. J. Butler at $8,000, $130,187.50.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). By a glance at the

estimates, it will be seen there is a reduction of $9,500. The number of clerks is reduced by six. In one division there is an increase of one. That is caused by the promotion of Mr. Little, the accountant in the department, to the first division subdivision A, which was done in the usual way through the Civil Service Commission. During the last five years I think Mr. Little has handled over $139,000,000. He is one of the most important officials we have and has been in the service some 28 years. That is the only increase in any class and there is a decrease in the total expenditure of $9,500.

Mr. R. L. BORDEN. It is interesting to observe that a decrease is really an increase. Where is the increase in this case?

Mr. GRAHAM. There is absolutely no increase in the total. The decrease comes from the fact that while some officials have statutory increases, and Mr. Little's salary will be increased in promoting him from one class to the other, we drop some six clerks from the total that were in the estimates of last year. So we have a net increase in the expenditure of $9,500.

Mr. R. L. BORDEN. Is there an actual decrease in the number of clerks employed?

Mr. GRAHAM. The decrease is rather in the estimate of last year. We had several vacancies in the department, and in our reorganization I came to the conclusion that we could get along without filling those vacancies, and they are dropped from the reorganization.

Contingencies, $15,000.

Mr. GRAHAM. This is the same figure as it has been for years.

Mr. HENDERSON. What is the item of $10,000 expended for printing and stationery?

Mr. GRAHAM. There is all the printing and stationery for the department, for instance, the annual report. There is almost an unlimited quantity of stationery used in the various branches of the department, books and stationery of all kinds. Besides the annual report, special reports have to be printed.

Mr. HENDERSON. Does $10,000 cover all that?

Mr. GRAHAM. It covers the departmental printing.

Mr. HENDERSON. I must compliment the minister on his economy. I should expect it more likely to be $30,000.

Mr. CROCKET. That does not cover the printing for the railway?

Mr. GRAHAM. Not for the Intercolonial, the Intercolonial pays for its own report.

Mr. STANFIELD. Is it the intention to start a purchasing agency in Ottawa to buy supplies for the Intercolonial?

Mr. GRAHAM. Yes, in connection with the Intercolonial we are establishing a purchasing agency. Of course that will come in the Intercolonial estimates. But we intend to have a purchasing agency under the direct control of the department.

Mr. HENDERSON. Where is this printing done?

Mr. GRAHAM. I think our departmental work and our reports are all printed at the Printing Bureau, but I am not positive. It all comes through the King's Printer at least.

Mr. HENDERSON. So did the report of the Department of Labour come through the King's Printer, it bore his impress, and yet it seemed to have been farmed out. I do not know whether the Minister of Railways is engaged in farming operations as well as the Minister of Labour.

Mr. GRAHAM. The head of the Printing Bureau would have to say that, personally I do not know. We get our report from the King's Printer, I imagine it is done at the Printing Bureau.

Mr. DANIEL. Are tenders asked for the supply of any of this stationery?

Mr. GRAHAM. I stated before that we do not ask for tenders for stationery, our printed material is supplied by the King's Printer. The head of that department would be able to say how it is done.

Mr. DANIEL. I understand your printing is done there, I was referring to stationery.

Mr. PUGSLEY. There is a stationery department to which all requisitions go for stationery.

Mr. R. L. BORDEN. Who is the head of that department?

Mr. GRAHAM. The Secretary of State is the head of the Printing Bureau, and of the Stationery Department as well.

Mr. PATERSON. When the Secretary of State is here he will be able to show that it is all right.

Mr. R. L. BORDEN. He may be able to say it is all right, but he ought to be here to say it. It is not satisfactory to be told that we should get information from some one else who is not here. If that information is necessary from some one else, that person ought to be here to give it.

Mr. PATERSON. Does the hon. gentleman mean the supplying of stationery to all the departments?

Mr. R. L. BORDEN. An inquiry is made as to whether there are tenders; the

minister says he does not know, we will have to apply to the head of some other department. Then I say if we are to apply to the head of some other department that head ought to be here to give the information.

Mr. PATERSON. He will no doubt give it when he is here passing the estimates in his department.

Mr. GRAHAM. So far as an item in any department is concerned, we do not ask for tenders, we send a requisition for it. When the Department of the Secretary of State comes up, all this will be a matter for criticism, how he does all this.

Mr. HENDERSON. In the meantime you have got your money voted.

Mr. DANIEL. This is the first time I have learned that you apply to the Secretary of State with your requisitions for stationery. All I have heard mentioned before was the Printing Bureau.

Mr. GRAHAM. My hon. friend will understand that no person has said that he applied to the Secretary of State. Requisitions are made to the King's Printer. The question was asked who is the head of the department; it is the Secretary of State.

Mr. R. L. BORDEN. Certainly he is the King's Printer for the purpose of giving information to this House. Is it a charge from one department to the other, as if it were an actual purchase, or what is the system?

Mr. GRAHAM. I think you will find we are responsible to the King's Printer in cash, as if it were a transaction betwen our department and some outside printing establishment.

Mr. R. L. BORDEN. He supplies the other departments at certain prices, and the question is whether or not, in laying in those supplies, he adopts the system of tender, and no one knows anything about it.

Mr. GRAHAM. He will be able to tell you that.

Mr. PATERSON. I have no doubt he does apply for tenders in many cases.

Mr. ARMSTRONG. We tried to obtain from the Minister of Labour some information in regard to the printing done in the Printing Bureau, and he finally gave us to understand that it was done by the Free Press Printing Company in this town, and apparently not done by tender at all. That item this year amounts to $23,300. Certainly it is a proper question to ask, and there should be some information.

Mr. GRAHAM. Perhaps the head of that department will say when his department is under discussion that he did get tenders for it.

Mr. ARMSTRONG. All we could get from the Minister of Labour was that the Printing Bureau did the work, and that he knew nothing further about it.

Mr. GRAHAM. As to buying by tender, knowing something about buying paper and supplies of that kind, I am inclined to think that when the Secretary of State comes to make his reply he will have to say that he buys his paper as any dealer does, getting it from the best people at the best price he can. Any man who is engaged in the paper business often buys his stock by tender.

Mr. R. L. BORDEN. The Minister of Customs says that this is a very proper question when the Secretary of State is in his place. What kind of a question is it when the secretary is not in his place? I remember an incident occurring once in a court in Nova Scotia where witness was trying to explain to counsel what kind of a dog a retriever was and finally, to make himself understood, he said: He is a dog which, if you throw your handkerchief away, will go and bring it to you, whereupon counsel responded: What kind of a dog is he when you do not have any handkerchief?

Department of Marine and Fisheries—Salaries, $250,150.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). The amount voted last year for this item was $247,830. This year $250,150 is asked, or an increase of $2,320. The increase is made up as follows: In the first division, subdivision 'A', there is an increase of $600 to six officers who have not reached the maximum of their class. In the first division, subdivision 'B', there is a decrease of $750. The decrease is due to the fact that five of the officers who have reached the maximum salary have dropped out and their places will be filled by officers at the minimum salary.

Mr. HENDERSON. What becomes of the officers who drop out? Do they go into some other branch?

Mr. BRODEUR. Yes, they have gone up to some other branch or have left the service. There is the wreck commissioner, one hydrographer, one chief clerk, and the commissioner of lights. In the second division subdivision 'A,' there is an increase of $2,600 which is made up as follows: One translator at $1,600 and the statutory increase of $50 to each of the officers of this class who have not reached the maximum. Three who have reached the maximum salary have dropped out and their places are to be filled by officers at the minimum salary. In the second division, subdivision 'B', there is a decrease of $1,300. In the third division, subdivision 'A', there is an increase of $700 made up

of the statutory increases of $70 to each of the officers who have not reached the maximum of their class. In the third division, subdivision 'B', there are extra shorthand writers at the minimum salary of this class and there is also the statutory increase of $50 to each in this class. Deducting the decreases of $2,050 there is left an increase of $2,320.

Mr. LAKE. Is this new naval vote going to be administered by the Department of Marine and Fisheries?

Mr. BRODEUR. Yes.

Mr. LAKE. Will there be any increase in the staff of the department for the administration of a service which is to cost nearly $3,000,000?

Mr. BRODEUR. Most of the officers for the administration of this naval vote will be technical officers whom the British Admiralty are kind enough to loan us for the organization of the service, and as they cannot be under the regular Civil Service Act they will have to be paid out of the vote itself.

Mr. HENDERSON. That is out of the $3,000,000?

Mr. BRODEUR. Yes, out of the $3,000,000.

Mr. DANIEL. Do I understand the minister to say that these salaries are inclusive of the salary of the wreck commissioner?

Mr. BRODEUR. Yes.

Mr. DANIEL. The wreck commissioner, I presume, is the officer who has charge of the inquiries into wrecks?

Mr. BRODEUR. Yes.

Mr. DANIEL. When he does not attend himself he appoints some one else?

Mr. BRODEUR. No, not himself. The minister has the right under the law to appoint any officer of the department, or any judge, for the purpose of making these inquiries. It need not necessarily be the wreck commissioner, but generally speaking we have a man who looks after this business and who is called the wreck commissioner. When the wreck commissioner is too busy, when he is doing something else or making some other inquiries, some one else may be appointed under the law by the minister for the purpose of making an inquiry.

Mr. DANIEL. Then it would be the minister who would issue the instructions to be followed by the commissioner who makes the investigation into the wreck? They would not come from the wreck commissioner but from the head of the department?

Mr. BRODEUR. There are no special instructions given. There is simply an appointment made for the purpose of making the inquiry and the inquiry is then made under the provisions of the law.

Department of Marine and Fisheries—Contingencies, $20,000.

Mr. BRODEUR. There is an increase of $7,000 made up as follows: The amount set apart for printing and stationery and other such services of the department for this current year was in excess of the amount which was voted and the expenditure would be so close as to require the cutting down of requisitions, such as for typewriters; so that we have to provide for a larger amount.

Mr. ARMSTRONG. Where is this printing done?

Mr. BRODEUR. It is done at the Printing Bureau. We send our requisitions for stationery and printing to the King's Printer, the accounts are sent to us and we have to pay them.

Mr. ARMSTRONG. As the hon. the Secretary of State (Mr. Murphy) is in his place he could possibly tell us about the contracts which are let outside of the Printing Bureau. We have been asking for a good deal of information with regard to a number of contracts for printing and stationery which are let by tender or in what manner they were let.

Mr. MURPHY. I will be pleased to give my hon. friend all the information on this subject when the estimates for the Printing Bureau are up, but my present recollection of what has been done is that there are few, if any, contracts outside of the Printing Bureau for printing.

Mr. ARMSTRONG. We were able to find just a few minutes ago where one contract was let to the Free Press of Ottawa for some $20,000 odd. Perhaps the minister can tell us whether this was let by tender or not?

Mr. MURPHY. Was that last year or this?

Mr. ARMSTRONG. There was over $30,000 worth of printing done for the Department of Labour last year.

Mr. MURPHY. I have not the information at hand, but I will be pleased to give my hon. friend all the information when the estimates for printing are under consideration.

Mr. ARMSTRONG. The Minister of Marine and Fisheries has taken the position that the other ministers have taken this evening with regard to printing. He simply says that it is done at the Printing Bureau as far as he knows. He does not

know whether it is let by tender outside of that or not. We have been anxious to find whether the printing has been done outside of the Printing Bureau.

Mr. MURPHY. I will be pleased to give my hon. friend all the information on that point.

Mr. GEO. GORDON. I would like to ask the Secretary of State if the printing is charged to each of the different departments at actual cost?

Mr. MURPHY. That is the procedure, as I understand.

Mr. DANIEL. Would the minister give us some idea what the $10,000 is needed for in the way of sundries?

Mr. BRODEUR. Telephones, telegrams, newspapers and travelling expenses.

Mr. DANIEL. Travelling expenses if included as sundries would not appear as 'travelling expenses' in the Auditor General's Report.

Mr. BRODEUR. This is a vote for contingencies and they are taken out of that.

Mr. HENDERSON. A contingency is something that is unexpected, but travelling expenses are a thing that have to be paid every year. It would look as if the word 'contingencies' was used to cover up something. I am not saying there is anything wrong about it, but the word is misleading and does not give us an accurate idea of what the money is intended for. The minister will remember that during the past year or two a good many suspicions have been aroused, and a thing of this kind is calculated to arouse suspicion. It is in the interest of the minister I make the suggestion.

Mr. BRODEUR. The remarks of my hon. friend will apply to all the departments because the word 'contingencies' is used all through the estimates.

Mr. HENDERSON. I quite understand that but it does not improve the situation.

Mr. CROCKET. How much of this vote was for travelling expenses last year?

Mr. BRODEUR. The accountant has not the information, but I will procure it later.

Department of Justice—Salaries (including E. L. Newcombe, $7,000), $103,498.75.

Hon. A. B. AYLESWORTH (Minister of Justice). An additional stenographer is provided for this year to commence with a salary of $500.

Mr. HENDERSON. Who decides that an extra clerk is necessary?

Mr. AYLESWORTH. It has been discussed with me by the deputy several times during the year as a matter of necessity. It is within my own knowledge that this official is required, but it is entirely on his representation that I am proceeding.

Mr. HENDERSON. I understand that the deputy minister recommends the appointment of a new officer. Who selects the officer?

Mr. AYLESWORTH. The officer will be selected, of course, under the Civil Service Act by our applying for him to the Commission, and asking them to give us the name of some person competent to take this position. We have no idea who it will be.

Mr. HENDERSON. Who makes the recommendation to the Civil Service Commission as to whom it should be?

Mr. AYLESWORTH. There is no recommendation to the Civil Service Commission. They have their list of candidates who have passed the examination, and under the statute they will simply make the appointment and send the person selected to the department to enter upon the duties of the office.

Mr. HENDERSON. Will it be a person who has passed the Civil Service examination or one who intends to apply for examination?

Mr. AYLESWORTH. It must, under the statute, be some person who has already passed.

Mr. DANIEL. It does not follow, then, that the person who receives the most marks will get the first appointment?

Mr. PATERSON. I think it does.

Mr. AYLESWORTH. That depends upon the manner in which the statute is administered by the Commission, and my own idea was that it would be the person who obtained the highest number of marks, if that person were willing to take that position in preference to waiting for the next one that came.

Mr. CROCKET. I noticed lately that the deputy minister of justice has been practising in private cases before the Supreme Court. Not long ago he appeared as counsel for the province of Nova Scotia in a case in which the province of New Brunswick was also a party. I have heard considerable criticism as to that. I must say that it does seem to me that a gentleman occupying the position of deputy minister of justice should not practise before the Supreme Court of Canada as counsel for private parties. I do not wish to make any reflection at all on the deputy minister of justice, because he is recognized by the profession throughout the country as a very able lawyer and a very efficient minister of justice; but it did seem to me that a gentleman occupying his position should

not practise before the court as counsel for private litigants.

Mr. AYLESWORTH. The subject which the hon. gentleman has mentioned is one that I am probably in no better position to say anything upon than any other member of the House. I have never considered that it was my duty or my right to investigate what may be said to be the private affairs of the gentleman who happened to be the deputy minister of the Department of Justice. I think I am in a position to certify, as matter within my own knowledge, which I have learned within the last three years if I never knew it before, that it would be very difficult to find any man able to discharge the duties of the position which Mr. Newcombe occupies, as efficiently as he discharges them; and I think I am in a position to say also that he has never in any way neglected the duties of the office which he holds, or allowed any other considerations, such as those of business or even of recreation, to interfere with the efficient and faithful doing of his work as deputy minister. To what extent he may be given by professional friends who have confidence in him, briefs in the Supreme Court, I am not able to state; I have never made examination. I know, just as my hon. friend knows, that occasionally there is an instance of that happening; it is not very frequent. I am able to say, however, that the doing of any such work, which is outside the regular work of the department, has never been allowed by Mr. Newcombe to interfere in the least degree with full attention to the duties of his position.

Mr. CROCKET. I hope the Minister of Justice did not understand me as suggesting that the appearance of Mr. Newcombe before the Supreme Court rendered him any less efficient as deputy Minister of Justice. My remarks were directed entirely to the question of his practising before the courts of the country as counsel for private litigants, in view of the relation he occupies towards those courts. The salary of the deputy Minister of Justice is $7,000, is it not?

Mr. AYLESWORTH. Yes, that is the statutory salary. As to the other items, I may say that there is no change whatever in the staff of the Supreme Court, except the statutory increases. In the Court of Exchequer an additional clerk is asked for. That clerk, the registrar says, the business of the court requires. He is to do the work of a stenographer, as the present staff of the court is not able to cope with that work without the aid from time to time of stenographers who are employed for temporary purposes. The salary of the new clerk, which it is proposed should be $2,100, is the lowest that an efficient man can be obtained for, and it will be, perhaps not in whole but in large part, met by the charges for copies of evidence, which are paid for by litigants before the court.

Some resolutions reported.

On motion of Mr. Paterson, House adjourned at 9.35 p.m.

HOUSE OF COMMONS.

MONDAY, November 22, 1909.

The SPEAKER took the Chair at Three o'clock.

CONTROVERTED ELECTIONS.

Mr. SPEAKER. I have the honour to inform the House that I have received from the Hon. Chief Justice Sullivan and the Hon. Mr. Justice Fitzgerald, two of the judges selected for the trial of election petitions, pursuant to the Dominion Controverted Elections Act, certificates and reports relating to the elections for the electoral district of Kings, Prince Edward Island, and the electoral district of Queens, Prince Edward Island, by which the said election petitions were dismissed and the sitting members declared duly elected.

HOURS OF LABOUR ON PUBLIC WORKS

Mr. A. VERVILLE (Maisonneuve) moved for leave to introduce Bill (No. 21), respecting the Hours of Labour on Public Works.

Sir WILFRID LAURIER. Explain.

Mr. VERVILLE. There is no explanation of this Bill necessary, as it has been on the Order Paper for some sessions, and its principle of a shorter work day was discussed last session. I hope that this session it will reach its second reading, so that a chance will be given to members to state whether they are for or against the measure.

Motion agreed to, and Bill read the first time.

DOMINION ELECTIONS ACT—AMENDMENT.

Mr. A. C. MACDONELL (South Toronto) moved for leave to introduce Bill (No. 22) to amend the Dominion Elections Act. He said: The Bill is a repetition of a Bill that I introduced last session. It has two provisions. One is to dispense with the $200 deposit now necessary to be made by a candidate. The other asks that the general election day throughout Canada be made a public holiday.

Motion agreed to, and Bill read the first time.

INDUSTRIAL DISPUTES ACT—AMENDMENT.

Mr. MACDONELL moved for leave to introduce Bill (No. 23) to amend the Industrial Disputes Investigation Act, 1907. He said: This Bill is a copy of the Bill which I introduced towards the close of last session, and time was not afforded to reach a conclusion upon it. Its object is to amend the Industrial Disputes Act in several more or less important respects. First, it asks that the authority which the Act now requires to be obtained from a labour union desiring to strike, in the shape of a meeting, and the proceedings consequent thereon in the way of notice, &c., &c., be dispensed with. That is found expensive and cumbersome, and not conducive to the best working out of the Act. The next provision deals with the fees that are payable to the arbitrators. I have not inserted any fees here, leaving the amount to be considered by the government. At present the chairman receives a larger fee than the other members of the board, although he performs no greater service. The present fee is $15 per day. It is thought that a general charge of $25 per day for every member of the board would be reasonable, especially in view of the fact that most of the sittings are continued well on into the night. A further amendment is proposed to section 57 of the Act, which provides that only investigations regarding intended changes in wages and hours of labour can take place. It is desired that these should be extended to any conditions affecting employment. Then, at present the onus of proceeding with an investigation does not rest on anybody. That is found to work hardship, and the provision of the Bill is that on those who set the Act in motion by giving notice of a desire or intention to effect a change in working conditions, shall rest the onus of proceeding with the appointment of the board of arbitrators, and that no change in the conditions shall take place after the notice is given. At present the conditions can be changed by either party up to the time the board is appointed. That is found to work hardship, certain interested parties taking advantage of the delay between the serving of the notice and the appointment of the board to change the conditions of labour. The spirit of the Act is that no change in the conditions of labour shall take place after the notice is once given, when the parties are at arms length and the issue is on.

Motion agreed to, and Bill read the first time.

RAILWAY ACT—AMENDMENT.

Mr. MACDONELL moved for leave to introduce Bill (No. 24) to amend the Railway Act. He said: This is to amend section 341. The hon. Minister of Railways recollects that during last session, when his general Bill was moved to the House, I sought to have adopted then the amendment I now propose. Under section 77, no discrimination is allowed a railway company, and section 341 gives the company the right to issue family commutation and other cheap rate tickets. The question has arisen, both before the Railway Commission and in the courts, as regards the right of a railway company to discriminate against a locality by withholding the issue of these cheap rate tickets in any locality, and it is to make the matter clearer and prevent discrimination against localities or persons that I introduce this Bill. The Railway Commission have considered that there is a conflict between section 341 and section 77, and the Act should be amended so as to make it clear.

Motion agreed to, and Bill read the first time.

WATER CARRIAGE OF GOODS.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) moved for leave to introduce Bill (No. 25) relating to the water carriage of goods. He said: The object is to declare illegal conditions put in bills of lading by which the shipowners free themselves from any liability arising out of their fault and negligence. The Bill was before the Senate two years ago and made the subject of an investigation. It was passed through that Chamber last year and sent here, but sent unfortunately too late for us to take it up. The other provisions in the Bill are concerning losses in case of accidents or force majeure. It provides also that shipowners shall have the right to remove inflammable and explosive goods which may have gone on board without their consent.

Mr. R. L. BORDEN. Does this comprise all the provisions of the Bill that came to us last session?

Mr. BRODEUR. Yes, it is almost word for word the Bill passed by the Senate last year.

Motion agreed to, and Bill read the first time.

MR. LUMSDEN'S RESIGNATION.

Mr. R. L. BORDEN. Might I ask the hon. the Minister of Railways when we may expect the return for which I moved some days ago—papers connected with the resignation of Mr. Lumsden. I was under the impression they would be brought down without any motion.

Mr. GRAHAM. The returns are all ready and will be here to-morrow.

QUESTIONS.

LOBSTER FACTORIES.

Mr. SINCLAIR :

How many owners or managers of lobster factories or canning establishments for packing lobsters holding licenses have failed, on or before September 1, 1909, to send to the minister the return called for by section 78 of the Fisheries Act, and what are their names and addresses?

Hon. L. P. BRODEUR. Licensees are required to send the returns in question to the different inspectors of fisheries, who arrange the information in the form of statistics, which are forwarded to the department at the close of the fiscal year. The department has not been informed of failure on the part of any cannery licensee to forward the required return.

PAY OF MACHINISTS, &c., ON INTERCOLONIAL RAILWAY.

Mr. STANFIELD:

1. What is the standard pay for machinists, pipe fitters, boiler makers, and day and night foremen, in engine-houses on entering the service of the Intercolonial?
2. What are the statutory increases for subsequent years for each of these classes?

Hon. GEO. P. GRAHAM:

1. The present rates in schedule are:

Machinists, 26c. per hour.

Pipe fitters, 21c. per hour, according to class of work.

Boilermakers, 27c. per hour.

Day foremen, in engine houses, $70 to $105 per month, according to station.

Night foremen in engine houses, $56 to $80 per month, according to station.

2. There is no statutory or other provision for increases for subsequent years.

RURAL FREE MAIL DELIVERY.

Mr. ARMSTRONG:

1. How many rural free mail delivery routes are in actual operation?
2. How many routes have sent petitions to the government asking for mail to be delivered to them?
3. What is the total number of rural free mail delivery boxes erected or disposed of by the government, and the number in actual use on routes?
4. What has been the total increased cost to the Post Office Department since the establishment of rural free mail delivery in Canada?
5. What action, if any, has the government taken with a view to granting to all the people living in thickly peopled portions of Canada, a system of rural free mail delivery similar to that in operation in the United States and other lands?

Sir WILFRID LAURIER:

1. 186.
2. 197.
3. 3,628.

Mr. GRAHAM.

4. $13,372.48 per annum for mail service. Miscellaneous expenditure to 31st October, 1909, $13,528.02.
5. The department is not considering the question of rural delivery as given in the United States or any other country, but is devising a scheme of rural delivery suitable to conditions in Canada at the present time.

PUBLIC WHARFS LEASED.

Mr. FOSTER:

What public wharfs have been leased under the Act passed in 1909, to whom leased, and under what conditions?

Mr. BRODEUR.

None.

GRAND TRUNK PACIFIC CLASSIFICATION.

Mr. LENNOX:

1. Have the questions in difference between the Grand Trunk Pacific Railway Company and the Transcontinental Railway Commissioners as to classification of the material dealt with in the construction of parts of the eastern division, been adjusted or determined?
2. If not, what steps have been taken, how far has the matter proceeded, and how does the matter now stand?
3. Have the engineers reported the result of their investigations? If not, what is the cause of the delay?
4. Will the government lay the papers in connection with this matter upon the table for the information of the House?

Mr. GRAHAM:

1. No.
2. Chief Engineer Grant of the Transcontinental Railway Commission and Chief Engineer Kelliher of the Grand Trunk Pacific Railway Company have agreed on Mr. Collingwood Schreiber as third arbitrator and are proceeding to arbitrate the matters in dispute as provided by the National Transcontinental Railway Act.
3. The arbitration proceedings have not been completed, and consequently no report has been made by the arbitrators.
4. The correspondence on the subject of these arbitration proceedings will be included in the return ordered by the House in response to the motion of Mr. R. L. Borden, M. P.

QUEBEC BRIDGE.

Mr. SPROULE:

1. What consideration is the Quebec Bridge Company to receive for their interest in that corporation when the government takes over the undertaking and franchise to construct the bridge?
2. Has an agreement been reached between the government and the company as to the exact amount in cash or its equivalent that the company is to receive for its interest in undertaking and franchise?
3. Is the bridge to be erected in the same place as the first one, and will the present abutments be used for that purpose?

4. What kind of bridge is intended to be erected, a suspension or cantilever?

5. What is the approximate cost of it to be?

6. Will any portion of the work done for the bridge which collapsed, be utilized for the new bridge? If so, what is the approximate value of it?

7. When is it intended that the new bridge is to be completed?

8. Will the province, or the city of Quebec be appealed to for assistance by way of subsidy or otherwise to assist in the cost of construction of the new bridge?

Mr. GRAHAM:

1. See Statutes, Chap. 59, Statutes of Canada for 1905, under which bridge was taken over by the government.

2. Yes, under provision of statute.

3. The bridge is to be erected at the same site, the south pier will be used in part but must be enlarged, a new pier will be sunk to the rock on the north side, the other piers will require to be rebuilt.

4. Bids will be asked for both cantilever and suspension.

5. It is not in the public interest to give out approximate estimates of cost at a time pending the receipt of tenders.

6. Yes, it is expected to utilize certain parts, but the value cannot be determined until the plans are finally settled.

7. Pending the receipt of tenders it is impossible to fix a date.

8. The city and province have already contributed.

TRADE RELATIONS WITH GERMANY.

Mr. ARMSTRONG:

1. What is the total value of agricultural products exported from Canada to Germany?

2. What action, if any, has this government taken to improve our trade relations with Germany?

3. Is the government aware that representatives of the German-Canadian Economic Association are travelling through our land with a view to improving our trade relations with that country, and is it the intention of this government to assist them in the work they have undertaken?

Hon. WM. PATERSON:

1. The total value of agricultural products of Canadian origin (not including animals and their produce) exported from Canada to Germany during the fiscal year 1908-1909 was $303,414.

2 and 3. The government do not deem it expedient to enter into negotiations respecting commercial relations with any other foreign countries until all matters connected with the treaty with France are disposed of.

GRAND TRUNK PACIFIC CLASSIFICATION.

Mr. LENNOX:

1. Were the differences as to classification and other matters existing between the Grand Trunk Pacific Railway Company and the Transcontinental Railway Commission on the 16th of March, 1909, and at that time submitted to Mr. Lumsden, Mr. Kelliher and Mr. Schreiber for determination, adjusted, determined upon and reported before the resignation of Mr. Lumsden from the position of chief engineer?

2. If not, what has been done and how does the matter now stand?

3. If the questions in difference have been determined what is the result, or will the minister bring down the report or findings and lay them upon the table of the House?

Mr. GRAHAM:

All the information sought by this question will be found in the correspondence to be brought down in response to a resolution passed by this House on motion of the leader of the opposition (Mr. R. L. Borden).

LEASES OF GOVERNMENT PROPERTY IN FRONTENAC.

Mr. EDWARDS:

1. How many acres of government land in the township of Pittsburg, county of Frontenac, have been leased to the Hon. Sir R. J. Cartwright?

2. How many years has the said lessee had the land referred to, and what rental does he pay annually for the same?

3. Have any fences been erected on said lands by the government in recent years? If so, by whom and at what cost?

4. How many acres are in the adjoining farm, formerly occupied by the late Robert Dunlop, and what annual rent did that gentleman pay the government?

5. When was the last payment of rent made on each of the properties mentioned?

6. Are there any arrears of rent from either property? If so, what amount?

Sir FREDERICK BORDEN:

1. So far as the Department of Militia and Defence is concerned, no portion of the government property in the Township of Pittsburg, in the county of Frontenac, is leased to Sir Richard Cartwright. About seventy-five acres were originally leased to Sir Richard Cartwright in 1868 or 1869 by the Imperial Government. This property is now under lease to Lady Cartwright.

2. The above seventy-five acres have been leased to Lady Cartwright on the 30th of January, 1905, at an annual rental of $59.35. One hundred acres which formed part of the property originally leased to Mr. Robert Dunlop were, at that tenant's death, in August, 1906, leased at the same rental formerly paid by Mr. Dunlop, $42.96 per annum. Only a part of the lands in above leases are fit for tillage, a large proportion being exceedingly rocky and stony.

3. Considerable sums have been expended in properly fencing the property, but the entire cost has been defrayed by the tenant.

4. In addition to the 100 acres above referred to, some 44½ acres of the adjoining land, being part of lots 20 and 21 in the

western addition of the Township of Pittsburg, were also leased to Mr. Dunlop, at a rental of $11.87 per annum. The Department of Militia and Defence resumed possession of this parcel of land in November, 1907, and it now forms part of the Barriefield camp grounds.

5. (a) The last payment made by Lady Cartwright was received at the department on September 27 last, and covered the rent due on the whole 175 acres for 12 months ended the 30th of September. (b) The last payment made by the Dunlop estate on the 125 acres formerly under lease to the late Mr. Dunlop was received at the department October 29, 1906, and covered the rent due for the six months ended September 30, 1906. (c) The last payment made on the additional 44½ acres formerly under lease to the late Mr. Dunlop was received at the department January 28, 1908, and covered the rent due for the seven months ended October 31, 1907.

6. No.

SERVANTS' QUARTERS AT R. M. C.

Mr. EDWARDS:

1. When were the servants' quarters at the R.M.C. completed?
2. What was the total cost of the said quarters?
3. When were these cottages first occupied?
4. How many of the cottages are at present occupied?

Hon. WM. PUGSLEY:

1, I presume this question relates to the quarters recently erected for the accommodation of teachers and instructors in the Royal Military College, some having the rank of non-commissioned officers, and others being civilian instructors in connection with the college. The buildings were completed and inspected by the Department of Militia and Defence on October 25, 1909.

2. Total cost to date, $90,995.40.

Sir FREDERICK BORDEN:

3. These cottages were occupied from Saturday, the 13th instant.

4. All the cottages are at present occupied.

BRIDGE AT KINGSTON MILLS.

Mr. EDWARDS:

1. When were tenders asked for the construction of the bridge at Kingston Mills?
2. From whom were tenders received, and what was the amount of each?
3. To whom was the contract awarded, and when?
4. When was the work completed, and how much has been paid on it to date?
5. What is the total cost of the work?

Mr. GRAHAM:

1. April 16, 1909, by newspaper advertisement.

Sir FREDERICK BORDEN

2. Tenders were received from the following contractors for the abutments and approaches at schedule rates, viz:

The Jenks-Dresser Co., Ltd., Sarnia, Ont.
James McGrath, Montreal.
Fallon Bros., Cornwall.
Patrick Kennedy, Ottawa.

Tenders for a steel riveted highway bridge were received from the following contractors, as follows, viz.:

Jenks-Dresser Co., Ltd., $2,000, plan A; $1,475, plan B.
Dominion Bridge Co., Montreal, $1,690.
Hamilton Bridge Works, Hamilton, $1,340.

The lowest tender in each case accepted.

3. The contract for the abutments and approaches was awarded Fallon Bros., Cornwall, at their tender price, viz, $3,690.55. The contract for the superstructure was awarded The Hamilton Bridge Works at their tender price, viz, $1,340, on the 15th June, 1909.

4. Work was completed on 10th October, 1909. Total payments to date, $3,969.10.

5. Total cost cannot be stated, as the final estimate has not yet been received by the department.

PORT BRUCE HARBOUR.

Mr. MARSHALL:

1. What amounts have been expended upon harbour improvements at Port Bruce, Elgin county, Ontario, in fiscal years 1904-5, 1905-6, 1906-7, 1907-8 and 1908-9?
2. Is it the intention of the government to make any further improvements in the said harbour during the present fiscal year?

Mr. PUGSLEY:

Fiscal Year.	Construct'n and Dredging.	Repairs.	Total.
	$ cts.	$ cts.	$ cts.
1904-05	975 54	.....	975 54
1905-06	4,947 76	.....	4,947 76
1906-07	2,122 00	2,877 83	4,999 83
1907-08	.....	665 11	665 11
1908-09	5,846 25	.....	5,846 25
	13,891 55	3,592 94	17,434 49

2. Some additional work is still to be performed to decking of pier.

RURAL MAIL DELIVERY IN ELGIN.

Mr. MARSHALL:

1. How many rural mail delivery boxes are installed in East Elgin?
2. What is necessary to be done to secure a rural mail delivery box?

3. What extra remuneration do the mail carriers receive respectively, and who attends to the delivery and removal of mail from the rural mail boxes in East Elgin?

Sir WILFRID LAURIER (for Postmaster General):

1. One hundred.

2. Upon a receipt of a properly signed petition for rural mail delivery from the residents along and contiguous to the existing mail route the department will proceed at once to organize the service.

3. (a) $1 per box per annum, where the service is performed daily or more frequently; 75 cents per box per annum for semi-weekly and less frequently than daily; 50 cents per box per annum for weekly or less frequently. (b) The contractors for the several mail routes on which boxes have been erected.

RIFLES AVAILABLE FOR CADET CORPS.

Mr. WORTHINGTON:

1. How many rifles have the Militia Department on hand which are available and suitable for issue to both Junior and Senior Cadet Corps?

2. What are the patterns of such rifles and the total length and weight thereof?

3. Have any applications for rifles been received from any Cadet Corps which have not been complied with? If so, to what extent?

4. Are a sufficient supply of such rifles on store charged to keep pace with the rapidly growing requirements of the quickly expanding cadet system throughout Canada?

Sir FREDERICK BORDEN:

1. 11,470.

2.

—	No.	Weight.	L'gth.
Rifles Snider Shortened	9,199	6½ lb.	37 in.
" Martini-Henry	913	7 "	50 "
Carbines ·303 inch	1,358	8 "	40 "

3. All issues are approved locally by District Officer Commanding and no complaints have been received at headquarters that any cadet corps is short of its rifles.

4. Yes, as far as can be foreseen, for future issues a pattern of Ross rifle is in hand.

TRANSFER OF ESQUIMALT.

Mr. WORTHINGTON:

1. Have the negotiations with the imperial government for the transfer of the Naval Station at Esquimalt to the Canadian government been yet concluded? If so, will the papers in connection therewith be laid on the table without a motion being moved therefor?

Mr. BRODEUR:

These negotiations are not yet concluded.

STRENGTH AND EXPENDITURE, PERMANENT FORCE.

Mr. WORTHINGTON:

1. What establishment has been fixed for the Permanent Force at Halifax, Fredericton, Quebec, St. John, P.Q., Ottawa, Kingston, Toronto, London, Winnipeg and Esquimalt?

2. What is actual strength of the Permanent Force at those stations?

3. What was the expenditure at those stations during the fiscal year on the Permanent Force, excluding any sums chargeable to Capital Account?

4. What amounts were expended at those Stations chargeable to Capital?

Sir FREDERICK BORDEN:

1. Present establishment of the Permanent Force:

Halifax	1,297
Fredericton	84
Quebec	381
St. John, P.Q.	99
Ottawa	86
Kingston	338
Toronto	257
London	91
Winnipeg	106
Esquimalt	131

2. Strength of the Permanent Force, November, 1. (The date of the last return):

Halifax	1,219
Fredericton	77
Quebec	357
St. John, P.Q.	99
Ottawa	86
Kingston	316
Toronto	246
London	86
Winnipeg	98
Esquimalt	126

3. The annexed statement marked 'A' shows the expenditure for the whole of the Permanent Staff and Permanent Force for pay and allowances, provisions and supplies at all stations.

There is also annexed herewith a statement marked 'B' showing direct expenditure for repairs to barracks, &c., occupied by the Permanent Force.

It is not practicable to give the amount expended on stores, transport, and clothing as these votes are general for both the permanent and non-permanent militia. It may be stated, however, that quite two-thirds, if not more, of the stores vote and clothing vote is expended on account of the non-permanent militia.

4. None.

STATEMENT 'A'—Expenditure Permanent Staff and Permanent Force 1908-9 and average strength during 12 months ended 31st March, 1909.

Station.	Average Strength.		Pay 'A' Staff.	Pay 'B' Perm't Force.	Provisions and Supplies.	Total.
	Staff.	P. F.	$ cts.	$ cts.	$ cts.	$ cts.

ABSENCE OF POSTMASTER GENERAL ON OFFICIAL BUSINESS.

Mr. ARMSTRONG:

1. Is the Postmaster General away from the Capital on official business? If so, what is the nature of the business, and when is he expected to return?

2. What minister is acting for the Postmaster General during his absence?

Sir WILFRID LAURIER:

1. Yes, the Postmaster General is away from the capital on official business. In response to an invitation from the Swiss government, he was appointed to represent Canada at the inauguration of a monument to be erected in commemoration of the forming of the Postal Union. He was also authorized to discuss with the Postmaster General of the United Kingdom the subject of cable rates between Great Britain and Canada.

2. The Prime Minister.

RECORD OF EMIGRANTS FROM CANADA.

Mr. URIAH WILSON:

1. Is any record kept by any department of the government of people emigrating from Canada? If so, how many people have emigrated from this country during the past fiscal year?

2. If not, is it the intention of the government to establish a system of keeping a record of this nature.

Hon. FRANK OLIVER:

1. No.

2. Not at present.

TREATIES WITH THE UNITED STATES.

Mr. MACDONELL:

1. How many treaties have been made or entered into with the United States by the government since 1896?

2. What are the dates of such treaties and in respect of what were they respectively entered into?

3. How many of these treaties and if so, which, have been submitted to parliament for ratification, and how many of such treaties have been brought into operation with the consent of the government only?

4. If any of such treaties were not sanctioned by parliament, why were they not so sanctioned?

Hon. CHARLES MURPHY. Since 1896 there have been entered into between Great Britain and the United States, twenty treaties or conventions, of which eight relate more or less directly to Canada. These are:

(a) Convention relating to the mutual extradition of fugitive criminals. Signed at Washington, December 13, 1900.

(b) Convention for the adjustment of the boundary between Canada and Alaska. Signed at Washington, January 24, 1903.

(c) Convention for the adjustment of the boundary between Canada and Alaska. Signed at Washington, April 21, 1906.

(d) Arbitration convention. Signed at Washington, April 4, 1908.

(e) Convention respecting the protection, preservation and propagation of food fishes in waters contiguous to the United States and Canada. Signed at Washington, April 11, 1908.

(f) Treaty relating to the demarcation of the International boundary. Signed at Washington, April 11, 1908.

(g) Treaty providing for the conveyance of prisoners of Canada or the United States through the territory of the other, also providing for reciprocal rights in wrecking and salvage. Signed at Washington, May 18, 1908.

(h) Agreement for the submission to arbitration of questions relating to fishing on the North Atlantic coasts. Signed at Washington, January 27, 1909.

None of these treaties were laid before the parliament of Canada for ratification. Because under the British Constitution the treaties in question did not require parliamentary sanction.

THE ALL-RED ROUTE.

Mr. MONK:

1. When will Mr. Coulter's report in connection with the All-Red route be submitted?
2. What is the present position of the negotiations in connection with the All-Red route?
3. Is the Postmaster General discussing this matter in London?
4. Has the imperial government decided to grant £135,000 sterling to Collooney Blacksod Bay railway in connection with the All-Red route, as reported?
5. Does the government intend to submit legislation in this connection this session? If not, why not?

Sir WILFRID LAURIER:

1. No.
2. In the condition revealed by the report.
3. No.
4. The government has not been advised of any such actions by the imperial authorities.
5. Matter under consideration

LAND OPEN TO HOMESTEAD SETTLEMENT.

Mr. FOSTER:

1. How many acres in the surveyed areas of land in the Northwest, including Manitoba, are open to homestead settlement?
2. How many acres in the unsurveyed areas of the above are estimated as available for homestead settlement?

Mr. OLIVER:

1. Area surveyed excluding Parish and River lot settlements, Forest reserves and Indian reserves, 142,574,308 acres; area alienated at the 1st November, 1909, 101,285,781 acres; leaving a balance of 41,288,527 acres open to homestead settlement.
2. It is impossible to say how many acres in the unsurveyed area are available for homestead settlement as a considerable portion of this country has not been explored.

MEDALS AWARDED FOR HEROISM.

Mr. MACDONELL:

1. Has the government awarded or recommended the Edward medal, instituted by His present Majesty for heroic deeds done by miners or quarrymen, in connection with the recent disaster at Extension, British Columbia?
2. If so, how many such medals were awarded or recommended?
3. To what person or persons were such medals awarded or recommended, and for what deeds?
4. What department of the government has charge of this matter, and on whose recommendation or advice were such awards made or recommended?
5. What inquiries were made by the government to properly ascertain the names of the parties entitled to such medals, and from whom were such inquiries made?

Hon. MACKENZIE KING:

1. No.
2 and 3. Answered by No. 1.
4. Answer to the first part of this question. The Department of the Secretary of State. The second part is answered by the answer to No. 1.
5. Inquiries were made of the member of parliament representing the district in which the disaster occurred.

BARRACKS AT LAMBTON.

Mr. MACDONELL:

1. Is it the intention of the government to place in the estimates an appropriation for the erection of the new barracks at Lambton, to take the place of Stanley Barracks, Toronto? If so, what is the amount of the appropriation?
2. When was the site at Lambton acquired, and what has been the cause of the delay in proceeding with the work?
3. Does Stanley Barracks afford sufficient accommodation for the officers and men stationed there?

4. What is the amount of rental and other additional expenses payable by the government during the current year, for accommodation or quarters outside of Stanley Barracks because of their insufficiency?

Mr. PUGSLEY:

1. $100,000 included in estimates for 1910-1911.

2, 3 and 4. To be answered by the Department of Militia and Defence.

SIR FREDERICK BORDEN:

1. Appertains to the Department of Public Works.

2. The property was conveyed to the Crown by the city of Toronto by deed dated February 15, 1909. The delay in proceeding with the work is due to there having been no appropriation for the purpose.

3 and 4. No. There are 75 all ranks in Toronto for whom no quarters are available. The total amount of lodging allowance paid to them is $14,825 per annum.

NORTH ATLANTIC FISHERIES BEFORE HAGUE TRIBUNAL.

Mr. MACDONELL:

1. When does the government expect the North Atlantic Fisheries dispute to be submitted to the Hague Tribunal?

2. By what counsel will Canada be represented on this occasion?

3. Has the government retained the services of Sir Robert Finlay, and will he appear for Canada on that occasion? If not, why not?

Hon. A. B. AYLESWORTH:

1. In April or May next.

2 and 3. There will not be any separate representation of Canada before the tribunal. It is expected that upon the oral argument His Majesty's government will be represented by the Attorney General of England and by Sir Robert Finlay and probably by one or by two other counsel, but who such other counsel will be has not yet been decided. The government of Canada joined with the government of Newfoundland in asking that Sir Robert Finlay should be retained. He has been retained and if available as counsel when the time comes will no doubt appear in that capacity.

ALIEN LABOUR LAW.

Mr. MACDONELL:

1. Is it the intention of the government to abolish the Alien Labour Law, on the ground that it is useless in its present condition?

2. Has the government received any request from the Trades and Labour Congress of Canada to this effect?

3. What is the intention of the government with regard to either the enforcement of the Act or its repeal?

Mr. MACDONELL.

Mr. KING:

1. No.
2. No.
3. Answered by No. 1.

PURCHASING AGENT FOR INTERCOLONIAL.

Mr. STANFIELD:

1. Has the department created a purchasing agency for buying supplies for the Intercolonial railway, at Ottawa?

2. If so, what is the personnel of the same, salary and former experience of each member of such agency?

Mr. GRAHAM:

1. Yes.

2 (a) Louis Lavoie who entered the service in October, 1894, as clerk in the general manager's office, and where he remained until 1901, when he entered the office of Track Expert Horn, as general clerk, on the reorganization of the railway yards. In August, 1902, Mr. Lavoie entered the office of the late General Superintendent Price, as chief clerk and was employed in that capacity until September, 1905. Since that date, in the general manager's office as all round assistant in transportation work. He is an expert stenographer and typewriter, with a good knowledge of the English and French languages and is thoroughly familiar with railway work. Mr. Lavoie's present title is 'Purchasing agent' at a salary of $150 a month.

(b) O. O. Leblanc entered the service as clerk in the Purchasing and Stores Department in March, 1884, his present sal- June, 1888, salary $100 a month.

(c) F. H. Kinnear, clerk in the Storekeeping and Purchasing Department since June, 1898, salary $100 a month.

(d) George Harshman clerk in Stores and Purchasing Department since 28th July, 1899. Salary $85 a month.

SURVEYS IN TOWNSHIP NINE, PROVINCE OF MANITOBA.

Mr. STAPLES:

1. Has the government done any re-surveying in township nine, range ten, west of first, province of Manitoba, recently? If so, what was the nature and the extent of the work?

2. By whom was the work requested?

3. When did the work begin?

4. How long did it last?

5. Who was in charge of the survey party?

6. Did the surveyors alter or change any of the stakes or lines? If so, what alterations were made?

7. How many persons were employed during the work?

8. What is the total cost of the resurvey?

Mr. OLIVER:

1. The lines in township nine, range ten, west of the principal meridian, have been retraced recently. All the section

lines were retraced and marked on the ground. The Assiniboine river was also surveyed across the township.

2. The work was requested by John Kerr, Eldrage Precious, Frank Precious, Albert Catt, Hy. Precious, Alex. Dobbin, C. Pullman, Robt. J. Pullman, J. Wilkinson, W. G. Ross, Wm. T. Grogan.

3. The work began at the end of April.

4. The work lasted about three months.

5. C. F. Aylesworth.

6. The returns of the survey not having been received, the question cannot be answered.

7. Twelve persons and the surveyor.

8. The accounts of the surveyor not having been received, the question cannot be answered.

THE ROSS RIFLE.

Mr. WORTHINGTON:

1. Was any certificate or other document issued or given by any person at Militia Headquarters, or belonging to the Militia Department, or any other person, which caused the Ross Rifle, Mark II, double star to be admitted by the National Rifle Association of Great Britain for use in the last Bisley competition? If so, by whom was such issued, and what was the nature thereof?

2. What is the cost to the Militia Department of Ross Rifle Mark II., double star?

3. Is the Ross Rifle Mark II., double star, regarded by the Militia Department as a service weapon?

4. Is this pattern the one which will govern future purchases for issue to the Militia as its service weapon?

5. What contract has been made with the Ross Rifle Company for the supply of rifles of this issue, including dates, numbers, payments, &c.?

6. Who are the twelve individuals to whom rifles of this pattern have been issued, and under what regulations were such issues made?

Sir FREDERICK BORDEN. In answer to the first part of this question I would say that as far as I can ascertain, there is no certificate or other document in the Militia Department, or which has been issued through that department, which would answer to the description contained in this question. However, I, myself, while in England, in July last, wrote a personal letter to the commandant of the Bisley team, Col. Bertram, and, as I told Col. Bertram that he could make such use as he chose of my personal letter, it is possible that this is what the hon. member refers to and, if so, I am delighted to have the opportunity of satisfying his curiosity. The letter is as follows:

Waldorf Hotel, Aldwych,
London, Eng., July 12, 1909.

Dear Colonel Bertram.—Having read the correspondence, including the letter of Lt.-Col. Crosse, relating to the use of the Mark II** rifle by the Canadian Bisley Team, this year, I have no hesitation in saying that the rifle issued to the team by the Militia Department is in every respect of the same pattern as the rifles of same mark, duly and previously authorized by General Order, now being manufactured for and issued by the Department. You are at liberty to make such use, as you may see fit, of this letter.

Wishing you every success,
I remain,
Yours very truly,
(Sd.) F. W. BORDEN.

Lt.-Col. A. Bertram,
Commandant, Canadian Bisley Team,
Bisley.

2. The cost of the conversion of the Mark II rifle to Mark II** was $11 per rifle.

3. Yes.

4. It is expected that both mark II and mark II** patterns will be manufactured and issued to the Canadian troops in such relative quantities as may be deemed advisable.

5. The only order given the Ross Rifle Company for this pattern of rifle was by letter dated April 29, 1909, for the conversion of 500. Delivery under this order was completed on September 29, last, and the rifles have been paid for.

6. The rifles were issued to the following:

Colonel S. Hughes, M.P.	1
W. H. Sharp, Esq., M.P.	1
W. D. Staples, Esq., M.P.	1
Vickers Sons & Maxim	2
J. A. Sexsmith, Esq., M.P.	1
W. Price, Esq., M.P.	1
J. Arthurs, Esq., M.P.	1
J. D. Taylor, Esq., M.P.	1
H. Clarke, Esq., M.P.	1
F. B. Carvell, Esq., M.P.	1
Captain Swift, Inspection Staff.	1
	12

PITT MEADOWS, B.C.

Mr. J. D. TAYLOR:

1. Has the government made arrangements for the granting of a large area of public lands on Pitt Meadows, in New Westminster District, in British Columbia, to any person or persons, on terms differing from those obtainable by applicants generally under the provisions of the Land Act?

2. If so, what are names of the persons, their occupations, the acreage and the price per acre?

3. (a) Is there any settlement in the neighbourhood. (b) If so, what is the average price of land there?

Mr. OLIVER:

1. Yes.

2. W. A. Rannie, contractor, 6,821·2 acres at the rate of $1.50 per acre.

3. (a) Yes.

(b) The department has not the information at hand.

MILITARY COURTS OF INQUIRY.

Mr. WORTHINGTON:

1. Have officers or soldiers of the Canadian Militia the right to cross-examine witnesses and to procure evidence before Courts of Inquiry as established by the rules of procedure under the authority of the Army Act?

2. If so is the government aware as to whether any such right has been curtailed or diminished by the regulations established by the Governor in Council under the authority of the Militia Act, paragraph 77, line 940?

Mr. WORTHINGTON. I would like to call the minister's attention to the fact that the last line of the question should read 'under the authority of the Militia Act, 1904, paragraph 77, line 9.'

Sir FREDERICK BORDEN. I have the answer here according to the way the question was put. It is as follows:

1. Yes, in so far as the rules of procedure are not contrary to the Militia Act and regulations made thereunder.

2. Yes.

LAND ENTRY OF THOS. G. WARWICK.

Mr. LAKE:

Did Thos. G. Warwick pay the value of the improvements performed by A. R. Mudie on the S.W. quarter of section 24, 38,10, W. 3rd M. within thirty days from the 19th May, 1909, in accordance with the decision of the Minister of the Interior? If not, was his entry cancelled and notice given to Mr. Mudie to make re-entry within the usual 30 days?

Mr. OLIVER. On the 3rd of June, 1909, the agent of the Dominion lands at Saskatoon was instructed to notify T. G. Warwick that if he did not, within thirty days, pay the value of the improvements upon the southwest quarter of section 24, township 38, range 10, west of the third meridian, made by Mr. A. R. Mudie, his entry would be cancelled. On the 16th idem, the agent notified Mr. Warwick accordingly. On the 16th of July, 1909, Mr. Warwick paid the sum of $60, being the value of 30 acres of breaking done by Mr. Mudie. Mr. Warwick having complied with the conditions, his entry was not cancelled.

PRE-EMPTIONS AND PURCHASED HOMESTEADS.

Mr. LAKE:

1. What has been the total acreage of pre-emptions and purchased homesteads sold since the 31st December, 1908, to date?

2. What total amount of money receivable by the government does this represent?

3. How much has been paid on this acreage during the above period?

Mr. OLIVER:

1. 1,937.696 acres.

2. $5,833,376, with interest to date of payment.

3. $33,504, being entry fees and first instalments on account of purchased homesteads. This statement is for the period extending from the 31st December, 1908, to 31st October, 1909, which latter date is the date of the last returns received from the Dominion land agencies.

IMPERIAL CONFERENCE, 1909—FRENCH VERSION OF PROCEEDINGS.

Mr. PAQUETTE:

Is it the intention of the government to give to the members of the House, before the debate on naval defence, the official French version of the Imperial Conference of 1909?

Sir WILFRID LAURIER. I have to observe that this matter is not under the jurisdiction of the government but of the House itself.

FISHERIES COMMISSION.

Mr. CAMPBELL:

1. Has the Fisheries Commission which lately sat in the west completed its report?

2. If so, when will such report be brought down?

3. Will all the evidence taken be also laid on the table?

Mr. BRODEUR:

1. No.

2. Commissioners are now engaged in its preparation and report will be brought down when completed.

3. Yes.

FRENCH TREATY.

Mr. MONK:

Is there a provision in the existing treaty between France and Canada, respecting trade, for terminating the treaty upon notice or otherwise? If so, what is the effect of the provision?

Hon. W. S. FIELDING (Minister of Finance). The French treaty of 1893, now in force, contains a provision that either party may terminate the treaty after twelve months' notice. There is a further provision that if Canada should increase the duty on certain wines the French government may terminate the treaty immediately without notice.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing the number of passes issued on the Intercolonial railway from October 1, 1908, to October 1, 1909, whether annual, return trip or trip, to whom issued, the authority and upon whose recommendation the passes were issued and reasons for the issue, the several points at which these passes took effect and the destination, and also a copy of the agreement entered into by the various railways of Canada regarding the non-issuing of passes—Mr. Stanfield.

For a return showing: 1. The applications made to the Railway Board for protection of railway crossings under the provisions of chapter 32 of the statutes of 1909, an Act to amend the Railway Act, and (a) the cases in which these applications have been granted, (b) in which they have been refused, when refused, and the reason for refusal.

2. The names of the persons in each case making the application.

3. The cases in which the board of its own motion made an order for the protection of crossing under said Act.

4. The appropriations made by the board out of the Railway Grade Crossing fund under said Act, and the crossing in respect of which such appropriations were made.

5. The character or description of the crossing in question, and the character, description and cost in each case of the construction work of protection ordered or directed by the board.

6. The amount in each case ordered or directed by the board out of the said fund and by the railway company and municipality or other party to the proceedings.

7. The cases in which the work ordered to be done (a) has been completed, (b) in which it is under construction, (c) the cases in which the municipality has been submitted to or complied with the order of the board, and (d) cases in which the municipality has refused to comply.—Mr. Lennox.

For a return showing the areas sold or leased as oil lands in the northwest, giving the amount sold or leased, the date when, and the parties to whom sold or leased, and if leased the various assignments, if any, made thereof, and the dates of the same.—Mr. Foster.

For a copy of all letters, telegrams, applications, contracts, lease or leases and correspondence with regard to Lac du Bonnet fishing.—Mr. Campbell.

For a copy of all letters, telegrams, applications, contracts, and correspondence with regard to the taking of spawn for the fish hatchery at Snake island, Winnipegosis for the years 1907-1908 and 1909.—Mr. Campbell.

THE LATE SENATOR MERNER.

Mr. LENNOX moved for a copy of the resignation of the late Senator Merner and all letters, correspondence and papers in connection with the resignation.

Sir WILFRID LAURIER. There is no such correspondence in existence.

Mr. LENNOX. No resignation?

Sir WILFRID LAURIER. No.

Mr. SPEAKER. Dropped.

PRINCE EDWARD ISLAND TUNNEL.

Mr. A. B. WARBURTON (Queens, P.E. I.) moved for:

A copy of all memorials, reports, correspondence and documents in the possession of the government not already brought down, relating to a survey of a route for a tunnel under the Straits of Northumberland between the province of Prince Edward Island and the mainland of Canada, and also relating to the construction of such tunnel.

He said: Mr Speaker, this is a question which has been often brought before the parliament of Canada, although it has not been presented during the present parliament until now. Last year, owing to the fact that there was a serious falling off in the revenues of the country, I did not myself consider it an opportune time to move a resolution which if adopted might mean the expenditure of a considerable sum of money, and consequently I deemed it better to wait for a more convenient time when the revenues of the country would be buoyant and when those in charge of the finances might be in a more melting frame of mind and better prepared to give the people of Prince Edward Island assistance in this direction. At all events the question has been ventilated in the press and in parliament for years. Permit me to say that in my humble opinion the method adopted by some of its advocates, and the press, particularly in the press of Prince Edward Island, has not been characterized by that common sense which would have been better for the tunnel. We have had speeches on the hustings and editorials in the newspapers which have brought ridicule upon a worthy scheme and which to some extent at least has made it a laughing stock. In consequence of this I find it more difficult to remove the wrong impressions created by the absurd declarations which have been made by would be advocates of the scheme, than in gaining the sympathy of those in parliament and outside of parliament when I submit facts. As you were aware, Mr. Speaker, some 19 years ago the government of Sir John Macdonald took steps towards getting a survey of that part of the Straits of Northumberland where this tunnel is to be built. So far as that survey went it was useful, but it did not go far enough and was so imperfect that it would be quite impossible for any one to tender for the construction of a tunnel on the data which it furnished. The survey was made by a Mr. Palmer, of England, who was said to be an expert in this branch of engineering. I met Mr. Palmer in those days in Prince Edward Island, and whatever the cause of it was there seemed to be a great deal of friction between him and those who were then actively interesting themselves in the project. However that was, the survey was not made to the extent we had expected. Possibly we were looking for too much and possibly, and very likely, our imperfect knowledge of that sort of work did not enable us to form a just estimate of the extent of survey that should be accomplished for the sum of money appropriated for it. Of course, I recognize that laymen are apt to be led astray when they come to con-

sider questions which require great engineering skill. However, upon the information reported to him by Mr. Palmer's survey, Sir Douglas Fox made a very important report. It does not require any words from me to add to the fame of Sir Douglas Fox as a great engineer. I shall, with the permission of the House, read certain extracts from the report of Sir Douglas Fox and from the correspondence with the late Senator Howlan, and I shall read these extracts in order to explain to the House perhaps more fully than has been explained in any former discussion the position which is taken by a great many of the people of Prince Edward Island and the mainland, and the position which I myself take now.

Sir Douglas, in the opening of his report, gives us this information. He said:

The greatest depth of water is shown as being 96 feet at high water, with a rise of tides of six feet at springs and three feet at neap, and the speed of the current as not exceeding three knots, with two hours of slack water each tide.

The distance from shore to shore is given as about 13,200 lineal yards, or say from shaft to shaft 13,500 lineal yards, exclusive of land approaches on either side, of which about 2,000 lineal yards would be in the tunnel.

Mr. Palmer further reports that the shores upon either coast are well adapted for railway approaches, varying from 15 to 35 feet in height above high water mark, with a mean altitude of 25 feet, the soil being of a red clayey nature. It appears also that the higher land on Prince Edward Island shore falls away towards the interior which will, therefore, shorten the approaches on that side.

That section of the report bears more upon the nature of the particular material through which the proposed tunnel would run. Then he took up the question of the stratification, upon which he reported as follows:

Upon the all important question of stratification on the proposed alignment, Mr. Palmer quotes the following opinion, given him verbally by Mr. Francis Bain on the occasion of his visit:—

Mr. Bain was a somewhat noted geologist in that section of the country——

'In his belief, a bed of red clay shale, varying in thickness from 50 to 80 feet extends right across the Straits of Northumberland. It lies almost horizontally upon a carboniferous or gray sandstone base, and is said to contain small occasional lenticular masses of fine red sandstone.'

Mr. Palmer adds, as the result of his own investigation: 'The geological outcrop on either shore in which the strata are distinctly visible, the formation of the surrounding country, the stratification seen in neighbouring wells, combined with the opinion of Mr. Bain, the geologist who is a native of the island, and has a knowledge of its entire formation, proves that a most favourable and impervious stratum does exist for subaqueous tunneling.

That, I may remark, is a point in regard to which a great deal of exception has been taken. It has been contended by some that this red sandstone formation is very likely to have fissures through which the water could pass to the underlying strata, which would add enormously to the cost, if not render impossible the construction of the tunnel through that material. But that does not appear to be the opinion of those most qualified to judge. There is no information upon this point, and it is mainly for the purpose of getting that information that we wish to have a survey made.

In this report, Mr. Bain remarks: 'The great shale beds are persistent and uniform, but the small arenaceous or balcareous deposits, which occur in them, are local, lenticular and discontinuous and are not likely to form leads from water.

These shale are impermeable to water. The carboniferous base of sandstone will possibly form a dangerous source of water, and it should be avoided, but as already remarked, it does not break up under the bed of the straits here.

It is my duty to state that, though convinced of the accuracy of what I now present, a more minute and detailed geological investigation should be made before active engineering operations are begun.

That is what Sir Douglas Fox wanted in 1890 or 1891, when he made this report, and that is what some of us, myself among the number, have been agitating for ever since. Sir Douglas goes on to say:

So far as I can judge from the small specimen of shale in my possession, I agree that it is likely to be impermeable to water, and to form a favourable material for tunnelling operations. * * * * *

In very soft and wet strata, and when compressed air has been employed, it has been found desirable to adopt, for the permanent tunnel a cylinder of cast iron with suitable flanges, such cylinder being sometimes lined wholly or partially with brickwork for protection purposes.

In homogeneous and dry strata, such as the shale referred to by Mr. Bain, I have a strong preference for a tunnel, also cylindrical in form, but composed entirely of brickwork in cement (grouted externally when practicable) as being of much more permanent character than an iron structure which, however, well protected, must be more or less subject to corroding influences.

In the present instance, there would be the great advantage in the brickwork tunnel of using local instead of imported materials of much reduced cost, and of more easily providing refuges for the plate layers.

The importance of that section of Sir Douglas Fox's report is this, that some years ago the chief engineer of the Public Works Department estimated that the cost of this tunnel would be $15,000,000; but in making his estimate he provided for a tube or casing of iron from end to end of the tunnel, which would add enormously to its

cost. I have a very high respect for the late chief engineer of the Public Works Department in any matter with which he is familiar; but I must say, with all due respect to him, that I would prefer the opinion of Sir Douglas Fox to his on this subject, and if Sir Douglas Fox takes the view that a cylinder of brickwork is preferable to one or iron, I think we would be safe in adopting it. Sir Douglas Fox then goes on to say:

I should propose to carry on the work——by means of a shield, especially designed for rapid progress in good material, and in conjunction with brickwork, but so arranged that whereas in the sandstone beds, feeders may be met with, an iron casing may readily be introduced to keep back the water, and so reduce the permanent pumping. In my estimates I have allowed for a considerable length (one-quarter of the whole distance between the shafts) of such casing.

In some sections Sir Douglas expected that there would be an inflow or leakage of water, and he would meet that with an iron casing, which he estimated for one-fourth the distance, whereas the engineer of the Public Works Department estimated it for the whole length. The difference in cost between a brick casing and an iron casing would be some millions of dollars; and if we take as our guide Sir Douglas Fox, one of the most famous engineers in tunnel building in the world, it is essential to deduct at least three-fourths of the iron work estimated for by the chief engineeer of the Public Works Department. Sir Douglas made several estimates varying with the size of the tunnel. A tunnel sixteen feet in diameter he estimated would cost in the neighbourhood of $10,000,000, but he did not think that would be large enough for the rolling stock which existed even at that time. He said:

Should it be decided that the tunnel must be of sufficient dimensions for an ordinary railway of the 4-foot 8½-inch gauge, and that the railways of the island shall be altered to that gauge, a tunnel of 16 feet in diameter would appear to just accommodate passengers and freight cars of the normal American and Canadian type, but not drawing room and sleeping cars, nor some of the cars reported to me as running on the Intercolonial railway. This size does not allow of a very satisfactory permanent way, nor does it provide proper space for the plate layers.

Such a tunnel constructed in the shale of brickwork in cement 1 foot 10 inches in thickness and where feeders occur with cast iron casing 1½-inches thick with 9-inch. flanges and laid with permanent way having steel rails weighing 70 pounds to the lineal yard, I estimate to cost, subject as hereinbefore mentioned £122.10s. nearly per lineal yard or say £1,652,500 from shaft to shaft, or with the land tunnel and contingencies a total sum of £1,971,800—$9,859,000.

I am of opinion to properly accommodate the Canadian and American rolling-stock, generally (exclusive of the special cars on the Intercolonial railway) the tunnel should have an internal diameter of not less than 18 feet.

That is the tunnel I am advocating.

Such a tunnel constructed as specified for the 16 foot tunnel. I estimate to cost subject as hereinbefore mentioned £140 sterling per lineal yard, or say £1,890,000 from shaft to shaft, or with land tunnel and contingencies a total sum of £2,252,500—$11,262,500.

Borings similar to these taken at the Sarnia tunnel, viz: from a vessel or platform through six inch wrought iron pipes, so as to ensure cores of sufficient size and undamaged being brought to the surface, should be made at intervals of, say, not more than 500 yards right across the straits, and down to the carboniferous bed rock, but this line of borings should be at some distance, say 300 yards from the centre line of the tunnel. This work should be carried out in the presence of experienced engineers who shoud carefully note the samples taken.

With this information obtained, much closer tenders may be expected for the construction of the tunnel, whilst the cost of these temporary works will be comparatively insignificant.

That extract explains itself. In his correspondence with the late Senator Geo. W. Howland, Sir Douglas Fox, on the 15th of May, 1891, writes as follows:

The cost of construction cannot be definitely fixed (assuming a close figure is required) until we possess fuller information as to the quantity of water that may probably be encountered in the tunnel. The beds of red sandstone which have to be passed through have an outcrop into the straits. These have to be contended with for about one-quarter the whole length of the tunnel, and the quantity of water they will give is the most important factor we have to consider when making the estimate of the cost. It appears to us that satisfactory information upon this point can only be obtained by sinking trial holes at each end of the tunnel through the strata the tunnel will have to pass through, and we suggested that these trial holes should be made before any price for the work be given.

That concludes the quotation I wished to make from the reports of Sir Douglas Fox. These reports I consider so clear that they require little or no explanation. Let me add that this matter has been keeping Prince Edward Island and some parts of the main land of the maritime provinces in a certain amount of turmoil for a great many years. The question is one that will not down. What we wish to know is whether this scheme is feasible and practicable or not, at a reasonable cost. Of course we do not expect the Dominion to bankrupt itself in order to build this tunnel, but if the project be reasonable and practicable, at a reasonable cost, well within the means of the Dominion, it ought to be built. But if a survey should prove that the scheme is not practicable, we ought to know it and get clear of the question and devote our attention to more practical matters. Until

some such survey however, as Sir Douglas Fox, recommends, is made, it will be out of the question to expect that this tunnel agitation will not continue to be a sort of irritation and annoyance from one end of the year to the other.

An hon. MEMBER. What is the distance?

Mr. WARBURTON. The distance under water is not more than seven and a half miles. It has been customary in correspondence and newspaper articles and in discussions on the floor of this House to quote letters written by the late Sir John Macdonald and the right hon. the leader of this House (Sir Wilfrid Laurier) as well as speeches by my hon. friend the leader of the opposition (Mr. Borden), the hon. member for North Toronto (Mr. Foster) and others. I must frankly say that I have never been able to see a great deal of force in quoting speeches or letters of that kind. They are valuable to this extent that they show the good feeling of these hon. gentlemen and their willingness to help us; but however eminent these hon. gentlemen may be, however high they may stand in the service of their country and in the confidence of their respective parties, and however eminent they may be in the history of the country, such quotations are not the best way in which to impress this matter upon the attention of the government and the House. I have long come to the conclusion that the strongest argument one can use on behalf of any public work is the argument that it is for the best advantage of Canada, I do not think it wise to argue on purely sectional grounds and say: I want this thing for my province because it is my province. For my part I want this tunnel, not only because it will be to the advantage of Prince Edward Island, but to Canada as a whole. Anything that tends to the consolidation of this Dominion tends to its welfare as a whole. Anything that tends, for example, to unite the island of Vancouver with the main land by material as well as theoretical bonds, by permanent and continuous bonds, does to that extent —and it is to a very considerable extent— strengthen the bonds that unite the various parts of our nation. On that ground, I urge this matter on the attention of the government and the House. You cannot expect Canada as a whole to be contented and progressive so long as there is a festering sore in any part of it. Every day we hear of applications to the government for assistance to improve transportation facilities in various parts of the country. In many cases these improvements will be confined to certain provinces, but nevertheless, they have a great bearing on the general prosperity of the country. Canada is now building the great transcontinental. That railway will be of very little practical use to us down in Prince Edward Island, yet four or five years ago, I went to defeat on that question and am prepared to go to defeat on it again—not because the railway is of much use to us in Prince Edward Island but because it will bind together the various parts of the country and make of us one nation. The greatest question before the country and to-day is that of consolidation, and transportation is the largest element in that respect. In the speech of His Excellency, he mentions the proposed road to Hudson bay. That road will be soon undertaken and built. It will be of no earthly use to us in Prince Edward Island but will be of great benefit to our fellow Canadians in the west by enabling them to get their produce to market more expeditiously and cheaper, and for that reason, although the road is of no benefit to my constituency, I shall give the project my support. Then there is the proposed expenditure on the Welland canal. It is important to the trade of Montreal and the west that the Welland canal should be deepened and broadened. Although we in Prince Edward Island are outside the track and influence of that canal and can derive no great benefit from it, I am going to support the project for the reasons I have given.

I have here a summary of a speech delivered by the Minister of Railways at Stayner, in February, 1908, which appeared in newspapers, and in which he spoke of the Trent Valley canal. I do not propose to give his speech in extenso, but merely a brief summary to this effect: The Minister of Railways defended the spending of money for transportation facilities because the people in that way obtained higher prices for their products. The price of products he added, was governed largely by the speed with which they could be got to market. When the transcontinental railways were completed, he said, the country would still not have sufficient transportation. Again dealing with the Trent Valley canal project, he said the country had been long committed to that scheme and the present government had said it would be built. He added:

If I stay where I am as Minister of Railways I am going to build that canal through to the Georgian bay.

He also referred to the building of better storage facilities on the eastern side of the Georgian bay and elsewhere where they were needed. I think he might have gone further and added a number of other works for the benefit of Canada, not that they are of benefit to Prince Edward Island, had they been brought to his mind.

It is this question of transportation to which the minister so well referred that affects us. We have a very fertile part of of Canada. We have very little poor land on the island; I suppose it is not as fertile

as the more fertile parts of Manitoba, Alberta or Saskatchewan, but taking the average of those provinces it is quite as fertile, and we have very little land that is not fertile. Our land is very nearly all owned by farmers, it is worked by the farmers and their families, and they raise an enormous quantity of produce on those farms. Our population is from 45 to 50 per square mile, and we require facilities not only for freight traffic, but also for passenger traffic. We do not complain about the summer facilities; we do not mind crossing over the Straits in the summer, but we do object to getting stuck in the ice in the winter as we have done in the past. If we could manage to get a line of steamers crossing over in winter that would keep navigation open throughout the season—and this I believe to be possible, as I shall endeavour to demonstrate to the House on a future occasion—we would not complain, but I am assuming that the winter conditions will continue as they have been and that we will still be exposed to the danger of having to cross the Straits on the small ice boats. It is for that reason that I am bringing this matter before the House to-day. I wish to commend it to the consideration of the government. As you can see it is not a very difficult matter to give us this service. I am not asking the government to build the tunnel, I am merely asking them to take such measures as will show whether or not it is practicable to build the tunnel. I am simply asking that the preliminaries shall be carried out in order to enable us or any other practical man to judge what can be done or ought to be done. I do not think this is asking too much. I feel sure that in this matter we will have the sympathy of members on both sides of the House. If they can see their way clear to assist us in this matter I have confidence that they will do so and therefore, without taking more of your time, I shall move the resolution standing in my name.

Mr. J. W. RICHARDS (Prince, Prince Edward Island). Mr. Speaker, I desire to say a few words in support of the motion made by my hon. friend from Queens (Mr. Warburton). The question of transportation between Prince Edward Island and the mainland is of great importance to the people of that province. This position I think will be generally admitted at least by those who are familiar with the conditions which exist in that part of Canada. It is true that our means of communication in the winter season have been greatly improved of late years by reason of our having steamers generally capable of breaking the ice in the winter season. The present administration have done a great deal in that regard; they have put on the 'Minto,' a powerful boat which has done very good service; and recently a new boat called the 'Earl Grey,' costing something like $500,000 has been put upon that service. It remains to be seen how far she will be successful in keeping up continuous communication during the winter. We have every reason to believe from the pains taken in the construction of that boat and from her great power and improved design, incorporating the latest improvements with regard to breaking ice, that she will do a great deal to keep up communication in a more regular way than has been possible in the past. However, during a very severe winter, and we have these occasionally, I am of the opinion that it would be very difficult for any boat, no matter how powerful she may be or what her design, to keep up regular communication in winter and for this reason we are looking for some means by which continuous communication can be maintained.

It is not necessary for me to repeat what my hon. friend (Mr. Warburton) has said with regard to estimates and opinions that have been published by so eminent an authority as Sir Douglas Fox. It is beyond question that since he made that estimate the science of tunnelling has advanced greatly, and to-day the work of constructing a tunnel can be done at a much lower cost than would have been possible fifteen or twenty years ago. Tunnelling is not a new thing. In the State of New York there are tunnels of great length and in Ontario large tunnels are also to be found. Tunnelling is practicable in other parts and I have no doubt that it would be practicable between Prince Edward Island and the mainland of Canada.

Prince Edward Island, as many of you are aware, is a very fertile little province. As has been stated, it has a larger population to the square mile than perhaps any other province in the Dominion. We have a large export trade, and what has been done in giving us winter steamers has greatly increased our winter trade, so that our exports during the winter months are nearly as large as they are during the summer, and for this reason there is great necessity for having some better means of transportation. I shall not go into particulars as to the size of this tunnel or other features that have been touched on by my hon. friend, but shall simply say that we want to know whether or not the construction of such a tunnel is practicable and that we think the time has arrived when this question should be settled one way or the other. To my mind the only way in which that can be done is to have a report after investigation or survey. At every election this question comes up and we are all in favour of a tunnel, but so far nothing has been done, and the question has caused

a good deal of agitation, I would not say turmoil, in the province of Prince Edward Island. It has been a burning question there for some years, and I agree with what has been very properly said, that in order that there should be a feeling of good will and peace and harmony among the provinces of Canada, in order to consolidate them, if on no other ground, we are entitled to have this question of the practicability and cost of the tunnel set before our people. If it can be done at a reasonable cost, at such a cost as the province would expect to have expended for that work, then I say we should have it, but it is most important and highly desirable to our people that the question should be settled one way or the other. I cannot complain of the large expenditure made in western Canada because I am well aware that the expenditures made there under a careful administration such as we have are necessary and are for the building up of this great nation of ours. At the same time, our people take the view that while these expenditures are being made in other parts of Canada, we in Prince Edward Island contribute our share to these expenditures, and we are entitled to some consideration in the matter of the construction of public works, and especially in the construction of the tunnel. The survey made there some years ago, so far as it went, was probably of considerable service; but since that time I am informed by engineers who are capable of passing an opinion on such subjects that improved means have been discovered of making surveys of that character. I would, therefore, urgently call upon the government to take up this matter seriously. The people of Prince county whom I represent are very deeply interested, because one end of this tunnel would most likely be constructed from Cape Travers in that county. I can assure this honourable House that this is a burning question in that province, and our people are most anxious that some steps should be taken with a view of satisfying the public with regard both to the cost and the practicability of the construction of a tunnel. I feel that we have the sympathy of the members from the other provinces of Canada, especially from Nova Scotia and New Brunswick, and whatever support we get from them will strengthen the hands of the government in at least ordering a survey. I can only express the hope that at an early date the government will see its way clear to take some steps to have an investigation on the lines I have indicated. It is a work which would do much for Prince Edward Island, the garden of the gulf, and would do much to bring about a better state of feeling among the people because as has been very well said, we are the only province in which there is a feeling of irritation and annoyance. I shall say no more on the present occasion, but I hope before the session is over to have another opportunity of dealing at greater length with this important question.

Mr. A. L. FRASER (Kings, P.E.I.). I wish to endorse what has been so well said by my hon. friend from Queens, Prince Edward Island (Mr. Warburton), and from Prince, Prince Edward Island (Mr. Richards) on this question. There are no two sides to it in our province, upon this subject at least we are at one. I am sure that seventy-five per cent, perhaps ninety-five per cent of the people of our province desire to have the conditions of confederation carried out if at all possible. One of the conditions under which our province entered into the confederation of this great Dominion, and perhaps the chief condition, was the promise of continuous communication with the mainland. We have that in our bond, and we desire to see it carried out by the Dominion government. If that is a condition that cannot be carried out, then we want to know it as soon as possible. At present it is, as my hon. friends have pointed out, an ever recurring subject of turmoil and trouble at every election, whichever government is in power; I think it is the same with both parties. On the eve of every election certain parties go down there and promise, or half promise, that this tunnel shall be constructed, but when the election is over we hear very little about the tunnel until the next election is coming on. Under these circumstances our people are getting discouraged. We trust now, seeing that we are some distance from an election, that this government will at once undertake to ascertain whether a tunnel can be constructed at a reasonable cost. It has been said that such a tunnel would cost an enormous sum of money, some people have placed it as high as $150,000,000. We will not ask for a tunnel if it costs half that amount. The people of our province do not wish to be unreasonable, we do not ask for any thing unreasonable, we only ask this government to make a proper effort to ascertain what the tunnel is likely to cost. We trust that at this present session the government will set aside a certain sum to have a thorough survey made. We do not want a survey that will be barren of any reliable and useful information, we want a complete survey made, cost what it will, and we want the survey made as soon as possible. This is a question that should not enter into politics, because it is an obligation about which there can be no question. We feel that the federal government should carry out the condition under which we became part of this great Dominion, and that we are entitled to this tunnel. We contribute our full share to the public exchequer, indeed some people argue

that for many years past we have contributed more to the treasury at Ottawa than we are getting back in any shape. It has been figured out pretty closely that we are contributing a larger sum each year, more than we are getting back. Now if that is so, it must be plain that we are entitled to to see this matter taken hold of seriously by the government. Without saying any more at the present on this subject, I have great pleasure in endorsing what has been said by my hon. friends from that province, and I hope that the government will take heed to it and act upon it without delay.

Hon. W. S. FIELDING (Minister of Finance). The question that has been brought to the notice of the House by my hon. friend from Queens (Mr. Warburton), my hon. friend from Prince, Prince Edward Island (Mr. Richards), and my hon. friend from Kings, Prince Edward Island (Mr. Fraser), is, I am well aware, of the deepest interest to the people of Prince Edward Island, and they are quite right when they claim that it ought to be regarded as a matter of general interest to the people of the Dominion. It is a good many years since this question was first brought before the House of Commons. Perhaps it would not be too much to say that in the earlier days the matter was regarded by many members as somewhat impracticable, and possibly even visionary; and for a long time it was hardly treated with the seriousness that our friends from Prince Edward Island desired. But I am glad to recognize the fact that the progress of engineering science in recent years has brought into the realm of practical affairs many projects which years ago would have been regarded unfavourably, and I am inclined to think that one of the matters that has been brought within that realm is the question of a Prince Edward Island tunnel. The subject has been brought before the House from time to time, and I must in justice to my hon. friends say that in no case when I have been present, or when I have read the debates, has it been presented better than to-day. It has been presented to-day forcibly, reasonably and with great moderation, and I compliment my three hon. friends for presenting the matter in that way. If I have to dissent from anything that has been said, it is in view of the words uttered by the hon. member for Kings who treated this matter as an obligation under the Confederation Act. Frankly I do not agree with my hon. friend. I do not think that this is an obligation under the Confederation Act. I do not think the government of Canada, either of one party or the other, has failed in its obligation to the people of Prince Edward Island to carry out the conditions of confederation. But though I differ from my hon. friend in that respect, that does not in the slightest degree affect my disposition to sympathize with Prince Edward Island, and to help the people of that province in this matter. I am disposed to think that if it can be had at a moderate cost the people of Prince Edward Island should have this tunnel, not because it is an obligation of confederation, for I humbly think it is not, but because they may fairly ask it in order that they may keep pace with the progress of the times, and that they may receive a share of the benefits of the great growing time in Canada irrespective of whether it is an obligation of confederaton or not. I look upon Prince Edward Island as one of the fairest provinces of the Dominion. In many respects it is one of the happiest provinces of the Dominion. It is an island almost entirely devoted to agriculture, settled by a fine farming population, by a very intelligent people, and there is no part of the Dominion of Canada, nay, there is probably no part of the world, where the blessings and comforts of life are more evenly distributed than they are among the good people of Prince Edward Island. Nevertheless, the population does not grow. Occasionally, indeed, there are indications that the population is falling away and our island friends are naturally very much disturbed on that account. They think their chief difficulty is this question of transportation. In the past very large figures have been quoted as the probable cost of this work. I am glad to hear my hon. friends from the island say that all they ask is that this matter shall be thoroughly and impartially inquired into and if the tunnel can be built at a moderate cost they think the work should be done. To that sentiment I most heartily subscribe, and I am quite sure that the government will have that feeling towards it. There have been some surveys in the past. I suppose that each of them in its day served the purpose, it was the best that could be had ; but I quite agree with my hon. friends that the matter should be taken up more vigorously and more seriously, and that we should endeavour to get a reliable and thorough survey by the best engineers, and if, as a result of that survey, it is found that this important work can be constructed at a moderate cost, I for one, would promise my hon. friends from Prince Edward Island my most hearty and cordial support.

Motion agreed to.

WRECK OF STEAMER 'HESTIA.'

Mr. J. W. DANIEL (St. John City) moved :

For a copy of all reports, correspondence and other papers relating to the condition and maintenance of the buoy on the Old Proprietor Ledge in the Bay of Fundy since January 1, 1908; also of all reports, correspondence

and other papers relating to the establishment, equipment, maintenance and operation of the life boat and life saving station at Seal Cove in the Bay of Fundy; also copy of all instructions issued to Captain Lugar in connection with the inquiry into the wreck of the ss. 'Hestia,' and of the findings and report on said inquiry.

He said: Mr. Speaker, in making the motion which I have just read calling for the papers which the motion calls for it will be necessary for me, to some extent, to call to the minds of the members of this House the unfortunate and disastrous wreck which took place in the Bay of Fundy on the night of the 24th, or early in the morning of the 25th of October last. The wreck of the steamship 'Hestia' is, as far as my memory goes, the most disastrous wreck, in so far as loss of life is concerned, that has ever taken place in the Bay of Fundy. The crew of the steamship numbered 41, and, in addition, there were four passengers, making 45 in all. Of these 45 persons, 39 went down to a watery grave. The facts given simply and shortly, are these: On the evening of Sunday, 24th October, the steamship 'Hestia' rounded into the Bay of Fundy, passing the Lurcher Light about eight o'clock. At half past twelve she sighted the Gannet Rock light and at ten minutes after one in the morning she rushed on to the rocks known as the Old Proprietor reef, passing at that time, in order to get into that position, within 30 or 40 feet of what is known as a gas or whistling buoy erected to guard against that very reef and known as Old Proprietor buoy. We all know that the life of a sailor is at all times a dangerous one, that he constantly takes his life in his hands. He is exposed to the danger of collision in darkness and fog. He is subject to the dangers both of wind and waves, of storms and hurricanes even when he has plenty of sea room on the broad Atlantic or on any other ocean, but as he nears the land and approaches his destination there is no doubt that the anxiety of the navigator increases very greatly, more especially when he approaches the shore at night time or in thick weather. This Sunday evening that I have referred to it was raining, clearing at intervals, with some mist, with a north-easterly wind, bearing to some extent on the starboard bow of the ship and tending to drive her to the westward of her course. The fact that these dangers when approaching the coast are very considerable for the navigator is well known and has long been recognized by all maritime nations. The consequence is that they have and are spending a great deal of money to provide suitable aids to navigation where they are needed in the shape of lighthouses, buoys, fog whistles, whistling buoys, floating buoys and very many other aids that human ingenuity has devised in order to point out the right course or as a warning beacon to ward off the ship against the hidden dangers, or dangers of any kind, that may be provided against by a light or such other aid to navigation. The principal aids to navigation are all listed and charted so that all the captains and men responsible for the navigation of vessels may become acquainted with all these lights and aids. When coming into any region they have on their charts a statement of these aids and are able to look for them when they require to do so as their course develops and they go on their path towards their proper haven. If it is necessary, as of course it is, that all these things should be made known and the information placed in the hands of people who ought to have it, the navigators or captains, then surely we will readily understand that it is much more important, that where anything happens to these aids to navigation, when the light goes out, or a buoy goes adrift, that these men who go up and down the great highways of the sea should be made acquainted with all accidents of that nature and with any changes that may be made in the listed lights and buoys around any particular coast.

The course which is generally pursued when anything goes wrong with these lights is, for the Marine Department to notify the British Board of Trade which issues a monthly bulletin to be placed in the hands of navigators so that they may be informed of any changes which take place; and not rely on these lights being in their accustomed places. In the Bay of Fundy we have such fixed lights as the Gannett rock light, and there are also these automatic gas whistling buoys which are not fixed on lighthouses but which are equally important to the navigator. Such a light was placed on what is known as the Old Proprietor reef. Off the southern coast of Grand Manan there is a very dangerous reef mostly covered by water which on the eastward juts out on the course which is taken by vessels going to St. John and other ports on the bay. This sunken reef at its outermost end raises its gnarled and scarred surface above the water and it is called the Old Proprietor rock, and for years there has been a high mast on that rock. Some years ago the St. John Board of Trade petitioned the Marine Department to place a lighthouse on that rock, but the request was refused on the ground that the expense would be too great. However, on account of the great danger of this reef the Department of Marine placed, a mile or so to the southward of the rock, one of those automatic whistling buoys supplied by Messrs. Willson, of Ottawa, and which I think cost $8,000. This buoy was for two or three years in commission and was regularly listed and charted. It was one of the most important lights in the Bay of Fundy

and had it been in working order on the night of October 24, or the morning of October 25, there would not have occurred that disaster by which thirty-nine persons found a watery grave, and among them two little Scotch lads who were coming out to settle in this country. It was most pathetic to read in the account of that wreck that when these two little lads were overturned in the boat the voice of one of the little ones in his Scotch accent was heard to cry out over the waters: Oh, mother, mother, save me, I am drowning. But these two little boys, together with two other passengers and the thirty-five hardy sailors, including the captain and all of the deck officers, except one, were drawn down in that waste of waters on that night. I say, Sir, and I say it calmly and coolly, that in their death they were the victims of either the inaction or the indifference or the incapacity of the responsible officers of the Marine Department. Had the defect in that buoy been remedied, it would not be in my power nor in the power of any one to point an accusing finger at the Department of Marine. But, Sir, the agent of that department knew as long ago as January the 22nd last, ten months ago, that the light was out or that the buoy was adrift. Now, what action was taken? They put an advertisement in three of the St. John papers and they inserted that advertisement three times and it read:

The Old Proprietor gas and whistling buoy has been reported as being either adrift or the light out. It will be attended to as soon as possible.

Signed J. E. LEGERE,
Acting Agent

Jan. 26, 1909.

So far as I know that was the only notice given in printed form, but I understand that the agent of the Donaldson line in St. John was verbally notified that there was something wrong with the buoy. Now, was that buoy attended to as soon as possible as stated in the advertisement? Is it necessary to take ten months to put right one of these gas buoys? I put a question to the Minister of Marine on the point and the minister allowed himself to be made the mouthpiece of an answer which stated that the weather conditions and press of more important affairs would not allow of that buoy being attended to. But, Sir, only a week after the wreck took place that buoy which for ten months lay there neglected, was towed into St. John harbour and tested opposite Partridge Island. All summer long, for ten months, the weather conditions would not allow the department to put this buoy right, but in the stormy month of November, in less than a week after the wreck they could go out there and tow it into harbour and set it in order. Why was not the 'Lansdowne' sent to attend to this matter? I would like to ask the minister, so that when he speaks on this subject he will be able to say whether there is any regulation in the department to the effect that that steamer should only leave port when it had several jobs to attend to. I understand that the acting agent at St. John, when asked why he did not send the 'Lansdowne' there, gave that as one of his reasons. I know that day after day and week after week the 'Lansdowne' was lying in the harbour at St. John, and might easily have been sent during the summer months when the weather was fine. It is ridiculous for the minister to say that the weather conditions were such, in one of the finest summers we ever had, that the steamer was unable to go to that buoy. When I heard the minister give that reply, I was astounded. I do not think that even for the purpose of screening his department, which he might naturally be expected to desire to do, he should allow such a ridiculous answer to be put into his mouth as that for ten months in the year the weather conditions in the Bay of Fundy were such that a steamer of the size of the 'Lansdowne' should not go and tow up a buoy of the size of that on the Old Proprietor ledge. The thing to my mind is utterly absurd and farcical. He also says that press of more important business prevented. I would like the minister to say what that more important business was. I would like to call his attention to the fact that that buoy is considered the most important among all the aids to navigation in the whole Bay of Fundy. What did Captain Gillies say on that very point in the investigation which was held? He said:

The neighbourhood of the Grand Manan has always been acknowledged to be the most dangerous locality in the whole bay.

There is the statement of a practical navigator; and yet the minister says that he spent nearly the whole year in looking after more important business while this steamer was lying in the harbour of St. John. To give you some idea of the importance of these aids to navigation in the Bay of Fundy, and the necessity of having them kept in the best possible condition, let me remind the House that in the year 1908-9 there was exported from the city and port of St. John alone for transatlantic ports no less than $24,564,840 worth of goods. I would also like to give the House an idea of the number of vessels trading up and down the bay. I will read from the annual report of the St. John Board of Trade the figures for the last three years 1906, 1907 and 1908, of the arrivals and clearances of the port of St. John:

Arriv'ls	1906.		1907.		1908.	
	No.	Tons.	No.	Tons.	No.	Tons.
Steam.	474	827,514	339	747,090	393	978,277
Sail....	980	116,664	677	78,574	940	105,319
Coast-wise.	2,403	411,735	649	244,832	829	282,723
Totals..	3,957	1,355,913	1,665	1,070,496	2,162	1,366,339
Clear-ances.						
Steam..	305	565,520	247	531,654	283	667,521
Sail....	1,027	111,112	692	77,819	963	108,000
Coast-wise..	2,651	685,123	720	456,403	939	614,596
Totals..	3,983	1,361,755	1,659	1,065,876	2,175	1,390,115

Besides the tonnage entering and leaving the port of St. John, there is the shipping business of all the bay ports on both the Nova Scotia side and the New Brunswick side. Not that all the vessels take the easterly side of the Grand Manan in going inwards and outwards, but all the large steamers do, and pass this Old Proprietor ledge. This buoy was known for ten months to be defective, and that fact is entirely responsible for the wreck of the 'Hestia.' In this connection I wish to read letter of the only deck officer whose life was saved after the wreck, that is, the third officer, S. A. Stewart. On the 2nd of November this letter was published in the St. John 'Globe'. It is headed:

Aids to Navigation in Bay of Fundy—Strong Statement by Third Officer of ss. 'Hestia.'

Seal Cove, Grand Manan, Oct. 31.

To the Editor of the 'Globe':

Sir,—I inclose herewith a letter from the third officer of the stranded steamer 'Hestia,' setting forth his views and expressing his feelings in this matter. We would ask you to publish the letter in your paper as early as convenient to you, as we think it would be of interest to the general public and possibly remedy a great evil.

Unless something is done the insurance rates will certainly increase on Bay of Fundy trade, which will act against St. John, New Brunswick.

WILLIAM H. LOGAN,
Salvage Officer, Salvage Association, London.

M. V. GILLIES,
Supt. Donaldson Line.

Mr. S. G. Stewart, third officer of the 'Hestia,' speaking of the stranding and subsequent happenings of that vessel and her crew, says:

The night we stranded there was a strong northeast wind with thick rainy weather, clearing at intervals, short high sea running. We were steering a mid-channel course up the bay, and our frequent soundings of over a hundred fathoms were satisfactory.

About half an hour after midnight on Sunday, October 24, Gannet Rock light was sighted, but owing to weather conditions accurate distance off could not possibly be established. The captain kept the ship on her course, evidently looking for the Old Proprietor buoy. At 1.10 on 25-10-'09, the ship struck on the outer part of the latter named ledge, where when the tide rose she fell over on her side and was completely submerged at high water. Myself, the second engineer and four seamen are all that remain alive out of a crew of 41 men.

I find since being brought ashore here that the light keepers in Gannet Rock lighthouse saw the ship passing, also that there is a large whistle and lighted buoy between the Gannet Rock and Old Proprietor shoals. All seamen entering the Bay of Fundy are compelled to depend upon these aids to navigation and if they were not there would not enter the bay under such weather conditions as existed on the night in question.

I feel, on behalf of myself and my brother officers and the many men who have lost their lives, also in the general interests of shipping trading to Bay of Fundy ports, that a strong protest to the department responsible for the lighthouse and buoyage system should be made through the public press, against the existing conditions of the aids to navigation on this dangerous coast.

My direct complaint is that the Old Proprietor Ledge buoy has neither light nor fog signal, whereas it is listed as having both. It is also well known locally that this buoy has been in this condition for months; while it is known that the 'Hestia' must have passed within a few feet of this buoy it will readily be conceded that had it been lit or its whistle sounding the ship would have been warned and cleared easily the ledges upon which she was wrecked. Doubtless the captain, after seeing the Gannet, was looking for this buoy. Can any one imagine a worse trap laid for any man than a buoy listed as marking dangerous ledges, and having a light working at stated intervals, also an automatic whistle signal, whilst neither whistle nor light exist? It is simply a trap worse than any ever thought of by even the old time wreckers that are now but a winter's tale. It is impossible to describe one's feelings when he finds that what he thought was his great factor of safety has proved his ruin.

In the bitterness with which one looks upon the dreadful loss of life that certainly would not have been if those responsible for the conditions of the Old Proprietor Ledge buoy had attended to their ordinary everyday duties; for there is not a shadow of a doubt the loss of the 'Hestia' is due to the long neglected conditions of this buoy.

Again, the keeper of the Gannet admits he did not fire a warning gun because he was afraid he might awake the doctor. Can anyone imagine a man, keeper of an outlying lighthouse, seeing a vessel standing into a probable danger, and not warning her because he thought the doctor might mistake the signal as being intended for him. A few explosive signals from the lighthouse would have been quite sufficient to warn this ship and

save her from destruction; still they were not given, although the keeper admits seeing the vessel and thinking her too close in, because they might call the doctor; and the vessel was allowed to go to her end. Is there any way of describing such stupidity or incompetence? Will the Canadian people allow such things to be? Let them try to think what it would mean if this accident had happened to one of the large passenger vessels plying to St. John, particularly when it is known that there is no life-saving station in the neighbourhood. There is supposed to be one, but it now consists of a boat unfit for use and without a crew. We were from 1.10 a.m. on Monday until noon Tuesday in a helpless and perilous position before any one came near the ship. Notwithstanding our being but four miles from the Gannet Rock lighthouse and making distress signals night and day; especially Monday night, which was clear and fine with all shore lights plainly visible, and during which bonfires were burnt on board the wreck almost continuously.

I would pray that the people of Canada may insist that those who are responsible for the coast lighting and buoyage system will keep that system in order or not put buoys out at all, so that there may not be traps added to a profession which already bristles with difficulty and much danger.

S. G. STEWART,
Third Officer ss. 'Hestia.'

Seal Cove, October 31, 1909.

That is the statement of the only surviving deck officer of the steamship 'Hestia.' With regard to the conditions of this light, let me refer to the evidence taken at the investigation. Here is the evidence of the first witness, Colin MacVicar, able seaman. In reply to a question put by Mr. Boyer, who was counsel for the department, he said:

That he had seen the Old Proprietor buoy from the ship as she lay on the rocks on Monday morning, but heard no whistle from the buoy nor was any light visible thereon Monday night.

The next witness was Andrew West Morgan, second engineer of the wrecked vessel, who was saved. He said:

During both Monday and Tuesday the buoy on the Old Proprietor reef was plainly visible during the daytime about a mile away, but he heard no whistle from it, nor was there any light upon it at night.

The next evidence I will give is that of the gentleman whose letter I have just read, the third officer :

The witness was of the opinion that the captain expected and hoped to take up the Old Proprietor buoy. Had the light on the buoy been burning, the accident could not have happened, since they must have passed within a few feet of the buoy.

That is the evidence of the third officer.

Mr. Holden, continuing the examination of Stewart, asked him whether, in his opinion as a navigator, the ship would have gone on the rocks had the Old Proprietor buoy light been burning to which Stewart gave a decided negative.

Mr. Holden went on to ask him this question:

I will ask the witness whether the fact that the light supposed to be on the Old Proprietor buoy has been non-existent during the whole summer, has been officially brought to the notice of mariners.

The answer is:

Never in any form.

Then there is the evidence of Captain Gillies with regard to the neighbourhood of Grand Manan being the most dangerous in the whole locality. There is no need of citing more evidence of that nature; it is all of the same kind and it must be of the same kind because it cannot be denied.

One would suppose that under these circumstances, when it was shown that this buoy had not been lit or its whistle sounding, and that this had been known for almost a year, a strict investigation would be held into the matter. You would also suppose that there would be some investigation into the cause of a wreck in which 39 lives were lost and an attempt made to ascertain whether all was done that should have been done to put that buoy and keep that buoy in its proper position and every possible effort made to succour the survivors. But what was the result? We have had a so-called investigation but, Sir, an investigation that was incomplete and literally farcical in its denouement. From all that I can learn Captain Lugar, who was chairman of the commission, stated on the streets of St. John before he had taken a particle of evidence that the cause of this vessel going on the rocks was because the compasses were deviating on account of her cargo of iron. According to the press, orders were given that there should be held a secret inquiry into this most disastrous wreck. I believe there was some secret inquiry but that did not by any means commend itself to the common sense or the ordinary judgment of the people down there and there was an immediate agitation for a public inquiry. Then it was stated there would be a public inquiry. It would be expected that the public inquiry would be held in the port of St. John where every available witness was at hand to be subpoenaed. But what was done? Suddenly we were told that the inquiry was to be removed to Montreal. Why? It was stated that the survivors were there. As a matter of fact the survivors were not there. The survivors were taken there after it was given out that the inquiry was to be held there. Then it was stated that Montreal was more central.

More central to what? To the centre of Canada. Then why not take it out at once to the city of Winnipeg? When you take it to Montreal you are taking it away from the men who were in the ship, from the pilots who would be able to give information and from the keeper of the lighthouse, from those who had gone down in tug boats to the wreck and rendered what assistance they could, from every one who was there ready to give his testimony. What was the result? Why Sir, I think with all honesty that we can only come to the conclusion that this so called investigation was not intended to investigate, it was intended more to screen the officials of the department responsible for the condition of this buoy. Otherwise it would appear to me and I think to every reasonable man that an investigation intended to be thorough, intended to be what it was called, would have been held right down there in the midst of those who were in a position to give true and honest testimony, and in the nearest place to the scene of the wreck. There were the survivors, the representatives of the steamship company, the pilots, those who had been off to the ship, the lighthouse keeper, and all of them were there ready to testify and easily accessible. But the inquiry was removed to Montreal. What was the result? We get a finding such as one would have expected, if the statement I have made with regard to Captain Lugar before the investigation was correct and I believe it was. The finding reads:

> The court is of the opinion that the cause which led to the foundering of the steamship 'Hestia' on the Old Proprietor ledge were:—An error in the compass, due probably to what is known as Gauss's error, aided probably by the fact that the vessel carried a cargo of 800 tons of iron.

The statement he made before he held any investigation at all, whereas the evidence in that investigation did not give Captain Lugar the slightest reason for saying that there was any error in the compass of that ship. All the evidence I have seen, and of course I have only seen the evidence reported in the newspapers, is to the effect that the compasses were all right and that before that ship left Glasgow she was swung, the compass was tested and the deviation was found to be extremely slight. What other evidence have we that the compasses were true? Why Sir, the very fact that that ship sailed from Glasgow to the mouth of the Bay of Fundy on her direct course, without any going to the right or left. If her compasses had been wrong, would the ship have made the mouth of the Bay of Fundy just as she expected to do and at the time she expected to get there? That fact of itself is enough to show that the compasses were in proper order and it is supported by the evidence of the surviving officer that the ship was swung in Glasgow after her cargo had been placed on board and her compasses were found true. That is enough to show that the finding was not warranted by the evidence or by the facts.

I want to say this: Supposing the compasses were out of order, there is no doubt the vesesel was off her course. Is that any excuse why the light and the whistle of the Old Proprietor buoy should be out of order after having been ten months in that condition? What is the need of a buoy on the Old Proprietor, or anywhere else, if a vessel is in her course and everything is going well and right? These aids to navigation are wanted when things go wrong, and not when they go right. I have called attention to the fact that this board has stated that the compasses were wrong. Secondly, it says :

> The neglect of the master to take soundings when in sight of the Gannet rock.
> 3. Allowance was not made for the tides and the set of the wind.
> 4. An error of judgment on the part of the master in allowing his ship to get the bearing of the Gannet Rock light to southwest of west nagnetic. It must be borne in mind that the ship was only five and a half miles from Gannet rock when she struck.

Now, Sir, there are the facts as I have learned them from the finding, and I think I have shown the common sense and judgment of this House that that finding was not borne out either by the evidence or by the facts.

The other point I wish to bring before the House is that in that finding no mention whatever is made of the fact that the Old Proprietor buoy light was out, and that the whistle was not sounding. Now, what sort of an investigation is that? Here you set out to find the cause of the wreck, and the actual and veritable cause of the wreck is not mentioned at all. It was utterly impossible for that vessel to have gone on the Old Proprietor rock if that buoy had been lighted or the whistle sounding. It is idle to say that the ship's compasses were out, or that the master had not been making his soundings as he ought to have done, or that other things had happened, when, if the one requisite thing had been done, the wreck would never have taken place. If the man, or men, or officials, responsible for the proper condition of that light had attended to their duty, these 39 people, little boys and grown up men, would now be enjoying life with the rest of us, instead of being buried under the waters of the Bay of Fundy. That is the charge which this wreck, this unnecessary wreck, brings against the Department of Marine and Fisheries.

Another point I wish to bring out is that the commissioners state that these other things would be the subject of a later inquiry, that is, with regard to the buoy, and

with regard to the coolness of the light-house keeper and other matters of that kind, and I hope that when the minister gets up to speak he will be able to give a satisfactory assurance to this House and the country on those points. I can assure him that the greatest interest is taken in this matter, more especially by those who are interested in the ownership and in the sailing and operation of ships, and by those who are interested in the maritime affairs of this country, and in the proper operation of the buoy system, and the system of marine aids generally upon which we have been spending so much money for many years past. To these people this is a most vital question. I do not think the people will be put off with any such farcical so called investigation as we have been treated to so far, but will insist, and I hope will obtain, a proper and serious investigation into all these matters. Why, Sir, if a man lost his life through violence on land, there would be an inquest held, and some attempt would be made to find out how he came to his death, who was responsible for it. But here are 39 lives wiped out within an hour or two, and no attempt is made to ascertain why all these people were drowned, and why only six were saved out of the whole number of crew and passengers. I hope the minister will explain these matters, because I can assure him that the people of the maritime provinces are losing confidence in the department over which he has the honour to preside. It will not do for him to allow any want of confidence in that department to exist, more especially in regard to the operation of aids to navigation, and the buoyage system on that extensive coast, and indeed on both the Atlantic and Pacific coasts. I hope he will be able to satisfy this parliament and this country that he intends to have this matter properly investigated, and whatever is wrong, to have it righted. With regard to the acting agent of marine at St. John, who appears to be the responsible party, I have nothing to say, I have never met him, I do not know him. The only facts I know are those that I have been trying to present this afternoon. But I do not mind saying this, Mr. Speaker, that if Mr. Fred Harding had been retained in his position as agent of that department, and in the post from which he was removed, so far as I can see, without proper cause, the department at Ottawa would not have remained for ten months without being made acquainted with the condition of that Old Proprietor buoy, nor would that Old Proprietor buoy have been allowed to remain ten months in that condition without being remedied.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Mr. Speaker, I may say that there is certainly no objection to the motion which has been made by the hon. gentleman (Mr. Daniel) being adopted. I will be very glad indeed to bring down all the papers concerning this unfortunate accident to the 'Hestia,' and at the same time the papers concerning the establishment of the life-saving station on Seal Cove. I do not think there were any special instructions given to Capt. Lugar, but I will bring down all the instructions special instructions given to Capt. Lugar, which may have been given to him of a general character.

Mr. DANIEL. And the different instructions which, I understand, he received—instructions for a secret inquiry in the first place and after that a public inquiry in St. John and later in Montreal?

Mr. BRODEUR. Certainly, I shall be very glad and besides I will say a word or two later on in my remarks in regard to that phase of the question. I may say that I am very glad that my hon. friend has given me an opportunity of putting before the public the side of the department in regard to this question.. I do not want to find any fault at all with my hon. friend for having brought the discussion before the House, because I know that this matter has received the attention of the public especially in St. John and in his province, and I suppose that he felt it was his duty to bring the matter before the country. Generally speaking, I am not much in favour of having these questions of wrecks discussed publicly in the press or before parliament and I will tell my hon. friend why. There has been in late years very serious discrimination by the insurance men against our Canadian ports, so much so, that to-day there is great difference between the insurance rates charged for a vessel going to Portland and for a vessel going to St. John, or Halifax, or to the St. Lawrence. There might be some reason for this discrimination with regard to the St. Lawrence because vessels have to navigate a long stretch of water and it might be found that accidents occur more frequently than in the ports of New York, Boston or Portland. But, in view of the improvements that we have made, in view of the aids to navigation we have established in the St. Lawrence, I think I may affirm now that the accidents that occur in that part of the country are very much less in number than those that happen on some other routes where shipping is carried on to the same extent. But, though I deprecate the discussion of these accidents, because they

become too prominent sometimes before the public and because they justify, to a certain extent, the underwriters charging higher rates, I feel that in this case my hon. friend was perfectly justified, in view of the discussion which has taken place in his province and especially in his own city, in bringing the matter before the public.

As far as the department is concerned, I am also very glad to have the occasion of discussing this question because I think I may say to my hon. friend and the House that the rumours that have been set in motion, the charges which in some cases have been made of negligence on the part of the officials, are charges that cannot be substantiated. The officer who was largely responsible for carrying out the work in the St. John district is Mr. Legère, who was acting agent at the time. Mr. Legère is certainly a very good officer. He was assistant engineer in the department under Col. Anderson and I must bear testimony to his character as an officer. I think I cannot do better than quote what is to be found in the last report of Col. Anderson, in which he states:

The assistant engineers appointed to attend to details of construction in the several outlying portions of the Dominion have rendered me valuable assistance and I wish again to bear testimony to the efficient work done by Mr. Legère in the maritime provinces.

Mr. Legère is supposed to be one of our best officers. He has been acting assistant engineer for some time and has given entire satisfaction. When last year, on the report of the persons who were making inquiries into the department, I had to take action and suspend the agent in St. John, we looked around and we thought the man who was best qualified to take the place temporarily was certainly Mr. Legère and he was appointed in St. John as acting agent. My hon. friend has attached a great deal of importance to the gas buoy on Old Proprietor ledge not being lit when the accident happened in the month of October last. I may say that it is not customary for mariners or navigators to rely upon those gas buoys; in fact, if, in a place like the Bay of Fundy, or south of Nova Scotia, you rely entirely, or to a large extent, upon the gas buoys which are there, you will find it is very difficult because one of the greatest problems that we have to deal with in the department is to keep these buoys in proper order. I will take the opportunity later on to read part of a report made by Mr. Legère concerning the work which he has done there since January last and it will be seen from that report how difficult it is to keep these buoys in proper condition. It is no wonder. The tide is very high, the winds are sometimes very strong, and the conditions are such that it is very difficult to maintain these buoys in proper condition. This is true not only of these buoys but of the buoys that we have as aids to navigation in different parts of the country. In our list of lights and fog signals issued on the first of April, 1909—and the same will be found in previous reports —we have this notice:

Mariners must bear in mind the fact that gas buoys are unwatched and if extinguished some time may elapse before a tender can reach them to repair or relight. Their lights cannot therefore be depended upon in the same way as those shown from watched light lighthouses.

(Sgd.) G. J. DESBARATS,
Acting Deputy Minister of Marine and Fisheries.

Not, only in Canada, but in every country in the world and especially in Great Britain, mariners are warned against relying too much not only upon gas buoys, but also upon light houses because accidents may happen to them. In our case we ought not to be too greatly blamed, because in Canada the government of the country renders the light service gratuitously, whereas in England no vessel can enter a harbour without being taxed light dues for the light in that harbour. Now, here is a company which has taken us to task—I should not say the company because I have had no serious complaint from the company—but here is an agent taking us to task who is probably himself largely responsible for the accident that has occurred. Let us see whether the department should be held responsible. I shall give the result of the investigations which have been held later, but I may say now that I regret to find that the agent of the company is trying to put upon the department the responsibility for this accident. The Donaldson line itself has not made any representations to us in that respect; their agents in Montreal have never made any complaint, but on the contrary the correspondence will show that the work we have done has received their appreciation. There is one thing to which I must call the attention of the House and of the public, and it is: We are providing aids to navigation, we are building lighthouses, we are putting in gas buoys, spar buoys, fog alarms, wireless telegraph stations, and equipping in every way, shape, and form, our navigation system on the Pacific and Atlantic coasts. But we must expect that those engaged in the shipping business shall take the necessary steps to utilize the aids to navigation which we supply. In this case, just a few miles from where the accident happened and where such loss of life occurred there is a wireless station—I join in the sympathy my hon. friend has expressed for that loss of life; I am sorry for it, and perhaps more sorry than he is—but I say that if the company had put a wireless telegraph apparatus on their steamer so that they could communi-

cate with the wireless apparatus which we are maintaining at Partridge Island and other places in the locality, the loss of life would not have occurred. Even if the vessel had struck on the rocks she could have communicated with our station at Partridge Island and we could have sent vessels immediately to their assistance. Therefore I say that if the company or its agent find fault with us, I think they are also at fault for not having equipped their vessel with a wireless system. The question is engaging the attention of the American authorities and of the British authorities now, and it should also engage our attention in this parliament, as to whether the steamship companies which are plying to our ports should not be bound to establish a wireless system on their vessels so that loss of life would be prevented, as it would in this case had the steamer been so equipped. Now, the agent of this company at St. John seems to have started an agitation over this accident. Let me say that the agent or his office in St. John was notified that this light was out and I presume he failed to communicate it to the owners of the 'Hestia' or to the master of that ship. There is no evidence to that effect that I know of, but at all events the 'Hestia' was in St. John several times since that notification and the agent should have notified her master that the light was out. I do not know whether he has done so or not. But not only did we notify the agency of the company at St. John, but our acting agent also thought well to publish in the newspapers the following notice which I do not remember that my hon. friend (Mr. Daniel) read.

Mr. DANIEL. I read the advertisement.

Mr. BRODEUR. The advertisement was published on the 25th of January, 1909 in the newspapers of St. John, Yarmouth and St. Andrews, and it read as follows:

St. John, N.B., January 25, 1909.

Notice to Mariners:—The old Proprietor gas and whistling buoy has been reported either adrift or light out. It will be attended to as soon as possible.

(Sgd.) J. A. LEGERE,
Acting agent, Department of Marine and Fisheries, St. John, N.B.

Well, Mr. Speaker, the first question we have to discuss is what has been the cause of the accident. My hon. friend (Mr. Daniel) says the department is entirely responsible for the accident and he lays the entire blame on the negligence of the department. I must take issue with my hon. friend in that regard. Before condemning the department, as he has done, I think he should have waited until the papers were brought down. From them he would have found that the accident was not due in any shape or form to the negligence of the department or of the acting agent at St. John. How did the accident occur? An investigation has taken place. The result of that investigation will be placed before the House, when it will be found that the accident was in part due to what is called Gauss's error. On that point I might mention the evidence given by one of the survivors of that unfortunate accident, Mr. John Mackenzie. He stated that he was an able seaman to the ss. 'Hestia,' but had lost all his papers. He had been at sea 16 years, 13 of which he had served as an able seaman. It was his first voyage on this ship. She left Glasgow on October 10, and she stranded about ten minutes past one on Monday, October 25. He was at the wheel from 6 to 8 p.m. the previous day. Could not remember the course he steered by the compass; it was given in degrees.

He considered the 'Hestia' was a very bad vessel to steer. She would sheer some times more than a point off her course.

Some of his friends who had made the previous voyage in her advised him strongly not to go because she steered so badly. Here is a man who was on the ship and who makes that extraordinary statement. But, Mr. Speaker, I will not rely entirely on the evidence of that man. I will take the chart itself, and will show to the House that the accident was entirely due to the causes mentioned in the judgment rendered by the commissioner, Capt. Lugar, and the two assessors, Capt. Francis Nash and Capt. Richard Jones, men of a great deal of experience in marine matters. The first cause assigned for the accident is what is called Gauss's error. This, I may say, is an error that ocurs in the following circumstances. When a ship has been for several days on a course, let us say an easterly or westerly course, the soft iron of which the ship is constructed becomes magnetized. The ship in fact becomes a large magnet. In this instance the magnetism of the ship was increased by the fact that she had 800 tons of iron on board. This magnetism does not affect the needle of the compass while the same course is continued, that is, so long as she goes from east to west, from west to east, from north to south, or from south to north. But if at the end of several days the ship's course is changed, as happened in this case, the magnetism of the ship tends to draw the needle to the position in which the ship had been during the previous course. There are two ways in which this error can be remedied—taking the bearings or making soundings. In this case we have no evidence to show whether on the southern coast of Nova Scotia the bearings could be taken or not; but the soundings could have been taken. The soundings appear to have been taken. Now, the chart in my hand shows first that the boat should go from east to west until it reaches Seal Island, where we have a light-

house or a lightship. It should then go in a northwesterly direction until it comes nearly opposite Yarmouth, when it should go straight north in order to pass the Lurcher lightship, when it reaches a point where there are fifty fathoms of water. Then it should take a straight course to St. John between Gannet rock on the west and Brier Island on the east. We have there two lights, the Brier Island light and the Gannet Rock light. The latter is of the second order, that is to say, the third best class of light in the world. I may say that the best class of light in the world is to be found at Cape Race in Newfoundland, a light which has been erected by the Marine Department here. The first order light is similar to one on Sambro near the entrance to Halifax harbour, and the second order light is the one erected at Gannet rock. By the chart of the Admiralty, the vessel, on leaving the Lurcher lightship, should go nearer to Brier Island than to Gannet rock. There is a great distance between the two, but the two lights can easily be seen. What happened in this case? The captain did not follow this course but evidently got out of his course. If he had been in his right course, and had taken soundings, he would have found a depth of 100 fathoms or more. He went near to Gannet Rock, and instead of directing his ship towards the northeast, he let her go towards the northwest, and in a few hours she was on the Old Proprietor ledge. The commissioners have taken the evidence, and they conclude as follows in the report signed by Capt. Lugar and the two assessors. With regard to Capt. Lugar, he is certainly one of the most experienced navigators in the country. He has a certificate of the British Board of Trade, and my hon. friend knows well that the British Board of Trade never gives a certificate except when they know that the man to whom they give it is capable of doing the work. That court decided as follows:

This court is of opinion that the causes which led up to the loss of the ss. 'Hestia,' on October 25, 1909, on Old Proprietor ledge, were as follows:—

1. Error of compass due probably to Gauss's error. This vessel had in as cargo about 800 tons of iron.

2. Neglect of soundings when in sight of Gannet Rock light.

There are places, where this vessel was supposed to go, where there are 100 fathoms of water. If the captain had taken proper soundings in approaching Gannet Light, he would have found that there were in some places there only eighteen fathoms, ten fathoms, forty-five fathoms and forty-three fathoms of water. Why did he not change his course instead of continuing west? Was that because, as a witness said, the vessel steered badly? Why should the department be held responsible for that?

3. Not sufficient allowance made for set of ebb tide and strong wind.

The wind was coming from the north east and was supposed to bring the steamer on the Grand Manan and the ledges surrounding. What did the master do? Instead of directing his course north-east just in front of the wind, he went on the other side and came on the rocks.

4. Error of judgment on the part of the master in allowing ship to get the bearing of Gannet Rock light to the southward of west magnetic. It must be borne in mind the ship was about 5½ miles from Gannet light when she stranded.

That is a term absolutely nautical which I shall not undertake to discuss. The ship was about five miles from the Gannet light when she stranded. Here is the decision given by three men, one having a certificate of the British Board of Trade, and the two others being master mariners, and they say the accident was due to the causes I have just mentioned. My hon. friend has said that a secret investigation was held. If he will look over the Shipping Act he will find that there are two kinds of investigations—the preliminary investigation and the formal investigation. The preliminary investigation is held in private. It is not necessary that the commissioner should act as a court. He simply goes around collecting information and then reports to the minister and advises whether an investigation should be held in full court or not. Capt. Lugar is our wreck commissioner for the maritime provinces, and his instructions are, whenever an accident occurs, to investigate the facts immediately and find out whether a formal investigation should be held or not. A formal investigation is held in order to give a hearing to any of the parties implicated because nobody, under the British constitution, can be convicted without being heard. If it be found at the preliminary inquiry that the captain of the vessel is responsible or other persons on the vessel, a formal investigation is held, but in this case the master unfortunately was lost. There was so much talk however about the accident that I thought it advisable to order a formal investigation in order that the public should be made aware exactly of what happened.

My hon. friend called the first investigation a secret one. That is not what it is called in the Shipping Act. It is called a preliminary investigation and is for the purpose of discovery. My hon. friend goes further. He asks: Why did you hold the investigation in Montreal? Well, the accident happened on the 25th of October. On the 27th, we were notified. My hon. friend will find in the papers, when they come down, that immediately on representations being made by the agents of the vessel, we

ordered two government steamers to go to the rescue—the 'Curlew' and the 'Lansdowne'. I received thanks from the agents for this assistance. Immediately Captain Lugar left under special instructions for Yarmouth to attend the coroner's investigation, and he reported to us on the 5th of November. He held his preliminary inquiry on the 2nd and 3rd of November. We did not lose any time. He examined all the witnesses who could give information at St. John, and of course he heard the survivors of the accident. Immediately he made his report. On the 4th of November we got the following request from Robert Reford & Company, agents of the Donaldson Line:

Captain Lugar intends holding informal investigation, 10 a.m. Friday, into loss of ss. 'Hestia.' Can we have representation at that inquiry? If our request is not in order, could you arrange hold full, formal investigation while crew are here. Reply wire.

On the 5th of November I appointed Captain Lugar as wreck commissioner in the following words:

Ottawa, Nov. 5, 1909.

I, the honourable Louis Philippe Brodeur, Minister of Marine and Fisheries, by virtue of the powers vested in me under section 781 of the Canadian Shipping Act, chapter 113, Revised Statutes of Canada, 1906, and amending acts, hereby appoint you a commissioner to hold a formal investigation into the causes which led to the grounding of the ss. 'Hestia' on the 25th October, 1909, at Old Proprietor ledge, Grand Manan, New Brunswick.

Sgd. L. P. BRODEUR.

On the same day we received from Capt. Lugar, at St. John, a telegram stating that the crew were leaving for Montreal. His message read:

St. John, N.B., Nov. 5, 1909.

Your wire with authority from minister too late to stop crew leaving for Montreal. Before holding formal inquiry suggest wait my preliminary report. Hold crew of six survivors in Montreal. The Donaldsons' superintendent wants this formal investigation to be big thing; want their lawyer attend and call outside evidence.

Sgd. LUGAR.

When we were informed on November 5 that these men were coming to Montreal we gave instructions immediately to Captain Lugar to proceed to Montreal. We were afraid that the members of the crew would leave Montreal early the next week for the other side, we wanted the investigation to be absolutely complete and what did we do? We simply gave instructions to have the investigation held in Montreal in order that these men might be at our disposal. In fact they were sent to Montreal and were examined there so that the reason assigned by my hon. friend (Mr. Daniel) for not holding the investigation in St. John falls to the ground.

My. hon. friend has stated that at one time a request was made to us for the erection of a lighthouse station at the Old Proprietor ledge and that the department decided not to build it because it would be too expensive. I do not know whether the last statement is absolutely correct, as I have not been able to ascertain the facts since my hon. friend made that statement, but I may say with the knowledge I have of lighthouses of the same kind that it would cost about $150,000 or perhaps $200,000 to build a lighthouse at that place. Besides that what would be the use of such a lighthouse there? The Gannet Rock light, I understand, is not more than four or five miles from this spot. Some years ago when our lights were of an inferior character a request for such a light would have had more force but now that we have lights like the Gannet Rock light that can be seen for 15 miles, what would be the use of putting another light four or five miles from there? It would be absolutely useless to spend $200,000 for that purpose and I would call my hon. friend's attention to this fact; I am sure he will agree with me that such an expenditure would not be justified under the circumstances. However, I shall inquire into the statement he made, I shall have my officers make a report and if it is found that the erection of a light there might prevent wrecks I will be very glad to favourably consider the erection of a light.

My hon. friend stated also that he heard that the 'Lansdowne' is sent only when there are several matters to attend to. I may say he is entirely mistaken in that respect. As soon as it is reported to the agency of the department that something is wrong with any of our buoys or lighthouses, he has instructions to attend to it immediately and the 'Lansdowne' is supposed to go at once.

Mr. DANIEL. I did not make the statement. I stated that it was reported that the agent had made that statement and given it as an excuse, as one reason why the 'Lansdowne' was not sent to repair this buoy.

Mr. BRODEUR. That is certainly not the report that was before the department. Our report says that the agent has done his best to have the ship go there to attend to that light.

My hon. friend has also stated that the Gannet Rock light keeper did not show any sign of distress because he was afraid to disturb the doctor who was on shore. I do not know where my hon. friend (Mr. Daniel) got that statement but I have the evidence before me and it appears that the Gannet Rock light keeper never knew of the accident, did not see the vessel passing there. Here is the report of Captain Lugar:

Gannet Rock did not see steamer passing or wreck till nearly 30 hours after the stranding on account of rain and fog.

By that statement we see that the charge against the Gannet Rock lightkeeper that he did not warn that vessel falls to the ground.

The hon. member for St. John (Mr. Daniel) says that the department has put in my mouth some statements which on their face are ridiculous. It appears that they declared the other day that pressure of more important business prevented their attending to the buoy at Old Proprietor ledge and my hon. friend went on to say that the port of St. John occupies a very important position. that a large amount of business was carried on through that port and that it is ridiculous for me to state that pressure of more important business prevented attending to that buoy and he intimated that I had stated that St. John was not an important port. My hon. friend may be sure that I realize that the port of St. John is certainly one of the most important ports that we have in this country. I am well aware that this port in the winter has been doing a very large amount of business, and it would be certainly a mistake on my part to say anything disparaging as to the importance of that harbour. Not only I but the department realize the importance of the port of St. John. We have done a great deal to improve the service there and my hon. friend has only to look at the chart issued by the Admiralty to find out what we have been doing there in the way of aids to navigation. If my hon. friend goes back only ten years he will not find in the harbour of St. John one half the aids to navigation we are giving there to-day. He will not find any of those gas buoys or the improved lights at Partridge Island, Gannet Rock, Brier Island, the Lurcher Lightship or Seal Island. So it would be very unfair to me to state that I did not realize the importance of the harbour of St. John and I suppose my hon. friend did not intend to put that in my mouth. What the acting agent at St. John stated was that although he was willing and anxious to see that this Old Proprietor ledge buoy was lit, his services were required on more important business, as I shall explain immediately to my hon. friend.

The gas buoy at Old Proprietor ledge is very near the Gannet rock light. There are on the other side of the channel where vessels pass places called the Northwest ledge and the Southwest ledge, and the Yarmouth Fairway buoy. These are places where vessels are passing continually. What occurred? When instructions were given to the 'Lansdowne' to go up there and light that buoy, it was found that the buoys at these ledges had gone adrift. My hon. friend will realize immediately how dangerous it is to leave buoys adrift on the sea in that region, because if you leave them adrift, and a navigator understood them to be in the proper place, a grave accident might occur. There was on one side of the channel, and on the other side a buoy which was not lighted. So there was no particular danger as to that buoy. But there were on the other side of the channel other buoys which were lighted and which were adrift, and if those buoys were not attended to there might be serious consequences to the trade in that section of the country. Then what did the acting agent do? I think it is due to that gentleman who has been devoting himself so faithfully to his business, to read his report on that matter. It is rather long, but since he has been attacked I think it is only fair that his report should be laid immediately before parliament before this discussion ends. My hon. friend will see by it the difficulty with which this government had to contend, and the serious situation in which he was placed. Most of those buoys were adrift. There had been during a considerable portion of the year very heavy winds and gales blowing at that place, and when the buoys went adrift it became absolutely necessary for him to look, not only after the Old Proprietor buoy, but also after the others. My hon. friend will also see in that report that he tried several times to reach the Old Proprietor buoy during a period of four months, and the gales were so heavy that he found it impossible to reach it and relight it. This was a very serious situation, and I cannot understand why, in face of the difficulties which those officers had to encounter, in face of the duties which those captains had to perform in keeping these aids to navigation in proper shape, we should insult them by charging them with dereliction of duty. I will read that report. It is dated November 6, 1909:

I beg to submit the following report in answer to your telegram of October 30, 1909.

The light on the Old Proprietor gas buoy was reported out, or gone adrift by the keeper of Gull Cove light, January 22, 1909. On January 23 I ordered the 'Lansdowne' to sea, and am inclosing a copy of my letter to the captain. You will note at the time the Old Proprietor was reported out that the Yarmouth Fairway was adrift.

My hon. friend knows what the Yarmouth Fairway buoy is.

The agent at Halifax, Mr. Parsons, having wired me as follows, on January 21, 1909.

'Cacouna' reported Yarmouth Fairway adrift 19th, 10 miles W.S.W. Seal island. We marconied 'Lady Laurier' 'Shelburne' rescue. If possible you place another buoy Fairway, we bringing buoy Halifax. Inform board of trade.

My hon. friend will admit that the Yarmouth Fairway was a very important buoy, more important than the others.

Mr. DANIEL. Does the minister mean the Board of Trade there?

Mr. BRODEUR. I do not know whether it is the Board of Trade there or the Board of Trade of a Canadian city, but I suppose it is the British Board of Trade. Then he goes on:

You will note that I arranged to send a Trinity bell buoy to replace the one adrift at Yarmouth Fairway.

In the meantime the Southwest ledge, Brier Island, buoy was reported adrift on January 23, 1909, by the signal agent at Westport, N.S., an in his telegram he stated ss. 'Westport' had gone out to tow it in, but later he advised me that the steamer had returned without the buoy.

On January 27, Capt. Bissett wired that the Old Proprietor was in position,—

Capt. Bissett was the captain of the 'Lansdowne.'

—but the sea was too heavy to light lamp, stated no word of South West ledge buoy yet—strong gales and heavy sea. Search was maintained, and on January 30, the South West Ledge buoy was located, one mooring stone gone. On Friday 3, Capt. Bissett wired that the South West ledge had been placed in position.

My hon. friend knows what the North West ledge is. That is a very dangerous place near Brier Island. Vessels, according to the information I have in my hands, are passing there, and if that buoy had been adrift or nearer the shore, some vessels might have come to grief. It was more necessary to look after that buoy.

Mr. DANIEL. Is that a light buoy?

Mr. BRODEUR. Yes, the North West ledge and the South West ledge are two light buoys.

The North West ledge had been reported out, some time during the latter end of December, 1908, and an effort was now made to have this buoy attended to. On February 5, Capt. Bissett wired that he had placed the bell buoy at the North West ledge, but could not take up the gas buoy.

In the meantime, on February 2, I received telegrams from Mr. Tremaine of Halifax, stating that the Yarmouth (S.W.) Fairway automatic gas buoy was still at Abbott's Harbour, having been towed there by the 'Ralph.' E. S.' on January 22. This buoy had been reported to the Halifax agency.

On Friday 6, when I saw poor progress at North West ledge, I wired Capt. Bissett, stating he had better proceed to Abbott's harbour and to attend the South West Yarmouth and do the North West ledge on the way back; also wired him on February 3, as follows:—'When through with Brier Island, proceed to Abbott's Harbour and if gas buoy Yarmouth (S.W.) Fairway not damaged and can be moored in position, do so. Also upright Candlebox and another upturned buoy whose name you may find locally.

On February 6, I received a telegram from the captain stating he had just returned from the North West Brier Island gas buoy, with no chance to take hold of it. Asked if he should wait and finish there, or proceed to Abbott's Harbour.

On February 8, I received a further telegram from the captain at Westport, stating that he had been out to the North West Ledge buoy, but that it was blowing hard from the northeast and he could not get near it owing to heavy sea. He also stated the buoy to be one mile west of true position, and that on the previous day the chances looked favourable for this day, also advised he would proceed to Abbott's Harbour first chance, and that he had only 25 tons of coal in bunkers.

On February 8, Messrs Hugh Cann & Sons, of Yarmouth, N.S., wired me that the Yarmouth North West automatic gas buoy found adrift had been towed to Yarmouth by their boat.

My hon. friend, I suppose, would not deny that this part of the bay is very important too, because there are vessels running every day, if not every day, several times a week, between Yarmouth and Boston, and it is of the utmost importance for the coasting trade that these buoys should be kept in proper position.

On the 10th of February, I received a telegram from Capt. Bissett, as follows:—Arrived here last evening, got buoys alongside and moorings on board, wire in bad condition, chain fair, stones gone. Reported here that buoy at Abbott's Harbour is South West gas Fairway. Want 60 fathoms (1¼-in.) chain and shackles and two (2) stones for buoy here. Can you send by 'Senlac'?

I endeavoured to send these stones and moorings by the 'Senlac,' but was notified that this could not be done. I then wired the captain February 11. 'Cannot send stones by 'Senlac. Yarmouth Southwest Fairway buoy at Abbott's harbour should be properly secured. Better do this and then return to St. John harbour for gear.'

I also received a letter from Yarmouth, dated February 10, a copy of which I am attaching.

On the 13th, Capt. Bissett wired me as follows, from Yarmouth: 'Visited Abbott's harbour yesterday, found buoy was secured. Could not turn up candlebox bell-buoy, sea too heavy to-day, strong gales southwest and think proceeding first chance.'

The 'Lansdowne' then returned to St. John, coaled, took on needed gear, and was ordered to sea on February 19.

Here is a month which was spent for the purpose of locating these buoys which were more important than the one at Old Proprietor ledge for he reason which I have given to the House.

I am inclosing a copy of my order to the captain. You will note that the Lurcher lightship had to be coaled and then the buoy work was detailed, which had to be attended

to. The Old Proprietor was one of the buoys mentioned in my instructions. The ship did not get away until February 22, and on the 24th the lightship was supplied with coal and all the water she could take.

On February 26 I received a telegram from Yarmouth, as follows: 'Do you wish me to go to the Lurcher lightship No. 15 with pay sheets before handling buoys? Moorings for two buoys on board, weather very bad.' I replied on the same date, 'Want you to tend to buoys first, if weather suitable, you may run over to Lurcher when replacing Yarmouth north-west gas buoy.'

On February 24 the agent at Halifax wired me as follows: 'Blonde Rock buoy drifted, towed into Wood's harbour. 'Lady Laurier' going west next trip, can replace unless your ship undertaking work. Please advise.'

This telegram was received late in the evening of the 24th, and I answered it on the 25th as follows: 'Will endeavour to replace Blonde Rock buoy, but wish you would order 'Lady Laurier' to do so, subject my confirmation to her by wireless. Advise me when she leaves.'

I am under the impression that I held conversation over the phone with Mr. Parsons, but at any rate I wired Capt. Bissett on the same date as follows:

'Blonde Rock buoy towed into Wood's harbour, make endeavour to replace before doing Yarmouth Southwest Fairway, as in my opinion Blonde Rock is more important than Southwest Yarmouth.'

Not hearing from Capt. Bissett, I wired him at Yarmouth, March 2, as follows: 'Please advise me where you are, and whether any further work has been done since the Lurcher was supplied with coal.'

Mr. R. L. BORDEN. Was the Old Proprietor buoy unlighted during all this time?

Mr. BRODEUR. Yes.

Mr. R. L. BORDEN. Why did he not give notice to the public that his representation that it would be attended to at once was not being fulfilled?

Mr. BRODEUR. He did give notice on the 22nd January that the buoy was not lighted.

Mr. R. L. BORDEN. Did not the public notice state that it would be attended to at once?

Mr. BRODEUR. As soon as possible.

Mr. R. L. BORDEN. But a month had gone by without any attempt being made to remedy it.

Mr. BRODEUR. Yes, because he could not go there. Then he went there, but he could not light the buoy.

Mr. R. L. BORDEN. Why did he not notify the public?

Mr. BRODEUR. My hon. friend has missed the point; he could not light it.

Mr. R. L. BORDEN. It is the minister who has missed the point.

Mr. BRODEUR. Well, I will read it again:

On January 27 Capt. Bissett wired that the Old Proprietor was in position but the sea was too heavy to light lamp, stated no word of southwest ledge buoy yet.

He went there, but he could not light it.

Mr. R. L. BORDEN. What was the original notice given to the public?

Mr. BRODEUR. It was to the effect that Old Proprietor gas or whistling buoy has been reported with light out, and that it will be attended to as soon as possible. He gave instructions immediately. He gave instructions on January 23, February 19, on May 3, and on May 15 to relight the buoy. On May 20 the captain found that he could go near the buoy, but that as the upper part of the buoy was out of order he could not light it. He reported that fact to the agency and he wanted to get a new buoy to replace the old one. There were two spare buoys at that time at St. John, the number that we generally keep there. What happened then? Immediately after that a buoy went adrift from near Brier Island and it had to be replaced immediately by one of these spare buoys. Then, he happened to get a No. 11 buoy and he thought that No. 11 was too heavy. Accordingly he asked that a No. 9 buoy be got. He telephoned Mr. Parsons at Halifax and got a No. 9 buoy. Unfortunately, that buoy had no superstructure, so that he had to give instructions to have a superstructure made. That work had to be done at Owen Sound and it took some months to get that superstructure because it is something that is not kept in store by the manufacturers here. Therefore, four months elapsed before he could go near the buoy, and when he saw the buoy he found that it could not be used in the condition in which it was then. He ordered a new buoy, but it took the time I have just mentioned to procure one for this place. The new superstructure arrived about the beginning of September, and it was immediately sent out there. At the same time this same trouble occurred that had occurred before, that is to say, that the buoys of the north-west and south-west ledge of Brier Island went adrift and he had to attend to these. The Lurcher lightship also required attention, and this prevented the 'Lansdowne' from being able to place the buoy at Old Proprietor ledge before the month of October. These are the main facts which have been brought out by the agent. I could read over this report and the House will see how difficult it is to deal with these buoys in the Bay of Fundy. The tide is very heavy, the winds and gales are very serious, and it is a question whether we should continue the buoys in that section of the Bay of Fundy.

If we were sure that no accidents would happen, well and good, but experience has shown us how difficult it is, especially in winter, to maintain these buoys in the Bay of Fundy. This problem is now engaging the consideration of the department. But to come back to the first point, I would say that if the vessel had followed the proper course, if she had followed the course she should have followed, of making proper soundings or if the officer in charge had taken into consideration the error in his compass I am sure there would be no accident and that the loss of life that we have to deplore to-day would not have occurred.

Now, my hon. friend has found fault with me because Mr. Harding has been removed from the agency at St. John and he says that if Mr. Harding had been there no such accident would have happened. My hon. friend knows the circumstances and I do not know why he brings this question before the House now. It was a painful duty which I had to perform, but in view of the report which has been made by Mr. Justice Cassels no other course was open to me than to superannuate Mr. Harding. I do not need to read the report as doubtless my hon. friend is conversant with it, but Mr. Justice Cassels says this:

> No agent can faithfully perform the duties entrusted to him of letting contracts, supervising works and certifying accounts, &c., where he is under financial obligations to those dealing with him, as representing the department, in the manner described in the evidence.

Mr. Harding was a very sick man at the time and we had to superannuate him. I think my hon. friend, on giving the matter more consideration, will find that I acted in that case with the utmost justice in regard to Mr. Harding.

Now Mr. Speaker, I do not need to take up further of the time of the House. I think I have answered the accusations which have been made by my hon. friend (Mr. Daniel) against the department and shown that the department cannot be considered at fault under the circumstances. We have done our best to discharge our duty. I was not here at the time myself, but of course I am responsible for everything that happened, and I admit there is something that requires fuller information. I am going to get that information and if it is found that some officers have not discharged their duties properly and have not made to the department the reports they should have made I will have to take the steps that a minister should take. I deplore as much as my hon. friend does the serious loss of life; I am probably more sorry than he is, but I think he will render us the justice of saying that the department is doing everything possible to keep these aids to navigation in proper shape so as to give to navigators proper protection and that in so doing we are discharging our duty to our country.

Mr. R. L. BORDEN. Is it not usual to give the British Board of Trade notice with regard to aids to navigation?

Mr. BRODEUR. The only mark shown on this Admiralty chart on the Proprietor rock ledge is a red beacon which is in existence; the gas buoy does not appear on this admiralty chart.

Mr. R. L. BORDEN. That does not answer the question. Is it not usual to give notice to the British Board of Trade?

Mr. BRODEUR. I do not know that any notice had been given.

Mr. O. S. CROCKET (York, N.B.). It must be evident to every hon. member who has followed this debate thus far that the Minister of Marine has completely failed to meet the case which has been so clearly and convincingly made out against the department by my hon. friend from St. John (Mr. Daniel). After all that the minister has said these facts stand out conspicuously uncontroverted: First, that this Old Proprietor buoy was established by the department ostensibly as a necessary protection against this dangerous ledge; secondly, that it was charted so that mariners were led to rely upon it as a guide; thirdly, that the buoy—which was provided, I believe by the department's friend, Mr. Willson, to whom reference has been made by the Civil Service Commission, at a cost of $8,000—was defective; fourthly, that the light went out in January last; fifthly, that the acting agent of the department at St. John inserted an advertisement in three of the St. John newspapers for three days, stating that the light was out and that it would be repaired as soon as possible; sixthly, that no notice was given to the British Board of Trade according to the usual custom and practice so that any mariners other than those under whose notice these local advertisements came were apprised, and as to these latter they were given to understand that it would be repaired as soon as possible; seventhly, the light was allowed to remain out and the buoy to remain defective for nearly ten months; eighthly, that the light was out and the whistle not sounding on the night of the wreck of the 'Hestia,' and ninthly and lastly that the 'Hestia' was wrecked on the very ledge which this buoy was established to protect shipping from. It does seem to me that in view of these facts which stand uncontroverted after the speech of the minister, the department cannot hope to escape responsibility for this lamentable catastrophe. The minister has referred to the findings of the commission which was appointed to investigate this wreck and he relies on these findings

as exonerating the department from all blame. These findings were first, that the wreck was due to an error in the compass, what is called Gauss's error, of which the minister gave the House such an illuminating explanation; second, that there were no soundings taken and that a mistake was made in taking the bearings of Gannet Rock light five miles away. These are the findings upon which the minister relies to excuse the department for all responsibility for this disaster. Do any of these findings touch the questions: That the Old Proprietor buoy was defective, that no notice was given to the British Board of Trade; or do any of them touch the question as to the ten months delay in repairing the buoy? Notwithstanding the local notice which was given by the agent at St. John, not one single thing was done to repair that light and put it in a condition that it could be relied upon as a safe guide to mariners for over nine long months. It seems to me that this House has never heard of such a flimsy pretext as that given to it by the minister for the non-repair of this buoy. The Minister of Marine and Fisheries would have the members of this House believe that for nine months it was impossible because of adverse weather conditions in the Bay of Fundy to repair one of these Willson automatic gas buoys. Was ever a more self-evident arrant absurdity placed before this House and before the public than the statement which the minister placed on 'Hansard' the other day? As has been pointed out by the hon. member for St. John (Mr. Daniel) the weather during the past season in the Bay of Fundy has been perhaps the most favourable that has been experienced for many years and one cannot believe that during this lengthy period it was impossible for the department to accomplish the repair of this buoy. Then the minister advances another reason for the non-repair of the buoy from January 23, until late in the month of October, and that is that there were other important duties which were engaging the attention of the officers of the department. The minister has read a very long report from Mr. Legère, the acting agent of the department at St. John telling what he had done for the replacement and repair of different lights in different parts of the Bay of Fundy, but it will be observed from the extracts which the minister read from the report that only one effort was made to get to the Old Proprietor buoy and that in the month of January. It is true that the report of the agent which he read showed that the agent of the department was very active in his efforts to find the floating buoys which had been reported adrift in other quarters. But certainly nobody who heard that report can conclude that he took all proper measures to repair this very important light at Old Proprietor ledge, the non-repair of which, without any question, was responsible for the disaster which occurred. It may be that the compass was defective, as the minister has endeavoured to make the House believe; but I do not think that he read from the evidence which he had in his hand any testimony which would bear out that statement. The hon. member for the city of St. John this afternoon quoted the testimony given by the witnesses at Montreal, showing that the 'Hestia' had been swung at Glasgow and the compass tested before she had left that port, and that no material variation had been found. That testimony was given by one of the few surviving officers of the crew. The very fact that the vessel made the Bay of Fundy as she did is pretty strong evidence that the compass was not so defective as the Minister of Marine and Fisheries would have the House believe.

Mr. BRODEUR. It is quite the reverse. It is because the same course had always been followed; but when the vessel came to change its course, it could not do it properly without having new bearings taken.

Mr. CROCKET. Whether the compass was in error or not, what difference does it make as to the liability of the department for the non-repair of the Old Proprietor buoy, the buoy that was placed to protect vessels from the very rock on which the wreck occurred? The same remark applies to the other findings of the commission and the other grounds advanced by the Minister of Marine as to the failure of the ship's officers to take proper soundings. In that respect also, I think the hon. member for the city of St. John read this afternoon evidence that soundings had been taken, and also evidence with reference to the taking of the bearings of Gannet Rock light, a light which was five miles distant from the scene of this wreck. It seems to me that none of these facts excuse the Department of Marine and Fisheries from liability or responsibility for this wreck. To my mind it admits of no manner of doubt that had that light been working, and had he whistle been sounding as it should have been, on the night of this wreck, the wreck would not have occurred; and in that view, I think it is impossible for any unbiassed mind to acquit the department of responsibility as the minister has sought to induce the House to do. It did seem to me that the excuse advanced about the officers of the department being engaged with more important business was one which under the circumstances the officers of the department should have refrained from putting upon the records of this House. I understand, from the statement which the minister has made, that the other more important business referred

to was the looking after the other buoys and aids to navigation at the other points in the Bay of Fundy that he mentioned. But, Sir, when one recalls the pitiful cries of the poor little boy from Scotland, to whom the hon. member for St. John made reference, within a few hours of his destination, 'Mother, save me, I am drowning,' and when one thinks of the fearful scenes which were enacted in the darkness of that cold and stormy night, when thirty-nine precious lives were sacrificed to, what I think has been clearly shown to have been the neglect of this department, one wonders at the callousness and the heartlessness of the officers of the department in putting such a statement as that upon the records of this House: 'other more important business on hand.' Mr. Speaker, it was not long ago when a Royal Commission appointed by this government exposed to the people of this country the inefficiency, the incompetence and the corruption which characterized the administration of this department. That commission exposed those conditions in very strong language which will not soon be forgotten. But I venture to say that those conditions which characterize this department have been brought home to the people of the maritime provinces at least, by this lamentable disaster and loss of life with an effect which no language, however strong, can produce, and which no such sophistry as the Minister of Marine has addressed to this House to-night will alter.

Mr. W. F. TODD (Charlotte). Mr. Speaker, as the House has been occupied for several hours in the discussion of this resolution, which has been moved by the hon. member for the city of St. John (Mr. Daniel), I feel it fitting on my part that I should say a few words in regard to this wreck. Representing the county in which these waters are, and in which the Old Proprietor ledge is situated, I feel that it is due to my constituency that I should say a few words on this subject. The hon. member for the city of St. John, followed by the hon. member for the county of York (Mr. Crocket), would lead this House to believe that almost a murder had been laid at the doors of the Department of Marine and Fisheries. There is nothing whatever in the evidence to justify such blame being placed upon the department. I think the blame for the wreck should be rather placed upon the captain and the other officers of the ship. Any one who looks at the map of the coast of the Bay of Fundy, with its high tides and the small opening at the mouth, will understand that there is naturally a great current in that water. He will also see that from Brier Island light to the light at Gannet rock, two of the best lights in this country, there is a breadth of nearly thirty miles of water, in which this ship was fully nine miles out of her course. So that I believe the judgment of this House will bear me out in saying that there must have been something vitally wrong with the compass of that ship. It is said by the hon. member for the City of St. John (Mr. Daniel) that the compass was tested when the vessel left the other side, and he asked if the vessel was so much out of her course on account of a defect in the compass, how she could have found the mouth of the Bay of Fundy. Well, she was only nine miles out of her course, and still there was an opening of thirty miles between Brier Island and Gannet Rock light. It is altogether too fine a point to pretend that if the gas buoy of Old Proprietor ledge was not working, that was sufficient reason for the captain of the 'Hestia' paying no attention to Gannet Rock light and changing his bearings and shifting his course.

I regret that the hon. member for the city of St. John (Mr. Daniel) in his anxiety to make a point against the government, should have cast reflections on the shipping facilities of his own city. We are all trying to build up a winter port in the great city of St. John. Have we not heard over and over again in years past from our sister provinces and the other side of the water that the Bay of Fundy is a tortuous, difficult course for vessels? Should not the hon. member for St. John city rather uphold the advantages of the Bay of Fundy than decry them? I think he would be doing his duty by his constituency much better by urging this government to build up the harbour and equip it with better lights and every protection possible. But instead, he appeals to the House, followed by the hon. member for York (Mr. Crocket), and with tears in his voice he repeats the cries of the two Scotch boys who met a watery grave. One of them, he said, in his last moments, as he sank below the water exclaimed in agony: Mother, save us. But as a medical man, has my hon. friend not often heard that cry for help from patients drifting towards the rocks of Eternity? And because he as medical adviser could not save them, are we expected to hold him responsible for their death? I think it would better become the hon. gentleman and the hon. member for York (Mr. Crocket) to work for the improvement of the harbour of St. John and the better equipment of the Bay of Fundy with aids to navigation than try to arouse prejudice and belittle their own port approaches as they are doing. I would suggest to the Minister of Marine that instead of trying to establish a lighthouse as requested by the hon. member for St. John, he should have a submarine bell, placed in 10 fathoms of water near the Old Proprietor ledge and an electric light on the spindle

on said ledge, connected and worked from White Head Island, by the proper cable. This in my opinion, and that of many living near to this dangerous reef, would remove all danger to vessels or steamers at this point.

Mr. R. L. BORDEN. This subject has been so thoroughly debated that very little remains to be said. I do not think it will do for the minister to take the ground that he and his department are absolutely absolved by any amount of censure cast upon the captain and the officers who are no longer alive to defend themselves. Whether or not the compass was out, whether or not the captain took sufficient soundings, it is perfectly clear that this wreck would not have occurred and these lives would not have been lost if that light had been in proper working order. I do not think any one who has listened to the minister and who has read the reports in the public press could entertain the slightest doubts on that point. True the gentleman who acted as chairman of this board of inquiry took the ground that no great reliance should be placed on these floating lights and Captain Gillies, the superintendent of the Donaldson line, retorted that certainly no one would rely in the future upon floating lights in Canadian waters. But it seems rather peculiar that the course of events should have been what it was. This light became extinct about the 22nd of January, 1909. A notice was sent—not apparently in the ordinary course so that it would reach the mariners—but was pubilished in the local newspapers in the city of St. John. I do not know whether Captain Gillies was correct in the observation he made that no navigator would hereafter rely on our floating lights, but I did observe that in the course of the inquiry he said that no official notice had been given the mariners with regard to it. The minister will know best whether or not that statement was correct. Capt. Lugar, the chairman, remarked:

> But the fact that the light was not burning was published in all the Halifax newspapers.
>
> To which Captain Gillies replied: Perhaps, but not in the official notification issued to the mariners by the government.

Even if it had been published in those official notifications, one would suppose that the department, finding that the light could not be replaced within reasonable time, would have given timely notice in some official communication so that it would have reached the mariners; but for ten months that light was absolutely extinct and no more notice given of that important fact than the notice published in the local newspapers.

These new gas buoys were heralded by the Department of Marine and Fisheries as a most important advance. To such an extent did this go that on January 31, 1906, the deputy minister of the department gave a certificate to the United States government with regard to them. According to the report of the Civil Service Commission, that certificate was in these words:

> This department has had in the past considerable difficulty in carrying out its policy of providing an efficient buoy lighting system and has taken great pains to test and investigate the Willson buoy, with the result that it has been fully adopted; and the department purchases no other types. It is regarded as a distinct improvement on all others which the department has used. I can therefore recommend it to your Board.

This was a most distinct and unqualified recommendation of this buoy from the Department of Marine and Fisheries of Canada to the government of the United States. This efficiency comes to be tested in a portion of the Bay of Fundy that is regarded as having a special need of every possible aid to navigation that can be devised. The light goes out on January 22, 1909. Perhaps the minister can state when the buoy was placed there?

Mr. BRODEUR. I could not state exactly, I suppose two or three years ago.

Mr. R. L. BORDEN. I suppose it had been tested before being placed there, yet it goes out and as I understand the whistling apparatus also becomes defective and for a period of nine months both those defects remain absolutely without any remedy or correction. I would not say that this is an efficient buoy for the purpose unless it is of such a character that it can be repaired within a reasonable time and unless the materials and means for repairing it within a reasonable time are available, because, as Captain Gillies very well says, it would be far better to have no light at all than to place a light there and allow it to go out without giving any notice to mariners, the natural reliance on the light, operates as a complete and perfect trap to navigators who are traversing that portion of the Bay of Fundy.

I am not very much concerned with the fine-spun theories about the compass which have been enlarged upon by the minister and to which so much importance has been attached by Capt. Lugar. I think it would not be possible to arrive at any correct conclusion on that subject unless we had the evidence of the captain and officers of the ship who are now no longer here to testify. As far as the taking of soundings is concerned, it is evident from the testimony that soundings were taken as late as 11.30 o'clock that night.

Mr. BRODEUR. Some soundings were taken during the day on the south coast

of Nova Scotia, but he did not take any soundings when near the rocks.

Mr. R. L. BORDEN. Soundings were taken every half hour according to the evidence of one of the officers, he himself reading the log after each sounding. A sounding was taken about 11.30 p.m., when the depth of water was 100 fathoms.

Mr. BRODEUR. They continued two hours after that without soundings.

Mr. R. L. BORDEN. Those soundings were taken at least as late as 11.30 p.m., and it would seem inconceivable under the circumstances, with the condition of the weather and the position in which the vessel was, that the captain would cease taking soundings when he had taken them every half hour up to that time.

I see that Captain Lugar has rejected what would seem to me to be important evidence. On the dead body of one of the seamen, who was steering the ship, was found a memorandum indicating the course he was steering, a written statement of the course he was directed to steer. I would consider that good evidence, I think it would be received in a court of law and why Captain Lugar, chairman of the board, should have seen fit to reject that evidence is not very clear to me. Further than that, counsel for the steamship company asked especially that as the causes of the wreck were being investigated the Court of Inquiry should be adjourned to St. John, N.B., where men familiar with all the local conditions might be summoned to give evidence in order to make the result of the investigation more accurate and more clear. I do not see why that course was not pursued. The evidence of the survivors of the crew had been taken; the object was to discover the cause of the accident and the wreck, and when counsel for the steamship company asked that the court should be adjourned to a locality near where the accident had occurred, where men familiar with these tides which have been enlarged upon, men familiar with all the difficulties of navigation, could be summoned and might have thrown some light on the subject, the chairman airily put the request aside and said there was no occasion to take any such course. Does the minister approve of that course? Does he not think that some light might have been thrown on the circumstances attending this wreck by adopting that course? I am putting altogether aside the conduct of those on shore and dealing only with the causes of the wreck. It does seem clear that some light might have been thrown on the circumstances of the case by calling men familiar with the difficulties and the navigation of those waters.

The minister has spoken of insurance rates and has deprecated in a mild way the discussion of these matters in the House of Commons. The tone and spirit in which my hon. friend from St. John (Mr. Daniel) introduced this subject in the House indicated a sincere desire on his part to do only that which was in the public interest and in no way to create prejudice or cast discredit on the navigation of these waters. As far as that is concerned, I think the circumstances brought out in the inquiry, the fact that this buoy remained ten months unlighted and with its whistling apparatus out of order, would do much more to cast discredit on navigation in the Bay of Fundy than anything that could possibly be said in this House.

I do trust that the minister will not permit the matter to remain in its present position, that a further inquiry will be had and that he will be able to come down to the House later on and give us some assurance as to the continuous efficiency of these buoys. One of the chief causes he has urged to the House in defence of the inconceivable delay of nine months in repairing this buoy is the fact that so many other buoys had got out of order and gone adrift. Something must be wrong. Either the buoys are not adapted for the waters of that coast, cannot properly be secured, or are otherwise inefficient, or else there is some neglect on the part of some official of the department. The two things cannot stand together. If the buoys are of the proper type, if they can be made fast, if they are efficient and if the officials of the department do their duty then no such condition of affairs could have occurred in those waters as that which the minister himself has exposed to the House this evening in making his defence in this matter. I sincerely trust that some further inquiry will be held and further explanation will be given and that those who are interested in the navigation of Canadian waters will be able to understand that the course which has been pursued and the conditions which have arisen in this matter are not likely to occur again.

Mr. DANIEL. I have listened very carefully to the speech of the Minister of Marine and Fisheries and I cannot at all agree that he has made it clear that the acting agent did his duty in this matter. He read a long report from the acting agent. But that report, as I understood it, and as I heard it read, only accounted for four or five months of the year, and stated what he was busy about during those months. But there was a long hiatus between the end of the four months and the end of the nine months. What was he doing the other five months after he had been so busy during these first four months? I also noticed the fact that when the Fairway buoy at Yarmouth got adrift he notified the Board of Trade. Why, Sir, when this buoy went

wrong, if the agent of the department, or the department itself, had taken the action which they should have taken, and had sent an official notification to mariners, then I say the negligence of the department in taking nine months and more to remedy the defects of this buoy, would not have been so reprehensible, in fact would not have been reprehensible to any extent, because they would have discharged their duty and notified the mariners, sea captains and others that when they came into these waters they could not expect to find that Old Proprietor buoy.

Mr. BRODEUR. The acting agent did better than that, he notified the owners, the agents of the 'Hestia.'

Mr. DANIEL. He gave verbal notice to the agent of the Donaldson line.

Mr. PUGSLEY Of this very line.

Mr DANIEL. Yes, of this very line, in January, nine months ago. And what was that notification? A notification to the effect that the buoy was adrift, or the light was out, and that the defect would be remedied as soon as possible. So when it comes to the fall of the year, October or November, had not those captains, those mariners, those navigators, a right to suppose that the defect had been remedied long ago? That is the point of the whole matter—the fact that not only was this defect allowed to continue, but that those who ought to have been acquainted with the fact were not put in possession of it, or still worse, that the notification given was a deceptive one, as it only stated that the buoy was adrift, or the light out, and that the defect would be remedied as soon as possible. Now there is one point in the minister's speech that I was glad to hear, when he says that he intends to have a further investigation. I think it is absolutely necessary to have a further investigation, and I hope that investigation will be thorough and rigid, and cover all these points with regard to which evidence is so necessary, namely, the need of life saving stations and crews, of life boats, the quality of life boat and all those needs in the Bay of Fundy. The minister also spoke about the difficulty of keeping the buoys in a certain place in the Bay of Fundy, and he said he was considering whether the department ought to continue to keep those buoys going. My opinion, formed from the evidence that was given at this investigation, is that it is far better to have no buoys at all than to have buoys listed and put on the chart, and then when you come to the place where you expect to find them, they are either adrift, or there is no light, or whistle or anything of that kind. Such a thing as that is simply a lure to destruction. Far better to have no buoys at all on those exposed positions than to expect them and then find nothing there when you get there. That is the complaint we have to make.

Now before I sit down I want to refer to a remark made by the hon. member for Charlotte (Mr. Todd). The hon. member for Charlotte reproached me because I made a reference to a disaster in the Bay of Fundy and had drawn the attention of the country to the fact that the Department of Marine had been remiss in its duty in looking after the lights at the Old Proprietor rock. Sir, when he was saying that he reminded me of a bird, I believe a very stupid bird, an inhabitant of South Africa. That bird, when it is pursued and wants to hide itself, simply buries its head in the bush or in the ground, and thinks that because it cannot see any one no one can see it. That appears to me to be the position the hon. member for Charlotte would like me to take. He wants me to say nothing about this, to conceal it, and he thinks that then nobody else will know anything about it. But if we were to take that course the defect would never be remedied. That is not the position I take. I take the position that the proper course to take under these circumstances is to make this thing so public that it will never occur again, that the department will act in a more rigid and conscientious manner in future than it has been doing in the past, and then the navigation up and down the bay to and from the city I have the honour to represent, will be safer than it ever has been in the past.

Motion agreed to.

TRADE MISSION TO JAPAN OF W. T. R. PRESTON.

Mr. F. D. MONK (Jacques Cartier), moved:

For a copy of all correspondence, petitions, reports and written representations in the hands of the government, or any department of the same, concerning the commercial or trade mission to Japan of W. T. R. Preston, as Canadian Trade Commissioner for Canada, and of the report of said commissioner, as well as all other reports and despatches received by the government in connection with the execution of said mission.

He said: The object of this motion is to bring before the House all the correspondence that has taken place between the government and Mr. Preston, as well as between the government and any persons in Japan, or between the government and the British ambassador, or any representative of other governments in Japan, during the execution of the mission confided to Mr. Preston by the government. I think that

correspondence will prove very interesting and instructive. As I understand the events that have taken place since Mr. Preston went to Japan, he was entrusted with the mission of opening up direct relations between the commercial houses in Japan, the commercial world generally of Japan, and our own people, in order to establish direct trade relations between the two countries, in consequence of the treaty which was recently concluded between Japan and Great Britain, our adhesion, in other words, to the treaty concluded by Great Britain with Japan some ten or twelve years ago.

From what I have been able to cull from the newspapers, what has been published since Mr. Preston went to Japan and since his return, that mission was altogether marred, or came to very little, and the circumstances appear to be as follows: It would seem that in Japan, since that country has endeavoured to develop commercial relations with occidental countries all over this part of the world a certain number of commission merchants have established themselves in Japan and they have succeeded in implanting there a system by which all commercial relations must take place through themselves. They object to any direct relations and they have sedulously spread all over the world the idea that the Japanese commercial houses are not to be trusted but that through them and only through them can safe commercial relations be had with the Japanese merchants. Of course, the arrival there of Mr. Preston under the circumstances was anything but welcomed. He was considered as an intruder, arriving there presumably for the purpose of breaking up this system that existed in Japan. But, he was welcomed by the Japanese. The Japanese merchants are anxious to develop direct commercial relations with Canada and with all parts of the world. They are people with whom commercial relations can be safely maintained just as well as with other people and the moment Mr. Preston began there the execution of his mission and endeavoured to establish direct relations between the commercial men of Japan and Canada he became, so to speak, the butt of the attacks of these commission houses and, as far as my information goes, these commission houses, being confined principally to English and American firms, solicited the intervention of the British ambassador to cause Mr. Preston to cease his campaign. I understand that the correspondence will show that. Correspondence took place between His Majesty's representative in Japan and the Canadian government either directly or through the Home government. I am not sure as to that, but it has been stated in the papers that the claim was made on behalf of the English commission houses that Mr. Preston was interfering with their business, that he was disturbing commercial security and solidity in Japan and that it was desirable that he should be recalled. I think that is a point of very great importance upon which the House should be very fully informed. I have reason to believe that the objections from the commission houses, not only the English commission houses, but others as well, were forwarded to the Canadian government or to the imperial government, to be, by them, communicated to the Canadian government. My hon. friend the Minister of Finance (Mr. Fielding) will probably know whether these allegations are well founded or not, but steps of various kinds were taken in order to secure the recall of Mr. Preston and his mission there was not only interfered with but was nullified by the influence that I have just referred to. This information has come to me from the newspapers and I think it is very important that the House should see that correspondence that we may know exactly what Mr. Preston did there and what his reports stated as to the possibilities of establishing direct trade communication with that nation, because there is no doubt that we have an immense possible commerce not only with Japan but with all those Asiatic countries. We are therefore interested to know why that mission was brought abruptly to a close and what was the result of the mission itself. I think it is even more important why we should know why that mission came to an end, what were exactly the influences which were brought to bear, the representations that were made against or for Mr. Preston by the associated interests, by those commission houses established there and on his behalf by other commercial bodies, chambers of commerce and Japanese interested in his mission. I think the idea is covered by my motion. I have prepared a motion somewhat longer but I mislaid it. The motion that I had originally prepared after I had seen this matter formulated in the newspapers was to this effect:

Copy of the correspondence between the Department of Trade and Commerce and the late Commissioner of Trade in Japan, Mr. Preston, on all subjects arising out of the controversy between Mr. Preston and foreign commission merchants in Japan during and subsequent to his stay there.

Copy of correspondence between the government of Canada and the British Ambassador in Japan respecting or in any way relating to Mr. Preston's appointment to Japan, the discharge of his duties there or connected with the controversy arising in Japan from Mr. Preston's advocacy of direct trade between Canadians and Japanese.

Copy of correspondence between the government of Canada, the British and the United States and the German Ambassadors and Mr. Preston on subjects growing out of the advocacy of direct trade between Canada and Japan.

Copy of all correspondence, loose paper clippings, memorials from Japanese or For-

eign Chambers of Commerce in Japan, or with the Colonial Office in London, touching or relating to the subject matter referred to herein.

I may say to the House that although it seems to me that it is covered by the motion I gave notice of this one is fuller and may be substituted for that which appears on the notice paper if the House will admit of the substitution. As I am informed Mr. Preston was actually recalled. I do not believe that the reason of that recall was that he was not carrying on properly his commercial mission, but that he had fallen upon a mare's nest there, had stirred up a great deal of trouble, and that, in reality, it was that opposition to the execution of his mission which brought about his recall —all the more reason why the House ought to be fully informed of all the circumstances. I understand also that since Mr. Preston's return, or simultaneously with his recall, another commissioner, a Mr. Harris, was named to replace him. It is stated in the newspapers that Mr. Harris rather inclines to the views, or falls in with the ideas, of those who think that direct commercial relations with that country are difficult because it has been stated in the public press that Mr. Harris has written a letter from Japan to a commercial house here stating in effect that the Japanese, in matters of business, are not to be trusted. That is what the newspapers state is the purport of his letter. Then there would be an absolute contradiction between the representations and reports made by Mr. Preston and the statement or representation made by the new appointee. A newspaper has stated that in that statement which he communicated to a commercial house here the new representative had not the support of the government. All this, it seems to me, is rather confusing and it would be very interesting for us to have the whole of the papers before us because this is a singular case that has never, to my knowledge, come to the notice of the government since we attempted to establish direct relations and I think the House will find some interesting data if these papers are all brought down. With your permission, Mr. Speaker, I will substitute this rather longer motion but in effect it is the same as that on the Order Paper.

Hon. W. S. FIELDING (Minister of Finance). I am not sufficiently acquainted with the matters to which my hon. friend has referred to justify me in making a reply to his observations. I quite realize that the matter is a proper one for inquiry and I would have no objection to the notice which appears on the Order Paper. It may be that on further consideration we would have no objection to the motion he now presents, but if my hon. friend thinks there is a substantial difference between the two I would suggest that he drop the motion on the Order Paper and substitute the other by way of notice. If the motion on the Order Paper is substantially what he wants I think he had better take it and any papers dealing with the matter which can properly be brought down will be produced at an early date.

Mr. MONK. I am induced to accept the suggestion of the Minister of Finance because I understand there are a considerable number of papers and I do not want to have delay. Did I understand the hon. gentleman to say that some of these papers might not properly be brought down, and if so I would remark that this is not a confidential or state matter and that none of the papers relating to it can very well be withheld.

Mr. FIELDING. I do not wish to indicate that to my knowledge there are any papers that should not be brought down, and my remark was intended only to put in the usual general saving clause. I am not unmindful that in international matters it frequently arises that there are some papers that cannot be brought down. It was with that general thought in my mind, and not with any particular reference to these papers, that I made this remark.

Motion agreed to.

SUPPLY—INTERCOLONIAL RAILWAY TRAIN SERVICE.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. R. L. BORDEN. Before you leave the Chair, Mr. Speaker, I would like to say that if the Minister of Railways were in his place I would direct his attention to a resolution of the Board of Trade of Dartmouth, Nova Scotia, which has been sent to me relative to the railway service between Windsor Junction and Dartmouth. It is stated that a change has been made in the arrival and departure of trains which has been found very inconvenient. Perhaps the Minister of Railways will take this as an intimation that I will call his attention to the matter at an early date.

Mr. FIELDING. I will see that the attention of the Minister of Railways is drawn to the remarks of the hon. gentleman.

ADDITIONAL JUDGES IN MONTREAL.

Mr. F. D. MONK (Jacques Cartier). I ask the government if it is intended soon to give effect to the law which has added three judges to the Superior Court of the province of Quebec. The Council of the Bar of Montreal has recently passed a resolution asking for the immediate appointment of these three judges. Is it the in-

tention of the government to comply with the wish of the Bar of Montreal at an early date?

Mr. FIELDING. I would ask my hon. friend to renew the inquiry when the Minister of Justice is in his place.

Motion agreed to, and House went into Committee of Supply.

Public Works Department, salaries, $358,537.50.

Hon. WM. PUGSLEY (Minister of Public Works). Six additional employees in the department are provided for next year. The total increase in salaries is $5,182, which is largely made up of the salaries of these six officials and the statutory increases to the others.

Mr. SAM HUGHES. Are there any who did not receive the statutory increases?

Mr. PUGSLEY. Not in the first division, they are all entitled to it in that division. Mr. J. A. Robillard, Mr. J. A. Blain, Mr. G. M. Hutchinson, and Mr. G. Perley are promoted from the second division (subdivision A) to the first division of subdivision B. Then there is Louis Coste, who was in this division, and who has been transferred to the outside service. My hon. friend will know that he is connected with the International Waterways Commission.

Mr. BLAIN. What is his salary?

Mr. PUGSLEY. $25 per day during the time he is actually engaged in the services of the government. In the 2nd division, subdivision ' A,' there are twenty-three statutory increases at $50.

Mr. HUGHES. Were any of the officers of the 1st division, subdivision ' B,' not given the statutory increase?

Mr. PUGSLEY. Yes, there are apparently two.

Mr. HUGHES. Why not?

Mr. PUGSLEY. Because they were not recommended as entitled to receive it. Under the Civil Service Act it is optional with the deputy minister to recommend them or not. In the 2nd division, subdivision 'A,' there are twenty-three statutory increases at $50, four at $25, and one at $12.50, making a total of $1,262.50. There are seven promotions from subdivision ' B ' to division 'A' of the 2nd division. This makes a total of $14,062.50. From this is to be deducted the salaries of four employees promoted from the first division, subdivision ' B,' the salary of Mr. Lucas who resigned, and half the salary of Mr. McLaughlin, which was paid by the Railways and Canals Department, a total of $10,025, leaving an increase in this subdivision of $4,037.50.

Mr. HUGHES. How many in this division were passed over without getting the increase?

Mr. PUGSLEY. Four.

Mr. SAM SHARPE. Have the promotions been made on the recommendation of the Civil Service Commission?

Mr. PUGSLEY. They will have to be made in the report of the Civil Service Commission that they are entitled thereto.

Mr. SAM SHARPE. Are they proposed promotions or have the promotions already been made?

Mr. PUGSLEY. They are proposed promotions.

Mr. SAM SHARPE. Are they made as the result of competitive examinations?

Mr. PUGSLEY. No, the promotions are not made as the result of competitive examination, except in the lower division. They are made on the recommendation of the deputy minister and the certificate of the commission that the persons recommended are qualified to be promoted.

Mr. SAM SHARPE. Are there any new appointments in that department?

Mr. PUGSLEY. Two or three are contemplated.

Mr. SAM SHARPE. Are they to be appointed on the recommendation of the Civil Service Commission?

Mr. PUGSLEY. Yes, they will have to be, unless of course officials are promoted from a lower division, in which case there would be vacancies in the lower division to which appointments would have to be made on the recommendation of the commission. In the 2nd division, subdivision 'B,' there are forty-seven statutory increases at $50 and four at $25, and there are to be two promotions.

Mr. HUGHES. Who are they?

Mr. PUGSLEY. A. Dostaler and T. G. Bell. In the third division, subdivision 'A,' there are twenty-three statutory increases at $50 and one at $25, and there are to be nine promotions from subdivision ' B ' to subdivision ' A.' There are some reductions and some transfers, making a total increase in that division of $4,900.

Mr. HUGHES. Let us have the names of those promoted.

Mr. PUGSLEY. Miss M. E. Sylvain, V. Lepage, C. A. Narraway, Miss A. Valade, Mrs. M. L. Roy, M. Laframboise, F. O. Hamel, J. E. Kennedy and A. A. Rivard. In the third division, subdivision ' B,' there are three statutory increases at $50, and seven at $25.

Mr. SAM SHARPE. Does the minister designate those who are proposed for promotion, or how comes he to have their names there?

Mr. PUGSLEY. They are proposed subject to the certificate of the commission. There is a new appointment in this division—Miss McPherson, who was appointed after examination and on the recommendation of the Civil Service Commission.

Mr. HUGHES. Has the Civil Service Commission recommended for promotion those whose names the minister has read?

Mr. PUGSLEY. These are what the deputy minister believes are the proper promotions. All the commission has to do is to certify that the parties are qualified for promotion.

Mr. HUGHES. I presume the commission will be pliable.

Mr. SAM. SHARPE. If the initiative is not taken by the Civil Service Commission with regard to competitive examination, what is the advantage of this over the old system?

Mr. PUGSLEY. No new appointment, except in some special cases, can be made to the service except upon competitive examination and the recommendation of the commissioners.

Mr. SAM. SHARPE. No advantage with regard to promotion.

Mr. PUGSLEY. No, except that they must certify that the person whom the deputy recommends is qualified.

Mr. HUGHES. Does the hon. minister find that those appointed by the Civil Service Commission are much better than those appointed in the good old way of political pull. I must say I believe in the old way.

Mr. PUGSLEY. I must say I was not here when the good old way prevailed.

Department of Finance and Treasury Board salaries, $113,500.

Mr. FIELDING. There is a decrease here. The number of officials is the same, and it is contemplated that we shall have one promotion to the higher grade under circumstances exactly as described by the Minister of Public Works. The promotion is made subject to the approval of the Civil Service Commissioners as to the officer's qualification. We are contemplating the retirement of one or two gentlemen by superannuation, and younger men will come in at the foot of the ladder so that there will be some saving.

Mr. BLAIN. Are the recommendations for superannuation made by the Civil Service Commission?

Mr. FIELDING. No, they are made by the minister, with the concurrence of the chief adviser. The applications come to the Treasury Board, and the facts of age, physical condition and other circumstances are reviewed before a decision is given.

Mr. HUGHES. Who is the officer to be promoted?

Mr. FIELDING. We contemplate the promotion of Mr. Saunders who has been in the office for many years.

Department of Mines, salaries, $174,689.

Mr. HUGHES. Does the government intend establishing an institution for the better testing and reducing of ores?

Mr. TEMPLEMAN. It is contemplated by the director of mines to have a plant in Ottawa. The building is being erected. Possibly the production of gas from peat will be tested the coming summer. To what extent we will go in providing plant for the testing of ores is a moot question, but we are not losing sight of it.

Mr. HUGHES. Has the hon. gentleman's officers taken notice of the possibility of using peat exhaust or coal in what is termed suction gases or producer gases?

Mr. TEMPLEMAN. That is being investigated. An officer leaves in a day or two to visit an experimental plant in New Jersey for the purpose of acquiring information and he will make a report. The total increases in civil government over last year is $19,675, made up of statutory increases $3,625, increases by promotions $1,450, additional appointments $14,600. We have an additional clerk in the department proper, an additional mining engineer in the mines branch and a statistical clerk. In the geological survey, two additional geologists at $2,100 each and two draughtsmen at $1,200 each. The total increase in the number of officers for the next financial year is 10.

Mr. HUGHES. Has the minister lost any of his geological survey officers in recent years?

Mr. TEMPLEMAN. Yes, we are losing one at the present moment.

Mr. HUGHES. And the minister knows why?

Mr. TEMPLEMAN. With the concurrence and approval of the Civil Service Commission, I propose to recommend these increases by promotion to council. In this way we propose to increase the salaries of half a dozen of the senior geologists.

Mr. HUGHES. Does not the minister think the salaries he pays to his first-class officers are not adequate to retain good men?

Mr. TEMPLEMAN. Quite true. In the Geological Survey we have half a dozen geologists who have served from 25 to 35 years They are in subdivision B of the first division, the maximum of which class is $2,800 The geologist who is likely to leave us now has been thirty odd years in the service. He is receiving $2,300 or $2,400 and he has been offered $4,000 to take charge of the Mines branch of the province of Quebec. While he was reluctant to sever his connection with the department where he would be entitled to superannuation in a few years and where he was carrying on congenial work, we were unable to offer him a larger salary at the moment, but his name is here as one of those proposed to be promoted in the event of his not accepting this position in Quebec. His increase would be $460 to bring him into subdivision A where he would go up from $2,800 to $4,000. I desire to put all six of the senior geologists into subdivision A of the first division where they will ultimately go to $4,000. It is absolutely impossible for the Department of Mines to retain well qualified technical men unless we can pay them larger salaries. We have lost half a dozen men who have gone to private enterprises and it is for the purpose of giving fairly adequate salaries that this increase is made. In providing for these additional positions, we are anxious to have the vacancies so that we may secure good men if opportunity presents itself.

Department of the Secretary of State, salaries, $56,412.50.

Mr. MURPHY. There is a decrease here of $1,375 due to the transfer of one of the officers and the death of another. These vacancies will be filled by new appointments at the minimum salaries of the divisions.

Department of External Affairs, $14,875.

Mr. MURPHY. It will be observed that the number of officials has been increased by four, comprising three clerks in the lowest division and one messenger. The work of the department has increased to such an extent that it will be necessary to make these appointments in the lowest division and also to secure a messenger.

Mr. HUGHES. Who is the head of this department?

Mr. MURPHY. Mr. Joseph Pope.

Mr. SAMUEL SHARPE. Will these appointments be made as the result of the Civil Service examinations?

Mr. MURPHY. Yes.

Mr. HUGHES. Who is the officer in subdivision A?

Mr. MURPHY. That is Mr. Walker, transferred from the Governor General's office.

Mr. HUGHES. Who is the next one in subdivision B?

Mr. MURPHY. Mr. Brophy.

Mr. R. L. BORDEN. Does this department make any report?

Mr. MURPHY. The department was only organized on the 1st of June last. It will make a report.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business for to-morrow?

Mr. FIELDING. Civil government.

Motion agreed to, and House adjourned at 10.55 p.m.

HOUSE OF COMMONS.

TUESDAY, November 23, 1909.

The SPEAKER took the Chair at Three o'clock.

QUESTION OF PRIVILEGE—THE ROSS RIFLE.

Mr. SAMUEL HUGHES (Victoria and Haliburton). Mr. Speaker, I desire to rise to a question of privilege. From answers given by the Minister of Militia to a couple of questions in the House in the last day or two, and the form in which those questions were put, a wrong impression might be created throughout the country. I would take the liberty of suggesting to the minister that he get some one in his department to answer the questions placed on the Order Paper in a little more definite manner than these questions seem to have been answered. It is very well known that for some years past a conspiracy or agitation has been carried on in this country by agents, direct and indirect, of concerns in the motherland, with the object of discrediting the Ross rifle and injuring it in this country. That rifle, Sir, has spoken for itself; it has silenced all critics by the answers it has given on the ranges throughout the world during the past year. As president of the standing committee on small arms for the Dominion of Canada, last spring, before the rifle had been very much distributed throughout the country, and in order that it might reach every riding in the Dominion, as far as possible, and be placed in the hands of competent men who would judge it on its merits, I requested the minister to distribute a number of these rifles amongst the members of this House who would see that they were placed in the hands of expert riflemen in their respective localities, and thus meet

the slanders and falsehoods circulated throughout the country against the rifle. Accordingly, some were distributed. I thought one was issued to nearly every member of the House; but I am very sorry this was not the case. They were issued only to a few members of parliament, with that object in view. It is a very meritorious object, and I trust that the minister will see that a rifle is sent to every riding as an eye-opener and an object lesson to the critics and slanderers of the rifle.

However, the fact that the rifle has swept everything before it, although only a few were issued, at the Rifle Association meeting in Quebec and Ontario and at the meetings of the Dominion Rifle Associations, where nearly every place on the Bisley team and in the Governor General's match was won by the Ross rifle is proof of its superiority. In every provincial and Dominion match, the Ross rifle has made a name for itself as superior to every other. For the first time in history a rifle—of which only a few were used, less than 20 among 4,000—took more than one half of the first prizes at Bisley. I make these remarks in justification to gentlemen whose names were brought rather frivolously before the House on a recent occasion when there was no need for levity.

Mr. W. D. STAPLES (Macdonald). I rise to a question of privilege. I was both amused and surprised at the manner in which the hon. minister answered the question yesterday. He appeared desirous of leaving the impression that I had secured this rifle in a somewhat irregular manner. Let me advise the minister that although he may have had some trouble in recovering certain goods and chattels, he will have no trouble in securing this rifle at any moment. It is now in the hands of a good young marksman in my constituency, a member of the Rifle Association. He has keenly followed all the improvements on this rifle and asked me to try and get him one. I made application to the hon. minister and the rifle was forwarded me. I handed it to this young marksman, and if the minister wants it back, I can wire and have it back here to-night.

Hon. SIR FREDERICK BORDEN (Minister of Militia and Defence). If I may be permitted to say a word, I wish to say that yesterday a question was put asking for information regarding the distribution of a certain lot of rifles. I gave the information. I said that 12 rifles had been issued to individuals.

Mr. SAM. HUGHES. On a receipt.

Sir FREDERICK BORDEN. That goes without saying. The hon. gentleman who asked the question was not satisfied and wanted to know the names. What could I do but give them? There was no intention to cast any reflection on my hon. friend. He will look in vain in the answer I gave for any such suggestion or intention. On the contrary, I quite agree with my hon. friend from Haliburton (Mr. Sam. Hughes) that it was a perfectly proper and laudable thing to give these rifles and I was very glad indeed to have had the opportunity of issuing them. As a matter of fact they were issued on receipt. I am sorry if my hon. friend misunderstood my remarks as casting any reflection on him. Quite the opposite was the case.

CO-OPERATIVE CREDIT SOCIETIES ACT.

Mr. F. D. MONK (Jacques Cartier) moved for leave to introduce Bill (No. 26) respecting the Co-operative Credit Societies Act. He said:

Mr. MONK. (Translation). Mr. Speaker, the object of this Bill is to enable loan and savings banks, such as are termed 'People's Banks,' and working on co-operative principles, to obtain incorporation under Dominion legislation. The House will remember no doubt that a Bill dealing with co-operation was introduced in the course of last parliament, for the purpose of enabling or authorizing these associations to obtain incorporation under Dominion legislation. The Bill as introduced dealt with co-operative associations as a whole. And, as no distinction was made, it turned out that the main objection offered on behalf of some of the provinces and people interested in preventing such legislation from being passed rested on the ground of its being ultra vires.

The House will remember that the retail merchants, who were also formed into an association, opposed the passing of such a Bill. And, while it was unanimously carried through this House, the Bill, after consideration in the Senate, was rejected, mainly on the grounds set forth by the provinces of Ontario and Quebec, that it went beyond the powers granted by the constitution. Accordingly, it was deemed preferable to introduce two separate Bills, one dealing entirely with people's bank, loan and savings associations. Nobody denies the right of the Dominion government to legislate as regards savings and loan banks. That explains why a separate Bill is introduced as regards credit and loan associations. The labouring classes take a deep interest in this legislation and for the last ten years to say the least organized labour, as I understand, have been requesting from year to year, at their annual meetings, that such legislation in regard to co-operative associations be carried out. The hon. member from Brantford (Mr. Harris), who, representing as he does in this House a large manufacturing centre, is greatly interested in such legislation, proposes, as I perceive at reading the notice contained in the orders of the day,

to introduce a Bill for the incorporation of co-operative producing and distributing associations, these being of great interest to the working classes, in the same way as people's banks.

The House has not forgotten what occurred in regard to the first Bill. The government stated their approval of such legislation; and the Bill was taken charge of by the hon. Postmaster General (Hon. Mr. Lemieux), who at the time had also the Department of Labour under his supervision. He took charge of the Bill, and my right hon. friend the Prime Minister granted us an inquiry which gave most interesting results. We had as witnesses experts in agriculture, university professors, representatives of labour, agriculturists, and even His Excellency the Governor General, who has from the beginning concerned himself with that movement in England, is honorary president of the international co-operative league, and whose evidence was of a most useful character.

This House unanimously voted the Bill of which the government had taken charge; but in the Senate, as session was drawing to a close, and through the pressure which was exerted, as previously stated, on behalf of the retail dealers, whose claims did not appear to me well grounded, the Bill was rejected by a vote of 19 against 18, a number of the senators being away.

I think this is an opportune time for the introduction of these two Bills. The movement, started several years ago, has made great strides throughout all the provinces, especially as regards people's loan and credit banks. I may say that in the province of Quebec, there are already in existence over 32 associations of that kind, and that in the same province the number of members of such associations exceeds 15,000. The movement is growing rapidly from day to day.

Clergymen in all parts of the Dominion who are in close touch with the working classes and farming community, have taken a deep interest in the movement, and especially in the province which I represent, they have in this connection taken the lead with the best results.

I may say to the House that in this Bill we are entrusting the Minister of Labour with the superintendence or control of these associations. That is the rule followed in most countries. In England co-operative associations—and there are many of them—are under the law controlled by the chairman of the Board of Trade, whose duties correspond to those of the Minister of Labour here. In France, that control lies also with the Minister of Labour and provident associations. The same condition of things exists in the neighbouring republic; that is, in those states which have voted similar legislation, in Massachusetts, for instance, where the Minister of Labour has under his control co-operative institutions. In entrusting these powers to the Minister of Labour, the object is in no way to detract from the prestige or the importance of the duties assigned to the hon. Secretary of State. The latter department has charge of the granting of charters applied for by private stock companies; but such charters as a rule grant important privileges and for their cancellation require going through a tedious and expensive procedure. In this case, the Minister of Labour will have no such duty to fulfil, he will merely be called upon to grant authority for the formation of such associations, and to cancel the same without going through numerous formalities, whenever he thinks it advisable in compliance with the provisions of the Act.

As I have previously stated, the most serious objection with which we were met was that based on the ultra vires character of such legislation. It was claimed that this parliament was without jurisdiction, although it was acknowledged at the same time that as regards loan banks, such business being in the nature of banking and finance, the Dominion parliament, no doubt, had jurisdiction. However, it seems to me that this parliament has jurisdiction as well as regards co-operative producing and distributing associations. In the first place, we are authorized to legislate in regard to agriculture. Now, it is more particularly the farming community who are anxious that such legislation be enacted and who will benefit by it. That legislation will be enforced throughout the country and will prove of great assistance to the farmers. As regards the industrial classes, it seems to me we have jurisdiction as well. Undoubtedly we have the right to legislate with the object of insuring the welfare and development of the country as a whole, though we would be debarred from legislating in the same fashion for the exclusive benefit of one province. That is the view taken to-day even by those who objected to the proposal as first submitted.

Dominion legislation in this connection is necessary for the following reason: There are nine provinces in the Dominion, and as such a movement requires to be forwarded on uniform lines, it is important that the Dominion government be in a position to act efficiently. Wherever that movement has taken foot, it has developed in marvellous fashion. Is it not desirable that such happy results be extended to the whole Dominion? In the absence of Dominion legislation, this movement would lack uniformity and cohesion. Two provinces only have legislated in this respect, and they have done so on different lines; apart from these two cases, there exists no legislation emanating from the provinces in this connection. If all the provinces were to legislate in this

regard, we would some day be confronted with nine different systems emanating from as many legislatures. It would be impossible to collate uniform statistics, since each province would have its own system. Now, if this House voted this Bill, the movement no doubt would be greatly accelerated and extended owing to this Dominion legislation. I conclude, Mr. Speaker, by stating that those requesting such legislation are increasing in numbers from day to day. The benefits of co-operation are making themselves felt more strongly throughout the world. I hope that the government and the House, as they have already done, will enact this legislation, and that no further check will be put upon it by the Upper House.

Bill read a first time.

SELECT STANDING COMMITTEES.

Mr. R. L. BORDEN. Before the orders of the day are called, I would like to ask when it is intended to have the committees organized. No committee has been organized yet.

Sir WILFRID LAURIER. Immediately.

SUPPLY — INTERCOLONIAL RAILWAY TRAIN SERVICE.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. R. L. BORDEN. Before the House goes into Supply, I would like to ask the Minister of Railways (Mr. Graham) whether he has received a resolution of the Board of Trade of Dartmouth in regard to the present train service, both passenger and freight, between Windsor Junction and Dartmouth. I have under my hand a copy of that resolution—it is rather lengthy—I have no doubt the minister has had communication of it. In effect, it declares that the recent changes in the train service have completely demoralized business conditions, both as regards passengers and freight; that it has accomplished the maximum of inconvenience with the minimum of economy; that under present conditions the train service probably costs more than it did formerly, and it is not giving nearly as good accommodation to the public. Not only is there alleged to be greatly additional inconvenience so far as the transportation of freight is concerned, but there is an almost intolerable inconvenience to persons residing at Waverly, and elsewhere on the line, who desire to go to Halifax or to Dartmouth and do business for a day, and return to their homes the same night. I will not inflict the whole of this resolution upon the House at the present, but I would only ask the minister whether he has taken the matter into consideration, and whether he thinks that any changes could be made. I realize that the Intercolonial management has been placed in the hands of a commission, that a great deal of discretion must be left to them in such matters, and I would not be inclined lightly to interfere with them. But if the representations in this resolution, the terms of which seem to have been very carefully considered, and the condition of affairs are such as are described here, then I think the members of that commission ought to take up the matter at once and endeavour to give to the people of Dartmouth and all along that line to Windsor Junction some better train service than they have at the present time, particularly as it is alleged in the resolution that this could be done without adding one dollar to the cost of operating the line beyond what it amounts to at present.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). I may say in reply that I have no recollection of receiving such a resolution. If it has been received, it has been transmitted at once to the Board of Management. Since handing the Intercolonial over to the Board of Management I have not interfered in any way with the manner in which they choose to run that railway. I have given them some suggestions but they have had control of the situation and of the management of the trains. I may say that the general superintendent, Mr. Brady, who has charge of the transportation, is one of the best transportation men in the Dominion of Canada, I believe he has few superiors in America as a transportation man, and I am sure that any representations that may be made to him will receive due consideration. I will make inquiry at the department, and if the resolution has been received and has not been transferred to the board, I will see that it is done at once.

Mr. R. L. BORDEN. In order that there may be no doubt about the minister receiving it, I will send him a copy of it across the floor of the House.

Motion agreed to, and the House went into Committee of Supply.

Department of Indian Affairs—salaries, $111,825.

Mr. FRANK OLIVER (Minister of the Interior). In the third division subdivision B there are four clerks at $800; one at $775, one at $750, one at $737.50, one at $725, and two at $535, making a total of $7,237.50. There is one packer at $800, 4 messengers receiving a total of $2,887.50. Total, $111,825. Add the difference between the amount paid under the flat increase and the amount paid by statutory increase, $1,275. The increase is made up by 10 statutory increases of $100; 45 statutory increases of $50; 1 broken statutory increase at $37.50; 5 brok-

en statutory increases at $25, and 1 broken statutory increase at $75, making a total of $3,487.50. Less saving between estimated salary of officer deceased and new appointment, $650. Less savings due to status of 2 clerkships in grade A of third division, reduced to status of two clerkships in grade B of third division, $800, showing a net increase of $2,037.50. Less amount deducted from estimated salary $200; less amount of difference between money paid under the flat increase and that paid by statutory increase, $1,275. The net increase on the entire showing is $562.50.

Mr. FOSTER. Who are the two additionals in the third division, subdivision B?

Mr. OLIVER. Miss Coghlan and Miss Darby, at $525 each.

Mr. FOSTER. The minimum of that class is $500 is it not?

Mr. OLIVER. They were appointed in the first half of the year, and therefore they are allowed the statutory increase which belongs to the latter half of the year.

Mr. ARMSTRONG. Does the minister think it necessary to have so large a staff of officials in the Department of Indian Affairs? As I understand it, there is about $1,500,000 distributed in that department, including salaries of officials. Has the minister made an investigation as to the amount of work done in his department? Does he think there is need for such a large staff, and does he know what they are doing?

Mr. OLIVER. The information I have received from time to time from officers of the department is to the effect that their work is arduous and faithfully performed. I receive this information very generally and persistently when there is any prospect of an increase of salary or promotion.

Mr. ARMSTRONG. I have no doubt the minister will receive suggestions of this kind, but I wish he would give us some knowledge of the amount of work in that department. There are in Canada 107,000 Indians, of whom 85,000 are actually under government control. One half of the expenditure of the department is devoted to salaries, and I would like to know what the work of the department requiring such a large staff is.

Mr. OLIVER. A careful study of the annual report of the department will show that there is a large amount of work. It is not a mere matter of distribution of money but of the oversight of the work and the social life of people scattered from one end of the Dominion to the other who are notoriously difficult to care for. While the work of the department does involve a large expenditure, it is nevertheless very responsible work and must be done if the credit of Canada is to be maintained.

Mr. FOSTER. Would the minister state the reasons why the officers on whose account items for travelling expenses appear in the report have to travel in the service of the department? I notice the following items for travelling expenses: Mr. Bray, $198.55; Mr. Ogilvie, $284.02; Mr. McKay, $259.70; Mr. F. H. Paget, $520.50.

Mr. OLIVER. Mr. Bray is the chief surveyor of the department, and these travelling expenses were incurred in inspecting survey work done by other surveyors of the department, chiefly in Ontario. Mr. Ogilvie is the architect of the department and these expenses were incurred in the inspection of buildings of the department. Where it is reported that a building needs repairs or is unfit for use, or that a building is required, Mr. Ogilvie gives the department the expert advice required. Mr. McKay is the accountant of the branch, and made a trip in western Canada, auditing certain accounts of the western agencies. Mr. Paget was sent on an inspection of the agencies in the prairie province last year. It was thought advisable that an important officer at the head office should have personal cognizance of the way in which business was being transacted at the different agencies, and therefore we thought it sound policy that Mr. Paget should make that trip. These accounts are all for out-of-pocket expenditures.

Mr. FOSTER. There is no per diem allowance?

Mr. OLIVER. Oh, no.

Mr. ARMSTRONG. How many employees are in the inside and outside service of the Indian Department?

Mr. OLIVER. In the inside service there are 78. At a later date I can give my hon. friend the number in the outside service.

Mr. HENDERSON. I understand that the 75 officers whose salaries we are now considering are employed in the departmental offices, their work not extending outside of Ottawa, so that practicaly what they have to do is largely connected with the distribution of moneys referred to by the hon. member for Lambton (Mr. Armstrong). It seems to me that a large number of people are employed to distribute a reasonably small amount of money. I presume those in the outside service will be much more numerous. The whole department seems to be somewhat expensive.

Mr. OLIVER. There is no doubt that the department is expensive, it costs a great deal of money, but I admit that I know of no way in which the responsibilities of the country in regard to the Indians can be dis-

charged without a very large expenditure of money or without the employment of a large staff of officers. I might say that some of the officers whose salaries appear as a part of the civil government vote are not employed in the offices here. I speak of the surveyors, whose work, of course, is in the field, but who still are a part of the inside service. Then there are the two inspectors of the Ontario agencies, whose work is outside but who are part of the inside service.

Mr. ARMSTRONG. Does the sale of lands come under the supervision of these employees, and are these sales of Indian lands being conducted in the same manner as they were some years ago? If the minister will recollect, we made an investigation some years ago and found that this government had sold in the neighbourhood of 600,000 acres of Indian lands since they had come into office, and though a large portion of these lands were sold at an upset price fixed by the department they brought ten and fifteen cents an acre. Islands were sold for one dollar apiece. Is the minister still allowing sales to be conducted in the same manner, and are these officials the ones who look after that part of the work?

Mr. OLIVER. The department has secured surrenders from a number of bands of Indians within the last few years for the purposes of sale for the benefit of the Indians. In all cases the land has been sold at public auction, duly advertised, and the prices realized have been, I think everybody will admit, fair prices as compared with the value of surrounding land. We have had some sales within the last few days. Land that belonged to a band near Ponoka brought an average of $11 an acre. Lands were also sold near Battleford and in other parts of the country and I think the records will show that we secured a fair average price. I will be very glad to produce the returns of the sales if it is desired.

Mr. ARMSTRONG. My reason for referring to that is that two years ago we had the returns brought down showing the sales of lands that were disposed of, and, as I have already stated, the bulk of these lands were not disposed of by public tender and in fact a very small proportion of them have been disposed of by public tender. I am very glad to know that the minister is now disposing of the lands by public tender.

Mr. OLIVER. By auction.

Mr. ARMSTRONG. I might assure my hon. friend from Halton (Mr. Henderson) that if he will inquire as to the men employed in this department in the outside service he will find that there are a hundred of them and that a large sum of money amounting to hundreds of thousands of dollars is going to men employed by this department engaged in other walks of life throughout the country.

Mr. BRADBURY. I cannot help but contrast the remarks of the minister with the facts regarding the sale of lands. I understood him to say that all the Indian reserves which had been surrendered had been sold at public auction and that they had brought fair prices. I would like to recall to the minister the surrender of the St. Peter reserve which is a very important subject in Manitoba. That reserve was surrendered and nearly half of the reserve has been practically given away. It was given in the first place to the Indians on the condition that they would agree to the surrender. The Indians were left unprotected. The department made no effort to protect them and nearly 22,000 acres of this land fell into the hands of speculators at a less sum than $5 per acre when it was admitted to be well worth $15 or $20 an acre. The balance of some 20,000 acres was sold, as the minister says, at public auction. It was advertised and the auction took place about this time of the year. But very strange to say the advertising was so managed that the public were not aware that the auction was going on. The men who bought the land and who attended the auction at St. Peter where, in every case, or, I think nearly every case, the men who had secured the land from the Indians and I think that if the minister will look into the matter he will find that the prices secured even by auction for the St. Peter reserve were away below what the land was worth. The department has an Indian agent in the town of Selkirk. That man, I presume, is supposed to look after the interests of the Indians. In this case whether his hands were tied by the department or not I do not know, but I am inclined to think they were. There was no effort made on the part of the agent to protect the Indians. I understand—and I think I can produce the evidence before the House rises—that the Indian agent himself was in collusion with the land dealers and that he purchased some of these lands from the Indians. I do not know but I think it is likely that the minister is well aware of these facts because the matter was brought to his attention while he was in Winnipeg. I would desire very much that the minister should cause some investigation to be made into the manner in which the St. Peter Indians have been treated. They have a serious grievance. The Indians feel that they have been practically robbed of their rights. In addition to that the state has lost a great deal of money because of the fact that when the Indian loses and becomes pauperized the state has to step in and take care of him.

Mr. OLIVER. With regard to the case of the Indians of the St. Peter's reserve I said that all land which had been sur-

rendered by the Indians had been sold by public auction. The land of the St. Peter's reserve that was surrendered by the Indians was sold by public auction. If it did not bring the price that it should have brought I regret it very much, but if at a point within twenty miles of the greatest centre of real estate speculation in the known world an advertised sale of real estate takes place and a fair price is not realized I submit it is not the fault of the Indian Department. In the transaction that took place in securing the surrender by these Indians of their land the department placed itself in the hands of a gentleman against whose character or ability I do not think any person in the province of Manitoba would utter one word.

Mr. FOSTER. Namely?

Mr. OLIVER. He is now the chief justice of Manitoba--Chief Justice Howell. He was, in fact, the Chief Justice of Manitoba at the time. He made such an arrangement with the Indians as was possible in order to secure their consent. The presence of the Indians upon that reserve was an open sore that could not be healed as long as that presence continued. My hon. friend who represents that constituency knows perfectly well that that is the case and will not deny it. It was sound public policy to secure the surrender by the Indians of their land at that place and to secure their removal as far as was possible to some other locality better suited to their nature and to their natural and proper modes of life. In order to secure the surrender Chief Justice Howell was given a free hand and, in the process of securing the surrender, an arrangement was made whereby these Indians—who, by the way, are only Indians in name, who are, as a matter of fact, half-breeds, as well able, in the large majority of cases, to look after their own business, as any member of this House—insisted that they should individually receive for their own personal use and benefit some portion of the land on this reserve and that they should receive that land free from any control or supervision by the Indian Department. That was the condition of the surrender, and having faith in the disinterested motives, the ability, and the honour of the Chief Justice of Manitoba the Indian Department believed these were the best terms upon which we could secure the surrender in the interest of every one. The surrender having been secured on these terms the land which the Indians individually claimed they were entitled to was allotted to them and they disposed of it as they had the right to do under the terms of the surrender, to whomsoever they pleased and on such terms as they agreed upon.

Mr. FOSTER. What was the allotment to each individual?

Mr. OLIVER. About 15 acres.

Mr. FOSTER. Was that to each head of a family?

Mr. OLIVER. To each individual Indian. My information is that the price that the Indians received for this land which they held individually and which they sold individually was to all intents and purposes the price which was received at the auction sale by the Indian Department of the land which the band surrendered.

Mr. FOSTER. How much was that?

Mr. OLIVER. About 24,000 acres was surrendered for sale and was sold by auction and realized about $5 per acre or about the same price as the Indians received for the land which they sold at private sale. Since that time it has transpired that some of the Indians who have sold, claim they have not been paid in full according to the terms of the bargain, but that is a matter in which the Indian Department has no legal right to interfere. Of course, if it is a fact that the Indians have not been properly dealt with by the parties to whom they sold it is possible that the department might take an advisory interest in the matter, the interest of a solicitor for a client. But the department has no legal standing in that transaction. Now, the conditions were arrived at as the result of the best judgment of the Chief Justice of Manitoba and in the estimation of the Indian Department the transaction has been good not only for the constituency of my hon. friend and the province of Manitoba, but is essentially in the interest of the Indians themselves.

Mr. FOSTER. What instructions were issued to Judge Howell?

Mr. OLIVER. I am under the impression that the papers were brought down last session but if not they can be laid on the table.

Mr. FOSTER. Did the Indian Department hand over the whole matter of getting a surrender to Judge Howell, under instructions, instead of availing itself of its own officers or agents?

Mr. OLIVER. An official of the department took the surrender in its proper form but the negotiations were carried on by Judge Howell. There was an extra complication in this case in that there were claims of private owners interspersed with the lands of the Indians and there was a dispute between them and Judge Howell was appointed to adjudicate on the dispute and at the same time if possible to secure a surrender of the Indian lands.

Mr. FOSTER. What is the general quality of the land?

Mr. OLIVER. It varies. I understand that generally speaking it is very good land

but parts of it run into marsh so that there is quite a variation in the value.

Mr. BRADBURY. I am a little surprised at the explanation given by the minister. He first started out to say that all the lands surrendered by the Indians were sold by competition, but he knows that every acre that the Indians received from the government was part of the land they surrendered. They first surrendered the Indian reserve and then the government gave them, not 15 acres but 16 acres for every soul on the reserve. There is nobody trying to cast any reflection on Chief Justice Howell's integrity or ability. I think perhaps he did the very best he could, but it is history in Selkirk that when he went there to negotiate the treaty there was no agitation in the town or surrounding district for the surrender. I have failed to hear or see where the representation came from to the government to take that action. There was no petition from the residents of the town of Selkirk who were directly interested. The surrender was brought about I think by the late member for Selkirk and a few of his friends, and when Chief Justice Howell came down the Indians refused to negotiate for the surrender. They did not desire to give up the reserve. The consequence was that before the surrender could be secured some deal had to be made with the chief and council. I think I can produce evidence that there was a deal made with the chief and council by which they were promised a certain amount of money and a great deal more land than the ordinary Indian would receive if they would consent to the surrender. They did consent and immediately the chief and council received 196 acres while the ordinary Indian received only 16 acres. I am told that in addition to that the chief and council were promised $200 in cash to agree to the surrender. After all this was done, they had to call the band together to secure its consent, and I am told on very good authority that after a good deal of canvassing and a good deal of bribing and the free use of whisky, the consent of the band was secured to that surrender by a majority of one vote.

The department must have been aware of these facts. The minister says the Indian refused to surrender his lands unless he had absolute control of the sixteen acres allotted to him. I do not doubt that, but I do not think there is any question that the Indian was instructed by the men who were seeking to get control of his land to put in that plea. I do not think that would justify the department in leaving the Indian unprotected. The Indian of St. Peter's reserve is just as much an Indian as any Indian in Canada to-day, so far as business affairs are concerned. My hon. friend says that he is as capable of transacting business as the average man. There is not one man in a dozen on St. Peter's reserve who has the slightest knowledge of any written document; he will sign anything he is asked to sign; you can get him to sign away his land for a mere trifle. The price obtained for the land, the minister says, he considers a fair price. I would ask the minister, is it not a fact that the chief justice who negotiated the treaty has himself within the last month approached the minister and made representations to him to the effect that the Indian has been unfairly treated and has not received fair value for his property. I know that in the city of Winnipeg the land titles office has held up every one of the patents, because representations have been made to that office that the Indian has been defrauded and has not received a fair value for his land, because when he signed an agreement for the disposal of his land, he was led to believe that he was only agreeing to give the man the first choice of purchasing it on the issue of the patent. Instead of that, it turned out to be an absolute quit claim deed of the property. This I am sure the minister must be aware of. I myself have brought it very clearly to his attention before. Mr. F. Heap, lawyer, of Selkirk, and Mr. J. O. Clark, of Winnipeg, were both employed and paid by the department, one to look after the interests of the Indian, the other to look after the interests of the old settlers. Neither of these men had any interest in protecting the interest of the Indian. The Indian was thrown entirely on his own resources, which meant that he was thrown into the hands of the land speculators. Nobody attempted to protect him. The department turned their back upon the Indian and told them to do as they liked with their lands. The result is that the lands have passed into the hands of speculators at one-third of their value. The lands comprising the old St. Peter's reserve are the best available farm lands in the province of Manitoba; and the land that was left, after the sixteen acres that were allotted to the different Indians, fell into the hands of speculators. These men bought in the sixteen acre lots here and there. I know a man who got 1,000 acres in one block. At the time he secured this land, the government had surveyors on the ground, and he went to them and had them lay out the land, and he picked out the best land that could be secured in one block to satisfy these allotments; so that every allotment fell into the hands of speculators, and they picked out the best land to satisfy the claims of the individual Indians. The remnant of the reserve, something like 20,000 acres, if I remember correctly, after all the best lands had been picked out was put up at auction. The advertisement for this sale was published in

such a way that the public were not really aware that it was on. The sale was brought on when the snow was on the ground. There was no crying need of rushing that sale. It would have been more in the interest of the Indians and in the interest of the public if the sale had been put off until next spring. The men who attended the sale in Selkirk were, with one or two exceptions, the very men who had been going around among the Indians acquiring their rights, and there was very little, if any, competition among them. This the department is thoroughly aware of. The Indian agent at Selkirk was paid by the department to look after the interests of the Indians. The Indian is absolutely under the control of the Indian agent, to whom he looks to protect his interest, and he will do whatever he is told by him. At the time the surrender of the lands was made, I had not the honour of a seat in this House, and I wrote to the hon. member for Macdonald (Mr. Staples) requesting him to ask the minister across the floor if any protection would be given to any body who secured any of these lands from the Indians until after the patent issued. The minister answered in what I thought was a very proper manner. He said no, that the Indian had no land to sell until such time as the patent issued, and the department would take no responsibility and would protect nobody who bought these lands. In addition to that, a letter was written from the department by one of the officers instructing the Indian agent to make it known all over the reserve that if any man pledged his land or disposed of it in any way before the patent issued, such pledge or transfer would not be recognized by the department. I have a copy of that letter, which I would have brought if I had known that this matter were coming up to-day. In the face of that letter, about 22,000 acres of these lands passed into the hands of speculators before the patent issued, and the department recognized those deals and handed over the patents to these men. I understand that the department requires, before any patent shall issue, that an application shall be made, signed by the Indian entitled to the patent, and again when the patent is handed over by the agent, the instruction of the department is that the particular Indian should make application for it and sign a receipt when he receives it. I do not think there are 20 men on that reserve who made applications for patents or signed receipts. I have evidence in my desk which I shall produce later, to prove that the large majority of these people never saw their patents. The patent was simply handed by the Indian agent to the speculators. This is a serious matter and I would ask the minister to grant an investigation. I am sure that Chief Justice Howell himself would urge that an investigation be granted in order that justice be done these Indians. I am satisfied that not one of these men has received more than one-third the value of his land. The Department of Indian Affairs must bear the full responsibility of the wrong done these Indians on the St. Peter's reserve. It is not too late to remedy this great wrong, because every one of these patents is held up by the lands titles office, and it is a blessing that there is some power in the land which will take cognizance of a wrong of that kind. These patents have been held there for the last five or six months. The registrars in Winnipeg, the gentlemen standing between the Indians and the speculator who has wronged them, have no special right to do so. They are not the custodians of the Indian lands or guardians of the Indians, but the minister is; and I appeal to him, in the interest of justice, to grant an investigation by impartial men. I feel satisfied that the men who helped to negotiate this treaty and who are in charge of affairs in that department, are responsible to a great extent, and therefore I ask an investigation by independent men, not closely identified with the department. The minister is hardly right when he says he has no power to protect the Indians in this case. The best legal minds of Winnipeg differ with him on that point, and I am sure that Chief Justice Howell will not take that position. The Indians claim that they were fraudently dealt with, that the agreements they signed were only agreements providing that when the parties received their patents, the men who advanced them two or three dollars an acre, and in many cases from $2.50 to $5, would have the first rights to purchase the lands at a price to be fixed by the Indians, and if they were not willing to pay that price the Indians were to return the money at a fair rate of interest. This is the manner in which the deed was interpreted to the band by the chief and council. The very first move made was to purchase the chief and council. These men were bought and bribed to deceive the band. I think the department is well aware of the fact. The Indian agent at Selkirk, instead of defending these people and protecting their rights, was himself in the market to buy these lands.

Mr. OLIVER. I would like to call the attention of the committee to the last statement of my hon. friend. He said that the first move made in connection with this surrender was to bribe the chief and councillors with land and money, and some little time ago he said whisky.

Mr. BRADBURY. I said that when the consent of the band was given at a meeting to agree to a surrender, whisky was then used among these men to get them to vote, and even with the aid of whisky only one of a majority was secured. Surely that was not sufficient to turn these men out of house and home.

Mr. OLIVER. My hon. friend said that the first move to secure the surrender was the bribing of the chief and council with land and money. Now the negotiations with the band were open. The first move to secure the surrender was made by Chief Justice Howell of Manitoba; and if the chief justice opened his negotiations by bribing the chief and council with land and money, my hon. friend will have to take the responsibility of making that assertion.

Mr. BRADBURY. I do not think that anything I said would lead this House to believe that I insinuated that the chief justice had anything to do with the bribing. I do not think I said that. I am sure I did not mean to. What I said was the absolute facts, that the land speculators—no doubt the men who induced the minister to throw that reserve open—were the men who did the bribing and gave the whisky.

Mr. OLIVER. My hon. friend will have to be more careful in what he says because the men, who are not concerned in the department, were not able to give any land or to bribe the chief or councillors with land. The only bribe of land that could be given, could have been given by whoever made the surrender arrangement, and that man was Chief Justice Howell.

Mr. BRADBURY. Let me point out this fact. The chief and the councillors received, I think, five times as much land as the ordinary Indians. That was one of the inducements offered. I do not mean to say it was offered as a bribe, but it certainly was an inducement. The other statement I made that the Indian chief and council were promised money is absolutely true. That was not done by Chief Justice Howell, but by the men who set out to get the Indian chief and council to agree to meet Chief Justice Howell. These men would not meet the chief justice. They did not want to surrender their homes, but there were men in Selkirk who got hold of the chief and council and made it appear to their interest to meet Chief Justice Howell and agree to that surrender.

Mr. OLIVER. Again my hon. friend has used the word bribe and used it in connection with the distribution of land among the Indians. Bribe is an ugly word. Whoever gives a bribe must be responsible, and whoever makes a charge must be equally responsible for his accusation. If the giving of the land was a bribe, that was given by Chief Justice Howell.

Some hon. MEMBERS. No.

Mr. OLIVER. Undoubtedly. There was no other authority to give it or to make the arrangement, and the arrangement was made open and above board. It was considered fair and right that the chief and councillors should get a larger share of the land than the other Indians, and my hon. friend is not well advised in using the word bribe in connection with that part of the transaction, and he must take the responsibility of having accused the chief justice of bribery.

Some hon. MEMBERS. No.

Mr. BRADBURY. I do not think the minister has any right to keep reiterating that statement. I have explained that I did not state that the chief justice had given this bribe.

Mr. HUGHES. Are the chief and councillors hereditary in that position? If they are not, why should they get any more than any one else? If they are selected, they should get the same as any one else.

Mr. OLIVER. As to whether they should or should not get this amount, I am not pretending to say. If my hon. friend says they should not get it, then he stands with my other hon. friend in holding that the government acted improperly, that the negotiations were improper, and therefore the man who made the negotiations was guilty of an impropriety. When my hon. friend makes an accusation he ought to stand to it, and when he says 'bribed' he ought to stand by the word, and admit that he made an accusation that was not warranted by the facts. As to the assignments from the Indians to the purchasers of their lands, the House and the public were informed that no assignments would be recognized by the department, and in every case my information is that the patent was made out to the Indian and not to any body else, and it was handed to the Indian. Now I ask the House in all fairness how is the Indian Department to be made responsible for the disposition that the Indian subsequently made of that patent, a patent which he received under the agreement of surrender negotiated as I have stated? It was his to do with as he pleased. It may be that it was not proper to give him a patent with which he could do as he pleased. But that was a part of the terms of surrender, negotiated as I have said, on the responsibility I have explained to the House. I say it is unfair and unreasonable to suggest responsibility on the part of the Indian Department to control the action of the Indian in regard to a matter that was placed absolutely under his control by the terms

of the surrender of the reserve. As to the difference in price between the land that was sold by the Indians to private parties and the land that was sold by auction, it must surely appear to any one that little patches of land in areas of 16 acres do not have the same value in a farming country such as Manitoba as an area of 160 acres.

Mr. FOSTER. No, if they all remain 16 acre areas. They were not allowed to remain in 16 acre areas.

Mr. OLIVER. They were allowed to remain in 16 acre areas. If I bought 16 acres of you and 16 acres of another man and 16 acres of another man and so on, I have to take my chances of being able to get those different parcels brought together so as to make a single block. Does my hon. friend suggest that that land would be as valuable to me as if I could have bought the whole 160 acres in one lot?

Mr. FOSTER. Yes, if you knew you could get it all put together.

Mr. OLIVER. How could you know? There was no way you could know. If Brown, Jones and Robinson each held single patents for 16 acre lots of land, how are you going to ensure that Brown, Jones and Robinson are going to lump their sections together at your convenience, unless you pay them for it? So I say if that land was sold in blocks of 160 acres it is surely more valuable than the land that was sold in 16 acre pieces. The plea that the land did not bring its full value, that the auction sale was not well known, is, I submit, not worthy of consideration. There is no doubt that the sale was advertised in the public press, and as I said before, it was advertised in a centre of population and business which has the keenest eye for real estate speculation of any place in the known world. I am satisfied that whatever the land may be worth to-day, it realized its full value at that time.

Mr. FOSTER. When was it sold?

Mr. OLIVER. About a year ago.

Mr. BRADBURY. The minister says that the value they received at that time was the full value. Now I would like to ask him if it is not a fact that the chief justice who negotiated this treaty has himself brought it to the attention of the minister that the Indians, in his opinion, had not received fair value for their land?

Mr. OLIVER. The chief justice never said anything to me about the value that was received at public auction. No word was said to me by any one except by my hon. friend in this House, indicating that the land which was sold at auction did not bring its fair value at that time, or that there was not every opportunity given to the public who wished to invest in those lands. Now I submit that when the Indian Department does that, it does all it can do, all it was expected to do, all any reasonable man could expect it to do. In regard to the Indians who sold their own lands privately, if my hon. friend is anxious to hear private conversations, I will say that I did have a private conversation with the Chief Justice of Manitoba, and he told me he had heard that some of these Indians had not received full value for their land; he said he had heard it, but he had no knowledge of the matter beyond the treaty; but he had heard so, and he thought that it was right to let me know it. As I have said, it is a matter perhaps of oversight. But I want to point out to the House that the department has no legal standing in that matter because of the terms of the surrender which was made on the responsibility that I have mentioned.

Now in regard to the attitude of the registrar of the land titles in Manitoba, this gentleman is a provincial officer, he has certain duties to perform, and is responsible to those who appointed him for the performance of those duties. The registrar of land titles in the province of Manitoba is responsible, and his actions are no concern of ours. The titles to these lands were registered in the Selkirk registry office under the system of registration there prevailing. When the people who acquired the titles desired to bring these lands under the Torrens system, they took them to the gentleman my hon. friend has mentioned, and it is between the registrar and the purchaser as to whether their title is in proper shape or not. So far as we are concerned, the titles are registered in the proper office. I submit that while we have an interest in seeing that the purchasers get their titles and in helping them to get their titles as far as we can, we have absolutely no responsibility in the matter beyond seeing that the Indians get the full price for the land that was theirs to sell and do what they pleased with.

Mr. FOSTER. Does the minister make any statement as to the Indian agent?

Mr. OLIVER. No, I cannot make any statement in regard to the agent. If my hon. friend can establish that the Indian agent trafficked in these lands as he should not do, I will guarantee that the agent will cease to be agent on very short notice, but, so far, I have no knowledge of that fact. Certainly it did not come within the scope of our arrangement. My hon. friend has stated perfectly clearly that we gave certain instructions from the office here which we believed would be in the interests of the Indians and all parties concerned. That was our duty in the matter and so far as we are aware those instructions have been carried out. If they have not been carried out then those who should have carried

them out of course will have to suffer, but that does not in any degree establish any responsibility against the department for the action of the Indians who, under the terms of surrender, were secured in their right to do as they pleased with what was their own.

Mr. R. L. BORDEN. Was it not anticipated that they would do just what they have done, that is, get rid of the lands very quickly and at a very inadequate price?

Mr. OLIVER. I cannot say that it was or that it was not. That was a matter for the consideration of the gentleman upon whose good judgment we relied in the negotiations with the Indians.

Mr. R. L. BORDEN. Surely the minister does not believe that the department can shield itself by giving a free hand as he says to some gentleman and then saying: He advised so and so and we have no further responsibility about it.

Mr. OLIVER. We do not propose for an instant to shelter ourselves behind anybody, but it is necessary that the House should be made aware of the circumstances under which the surrender was secured and it would be unfair to the House not to state to them the terms of that surrender. I have already said that we take full responsibility and I believe that the surrender was made on the best terms that could be secured, that it was sound public policy to secure it and it was in the interest of the town of Selkirk, of the constituency of Selkirk, of the province of Manitoba and of the Indians concerned.

Mr. FOSTER. After what the minister has heard publicly and privately does he propose to take any steps towards investigating this transaction?

Mr. OLIVER. As I have said to the House, we are interested in seeing as far as we can that those who are in our wardship get value for what is theirs, and so far as that is concerned, our intention is to investigate; what I am trying to impress upon the House is the difference between a legal responsibility and an advisory responsibility. That is the difference between the position my hon. friend desires to hold us in and the position that we consider we are entitled to be in.

Mr. FOSTER. I heard a good deal about this personally from various parties in Winnipeg and in Selkirk; in fact it is common talk there. I may have mingled with people who were not altogether disinterested, although I think in certain cases I got my information from people who were disinterested, but I can tell the minister that the general opinion, so far as I could gather, is that a great wrong has been done. Sentiments of that kind have been expressed to me by people on both sides of politics; in fact I found no other opinion existing. I think the hon. member for Selkirk (Mr. Bradbury) has done his duty and was perfectly justified in bringing this matter before the committee as he has done, and I was glad to hear the minister say that he proposed not to let it rest at this particular stage, although he qualified himself in some way that I could hardly understand as to the scope of the investigation that he would hold. But two facts remain and they are to my mind uncontrovertible. You can go anywhere you like in Manitoba and you cannot find an equal area together of better lands than the lands in this reserve, that have gone in this way out of the reserve largely into the hands of speculators. It is also, I think, an absolute fact that $5 an acre for these lands is the merest bagatelle. The minister may stand there from now till doomsday and say he thinks that a fair value was got for these lands but he could not convince me. The lands are beautifully situated, they are on each side of the river, they are near to the town of Selkirk; in fact they jut right into the town at certain places, and are within easy communication. As to the quality of the soil there is but one opinion, they are prime lands. And yet, an auction sale, said to have been well advertised within a very small distance of the centre of real estate activity, realizes only $5 per acre for these prime lands.

Mr. BRADBURY. Less than $5.

Mr. FOSTER. Less than $5 I am told, but the minister said $5 per acre in the bulk.

Mr. OLIVER. I must have been a little wrong, they realized a little over $6.

Mr. FOSTER. Say over $6, the difference of $1 in this consideration matters very little indeed. If the minister puts up school lands in the far northwest, he will get prices, five, six or seven times as great as those obtained here. The reason he gets it there is that while the lands are not better situated or of better soil, the competition is keener, and the competition is keener because people are advised that these lands are to be sold, they attend the sale and run up the price to the limit of what they consider they are able to pay for lands of that quality. Yet in this garden of Manitoba, prime lands, beautifully situated along the river, realize only $5 or $6 per acre in the bulk. It is common talk there that these lands have gone into the hands of speculators. I have myself seen some of the men who have bought them, and they are speculators and speculators simply. They do not propose to sell these lands at $6 or $7 or $8 an acre; I think there is no doubt that the ultimate purchaser will pay three, four or five times the price that has been realized. What is

the position of the minister, who is the guardian of the Indians, who is their trustee and who must not simply shuffle off his duties into the hands of even the chief justice, and then shelter himself, as the minister certainly does, behind the argument that he gave it over to the chief justice and that he only carried out the arrangement that the chief justice made. If any man ought to have protected the Indian, it was the Indian agent who represented the department and the department itself which is the trustee for the Indian. Now, the minister is no chicken. He is well versed in business matters. He knows the history of the whole of the scrip business in the Northwest, he knows how the cormorants got after the Indian or the halfbreed and how they got his scrip or allotment of land by virtually wheedling it from him for whisky or an infinitesimally small part of its value. He knows that what takes place in one case will very likely take place in another, and if the minister did not take all the precautions he could to see that this rich land which belonged to these Indians, when it was taken from them and sold to the public, brought to these Indians at least fair value for what their possession was, he certainly did not do his full duty. Have they got their fair value? I do not believe they have; I do not think there is a man in this House who believes they have. Could the department have taken precautions to have prevented them being sacrificed in the way in which they were and thrown out with a very small, if any, pittance upon which to live? The department could have done it if it had done its whole duty, and its proper officers, in their proper places, had shown as much disposition to protect the Indians as some of them, I am told, had to get a slice of what was the Indians valuable possession.

Mr. ARMSTRONG. May I ask the minister if the 22,000 acres that were sold by public auction were all sold in bulk and at one time?

Mr. OLIVER. They were sold by quarter-sections but at the one auction sale.

Mr. ARMSTRONG. Having devoted parts of two sessions to a study of the Indian Department and knowing, as I do, considerable about that department, I feel satisfied that the minister has not given sufficient attention to it, and that the officers in that department are woefully incapable of handling the affairs of the Indians of this country. There is no doubt in my mind about it. There is no doubt in my mind that for the last ten years the Indian Department has been disposing of lands belonging to the wards of this nation in a manner which is not only unfair to the Indians but most unfair to the people of this country. I am satisfied that if the minister will devote more time and attention to that department and see to it that in future at least lands will not be squandered in the manner in which they have been in the past he will be doing a very great favour, not only to the Indians, but to those of our people who are interested in their welfare. Some 600,000 acres of land have been disposed of since this government came into power, and tens of thousands of acres of that land have been sold at from ten to fifteen cents an acre, when there was no need of it being disposed of. Islands have been sold at a dollar apiece. Yet the minister will stand up and say that this department is being conducted in the best possible manner. I sincerely hope that the minister will devote more attention to the Indian Department and see that affairs are run in a better manner than they have been in the past.

Mr. MEIGHEN. What inducements were offered to the chief and council beyond what the band got and why?

Mr. OLIVER. I am informed that the chief received 320 acres and the councillors 160 acres each. That was a matter that was discussed in council and was satisfactory to the Indians, to all the members of the band, or, at any rate, to the majority who voted for the surrender.

Mr. MEIGHEN. Will the minister answer the latter part of the question, and let us know why these parties were entitled to more than the ordinary members of the band.

Mr. OLIVER. I am not able to answer that question. I did not negotiate the treaty for the surrender. I have already given to the committee the responsibility upon which the surrender was negotiated and the department felt it wise to accept the terms that had been arranged.

Mr. MEIGHEN. Has the minister any information to give to the House to show that the ordinary members of the band knew before the agreement was surrendered that the chief and council were to get these extraordinary inducements?

Mr. OLIVER. Yes, I am informed that the provisions of the surrender, including the large grant of land to the chief and councillors, were read and explained in detail to the Indians and were discussed for two days by the band before the surrender was signed.

Mr. STAPLES. Will the minister kindly advise us how long these lands were advertised and in what papers ?

Mr. OLIVER. I cannot offhand give my hon. friend a list of newspapers, but

I am informed that the sale was advertised in the Toronto 'Globe,' the Winnipeg 'Free Press' and the local Selkirk paper and the advertisement was continued for a period of from four to six weeks. I can give my hon. friend the exact data at a later date, but I have forgotten it at the moment.

Mr. STAPLES. Was the sale advertised in the local Selkirk papers?

Mr. OLIVER. It perhaps would not be well to answer offhand because I am not perfectly certain. It is a question of fact. It can be settled without difficulty later on. If my hon. friend would leave it for the present I can satisfy him at another time.

Mr. STAPLES. There should have been no difficulty in securing full value for these lands if they had been properly advertised. Take, for example, the reserve at Swan Lake, which the minister was good enough to reclaim, advertise and sell. It was sold last summer. I had been at the minister for several years, in fact, since I came into this House, endeavouring to have these lands recovered from the Indians and put on the market. The lands lay in very much the same position with reference to the town of Swan Lake as the lands in question lie to the town of Selkirk. As the minister knows, the sale of the Swan Lake reserve was advertised in the principal papers and in the local papers. The lands were sold at public auction last summer and these lands, which are not any better, in my opinion, and, in fact, in regard to location, are not as valuable as the lands in question, brought all the way from $15 to $26 per acre. I did not hear the early part of this discussion but it seems to me that lands, such as have been sold within that reserve, should have brought from $15 to $30 per acre.

Mr. MEIGHEN. The answer of the minister to the effect that the ordinary members of the band knew and understood that the chief and council were getting those extraordinary inducements is rather disappointing to me. The minister knows quite well that any engagement entered into in writing between the Indian Department and the chief and council would in all likelihood be quite well understood by the chief and council, while it is very unlikely that it would be understood by the ordinary Indian. The Minister of the Interior is very anxious to-night about the reputation of the chief justice and as to how that reputation is attacked. It is clear to everybody that it has not been attacked nor has the conduct of the chief justice in any way been attacked by the member for Selkirk or by any other hon. member on this side of the House. But, Sir, whatever may have been said reflecting on what may have been done to the Indians is surely ascribable directly to the minister and to the department itself and not through the medium of the chief justice. If bribery is a correct term to apply, then that bribery is referable directly to the Department of the Interior itself. I am absolutely at a loss to understand why the department should see fit to grant land of this country to the chief and council of the band over and above what the members of the band were entitled to. The minister is in a quandary over that and so am I. Standing on his feet in the House the minister has admitted he could give no reason for it whatever. As is well known the chief and council of a band of Indians are simply elected only to hold their office terminating at the end of each year, and why that annual election should give them the right to hundreds of acres of land and perhaps other inducements, over and above the members of the band who elect them is certainly a mystery. But the purpose of it is only too clear, and if the minister considers bribery the proper word to describe it then it seems to me that his department is responsible. The chief and council in the natural course of events are above the average intelligence of the band; they have very considerable influence over the other members of the band; their word practically goes, for no ward in all the world is more easily influenced than the Indian, particularly by one of his own people who excells in intelligence. And, just so soon as the department, by whatever means they chose to adopt got the good will of the chief and council, they were very likely to get the good will and assent of the band in general. If the Department of Indian Affairs chooses to hand over the lands of this country to the chief and council, even with the assent of their wards the Indians, then it seems to me they ought to be willing to accept the word bribery as a proper word to apply to their conduct. We do not apply it to the chief justice at all, but I can think of no other word better applicable to the conduct of the officials of the department who adopted that method of getting this surrender from the Indians.

Mr. OLIVER. The department absolutely accepts full responsibility for every transaction in connection with this surrender, and if the giving of this larger amount of land to the chief and to the councillors is bribery, then I have given to the House the advice on which it was done and we take the fullest responsibility for having done it. It was our responsibility and we stand to be condemned or approved for it. My hon. friend (Mr. Meighen) is somewhat in error in stating that the chief is elected only for a year; in this case he is elected for three years, but that is hardly to the point. I think

that the hon. gentleman rather contradicted his own argument when he suggested that the chief and councillors were only as the average of the band, and then said that the chief and councillors necessarily had great influence over the others.

Mr. MEIGHEN. I said they had only the same rights as the rest of the band, but that they had greater average intelligence.

Mr. OLIVER. My hon. friend was strong on the point that the Indian could be persuaded to do almost anything you wanted him to do and that the chief had great control over the band. And as this is a rather important question; let me point out that in a recent surrender, the surrender on the Peigan agency, the chiefs were in the minority and the members of the band were in the majority, and the surrender was secured in spite of the adverse vote of the chiefs, and that was one of the objections raised against the surrender. In this case the chiefs were for the surrender and the vote was carried. Now, I want to say that the policy of the Indian Department, as it is at present administered, is to secure the surrender of Indian lands which are not being used beneficially by the Indians, so that they may be transferred at a fair price to white settlers who will use them beneficially, the country thereby receiving the benefit of increased production and increased wealth and the Indians receiving the benefit in money of the value of the land which they themselves were not able to realize. Furthermore, it is the policy of the department that where a reservation is situated near a town or close to a settlement, where conditions are in any degree as they were on that reserve at St. Peter's —and my information is that the conditions on that reserve were more deplorable by reason of the proximity of that reserve to the town than on any other reserve in the west—I say that where that condition exists it is the policy of the department to secure the removal of the Indians to a locality where they will not be subjected to the same temptations, and where it will be better for them in every way than to remain in that location. In regard to the value of the land, hon. gentlemen know that it is easy to say that land is worth more than is secured for it. I have seen the city of Winnipeg surrounded by vacant land that was not brought under cultivation when land 100 or 150 miles distant was closely settled. It is no use to say that because the land at Selkirk is good and because it is only 20 or 25 miles from Winnipeg that therefore it has a certain fixed value. The values of land depend on conditions and reasons that we do not always understand. If we always did understand them we probably would all be richer than we are to-day; it is because we do not understand these conditions that we do not make as much money out of real estate as we would like. I say it is no evidence that an adequate price was not received for that land to say that it was good land and that it was near the city of Winnipeg. I say that when an auction sale of this land was duly advertised and the land was sold, that the price that was received at that auction sale is evidence as to the value of the land that it is not competent for any one to deny.

Mr. SCHAFFNER. At what time of the year was this auction held?

Mr. OLIVER. In the latter part of October or the early part of November, 1908.

Mr. BLAIN. Can the minister supply us with a list of the purchasers of the land and the prices paid in each case?

Mr. OLIVER. I can if I am given time.

Mr. BLAIN. Perhaps the minister would agree to supply it when this matter is again discussed.

Mr. ARMSTRONG. Is it the practice of the department to send a man out to investigate the land and ascertain its value before disposing of it?

Mr. OLIVER. All Indian land, before being put up for sale, is surveyed and valued by an officer of the department. The land in question was surveyed and valued by an officer of the department, and it sold at more than the valuation or of course it would not have been sold.

Mr. ARMSTRONG. Was the officer of the department an Indian agent in the district or an official from the department here?

Mr. OLIVER. The gentleman who valued the land was Mr. McLean, one of the surveyors of the department, a man of long experience in the west and of very good reputation.

Mr. SCHAFFNER. The word bribe may not be a very good word to use, but I think it fits in very well with the circumstances of this case. I would like to ask why it was necessary to pay the councillors and chief anything to get their consent?

Mr. OLIVER. It is in accordance with the principle recognized the world over, that the man of higher position receives the greater recognition. In making a treaty with the Indians, we always give a larger amount of treaty money and a greater recognition in every way to the men of rank, the chief and the councillor, than to the other Indians. That principle was followed in this case.

Mr. SCHAFFNER. Was this amount paid to them with the view of having them

influence the other Indians to sell their lands at a given price?

Mr. OLIVER. I would think the tendency would be quite the other way. According to my reasoning, it would have the opposite effect.

Mr. SCHAFFNER. The Minister of the Interior has had too much experience in that western country and knows it too well to try earnestly to make anybody from Manitoba believe that he got a fair price for that land. He has tried to bolster up his case by saying that land near Winnipeg or Selkirk might be worth very little. That is quite true, but we know this land, and I do not hesitate to say that land just like it in the province of Manitoba, not near Winnipeg or Selkirk, but hundreds of miles from those places, is selling to-day at from $30 to $50 an acre. Somebody is responsible for this deal, and it should be investigated. It is only a repetition of what has been going on in that western country for some time—lands going into the hands of speculators, and one of the most disgraceful acts this government ever committed has been to appoint the man who did the most to sacrifice the lands of that country, to be chairman of a commission for the conservation of those lands.

Mr. CROTHERS. We have got considerable interesting information from the Minister of the Interior touching this transaction, but I cannot help thinking that he has withheld a good deal of interesting and material information which would enable us to determine whether or not this transaction was carried out in a businesslike manner. The minister might have gone a little further and told us what steps he had taken to inform himself as to the value of this piece of public property. Here were 22,000 acres of land to be sold, worth from $150,000 to $200,000. It would be interesting to learn from the minister whether or not he has gained any information, and if so from whom, as to the price he ought to obtain for this property. He has told us that the gentleman who surveyed these lots reported on their value; but surely it was not a business transaction to dispose of $200,000 worth of property on the strength of that single report. No private individual dealing with a piece of property of his own would ever think of disposing of it in that way. We all have had something to do with disposing of parcels of land, and we never accept the affidavit of one individual only as to the price of it. We get three or four men whose knowledge of the values of property in the district carries weight; we see to it that they are wholly disinterested; we have them go and examine the property; we get their three affidavits before we make up our minds what the property is worth; and then we inform the auctioneer of the reserve bid, and unless the offers reach that, the property is not sold. That is a business way of disposing of a piece of property, and the Minister of the Interior should have proceeded in that way. He has not told us that he got any information whatever except what he got from the surveyor, and I am informed that if all the facts were known his report would not carry very much weight. The Minister of the Interior and also the Minister of Public Works might learn a good lesson if he would study the methods adopted by the government of Ontario in disposing of public property. Let me give one illustration, and I could multiply it by scores. They had a piece of property a short time ago for sale. The highest offer was $50,000. But the Prime Minister said: I have private information that this property is worth a great deal more. And although they were his political friends who had offered the $50,000, he said: I am trustee for the whole of the people of Ontario, I am informed this property is worth a great deal more than $50,000 and you cannot have it. What was the result? He re-advertised the property for sale, and the very same men came forward and offered him $178,000 for the property. Then take public contracts. A short time ago the Ontario government advertised for the construction of a public building. The lowest tender was for a certain sum, but the Minister of Public Works said, I have had that matter investigated, I am informed that building can be erected for much less, we will build it ourselves. They engaged a foreman and put up the building and it cost ony 60 per cent of the lowest tender. That is only one or two instances to show that in Ontario public affairs are carried on in a businesslike manner.

This illustration you have just had of the sale of lands in Manitoba—and we had a dozen such cases last year—shows us that this government does not dispose of public properties in a businesslike manner. I do not wish to go into the particulars of the tenders but I submit that the minister has not—so far as we can judge from what information he has condescended to give us on this matter—taken a businesslike manner to dispose of this property in the interests of the poor Indians.

Mr. OLIVER. I suppose it is the privilege of an hon. member to say in this House anything he pleases. But since my hon. friend has been so very critical in this matter, let me repeat that in this particular case, the land was advertised in the public newspapers and was sold by public auction in parcels of 160 acres each, or 60 to 70 different parcels. It was valued, when surveyed, by a competent man and sold at a price above his valuation, and the transaction was in all respects quite on a par with the best illustration the hon. gentle-

man has given the House. Let me point out that the only difference, judging by the instances he gave us, is this, that there must be a difficult lot of people which the Ontario government have to deal with in Ontario.

Mr. J. D. TAYLOR. Will the hon. minister, when the main estimates come up, bring down a list of the papers in which these lands were advertised, also a list of the purchasers and the prices paid? Some of my hon. friends behind me asked if they were advertised in the Selkirk papers and the hon. gentleman could not answer the question.

Mr. OLIVER. I have no objection whatever.

Mr. BLAIN. How much was paid the auctioneer and who was he?

Mr. OLIVER. He was paid one half per cent of the selling price, not to exceed in all $200. I cannot give his name just now.

Mr. SCHAFFNER. Does the minister undertake to say that he considers $6 per acre a fair price for this land?

Mr. OLIVER. Yes, I think that any land advertised in the public press for a reasonable time and offered for sale within a distance of 25 miles of Winnipeg is absolutely certain to bring its full value at that particular time.

Mr. BRADBURY. I am somewhat surprised at the minister's statement regarding the advertisement of those lands. As I said a few moments ago, although these lands had been advertised, there were conditions surrounding the whole transactions which practically frightened away ordinary purchasers. There was a letter from the department which seems to have been entirely overlooked by the minister. That letter was practically a warning to the people that the Indians had nothing to sell, and the average man got the Indian allotment and the balance of the reserves mixed up in such a manner that he was afraid to touch any land. I have a letter written by the department to the Indian agent, instructing him how to proceed. It is dated Department of Indian Affairs, Jan. 21, 1908, and is signed by Frank Pedley:

Copy.

Department of Indian Affairs,
Ottawa, January 21, 1908.

Sir,—I beg to acknowledge the receipt of your communication of the 12th instant (No. 2-37) in connection with the locations of Indians of the St. Peter reserve, in accordance with surrender, and given by them a short time ago, and in reply beg to say that action is being taken with as much expedition as possible to locate the Indians on the lands to which they may be found entitled, and you should notify them that there will be as little delay in arranging the matter as possible.

In connection with Indians disposing of or pledging their holdings, I beg to say that no transfer or pledge by any Indian will be in any way recognized by the department, and when it has been determined what land each Indian is entitled to receive, a patent for the same will be issued to such Indian, without regard to any claims by white men or others.

It is necessary to make this position of the department clear and as widely known as possible, as any recognition of rights by transfer would cause endless complication, and in order to prevent same it is incumbent on the department to issue grants only to the Indians found entitled to receive same.

The representatives of the Indians and the department will deal with all claims to land in accordance with the provisions of the sur render.

Your obedient servant,

FRANK PEDLEY,
Deputy Superintendent General of Indian Affairs.

J. O. Lewis, Esq.

The point is this, that this letter was written to the Indian agent just at the time these lands were coming into the market. A great many people around Selkirk wanted to purchase some of these lands, including a lot of my own friends, but as soon as it was made known that the department would not recognize any pledges or transfers given by the Indians until after the patents were issued, not one of these men would buy an acre of that land. Not one of these men bought an acre of this land. But very strange to say, the men who did purchase these lands, every one of them, were supporters of the hon. gentlemen opposite. Now these men must have received a tip from the department, or from somebody, that these pledges or transfers would be accepted. I ask the minister now if it is not a fact that every acre of this land was secured by the speculators before the patents were issued, in defiance of that letter written by Mr. Frank Pedley of the Indian Department? This is an absolute fact, Mr. Chairman, and this is one of the reasons why I ask the minister to open up this question and make a fair investigation. Now, if this letter had never been written and these lands had been thrown on the market, these frauds would not have taken place. Some of my friends were willing to pay $25 an acre for pieces of the land, but they knew that unless they stood in with the Indian agent and the Indian Department, there was no guarantee they would ever receive their titles. I cannot understand how the minister, in face of the instructions given by his department, can get up and say that he assumes full responsibility for accepting the patents to-day, or accepting the transfers, and handing the patents over to those men who have purchased the lands in defiance of the instruction of the de-

partment. Why, according to this instruction not one of those allotments has been legally sold, and every one of them ought to be cancelled. Now so far as the Indian himself is concerned, it is the Indian I am fighting for to-day. I have no interest, nor have any of my friends, a dollar's interest in these lands, I am glad to say. I want to say this to the minister, that after this letter was written, one of the biggest speculators, one of the biggest holders of this land to-day, came to Ottawa to interview somebody here, I do not know who. But I met him on the train going back, and he said to me: I have fixed the thing all right, I am going to buy the land, and if you like you can come in with me. I answered that it might be my duty, if I were elected, to criticise this matter in the House of Commons, and consequently I could not invest one dollar in the land. That fact, Mr. Chairman, is, I think, evidence that there was collusion between the purchasers and some official in the Department of Indian Affairs. These men who purchased those lands, who were putting up thousands and tens of thousands of dollars to be given to these Indians, do you not think they knew that they were safe? There was no risk so far as they were concerned, they were going to get their patents in defiance of that letter, and they got them; and the only reason why the deal has not gone through is because the Land Titles Office at Winnipeg has held up every one of those patents on account of the alleged fraud on the face of the whole transaction. I hold in my hand a petition from 110 Indians, some of those men that have been wronged, and I am going to present it to this House. I had no idea this discussion was coming on, and consequently I am not as well prepared for it as I would liked to have been, as there is other evidence that I will bring before the House later on. This letter was written from St. Peter's, November 1, 1909, and is addressed to myself:

We, the undersigned, beg to lay before you their following grievances. The surrender of the St. Peters reserve was made on the 24th September, 1907. A few days after the surrender was made, land buyers came and bought land, first of all buying from the chief and council.

Then they hired the chief and council at $2 a day to remain in the offices, and around the offices, and to bring in other men who owned land and induce these Indians to sell to these men.

After this was done, then they were hired to influence their people to sell land, telling them until such time the issuing of patents, a proper bargain could be made, hence the land was sold, and the majority of Indians never made an application for their patents. However, the patents were issued, the Indians only heard of the same, never even having the privilege of seeing their patents.

Remember, Mr. Chairman, that this is an Indian letter, which fact explains the peculiarity of the language.

The Indians were entirely ignorant as to the nature of the documents they signed when selling land, for the reason that no proper interpretation was given at the time of sale or any other time, and that is the reason why there is so much complaint.

There is another matter which we think would be necessary to be understood properly. There were application forms at the Indian office, and each head of a family had to make an application in person for his or for her patent. This was never done, with but a few exceptions. When issuing of patents there were another kind of forms at the Indian office which had to be signed by the Indians before receiving their patents. This was never done, with but a few exceptions. We think it would be only proper to demand those forms in order that you may understand more fully as to the nature of the same.

The hon. gentleman says to-day it was 320 acres. These men are a little more moderate.

With regard to allotment of land, the chief received 196 acres. Each individual councillor received 136 acres, an ordinary Indian received 16 acres. Besides the chief and councillors received more money than the ordinary Indian.

Now, I want the minister to listen to this part:

The land buyers were the parties that selected the choice land, the Indians were simply onlookers. That is the treatment the Indians received from their so-called chief and councillors. In some instances the Indians were only receiving less than $2 per acre, some received $2.50, some $3, and some $4 and $5 to the acre, and some are entirely ignorant as to what sum they received. We are all fully aware that our land was fully worth at least from $15 to $20 per acre.

Trusting that you will be able to understand the nature of our grievances, humbly requesting that you will use your influence to bring the matter before the House if possible, your petitioners will ever pray.

This is signed by 110 of the men that have been wronged. Now, Mr. Chairman, in face of all this evidence, in face of the many complaints that the minister himself has received personally, in face of the position that the chief justice takes, the man who negotiated this treaty, in face of the fact that the registrar at Winnipeg refused to allow these patents to go through is it not reasonable that I, the representative of that constituency, should ask the minister to grant an investigation to find out whether these statements are true, or false, to find out whether these Indians have been wronged or not. The minister cannot shield himself behind the fact that the Indian refused to allow him, or to allow

his officials, to insert in the surrender a clause which prevented the department from protecting them. These Indians were mere children, these Indians up to that time had been wards of the government. Every pound of tea they secured from the Indian Department was obtained through the Indian agent. Consequently, the Indian was utterly incompetent to deal with a matter of this kind, quite incompetent to dispose of an acre of land; but suddenly the department made him a landlord. I do not suppose that one of these Indians had ever owned an acre of land in his life before. The Indian had no idea of the value of what he possessed, but the chief and council were a little more intelligent and thoroughly unscrupulous. These men were purchased. In the first place, as the minister admits, they secured more lands than the others, 320 acres. The minister says the chief received this amount while the ordinary Indian, the man who had elected the chief and the council to protect his interests, received only sixteen acres of land. Why? I think it is a fair deduction to say that these Indians received that land in consideration of their inducing the rest of the band to agree to the surrender. In addition to that there is this other fact, which I wish to bring to the attention of the minister although he and his department are well aware of it: Although the term of office of the chief and council of these Indians expired in July in the very year of this transaction the department has refused to allow an election to take place in the band since. They have retained that chief and council there in defiance of the band. Petition after petition has been sent in asking that an election should be granted in order that they might have an opportunity of turning these men out of office. But in spite of all that the Indian Department keeps these men there. What for? To assist the land dealers in carrying out that nefarious transaction.

Mr. SCHAFFNER. Does the hon. gentleman mean to say that the department here can keep a chief and council in office in defiance of the band?

Mr. BRADBURY. That is what they have done. They have refused to allow the Indians in St. Peter's to have an election, although petition after petition has been sent in praying for justice. The band do not recognize the chief as their chief or the council as their councillors. Consequently they are practically in a disorganized condition to-day and the Department of Indian Affairs is directly responsible for it.

The whole transaction, from its very inception until the present time, has been notorious in Selkirk. Every one in Selkirk who knows anything about the manner in which the Indian agent and the lawyers employed by the Indian Department to protect these Indians have conducted this affair, realizes that a great wrong has been done to these people. I have here a statement brought down from the Department of Indian Affairs showing the fees paid to lawyers in this connection. One letter says:

I am directed to forward to you an account amounting to $1,509.65 received from the Hon. Chief Justice Howell, in connection with St. Peter's reserve.

There is another account of $1,093. Two of these lawyers, one being Mr. Heap, of Selkirk, were appointed to protect the interest of the Indians. Mr. Heap was looked on by the Indians as their solicitor and he advised them in many cases, but the strange part of the thing is that he was one of the land company who were purchasing this land. The whole transaction was carried on in a room not half the size of one of our committee rooms. The land buyers were in one end of the building, the Indian agent was in the other end, the lawyer was next door, and the chief and counsel were in attendance day after day bringing in these poor ignorant people and advising them to sell their land to this land company and these speculators. In face of the facts that have been adduced here to-day, in face of what the minister knows, I ask him again to grant a fair investigation into this transaction. It surely cannot do any harm to have an investigation into this transaction. It surely cannot do any harm to have an investigation. I feel satisfied in my own mind that wrong has been committed. I believe that these lands have passed into the hands of these purchasers at less than one-third, perhaps one-fourth of their value. I was surprised to hear the minister state that he believed that these lands had brought their full value at the sale. Let me illustrate for a moment. These lands were sold some time in November, 1908. The following spring the Indian reserve at Shoal Lake, hundreds of miles away, was put on the market. That land brought an average of $17.60 an acre, while the St. Peter's land, in the very garden of the province of Manitoba, has yielded the Indians much less than $5 an acre. After the lands were picked over, as I have stated in the earlier part of this discussion, the remnant of the reserve that was left to be sold by public competition, so-called—because it was only so-called, there was no competition about it—brought $5.68 an acre.

Let us take another illustration. At Beauséjour, 35 miles east from Winnipeg, a school land sale was held the same season, and some of the same men who had secured these lands from the Indians paid $22 an acre for school lands by no means

equal to what they secured at St. Peter's for less than $5 from the Indian, and $5.68 at the so-called auction. In face of these facts it must be apparent to the hon. gentleman that the Indians have not received a fair price for their lands. The question arises, what is the responsibility of the department? The hon. minister says they have no responsibility. They made a deal with the Indian to surrender his land. He agreed to take the 16 acres and another reserve, and as far as that allotment was concerned, he could do as he pleased, the department had no authority, no control and consequently did not intend to interfere. I think that is a short-sighted position. The Indian is a ward of the government and if he becomes pauperized this country must come to his assistance and feed him; consequently it is the duty of the department to see that he gets a fair value for every acre of his land. In addition to all these things the hon. minister knows, I am satisfied there are documents in his department which will show beyond any doubt, that there are to-day even more serious complaints from the Indians than those I have made regarding this transaction. This petition I received only yesterday and I am informed by letter that the chief himself, the man who was an instrument in the hands of these land sharks has since declared that he helped to deceive the band, that he did not tell the band the truth, that when these lands were being purchased the explanation given to the Indian in nearly every case was that the Indian was not signing away his lands but only signing an agreement that when the patents were issued, he would give the man advancing him the money, the first chance to buy the lands at the price fixed by the Indian.

Now, Mr. Chairman, in face of these facts, because I believe they are facts, I cannot see how the minister can hesitate one moment to grant a fair investigation. I do not think there is any doubt at all that it can be proven beyond any question that the Indian has been deceived. I do not think there is any doubt that when he signed these agreements he did not realize that he was signing away his rights to his land. He thought that these speculators were giving him an advance, loaning him money on his land. Do not overlook the point that the Indian was misled by the department itself. The department told the Indian that until such time as the patents could be issued the Indian had nothing to sell. The department is on record advising the Indians that they had nothing to sell until their patents were issued. Consequently the Indian did not realize that he was selling his land or that he was disposing of his rights. He said to himself: Here is the letter; the Indian agent tells me I have nothing to sell, and I am only signing an agreement that when I get something to sell I will make a bargain with these men who want my land. There is no question at all that that is the position that the Indian took in the matter. That is what he thought, and when you realize that every one of these agreements is an absolute transfer secured in defiance of this letter you will acknowledge that the minister has the authority and the right to step in and cancel every one of these agreements and you will acknowledge that it is his duty to do so. I have taken up a good deal more of the time of the committee than I expected to do. There is a good deal more to be said on this question, and unless the minister is prepared to grant a fair investigation I can only promise him that this debate cannot end here, because there are matters of very great importance that will have to be ventilated, and it would take up a good deal more of the time of the House than we have taken up this afternoon. But it is only fair, I think, if the minister were inclined to be fair, and he usually is, to ask that he will undertake to have this question thoroughly inquired into. I cannot understand why the minister, in a case of this kind, is hesitating. There must be something behind it that we cannot see, for if there ever was a case for interference by the trustees of these people it is this one. I feel satisfied that the minister ought to step in and tell us to-night that he will give a fair and impartial investigation into all these facts and see that the Indian gets a fair price for his land.

Some resolutions reported.

Mr. FIELDING. It has been intimated that very many of the members on both sides of the House have engagements which will prevent their being present to-night, and as we are likely to have a thin House I beg to move that the House do now adjourn.

Motion agreed to, and House adjourned at six o'clock.

HOUSE OF COMMONS.

WEDNESDAY, November, 24, 1909.

The SPEAKER took the Chair at Two o'clock.

RESTAURANT OF THE HOUSE.

Hon. WM. PUGSLEY (Minister of Public Works). It becomes necessary to appoint a committee of the House of Commons to act in conjunction with the committee of the Senate in connection with the restaurant. As the present committee of the House has given such satisfaction during the past year, I would move that they be reappointed. I therefore move:

That the members of the House of Commons on the permanent Joint Committee on the restaurant be His Honour the Speaker, and Messrs. Monk, Harris, Macdonald and Stanfield.

Motion agreed to.

MESSAGE FROM HIS EXCELLENCY—SUPPLEMENTARY ESTIMATES.

Hon. W. S. FIELDING (Minister of Finance) delivered a message from His Excellency the Governor General.

Mr. SPEAKER read the message as follows:

Grey:

The Governor General transmits to the House of Commons Supplementary Estimates of sums required for the service of the Dominion for the year ending on the 31st March, 1910, and, in accordance with the provisions of 'The British North America Act, 1867', the Governor General recommends these estimates to the House of Commons.

Government House,
Ottawa, Nov. 24, 1909.

Mr. FIELDING moved that His Excellency's message together with the estimates be referred to the Committee of Supply.

Motion agreed to.

NATIONAL TRANSCONTINENTAL RAILWAY—RESIGNATION OF MR. LUMSDEN.

Mr. R. L. BORDEN. Mr. Speaker, might I suggest to my hon. friend the Minister of Railways and Canals (Mr. Graham) that the papers brought down yesterday in connection with the resignation of Mr. Lumsden ought to be printed without delay. Perhaps he would be good enough to make a motion to that effect. Before he makes the motion I would like to ask whether this return includes all the papers. The motion that passed the House referred to any communications from Mr. Lumsden to the Prime Minister. I did not observe them in the papers. I do not know that there was any such communication but if there was one it should be brought down.

Sir WILFRID LAURIER. Perhaps there is. If there is such a communication I will bring it down to-morrow.

Mr. R. L. BORDEN. This might perhaps be proceeded with in the meantime if the Prime Minister has no objection. I would move:

That Rule 72 relating to the printing of public documents be suspended in the case of the papers relating to the resignation of Mr. H. D. Lumsden, as Chief Engineer of the Transcontinental railway, and that all such papers be ordered to be printed forthwith.

Motion agreed to.

QUESTION OF PRIVILEGE—DELAY OF RAILWAY PASSENGER SERVICE.

Mr. W. F. MACLEAN. Mr Speaker, at this stage of the proceedings I am going to bring up as a question of privilege, the condition of the railways of this country in connection with the storm of yesterday, and I propose to show why myself and other members have not been able to get here because of the inefficiency of these roads. People who left Toronto the night before last only got here last night while others who left last night are only here now, with the result, that they missed their engagements yesterday and most of them to-day. It seems to me that the railway service in the province of Ontario, which has been organized for years, is altogether inadequate to the requirements of the country, especially between Toronto and Ottawa. The Grand Trunk Railway Company have promised to give us a line from Ottawa to Kingston connecting with their main system at that point, but it has not been built. The Canadian Pacific Railway Company have promised to double track their system between Ottawa and Toronto, and this has not been done, although it has been promised for years. In consequence, whenever there is the slightest storm, the road breaks down, the public are not accommodated, and people are not able to keep their engagements. There is another thing which I notice and I believe it is the cause of the inferior railway service in this country, and it is that the railway men, the general managers, whenever they wish to travel, are so distrustful of their own system and so distrustful of the accommodation that the public have that they always go in private cars, with especially well equipped larders. This morning there were two railway magnates with special cars with well equipped larders and they were well looked after. The Chairman of the Railway Commission was there, and he was looked after while the general public was lacking accommodation. When the Minister of Railways travels he has so little confidence in the railways and the treatment that they give the general public that he has his private car. This is an abuse of the railway system of this country. The railway and political magnates travel in these specially equipped cars and we failed to make time last night—we were four hours coming from Smith's Falls—because the engine was overtaxed by these magnates' cars.

If these magnates want to travel on these special cars, and if they cannot give ordinary accommodation to the public, let them hook up to the freight trains. If, instead of that they were compelled to travel as the ordinary Canadian travels there would be a great improvement in the railway service of this country. I will venture to make the statement after a personal in-

vestigation that the equipment of our Canadian railways is always at the minimum. The moment there is a strain the service falls down, trains are delayed, and the ordinary public cannot keep their engagements. It is time the Minister of Railways took up this question in order to see that the city of Toronto and the city of Ottawa have better railway service than they have now and that an improvement takes place throughout the province of Ontario as well as in the older provinces of the Dominion. He will find that we cannot get here in time to attend to our duties because the energy of the railway managements is devoted rather to the acquisition of new lines in the west—

Sir WILFRID LAURIER Order.

Mr. SPEAKER. The hon. gentleman is right in discussing the matter as a question of privilege in so far as inconvenience and delay have been caused to himself in getting here, but not in undertaking to discuss the railway system generally. It must be confined to the question of privilege which is a question personal to the hon. gentleman.

Mr. W. F. MACLEAN. I quite admit what you say, Mr. Speaker, and I must accept your decision in the matter. But, I still say that if I were speaking to the question of privilege I would contend that the reason I am not able to get here in time is that the railway managers are not attending to their business and are not giving the accommodation they ought to. I hope that the Minister of Railways will find a way of stopping these magnates from delaying trains and that he will see that the railways are better equipped.

Mr. SPROULE. As one who was also on the same train as my hon. friend (Mr. W. F. Maclean) I may say that it occurred to me in looking along the line that the delay was occasioned almost wholly by the breaking down of the telegraph and telephone lines, which I thought could be avoided if these were either put under or upon the ground, because the increased weight from the ice broke them down and the train was obliged to feel its way from station to station to avoid danger.

FIRST READINGS.

Bill (No. 27), respecting the British North American Mining Company.—Mr. Geoffrion

Bill (No. 28), respecting the Campbellford, Lake Ontario and Western Railway Company.—Mr. Fowke.

Bill (No. 29), respecting the Columbia and Western Railway Company.—Mr. Goodeve.

Bill (No. 30), respecting the Eastern Townships Railway Company.—Mr. Lavergne.

Bill (No. 31), respecting the Kamloops and Yellow Head Pass Railway Company.—Mr. Burrell.

Bill (No. 32), respecting the Nicola, Kamloops and Similkameen Coal and Railway Company.—Mr. Burrell.

Bill (No. 33), respecting the Northern Mortgage Company of Canada.—Mr. A. Haggart.

Bill (No. 34), respecting the Ottawa, Northern and Western Railway Company.—Mr. McGiverin.

Bill (No. 35), respecting the South Ontario Pacific Railway Company.—Mr. Nesbitt.

Bill (No. 36), respecting the Union Life Assurance Company.—Mr. McGiverin.

Bill (No. 37), respecting the Walkerton and Lucknow Railway Company.—Mr. Donnelly.

Bill (No. 38), respecting the West Ontario Pacific Railway Company.—Mr. Nesbitt.

DEATH OF MR. BARR.

Mr. E. N. LEWIS (West Huron). Mr. Speaker, as you are aware, I have just returned from paying the last acts of respect to our late fellow member, Dr. Barr, the member for Dufferin. I have been requested by the Warden and other prominent gentlemen of the county of Dufferin, among whom our late colleague had spent his whole life, to convey to the government and parliament of Canada an expression of appreciation of their courtesy in furnishing a government car for the conveyance of the body of our late colleague to his home.

May I, as perhaps his most intimate colleague, take this opportunity to voice my deep sense of the great loss we have sustained through Dr. Barr's death.

BILL TO AMEND THE RAILWAY ACT—LABOURERS' PAY.

Mr. N. MARTIN (Ste. Marie, Montreal). introduced the Bill (No. 39) 'Act amending the Railway Act.'

(Translation) I will, Mr. Speaker, explain in a few words the object of this Bill. It is intended to amend section 259 of the Railway Act, in its relations to the labourers' pay. The railway companies as a custom pay their employees monthly. By this Bill I desire that these companies should be obliged to pay their men fortnightly.

Moreover, it is the custom with these companies to keep the pay of the first fifteen day of a new employee, which means that when an employee enters the service of the company, he must work during six weeks before receiving a month's salary. This reserve forms a very considerable sum on account of the great number of employees. It is no wonder to see the president of Canadian Pacific Railway Company receiving a salary of $50,000 a year, when this

company is able to economize a sum as large as the interest alone on the money which is kept back and remains in his hands.

I hope that these explanations are sufficient to satisfy the honourable members of this House. As to the merit of the Bill, I will discuss it more fully on the second reading.

(Motion adopted and Bill read for the first time).

QUESTIONS.

INTERNATIONAL FISHERIES REGULATIONS.

Mr. HENDERSON:

1. Has the report of the International Fisheries Commission, appointed to draft regulations respecting fishing in the international waters between Canada and the United States been completed and placed in the hands of the government? If not, when may such report be expected?

2. Will the report when presented be laid before parliament before being finally ratified by the government?

Hon. CHARLES MURPHY:

1. The regulations prepared by the International Fisheries Commission have been received by the government.

2. Inasmuch as simultaneous publication in both countries is considered desirable, and as the regulations cannot appropriately be laid before Congress until that body meets in December next, the government have agreed to defer laying the regulations before parliament until after the date of the meeting of Congress early next month.

ROYAL MILITARY COLLEGE RIDING ESTABLISHMENT.

Mr. EDWARDS:

1. What are the dimensions and what the internal arrangements of the riding establishment on the R.M.C. grounds?

2. When will the building be completed and to what use will it be put?

3. Were tenders called for by advertisement? If so, in what papers and when?

4. From whom were tenders received, and what was the amount of each?

5. To whom was the contract awarded, and what did the contract cover?

6. How much has been paid on the building to date, and to whom?

7. What is the estimated cost of the building completed and ready for use?

8. Has any of the work been let without tender? If so, what portion, to whom and the amount in each case?

Hon. WM. PUGSLEY:

1. (a) 35 by 41 feet.

(b) Basement contains furnace and fuel rooms, storeroom and laundry; ground floor, non-commissioned officers and men's mess rooms, kitchen and lavatory; first floor, men's dormitory and bedrooms for non-commissioned officers; attic, bedrooms.

2. (a) The building is practically completed and is expected to be ready for inspection early in December.

(b) I am informed by the Department of Militia and Defence that the building will be used as quarters for non-commissioned officers and men attending horses and instructing cadets in riding.

3. (a) Yes.

(b) Kingston, 'Freeman'; Kingston, 'British Whig'; Deseronto, 'Tribune'; Trenton, 'Courier'; Napanee, 'Express'; Belleville, 'Ontario'; Brockville, 'Recorder'; Ottawa, 'Le Temps'; Ottawa, 'Free Press'; Ottawa, 'Danebrog'; Peterborough, 'Examiner'; Peterborough, 'Times'; Toronto, 'Globe'; Toronto, 'Star'; (3 insertions in dailies, 2 in weeklies.).

(c) Advertisement dated December 12, 1908.

4. M. Sullivan, $9,490; W. H. Godwin, Jr., and E. Godwin, Jr., $9,890; W. J. Chapman, $10,500.

5. (a) M. Sullivan.

(b) Excavation, masonry, brickwork, carpenter and joiner work, plastering, galvanized iron, plumbing, painting and glazing.

6. Michael Sullivan, contractor, $6,100; Henry P. Smith, services as clerk of works, $99.03; advertising, $205.47; printing and stationery, $60.63; total, $6,465.13.

7. $15,000.

8. No.

LIEUTENANT GOVERNORSHIP OF BRITISH COLUMBIA.

Mr. J. D. TAYLOR:

1. Has the government or any member thereof received from the executive of the Liberal Association for British Columbia, or any other political organization, any recommendation purporting to be made by resolution of that body, in favour of the appointment of F. C. Wade, K.C., as Lieutenant Governor of British Columbia? If so, what reply has been made?

2. Is the office of Lieutenant Governor one as to which the jurisdiction of patronage committee is recognized?

Right Hon. Sir WILFRID LAURIER. I must observe to my hon. friend that information of the description asked for in the first part of his question would be considered by the government or by any minister as absolutely private matter. In reference to the second part of his question I do not exactly understand what he means by the expression 'the jurisdiction of patronage committee.'

MANUFACTURE OF AGRICULTURAL MACHINERY.

Mr. HENDERSON:

1. How many mowing machines were there made in Canada during the year ending 31st March, 1909?

2. How many harvesters, self-binding, were there made in Canada in the same period?

3. How many reapers were there made in Canada during the aforesaid time?

Hon. SYDNEY FISHER. This information is not obtainable in any government office or, I think, in any office or any place in Canada. This applies to all parts of the question.

GRAND TRUNK PACIFIC CONSTRUCTION CONTRACTS IN NEW BRUNSWICK.

Mr. CROCKET:

1. Is there any provision in the contract entered into between the government and the Grand Trunk Pacific Construction Company for the construction of that portion of the New Brunswick section of the Transcontinental railway (a) for limiting the subletting of said contract for different sections or otherwise beyond one or any number of subcontracts below the original contract, or (b) for the protection of farmers, merchants and others furnishing supplies and materials to subcontractors for the construction of the railway by providing for recourse against the original contractor or otherwise.

2. Is the government or the Transcontinental Railway Commissioners aware that for certain sections of the railway in New Brunswick the contract has been sublet from one subcontractor to another until in some cases the work has been done and is being done by 4th and 5th subcontractors at a cut of 40 to 50 per cent below the prices contracted for and paid by the government to the original contractor?

3. Has the government or Minister of Railways received any complaints to the above effect, and that as a result farmers, merchants and others, who have furnished supplies and materials for the construction of the railway, have suffered heavy losses by the failure of the subcontractors to pay their bills?

4. What action if any, has the government or Railway Department taken or what action is intended to be taken in the matter?

Hon. G. P. GRAHAM:

1. (a) No, but the contract provides that the work or any part thereof shall not be subcontracted without the written consent of the commissioners. (b) There is a clause in the contract providing that where the contractor fails to make payment for labour, services and material in or about the construction of the work the commissioners may retain, such amount of moneys as the chief engineer deems sufficient to make such payments; or if the engineer reports that there is reason to fear that any such payments will not be properly made by the contractor, the commissioners may pay for any such labour, services and material, from any date to any date and to any amount, which may be payable and charge same to the contractor.

2. The commissioners are aware that certain portions of the work have been sublet, and this was done with their consent, but such subcontractors are not dealt with by the commissioners, who treat them only as agents of the contractor and have no knowledge of the prices that are paid by the contractor to such subcontractors. They do not know anything about a contract sublet from one subcontractor to another.

3. The Minister of Railways has had correspondence with the hon. member for York, N.B., on the subject.

4. The minister took the matter up with the commissioners of the National Transcontinental railway and will be glad to lay a copy of the correspondence on the table of the House, if the hon. gentleman will make the usual motion.

TRENT CANAL—BRADFORD CHANNEL.

Mr. LENNOX:

1. Has the Department of Railways and Canals had a survey or investigation made into the feasibility and cost of constructing a channel from the Devil's Elbow on the Holland river to a point in the neighbourhood of the Bradford railway station in South Simcoe?

2. If not, will the department have this done at an early date, and if done, is the report favourable and what is the estimated cost?

Mr. GRAHAM:

1. Yes, a survey has been made in that locality; but owing to the telephone and telegraph wires being out of order it is not possible to get the information required for the House to-day; but it will be given as soon as it can be obtained.

2. Answered by No. 1.

FISH HATCHERIES, MANITOBA.

Mr. BRADBURY:

1. What is the total outlay for the erection and equipment of the three fish hatcheries in the province of Manitoba?

2. What is the annual outlay in connection with the taking of spawn and the running of those hatcheries?

3. What is the annual cost of the Fishery Protection Service in connection with lakes Winnipeg, Manitoba and Winnipegosis?

4. What is the total revenue received by the government from all sources in connection with these fisheries?

Hon. L. P. BRODEUR:

1. $34,013.

2. $14,550, in 1908-9. This cost is not stationary, depending on conditions.

3. $9,423.72 in 1908-9, not including the salary and expenses of the inspector of fisheries, which are chargeable to the whole province.

4. $4,671, in 1908-9.

Note.—The year 1908-9 has been taken as the present one is not yet completed.

BRITISH COLUMBIA LIGHTHOUSES.

Mr. RALPH SMITH:

1. How many lighthouses are there in British Columbia?

2. What were the salaries of the light-keepers at the end of the financial year 1907-1908?
3. What are their salaries to-day?
4. Why have some salaries been reduced, and when did the changes of salaries take place?

Question allowed to stand as notice of motion.

CANADIAN GOVERNMENT ANNUITIES.

Mr. RALPH SMITH:

1. What is the revenue to date from the sale of Canadian government annuities?
2. How many persons are purchasing annuities?
3. What are the occupations of the persons purchasing?
4. What amount is represented in annuities applied for?
5. What is the average annuities applied for?
6. In what provinces are agents or representatives for explaining the features of the Act employed?
7. Have any manufacturers or other employers of labour been in communication with the department with a view to purchasing annuities for their employees?

Sir WILFRID LAURIER:

1. $337,634.56.
2. 426—Ontario 266
Quebec 46
Nova Scotia 32
Manitoba 21
British Columbia 20
Alberta 19
New Brunswick 13
Saskatchewan 6
Prince Edward Island 2
Yukon Territory 1

3. Accountants, Attorney General, bookkeepers, bank clerks, barristers, barbers, business managers, bakers, boiler makers, brick makers, clergymen, clerks, civil servants, carpenters, civil engineers, chemical engineers, cable operators, children, compositors, dressmakers, domestics, dentists, draughtsmen, druggists deaconesses, Dominion immigration inspector, excise officers, electricians, farmers, ferrymen, freight checkers, factory hands, freight agents, florists, geologists, gardeners, grocers, harness makers, insurance agents, lithographers, librarians, lumbermen, locomotive engineers, labourers, married women, merchants, mariners, music teachers, miners, Northwest Mounted Police, physicians, photographers, postmasters, property agents, printers, pedlars, port stewards, picture framers, polish maker, reporters, spinsters, students, stenographers, shipping clerks, shoemakers, solicitors, station agents, shantymen, school inspectors, superintendent of homes, teachers, trained nurses, travellers, tailors, trackmen, telegraphers.
4. $100,007.63.
5. $240.
6. Ontario, Quebec, New Brunswick, Nova Scotia. Chief lecturer covering all provinces of the Dominion.
7. Yes.

VACANCIES IN SENATE.

Mr. JAMESON:

1. How many vacancies now exist in the Nova Scotia representation in the Canadian Senate, and when did any such occur?
2. Have any names been submitted to the government by any person or persons for recommendation to His Excellency? If so, what names?
3. When will the vacancies be filled?

Sir WILFRID LAURIER. There are two vacancies in the Senate to-day in Nova Scotia. I am sorry I cannot give at this moment the dates at which they occurred. No names have been submitted to His Excellency for any appointment, but the vacancies will be filled in a very short time.

ORDNANCE STORE, OTTAWA.

Mr. WORTHINGTON:

1. Has any damage been recently caused by fire to the ordnance store building at Ottawa? If so, what is the approximate loss to building and stock?
2. What is the approximate value of stores held on ordnance charge at Ottawa?
3. What is the strength of Canadian Ordnance Corps at Ottawa, including attached officers, non-commissioned officers and men, and civilian employees?
4. Does the Canadian Ordnance Corps maintain a night guard or watchman at this building? If not, why not?

Mr. PUGSLEY:

1. (a) Approximate loss to building, including heating, electric wiring and elevators, $20,000.
(b) 2, 3, 4. To be answered by the Department of Militia and Defence.

Sir FREDERICK BORDEN:

1. (b) Yes. Approximate Public Works answers. Approximate loss of clothing through fire, $120,000; approximate damage to stock through smoke and water, $30,000.
2. Approximate value of stores and clothing, $900,000.
3. Officers 5; warrant officers, non-commissioned officers and men, 30; civilian armourers, 1; civilian labourers, 1; civilian transport driver, 1.
4. No. The duty of patrolling the building at night is performed by the Dominion Police.

GRAND TRUNK PACIFIC RAILWAY.

Mr. LENNOX:

1. Referring to a letter from the Auditor General to the Secretary of the National Transcontinental Railway Commission, of the 18th of August, 1909, in which the Auditor

General points out that 64,192 cubic yards of excavation, classified at an average price of 83·06 cents, were subsequently reclassified at $1.10¼ per cubic yard, and the cost thereby increased by the sum of $17,433.80, and asking for an explanation. Has this letter been answered? If so, when?

2. What was the cause of the delay?

3. In any case, what is the explanation?

Mr. GRAHAM. The Transcontinental Railway Commission answer as follows:

1. Yes, 8th and 10th November instant.

2. Matter was taken up with the engineers, and an order in council obtained in accordance with the advice of Justice Department.

3. The price referred to was the result of an agreement with the contractor by the late chief engineer of the commission and approved by his successor who reported that, 'In the interest of the economical construction of the road this price for rock borrow should stand.' The explanation is too long to incorporate in an answer to a question, and can be best furnished in the form of a return giving copies of the correspondence relating to the matter.

Mr. LENNOX:

1. Referring to a letter of the 18th August, 1909, from the Auditor General to the Secretary of the National Transcontinental Railway Commission, in which he calls the attention of the commission to 581 yards (cubic) of excavation returned and paid for at $10 per cubic yard, and other quantities at the same price, and asks for an explanation as to why the price should exceed $2.50 per cubic yard. Has this letter been answered? If so, when?

2. What caused the delay.

3. In any case, what is the explanation?

Mr. GRAHAM. The Transcontinental Railway Commission answer as follows:

1. Yes, on the 10th November, instant.

2. Matter was taken up with engineers.

3. Price referred to was arranged between contractor and late chief engineer of the Transcontinental Railway Commission, but was disallowed by his successor, as a result of an opinion given by the Deputy Minister of Justice.

Mr. LENNOX:

1. Has the letter of the Auditor General of the 16th December, 1908, to the Secretary of the National Transcontinental Railway Commission re contractors in default in completing work, been answered? If so, when? If not, why not?

Mr. GRAHAM. The Transcontinental Railway Commission answer as follows:

1. Yes, on 12th November instant.

Mr. LENNOX:

1. Is there any provision in the contracts for construction of the Transcontinental railway that the contractor shall pay or forfeit $5,000 for each calendar month during which he makes default in completing his contract?

2. If so, has this provision, in the opinion of the minister, a tendency to increase the price at which the work is tendered for?

3. Has this provision been enforced against any of the contractors? If so, against which of them, and with what result?

4. How many of the contractors are in default in this connection, what are their names, and for what period, respectively, have they been in default?

5. In what cases have extensions of time been formally granted, and upon what terms and for what cause in each case?

Mr. GRAHAM. The Transcontinental Railway Commission answer as follows:

1. Yes.

2. No.

3. No.

4. The following contractors have not finally completed the work covered by their contracts within the time limit fixed by their respective contracts: Hogan & MacDonell, 26 months beyond fixed date, contract covers work from north end of Quebec bridge to near La Tuque about 150 miles. Grand Trunk Pacific Railway Company, 14 months beyond fixed date. Contract covers from 150 miles west of Quebec bridge to Waymontachene about 45 miles. Grand Trunk Pacific Railway Company about two months beyond fixed date, contract covers from 8 miles of Abitibi river, easterly about 150 miles. O'Brien, Fowler & McDougall Brothers, about two months beyond fixed date. Contract covers about 24 miles easterly from Dog lake, Ontario. John D. McArthur. 26 months beyond fixed date. Contract covers from Winnipeg about 24 miles easterly.

5. No extensions of time have been granted, and enforcement of penalty clause is a matter for consideration before final payments have been made.

IMPERIAL CONFERENCE SECRETARIAT.

Hon. GEO. E. FOSTER moved:

For a copy of correspondence and papers, and any information possessed by the government relating to the formation and work of the secretariat decided upon by the imperial conference of 1907.

He said: I have two objects in view in moving this motion. One is to get such information as the government may be possessed of with reference to the formation of a secretarial staff, here called the secretariat, which was decided upon at the conference of 1907, and the work which, up to the present, they have done, or the system which may have been arranged upon which the work is to proceed. The other object I have in view is to make a short review of the work of the several conferences, the first of which was instituted in 1887. When we come to think of it, the initial step which was taken in 1887 has proved to be a very important one, and I am sure the developments have been far in excess of what the promoters of that con-

ference could possibly have had in mind. It is one of the characteristics of the British constitution and system that many institutions grow up and become, without force of statute, very important and operative parts of the general administration of the affairs of the empire, and this is one which probaly illustrates that feature of the British system as well as any other.

The conference of 1887 was probably born out of two ideas; the first was the necessity felt for a closer and more intimate union between all the parts of the British dominions, and the second was the dissatisfaction which had been felt at the formal and distant and tedious system of communication between the various colonies and the motherland, and the almost entire absence of any method of communication between the different colonies themselves. Correspondence undertaken several thousand miles away from the department to which you are writing is cold and formal and at the best inefficient. It probably for years had been felt that there was necessity for closer personal touch and more of the personal element in inter-communication. Any one knows that two gentlemen sitting down and talking over a question can come to a conclusion in shorter time and more satisfactory way than they can through the medium of long distance correspondence. In dealing with this matter, I shall, in my brief remarks, speak altogether from the non-partisan standpoint and in a non-partisan spirit. The conference of 1887 was called by Mr. Stanhope, but before it met he was succeeded by Sir Henry Holland, who, as Colonial Secretary, presided at the conference which lasted from April 4 to May 9. Ministers or delegates from all of the self-governing colonies were present, as well as Lord Salisbury and some of the other British ministers. In addition, prominent men from the different Crown colonies were invited to attend and to listen to the proceedings. It is characteristic of the extreme sensitiveness and delicacy and of the great wisdom which characterize so many of these innovations, that at this conference every step was avoided that could possibly lead to anything like a feeling of constraint or restraint, or anything that could be said to be binding and absolute in its nature. It was therefore laid down at the beginning that the discussions should be perfectly free and that no resolutions should be moved, it being supposed that the freest exchange of opinions would take place from the feeling that those present were not being bound by resolution It was distinctly stated that the conference should be entirely consultative and should have no executive functions of any kind. It is interesting to note the questions which were brought before that first conference—organization for defence, postal and telegraph communications, the sugar bounties and trade questions as affecting the different members of the empire, British trust fund investments in colonial stocks, and the stamp duties upon the transfer of inscribed stocks. The most important subjects were organization for defence and postal and telegraphic communications. The results obtained at this conference may be summed up briefly. The question of defence was largely with regard to naval defence, and the colonies chiefly concerned were the colonies in the southern Pacific and what may be called the Chinese waters, and the Cape of Good Hope. What was done as a result of that conference, afterwards ratified by the respective legislatures, was the strengthening and enlargement of the squadron for the Australasian colonies which was to be confined to Australian waters. To this New Zealand made a contribution of £20,000, and the Australasian colonies a contribution of £106,000. The squadron was to consist of five fast cruisers and two torpedo gunboats. A desultory exchange of views was had with reference to the protection of some of the outstanding portions of the empire. There was a very lengthy exchange of ideas with reference to postal and telegraphic communication based upon the cheapening of postage rates between the different parts of the empire and the establishment of better telegraphic facilities. In this discussion the representatives of Canada, Sir Alexander Campbell and Sir Sandford Fleming, dealt very thoroughly with the Canadian Pacific railway which had then been opened across this continent and pressed upon the members of the conference and the British government the importance of that great undertaking, by which a new empire route had been opened up. That led the way to impressing upon the members of the conference the advisability of a new line of telegraphic communication from Britain across the Atlantic over Canada and then across the Pacific. This was the first discussion of that question. This discussion which began in 1887 ultimately bore its fruit in much later years, but it did bear fruit.

Although, under the understanding of the conference there were to be no resolutions passed, yet so vivid was the interest created in the conference by the statements made by the Canadian delegates on the lines I have mentioned, that the conference broke through its rule in that respect, and these two resolutions, while not formally put, were assented to unanimously by the conference, and I think it well that they should be read and go on record:

First, that the connection recently formed through Canada from the Atlantic to the Pacific, by railway and telegraph, opens a new alternative line of imperial communi-

cation over the high seas and through British possessions, which promises to be of great value alike in naval, military, commercial and political aspects.

Second, that the connection of Canada with Australia by direct submarine telegraph across the Pacific is a project of high importance to the empire; and every doubt as to its practicability should without delay be set at rest by a thorough and exhaustive survey.

Before the conference finished its deliberations, very strong representations were made as to the advisability of having the British government undertake a survey of the under-sea-service across the Pacific in order to develop as far as possible the facts on which to base the ultimate building of the cable.

On trade matters there was the beginning of the discussions which have been continued and have grown in every succeeding conference. As a specialty, the question of sugar bounties was taken up and their continuance was deprecated. The trade discussion was commenced by Sir Samuel Griffith, of Australia, in a very temperate and moderate speech, which, as we read it now, would be called very tentative indeed. The shadow of the long extended and at that time unattacked free trade regime in Great Britain was over the whole discussion. The horizon was comparatively narrow and the vision did not extend very far; but the discussion was notable for an expression of opinion on the advisability of something being done by which, within the British empire, the kith and kin of the empire would have the privileges and advantages in the matter of trade which were not given to the foreigner and outsider. Mr. Hofmeyer, who later visited Canada and took part in a conference of 1894, also discussed his policy, which was this, that over and above all tariffs which were imposed in Great Britain or in the colonies, there should be a small percentage added—2 per cent he himself proposed—which should be collected from foreign imports, and should be earmarked as a fund to be used for the naval defence of the empire. He made calculations upon the existing trade at that time, and showed that 2 per cent would yield about £7,000,000 annually, and he argued for this on two grounds: first, that it would tend to strengthen the bonds of the empire, and, secondly, that it would give a much needed fund, and one which could be very wisely used for strengthening the general defence of the empire. The discussions at the first conference were, as I have said, very tentative. The horizon did not reach very far, and their vision was somewhat weak; but it was an initiation, a beginning, and out of that have grown the several conferences which have since taken place.

The second conference was held in the Dominion of Canada, at the city of Ottawa, in 1894. This conference was a little different from its predecessor, in that it was called by the government of Canada and not by the British government. It was called mainly for the purpose of discussing trade matters and intercolonial communications, both by steamship and by cable, between the colonies of the empire, and the British government gave it its sanction and its prestige by sending Earl Jersey, who attended the conference, and who made a very able and sympathetic report of it to the Home government, which is preserved in our blue-books. The Huddart steamship contract had been made, Mr. Mackenzie Bowell had visited the Australian colonies on the mission on which the government sent him, and a great deal of interest was manifested in the conference, especially with reference to Australia and Canada. The Cape of Good Hope was invited, and sent as its representatives Mr. Devilliers and Mr. Hofmeyer.

The discussions of the conference of 1894 were much wider and fuller, and certainly had a wider and stronger vision, than those of the preceding conference. The question of defence was naturally not taken up, owing to the circumstance that the British government had not called the conference, and it was not seemly or fitting for the colonies themselves to take up that question. What was discussed, and discussed with a great deal of freedom, and, as Earl Jersey himself said, with a great deal of strength and vigour, were the lines of communication and the development of trade. As a result of these discussions in a conference which lasted from June 28 until July 9, several resolutions were passed. That marks also a distinct step forward from the preceding and initiatory conference. This conference felt that it ought to have the courage of its opinions; and it put the results of its deliberations into the form of resolutions, thus giving point and force to its discussions. The resolutions that were passed were on these lines: that provision be made for imperial legislation enabling the dependencies of the empire to enter into agreements of commercial reciprocity, including power to make preferential tariffs with Great Britain and with one another, and that any provision of existing treaties preventing the above from taking place ought to be removed; and another resolution strongly in favour of imperial trade preference between Great Britain and the colonies, with the addition that until Great Britain should find it possible for her to take part in preferential treatment with the colonies, the colonies themselves should press the matter to a conclusion as between each

other. The Belgian and German treaties and the most favoured nation clauses came in for a very thorough review, and these resolutions I have read—the two former especially—were for the purpose of clearing away as far as possible the obstacles which existed in the way of preferential arrangements.

With reference to communications, strong ground was taken on two matters. One was an arrangement for fast lines of steamships on the Pacific beween British Columbia and the east, especially Australasia and New Zealand, and the principal of co-operation was invoked, namely, that as the scheme was for the benefit of the empire, it should be supported by the constituent parts of the empire between which these steamship lines were to ply. Strong ground was taken with reference to a Pacific cable, and a resolution passed asking the British government to have a survey made, subject to the condition that the expense of the survey should be shared mutually between the British government, the government of Canada and the government of Australasia; and in order to keep this resolution alive, another resolution was added giving into the hands of the Canadian government the pressing of this to a conclusion. I may say that this resolution followed on the assent of the Earl of Jersey to the British government undertaking the survey and paying a portion of the cost. Canada assented through her representative as did the representatives of the Australasian colonies. These, then, were the results of the conference of 1894, a conference which was characterized by great unanimity, great interest and a more hopeful feeling that the period of discussion would quickly merge into a period of more or less full developments along the lines that were then discussed.

The next conference held was that of 1897. It was called by Mr. Joseph Chamberlain on the 60th anniversary occasion of Her Majesty's ascension. It met in June, and continued for some days. The usual countries were represented. The Secretary of State presented a memorandum dealing with three matters, political, defence and commercial relations and incidentally with the Pacific cable. With reference to commercial relations it was resolved:

1. That an early denunciation of any treaties now hampering the commercial relations of Great Britain and the colonies is desirable.

Having special reference to the Belgian and German treaties which have since been denounced. The various colonial premiers undertook to confer with their colleagues as to a preference on the products which may be imported from the United Kingdom. With reference to political relations, a resolution was passed affirming that the present political situation and relations were satisfactory, to which Mr. Seddon and Mr. Braddon dissented. Another resolution was passed affirming:

That it is desirable whenever practicable to group into federal union colonies which are geographically united.

That has borne fruit in the subsequent union of different colonies into the commonwealth of Australia. A third resolution affirms that it is desirable to have periodical conferences at which matters of common interest may be discussed. The memorandum goes on to state that although a resolution was passed as to the present relations being satisfactory, it was the decided feeling of the conference that these could not last very much longer, that they could not continue indefinitely, that some means was desirable of giving the colonies a voice in the control and direction of questions of imperial interest, those more especially affecting the colonies. It was also felt that such control, or such voice in control, would bring its corresponding obligations of assistance and of help. With reference to defence, the Australian squadron was continued with some changes, and a resolution was passed in that sense. The premiers agreed that on their return they would examine into the practicability and possibility of interchange of military units beween the mother country and the colonies. With reference to penny postage, it was found to be impracticable on account of the revenue necessities of several of the colonies. With regard to the Pacific cable, it was discussed but little in that conference, the representatives feeling that they should make themselves better acquainted with the reports which had been obtained, and examine them before coming to any conclusions.

The next conference held was that of 1902. It was held in London and was called on the 23rd of January of that year, and the meetings extended from June until August. The occasion of the calling of the conference of 1887—the first one—was a ceremonial one. It was called on the 50th anniversary of Her Majesty's reign. The occasion of the calling of the conference of 1902 was also a ceremonial one, that of the King's coronation. Advantage was taken of that event to bring representatives of the different over-seas countries in communication with the British government. All the over-seas dominions were represented and many very able men brought together. Of course, I think myself, that the ceremonial part of the proceedings rather interfered with the business outcome, but at the same time opportunity was had for extended discussion. We have not, however, any report of the discussion, inasmuch as at the beginning of the conference of 1902 it was decided that the resolutions arrived at and a summary only of the proceedings should be

given, and that is all that has yet, as I understand, been brought down to the British parliament or that we have cognizance of. I am, however, assured that a full report of the discussions of the conference of 1902 was kept and is on record, and I cannot help but think that it would be well if those discussions were put into the form of a return and brought down. And I notice that in 1907 the right hon. the Prime Minister, who was there, gave it as his opinion that it would be well to have these brought down. It is advisable, I think, that our representatives from the different colonies and from the empire who met together on this great occasion should have the benefit—for I think it is a benefit—of having their views, their reasoned and matured views, preserved; and it is of even more importance that we who did not have the pleasure of listening to those discussions should have the benefit of reading the views of these prominent and representative men expressed by them on such occasions.

The matters which were taken up and dealt with in the opening address of the Right Hon. Joseph Chamberlain were divided into three parts: the political relations of the empire, its commercial relations and the naval and military defence of the empire. We come back again to these primary and basic questions, which, from 1887 up, have formed the subject of discussion in these conferences. The Colonial Secretary, in his memorandum, gave a slight sketch of his views or the views of the government—some of them views of the government and others his own personal views—with reference to these three great divisions. He took for granted the general feeling that existed for the unity and preservation of the empire and for the strengthening of that empire by all possible, reasonable bonds. He however, was careful to state that no particular course was pressed by the home government which is noteworthy all through this conference, is the extreme courtesy and delicacy with which the home government approached these questions. Whilst having strong views, they were careful not to offend the susceptibilities of the outlying dominions and did not press any line of action upon the colonies. They invited them to a grave and serious discussion and consideration of these questions, and then left the way perfectly open for these different colonial representatives to take such action as they might deem wise in the premises. He gave expression to the sentiment of the heavy load that the British government was carrying for naval and military defence. He acknowledged in fitting terms the help which had been given by all the different outlying colonies in the Boer war, through which the country had lately passed. With reference to the trade within the empire, he acknowledged what had been done by Canada in the granting of a preference. He was inclined to question whether that preference had been as favourable in its outcome as had been expected, and ended with a question as to whether or not the different colonies could go any further in the way of preferential trade concessions than they had already gone.

The conference then entered upon its discussions. The first question that was taken up was that of naval defence. Mr. Seddon, who was then living and who represented New Zealand, had given notice of a motion and this was also placed, opened the discussion before the conference a very able series of communications and a state paper by Sir John Forrest, who was Minister for Defence in the Australian Commonwealth. That state paper took up the whole question of naval defence, and detailed what had been done by the Australians. On Mr. Seddon's motion, these papers were presented to the conference and a discussion took place upon them. In this paper of Sir John Forrest, which seems to me to be a very able and frank paper, the whole question of naval defence as regards the Australian Commonwealth and New Zealand was taken up and discussed. Some fault was found as to the ineffective training of their own naval cadets or naval reserve which the different states of the Commonwealth had previously arranged for and which had been taken over by the Commonwealth of Australia. On the principle of defence, some statements are made which I think are worthy of being read in the House, and if the House will allow me I shall place them on record. In regard to defence he says:

> We must altogether get rid of the idea that we have different interests to those of the rest of the empire, and we must look at the matter from a broad common standpoint. If the British nation is at war so are we; if it gains victories or suffers disasters, so do we; and therefore it is of the same vital interest to us as to the rest of the empire that our supremacy on the ocean shall be maintained. There is only one sea to be supreme over, and we want one fleet to be mistress over that sea. We are bound also to consider and to fully realize that we belong to a nation which for centuries has been mistress of the sea and that the position we occupy in Australia to-day in being in all British territory, and having always enjoyed peace and security, is absolutely attributable to the protection given to us by the British flag. We are accustomed to travel about the world for the purpose of trade or in pursuit of pleasure, and to feel when we visit foreign countries that our lives and property are secure, and in specially safe keeping. We then realize fully the great privilege and advantage of being a British subject, and feel proud when we see the flag of our motherland everywhere in evidence, ready, willing,

and able to protect us. Our aim and object should be to make the Royal Navy the Empire Navy, supported by the whole of the self-governing portions of the empire, and not solely supported by the people of the British isles, as is practically the case at the present time. It is, I think, our plain duty to take a part in the additional obligations cast upon the mother country by the expansion of the empire and the extra burdens cast upon her in maintaining our naval supremacy. If a proposal were adopted that the empire should have one fleet maintained by the whole nation, every part contributing to its support on some plan to be mutually arranged, probably on that of the comparative trade of each country, and not necessarily on a uniform basis of contribution, what a splendid idea would be consummated, and what a bulwark for peace throughout the world would be established! Besides which, we would be doing our duty to the mother country, which has been so generous to us during all our early years.

That is a fair expression of the spirit and sentiments which animated the Commonwealth at that time, as expressed in the statement laid before the conference by Sir John Forrest, its Minister of Defence. The first Lord of the Admiralty who I think at that time was the Right Hon. the Earl of Selborne, prepared a paper which was presented to the conference. The general line of his paper was that in the study of defence it is the best defence which is in a position to become aggressive when an emergency arises, that there was need not only of money but of man contribution; he would like to see each colony represented in the navy with vessels and with men from the colony. He thought the allocation in peace time would be easy, but all through his memorandum he stood unflinchingly for one control, absolute in case of war and in case of emergency. Some discussion took place but not very much at this stage and it was then decided that the conference should separate and that each colony should have its own conference with the admiralty and that then a report should be made to conference as to what had been agreed upon. This was in the line that I have spoken of that the greatest freedom should be allowed to each colony to meet the situation as it thought it best could, in view of its own peculiar conditions. The following is a summary of the result of these individual conferences:

New Zealand, which up to that time had been making a contribution of £20,000, a year agreed to raise its contribution to £40,000.

Cape Colony, which up to that time had been giving £30,000 a year, raised its contribution to £50,000 and placed no condition upon the expenditure of the money.

Australasia raised its contribution to £200,000 and imposed the condition of an Australian squadron and also the establishment or maintenance of a branch of the Royal Navy reserve.

Natal, which up to that time had given £12,000 per annum raised its contribution to £35,000, and attached no conditions.

Newfoundland, which had been giving £3,000. raised its contribution to £4,800 with the stipulation that a naval reserve of not less than 600 men having been established in part should be continued and maintained.

The attitude of these different colonies is shown in each of these contributions. The ratification of these proposals and of these understandings took place immediately as between the British government and the Colonial governments and they were afterwards fully endorsed by the different legislatures and were carried out. With reference to Canada, the report of the First Lord of the Admiralty is that:

> Sir Wilfrid Laurier informed me that the government were contemplating the formation of a local naval force in the waters of Canada, but were not able to make any offer of assistance analogous to those enumerated above.

A certain part of Lord Selborne's statement seems to be worth repeating. I referred to it before; it is the expression of the admiralty at that date, and of their views. Ending up his memorandum, which was acknowledged by all to be a particularly able one, he says:

> The British empire owes its existence to the sea, and it can only continue to exist if all parts of it regard the sea as their material source of existence and strength. It is therefore desirable that our fellow subjects in the dominions beyond the seas should appreciate the importance of naval questions. If they will undertake a larger share of the naval burden, well and good, but I regard it as of even more importance that they should cultivate the maritime spirit; that their populations should become maritime as ours are, and that they should become convinced of the truth of the proposition that there is no possibility of the localization of naval force, and that the problem of the British empire is in no sense one of local defence.
>
> The sea is all one, and the British navy therefore must be all one; and its solitary task in war must be to seek out the ships of the enemy, wherever they are to be found and to destroy them. At whatever spot, in whatever sea, these ships are found and destroyed, there the whole empire will be simultaneously defended in its territory, its trade and its interests. If, on the contrary, the idea should unfortunately pervade that the problem is one of local defence, and that each part of the empire can be content to have its allotment of ships for the purpose of the separate protection of an individual spot, the only possible result would be that an enemy who had discarded this heresy, and combined his fleets, will attack in detail and destroy those separated British squadrons which, united, could have defied defeat.

The Canadian ministers presented a memorandum which I will also read and

which shows the position that was taken by Canada at that conference. It is found in the appendix, page 73 of the return for 1902:

The Canadian ministers regret that they have been unable to assent to the suggestions made by Lord Selborne respecting a navy, and by Mr. St. John Brodrick respecting the army. The ministers desire to point out that their objections arise, not so much from the expense involved, as from a belief that the acceptance of the proposals would entail an important departure from the principle of colonial government. Canada values highly the measure of local independence which has been granted her from time to time by the imperial authorities, and which has been so productive of beneficial results, both as respects the material progress of the country and the strengthening of the ties that bind it to the motherland. But while, for these reasons, the Canadian ministers are obliged to withhold their assent to the propositions of the admiralty and the war office, they fully appreciate the duty of the Dominion, as it advances in population and wealth, to make more liberal outlay for these necessary preparations of self defence which every country has to asume and bear.

Then follows a recapitulation, through four or five paragraphs, of what Canada has done in expenditure upon her militia and the militia pension law, and cites as a proof of the availability and effectiveness of that system that:

At the time of the Boer war a thousand men in the first contingent were drawn from every section of Canada embraced within 4,000 miles of territory, and was organized, fully equipped and embarked within a period of 14 days; and a second contingent composed of 1,200 men was shortly afterwards similarly organized, equipped and embarked within the space of three weeks.

Then it ends up with this part, which is of course the more important part of the memorandum:

At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval system of defence as well. On the sea coast of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early date a system may be devised which will lead to the training of these men and to the making of their services available for defence in time of need.

The House will note that, both with reference to the military and with reference to the naval side, this memorandum confines the effort and good will of Canada's representatives entirely to the lines of self-defence, the defence of Canada itself.

In conclusion, the ministers repeat that, while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purpose of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures should be so directed as to relieve the taxpayer of the mother country from some of the burdens which she now bears; and have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of the experienced imperial officers, so far as this is consistent with the principle of local self government, which has proved so great a factor in the promotion of imperial unity.

This, I think, sets forth the position of the different participants in that conference upon the question of naval defence. With reference to military defence, no definite conclusion was reached at this conference. The Secretary of State for War and New Zealand suggested an imperial reserve, that is a special body of troops ear-marked for imperial service, and held ready in the different colonies for emergencies when they arose. Cape Colony and Natal agreed to that principle; Canada and Australia thought it best to raise the standard of the training of the general body of the forces, leaving it for the colonies to determine the nature and the extent of the assistance when an emergency arose; and both argued that in that way you would avoid any jealousy that might arise from there being two kinds of militia, so to speak, one, a special reserve marked for a special purpose, and the other thrown alongside of them, the general militia of Canada. In that respect I am not at all saying that I do not think the position taken by Australia and Canada was a proper position. I am not here to comment on this to-day. but simply to make the review. Resolutions were passed with reference to government contracts, that is, favouring the colonies, the parts of the empire itself, in giving government contracts for the militia and military, and with reference to the nomination of cadetships; and I think the number of cadetships at that time was somewhat enlarged so as to open up a larger career to young men from the colonies. There was also a general agreement as to the bringing, as far as possible, the organization of the militia down to a common principle and a common system so that, as far as possible, the same general equipments and all that kind of thing might be standardized, as it were throughout the different parts of the empire, so that, if ever a time came that the forces of the empire were to be massed together for a supreme effort there would be no disparity and the different parts of the work in every direction could be carried on with the greatest possible effectiveness. So much with reference to defence matters at that conference.

Taking up the political relations, we find the following were the results: It was re-

solved that there should be quadrennial conferences and that if, within a period of four years, any special occasion arose subsidiary conferences, if necessary, might be called. It was also resolved that the views of the colonies affected upon foreign treaties be obtained before ratification of these treaties by Great Britain. An agreement was also reached between the different parties to the conference on an imperial court of appeals. When we come to commercial arrangements and relations, there was a longer discussion and there was some definite advance made. A general debate showed differences of opinion and conditions and here again the step was taken of having the conference dissolve itself into a system of conferences between individual colonies and the President of the Board of Trade. On the reassembling of these conferences the following were announced as the results: Canada, having given a 33⅓ per cent, expressed its willingness to make an additional concession in one or all of three ways—either by reducing the duties to Great Britain on her imports into this country, or by raising the duties on imports from foreign countries, or by imposing duties on foreign free imports. Australia promised a preference on imports from Great Britain but was not able to define at that conference just exactly what it would be. New Zealand promised a 10 per cent reduction all round on manufactured goods imported into New Zealand or an equivalent on the same lines as were stated with reference to Canada, upon either one or all of the three plans. Natal promised a 25 per cent preference on all dutiable goods, with the exception of some that were specially rated. Then there was a general resolution passed which is somewhat important. That general resolution recognized (a) the principle of mutual preferential trade, (b) that free trade is impossible within the empire, (c) that the colonies should give a substantial preference to Great Britain's products, (d) that Great Britain should give preferential treatment to the colonies, and (e) that the premiers present undertook to bring the matters before their legislatures on their return, and to submit to their respective governments measures to carry out these conclusions that were arrived at. That especially had reference to the legislatures carrying out, when they were assembled and received the reports from the premiers who were present at this conference, what the premiers all promised and which I have just detailed. Canada contended that Great Britain should give an exemption on Canadian food products from the recent duties imposed on certain food products coming into Great Britain. These were known as the war duties and it was contended that in right Canada should have that because of the preference she had given and the representatives of Canada stated that they were willing to make further concessions if the British government would grant that. For a wider preference they would go still further and presented a resolution affirming the principle of preferential trade, the advisability of its adoption by the colonies generally and that Great Britain should reciprocate. That is the resolution which I just a moment before analysed. Then they made the statement that if that principle was not acceptable to the colonies and the mother country Canada would hold herself free to choose her own course thereafter.

With reference to other questions, there were discussions upon mail services, and shipping subsidies, patent protection, purchase of ocean cables, merchant shipping laws, stamp duties, wireless telegraphs, metric system, newspaper postage, naturalization and professional employment in South Africa. All of these were discussed. This in brief is the result of the conference of 1902.

The next conference was held in 1907. That was called and met from April 15, until the 14th May. The Earl of Elgin was in the chair, the colonies were all represented, I think, without any exception. India also was represented for the first time at a colonial conference, and the Prime Minister and other ministers of His Majesty's government were present and took part in the various discussions. The resolutions that were come to as a result of the conference are in brief these: a resolution for establishing, as it were, the permanency of the imperial conference, that it should be held every four years, that it should be a conference consisting of the Prime Ministers of the outside Dominions, of the Prime Minister of Great Britain, with other ministers attending the Prime Ministers and taking part in the discussions upon the various questions, more particularly those which were technical to the different departments, but that each colony or portion of the empire should have one vote, each premier could be assisted by two of his colleagues at any discussion and that no more than two persons should take part in that discussion. What was particularly important at this conference was the formation of a secretarial staff or secretariat as it was called. This was thought necessary to fill a long-felt want. The trouble with the old conferences was that, once the conference had ended and the resolutions had been passed, there did not seem to be any machinery to keep these resolutions alive, and, as regards a coming conference, there did not appear to be any machinery to prepare, collate and gather information. It was so arranged that this information should be presented not after the conference took place, when the delegates and representatives would be so busy that it would be

almost impossible for them to digest the information, but to have it prepared, at a sufficiently early period and put in the hands of the representatives so that reasoned judgments and opinions could be given upon the digestion and consideration of that information.

Very strong ground was taken by Mr. Deakin, Sir Joseph Ward, and the representatives of Cape Colony and Natal. The Canadian representation did not see quite the same necessity for a secretariat but Sir Wilfrid Laurier declared he had an open mind. The Australian delegates with the Cape and Natal were in favour of a secretariat which would be responsible to the Prime Minister of Great Britain, and attached to his office as head of the conference, this secretariat to be the creation of the conference itself and to be paid by the conference. Sir Joseph Ward and the Canadian representatives took the ground that there must be a responsible head as the Colonial Secretary was the proper head and that argument triumphed when the Prime Minister stated that it was impossible for him to take on this added burden, and when Lord Elgin proposed to take charge if it in his own department, to separate absolutely the Crown colonies from the self-governing colonies and to secure a secretarial staff whose whole duty it would be to look after the affairs of the conference and perform the duties of the secretariat which had been urged as necessary. That idea was unanimously agreed to, and one object of my motion to-day is to find out, if I can, from the government what steps have been taken as regards the organization of that staff and what work has been done by it. There was a strong feeling in the conference that such a link was absolutely necessary in order to join conference to conference, to maintain continuity, and to contribute to the effectiveness of the work of each succeeding conference. There was some difference of opinion as to the name the conference should go by; it had been suggested by Australia that it should be called the imperial council, but on the suggestion of Sir Wilfrid Laurier it was unanimously decided to call it the imperial conference. There, however, was no difference of opinion as to its still being maintained as consultative only and not having in any way legislative or executive authority.

Mr. W. F. MACLEAN. By whom is the expense of the secretarial staff paid?

Mr. FOSTER. By the British government.

Mr. W. F. MACLEAN. I thought you said that all the colonies should join in its maintenance?

Mr. FOSTER. Had it been a secretariat responsible to the conference alone as was proposed, the expense would be paid by the different members to the conference, but as the other scheme was adopted, I understand it is regarded as one of the expenses of the Colonial Secretary's department.

On the question of military defence I read with extreme interest the two memoranda which were submitted from the naval and military point of view and though but a layman I should say they were very able state documents. The members of the conference may not have agreed with everything in these two memoranda but that they were able state papers there was a complete unanimity of opinion. In the memorandum upon military defence two ideas were brought out—that there should be a business management of the militia, that the Militia Department should have brains as well as body, and that therefore the prime requisite of any perfect system was an imperial staff whose duty it would be to study strategic war organization, the conditions of defence in every part of the empire, and to give their complete attention to that subject. That is the plan that largely contributed to the success of Germany; that is the plan which every great military power now puts into execution. The imperial staff which was to be an advisory board and nothing more, should, in the opinion of Mr. Haldane, the author of the memorandum be made really imperial and should take in every portion of the British empire which has a militia organization, and by way of advice, and of counsel, and of interchange of officers, and of information arrive at the best conclusion as to what should be done for the empire as a whole. The memorandum contemplated that if it were possible there should be two lines of defence the empire through. As Great Britain herself has an army which is kept ready to strike whilst she has also defensive forces, her militia, or at present her territorial army at home, it would be well if it could possibly be carried out, to have the same carried out in every one of the self-governing colonies; but Mr. Haldane expressed the difficulty he found in carrying that out in Great Britain itself, the territorial army there being a volunteer force, and the militia in all the British dominions being also, I think, a volunteer force, although I am not sure but Natal or the Cape has a compulsory system. However, the main idea that was promulgated in Mr. Haldane's memorandum was the necessity of having this imperial staff, which was acceded to unanimously by the conference. It was suggested that it would be well, if possible, to have a portion of the forces in every over-seas dominion, as well as in Great Britain, ear-marked for outside service when emergencies arose. That, however, was abandoned, as I have said. So that what was really contemplated by

Mr. Haldane was this striking force in Great Britain, a second line of defence in Great Britain and a second line of defence in every one of the self-governing dominions. These were the broad principles on which this memorandum was based, and these principles, I think, received the unanimous assent of the conference. Three basic facts were laid down in that memorandum as obligations upon all members of the empire (a) that each unit should provide for its local security; (b) arrangement for mutual assistance in cases of supreme need; and (c) the necessity of the maintenance of sea-supremacy. It was argued in the memorandum, and ably argued, that as far as possible the methods, the equipment, the arms, the ammunition, the units of force, all these technicalities of administration, should be in all parts of the empire standardized and on an equal basis. The resolution which was come to by the conference, and which will be found on page 5, was as follows:

That this conference welcomes and cordially approves the exposition of general principles embodied in the statement of the Secretary of State of War, and, without wishing to commit any of the governments represented, recognizes and affirms the need of developing for the service of the empire a general staff, selected from the forces of the empire as a whole, which shall study military science in all its branches, shall collect and disseminate to the various governments military information and intelligence, shall undertake the preparation of schemes of defence on a common principle, and, without in the least interfering in questions connected with command and administration, shall, at the request of the respective governments, advise as to the training, education, and war organization of the military forces of the Crown in every part of the empire.

Leaving the military side of the question, and coming to the naval side, we find an interesting discussion and interesting conclusions that were come to. Lord Tweedmouth was the exponent of the British government on naval defence. What he declared in the main was that they wanted the over-seas dominions to help them make more complete the naval defence of the empire. He held strongly to the necessity of the admiralty having the management, and without constraint, in the time of war. He was glad to get contributions in money, or, if not in money, in kind, and he welcomed the latter almost as heartily as the former. Unity of command and direction of the fleet, however, he maintained must be kept. He was in favour of help being given by the colonies in the way of smaller defence vessels for squadrons, in the way of docks, in the fitting up of establishments for receiving and repairing warships, in the initiation and maintenance of coaling vessels. All these are of great advantage in the defence of the empire, and if these are provided by the colonies, very substantial aid will be given in the general purpose of imperial defence. I think it well, to read this extract from Lord Tweedmouth's memorandum:

We welcome you, and we ask you to take some leading part in making more complete than it is at present the naval defence of the empire. I wish to recognize all that our cousins over the sea have done in consequence of decisions of former conferences. I know that you gave to the government and to the admiralty, with a free and unstinting hand, the help that you thought you could manage to give. Gentlemen, I have only one reservation to make, and in making it I ask that, as we have proved ourselves successful in the past, you should put your trust in us now. The only reservation that the admiralty desire to make is, that they claim to have the charge of these strategical questions which are necessarily involved in naval defence, to hold the command of the naval forces of the country, and to arrange the distribution of ships in the best possible manner to resist attack and to defend the empire at large, whether it be our own islands or the dominions beyond the seas. We thoroughly recognize that we are responsible for that defence. We want you to help us in that defence. We want you to give us all the assistance you can, but we do not come to you as beggars; we gladly take all that you can give us, but at the same time, if you are not inclined to give us the help that we hope to have from you, we acknowledge our absolute obligation to defend the King's dominions across the seas to the best of our ability.

Upon this a discussion arose, participated in by the representatives of all the portions of the empire represented at the conference. Mr. Deakin, speaking for Australia, which is now contributing largely in money to the defence under certain conditions, made the statement that this contribution was not altogether satisfactory—that, as he read the spirit of his people, it was felt that something more must be done. The squadron furnished by Australia was at first to be confined to Australian waters, but afterwards could be extended to Chinese waters. The feeling to which Mr. Deakin gave expression was that although no very formidable fleet might break the first line of defence, it might be possible that marauders —two or three cruisers fitted out for a sharp descent—might break the lines and find the harbours of Australia entirely defenceless. So he thought something should be done by Australia at once towards putting her harbours into a state of defence and if possible at reasonable cost, go further and patrol the more valuable portions of the coast. Sir Jos. Ward, who represented New Zealand, came out straight for contribution and contribution alone. His dominion was too small to build a fleet, and they preferred to give what they had to give to the British admiralty to expend as the British admir-

alty thought fit. When Canada's turn came Mr. Brodeur spoke, and as what he said is somewhat important, I shall refer to it a little in detail:

Sir WILFRID LAURIER. Mr. Brodeur will speak for Canada.

Mr. BRODEUR. Lord Elgin and gentlemen. In view of the remarks made by Mr. Deakin and Sir Jos. Ward, it will not be necessary for me to state to-day the position which Canada intends to take in regard to this question of naval defence. Our situation is a different one to that of the other colonies, and should be treated as such. I think, however, it would only be fair that I should state to-day that the position of Canada has not been properly represented as far as naval defence is concerned. I see by a document which has been laid before us that we are supposed not to have spent any money at all upon naval defence. That document shows what has been spent by the United Kingdom, by Newfoundland, Australia, New Zealand, the Cape, Natal, and when it comes to speak of Canada, it is simply stated that the naval expenditures is none. I may say at the outset that in view of the treaty which was made in 1818 between the imperial government and the government of the United States, it was formally stipulated that the Americans should have the right to come in and fish on our shores, and that they should have the right also to come into our harbours when they are looking after their fishing. Outside of that, they have a right also, in virtue of that treaty, to go to some parts of Canada to fish on the same footing as the Canadian British subject. This particular situation, which was created in Canada by the treaty induced the British admiralty to look after the defence, or after the protection of Canada, against the poaching of these American fishermen. That duty was performed and that protection was given to our own people during many years by the British admiralty, but for some time, especially since 1885, absolutely nothing has been done by the British authorities.

He then goes on to say that after that time Canada provided her own protection vessels and protected her own fisheries and spent a more or less large sum, amounting to about $3,147,990 up to date, that she was called on to provide other vessels to protect the service, and that such expenditure should count as naval expenditure. He then called attention to the situation on the Great Lakes. He said:

We have to-day on the lakes a boat which is an armed boat, which is looking specially after the protection of our fisheries against the American fishermen, not only for the carrying out of the local regulations, but mostly and I may say almost exclusively for preventing the Americans from coming and fishing in our waters. We have on the Great Lakes (large seas, properly speaking) American states bordering these great lakes, and they are having navies of their own now. I think that three states bordering on the three great lakes, Ohio, Michigan and Illinois are spending not less than $15,000,000 themselves for keeping up a navy on these lakes, and are drilling their men on the shore of the lakes. Besides they have some ships which are not on—because it would be against the conclusions of the treaty—but built in order to be prepared in case of emergency. As far as Canada is concerned, one of the first duties we shall have to look after is our protection in connection with the great lakes. I may say that the wars we have had since 1763, since Canada has become part of the British empire, came from the United States. We had an invasion in 1775, we had an invasion in 1812, and we had the Fenian raids in the 60s. All those invasions came from the United States. So we have to look specially to protect ourselves in that direction, and I may say we have been doing it as far as the Great Lakes are concerned, not to a very large extent it is true, but to the extent of spending a sum of money which is quite important for a country of the size of ours.

Then he speaks of the naval militia, and that the cruiser 'Canada' is manned by Canadian seamen and that men are drilling on her every day. He also speaks of the wireless telegraph stations and the amount of money spent on them. He mentions that Canada has taken over the hydrographic survey as well, that she is going to take over the Halifax and the Esquimault dockyard, which will then be at the cost of Canada instead of Great Britain, and he ends by saying:

And so I think it will be only fair that in the statements published giving the money spent for naval expenditures, the amount spent by the Canadian government in connection with those of different services I have just mentioned should be included in such naval expenditures. I do not think for a moment it will be necessary for me to discuss the question further, because I understand the discussion will be taken up on some other day.

That shows fairly well the position taken by Canada with reference to the contribution towards the navy. Well, after still further discussion, Lord Tweedmouth, in a short reply, stated among other things that he made no reflection on Canada, that Canada was perfectly free to come to any resolution.

We hope to have their help, but still they are quite right to look after their own interests, in the full security that so far as the British government can be of use to them in their defence in time of need, they may depend in any circumstances on our giving that aid with the greatest joy and without any sort of drawback whatever.

In this respect the same method was taken as in the others. Individual conferences took place between the different colonies and the first Lord of the Admiralty and as a result the following was reported:

Australia continues her contributions of £200,000 per year, New Zealand hers of

£40,000, Cape Colony £50,000, Natal £35,000 and Newfoundland £3,000.

At page 480, the subject of naval defence is again taken up and Canada, in the person of the Minister of Marine and Fisheries (Mr. Brodeur), again speaks. He said:

Lord Elgin and Gentlemen,—I have nothing to say except to thank heartily Lord Tweedmouth for having been good enough to recognize what Canada has been doing in regard to its defence. As I mentioned the last time we discussed this question at the conference, I think the situation of Canada has not been properly represented. I am very glad to see Lord Tweedmouth has actually acknowledged and recognized that we have been doing a great deal and are still doing a great deal by taking over the naval stations at Esquimalt and Halifax. There was a discussion in previous years to the effect that we should contribute something directly to the British navy. I may say with regard to that, there is only one mind in Canada on that question, and if it was necessary I should be able to quote the remarks made lately in an article published by Sir Charles Tupper, who is certainly one of the men best qualified to speak in Canada, upon the question. I think, perhaps, I might mention what he said in regard to that. He said: 'It is known that from the outset I have felt the interests of Canada and the true interests of the empire to be opposed to the demand for colonial contributions to the imperial navy,' and 'I maintain that Canada has discharged that duty in the manner most conducive to imperial interests.' So it shows that both sides of politics in Canada agree with the policy which has been going on for some years there. He adds, also, in that article, that 'Canada protects her fisheries by her own cruisers, and when the imperial government expressed a wish to be relieved of the expense of maintaining the strategic points at the harbours of Halifax and Esquimalt the Canadian government at once relieved them of that large expenditure, amounting to £185,000 per annum.' Negotiations are now going on for taking over the naval stations there. I do not know exactly what will be the amount by which the admiralty will be relieved, but I think it is a somewhat large amount.

Since the matter has been brought before this conference I may say that parliament has voted a large sum of money for the purpose of purchasing another cruiser and putting that cruiser on the Pacific coast for the protection of our fisheries.

We are very glad to see that Lord Tweedmouth has recognized that in this matter it should be left almost entirely to the colonies. I may say, in conclusion, that we will be very glad to work in co-operation with the imperial authorities, and under the advice of an imperial officer, so far as it is consistent with self-government.

That is the whole presentation of the case thus far as far as Canada was concerned, in relation to imperial defence. But towards the latter part of the conference Mr. Smartt, who was the colleague of Dr. Jameson, moved the following resolution:

That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to maintain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contribution towards the up-keep of the navy as may be determined by their local legislatures—the contribution to take the form of a grant of money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with their varying circumstances.

To that resolution he spoke briefly and gave his reasons for moving it. Then we find Canada's voice again raised:

Sir WILFRID LAURIER. I am sorry to say, so far as Canada is concerned, we cannot agree to the resolution. We took the ground many years ago that we had enough to do in our respect in that country before committing ourselves to a general claim. The government of Canada has done a great deal in that respect. Our action was not understood, but I was glad to see that the First Lord of the Admiralty admitted we had done much more than he was aware of. It is impossible, in my humble opinion, to have a uniform policy on this matter, the disproportion is too great between the mother country and the colonies. We have too much to do otherwise; in the mother country, you must remember, they have no expenses to incur with regard to public works; whereas, in most of the colonies certainly in Canada, we have to tax ourselves to the utmost of our resources in the development of our country, and we could not contribute, or undertake to do more than we are doing in that way. For my part, if the motion were pressed to a conclusion, I should have to vote against it.

Dr. SMARTT. But the public works to which you refer are of a reproductive character which are vital to the interests of your Dominion.

Sir WILFRID LAURIER. Some of our railways have never paid a cent of interest or expenses.

Dr. SMARTT. Still, it is developing and opening up the country to an enormous extent. All the colonies are building developing railways of a character which may not be revenue producing for years. I thought the wording of this resolution would have specially met your views because towards the up-keep of the navy it may take the form either of a grant of money or the establishment of a local defence force or other services. I understand Canada suggested strongly the other day that some of their other services were in the nature of local defence.

Sir WILFRID LAURIER. I have said all I have to say on the subject.

Dr. SMARTT. I should like very much to hear the opinions of the representatives of the other portions of the empire.

Mr. DEAKIN. I have no hesitation in entering into the discussion if desired; but if we are not going to pass the resolution, is it worth while?

Dr. SMARTT. I think it is a great pity we do not pass something. We have done so

much in the way of pious affirmation, that I am anxious we should do something of a practical character.

Sir WILFRID LAURIER. It can be passed if there is a majority. For my part I must vote against it.

Sir JOSEPH WARD. To do any good we would require to be unanimous about it.

Dr. SMARTT. Yes, I suppose so.

Mr. WINSTON CHURCHILL. It is not much good to have a resolution at all if we cannot be unanimous.

The CHAIRMAN. I think we had better not proceed any further just now.

Sir WILFRID LAURIER. We, of the different dominions beyond the seas, have tried to be unanimous up to the present time. I am sorry to say this is a question upon which we could not be unanimous. Therefore, Dr. Smartt can move it if he chooses or withdraw it, but if he presses it I should have to vote against it.

Dr. SMARTT. I am absolutely in the hands of the conference. I do not want to press a resolution that is not likely to meet with the general approval of practically everybody on the conference, especially a resolution of this particular character. We might, perhaps, let it stand over until the next sitting. Between this and Tuesday I may be able to modify it in some way to meet Sir Wilfrid's view.

Nothing further was done and that represents the situation as far as naval defence is concerned.

Other questions of more or less importance were discussed, but I have not time to refer to any except the trade question With reference to the trade question, I will give the summary in the resolutions which after a debate were passed. I may say that the debate was an extended and a very able one, and all views were placed fully before the conference. The result was that the resolutions of 1902 were reaffirmed, with the representatives of the British government dissenting in so far as the implication that it is necessary or expedient to alter the fiscal system of the United Kingdom. Those resolutions I read in discussing the conference of 1902 and it is not necessary at this point to recapitulate them. The ground that was taken was ground that had been strongly affirmed in 1902 and the conference did not see that they could go beyond that although several members of the conference were strongly of the opinion that a forward step by resolution, if it could possibly be agreed upon, ought to be made. A resolution was passed providing:

> That all doubts should be removed as to the rights of the self-governing dependencies to make reciprocal and preferential fiscal agreements with each other and with the United Kingdom, and further, that such right should not be fettered by imperial treaties or conventions without their concurrence.

Among other subjects taken up were international penny postage and imperial cable communication, and then, towards the latter part of the conference, the All Red Route resolution which we have already had discussed in parliament and to which I need not further refer. Such, in brief, were the results of the conference of 1907.

Now to conclude: We have had conferences commenced in the way I have stated, begun in 1887, repeated in 1894, 1897, 1902 and 1907; and this latest conference in 1909, of which, as it is fresh before us, I should say nothing at the present time. No one will doubt, I think, that these conferences have grown in public commendation, and they have grown in their sphere of action, grown in their usefulness, grown in the greater knowledge which public men of the empire have been able to form of the different questions affecting others than their own countries, grown in that personal contact and sympathy which arises therefrom, and the mutually good understanding which takes place as a result of those conferences, that which is not by any means the least important of the benefits that have been conferred; until to-day they have taken a character of absolute permanency, with their own secretarial staff, the link being thus found for their continuity and their action. They constitute in fact the only imperial parliament that we have, and a regal and worthy imperial parliament it is, in its way—consultative simply and solely, advisory one with the other, without any functions, legislative or executive, but still a parliament composed of the empire's strongest and best men from the different portions of the empire, collected on the basis of popular selection, and so supposed to be representative in the very highest way. It is this quadrennial parliament, which may meet more frequently, which has grown up almost without our noticing it, which has gradually taken to itself power and influence without any legislative or executive character, but influencing the very centre, and from the very centre the very outside limits of the empire, a parliament which draws the great men, the chief men of the empire, together at stated times for the development of plans, the consideration of sentiments. Therefore it must have a tremendous effect in coming to wise decisions, in avoiding complications which otherwise would be sure to take place, and in leading in a general sense the empire along the lines of certitude and of reasonable safety. It may be that we shall never have any other imperial parliament. I cannot say. In the meantime I, for one, am content with this, and I hope that in the future as in the past, the same able contingents may form the delegates and representatives to these conferences, that the same unanimity and wisdom may

characterize their discussions and their conclusions. History not long in the future will write many pages about this new addition to the British constitution and the British system; and this history will not be written with the first pages that are made. I for my part look to it, however it may expand, gradually or more rapidly, as the one medium of the exposition of the best and strongest sentiments that prevail in the empire.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). My hon. friend has presented the observations with which he has favoured the House in the manner that he promised us at the outset, that is to say, in no partizan spirit. If he will permit me to say so, I offer him my hearty commendation. The only observation I will make is that he has presented the conclusions of the different conferences that have taken place in a very fair and accurate manner.

Motion agreed to.

NEW MEMBER.

Mr. SPEAKER informed the House that he had received from the Clerk of the House a certificate of the election and return of Duncan C. Ross, Esq., for the electoral district of West Middlesex.

MEMBER INTRODUCED.

Duncan Campbell Ross, member elect for the district of West Middlesex, introduced by Sir Wilfrid Laurier and Mr. Mackenzie King.

REPRESENTATION OF OTTAWA AND QUEBEC EAST.

Mr. JAMESON. I wish to ask the Rt. Hon. Prime Minister (Sir Wilfrid Laurier) if he has yet decided whether he will elect to sit for East Quebec or Ottawa?

Sir WILFRID LAURIER. No, I have not yet decided.

RAILWAY ACT AMENDMENT.

On the order for the second reading of Bill (No. 2) to amend the Railway Act.—Mr. Lancaster.

Mr. LANCASTER. The Minister of Railways was obliged to go away this afternoon and he asked me to allow these orders of mine to stand until to-morrow, which I am willing to do.

Order allowed to stand.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all correspondence, orders, proceedings of courts of inquiry, or other documents or papers, in connection with charges of malfeasance of office made against the officer commanding No. 5 company, Canadian Army Service Corps, or the officer second in command of this company.—Mr. Worthington.

For a return showing the total number of incubators and brooders, respectively, imported into Canada from the United States during the fiscal year ending March 31, 1909, and the total cost of each.—Mr. White.

For a return showing approximately the amount of revenue collected by the government between the 1st January, 1908, and the 1st November, 1909, in the provinces of Alberta and Saskatchewan, respectively, on account of payments for coal lands, coal royalties, bonuses and rental on timber lands, timber dues, hay lands, grazing lands, irrigation areas, school lands, minerals, water powers, stone quarrying lands, Indian lands, or on account of any natural resources within each of the above provinces.—Mr. McCarthy.

For a copy of all letters, correspondence and complaints, or other papers, from Indians or others regarding the manner in which the St. Peter's Indians have been treated, relating to lands allotted to them by the government in consideration of the surrender of the St. Peter's reserve.—Mr. Bradbury.

For a return showing the total amount paid by the government in each year since 1896, for all printing, advertising and lithographing done outside of the Government Printing Bureau; the total amount so paid by each department of the government for such purposes during each year; the names and addresses of each individual, firm or corporation to whom any such moneys have been so paid, and the total amount paid to each such individual, firm or corporation in each year since 1896. What portion of the said sums, if any, so paid since 1896 was expended after public advertisement, tender and contract, to whom such tenders were awarded, whether to the lowest tender in each case, what portion was expended otherwise than by public advertisement, tender and contract, and to whom it was paid in each instance.—Mr. Armstrong.

SUPPLY—COMMITTEE ON FORESTRY.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. FOSTER. Before the House goes into Committee of Supply, I would like to ask the hon. Minister of Agriculture (Mr. Fisher) if he has yet found the tracing that was to form a part of the report of the Committee on Forestry?

Mr. FISHER. Yes, and instructions have been given to have it reproduced so that each member will have a copy as soon as possible.

Motion agreed to, and House went into Committee of Supply.

Department Indian Affairs—salaries, $111,825.

Mr. BLAIN. I see a very large number of items for expenses in connection with

the payment of annuities to Indians. Would the minister give us a statement as to what the total amount of expenses is in connection with paying annuities to Indians?

Hon. FRANK OLIVER (Minister of the Interior). The information asked by my hon. friend is of a character that is not compiled in that form in our records and will require a general search through the records in order to procure it. I will have to ask my hon. friend for time to prepare the information that he asks.

Mr. BLAIN. Every year we pay large amounts in travelling expenses, railway fares and pullman cars to distribute this money. Could this money not be sent to the local banks, without the necessity of a special messenger and the agents pay the annuities?

Mr. OLIVER. The course suggested by my hon. friend is followed so far as possible, but in connection with the treaties in northern Ontario, northern Alberta, northern Saskatchewan, and the territory north of Manitoba, the treaty money must be carried by an officer whose duty it is to pay it out, and as he must be accompanied by a party the expense is very considerable.

Mr. BLAIN. Would the minister furnish a statement of the amount of money carried in this way and the total expense of distributing it.

Mr. OLIVER. Yes, but it will take some time to prepare.

Mr. FOSTER. Is Mr. Laird employed in the Indian Department here?

Mr. OLIVER. Yes.

Mr. FOSTER. Is he a civil servant?

Mr. OLIVER. Yes, in division A of the first division.

Roval Northwest Mounted Police—Salaries, $18,425.

Sir WILFRID LAURIER. There are no changes in the staff; the increases are simply the statutory increases.

Mr. DANIEL. Is it the intention to continue the Northwest Mounted Police at the present numerical strength?

Sir WILFRID LAURIER. This is the vote for civil government and that information would be given more properly on the vote for the Northwest Mounted Police, but I may say to my hon. friend that while we are diminishing the force in the Yukon, it is our intention to maintain the strength of the force as it is at present.

Department of Trade and Commerce—Salaries, $44,887.50.

Sir WILFRID LAURIER. There are no increases with the exception of provision for two additional clerks in subdivision B of the third division at $500 each, and the appointment of an actuary in subdivision B of the first division at $2,100. These are for the annuities branch.

Mr. FOSTER. Who is the superintendent of the branch?

Sir WILFRID LAURIER. Mr. Bastedo.

Mr. FOSTER. Who is the actuary?

Sir WILFRID LAURIER. I cannot tell my hon. friend just now.

Mr. FOSTER. Will the minister give us any reason why we should have an actuary?

Sir WILFRID LAURIER. I am sorry to say that I cannot give the information today. If my hon. friend wants it, I will let the item stand.

Mr. FOSTER. I think this annuities branch will provoke some discussion. I would like to have a full explanation in regard to it.

Item allowed to stand.

Public works chargeable to Capital—Ottawa Astronomical Observatory—additional buildings, etc., $11,000.

Hon. WM. PUGSLEY (Minister of Public Works). This is asked to make provision for the completion of the residence for the chief astronomer, also two azimuth huts in connection with the observatory, applied for by the Department of the Interior.

Mr. CROCKET. What is the total cost?

Mr. PUGSLEY. For the residence, $17,000 and for the two azimuth huts, $6,000, making a total of $23,041.49. According to the chief architect's estimate, $1,291.71 additional will be required.

Mr. DANIEL. This is just for the building, not for any furniture in it?

Mr. PUGSLEY. It includes the electric wiring and fixtures, heating and boiler, but not the furniture. I have made no provision for the furniture. I have no intimation from the Interior Department that we shall be asked to do the furnishing. I would think that would be done by the chief astronomer himself.

Mr. FOSTER. What is the building made of?

Mr. PUGSLEY. It is a brick and stone building, two stories, with a wooden attic and a concrete and stone basement. Tenders were called for, and the lowest tender was $12,300, which was accepted.

Mr. FOSTER. How comes it to be $17,000 now?

Mr. PUGSLEY. This figure of $12,300 does not include the cost of heating and boiler, electric wiring and fixtures, side-

walks, fencing, contingencies and superintendence.

Mr. CROCKET. Were tenders called for the works not covered by the contract?

Mr. PUGSLEY. No tenders have yet been called for these.

Mr. FOSTER. How much is estimated for the installation of the heating apparatus?

Mr. PUGSLEY. $1,500. Office fixtures and electric wiring $1,000, sidewalks and fencing $500, contingencies and superintendence, $1,700. According to the present practice of the department, tenders will be called for electric wiring and fixtures, also for heating and boiler.

Mr. DANIEL. That is just for the residence of the astronomer royal?

Mr. PUGSLEY. Yes, for the chief astronomer.

Mr. DANIEL. Does it usually take as much as $1,000 to establish light and fixtures in an ordinary house of that sort?

Mr. PUGSLEY. That is the amount the architect estimates.

Mr. TURRIFF. What is the total cost of the building complete?

Mr. PUGSLEY. $17,041, including everything.

Mr. FOSTER. Who made the requisition for the house?

Mr. PUGSLEY. The Minister of the Interior.

Mr. TURRIFF. I do not intend to criticise the expenditure on that particular house because it is not very much out of the way, but I want to point out that very expensive buildings appear to have been put up for officers in connection with the Militia Department. There is not a minister living in a house which cost as much money as that, if you leave the site out of consideration. It would be well to go a little easier in expending public money on houses for government officials.

Mr. CROCKET. Is this a new departure?

Mr. PUGSLEY. It is a special case and was fully explained last session. The chief astronomer is required to live close to the observatory, and there was no building close by that could be obtained.

Mr. FOSTER. What is his salary?

Mr. PUGSLEY. I do not know. That is in the Interior Department.

Mr. SPROULE. Surely it is not intended that this will not be furnished for the astronomer.

Mr. PUGSLEY. I do not see why we should furnish it.

Mr. SPROULE. Take the experimental farm, are not the residences there furnished? And if they are, will not the chief astronomer expect the same treatment as other officials have received?

Mr. PUGSLEY. The argument my hon. friend is urging in favour of furnishing it will be carefully considered; but as at present advised, I am not disposed to furnish it.

Mr. SPROULE. I am not furnishing any argument. If the hon. minister chooses to be facetious, he should have some better grounds. I was asking for information which he is here to give. I wanted to know if he would not be called on to furnish that residence, and he did not give a definite answer.

Mr. PUGSLEY. My present view is not to furnish it. I did not intend to be facetious, but I understood my hon. friend to urge that the astronomer was as much entitled to have his house furnished as the officers at the experimental farm. If he did not intend to say that, I regret that I misunderstood him. I have informed the committee that I have not been asked to furnish the residence and see no reason why I should furnish it.

Mr. SPROULE. It was the hon. gentleman's indefinite answer which induced me to ask a further question. He said he was not aware the house was to be furnished, and I think it desirable that we should have now definitely the intention of the government, whether to furnish it or not.

Mr. PUGSLEY. I thought I was as definite as I could be. The question of furnishing has not been brought before me and I do not see why the department should furnish it.

Mr. BLAIN. Did the hon. minister not say to the committee last year that the government did not intend to furnish the house?

Mr. PUGSLEY. I do not remember.

Mr. BOYCE. Were the estimates for this house prepared under the instructions of the minister?

Mr. PUGSLEY. They were prepared by the chief architect in the usual way. There were no special instructions as to the exact form or detail.

Mr. BOYCE. Last session the minister got into a rather penitent frame of mind with regard to expenditure. I have recollections of his saying, almost with tears, that he was obliged to cut down some of the estimates for Public Works in order to keep them well within the revenue, which then was not as bounding as he would have liked to see it. It does seem now rather extraordinary that as high as $17,000 should be expended on a house for the astronomer. It is rather contradictory to find that the hon. minister, while deprecating extravagance, should agree to build so extravagant a house for a public servant. No doubt by the time it is completed it will cost $20,000 and possibly more.

Mr. FOSTER. I am surprised at the mildness of the criticism by the hon. member for Assiniboia (Mr. Turriff) but I was still more surprised that he should have given expression to any criticism. If we just had about once a week some gentleman on that side, who knows just as well as men on this side, who would get up and condemn these extravagancies, even as mildly as my hon. friend has done, we would have a change that would save the country millions of dollars. I invite my hon. friend to do this thing oftener and more strongly, and he will find that he will do his country extraordinary good service. This expenditure is simply outrageous. There is no possible justification for it. I go into the homes of people all through this city and find gentlemen and their families living in good homes, which cost from eight to ten thousand dollars and many less. What reason is there that this official should have a $20,000 house built for him by the government. He would not build such a house for himself. The minister says he is not going to furnish this house, but is the disposal of that in his own hands? He was simply asked by the Minister of the Interior to build this residence. I do not know whether responsibility for the extravagant sum rests on the Minister of the Interior or the Minister of Public Works and his department but the sum is extravagant. Is it the intention of the government to furnish the house?

Mr. PUGSLEY. It is not the intention to furnish the house. In saying that, I am speaking for the government. I do not quite agree with my hon. friend as to the price at which suitable residences can be purchased in Ottawa. I looked around with a view to purchasing a residence, and although I am not extravagant in my tastes, I did not find that I could get a fairly good residence for less than $20,000, and the result has been that I have not felt myself able to purchase a residence so far in the city of Ottawa and I am living in somewhat humble apartments. A fairly good residence ranges from $15,000 to $30,000, some of them more than that. The chief astronomer is a high official of the government, and it having been decided to erect a residence for him, close to the observatory, it does not seem unreasonable that he should be given a residence suitable to the position which he occupies, and a residence of such style as he would be likely to live in if he were permitted to reside in the city of Ottawa.

Mr. BOYCE. What is the salary of the chief astronomer?

Mr. PUGSLEY. That rests with the Interior Department, and is to be found in the Auditor General's Report.

Mr. BOYCE. I understand the salary is $3,000. Is he to pay any rental?

Mr. PUGSLEY. No.

Mr. CROCKET. Was his salary increased in the general increases last year?

Mr. PUGSLEY. Unless he had reached the maximum of his class, I presume the increase would apply to him.

Mr. CROCKET. Has an estimate of the rental value of the property been made?

Mr. PUGSLEY. No, but it could be easily figured, I suppose, at six per cent on the cost.

Mr. CROCKET. So it amounts to another increase to his salary? I was amused at the minister's statement that he was not extravagant in his tastes. Of course, all we have to judge by is the minister's use of the public moneys of the country. I may call the attention of the House to the fact that on one occasion it cost the government $600 to maintain the minister here at Ottawa for one week.

Mr. PUGSLEY. One cannot help admiring the fertile imagination of my hon. friend. If his ability to present the facts were as great as his ability to draw on his imagination he certainly would be a wonderful man.

Mr. CROCKET. I may say that I am not drawing on my imagination at all. I have the documents at hand, and I can turn them up very readily, which will fully substantiate the statement I made that on one occasion he charged the province of New Brunswick $600, if it was not $800, as travelling expenses on a trip to Ottawa which did not extend beyond one week.

Mr. BOYCE. What would be the ordinary rental for a residence of this description?

Mr. PUGSLEY. I am not a very good judge of rentals in Ottawa, but I would suppose $1,000 a year would be a fair rental.

Mr. GEO. TAYLOR. Would that amount to six per cent?

Mr. PUGSLEY. Very close to that.

Mr. GEO. TAYLOR. The minister considers six per cent a fair rate for the owners of property to get?

Mr. PUGSLEY. On a brick and stone building, where the wear and tear is not very great, yes.

Mr. GEO. TAYLOR. It is on that basis that the government pays rent on property throughout the city for their own use?

Mr. PUGSLEY. We do not rent on that basis, we rent by the superficial foot.

Mr. GEO. TAYLOR. Does that amount to more than six per cent on the value of the property?

Mr. PUGSLEY. I am not able to tell my hon. friend as to that.

Mr. GEO. TAYLOR. But six per cent on the value of the property would, in the minister's opinion, be a fair value?

Mr. PUGSLEY. All I can say is that in my own city of St. John we consider six per cent rental on a stone or brick building as a very fair return.

Mr. BOYCE. Net rental?

Mr. PUGSLEY. No, gross rental.

Mr. BOYCE. What would be the value of the site?

Mr. PUGSLEY. We are building it upon government land. I am not able to say what the value of the site would be.

Mr. FOSTER. The minister ought not to go to St. John when we are talking of rental values in Ottawa. The minister gave a statement of a fair value in Ottawa.

Mr. PUGSLEY. I think six per cent.

Mr. FOSTER. Six per cent would be a good rental?

Mr. PUGSLEY. That is what I would suppose.

Mr. FOSTER. What arrangement has been made as to this gentleman's salary? He gets a certain salary which we have voted to him. If we are to supply him with a house worth $1,000 to $1,200, then he is getting an increase in his salary of that amount. The whole thing is unfair, and we should have a full statement. Other officers of the same class do not receive these houses. It is not fair treatment as between man and man.

Mr. PUGSLEY. I may say frankly that my understanding is that the chief astronomer will be furnished the use of this residence free in addition to his salary.

Mr. GOODEVE. Is it the intention to supply him with fuel and light for this residence?

Mr. PUGSLEY. He will have to pay for his own light and fuel.

Mr. HENDERSON. I understand the minister to say that he did not fix the value of this residence, that that was determined by the architect. That seems an odd way of disposing of the public moneys for the minister to absolve himself entirely as to the amount of money to be expended on any particular undertaking. Cases of this kind have come up repeatedly where architects have been instructed to erect buildings without instructions as to the cost. One notable example of that was in the case of the post office at Winnipeg, where the then Minister of Public Works stated distinctly in the House that he was not responsible for the character of the building, that he gave the architect carte blanche, and if there was anything wrong in the construction of the building the government was not to be held responsible for it, the department was not to be held responsible, the minister was not to be held responsible. If a mistake was made it was simply the mistake of an officer of the government. I distinctly understood the minister to say here that the architect had fixed the character of this building and consequently the cost of it. Now it does seem a strange thing that a minister presiding over a department should hand over to an officer of that department, who is not responsible to the people of this country, the control of the money to be expended in the erection of that building. I think the minister when he instructed the architect to go on and prepare plans and specifications for a building, should have limited him to a particular sum, say $10,000 or $12,000, and then let the architect work out a plan of a building where the cost would not exceed that sum. In that way the minister would hold some control over the expenditure of the country. But according to the plan that I understand is adopted, the head of the department practically has no control over the expenditure, neither has the House. We

are supposed to watch the expenditure of the country, but it turns out that it is an officer of the government in no way responsible to the people, a man who can do just as he pleases. We vote him his salary, and he determines what the cost of a public building shall be, he controls the expenditure of the country, and the House or the minister practically has nothing to say in the matter. I say the whole principle is wrong, and the sooner some other plan is adopted the better. If we are going to have an economical administration of the affairs of this country the minister himself should keep control of that expenditure, by giving more full directions to his officer as to what amount of money is to be expended on any particular undertaking. Now I think my statements are properly put, because I distinctly understood the minister to say that the architect alone was responsible for the cost of that building, that he determined the character of the building.

Mr. PUGSLEY. I do not remember saying anything of the kind.

Mr. HENDERSON. I think 'Hansard' will report the minister as having made that statement. If I misunderstood the minister—I did not intend to make an unfair statement.

Mr. PUGSLEY. What I said in answer to the hon. member for Algoma, was that the details of the building were prepared by the chief architect. But I certainly did not intend to say that I gave up the absolute control of the cost of the building to him. What took place would be this: I would confer with him as to what kind of a building, in a general way, should be erected. His directions were to prepare plans for a building that would be a suitable residence, not a flimsy residence, but a building reasonably fire proof, reasonably substantial in its character, and suitable for a gentleman occupying the position that Dr. King occupies as chief astronomer.

Mr. HENDERSON. I do not know that the hon. minister has made the matter much better in his latter statement. I do not think he has shown the House that he in any way restricted the architect as to the cost of this building. He has not told us that he directed him to construct a building that would cost any specific sum. Perhaps the minister will tell us if he did limit him in any way beyond the general way to which he has referred. We all know the disposition of architects to erect buildings of this kind on an elaborate scale. I remember years ago when the Hon. Mr. Tarte, then Minister of Public Works, determined to erect a number of post offices throughout the country on what might be called a cheaper scale, with the idea that smaller towns and villages throughout the country might obtain a public building at not a very large cost. I had year after year advocated in towns ranging from 1,500 to 2,000 population, the erection of post office buildings at a cost of about $6,000. I was supported on both sides in that contention. It was stated in the House that such could be done. After one or two years advocacy of a plan of that kind, in order that small towns and villages could participate in the public expenditure and get the advantage of a public building, the Hon. Mr. Tarte determined to try the plan. I was told in the case of the Clinton post office, the first one that the minister determined to erect on the plan we had spoken of, that when he found the cost running up, instead of to $6,000, to $15,000, the architect had said that he would not draw a plan of a building to cost less than $10,000. It was no matter what the minister wanted, the minister was only a side show in the matter, the architect was the man that decided what the cost of the building should be. I fear that has been the case in these expenditures, that the architect has been given a free hand, that he wanted to put up a building according to his own fancy, according to his own ideas, without regard to how the public money should be spent, and that he has erected this $17,000 building when, possibly, if the minister's better judgment had been exercised, and if the minister had controlled him along the lines that he says he believes in, a building quite suitable for the astronomer could have been erected at a cost of not more than $10,000 or $12,000. What I wish to draw to the minister's attention is that I think in every instance of the erection of a public building, he should restrict the architect to the ultimate cost, and if the architect is not able to draw plans and specifications of a building to come within the measure of the capacity of the country's finances, then some other man should be put in his place who would be willing and able to do so. There is a principle involved, and if we are going to see that the finances of this country are carefully conserved, then I think the minister should in all cases control this expenditure in some such manner as I have indicated. I had occasion in bygone years to refer to this matter time and again. I remember when the Hon. Mr. Sutherland was Minister of Public Works. In speaking with reference to a public building in London I explained to him what I thought should be the principle upon which he should proceed, that he should tell the architect exactly the amount of money he wanted to expend on that building, and then limit him to that expenditure, compel him to keep within that amount, and in that way he would have a control of the ex-

penditure of the country. The Hon. Mr. Sutherland, a very genial man, a man who never liked to quarrel with anybody in the House, found it always the easiest way to get his estimates through was to agree with those who were criticising them. He answered me by saying that he thought I was right, he thought that was the proper plan, and in fact gave us to understand that in future he was going to adopt that course. I am sorry to say that what was approved by the Hon. Mr. Sutherland when he was Minister of Public Works has not been carried out by his successor. I think the minister should weigh this matter well and put a firm hand upon the expenditure of the country, keeping control of that expenditure himself, and then we will certainly know who is to blame if we think too much is being expended in the erection of any building.

Mr. BURRELL. In this discussion the chief astronomer, whom I have not the pleasure of knowing, is almost put in the position of being the party who was blameable for the action which the government has taken. I should think there should be a fair line of division drawn as between the chief astronomer and the government We have been accustomed to think of people associated with scientific pursuits as being men of scientific minds given to plain living and high thinking, and here the government is trying to force upon a gentleman of simple tastes a wildly extravagant house perhaps contrary to his wishes and beyond his ability to maintain. They are not only putting upon a $3,000 civil servant a $20,000 house, but they are practically saying, according to the advising of the Minister of Public Works, that he will not only have to furnish it but that he will have to furnish his own fuel and light. It is tantamount to saying to a gentleman who is drawing $3,000 a year: You will have to give $2,000 a year in heating and warming yourself if we make you a present of this white elephant. It seems to me up to us on our side to take into consideration the view of the chief astronomer that he may not want a house of these regal dimensions. I suggest that his views be ascertained before he is called upon to pay these extravagant prices for furnishing, heating and lighting and not have forced upon him by the government this riotous and extravagant style of living which may not be in harmony with his own wishes.

Mr. ARMSTRONG. The minister has not definitely stated whether he places any limit upon buildings which are erected or whether he placed any limit upon this building.

Mr. PUGSLEY. I think it will be found that the amount which I stated to parliament when this vote was first asked for will not be materially exceeded. I think I then stated what would be the character of the house that it was proposed to build and what would be the cost. I may say that the residence is not of an extravagant character. The foundation is of concrete, it is a two story brick building and is to have a wooden attic. The design is very good. The house is somewhat large but still it is not what would be called an extravagant house.

Mr. CROCKET. What are the dimensions?

Mr. PUGSLEY. 47 x 41. The basement partitions are of brick, it is a very substantial house and will be pretty nearly fireproof. I think it is desirable that all these buildings should be built in a substantial manner. It is desirable that they should be reasonably fireproof because the government is its own insurer. We have a great many buildings, we do not insure, and we try, as far as possible, to erect buildings of such character that the danger from fire will be as little as possible.

Mr. ARMSTRONG. Was the work let by tender?

Mr. PUGSLEY. Yes, five tenders were received and the contract was awarded to Messrs. Doran & Devlin, of Ottawa, for $12,300. An hon. gentleman spoke of this as a $20,000 house. It does not amount to that. The contract was for $12,300 and then there is an additional amount for heating and boilers, electric wiring and fixtures, sidewalk in front of the house, fencing, contingencies and superintendence, making a total of $17,000.

Mr. DANIEL. I do not quite understand these items. The item under discussion refers to this building that I understand the minister is erecting for the astronomer royal.

Mr. PUGSLEY. I did not say astronomer royal. I said chief astronomer.

Mr. DANIEL. Oh, chief astronomer. I see that there is $14,000 down for 1909-10 and $11,000 for 1910-11 which makes $25,000. Then, I think the minister stated that there was $1,200 in addition not included so that that would be $26,200. Does that refer entirely to this building, or does it refer to other buildings?

Mr. PUGSLEY. It includes two azimuth huts.

Mr. FOSTER. Is azimuth a building material?

Mr. PUGSLEY. No, that is the name of the building.

Mr. LANCASTER. Why do you not get an easier one?

Mr. SPROULE. Does the chief astronomer take the rank of a deputy minister or does he rank as a technical officer?

Mr. OLIVER. The chief astronomer does not hold the rank of a deputy minister. He is at the head of a branch.

Mr. SPROULE. Is there any specific salary provided under the Civil Service Act for that class of office, and if so, what is it?

Mr. OLIVER. The chief astronomer is in the highest division next the deputy minister.

Mr. SPROULE. What salary does that division command?

Mr. OLIVER. From $2,800 to $4,000. It is in class A of the first division.

Mr. SPROULE. How do you justify the provision of a house for this officer and the refusal of the same to another who is in an equally high class or in a higher class?

Mr. OLIVER. As the Department of Interior is responsible for the salary of the astronomer and also for this request, I may be privileged to answer. The most important work of the astronomer necessarily is done at the observatory and at night. That being the case it is considered to tend both to economy and efficiency that he should reside at his place of work. The condition is not paralleled in the case of any other officer of the Department of the Interior, and it is not with the view of giving the astronomer an advantage over any other officer of the department, but merely of putting him in a position whereby he can give the best and most work for the salary that he receives that this residence is being provided. It is not with a view of favouring the chief astronomer over any other officer, but merely to put him in a position whereby he can do the best and most work for his salary.

Mr. ARMSTRONG. The chief astronomer receives a salary of $3,000 which will gradually go up to $4,000, and the Minister of Public Works tells us that this house will be worth an additional thousand a year to him. Does not the Minister of the Interior see that if the reasons given by him are sound, then the three assistants should also be supplied with houses?

Mr. MEIGHEN. Are we to understand that these asimuth huts are to cost $6,000?

Mr. PUGSLEY. They will cost $6,000.

Mr. MEIGHEN. What is their purpose?

Mr. PUGSLEY. They are intended for the purpose of testing the steel tapes, a work which is essential in connection with the observatory, and considering the size of the building and the manner in which it is to be built, $6,000 does not appear to be out of the way.

Mr. LANCASTER. Why do you call them huts? Is it because they are only one story and will cost $6,000?

Mr. PUGSLEY. It is the technical name by which they are known. The building is only one story but it is 177 feet long.

Mr. MEIGHEN. I beg to move that this item be reduced by $5,000, the reduction to apply to the astronomer's residence.

Mr. OLIVER. Well, Mr. Chairman, with respect to that matter——

Some hon. MEMBERS. Vote.

Mr. FOSTER. You are obstructing now.

Mr. OLIVER. I am not obstructing. As my department is responsible for the request to build this residence, I may be permitted to say something.

Mr. GEO. TAYLOR. Let us vote.

Mr. OLIVER. The matter has been under consideration for some years and it would appear that there is just as much necessity for the residence of the chief astronomer to be convenient to the observatory as there is to have an observatory at all. My hon. friend (Mr. Armstrong) has asked why residences should not be built for the assistant astronomers; but that is not a fair comparison. The time and talent of the gentleman who has charge of the responsibility of making astronomical investigations may be of much more value than the time and talent of his assistants. Therefore it is advisable from every point of view that his time should be conserved as thoroughly as possible.

Mr. LANCASTER. Would not that apply to his assistants as well?

Mr. OLIVER. I do not understand my hon. friend's point of view. If a gentleman is placed in charge of a certain work and receives a salary proportionate to his responsibility, it is presumed that he is burdened with the responsibility and receives the salary because his talent is greater, and therefore his time is more valuable than that of his assistants.

Mr. J. D. REID. Is the minister trying to argue for a $20,000 house for this astronomer?

Mr. OLIVER. No, I understand that I am trying to argue for a $17,000 house lo-

cated convenient to the observatory, and that this is not an improper expenditure of public money, but on the contrary——

Mr. DEPUTY SPEAKER. I am afraid I cannot allow the committee to continue work after 6 o'clock.

Mr. FIELDING. I think it would be convenient to have the usual motion that the committee rise, report progress, and ask leave to sit again, and I would ask my hon. friend opposite to withdraw his motion in order that I may make the usual motion, and he can renew his motion on a future occasion.

Motion of Mr. Meighen withdrawn.

Item allowed to stand.

Some resolutions reported.

House adjourned at 6 p.m.

HOUSE OF COMMONS.

THURSDAY, November 25, 1909.

The SPEAKER took the Chair at Three o'clock.

PROPORTIONAL REPRESENTATION.

Sir WILFRID LAURIER moved:

That the committee ordered by this House on the subject of proportional representation be composed of Hon. W. L. Mackenzie King, and Messrs. Monk, Turcotte (Quebec County), Burrell, Magrath, Wilson (Laval), and Kyte.

Motion agreed to.

INSPECTION AND SALE ACT AMENDMENT.

Hon. SYDNEY FISHER (Minister of Agriculture) moved for leave to introduce Bill (No. 40) to amend the Inspection and Sale Act.

Mr. SPROULE. Explain.

Mr. FISHER. This is a Bill which has been handed to me by the Minister of Trade and Commerce as it comes under his administration. It involves an amendment by which the words 'no cargo' and 'cargo or cargoes' are struck out. The effect of this is to provide that the weighing of cargoes shall not be continued. They have found it impracticable after a year or two of trial and they desire it to cease. The second clause in the Bill is simply to give representation to Alberta and Saskatchewan upon the grain survey board. The third clause is to correct a mistake by which this Act was put under the control and administration of the Department of Trade and Commerce instead of the Department of Inland Revenue. The last clause defines the weight of a barrel of potatoes when potatoes are sold by the barrel.

Motion agreed to, and Bill read the first time.

CRIMINAL CODE AMENDMENT—COPYRIGHT.

Mr. H. LENNOX (South Simcoe) moved for leave to introduce Bill (No. 41) to amend the Criminal Code.

Sir WILFRID LAURIER. Explain, please.

Mr. LENNOX. Briefly, this Bill is intended to protect the owners of copyrights. It has been frequently said in this House and in Canada that our copyright law is defective, but it will be sufficient for me to say that last session, when the Minister of Justice was amending the Criminal Code, I presented an amendment in the form that the Bill now takes. The Minister of Justice took time to consider the matter and the Minister of Agriculture who was also interested was in the House. The amendment passed this House unanimously but it was rejected with other amendments re musical compositions by the Minister of Justice by the Senate. I, therefore, beg leave to introduce this amendment to the law.

Mr. FISHER. Is this amendment with regard to copyright in music?

Mr. LENNOX. No, the amendment with reference to music was introduced by the Minister of Justice. The amendment I propose is to protect the owners of dramatic copyrights.

Motion agreed to, and Bill read the first time.

QUESTIONS.

SALE OF WATER LOTS AT QUEBEC.

Mr. MONK:

1. Are the two water lots on the St. Charles river situate in front cadastral lots Nos. 582A and 583B, of the parish of St. Roch, in the county of Quebec, the property of the Quebec Harbour Commissioners, under the statutes governing that body?

2. Have the said two water lots above described, been sold by the Quebec government

to private individuals within the past four years? If so, to what persons have the said lots been sold, and for what price?

3. Who are to-day the registered owners of said two water lots, and in what proportion for each person?

4. What is the superficial area of said water lots, in arpents and in foot measure?

5. Has the conveyance of said water lots been ratified by the Governor General in Council pursuant to paragraph 2 of article 20 of chapter 34, of 62-63 Victoria?

Sir WILFRID LAURIER. Stand.

Mr. MONK. This question was put on the 12th November. One of the questions could have been answered on that very day. I was told that the question had been referred to Quebec for information on the 12th. It seems to me that the delay is unduly long unless a messenger has been sent down to Quebec on foot to get the information.

Mr. BRODEUR. We have not in the department any information in regard to it. Just to please my hon. friend (Mr. Monk) we wrote to the harbour commissioners in Quebec asking them whether they could supply us with the information. We have not received that information from them so far. I am very sorry I cannot give any information to my hon. friend.

Mr. MONK. This is a body that is under the control of the government.

Sir WILFRID LAURIER. Order.

Mr. SPEAKER. The hon. gentleman cannot discuss it at this point.

REPORTED EMIGRATION TO UNITED STATES.

Mr. GEO. TAYLOR:

1. Is the government aware that Col Van Sant, American Consul at Kingston, Ontario, has made the following report to his government:—

Kingston, November 18—(Special)—Col Van Sant, American Consul for this district, in a report to his government, states that this city during nine months ended September 30, has lost nearly 800 of its population through its citizens emigrating to the United States. He bases his calculations on the fact that during the nine months 110 invoices for emigrants effects were issued at Kingston and continues:

As each settler's effects' certificate usually represents a family averaging four, the gain in population to the United States for the past nine months from this city and vicinity will reach 400. Add to this number moving to the States without household effects, and the loss to Kingston would be nearly double, or 800. This condition largely prevails in other towns and cities of eastern Ontario.

2. If so, what action does the government intend to take to put a stop to such emigration from Canada to the United States?

Hon. F. OLIVER:

1. The government has no information on the subject, beyond the statement referred to, appearing in the public press.

2. Inquiry will be made as to the facts.

I would like to add the contents of a telegram which has been received from Kingston as follows:

Consul Van Sant says press statement that 800 people from Kingston have emigrated to United States this year is false.

INTEREST ON PRE-EMPTION PAYMENTS.

Mr. LAKE:

1. Is the government calling upon all persons who hold receipts for pre-emption fees to pay interest at rate of 5 per cent on the amount payable for their pre-emption at the close of each year from the date of their receipt?

2. Was specific notice given to applicants for pre-emption at the time they made their entries, or subsequently, that they would be called upon to pay interest at the expiration of every twelve months?

3. Does the government consider that the average entrant for a pre-emption is likely to be in a position to pay the annual interest of $24 per annum for the outset, and does it intend to insist upon such payment? If so, what means does it propose to take to enforce the payments?

Mr. OLIVER:

1. Yes.

2. No, it was not necessary to give such specific notice as the statute provides that interest shall be payable at the rate of five per cent per annum at the end of each year from the date of entry.

3. When an application is made for a pre-emption entry it must necessarily be presumed that the entrant will be in a position to carry out all the conditions prescribed by the statute in that behalf. His failure to do so renders his entry liable to cancellation.

SALE OF SCHOOL LAND AT REGINA.

Mr. W. H. SHARPE:

1. What amount of school land was sold at the last sale at Regina, Saskatchewan?

2. What amount was spent in advertising this sale, and where and how was it spent?

3 Who was the auctioneer and what is his address?

4. What amount was he paid for his services?

5. Who were the purchasers of the land sold, and what prices were paid?

6. How much land has the government sold to the Saskatoon and Western Land Company, and at what prices?

Mr. OLIVER:

1. The area of school lands disposed of at the last auction sale at Regina, May 20, 1903, was 46,940·99 acres, and the price realized was $457,324.42, being an average of $9.74 per acre.

2. The cost of advertising this sale cannot be given separately, as the advertisements and posters covered the following sales held in the month of May, 1903, namely: Regina, Moosejaw, Qu'Appelle, Wolseley, Whitewood, Moosomin, Carlyle, Carnduff, Alameda, and Yellow Grass, at which sales 136,002·24 acres were sold for $1,306,091.92.

The total cost of advertising and printing in connection with the above sales was $997.17. Of this sum $498.97 was in payment for the advertisements in the following newspapers, as approved by the King's Printer, namely:

Qu'Appelle 'Progress'	$ 46 20
Regina 'Leader'	46 20
Indian Head 'Prairie Witness'	46 20
Moosomin 'Spectator'	46 20
Yorkton 'Enterprise'	40 04
Regina 'Standard'	46 20
Wolseley 'News'	46 20
Regina 'Rundschau'	44 66
Brandon 'Western Publishing Company'	46 20
Winnipeg 'Free Press'	40 05
Arcola 'Moose Mountain Star'	27 72
Winnipeg 'Der Nordwesten'	23 10
Total	$498 97

The balance of $498.20 was for the printing of the sales list and posters by the Printing Bureau.

3. Mr. W. B. Underhill, of Melita, Manitoba, now deceased.

4. $800. This amount covers his services for the sales before-mentioned, all of which were conducted by him.

5. The names of the purchasers at the Regina sale and the prices paid are shown on the accompanying list.

6. No school lands have been purchased from the government by the company mentioned.

SCHEDULE of School Lands sold by public auction at Regina, on May 20, 1903.

DR. McCONNELL, OF MORDEN.

Mr. W. H. SHARPE:

1. Is Dr. McConnell, of Morden, Manitoba, in the employ of the government in any way?
2. Has he been employed by the government during the past five years? If so, how much money has he drawn each year?

Mr. OLIVER:

As far as the Department of the Interior is concerned:

1. No.
2. No.

Hon. SYDNEY FISHER. So far as the Department of Agriculture is concerned, no.

DR. ARMSTRONG, OF GLADSTONE.

Mr. W. H. SHARPE:

1. Is Dr. Armstrong, of Gladstone, Manitoba, in the employ of the government in any way?
2. Has he been employed by the government during the past five years? If so, how much money has he drawn each year?

Mr. OLIVER:

So far as the Department of Indian Affairs is concerned:

1. Yes, as medical officer to the Indians of Manitowapah agency.
2. Yes. 1904-05, $11; 1905-06, $27; 1906-07, $56; 1907-08, $169; 1908-09, $97.50.

As far as the Department of the Interior is concerned:

1. No.
2. Yes. 1905-06, Nil; 1906-07, Nil; 1907-08, $37; 1908-09, Nil; 1909-10, $19.

WRECKING PLANTS.

Mr. MARSHALL:

1. From what persons or corporations have tenders been received for the establishment or maintenance of any wrecking plant, whether on the Pacific or Atlantic coasts or in the River or Gulf of St. Lawrence, and what was the subsidy in each case?

Hon. L. P. BRODEUR:

Tenders for the maintenance of a wrecking plant on the Atlantic coast were received from the following: Dominion Coal Co., Glace Bay, N.S.; St. Lawrence Floating and Wrecking Co., of Montreal, P.Q.; Maritime Newfoundland Shipping Co., of Halifax, N.S.; J. E. Moore, St. John, N.B.; Messrs. Larder Bros., North Sydney, N.S.; William Leslie, Kingston, Ont.; J. A. Farquhart, Halifax, N.S.

Only one tender was received for the maintenance of a wrecking plant on the Pacific caost. This tender was from the British Columbia Salvage Company.

In the year 1901, an agreement was entered into with Messrs. Geo. T. Davie & Son to maintain a wrecking plant in the River and Gulf of St. Lawrence.

The subsidy granted for maintaining a wrecking plant on the Atlantic and Pacific coasts and on the River St. Lawrence is $10,000 per annum in each case.

SHIPPING STATISTICS.

Mr. SINCLAIR:

1. Distinguishing between sail and steam, how many tons of shipping were added to the Canadian register during the year ending 31st March, 1909?

2. How many tons of shipping were removed from the said register during the year ending 31st March, 1909, by loss of the ships so removed, and by transfer to the shipping register of some other colony or country, respectively?

Mr. BRODEUR:

The statistical year as regards registration of shipping is defined in section 31, chapter 113, of the Revised Statutes of Canada, 1906, to be the calendar year. Statistics to the end of the fiscal year are not kept in the department. The figures given are therefore for the last statistical period, viz., the year ending December 31, 1908.

1.

	Vessels.	Tons.
Steam	162	16,303
Sail	180	23,448
Total	342	39,751

2.

	Vessels.	Tons.
Sold foreigners	12	6,080
Wrecked	33	4,601
Stranded	9	2,115
Lost	16	2,684
Broken up	126	7,331
Abandoned	6	3,178
Collisions	2	512
Missing	4	374
Registry surrendered	1	5
Foundered	5	410
Burnt	17	1,653
Condemned	6	1,475
Transferred St. John's, Nfld	14	2,964
Transferred Barbados	13	3,095
Out of existence	17	667
Total	281	37,144

GRAIN TRADE, 1908.

Mr. ARTHURS:

1. What quantity of grain was received during the season of 1908 at the following points: Depot Harbour, Midland, Tiffin, Collingwood, Owen Sound and Goderich?

2. What quantity of grain was shipped from Port Arthur and from Fort William to Canadian ports and to American ports, respectively?

3. How much grain was transhipped at Kingston and Prescott during 1908?

4. What quantity of grain was received at the Port of Montreal during 1908, from Port Arthur and Fort William by water from American ports?

Sir WILFRID LAURIER (for Minister of Trade and Commerce):

	Bushels.
1. Depot Harbour	2,624,622
Midland	1,849,851
Tiffin	8,440,136
Collingwood	1,082,634
Owen Sound	3,245,549
Goderich	7,769,343
2. To Canadian ports	48,319,113
To American ports	19,875,187
3. At Kingston	13,922,525
At Prescott	2,120,000
4. From Fort William and Port Arthur	19,157,905
From American ports	11,613,416

AIR NAVIGATION.

Mr. T. CHISHOLM:

Has the government given to Messrs. McCurdy, Baldwin or Dr. Graham Bell any financial or other aid to encourage them in their efforts to navigate the air?

Sir FREDERICK BORDEN. The Department of Militia and Defence placed the Petewawa camp grounds at the disposal of Messrs. McCurdy and Baldwin during the past summer, for the purpose of carrying out trials with their aerodromes, and lent the services of one or two engineer officers and men to assist them when required.

The Department also erected a shed for the temporary housing of Messrs. McCurdy and Baldwin's machines while at Petewawa.

No financial assistance was given.

TRENT VALLEY CANAL.

Mr. OWEN:

1. What is the estimated cost of sections, 1, 2, 3, 5 and 7 on the Trent Valley Canal when completed?

2. How much money has been expended on each of these sections up to November 1, this year?

Hon. GEO. P. GRAHAM:

1. Superintending engineer's estimates for the following sections, of the Ontario-Rice Lake Division of the Trent Valley Canal, are as follows, viz.:

Section No. 1	$1,074,313 00
Section No. 2	733,482 00
Section No. 3	304,196 00
Section No. 5	527,239 00
Section No. 7	458,227 00

2. The expenditure on the different sections on contract work, is as follows:

Section No. 1—	
Larkin & Sangster	$472,940 00
Section No. 2—	
Dennon & Rogers	126,830 00
Section No. 3—	
Canadian General Development Co.	149,030 00
Section No. 5—	
Brown & Aylmer	288,290 00
Section No. 7—	
Randolph McDonald Co.	20,940 00
	1,058,030 00
Cement on above sections	136,987 50
	1,195,017 50

VETERAN LAND GRANTS.

Mr. DANIEL:

How many land grants have been taken up by veterans, and how many assignments approved?

Mr. OLIVER. 433 land grants have been taken up by veterans up to the latest returns from the various Land Agencies of the department.

2,588 assignments have been approved.

POSTAL SERVICE.

Mr. S. SHARPE:

1. In what constituencies were the following post offices established, viz: Cedar Croft, Kawartha Park, Midlothian Wharf, Ojibway Island and Rigaud sur le Lac?

2. What is the number of persons that the department estimate is being served by each of these post offices?

Sir WILFRID LAURIER: (for the Postmaster General):

Cedar Croft, in Parry Sound, Ont. Population served—15 families with cottages and 75 boarders.

Kawartha Park, in Peterborough, W.R., Ont. Population served—A boarding house accommodating 25 guests, 15 cottages with from 75 to 100 occupants; also several new cottages, together with the Y.M.C.A. camp of Peterborough, and other camps in the vicinity.

Midlothian Wharf, in Parry Sound, Ont. Population served—A number of summer cottages, 8 families and about 50 single people.

Ojibway Island, in Parry Sound, Ont. Population served—25 families and 100 single people.

Rigaud sur le Lac, in Vaudreuil, Que. Population served—30 to 40 families.

NATIONAL TRANSCONTINENTAL RAILWAY.

Hon. GEORGE P. GRAHAM. Mr. Speaker, I wish to make an addition to the answers given yesterday to question No. 19, asked by my hon. friend from South Simcoe (Mr. Lennox). By some error, a portion of the answer to paragraph 4 was detached, and it is as follows:—

4. Grand Trunk Pacific Railway Company, about fifteen months beyond fixed date. Contract covers from city of Moncton westerly for about 50 miles.

The John W. McManus Company, Limited, about sixteen months beyond fixed date. Contract covers from Chipman easterly a distance of about 8 miles.

Lyons & White, about fifteen months beyond fixed date. Contract covers from near Grand Falls westerly, a distance of about 62 miles.

M. P. & J. T. Davis, about three months beyond fixed date. Contract covers from Quebec bridge easterly for about 150 miles.

THE APPROACH TO THE HOUSE OF COMMONS.

Mr. GEO. TAYLOR. Before the orders of the day are called, might I draw the attention of the Minister of Public Works to the fact that during the last two sessions on the approach of winter, cocoa matting was laid on the steps leading to the parliament buildings. The painted boards now on the steps are slipperv and dangerous, and I would recommend the minister to have the matting laid down at once.

Mr. PUGSLEY. I shall be glad to give the matter attention.

NATIONAL TRANSCONTINENTAL RAILWAY—RESIGNATION OF MR. LUMSDEN.

Mr. R. L. BORDEN. I would like to ask the Prime Minister whether there is any document to be added to those brought down in connection with the resignation of Mr. Lumsden.

Sir WILFRID LAURIER. My hon. friend suggested that there was some correspondence from Mr. Lumsden to me and a letter from me to him. I asked my secretary to look for this letter, and he has not found it yet.

RAILWAY ACT—AMENDMENTS.

Mr. E. A. LANCASTER (Lincoln) moved second reading of Bill (No. 2) to amend the Railway Act. He said: this Bill, as I explained briefly in introducing it, is I think required by virtue of an unanimous decision of the Ontario Court of Appeals, given in a well-considered judgment, placing a construction on section 340 of the Railway Act as it at present stands. That is a section dealing, not with the question whether a railway company is liable or not, but with the question of the amount that a company should pay in the event of its admitted or proved liability for negligence in the carrying of goods. It might not be amiss to state that previous to 1903 the law, as settled by the decisions of the courts, was in an unsatisfactory state. We thought in this House in 1903 that we had made it clear and distinct, and before this debate is over, I think the House will agree with me that the construction put on this section by the Ontario Court of Appeals is not the construction we intended that should be placed up on it when we passed it in 1903. The section permits a railway company, under certain conditions, to limit and restrict its liability to less than it would be at common law or ordinarily, when it injures or

destroys goods through its negligence in carrying. It is not a question whether the company shall be liable or not, but whether its liability shall be reduced or impaired by any contract which it makes with the shipper or owner of the goods as a condition of carrying them. The courts held previous to 1903 that a company could not contract itself out of the total liability; but they afterwards held that it could contract itself out of a part of the liability by virtue of giving the shipper a special rate under a contract by which the shipper agreed that he would take only a part of the damages, if entitled to damages at all, for the loss of his goods. That was the state of the law in 1903. In 1903, we left to the Railway Commission, the question as to what should be a fair contract to be made. We provided in the statute that these contracts, before they should be held to be good, should have the sanction of the Railway Commission. I had better, perhaps, read the exact words of section 340, which I am seeking to amend, as it now stands in the revised statutes of 1906. It reads as follows:

No contract, condition, by-law, regulation, declaration or notice made or given by the company, impairing, restricting or limiting its liability in respect of the carriage of any traffic, shall, except as hereinafter provided, relieve the company from such liability, unless such class of contract, condition, by-law, regulation, declaration or notice shall have been first authorized or approved by order or regulation of the board.

Now, the trouble turns upon these words, 'class of' in that section. I think parliament meant in these words a form of contract, and not that any court should say that a contract which was not the one authorized by the commission should be held to be good and binding on the shipper. That is what the court says could be done, and it is that which I object to, and which the House should amend. The case decided by the Ontario Court of Appeals last year, Sutherland vs. the Grand Trunk Railway Company, is to be found in volume xviii of the Ontario Law Reports, beginning at page 139. It was decided by Chief Justice Sir Glenholme Falconbridge in April of last year, and his decision was upheld by the whole Court of Appeals in November of last year. Mr. Sutherland shipped from Brocton, Massachusetts, to Grimsby, Ontario, $16,000 worth of valuable horses, which the chief justice held were fully proved to be worth that much money.

That was his loss when the Grand Trunk railway were negligent at Trenton and in consequence of the collision his horses were destroyed. He, however, was unable to ship those horses from Brockton, Massachusetts, unless he signed a contract, not authorized by the Railway Commission, but something like it, under which he bound himself to accept $1,200 for a carload of horses worth some $16,000 in case any loss occurred through the company's negligence. He had no option, no other rate was offered him, he could not ship those horses unless he signed that contract. They were taken by the Grand Trunk railway from a point near the Vermont line and were destroyed at Trenton, Ontario. Mr. Sutherland, having obtained on opinion that this contract had never been authorized by the board, thought he was entitled to his full amount of damages. He was given no option when he made the shipment, he had no chance to ship at any other rate, he had signed no contract which the Railway Board had sanctioned, and consequently thought he was entitled to recover his full amount of damages, but the judges held that the words ' unless such class of contract ' entitled them to rule that although the contract was not authorized by the Railway Board it was in that class, and therefore was just as binding as if it had been authorized by the Railway Commission. That ruling is contrary to the spirit of our legislation. We appointed the Railway Board to deal with questions of this kind. We did not want the ordinary judge of the land to decide what should be considered a fair contract. We appointed a board, specially selected for their knowledge, ability and acumen in railway matters to decide what shall be a fair contract, and the moment we agree that any judge, no matter how able, can in any sense usurp the functions of the board, we do a highly dangerous thing and a thing against the principle of the Railway Act. The Railway Board has declared that a certain contract, and no other, shall be the one the Grand Trunk railway must use in cases of the kind, but here we have a different contract, one which would be binding over the route in a foreign country, but which the Grand Trunk railway made apply to Canadian territory, and the company succeeded in convincing the court that because the words ' such class of contract ' are in the Act, they let in any other contract besides the one the Railway Commission adopts.

That is the chief point I make, but I go further and I say that as those contracts are based on the understanding that a man has to give up his common law rights, that he has to give up a part of what he is entitled to, he should at least have the option of paying a higher rate in order to be fully indemnified in case of loss or pay a lower rate should he agree to lesser indemnification. It is evidently manifestly unfair that if a man is willing to pay a higher rate and get his full common law indemnity, he should not have the right to do so before being compelled to ship at a lesser rate with a reduced liability on the part of the company. I might point out that we have already dealt with this matter in another

connection in the same Railway Act. When we brought in the express companies under the control of the Railway Commission and gave the commission power to fix the rates and the form of contract, we left out the words 'such class of contract.' That will be found in section 353. In section 340, the one I am moving to amend, the words, 'such class of contract' are contained, and these have been judged in the way I have pointed out. In section 353, however, the contract itself is not valid unless approved by order or regulation of the Board of Railway Commissioners. We are therefore in this position that, if we do not amend the law, we shall have two lines of decisions —the one with regard to express company's contracts and the other with regard to the railway company's contracts for carrying ordinary freight. That surely must be the actual effect, but I think the intention no doubt was that the same principle should govern both.

Hon. G. P. GRAHAM (Minister of Railways). The reasons adduced by my hon. friend in support of his Bill certainly have some merit. I have had representations made to me in the last few hours to the contrary effect but I think on the whole the House would be wise to give the Bill a second reading and let it go before the Railway Committee.

Motion agreed to, and Bill read the second time.

Mr. GRAHAM. I move that this Bill be referred to the Railway Committee.

Mr. LANCASTER. As I have said many times before, I do not believe on principle in public Bills going to the Select Committees of this House; I think this is the proper place to debate them, where the whole House deals with them. They are public Bills, and the rule of the House indicates that they should be dealt with here. However, I do not wish to be factious about the matter, and if the minister thinks he can give better consideration to this Bill by sending it to the Railway Committee, I would suggest that it be done by appointing a small sub-committee of the Railway Committee. I would agree to that if he will assure us that even if the government shall have taken all days when the Bill returns from the Railway Committee an opportunity will be given for discussing this Bill in Committee of the Whole House. I have not found the Railway Committee to be much more than a cul de sac in regard to public Bills. Unless we can have some specific assurance I think this Bill should go to the Committee of the Whole House.

Mr. GRAHAM. As I indicated, I have had a number of representations during the last few hours on several of these Bills, and as the members of the Railway Committee are conversant with matters affecting railways and with legislation of this kind, it seemed to me that that committee would be the best place to deal with this Bill, and any one who is opposed to it could there say what he had to say. I have no desire to retard the Bill or prevent it from getting through all stages.

Mr. LANCASTER. I think the minister should give some such assurance as I requested, otherwise I shall have to divide the House. I have observed during the last ten years that although there may be merit in a Bill, and a majority desire to get it through the House, it is almost impossible to send it to the Senate, because it cannot be called when it comes back from the committee. I do not suppose that the minister, who is usually fair, wants to put me in that position, and so I think we should be assured that after the Railway Committee deal with this measure there will be an opportunity of discussing it in a Committee of the Whole House, otherwise I will have to divide the House.

Mr. GRAHAM. I am astounded at the position taken by the hon. gentleman. Certainly there is no desire to retard the Bill, but rather to get it in the place where we can discuss it properly. I thought my hon. friend understood my position.

Mr. LANCASTER. I did understand that he wanted it to go to the Railway Committee, but I also understood that he would take care it would come back to this House after the Railway Committee dealt with it. If it was a private Bill it would have precedence on Mondays and could always be reached, but a public Bill or order can never be called in this House after the government take all the days.

Sir WILFRID LAURIER. I may observe that if the Bill comes back from the Railway Committee within a month or six weeks it is sure to have its turn on the Order Paper.

Motion agreed to, and Bill referred to the Select Standing Committee on Railways, Canals and Telegraph Lines.

RAILWAY ACT—AMENDMENT.

Mr. LANCASTER moved the second reading of Bill (No. 3) to amend the Railway Act. He said: This is a Bill which seeks to put some limit upon appeals in matters that come before the Board of Railway Commissioners. The statute at present does not limit those appeals; it allows the Railway Commissioners to grant leave to appeal to the Supreme Court upon any matter that is before them if they see fit to do so. It is being found in the country that the commissioners construe that to mean that they should be liberal in

granting these appeals, and this acts very harshly and unfairly upon people having grievances against railways. The House will see that unless immediate relief is given in matters that are brought before the board, it is useless for anybody to apply to that board. We do not recognize the Railway Commission as a court in the ordinary sense, because it is a place where laymen are supposed to go and air their grievances and obtain redress in an informal way from the board. The minute it becomes known that a man who applies to the Railway Commission runs the risk of being brought before the Supreme Court on an appeal, and that is beginning to be known now, applications to the board for relief will be avoided, as men will feel that they cannot afford to run the risk of a Supreme Court suit, and the whole object in appointing the Railway Commission is practically annulled, the whole benefit that parliament intended to give to the country is lost. We have a Railway Commission that in many ways is doing good work, but they are annulling the benefit of their work by allowing people to go before the Supreme Court, even in cases where there is no question of law involved, but only a question of the merits which the board is competent to decide. I contend that there should be some reasonable restriction on these appeals. Section 56 of the present Railway Act provides:

> An appeal shall lie from the board to the Supreme Court of Canada upon a question of jurisdiction, but such appeal shall not lie unless the same is allowed by a judge of the court.

That is on the question of jurisdiction. Then we have:

> An appeal shall also lie from the board to such court (the Supreme Court) upon any question which, in the opinion of the board, is a question of law, upon leave therefor being obtained from the board.

There is no restriction on the time within which leave shall be applied for. There is no restriction or guide as to the sort of appeals to be allowed by the board. When a man gets relief against the railway company ordered by the board or the railway company gets an order of importance in carrying on their traffic, unless there is a serious question involved there should be no appeal, else the whole object of the appointment of the commission is frustrated and annulled.

Again there should be some finality even if an appeal is granted, on which a man or a company may reckon. If we are going to have the country understand that an applicant may get into a law suit on any application to the Railway Commission, that they may be dragged to the Supreme Court at the will of the opposite party, whether a railway or another company or an individual, then 99 out of 100 of the benefits of the Railway Commission will be lost to the country, and people will not apply for relief in the very cases the board was appointed to deal with. The whole intent in the appointing of the board was to afford immediate relief. In fact the board does not grant an order unless the relief is immediately necessary. Relief may be necessary next year, and the board says: Make your application next year upon better material; in the meantime we dismiss your application. If the case does not require immediate attention, the board does not make an order at all, and therefore no order is made unless immediate redress must be made in order to carry on the affairs of the country properly. So I move to amend this section in order to limit the time for applying for that relief to one month from the time the order is made, so if anybody is going to ask the board to allow him to appeal to the Supreme Court from the decision, he must apply within one month. I think that is reasonable. We have that very thing in nearly all the courts, and we have it generally in the statute constituting the courts. I think we ought to put that in this statute as a principle to be followed by the Railway Commission. Then they will understand that parliament says to them: You must not grant leave to appeal in any case unless it is applied for within one month; and if people do not choose within one month to apply for leave to appeal, they must make up their minds to consent to the judgment. I also seek to add:

> But such leave shall not be granted unless, in the opinion of the board, doubtful questions of law are involved and serious injury or loss will result from immediate compliance with the order sought to be appealed from; and after notice to the opposite party stating the grounds of appeal.

I am not wedded to the actual language of that section as I have drawn it, and if any hon. gentleman can see any better way by which the object may be accomplished, I will accept his amendment. Whether we agree or not upon the method of the remedy to be applied, we must all agree that there is an evil in regard to the application under the statute as it stands at present. We must not contemplate that this Railway Act is to be administered by these Railway Commissioners in such a way that anybody may be able to hold over the aggrieved party a threat that no matter how just his cause may be he may never know when he is going to get redress. The board have made rules which practically leave it open for an application to be made at any time. Under the present rules the individual must apply within fourteen days or afterwards and the statute allows him to do that,

but the companies are not limited to any particular number of days. The board have practically said, and I do not blame them only as the statute is, that a man can apply any time that they, in their discretion see fit to allow. It is not proper legislation as it stands, and some amendment must be made. We should settle on certain permanent principles and lay them before the board, with instructions to the board to follow them. As the law stands to-day an appeal can be brought on ten years afterwards. I do not say the board would give leave ten years afterwards, but they can legally give leave to appeal ten years after the case has been decided, as the law stands to-day. I do not think we can have this Act properly administered unless the people have faith in the Railway Commission. We must establish a belief among the people in this country that the Railway Commission will give them redress when they have a well-founded grievance; but the minute they think, as they are beginning to think now, that they are just launching out into a law suit in which they may lose a lot of money and perhaps ruin themselves, the minute we allow that idea to get abroad in this country, we are losing the whole benefit of the appointment of the Railway Commission, because people will be loath to avail themselves of the remedies which the board is supposed to give them. Now, this is not one-sided; the railway may get an order and the case may be tried out. On all these grounds, therefore, I beg to move the second reading of the Bill, because it contains these provisions simply to limit appeals within a reasonable period, and to allow the Act to be administered in such a way that people may have some faith in it, and may apply in the ordinary way for the relief to which they are entitled and get it in reasonable time.

Mr. BLAIN. I do not propose to say any thing on the merits of my hon. friend's Bill, other than that I am of the opinion that there are altogether too many appeals to the higher courts in respect to legislation of this kind. I believe there is a growing feeling in Canada that instead of allowing more appeals, there should be fewer appeals from the lower to the higher courts. My hon. friend's Bill no doubt has a great deal of merit in it, when there is to be an appeal at all from the decision of the Railway Board. For myself, I think that the decision of the Railway Board should be final in all cases. My hon. friend has well said that the Railway Board was created for the purpose of giving the ordinary man an opportunity to lay his case before that tribunal, and when that case has been presented, as we have had a great many cases presented, and a great deal of good work has been accomplished, in my opinion the decision should be final, and there should be no appeal whatever in any case from the decision of the Railway Board.

Mr. SPROULE. As one who advocated for many years the establishment of a Railway Commission Board, I have always held that one of the important requirements in all these disputes was some court of finality, from which there could be no appeal. When this Railway Board was established, the people all over the country were told by both parties that it was a good thing, and one of the reasons why it was a good thing was because, when a difficulty arose between an individual and a railway company, it was to be tried by a court where the individual could go and be sure of getting justice, and that when the Commission made a finding that finding was finality. It had been held, and generally believed by the public, that there was little use in an individual trying to get his rights from a railway company, because the railway companies were all powerful financially, and that an individual, no matter what might be the determination of the first court, could not contend with the railway company, because the company could always carry the case up, and up, and up. Under these circumstances people who were aggrieved felt that it was better to suffer loss in the first instance than to impoverish themselves by going to a court when they had no assurance that the decision of that court would be final. It was held that this Railway Commission would obviate that difficulty, and that the case would be settled quickly—that was one of the merits of this court—that the case would be settled at once, without much cost or waste of time, and settled finally. I am sure if the people ever believed that there was the latitude which there appears to be in the findings of this Commission, that there was some latitude remaining whereby litigants, if you call them such, could appeal to another court, they would never have endorsed the Railway Commission. That was one of the strongest grounds in the judgment of the common people why the Railway Commission would be practically useful. Now, if it turns out that it is going to be of little more value in that regard than an ordinary court, then I can only say that there are many people who would appeal to the Railway Commission from the understanding that they have had heretofore who will never appeal to it in future because they will regard themselves as unable to get justice for the simple reason that they have not the means to prosecute a suit against a railway company. There may be other grounds where there would be a justifiable right of appeal. As my hon. friend from Lincoln says, they could have the right to appeal upon a ques-

tion of jurisdiction or of law. I think that would be proper. It seems to me that that should cover the whole ground but if we are to widen it beyond that we will make what otherwise would be a valuable court for the common people of the country a court that would be practically useless to them.

Hon. A. B. AYLESWORTH (Minister of Justice). Mr. Speaker, I think there is a general impression that lawyers favour numbers of appeals, and that, ordinarily speaking, the average practising lawyer is better satisfied the more appeals he can find open to his clients who may not be pleased with the results of litigation with which he is concerned. Although I am a lawyer I do not share that view. I entirely agree with the sentiments which have been expressed by hon. gentlemen that we ought not to facilitate or to increase the facilities for repeated appeals and I think that, ordinarily speaking, at any rate, decisions that have been subjected to the canvassing which even one appeal will necessarily involve, are likely to be correct as if they are further dragged through a course of repeated appeals. But while that is so, I do not suppose that many of us would favour abolition of the appellate court which has been carrying on its work in Canada now for the last thirty years—the Supreme Court of Canada. The propriety and advantage of establishing that court were debated and it was a matter in regard to which there was not perhaps agreement of opinion years ago, but experience, I think, has demonstrated the value of that court to the people of this country. Whether or not there is any question of abolishing the court, or putting an end to the right of resort to the court, the proposition which is before the House in this Bill does not concern anything so advanced or so far reaching as what I am suggesting. There is this, I think, to be borne in mind, that the existence of the right of appeal, whether it is exercised or not, and the knowledge on the part of the court which is deciding that if it goes wrong there is a place where it can be set right is something of very great consequence and of very great importance to the parties interested. We have in Ontario, and, I have no doubt, in other provinces as well, courts for the collection of small debts from which no right of appeal exists and very possibly no one would favour the giving of the right of appeal to a dissatisfied litigant where the amount involved was comparatively trifling. But, I am sure it is the experience of lawyers and, I think, it is the experience of litigants, that the same judge who is sitting in a court for the trial of small claims, where he knows that he is absolute, is very likely to be a much more arbitrary man and very likely to pronounce decisions of a very different character from those which the same man under the same circumstances would pronounce if the amount involved were a little larger so that his decision would be liable to review. Just so long as it is impossible to procure a perfect man, an infallible man for a judge, just that long there will be, I think, value in the right of appeal whether that right is, in a particular case, exercised by the dissatisfied litigant or not.

Now, with regard to this particular court —I term it a court because I think it possesses all the essential features of a court —the Board of Railway Commissioners—my understanding is that when that board was established and given the jurisdiction which it possesses it was with the idea that while it should have the power and authority of a court for many purposes it was not to be exactly the formal and certainly not the technical body which often our courts become. The right of appeal which is given from that body is of a very special character. The board, it will be remembered, was a substitute for a committee of the Privy Council which previously dealt with such matters as now come to the board, and the only appeal upon questions of fact or of policy which the statute permits from this tribunal is an appeal to the whole body of which its predecessor was a part, namely, to the Governor in Council. That right of appeal seems a necessity when you remember the constitution of the board and the purpose for which it was given being. The only other right of appeal which exists from the decisions of the board is upon questions of law or of the jurisdiction of the board. Upon questions of law a limited right of appeal exists to the Supreme Court by leave of the board itself. Upon questions of jurisdiction an equally limited right of appeal to the Supreme Court exists after leave so to appeal is given by a judge of the Supreme Court. The facility for appealing therefore from this board is peculiarly limited and parliament, in constituting the board, seems to have taken special care that there should not probably be numerous appeals from the decision of the board and that in the main these decisions, once pronounced, should be liable to correction if erroneous only by the board itself, because hon. gentlemen will remember that this board is given a very special power in that regard, that its judgments or decrees are not like those of a court which, when once pronounced are gone from the court and beyond control, but are liable to be altered, and modified from time to time by the board itself as justice may seem to require. In conferring upon a dissatisfied litigant any right of appeal from this board I fully concede an advantage is given to the rich as against the poor but that, after all, is only the advantage which, in every walk of life, the man of wealth has, by reason of his

wealth, over the man who is without resources. No matter what piece of business a man may desire to enter into, if he is possessed of large means it is a great advantage to him, and I venture to question whether it would be right to take that advantage from him. But, however, that may be, let me remind hon. gentleman that very generally—I do not know that I can say in the majority of instances—but very generally, at all events, the questions which come before this board are questions between possibly two contending railway companies or between a railway company and some municipal or other corporation and that very likely honours will be evenly divided as far as the possession of ample means to carry on appeals is concerned.

The discussion upon the propriety of the general right of appeal has gone a little afield, because while the Bill proposes certain restrictions upon the exercise of the right of appeal there is no proposal to cut down the existing right of appeal in the three cases—upon a question of fact to the Governor General in Council; upon a question of jurisdiction to the Supreme Court by leave of the court; upon a question of law of the Supreme Court by leave of the board. These three measures of appeal are left untouched, but the Bill proposes three limitations upon the exercise of the right of appeal to the Supreme Court. The most important of the three is that which will provide that leave to appeal upon a question of law should be given by the board only when in the opinion of the board doubtful questions of law are involved and serious injury or loss would result from immediate compliance with the order sought to be appealed from. The law as it stands leaves it to the discretion of the board whether or not they will grant leave to appeal upon a question of law. An appeal lies under the Railway Act as it now stands to the Supreme Court upon any question which in the opinion of the board is a question of law upon leave therefor having been first obtained from the board and the granting of such leave shall be in the discretion of the board. Would there be any object in saying to the board: You must not grant this leave unless the question of law is doubtful. I would suppose that no such body of men as the Railway Board, no men clothed with the powers of a court and the wide jurisdiction in the matters of railway dispute which is given to this board, would dream of exercising their judical discretion to permit an appeal upon a question of law unless that question were a doubtful one.

Mr. LANCASTER. May I tell the hon. gentleman that not later than last August this board granted leave to appeal in a case where the very terms of their order prevented the point of law arising which the railway sought to appeal on. They put a condition in their order which absolutely made factious the very point of law which the railway asked leave to appeal on, and yet they granted that leave to appeal to the Supreme Court.

Mr. AYLESWORTH. I was going on to say that if this board was to be trusted with the discretion which the present legislation confers upon them to determine whether or not the case was a proper one for appeal, it would seem to me that it would not advance the object aimed at in the Bill that we should say to the board on the face of a statute: You must not grant this leave unless the case is doubtful. It goes without saying that unless they feel there is some room for argument and unless they feel there is some point upon which the opinion of the Supreme Court is desired, they will not exercise the discretion the statute vests in them in favour of granting an appeal. I see no special objection to the limitation which is proposed by this Bill, but I would certainly have thought unless some cases have arisen of which I am not aware in which the necessity for this amendment has appeared that there was no need to give any direction to the board as to the manner in which or the style of cases in which the judicial discretion which is vested in them should be exercised. Generally speaking it certainly is better not to fetter the discretion of a court and to leave that discretion free to be exercised in such cases as the court may think proper. In regard to the other two points in the Bill, just a word. The Bill proposes that an appeal must be taken within two months after the decision complained of, and in the second section that unless such an appeal is entered in the Supreme Court within sixty days from the decision complained of, the appeal shall not lie. With great respect I should have thought that provision not necessary because the general practice of the Supreme Court must apply unless some special enactment such as this is substituted for the general practice. Under the Supreme Court Act, by section 69 chap. 139 R. S. C. every appeal to the court must be brought within 60 days unless a special order to the contrary is obtained and provision is made for the obtaining of such a special order. But, as to the general run of appeals unless they are brought within 60 days of the decision complained of the time for appeal has gone and the decision has become by lapse of time perfectly final. It is proposed to vary that in the case of an appeal from this board, to 30 days. Is there any object in doing so? It is not desirable to have a different period for different kinds of appeal.

Mr. LANCASTER. The hon. gentleman misunderstands. The Bill is that the leave must be applied for within 30 days and

the case must be entered in the Supreme Court within 60 days. The reason for that is that one of the judges of the Supreme Court has expressed a doubt, and has allowed an appeal to be entered, holding that it is not clear that the Supreme Court Act applies to the Railway Act and he invites us to say so in order to make it clear.

Mr. AYLESWORTH. I think I am acquainted with the circumstance to which the hon. gentleman refers when he mentions that there may be a doubt in the mind of one of the judges of the Supreme Court, but I do not understand it applies in any degree to the point I am discussing. The point I was at the moment speaking of was the principle of substituting a period of thirty days for the ordinary period of sixty days in regard to this particular kind of appeal. I cannot see any object in that, and I think it is not desirable to have a different period for one class of appeals from that prescribed for another class. The more variety you have in that respect, the more confusion you introduce. On the third point, by which this Bill provides that an appeal from the board shall not lie unless it is entered in the Supreme Court within sixty days from the making of the decision, under the general law as laid down in the Supreme Court Act, notwithstanding the omission to bring the appeal within sixty days, the court appealed from, or any judge of it, may under special circumstances allow an appeal after the prescribed period. Now, that is a very useful provision, and it would not be interfered with by the present Bill if it became law. It would still be competent to a judge of the court appealed from, under section 71 of the Supreme Court Act, to extend the statutory period in a special case under special circumstances; and unless you repeal that provision of the general Act, or in terms declare that it shall not be applicable to an appeal from the Railway Board, I would think it abundantly clear that it would have such application and that the power to extend the time would still remain. That is a very valuable power. Every practising lawyer knows of many a case in which some slip or accident has occurred, and in which it is desirable to bring an appeal after the prescribed time has gone by. It does not at all follow that it will be permitted; but the power to permit it, under special circumstances, in the way the exercise of that power is now safeguarded by the Supreme Court of Canada, appears to me to be a very valuable power to give to the court. It is in this connection, as I understand it, that the question alluded to is now before the Supreme Court for adjudication. I understand that at the present sitting of the court a case involving that question will come up for consideration and determination, and it will require to be decided by the court, whether or not section 71 of the general Act has application to the decisions of the Railway Board. If the decision given in that case by the Supreme Court does not commend itself, it will be easy enough to amend the statute after such decision is given; but until the court has pronounced on the subject, and until we see whether or not there is any necessity for special legislation in that regard, my view would be that we had better leave the statute alone.

Mr. LANCASTER. If no one else intends to say anything, I wish to say one word in reply.

Mr. SPEAKER. The hon. gentleman has no right to reply.

Mr. LANCASTER. I think that under the present rules, as amended three years ago, it is distinctly provided that a member moving the second reading of a Bill has a right to reply.

Mr. SPEAKER. Rule 21, subsection 2, says:

> A reply shall be allowed to a member who has moved a substantive motion or the second reading of a Bill, but not to any member who has moved an order of the day, not being a second reading of a Bill.

Mr. GRAHAM. I think the reading of the rule would show that the hon. gentleman would be in order in making a reply on the motion for a second reading.

Mr. SPEAKER. I understood the rule otherwise.

Mr. R. L. BORDEN. He is not allowed a reply on an order of the day unless it is the second reading of a Bill; but inasmuch as this is the second reading of a Bill, the hon. member for Lincoln is entitled to make a reply.

Mr. LANCASTER. I just wish to point out that the hon. gentleman has, I think, misapprehended the effect of my language. I am moving to amend section 56, the section dealing with appeals, by inserting in the fourth line, after the word 'board,' in subsection 3, the words 'within one month after the making of the order or decision sought to be appealed from.' That is, leave must be applied for within thirty days. That in no way conflicts or has anything to do with the sixty days within which the appeal must be made to the Supreme Court. In regard to the other matter which the hon. gentleman mentioned, I wish to point out that we are dealing here, not with ordinary courts. The Supreme Court Act deals with appeals from ordinary courts, in which they protect the litigant against all the consequences of an appeal, in case the decision of the court appealed from is affirmed and it is found that the appeal should never have been entered. This distinction between appeals from ordinary

courts and those from the Railway Board should always be borne in mind.

The Board of Railway Commissioners do not make an order unless the applicant is entitled to remedy or redress at that particular time. But the moment that order is taken to appeal, the board cannot order that any damages be allowed for the delay. Take the case of an ordinary farm crossing, the board decides that it shall be given. Its decision is taken to appeal, and the farmer has to wait a year until he gets judgment from the Supreme Court deciding whether the crossing shall be allowed him as a matter of law. In an ordinary suit, on an appeal being taken from the lower court, the plaintiff would be entitled to indemnity for damages during the delay caused by the appeal; but the Board of Railway Commissioners have not the power to make any order to that effect. There is, therefore, the greater necessity for our being careful about allowing appeal. The hon. gentleman has said that he does not see any difference between the words I use in this Bill and those in the statute giving the board discretion to grant an appeal. Well, this has happened. Notwithstanding the board may have no doubt about the law, they still allow appeals simply because they are asked for. We should put a stop to that. We should provide that the board must have doubts before allowing an appeal. Otherwise every case will be open to appeal. The Minister of Justice, although he thinks my Bill is not necessary, is of the opinion that it will do no harm. Consequently he should not object to the House going into committee on it. Then if the language used in the Bill be not the best adapted to express its intentions, the wording can be changed.

Mr. GRAHAM moved that the Bill be referred to the Committee on Railways and Canals.

Mr. LANCASTER. I wish simply to state that the same objection applies to this motion as I applied to a similar motion on the previous Bill. However, if the majority of the House insist, this measure will have to go to the Railway Committee, where I hope it will be discussed without delay and sent back to this House.

Mr. SPROULE. It seems to me that in this particular instance the House would be a better tribunal than the Railway Committee. We have here a number of eminent lawyers on both sides well fitted to deal with a question of this kind. I do not think that the argument advanced by the Minister of Justice (Mr. Aylesworth) is one that will appeal to the common people. Speaking of the advantage which a railway corporation has against an ordinary individual, he said it was only the advantage which the rich have against the poor, and we ought not to deprive the rich of that right. Well, in my opinion, parliament should apply itself to carrying out the principle of protecting as far as possible the weak and helpless. That was one of the reasons which induced parliament to create this Board of Railway Commissioners. The contention was made in its behalf that poor people, who are not able to prosecute a case from court to court, should be given access to a tribunal where they could obtain their rights at a minimum of a cost. That was one of the strong grounds for appointing a Railway Commission. The hon. minister said that, as a matter of law, he regarded the right to appeal as a sacred one, and that was why we established the Supreme Court. Well, I remember that when an effort was made to abolish the Supreme Court, the strongest argument then used in support of that effort was that the establishment of the court, instead of limiting the number of appeals, had increased them. It was thought that when we had a Supreme Court there would be scarcely any appeals to the Judicial Committee of the Privy Council, but experience has not proved that to be the case. Even Mr. Blake himself said he was rather disappointed in the Supreme Court. The Right Hon. Sir John Macdonald pleaded for the continuance of that court on the ground that it had not been tried long enough to give sufficient evidence of its value. Let us try it longer, he said, and if the people continue to be of the opinion that it is not as valuable as they expected, then will be time enough to abolish it. Since then no one has moved to abolish it, but it would have taken very little then to induce this House to abolish that court, if it had the power to do so. The consensus of the opinion of parliament then was really against the usefulness of that court; and the chief reason for that opinion was that it simply gave another appeal and another disadvantage to litigants who could not afford to carry a case from court to court until they could get a final verdict.

Mr. GRAHAM. I move that this Bill be referred to the Railway Committee for the sole purpose of getting a better understanding of the measure. However interesting the discussion in this House may be, I think we could get at the kernel of the matter much better at close range in committee or in a subcommittee and work out the best results. What my hon. friend from Grey expected would be the result, has been the result of the establishment of the Board of Railway Commissioners. That board was appointed to give a ready and quick road to justice in the smaller cases as well as larger ones. As a matter of fact thousands of ordinary cases have been disposed of almost without a formal hearing and the parties have been satisfied. Larger cases

have been dealt with to the general satisfaction all over the country, and there have been very few appeals from the findings of this board.

Mr. SPROULE. Has an appeal been allowed recently that it was generally expected would not be allowed?

Mr. GRAHAM. There must be a discretionary power somewhere, and merely because some person did not expect there would be an appeal, we are surely not called on to amend the law. One can easily imagine cases where an appeal ought to be allowed, but the right of appeal has been so safeguarded that as a matter of fact we have had very few appeals. I do not think we have had an appeal in cases where the poor are on one side and the rich on the other. The appeal just referred to is an appeal of a province against the Grand Trunk Railway Company. These are not poor people, they are two very wealthy corporations, one on each side, contending as to the right of the board to give an order for a station.

Mr. SPROULE. But by the same reasoning there would be a right of appeal in the case of poor persons.

Mr. GRAHAM. That is where the discretion of good, sensible men like the chairman and members of the Board of Railway Commission comes in. The present board have so exercised their discretion that no injustice has been done to any one.

Mr. LANCASTER. They are granting a great many appeals.

Mr. GRAHAM. It is a question of opinion, and I prefer to take the opinion of the Board of Railway Commissioners. An appeal lies to the Supreme Court under only two conditions, first by consent of the Supreme Court itself. The judges of that court, the highest court in the land, surely have some discretion as to when an appeal ought to lie. The second case is when leave to appeal is granted by the Board of Railway Commissioners, and they would grant an appeal only when they had some doubt as to a decision which had been rendered. There is also an appeal to the Governor in Council, but in my time there has not been a single appeal from the Board of Commissioners to the Governor in Council.

Mr. SPROULE. Neither party seems to respect that court.

Mr. GRAHAM. My hon. friend now seems to think it would be a token of respect if there were a lot of appeals to somebody. A moment ago he was arguing against appeals. I point out that the result of the action of the Board of Railway Commissioners has been that the number of appeals has been practically nil, and the good accomplished by that board is acknowledged by every one. It is recognized that they afford justice to all people in small and large things. The only appeal that has even been suggested in my time to the Governor in Council and it never got there—was the appeal of a railway company against a decision which it thought was in favour of another railway company, and the appeals that will be made will be largely in cases of dispute between railway companies themselves as to the right or priority of possession of certain pieces of right of way which would involve the question of payment of the cost of crossings, terminal rights, &c. There should be some right of appeal when these large companies clash, and the board is called on to give a decision. However, we want to get the very best result we can from this Board of Railway Commissioners. We have been getting excellent results. I have moved that this Bill be referred to the Railway Committee so that we can discuss it at close range, and if there is merit in the Bill thresh it out and get what there is in it.

Mr. HENDERSON. It seems to me that the Minister of Railways and the Minister of Justice have simply been beating the air, getting as far away from the question as possible. This court is said to be a layman's court. The whole procedure should be as simple as possible so that the simple layman could understand it. What does the farmer or business man know about references to the Supreme Court or the Governor in Council or the time that should be allowed for such references? They know nothing about it, they do not pretend to read up the law in regard to these matters. If an ordinary layman obtains a judgment from the Board of Railway Commissioners favourable to himself, he does not want to remain in suspense five or ten years without knowing whether that judgment can be attacked or not. This Bill simply provides that after thirty days no appeal shall lie, so that the ordinary layman would know, having obtained a judgment of that board, that that judgment could not be attacked for any reason after the expiration of thirty days. Surely that is a fair and proper position and one which will add to the usefulness of the board's decisions. I fail to see why there should be any opposition to this Bill; it does not abolish the right of appeal, it simply limits the time in which an appeal shall lie to a reasonable period. Any one feeling aggrieved by a judgment of the board should know within thirty days that he had not received justice. I think the Bill is a very proper one, and I fail to see any reason for sending it to the Railway Committee. Sometimes we say, and I am

not going to impugn the motives of the Minister of Railways in making this motion—that Bills are sent to the Railway Committee for the purpose of being slaughtered. I do not think that is his intention. He has stated his intention, and I must give him credit for being perfectly fair in the matter. The Minister of Agriculture, the Minister of Finance or the Minister of Railways in introducing a Bill dealing with matters connected with his department, does not think of sending that Bill to one of the committees of this House. This seems to be a new departure, and there must be something behind it. I think that the old procedure is the better one. There is no reason, to my mind, why this parliament should go beyond this House for aid in this matter. If there is, then it should be plainly stated, and the House should be convinced that its jurisdiction is not sufficient, that somebody else must be called in to give advice to parliament on the simple matter of what a layman's rights are in this court, whether they are to be clear, or whether they are to remain uncertain for ten, twenty or thirty years, and that he is always to stand in jeopardy of what might be sprung upon him some day without notice. I hope the House will consent to deal with the Bill at once, to put it through committee, if it is believed to be a fair Bill, and give the laymen of this country that protection to which they are entitled, without any technical attempt being made to destroy the legislation which the hon. gentleman is trying to get passed.

Motion agreed to.

RAILWAY ACT—AMENDMENT.

Mr. LANCASTER moved the second reading of Bill (No. 4) to amend the Railway Act, he said: This Bill, as I explained, on the first reading, is to correct what I think is a manifest injustice arising out of the amendments made to the Railway Act last year. When I was introducing the Bill I understood the Minister of Railways to say that he considered it an interference with the principle that had been adopted by this House last session in regard to his amendments. I wish to say that I think the hon. gentleman misapprehends the Bill entirely, though it may have been my fault in not sufficiently explaining the Bill. I understood the hon. gentleman then to say that I was violating the principle which he had got the House to adopt last year, namely, that there should be a contribution from the railways, the municipalities and the Dominion government to protect all crossings where highways are crossed by railways. But the section which I propose to amend here does not deal with that, but with the exceptions the hon. gentleman put through the House last session in regard to that matter. The section I propose to amend is the very opposite of what the hon. gentleman had in his mind when I introduced the Bill. I will read the legislation passed by this House last year on this question, which is to be found in chapter 32 of the Acts of last session.

238a. In any case where a railway is constructed after the passing of this Act, the company shall, at its own cost and expense (unless and except as otherwise provided by agreement, approved of by the board, between the company and a municipal or other corporation or person), provide, subject to the order of the board, all protection, safety and convenience for the public in respect of any crossing of a highway by the railway.

That is the section of the Act I am amending, and that section puts the whole cost upon the railway if it is a railway that is constructed after the passing of that Act. The Bill is now printed, and by it I am seeking to amend that section by adding these words:

And where the railway has been constructed before the passing of this Act,——

The converse of the case put by the hon. gentleman in his section last session.

—and is permitted by the board to pass over any highway crossing at rail level, the municipality shall not be ordered to pay any portion of the cost or expense of protecting such crossing unless and except it is otherwise provided by agreement, approved of by the board, between the company and the municipal corporation.

As the law stands to-day, a railway that is incorporated since last session has to bear the whole expense of protecting these crossings, no matter how well they may protect it, no matter what they may do in the shape of bridging or subterranean passages, no matter what works the board may order them to do, no matter how ideal the protection may be which they afford, they have to pay the whole expense if their railway was constructed after the passing of this Act of last session. Now, I am not saying that it is not always right to discriminate between railways, but we are certainly making a great discrimination here. We are saying that any railway that wishes to come into competition with the railways that were in operation last session shall have it up against them to bear the enormous expense of protecting a crossing, an expense to which neither the Dominion nor the municipality contributes, and no matter how good a protection they may afford. That is further than I would have gone, although I have been accused of being a radical in these matters. I would not have said that any corporation must do something that other railways constructed before it did not have to do. That is a discrimination against the later railway, and is calculated to discourage the construction of competing railways. But

when we say that railways which are constructed since the passing of the Act of last session must, no matter what ideal condition they may create for the perfect safety of the people, pay all the expenses of such protection, and that the board has no power to apportion those expenses upon anybody else, we should at least say that where these old railways which are using the King's highway refuse to create the ideal condition which the board might order them to create, or object to doing so, in that case we should at least say that no portion of such protection as the board finds necessary over a dangerous crossing, should be borne by the municipality. I never could see why they should. The board will order such contribution if we put the principle up to them, they will not order it if we say that the proper principle prevents them from doing so. Now, what should we do? I think that when we find the board going wrong we should step in and set them right. We are here to see that the Board of Railway Commissioners does what we think the people want them to do, and that they properly administer the affairs that we send to them to be administered.

The board holds as a matter of course, that the municipality shall always contribute. They are entitled to hold that. I am not finding fault with their power. If they choose to do so, they have the power to so hold unless you say, as a parliament, that there must be a distinction made. The Minister of Railways and Canals made the distinction last session in the law which I am now seeking to amend and he said that the board shall not be allowed to put upon the municipal or the Dominion fund, which was created for the purpose, any portion of the expense for protecting any highway from danger by a railway if the railway was not constructed before last year. But, these are not the railways that we are dealing with They do not exist. They are not killing people because they are not being operated. They are only in people's minds at the present time. There is no harm being done by them. They have not been constructed yet and they are unable to hurt anybody because they do not exist. But, we have before us the condition of affairs in which the railways that were constructed before last session of this parliament continue to kill people upon highway crossings where the highway and the railway track are upon the same level, and you cannot go upon the highway without running the risk of being hit by a train. Who creates the danger? What principle are you going to go by? There is the danger in running across the King's highway. They are persisting in running their trains across the highway instead of protecting the crossing, persisting in saying that they do not think it fair to require them to erect overhead or underground structures so that they cannot hit anybody because it will cost a lot of money and persisting in saying that they are going to run across the highway and create the danger rather than incur the expense which the commission may think they ought to incur in creating a better condition. The first question that we must ask is: Who creates the danger? It is the railway. I have heard it said—I never heard the Railway Commission decide it myself—but I have heard it said that the Railway Commissioners have said that they think that the public should help to protect these crossings because the public helped to create the danger. If that is the position of the Railway Commission, I think that parliament should condemn it. It is said that if a man owning a piece of property which the railway company did not expropriate erects a building upon that land which obscures the view of the railway he is doing something to create a danger and that therefore he and the municipality in which he lives should contribute towards the protection of the crossing. He has a perfect right to build upon his own land. The fact that the railway runs near it is no reason why he should not build upon that land if he wants to. I understand the commission holds that because he does construct that building which may obscure a view of the railway he and the municipality should contribute towards the protection of the crossing. That is confiscation. We have heard hon. gentlemen on behalf of the railway companies in this House—hon. gentlemen who might be trying to do their duty in the public interest—speaking of confiscation. Might not this be said to be confiscation of a private owner's property? You are putting a limitation upon his right of ownership. The railways say to him: If you erect a building upon your own land near the railway track which may obscure a view of the train coming down to this level crossing, you are helping us to create a dangerous condition there and, although we are the ones who run the trains and kill the people, you have placed your building so that they cannot see our track or the danger and you must tear your building down or you and the municipality in which you live must pay a tax to create a fund for the purpose of protecting that crossing. These are the special arguments put forward by the railways before the commission, more or less appealing to the commission, but when you scan them you find that there is no merit in them. The man who owns land outside of railway control has a perfect right to build upon it as much as he would if he were ten miles away, and he should not be prevented from building because he is going to be accused of obscuring the level crossing and the train coming down the

track to it. Now, the danger is entirely created by the railway and the protection should be at their expense as long as they persist in running upon the highway.

There is another question involved here and some fine day somebody will find it out, at a good deal of expense and disappointment perhaps to those concerned. I do not believe that this House, or, at all events, the government, in passing this legislation last year, gave anything like the consideration it should have had to what their power is to say that municipalities shall pay the cost of protecting the highway crossings assessed by a Dominion board. When had this parliament power to create any board to tax any municipality? Under the British North America Act who does control municipal government? Where did parliament ever get and how has it any vires or right whatever to deal with this question of municipalities protecting highway crossings under the orders of a creature created entirely by the Dominion parliament and having nothing whatever to do with the local legislatures which have the power to tax for municipal purposes? You are asking your board to say that the municipalities must contribute a certain proportion of the cost of protection of their own crossings which costs are to be put upon them by the Board of Railway Commissioners under the authority of a Dominion Act of parliament. You will find it some day decided, I am satisfied, that you have no power to do anything of the kind, and if a municipality against whom the board levied laughed in the face of the chairman and said: Go on and let us see, you collect this tax for crossings, the Board of Railway Commissioners could not collect it. They cannot do anything about it. If you bring an action how are you going to collect the tax? Who is going to impose the tax? Who is going to levy the assessment? This Dominion parliament cannot enforce the payment of anything of the sort unless perhaps they brought suit in the Exchequer Court against a municipality and seized a safe or a road roller. They cannot collect damages whatever they might be unless they could find some loose property of that kind that perhaps they might seize upon. You have not the power to levy any taxation upon any municipality for any such purpose and the right of the matter is probably as consistent as the right generally is with regard to technical powers. The reason that you were not given power by the framers of the British North America Act was because of the very great injustice of your attempting to exercise such a right. The municipalities control the highways, the highways are built by the municipalities with the aid of taxation levied by themselves, they are kept in repair for the convenience of the business of the country and if a railway crosses a highway upon a

Mr. LANCASTER.

rail level and this Board of Railway Commissioners undertake to say that the municipality must pay a part of the tax it is a matter ultra vires of this parliament and besides that it is unmeritorious and not fair that it should be done.

Mr. SPROULE. The highways belong to the Crown.

Mr. LANCASTER. The highways, as the hon. gentleman says, are the property of the Crown and are administered under the provincial legislatures. The provincial legislatures control the highways, they have passed this control on to the municipalities, the Dominion parliament has no power to tax the municipalities for anything done upon the highways and some day they will learn it to their cost. Orders made by the Railway Commission will have to be upset and you will have all sorts of confusion in regard to it.

But, the merits of the matter, outside of the technical question as to whether we are ultra or intra vires in passing such legislation is what appeals to me. Here is a railway constructed since last session trying to get into competition for the good of the country with railways that were constructed before last session and it is required to pay the whole expense. Not only is the municipality not to be charged but the Dominion fund is not to be drawn upon. But the railways which have done the harm, the railways that were constructed before last year, the railways that refused to protect these crossings, if the Board of Railway Commissioners find it necessary to protect them, are to be allowed to pay a portion of the expense only while they are running upon the highway and the municipality is to be ordered to pay part of the expense also. The effect of my proposed legislation is that where they do insist upon running upon the King's highway where they are likely to come in contact with people upon that highway the municipality must not be ordered to pay any portion of the cost. The board shall not have power to order them to unless they agree to it by some agreement which the board may sanction as fair and reasonable. That means that they cannot tax them without their consent. The board can still appropriate part of the Dominion fund to assist the railway, but they must keep their hands off the municipalities so long as the highways are being used by the railways for their own purposes. I move the second reading.

Mr. LENNOX. This is a very important and a somewhat large question, but as I discussed the matter fully last session, and as when certain statistics I have asked for are brought down I shall direct my attention to it again, I do not purpose going very fully in to the question now. I entirely agree with the object my hon. friend

(Mr. Lancaster) has in view and with the principle that underlies his Bill, and I want to add that the only objection I have to his Bill is that it does not go far enough.

Mr. LANCASTER. Take what you can get.

Mr. LENNOX. It is well enough to take what we can get, but I have not very much faith that we will get anything this session, I prophesy, however, that sooner or later the minister will have to adopt the principle which this Bill propounds. What I contended last session and what I repeat this session is, that wherever a railway sees fit—whether it is a new railway or an old railway—to occupy a highway, then there should be no public contribution for protection. If the railway will increase the public safety by separating its line from the highway then I am in favour, under certain circumstances, of making contribution at the public expense. But in absolutely no case—whether it is the case of an existing railway or a new railway—am I in favour of giving one dollar out of the funds of the Dominion, and much less out of the funds of the municipalities, towards the construction of safety appliances so long as the railway endangers the public safety by occupying the public highway. The legislation passed by the minister last session was a step in the right direction and a fairly good step, but I then called his attention to the fact and that he should limit the assistance to cases in which the separation of the railway grade from the highway is effected. At first we understood that the minister would adopt that suggestion. Afterwards it was intimated that, at the suggestion of the chairman of the railway board, the minister concluded that he would allow the public funds to be diverted not only in the case of separation of highways from railways, but in the case of the erection of simple appliances such as gates, or bells, or other devices which afforded some remedy but not an adequate one. If the minister had confined the contribution of the public money to cases in which the railway company agreed to absolutely separate the railway from the highway then a great benefit to the public would have accrued and we would have had an incentive to the railway companies to pursue that course; but as it is, the public funds are contributed to the railway when they agree to erect some temporary appliance which does not afford a complete remedy, and against that I protest. I have great pleasure in supporting the Bill introduced by my hon. friend, and I hope it will not be very long before we will have legislation which will have the effect of saving not only the municipalities from having to contribute but which will prevent any contribution of any public moneys, to any purpose other than the separation of grades. There is absolutely no justification for contributing one dollar of the public funds, whether of the municipality or of the Dominion government, unless the railway separates the grades and thus for ever removes the danger to the public. I have asked certain information to be brought down on this matter. It is a question which will bear discussion from time to time. I am glad that my hon. friend (Mr. Lancaster) with his usual energy and his great interest in questions which are for the benefit of the public has brought the matter forward. I hope he shall pursue his course until we at last attain to better conditions with regard to the crossings of highways by railways.

Mr. GRAHAM. There are hundreds of railway crossings in Canada the separation of which from the level is impracticable, and in respect to which the public can be well protected by a gate or some other device. And, if the public is protected then the object we all have in view is attained and there is no need for discussing technicalities. My hon. friend (Mr. Lancaster) forgets that the chief expense is not in the construction of a gate but in its maintenance afterwards, and no part of the government fund goes towards that maintenance.

Mr. LANCASTER. But the municipality has to pay.

Mr. GRAHAM. I should think that if our object is the protection of the public then so long as the public are protected it makes no difference how that end is attained whether it is by the erection of a gate, or of a subway or of an overhead crossing. Now, the innocent way in which my hon. friend (Mr. Lancaster) words his clause will compel me to read this subsection to the House: He told us that he was amending subsection 238A, but it would occur to me as a layman that in amending 238A my hon. friend is amending the whole legislation of last session, although if one had not the Act before him his Bill would not appear to mean so much as it really does. Now let me read subsection of 238A, and apply it to the Bill:

> Notwithstanding anything in this Act, the board may, subject to the provisions of sec. 238a, &c.

When you amend sec. 238a, you amend the whole power of the board.

Mr. LANCASTER. That is what I intend.

Mr. GRAHAM. This interferes with the principle of the Act passed last year. At that time we had a good deal of discussion on the question of why the municipalities or the government should participate at all. I could argue as strongly against the government participating as my hon. friend does against the municipalities participat-

ing. The argument, which has prevailed in the various states of the union, which prevailed in this House last year, and against which I have not heard one note of objection from a municipality in the province of Ontario, or anywhere else, was this, that conditions now exist which did not exist in the early days of railway building. There must come a time when the line of demarcation must be drawn between existing roads and roads which are to come into existence. That line we drew last year, and the argument for it was this. In the early days of railway building, every municipality was so anxious to have a railway that it was willing to give railways level crossings wherever they liked to have them without restriction, property for stations and terminals and often large bonuses. The country was anxious to have railways, and the crossings were not supervised as they are now. The railway companies were building in a new country and had to do all the experimenting as to whether the lines would pay or not. There were three parties contributing—the railway company itself, the government, in not more closely scrutinizing, and the municipalities, in giving the railway companies any privileges they wanted. These three parties contributed to the establishment of level crossings all over the country. When a measure was proposed for the purpose of getting rid of the danger of level crossings, it was argued that the three parties who had contributed to this state of affairs might reasonably be asked to contribute in a proper measure to the removal of the evil. Now, Canada is not alone in that. My hon. friend from South Simcoe (Mr. Lennox), who has given this matter a great deal of attention, knows that in the various states of the union the municipalities are asked to contribute, and to contribute very largely, and the larger municipalities are always prepared to do so.

Mr. LENNOX. They have always a fixed rate.

Mr. GRAHAM. The rate fixed by the commission has been very small; but that does not interfere with my argument. The hon. member for Lincoln contends that municipalities should not be asked to contribute at all.

Mr. LANCASTER. When the railway runs on the highway.

Mr. GRAHAM. His argument was that municipalities should not be asked to pay at all. I am pointing out that every state in the union that has dealt with this question has asked the municipalities to contribute a certain amount, which is usually specified, but a comparatively small amount; but the principle has been accepted that the municipalities should be asked to contribute something. Now, I am not prepared to argue the legal point, but I have been told by eminent legal gentlemen that although an Act might apparently be beyond the jurisdiction of this parliament, or that of any provincial legislature, anything that is incidental to the enforcing of that Act comes within the jurisdiction of this parliament or of the legislature, as the case may be. My hon. friend from South Lanark (Mr. John Haggart) stated that very clearly last session, giving as his authority the late Sir John Thompson. I have it on fairly good legal authority that the parliament of Canada can enforce against a municipality anything that it can enforce against an individual. But my hon. friend should not raise that point, because, if his argument be sound, he disposed of his apprehensions about our taxing municipalities. If we cannot tax municipalities, then his Bill would not be at all necessary, because we could not get anything out of them.

Mr. LANCASTER. Did not the hon. gentleman understand me to say that there were two objections—one the technical and the other the meritorious one. Why does he mix them up?

Mr. GRAHAM. I have dealt with the meritorious one; now I am dealing with the other. On the meritorious one, I do not think he has any argument on his side at all. On the technical one, there is possibly a difference between legal gentlemen, but I have given the opinion of more than one legal man, including some of my hon. friend's own friends. I say again, if my hon. friend's argument be founded on good logic and good law, then his Bill is not necessary. But that he does not really place much confidence in his own statement of the law is evidenced by the fact that he brings in a Bill to protect the municipalities against a power which he says does not exist. Now, last year we agreed that railways in the future, knowing the Act as it has been placed on the statute-book, ought to be held responsible if the commissioners found that an evil existed. In the city of Ottawa, just a few weeks ago, although the municipality and the railway company did practically agree on a certain level crossing, the commission refused to allow the crossing to be made in the way proposed. It shows the trend of public opinion and the wish of the commission to compel railway companies in the future to be very careful about creating a dangerous condition by means of level crossings. I say that is not injurious to or a discrimination against railways. The railways that have been constructed under the old conditions are now being compelled to suit themselves to the new requirements, and as we have been a party, to a certain extent, to the old conditions, in having al-

lowed them to create those crossings, we are prepared to assist them to a small degree in removing them, but we give them notice that in the future, if they create such crossings, we shall not help them to remedy any evil that may exist in consequence. I do not think that is unfair to the railway companies or to the people. Should we allow this Bill to pass? I say no. We passed the Act of last year after a lot of consideration and debate. Both sides of the House spent hour after hour on it, and we got what we thought was a good Bill, and one which I think would not be improved, but would be injured, by this amendment. We should at least allow the Act which we passed last session to have a chance to go into operation before we begin tinkering with it in one direction or another. Make this amendment this session, and next session we shall have amendments asking for a relief in some contrary direction. I believe that the Act passed last year, if we give it a fair trial, will remove in a measure at least the great evil that exists, and believing that to be the case, I cannot accept this Bill and must ask the House to vote down its second reading.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. GRAHAM. Mr. Speaker, I overlooked a phase of the question when discussing the Bill before six o'clock. In hundreds of instances the railways were in possession before there was a highway. Under the old Railway Committee of the Privy Council, a very marked distinction was always made in regard to priority of occupation. In a case where a railway had run through a portion of country before a highway was constructed, that fact was always taken into consideration in a decision by the Railway Committee as to the method and apportionment of the cost of a crossing. In order to express what I wish to in reference to this Bill, I think the proper procedure would be for my motion to take the form that the Bill be not now read a second time, but be read this day six months, and I beg leave to move accordingly.

Mr. STAPLES. I would like the minister's opinion upon the case of a crossing which originally was a level crossing, but at which the railway, in order to reduce a grade, depressed the track by six or seven feet. In such a case would the municipality be called upon to pay their proportion of the cost of erecting an overhead bridge?

Mr. GRAHAM. That would be a case for the Railway Commission and the facts my hon. friend has adduced would afford a strong ground for the municipality to ask exemption from contributing to the cost of such a bridge.

Mr. LANCASTER. I do not agree with the Minister of Railways that the conditions to-day are the same as the conditions at the time of which he spoke, years and years ago, when in their anxiety to secure railways the people of Canada were willing to allow them to run on the level of the highway and when many municipalities granted bonuses to secure railways within their borders. Those are by no means the conditions for which we have to legislate to-day. In those days every train stopped at every station and the fastest train did not run 25 miles an hour. The fatalities that occur to-day are caused by the fast through trains running 50 or 60 miles an hour that do not in any way serve the municipalities that are asked to bear the cost of protecting the lives of their people at these deadly level crossings. In the days of which the minister spoke there were no trains of this character, no train passed through a town or village at such a rate of speed that accidents could not easily be avoided at level crossings. There would not be the same objection to the expenditure of this money by the municipalities if the result would be to absolutely safeguard the lives of people within the municipalities by the entire elimination of level crossings. My Bill does not apply to the conditions mentioned by the minister. This Bill applies only so long as the trains continue to run on the King's highway.

As to the hundreds of instances which the minister has just mentioned, I fancy that is a little bit of imagination too, when he says there were hundreds of cases where the railways were in possession before the highway was constructed. In some large cities new crossings have been opened up, and those are always dealt with as they arise, that is a matter of new construction. But in the great majority of cases where the trouble arises to-day, the highways existed before the railway was built, in villages and towns where the railway stopped, and where they did not have the fast running trains we have to-day and which can hardly avoid killing people. To corroborate that statement you have only to look at the statistics, and you will find that in every case where these accidents have happened, they have occurred by trains running fifty or sixty miles an hour through villages and towns where they did not stop.

House divided on amendment (Mr. Graham).

Motion, as amended, agreed to.

RAILWAY ACT—AMENDMENT.

Mr. NORTHRUP moved the second readinf of Bill (No. 5) to amend the Railway Act.

Mr. GRAHAM. I think this is the same Bill that received the attention of the House some few years ago and was rejected. It was on the Order Paper last year, but, if I remember correctly, it was not reached. This Bill proposes an amendment to the present Railway Act, not so much, as I understand, to meet general cases as to meet a specific case. I do not care to go into the details as the House has heard the argument time and again from the hon. member for East Hastings (Mr. Northrup) as to a contract that was made some years ago between the railway company in the county of Hastings which he contends was never carried out by the company. Instead, the railway was transferred to another company. If I remember my hon. friend correctly, speaking last year, he said that a certain amount of money, paid by the late Conservative government, was caused to be paid through error and accepted fraudulently by the company. This Bill, if I understand it, is intended to be retroactive, to give the commission power to deal with the whole matter which had its

origin nineteen or twenty years ago. The matter was thoroughly discussed on a previous occasion. I do not care to detain the House, but I do not think that the government can see its way clear to accept the Bill, and as sending it to the committee will only be postponing the evil day, I beg to move in amendment that the Bill be not now read the second time but that it be read the second time this day six months.

Mr. NORTHRUP. Mr. Speaker, the only regret I have is that this Bill, which I have introduced, will not come into operation within the next few months because it certainly must come into operation after the next session of this House for there is no other point to which the minister can move but that one, he having been on every side of the compass with that exception. The minister objects to this Bill on what he regards as sufficient grounds. The first ground is that the Bill has already been rejected by this House. If this Bill had been rejected by the House that might be an argument, though certainly not a conclusive argument, against the present motion but, unfortunately, the minister is wrong. I am obliged, speaking in the parliamentary sense, to accept his statement, but I can assure you that it was the greatest surprise of my life to learn that this Bill had been rejected by this House, because it certainly was not my Bill, it was not during the time I was in the House that the Bill was rejected and therefore I cannot help having some kind of suspicion that the minister, when he gave that as a reason for not allowing this Bill to pass, was not stating the reason that was, at all events, uppermost in his mind. Then there was another reason, and that was that this Bill was introduced to meet a particular case. The minister is just as accurate in that statement as he was in the preceding one and not one bit more so. But it does seem rather an insult to a member of this House, when he introduces a Bill that he believes to be in the interests of the country, that a minister will deliberately oppose that Bill and give two reasons for the throwing out of that Bill on the strength of which two reasons there is not the slightest doubt in the world that this intelligent body will throw that Bill out, and yet there is not the slightest shadow of a ground of excuse for either of the reasons he gave. One would hardly believe it possible that there could be such ingratitude in this world. I remember a time, only a couple of years ago, when this very same matter was brought by myself before the House, and at that time the hon. the Minister of Railways and Canals, the same gentleman who to-day fills the position and moves so sensibly and on such meritorious grounds that this Bill should be thrown out, almost with tears in his eyes, regretted the lamentable state of affairs that existed and declared that he was looking for a remedy therefor. Let me tell the House what the minister thought of this same Bill two or three years ago when the Bill was first brought in and when, whatever may have occurred since, there had been no opportunity for any railway corporation to influence the minister or express its opinion in regard to this Bill. In those early days, when perhaps the minister's conscience was more sensitive, as he had been in office but a short time, speaking of this very measure, the minister thus expressed himself. I had laid before the House the grounds upon which I complained that the people of this country were suffering a grievance. The minister says that it is not necessary to repeat all the details, and I will not weary the House by repeating the full details of the story I told, but the story I told was of the manner in which this country had been robbed of $21,000 by a railway corporation, and after I had pointed out that the case was not met by existing law and asked if there was no remedy, the minister spoke of this lamentable state of affairs and said:

> We are anxious to find a remedy so that this will not occur again. The people have a grievance not only on account of the subsidies voted by this House, but on account of the votes by municipalities throughout Ontario and in other provinces. . . There is a weakness in the law somewhere that ought to be remedied, and I assure the House that I am trying to find out the method to remedy this grievance. If possible I shall have something further to say a little later on so that the Railway Commission or some authority may be given power to deal with such cases and compel companies to carry out their contracts with the people of Canada. . . I will say further that I will not be satisfied until I do find some way. I do not believe that a railway company has a right to take the money of the people of Canada and then not carry out its contract any more than it would have a right to take my money and not carry out a contract entered into with me.

Mr. LANCASTER. That was not this Minister of Railways.

Mr. NORTHRUP. 'Twas he. As I said a few moments ago about another matter, does it not almost seem to be a farce for hon. members of this House to waste their time preparing legislation in order to assist a minister to relieve himself of anxiety that is wearing him out and bringing him perhaps to an early grave through worry? And, when I found a remedy for him last year, the House did not reject the Bill but when it came up the first time it could not be moved because it had not been printed in both languages, and another unfortunate Bill was ahead of it—whether it was that Bill the government did not wish to

have read or my Bill I know not—but at all events no further opportunity of calling the attention of the House to the merits of this Bill was given. So Sir, I say that practically at the request of the Minister of of Railways I introduce this measure, because, when he informed this House that there was a grievance, that this grievance ought to be remedied and that he would not rest until he had found a remedy, I felt I was conferring a favour on the hon. gentleman when, in discharging my duty to my constituents and the people of this country I offered him a remedy which he himself was not able to discover. If we find the minister speaking the truth, as of course he did speak the truth when he admitted there was a grievance; if we find the minister speaking the truth in all conscientiousness which of course he did when he said he desired to find a remedy; and if we find him speaking the truth, as I admit he did when he declared he would not rest until he found a remedy, then when the remedy is offered and the minister declines to accept it, what are we to think? This House has heard the objections made to the present measure but not one word dropped from the lips of the minister to show that the Bill did not meet the desire of his heart to furnish him with the remedy he sought. But, merely, because, first, it had been rejected which it had not, and secondly, because it is to meet an isolated case which it is not, he asked the House to reject the Bill. The minister can hardly be surprised to find that I and other members of this House have their strong suspicions that there is some other reason actuating the minister than the two most unfounded reasons which he has given to the House. Now Sir, what other reasons can possibly exist? The minister says this is an isolated case and therefore, possibly because I happen to sit on the opposite of the House from him, he thinks my constituents are not entitled to redress. But there sits on my left the member for Missisquoi (Mr. Meigs) a more faithful supporter of the government than whom does not sit in this House and he requested me to push the Bill because in his constituency there are some cases precisely similar to the one in my own constituency. An hon. gentleman sits behind the minister, the gentleman from the county of Perth who, whether or not he himself is aware of the fact, his predecessor was aware of it and was prepared to assist me in carrying this Bill because in the county of Perth there are illustrations precisely similar to the one in the county of Hastings. Other members of this House have in their own constituencies precisely similar conditions, and therefore when the minister objects to this legislation on the ground that it is only to meet an isolated case there is no more reason for that excuse than there is for the others he gave. Is it possible that in the parliament of Canada in the twentieth century a minister would dare occupy a seat in this House, and without denying the facts in this case refuse to remedy the grievance? These facts are that the Crown had been robbed of $21,000 by a railway company which made an application for it to the Crown under the name of another company which did not exist; that it obtained a cheque from the government payable to the order of a railway company that had ceased to exist years before; that it endorsed that cheque in the name of a company which had no longer any existence and deposited that cheque to its own credit in the bank and was wrongfully the beneficiary of over $21,000 of the money of the people of this country; that a contract was entered into in the name of a non-existant company by one of the great corporations of Canada to-day; that that contract expressly recited and agreed that the recipient of the money, the bogus non-existing company was to continuously and perpetually operate this line of railway seven miles only in length, would it be believed that in the face of these facts and when it is pointed out that unfortunately under the wording of the Railway Act no relief lies at present, because that great corporation if it was brought into court would say that it did not make the contract and that the company that did make the contract does not exist, any more than it did when the money was paid over in its name; would it be believed that when under these circumstances I ask the government to do something to recover for the people of this country the $21,000 which have been most improperly taken from their pockets, the minister while admitting this state of affairs, while regretting the scandal that the law should be as it is, while declaring in this House that he deplored that state of affairs and never would rest until he found a remedy, now deliberately stands before this House and refuses to accept the remedy which is offered to him, and refuses on grounds which I do not think he would venture to state before me on a public platform in the county of Hastings where I could use language that the rules of this House unhappily prevent me from using here. Now, it has been said by the minister that this legislation is only to meet a state of affairs that arose in the past, that it is ex post facto legislation. Why, Sir, when the very board to which I wish to appeal was created, was there a single solitary shred of jurisdiction given to that Railway Board which did not stand on exactly the same footing that this case stands on which I to-day wish to bring before the board.

Mr. SPROULE. They are dealing with retroactive matters all the time.

Mr. NORTHRUP. Certainly, they all stand on the same footing. There was no Railway Board until the Act created it and gave it jurisdiction to deal with matters that had occurred up to that time as well as with matters that might occur in the future. And when, unhappily, it was found from time to time, as it has been found in many cases, that the Act constituting the Railway Board unfortunately did not go far enough and that a grievance had arisen for which there was no remedy, the government itself, led by my hon. friend the Minister of Railways, has come to this House again and again and again and amended the Railway Act to give to the Railway Commissioners the power that they thought was necessary to do justice to the people of this country. And, when to-day, I ask him to do precisely what has been done again and again and again; when I ask him to give to the board power—not to compel them to take any steps but merely to give jurisdiction to the board—that when certain facts are brought before them, the fact that the people have been deprived of their money and the contract not carried out, that the board may have jurisdiction to make such orders as may seem reasonable in the premises. I do not even provide that if the matter is brought before the board they must make any particular order. I merely ask that in such a case the board may give such an order as is reasonable in the premises. The hon. minister has so little confidence in his own board, or so little confidence in the honesty of the people he is defending, that he is not willing to allow this matter to come before the board and give them jurisdiction to make such an order as they may think reasonable and fair. Now, I would like the minister to be honest in this respect and to tell me which it is he distrusts: the honesty of those—I can hardly call them his clients —the honesty of those recipients of the $21,000 whom he is protecting, or the integrity of the broad which he will not trust with such a matter as this. There is no escape from the dilemma. The hon. gentleman admits the grievance. He has declared it publicly on the floor of this House and therefore he cannot deny it. He has declared that a grievance existed and he wished to find a remedy for it, and now when a remedy is offered he refuses to accept it.

Mr. GRAHAM. Will the hon. gentleman allow me? He has repeated that so often that he may possibly come himself to believe that it is founded on fact. If he will just read carefully the wording of my language which he himself has read, he will see that my observations were addressed to a remedy for future cases which might arise.

He had described this case as he has to-night, only at more length. I fear the hon. gentleman is not quoting exactly what I said, but if the hon. gentleman consults 'Hansard', he will find that at that time there was a division taken and that my contention was upheld on practically the same Bill which he has before the House to-night. I was speaking in general terms and for the future, while my hon. friend tries to make out that I was discussing his own case.

Mr. NORTHRUP. I do not wish to have any question of veracity between the hon. gentleman and myself. I asked a question in the House the other day as to the accuracy of these words, which were taken from 'Hansard', copied by myself; and even at the risk of being charged by the hon. gentleman with repeating the words once more, I will read from 'Hansard' exactly what he said. While the hon. gentleman the other day, in answering my question, said very astutely that the sentences were taken from different parts of his speech, which was perfecly true, yet it is also true that there is in the context not one word to modify the statement made by the hon. gentleman at that time. In fact, so eloquent and convincing was the hon. gentleman that his leader assented, and said there was a grievance that should be remedied. Therefore I thought the remedy was at hand. That there may be no doubt as to what the hon. gentleman did say, I will read his exact words, as found in 'Hansard' of 1907-8, at pages 2815 and 2816:

> We are anxious to find a remedy so that this will not occur again. The people have a grievance not only on account of the subsidies voted by this House, but on account of the votes by municipalities throughout Ontario and in other provinces.
>
> There is a weakness in the law somewhere that ought to be remedied, and I assure the House that I am trying to find out the method to remedy this grievance.
>
> I will say further that I will not be satisfied until I do find some way. I do not believe a company has a right to take the money of the people of Canada and then not carry out its contract any more than it would have a right to take my money and not carry out a contract entered into with me.

Does the hon. gentleman think to night that a railway company has the right to use the name of a non-existing railway company to obtain $21,000 of the money of the people of Canada, to execute a contract in the name of a non-existing railway company, to get the money, to endorse a cheque in the name of a non-existing railway company, and deposit it in a

bank to its own credit, and then decline to carry out one of the conditions under which the money was paid? Does the hon. gentleman think that he and his colleagues have no responsibility to the people of Canada in a case of this kind? Has the day come when the principle can be laid down, probably to be quoted as a precedent in other cases, that if once money can be filched from the public treasury and be placed in the pocket of any one not entitled to it, although you may prove that the money was improperly obtained, and although you may show the very pocket in which it still rests, nothing can be done by this House, because the money having been obtained, it would not be fair to pass ex post facto legislation, and make the recipient pay the money back, but we will see that in future no one catches us in the same way? Is that to be the highest type of political foresight that we are to find in this House? Now, I do not wish to occupy the time of the House, because I assume that, the government having committed themselves against the Bill, it will not pass. I am perfectly willing, if they insist, that the Bill will be thrown out on a division without taking time to call in the members and have the vote recorded; but at all events, I will insist on this, that if the Bill is not accepted by the government, every year that I occupy a seat in this House, I will make them vote as they did last year, and as they apparently intend to vote to-night, that it is not right to give the Railway Commission an opportunity to make a railway company pay back money which it is admitted it improperly received. If the government and their supporters are satisfied with this public exhibition of the ideas entertained by this government of the standard of right and wrong that should prevail with regard to the handling of public funds, I can only hope that the day is not far distant when the people of this country, estimating these hon. gentlemen at their true value, will place in office gentlemen from this side of the House who, whatever their faults, will not fail in this respect, but will be prepared to stand up, not for the rights of a defaulting corporation, but for the rights of the people of this country.

Mr. AYLESWORTH. Mr. Speaker, I am sorry that I should have to take up the time of the House by returning upon the path that we travelled over, not once, not twice, not even three times only, but I think no less than four times in the session before last with reference to this railway which my hon. friend from Hastings is so interested in. I might say that I am not much concerned in defending the transaction which he has so vigorously attacked, for the simple reason that it occurred over twenty years ago, in the golden days when the late lamented government of which my hon. friend was so well known a supporter, was in charge of the affairs of this country. In those days, somewhere between 1885 and 1888, the riding of North Hastings was represented in this House by an hon. gentleman whose name is well known in the political history of this country, who had his residence in the city of Belleville, and who was, I venture to say, thoroughly well acquainted with all the circumstances of this case as they happened from day to day and from year to year during the whole of that period. The building of the Belleville and North Hastings Railway, the aid it received from the municipalities through which it ran, the subsidies it got from the provincial legisture, and the subsidy which afterwards was granted to it by the Dominion government of that day, of which the hon. gentleman to whom I have referred, Sir Mackenzie Bowell, was a prominent member—all these matters that hon. member and the government were not at all unacquainted with. The railway line was built. It was on at least two different occasions made the object of subsidies granted by the parliament of Canada—in the year 1886-7 and the year 1887-8. These subsidies were to be earned by compliance with the conditions of the statutes under which they were granted. The railway line having been built, it was examined by the officials whose duty it was to certify to the Department of Railways and Canals that the subsidy had been earned.

That report was made, that certificate was given, and the amount mentioned, the sum of $21,000, certified to have been earned by the company, was paid over in January, 1889. My hon. friend says that money was filched from the treasury. Well, I give the government of that day, I give the Minister of Railways of that day, I give the member of that government and for that constituency of that day, who must have had personal knowledge of all the facts of the case quite as well as my hon. friend from East Hastings (Mr. Northrup)—I give to these gentlemen the credit of supposing that whatever they paid out of the treasury of this country as a subsidy to that company, was paid to that company after all the conditions surrounding that subsidy had been complied with. But if my hon. friend believes that his friends of that day were utterly remiss in their duty, that they allowed themselves to be hoodwinked, and voted to pay to some fictitious company money which had never been earned, I think he is labouring under an entire misconception of affairs. The company was legally brought into existence, it was incorporated regularly and properly, it carried on its business, it acquired property and complied with all the statutory requirements to give it a valid existence. What has put it out of existence,

which is the phrase my hon. friend continually uses? He alludes to the legislation of the province of Ontario which took that company and another company and fused the two into one. Did the other company go out of existence? Did the Grand Trunk Railway Company go out of existence by the fusion? If the Grand Trunk Railway Company, after the fusion, represented the Grand Trunk Railway Company which existed before the fusion, why does the hon. gentleman deny that it represented the other companies which by Act of parliament were merged into one?

Mr. NORTHRUP. What railways is the hon. minister talking about as having been fused at all?

Mr. AYLESWORTH. The various amalgamations as detailed in the debates of the House the session before last. There were several pieces of legislation which the hon. gentleman himself narrated and which appear in 'Hansard.' If I recollect correctly, the Belleville and North Hastings Railway Company was originally fused with the Grand Junction Company. Thus a company was formed which fused with the Midland railway. Then immediately afterwards that new company was fused with the Grand Trunk Railway Company. So just as the first two fused companies represented both the Belleville and North Hastings Company and the Grand Junction Company, the new company formed when the Midland was fused with that first one, represented the three companies which had gone into the amalgamation together, and the Grand Trunk Railway Company, which existed after the final piece of legislation, represented all four. The provincial legislature was careful, by the Acts which effected these fusions to provide that the liabilities, debts and obligations of each of the companies, dealt with and formed into one, were to be carried on as liabilities, debts and obligations of the new cmpany. Therefore I am quite unable to understand on what principle it is my hon. friend continually represents the company which had earned this subsidy as one which had no existence at the time the money was paid it. I would have thought that my hon. friend, as a lawyer, if he had been advising the government of 1888 and had been told by that government that there was a certain railway company which had earned its subsidy and was entitled to the money, but that the government were a little uncertain how they should make out the cheque for that subsidy and wanted his advice—I would have thought that he would have advised the government to make their check payable to the company with which they had a contract and which had done the work and earned the money and presented its certificate showing that it was entitled to be paid. My hon. friend says that the payment was a fraud on the public, that the money was filched from the treasury. All I can say is that the company to which the cheque was payable received the money, as shown by its endorsement of the cheque, I am speaking of facts which my hon. friend himself put before the House the session before last. The cheque shows the endorsement by the payees, the properly constituted officials of this very company, but the endorsement upon the cheque was for deposit to the credit of the Grand Trunk railway, and my hon. friend says that makes it all wrong. I remember two years ago asking my hon friend to explain what would have been the difference if this company, having earned the money, had, instead, of a cheque, received the money in current coin of the realm and handed that coin over to the Grand Trunk Railway Company, and I have never heard any explanation of what wrong there would have been in that. The money was earned, the company had complied with the conditions of the statute governing the subsidy, there was nothing in the statute about operating the railway, and I am unable to see what difference it would make whether the company paid the money to the Grand Trunk railway or deposited it in the bank to its own credit or threw it into Lake Ontario.

My hon. friend says there has been great wrong done the people of his county because that line has not been operated during the last twenty-one years, and he presented that circumstance as a grievance when addressing the House on the subject two years ago. The Minister of Railways then told the House that if a repetition of such a state of things, as my hon. friend from Hastings had described, could be prevented, if there was any way of preventing it, he would take that way. The extracts which the hon. gentleman made from the remarks on that date of the Minister of Railways, as pointed out in the answer given the other day to the interrogatories on the subject, were not continuous extracts. Sentences between were omitted and the quotations which the hon. gentleman put into the question he framed, were not given in the order of the sentences as uttered by the Minister of Railways. I venture to say that any one who reads the speech of the minister, as reported in 'Hansard,' will plainly see that every reference he made in that case was not to the individual grievance of which my hon. friend from Hastings was speaking but to the general question, and that he was pledging himself to the House upon that occasion that he would take the earliest means in his power to put on our statute-book, if he could find it, some remedy that would prevent any repetition of such circumstances

The pages to which the hon. gentleman has referred are incorrectly given in the citation from which he was just reading. They are correctly given in the answer to the question of the hon. minister a week or ten days ago, as 2815 and 2816 of 'Hansard,' 1907-8 in the report of the proceedings of February 10, 1908. What followed? During the course of that session the Minister of Railways thought he had succeeded in finding a remedy and he prepared and presented to this House his Bill amending the Railway Act, empowering the Board of Railway Commissioners to consider any future case of this character which should arise and conferring upon that board a new power by giving to any person entitled to apply to that board the new remedy of compelling all railway companies specifically to carry out every obligation into which they had entered. That was a vast step in advance in the legal history of this country. Up to that time, a railway company which might have entered into a contract that it would maintain a station, that it would operate a road or that it would do some other continuous piece of work, enjoyed this position of advantage not peculiar to a railway company, but which would apply and would exist in favour of any similar organization; the courts which have the power to compel people to carry out their contracts specifically have for a long series of years both in this country and in England, refused to pronounce any decree which the officers of those courts would not be in a position to see enforced. They had refused to pronounce a decree which would in terms order a railway company, for instance, to operate its road. How was such a decree to be enforced? It would need the sheriff or some other officer of the court to stand day by day through week after week or month after month over the company to see that it complied with the order of the court and because it was a task of that continuous character, which would involve the taking control of the railway and administering its affairs, the courts had long refused to pronounce any such decree, or judgment of that character as against a railway company or any other company which might have entered into such a contract. Under this legislation, which the Minister of Railways introduced and carried through the House during the session before last, the Board of Railway Commissioners is given precisely that power and for the first time in the history of this Dominion a court has been specifically empowered to take hold of a railway company, and compel it to live up to its obligations and to carry out specifically any contract of this character into which it may have entered.

When that legislation was under consideration in this House my hon. friend (Mr. Northrup) was not satisfied with it, he thought it would not cover this particular case which lay so near his heart and he urged that its language should be so widened that it would not merely include and cover cases which might arise in the future and which the hon. minister, by his Bill, was seeking to guard against; but that the legislation should be so worded that it would cover this old outlawed claim of his of twenty odd years ago. He pressed that upon the House, the matter was fully discussed in Committee of the Whole House, the committee was against him but he was not content. On the motion for the third reading of the Bill he proposed by way of amendment that there should be added to the Bill a clause in the very words, word for word and line for line, of this Bill now printed and now under the consideration of the House. He pressed his argument to the utmost and after a full discussion divided the House and on June 30, 1908, by a vote of 77 against 36, the House declined to accept the amendment of the hon. gentleman and accepted instead the Bill as framed by the Minister of Railways. My hon. friend is not content with that. He brings this Bill before the House and seeks to insist that it must be passed and that this duty which in 1908, only eighteen months ago, this House declined to put upon the Railway Board, should now be added to it.

We must in fairness to the hon. gentleman's Bill meet it not with reference to the particular facts of the special case which he described but with reference to its provisions and we must see in what way it would change the existing law. The existing law is to be found in the amending or substituted section of last session. On May 19 last the Royal Assent was given to the Bill of last session which empowers the Railway Board to deal in the way the hon. gentleman desires with all future cases of this character and the one point of substantial difference—there are verbal differences but they are matters of detail—between the Act as it now stands upon our statute-book and the Bill now under consideration is to be found in lines 21 and 22, and in lines 31 and 32 of the present Bill. That is simply a provision including the obligations of either the contracting company or any person or corporation which has acquired or owns or is in possession or occupation of or is operating the railway. Bear in mind that the present law imposes this obligation to carry out its contract to the full upon the contracting party but that will not suit the case of my hon. friend. He wants Paul to pay Peter's debt. He is not content with the present law which would make the company which contracted to do a certain thing do that thing, but he wants to make some other company do it and accordingly he frames this Bill to cover not only the case of the company which enters

into the contract but, in terms, to extend to and cover the case of any person or corporation which has acquired or owns, or is in possession or occupation of or is operating the railway. Now is that right? Ought that to be the law? If I buy a house and there is a mortgage on that house, I know that I must pay that mortgage before I can own that house free of encumbrance. But when I buy a house which is free of encumbrance, I hope I do not undertake to pay the coal bill of the former owner, I hope that I am not entering upon an obligation to pay any and all of the debts which the man who sold that house to me has contracted. And yet, that is identically and exactly the principle which my hon. friend wants to incorporate into this Bill now before the House and to enforce against the company which has purchased the property of the company that he says is in default. I think that principle needs only to be stated, needs only to be understood to justify every one in supporting the amendment which seeks to postpone for six months the consideration of this measure.

I, Sir, am not prepared by any vote I give in this House to enable some person who has a debt against one man to collect that debt from another man simply because that other man may have come into possession of the property of the man who owes the debt. That, stating it in plain English, is the position which this Bill seeks to put any railway company, or other person, or company, in, if such railway company, or other person, or company, has acquired or is operating a railway line. It seems to me that such legislation is wrong in principle. That was the view in which the proposition of my hon. friend was opposed from this side of the House during the previous session. The matter was then very fully discussed and debated, the matter was then pressed to the ultimate extreme of dividing the House on the subject, and I for my part certainly see no reason whatever to depart from the course which was taken then in rejecting the proposition of my hon. friend.

Mr. SPROULE. With regard to the last reason which the minister has given for his course to-day, in my judgment it does not hold good, because parliament has already done the same thing once or twice, or more, with regard to roads that had been purchased by other companies than the original owners. I can cite one or two instances where the labour was paid, and parliament compelled the new company to pay the cost of the labour that went into the construction of the road long before it was sold. We have done this several times in parliament. We did it with the old Northwest Central railway, we did it with the railway extending south from Hamilton, and we have done it in one or two other instances, I think one in the province of Quebec many years ago. So there is more than one precedent for it; and the argument which the Minister of Justice addressed to the House as the strongest reason why it should not be done, has in my judgment very little force in it, because parliament has already done it.

House divided on amendment (Mr. Graham).

Amendment agreed to.

Mr. NORTHRUP. Mr. Speaker, if I was somewhat surprised at the remarks made by the hon. Minister of Railways (Mr. Graham), I must frankly admit I was utterly astounded by the speech made by the hon. Minister of Justice (Mr. Aylesworth). I do not know that I can blame hon. gentlemen opposite for voting as they did in view of the statements, the illustrations and the propositions of law laid down by the Minister of Justice. There are some points on which there is room for argument. There are many questions upon which a man has a perfect right to hold an opinion on either side. But there are some questions on which it is inadmissable for any person to hold other than one opinion. I venture to say that if it were possible to entirely eliminate political considerations from this question there is not one single gentleman on the other side of the House, or a supporter of the government, sitting on this side, who would have by his vote signified his approval of the remarks made by the Minister of Justice. Let me proceed to give two or three illustrations. I might occupy considerable time in illuminating 'Hansard' by calling attention to his felicitous remarks, but the hour is late, the question is practically decided, and I merely call attention to the speech made by the Minister of Justice in order that hon. gentlemen on this side of the House can see, and the country may understand how questions are decided here. The Minister of Justice, as an objection to the measure which I had the honour to move, said that when amalgamations were made by various roads, as had been the case with the Belleville and North Hastings, the road which was the result of the junction of a couple of other roads assumed the obligations of the roads which were so fused. That, I believe, as a general rule is the fact. I say that it is a fact that when the Belleville and North Hastings and the Grand Junction were amalgamated the new road, called the Grand Junction, assumed the debts of the Belleville and North Hastings. I quite agree with the hon. gentleman in that. I quite agree that when the Grand Junction and Midland railway were fused the Midland railway assumed the obligations then existing of the Midland railway and the Grand Junction railway. But, I would like to know what application that very proper principle of law has to the case, where, after a railway has ceased to exist, after the Belleville and North Hastings and the Grand Junction have been fused and the Grand Junction has assumed the debts of the two, and after the Grand Junction and Midland are fused and the Midland assumes the debts of the Grand Junction, somebody comes along with a promissory note upon which he had written the name of the Belleville and North Hastings years after the company had ceased to exist and put that note in circulation. Would anybody be more surprised than the Midland Railway Company if told: 'You must pay that debt years and years after the Belleville and North Hastings had ceased to exist because the name of the Belleville and North Hastings is there, and ten years before they had assumed the obligations which were contracted by the Belleville and North Hastings.' That is the case we

have before this House. There was no road which could assume the obligations which the Belleville and North Hastings company had undertaken with the people of Hastings and of this country, because there was no Belleville and North Hastings to make good the obligations although the name of that company appeared upon the document. The Minister of Justice, with a great flourish of trumpets and as a conclusive argument, said: You might as well expect a man who had bought a house to be called upon to pay the coal bill of the former owner. It might be a proper thing to make him pay the bill of the former owner. If he had bought a house requiring coal, if he had sent an order for coal in the name of the deceased owner, if that coal were delivered and he used it, I would like to know why he should not pay the coal bill? I would challenge the Minister of Justice to show the distinction between the case of a man ordering a ton of coal in the name of a party deceased, using the ton of coal and refusing to pay for it, and a railway company, one of the large corporations of this country, using the name of a defunct corporation which had been defunct for years obtaining money on the endorsement of that name, pocketing that money and refusing to carry out the obligation that the money was paid for. When the Minister of Justice stated that the railway had been completed and that the company had complied with the conditions of the statute, I cannot contradict him there simply because there is no provision in the statute of any kind or condition. The statute is the ordinary one bringing down subsidies to railways, so much is put in for the Belleville and North Hastings, and there was no more condition in that statute than in habeas corpus. But before the government paid over the money the Minister of Justice should know, as the Minister of Railways and Canals certainly knows, a contract was entered into between the railway company and the government and no money was paid over until this contract was entered into. All the money that was paid over was paid on the strength of a contract perfect in form, regular on its face, duly signed, sealed and delivered to the Belleville and North Hastings Railway Company and the only possible objection on the face of it was that there was no such company as that whose name was appended to the contract. This contract was made by the Grand Trunk Railway Company in the name of the Belleville and North Hastings Railway Company. The Grand Trunk almost became a party, because in the letter of William Wainwright, sent to the engineer, the Grand Trunk railway undertook to supply the rolling stock. If the Grand Trunk was bound to the people and the government to supply the road with rolling stock, they avoided that liability under the contract by ceasing to operate the road, so that no rolling stock would be required. The hon. gentleman thinks that is a perfectly reasonable and fair way to treat the people of this country. I would just like for a moment to call the attention of the House to an opinion which, I am sure, all respect, which possibly may have weight even with the Minister of Justice, an opinion concerning this and a similar grievance which the Minister of Justice complains has been aired so often before this House. Let me give you an opinion which I frankly say and believe is entitled to the greatest respect and should carry the greatest weight. The opinion is this:

> I think there is no doubt whatever that the intention of parliament, when the Railway Act was passed, was to give jurisdiction to the Commission to deal with such matters as the one brought up by the hon. member for East Hastings (Mr. Northrup), that is to say to compel railway corporations to perform the duties towards the public which parliament has imposed upon them. I did not understand my hon. friend to dispute that, but if I understood him aright, he thought no party in this case could be brought before the Commission.

So there we have the opinion that the Railway Act, when it was passed, was intended to give this Commission the authority which I now ask parliament to give them. When we were told on authority which is at least respectable that the intention of this House was to give the Railway Commission certain power, and when the Minister of Railways has passed many a sleepless night because he could not find a remedy to obviate the oversight and give the powers which the government had intended to the board, I think it is about time that the members who sit on the other side of the House should have sufficient respect for the opinion of the right hon. the Prime Minister, expressed on 'Hansard' of 1908, page 2820, to vote for this Bill, I think I am justified in coming back again to the Minister of Justice and asking him what the influences are—for there certainly is some influence other than argument for of that we have heard none. What is the influence which prevents him from compelling the Grand Trunk railway of Canada to do what is right by the people of this country and to restore to the treasury of the Dominion the $21,000 which they wilfully and deliberately obtained on the promise they would perform a service which nobody pretends they ever did perform. Now, the Minister of Justice was very facetious over robbing Peter to pay Paul's debts. As a general proposition, like many other of his propositions, it is perfectly sound as a proposition, but unhappily, like the flowers that bloom in the spring it has

nothing to do with this case. I am not asking for legislation to compel the Grand Trunk Railway Company to pay anybody's debts. I am asking legislation to allow the railway board to do what the premier of this country said it was intended they should be given power to do when they were constituted. I am asking this House to give the railway board power to do what the Minister of Railways grieves they have not the power to do. I am asking this House to give the railway board power to compel a railway company which has wrongfully taken $21,000 and the interest on it for nearly twenty years, to pay back to the people of this country the money so long held and which they obtained by fraudulent representations. If such a matter as this were laid before the Board of Railway Commissioners, and if the Grand Trunk Railway Company of Canada had done just what the Belleville and North Hastings railway purported to have done; if the agreement which the Grand Trunk railway through its officials delivered to the government as being the contract with the Belleville and North Hastings railway had been signed by the Grand Trunk Railway Company; every single thing would have been precisely as it is to-day except that we could then make the Grand Trunk Company pay back the money because it had not earned it. Whereas to-day, because they wilfully used the name of that non-existant corporation, they keep the money of the people, they refuse to carry out the contract which cannot be enforced, and this House is apparently unwilling to do what in a saner moment two years ago it thought should be done. And to-night, blindly supported by their followers behind them, the ministers vote down this Bill without giving any rhyme or reason which had any bearing whatever on the measure before the House.

Motion as amended agreed to.

INTEREST ACT—AMENDMENT.

Mr. H. H. MILLER (South Grey) moved second reading of Bill (No. 8) to amend the Interest Act. He said: The effect of this Bill if it becomes law will be that mortgagees holding a mortgage on real estate will be compelled to accept payment of over due principle no matter what the terms of the contract, upon one month's notice or upon being paid one month's interest in lieu of notice. Some members of this House have raised a question as to whether this parliament has jurisdiction in this matter, and in reply I point hon. gentlemen to section 10 of our Interest Act passed in April, 1880, and which was introduced into parliament by the Hon. Edward Blake. That section says that a mortgage made for any time beyond five years may be repaid at the end of five years under certain conditions. This is certainly the same class of legislation as that which I now propose, and if one is within the jurisdiction of this parliament the other certainly would appear to be. It has been urged against this Bill that it interferes with the rights of parties to make contracts and so it does. In reply to that I again point the House to section 10 of the Interest Act to which I have already referred and which is a much greater interference with the right of parties to make contracts than is the Bill which I now move. I may be asked what is the necessity for this legislation. I contend, Sir, that at many times and in many cases where the mortgagor allows the mortgage money to run beyond the due date, that it is an imposition which he ought not to be subjected to that he cannot at any time thereafter repay his principal unless by the gift of three months' interest to the mortgagee. The mortgagee who usually inserts in his mortgage a contract that the overdue principal cannot be paid except by payment of three months' interest, is generally a loan company. I do not want to excite the prejudice of any person against loan companies. I have nothing to say against loan companies; I believe that the loan companies of Ontario have done a great deal towards the development of this province. I believe that loan companies are to-day doing a great deal towards assisting in the development of the western provinces, but that is not in itself any reason why a loan company mortgagee should have or exercise any unreasonable right or impose upon the ignorance of the borrower. It may be said that if the man borrowing money and the man lending money enter into a contract that I have no right to endeavour to disturb that contract, and that it is not fair I should endeavour to do so. I want to relate the circumstances under which these mortgages are usually made. The mortgager who is very often a farmer, goes to the agent of the loan company; he signs an application for a loan; the agent of the loan company sends in the application to the loan company's head office; if the application is accepted the mortgages are made out by the loan company's solicitor and are forwarded to that loan agent for execution by the borrower. The loan companies usually use a mortgage form that contains many long covenants, some of them very difficult indeed to understand. The mortgagor seldom either reads or has read to him all the long covenants contained in the mortgage. It may be said that he has the opportunity to read the mortgage if he so desired. That is true; but the mortgage being a very long document, when he sees that the rate of interest which he has contracted for and the

time of the year when it is payable are correctly stated in the mortgage, that is as far as he usually looks. If in an odd case the mortgagor should read the mortgage, and should understand the covenant, and should remonstrate with the agent, and say: I do not like to be bound by that covenant, he is probably told that it is a mere matter of form, that it is never likely to be exercised, and that he will be able to pay his mortgage when it matures. But if he is a strong-minded man and says: 'I will not sign that mortgage', the agent will say to him: 'Very well, you have signed an application for this loan, your application has been accepted and the mortgage has been made out, your farm has been inspected by the company's inspector, and if you refuse to go on you will have to pay about $20 of expenses.' Then he signs the mortgage rather than pay this amount. The borrower may wish to borrow money to pay off a mortgage maturing at a certain date, and for that reason it is necessary that he should obtain his loan promptly. Or it may be that he requires the money to make a payment on the purchase of another farm, which he has agreed to make on a certain day. In either case, his refusal to sign the mortgage might cause delay, and involve him in great expense, and so he signs it and is under the covenant. Now, I have here two letters written by the managers of two different loan companies. One manager says:

> We inclose herewith an agreement, and if you are able to have this signed and sent in, we shall be pleased to allow you the usual commission. We desire to point out that the mortgage is now overdue, and can be paid off at any time with a bonus of three months' additional interest.

In this case the borrower signed the mortgage containing a covenant that he could not pay off the mortgage if overdue unless he paid three months' interest by way of bonus. The mortgagor died, and his widow, not being aware of this covenant in the mortgage, and finding that she could borrow money at a reduced rate of interest, found that she was unable to pay off the overdue mortgage which her husband had made unless she paid three months' interest by way of bonus. The other letter, from the manager of another company, says:

> This mortgage is overdue, and by the terms of the contract the borrower will require to pay three months' interest in advance in addition to the principle and accrued interest. We cannot accept the notice in lieu of this, but will require the three months' interest in advance if the loan is to be paid off.

In this case the borrower was a poor farmer struggling with a large mortgage on his farm. He too had an opportunity to borrow at a lower rate of interest, but he could not avail himself of that opportunity, unless he paid three months' interest as a gift to the company who had had a mortgage for 10 years or more on his farm.

Mr. HENDERSON. Will the hon. gentleman be kind enough to give the names of those companies?

Mr. MILLER. I do not think I should do that. I do not wish to injure the companies.

Mr. SPROULE. As the hon. gentleman has read the letters in the House, he is obliged to give the names.

Mr. FIELDING. They are not state documents. That rule does not apply to private documents.

Mr. SPROULE. Mr. Speaker, I ask your ruling on the question. If an hon. gentleman reads a letter or an extract from a letter in this House for the purpose of strengthening an argument, is he not obliged to give the names?

Mr. SPEAKER. I understand that Bourinot holds that in the case of private members this rule does not apply. It applies only to a minister of the Crown quoting from a public document.

Mr. MILLER. I want to point out that when a man's mortgage matures, if it is allowed to run on and become overdue, that is essentially the act of the two parties, both the borrower and the lender. They must agree to allow the mortgage to run on, otherwise it cannot do so. If at the time the mortgage matures, the prevailing rate of interest is lower than the rate stated in the mortgage, or if it remains the same, the mortgagee will in all likelihood allow the mortgage to run on overdue; but if the rate of interest has increased and the mortgagee has an opportunity to lend the money at a higher rate, he will call it in. The mortgagor may allow the mortgage to continue until the opportunity occurs to call in the principal and lend it again at a better rate. Under the terms of the mortgage, the mortgagee may at any time, after the principal money is in arrear, take action without notice, to enforce the repayment of it. If he exercises the power of sale contained in the mortgage, he will usually have to give thirty days' notice, though sometimes he does not have to give any notice. If he desires to take proceedings under the mortgagor's covenant, he does not require to give any notice at all. I think the same privilege ought to exist as to the mortgagor as exists to the mortgagee. I know that an argument may be made, a very well sounding argument, that we ought not to interfere with the rights of parties to make contracts; but I want to point out that this fine or penalty of three months' interest by way of bonus is not a material part of the earnings of a loan company or any other

mortgagee; it is not necessary to add to the profits or the dividends to be paid upon the stock; and therefore it is not imposing any hardship upon anybody to enact this law and to that extent interfere with contracts that have been made. It may be said that we have not the right to interfere with existing contracts; but in the province of Ontario, by chapter 11 of the Ontario statutes of 1903, the very same law has been enacted, with the exception that the Ontario statute requires three months' notice or three months' interest, while I have made it one month. It may be said that the Bill which I have introduced is retroactive. It is, but so also is the Mechanics Lien Act of Ontario and the Woodman's Wages Act of Ontario. I took the trouble to go to the registry office and read some of the covenants contained in the mortgage to which one of the letters which I have read refers, and in that mortgage I found the following covenants:—

The mortgagor shall be liable for any tax the mortgagees may have to pay by reason of the mortgage, or money invested therein, or revenue derived therefrom.

Here is another covenant:

And that the society may at any time in their reasonable discretion, and from time to time, appoint some person to inspect the mortgaged premises and report thereon at the expense of the mortgagor.

Here therefore is a covenant signed by the borrower providing that the person or society he borrows from may at any time send an inspector to inspect the premises and the borrower has to pay. Then there is this covenant:

In the event of the mortgagor failing to pay the principal or any part thereof, at the time the same falls due as aforesaid, it is agreed that the mortgagor may pay the same at any time within ten days after maturity thereof, with interest for such ten days, and, if he shall fail to pay the same within ten days the society shall be entitled to three months' interest in advance at the said rate from the date of payment thereof, and to all the remedies for the collection thereof that they are entitled to in respect of any of the other moneys payable hereunder.

Another most vicious covenant reads as follows:

Whenever any interest shall be unpaid and in arrears for two weeks, the mortgagor, his executors, administrators or assigns shall and will, upon demand, give the society a chattel mortgage covering such of his chattels as, in the opinion of the society, shall be sufficient to secure the payment of arrears.

Here is a man borrowing money on his land who binds himself that he will, if required, give the loan society a chattel mortgage to secure the arrears of interest. And in the case of the sale of the land by the society before the maturity of the mortgage, the society shall be entitled to costs of inspection, to three months' interest by way of bonus, and costs to them of obtaining the loan.

Then there is a covenant providing that the loan society may exercise the power of selling the lands before the maturity of the mortgage. If the borrower allows his interest to go in default, the mortgagee may sell him out:

In the case of the sale of the lands by the society before the maturity of the mortgage, the society shall be entitled to costs of inspections to three months' interest by way of bonus, and costs to them of obtaining the loan.

The mortgagor thus attorns to the mortgagees and becomes their tenant. In case any of the covenants or agreements contained or implied be untrue, unobserved or broken, the society may, without any prior demand or notice, enter on the land and take and retain possession thereof and determine the lease. Thus the mortgagor, on borrowing perhaps half the value of his land, becomes the tenant of the mortgagee, and in case of default the mortgage may at any time, without notice or previous demand, close the tenancy and take possession of the farm and it shall be absolutely his. I say that the mortgagee who will, insert such covenants in a mortgage is not deserving of any sympathy; and if this House should chose to protect the borrower against companies which insert such provisos, I do not think any injustice would be done. I do not think there are many loan companies which insert such covenants or which would use them if they were inserted, but these have been inserted in this mortgage in order that they may be used should the mortgagees choose to use them. If such covenants were commonly used, it would be the duty of whatever parliament may have the jurisdiction and power to adopt a model form of mortgage and allow no other form to be used. These are my reasons for pressing this Bill, and I trust it will have the support of the House.

Mr. JOSEPH PIERRE TURCOTTE (Quebec county). (Translation). Mr. Speaker, I wish to make a few remarks in regard to this Bill. Were such a proposal to carry, its effect would be to entirely do away with mortgages. While I do not deny that grievances may exist, I do not think they can properly be dealt with by this parliament. It does not behoove us who represent the general interests of the Dominion to enact a law with the object of doing away with grievances which, I admit, may at times be excessive on the part of the creditor by opening the door to downright abuses on the part of the debtor. I do not think it is our duty to state in our statute-books that henceforth the debtor shall no longer be left at the mercy of his creditor, but rather the

creditor who shall be left at the mercy of his borrower.

This Bill provides that whenever a sum of money has been obtained under deed of mortgage for a certain fixed period, that sum may be paid back at any time after maturity, notwithstanding the fact that there may be in the deed a covenant whereby the parties have agreed that such payment should not be effected at any date after maturity, but only at the expiry of a term of two, five or ten years. According to the provisions of the Bill, the borrower would have the right by giving a month's notice or paying one month's interest, to terminate the mortgage.

This is what occurs as a matter of fact. Take the case of a small capitalist or of an estate. The sum of $10,000, let us say is loaned for a period of ten years, and it is covenanted in the deed that, if at the expiry of ten years the sum borrowed has not been paid back, the borrower will have to keep it for another period of five or ten years more. That clause is inserted because, as everybody knows, it is at times a difficult matter to find a good investment, and also because the rate of interest varies from year to year. It may happen very likely that the borrower finds it more difficult to borrow at the expiry of ten years than to-day; or, on the other hand, the creditor may experience greater difficulty in finding an investment at an equal rate of interest. The creditor when negotiating a loan at a rate of interest of 6 per cent per annum, to be paid back at the end of a period of ten years, covenants that if ten years hence the amount is not reimbursed, the loan will run for five years longer as a means of providing against the ups and downs of the money market. The lender, who had the assurance of drawing 6 per cent on his capital during fifteen years, will have to be content with drawing 6 per cent during the first ten years; after which, if he is bound to accept payment of the principal, according to the provisions of this Bill, he may not be able to secure more than 3 or 4 per cent. It was in view of such a contingency that the lender covenanted in the deed that should the borrower fail to repay the principal at the expiry of ten years, then the loan would run for five years more on the same terms. It must be admitted, therefore, that the provisions of this Bill interfere with the fundamental principles underlying contracts, the agreements entered into being actually as law to the contracting parties.

In the province of Quebec we have been in the habit on considering agreements as something which should not be broken, something which should be lived up to, provided they contain nothing contrary to morals or public interest. Well, an agreement such as I have outlined above, would be entirely lawful, and to my mind it would be undue interference on the part of this parliament to cancel the agreement entered into by the contracting parties.

My hon. friend referred to the grievances which occur in the province of Ontario. Of course, excesses will happen. But one of two things must be admitted: either those arguments are lawful or they are unlawful, and remedies other than the proposed legislation are available. True, it often happens that a borrower puts himself in the hands of his creditor; but that is the outcome of circumstances over which this parliament has no control.

I am satisfied the principle of this Bill is antagonistic to the spirit of legislation in the province of Quebec, and for that reason I am bound to oppose it.

Mr. MONK. Mr. Speaker, this Bill is so obviously ultra vires that I have no hesitation in moving the usual amendment that it be not read now but this day six months. There is no question that this parliament has no jurisdiction whatever in the matter. One would imagine it was a Bill to regulate the rate of interest, as we have power to do under section 19 of section 91 of the British North America Act. In that case my hon. friend's proposed legislation would be at any rate intra vires of this House. But it is not so. It has for its object the regulation and modification of contracts. It would, if allowed to become law, completely upset our hypothecary system in Quebec, which is a real rights question, and I have no doubt it would have the same effect in Ontario. It actually interferes with existing contracts relating to real rights, contracts made under our Civil Code in which our provincial legislature has sole and exclusive jurisdiction under section 13 of chapter 92 of the British North America Act. It would interfere with the institution of millions of mortgages in Quebec, completely upset our mortgage system, and cause inextricable confusion in the transactions of our mortgage offices. Although I am quite prepared to admit that grievances. If this legislation was within my hon. friend exist even in our own province, still it is within the jurisdiction of the provincial legislature to remedy those grievance. If this legislation was within our jurisdiction, we would have to suspend and hear the interested parties, the mortgage creditors and the mortgage companies in Quebec and the other provinces before attempting such drastic legislation. I have no doubt the Department of Justice would advise my hon. friend that this legislation is absolutely ultra vires under section 13 of chapter 92 of the British North America Act, as it interferes with civil rights and touches on real rights within the provinces. I do not think it is necessary for me to

point out in what way this legislation would interfere with clauses in existing contracts made under the provincial law. The legislation on its face bears that ultra vires character, and I do not think the government should allow it to be proceeded with.

Mr. E. ROY. I shall add only a few words to what has been said. This Bill is not under the jurisdiction of this parliament. It comes under chapter 120 of the Revised Statutes, which deals with questions of interest. The first clause in the Bill provides:

10a. Whenever any principal money, interest or other money secured by mortgage of real estate, is not paid at the time when, in the mortgage or in any agreement for the extension or renewal of the mortgage, the same is stipulated to be due and payable, the same may, notwithstanding any covenant, agreement or provision to the contrary, be paid at any time after due, by any person liable to pay or entitled to redeem the mortgage, upon one month's notice.

We see immediately that under this Bill, if it should become law, the term of the payment might be enlarged and these mortgages or money thus secured under the contract, which is a civil contract, would be interfered with. I could understand an amendment to the law relating to interest, but when it comes to interfering with the capital, the principal money, and to changing the terms of repayment, it is interfering with civil rights and is beyond our jurisdiction. I shall therefore be in favour of the motion that the Bill be read this day six months.

Mr. H. GERVAIS (St. James, Montreal). I will support the amendment proposed by my hon. friend the member for Jacques Cartier (Mr. Monk). I think that the Bill proposed would prove to be ultra vires of this parliament. It is one of those many amendments which are being incorporated in our statute-book for the purpose of creating perpetual invasions on the legislative jurisdiction of the provinces. All the statutes of Ontario which have been quoted by the hon. member go to show that the contentions which I am now urging upon this House are sound. I understand quite well that it is within the scope of our provincial legislature to pass legislation regulating contracts and more especially to create additional causes of dissolution or setting aside of contracts; but I do not see that by the mere fact that under the constitution of 1867 the Canadian parliament is authorized to regulate the rate of interest, it is authorized at the same time and under the same section to create or define the necessary elements to constitute the contract of loan. The passing of this Bill would mean that the parliament of Canada would define the causes of dissolution of that contract of loan and consequently then I say that the Bill would be an invasion of provincial jurisdiction, which is empowered exclusively to define the elements and causes of dissolution of civil contracts.

I say that this Bill, first of all, would be unconstitutional and in the second place that it would be unfair and unjust in that it constitutes an invasion upon the law of nature which guarantees to every one full and complete opportunity to make contracts, and much more so as the Court of Appeal of the province of Quebec and the Supreme Court of Canada decided, about twenty years ago, before the amendment of the Revised Statutes of 1886, that the parliament of Canada was powerless to declare that it was without the power of a loan company to stipulate, for example, that a loan should not be repaid before a certain period of years because it is exclusively within the jurisdiction of the provincial parliament to say under what condition a loan can be made or repaid. As a consequence the law courts have been consulted and in each case they have decided that it was not within the province of the parliament of Canada to regulate such contracts, although the parliament of Canada was authorized to regulate the rate of interest. The purpose of this Bill is to have re-enacted an amendment to the statutes concerning interest which has been repealed by this parliament, because it considered it ultra vires. There is a wide difference between the power to regulate the rate of interest and the power to say under what conditions a contract of loan may be created, set aside or may be dissolved. According to the text of the constitution of 1867, according to the jurisprudence of the Court of Appeal of Quebec and the Supreme Court of Canada, and according to the law of equity, this Bill, which the hon. member proposes to have reduced to an Act, would prove to be ultra vires, unfair and unjust, and in consequence I am ready to vote for the amendment. There is no reason why we should pass such legislation when there is in each province a legislative authority properly empowered to decide how such a question of civil contract should be governed.

Mr. SPROULE. The hon. member has addressed an argument to the House which I have often heard before, that is, with reference to whether an Act is ultra or intra vires. The hon. member says that in a contract made under provincial legislation we have no power to interfere or touch it, but that we might regulate interest as a matter of usury. But I remember distinctly some years ago when a Bill passed this House, that we did both the things which this Bill proposes. In the first place it provided that where a loan company stipulated that in the event of payments not being

made at certain times, a higher rate of interest should be paid, or something else which would have been a penalty. We did away with that, and we said by that law that over due interest was only to bear the same rate of interest as is stipulated in the original contract for the loan.

Mr. GERVAIS. If the hon. gentleman will allow me—under the Usury Act which was passed a few years ago, the civil contract was declared to be set aside as a consequence of the creation of the so-called usury crime. But the question of crushing usury is not introduced in this Bill. The payment of three months' interest cannot be considered for a moment as a penalty, it cannot be considered as a fine. But I may say, and any member of this House who has some knowledge of business will say also, that this three months' interest is simply an indemnity, or a compensation which is made under the contract payable by the borrower to the lender. There is all the difference in the world between the Usury Act creating the cancellation of the contract as a consequence of violation of its provision; and this Bill which purports to set aside a contract of loan alone or of mortgage.

Some hon. MEMBERS. Order.

Mr. SPEAKER. The hon. gentleman has already spoken.

Mr. SPROULE. I do not know whether I correctly understand the hon. member. But there were two features of the Bill in regard to which he argued that it was ultra vires and could not be considered in this House. One was with reference to usury, which I contend we have strictly control over, and that feature would make it intra vires. But the hon. member who introduced this Bill does not touch the interest question at all, it is the contract feature. But even though it dealt with the contract, and contracts are assigned to the provinces, or the right to stipulate what a contract should be, this would appear to be an interference with that right. In that Bill to which I have already referred we provided that where a mortgage is drawn, I think it was for five or seven years, when three years of the five had expired, if the party who gave the mortgage desired to pay it off he could violate that original contract by giving six months' notice and paying it off. We stipulated that he could do that. Now the question was raised: Can we apply this in all cases to loaning companies? It was held that we could not, that we might possibly apply it to loaning companies that got their corporate powers from this parliament, but not to those who got their corporate powers from a provincial legislature. I think that was held by several prominent lawyers in the House to be good law. But whether it is good law or not, I know that we went so far as to alter a contract to that extent, with a provision that the morgage was to be payable at a certain time; we changed that contract by providing that after the major portion of that time had expired the mortgagee could give notice and pay that mortgage off before it matured by effluxion of time.

Mr. CARVELL. I must say that I am rather inclined to think that the hon. member for Jacques Cartier (Mr. Monk) is right in his view of the law. But although I am in doubt, I would still be willing to vote for the second reading of this Bill for the purpose of having it brought before a proper committee, and also for the purpose of getting the opinion of the Justice Department. I must say that if there is any class of corporations in Canada for which I have very little respect it is loan companies. I have been practising law 19 years, and I have never yet allowed a client of mine to borrow a dollar from a loan company if I could help it. You have only got to take up the contract such as the hon. member for North Grey (Mr. Miller) has cited here to show the unfairness of those contracts. Why, we are spending days and weeks of our time in this House in attempting to enact legislation against railway companies that we think are unfair to the people. But all the iniquities of all the railway companies in Canada heaped together could not, in my judgment, compare with the iniquities of the insurance companies and the loan companies. True, we are not now discussing insurance companies, but I hope later on I shall have an occasion to say something about insurance companies. But on account of the justice of the claim which my hon. friend is advocating this evening, I propose to vote with him, although I have grave doubts as to our jurisdiction. There is, however, one excellent example we might follow and that is section 10 of chapter 120 of the Revised Statutes of Canada, referred to by the hon. member for South Grey. This section I am informed was drafted by the Hon. Edward Blake, a lawyer whose opinion I think will be taken for its face value anywhere in Canada. Now it is true, as the hon. member has stated, that if, under this section, a contract is drawn for more than five years, then, after the expiration of the fifth year the mortgagor can tender the amount due, principal and interest, and three months interest in advance, and no further interest can be demanded. If that be intra vires of this parliament, then it is certainly interfering with a contract which has been made by two parties, and which, according to the contention of my hon. friend from Jacques Cartier, would be relegated to the provinces under the British North America Act. But in view of the action of this parliament on a previ-

ous occasion, and in view of the fact that the matter has gone on for probably twenty years, I think it is a ma'ter of much importance that we can well afford to consider it. For these reasons I will vote for the second reading.

Mr. FIELDING. It is quite evident that the Bill which the hon. member for South Grey (Mr. Miller) has presented to the House is regarded as one of great interest and great importance. I am afraid, however, my hon. friend has not impressed the House generally with the merits of the Bill, I think that the sense of the House is against him. Nevertheless, I would hope that the hon. member for Jacques Cartier (Mr. Monk) would not press the motion to give this Bill the three months' hoist in a thin House, and I would suggest perhaps that it would serve all purposes if he were to move the adjournment of the debate so that we may have a further opportunity of discussing the question. If that meets with the favour of my hon. friend from South Grey, I would ask him to accept that suggestion.

Mr. SPROULE. As the Minister of Justice is present could we not have his opinion?

Mr. FIELDING. Ministers of Justice do not like to give offhand opinions.

Mr. MILLER. I rather think that if the debate is adjourned it may be a long time before we will have further discussion. I would like to have the Bill pass its second reading and be referred to the Committee on Banking and Commerce. We will then have an opportunity of obtaining the opinion of the Minister of Justice, not an offhand opinion, but an opinion given after due consideration. We all agree as to the justice of the Bill, and that I am endeavouring to do something that is reasonable and right. I talked to a number of the members of the legal profession before introducing the Bill, and they have agreed that it is a reasonable thing, and none of them objected that it was beyond the jurisdiction of this parliament. I relied upon section 10, which was referred to by the hon. member for East Grey and the hon. member beside me, as being of the same class of legislation, and I think that if one was within the jurisdiction of this House the other certainly is. I may be wrong in that. I would ask the minister who is leading the House to permit the Bill to pass its second reading and be referred to the Committee on Banking and Commerce.

Mr. MONK. I could not consent to that, not because I do not wish to accommodate my hon. friend, but the principle is at stake. I think the suggestion of my hon. friend the Minister of Finance is a more reasonable and a wiser one, because the principle is too important for us to allow it to be adopted under the conditions which exist at present. I would be quite prepared to change my motion to a motion for the adjournment, but my hon. friend must see that if we allow the second reading of the Bill to be adopted to-night, the principle of the Bill is adopted, and I think it would entail to grave consequences to do anything of the kind by consent.

Mr. MILLER. If we allow this Bill to pass its second reading on condition that it be referred to the Banking and Commerce Committee for the reasons I have stated, we are not accepting the principle of the Bill.

Amendment (Mr. Monk) agreed to, and debate adjourned.

CANADIAN SHIPPING ACT—AMENDMENT.

Mr. J. H. SINCLAIR (Guysborough) moved the second reading of Bill (No. 15) to amend the Canada Shipping Act. He said: Mr. Speaker, the shipping law of Canada as it now stands, provides for the annual inspection of the boiler, hull, machinery and equipment of every Canadian ship subject to inspection by an officer of the Department of Marine and Fisheries. To this present provision I propose to add the following words:

> Provided that any steamboat holding a certificate from the British Board of Trade, or the committee of Lloyd's Register of British and Foreign Shipping, shall, during the currency of such certificate, be exempt from the ordinary annual inspection under this Act on sailing from any port in Canada.

The effect of this Bill will be to dispense with the double inspection of Canadian ships. Every Canadian ship now, as I have said, is subjected to practically a double inspection. She is required to be inspected by Lloyds in order to obtain insurance. She has to maintain her classification at Lloyds in order to be entitled to obtain insurance from Lloyds Company. That involves an inspection by Lloyds officers and the inspection of the larger ships is usually made in England, when they are over there trading. Then, under the present law, when a ship returns to Canadian waters she is required to subject herself to a second inspection by the officers of the Department of Marine and Fisheries. The contention is that this is unnecessary as Lloyds inspection is quite sufficient to satisfy the British Board of Trade. The British Board of Trade do not require a ship to submit to inspection by the Board of Trade after it has been inspected by Lloyds; in fact, the British Board of Trade have acknowledged Lloyds inspection to be quite sufficient.

Not only the British Board of Trade but the republic of France has very recently passed a similar law to the effect that whenever a French or English ship has been inspected by Lloyds the inspection in France as well as in Great Britain during the current year is dispensed with. I propose to place Canadian ships in the same position. This double imposes a great deal of expense upon Canadian ships. The inspection of a ship means that she must be placed on the dry dock, her boilers have to be cooled off the coal in her bunkers have to be cleaned out and it means several days delay. Some of these large ships earn $100 and some of them $200 a day or more. If Lloyds' inspection be considered good enough in England, there should be no reason why it should not be good enough in Canada. I submit therefore that the Bill ought to pass, and I would suggest, with the leave of the hon. Minister of Marine and Fisheries (Mr. Brodeur), that it be referred to the Committee on Marine and Fisheries.

Mr. BRODEUR. I am ready, so long as this Bill is going to be referred to the Committee on Marine and Fisheries to agree that it should be read the second time. This question of inspection is somewhat important and I may say to the credit of the officer who has the administration of that branch of the service, Mr. Adams, that the work has been done in such a way that we must note the fact that no accidents have happened. This we attribute to the fact that this officer is exercising a great deal of caution in the proper inspection of all ships. I would like very much that this gentleman, who has had a great deal of experience, should have an opportunity of being heard upon this issue which my hon. friend (Mr. Sinclair) is raising. I know that our inspection is somewhat severe but at the same time it must be acknowledged that under certain circumstances it was found that this inspection was absolutely necessary in order to ensure the safety of the persons who are on these ships. I have in my mind a case which occurred lately where a ship having a certificate from Lloyds, I think—I am not sure about that, but it was from one of these large associations—was subjected to our inspection. We asked that the tests generally required by the department be applied to this ship and when they were applied it was found that the boiler was in absolutely bad condition. I think I would hesitate a great deal before accepting the proposition made by my hon. friend. But, I would like to have an opportunity to hear persons interested, the insurance companies and the vessel owners, on this subject and in view of the suggestion which has been made that the Bill be referred to the Committee on Marine and Fisheries I will not object to the second reading with that reservation.

Motion agreed to, and Bill read the second time and referred to the Committee on Marine and Fisheries.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. What business will be taken up to-morrow?

Mr. FIELDING. The Bills of the Minister of Inland Revenue, and afterwards we hope to move into Supply on the estimates of the Minister of Public Works.

Motion agreed to, and House adjourned at 11 p.m.

HOUSE OF COMMONS.

FRIDAY, November 26, 1909.

The SPEAKER took the Chair at Three o'clock.

OFFICIAL REPORT OF THE DEBATES.

Mr. GERVAIS presented the first report of the Select Standing Committee on Debates as follows:

Your committee recommend that, commencing with this session, the printing of both the English and French Revised Editions of the Debates for distribution to the public and the press be discontinued and that the King's Printer be authorized to have printed during the course of the session for the use of senators and members of the House 600 copies of the current sheets of the English Revised Edition and 100 copies of the French Revised Edition.

Mr. GERVAIS moved the adoption of the report.

Mr. SPROULE. We have not had an opportunity of examining that report yet.

Mr. W. F. MACLEAN. I would like to suggest to the hon. gentleman who proposes the motion, that I think he ought to make provision for the distribution daily of the unrevised edition of the 'Hansard' to the press and especially to the daily press.

Mr. GEO. TAYLOR. That is provided for.

Mr. W. F. MACLEAN. Does it cover that?

Mr GERVAIS. Yes, that is provided for in the regulations. As a matter of fact this report is merely to save a few dollars to the exchequer of Canada by discontinuing the useless distribution of a few thousand copies of the revised edition. The unrevised edition is distributed daily to the press and to the general public. I think that the press and especially my hon. friend (Mr. W. F. Maclean) will be satisfied. During last session every one was satisfied with this arrangement. This motion is

really to confirm that practice and to comply with the request made by the King's Printer.

Mr. GEO. TAYLOR. We have been in the habit of issuing to the weekly and daily press a revised copy of the 'Hansard.' We decided there was no use in sending that out, that we would send the unrevised edition instead, and this is merely to authorize the King's Printer not to send out both the revised and the unrevised to the press generally. We merely discontinue the printing of a number of extra copies of the revised edition which we have been sending to the press.

Motion agreed to.

FIRST READINGS.

Bill (No. 42), respecting the Edmonton and Slave Lake Railway Company—Mr. Cash.

Bill (No. 43), respecting the Hudson Bay Insurance Company—Mr. Knowles.

Bill (No. 44), respecting the Montreal Central Terminal Company—Mr. Ethier.

Bill (No. 45), respecting the Phoenix Assurance Company, Limited—Mr. Macdonald.

Bill (No. 46), to incorporate the Pine Pass Railway Company—Mr. W. H. White.

INSPECTION OF VESSELS.

Mr. LEWIS moved for leave to introduce Bill (No. 47) to provide for inspection of vessels not now inspected.

Some hon. MEMBERS. Explain.

Mr. LEWIS. Mr. Speaker, the object of the Bill which I now ask permission to introduce is two-fold. In the first place, clauses 1, 2, 3 and 4 refer to barges and vessels not now inspected. I know for a fact, Sir, that what I am about to say with reference to this matter is absolutely correct as far as the great lakes are concerned, and I am informed that the same conditions exist in the maritime provinces. The custom is for old wooden boats and vessels, out of which the engines and masts have been taken, to be towed by other boats. While the government of Canada does not allow well found boats to leave a harbour unless they are properly equipped, no such provision for the safety of the crew is enforced in reference to these barges. One section of this Bill provides that they shall be inspected. Another section refers to steam yachts under five tons, clause 6 refers to fishing boats. These boats under a certain tonnage are not obliged to carry either a life boat, life raft or other apparatus for the saving of human life. In 120 Ontario reports, Sturgeon vs. The Port Burwell Fishing Company, page 154, it is clearly laid down in the judgment that had the boat in question, which is of the class referred to in this Bill, been equipped with life-saving apparatus, the lives of one or two men lost on that occasion would have been saved.

The last section refers to steamships towing vessels of steel which have not motive power. As is well known, these steel vessels cannot approach close to one another and the consequence is that when a line breaks, as frequently happens, the men on the tow are almost invariably lost. I desire by this amendment to provide that all steamships towing other boats shall have on board a rocket gun by which a heaving line can be sent 300 or 400 feet and a vessel with motive power can thus pick up her derelict tow. The United States steel trust which owns the largest number of vessels on the continent obliges all its vessels to carry rocket guns.

Motion agreed to, and Bill read the first time.

INSPECTION AND SALES ACT AMENDMENT.

Mr. J. A. CURRIE (North Simcoe) moved for leave to introduce a Bill to amend the Inspection and Sales Act. He said: I find that under the British North America Act, this parliament has exclusive jurisdiction in matters relating to weights and measures. This parliament in its wisdom has seen fit to pass legislation fixing standards for weights and other measures. Parliament has also passed an Inspection and Sales Act which deals with the standard weight of certain articles, such as a bushel of grain, a barrel of flour, a barrel of salt, a load of hay and a bag of potatoes in Quebec. Parliament has also fixed the weight of a dozen of eggs at one and a half pounds. I find, however, that the most important article of food entering into every-day consumption, that is the loaf of bread, has not been standardized by this parliament and the various municipalities and provinces have from time to time been struggling with this question, some of them endeavouring to fix the weight at one figure and others at another. Thus there is confusion and the law is not carried out. In consequence the public, especially the poorer classes, have suffered. I think that we should follow the wise legislation of the mother country and the other colonies in this respect and fix the weight of a loaf of bread as clearly as we have the right to do under the British North America Act.

This Bill is intended as an amendment and to become part 11 of the Inspection and Sales Act. The first clause defines the terms 'baker' 'inspector' and 'officers.'

The second clause provides that all bread sold by bakers shall be in loaves of one two and four pounds. That fixes a standard for the whole of Canada. Provision is made in the Bill for the carrying out of its provisions. It provides that inspectors under the Inspection and Sales Act, inspectors appointed under the Inland Revenue Act or other inspectors appointed by this government for special purposes, shall be considered inspectors under this part of this Bill. It also provides that the officials appointed under provincial statute or under municipal by-law, whose duty it would be to see to the enforcement of this Act, shall have jurisdiction in certain cases. Penalties are fixed for having bread under weight and also against a baker if he or the man who delivers his bread does not supply himself with proper scales and appliances to weigh the bread he is selling. I trust that the Minister of Inland Revenue, under whose care I presume this Bill will come, will expedite its passage through the House. I ask the indulgence of the House in reference to it because I think it is a measure in the interests of the public. It is an absolute necessity that we should have a standard weight for a loaf of bread and that standard should be so fixed that there will be some legal redress in case of a baker breaking the law.

Hon. SYDNEY FISHER (Minister of Agriculture). There is a question as to whether a Bill of this kind should not be introduced by resolution. It seems to me to affect and regulate trade, which, under the general rule of the House, is a subject matter that must be introduced by resolution. If we are going to regulate the weight of a loaf of bread that regulates the trade in bread as much as any possible treatment of that trade can. It is well understood that Bills of that kind must be introduced by resolution.

Mr. SPROULE. If that be the fact, the minister must be a great offender, because he has introduced such measures without resolution.

Mr. FISHER. I think my hon. friend will find that I have invariably introduced such Bills by resolution.

Mr. SPROULE. Perhaps not this session, but I think last session and the year before he did.

Mr. FISHER. The hon. gentleman is entirely mistaken.

Mr. R. L. BORDEN. Has it not sometimes been the practice to have the Bills introduced and the resolutions brought in afterwards.

Mr. FISHER. That has been done, I am merely drawing attention to the fact.

Mr. R. L. BORDEN. It is quite proper that attention should be drawn to it, but I think that practice has been followed. Whether it be a correct practice or not I do not know.

Mr. PATERSON. It is against rule 48.

Mr. SPEAKER. Rule 48 reads:

No Bill relating to trade, or the alteration of the laws concerning trade, is to be brought into this House, until the proposition shall have been first considered in a Committee of the Whole House, and agreed unto by the House.

If it is a Bill in restraint of trade it will have to be preceded by a resolution, unless the House consents to the introduction of the Bill with the understanding that a resolution will be introduced later.

Mr. FISHER. There is no objection to that.

Mr. J. A. CURRIE. I do not wish to cause any misunderstanding. The measure is not a measure in restraint of trade in any way, and the Bill provides clearly that there shall be no charges against the consolidated revenue fund by any of its provisions. I could quite understand that in the measure contained a clause whereby there was to be any charge against the revenues of this country it would be necessary to introduce it by a resolution. As far as restraining or regulating trade is concerned, it fixes the weight of a certain article. I would like to know from the minister if, when the weight of a barrel of apples was fixed by this House, that legislation was initiated by a resolution of the House.

Mr. FISHER. I cannot say, but I think it was. Certainly if it was not it was contrary to the rules of the House. Bourinot says:

Rule 41 of the Rules of the House provides that no Bill relating to trade or an alteration of the laws concerning trade is to be brought into the House until the proposition has been considered in a Committee of the Whole House.

Then, later on it says:

Both in the English and Canadian Commons the rule, just cited, has been held to apply to trade generally, as well as to any particular trade, if directly affected by a Bill. It has also been decided that to bring a Bill under the rule it should properly propose to regulate trade as a subject-matter.

Under these circumstances, it seems to me that the Bill ought to be preceded by a resolution. I am not taking this objection for the purpose of blocking the Bill, but simply for the purpose of having it proceeded with regularly. The hon. leader of the opposition is quite right in saying that Bills have been introduced, probably on

several occasions, which, it has been afterwards found ought to have been preceded by a resolution, and then the resolution has been proposed and put through the committee, and afterwards the Bill proceeded with.

Mr. HENDERSON. Of course, I do not need to argue that two wrongs make a right; but if the hon. member for North Simcoe is wrong on this occasion, the Minister of Agriculture was wrong yesterday. He introduced a Bill, and in the latter part of his explanation said:

The last clause defines the weight of a barrel of potatoes when potatoes are sold by the barrel.

I am quite sure that Bill was not preceded by a resolution.

Mr. FISHER. My hon. friend is quite right. My explanation is that I referred the matter to the law clerk of the House of Commons, and he informed me that that Bill did not require to be preceded by a resolution.

Mr. HENDERSON. Then plainly the one before the House now does not require a resolution, because both Bills are of exactly the same character.

Mr. SPEAKER. Of course, it is for the House to say whether the rules are to be observed or not. Strict adherence to the rules is always advisable, and if I have to rule on the question of this Bill, my ruling will be that it will have to be preceded by a resolution.

Sir WILFRID LAURIER. It is always preferable to conform to the rule, and it may be that my hon. friend the Minister of Agriculture will have to revise his own Bill and have it preceded by a resolution. But I would observe that the Bill of the hon. member for North Simcoe seems to be objectionable in another respect, not on its merits, but as being under the exclusive jurisdiction of the provincial legislature. The weight of bread is generally regulated by municipal authority, and it is very questionable if we have jurisdiction in the matter.

Mr. J. D. REID. What about a barrel of potatoes?

Sir WILFRID LAURIER. The same thing would apply.

Mr. SPEAKER. I think the Bill had better stand in the meantime until the matter is looked into further.

Mr. R. L. BORDEN. What are we going to do about the one of yesterday?

Mr. SPEAKER. I may have been in error in allowing the Bill of yesterday to be introduced without being preceded by a resolution.

Question allowed to stand.

MANITOBA GRAIN ACT—AMENDMENT.

Hon. SYDNEY FISHER moved that the House go into committee now to consider the following proposed resolution:

Resolved, that it is expedient to amend the Manitoba Grain Act, chapter 83 of the Revised Statutes, 1906, as follows:—

By repealing subsection 5 of section 17, subsection 5 of section 47, and subsection 2 of section 109, and amending section 104, by substituting for the words 'license fee of two dollars' the words 'required license fee.'

By authorizing the Governor in Council to fix the respective fees to be paid for licenses issued under the Act, and by providing fines for contravention of the said Act.

Mr. R. L. BORDEN. What is the reason that sometimes resolutions of this kind are dealt with by way of notice that proceedings will be taken on the following day, and sometimes the House is moved into committee at once? In the first case the motion goes on government orders and is taken up accordingly. Is there any distinction with respect to the character of these motions?

Mr. FISHER. No, I think not. If they are proceeded with at once, it is simply by consent of the House. I will give notice that I will take it up on Monday.

Mr. BRODEUR. In the case of a money Bill, notice should be given in advance, and then it becomes an order of the day. When it is a notice concerning a question affecting trade, it does not go on the Order Paper, and may be taken up at once.

Mr. R. L. BORDEN. Where is that to be found?

Mr. BRODEUR. In Bourinot.

Mr. J. A. CURRIE. Is it in the rules of the House?

Sir WILFRID LAURIER. No. I think in order to guard the rights of the people over money Bills, they must be preceded by a notice in advance. That is the reason of the rule.

Mr. R. L. BORDEN. This particular motion involves the payment of license fees.

Mr. FISHER. I give notice that I will take it up on Monday next.

Motion allowed to stand.

THE NAVAL DEFENCE BILL.

Mr. R. L. BORDEN. Before the orders of the day are called, I would like to ask the Prime Minister when we may expect the Bill announced in the speech from the Throne with regard to naval defence? There

has been considerable delay already, and I observe in the speech from the Throne that a plan had been adopted before the opening of the session. I presume there is no reason why we should not have the Bill at the earliest possible moment, and I merely rise for the purpose of inquiring when we may expect it.

Sir WILFRID LAURIER. If my hon. friend will kindly renew his question on Monday, I think I shall be able to satisfy him.

REPRESENTATION OF DUFFERIN.

Mr. SPROULE. In compliance with the Act in that behalf, I desire to inform you, Mr. Speaker, that the representation of the county of Dufferin in this House is vacant, owing to the death of the late member, Dr. Barr, so that you may address your warrant to the Clerk of the Crown in Chancery for the issue of a writ to fill the vacancy, that that county may be represented in this parliament during the present session.

REPRESENTATION OF OTTAWA AND QUEBEC EAST.

Mr. SPROULE. I see in the Toronto 'World' of November 25, the following in the correspondence from Ottawa:—

Two statements of uncommon interest and co-related were made in official quarters to the correspondent of the 'World' to-day. The first of these is that Sir Wilfrid Laurier's present intention is to sit for Ottawa, and the second is that the Hon. S. N. Parent, Chairman of the Transcontinental Railway Commission, has been asked to resign his commissionership and contest the vacancy for Quebec East when the premier elects to sit for Ottawa.

I desire to ask the premier if that is correct?

Sir WILFRID LAURIER. I am afraid that the official quarters of the Toronto 'World' are better informed than I am. I have not heard anything either of the one case or the other.

INTERNATIONAL CONGRESS ON ALCOHOLISM.

Mr. FOSTER. I would like to ask the right hon. the Prime Minister with reference to the International Congress on Alcoholism which was held last July in London, England. It seems that this is an institution which has its regular meetings, and at its last meeting some twenty or 30 nations were represented. An invitation was extended to the Dominion government, as I am informed, and I would like to ask whether or not that was accepted and a reply sent or what were the reasons one was not sent. It may be more more convenient for the hon. gentleman just to lay the papers on the table, as they are not voluminous, without the form of a motion.

Sir WILFRID LAURIER. I would have to refresh my memory on this point. I have no objection to bringing down the papers.

INQUIRY FOR RETURNS.

Mr. R. L. BORDEN. Would it not be possible to have the returns brought down in better shape? I mentioned this matter a couple of sessions ago. The grievance is a very frequent occurrence. I refer in particular to the papers brought down in connection with the resignation of Mr. Lumsden. They were not only up side down but inside out. They began at the end but did not end at the beginning. They were in such bad shape that it was impossible to ascertain where to look for any particular document. I went to the officials and asked them to take some steps to have the papers properly arranged and some kind of index made. The papers were brought down in such a condition that any member who wants to examine them, loses an hour to an hour and a half, which means great aggregate loss of time to a number of the members. This might be saved by a little attention on the part of some of the officials in the first instance.

Sir WILFRID LAURIER. Hear, hear.

INLAND REVENUE ACT—AMENDMENT.

Bill (No. 9) to amend the Inland Revenue Act—Mr. Templeman—read the second time and House went into committee thereon.

On section 1,

Mr. TEMPLEMAN. This only increases the amount to be paid for a bonding warehouse license from $20 to $50 per annum. The charge has been long too low, and it has been considered proper to increase it to $50.

On section 2,

Mr. TEMPLEMAN. The only change is the introduction in the fourth line of the words 'one-sixth,' providing that snuff may be put up in packages of one-sixth of a pound. The trade have asked for it and that is our only reason for making the change.

On subsection (e).

Mr. TEMPLEMAN. The change in this subsection is the introduction of the words 'twenty-five', providing that cigarettes may be put up in packages of twenty-five. At present there is no provision for packages containing twenty-five; and as many are imported containing that number, it means that the packages have to be broken up and repacked to conform to our law which requires the packages to be of twenty or fifty as the case may be.

On section 3,

Paragraph (h) of section 311 of the said Act is repealed and the following is substituted therefor:—

(h) for determining the time and manner of payment of the duties on foreign raw leaf tobacco and other materials taken for use in any tobacco or cigar manufactory.

Mr. TEMPLEMAN. The only change is the addition in the second line of the words 'and other materials'. The duties are paid in tobacco factories in three kind of packages, ten, twenty and thirty. We have authority to provide for the arranging of the manner of payment of the duties on foreign raw leaf tobacco, and we want to use the words 'other materials'. Since the last change in the Inland Revenue Act, there is a duty of 16 cents per pound on other materials that go into the manufacture.

Bill reported.

Mr. TEMPLEMAN moved the third reading.

Mr. BLAIN. I would like that this Bill should stand over for a third reading.

Mr. SPEAKER. Next sitting of the House.

SUPPLY—LIEUTENANT GOVERNORSHIP OF BRITISH COLUMBIA.

Mr. FIELDING moved that the House go again into Committee of Supply.

Mr. J. D. TAYLOR (New Westminster). Mr. Speaker, before you leave the chair, I desire to call the attention of the House to a doctrine laid down by the Prime Minister (Sir Wilfrid Laurier) recently in dealing with a question which I had placed on the Order Paper in pursuance of the privilege conferred by rule of this House that members may, on due notice given, ask questions relating to public affairs. Sir, the question which I put related to the public affairs of this country, inasmuch as it referred to an appointment which is not exceeded in importance by any other appointment in the gift of the Dominion government, the office of Lieutenant Governor of British Columbia. We had an intimation through the newspapers that a political organization in British Columbia had by formal resolution passed, made a recommendation to the government at Ottawa that a certain gentleman should be appointed Lieutenant Governor of that province. This recommendation was made in the most public manner as a notification to other persons concerned to 'keep off the grass.' It was a notification that the British Columbia executive of the Liberal party having made such a recommendation, it was idle for any one else to butt in on that preserve, and that all should govern themselves accordingly. To my mind, that was a most shocking interference on the part of a political organization in the appointment to an office which should be non-political, should be kept strictly apart from all political considerations. I had hoped, when I saw that intimation in the press, that, upon receipt of that recommendation at Ottawa, the Prime Minister, if it came to his notice—as I suppose it would come to his notice as the man most concerned in the appointment—would administer to the committee in British Columbia the snub which their course deserved, would have informed them that, with respect to the office of Lieutenant Governor of British Columbia, they were exceeding their jurisdiction, they were violating the laws of propriety, in making any recommendation of that kind, particularly in making it in the public and theatrical manner in which they did make it. In pursuance of that idea, I placed a question on the Order Paper in the hope that the Prime Minister in answering it would have clearly laid down the principle I have indicated, and that his answer to that committee in British Columbia would have been a warning to political associations everywhere that here was an office upon which they must not lay their hands. I may say frankly that I was disappointed when I received the reply from the Prime Minister that,

> Information of the description asked for in the first part of his question would be considered by the government or by any minister as absolutely private matter.

Sir, I must dissent from the doctrine that a recommendation on the part of a public association such as the association I have described can properly be considered by the government of this country a private matter. To my mind it is an essentially public matter, a matter as to which we are entitled to have the most complete information. To my mind, we are entitled to know what has been done with respect to that application. We would be entitled to it even under ordinary circumstances; but I claim that we are very specially entitled to that information in view of the very special circumstances respecting the gentleman recommended by this resolution for the Lieutenant Governorship of British Columbia.

We have observed by the press that an election has been in progress in British Columbia. We have observed that one of the candidates in that election is the very gentleman whose application for the appointment of Lieutenant Governor has been favoured by the chief political association in the province. We find that gentleman, with this appointment as good as in his pocket—unless the government had turned down the recommendation in the manner in which I thought it should have been

turned down; unless the government consider that the publication of the recommendation of the patronage committee was absolutely fatal to the claim of the gentleman to whom I have referred—I say we have this gentleman, with the appointment of the Lieutenant Governorship of British Columbia as good as in his pocket, campaigning in that province against that very government on which he expected to sit in judgment as soon as that appointment was made. I invite the attention of this House to the condition these facts indicate, to the intolerable condition so far as the provincial government is concerned—that a man should be one day on the hustings making most scandalous charges against the provincial government and the next day be called to the office of Lieutenant Governor. I do not wish to go into details, because this is a question of principle which I do not wish to befog with a cloud of words. But I wish to indicate the nature of the charges which this Lieutenant Governor designate has been making against the government of British Columbia, charges so grave that they have been made the subject of an editorial in the chief Liberal organ of Canada, the Toronto 'Globe.' We read in the Toronto 'Globe' the following:

> The British Columbia election campaign has brought out the startling news that Premier McBride issued a secret order in council directing the sale of 3,238 acres of land in the Okanagan Indian reserve to a political favourite. The price at which this alleged sale was effected was $2.50 per acre, and as similar lands are sold in the neighbourhood for $300 and $400 per acre the fraudulent nature of the transaction is obvious. . . . The disclosure was made by Mr. Wade, K.C., in a campaign speech at Nelson, and it has not only startled the province, but has caused an uneasy feeling throughout the Dominion.

Here, Sir, we have, as the 'Globe' sums it up in referring to the incident, a charge by the man who, so far as we know, it is proposed to make Lieutenant Governor of the province—because, when the government had an opportunity to deny it they did not deny it, but said it was their private affair—that the McBride government has made a fraudulent sale of the public lands. Before referring to the bearing of that charge upon the question I am discussing, I might say, in justice to the McBride government, against whom charges of fraud do not lie and never have, that this allegation of this Lieutenant Governor designate is purely gratuitous, since the provincial government has no power to sell the lands referred to. So far as this alleged agreement of sale is concerned, it was merely an agreement between the provincial government and a gentleman who was applying to the Dominion government for the sale to him of these lands, that, provided he could obtain the lands from the Dominion government having paid to them whatever price they saw fit to declare, the reversionary interest of the province of British Columbia in these Indian lands would be conveyed to him on the payment of the sum stipulated in this bargain. But we have this gentleman on the stump making a charge of deliberate fraud —a charge certainly so understood by the public and by the chief Liberal organ in Canada, and spread broadcast over the whole Dominion.

I think we are entitled to a pronouncement from the government on that question, an assurance that no man who has so stultified himself shall be considered to be eligible for appointment to the office of Lieutenant Governor, that our provincial governments may be protected from the insult to which they would be exposed by such appointments. I believe that we are entitled to have it laid down and clearly understood by the government and by all applicants for office, that public office is not to be given as a reward for participation in a political campaign, that we should have it made clear in British Columbia that these expedients will not be resorted to when it is impossible to get candidates to appear voluntarily against a government such as that of Mr. McBride, which has the confidence of the whole people of British Columbia—I believe there was one Liberal elected, a despatch appeared this morning in the newspapers, indicating that three Liberals had been elected, but I am told that the Minister of Inland Revenue, who represents British Columbia in the government, has subsequent returns which bring down the number of Liberals elected in British Columbia to one, or at the most two. So I say we are entitled to have from the government some assurance that possible candidates will not be induced to enter the field of politics by promises of appointment such as lieutenant governorships, or positions on the Supreme Court and appeal court benches of British Columbia. I refer to the Appeal Court bench more particularly because of information which I gather from the newspapers, that a very serious wrong has been perpetrated there because of the holding up of the appointment of judges to the Appeal Court bench until after the election which was decided yesterday when the gentlemen who were in the field as candidates would be released from the embarrassment of that position. I find that a man is imprisoned in the district of New Westminister, consigned to prison by a county court judge there conditionally upon the appeal court answering certain questions referred to them in a certain way. I find it stated in the press

that the judgment intimated that the Appeal Court was meeting on November 2, and therefore no hardship was involved by this peculiar sentencing, pending an appeal to that court. This unfortunate man is now appealing to the county court for a rehearing on the ground that there is no appeal court to which his case can be referred and in the meanwhile he languishes in prison while the bench of British Columbia is being made a football for what appears to be the political convenience of the persons who have the appointment of these appellate court judges. I think that this incident of the lieutenant governorship and of the withholding of the appointment of judges is a scandal. That it is so regarded by the people of British Columbia was made evident yesterday in no uncertain way. By their vote they showed the opinion they hold respecting the action of this government in these transactions, and I believe that as one of the representatives of British Columbia in this House it is my duty to call the attention of the government to these facts, as possibly otherwise they might fail to recognize the voice of the people expressed at the polls yesterday, as indicating to them the state of public sentiment in British Columbia with respect to our treatment by the government at Ottawa, in their manipulation of offices such as that of lieutenant governor and Appeal Court judge. I would like to have it brought out here that even if this thing has occurred, even if, for diplomatic reasons, the government do not like to admit having received the recommendation I have indicated, and do not like to indicate whether or not they have made a promise to these particular gentleman, we shall receive an assurance that nothing else of this nature will be tolerated.

Sir WILFRID LAURIER. On a previous occasion my hon. friend who has just taken his seat (Mr. J. D. Taylor) put the following questions to the government:

1. Has the government or any member thereof received from the executive of the Liberal Association for British Columbia, or any other political organization, any recommendation purporting to be made by resolution of that body, in favour of the appointment of F. C. Wade, K.C., as Lieutenant Governor of British Columbia? If so, what reply has been made?

2. Is the office of Lieutenant Governor one as to which the jurisdiction of patronage committee is recognized?

I have no objection to admit that we are responsible for any action which we may take. At an early date we shall have to make the appointment of Lieutenant Governor for British Columbia because we have been notified by the present incumbent of the office that he does not intend to occupy the position beyond a certain date, and when that date arrives, it will be our duty to make an appointment and then we shall be open to censure or approval upon the recommendation we shall make to His Excellency, the Governor General. If at that time the selection which we make is not satisfactory to my hon. friend or to any member of the House we shall be open to criticism, but I think it would be fair of my hon. friend to wait until we have taken action before he criticises us.

My hon. friend tells me we should have rebuked the gentleman who presumed to advise us to appoint Mr. Wade if any person did presume to give such advice. I do not know but there may be some merit in the suggestion of my hon. friend that we should rebuke any such attempt whenever it comes, but if we are to rebuke every one who offers us advice that we should appoint Mr. Wade, what are we to say to or how shall we treat that gentleman who says we should not appoint Mr. Wade? Does my hon. friend see any difference at all between the one advice and the other? If somebody from British Columbia says Mr. Wade is a fit and proper person to be Lieutenant Governor of British Columbia and if this be, in the eyes of my hon. friend an offence, how should we characterize the conduct of the gentleman who tells us that Mr. Wade is not a fit and proper person to be Lieutenant Governor of British Columbia? I fail to see why if it is wrong in one case it can be right in the other. I have to say to my hon. friend that it will be our duty to canvass the condition of things and try to make the best appointment possible in British Columbia. I go further. I have no hesitation in saying that the appointment which we shall make in British Columbia will be unimpeachable even in the very particular eyes of my hon. friend. As to the advice which is offered to us, we are liable to receive advice from all quarters and from everybody. This is a free country. It is the privilege of any body to offer advice whether it is proper or improper, but we receive such advice wherever it comes from. If it comes publicly we receive it, if it comes privately we receive it also, but I dissent altogether from the view advanced by my hon. friend that if any one chooses to write to us with a recommendation to make an appointment whether to the position of a messenger or any other position, that is a thing to be disclosed to parliament. I refuse to accede to that position and this has always been our attitude. We are liable only for the action we take. It cannot be seriously contended that we must be responsible for the letters tendered to us, on this or that question, above all on questions of appointments which are sent to the ministers for their guidance. I

have no hesitation in saying to my hon. friend that sometimes advice is offered to us in matters on which I think we should not receive any, and as to which we should be competent to discharge our duties, but we should not canvass these things too critically and too minutely. I have only to say that we must be judged in these matters by the result and by our actions and the time will come before many days are over when we shall have to take action. Then I shall invite the criticism of my hon. friend.

Mr. BURRELL. Mr. Speaker, I would like to point out, in very briefly replying to the right hon. the First Minister (Sir Wilfrid Laurier), that this question is rather more important in its bearings as to the people at large in this country than he seems to imagine, and before saying another word I would also like to point out that the hon. member for NewWestminster (Mr. Taylor) did not specially offer the government any advice as to the appointment or non-appointment of Mr. Wade, but he rather indicated a line upon which Mr. Wade's appointment in this case would not be in the interest of the community at large because he would necessarily be a partisan after his indulgence in the political contest prior to the provincial election. Any man who had participated in the way he had done in this contest would necessarily put himself out of the pale of strict impartiality, which quality is so desirable in the occupant of the distinguished position of Lieutenant Governor. I also want to say one word upon this for the reason that this whole matter was discussed in connection with the appeal court the other day, and as it has a distinct bearing upon this question, I have to make some extended explanation touching upon this debate to-day. Referring to the delay on the part of the hon. Minister of Justice (Mr. Aylesworth) in filling up the appointments to the new Court of Appeal of British Columbia, I made a statement regretting that those whose names were being bandied about by the press and the people of British Columbia as being likely appointees to the bench had unfortunately dipped strongly into the partisan politics of the day and, in saying that, I made this remark:

So far has it gone that some time ago despatches were published in the chief Liberal newspapers announcing that the late leader of the Liberal opposition in British Columbia, a gentleman who has the unfailing respect of all people in British Columbia, Liberals and Conservatives, and that gentleman and his friends seem to have attached such full credence to that report that he retired from the leadership of the Liberal party in British Columbia and, to his credit, is not taking any part in the campaign now in progress.

I would like to add that, while I do not take anything from my words in regard to the respect in which that gentleman, the late leader of the opposition, is held in British Columbia, it is my firm impression that much as he might have regretted dipping into the campaign, he was forced by the exigencies of party pressure to take part in it because it is very singular that on the very day on which I made that reference in this House, November 12, I have a report that:

J. A. Macdonald was the last speaker of the evening.

I am referring now to the gentleman who is to be made chief justice of the new court of appeal according to the despatches which have been printed. The report is of a meeting at Rossland:

He devoted his time principally to throwing cold water on the McBride railway policy.

Not very effectually, Mr. Speaker, as, of course, you can see. The point is of the greatest importance, and I think not only that my hon. friend from New Westminster is within his rights but that it is a timely thing to insist that, whether one party or another is in power in the Dominion or in a province, good government is impossible, and it will be impossible to fill high positions which should be above party, such as appointments to the judiciary and Lieutenant Governorships, if we have to wait and give these appointments as political rewards to those who will work for their party to the eleventh hour and the fifty-ninth minute. That is the point that I want to make. I think it is a point that cannot be too strongly insisted on. The Minister of Justice, the other day, in his reply on this matter, stated that they would take their time, that it was not his delay or the delay of his department, and that he hoped to make the appointment from a list of gentlemen who were qualified to fill these positions on the court of appeal. Well, that may be true and while it is significant that the old Greeks represented justice as blindfolded because it was in the interest of no side or of no party and because justice should be dispensed evenly, it seems that if the head of the department was blindfolded the bandage must have slipped a little down so that he could get a view of the situation as it occurred in that western province, and I am sure we will agree that his last view must have been extremely discouraging. I do hope that in the interest of good government all over the country the Prime Minister himself—and we recognized, I think, that he is not always driven by the exigencies of party politics, that he must clearly see how subversive it is of the best interests of the country—we will see less of these practices which have been followed of late in British Columbia and

that they will put these high offices so much above political partisanship that they will be entitled to the respect of every member of the community whether he be Liberal, Conservative, Socialist or Independent.

Mr. R. L. BORDEN. Mr. Speaker, I entirely agree with the right hon. the Prime Minister (Sir Wilfrid Laurier) that the government cannot be responsble for the tendering of advice, but that is an entirely different thing from what apparently goes on in practice. The government does become responsible when it recognizes the suggestions and recommendations of these patronage committees all over the country and if what comes to us from very authentic sources is to be regarded as accurate the patronage committee or executive committee, in British Columbia was only doing in this case what it has been doing right along and what other patronage committees have been doing right along, and in doing that they have received the recognition and endorsement of this government in many cases. I am speaking of it only from information gathered as to what I believe has actually taken place. The hon. member for New Westminster (Mr. Taylor) put forward a consideration which should appeal to the Prime Minister. How would it be possible to carry on government in this country decently when a man who has gone into an election campaign as a candidate and uttered the most serious charges against the provincial administration was doing that upon the promise or understanding after the election campaign should be over he should receive his reward in the office of Lieutenant Governor?

Sir WILFRID LAURIER. There was no such promise; not even hinted.

Mr. R. L. BORDEN. But that is the standpoint from which my hon. friend from New Westminster was arguing and he was pointing out to the Prime Minister that if anything of that kind had taken place conditions would be intolerable as I am sure the Prime Minister would himself consider them intolerable. Look at it for a moment. Suppose a Lieutenant Governor in this Dominion were to be selected in the person of some man who had been campaigning immediately before his appointment against the government who were to be his confidential advisers. The thing would be absurd, monstrous and ridiculous, and I am glad to have the assurance of the Prime Minister that there is absolutely nothing in the suggestion. But it does seem to me to be altogether another matter that he should dismiss so lightly the delay in the appointment of the members of the court of appeal in British Columbia. I do not know of my own knowledge anything about the assertions which have been made by my hon. friend from New Westminster. He has made them upon his own responsibility as a member of this House and, as I gather from his remarks, they are to the effect that a man is languishing in prison in British Columbia to-day because he cannot get his remedy under the law owing to this default on the part of the government and of the Minister of Justice. A more intolerable and a more disgraceful condition than that I cannot imagine. It is absolutely intolerable that the appointment of men to the court of appeal in British Columbia should have been delayed with such results as that. What was the answer the other day? The answer of my hon. friend the Minister of Justice was, forsooth, that the wheels of justice must stop because ne was away in Europe. The Act was proclaimed on the first day of September. He came back somewhere about the middle of October, I think, and he would not count the intervening six or eight weeks. Justice must stand still, the courts of British Columbia must remain without judges because he, on official duties, no doubt, had found it necessary or convenient to absent himself in the British Isles. When the Minister of Justice went from here in June or July last did he leave no other member of the government to preside over his department? Was there no other minister of the Crown, was there not the Prime Minister or some other member of the government, who could take up and who did take up the duties of that department? The excuse put forward by the Minister of Justice is absolutely unworthy of consideration. I say that within a week or ten days after that Act had been proclaimed by the government of British Columbia the corresponding Dominion Act should have been proclaimed by this government and there should have been constituted a court of appeal in the province of British Columbia not later than the 20th of September last, in which case the man who is now lying in prison because his rights under the law are denied him through the laches of this government would have been able to obtain his proper remedy under the law. Under these circumstances the country and the House ought to ask the Prime Minister and the government for some adequate explanation of the delay of now nearly three months during which the machinery of justice in British Columbia has been absolutely out of gear.

Hon. W. S. FIELDING (Minister of Finance). I am afraid, Mr. Speaker, that the leader of the opposition hardly gave a fair statement of what the Minister of Justice said. I remember that the Minister of Justice said that he did not think the proceedings required such very great activity in the case of these British Columbia judges because he pointed out that the government of British Columbia, after causing

the enactment of this measure, failed to proclaim it for very many months. And, curiously enough during that interim there was an election pending, and gentlemen on the other side are so ready to suggest that elections have something to do with things, might I mention that it was even rumoured that the reason why the British Columbia Act was not proclaimed was that the British Columbia government was waiting for the results of the Dominion elections in the hope that a Conservative government might have a chance to make the appointments.

Mr. BURRELL. May I ask a question?

Mr. FIELDING. Yes.

Mr. BURRELL. Is it not true that during the time the British Columbia government failed to proclaim their Act, there was an efficient and available court of appeal in existence?

Mr. FIELDING. I was merely pointing out that when the leader of the opposition undertook——

Some hon. MEMBERS. Answer.

Mr. FIELDING. One of my weaknesses is that I never undertake to answer a question when I am not familiar with the facts.

Mr. FOSTER. Or when you are in a tight place.

Mr. FIELDING. Well, I do not know that; I think hon. gentlemen opposite will give me credit for being ready to answer questions whenever I can. I was pointing out that the leader of the opposition had hardly put the position of the Minister of Justice fairly, and I rose specially to take exception to some very dangerous doctrines that were laid down by my hon. friend from New Westminster (Mr. Taylor). I took down the words of my hon. friend, and he says he wants this government to lay down as a principle that public office is not to be given to any one as a reward for service in a political campaign.

Mr. J. D. TAYLOR. Hear, hear.

Mr. FIELDING. My hon. friend says hear, hear, but I refuse to subscribe to that doctrine. The hon. gentleman himself holds an honourable and important office as a member of this House, and I have no doubt he received that office as a reward for his services in political campaigns. If my hon. friend did not get his office in that way, I should think he did not very well deserve it. In my opinion participation in political campaigns is not a crime. Politics is the business of the people at large, and the men who engage in politics, according to their respective views of public affairs, ought to be regarded as the best citizens in the country. It is the duty of every good citizen to participate in politics, and far from being a cause for condemnation, participation in political campaigns ought under proper conditions to be a cause for reward. I hold a rather important office in the government of the country, and I venture to say that had I not taken a part in a good many political campaigns I would not have the pleasure of occupying it. This idea that a man is to be ignored and condemned because he takes a part in a political campaign is certainly a very strange notion. Then, my hon. friend from Yale (Mr. Burrell) went a little further; he said: Look at this question of the judgeships; here is the former leader of the opposition—a gentleman whom he spoke of and deservedly so in terms of respect—he actually went out and poured cold water on the McBride government and the hon. gentleman asked: Would you dare to make that man a judge after that? What a monstrous thing it would be to appoint a man to the bench after he has dared to pour cold water on a local government? Well, I have had a long experience along these lines. It was my pleasure and duty for a great many years to be the leader of a local government and I remember on one occasion that my chief opponent in the constituency of Halifax was a gentleman of the legal profession and a very eminent one. He went out through the length and breadth of the province, he poured cold water and sometimes hot water upon the government which I had the honour to lead, and, fortunately, I was successful and he failed. And, a very short time after that he was appointed by the Conservative government of the Dominion to the high and honourable position of Judge of the Supreme Court of Nova Scotia.

Mr. R. L. BORDEN. Was it not some years afterwards?

Mr. FIELDING. No, it was not some years afterwards.

Mr. R. L. BORDEN. In what year was the campaign?

Mr. FIELDING. I cannot tell my hon. friend, but I will remind him of the case.

Mr. R. L. BORDEN. I know the case.

Mr. BURRELL. Would the Minister of Finance permit me a brief explanation.

Mr. FIELDING. Yes.

Mr. BURRELL. The only point I desired to make was in reference to the statement of the Minister of Justice, that he hoped to make the appointments at the end of the month, and that was why I said that speaking on the 24th of November he only had six days in which to do it.

Mr. FIELDING. I am referring to whether participation in a political campaign on one side or the other ought to be regarded as a disqualification for public office in this country, and I am dissenting most emphatically from the position taken by my hon. friend. Now, this gentleman to whom I referred was my opponent in the campaign in Halifax and very shortly afterwards—the leader of the opposition says several years, but I think he is istaken in that; I am speaking from memory entirely, and I quite realize that memory may fail—very shortly afterwards; speaking now in good faith, a very few weeks afterwards that gentleman was appointed to the bench.

Mr. R. L. BORDEN. I do not think so.

Mr. FIELDING. I will look it up as a matter of curiosity, and if I am wrong I will tell my hon. friend.

Mr. FOSTER. Tell us all.

Mr. FIELDING. I would if I thought you were interested. At all events it is not important, for what I want to point out is that when this occurred it never seemed to any of us that there was any great wrong in appointing that gentleman to public office. True, he poured cold water on that most excellent and virtuous government of which I was the leader.

Some hon. MEMBERS. Hear, hear.

Mr. FIELDING. As I have said, sometimes he made it rather hot for us, but when a short time afterwards he was appointed to the honourable position of a judge, far from finding any fault, when his professional associates—including the leader of the opposition—desired to do him honour, it was my pleasure and my privilege to preside at the dinner which was given to him on the occasion of his appointment.

Some hon. MEMBERS. Hear, hear.

Mr. FIELDING. And so I should think that my hon. friend ought not for a moment to lay down the doctrine that because a man has participated in a political campaign in any province of the Dominion it ought to be regarded as a cause of offence. From my point of view—always supposing he exercises his right as a good citizen properly and reasonably—I would say that instead of that being a reason why a man should not be appointed to a public office it may be a good reason why he should be honoured by such an appointment.

Mr. MIDDLEBRO. How does the Minister of Finance reconcile his statements to-day with a resolution which was passed in this House some years ago and voted on unanimously by the then Reform party, and which enunciated the solemn principle that no man should be appointed to an office of emolument under the Crown during the time he was a member of this House or within two years afterwards?

Mr. FIELDING. If I had voted for any such resolution my hon. friend would make a good point, and I might not be able to square my views with that, but if the hon. gentleman will look up the records he will find that no such a resolution was ever unanimously passed, and I do not think it was ever passed at all. At all events, speaking for myself, I never approved of it.

Motion agreed to, and House went into Committee of Supply.

Public Works chargeable to capital—Ottawa Astronomical Observatory — additional buildings, &c., $11,000.

Mr. PUGSLEY. This afternoon my hon. friend who represents Jacques Cartier (Mr. Monk) asked me if I would take up the items for public buildings in the province of Quebec. I told him I would try and do so. The hon. gentleman is not now in his place, and I do not know whether he is still desirous that I should take up the Quebec items. In the meantime, with regard to the residence for the chief astronomer, which we were discussing when the House was last in committee, I stated that it was not intended to charge the chief astronomer any rental for the residence, following an example which was set by the Conservative government when the Experimental Farm was established. At that time a residence was erected for the director of the farm, Dr. Saunders, at a cost about the same as that of this building. The contract was for some $12,000 in addition to which there was the heating and lighting, just as in this case. The policy of the government then was not to charge the director of the Experimental Farm rent for the building, and the same policy was afterwards followed with regard to other residences erected in connection with the farm. I thought the same policy would be adopted with regard to the residence for the chief astronomer. I may say, however, that since the matter was last under discussion before the committee, I have given further consideration to the subject and have conferred with the Minister of the Interior with regard to it, and we have come to the conclusion that as the chief astronomer, if he resided in the city of Ottawa, would be obliged to pay a rental for a dwelling house, it would not be unreasonable that he should pay for the residence near the observatory which the government is providing, such rental as he would have to pay for a suitable residence if he resided in the city of Ottawa.

Mr. BOYCE. $1,000 a year?

Mr. PUGSLEY. I am not prepared to say what a reasonable rental would be, as we have not conferred with Dr. King on the subject.

Mr. BOYCE. I asked the minister what would be a reasonable rental for this residence, and he said $1,000.

Mr. PUGSLEY. I said $1,000, but I am not in a position to say whether or not Dr. King would be prepared to pay that. Of course, it must be borne in mind that the government could afford to rent the house at a somewhat lower rental than a private individual, because the government pays no taxes on its property. Whether that would be $1,000 or not, I am not prepared to say at this moment, but it would approach that I should say.

Mr. SPROULE. An allowance is to be made to him for the house he is to occupy close to the observatory, not that you intend to rent a house for him in the city.

Mr. PUGSLEY. Oh, no. He would pay for the house we are constructing for him near the observatory.

Mr. MEIGHEN. The members of the committee will agree that some good result has come from the motion I made at the last sitting of this committee. At the time I had a conviction that the Minister of Justice had some purpose out of the ordinary in discussing the motion at the length he did in order to reach the hour of 6 o'clock. However, a regrettable feature of the repentance to which the Minister of Public Works has come in the interval is that he strikes home at the innocent official instead of at his own department. I do not wish it to be understood that the purpose of this motion was in any way to affect Dr. King or the emolument that he receives. If the government were to go further and build a grander house still at the expense of the country, it would be no kindness to Dr. King. It would be just about as much unkindness to him as now to charge him $1,000 a year rental in order, if possible, to meet the wishes of the public in regard to the resolution which I have proposed. If they were to build a residence for him costing some $25,000 or $30,000, the doctor might have nothing left of his salary after he paid the expense of keeping it up. The principle I wanted to establish by the motion I made was this, that the government should adopt the rule of building for a salaried officer, if they built at all, such a house as the average man in this country would build for himself were he in receipt of the same salary. I do not wish to assent to the proposition that the government should undertake the construction of these residences at all; but this one is under construction, and I think a very good object would be served by cutting down the appropriation. It might serve the object of having the residence built at a reasonable cost, because it will certainly be an exception if it is so built. Therefore, if the government has come to this late repentance in order to meet the public wishes by striking home at Dr. King, I think the better course would be to strike home at themselves and cut out $5,000 of the appropriation, and then they would have a house somewhat in excess of what a man in receipt of a salary of $3,000 usually occupies in Eastern Canada. I beg to renew the motion which I made at the last sitting of the committee, to the effect that $5,000 be struck off that appropriation, the same to apply to the residence to be built for the chief astronomer.

Mr. TURRIFF. I feel that possibly I may have been responsible for some of this discussion. But when I referred to the matter, I had no desire to speak of this building particularly, but simply to draw the attention of the government to a few other buildings that they might have in contemplation. I do not agree for a moment to the suggestion of the Minister of Public Works (Mr. Pugsley) that Mr. King the chief astronomer, should pay a rental. I think he is punished sufficiently when he has to live in a house that costs $17,000, because it costs more to live in a house of that kind than in one which costs $8,000 or $9,000 which would be about the right amount for the residence of an official getting three or four thousand dollars a year. I would be sorry to see Mr. King punished to any greater extent than he is going to be, as it is. But I hope—in view of what I believe, namely, that the officials of the Public Works Department have been responsible for the extra cost of a lot of buildings—that they will be compelled to make their plans of a more moderate character. In my remarks I had no intention of singling out this building in particular but of dealing with the buildings in general. Take those erected for the officials of the Militia Department. There ought to be a general cutting down of the cost of such buildings. In this case the Minister of the Interior (Mr. Oliver) was perfectly satisfied to have a house of moderate cost, the Minister of Public Works (Mr. Pugsley) only wanted a house of reasonable cost, but the officials increased the cost. I have heard men say on this side that in the case of post offices and the like, it is almost impossible to get the officials to make plans that insure a perfectly suitable and less expensive building for certain places. I make this explanation because I do not want to be put in the position of hurting Mr. King in any way. If Mr. King has now to pay rent in addition to living and furnishing an expensive house, you are punishing him twice, and I should be sorry to be responsible in any way for that condition of things.

Mr. BLAIN. We on this side welcome the remarks of the hon. member for Assiniboia (Mr. Turriff) in condemnation of the party and the government of which he is a prominent supporter. But I take issue with my hon. friend on one point. I do not subscribe to the policy that a government can shift their responsibilities on to a paid official. If the government had done their duty in this case, the Minister of Public Works would have said to the chief architect: We want you to submit a plan for a building that will cost not more than six or seven thousand dollars without the lot. Does the hon. gentleman suggest that if the chief architect were so directed, he would bring in a plan for a building to cost, as this one did in the first instance, I am informed, more than $25,000?

Mr. PUGSLEY. Oh, no.

Mr. BLAIN. My hon. friend stated last year that when the chief architect submitted the plan for his consideration, he sent it back and asked him to reduce the amount.

Mr. PUGSLEY. I do not think he named $25,000.

Mr. BLAIN. Perhaps not, but I am sure the minister will not say that it would not have cost $25,000. Does he say that the first plan submitted would not cost that? He does not reply. I was quite sure he would not. Therefore it is not fair to condemn an official when the responsibility rests with the minister and the government themselves. I have sufficient respect for the chief architect of the Public Works Department to believe that if the minister had instructed him to submit a plan for a residence to cost not more than $6,000 or $7,000 he would not have submitted one to cost $17,000 or $18,000.

Mr. PUGSLEY. I desire to correct the impression under which some hon gentlemen are labouring, and that is that some injustice will be done the chief astronomer by providing him with a house of the character of the one which is being constructed. The plans were submitted to Dr. King and everything done in connection with this plan had his entire approval.

Mr. FOSTER. Was he told he would have to pay rent?

Mr. PUGSLEY. No, but that he would have to keep up the house and that the expense of so doing, outside the rent, would have to be borne by him. That is what my hon. friend (Mr. Turriff) referred to when he talked of the expense of keeping up a larger as compared with keeping up a smaller residence. Therefore no injustice could be done Dr. King except in requiring him to pay rent, if that be an injustice.

Mr. TURRIFF.

Mr. BOYCE. It is proposed to cut down the item $5,000 and the minister objects, but he wants to charge a rental for a $17,000 house. Would it not be a mercy to Mr. King to have the estimate reduced $5,000?

Mr. PUGSLEY. No, this is just the kind of house Dr. King wants. Indeed he asked for a house somewhat larger. My hon. friend (Mr. Blain) made the remark that if the chief architect had been directed to plan a house to cost $6,000, he would have done so. I do not think my hon. friend does justice to his knowledge of buildings when he suggests that it would be creditable to this country to erect at the public expense a residence for so prominent an official as the chief astronomer and to direct that it should not cost more than $6,000. That would not be a suitable residence. You must bear in mind that this is not a brick cased residence. It is not a building with wooden partitions in the cellar, but the partitions are of brick. The house itself is a brick building, the joists are of iron or steel, the house is built as nearly fireproof as it is ordinarily possible to build a residence. The policy of the government in the construction of public buildings is to make them as nearly fire proof as possible and so substantial that the ordinary depreciation will be as light as possible. The cost of the building in question is substantially the same as that of the dwelling erected by the former government for Dr. Saunders, director of the experimental farm.

Mr. LALOR. How much is it?

Mr. PUGSLEY. The price paid to the contractor was about $12,000, which is about the contract for this residence. In addition, in the case of Dr. Saunders' residence, there were the heating and lighting and certain contingencies also to be provided for. And Dr. Saunders' house was built about twenty years ago, when the wages paid to workmen were not within fifty per cent of what they are to-day—and that I leave to the judgment of every member of this House who has had any experience in building.

Mr. BRADBURY. Is Dr. Saunders' house about the same size as this? I understood the minister to say this was a two-story house.

Mr. PUGSLEY. Two stories with an attic.

Mr. BRADBURY. Is it the same size as the house built for Dr. Saunders years ago?

Mr. PUGSLEY. Dr. Saunders' house is a wooden house and ought not to be so expensive as the one we are now building for the chief astronomer; yet the contract price is practically the same. This is a brick house, a more substantial structure and in every way better than the one erect-

ed by the old government for Dr. Saunders, and, as I have said, was put under contract for practically the same amount. Now let me say a word to my hon. friend (Mr. Meighen) with regard to his motion to cut down this estimate. I submit to him that the time to have moved such a motion was last session. At that time when this matter was before the Committee of Supply last session, I stated what was the contract price; I stated that we had called for tenders and that the lowest tender was $12,300. I informed the committee as to what would be the probable cost of the complete residence and asked for authority to proceed with the work. The committee voted the sum of $14,000, and upon that the contract was entered into. The country is now under obligation to pay to the contractors $12,300; and if the committee were to act upon the suggestion of my hon. friend and reduce this vote we should have to break faith with the contractors. We cannot now alter the plans for the building; we cannot provide for a building at a lower cost, because the country has agreed to this building and to pay the contractor this price. I think my hon. friend will see upon reflection, that now is not the time for his motion, but that, the contract having been entered into and the building substantially completed, the contractors must be paid the amount of their contract.

Mr. GEO. TAYLOR. The minister says that the contract price for Dr. Saunders' house was about $12,000. Will he say that that contract did not include everything?

Mr. PUGSLEY. It did not; I say that on the authority of the chief architect.

Mr. GEO. TAYLOR. Will the minister (Mr. Pugsley) lay that contract on the table, that we may see what it did include? I am under the impression that it included everything except some minor fittings.

Mr. PUGSLEY. I will lay the contract on the table.

Mr. SCHAFFNER. As the minister has made the comparison between the building erected some years ago and this one, I would like to know, for my own information, if the minister can state definitely what was the size of that house and what it cost. He says he thinks the contract was about $12,000. But, before I attempt to discuss the matter, I would like to know the exact facts. This comparing of indefinite sums is not very satisfactory.

Mr. PUGSLEY. I stated to the committee on a former occasion what this house will cost, but I will give it again. The total expenditure, which includes the printing and advertising, the heating and boilers, the electric wiring and fixtures, the sidewalks and fencing and the cost of superintendence, will be $17,041.49. Deduct $500 for fencing and sidewalks, and the cost of printing and advertising and you have about $16,400 as the cost of the building.

Mr. URIAH WILSON. Without the land?

Mr. PUGSLEY. Yes.

Mr. DANIEL. Did the minister take into consideration the $11,000 or $12,000 of which he spoke on a former occasion?

Mr. PUGSLEY. Yes, that is all included. The total cost of the building alone is about $16,400. I would say to my hon. friend from Souris (Mr. Schaffner) that, as to the cost of Dr. Saunders' residence, it would be better that I should lay the contract on the table, for so we shall have the exact facts before us. But the Chief Architect tells me that the contract price was about $12,000, and that did not include heating or lighting.

Mr. SCHAFFNER. What will the heating and lighting of this house cost?

Mr. PUGSLEY. About $2,500.

Mr. S. SHARPE. The minister has said that it would be a breach of faith to dissolve the contract for this building. It seems to me it is for the House to decide whether it would be a breach of faith with Dr. King to charge him rent for a building more expensive than he expected to have. I remember that when this matter came up last session it was opposed by every member on this side of the House. We thought that this was too expensive a house for an official enjoying the salary of Dr. King. Dr. King might readily agree to a reduction in the cost of the house if he knew that he was to be charged rent.

Mr. PUGSLEY. I did not say that it would be merely a breach of faith; it would be a breach of contract. The building is nearly completed and we shall have to pay the contractor.

Mr. CROCKET. I do not understand how the minister accounts for the $25,000 vote for this building. Last year, $14,000 was voted, and we are asked to vote $11,000 this year. The minister has stated the cost of the residence at $17,000 or less, and I understand that two other buildings are being provided at a cost of about $6,000. There would seem to be nearly $3,000 unaccounted for.

Mr. PUGSLEY. Perhaps my hon. friend (Mr. Crocket) did not hear my explanation. The same question was asked by another hon. gentleman when the matter last came before the committee. It will be seen by the wording of this vote that it is not confined to this residence but covers 'Ottawa Astronomical Observatory—additional buildings, etc.' That is the way the vote has been carried on since we began the con-

struction of the Observatory. We have in connection with the other buildings, electric wiring and fixtures, $527.97; hardware, paint, glass, $181.08; stone, cement, lumber, &c., $372.50; sodding, $289.75; paylist, $1,872.42; sundries, $480.

Mr. CROCKET. Are those other items for the other building in addition to the $6,000?

Mr. PUGSLEY. Oh, yes.

Mr. MIDDLEBRO. I understood the minister to say that he considered $1,000 to be a reasonable rental for this House and that he would charge Dr. King the same rental as Dr. King would be likely to pay for a house in the city. Six per cent of the cost of this house, that is $17,000, would make a rental of $1,020. Does the minister think it would be fair to charge an official more than one-third of his salary for rent, and has Dr. King consented to pay more than one-third of his salary for rent?

Mr. PUGSLEY. The conclusion at which I have arrived, after considering the matter since we discussed the item the other day is that it would be fair that Dr. King should pay the same rental that he would be required to pay in the city for a suitable residence for him. I do not know whether that would be $1,000 or a less amount. Of course, we must bear in mind that it would be fair to allow, in respect to government moneys invested in the building, say four per cent. That is the very highest the government pays for money. Then there are no taxes, but there would be a certain wear and tear each year. Possibly somewhere between $600 and $800 would be a reasonable rental for the government to charge. My idea is that he should pay such reasonable rental as he would have to pay for suitable accommodation in the city of Ottawa.

Mr. MEIGHEN. The Minister of Public Works (Mr. Pugsley) has put it very pointedly to me that I should have introduced this resolution when the same subject was under discussion on the 4th of February last. During that discussion the viciousness of the whole undertaking was very thoroughly laid before the minister. Every opportunity was then given him for repentance both along the line of his present repentance, and on the broad principle of the transaction. The minister, however, having everything laid before him on that occasion did not see fit to reduce the estimite himself, or to come to the conclusion he came to last night to make the astronomer pay rent. Therefore, I retort on him, would it not have been far better for him then to have frankly told the House that they did not purpose making this gentleman pay rent. I find at page 619 of 'Hansard' of last year that the question of having Dr. King pay some rent for the house was brought to the attention of the minister and he then frankly told the House that he did not purpose making Dr. King pay any rental at all.

The facts laid before the House by the minister on the 4th of February last were quite different from those laid before us now. On the 4th of February last, the discussion proceeded all along the line of the ultimate cost of this residence being $15,000. To-day it is $17,000. Is that not a reason——

Mr. PUGSLEY. Is my hon. friend sure I said $15,000? Did I not say about $16,000?

Mr. MEIGHEN. In one place in the remarks of the minister he seems to have been misread by other members. The minister did say about $16,000, but further on he was asked if $15,000 was not the ultimate cost and the minister did not dispute the figures. And furthermore throughout the discussion——

Mr. PUGSLEY. That is very different. I did state $16,000.

Mr. MEIGHEN. But the point was put very direct to the minister at page 619 by Mr. Staples, who said:

> Are we to understand that $15,000 will complete this residence? My experience is that these buildings cost twice their estimated cost.

Mr. PUGSLEY. That shows that the gentleman was a long way astray.

Mr. MEIGHEN. It shows also that the minister took advantage of the opportunity not to put him right.

Mr. PUGSLEY. That would be a very heavy contract generally.

Mr. MEIGHEN. There was the opportunity of his life then to put the far-astray member for Macdonald right, but this is his reply:

> This contract is for the building alone, and then there will be the heating and wiring and I assume, from information I have, that $3,000 or $4,000 additional will be necessary.

Mr. PUGSLEY. That would make it $16,300.

Mr. MEIGHEN. But why did not the minister so state? It was one of the characteristic replies of the minister.

Mr. PUGSLEY. I supposed the hon. gentleman could add the two figures together.

Mr. MEIGHEN. Where were the other figures? The whole matter, may I inform the minister, is on a par with many others that came before this committee last ses-

sion. There was not an apportioning of the cost of the residence and the coelostat hut and other matters, but all were lumped in a single vote of $14,000. The same expedient is used this session. In the course of one of his remarks he used $16,000 and throughout the whole discussion $15,000 was used as the cost of the residence, and the minister, courteous as usual and more than courteous in this case, continued not to correct us in the impression that $15,000 was the limit. How much of this $11,000 that he asks for this session is to be applied to the residence and how much to the other buildings?

Mr. PUGSLEY. There is still due on the contract $8,320. Then we purpose spending an amount for heating boilers, estimated by the chief architect to be $1,500; electric wiring and fixtures, $1,000. We expect it will cost $500 for sidewalks and fencing, and that contingencies with superintendence will cost $1,700, and all this vote will be used for these purposes.

Mr. MEIGHEN. That amounts to the whole $11,000? Then I understand the whole $11,000 is to be applied to the residence.

Mr. PUGSLEY. To the residence.

Mr. MEIGHEN. But the minister told us last year that it would only take $3,000 or $4,000 to finish the residence. It is no wonder that we do not know where we are at. Furthermore, it seems to me that in arriving at a fair value of a house good enough for any servant of this government——

Mr. PUGSLEY. I assumed my hon. friend would understand that we have yet a part of the vote of $14,000 of last year to be used during the current year, which will not expire until March 31 next.

Mr. MEIGHEN. I understand that, but no man can understand how much of the vote of the year before last and of last year and of this year is being applied to this residence. The point which I wish to make is that the salary received by a civil servant is about all this committee has on which to judge as to the character and expense of a house that would be appropriate for him. Where was the minister on February 4 last when we asked what salary this man was getting? He was absent, he could give no information at all. We were, on the 4th February last, absolutely in the dark as to what salary this man obtained, and, therefore, absolutely in the dark as to one of the main principles that should govern us in deciding how much should be provided for his residence. Therefore, there is ample reason for moving at a later stage for a diminution. If the fact that the minister has entered into a contract is going to tie the hands of the committee, why submit it to the committee at all? It is before the committee for approval or disapproval. The circumstances have altered since last February. Facts are before us that were not before us then. We could vote in perfect honour and in justice to our constituents that a man should be given a house such as an ordinary citizen of this country might occupy performing like service, and receiving like remuneration.

Mr. PUGSLEY. I would not trouble the committee were it not for the fact that my hon. friend has sought to convey the impression that there was some misstatement of fact to the committee when this matter was up last session. Before any hon. gentleman undertakes to make an insinuation of that kind with reference to a minister he should be absolutely sure of his facts.

Mr. MEIGHEN. I made no insinuation; I made an absolute statement.

Mr. PUGSLEY. The hon. gentleman said that I led the committee to believe that this building was going to cost $15,000.

Mr. MEIGHEN. That is not the statement I made.

Mr. PUGSLEY. The hon. gentleman made that statement unless there is something very defective in my memory.

Mr. MEIGHEN. I did not.

Mr. PUGSLEY. I know the hon. gentleman made the statement and, unless he says he did not—

Mr. DEPUTY SPEAKER I must point out that where a member denies that he made a statement that denial must be accepted.

Mr MEIGHEN. The statement that I made—

Mr. DEPUTY SPEAKER I think it also extremcly desirable that any decision of the chairman should be received in silence with neither approval nor disapproval.

Mr. MEIGHEN. What I said was that the discussion proceeded on the assumption that $15,000 would be the ultimate cost and that when the minister was questioned whether it would or would not be he did not deny it.

Mr. PUGSLEY. Let me read the first statement I made when the item came before the committee. The item was :

Ottawa Astronomical Observatory—additional buildings, &c., $14,000.

This is the explanation I made to the committee:

This vote of $14,000 is asked to make provision for the construction of a residence for the chief astronomer, and also to complete

coelostat house and standardizing hut in connection with the astronomical observatory. The proposed building to be occupied by the chief astronomer is to be a brick building with a stone foundation two and a half stories in height. The residence of the chief astronomer will cost about $16,000.

Yet the hon gentleman says the whole discussion proceeded upon the theory that it was only going to cost $15,000, notwithstanding that I had made the statement that it would cost about $16,000 and notwithstanding also that I made the statement that the lowest tender for the building was $12,300, and that in addition to that there would be heating and electric wiring which would cost somewhere between $3,000 and $4,000. I think that the committee will acquit me of having given any information in any way misleading at the last session of parliament. I think it will agree that I put the facts fully and fairly before it, and I think it will also see that the suggestion which the hon. member for Macdonald made that when this building was completed it would cost twice $16,000 was entirely without foundation. The whole building, when completed, will cost a little bit over $16,000.

Mr. BRADBURY. Every one who listened to the reply of the Minister of Public Works must realize that it is in keeping with the manner in which he gets out of a very close corner. From the little experience I have had the minister has led me to believe that he is very apt to get out of any corner he has got into before the committee. The minister has stated that he did not lead the committee to believe that this building was going to cost $15,000. What the hon. member from Portage la Prairie did say was that the discussion was conducted freely during that debate on the assumption that the building was going to cost $15,000.

Mr. PUGSLEY. May I ask the hon. gentleman what warrant he has for that statement when I made the specific statement that it would cost $16,000?

Mr. BRADBURY. Just because the Minister himself stated so. I will read his statement to him before I proceed further. The hon. member for Macdonald (Mr. Staples) asked:

Are we to understand that $15,000 will complete this residence? My experience is that these buildings cost twice their estimated cost.

The Minister of Public Works said:

This contract is for the building alone and then there will be the heating and wiring, and I assume from the information I have that $3,000 or $4,000 additional will be necessary.

Mr. PUGSLEY. Add $4,000 to $12,300 and what does it make?

Mr. PUGSLEY.

Mr. BRADBURY. The whole discussion proceeded along the same line and every one who asked a question did so under the belief that the building would cost $15,000. Later the Minister of Public Works said:

The lowest tender is a little over $12,000 and with the heating, wiring and plumbing it will likely cost somewhere between $15,000 and $16,000.

I do not think the minister has any right to assume or suggest that my hon. friend from Portage la Prairie has misquoted him or has tried to make it appear that he had endeavoured to lead the committee to believe that the building was only going to cost $15,000. The assumption last year was that that was the cost of the building and my hon. friend from Portage la Prairie made that quite plain.

Mr. GOODEVE. The Minister of Public Works gives as a reason why this vote should pass that a residence was built by a previous government costing a similar amount of money. Admitting that for the sake of argument and believing as I do that every item of this kind and every change should be decided upon its merits, in order to make that a parallel on which to pass our judgment it will be necessary to have all the facts in connection therewith. While I do not pretend at this moment to have full knowledge of these facts I would like to know whether when the house was built for Dr. Saunders at the Experimental Farm it was not the case that his residence was understood to be a part of the emolument. It was thoroughly understood at that time that the building erected for the manager of the farm would be occupied by him free of cost. It was practically an official residence. His office, altogether likely, was situated in the building and probably part of the staff occupied quarters there. In any case he would there entertain a number of visitors who would require to go there from time to time on official business. So that the case the minister has cited is not parallel with the one we have here and for that reason I do not belive that any member of the committee should be asked to take that into consideration.

Amendment negatived. Yeas 42, nays, 67.

Mr. TAYLOR. The hon. member from Quebec came into the House after the question was put.

Mr. DEPUTY SPEAKER. The rule is that an hon. member cannot vote unless he has heard the question put.

Item agreed to.

New departmental buildings, Ottawa, $300,000.

Mr. PUGSLEY. The question of these new departmental buildings has been before parliament during the last few sessions and as last year and the year be-

fore I gave full explanations I do not suppose it will be necessary for me to go into details now. This $300,000 is to make provision for the completion of the payments for the land and also to enable the department to ask for tenders and enter into the contract for the construction of the buildings.

Mr. FOSTER. Is that all the information the minister proposes to give?

Mr. PUGSLEY. Unless some questions are asked.

Mr. FOSTER. There will be questions asked.

Mr. PUGSLEY. I fully explained the matter last session.

Mr. FOSTER. This is the first vote for the construction and we would like to know what the proposed buildings are to cost, what their capacity and what use they will be put to.

Mr. PUGSLEY. The building will have one frontage on Sussex street and another on Major Hill park; length 590 feet and width 250 feet; two large courts 154 by 79; the building will have six stories and a basement on the park and seven stories and a basement on Sussex street; it will be 125 feet high on McKenzie avenue and 150 feet high above Sussex street; the centre of the building will face York Street which is quite a wide street. The lower end of the building will be 503 feet from St. Patrick street and the upper end 247 feet from the Lindsay property. It will be built of stone.

Mr. FOSTER. What kind of stone?

Mr. PUGSLEY. Something similar to that in the Museum. The floor areas will be substantially laid: ground and first floors 148,256 superficial feet, second, third, fourth, fifth and sixth floors, 360,110 superficial feet. The basement on Sussex street will have 51,080 superficial feet, the tower rooms 9,984 or a total area in superficial feet of 596,430 or a net office area of 350,000 superficial feet.

Mr. FOSTER. How many officials will it house?

Mr. PUGSLEY. It will be sufficient to house all of the clerks who are now accommodated in rented buildings or perhaps even more than that.

Mr. FOSTER. How many is that?

Mr. PUGSLEY. What we rent to-day is about 300,000 superficial feet and this is 500,000 superficial feet.

Mr. CROCKET. Will this do away with the necessity of renting offices?

Mr. PUGSLEY. We hope it will, but the business of the country is expanding so rapidly that what may be our hope to-day in that respect may not be realized five years hence.

Mr. FOSTER. What is it to cost?

Mr. PUGSLEY. It is estimated that the cost will be $3,439,200.

Mr. FOSTER. What does that include?

Mr. PUGSLEY. This includes everything but furniture; it will include the building and the heating, and the lighting, incidentals, contingencies, everything which ordinarily forms part of a building.

Mr. FOSTER. The minister must be able to give the cost of the building itself and also the cost of the fittings.

Mr. PUGSLEY. I am afraid I cannot. The architect estimates upon the total cubic contents. The plans are not worked out sufficiently in detail so that I cannot tell just what the heating or lighting is going to cost.

Mr. FOSTER. The plans are not fully worked out?

Mr. PUGSLEY. No.

Mr. FOSTER. How do you get at the cost then?

Mr. PUGSLEY. An architect can estimate pretty well what a building will cost taking the cubic contents.

Mr. FOSTER. Does that include elevators?

Mr. PUGSLEY. Yes, it includes everything.

Mr. FOSTER. Everything but the furniture?

Mr. PUGSLEY. Everything but the furniture.

Mr. CROCKET. Is the site included?

Mr. PUGSLEY. No.

Mr. CROCKET. What is the cost of the site?

Mr. PUGSLEY. Up to the 21st of September, 1909 we have paid for properties $528,000 and they have all been purchased but two.

Mr. FOSTER. What was the last one purchased?

Mr. PUGSLEY. M. and F. B. Hayes and F. McDougall; that purchase was completed on the 14th of July.

Mr. FOSTER. Who were the purchasing agents?

Mr. PUGSLEY. Mr. Riopelle?

Mr. FOSTER. You had agents besides Mr. Riopelle?

Mr. PUGSLEY. No, we had valuators some time ago, but Mr. Riopelle has been the agent to make the purchases.

Mr. FOSTER. No one else has been associated with him?

Mr. PUGSLEY. Except as valuers.

Mr. FOSTER. Of any particular lot?

Mr. PUGSLEY. In the expropriation proceedings; also the solicitors.

Mr. FOSTER. Who are the solicitors?

Mr. PUGSLEY. Mr. A. W. Fraser and Mr. McLean. There are two properties still to be purchased. We have expropriated them, but have not paid the money. One lot is that of Mr. James Inglis, 100 feet by 150 feet 9 inches. For this we have made an offer of $38,000, which has not been accepted. Then the other is a half lot, 33 feet by 155 feet 9 inches, of Martha and Columbus Eagleson. For this we have made an offer of $7,750, which they have declined to accept.

Mr. FOSTER. That would make a total of about $575,000?

Mr. PUGSLEY. Adding together the three amounts I have mentioned, that would be the total cost of the land, assuming that our offers are accepted. It is estimated that buildings and land together will cost a little over $4,000,000.

Mr. FOSTER. What is to be the inside style of these buildings? Are they to follow the style of the other departmental buildings, and have small offices with a few clerks in each, and a few larger rooms, as in the later buildings, or has the minister, and the architect under his direction, had occasion to look at other business buildings, and if they have, have they decided on some other plan of inside arrangement?

Mr. PUGSLEY. That has been considered, and provision will be made to meet the very idea my hon. friend puts forward.

Mr. FOSTER. Then the minister might give us an idea of what is proposed.

Mr. PUGSLEY. What we propose to do in the first instance is to have a number of large rooms, to be arranged in consultation with the different departments. We shall have to have, of course, a number of small rooms as well. These will be decided upon after consultation with the ministers whose officials are to be accommodated in the building. We shall have a great many more large rooms than are contained in the present buildings. We recognize the desirability of affording accommodation for many clerks in one room under the eye of the chief of a branch of that department. We have not the details worked out yet.

Mr. WRIGHT. How near will the centre of the building come to the so-called Lindsay block?

Mr. PUGSLEY. About 247 feet.

Mr. DANIEL. This new building will accommodate the Militia Department, the Census and Statistics Department, part of the Interior Department, the new Naval Department, I presume, and what others?

Mr. PUGSLEY. All that are now in the rented buildings—the Department of External Affairs, the Department of Labour, the Civil Service Commission, the Inspectors of Penitentiaries——

Mr. DANIEL. The Transcontinental Railway Commission and the Navy Department?

Mr. PUGSLEY. Yes.

Mr. MIDDLEBRO. How much is now paid in rentals for the offices that will be taken care of by this building?

Mr. PUGSLEY. About $140,000 a year.

Mr. MIDDLEBRO. For what length of term are the various leases?

Mr. PUGSLEY. For from three to five years. There are none longer than five years. We have made the leases so that we shall be able to get rid of the leased properties about the time we hope to have the new departmental buildings completed.

Mr. MIDDLEBRO. When does the minister expect that the proposed building will be completed?

Mr. PUGSLEY. That is a pretty difficult question. It is a pretty large building. I should think that if we got it completed in four years we would be doing pretty well.

Mr. MIDDLEBRO. As this is going to involve an expenditure of $4,000,000, that is, more than half the original cost of the parliament buildings, we should have more detailed information about this building.

Mr. PUGSLEY. The public buildings in Ottawa, I think, cost between $9,000,000 and $10,000,000.

Mr. MIDDLEBRO. I do not think we should vote any appropriation upon the estimate of an architect who has made his estimate solely on space. I think the House is entitled to further information as to the kind and size of this building, and the plans and specifications should be submitted to the House; because we shall probably have the same experience with regard to this building that we have had with regard to others. After we have committed ourselves to the proposed building by voting this $300,000, we shall be charged with having assented to a great

many details that we shall probably object to later on. On such an expenditure we should have a great deal of information, probably all that the minister has and a great deal that he has not got yet.

Mr. PUGSLEY. I have given to-day, I think, pretty full information. I have given the size of the building, the height of the building, the materials out of which it is to be constructed. Surely my hon. friend does not expect me to go into all the details of the construction of the building. I think that would be very unreasonable.

Mr. MIDDLEBRO. Has the minister yet got a regular series of plans and specifications?

Mr. PUGSLEY. The plans are pretty well completed.

Mr. MIDDLEBRO. Does the minister think he should not submit these to the House?

Mr. PUGSLEY. I will be very glad, if the hon. member or any other member desires it, to lay the plans on the table; but I think he will see the unreasonableness of postponing this item until that is done. On concurrence I will have the plans laid on the table.

Mr. FOSTER. What does the minister propose to do with this appropriation?

Mr. PUGSLEY. Complete the plans and specifications, call for tenders for the building, and make a start by tearing down the old buildings and preparing the foundations of the new building as soon as possible.

Mr. WRIGHT. The plan I have seen included a bridge across the Rideau canal. Is it the intention of the government to have such a bridge as well as the building?

Mr. PUGSLEY. That idea was thought of and a plan was prepared showing a bridge, but my own view is that we can get along quite a number of years without a bridge. The bridge would cost close on to a million dollars. There might be a small foot bridge.

Mr. HENDERSON. Before passing this estimate we should have some complete statement of the government's estimates and the cost of the building to be erected on Sussex street.

Mr. PUGSLEY. I have given them.

Mr. HENDERSON. Does the hon. gentleman include in his figures the cost of the removal of the buildings which have to be taken down before the new ones can be erected?

Mr. PUGSLEY. That is included. It will be provided in the specifications that the contractor shall remove the old buildings. In the large majority of cases, he will find the material he gets will equal, if not exceed, the cost of the removal. That will be included in the contract and is estimated for in these figures.

Mr. HENDERSON. From what we have heard now, the new building when completed, is to cost a little over $4,000,000. That is practically the estimate for land and building.

Mr. PUGSLEY. Yes; of course not including fixing up the grounds after the building is completed.

Mr. HENDERSON. I am speaking of the cost of the building and the site.

Mr. PUGSLEY. Yes.

Mr. HENDERSON. Reference was made to the cost of the departmental buildings in Ottawa by way of comparison. I notice in the public accounts that the cost of the government buildings at Ottawa or their value is put down at $8,156,800. That I understand will include the cost of the buildings on the hill, the main building with the recent improvements, the library, the east and west wing and the Langevin block as well. It would also include no doubt the Printing Bureau, the Mint; and the Museum, which is now rapidly approaching completion would no doubt be included in the valuation of the government buildings in Ottawa up to the time these public accounts were prepared. Also the Archives, and there may be some other buildings which I have overlooked. I had always understood that the buildings on the hill including the Langevin block practically only cost about $5,000,000. But we have since then erected some pretty costly buildings. The Museum is a costly building, and is now, I understand, rapidly approaching completion. The Mint is a costly building, and I trust now is nearly completed. As I have said, we have the Printing Bureau, the Archives and some others. So, no doubt the $8,156,800 is a correct valuation of all the public buildings in Ottawa, and what is proposed now, is to erect one building at a cost at any rate of half the value of all the public buildings we have in Ottawa at present. All I desire to do is draw attention to this and have a distinct understanding of what the estimate of the minister is because he may expect to be held down to his estimate very closely by those who may be here in future years.

Mr. PUGSLEY. Would my hon. friend bear this in mind, that we are paying to-day for outside buildings 4 per cent on $3,500,000?

Mr. HENDERSON. I am not criticising the propriety of erecting this new building because I understand that is a foregone conclusion. But when the previous vote

was taken, determining that a building should be erected, we had not such full details of the size and cost of the building as we have now, but in a few years no doubt, attention will be drawn to the statement made here to-day, and the minister may expect to be held down very closely to the estimate he has given. And I trust we shall not be called upon inside of the four years, in which it is thought this building will be completed, to expend more than one half the amount that the entire public buildings we now own in Ottawa actually did cost.

Mr. FOSTER. I do not think the minister should expect us to enter upon this expenditure of $4,000,000 or more without a little more discussion and a little more details with reference to the plans and what is proposed to be done. It is rather a startling statement to find in the public estimates that we are going to expend on one building about half as much as it has cost us to construct all the government buildings we have. It is all very well to say you are going to keep within that estimate, but what we particularly want to know, is whether that is an extravagant estimate or not. How did the minister arrive at that estimate? What skill, if any, outside his departmental officers, did he have? Then a very important inquiry would be as to what is the space provided by the government buildings which are now erected and which have been built for about $8,000,000, and how does that compare with the space to be provided by this building. We want to find out whether this is an extravagant estimate or not and whether it is not possible to erect a building for our accommodation at a less cost than $4,000,000. We must take into account the fact that wages have increased and some kinds of building materials cost more as well, but the main thing to be used is stone, and the cost of the stone itself would not be very much increased. But we are asked to sanction an expenditure, to give the minister an initial vote upon which a hard and fast contract may be given before we meet again, and we are entitled to have a look at the plans and see whether or not there are any suggestions to be made. We want to have a thorough explanation of these plans and what they provide for from the minister himself. It is rather absurd that we should spend only fifteen minutes authorizing an expenditure of $4,000,000 about which we have never seen the plans and know very little. It may be that some of us will not know much more after seeing the plans, but it is still better that we should have a look at them and have an explanation.

Mr. PUGSLEY. I think the suggestion of my hon. friend (Mr. Foster) is only reasonable. I should be glad to have the plans brought here and give all in detail that it is possible to give. Perhaps it might be better to let this item stand, and, this evening, take up items with regard to which there might not be the same——

Mr. FOSTER. Don't forget the floor-space.

Mr. PUGSLEY. I might just say that the Langevin block contains 90,000 superficial feet of floor-space, and cost $1,250,000. The whole three blocks of departmental buildings contain 315,000 superficial feet. Therefore, we shall have nearly fifty per cent more space than is contained in all three of the present departmental buildings.

Mr. FOSTER. I do not think the minister has given us the floor-space of the buildings covered by this amount of $8,000,000.

Mr. PUGSLEY. No.

Mr. WRIGHT. Would there be any objection to allowing us to look at the plans not accepted, but for which a certain amount of money was paid as prize-money?

Mr. PUGSLEY. Not at all. They were all here last year in the Railway Committee room. I may say we could hardly display them in the Chamber. They are on file in the department, and the chief architect will be glad to show them to any hon. member who would like to examine them.

Mr. FOSTER. It would not be too much trouble to have the plans that have been accepted hung in the Railway Committee room for the information of members?

Mr. PUGSLEY. These buildings are not being constructed upon any plan accepted from outside. The plans on which it is proposed to proceed with construction are prepared by the chief architect of the department. We could have these brought in.

Mr. CROCKET. Does the minister say that the plans are completed?

Mr. PUGSLEY. They are well on toward completion.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

SECOND READINGS.

Bill (No. 27) respecting the British North American Mining Company.—Mr. Geoffrion.

Bill (No. 28) respecting the Campbellford, Lake Ontario and Western Railway Company.—Mr. Fowke.

Bill (No. 29) respecting the Columbia and Western Railway Company.—Mr. Goodeve.

Bill (No. 30) respecting the Eastern Townships Railway Company.—Mr. Lavergne.

Bill (No. 31) respecting the Kamloops and Yellow Head Pass Railway Company.—Mr. Burrell.

Bill (No. 32) respecting the Nicola, Kamloops and Similkameen Coal and Railway Company.—Mr. Burrell.

Bill (No. 33) respecting the Northern Mortgage Company of Canada.—Mr. Haggart (Winnipeg).

Bill (No. 34) respecting the Ottawa, Northern and Western Railway Company.—Mr. McGiverin.

Bill (No. 35) respecting the South Ontario Pacific Railway Company.—Mr. Nesbitt.

Bill (No. 36) respecting the Union Life Assurance Company.—Mr. McGiverin.

Bill (No. 37) respecting the Walkerton and Lucknow Railway Company.—Mr. Donnelly.

Bill (No. 38) respeecting the West Ontario Pacific Company.—Mr. Nesbitt.

SUPPLY.

The hour for Private Bills having expired, the House resumed Committee of Supply.

Royal Mint, refinery, buildings and equipment, $57,000.

Mr. PUGSLEY. This amount is for payment upon the refinery which is being erected in connection with the Royal Mint, the construction of which was authorized at the last session of parliament. The total cost of the building of the refinery and equipment is estimated at a little over $60,000. The equipment is quite expensive and consists of very delicate and expensive machinery. It will cost $32,000, including customs duties of $2,000.

Mr. SAMUEL SHARPE. Is the building now under construction?

Mr. PUGSLEY. It is partly constructed now, by contract.

Mr. ARMSTRONG. Will this complete the building?

Mr. PUGSLEY. The amount of the contract is $31,047.

Mr. SPROULE. You had $30,000 voted last year and have spent $10,000, and now ask $57,000, which would make $67,000 if you spent it all.

Mr. PUGSLEY. $57,000 and $10,000 make $67,000.

Mr. SPROULE. Instead of $63,000?

Mr. PUGSLEY. I will show my hon. friend how this $67,000 is arrived at. Amount paid for advertising, $358.84; supplies, hardware, repairs to roof and boiler, $205.42; amount of this contract, $31,747; equipment, fitting, machinery, $32,000; sidewalks and grading, $500; superintendence, $1,943; total, $66,754.26, or within $240 odd of the amount that we are asking.

Mr. ARMSTRONG. How many men will be employed in this refinery?

Mr. FIELDING. I am afraid the Minister of Public Works will only be able to deal with the construction of the building. If the hon. gentleman desires information as to the kind of operations which are carried on there and if he will be good enough to state the point on which he desires to be informed I will be very happy to take a note of it and bring the information at another meeting. I could not tell off-hand, but the refinery will not call for many officers. We had hoped to have avoided the necessity of having a refinery at all. We had reason to believe that the refining could be done outside by corporations and we were hoping to save the expense of a refinery, but after carefully inquiring into the matter the mint officials informed us that the material they could get outside was not of sufficient purity for coining purposes and so, reluctantly, we had to undertake the construction of a refinery. I do not understand that it calls for many officials in addition to the present staff, but upon that, as upon any other point in connection with the administration of the mint, if any hon. gentleman will mention the point that he desires information upon I will be very glad to bring it down at another meeting.

Mr. ARMSTRONG. Will the minister be good enough to tell us the total cost of the Royal Mint, including the refinery?

Mr. FIELDING. It is on 'Hansard'—between $500,000 and $600,000.

Mr. SPROULE. I understand the hon. Minister of Public Works now to say that this will cost about $66,000.

Mr. PUGSLEY. Nearly $67,000—$66,754.26.

Mr. SPROULE. The minister first gave the figure as $63,000.

Mr. PUGSLEY. I had not these additional figures in my mind then.

Mr. SPROULE. Do you not see how we are misled? We accept that as correct and if the minister afterwards corrects his statement it rather discredits the information given by him.

Mr. HENDERSON. I understand that the present vote is only for the refinery.

What we call the Royal Mint is something different altogether?

Mr. PUGSLEY. This is part of the mint.

Mr. HENDERSON. What would be the entire cost of the Royal Mint, refinery and everything connected with it? Would it amount to three-quarters of a million?

Mr. PUGSLEY. It is less than three-quarters of a million. The total expenditure on the Royal Mint up to the 31st of March last was $535,238.62. That includes the site. I do not imagine there has been anything expended since that outside of what has been spent on the refinery, amounting to $66,754.26. That will make it a bit over $600,000.

Mr. CROCKET. Does the minister remember the original estimate that was given to the House?

Mr. PUGSLEY. No, I do not.

Mr. FIELDING. It was certainly very much below that.

Mr. HENDERSON. About half.

Mr. FIELDING. The original estimate was between $300,000 and $400,000. But, of course, all public buildings have cost more since the time that estimate was made. The work was undertaken on a somewhat broad scale and I am sure the feeling of the hon. gentlemen is that if you are to have a mint you should have a good one. I confess that I was anxious that instructions should be given that if the mint was to be placed there we should have the most perfect machinery that it was possible to procure, and I believe we have it. I do not know how many hon. gentlemen have had an opportunity of visiting the mint, but if there are any present who have not been there, I think they would find it a very interesting place to go. I believe that every hon. gentleman who has gone to the mint has realized the fact that the work done there is of a very fine character. It was all done by contract and I have reason to believe that it was carefully and well done. I was surprised at the cost myself, but when we were doing an expensive piece of work of this kind we thought we should have it thoroughly well done by scientific men.

Mr. HENDERSON. I am very glad the minister has extended an invitation to visit the mint. I had it in mind to visit it to-morrow and I was not sure if they would require a letter of introduction from the Minister of Finance in order to get inside to see what was being done.

Mr. FIELDING. I am sure that any member of parliament presenting his card would be welcomed there. It would be a convenience if hon. gentlemen would let them know the day before. I would not advise the hon. gentleman to go on Saturday because that is a short day and he might not see as much as he would upon another day. But if any hon. gentleman would telephone any afternoon that he would like to go on the following day, I am sure he would be welcomed and that it would be very interesting.

Mr. ARMSTRONG. The hon. gentleman will require more than his card as a member of parliament to get in there. The mint officials require a letter. I found that out myself.

Mr. FIELDING. I do not blame the mint people for being a little more stringent than at ordinary places, but there are a number of instances in which hon. gentlemen have asked me and I have said: Go down and present your card, and I rather think they admitted these hon. gentlemen without question. However, there should be no difficulty on that score. If any hon. gentleman intimates to me the time when he wishes to go to the mint they will be only too glad to have him.

Mr. ARMSTRONG. Will the Minister of Finance give an idea of the amount of loss that the country has sustained from the operation of the mint during the last few years?

Mr. FIELDING. As the question before the House is merely that of a contract work upon the refinery I did not anticipate questions of that character. I would rather bring in a statement at a later date. I would not care to answer the question from memory.

Mr. ARMSTRONG. Is there a residence in connection with this establishment for any of the employees?

Mr. FIELDING. No. The imperial authorities were very anxious that there should be a residence, but I advised the Minister of Public Works to try and disregard that for the present, and we have no residence. It is the practice in connection with Royal Mints elsewhere that the chief official resides in the mint and there is an advantage in it. However, the building was proving so much more expensive than we had anticipated that I have ventured to take the risk of the displeasure of the imperial authorities up to the present time and have not asked for a residence.

Mr. ARMSTRONG. Do you pay the rent of the chief officer's residence in any other part of the city?

Mr. FIELDING. I think we make an allowance. It is done under the regulations of the Royal Mint and we contribute a lump sum for maintenance and upkeep generally. My recollection is that there is an allowance granted for the residence of the deputy master.

Mr. J. A. CURRIE. The hon. gentleman stated that members of the House could get in on presenting their cards? I presented my card at the mint and I was told I could not be admitted unless I made an appointment a day or two before.

An hon. MEMBER. You looked suspicious.

Mr. J. A. CURRIE. I was also given to understand that the officials were not under the control of this parliament, that they were the appointees of the British government, and that though we had the privilege of paying for the mint we had nothing to say about its engagement. I would like to hear from the Minister of Finance on this matter.

Mr. FIELDING. Last session a notice was placed before all members of parliament intimating the times at which it would be most convenient to have them visit the mint, and many hon. gentlemen took advantage of it. I thought they were now sufficiently democratic to admit any gentleman who was a member of the House, although not necessarily at any moment he thought fit to apply, because I fancy that a large number of gentlemen going down there at different times might make it very inconvenient. The mint is something like a bank and it would not be possible to take visitors to the vaults of a bank at all hours of the day. I do not think it unreasonable that the director should be notified a day before of the visit of a number of members of parliament, and if that were done I have no doubt they would be received at once. It is a fact that the control of the mint is under the British government and that is so for reasons which we thought were good. We decided we would have a branch of the Royal Mint in Canada, and one great advantage of that has been that the building has been erected and the machinery installed on the advice and under the supervision of gentlemen who I have no hesitation in saying are the most experienced mint officials in the world. Had the mint been built as a purely Canadian institution we would have had great difficulty in obtaining equal supervision. While it is true that the mint is under the control of the Royal Mint, I have not the slightest doubt that every courtesy would be extended to every member of parliament who wished to visit it, and that far from desiring to put obstacles in their way the director of the mint would be most happy to welcome them. Last session one gentleman opposite came to me and said: I have just visited the mint, and I do wish that every member would visit it, because I had no conception of what an interesting process was carried on there, and I think every member who goes to the mint will come away proud of it and pleased with it.

Mr. J. A. CURRIE. The minister states that the advice of the Royal Mint authorities was taken with reference to the machinery. I had the pleasure of visiting that mint and I noticed that about eighty per cent of the machinery was of American manufacture. Can the minister tell us what proportion of the machinery in that mint is of British manufacture, and what proportion of American manufacture?

Mr. FIELDING. The Minister of Public Works who has charge of that would be able to give the information, but if it should turn out that all the machinery is American, that does not show that there is anything wrong with the mint, because the American mints are amongst the most modern and best equipped in the world. I am quite sure that the officials of the mint would get the best machinery possible, and in fact we sent them to Philadelphia, to observe the latest process there. I think it is quite possible that the American mints are more modern and better equipped than even the Royal Mint in England.

Mr. J. A. CURRIE. When does the government intend to proceed with the coinage of gold?

Mr. FIELDING. The object of this vote is to complete the refinery, and we cannot coin gold on any extensive scale until we have a refinery. They are able to do a little refining now on a very small scale, and they have already turned out a few British sovereigns, under authority which comes to us by virtue of its being a branch of the Royal Mint. Several of our gold mining companies have sent their gold to the mint and British sovereigns have been produced, but to embark on gold coinage generally you must have a refinery. I hope there will be the least possible delay in turning out the gold coins of Canada.

Mr. J. A. CURRIE. Is it the intention to coin a five dollar Canadian gold piece?

Mr. FIELDING. Yes.

Mr. SPROULE. What is the relationship between the Royal Mint and our Mint?

Mr. FIELDING. The Royal Mint of England is an imperial institution having branches in several parts of the British empire, and we asked that ours might be treated as a branch of the Royal Mint. One of the reasons which led us to that were it a Canadian mint proper we could not coin the British sovereign. How far our Canadian people will make use of gold coins is a debatable question and a very interesting one, and as we believed it desirable that we should find a market—if I may so express it—for the gold of the Yu-

kon and British Columbia, we thought it desirable that we should have the privilege of coining not only Canadian gold coins but the British sovereign, which is current throughout the world. There are many people who believe that our gold should be kept in our own country as much as possible instead of it being sent to the mints in the United States. In consideration of the privilege of coining the British sovereign we had to relinquish some measure of control. The chief officials have been sent out from England, the appointments are made under the English competitive system; we surrender something of what might be called patronage, and I am bound to say that as a general result it has worked well.

Mr. SPROULE. There is no chance for defeated politicians getting in there?

Mr. TURRIFF. It is hard enough for members to get in.

Mr. ARMSTRONG. This refinery is being built for the purpose of refining the gold to turn into coinage?

Mr. FIELDING. We have to have gold of a certain standard for coinage and this refinery will be for that purpose.

Mr. ARMSTRONG. As I understand it a large portion of the gold produced in Canada is minted in the United States at the present time. If we coin our own gold we will have to pay for the gold which comes from our western country, and mint it, and in the end there will be no profit on the process but rather a loss.

Mr. FIELDING. We quite anticipate that the gold to be used at the Canadian mint will be the gold of Canada. We will have to purchase it as others have to purchase it. There is a profit in coining bronze coins and a large profit in coining silver but there is no profit in coining gold. You take a given amount of bullion and you convert it into coins and after you have done so it is not worth any more than it was before, so that to that extent there will be a loss on the process of coinage.

Mr. ARMSTRONG. Then I cannot understand the wisdom of going to the expense of building a refinery when at present we can receive our gold coinage from the old land without cost.

Mr. FIELDING. Wisely or unwisely one of the objects of the Canadian mint was that the gold which my hon. friend says goes from Canada to the United States should be as far as possible kept within Canada. It was claimed that the city of Seattle has been largely built up by the trade of the Yukon country because the miners who produced the gold from our Canadian Yukon, went to Seattle and even to San Francisco with their gold. It was argued by our friends from British Columbia, with very great force, that if we could induce these miners to come to Vancouver or any other place in Canada, and could provide there a market for their gold, the trade would follow the gold, and we would keep in our own Dominion, particularly in British Columbia, the trade associated with the gold industry. How far that will work out is, like many another economic question, very debatable; but that is one of the reasons why this mint project commended itself very strongly to hon. gentlemen on both sides of the House.

Mr. WRIGHT. In your arrangement with the British government, is there any limit to the number of British or Canadian coins in gold that you may turn out?

Mr. FIELDING. No. The Mint Act provides that any person possessing gold may tender it to the mint and have it converted into British sovereigns at a stated charge, which is fixed in the Act or the regulations. In that we suffer no loss. Indeed, I think there has been a slight profit from the minting of British sovereigns. When we come to mint our own gold coins, there may be a slight loss.

Mr. WRIGHT. Is there any limit to the number of Canadian coins you may mint?

Mr. FIELDING. No. That will be determined by the law of supply and demand. We will make as much coinage as the people absorb in their business. When they cease to absorb it, we shall cease to make it. British gold is not practically current in Canada at all. While it is the standard of our currency in a certain sense, the British sovereign, which is equivalent to $4.86⅔ of our money, is not available for general circulation in Canada, and, except in the case of a company which for some reason of its own wants these coins made, I do not think we may look for any very general demand for the making of British sovereigns.

Mr. HENDERSON. I understand that it is the intention of the government to coin a $5 gold piece of Canadian currency?

Mr. FIELDING. Yes, $5 and $10, and we are free to make others if we wish.

Mr. TURRIFF. I would like to ask the minister if he proposes to take any steps this year to arrange with the banks to get rid of the large amount of American silver coinage circulated throughout Canada, and have the mint coin a great deal more Canadian silver coinage, which he says gives considerable profit in the making.

Mr. FIELDING. Yes, we have such an arrangement whereby the banks, for a very small commission, I forget the exact amount, undertake to collect the foreign silver and ship it to the United States. In

that way I think there will be a considerable increase in the work of the mint in coining Canadian silver, on which there is a very large profit.

Mr. ARMSTRONG. Will the Minister of Finance be good enough to tell us how he expects the miners of the Yukon to bring their gold to Ottawa and do their trading in Ottawa instead of going to Seattle?

Mr. FIELDING. I did not compare Ottawa with Seattle, but I did compare Vancouver with Seattle. I would not expect them to bring their gold to Ottawa, but we have an assay office at Vancouver, and we expect to get Yukon gold there. The question still remains how far the government will go to get the gold. We have to get Canadian gold for the Canadian mint, and if we have to go to the Yukon to get it, we will go.

Mr. SAMUEL SHARPE. Are all the officials of the mint given an allowance in lieu of rent, and, if so, are these allowances included in the general allowance for maintenance, or are they kept separate?

Mr. FIELDING. My impression is that there is no allowance made for rent to anybody but the Deputy Master of the Mint, and the reason we make that is that we were required by the British government to provide a residence for him in addition to the salary fixed, and as we preferred not to construct a residence for him, we have made him a moderate allowance for rent instead—I cannot remember the exact amount. Under the statute there is a general vote of $75,000 for the maintenance of the mint. We have been trying to keep it down to that, but it is possible that in closing the account we may have to ask parliament to increase that amount.

Mr. SPROULE. What are the coins turned out at the mint—gold, silver, copper and other metals?

Mr. FIELDING. It is proposed to turn out all the coins which Canada requires—the silver coins of the various denominations, the bronze cent, and gold coins of $5, $10 and $20.

Mr. SPROULE. Nothing less than $5?

Mr. FIELDING. We have the right under the Act to make coins corresponding approximately to the British half sovereign, that is, $2.50. Some said that was too small a coin. However, that is a matter of detail.

Mr. SPROULE. What of silver?

Mr. FIELDING. 50 cents, 25 cents, 10 cents and 5 cents.

Mr. SPROULE. No dollar?

Mr. FIELDING. Not of silver. We use our dollar note.

Mr. SPROULE. Do you turn out medals or anything of that nature?

Mr. FIELDING. Yes, it is intended that any work of that kind should also be done by the Mint.

Ottawa Victoria Memorial Museum, $260,000.

Mr. PUGSLEY. This building, all members of the committee know, has been under construction for a considerable time. This amount will complete the building with the exception of about $21,000. It will also provide for the fittings, the furniture, and the general equipment. The contract for the building was let some time ago to Mr. George Goodwin of Ottawa for the sum of $950,000. He was the lowest tenderer, and I think it is generally recognized by those who have seen the building that he is doing his work thoroughly and standing up under his contract in the most creditable manner. The chief architect's estimate of the cost of the building was $300,000 higher than Mr. Goodwin's tender, and the next tender was something like $300,000 more than his. Quite a number of tenders were received.

Mr. DANIEL. How much has been expended on it up to date?

Mr. PUGSLEY. Up to the 30th of September last $870,494.52.

Mr. CROCKET. What will the total cost of the building be?

Mr. PUGSLEY. The total estimated cost under the present contract, including $75,000 for furnishing, heating, wiring, electric fixtures, elevators, &c., is $1,395,000.

Mr. CROCKET. Did the contract call for wiring and heating?

Mr. PUGSLEY. No, the contract for these was given to the present contractor of the building.

Mr. CROCKET. What is the cost of the wiring?

Mr. PUGSLEY. Including the fixtures, $30,500.

Mr. CROCKET. And the heating?

Mr. PUGSLEY. $48,000.

Mr. DANIEL. What was the original estimate of the cost?

Mr. PUGSLEY. For the building alone, $1,250,000. And, if the fittings, furniture and everything of that character were added, it would be about $1,500,000.

Mr. DANIELS. I quite understand that. Is that the architect's estimate?

Mr. PUGSLEY. His estimate was $1,250,000.

Mr. DANIEL. And the contractor tendered for $950,000. The architect was pretty far out.

Mr. PUGSLEY. The contractor may probably have been out.

Mr. DANIEL. He seems to be satisfied.

Mr. FIELDING. No, he is not.

Mr. PUGSLEY. The next lowest tender was the same as the architect's estimate.

Mr. MIDDLEBRO. What proportion of the $1,400,000 was not let by tender?

Mr. PUGSLEY. The heating apparatus, the electric wiring, the elevators and the ventilation.

Mr. SAMUEL SHARPE. Have they all gone to Mr. Goodwin?

Mr. PUGSLEY. Yes.

Mr. SAMUEL SHARPE. How was the price arrived at?

Mr. PUGSLEY. Our own staff went carefully into the matter.

Mr. SAMUEL SHARPE. And did Mr. Goodwin accept their estimates?

Mr. PUGSLEY. He did, reluctantly and after a good deal of discussion and negotiation.

Mr. DANIEL. He is an experienced contractor?

Mr. PUGSLEY. Yes, and a very reliable contractor.

Mr. MIDDLEBRO. How does the hon. minister justify the letting of $450,000 of this work without tender in view of the resolution passed by this House last session that public works should be let by tender? Because we had got a good bargain on a contract, we then proceed to let the balance to this same contractor without tender.

Mr. PUGSLEY. The hon. gentleman must remember that there is still $100,000 of furniture which has not yet been let. What I said was that the heating apparatus, estimated at $38,600; the electric wiring, $30,000; elevators $32,000, and ventilation $27,000—total about $127,600 not $450,000, as the hon. member said had been let without tender. If I am asked to justify this, I do it on the principle announced last session and I happen to know that my statement then met with the approval of some of the most prominent of hon. gentlemen opposite, men who know Mr. Goodwin, the contractor, who know what a thoroughly honourable, reliable contractor he is, and who were satisfied, as I am satisfied, that he is standing up under a load which means $300,000 less than the work he is doing for the country is fairly worth, $300,000 less than the chief architect, who is a man of large experience, has certified the work to be worth. Under the practice which has prevailed ever since confederation, upon the certificate of the architect, the contractor for a building may be given the contract for the fittings also. And this is often to the great advantage of the country. I thought that under the circumstances of the present case it was not unreasonable that this work should be given to Mr. Goodwin at reasonable prices as ascertained by the chief architect after careful consideration. I believe that my course in this matter will meet with the approval of the majority of the members of this committee on both sides.

Mr. LANCASTER. Are we to understand that the minister (Mr. Pugsley) justifies the violation of a resolution of this House by the plea that some man who is honourable gets the benefit of that violation? That is the way I understand it—that, because Mr. Goodwin has the reputation of being an honourable man, the minister is justified in dealing with him in violation of the resolution of this House.

Mr. PUGSLEY. I do not understand that I have violated any resolution of this House.

Mr. CROCKET. Is there not a statute which requires all public works of the value of over $5,000 to be put up for public competition?

Mr. PUGSLEY. No, not in the way the hon. gentleman (Mr. Crocket) states it.

Mr. CROCKET. There is some statute of that nature. I have not it before me. Did the minister let this work without tender on his own responsibility, or was there an order in council?

Mr. PUGSLEY. There was an order in council authorizing me to take this course. I may say also that the making of that order in council was absolutely within the authority granted by the statute. I would also say that in the completion of a building of this character it is desirable that there should be no conflict beween those who are doing the electric wiring, putting in the heating apparatus and so on, and those engaged in the work of construction, There is, therefore, great advantage in having the work done by one contractor, provided that it is done at fair prices.

Mr. DANIEL. Is the system of ventilation of which the minister has spoken operated by means of fans?

Mr. PUGSLEY. Yes.

Mr. SEXSMITH. Do I understand that the contractor is making a loss of $300,000?

Mr. PUGSLEY. I stated that the contractor is doing the work for $300,000 less than the chief architect's estimate of the

cost, and $300,000 less than the next lowest tender, and I believe he is carrying a very heavy load in connection with it. How much he is losing I do not know. Mr. Goodwin belongs to the other side of politics but I give him credit for being too courageous a man and too good a contractor to come to us and cry about conditions which he has accepted. He has not stated to me what his loss is, but I beleive he is, as I have said, carrying a heavy load, and also he is doing his work in a very creditable manner.

Mr. SPROULE. Does the minister know whether the contractor is sustaining any loss at all?

Mr. PUGSLEY. I do not. All I know is that the chief architect was of the opinion he could not do the work without sustaining a loss.

Mr. DONNELLY. What was the reason that the heating apparatus and lighting was not included in the original advertisement for tenders?

Mr. PUGSLEY. Certain practices grew up in the department.

Some hon. MEMBERS. Hear, hear.

Mr. PUGSLEY. And this practice began at a time which my hon. friend from Grenville and Leeds (Mr. Reid) said was the good old time, and it continued more or less until recently. The practice has been changed, and the chief architect has been instructed as far as possible to let all the work under one contract.

Mr. BLAIN. Why was not the policy applied to the construction of the residence we had under discussion this afternoon?

Mr. PUGSLEY. We had two under discussion, one was the departmental building and it will apply to that absolutely.

Mr. BLAIN. What about the other?

Mr. PUGSLEY. That was done under the good old Conservative way.

Mr. BLAIN. When was the hon. minister converted?

Mr. PUGSLEY. Quite a while ago.

Mr. BRADBURY. Was any change made in the construction of the building after the contract was let?

Mr. PUGSLEY. The tower was changed, but it was not much of a change.

Mr. BRADBURY. What did the change amount to?

Mr. PUGSLEY. There was no extra cost and no saving either way. It did not add to the cost or take from it.

Mr. BRADBURY. If I understand rightly, there was quite a tower, 40 or 50 feet high, which was taken off. Surely that was some saving.

Mr. PUGSLEY. Only the crown was taken off.

Mr. ARMSTRONG. When will the building be ready for occupation?

Mr. PUGSLEY. I think in about six or eight months.

Mr. SEXSMITH. The hon. minister says he does not know that the contractor is losing any money at all. I think that usually when a government contractor is about to make a loss on his contract of some two or three hundred thousand dollars, he will make that public; and since this contractor has not done so, my opinion is he is not losing anything. Is the minister still employing that architect. There is $300,000 difference between the contract and the estimate of the chief architect. Is the minister still employing an architect who will make an estimate $300,000 more than the work will actually cost, according to the tender accepted? It seems to me that this was pretty wide of the mark.

Mr. PUGSLEY. My hon. friend surely does not suggest that because a contractor may have made a mistake in his figuring and tendered at $300,000 less for an expensive building then he ought to have done, that implies that the chief architect had estimated the cost of the building as more than he ought to have done? There were several tenderers, men of the widest experience, some of the most practical and experienced contractors we have, whose figures were very close to the estimate of the chief architect, but some $300,000 higher than the tender of Mr. Goodwin. Had Mr. Goodwin not put in a tender, the government would have given the contract to the next lowest whose figures were very close to those of the chief architect. With regard to the latter, let me say this. Hon. gentlemen opposite have passed criticisms on his estimates. The hon. member for Macdonald (Mr. Staples) said that his estimate for the residence of the chief astronomer would be no doubt doubled when the actual cost of the completed building was ascertained. All I can say is that during the time I have been in the department, I have learned to have the very highest respect for the judgment, care and knowledge possessed by the chief architect. He has been in that position some 25 or 30 years, and has held, and deservedly enjoyed, the confidence of all governments which had charge of the administration of our affairs down to the present. I believe that he carefully safeguards the public interests in every way possible.

Mr. STAPLES. The Minister of Public Works appears very anxious to keep reiterating the question I put him a year ago. It is somewhat satisfactory for me to know that it was I who opened over a year ago the discussion that was settled on the floor

this afternoon. On that occasion the minister was gliding along with his estimates in that smooth manner of which he is past master; and when last year I asked certain questions, he assured us that this building would be constructed for not more than $16,000. I then made the statement that, from our past experience in the case of other public buildings, the cost of which very often doubles the original estimates, we might expect something similar in this case. Let me tell the minister that I think I can verify that statement even to-night. If he will go back to the first discussion on the Grand Trunk Pacific, he will find that the right hon. the Prime Minister told this House and the people that its cost would not be more than $13,000,000. What has that public institution cost up to date? Let me ask him what was the original estimated cost of the institution we are now discussing. Was it not about $300,000, and it has now amounted to over $600,000. You can go through the long list of smaller institutions, post offices, and other public buildings throughout the country, and if the hon. gentleman will take time to look through the Auditor General's Report and compare the actual costs with the original estimates, he will find that in many cases the former has doubled the latter. I hope the minister will now be satisfied and not again bring up my assertion that the cost of the residence of the chief astronomer would be double the original estimate. Let him wait until the residence is completed. Possibly then he will find, if the general reputation of this government for extravagance is lived up to, that I was not very far astray in that statement which I made a year ago. You are not through with the building yet. Next year the minister may listen to what we will have to say when he comes asking for a further amount to complete the construction of that building. I hope the minister will give me a little credit for the statement I made, and I think I would have no difficulty in verifying my statement if I desired to go back and review many of the buildings constructed by this government.

Eastern Departmental Block, revote, $75,000.

Mr. PUGSLEY. This is for the purpose of undertaking a work which was considered necessary some years ago and which was actually provided for but which the government thought might stand over, even although it was at some inconsiderable inconvenience to the departments which are occupying the Eastern block. The Finance Department particularly is in very great need of additional room. Additional room is required in connection with the Treasury Branch of that department which ought really, in the public interest, to have been provided some years ago. The Justice Department also requires additional room and it is very desirable that just as soon as possible the Department of External Affairs should be located in that building. The Minister of Finance reminds me that he is afraid that the room will all be required for the extension of the Finance Department. Still I hoped we might be able to have some of the other officials there. The total cost of this extension is estimated by the chief architect at $200,396. The addition will be 120 feet by 64 feet exclusive of the tower, two stories high, with an attic and basement It will contain 31 offices and 8 vaults. This estimate does not include the vault linings, which of course will necessarily cost a considerable sum.

Mr. DANIEL. Just before dinner the minister stated it was the intention to place the Department of External Affairs in the new building on Sussex street.

Mr. FIELDING. I am afraid I will have to put in a word on this subject. I discover that a vote originally designed for the Finance Department is being appropriated to others and I want to warn the Minister of Public Works that until he provides adequate accommodation in that building for the Finance Department I do not want him to allot space to any other. If there is more than enough space to accommodate the Finance Department I do not object, but this vote was taken to provide much-needed accommodation in the way of vaults, etc. for the Finance Department ; it has been presented to the House in that way and I wish the Minister of Public Works to have it understood that he is to give only surplus accommodation to any other department.

Mr. PUGSLEY. That is my understanding, the Finance Department is to have first claim on any accommodation constructed.

Mr. DANIEL. The minister stated that among other things this is to provide vaults.

Mr. FIELDING. Yes.

Mr. ARMSTRONG. I suppose that is where he keeps the surplus.

Mr. FIELDING. In these growing times the vaults that keep the surplus have to be enlarged.

Ottawa Public Buildings—instrument testing and standardizing building, Cliff street, revote, lapsed amount, $5,000.

Mr. BLAIN. What is a standardizing building?

Mr. PUGSLEY. A small building to be erected on the ordnance lot on Cliff St. for the purpose of standardizing the different instruments, such as surveying instruments, tape and chain measures. It is for

the testing and standardizing of the various instruments used in the Surveyor General's Branch of the Department of the Interior.

Mr. SPROULE. My understanding is that the standardizing of weights and measures is done in the Inland Revenue Department, and if they have a building for that purpose it would not seem to be in the interest of economy to establish another building to carry on the same work for the Interior Department.

Mr. PUGSLEY. This is for instruments to be used in the Surveyor General's Branch. The Interior Department send out many surveying parties during the year, and of course it is highly desirable that their instruments should be absolutely correct. If there is such a building in connection with the Inland Revenue Department, I am satisfied it is not sufficiently modern or sufficiently large to meet the demands of the Interior Department, because I have been informed there was formerly a building upon this lot for testing purposes belonging to the Inland Revenue Department. That building was destroyed and I do not think any building has been erected to take its place. The demand for this building has been before the Public Works Department for many years. It has been urged from time to time by the Department of the Interior and it has been represented in the strongest way that there was a necessity for a testing room where engineers can adjust and test their instruments.

Mr. DANIEL. How much will the building cost?

Mr. PUGSLEY. The total estimate is $10,000.

Before passing from this item, why should we not pass the item of new departmental buildings and discuss it upon another item later? This afternoon the hon. member for North Toronto (Mr. Foster) suggested that we might let the item for the new departmental buildings stand until the plans had been examined by the committee. But, I would think that it might be better to pass the whole item with the understanding that the matter could be discussed on concurrence.

Some hon. MEMBERS. No, no.

Mr. SPROULE. I think there would be a very serious objection because every one of these items requires to be questioned.

Mr. PUGSLEY. Very well; it was only to save time.

Public Buildings, Nova Scotia—Digby public buildings, rewiring, &c., $1,000.

Mr. JAMESON. Will $1,000 complete the work which the minister has in view?

Mr. PUGSLEY. Yes, that will complete the wiring.

Mr. SPROULE. What kind of building are you rewiring?

Mr. PUGSLEY. It has been reported that the building at Digby requires to be rewired to make it safe.

Halifax Dominion Building—improvements, repairs, &c., $60,000.

Mr. MIDDLEBRO. I would suggest that as the members for Halifax are not here, we might pass over these six items.

Mr. PUGSLEY. I would agree to that if it were a new item, but it is simply to pay the contractor for the work being done on the building. I will let them discuss it on any other item.

Mr. DANIEL. Perhaps the minister would give us a statement as to the cost and of the nature of the work.

Mr. PUGSLEY. This is to make a payment upon the work of remodelling the whole interior of the Halifax Dominion building. The floors are to be removed, only the walls and roof remaining.

Mr. DANIEL. Is it the customs house or post office?

Mr. PUGSLEY. It is the old post office, and we are fitting it up now for post office purposes and for the Assistant Receiver General's office. The customs examining warehouse and the Inland Revenue office were removed to the new customs house building.

Mr. DANIEL. How much will it cost?

Mr. PUGSLEY. $134,795.50.

Mr. DANIEL. What is the size of the building?

Mr. FIELDING. I cannot give the dimensions, but the hon. gentleman will remember, from his visits to Halifax, that this is the building facing the parliament buildings. It was erected before confederaton and is commonly known as the post office building. It was taken over by the Dominion government in an unfinished condition. It was then finished and several of the departments were located in it. The customs house was in one end, the post office in the other and half a dozen minor departments upstairs. Gradually it became necessary to hire three or four places in the city and some years ago it was determined to erect a new building right below, or nearer the waterside, for customs purposes. The customs house was removed and temporary accommodation was secured by the post office. This building, which is a very handsome one, is now being reconstructed for post office purposes. Nothing now remains but the walls and

part of the roof. It is really almost a new building. It is intended to be chiefly used for post office purposes, but there will be some space available for others. My own department is hiring quarters in another part of the city, and it is proposed to provide offices for the Assistant Receiver General in this new building. I think there may also be some space remaining for minor offices.

Mr. DANIEL. Will it take in the savings bank?

Mr. FIELDING. The Assistant Receiver General's office is the savings bank.

Mr. PUGSLEY. I can now give the hon. gentleman the dimensions of this building. It occupies 125 feet on Cheapside and George streets, and 55 feet on Hollis street and Bedford road.

Mr. DANIEL. Is it built in a fire proof manner?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Is this the building in reference to which the minister received a report of defective work on the part of the contractor?

Mr. FIELDING. No, that was the customs house.

Mr. JAMESON. Who is the contractor?

Mr. PUGSLEY. Mr. M. E. Keefe.

Mr. CROCKET. What was the contract price?

Mr. PUGSLEY. $94,000.

Mr. CROCKET. How does the minister account for the other $50,000?

Mr. PUGSLEY. In addition we require for heating and boilers, $7,500; electric fixtures, without wiring, $1,500; elevators, $8,500; vault lining and doors, $7,000; contingencies and superintendence, $14,150.

Mr. CROCKET. Were these matters put up to tender?

Mr. PUGSLEY. Yes.

Mr. CROCKET. In all cases?

Mr. PUGSLEY. With the exception of the elevators, for the reason that we make a contract for the Otis-Fensom elevator because we think it—perhaps it is quite a strong thing to say—the only thoroughly safe electric elevator built in Canada.

Mr. CROCKET. That is a good advertisement.

Mr. PUGSLEY. It is. If it were not for that we could not justify the letting of the contract without tenders.

Mr. S. SHARPE. Did just one contractor get the work?

Mr. FIELDING.

Mr. PUGSLEY. No, not the same contractor.

Halifax Quarantine Station, on Lawlor's island—repairs and renewals, $3,500.

Mr. DANIEL. What is this for?

Mr. PUGSLEY. Repairing the wharf. It was reported in a dangerous condition.

Lunenburg Public Building—improvements, $1,000.

Mr. PUGSLEY. This is to complete the payment in connection with the installation of the clock in the tower and for wiring. The building is to be lighted by electricity.

Mr. SPROULE. If an election comes on in Ottawa I would like either to have a new clock put in the tower of this building or some very great improvement made in the clock, because it is now impossible to tell the time by it. I think we have a right to expect that the government will take steps to have this clock repaired remembering what they have done in that direction in Waterloo.

Mr. PUGSLEY. I admit the clock is acting very badly and I have taken the necessary steps to have it put in order.

Mr. HENDERSON. I would also remind the minister that we are very badly in need of a clock in No. 89.

Mr. PUGSLEY. That has been ordered.

Mr. HENDERSON. Ordered a year ago.

Mr. PUGSLEY. It will be there in a few days, possibly to-morrow, but I do not think so.

Mr. BLAIN. Last year I called the attention of the minister to the fact that the cellar of this building got flooded during rainstorms, and that there were some complaints with regard to the quality of the cement work, and saying that the contract was not being properly carried out.

Mr. PUGSLEY. It must be some other building.

Mr. BLAIN. No, it was this building.

Mr. PUGSLEY. I don't remember anything of the kind.

Mr BLAIN. I have it here on 'Hansard.' The minister did not know anything about it last year and he seems to know less now.

Mr. PUGSLEY. Would the hon. gentleman read what is in 'Hansard?'

Mr. BLAIN. I will send over 'Hansard' and the hon, gentleman can read it for himself.

Mr. PUGSLEY. Oh yes, I see that the hon. gentleman did make a complaint but I regret that I do not remember making any inquiry about it as I seem to have

promised. My hon. friend did not mention it again during the session and I suppose when the rain stopped there was no further ground for complaint.

Mr. BLAIN. I had a complaint before me that the sidewalk was not completed according to contract and the minister led the committee to believe that he would inquire into it.. He now seems to have forgotten all about it.

Mr. PUGSLEY. There has been no complaint in the department and I have asked the chief architect to make a further note with reference to what my hon. friend says.

North Sydney immigration shed, $2,500.

Mr. JAMESON. Where will the shed be located?

Mr PUGSLEY. It is an addition to the Intercolonial railway shed for the accommodation of immigrants.

Parrsboro' public building, $15,000.

Mr. DANIEL. Does the department own the site?

Mr. PUGSLEY. We bought it.

Mr. DANIEL. What will be the total cost of the building?

Mr. PUGSLEY. We have not the plans but Parrsboro' is quite a nice town, and I suppose we would give them a building that would run up to $25,000. It will be for a custom house, post office, &c.

Mr. DANIEL. Have you called for tenders?

Mr. PUGSLEY. Not yet.

Mr. CROCKET. What did the site cost and from whom was it bought?

Mr. PUGSLEY. It was bought from Mrs. Vickery for $3,000.

Mr. DANIEL. What is the size of the lot?

Mr. PUGSLEY. It fronts on Main street, Station street and Spring street, on one street 69 feet, on the other 96, and the other 77 feet.

Mr. JAMESON. When will tenders be asked for this work?

Mr. PUGSLEY. During the coming year; as soon as we get the plans ready.

Mr. DANIEL. How does it come to front on three streets; I do not understand how that can be unless the block is very small?

Mr. PUGSLEY. It is quite possible that it can front on three streets. You will find a building fronting on three streets in St. John city, and for example the Flat Iron building in New York.

Mr. DANIEL. I would like the minister to give the facts about this and not be drawing on his imagination?

Mr. PUGSLEY. Strange as it may seem these are the exact dimensions on the various streets.

Mr. DANIEL. I do not see how it can possibly front on three streets unless of course the block is very small.

Mr. PUGSLEY. Why, my dear friend—

Some hon. MEMBERS. Oh!

Mr. PUGSLEY. Oh pardon me. I was going to say that it almost paralyses one to think that my hon. friend does not know that a building could have a frontage on three streets.

Mr. DANIEL. They must be very small lots in that town.

Mr. LANCASTER. What streets will it front on?

Mr. PUGSLEY. On the three streets.

Mr. LANCASTER. How many sides on the building?

Mr. GRAHAM. Two, the inside and the outside.

Mr. LANCASTER. I think the committee should get down to business and have some sensible information from the minister.

Mr. PUGSLEY. Did the hon. gentleman ask me a question?

Mr. LANCASTER. The minister seems to think this is a great joke.

Mr. PUGSLEY. The minister is the most serious man in the room.

Mr. LANCASTER. The minister thinks it a great joke to compare this building with a flat iron building or a round iron building or a smooth iron building in New York.

An hon. MEMBER. Hear, hear.

Mr. LANCASTER. The Minister of Railways says hear, hear.

Mr. GRAHAM. No he did not.

Mr. LANCASTER. Perhaps the minister will now tell us the dimensions of the building on each of these three streets.

Mr. PUGSLEY. The building has not been laid out, but if you take the dimensions you will find that the lot is just of a size upon which you can construct a building suitable for a town of that size and having a frontage on three streets. Of course there may not be an entrance on each of these three streets but it will have a frontage on each.

Mr. LANCASTER. Which is the main street it will front on?

Mr. PUGSLEY. On the Main street.

Mr. LANCASTER. I might want to go down there to see this wonderful building

and I do not want to get mixed up looking for a building something like the flat iron building in New York which the minister has referred us to for a comparison. The minister ought to be able to give us some description of the building before he asks us for a vote.

Mr. PUGSLEY. I am surprised that an hon. gentleman who is usually so serious should, now when we are dealing with the important question of voting public moneys lapses into frivolities and attempt to disturb the serious calm of this committee.

Shelburne public building, $3,000.

Mr. CROCKET. Did the Minister of Finance promise that at the by-election or the general election?

Mr. FIELDING. I did not promise it either time.

Wolfville public building, $15,000.

Mr. PUGSLEY. This is to enter into a contract for the erection of a building at Wolfville which is a very rising town.

Mr. BLAIN. What will be the total cost?

Mr. PUGSLEY. We have not the plans prepared as yet but I should think this building ought to be erected for $20,000. It is a very nice town and there should be a building which would be creditable to it, but I think $20,000 would cover the cost.

Mr. W. WRIGHT. Are we to understand that when the minister gives an estimate of the total cost of these buildings that under the new arrangement, that includes the heating and the lighting and everything pertaining to the building.

Mr. PUGSLEY. Yes, I intend to cover that; I may be astray of course until the details are worked out.

Mr. BLAIN. What did the site cost?

Mr. PUGSLEY. $4,000.

Mr. BLAIN. What is the total cost including site, and everything else when the building will be ready for occupation?

Mr. PUGSLEY. I cannot say absolutely but what we have in mind is a building which will cost, including the site, in the vicinity of $25,000.

Mr. BLAIN. There was a vote for this building in 1908 and how does it come that although the $900 voted then was not expended he is asking for this sum now?

Mr. PUGSLEY. I explained in the House last year that owing to the state of the revenue a large number of these public works were dropped in the estimates and Wolfville was one of the number.

Mr. JAMESON. Will the buildings at Shelburne and Wolfville have clocks and towers?

Mr. LANCASTER. Mr. PUGSLEY. I have not yet thought of a clock for the Wolfville building but there is one to be provided for Shelburne.

Charlottetown drill hall extension, $4,000.

Mr. WRIGHT. Is this the total cost?

Mr. PUGSLEY. Yes, for the work we intend doing.

Summerside public building, $5,000.

Mr. PUGSLEY. This is to replace the present slate roof which is in a bad state of repair. This will complete.

Mr. FRASER. Is it the intention to call for tenders for this work?

Mr. PUGSLEY. We have not yet decided as to that, but I think very likely we shall. We shall if the work can be done by tender as well as by day's work.

Mr. BLAIN. That is rather indefinite. Surely the minister has a policy as to that.

Mr. PUGSLEY. The policy of the department is to call for tenders as far as possible for all public works, but in some cases we find that certain works, such as repairs to a wharf, can be done more cheaply by day's work than by tender. In some cases we have called for tenders, and the tenders have been higher than the chief architect or the chief engineer has reported to be fair and reasonable, and we have done the work by day's labour and done it for less than the amount of the lowest tender. The present work, I think, we can do by tender, and we intend to ask for tenders.

Public Buildings, New Brunswick—Bathurst public building—repairs and renewals, &c., $1,000.

Mr. PUGSLEY. This amount is to make provision for repairs and renewals and also for a concrete sidewalk along the front and side of the building.

Mr. BLAIN. In the New Brunswick items I notice five revotes of amounts previously voted which have now lapsed. May I ask if every vote for the province of New Brunswick which has lapsed is renewed in these items, or has my hon. friend made a selection of some?

Mr. PUGSLEY. I do not remember any items that have been dropped.

Fairville public building—revote of $3,000 lapsed, $15,000.

Mr. PUGSLEY. This is to enable us to enter into a contract for the building. The site was purchased pursuant to a vote passed in 1908.

Mr. DANIEL. How much will the building cost?

Mr. PUGSLEY. About $25,000.

Mr. DANIEL. What will it contain?

Mr. PUGSLEY. A post office, and we trust also a savings bank.

Mr. DANIEL. Will there be room for a janitor in the building?

Mr. PUGSLEY. Yes.

Mr. DANIEL. This is not on three streets?

Mr. PUGSLEY. No, it fronts on the main street. I may say that Fairville is a very important town. The monev paid out in wages alone averages about $450,000 in the year. My hon. friend knows that it is one of the most important manufacturing cities in the Dominion of Canada. It has a large number of mills, a very large pulp industry and other industries, quite a number of important business houses and some fine residences. There is a very thrifty population settled at Fairville and its vicinity, and I think it is well entitled to a public building.

Mr. DANIEL. I quite agree with the minister that the town of Fairville is growing and increasing rapidly, and that it is as much entitled to a post office building as other towns of the same size, or towns of even smaller size which are getting them.

Fredericton Dominion public building—government share of cost of permanent pavements put down by the municipal corporation on Queen and Carleton streets, $2,934.87.

Mr. PUGSLEY. This payment is in accordance with the principle of paying the frontage tax where granolithic sidewalks or asphalt pavements are being constructed by the municipality.

Mr. CROCKET. Is this the whole of the government's share of the cost?

Mr. PUGSLEY. It is the whole, as made up by the officials of my department, though there is a little difference between the city and my department. This will be paid to the city.

Mr. DANIEL. Is the government's share half the cost?

Mr. PUGSLEY. My understanding is that we shall pay half the cost of the pavement on that side of the street immediately in front of the government building; in other words, one-fourth of the total cost of both sides.

Mr. CROCKET. I think the impression in Fredericton is that the government was agreed to pay one-half of the whole cost. I suppose the department has an agreement with the city in the matter?

Mr. PUGSLEY. Yes.

Grand Falls public building—revote of $4,050 lapsed, $15,000.

Mr. PUGSLEY. This will enable us to enter into a contract for construction.

Mr. CROCKET. Is that the total estimated cost?

Mr. PUGSLEY. No. The total cost will be $20,000 or $25,000.

Mr. CROCKET. Are the plans prepared yet?

Mr. PUGSLEY. Not yet. Grand Falls is a thriving growing town with magnificent water-power, the best east of Niagara, and it is expected that there will be development of that power very soon. I think that the town is well entitled to a public building, and there is at present no public building in the county of Victoria of which Grand Falls is the shire town.

Mr. BLAIN. When the hon. gentleman first introduced this proposed expenditure, he said to the committee that the cost of the building would be only $15,000 or $20,000.

Mr. PUGSLEY. That probably did not include heating and wiring.

Hartland public buildings, $5,000.

Mr. MAGRATH. I do not object to revotes, but when it comes to a question of voting for the first time public moneys for public buildings in this country, I want to remind the hon. gentleman of a question I brought to his attention last year. That was the necessity for a post office at Lethbridge, not for the purpose of beautifying the city of Lethbridge but of meeting the necessities of the people. Over a year ago I received a communication from the post office authorities stating that relief could only be secured by a public building. My duty, I presume, ends when I draw the attention of the government to that feature. I did that very fully last year. I see that no provision is made for a post office there in the estimates this year. I realize that this country is growng and that it is almost impossible to keep pace with its needs, but at the same time there are instances, this is one, when something must be done. Only to-day I received a letter from a business gentleman in the city of Lethbridge referring to business matters, and he added this postscript:

Can you not impress on the department the necessity of providing a post office here. The congestion is out of all reason.

I suppose the hon. minister is aware of that. I do not know that I could do any more than what I did last year and what I am attempting to do now. I have a question on the Order Paper that will come up on Monday, and I want to put myself on

record now. When it comes to providing votes for new buildings, I would like the hon. minister to understand that the people in the west will have every opportunity to consider these matters and will hold the government responsible. It is not a question of partyism but merely of meeting the needs of the people in the country.

Mr. PUGSLEY. I may say to my hon. friend that there are not many new votes for public buildings in these estimates. I have endeavoured as far as possible to implement the pledge which was given parliament two years ago. I said then that the public works which had been provided for previously and which had been left out on the estimates were works which were simply postponed, and that when the turn in the tide came, so far as revenues are concerned, I would ask parliament to revote the amounts in order to enable the Department of Public Works to proceed with these various undertakings except in cases where, on further investigation, I was satisfied that they were not required, or not immediately required in the public interest. I think it will be found that in nearly all cases that promise has been carried out in the estimates now before the committee. The case of Lethbridge is one which certainly appeals to me. I have been very glad to learn of the rapid progress which has been made by that enterprising town; but it will be found, in the estimates on page 60, that three amounts are given for Lethbridge. We are asking for a vote of $10,000 for an armoury, we are asking for a vote of $6,000 for the enlargement of the customs house and Dominion land office and also for a vote of $6,000 for the immigration building.

Mr MAGRATH. These are revotes.

Mr. PUGSLEY. I do not care, you are going to have them. It does not seem unreasonable that the question of erecting a post office at Lethbridge might stand over for consideration at the next session of parliament in view of the fact that we are asking for three expenditures on public buildings in that town.

Mr. MAGRATH. Our view points appear to be different. It is not a question with me of satisfying the people of Lethbridge by distributing some of their taxes within their own boundaries, but a question of supplying the absolute needs of the people. I have not raised my voice in this committee with reference to any revote, and I do not propose to do so; but when it comes to new votes I want the fullest information as to the absolute need of this money being spent.

Mr. PUGSLEY. As regards Hartland, it is proposed that this building shall be utilized for a post office and also for an armoury. I am inclined to think that Hartland has grown to be a place of sufficient importance to have a branch customs house there also, which will be accommodated in this building. The militia have been urgently asking for an armoury, and I think I can say that there is just as much demand, at all events for this building, in the town of Hartland as there is for a post office in the town of Lethbridge. I may say further that there is no other vote for any other purpose in Hartland, while there are votes for three different purposes in the town of Lethbridge.

Mr. MAGRATH. Perhaps we might as well settle this matter now. Do I understand the hon. minister to say that there is no possibility of anything being placed for a post office in the city of Lethbridge? We have there to-day a population of 15,000. There is no place in the country which is growing so rapidly. It is growing by leaps and bounds, and people have to stand out in the street waiting their turn to get into the post office and everybody is complaining. If it is understood that absolutely nothing is available for a post office in Lethbridge this year, we ought to know it.

Mr. PUGSLEY. There is nothing in the estimates for a post office there this year, and I cannot put anything in them now. I am not aware that there will be any supplementary estimates. There may or may not be. On that point, I can give no assurance whatever. All I can say now is that there is no provision for a post office for Lethbridge in the present estimates. I am glad to know that Lethbridge is growing so rapidly, but it has only begun to take on its rapid growth in the last year or two. If it is a place the size my hon. friend says it is—and I have heard from other sources that it is—I recognize that we must very soon provide a post office for that town.

Mr. MAGRATH. I must call the hon. gentleman to order—for that city.

Mr. HENDERSON. I am not sure that the principle laid down by the hon. minister for the erection of public buildings is just what it should be. I understand he proposes to complete all the public works that were promised some two years ago before he undertakes any new ones.

Mr. PUGSLEY. No, I did not say that.

Mr. HENDERSON. Is that not the policy of the hon. gentleman?

Mr. PUGSLEY. No.

Mr. HENDERSON. I think we were told a year ago that the intention of the government was that where a public building had been promised prior to the time when

the revenues of the country began to fall off and the government was forced to drop a great many public works which they had intended to prosecute, they would, before putting any new votes on their list, complete what they had promised. Is not that, in fact, the policy of the government?

Mr. PUGSLEY. My hon. friend may have drawn that conclusion from my remarks, but it is possible that he was not here during all the time when I was urging these estimates in committee—because I had to answer a good many questions put by hon. members who were annoyed at certain items being left over last year. I said that, speaking generally—I used that expression advisedly—that would be the policy of the department. But I also said that there would probably be cases in which, on making further investigation, I might be satisfied that there was not the urgent demand in the public interest for the work which I had been led to suppose there was, and that there might be buildings in other cities or towns, other harbour or river works, more urgently required and for which we must provide. But, I repeat, I said that, speaking generally, the public works provided for in the estimates of 1907-8, but which we were obliged to postpone on account of the condition of the public revenues would be the first taken up.

Mr. HENDERSON. There is little difference between the minister's recollection and my own on that point. As to my possibly not having been present at the debates on the estimates, I may say that I came here last session on the day of the opening of the House, I left Ottawa after the gun had fired for prorogation, and I had never been out of the city during the entire session and had never missed a day sitting in this House. So, possibly, I may have been present—I think I was present at practically all the discussions that took place with regard to the estimates.

Mr. PUGSLEY. The hon. member (Mr. Henderson) was here pretty often.

Mr. HENDERSON. Yes, and the minister may find that I shall be here pretty often this session.

Mr. PUGSLEY. I hope so.

Mr. HENDERSON. I think we have a right to arrive fairly at the conclusion that there is practically no difference between my recollection and the minister's recollection of what the policy was. I do not mean to say that there was to be absolutely no exception to the rule. But I would remind the minister that in the estimates prior to the last general election a great many buildings were promised. They were pre-election promises.

Mr. PUGSLEY. Oh, no.

Mr. HENDERSON. The hon. minister knows as well as I do that a great many public buildings were promised throughout this country just prior to the general election.

Mr. PUGSLEY. The hon. member said they were 'pre-election promises.' That would connect one with the other.

Mr. HENDERSON. Pre-election promises are promises made before an election. I will allow the members of this House to draw their own inferences as to why these promises were made just before the general election. Of course, I do not accuse the minister —I should decidedly refrain from accusing him—of making these promises for any ulterior purpose. But there is the fact—public buildings were promised from one end of this country to the other which this House did not regard as being urgently needed, and the general impression was that they were pre-election promises made for election purposes. These were all buildings that came under the estimates of 1908. Now I mention that it would not be fair, these buildings having been promised prior to the general election, and especially if they were offered for election purposes, to give them the preference over other buildings that are urgently needed, such as the post office in the city of Lethbridge. I do not see why, if a post office had been promised in my county—which it was not—prior to the election and for the purpose of influencing the electorate, but yet not needed, the government should go on and build that public work to the neglect of other places that have not been so fortunate as to get a promise prior to election. All these pre-election promises should be dropped, and the minister should start afresh and deal with the needs of each county as if these pre-election promises had not been made. Only so will justice be done to all localities. I hope that on reconsidering the matter, and in considering the supplementary estimates, this idea will be allowed for—because I can inform the minister, we will and are likely to have supplementary estimates. In twenty-two sessions I have never seen a session in which there were no supplementary estimates, and, as I have observed, new work generally appears in the supplementary estimates.

Mr. PUGSLEY. There were not many last year.

Mr. HENDERSON. That was immediately after the election—no, there were not many, but there were some. As I say, new works generally appear first in the supplementary estimates. No doubt, we should have a recurrence of that this session, though not perhaps to the same extent as in former years. I hope that my hon. friend from Lethbridge (Mr. Magrath) will not

be forgotten when the supplementary estimates are in preparation.

Mr. CROCKET. What is to be the total cost of this building?

Mr. PUGSLEY. We hope that it will not exceed $10,000.

Mr. CROCKET. I understand that it is to be for post office and armoury. Is it not unusual to build these two together?

Mr. PUGSLEY. It is; but I believe it would be a very good idea to adopt the practice more generally—in towns of this character to have part of the public building used as an armoury in which the arms and stores of the militia are to be safely kept.

Mr. DANIEL. What is the size of the garrison in Hartland?

Mr. PUGSLEY. I do not know, and the Minister of Militia (Sir Frederick Borden) is not here at the moment.

Mr. MAGRATH. Has the minister any idea of the population of this place?

Mr. PUGSLEY. I should say from 1,200 to 1,500. My hon. friend from York (Mr. Crocket) would know.

Mr. CROCKET. I should think the minister's estimate is not far astray. What proportion of the cost is assigned to the armoury in the estimates?

Mr. PUGSLEY. It is not divided; it all comes under my department.

Mr. CROCKET. I should think the architect could tell us how much the armoury would increase the cost of the building.

Mr. PUGSLEY. We have not the plans prepared. I will be able to give the hon. member that information next year.

Hillsborough — public building—revote of $4,970 lapsed, $15,000.

Mr. PUGSLEY. The site for this building, which is admirably suited for the purpose, has been given free to the Crown by the Hillsborough Manufacturing Company. I have about the same statement to make with regard to this building as with regard to the other; I think this work should be entirely completed, including heating apparatus and fixtures, for something under $20,000.

Mr. CROCKET. I suppose this site was given by Mr. Osman in return for the wharf made for the manufacturing company by the Public Works Department.

Mr. PUGSLEY. The wharf?

Mr. CROCKET. Yes.

Mr. PUGSLEY. I do not know of any wharf given to the company. My hon. friend is mistaken. The wharf built there is a public wharf, built for the convenience of the public.

Mr. CROCKET. The money was voted and expended for an extension of a wharf which is used exclusively by the Albert Manufacturing Co. That is the information I have in regard to the Pink Rock wharf and that the public derive no benefit from that wharf.

Mr. PUGSLEY. It would be more convenient to discuss the item of the Pink Rock wharf when we come to harbours and rivers. The trouble with my hon. friend is, and I think it is a misfortune for him, that he is all the time thinking of hidden motives and interested motives and improper motives. As far as Mr. Osman, the manager of the Albert Manufacturing Company, is concerned, I say to my hon. friend that he cannot get a man in New Brunswick, outside of himself, to deny it —there is no more honourable, straightforward man in the whole Dominion of Canada than Charles J. Osman. His company is carrying on an enormous manufacturing business whose sales extend throughout the eastern United States and a large part of the Dominion of Canada. As far as this wharf at Pink Rock is concerned, the company gave the right to use it to the public and the Crown is extending that wharf for the public convenience and to facilitate a large business in connection with which hundreds of men receive employment in that vicinity and many thousands of dollars are expended annually. I do not know of any wharf built by the Crown for such a small amount which affords so much convenience or gives such accommodation as the extension of this wharf. As far as the public building is concerned, the company were anxious to see a public building erected and they generously gave a site for the purpose.

Mr. CROCKET. I understood the minister to state that he did not propose to discuss the subject of the Pink Rock wharf, and then he proceeds to discuss it. My reference to the Pink Rock wharf was simply in connection with the minister's statement that this site for a post office was given so generously by his friend, Mr. Osman. I am not here to make any reflection upon Mr. Osman. It is a favourite method of the minister, whenever a fact is stated which might inure to the detriment of his department, to sound the praises, the high character and great reputation enjoyed by this and that gentleman. The House will remember that in the session of last year he sang the praises of another very distinguished friend of his in New Brunswick as one who enjoyed the highest reputation from end to end of the

Dominion, against whom not one word could be spoken, his bosom friend, George McAvity.

Mr. PUGSLEY. Hear, hear, as honest a man as any in Canada.

Mr. CROCKET. The gentleman who got away with the $36,000 rake-off in the Mayes contract, Mr. Mayes being the same gentleman from whom the Minister of Public Works received the $2,000 note which he would have the members of this House believe was received for professional services.

Mr. PUGSLEY. And what does the hon. gentleman insinuate it was received for?

Mr. DEPUTY SPEAKER. I think the discussion is wandering away from the item before the committee. I must ask the hon. member to confine himself to the item before the committee.

Mr. CROCKET. The minister has asked a question——

Mr. DEPUTY SPEAKER. The minister may ask a question which it is not proper to answer, within the rules of the House. I rule that the hon. gentleman is wandering away from the point at issue and ask him to confine his remarks to the item before the committee.

Mr. CROCKET. I am simply replying to some observations made by the minister which grew out of this item, and you will remember, Mr. Chairman, how the matter arose. The minister was referring to his friend's great generosity in donating a site as if he were a public benefactor, and in connection with that statement the thought came to me of certain information which had been communicated to me.

Mr. PUGSLEY. I rise to a point of order. The way the matter arose was this. I stated——

Mr. SPROULE. What is the point of order.

Mr. PUGSLEY. The hon. gentleman has not stated correctly how the matter arose. I stated that this site had been donated by the Albert Manufacturing Company. The hon. gentleman then said: I suppose it was in return for the wharf which the government generously built for Mr. Osman at Pink Rock. That was an insinuation, in my judgment, which is not worthy of an hon. member of this House.

Mr. DEPUTY SPEAKER. The point is, I think; scarcely a point of order; it is rather one of correction. I will still ask the hon. members to confine themselves to the item before the House. I think I cannot properly allow the discussion to wander to the items the hon. gentleman has been bringing forward.

Mr. CROCKET. You will understand that I am speaking solely because of a statement and some reflections that the minister sought to cast on myself. I did not rise to a question of order when he described me as a gentleman always seeking for some hidden motives, which statement, I think, transgressed the rules of the House; and it was because of that state ment and that statement solely that I rose to reply to the minister. When I referred in connection with this observation of the minister to matters that grew out of the very reference of the minister, then the minister seeks to call me to order.

Mr. PUGSLEY. I did not call the hon. gentleman to order.

Mr. CROCKET. But if the minister wishes me to answer his question as to what I suppose and believe he got the $2,000 note for I am prepared to state my belief. I believe the statement of Mr. Mayes.

Mr. PUGSLEY. The hon. gentleman has made the statement to this committee that he believes the statement of Mr Mayes.

Some hon. MEMBERS. Order.

Mr. DEPUTY SPEAKER. Order.

Mr. PUGSLEY. The statement of Mr. Mayes is false, and the hon. gentleman should take that back, Sir.

Some hon. MEMBERS. Order.

Mr. DEPUTY SPEAKER. I have refused to allow the hon. member for York (Mr. Crocket) to continue the discussion along the lines on which he was proceeding. I must still adhere to that. I did not want to be too abrupt, I could not tell to what extent he desired to go in continuing to speak, but the point that is under discussion is the Hillsborough public building. I will not, as far as my power goes, allow the discussion to wander to the items that have been brought forward. It is always impossible, where there has been attack and reply to cut short discussion at a point that will please each hon. gentleman. In that respect I may not be able to satisfy every one, but I must ask the committee to confine itself entirely to the Hillsborough public building.

Mr. PUGSLEY. Did you hear the hon. gentleman state that he believed the statement of Mr. Mayes?

Some hon. MEMBERS. Order.

Mr. PUGSLEY. A man who either in this House or outside—

Some hon. MEMBERS. Order, order.

Mr. PUGSLEY. I say that Mr. Mayes is a shameless and wicked perjurer.

Some hon. MEMBERS. Order.

Moncton—public building—addition to building and alterations to fittings, $10,000.

Mr. DANIEL. Perhaps the minister will explain this?

Mr. PUGSLEY. This is to make an addition to the public building at Moncton, 35 x 27 feet. We are to make some alterations to the fittings, modernizing it. The estimated cost of the addition is $8,500; alterations to the fittings, $600; contingencies and superintendence, $900, total, $10,000. We expect this amount will finish the improvements to the building.

St. John drill hall, $35,000.

Mr. DANIEL. Perhaps the minister will explain this item.

Mr. PUGSLEY. It is intended to erect a drill hall in St. John, and for that purpose the Crown has expropriated a site which I think is admirably adapted for the purpose, on Sheffield street, between Wentworth and Sydney streets, taking in two blocks near the exhibition grounds. Although we have expropriated the land, we have not yet made the payments to the owners because they have not agreed to take the amount which has been offered, and it is possible we may have to place the matter before the Exchequer Court, although I trust that an amicable arrangement will be made. We had a small appropriation last year which will be available for the payment of the land up to the 31st of next March, and with the vote we are asking for now we will be able to have the tenders called for and a contract for the erection of the drill hall entered into. For a good many years there has been a recognized necessity for a drill hall at St. John. The present one is quite old. It is a wooden building and it is not at all well adapted for the purposes of the militia. I think I can safely assure the committee that this work is absolutely required in the interests of the militia and the public.

Mr. DANIEL. From the minister's statement, I judge that the plans of this drill hall have been already prepared. Is that correct?

Mr. PUGSLEY. Plans were prepared some years ago, but we have not prepared new plans for a building upon this site. It may be that there will be some change necessary. Possibly some slight alterations in the old plans will be all that will be required. We could not prepare the new plans until we got the requisite vote for the purpose.

Mr. DANIEL. What is to be the size of the building? Has the minister any details at all?

Mr. PUGSLEY.

Mr. PUGSLEY. I cannot tell my hon. friend at present. We have a memorandum from the Department of Militia as to what they require, but we have not yet decided to erect a building according to the requirements of the Militia Department. However the Militia Department suggests a building 199 feet by 124, with two wings at the rear, each 40 feet square. They ask that the drill hall shall be 193 by 80. There will be two wings upon the building according to the suggestion of the Department of Militia, and it will be two stories with a basement. It will contain armouries for eight companies of infantry. It will also have a gun shed, wagon shed, harness room, and armouries for the garrison artillery, army service corps and bearer company. Whether we can meet the views of the Militia Department entirely, I am not prepared to say. The estimated cost of a building such as the Militia Department ask for would be about $200,000. Whether we can afford to erect a building of that high character or not, I am not prepared at the moment to say.

Mr. DANIEL. Could the minister give any idea when these plans will be available so that they can be seen? Have any orders been given yet to make the plans?

Mr. PUGSLEY. I could not have the plans made until the estimate had passed parliament. Just how soon the plans will be ready will depend on how soon the estimates go through; I presume some time during the spring or summer.

Mr. DANIEL. I take it that this item is just to pay for the land expropriated?

Mr. PUGSLEY. No, to do more than that. I rather hope that we will get the land paid for out of the money which we have available during the current year.

Mr. DANIEL. That is only $2,500.

Mr. PUGSLEY. We have $12,500, and we hope that $10,000 will pretty well pay for the land.

Mr. BRADBURY. There have been a great many of these buildings before the committee to-night, and it struck me as strange that the minister has never produced a plan. It would facilitate matters very much if plans of proposed buildings were laid before the committee.

Mr. PUGSLEY. I am asking in these estimates for 1,200 different works. If I brought down 1,200 different plans of public buildings and wharfs they would fill this whole room and nobody would look at them. If there is any plan which my hon. friend desires to see, or any information he wishes, I will be very glad to give him a note to the chief architect and he can go and look the plan over. Plans have never been

brought to the committee unless specially asked for in some particular case.

Mr. LANCASTER. I would like to ask the hon. gentleman to bring down a plan of the building that fronts on those three streets that we inquired about a little while ago.

Mr. PUGSLEY. As soon as that plan is ready I will be very happy to do so.

Mr. SPROULE. There is another duty devolving upon the minister which he has not yet fulfilled. He is proposing to undertake the erection of a building which he says, according to the judgment of the Militia Department, will cost $200,000. He asks a vote for that. Whether he has or has no plans it seems to me that an intelligent business department would reach some understanding as to what they intended to build and as to about how much it is going to cost and let the House know what that cost is going to be before we vote any money to commence the undertaking. We want to know what we are committing ourselves to, the size of the building, whether there is a need of the building or not, whether what the people ask for is more than they should get and what the government have decided that they are prepared to do in supplying the needs of the people in that place. In other words give us all the information we ought to have to enable us to decide whether we ought to vote that money or refuse to vote it. We ought to know what we are committing ourselves to because afterwards we are confronted with the arguments that we ought to have taken our objection to it when the vote was asked and before the money was spent. Now we are committed to it, contracts have been let and we are obliged to vote the money if we think it wise or not. We want the information at the proper time, and this seems to be the proper time to get the information with regard to this item.

Mr. PUGSLEY. We have to be governed in my department very largely by what, in so far as drill halls and armouries are concerned, are the requirements of the Militia Department. My hon. friend can see that it would not be wise to erect a drill hall which, when it was completed, would not give the accommodation required for the militia.

Mr. SPROULE. It is on the basis of that information that council decides whether it is wise or unwise to put that item in the estimates.

Mr. PUGSLEY. As far as St. John is concerned, it was decided years ago to give them a new drill hall. I think it was decided ten or fifteen years ago, when the old government was in power. I think it has been the view of the different ministers that when a new drill hall should be erected in the city of St. John, it should be one that would be creditable to the city and the country and would give the militia the requisite accommodation. St. John is a very important city, having a population, with its suburbs, of about 55,000. The military spirit is very strong in St. John. It has a regiment of artillery and one of infantry, and it has been felt by both officers and men that great injustice has been done to them in not giving them a drill hall long before this. If we can get the cost of the building below $200,000, we will do so, but I cannot hold out to the committee any expectation that the cost will be less. If it costs that much, it will not be as expensive as the drill hall at Halifax or the one at Hamilton, not nearly as expensive as the one it is proposed to erect in the city of Toronto, and I doubt if it will be very much more expensive than the one erected in the city of Sherbrooke. Nobody will say that $200,000 for a drill hall and armoury in a city of the size and importance of St. John is an excessive amount, provided it is built substantially of brick and stone and fireproof material, and we do propose that it shall be constructed in a very substantial manner.

Mr. SPROULE. A good deal of what the minister has said is outside of the question altogether. I was not arguing that St. John was not entitled to a drill hall or whether it was costing too little or too much. I was arguing that when the minister submits an item for a new building or a new work of any kind, he should have some data to submit to parliament showing how his estimate was arrived at. I think he ought to tell us what data he placed before Council.

Mr. PUGSLEY. I have told my hon. friend that the Militia Department has asked my department to provide a drill hall and armoury of a size which my chief architect estimates will cost $200,000. Until the architect prepares his plans and details I am not prepared to say positively whether or not we can provide a suitable building for less. All I can say is that I do not believe the cost will exceed $200,000. If I can save anything on that, I will do so.

Mr. DANIEL. I may say that this matter of a drill hall for St. John has been befor parliament on several occasions and items have been frequently placed in the estimates for it. I think that in the very first year that I came here I found an item for it in the estimates. So far nothing has materialized, and yet there is no place in the whole Dominion that needs a drill hall more than St. John. I believe that the old drill shed there now was about the first one built in Canada. It is of wood and in wet weather one cannot keep dry in it without an umbrella. The garrison there con-

sists of a regiment of artillery and a regiment of infantry besides the Army Service corps and the Army Medical corps and we have also to house the heavy 4.7 guns which require a good deal of room. When a drill hall and armoury is to be built there, it would be very foolish to build it of anything but brick and stone. The armoury at Halifax cost from $500,000 to $750,000. In St. John we are not looking so much for extravagant expenditure as for the erection of a really needed armoury and drill hall; and comparing the cost of similar buildings in various parts of the country, members of this House will hardly expect to get anything there worthy of the name and suitable for the requirements at anything less than $200,000.

St. John quarantine station, Partridge island—water service and improvements, and repairs to buildings, &c., $2,500.

Mr. DANIEL. There is great complaint from the Water and Sewerage Board of the city of St. John of the great wastage from leaky pipes carrying water from the west side of the harbour to Partridge Island, and in connection with this I will read a short item which I have taken from one of the St. John papers:

Improvement needed.—Residents of Lancaster and Carleton Heights complain of the frequent scarcity of water. Carleton water officials say that the great trouble is the enormous leakage through the pipes to Partridge island.

This leakage, which has existed for some time, grows constantly greater despite all efforts to check it. According to dwellers on the heights, the scarcity of water is often a very great inconvenience, and the condition is such that vigorous efforts should be made to meet the conditions.

This is a statement made in the press. And certainly statements are current that there is a very great leakage from this pipe adjoining the service in St. John West with Partridge island. The pipe is under water, and it may be difficult to find the leak, nevertheless there should be some way of finding it and stopping it.

Mr. PUGSLEY. I know there are complaints of leakage, and some time ago I gave directions to have the matter looked into. As soon as possible it will be remedied. The pipes are laid a considerable distance under water. Whether the action of the salt water affects the pipes injuriously or not I am not prepared to say. We are constantly trying to overcome the leak by having a diver go along the pipe frequently. I do not know what is to be done, but I can assure my hon. friend (Mr. Daniel) that the matter is having the earnest attention of the department.

Mr. DANIEL. Whereabouts is the meter situated—on the Carleton side or on the island side? In other words, who is paying for the leakage, the government or the city of St. John?

Mr. PUGSLEY. The chief architect is not quite sure, he tells me. He thinks that recently one was placed on the Carleton side, and if that was done, I suppose it was to make the department pay for the waste.

Mr. DANIEL. That is the way it ought to be.

Mr. PUGSLEY. I do not think so.

Mr. DANIEL. As a citizen of St. John, I would like to know whether the city is or is not paying for the leakage due to the officials of the Department of Public Works not attending to this matter. It must be quite a large amount in the run of a year, and I would like to know——

Mr. PUGSLEY. The department is a very good customer of the city for water.

Mr. DANIEL. Not very good. Where is the meter?

Mr. PUGSLEY. I shall have to find that out. The chief architect says it was formerly on Partridge island, but he thinks that latterly one was put over on the Carleton side.

Mr. DANIEL. Will the hon. minister get that information?

Mr. PUGSLEY. Not to-night.

Mr. DANIEL. When?

Mr. PUGSLEY. On Monday, probably.

St. John quarantine station, Partridge island—to provide for full and final settlement of contractor George McArthur's claims for works performed, &c., in connection with his contract of 26th August, 1904, for the erection of two detention buildings and a hospital, $301.80.

Mr. DANIEL. Is that the full amount of the claim?

Mr. PUGSLEY. I think so. At all events, it is all I am prepared to recommend.

Tracadie Lazaretto—house and barn, &c., $3,000.

Mr. PUGSLEY. This is a residence and barn for the doctor at the Tracadie Lazaretto. It is urgently asked for by the medical superintendent.

Public Works — chargeable to income—Maritime provinces generally — Dominion public buildings — renewals, improvements, repairs, &c., $15,000.

Mr. CROCKET. Is that the same amount as last year?

Mr. PUGSLEY. Yes. There is one other item that, I am sure, the committee will

pass without hesitation. I refer to the item in the supplementary estimates.

Ottawa Military Stores building—to make good the damage caused by fire, $20,000.

Mr. PUGSLEY. This is necessary in order to enable the department to go on with the work.

Mr. R. L. BORDEN. How did the fire occur?

Mr. PUGSLEY. So far as we can judge it must have been caused by electric wiring getting in contact with some inflammable material.

Mr. LANCASTER. In what part of the building did the fire start?

Mr. PUGSLEY. The upper part.

Mr. SPROULE. Was there any insurance on the property?

Mr. PUGSLEY. No, the government is its own insurer.

Mr. R. L. BORDEN. Are the government buildings all liable to be burned down through defective wiring?

Mr. PUGSLEY. I do not know just what the question means. Fires are liable to occur at any moment.

Mr. R. L. BORDEN. They are not liable to occur from the wiring if that wiring is put in properly insulated. I ask if public buildings are liable to be burned down because of defective wiring?

Mr. PUGSLEY. I think there ought to be very little risk, but there is a risk. The insulation may be removed from a wire.

Mr. R. L. BORDEN. Is there no supervision or regulation?

Mr. PUGSLEY. Yes, the experts inspect it.

Mr. R. L. BORDEN. What do they know about it?

Mr. PUGSLEY. Whatever experts know.

Mr. R. L. BORDEN. What is that?

Mr. PUGSLEY Well, for one thing, that if the wire is properly insulated and properly installed, the danger of fire from the wires is reduced to a minimum. But sometimes, I believe, the insulation may be removed. For instance a rat may gnaw off the insulating material.

Mr. SPROULE. I see by the press that the inspector of one of the insurance companies, looking over many Canadian buildings recently, declared that there was but a very small percentage of them wired in a reasonably safe manner, while many were very dangerously wired and liable to fire, and showing that it was of great importance that some inspector should look over these buildings and determine whether the wiring had been done properly or not. Has the government assigned that duty to any person? Have they been in the habit of examining these buildings to see whether they are correctly wired or whether the method of wiring may give rise to danger?

Mr. PUGSLEY. When government buildings are being erected, we have an electrical expert who examines very carefully the wiring to see that it is properly insulated, and from time to time we have the electric wiring inspected. In the items we have passed here are some amounts for rewiring which is the result of examination. Some years ago there was not the same care taken with respect to insulating wires which is taken to-day. Electric wiring is much safer to-day than it was some years ago, because greater care is taken to insulate the wires.

Mr. SPROULE. When was this building last examined as regards the safety of the wiring and how frequently do these inspections take place?

Mr. PUGSLEY. The chief architect informs me that they are inspected very frequently. I cannot say from week to week or from month to month, but from time to time inspection is made.

Mr. SPROULE. Is any record taken when these inspections are made?

Mr. PUGSLEY. I cannot say to-night when the last inspection was made?

Mr. R. L. BORDEN. When was the building last examined for rats?

Mr. PUGSLEY. My hon. friend makes a joke of the rat question, but it is more serious than he imagines. I think that rats and mice are responsible for more fires than people give them credit for, in the friction of matches and the destroying of the insulation of wire.

Mr. LANCASTER. Did the hon. gentleman have any investigation made to ascertain what was really the cause of this fire?

Mr. PUGSLEY. The Militia Department did, but my hon. friend will see how difficult it must be to ascertain just how the fire occurred, provided it resulted from the wiring, and we are not able to trace it to any other cause. If it resulted from the wiring, that is in a part of the building which was destroyed, and it will be impossible to ascertain with what the electric wires came in contact.

Mr. LANCASTER. What is the total amount of the loss?

Mr. PUGSLEY. About $150,000.

Mr. LANCASTER. If the hon. minister would do what any ordinary company would do, which had to pay that amount

of money, he would not be satisfied to guess at the cause of the fire. No insurance company would pay out that amount and content itself with guessing whether the fire was caused by rats or mice as the hon. gentleman does.

Mr. PUGSLEY. The building was occupied by the Militia Department and was known as the militia stores building. I understand that the Militia Department made an investigation, but I am not in a position to say what has been the result, and the Minister of Militia is not here to give it.

Mr. LANCASTER. Then the hon. gentleman should not ask us to pass that item without such information.

Mr. PUGSLEY. We must repair the building at once. It would be the greatest folly not to do so. We must have a roof put on to prevent the rain coming in and destroying valuable property.

Mr. LANCASTER. But we want the repairs done in such a way that the building will not burn down within another week or two.

Mr. PUGSLEY. My hon. friend need have no fears with regard to the electric wiring, because now that is carried in steel conduits. I would be very glad to give all the information on this subject and will get it from the Department of Militia and lay it before the House, but I would ask the committee to pass the item so that we may get to work with the least possible delay.

Mr. SPROULE. Does the minister say that the government carry no insurance on the property but insure it themselves. What kind of insurance is that?

Mr. PUGSLEY. Of course there is no policy issued, but owing to the large number of buildings owned by the government it has always been thought less expensive not to insure at all, because the losses would not be so heavy as the cost of the premiums.

Mr. COWAN. If the government carries no insurance, one would think it would take the ordinary business precaution of having the wiring inspected at regular periods.

Mr. PUGSLEY. If the hon. gentleman means that on a certain day in a certain month each building shall be inspected, there is no periodical inspection of that kind, but there is a continual inspection going on.

Mr. R. L. BORDEN, Is any record kept of each inspection?

Mr. PUGSLEY. I cannot say to-night, but I can find out from the expert who does the inspection, and will be able to inform the House later at what time this building was last inspected and what is the system of inspection.

Mr. COWAN. I would think that he should wait until he is prepared to give that information.

Mr. PUGSLEY. In the meantime a big rain might come on and destroy a lot of valuable property.

Mr. COWAN. Or a big rat. It seems to me that the Dominion government should at least take the ordinary precaution exercised by a business firm——

Mr. PUGSLEY. So it does.

Mr. COWAN. I think it should either insure its own property or take steps to guard more effectively against loss. This particular item does not amount to very much, but if all the property of the Dominion, under control of the Public Works Department, is not subjected to periodical inspection, that seems to me a very startling condition of affairs.

Mr. STAPLES. Has there been any other fire in any other public building in this city during the last year?

Mr. PUGSLEY. I recall one slight fire.

Mr. STAPLES. Caused by a mouse or a rat?

Mr. PUGSLEY. I only know it was put out very quickly.

Mr. STAPLES. What fire was that?

Mr. PUGSLEY. We had better pass this item first.

Mr. STAPLES. But it is a fair question. We are responsible to the people for these buildings, the people carry their own insurance and we should receive adequate protection, as my hon. friend says, against any fire.

Mr. PUGSLEY. The chief architect says there has been no fire in any of the public buildings except a very slight fire which occurred in my own office some months ago and which was immediately extinguished by means of the hose which was just outside the door. We have a very excellent fire apparatus in the buildings and there was no difficulty on that occasion in putting it out immediately.

Mr. LANCASTER. In view of the position the item is in, I think it had better stand. The minister says he had no idea the item was coming up.

Mr. PUGSLEY. No, what I said was that I did not know I would be asked the question as to the inspection of the wiring in the buildings and therefore I was not prepared to-night to give the information

as to that. However, I will get the information and will submit it to the committee. I appeal to the good judgment of the members of the House and ask whether they think that as this building has been so seriously damaged by fire, a building containing a great deal of very valuable property amounting in all to nearly a million dollars in value, which is liable to be injured by rain, the roof having been destroyed, it is in the public interest that this item should be delayed. Should the item not pass in order that we may as soon as possible proceed to the repair of this building?

Mr. R. L. BORDEN. For what year is it a supplementary estimate?

Mr. FIELDING. For the current year.

Mr. SPROULE. The minister spoke of another fire. Has he ascertained what it originated from?

Mr. PUGSLEY. No.

Mr. SPROULE. Would it not be advisable to set apart a portion of this money to purchase a rat trap?

Mr. PUGSLEY. The hon. gentleman's suggestions are usually worthy of consideration and very wise and I have no doubt this is as wise as the suggestions he ordinarily makes to the committee.

Mr. SPROULE. In view of the intelligence and great prescience of the hon. gentleman from whom it comes, I take it for granted it is accurate.

Mr. BLAIN. What will be the total cost of these repairs and will they be done by public tender or day's work?

Mr. PUGSLEY. The total cost is estimated at $20,000 and the intention is to ask for tenders for the work.

Mr. BRADBURY. I was surprised to hear the minister say that there was so much danger in connection with the wiring of public buildings. He admitted later on that a building could be wired and made perfectly safe. Every one who knows anything about the system of wiring a building knows that it is possible to wire it so that no mouse or rat can injure the wiring. I think that every public building in this city should be examined and that the wiring in many of them should be changed. A few years ago a serious fire occurred in the Marine Department and many very valuable documents were lost. That fire was attributed to bad wiring. Where it is an admitted fact that a building can be wired in such a way that accidents become almost impossible, every public building in Ottawa should be rewired. I think it would pay the government. Here is a loss of $150,000, an amount which would more than wire every government building in the city and make them perfectly safe. I think that is worthy of consideration.

Mr. PUGSLEY. I quite agree that that is worthy of consideration. Of course when these buildings were erected the modern system of electric wiring was not in use. The new wing has the steel conduits.

Mr. R. L. BORDEN. I think the information asked for this afternoon should be brought down later on. We should also have information as to whether or not there was any watchman in that building.

Mr. PUGSLEY. The Dominion Police have charge of the building.

Mr. R. L. BORDEN. I saw the statement, I do not know what reliance is to be placed on it, that if a watchman or caretaker had been in charge very little damage would have been done.

Mr. PUGSLEY. I will undertake that information will be furnished to the committee from both my own department and the Militia Department.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House. He said: On Tuesday next I propose to proceed with the Bills representing the French Treaty.

Motion agreed to, and House adjourned at 11.10 p. m.

HOUSE OF COMMONS.

MONDAY, November, 29, 1909.

The SPEAKER took the Chair at Three o'clock.

PUBLIC ACCOUNTS COMMITTEE.

Mr. A. B. WARBURTON (Queens, Prince Edward Island) moved that the Public Accounts for the fiscal year ending March 31, 1909, and volumes I. and III. of the report of the Auditor General for the same period, be referred to the Committee on Public Accounts.

Mr. HAUGHTON LENNOX (South Simcoe). Before that motion is put I wish to direct the attention of this House to the advisability of making some change in our method of procedure in the Public Accounts Committee. There is no member of this House, whether he be a member of the Public Accounts Committee or not, who has not some knowledge of the very great difficulty experienced in getting at the information which the public of this country require in relation to the Public Accounts of Canada. There is no member of this House who, aside from political considerations, would hesitate to admit that in certain cases our investigations are not as full as they ought to be and that we do not get at the true state of the facts to

the extent we should. The opposition which we who investigate are met with from time to time by certain gentlemen in the House is one conspicuous cause of the failure to elicit the facts. In the years that have gone by it is true we have been able to divulge very startling conditions in reference to the public expenditure of Canada, but I venture to think, and I believe most people in Canada who follow the trend of public affairs think, that we are only on the threshold of all that could be divulged did we have the proper facilities to elicit it. I would be glad to feel—and for the present I will assume, and the subsequent attitude which the government takes will show whether I am justified or not—I would be glad to feel that the government is as anxious as are the members of the opposition that full light should be thrown on the circumstances surrounding the expenditure of public moneys. Following a time honoured precedent the hon. gentleman (Mr. Warburton) has to-day moved that the Public Accounts and the Auditor General's Report for the year ending March 31 be referred to the Public Accounts Committee for investigation.

Now, what I propose, Mr. Speaker, is that we should have a wider range; that instead of referring the public accounts merely for the year ending the 31st March last and the Auditor General's Report for the same period, we should refer at least two years of the public accounts to that committee. I do this for various reasons, one of which is that it is the Public Accounts and the Auditor General's Report for the year ending 31st March last which give the true bearing of certain items in the accounts of the year preceding. Therefore as it should be the object of every member of this House to get at the true state of the facts in the most expeditious manner possible, it is important that we should be able, after these accounts have come in, to go back to the preceding year and avail ourselves of the information afforded by the subsequent transactions in connection with the same item. We cannot close our eyes to the fact that many hon. gentlemen who believe they are acting in the interest of their party set themselves deliberately to block the investigation which is going on, impelled by the belief that if they can prevent it for one year it will be dropped altogether. The matter comes up within a few weeks of prorogation, and they will not allow the investigation to proceed rapidly; they take all the technical and captious objections possible, with the result that very little information is elicited during the balance of the session; and when we come to another session we are confronted with the statement: You cannot go into that, because the only public accounts referred to the committee are those of the year ended the 31st of March last. If the public accounts of the two years were referred, to the committtee, we would not be met with that difficulty, because these hon. gentlemen would realize, contrary to what they believe now, that we could not be blocked altogether in our investigations. It may be suggested that it would be rather unfortunate if the committee went back to investigate not the public accounts of last year, but those of the year before. To that I reply that no hon. member of this House is going to ask the committee to investigate for two years back, unless there is some good reason for doing it. It is said that there are no birds in last year's nests, and we realize that in the majority of cases our best work is done on the recent accounts; but there are a great many cases in which light can be thrown on a transaction on which the public should be informed if the rule did not confine us to one year's accounts, but gave us liberty to investigate the accounts of two years. I had intended to move an amendment to this motion, but I have decided not to do so on this occasion. I have listened, not always with approval, to the remarks of hon. gentlemen opposite in regard to long sessions. I have tried to believe, but have not succeeded in believing, that these hon. gentlemen are sincere in the ideas which suggest these remarks. Any one who reads the records of this House will, on a careful study of this matter, come to the conclusion, that the evidence is not strong that the government is sincere in desiring short sessions. If we want to have short sessions combined with efficiency of investigation, we will adopt the suggestion I make. If hon. gentlemen desire to have the time of the Public Accounts Committee used to advantage, and a rule broad enough to enable us to work effectively without having to make special applications to the House, they will agree to the suggestion I make, and say that in years to come, as long at any rate as this government is in power—and I think I can promise that when we get into power in the near future, we shall be quite willing to continue the rule—we shall have the right, without making any special motion in the House, to investigate the public accounts and the Auditor General's Report for at least two years whenever any hon. gentleman of this House deems it in the public interest that such an investigation should be made.

Hon. W. S. FIELDING. Mr. Speaker, as my hon. friend has not made any motion on the subject proposed, it is not necessary for me to discuss the matter at length. The impressions I have received of the Public Accounts Committee are not the same as those which my hon. friend seems to entertain. I think that those who have given the closest attention to the Public Accounts Committee will be able to testify that the

investigations of that committee are very thorough, and they take a very wide range. If one wanted to be critical, he could often complain that the committee enters into the consideration of matters which strictly speaking do not pertain to its duties at all. But on a question of that character it is well to take a very liberal view not to be too technical. Inasmuch as we have annual parliaments, it follows that there should be annual inquiries into the public accounts. These matters are all regulated by the long experience of the mother of parliaments, and the rules and practices found to be successful in the mother country may safely, in most instances, be continued here. I quite understand that there may be cases in which the events of one year may be closely connected to those of another; the transaction beginning in one year may extend into another year. In cases of that kind it would not be unreasonable that the whole transaction should be reviewed, and I am sure that the Public Accounts Committee would at all times be willing to grant such an investigation. If there be any special circumstances which seem to call for such an inquiry, I think we can safely trust in the future as in the past the wisdom of the Public Accounts Committee and ultimately the wisdom of the House of Commons. It is unfortunate that in the discussion of questions in that committee occasionally some party feeling may be manifested on one side or on the other; a man who has strong party views may sometimes think that a man who has strong party views on the other side is a little unreasonable. We must learn to make allowance for one another in these things. I am persuaded that, all in all, the work of the Public Accounts Committee is well done; and if it should be desired at any time to inquire into a matter that is not before the committee in the usual formal way, I am sure that the committee and the House of Commons itself will always, on a statement of the facts, be prepared to provide a remedy.

Mr. F. D. MONK (Jacques Cartier). I would like to say a word in support of what the hon. member for South Simcoe (Mr. Lennox) has said. My experience of the Public Accounts Committee differs entirely from that of the Minister of Finance; and when he invokes the example of the mother of parliaments, my hon. friend cannot ignore the fact that the investigation of the public accounts is very differently conducted in the mother country. In England, under the rules of the House, the Public Accounts Committee is composed of eleven of or at most fifteen members of the House. The chairman is always by custom a member of the opposition. It would be entirely unheard of in England that one of the members of the committee, desiring information on some particular transaction, would be opposed by a member of the same committee on legal technicalities. The thing has never occurred, and never could occur there, because the idea that dominates the Committee of Public Accounts in the British parliament is that any man can ask any question which may lead him to a full understanding of the transaction under consideration. But what do we find here? So far from exhibiting any wisdom, the proceedings in the Public Accounts Committee, during the past four or five years, have degenerated into a farce. People go there just to see the kind of a battle that is carried on, just to hear the objections made and the difficulties put in the way of getting any information on any transaction. I appeal to any hon. gentleman who has attended any of the meetings, if that be not the case. That committee is the place where it is most difficult to get any information. What usually happens? A number of gentlemen, who form part of the committee, come to the meeting, and a certain number do not find a single matter to investigate. It is but fair to presume therefore that they are satisfied with the accounts presented to them. They do not ask any questions, but are perfectly content. Other members come there who are not so easily pleased. Certain transactions have come under their observations on which they desire to be informed, and they call for the papers. These are brought down, and on looking over them, these members of the committee find reasons for pushing their researches a little further. Witnesses are then brought before the committee, but the minute you begin to examine them, other members of the committee, who seldom come there, who have asked for no papers, who presumably are satisfied with everything, make their appearance on such occasions, and make it their business to enter objections and prevent the investigation. Is that the case or is it not? Some four or five members, in some cases more, troop into that Public Accounts Committee room for the sole object of blocking the investigation. There can be no doubt about that. The best proof is that these gentleman, as a rule, are able lawyers, and they interpose objections just as they would in a court of law. An hon. member from Nova Scotia will base his objection upon the rules of investigation which obtain in his particular province. Other members from other provinces will make objections founded on rules of evidence which govern in their respective provinces. The result is you cannot proceed. If the case be one which seems to lead up to discoveries of irregularities, the stronger are the objections and the greater is the number of members who come in to support them. It seems to me that proceeds from an entire mis-

conception of the duties of that committee. There is no possible ground, I submit, on which one hon. member can object to another obtaining information, unless the latter ill-treats the witness or clearly wishes to obstruct the work of the committee, but when he puts a question to a witness with regard to a fact, is it tolerable that one of his colleagues should object because that question violates some rule of evidence in some provincial court. For instance, the objection will be urged that you cannot put that question unless you have a commencement of proof in writing or some other absolutely technical objection, which could only be made in a court of law. We have all seen some particular member apparently designated as being an able lawyer accustomed to cross-examine, come into that committee when there is some ticklish matter under investigation, involving irregular transactions on the part of the government. We have seen four or five such members come there and sedulously one after another, object to questions on some technical rule of evidence. All members of parliament are not lawyers, and it is quite clear that this group of members has for its object the blocking of evidence and the preventing of our obtaining that information which the committee ought to have. I am very glad that my hon. friend from Simcoe has brought that matter to the notice of the House. It has been noticed by all strangers and witnesses attending the committee, and the result is that the examination before that committee, instead of being serious, becomes a farce.

Mr. F. B. CARVELL (Carleton, N.B.). I am very much surprised at the statements of the hon. member for Simcoe (Mr. Lennox) and the hon. member for Jacques Cartier (Mr. Monk). If these came from other members of the opposition, I would say that they were drawing upon their imaginations, but my hon. friend from South Simcoe (Mr. Lennox), I think, is the last person who ought to complain of the treatment he has received from the Public Accounts Committee. I have been rather a regular attendant at the meetings of that committee during the past three or four sessions——

Some hon. MEMBERS. Hear, hear.

Mr. CARVELL. And I challenge the hon. member for South Simcoe (Mr. Lennox) to point out one specific case in which he ever asked a proper question for proper information and failed to have that question allowed.

Mr. LENNOX. I may say that I have not asked many questions altogether in the Public Accounts Committee and I do not recollect that my hon. friend ever interrupted me, and I would not be particular if he did, because I am able to fight my way, but I have heard, on many occasions, objections made on technical grounds to questions put.

Mr. CARVELL. I knew that the hon. gentleman could not point to one instance when he put a proper question and it was objected to. But let me point out what has occasioned this irritation on the part of the hon. members for Jacques Cartier (Mr. Monk) and South Simcoe (Mr. Lennox) and others of their friends. In the first place, they ask for the papers and the original papers are brought down. Then they ask that witnesses be summoned; and to the best of my recollection, there never has been a refusal to bring witnesses from any part of the country, from the Atlantic to the Pacific. Thousands and tens of thousands of dollars have been squandered bringing witnesses, who, not only could not give any information, but who, I believe, these gentlemen knew could not give any; but they brought them because they had some ulterior object in view. After asking a few questions regarding the item under discussion, they drift off to some other outside matter, and when members of the committee who have some regard for the rules of order and decency——

Some hon. MEMBERS. Oh, oh.

Mr. CARVELL—attempt to hold them down to the question under discussion, these gentlemen make the charge that an attempt is being made to burk the investigation. Let them ask for their witnesses, and confine themselves to the subject matter under investigation and I can promise, as far as I am concerned, that they will meet with no difficulty, and I challenge them to point out where I or any other member, in the past four sessions, have attempted to obstruct investigation into any particular subject before the committee.

I am very glad this matter has come up. These accusations have been hurled at members on this side of the House from one end of Canada to the other. And I may say that my own name has been bandied about from the Atlantic to the Pacific as one of the leaders of a dark lantern brigade. I have only to repeat that I have not a word to take back that I have ever uttered in that committee. I have never objected to a solitary question that was proper;—I do not mean technically proper; I am not talking along the line of whether a question is one that would be allowed in a court of law or not; I mean a question bearing on the subject at issue. If these hon. gentlemen opposite will direct their investigations to the subject under discussion and not to some extrinsic matter they will have no difficulty. But I am afraid that if they continue to carry out the policy they have

pursued in the past, of attempting to bring out matters that have nothing to do with the subject under discussion, if they will attempt to use the Public Accounts Committee and the money of Canada as a means of trying to get some information which they think may possibly be of benefit to them in their constituencies but has nothing to do with the subject of the investigation, they will meet with the same treatment that they have met with in the past and of which they are complaining here to-day. We might as well have a clear understanding on this point. As a matter of fact, so far as I, for one, am concerned, there has been no objection in the past, and will be no objection in the future, to any proper investigation; every subject can be laid as bare as it possibly can be laid. On the other hand, I can only warn hon. members that if they will attempt to use this power of investigation in a way in which they are not entitled to use it, I am afraid they will meet with the same treatment as in the past.

Mr. SAMUEL BARKER (East Hamilton). I do not desire to occupy the time of the House in repeating what other gentlemen have said on this very important subject. I think that, especially seeing that we have a new chairman, not so much accustomed as others to our ways, even what the Minister of Finance (Mr. Fielding) has said, may do a great deal of good. I can say that I have nothing to complain of particularly myself; but I have again and again in that committee heard gentlemen who are not versed in the methods and forms of the law, attempting to ask a question of a witness, a perfectly proper question, when three or four gentlemen would at once spring to their feet objecting that the question was not put in proper form. There is not a member of that committee who hears me but knows that that is the case. The hon. member for Carleton, N. B., (Mr. Carvell) asked the hon. member for South Simcoe (Mr. Lennox) to give an instance. I can give him a very common instance of most outrageous interference with the witnesses. I have myself, again and again, in examining witnesses as to the value of property which they have sold to the government, asked them, as the very best test of that value, what they had paid for the property, which, perhaps, they had bought within a month and may not even have paid for; and everybody knows who is on that committee who the gentlemen were who objected that this was an attempt to compel a man to disclose his private business. The hon. member (Mr. Carvell) will not deny this—

Mr. CARVELL. Will the hon. member name a specific instance; I cannot recall such a thing.

Some hon. MEMBERS. Oh, oh.

Mr. CARVELL. I would like to have an instance.

Mr. BARKER. There are so many that it is quite unnecessary—

Some hon. MEMBERS. Oh, oh.

Mr. BARKER. One case was brought before the House.

Mr. CARVELL. What was it?

Mr. BARKER. That is quite enough; I will not give names unnecessarily; I know what I am talking about, and I do not think that there is one of the gentlemen here who has been declaiming but knows that I have only stated the facts. We have investigated the prices of articles sold to the government where we know that the most extravagant prices have been paid. I have asked what the seller paid for it, and what was his reply? His reply, suggested by a member of the committee, was that that was prying into a man's private business. I have even heard the chairman say that the witness was not bound to answer. Is that decent? Is that right? Is that reasonable, fair investigation? The hon. member (Mr. Carvell) knows that for a whole week we struggled with one witness to make him produce his invoices. He refused. We, at last, put him in a position where he would be forced to produce them, and then he said they were burnt. And we had to bring a man all the way from Galt, Ontario, to tell us at what price he sold these articles to the witness when the witness might have told us at once. I have heard members, not of the legal profession, asking a witness questions who were persistently interrupted by some legal gentlemen until the witness, alive to what was going on, found in what he should be careful, and then we might as well abandon the investigation. That is a very common thing, and every member of that committee knows it. As I have said, however, I think this little discussion will do good. It tends to show the absurdity of pretending that this is a court of inquiry to be conducted according to legal procedure. It is an investigation of business questions by business men, and ought to be carried on in the way in which business men would investigate such questions in their own office.

Mr. T. S. SPROULE (East Grey). As one member of that committee, for some time past I have regarded it as of little value in ascertaining anything with regard to the expenditure of public money. There is hardly a layman in this House, except one or two, who would go before that committee to investigate any of the matters referred to, for we know from experience that as soon as it appears that information is being brought out of value to the country,

we are badgered by a number of lawyers in that committee under the plea that we are not following the procedure laid down for a court of law. These gentlemen seem to forget that the rules that apply in a court of law do not apply here. I am well within the mark when I say I have heard that plea raised a hundred times, and I have often seen fifteen or twenty minutes of the valuable time of that committee wasted in a discussion which finally resulted in the member being prevented from putting his question because it was not according to the rules of evidence in a court of law. And I do not know a much greater sinner in this respect than the hon. member for Carleton (Mr. Carvell). The Minister of Finance (Mr. Fielding) says that the effort is to make the investigation thorough, and that it is thorough. It may be thorough as far as it goes, but, unfortunately, it does not go far enough. The time at the disposal of the committee is not sufficient to enable it to make a fair inquiry, by the examining of witnesses, when members are hampered in putting their questions. Of the thousands of items in the Auditor General's Report, only an extremely small proportion can be investigated owing to the absolute obstruction in that committee. That has been found to be the case over and over again. It may be said that if you go back over more than one year you even increase the number of subjects to be investigated. That is true. But one advantage of going back, as any one who has been in the House any considerable length of time will know, is that you may get most valuable information regarding these transactions after a year has passed. Generally, parties are close-mouthed for a year, but when they begin to settle up they are apt to be dissatisfied with one another and to disclose information which would not otherwise be in the possession of members or of this House. But, try to go back into the previous public expenditures and you are met at once with the objection: 'You are going beyond the fiscal year.' That objection has been raised over and over again.

The members of the committee who have been endeavouring to get information have been prevented from getting it on that one ground alone. I do not think that is right. I remember a long inquiry that took place in 1893, and when the then opposition desired to go back two years, the offer was made to them that they might go back two years, or three years, or four or five years, and they got that right. We said they had the right to go back just as far as they liked, only they would have to say that they had reasonable grounds for suspicion that something was wrong; and if they desired to bring evidence with regard to anything that took place three or four years ago, we allowed that to be done. I thought that was right. I always agreed with it when our friends were in power. I think if there were not an effort made now to restrict the inquiry within the limit of one year, and that the last year, there would not be so much inclination to go back. But only in cases where there was a strong ground for suspicion that something could be got out which had not been brought to public attention, would any member of parliament desire to go back beyond a year. I think it would do a great deal of good if we had the right, though we might not exercise it very often. The Minister of Finance says: If you make certain allegations of fact the House will consent. Well, allegations of fact have been presented to that committee over and over again, and the committee did not consent; and I think in one or two cases when it was brought up in the House, the House did not consent. There is always some excuse made, so that no matter what you do you are confronted with obstruction, and you are prevented from doing what you conceive to be your duty. The hon. member opposite who just took his seat said that no proper question was ever refused. Well, what is meant by a proper question depends altogether on the mind of the gentleman who uses the word. If we were only to ask such questions as the hon. gentleman thought were proper questions, we would never bring out the information that we desired. Besides, one hon. gentleman might have something in his mind that others did not have, and he might desire to ask the question in a way that would bring out information which other hon. gentlemen could not bring out. I know that many laymen have been prevented from asking questions in the committee to such an extent that they have abandoned the attempt to go before that committee and endeavour to get any information, because of the way they are badgered by, I was going to say, the brigade of lawyers who have been constantly in the Public Accounts Committee session after session apparently to obstruct for many years past.

Mr. R. BLAIN (Peel). I beg to move the following amendment.

That the motion now read be amended by inserting the words 'Public Accounts and Auditor General's Report for the fiscal year ending 31st March 1908' immediately after the word 'period' in the said motion.

I have very little to add to what has already been said, other than that it seems to me to be a very reasonable request on the part of my hon. friend from South Simcoe (Mr. Lennox) that the Public Accounts Committee should have an opportunity to investigate accounts further back in the history of this government than one

year. It is well known that it is only after a session commences that the Auditor General's Report is placed in the hands of members. Up to the present time we only have volume I. and volume III. of the Auditor General's Report, and I suppose it will be some days before we see volume II. That fact in itself is sufficient reason why the Public Accounts Committee should have an opportunity of investigating the Auditor General's Report after it has been in their hands for seven, or eight, or ten months.

My hon. friend from Carleton, New Brunswick, (Mr. Carvell) says that his name has been bandied from the Atlantic to the Pacific ocean, to use his own words. If that is so, the reason is that my hon. friend has been the chief offender in the Public Accounts Committee, and if his name is well known from one end of this country to the other, as he states, it is because he has been most prominent among those who were unwilling to allow the opposition to investigate the public accounts of this government. Whether my hon. friend thinks that is an enviable reputation or not he must judge for himself. My hon. friend was asking for an example. I will give one. We had before the Public Accounts Committee the well known Mr. Merwin, the great middleman who has been supplying the government with goods for many years. That gentleman was called before the committee and the question was put to him: 'How much did you pay for these goods that were supplied to the government at such an enormous cost?' The gentleman supporting the government in the committee at once flew to his rescue and said: 'Don't answer the question.' The chairman coincided, and the question was not answered then. But after my hon. friend from Hastings (Mr. Northrup) summoned the gentleman who manufactured the goods, Mr. Willson, of Montreal, and after that gentleman came before the committee and was asked: 'What did you supply these goods for to the general traders throughout the country?' and after he was compelled to answer that question, then the committee said: 'Oh, yes, Mr. Merwin can answer it now.' Now if there is any person in the House of Commons, or any member in the Public Accounts Committee, who, more than another, is responsible for the expenditure of large sums of money for bringing witnesses from different parts of the country, it is my hon. friend from Carleton, New Brunswick, he and his chief supporters in the committee. It is well known that one of the chief charges against this government is that they have refused to the opposition members, and have refused to the people of Canada who are the taxpayers, such information as they are entitled to. That has been one of the chief charges against the government for the last few years. Why is it that the government are afraid to let us investigate the accounts that are two years old? If the public accounts are as fair as the government would lead this House to believe, then the Prime Minister himself should be the first man to stand up and say: This government is all right, we fear no investigation, let the opposition have all the latitude they want. We are not asking to investigate accounts ten years old; my hon. friend is only asking that accounts about two years old, should be brought before the committee for investigation. Surely that is a reasonable request, and if I am not mistaken, it is a request that the people of this country will endorse. I say that one of the principle charges against the government is that they are buying goods at enormous prices from middlemen, and the opposition are making an effort to investigate the charge in some of the most glaring cases. My hon. friend from Carleton, New Brunswick, says if cases of this kind come up, perhaps, if you bring them before the committee, we may allow you to bring witnesses. Are we to be at the mercy of my hon. friend and his supporters in the committee? It is a well known fact that the committee is a partisan committee, the chairman is a supporter of the government, a large majority of the members of the committee are supporters of the government. If any man will look at the divisions in that committee during the last two years, he will find that when a question of this kind comes up, the supporters of the government on the committee, almost to a man, stand up and declare that these charges are too old and cannot be investigated. I am heartily in accord with my hon. friend's suggestion, and, therefore, I have the honour to present a motion which will give an opportunity to the Public Accounts Committee to make a fair and honest investigation of the public accounts of Canada.

Rt. Hon. Sir WILFRID LAURIER. Mr. Speaker, after the speech of my hon. friend from Simcoe (Mr. Lennox), which I thought was on the whole very moderate, I did not expect my hon. friend (Mr. Blain) would move the amendment which he has just placed in your hands. I am unable to say at this moment whether this motion will be acceptable to this House or whether it will not. I listened to the observations of my hon. friend with some care, and I do not think I would object very seriously to the suggestion which he made to have the record of the accounts of the government for the last two years investigated. The matter is one which is quite worthy of consideration. I might say to my hon. friend, however, that he was a little more —what shall I say?—previous than his

friend. If he had given us an opportunity to have looked at his motion, I do not think that we would have objected to it very seriously. My hon. friend from Jacques Cartier (Mr. Monk) observed that our procedure in the Public Accounts Committee was not on all fours with the example of the mother country. He stated that in the mother country the chairman of the Public Accounts Committee always belongs to the opposition. That is a practice which has never been followed in Canada as far as my memory goes. I am pretty sure that at confederation the practice was adopted which has prevailed ever since of selecting as chairman of the Public Accounts Committee a supporter of the government. There has been no departure from that principle. Perhaps it is regrettable in this matter we have not followed the example of the mother country. I think that we would do well, as far as we can, to conform our procedure to the rules which prevail in the mother land. But, perhaps my hon. friend will not have any objection if I ask him to allow this matter to stand so that we may consider this motion and perhaps we may come to an agreement upon it.

Mr. W. B. NORTHRUP. Mr. Speaker, I sincerely hope that the mover of this amendment will accept the suggestion made by the right hon. the leader of the government (Sir Wilfrid Laurier) and allow this matter to stand in the hope that the government will accept the proposition. As I take the words of the right hon. gentleman as an indication that the government intend to look into this matter, I would venture to suggest that there is another matter that they might well consider in connection with the same committee. Whether the committee is to be allowed to go back two years or only one is a matter of comparatively little moment, but there does seem to me to be a matter of the utmost importance, the very basis upon which the committee works, and this may be an opportune time to have it decided what the real function of each member of that committee is. Without wishing to do anything more than to speak with perfect calmness upon the matter, I think that all members upon this side of the House will say that our chairman for the last term gave perfect satisfaction to this side of the House, both by his ability and integrity. Whenever papers have been moved for to be brought before the committee there has been no ground for complaint from this side of the House of any papers not being allowed to be obtained. As far as the subpoenaeing of witnesses is concerned, I do not think that primarily there is any ground for complaint by hon. members on this side of the House. So, Sir, a great deal of good can be done by the committee, and I venture to think a great deal more might be done if one little change were made. When a matter is referred to the committee, prima facie, it being the Public Accounts Committee, every member of this House would have the same duty to perform; that is, to endeavour, if possible, to ascertain if the funds of the people have been properly or improperly spent. Nobody could have attended the meetings of that committee without having been struck by two facts; first, that no member of that committee has the slightest interest in investigating the payment of any of these accounts except members of the opposition. I quite admit that it would not altogether be natural for members of the government to be as suspicious as members of the opposition, but I think every one must admit—which casts a light upon the subsequent proceedings—that under no circumstances is any attempt made to investigate anything by any member of the House except by a member of the opposition. For this reason the whole committee is formed into two camps, and this does seem to be absolutely absurd in a committee like the Public Accounts Committee.

There is no doubt that when this committee comes to the discharge of its duties it has one side—the opposition—trying to investigate and the other side—the government—trying to prevent investigation. It is all very well to find fault with this, that and the other thing, but there is the primary difficulty and so from day to day the opposition is prevented from making the investigation it desires to make. Let me give you a little illustration. We have the case occurring again and again when a matter has come before the committee. A question has been asked in the committee and it has been ruled that it has been improperly asked. A vote is taken in the committee and a report is asked for in order that the minority of the committee may appeal to this House, where hon. gentlemen are in the majority and where there is a 'Hansard' in order that the matter may be threshed out whether the member of the opposition who asked the question was wrong or whether the supporters of the government who prevented it from being answered were wrong. Surely one would think there could be no conceivable objection to a question of that kind being referred to this House where hon. gentlemen opposite are in such a majority, yet the rule has been laid down again and again that we shall not be allowed the right of appeal from the Public Accounts Committee to this House unless the whole matter is closed, and that means that the party who has been unable to ask the question must drop that question and all other questions he wishes to ask in order to get an opportunity of finding out whether the primary question was correct or not.

Can any one imagine that any hon. gentleman who really desired to have a fair and honest investigation of the public accounts would impose such a condition upon men who were asking a question or who would say that you are bound by that question and that you shall not be allowed to appeal to the House of Commons unless, you drop your case and forego all other questions that you wish to ask? That is the greatest objection we have had in the committee and it does seem to me that there is no reason why we should not be allowed to appeal upon an interlocutory matter in the committee just as well as upon a final matter. Another difficulty that has arisen is that every witness practically that the opposition examines is an adverse witness. I do not suppose one would find one witness out of a hundred in the Public Accounts Committee who is not an adverse witness and that is a drawback to the opposition in its investigations.

Mr. R. L. BORDEN. What do you mean by an adverse witness?

Mr. NORTHRUP. Adverse to the party trying to investigate the accounts and bring out the facts as to the expenditure. In trying to find out whether the expenditure is honest or not the witness, in almost every case, is adverse to the cross-examiner because he wishes to prevent the facts being elicited. There is no disputing the fact that the great majority of witnesses are very able witnesses—exceedingly able witnesses—men who know the facts, who, in most cases, are interested in concealing the facts and men who are most competent to attain the object which they desire. If members sitting on the government side would help members on the opposition side to investigate these matters instead of helping to burk such inquiry they would only be doing their full duty to the public. Instead of being hindered we should receive from them every possible assistance. How often does it happen, that in a case which it is in the interests of the people that the facts should be made known, the cross-examiner, when he begins to examine his witness, knows exactly how far his case will go, knows exactly what evidence he is to receive? It seems to me that if a member of this House is willing to spend the time that is necessary—and every one who has taken charge of such matters knows the long preparation necessary in investigation and inquiry—it does seem to me it would come with better grace from hon. gentlemen opposite if they would assist the member who is trying to do his duty instead of throwing obstacles in his way. I am prepared to support the amendment made by the hon. gentleman (Mr. Blain), but I do hope the right hon. leader of the House will consider carefully the functions of this committee, and perhaps when we get the new rules which are promised there may be one under which the work of the Public Accounts Committee will in the future be much more valuable than it has been in the past.

Hon. GEO. E. FOSTER (North Toronto). Whilst we are all in such an amicable mood maybe the House would listen for a moment to another suggestion which, not for the first time, I have to make, and indeed I am not sure that the first minister himself is not entirely in favour of it. I was glad to hear the remarks made by the Minister of Finance with reference to the reasonableness of the committee (and he was certain of the House) granting the committee back time so to speak, were it shown to be necessary in order to get at all the facts of the case; and also the position taken by the Prime Minister in thinking the suggestion made by my hon. friend (Mr. Lennox) a reasonable one. The two great troubles that appear to be in the way of that committee doing the work it ought to do are these: in the first place the committee is too large to do good work. We assemble pretty nearly one half of the House of Commons there, fresh from all the disturbance and party rancour in the House and they immediately line themselves up on two sides, one side never making a move for the investigation of any of the items in the Public Accounts, and indeed watching very carefully and very jealously every move made by the opposition to examine into items, and using every reasonable and sometimes unreasonable method of making the inquiry as ineffective as possible, if not going further and preventing it altogether. Now, you will eliminate the greater part of that unreasonable party spirit on both sides by having a small committee and composing that committee chiefly of men of experience in Public Accounts, and in practical business work. Those are two elements which I think would make an effective committee. I am pretty certain that a committee of 15 members appointed in that way to investigate the Public Accounts would really do good work for the government as well as for the country. After all, it is not any gentleman's affairs that are being looked into; it is not the government's affairs that are being looked into except in so far as they are the supervisors of public expenditure; it is the money of the whole country that has been expended and the whole country and every member of parliament should see to it that that money has been properly expended, or that the facts about its wrong expenditure should be disclosed. In the end nearly every government comes to its defeat not so much through mistaken policies as through that dead weight growing every year of bad or foolish or corrupt expenditures. The government can have no better

friend than an intelligent and able finance committee before whom in review every item of expenditure may go, with the idea that it will be looked into closely and competently and thoroughly. On these two grounds I would like to urge on the first minister that he take also into consideration the absolute necessity of rescuing that committee from the intolerable and mainly useless position in which it has been placed during these many years past. It has not done the work it should have done; it never will under its present constitution, and it is too bad that you must take many hours out of hard worked members of parliament, and pit them against each other in that committee where from the very moment they enter the room until the session is over they know there is very little chance of getting at the facts of any one case let alone a general revision of the public expenditure. You get rid of that unreasonable party spirit in the committee if you lessen the number of its members, and you will, I think, go largely towards effecting a great reform.

But another way of doing it is that the reasonable views of the first minister and the Minister of Finance as they have been expressed here to-day be impressed upon the members of the government who form that committee that the policy so reasonably laid down and fairly expressed this afternoon by both these gentlemen should be the policy which should rule in the Public Accounts Committee. Give some grace and favour to the opposition; ask yourselves one question and answer it. Ask: Would there be an item of the public expenditure in any year ever looked into if it remained for the members in that committee who represent the government to do so. The answer comes that it has not been done in the past and that it will probably not be done in the future. More than one half of the members of that committee are not doing their work and the other less than half are being hindered from doing it. Lessen the committee and at the same time let the reasonable attitude advanced this afternoon by the Prime Minister and the Minister of Finance imbue its members and better work will be done. For myself I am a hard worked member of parliament; I came here to work and I have worked every year I have been here, but I have lost very many most valuable hours in that Public Accounts Committee and have seen very little good come from my efforts until for the last year or two I have cut it out and have largely devoted myself to other kinds of parliamentary work. That ought not to be. It ought to be the ambition of every hard working member of parliament to put his force into one or two of the committees of this House and do the same hard work there that he does in the House itself. I am hoping for a great deal to come from this proposition

Mr. FOSTER.

to adjourn the question under debate and to give time for the first minister to look into the matter.

Mr. BLAIN. At the request of the Prime Minister and as we are so accustomed to being controlled by my right hon. friend I will leave my motion for further consideration. On this side of the House there was no thought of introducing a motion but rather to direct the attention of the government to this most important question until the Minister of Finance took issue with the member for South Simcoe, and so, in order to get the matter fully before the House I moved the amendment.

Sir WILFRID LAURIER. I suppose there is no objection that the motion of my hon. friend (Mr. Warburton) should carry. The amendment can be renewed by my hon. friend at any time.

Mr. BLAIN. That is satisfactory.

Amendment (Mr. Blain) withdrawn, and motion (Mr. Warburton) agreed to.

VACANCY IN DUFFERIN.

Mr. SPEAKER. I have the honour to inform the House that I have issued my warrant to the Clerk of the Crown in Chancery to make out a new writ of election for the electoral district of Dufferin to fill the vacancy caused by the death of John Barr, Esquire.

NEW MEMBER.

Mr. SPEAKER. I have the honour to inform the House that the clerk of the House has received from the Clerk of the Crown in Chancery a certificate of the election and return of Oliver J. Wilcox, Esquire, for the electoral district of North Essex, Ontario.

JOINT DISTRIBUTION OFFICE.

Mr. SPEAKER. I have directed to be laid upon the table of the House, under the provisions of the Civil Service Amendment Act, 1908, my recommendation of certain increases of salaries to the clerks in the joint distribution office, Senate and House of Commons, of the Department of the Printing of Parliament for the ensuing year.

BILLS RELATING TO TRADE.

Mr. SPEAKER. A question arose on Thursday last at the time of the introduction of Bills, as to the proper application of Rule 48. This rule reads as follows:

No Bill relating to trade or to the alteration of the laws relating to trade, is to be brought into this House, until the proposition shall have been first considered in a Committee of the Whole House, and agreed unto by the House.

The Bill introduced by the hon. member for Simcoe (Mr. Currie) intituled an Act

to amend the Inspection and Sales Act, in my opinion, clearly comes within the terms of the rule and should first be considered in Committee of the Whole House, as provided by the said rule. This Bill not only related to trade, but deals directly with trade, and provides for certain inspection and other regulations applicable to a particular trade. Incidental to the brief discussion on the above matter, the question was raised as to whether the Bill (No. 40), intituled an Act to amend the Inspection and Sales Act, introduced by the hon. the Minister of Agriculture on the 25th November, should not also have been first considered in Committee of the Whole House under the said rule. In reference to this Bill, I may say that both the Clerk of the House and the Law Clerk advised the hon. minister, after looking into this Bill and considering the precedents referred to in Bourinot's 'Parliamentary Practice,' that such a resolution was not necessary. The precedents in support of this position I find on page 635 of Bourinot's 'Parliamentary Practice.' In looking into these it appears that on former occasions, in several instances, Bills of that nature have been allowed to pass the House without previous action by resolution; but these, in my opinion, do not constitute such a precedent as would warrant me in varying from the strict letter of the rule. The cases referred to do not appear to have been the subject of discussion, or of any specific ruling on the part of the Speaker at that time. I, therefore, recommend that in regard to that Bill (No. 40) the same stand until a resolution has been duly considered and approved.

REPORT PRESENTED.

Report of the Department of Trade and Commerce for the year ending March 31, 1909, Part III.—Sir Wilfrid Laurier.

RAILWAY ACT AMENDMENT.

Mr. LOUIS J. PAPINEAU (Beauharnois) moved for leave to introduce Bill (No. 48) to amend the Railway Act. He said: The object of the Bill is to amend subsection 1 of section 298 of the Railway Act. This subsection was the subject of an amendment passed by parliament last session. It deals with the liability of a railway company for damage caused to property by fires started by a locomotive. It enacts first that in every case the railway company shall be liable for such damage. Then it declares that if it is shown that the railway company has used modern and efficient appliances, its liability shall be limited to $5,000 no matter what the value or the number of the properties injured or destroyed by the fire may be. The amendment of this subsection passed last session provides that the railway company, though liable to the amount of $5,000 shall have the benefit of such insurance as the property owner of the property destroyed may have had on the property. The company shall be entitled to deduct from the amount of its liability the amount of such insurance. This deprives the property owner practically of his recourse against the railway company. If, for instance, a property of the value of $15,000 is destroyed, and it is insured for $5,000, the company has a right to deduct this amount, which leaves it with no damages to pay, and the owner loses the balance. Previous to the adoption of this amendment, the railway company would have been liable for $5,000, the owner would have recovered $5,000 of insurance, and would have lost $5,000. Now, instead of this, the $5,000 of insurance goes to the railway company and the property owner loses $10,000. For these reasons I think this amendment should be repealed. As there were three amendments of the same section made by the Act of 1909, I have thought it best by my Bill to repeal the whole section and draft a new section.

Motion agreed to, and Bill read the first time.

INQUIRIES.

Mr. LENNOX. Before the orders of the day are proceeded with, I would like to ask the Minister of Railways when the report of the Transcontinental Railway Commission will be ready for general distribution. I know that some printed copies have been distributed, but there has not been a general distribution.

Mr. GRAHAM. I will make inquiries as to how the work is progressing. I am very anxious that the report shall be distributed without delay.

MR. LUMSDEN'S RESIGNATION.

Mr. R. L. BORDEN. Before the orders of the day are called, might I ask the right hon. the Prime Minister whether or not there was any communication from Mr. Lumsden to him. The right hon. gentleman has already stated that none has been found, but could he inform us whether or not any such document is in existence.

Sir WILFRID LAURIER. So far I have not been able to find anything in my office but I have instructed my secretary to make further research. I do not remember any such letter coming to me, but will investigate further.

APPOINTMENT OF JUDGES.

Mr. R. L. BORDEN. I would like to mention to my hon. friend the Minister of Finance, in respect of a little controversy

we had on a matter of fact, that I have looked up the dates and find that I was quite right. The general election to which he alluded took place in 1890, so far as I know, and the gentleman he mentioned was not appointed to the bench until February, 1893, or two years and ten months after the election had taken place.

Mr. FIELDING. I looked up the dates also and found that, as respects the lapse of time, my hon. friend was entirely right and I was mistaken, and I am very glad to admit my mistake. But I do not think the question of time affects the point I desired to make. He was appointed to the first judicial vacancy that occurred after he had opposed and even poured cold water on my excellent government.

THE DUFFERIN ELECTION.

Mr. SPROULE. Might I ask the right hon. gentleman if we may expect the election in Dufferin to be held forthwith.

Sir WILFRID LAURIER. I see no reason why it should not come off immediately, as regards the results I expect from it.

NAVAL DEFENCE.

Mr. FOSTER. I would like to ask the right hon. gentleman if he has heard anything with reference to the information which he said he would telegraph for as to the position of New Zealand and Australia on the defence question?

Sir WILFRID LAURIER. I have a despatch which is confidential, but I can show it to my hon. friend.

NEW PUBLIC BUILDINGS IN OTTAWA.

Mr. FOSTER. I would like to mention to the Minister of Public Works certain informations I shall require on the item in the estimates referring to the new buildings. I should like to have the space of the various government buildings and the number of clerks in each, the space of the various rented buildings and the number of clerks in each, and an estimate of the number of clerks to be accommodated in the proposed new buildings.

Mr. PUGSLEY. I shall be glad to give the information.

QUESTIONS.

GRAND TRUNK PACIFIC, WINNIPEG TO EDMONTON.

Mr. FOSTER:

1. What is the cost per mile to date of the Grand Trunk Pacific from Winnipeg to Edmonton?

2. What amount per mile is estimated to complete this section?

3. What is the same information as respects the section from Winnipeg to Lake Superior Junction?

4. What is the exact mileage of each section?

5. What has been expended to date on the Moncton-Quebec section?

6. What is estimated as necessary to complete this section, and what is the exact mileage?

7. What has been expended to date on the section from Edmonton to Prince Rupert, and what is now estimated as necessary to finish it?

8. What is the exact mileage of this section?

Hon. GEO. P. GRAHAM:

1. The cost to the 30th of September, 1909, of the section between Winnipeg and Wolfe Creek (Prairie Section) 915 miles—per mile is, $33,423.

The information asked in question No. 1 cannot be given Winnipeg to Edmonton, as the accounts are merely kept separate for the 'Prairie Section' and the 'Mountain Section'.

2. Estimated cost per mile to complete is, $1,557.

3. The estimate of Mr. Lumsden, of June 23, 1908, to complete this section was $85,003 per mile, exclusive of terminals in City of Winnipeg and shops near that city.

Up to the 13th of November instant the sum of $78,915 per mile had been expended. The present chief engineer, Mr. Grant, has not furnished any further estimate of the cost of completing this section.

4 From Lake Superior Junction to Water Street Winnipeg, 246·87 miles.

5 and 6. The estimate referred to made by Mr. Lumsden makes the total estimated cost of this section $26,935,902, exclusive of Quebec Bridge and terminals in the City of Quebec and line thereto.

Up to the 13th of November instant the sum of $17,334,113 had been expended. The present chief engineer, Mr. Grant, has not furnished any further estimate.

459·34 miles plus 1·11 miles, Quebec bridge section, making 460·45 miles to north abutment of Quebec bridge.

7. On the 'Mountain section' Wolfe Creek to Prince Rupert the expenditure has been up to the 30th of September, 1909, $7,053,-863.11, and it is now estimated as necessary to finish it $60,002,136.89, which includes $5,536,000 of interest.

8. As the revised location plans for about 400 miles of the 'Mountain Section' have not been submitted to the government by the company the exact mileage cannot be given It will, however, be about 836 miles.

ST. CHARLES RIVER, P.Q., LOTS.

Mr. MONK:

1. Are the two water lots on the St. Charles river situate in front cadastral lots Nos. 582A and 583B, of the Parish of St. Roch, in the county of Quebec, the property of the Quebec Harbour Commissioners, under the statutes governing that body?

2. Have the said two water lots above described, been sold by the Quebec government to private individuals within the past four years? If so, what persons have the said lots been sold and for what price?

3. Who are to-day the registered owners of said two water lots, and in what proportion for each person.

4. What is the superficial area of said water lots in arpents and in foot measure?

5. Has the conveyance of said water lots been ratified by the Governor General in Council pursuant to paragraph 2 of Article 20 of Chapter 34, of 62-63 Victoria?

Hon. L. P. BRODEUR. The answers to questions Nos. 1, 2, 3 and 4, have been supplied to me by the Quebec Harbour Commissioners.

1. The Quebec Harbour Commissioners claim that, under the statutes governing them, they are the owners of those two lots.

2. By a deed of sale passed before Cy. Tessier, notary, February 27, 1909, the late Etienne Dussault sold to Hon. A. Turgeon one undivided fourth of a beach lot in the River St. Charles, situate in front of cadastral lots Nos. 582A and 583B of the parish of St. Roch north. Subject to all federal laws concerning commerce and navigation. In this deed the vendor declares that he holds said beach lot under letters patent from the government of the province of Quebec, dated January 13, 1909.

3. The registered owners are as appears by said deed.

4. 67 arpents, more or less.

5. No.

NEW POST OFFICES.

Mr. SINCLAIR:

1. How many new Post Offices have been opened in each province of the Dominion during the past year?

2. How many Post Offices in the province of Nova Scotia are served only by weekly mails?

3. How many by two mails each week and how many by three?

Sir WILFRID LAURIER (for the Postmaster General):

No 1.

Name of Province	No. of Offices established from 31st March, 1908, to 31st March, 1909.
Ontario	100
Quebec	94
Nova Scotia	25
New Brunswick	64
Prince Edward Island	13
British Columbia	46
Manitoba	36
Alberta	122
Saskatchewan	154
Yukon	2

No. 2. 101.

No. 3. (a) 292, (b) 586.

HOLLAND RIVER CHANNEL.

Mr. LENNOX:

1. Has the Department of Railways and Canals had a survey or investigation made into the feasibility and cost of constructing a channel from the Devil's Elbow on the Holland river to a point in the neighbourhood of the Bradford Railway station in South Simcoe?

2. If not, will the department have this done at an early date, and if done, is the report favourable, and what is the estimated cost?

Mr. GRAHAM:

1. Yes.

2. The Bradford survey was begun on the west branch of the Holland river at the junction of the Newmarket canal, which point is 4·9 miles from the mouth of the river, Cook's bay, and carried up the west branch of the river to a point about three miles above the Bradford and Holland Landing road.

The canal or channel leading to the proposed basin in front of the Grand Trunk station, Bradford, would leave the west branch at the Devil's Elbow, 7 miles from Cook's bay, and the Bradford basin would be 8·2 miles long, with a bottom width of 50 feet. The proposed Bradford basin is estimated at 200 feet width, inclosed with concrete dock walls. No work is required in the 2·1 miles of river between the junction of the Newmarket canal and the Devil's Elbow. The estimated cost of the work is $59,947.

DR. THORNTON.

Mr. W. H. SHARPE:

1. Is Dr. Thornton, of Deloraine, Manitoba, in the employ of the government in any way?

2. Has he been employed by the government during the past five years? If so, how much has he drawn each year?

Hon. SYDNEY FISHER:

1 and 2. Yes, as a frontier inspector for smallpox, from March 14, 1908, to August 15, 1908. He has been paid the sum of $508.06 for his services during that period.

INTERCOLONIAL RAILWAY BOARD OF MANAGEMENT.

Mr. MACDONALD:

1. Have any additional powers been granted or conferred upon the Board of Management of the Intercolonial Railway other than those contained in the original order in council, which provided for their appointment? If so, when, in what way and what are they?

Mr. GRAHAM:

1. No.

LABOUR DEPARTMENT BUILDING.

Mr. GEO. TAYLOR:

1. Has the government rented the building situated on the northeast corner of O'Connor and Queen streets, and known as the Royal Building, lately owned by the Young Men's Christian Association? If so, for how long a term has the building been rented?

2. What annual rental has the government agreed to pay for said building, if the rental is to be paid by the superficial foot of floor space, and what is to be the rate per foot rental?

3. How many feet have been agreed upon for which rent has to be paid, and what will be the amount which the government will have to pay annually for said building?

4. Is the building now or to be occupied by the Labour Department?

Hon. WM. PUGSLEY:

1. (a) Yes. (b) 5 years, and renewable for a further term of 5 years.

2. (a) $16,095.73 per annum. (b) 68·58 cents per superficial foot.

3. (a) 23,470 superficial feet. (b) $16,-093.73 per annum.

4. The building is now occupied by the Labour Department and the Eastern Ontario Command Headquarters offices. The Insurance Branch of the Finance Department is to occupy the third floor.

LACHINE CANAL—CARPENTER SHOP.

Mr. VERVILLE:

1. What was the estimate allowed for the carpenter shop on the Lachine canal under the supervision of Denis O'Brien for 1909-1910?

2. What amount has been spent up to 1st October, 1909, outside of the fiscal year, and what amount is now left to finish the year?

3. How many men were employed as carpenters on October 1, 1909, and how many men are now employed?

4. What are the names of the men now employed as carpenters and helpers and their length of time in the service?

Mr. GRAHAM:

1. There was no special estimate for carpenter shop for 1909-10. A shed was transferred from the yard on Mill street to the north side of the dry dock and there re-erected as an extension to the new carpenter shop. The work was done out of the general appropriation for repairs.

2. Amount expended up to 1st October last, $51,202.22. Amount left to finish the year, $22,907.78.

3. Number of carpenters including assistant foreman employed on October 1, were eight. Number of carpenters including assistant foreman employed in November, are eight.

4. The carpenters and helpers now employed are:

O. Fiset,	time	of	service	12	years.

QUEBEC BRIDGE AND RAILWAY COMPANY—INTEREST.

Mr. LENNOX:

1. In the total sum of $6,424,718 paid by the government to, or for, the Quebec Bridge and Railway Company during the financial year ending 31st March, 1909, were the following items and sums included and paid, namely:—

Interest to the Bank of Montreal on various amounts advanced to the company	$889,687 81
Interest to shareholders in company	65,209 07
Bonuses to shareholders in company	26,370 00
Making a total for these items of	$981,266 88

2. What was the rate of interest paid to the bank?

3. Was the interest to be paid by the company to the bank in arrears at the time the government assumed payment of the account?

4. Did the bank claim to be entitled to be paid the sum $75,673.18 or any sum, as interest on accrued interest, and did the government pay the sum of $75,673.18, or any sum, to the bank as interest upon accrued interest, or compound interest?

5. In the interest and bonuses paid shareholders as aforesaid was there included and paid as interest and bonus the sum of $3,304.84 to Hon. S. N. Parent, chairman of the National Transcontinental Railway Commission, and the sum of $17,901 to Mr. M. P. Davis, one of the contractors for construction of said railway?

6. How was the interest paid shareholders made up, from what date and at what rate was it computed, and was it compounded? If so, how often, or at what intervals?

7. Have all the rights of the company been acquired and paid for?

Mr. FIELDING:

1. Yes.

2. 5 per cent was the rate of interest payable to the Bank of Montreal by the Que-

bec Bridge Railway Company upon advances made to the company.

3. Yes.

4. Interest on such advances fell due half yearly, and when unpaid carried interest at the same rate as the principal. The government, in taking over the undertaking, paid the Bank of Montreal the sum of $75,672.58 on this account.

5 and 6. Simple interest at 5 per cent was paid shareholders from the respective dates of payment by them on account of their stock until December 1, 1908, when the undertaking was taken over in accordance with the terms of the statutory agreement of October 19, 1903.

Hon. S. N. Parent received interest, $2,600, and a bonus of 10 per cent on $7,000 capital stock owned by him, and Mr. M. P. Davis received interest, $8,411, and a bonus of 10 per cent on $94,900 capital stock owned by him, in accordance with such agreement.

7. Yes.

COST OF VOTERS' LISTS, ETC.

Mr. BOYCE:

1. What was the total cost, by ridings, of the making up and revising of Voters' Lists in 1908, under the Dominion Election Act, respectively, for the constituencies of Thunder Bay, Rainy River, West Algoma, East Algoma, Nipissing, Muskoka and Parry Sound for the purpose of the last general election?

2. What amounts, respectively, were paid to the enumerators, to the Board of Registration, for printing and for miscellaneous disbursements in connection with the work in the ridings above mentioned?

3. Have any of the accounts been disputed? If so, which, for what reason, and what adjustment was made?

Hon. CHARLES MURPHY. The information asked for in this question cannot be conveniently compressed into the form of an answer to be given here. I would suggest, therefore, that this should be allowed to stand as a notice of motion. I may say that even in that shape I would ask the hon. member to include the correspondence, for without that the information will not be very intelligible.

Mr. SPEAKER. Stand as a notice of motion.

SEED GRAIN ADVANCES.

Mr. MONK:

1. Referring to the following entries on page K—118 of Auditor General's Report for year 1908, for seed grain advances, net expenditures to 31st December, 1908, $1,373,808.27 charged as follows:—

Dominion government	$ 508,498 34
Alberta government	151,172 44
Saskatchewan government ..	714,137 49
Total	$1,373.808 27

Have the sums thus debited and charged to the provincial governments been claimed and recovered?

2. What is the total sum refunded up to date on said seed grain advances?

Mr. FIELDING:

1. The sums charged to the provincial governments have been claimed. The province of Saskatchewan has repaid $182,628.82, and the province of Alberta, $33,257.30.

2. The total sum refunded up to date on account of the seed grain advances mentioned in the hon. gentleman's question is $348,769.59.

TRANSCONTINENTAL RAILWAY COMMISSION.

Mr. SCHAFFNER:

1. How any members compose the National Trancontinental Railway Commission and what are their names?

2. What is the salary of each?

3. What are their duties?

4. Had any member of the National Transcontinental Commission any experience in railway work previous to his appointment?

Mr. GRAHAM:

1. Hon. S. N. Parent, chairman, Charles A. Young, Colin F. McIsaac, W. S. Calvert.

2. The salary of the chairman is $8,000 a year and each of the other three commissioners, $7,000.

3. The duties of the commissioners are set forth in the National Transcontinental Railway Act, chapter 71, 1903.

4. The gentlemen named as commissioners possess the general training and experience of business or public men, and have a staff of engineers and others possessing the necessary experience and qualifications to advise the commissioners on all matters and requiring technical or other knowledge in railway works.

RURAL MAIL BOXES.

Mr. ELSON:

1. Has the government been informed that several rural mail boxes along the Proofline Road, London township, have been torn from their posts, pilfered, battered, carried some distance away and dumped in a heap?

2. If so, has the government taken any action to ascertain who the offenders are?

3. What would be the utmost punishment which could be inflicted on parties found guilty of tampering with rural mail boxes?

Sir WILFRID LAURIER (for Postmaster General):

1. Yes.

2. Yes.

3. Under Criminal Code 510 (c) five years' imprisonment.

FOREIGN CAPITAL IN CANADIAN INDUSTRIAL ENTERPRISES.

Mr. FOWKE:

1. What amount of foreign capital is known to be invested in industrial enterprises in Canada?
2. How much is American, British or other countries, respectively?
3. In what lines of industry are the investments principally, and where located, by provinces?

Mr. FISHER. The government have no information as to the origin of the capital invested in industrial enterprises, and consequently we cannot answer this question.

DREDGING PLANT FOR LAKE DESCHENES.

Mr. GEO. TAYLOR:

1. Has the government purchased this year a dredging plant for use on Lake Deschenes?
2. If so, from whom was it purchased, and at what price?
3. What work is necessary on the aforesaid lake which requires the use of such a dredge?

Mr. PUGSLEY:

1. Yes.
2. (a) G. C. Hurdman, (b) $6,500.
3. Widening and deepening of the channels leading to the wharfs at Aylmer and Britannia, removal of obstructions at Britannia wharf and removal of various shoals in the steamboat channel between Aylmer and Constant bay.

MANUFACTURE AND IMPORTATION OF CIGARETTES.

Mr. BLAIN:

1. How many cigarettes were manufactured in Canada during the past fiscal year, and how many in each province?
2. How many cigarettes were imported into Canada during the past fiscal year, and how many in each province?

Mr. TEMPLEMAN:

1. 356,189,380 cigarettes were manufactured in Canada, of which 29,477,100 were produced in the province of Ontario, and 326,712,280 in the province of Quebec.

2. There were 34,619 pounds of cigarettes imported into Canada, which, at an estimated weight of 2·8 pounds per M., would represent 12,363,928 cigarettes.

The importation by provinces was as shown below:

	Pounds.	Number, estimated at 2·8 lbs. per M.
Ontario	5,472	1,954,285
Quebec	17,282	6,172,143
Nova Scotia	4,162	1,486,428
New Brunswick	.....	.....
Manitoba	936	333,286
British Columbia	6,509	2,324,623
P. E. Island	.....	.....
Alberta	200	71,429
Saskatchewan	.....	.....
Yukon	58	20,714
Total	34,619	12,363,928

EXPENDITURES FOR IMPERIAL GOVERNMENT DURING SOUTH AFRICAN WAR.

Mr. SCHAFFNER:

1. During the South African war what sum or sums of money was sent by Great Britain to Canada to be expended by the Canadian government?
2. Had the British government any say as to how the said money was to be expended?

Mr. FISHER:

So far as the Department ot Agriculture is concerned:

1. $8,142,742.04.
2. Yes. The Department of Agriculture acted as an agent for the Imperial government, which, from time to time, asked the department what quantities of hay, oats, flour, etc., could be obtained in Canada for delivery in South Africa within a certain time and at what price. The department would reply, specifying certain quantities at a price delivered at Cape Town, South Africa. The imperial government would then authorize the department to purchase and ship the required supplies which had to conform to specifications furnished by the War Office.

Speaking on behalf of the Department of Militia and Defence, in the absence of the minister (Sir Frederick Borden):

1. The exact figures are not available, but, approximately, there was expended by the imperial government, so far as the Department of Militia and Defence is concerned, as follows: Horses, equipment, &c., $1,500,000; clothing and saddlery purchased in Canada for imperial troops, $600,000.

2. Prices were submitted to the imperial government, and nothing was contracted for without the sanction of that government.

FISH HATCHERIES BERENS RIVER AND SNAKE ISLAND.

Mr. BRADBURY:

1. What was the total cost for the erection and equipment of the fish hatchery located at Berens river?
2. What was the total cost for erection and equipment of fish hatchery at Snake island?

3. What is the total annual expenses in connection with Inspector Young's work?

4. What did the government pay for the steamboat 'Lady of the Lakes,' and what are the annual expenses in connection with the upkeep and running of the said boat?

Mr. BRODEUR:

1. $15,596.

2. $14,700.

3. Salary, $1,500; disbursements, 1908-9, $123.24.

4. $8,000. Exenses, 1908-9, $7,650.

NAVAL STATION AT ESQUIMALT, B.C.

Mr. J. D. TAYLOR:

1. Has the naval station at Esquimalt been maintained continuously from the time of the union of British Columbia with Canada until the present? If not, during what period has it not been maintained?

2. Has the influence of the Dominion government been used to secure the continual maintenance of the naval station at Esquimalt as agreed by the terms of the union?

3. Has the Dominion government made any report or representation to the government of British Columbia as to the outcome of the use of such influence? If not, why not?

Mr. BRODEUR:

1, 2 and 3. Yes, the naval station at Esquimalt has been maintained continuously, but the number of ships was reduced in March, 1905; owing to change of policy of imperial government as to naval strength it was necessary to maintain on outlying stations.

TRADE BETWEEN CANADA AND GERMANY.

Mr. LALOR:

1. What was the total value of exports from Canada to Germany during each year from 1890 to 1909, inclusive?

2. What was the total value of the imports from Germany to Canada for each year from 1890 to 1909, inclusive?

3. What was the value of hosiery imported from Germany to Canada in each year from 1890 to 1909, inclusive?

4. What was the total value of knit goods imported from Germany to Canada in each year from 1890 to 1909?

Hon. WM. PATERSON:

1. The total value of exports from Canada to Germany during each of the fiscal years from 1890 to 1909, inclusive, was as follows:

1890	$507,143
1891	532,142
1892	942,698
1893	750,461
1894	2,046,052
1895	626,976
1896	757,531
1897	1,045,432
1898	1,837,448
1899	2,219,569
1900	1,715,903
1901	2,141,552
1902	2,692,578
1903	2,097,699
1904	1,819,223
1905	1,146,654
1906	1,872,557
*1907	1,066,605
1908	2,374,607
1909	1,476,552

*Nine months.

2. The total value of imports from Germany into Canada (entered for consumption) during each of the fiscal years from 1890 to 1909, inclusive, was as follows:

1890	$3,778,993
1891	3,804,090
1892	5,583,530
1893	3,825,763
1894	5,841,542
1895	4,794,159
1896	5,931,459
1897	6,493,368
1898	5,584,014
1899	7,393,456
1900	8,383,498
1901	7,021,405
1902	10,823,169
1903	12,282,637
1904	8,175,604
1905	6,695,414
1906	6,987,314
*1907	5,474,908
1908	8,163,047
1909	6,050,365

*Nine months.

3. The value of hosiery imported from Germany into Canada for each year from 1890 to 1909, inclusive, was as follows:

1890	$19,323
1891	19,907
1892	43,898
1893	56,924
1894	75,626
1895	85,797
1896	91,929
1897	81,359
1898	79,340
1899	121,194
1900	118,408
1901	112,460
1902	153,255
1903	174,044
1904	127,661
1905	156,731
1906	224,217
*1907	191,886
1908	369,346
1909	298,986

*Nine months.

4. The imports of 'knitted goods, including knitted underwear,' from Germany into Canada during the fiscal years from 1890 to 1909, inclusive, have been as follows:

1890	$50,779
1891	32,936

1892	32,262
1893	30,285
1894	37,949
1895	36,029
1896	69,359
1897	32,635
1898	34,706
1899	38,893
1900	18,613
1901	18,119
1902	20,427
1903	24,968
1904	46,589
1905	46,440
1906	48,149
*1907	34,322
1908	54,464
1909	31,904

*Nine months.

INDIAN LANDS SOLD IN DISTRICT OF ALGOMA.

Mr. BOYCE:

1. What Indian lands, if any, in the district of Algoma, have been sold, en bloc, during the years 1906, 1907, 1908 and 1909?
2. If any have been so disposed of, under what terms and conditions were they sold, at what price, to what person or persons, and under what regulations?
3. Have the conditions with respect to the sale thereof been complied with? If not, in what respect are the purchasers in default?

Hon. FRANK OLIVER:

1. No Indian lands in the district of Algoma have been sold en bloc during the years 1906, 1907, 1908 and 1909. Any sales that have taken place during those years have been for areas provided for by the Land Regulations of the Department of Indian Affairs, not exceeding four lots or 400 acres in all, or a section of 640 acres.

2 and 3. Answered by No. 1.

GARDEN RIVER AND MISSISSAGUA INDIAN RESERVES.

Mr. BOYCE:

1. Will the Department of Indian Affairs construct, or bear any part of the cost of construction, of those portions of the Trunk Road projected and under construction from Sudbury to Sault Ste. Marie, which cross the Garden river and Mississagua Indian reserve? If not, why not?
2. What negotiations have there been with the department, and with the Indian bands controlling said reserves, respectively, for a grant of right of way through said reserves for the purposes of such road, and what the result of such negotiations?
3. What objections, if any, have been raised by the Indians, or otherwise submitted to the department, against the traversing of said reserves by the said Trunk Road?
4. What terms and conditions, if any, have been attached to any permission to traverse said reserves by said road, by whom were such terms and conditions imposed, and when?
5. Have such proposals been submitted to the government of Ontario?
6. Is the department aware that the completion of the construction of a Trunk Road, about 180 miles long, is being prevented by the inability to arrange for the necessary crossings?

Mr. OLIVER:

1. No. The construction of these roads does not come under the jurisdiction of the Dominion government.
2. An officer of the Department of Indian Affairs was sent to the reserves and obtained surrenders of right of way.
3. The Indians objected to parting with any of their land and contributing to the up-keep of the road.
4. The conditions attached to the permission by the Mississagua band were: That $100 should be made to individual Indians for any interference with their improvements, and that the Indians should not be called upon to contribute to the up-keep of the road. These conditions were imposed by the Indians when the surrender was taken and were embodied therein.

The conditions attached by the Garden River band were: That $4 per acre should be paid for the lands. The other conditions were similar to those of the Mississagua band.

5. Yes.
6. No.

SURGEON-MAJOR CHEVALIER.

Mr. MONK:

1. Has the government asked for the resignation of Dr. E. N. Chevalier, Surgeon-Major at St. John, P.Q.? If so, what is the reason for this step?
2. How long has Dr. Chevalier served in his present position?
3. Is he entitled to a pension?
4. Was he placed under arrest at the military camp at Three Rivers in 1907?
5. What is his salary, and does he perform his duties in a satisfactory manner?

Mr. FISHER (for Minister of Militia and Defence):

1. No. Major Chevalier has, however, reached the limit of age of his rank, and is being retired from the Permanent Army Medical Corps.
2. Eleven years.
3. No.
4. No.
5. (a) $4.50 per diem. (b) Yes.

EASTERN TOWNSHIPS CAVALRY BRIGADE.

Mr. WORTHINGTON:

1. At what place has the Eastern Townships Cavalry Brigade trained during each of the last five years?
2. What was the strength of the different corps forming those camps of training?

3. What was the cost during each such training, respectively, for pay, provisions and supplies, transport, hire of ground, or other local expenditures?

Mr. FISHER:

1. 1905—Laprairie.
1906—Sherbrooke.
1907—Granby.
1908—Savard Park, Quebec.
1909—Granby.

Year.	Expenditure for				
	Pay and Allowances.	Supplies.	Hire of Grounds.	Transport.	Miscellaneous.
	$ cts.	$ cts	$ cts.	$ cts.	$ cts.
1905	43,510 78	8,716 75	.....	Note *(a)*	98 74
1906	45,708 99	11,288 17	2,250 00	Note *(a)*	268 48
1907	43,013 87	10,797 62	2,521 00	6,984 17	174 92
1908	68,792 79			Note *(b)*	
1909	28,610 76	7,862 02	2,275 00	Note *(c)*	

Remarks:

(a) Transport for 1905 and 1906 would be approximately about the same as 1907, but figures cannot be given as separate accounts for these camps were not kept as at present, the expenditure being shown under the general transport expenditure for the district.

(b) In 1908 the Brigade took part in the Quebec Tercentenary and the expenditure for supplies, hire of grounds, transport, &c., is included in the general expenditure for Tercentenary.

(c) Expenditure for 1909 transport, &c., is not yet completed.

IMMIGRATION INTO EASTERN TOWNSHIPS.

Mr. WORTHINGTON:

1. What was the total immigration into the eastern townships of the province of Quebec during the last fiscal year, and from what countries did such immigrants come?

2. What are the names of the immigration agents in the eastern townships, where stationed, salaries, and dates of appointments?

Mr. OLIVER:

1. The government has no record of the number or nationality of immigrants going into a particular locality.

2. None at the present time. Mr. E. W. Brewster was employed from 1st April to 1st November, 1909, at a salary of $100 per month, and travelling expenses, his headquarters being at Compton. The government has employment agents paid by commission, whose names, dates of appointment and addresses are as follows:

H. E. Colt, June 17, 1908, Coaticooke.

A. W. Westover, March 17, 1908, Sutton Junction.

George McCracken, February 11, 1908, Danville.

C. P. Taber, February 4, 1908, Cowansville.

Alfred Millar, February 4, 1908, South Durham.

Charles Manseau, February 1, 1908, Drummondville.

KING'S REGULATIONS FOR MILITIA OF CANADA.

Mr. WORTHINGTON:

1. Is the last edition of the King's Regulations for the Militia of Canada now out of print? If so, for how long have copies not been available for issue for the department?

2. When may the issue of a new edition be expected?

3. Is it the intention of the government to amend paragraph 17 of those regulations so as to conform to the rules of procedure?

4. Have Canadian courts of inquiry been governed by the rules of procedure as respects the cross-examination of witnesses by persons whose conduct is under investigation and the production of evidence by such person, or have the court of inquiry proceeded as instructed by paragraph 77 of the King's Regulations for Canada in relation to such matters?

Mr. FISHER:

1. Yes; no copies have been available since January 28, 1908.

2. Two-thirds of the new edition is in page form, with slight corrections to be made before final print off. It is considered that the edition will be ready for issue by February 1, next.

3. It is intended to change the rule now contained in paragraph 77 of the King's Regulations and Orders for the Militia in Canada, so as to make it uniform with Rule of Procedure 124.

4. Militia Courts of Inquiry are governed by the rule laid down in paragraph 77, but it has been left to the discretion of those courts to modify the rule, and to admit such evidence as would best bring out the facts and do justice to the accused.

IMPERIAL DEFENCE CONFERENCE.

Mr. MONK:

What was the total amount expended by the government in connection with the Imperial Defence Conference, including travelling expenses and all other disbursements generally?

Mr. BRODEUR:

For Department of Marine and Fisheries, $3,581.30.

Mr. MONK. I would ask that the question remain on the Order Paper to be answered by the other department. It has only been answered by the Department of Marine and Fisheries.

Mr. SPEAKER. Stands.

NORTH ATLANTIC TRADING CO.

Mr. URIAH WILSON:

1. Has any claim been made by the North Atlantic Trading Company for balance due them by the government for work done according to their contract?

2. Has any claim been made for damages for non-fulfilment of contract?

3 If so, what is the amount of such balance, and of such damages?

Mr. OLIVER:

1. No, except as stated in answer to No. 2.

2. Yes.

3. Damages are claimed to the extent of $71,275.

Mr. URIAH WILSON:

1. Has the North Atlantic Trading Company asked for a fiat in order that they may bring suit against the government for damages or other claims?

2. If so, has such fiat been granted?

Mr. OLIVER:

1. Yes.

2. Yes.

PESTS TO FRUITS AND VEGETABLES.

Mr. ARMSTRONG:

What provinces of the Dominion are enforcing laws dealing with the eradication of pests affecting fruits and vegetables?

Mr. FISHER:

Ontario, Nova Scotia and British Columbia.

MR. WENCESLAS LEBEL.

Mr. MONK:

1. Is Wenceslas LeBel, farmer, of Kamouraska, province of Quebec, employed by the government as preventive officer or acting preventive officer of customs?

2. If so, when was he named, and what is his salary?

3. Is the said Wencesles LeBel also employed by the provincial government of Quebec as agricultural lecturer, and are both employments compatible?

4. Was the said LeBel actively engaged in the county of Charlevoix and elsewhere during the last federal election in political work?

5. Did the said Wenceslas LeBel address a public meeting at Murray Bay in the county of Charlevoix, during the last federal elec-

tions, in the presence of the Right Honourable the Prime Minister?

6. Did the same thing occur at L'Islet, province of Quebec, during the same election?

7. Has the said LeBel applied for an increase of salary? If so, with what result?

8. How many written reports has said LeBel sent in since his appointment?

9. Has he made any seizures? If so, how many?

Mr. PATERSON:

1. Wenceslas LeBel is employed as an acting preventive officer of customs.

2. (a) 31st May, 1898, (b) $50 a month.

3. The department is not aware that Mr. LeBel is also employed by the provincial government of Quebec, as agricultural lecturer.

4. Not that the department is aware of.

5. Not that the department is aware of.

6 Not that the department is aware of.

7. No application on file in the department for an increase of salary. Customs salary is the same as when first employed.

8. 109.

9. Six seizures have been made by this officer.

MR. LUC LIZOTTE.

Mr. MONK:

1. Has Luc Lizotte, of St. Pacôme, province of Quebec, been appointed or nominated preventive or acting or temporary preventive officer of customs? If so, when?

2. What is his salary, and how much has he drawn to date on account of salary or expenses?

Mr. PATERSON:

1. No.

2. Answered by No. 1.

POST OFFICE ACCOMMODATION AT LETHBRIDGE.

Mr. MAGRATH:

1. Has the Post Office Department made any demand on, or representation to the Public Works Department, for proper post office accommodation in the city of Lethbridge, Alberta?

2. If so, when made and the nature of same?

3. What action, if any, has been taken by the government to meet the requirements of the people of Lethbridge in this matter?

Mr. PUGSLEY:

1, 2 and 3. A building was erected in 1893-94, for post office, customs and court house. The post office was fitted up and completed, but objections were raised as to location and the post office was never moved into the building, the post office quarters being occupied by customs and inland revenue. Subsequently, in 1902, upon representations made by the Post Office Department, the postmaster at Lethbridge was allowed to use a portion of the fittings in a rented post office building.

CARGO INSPECTION.

Mr. BELAND:

1. How many inspectors of cargoes of perishable commodities, especially cargoes of butter and cheese, are employed by the Canadian government?

2. At what ports, as well in Canada as in foreign ones, do they perform their duties?

3. In what do these duties chiefly consist?

4. Have the results obtained been determined? If so, are they of such nature as justify the employment of such inspectors?

Mr. FISHER:

1. Eleven.

2. Montreal, and Halifax in Canada, Liverpool, Manchester, London, Bristol and Glasgow in Great Britain.

3. Montreal.—Six cargo inspectors are employed at this port to watch the handling of perishable freight as it is unloaded from the cars and loaded into the steamships, to test the temperature of butter before it is placed in the cold storage chambers in the ships, to report the condition of the refrigerator chambers before loading is commenced and the ventilation of the holds in which perishable cargo is stowed and to place thermographs (self-recording thermometers) in refrigerator and cooled air chambers and in the holds in which perishable freight is carried. Particular attention is also paid to the deliveries of cheese and butter by river boats at Montreal.

Halifax.—During the winter months an inspector is employed at this port to look after the loading of apples and other perishable freight and to install thermographs in the fruit carrying steamers.

Ports in Great Britain.—Five cargo inspectors are employed to report the condition in which Canadian cheese, butter, eggs, fruit, &c., are landed from the steamers and the manner in which these products are handled while being unloaded and to advise the steamship officials of any rough handling and to report same to the department as well. They also retest the temperature of the specially marked packages of butter which have been tested by the Montreal inspectors, remove the thermograph records and send them promptly to Ottawa and interview importers on matters affecting the trade in farm and food products.

4. Since the cargo inspection work was undertaken leading provision firms in Montreal, Liverpool, London and Glasgow have written the department expressing their appreciation of the beneficial results that have followed the appointment of inspectors at these ports.

During recent years the conditions under which Canadian produce is handled at the ports in Great Britain have been greatly improved. Previously there was considerable delay in the removal of shipments from the docks, but the inspectors have

succeeded in preventing this to a great extent and now as a rule Canadian shipments are handled with despatch.

The thermographs which are placed by the cargo inspectors in steamships at the ports of Montreal and Halifax have been a very important factor in improving the efficiency of the cold storage transportation, and have also been the means of bringing about more thorough systems of ventilation in the ordinary holds of the steamers.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all correspondence between the following legal firms, Rothwell & Johnson, Rothwell, Johnson & Bergeman, and Rothwell, Johnson & Stubbs, on the one side, and the government or the Transcontinental Railway Commissioners, on the other side, as to the instructions to the solicitors for legal services rendered in passing titles of property acquired by the government, and in respect of the bill of cost and charges of the said several firms; and all papers, documents, letters, telegrams and correspondence having any reference to the items of charges of said firms appearing on page W—370 of the Auditor General's Report of 1909, amounting in the whole to $1,376.60.—Mr. Meighen.

For a copy of all instructions sent to the Indian agent at Selkirk, in connection with St. Peter's Indians, pledging or disposing of their holdings, secured through the surrender of their reserve; a statement showing all those entitled to receive patents for lands in connection with the surrender of the reserve, the applications made by those so entitled for their patents, and receipts signed for the patents by those so entitled on delivery of the patent.—Mr. Bradbury.

For a return showing the number of lighthouses in British Columbia, the salaries of the lightkeepers at the end of the financial year 1907-1908; what the salaries are to-day; why some salaries have been reduced and when such reduction took place.—Mr. Ralph Smith by Mr. Turriff.

For a copy of all correspondence, papers and documents connected with and relating to the matter referred to in the letter of the Auditor General to the Secretary of the National Transcontinental Railway Commission of the 18th of August, 1909, in which the Auditor General points out that 64,192 cubic yards of excavation classified at an average price of 83·06 cents, were subsequently reclassified at $1.10¼ per cubic yard, thereby increasing the cost by the sum of $17,453.80, and asking for an explanation.—Mr. Lennox.

For a copy of all correspondence, had between the Minister of Railways and the Transcontinental Railway Commission, relating to the sub-letting of contracts for the construction of the Transcontinental Railway in New Brunswick; and the failure of sub-contractors to make payment for supplies and material furnished by farmers, merchants and others for use in said work.—Mr. Crocket.

For a copy of all reports and correspondence in connection with section 29, township 9, range 22, west of the 4th meridian, as well as applications for railway right of way and station grounds within such land.—Mr. Magrath.

For a copy of all orders in council relating to the North Atlantic Trading Company, and all correspondence between the North Atlantic Trading Company and the government or any member thereof, since November 1, 1908, and up to 20th November, 1909.—Mr. U. Wilson.

MAINTENANCE OF WRECKING PLANT.

Mr. GEO. TAYLOR—by Mr. Borden—moved:

For a copy of all correspondence, reports, advertisements, tenders, contracts and other papers and documents relative to the maintenance of a wrecking plant on the Pacific or Atlantic coasts or in the River or Gulf of St. Lawrence.

Mr. BRODEUR. The papers have already been brought down. I suppose it will cover only papers which have not been brought down?

Mr. R. L. BORDEN. Any subsequent papers.

Mr. BRODEUR. I would suggest the words 'not already brought down' be added to the motion.

Motion as amended agreed to.

MANITOBA BOUNDARIES.

Mr. ROCHE moved:

For a copy of all letters, correspondence, papers, bills and memorials passing between the government of the province of Manitoba and the Dominion government since 1st January, 1907.

Sir WILFRID LAURIER. Does my hon. friend allude to the correspondence of the boundary?

Mr. ROCHE. Yes.

Motion agreed to.

Mr. A. B. WARBURTON (Queens, Prince Edward Island) moved:

For a copy of all memorials, reports, correspondence and documents in the possession of the government, relating to the reduction of the representation, in the House of Commons, of the several provinces of Ontario, Nova Scotia, New Brunswick and Prince Edward Island, and of all correspondence with the governments of these provinces with regard to the restoration to the said provinces of such representation as they respectively had at the time of their becoming provinces of this Dominion.

He said: I would ask permission of the House to amend the resolution by striking out the word 'Ontario' because that province does not quite come within the scope of the resolution.

Resolution amended.

Mr. WARBURTON. In discussing this question it is hardly necessary that I should point out that it is of the utmost importance to the three maritime provinces. I have bracketed them together in connection with my resolution because they have all suffered in the same way, though not to the same extent, and they have suffered for the same reasons. Prince Edward Island more than the other two, because she has only the fisheries and agriculture as her natural resources, while Nova Scotia and New Brunswick have minerals, lumber, fisheries, and agriculture to depend upon; they are the eastern gateway of Canada and attract to their ports the trade of Canada, particularly the winter trade, and hence it is that they do not feel to the same extent perhaps as Prince Edward Island the decrease in their representation. In connection with this important subject I shall give the House some statistics which I hope may be found interesting. In 1867, when the four provinces of Ontario, Quebec, Nova Scotia and New Brunswick agreed to form the Dominion of Canada, Ontario was allowed 82 members in the federal parliament, Nova Scotia 19, New Brunswick 15, and Quebec the unit of 65. In 1873 Prince Edward Island came into confederation under the census of 1871 and according to the census of that year the population of the provinces was as follows: Quebec, 1,191,516; Nova Scotia, 387,800; New Brunswick, 285,594; Ontario, 1,620,851; Prince Edward Island, 94,021.

The representation of Quebec being fixed at 65 members and the unit of representation being one-sixty-fifth of the population of Quebec, that unit under the census of 1871 was 18,331, which gave Nova Scotia an increase of two members making 21 members and 2,849 of a population over, it gave New Brunswick 15 units and 10,629 of a population over, which being over one-half the unit, allowed New Brunswick to have a representation of 16 members; it gave Ontario 88 units with 7,723 of a population over or less than one-half the unit. These 88 members represented an increase of 6 members on the previous representation. It would have given Prince Edward Island 5 units with 2,366 or one-eighth of the unit of population over, but Prince Edward Island was given six representatives at that time. Later on I shall go into the question of why that was done. The decade between 1871 and 1881 saw a large increase in the population of the maritime provinces and of Ontario. The times were prosperous down there and the population increased largely so that according to the census of 1881, Quebec had a population of 1,359,027, or a gain of 160,000; Nova Scotia had a population of 440,572, a gain of over 50,000, New Brunswick had a population of 321,233, a gain of 35,000; Ontario had a population of 1,926,922, a gain of over 300,000, and Prince Edward Island had a population of 108,891, a gain of nearly 15,000. It will be seen that all of the provinces during that decade from 1871 to 1881 made substantial and respectable gains, notably the province of Ontario, notwithstanding that during that decade there was severe depression throughout Canada. Then in the census of 1881 the unit of representation was increased to 20,908 or 2,500 more than in 1871, and this gave the four provinces other than Quebec the following representation in the House of Commons: Nova Scotia, 21 members, and 1,504 of a population over; New Brunswick, 15 members and 7,613 of a population over, which being less than half the unit New Brunswick lost one of her representatives; Ontario 92 members, with 3,386 of a population over, giving her an increase of four members on the previous parliament, and Prince Edward Island five members and 4,351 of a population over, which was only about one-fifth of the unit, and yet the island retained her six members. Again I ask why was that?

The decade between 1881 and 1891 showed a reduced increase in Quebec and practically no increase at all in the maritime provinces. It was a period of stagnation so far as the population of these provinces was concerned, and although there was a growth in Ontario and Quebec it was not of very great extent. According to the census of 1891, Quebec had a population of 1,488,535; Nova Scotia 450,396, a gain of 10,000; New Brunswick 321,263, practically the same population as before; Ontario 2,114,321, and Prince Edward Island 109,078, or an infinitesimal gain. I shall, before I conclude, discuss what were the causes of this falling off, because I agree with the remark of the Finance Minister, addressed to the House a few days ago, that if you find that something happens you will likely see that there is a cause, and if you try you can discover what that cause is. I shall endeavour to present to the House some of the causes which led to this deplorable result. Now, the census of 1891 gave a unit of 22,900, or 2,000 more than the unit of 1881. The four provinces other than Quebec were under that census represented as follows: Nova Scotia, 19 members, and 15,296 of a population over, which being greater than half the unit allowed her 20 members or one less than she had on the previous census; New Brunswick had 14 members and 663 of a population over, giving her 14 representatives, or another loss of one member, and bringing her representation down to one less than when she entered confederation; Ontario got 92 members and 7,521 of a population over, leaving her representation the same as it was under the previous census; Prince Edward Island had 4 members and 17,478 of a population

over, or more than one-half of the unit, reducing her representation for the first time to five. The question arises: if the representation of Prince Edward Island remained at six members under the census of 1871 and 1881, upon what grounds was that rule departed from and her representation reduced in 1891? In the decade between 1891 and 1901, Ontario had a reduced increase of population, Quebec had a somewhat larger increase than before. Nova Scotia and New Brunswick a small increase of 9,000 and 10,000 respectively, and Prince Edward Island had a loss in her population of nearly 6,000. The population according to the census of 1901 was as follows: Quebec, 1,648,898; Nova Scotia, 459,574; New Brunswick, 331,120; Ontario, 2,182,247, and Prince Edward Island, 103,259. This census gave a unit of 25,367 or nearly 2,500 greater than the unit in 1891, and it gave a representation to the four provinces as follows: Nova Scotia, 18 members and 2,964 of a population over, or one-tenth of a unit, thus reducing her representation by the loss of one member below what it was in 1867 when she entered confederation; New Brunswick had a representation of 13 members, a loss of one on the preceding census, or 2 members less than when she entered confederation; Ontario had 86 members, reducing her representation by 4 less than she had under the previous census but still leaving her with a representation of 4 members greater than she had at confederation; Prince Edward Island had 4 units and 1,791 over, again reducing her representation by one, and making it 4. As there were 1,791 over, why were not five retained, as were the six in 1871 and 1881? Why was not the same rule applied to the census of 1901 as to the census of 1871 and 1881?

I must now, because it is essential to what I wish to present to this House, go back to the time when we entered confederation. As you are aware, Prince Edward Island did not become a part of confederation when the other four provinces entered, but remained a separate colony for six years, entering confederation on the first of July, 1873. In Prince Edward Island, as elsewhere, confederation was a very much debated question, causing much friction between two very strong and very honest parties holding diametrically opposite views and enforcing those views to the best of their ability. Two delegations were sent to Ottawa to take up the question of the terms upon which the province would enter confederation. At that time the province of Quebec was not progressing as it has since progressed. The delegates from Prince Edward Island were instructed to insist that Prince Edward Island should have six representatives, although according to the census returns, the unit of representation would entitle it only to five. The Dominion government of that day took the ground that the smaller provinces were entitled to special consideration, and they allowed Prince Edward Island six members. Had that number not been allowed, it would have been absolutely impossible to carry confederation. Any member of the legislature who would vote for confederation without six members would not have seen the inside of the legislature again after the following election. On the return of the delegates from Ottawa, the people of the province were told that six representatives were assured for all time to come. Unfortunately, of the delegates who attended that conference two were not lawyers, and the third, who was, does not seem to have given very careful attention to the way in which the agreement arrived at was reduced to writing. Instead of doing as British Columbia did, providing that in future the representations should be 'increased' from time to time, they agreed that it should be 'readjusted,' a very different thing, and through the unfortunate use of that word we have since lost two representatives.

Now, I have placed as briefly as I can the salient facts bearing on this question before you. The men from Prince Edward Island who negotiated the terms of union have all passed away, and those who negotiated on behalf of the Dominion are all gone, with one possible exception—I am not sure whether Sir Charles Tupper was one of the negotiators or not, but I think not. Now, we cannot dream that such men as Sir John Macdonald and Sir Leonard Tilley, deliberately intended to cast dust in the eyes of the people of Prince Edward Island. We entertain too high a respect for their reputation to think anything of the kind, and the proceedings after the subsequent census went to show that not only those gentlemen but the parliament of that day took the view that the bargain made with Prince Edward Island was intended really to give her six members. Otherwise, why should they have given more members in 1871 than the island was entitled to according to the unit of representation? If they had done that in order to get Prince Edward Island into confederation, intending to deprive her of that representation later, it would have been rather a shabby trick which I would not like to accuse those gentlemen of having been guilty of. When the census of 1881 came round, Prince Edward Island, according to her population, was entitled to only five representatives, with a few hundreds, much less than half a unit, over; and yet the government and the parliament of that day, while changing the representation in the other provinces according to that unit, allowed Prince Edward Island to retain the six members she came in with. It seems to me that this is an exceedingly

strong proof, if proof were required, that by the terms of union between Prince Edward Island and Canada it was intended that Prince Edward Island should have six representatives for all time to come. It is not conceivable that these hon. gentlemen, who represented the Dominion government at the time, some of the most eminent men Canada has produced, should have deliberately planned to treat Prince Edward Island to a desert of Dead Sea apples after they had taken her seat at the Dominion Board; and yet that would fittingly describe their action if it was intended, after the negotiations had taken place, that Prince Edward Island should lose any representation after she came in. It was, I may say, a difficult matter to carry confederation in Prince Edward Island.

I may say further, while this matter was being discussed, the then leader of the provincial government—the late Hon. J. C. Pope, afterwards Minister of Marine and Fisheries in the government of Sir John Macdonald—pointed out that the population of the province of Quebec was not increasing; and in order to impress upon his people the desirability of accepting the terms which he had negotiated, he said that they would eventually have more than six members in the Federal parliament. When the matter was brought up in the Prince Edward Island House of Assembly in those days, it was proposed that the three counties in the island—Queens, Kings and Prince—would each elect two members, although Queens had much the larger population, if not quite the double that of Kings, and a very much larger population than Prince. It was urged by members of Queens county—and Mr. Pope himself was one of them—that Queens was entitled by population to more than two members, but Mr. Pope said it was better to stick to county boundaries and give to the other counties two representatives as well as to Queens, although Queens had much the larger population. I find in the Prince Edward Island Parliamentary Reports of 1873, page 193, the following extract from the Terms of Union with Canada, quoted by Mr. Pope, section 12:

That the population of Prince Edward Island, having been increased by 15,000 or upwards since the year 1861, the island shall be represented in the House of Commons of Canada by six members. The representation to be readjusted from time to time under the provisions of the British North America Act, 1867.

That is an extract from the terms of union as brought down by him. When he moved it, an amendment was proposed to give Queens county more than two representatives, which was really an attempt on the part of the opposition of that day to burk the arrangements made and keep out of confederation. Mr. Pope said,and I have no doubt he was sincere:

In whatever way this matter was viewed, there were serious difficulties to contend with. Before long an additional member of the House of Commons will be allowed to this island, as the representation is based on that of the province of Quebec, from which thousands of people are emigrating every year to Manitoba, where land is abundant and cheap. The population of Quebec will increase at a slower rate than that of the other provinces, and the consequence will be that the latter will, the sooner, receive an increase of representation, it will upset the arrangement, whereas by taking the present county divisions as electoral districts, the additional member could be given to Queens county.

Again at page 210, he said:

As we shall be entitled to an additional member whenever the population reaches the required number, a rearrangement of the whole plan will be required if the amendment were carried out.

Unfortunately, in 1873 there were no 'Hansard' reports of the debates in this House. We have in the library simply a scrap book containing the reports which appeared in two of the Ottawa papers. Only matters that struck the newspaper men as very important were reported at any length, and this matter was not evidently in that category because the only record I find is that the resolutions were introduced and after some discussion agreed to. There is nothing therefore in the debates, as then reported, which can give us any assistance whatever.

Passing from that phase of the question, I have gone over the statistics bearing upon this subject. When the number of members in 1871 was fixed at six, I asked why that was done. When the same thing was repeated in 1881, I asked the same question.

Who is willing to answer it? Who can answer it?

Another very important question arises and that is why the maritime provinces have fallen behind. Actually Prince Edward Island has more population by nearly 10,000 than in 1873 but it has less than in 1891. Why have we lost population? The growth of the province of Quebec of course is the simple answer, but a good many more questions arise, and one is why has the province of Quebec increased in population? No one can surpass me in the desire to see Montreal greatly expand and to see the River St. Lawrence becoming more and more the great route of commerce. The great city of Montreal is the furthest inland seaport in the world, I believe. It is essential to the trade of the whole of western Canada; and although not of so much consequence to the trade and commerce of the maritime provinces, it is of very considerable importance to them also. But it is an absolute necessity to

the trade and commerce, not only of Quebec itself, but of Ontario and the other western provinces as well. It is the summer gate of commerce from the west and has to be improved. I do not know what the population of Montreal is at present, but I think it will be found at the next census to touch the half million mark. And I judge by the progress of the past few years, the time is not far distant when it will touch a million, and I hope that time will come soon. But in order to bring about the growth and expansion and consequent increase of population in the province of Quebec and particularly in the city of Montreal, this parliament had to spend, and rightly spend, enormous sums in order to create the channels and arteries by which trade and commerce would come. Already in improving the harbour of Montreal, some $12,000,000 have been spent, and it is in contemplation in the course of a few years to spend $18,000,000 more in order to make its harbour facilities equal to those of any port in the world. And it is perfectly right and proper that that should be done, but it means a lot of money. When we came into confederation in 1873, the St. Lawrence was a great river but you could not get ships drawing such draft of water up that river as now go up. You had to dredge it from end to end and make it so that large ships could get up in order that the trade and commerce, which naturally belongs to Canada, should find its way through this great Canadian port, and not through ports foreign to Canada. The consequence is we have spent enormously to dredge and improve that great waterway. You are going to make it practically a great canal. You have it down to something like 30 feet but that is not enough. The hon. Minister of Marine will have to undertake more work. Thirty feet is nothing extraordinary now. He will have to go on and deepen it to 40 feet, and that it should be done in the interests of Canada as a whole.

It is necessary, in order to bind the parts of Canada more closely together and to keep in our own channels the commerce which belongs to us. Therefore, so far as I am concerned, as one member of this House, although it is no particular advantage to me or my constituency, I recognize the need of that work and am just as strong in support of it as any gentleman living in Montreal itself. It is true this process of improving transportation develops other parts of the country than the province of Quebec, but I confine myself to a consideration of the effect upon Quebec because that is the pivotal province. Enormous sums have been spent in other ways which must benefit the city of Montreal and Quebec generally. Consider the effect of one of our earliest works, the Intercolonial. That railway was built, of course, as a part of the compact of confederation, to induce the four provinces to come together, it having been made, I believe, a sine qua non that this railway should be built to connect the maritime provinces with old Canada. It is true that this railway greatly benefits the maritime provinces. But it has been an enormous benefit also to the province of Quebec and the provinces further west. Long before other railways were in existence it afforded a means of carrying the manufactures of the west to the maritime provinces, and the manufacturers of Canada generally admit that the markets of the maritime provinces are among the best they have. It still does that. Of course, this road was not built solely for the benefit of Quebec or of the other provinces. What I desire to point out is not so much what the object is as what the result has been. The effect of these improvements of which I have spoken is to greatly increase the opportunities of employment in the great city of Montreal and so to increase greatly the population of that city and other parts of the province of Quebec. Montreal contains thousands and probably hundreds of thousands of people who but for these improvements in transportation would never have gone to help in building up the prosperity and the population of that great city. And now we have the great railways coming down from the west, the Canadian Pacific railway and the new Transcontinental. There is no question but that the Transcontinental will open up vast territories in the north of Quebec as well as Ontario and will gradually draw a large population to that region, with the result that the unit of representation will rise. Of course, we are all glad of these prospective additions to our population. I do not believe in a sectional view of these matters, for a benefit to one province is a benefit to the whole of Canada. Still, the result is that, through these enormous expenditures, expenditures made not only by the present government but by the several governments that preceded it, and made in pursuit of a well-defined and laudable policy carried out by all governments, which, though they may have differed in details and in questions of degree have always favoured the carrying out of this policy of development—population in the pivotal provinces has been increased and the unit of representation raised. Nor is the work finished, it goes on and will go on. There is the territory of Ungava, which is not now a part of the province of Quebec, but probably will be. This will mean a further addition to the population of Quebec. It is true there are few people in Ungava now, but we know enough of the resources of Ungava to lead us to believe that many will be attracted to that territory, and, in speaking of this matter I think of the future as well as the present. This will further raise the unit

of representation, making our chances o regaining our lost representation very poo indeed. The further improvement of ou canals, and especially the enlargement o the Welland and other canals, will add t the result that we have already seen. So it is a rather forlorn prospect that is pre sented to us, with this great province o Quebec growing by leaps and bounds with the result that our representation is going down. Even the regular public expenditure is having the effect of promoting the opening up of the west and developing trade which ultimately benefits the city of Montreal. As you fill up the west you bring nearer the time when hundreds of millions of dollars worth of grain, besides other products of enormous value, will be annually produced for export, thus giving still more employment to the people of that province in which is our greatest port and which is the unit of representation, and so increasing the population of the province of Quebec. This great west, on the other, takes people from us. Many of those who were constituents of members from Prince Edward Island are now in the west. If the Prince Edward Island voters in that country were to throw their influence all on one side they would easily influence an election. I believe that in half of the constituencies west of the Great Lakes electors from Prince Edward Island hold the balance of electoral power. There are hundreds of teachers alone, now engaged in training the children of the west, who came from Prince Edward Island. All these, I am sure, have a warm spot in their hearts for their old sea-girt home. And if my words should reach them, as I hope they will reach some of them, I am sure that they will sympathize with me in desiring to see the representation of Prince Edward Island restored to that which she originally had.

The objection raised to the plea of Prince Edward Island in this matter is the old cry 'representation by population.' That is a most excellent general rule. But, like all general rules, it has its exceptions, and the exception proves the rule. When British Columbia entered confederation an exception was made. They drafted their terms better than we did, inserting the word 'increased' when we said 'readjusted.' They came into the Union with six representatives in this House, and at that time, I think, they had scarcely white population enough to make up the number of the unit of representation. They have continued to grow. But what I point out is that the principle was recognized that special conditions should be recognized in this matter—the principle of representation by population was not carried out in its entirety. Nor do we carry it out with uniformity to-day. The unit of population is 25,000 odd, but take the case of the city of Montreal. I do not know what is the population of its several constituencies, but I think I am safe in saying that none of them is lower than 40,000, which would be 15,000 more than the unit. I am not sure, Mr. Speaker, but that your own constituency has a population a good deal greater than the unit. The same applies to the city of Toronto and other portions of Canada. The reason for these variations is that the local conditions are taken into consideration. It is obvious that when you deal with a city population, concentrated on a few square miles, those people can make their public wants felt much more readily than can a scattered population such as that of your constituency or mine. The question of remoteness also is taken into consideration, and I have no doubt that it was this element that caused the representatives of the Dominion government, away back in 1873, to concede to British Columbia a representation much greater than the application of the principle of representation by population would have given. The system of representation by population has been ignored in the United States in relation to the Senate. It was applied in the case of the House of representatives, but the framers of the Constitution, desiring to protect the smaller and weaker states, provided that each state should have the same representation in the Senate regardless of population. I do not know that the Senate of the United States has quite fulfilled the expectations of those who created it, but that is neither here nor there: the idea was to give each state equal representation in the Senate in order to protect the smaller.

It is not necessary for me to go at greater length into this question. I think that I have said enough to bring the matter fairly before the House; and I think the subject is of sufficient importance to justify me in so doing. I have not the acquaintance with the conditions prevailing in Nova Scotia and New Brunswick when they entered confederation that I have of those that prevailed and prevail in my own province. But I have no doubt that hon. members from those provinces who have the facts at their fingers' ends will be quite prepared to advance arguments in support of the restoration of their former representation. With these remarks, Mr. Speaker, and thanking the members of the House for their courtesy in listening to me on a subject which may appear to some of them trite, I beg to move the resolution standing in my name.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

Hon. W. S. FIELDING (Minister of Finance). The motion to which my hon. friend

from Queens, Prince Edward Island (Mr. Warburton) has addressed himself this afternoon is, of course, one to which no objection can be taken. It is a very proper motion, and we will be happy to bring down any papers that may be in our possession in relation to the subject. I do not hesitate to say that personally I sympathize very warmly with my hon. friend in the good purpose he has in view; and if, by any stroke of my pen, I could restore to Prince Edward Island her lost representation, I can tell my hon. friend I should be exceedingly happy to do so. Possibly I see more clearly than he does the difficulties which arise in the way. I have no doubt that if, at the time the terms of union with Prince Edward Island were under consideration, any representatives of the Island had asked for a clause to be inserted to the effect that the representation of the Island should never be less than the number with which it started, I do not anticipate that anybody would have seriously objected to such a provision. We have such a provision, not exactly in so many words, but there is a like provision in relation to British Columbia, and if it should so happen that by reason of that provision British Columbia should at any time have one or two members more than she would otherwise have, I do not think any of the other provinces would regard it as a very great grievance. And I have no doubt that if, at the proper time, somebody on behalf of Prince Edward Island had made the request, it is altogether probable that no serious objection would have been taken. Still we have to deal with the matter as it stands. The Confederation Act is a compact between various provinces; and even though we should feel, or the people of any one province should feel, that the terms of union were not working out as well as we might like, we have to recognize the fact that we cannot expect those terms to be changed by any mere will of our own; we have to consider what would be the attitude of the other provinces as well. Now, I think it would be a gracious thing if the great provinces of Quebec and Ontario, not to mention any of the others, should see the matter just as my hon. friend sees it, and say, 'Yes, we will readily agree to such a change as would preserve the representation of Prince Edward Island, and perhaps of several other provinces as well'—that would, of course, be a very happy solution. But I have to return to the point I first made, that this is a matter of compact between the several provinces. We know our friends in the province of Ontario have always attached great importance to what they used to term rep. by pop.—representation by population; and it is well to understand the fact that if that principle had not been recognized the union could never have been brought about. I fancy that the good people of Ontario may attach enough importance to that principle to-day to object to a change of the constitution, or to a departure from that principle, which would be involved in the proposition of my hon. friend. If, as a result of the discussion which my hon. friend gave the subject to-day, and of other discussions which he may perhaps congratulate himself on opening up, we should find that the change which he desires could be brought about by the good will of the other provinces, no one would be more pleased than myself. But I know the difficulties in the way; therefore I should not encourage my hon. friend from Prince Edward Island to expect very quickly the result which he desires.

Mr. FIELDING.

Motion agreed to.

LIBEL SUITS INSTITUTED BY W. T. R. PRESTON.

Mr. McKENZIE. In the absence of the hon. member (Mr. Macdonald) in whose name this motion stands, I beg to move:

For a copy of judgments or reports of judgments in connection with any libel suits instituted by W. T. R. Preston, while commercial agent in Japan, and all other papers or documents in connection with said suits in the possession of the departments.

Hon. W. S. FIELDING (Minister of Finance). I do not know whether we have any such papers. There will be objection to their being brought down if they are in the possession of the government.

Motion agreed to.

AMENDMENT TO SEED CONTROL ACT.

Order called for second reading of Bill (No. 6) to amend the Seed Control Act.

Mr. FISHER. This afternoon I wished to move that this item be struck off. I intend to proceed by resolution.

Mr. SPROULE. The hon. minister will admit now that the member for East Grey (Mr. Sproule) was not wrong?

Mr. FISHER. The Speaker ruled that he was wrong. I move now that this order be discharged.

Motion agreed to.

INSPECTION ACT.

Mr. FISHER moved that Bill (No. 40) to amend the Inspection and Sales Act be struck off the Order Paper.

Motion agreed to.

MANITOBA GRAIN ACT AMENDMENT.

Mr. FISHER moved that the Speaker do now leave the Chair for the House to go

into committee to consider the following proposed resolution:

Resolved, that it is expedient to amend the Manitoba Grain Act, chapter 83 of the Revised Statutes, 1906, as follows:—

By repealing subsection 5 of section 17, subsection 5 of section 47, and subsection 2 of section 109, and amending section 104, by substituting for the words 'license fee of two dollars' the words 'required license fee.'

By authorizing the Governor in Council to fix the respective fees to be paid for licenses under the Act, and by providing fines for contravention of the said Act.

Motion agreed to, and the House went into committee on the resolution.

Mr. SPROULE. What are these subsections that are repealed?

Mr. FISHER. By substituting 'required license fee' for 'license fee of $2' it is proposed to change the system under which the fee is collected. At the present time all elevators have to pay the same license fee of $2, but there is a decided difference in the amount of business done in different elevators, and, therefore, they wish to measure the license by the amount of business done. The words have to be changed in the Act to 'required license fee.'

Mr. SPROULE. That seems to have reference to amending section 109, but the minister has not told us what he proposes to repeal.

Mr. FISHER. These words occur in different places in the Act, and the sections mentioned in the resolution are the sections in which they occur; therefore, they all require to be amended.

Mr. R. L. BORDEN. What is the idea of the minister as to the fee that should be exacted?

Mr. FISHER. I could not give an exact statement as to the amount, but it will vary according to the business done in the different elevators. Some of the large elevators will have to pay more than $2. I do not think it is intended that any elevator shall have its license for less than $2.

Mr. SPROULE. At the present time the Governor in Council may impose fines. Have you any knowledge of the fines that are contemplated in the Act? This appears to be a new authority.

Mr. FISHER. That section changes the form of the proceedings. At present the proceedings under the Act are in the form of an indictment, whereas, it is desired that these proceedings be taken under the Summary Convictions Act, and that changes in the Act are required for that purpose. I have no memorandum from the Department of Trade and Commerce as to how great the fines may be. These fines are imposed by regulation.

Mr. SPROULE. Were they heretofore imposed by the statute itself? Does it propose to change that now and give power to the Governor in Council to impose fines by regulation?

Mr. R. L. BORDEN. It means that you are providing for fines by the Bill?

Mr. FISHER. Yes, I have the Bill here:

Any person required by this section to furnish such statement or declaration, and failing to do so within three days after receipt of a written demand to him therefor from the commissioner, shall be liable upon summary conviction, to a fine of twenty-five dollars for each day thereafter during which he shall fail to furnish such statement or declaration, and the minister shall have power to cancel his license.

Licenses issued under this Act shall be revocable by the commissioner upon a summary proceeding before the commissioner upon complaint of any person, in writing, under oath setting forth the particular violation of the law, and upon satisfactory proof in that behalf to be taken in such manner as is directed by the commissioner; provided that such revocation shall not take effect until the minister has given his sanction thereto.

I do not see anything defining any other exact amount, and I do not find anything in the Bill prescribing any other fines than the sections which I have just read. I think that must be the one that is referred to in the resolution.

Mr. STAPLES. I would like to ask the minister on what representation he is making these amendments. Has there been a petition presented, or has a delegation waited upon the minister to point out defects in the Act, or where the Act could be strengthened in any way? This is the first intimation I have had that the Act was going to be amended.

Mr. FISHER. As far as I know these amendments originated in the department to facilitate the working of the Act. I am not aware that they have not been asked for but I have no officer of the department with me to-night and I could not positively answer that question. Of course, this is merely the resolution upon which the Bill is founded.

Mr. STAPLES. There certainly must have been some communication from the officials representing the government of Manitoba or this amendment would not be advanced by the minister. I would like to know what representations have been made.

Mr. FISHER. I have no information about any representations. If the hon. gentleman considers it necessary, before proceeding with the Bill itself, to have that information I would have to ask the committee to rise and report progress.

Mr. STAPLES. I think it would be well to have all the information which we can have before any such amendment takes place. I rather agree with the minister that it would be well to ask the committee to rise and report progress and let us get some further information.

Mr. FISHER. All the information will be available when the Bill itself comes up for consideration. I think it would be well perhaps to let the resolution go through.

Mr. STAPLES. I have no objection providing this resolution does not commit us to any particular amendment. I fancy that if this resolution is allowed to pass the argument will be put forward, as it has been put forward on other occasions, that we have committed ourselves to the amendment. I do not know that we will retard the business of the House very much if we ask the minister to have printed, or laid on the table of the House, such information as he has with respect to the request for these particular amendments.

Mr. FISHER. The Bill is printed, but it cannot be distributed until it is introduced. The Bill will not be introduced until the resolution is adopted. I am just waiting for the adoption of the resolution to introduce the Bill. The Bill will be distributed the moment it is introduced. The information my hon. friend asks for will certainly be available when the Bill comes up for discussion, and it is quite open to the House to reject any portion of the Bill or amend it; so that the passing of the resolution does not in any way prevent the discussion, amendment, or rejection of any particular clause in the Bill.

Mr. TURRIFF. I think it would be well to pass this resolution. I may say to the hon. member for Macdonald (Mr. Staples), that there has been some request for some amendments from the representative of the farmers, the man who looks after any difficulties that the farmers have.

Mr. STAPLES. Who is that?

Mr. TURRIFF. Mr. D. D. Campbell, of Winnipeg. He has represented that some amendments are necessary to carry out the evident intention of the Bill of last year. I took these amendments up with the Minister of Trade and Commerce and he is of the opinion they are reasonable amendments, and although they do not appear in the Bill as introduced they will be passed later on. The sooner they are passed the better. The amendment to which I particularly refer is in connection with broken and small wheat. At present the elevators are not compelled to account for the screenings of wheat and this year in some cases there have been 100 bushels of screenings, which make first-class feed, cleaned out of a 1,000 bushel car. The farmer has to pay the freight on the screenings but at present the elevators can, if they wish, retain them. An amendment is to be introduced in this Bill to make it compulsory on the inspector to state, when he inspects a car, what percentage of dockage there shall be for number one or number two screenings, and the elevator in addition to giving a certificate of the out-turn of the whole wheat must also give a certificate of the out-turn of the screenings provided the screenings amount to over two per cent. Number one screenings will be the screenings that have over 50 per cent of wheat broken, and number two screenings under 50 per cent.

Mr. SAM. HUGHES. How could the inspector tell how much broken wheat there would be in any car and how could he distinguish one car from the other after passing through the elevator?

Mr. TURRIFF. The inspector does that at present.

Mr. SAM. HUGHES. No.

Mr. TURRIFF. He does, and the western members can tell my hon. friend that he does. The inspector at present says that it will take two per cent or five per cent or ten per cent to clean that car and that much is docked, but under the present system he does not say what that is, and the amendment will give the inspector the power to say what it will take to clean that car, and a separate certificate must be given the farmer for that if it is over two per cent. The inspector will also say whether it is number one or number two screenings. This year there has been as much as $40 or $50 worth of good feed taken out of a car which the elevator does not need to account for and the amendment is proposed to remedy that injustice.

Mr. STAPLES. Is that the intention of the Bill now introduced?

Mr. TURRIFF. The Bill was drafted before I took the matter up with the Minister of Trade and Commerce, but he agreed with me that these were necessary amendments and that he would have them passed.

Mr. STAPLES. What I want to know is on what advice the minister is amending the Act on the lines suggested in the resolution.

Mr. FISHER. As I understand it from a short conversation with the Deputy Minister of Trade and Commerce these amendments which are in the Bill have been found necessary to facilitate the working of the Act. I am not aware that any of the provisions in the printed Bill now ready are based on representations from any particular body. I am speaking subject to correction; the department may have had representations in regard to these in addition to their own experience in the working of the Act.

Mr STAPLES. I know from personal experience that the farmers have suffered to a large degree because of the defects in the present system which the hon. member (Mr. Turriff) has referred to. I hope when the Bill comes down that it will have a provision for preventing the great loss of money which the farmers have suffered in this way in the past. There never was in the western crop, especially in Saskatchewan and Alberta, as large a percentage of broken grain as this year; a fact which is no doubt due to the well developed kernel and the extremely dry weather during harvest. I believe it is necessary to have the amendments referred to passed as soon as possible, and I have therefore no objection to the resolution.

Mr. A. HAGGART (Winnipeg). My hon. friend from Assiniboia (Mr. Turriff) and Macdonald (Mr. Staples) are both farmers and their interest is for the farmers, but the elevator men and the grain merchants are also interested in the grain business, and, and I think an opportunity should be afforded to them to express their views before the Bill is passed.

Mr. FISHER. The amendment spoken of by my hon. friend from Assinboia (Mr. Turriff) is not contained in the Bill as printed. Probably the hon. gentleman himself will move it in the House at the proper stage of this Bill and it will be considered on its merits. I can assure my hon. friend (Mr. Haggart) that if I have charge of the Bill at that stage I shall be only too happy to secure an opportunity for all the different interests being represented and heard.

Resolution reported, read the second time and agreed to.

Mr. FISHER moved for leave to introduce Bill (No. 49) to amend the Manitoba Grain Act.

Motion agreed to, and Bill read the first time.

SUPPLY

House in Committee of Supply.

Arthabaska public building, $15,000.

Mr. PUGSLEY. A site has been purchased out of an appropriation made two sessions ago, and we are asking for this vote in order to proceed with the construction of the building.

Aylmer post office—addition to building, &c., $5,000.

Mr. PUGSLEY. This is for the purpose of making necessary additions and improvements to the public building at Aylmer, a building which is now entirely out of repair.

Chicoutimi public building—ground improvements, $1,500.

Mr. PUGSLEY. This is for laying concrete sidewalks and macadam roadways around the public building.

Mr. HUGHES. What other public works are in progress at Chicoutimi?

Mr. PUGSLEY. There is dredging and, I think, a wharf.

Dominion public buildings Quebec—renewals, improvements, repairs, &c., $20,000.

Mr. WORTHINGTON. What was the amount spent at Sherbrooke last year?

Mr. PUGSLEY. $274.40.

Mr. WORTHINGTON. What will be the amount this year?

Mr. PUGSLEY. I am not able to tell my hon. friend.

Fraserville armoury, $5,000.

Mr. PUGSLEY. This is to make provision for the purchase of a site and the erection of an armoury, which has been requested by the Militia Department since October, 1907.

Mr. SAM HUGHES. What regiment uses this?

Mr. PUGSLEY. The 89th Temiscouata and Rimouski regiment.

Mr. SPROULE. What will be the full cost of this building?

Mr. PUGSLEY. As near as I can tell, about $10,000.

Mr. WORTHINGTON. Has it been arranged to put a shooting gallery in this building?

Mr. PUGSLEY. I am not able to say positively.

Mr. WORTHINGTON. It would be a great source of benefit to the regiment and would not cost anything, because the basement could be utilized for the purpose.

Grosse Isle quarantine station—improvements and repairs to buildings, and fittings, furniture, &c., $7,000.

Mr. PUGSLEY. This is to make provision for the construction of new buildings and also repairs to the old buildings. These have all been asked for by Dr. Martineau, the medical superintendent of the station.

Joliette armoury, $12,000.

Mr. PUGSLEY. This amount is asked to complete the erection of the building, which is now under contract.

Mr. WORTHINGTON. Can the minister tell us numerically the strength of the force at Joliette?

Mr. PUGSLEY. It is the headquarters of the 83rd Joliette regiment and also a company.

Mr. WORTHINGTON. What will be the total cost?

Mr. PUGSLEY. Including everything, about $23,200.

Mr. WORTHINGTON. Was there a drill shed there formerly, or what accommodation had the regiment up to this time?

Mr. PUGSLEY. I really do not know as to that.

Mr. SAM. HUGHES. How many companies are accommodated there?

Mr. PUGSLEY. I think two.

Mr. SPROULE. Is the contract let?

Mr. PUGSLEY. Yes, and the building is very nearly finished. Six tenders were received. The lowest was accepted, $13,500. In addition there is heating, electric wiring and fittings, furniture, inside walks, fencing, contingencies and cost of site. The electric wiring and heating were, I think, let by tender, but I am not sure.

Mr. SPROULE. What did they cost?

Mr. PUGSLEY. The electric wiring, $512; heating and boilers together, $2,000. The building is two stories of brick, with stone foundation and trimmings; 56 feet 2 inches by 47 feet 1 inch.

Mr. SAM. HUGHES. According to the Militia list, there is only one company there. What is the hon. gentleman's policy with regard to armouries in general? Are any more being built? Why is it this one cost $23,000 and the one at Fraserville only $10,000, and how is it these are not paid out of the general vote for armouries of $50,000?

Mr. PUGSLEY. We are endeavouring to build one at Fraserville at less cost than at Joliette. Fraserville is the last. There is a strong disposition on the part of hon. members on both sides to try if possible to reduce the cost of armouries, and we have felt that in the case of Fraserville, we should get a suitable one for $10,000. In the case of Hartland, we are providing for a building at $10,000 which will also accommodate the post office.

Mr. SAM. HUGHES. What regiment is that to accommodate?

Mr. CARVELL. Two companies of the 67th.

Mr. EDWARDS. What is the size of the armoury at Fraserville?

Mr. PUGSLEY. The plans have not been prepared yet.

Mr. SAM. HUGHES. The headquarters of the 67th are at Woodstock, and we have already constructed an armoury there to accommodate a regiment of infantry and a battery of artillery. Why then erect an armoury at Hartland?

Mr. PUGSLEY.

Mr. CARVELL. In the Woodstock armoury there are the 10th Field Battery, the First Company of the Engineers and two companies of the 67th. The remaining six companies of the 67th are at local headquarters. Two of them are at Hartland.

Mr. SAM. HUGHES. Is it the policy then, in addition to building armouries at headquarters for the regiments, to build armouries at other places for various companies?

Mr. PUGSLEY. The armoury at Hartland is not in pursuance of any general policy, but it was represented to us that the people would be well satisfied if we put up a building costing $10,000 which would do for a post office and might be used also for regimental purposes. That was done to meet the necessities of a particular case.

Mr. SAM. HUGHES. It would be more advisable to follow some uniform system. That has been discussed again and again in the House. There are a great many regiments in this Dominion which have no armoury and which, so far as qualifications and service records go, are unsurpassed. I must certainly protest against the system pursued here. We understood that there was one bulk vote brought each year that is to be used for these armouries.

Mr. PUGSLEY. While there has been a vote taken of $50,000 each session for the construction of armouries in smaller towns, I do not think that that vote has been granted to the exclusion altogether of special votes for buildings which could not be erected out of the $50,000 vote. When I became minister, I found there was some departure from that rule, and that has been continued.

Mr. SAM. HUGHES. Why is Fraserville specially selected and Joliette and Hartland and other important places left out? Is there any reason for it?

Mr. PUGSLEY. Nothing more than I have given.

Mr. SPROULE. On what principle is that $50,000 apportioned?

Mr. PUGSLEY. This apportionment is made on the recommendation of the Militia Department. Last session, when I asked for the general vote, I gave a statement of how the money voted for the previous year had been expended. And when we come to that item I will give a statement for the expenditure on armouries for the past year.

Mr. WORTHINGTON. Was there a post office building at Hartland before?

Mr. PUGSLEY. No.

Mr. SPROULE. On what principle would the selection be made of places in which the money is to be spent?

Mr. PUGSLEY. The Militia Department makes a requisition on the Public Works Department for the erection of certain armouries out of the general vote. We recognize that their judgment is to be relied upon and we proceed with the work, drawing on the vote for that purpose.

Mr. SPROULE. It would be the right of the Minister of Militia, of course, under the circumstances to recommend where an armoury was to be built, regardless of the judgment of parliament.

Mr. PUGSLEY. That is the object of getting the vote in that way.

Mr. SPROULE. Very convenient for the minister when an election is coming on.

Mr. PUGSLEY. That might be said, but I do not think that that has ever influenced the distribution.

Mr. SPROULE. I do not know whether this general vote has been long in existence or not. But, from the knowledge we have of this government, I should not have the highest expectation of such a vote would be distributed strictly on sound principles.

Mr. DEPUTY SPEAKER. At this point I should explain to the committee, that while in the printed estimates there are two items connected with Grosse Isle station, I have called only one, as the resolution in my hand does not completely give the other. The second is:

Grosse Isle quarantine station—new detention building, $20,000.

I have entered it in the resolution. Does it carry?

Mr. PUGSLEY. This building is asked for by the Minister of Agriculture (Mr. Fisher) who tells me that there is absolute need of it.

Mr. WORTHINGTON. How many immigrants will it house?

Mr. PUGSLEY. I have not that information before me, but no doubt the Minister of Agriculture will be glad to give the information.

Mr. FISHER. This building is intended to take the place of the present second-class detention building. These detention buildings at Grosse Isle are to receive those who arrive in ships and who, though not themselves diseased, may have come in contact with disease on the ship and possibly bear the germs of that disease with them. We have there what is called a first-class detention building where the first-class passengers are accommodated. It offers about as good accommodation as the second-class on a steamship. In the present second-class detention building the accommodation is not better than the present steerage on board the vessels, and has been frequently occupied by steerage passengers because we have not sufficient accommodation for all when a large number are to be detained. The new building will be about the grade of the first-class detention building at present, because the accommodation for second-class passengers aboard the ships is so much better than the present second-class detention building can offer. The new building will accommodate about 150 without crowding, with a possibility of putting into it 200 if necessary.

Mr. DANIEL. It affords sleeping accommodation, of course?

Mr. FISHER. Much like the state-rooms on a steamer. The building has a passage down the middle with rooms about the size of state-rooms on a vessel on either side. There are two stories of these. In the centre of the building are the dining and sitting rooms. There are wings on either side with the rows of state-rooms.

Mr. DANIEL. And bath-rooms, &c.?

Mr. FISHER. Yes, about the same accommodation as is afforded on the river steam-boats on the St. Lawrence. There is a bath-room at either end. As a rule, the lady passengers are housed at one end of the building and the gentlemen at the other, with exceptions in the case of married people.

Mr. J. D. REID. I see the statement made in the press that 8,000 Doukhobors are coming to Canada. I would like to know if that is a fact, and also if the $5 a head bonus is being paid on these people?

Mr. FISHER. That is a matter under the Department of the Interior.

Mr. J. D. REID. But the government must know, and I thought perhaps the Minister of Agriculture could answer the question.

Mr. FISHER. The item before us has nothing to do with that point, and I have not the information before me. When an item concerning such things is before the committee, the information will gladly be given.

Mr. J. D. REID. How are you going to accommodate 8,000 Doukhobors when they come?

Mr. FISHER. The 8,000 are not likely to come all together. As a matter of fact, no ship carries 8,000 passengers.

Mr. SPROULE. Is this vote expected to pay the whole cost of the building?

Mr. PUGSLEY. Yes.

Mr. SPROULE. Is the contract let?

Mr. PUGSLEY. No.

Mr. DANIEL. Is it to be a wooden building?

Mr. PUGSLEY. Probably; the detention buildings are generally frame buildings; but the point has not yet been decided.

Mr. DANIEL. How does the minister (Mr. Pugsley) know what the building is to cost if he does not know of what it is to be built?

Mr. PUGSLEY. We shall know more definitely when we get the plans, but I assure the committee in the meantime that we expect to put up a building which will not cost more than $20,000.

Lachine post office—tower clock, $750.

Mr. PUGSLEY. Twenty years ago a post office was built in Lachine and a tower erected upon it with a place in it for a clock. But the clock has never been placed there. The opening for the face was boarded up and has really been an eye-sore to the people. They have urged very strongly that we should put a clock in this tower, and I trust there will be no opposition.

Mr. WORTHINGTON. Who is to put it in?

Mr. PUGSLEY. We will not put it in until we get the appropriation.

Mr. HUGHES. How about the clock for Port Hope? Or was it Bowmanville? The government solemnly promised it some years ago and that promise has not been kept.

Mr. PUGSLEY. Does the hon. gentleman (Mr. Hughes) oppose this vote?

Mr. HUGHES. I am calling attention to a promise made by the Minister of Justice.

Mr. PUGSLEY. I find it hard enough to keep my own promises——

Mr. HUGHES. I know.

Lachine public building—installation of new heating apparatus—revote of $1,700 lapsed, $2,000.

Mr. PUGSLEY. It is estimated that excavating the cellar for furnace rooms, putting in concrete floor, heating apparatus, &c., will cost $2,000.

Mr. WORTHINGTON. Could the minister tell us whether a contract was let for the building, and another contract for the installation of lighting?

Mr. PUGSLEY. I cannot tell that, because it was built 20 years ago under the old government. I would assume that the heating and lighting was done without tender.

Mr. BLAIN. Perhaps the minister, who is so well posted on the good old days, could tell us whether this building was constructed by public competition?

Mr. DANIEL.

Mr. PUGSLEY. I am not able to tell my hon. friend.

Mr. BLAIN. Then my hon. friend should not be so free in his criticism, because he knows very well that the policy of the opposition to-day is a policy of public tender, and that is not the policy of my hon. friend's government.

Mr. PUGSLEY. Yes, it is.

Mr. BLAIN. Then my hon. friend is a recent convert to something of that kind, and we will expect to see him put it into practice. Since my hon. friend ventures on criticising the old government, perhaps he could bring forward some of this twenty years old information. For instance, he says the old government did not supply a clock in buildings constructed twenty years ago. We were not so profuse with promises in pre-election days as my hon. friend; therefore we are not in the clock business to the same extent.

Lévis—drill hall—revote of $20,000 lapsed, $20,000.

Mr. PUGSLEY. This is for the purpose of proceeding with the construction of a drill hall in the town of Lévis. The site is being provided by the municipality of Levis, free of cost to the government.

Mr. WORTHINGTON. Tell us how this vote lapsed?

Mr. PUGSLEY. This vote was in the estimates of 1907-8, and it was one of the buildings the construction of which was postponed in accordance with the decision which I explained to the committee last session.

Mr. WORTHINGTON. What regiments is this building intended to accommodate?

Mr. PUGSLEY. The 6th regiment, a Quebec and Levis regiment of Canadian artillery, 265 officers and men.

Mr. FOSTER. Has the building been commenced yet?

Mr. PUGSLEY. Not yet.

Mr. FOSTER. Does the minister not think that when he is commencing a work for another department it is the duty of the head of that other department to be here to justify the vote? The Minister of Militia is not present. The Minister of Public Works is responsible for the construction of buildings on the request of his colleagues. But the deeper question is as to whether there should be a drill shed, and that can only be answered by the Minister of Militia. I think the House is entitled to have the responsible minister in his seat when these votes are canvassed. For instance, my hon. friend from Sherbrooke (Mr. Worthington) asks for information from a mili-

tary point of view. The Minister of Public Works, though a genius in some ways, is not a military man, and he cannot answer all these things.

Mr. PUGSLEY. My hon. friend in a general way is right. Of course if any item came up in respect to which there was serious opposition on the part of any member of the committee, I would ask it to stand over until the Minister of Militia was present. But in the case of this drill hall I can satisfy the committee that it is really necessary. There is no place in Lévis where the men of the regiment can be drilled. I should have mentioned that in addition to the 6th regiment there is the 17th regiment, which has 196 officers and men. Lévis is an important town, and I think everybody will agree that it is a place where there should be a drill hall. We do not propose to erect a very expensive one, it is to cost $60.000. That is not so expensive as the drill hall in Sherbrooke or Peterborough.

Mr. HUGHES. I may inform the hon. minister that the 6th regiment belongs to Vancouver, B. C.

Mr. PUGSLEY. It is the Canadian artillery I spoke of.

Mr. WORTHINGTON. The hon. gentleman says that this drill hall does not cost as much as the drill hall at Sherbrooke. Perhaps he will tell us what the drill hall at Sherbrooke has cost. He might also tell us whether accommodation has been prepared for the new regiment which is being formed at Sherbrooke. I understand there is a new French Canadian regiment being recruited now in Sherbrooke, and it is found that there is no room in the drill shed for this new regiment.

Mr. PUGSLEY. I am sorry I cannot give the information to my hon. friend. We are not asking for a vote for the Sherbrooke drill hall.

Maisonneuve—post office—revote of $10,000 lapsed, $20,000.

Mr. HENDERSON. The first vote having lapsed, I understand that we are now starting afresh, this is practically a first vote. I think it would be well for the minister to state positively just how much money he intends to expend on this building, to erect it, fit it up, light it, heat it, everything in connection with it, including the site. I would like him to assure the House that he will instruct his officer of the extreme limit to be allowed in the erection of this building. In taking this vote we want the minister to tell us now what this building is going to cost complete, including site, and the House wants to be assured that he will never come back again to ask for any larger sum. This is the only way the minister can keep a check upon the expenditure of the country. We do not want him to come back next year, or the year after, and ask for a further estimate beyond what he now estimates the building will actually cost. But, as the minister was able to repeat my statement and so well understands my meaning, I do not think it is worth while for me to detain the committee further on it. I hope I will have the opportunity of meeting him here another year, when possibly this matter may be dealt with again, but I do not want that the minister shall ever come back to ask for any larger sum than he says this building is actually to cost. Now, will the minister make his statement and say just how much money he proposes to expend on this building, what limit he is going to give to his officer, and then we will know exactly where we stand.

Mr. PUGSLEY. I would like very much to give my hon. friend a definite assurance in regard to the cost of this building, including the site, but I am not able to do so for the reason that I do not know what it will cost us to procure a suitable site in the first place. Maisonneuve, while it is a separate municipality, is really a part of the city of Montreal, it is growing very rapidly and land is held at high prices. I am not able to state to the committee to-night what we will get a suitable site for, and I am not able to tell the committee positively what the building will cost, but my own impression is that we ought to get a building at Maisonneuve which would not cost us over $30,000 or $35,000. That would be exclusive of the site. Of course, in a city like Montreal, which is growing very rapidly, we must be prepared to pay something more for a public building than we would in one of the smaller towns.

Mr. HENDERSON. I am afraid the minister has taken a very wide range. Thirty thousand or $35,000 would put up a pretty handsome building, but I think that between his maximum and his minimum there is too wide a difference. I think he should be able to say to the committee that he considers $30,000 ample. If he does not think so let him tell the committee that he will instruct his officers not to go beyond the larger sum. Let him fix some definite sum, because, if he does not do so, he can rest assured that the amount, no matter what it is, will be very greatly exceeded. The minister says that he does not know what the site will cost. I am not asking him to declare how much he will expend on this building, including the site. We will leave the site in abeyance. That may cost $1,000, it may cost more, it may cost less; but let the minister tell us now just how much he is going to say to his officers that the building will cost exclusive of the site. There is no difficulty in doing that. The minister knows how much money he can afford to

spend on a building of that kind. It is not a question of whether it shall be $30,000 or $35,000. The minister is going to erect a building and he says: The country can afford to spend $30,000 or $35,000. But what I do want is to establish some fixed amount that shall be adhered to and that upon a future occasion he will not come here and ask for a sum in excess of that. That is the only way in which the minister, or the House, can keep a check upon the expenditure of the country, and I do say that before this vote is passed the minister must definitely give us the assurance that the amount to be expended shall not exceed a certain sum, and let him name that sum exclusive of the site if he thinks fit.

Mr. VERVILLE. As this proposed building is in my constituency, I may be permitted to say a word upon it. An amount has been mentioned as the probable value of land in Maisonneuve, but I should like to point out that you cannot buy land there as cheaply as some hon. members may imagine. You cannot buy a site for a postal station for much less than between $8,000 and $10,000. If a postal station is to be built there it will not be to please people in Maisonneuve but to satisfy the requirements of the postal department. Under these circumstances I think the minister rather underestimates when he mentions $35,000 as being the amount which will be required to satisfy the postal requirements of that community which is growing very fast. In the near future it will be absolutely necessary to have a building large enough to provide for the growing business of the postal department in that section. There are between 18,000 and 20,000 people in Maisonneuve, and the city is growing at the rate of 1,800 every year.

Mr. HUGHES. Is it annexed?

Mr. VERVILLE. It is not annexed yet, but will be next year. They are annexing everything around the city of Montreal just now and it will be brought in next year. There is vast difference between a post office and a postal station because in the city of Montreal to-day there are no more post offices; there are postal stations under the management of the general post office.

Mr. HENDERSON. My hon. friend from Maisonneuve (Mr. Verville) rather surprised me when he stated that the site for a public building in this town would cost as much as $10,000. He may be right. I have no knowledge of the value of land there. But, I made a fair proposition to the minister. We leave out of consideration the site and only ask the minister as to the amount which will be expended upon the building. I have a little suspicion about the cost of this building. No doubt when he comes to erect it the workmen will have to work only eight hours a day. The hon. member for Maisonneuve (Mr. Verville) has an eight hour a day Bill before the House.

Mr. PUGSLEY. I do not understand my hon. friend's statement that on all public buildings they only work eight hours a day. There is no limitation to eight hours a day.

Mr. HENDERSON. The hon. member from Maisonneuve may have something to say upon that. He is supporting the government and he will expect the government to support him. What about the hon. gentleman's Bill providing for an eight hour day on public works. It would be a most remarkable thing after the hon. gentleman's advocacy of an eight hour day for public works that he should permit a public building to be erected in his riding and the men be called upon to work ten hours. Surely the hon. gentleman would not permit it. He would not want public money expended in his county if the men had to work ten hours a day. So that we can take it for granted that it would be an eight hour a day job, and of course it will cost a great deal more than if it were a ten hour a day job, because the men will reasonably expect to get as much for eight hours as they would get for ten. In that way the minister will have to be very guarded in his estimate and make sure that his proposal is sufficiently high. I understand the minister to say that $35,000 is to be the extreme limit that he will go in the erection of this building. Has the minister fixed that amount to cover everything, or are we to understand that $10,000 is to be paid for the site and $35,000 over that for the erection of the building?

Mr. PUGSLEY. The figure I named was exclusive of the site.

Mr. HENDERSON. I am not very much concerned as to what the cost of the building will be. I do not know anything about the size of the town or the requirements of the place, but I want to establish the principle so that we will know just exactly what we are doing. Now we understand the minister that whatever the site costs is not to be a portion ot this $35,000, but that the building, outside of the site, is not to cost more than $35,000 when completed, lighted, the walks around it, the grass planted and everything done that will make it a place of beauty so that the government will not be called upon to expend another dollar upon it.

Mr. PUGSLEY. Did I give that assurance?

Mr. HENDERSON. I want the minister to give us that assurance. If we allow the latitude that has prevailed in the past the

expenditure is bound to get beyond our control. Has the minister the plans and specifications before him?

Mr. PUGSLEY. No.

Mr. HENDERSON. Then perhaps it is so much the better because he can direct his architect to produce a building which will not cost more than $35,000, and if the architect does not do it he should get another architect. But I am perfectly confident the architect will and can do it if he is so instructed.

Mr. PUGSLEY. If it does cost more than $35,000 the hon. gentleman will want to know the reason why.

Mr. HENDERSON. Oh, the hon. gentleman can easily find a reason or an excuse; he could give the eight hour day movement as a reason, but here we are spending the money of the people and the minister should not treat it as a joke. I have advocated this in the House for many a year, and one Minister of Public Works told me that my plan was a good one and that when we were voting away the money of the country we should know just how much we were voting.

Mr. EDWARDS. I enter my protest against the utterly reckless manner in which the money of the country is being handled by this government. I do not think that even this House has ever seen such an exhibition as the Minister of Public Works has afforded in respect to this item. A year ago he asked for $10,000 to erect a building in Maisonneuve, and one would naturally suppose that was all that was needed, but this year he asks for $20,000, and before we have had time to realize it, he tells us the building will cost $30,000 or $35,000. Then the member for the constituency tells us that the land alone will cost $8,000 or $10,000 and the Minister of Public Works immediately tries to excuse himself for his intention to pile on something like $15,000 or $20,000 more than he is asking for to-night. Surely the minister should know what a building will cost before he asks for money for it, but he has no more idea of the ultimate cost of this building than a child on the street. That is our experience of him in connection with other buildings. The cottages for the servants of the Military College at Kingston were contracted for at $77,000, and then he asked for $112,000, and after spending two weeks trying to justify himself he finally agreed to knock off $20,000 from the vote. Last year his excuse for the large amount of money these cottages cost was that the foundations had to be dug out of the solid rock, but as a matter of fact there were not over three feet of rock excavated. The wall above the ground is over four feet high and allowing eight feet for the cellar, I do not see how he can make out that the excavation is as much as he said. But that is the way the money goes; drill halls here and there for the accommodation of the soldiers and the soldiers to-day at Kingston are out on Barriefield common providing films for a moving picture show. I protest against the minister asking an appropriation for a building until he is able to tell us what that building will ultimately cost.

Mr. SAM. HUGHES. Maisonneuve is a very important centre, and I am satisfied the minister will not erect a suitable building there for $25,000, but I want to ask him if he is providing that the public buildings erected by the government shall have 100 feet, or even 200 feet, of space all round them so as to separate them from adjoining buildings? That is the practice in the United States and a very good practice it is.

Mr. PUGSLEY. If we made any such rule as that it would cost us a great deal of money.

Mr. HUGHES. Even so.

Mr. PUGSLEY. I admit it might be in the public interest to do so.

Mr. HUGHES. It would.

Mr. PUGSLEY. We have not adopted that rule and we are not going to do so in this case.

Mr. HUGHES. In the country towns you will find some of these buildings erected between a corner grocery and a saloon, when it would be just as easy for the government to acquire a suitable site. I would suggest to the member for Maisonneuve that he should select a proper site and even if it cost a few thousand dollars extra the House will not begrudge it.

Mr. J. D. REID. Surely the minister must know what the ultimate cost of this building will be, and the House certainly has the right to know, before we are asked to vote this money. I would suggest that the minister let this item stand, as well as other items which may follow, until he is able to state to the House how much in each case shall be spent for a site and how much for a building to be erected thereon. I for one do not feel justified in letting an item of this kind go through without a proper statement from the minister.

Mr. PUGSLEY. I thought I stated very frankly to the committee what was the situation in regard to this building. Maisonneuve is a part of the city of Montreal; it is growing very rapidly, and land there has a value which is based upon that growth. The hon. member who represents the constituency states that in his judgment the site will cost between $8,000 and

$10.000. In my opinion the building will cost not less than between $30,000 and $35,000. I shall ask the chief architect to plan a building that will cost about that amount, though if a suitable building would cost $5,000 or even $10,000 more, I think we should still proceed with it. The hon. member for Frontenac (Mr. Edwards) complains that while I am asking for $20,000, I intimate that the building is going to cost more. When my hon. friend has more parliamentary experience, he will know that the total amount required for the construction of any public work is never asked for in the first vote unless it is expected that the work will be completed during the year. All that is asked is the amount expected to be spent in the year.

Mr. EDWARDS. Is it also the case that when a minister asks for an appropriation for a public building, he gives no estimate of the cost of that building?

Mr. PUGSLEY. That is not the point my hon. friend made.

Mr. EDWARDS. That is the point I am making now.

Mr. FOSTER. Is this a post office?

Mr. PUGSLEY. A postal station.

Mr. FOSTER. Why is it not called so?

Mr. PUGSLEY. It is a post office at present, because Maisonneuve is outside the city of Montreal. When it is joined to Montreal, this will be a postal station.

Mr. FOSTER. I understand that the Postmaster General contemplates having a postal station there, and that is what it ought to be called. Did I understand the minister to say that he had not yet any plans prepared for this building?

Mr. PUGSLEY. Not yet.

Mr. FOSTER. It does seem to me to be a little peculiar in the minister to ask for a vote of $20,000 without a plan. When he comes and asks for an appropriation for a public building, he ought to be able to lay the plans on the table of the House. What are we giving the vote for? Not on the strength of the minister's assertion. We are going on a plan and a plan which is tangible and can be got at; and when we are asked for $30,000, we want to know the plan of the building. The minister says he has not got any. It turns then entirely on the minister's assertion, so that it is perfectly proper that he should have his land before he asks us for the vote. The minister might very well take a vote and purchase the land, but until he submits his plan for the building, it seems to me not proper for him to ask the House for a vote for the building and then give no definite promises because he has no plans on which to base them.

Mr. PUGSLEY. If my hon. friend will assure the committee that during the time he was in charge of the finances of the country, he ever knew of an instance when plans were laid on the table with reference to public buildings for which votes were passed, there would be some force in his argument.

Mr. FOSTER. My hon. friend is always at his old trick of going back to the past. Might I retort by asking, if during the time when he was a Liberal-Conservative and supported that party, and at other times he was half way between the two parties, on the fence, as an independent, and at others when he dropped down on the other side of the fence as soon as he felt the attractions of patronage, I suppose that kind of reminiscence would rather bother him and he would not consider it was the best way of conducting business. But suppose we consider that he is responsible for the votes he asks us to pass when he brings down the estimates, are we not justified in asking him to submit the plans for the buildings he asks us to authorize him to construct.

Mr. PUGSLEY. If the hon. gentleman chooses to go back to the days when he used to live away down by the sea, before he found it necessary to change his political residence and move westward to Toronto, and if he would call to mind the thousands of dollars squandered, so far as New Brunswick was concerned, by his own neglect of the interests of people in the city of St. John, by his refusal to recognize their legitimate aspirations to have that port become the winter port of Canada, and his recognition apparently that it was quite proper to vote subsidies out of the people's money for Atlantic steamers which passed by the port of the city of St. John and made their terminus at a foreign port, assisted by the moneys of Canada, despite the pleadings of the people for some recognition of their rights, he would probably have no difficulty in discovering why so many of the best people there changed their politics and supported a party which is disposed to do justice to the maritime provinces. Now as to why I have not brought down plans here to-night, I would say that in these estimates we have some twelve hundred items and that it would be out of the question for me to instruct my chief architect and chief engineer to prepare the plans before the items were submitted to the House and voted. Does he suggest that I should have had the plans prepared before my colleagues had agreed to the estimates and before they had been submitted for the consideration of the House? These estimates were only prepared and approved by council a few weeks ago, and it would be utterly impossible to prepare one-tenth of the plans of

the various public buildings and wharfs for the consideration of the committee at present. Were I to attempt to do so, it would be utterly impossible to go on with the consideration of these public works within any reasonable time. What I have said is that such and such a building is to cost a certain amount of money; and when the amount is voted, I shall ask the chief architect to prepare the plans in each case accordingly. In the particular case under consideration, I have said that the building, in my judgment, ought not to cost over $35,000, and I shall instruct the chief architect to prepare plans of a building which will not cost more than that sum.

Mr. SAM. HUGHES. Before the minister will instruct the chief architect to have the plans prepared would it not be advisable for him to have his site? Should he not first secure a site at Maisonneuve which would be of sufficient size to leave considerable space between the public building and any other adjoining building?

Mr. PUGSLEY. As soon as I can get the site, I shall have the plans prepared for a suitable building. I cannot get the site without getting the money appropriated. I am only asking for $20,000. If the site should cost $10,000, that will only leave $10,000 for the building.

Mr. EDWARDS. When we see in the estimates an item such as this for a post office $20,000, we are justified in concluding that that amount, or very nearly that amount, is all that will be required. In the absence of any other statement from the minister, we are justified in coming to that conclusion; and I would say that when, as in a case like the present, the minister asks for an appropriation of $20,000, and knows that the building will cost in all probability $35,000 or $40,000 with the site, when completed, he should be fair enough to say that in all probability the site there will cost more than in some other places and that possibly we shall have to spend $35,000 or $40,000 for that building. That would leave us with an altogether different impression than we are justified in having when we see simply an item of $20,000.

Mr. FOSTER. Does the hon. minister not think it would be better to take a vote for the purchase of the site and have his plans prepared and ready at the next session so that the House will know what kind of building will be constructed?

Mr. PUGSLEY. That would put the matter off a year.

Mr. FOSTER. My hon. friend can hardly plead that as an excuse because he has not yet got the site. I do not want to press too strongly the cogency of the speech delivered by my hon. friend. It had great influence on my own mind against the passing of this vote. Does not the minister think he will be better advised if he takes a vote for the site? He is asking for a vote for $20,000, and, if he likes, he can spend all that money on a site, a thing which, I think, the House would not justify. The minister has not told us what kind of building he is going to construct or what it will cost. He thought at first that a site could be got for $5,000, but now it is $6,000, $8,000 or $10,000.

Mr. PUGSLEY. I did not mention any amount for the site.

Mr. FOSTER. Perhaps my hon. friend's memory is not as good as his imagination. But 'Hansard' comes, fortunately, as a help to bad memories, and if he will read 'Hansard' to-morrow, I think he will see that I am right. But we are entirely at sea in this matter. The minister tells us $5,000 for a site, but the gentleman behind him who ought to know more about the matter, says that he cannot begin to get a site for that money. Before the committee is called upon to vote money for the building, it should know whether a site can be got at a fair price or not. The minister is committing us to an expenditure of $35,000 or $40,000 without a shred of a plan.

Mr. NANTEL. (Translation). Mr. Chairman it seems to me that the suggestion offered by the hon. member for North Toronto (Mr. Foster) is quite fair. I am personally aware that in a certain locality a site was bought along with a view to the building thereon of a post office and nothing so far has been done. In the town of Ste. Thérèse, in the county of Terrebonne, a site was purchased over two years ago at a cost of $5,000 for a post office, and I do not see that any vote is taken in the estimates for the erection of a post office in that town.

When a vote like this one is taken for Maisonneuve, I do not see why Ste. Thérèse should not enjoy a similar treatment.

Mr. PUGSLEY. Though a site was purchased at Ste. Thérèse, we were not able to go on with the construction of the building last year. But we hope in the not distant future to see to the erection of a building there.

Mr. HUGHES. Why is there no vote this year?

Mr. PUGSLEY. At this moment, I cannot give my hon. friend the reason.

Mr. HUGHES. Has the superior intelligence of the electors anything to do with it?

Mr. PUGSLEY. No, I do not think so.

Marieville public building—revote of $5,860 lapsed, $15,000.

Mr. FOSTER. What is the population of Marieville as compared with Ste. Thérèse?

Mr. PUGSLEY. Marieville 1,306 in 1901.

Mr. FOSTER. And Ste. Thérèse?

Mr. PUGSLEY. I do not at this moment remember.

Mr. NANTEL. Oh, oh.

Mr. PUGSLEY. Perhaps my hon. friend (Mr. Nantel) can give the population.

Mr. NANTEL. About 2,000.

Mr. FOSTER. We have been used, in times past, to get some information showing the necessity for any proposed building. Does the minister propose to introduce some new plan?

Mr. PUGSLEY. I am glad to give information, but I do not want to take up the time of the committee unduly. Parliament voted, two years ago, a sum for this building, evidently satisfied that it was necessary. But if the hon. member wants information I am glad to give it. The population of Marieville was 1,306 in 1901; postal revenue in 1908-9 was $1,396; customs revenue—it is an outport of Montreal—$4,061.56: money orders issued, $18,905.62; money orders paid, $14,396.42. The site on which the building is to be constructed has a frontage of 84 feet on one street and 61 on another. The building is for post office and customs purposes. The site was purchased from the corporation of Marieville.

Mr. FOSTER. What was paid for it?

Mr. PUGSLEY. $1,500.

Mr. FOSTER. What is to be the cost of the building?

Mr. PUGSLEY. We think this building should be erected for not more than $25,000, that to include site, heating, lighting and everything except furniture.

Mr. FOSTER. Has the Postmaster General made a requisition for a building of this size to accommodate the postal service in Marieville?

Mr. PUGSLEY. The Postmaster General has not described the building required.

Mr. FOSTER. What is the request of the Postmaster General?

Mr. PUGSLEY. I do not find in the information before me any request from the Postmaster General. But the Board of Trade urged the erection of a public building as long ago as March 10, 1906.

Mr. SAM. HUGHES. In what county is Marieville situated?

Mr. PUGSLEY. Rouville.

Mr. SAM. HUGHES. And who represents Rouville, please?

Mr. PUGSLEY. Hon. Mr. Brodeur.

Mr. FOSTER. I venture to raise my voice in protest against this vote. I notice that one or two members on the other side laugh. I wonder now, if they would conduct their own business in this way.

Mr. PUGSLEY. If the hon. member (Mr. Foster) will pardon me, there is one bit of further information which I wish to give. I stated the population of Marieville at 1,306. I should have added that there is also the population of Ste. Marie de Mannoir who use the same post office, that population being 1,054, so that there is a total population of 2,360 to be accommodated by this post office.

Mr. FOSTER. Is that a town?

Mr. PUGSLEY. A village, I believe.

Mr. FOSTER. Does the minister know?

Mr. PUGSLEY. I am informed that Ste. Marie de Mannoir is a parish.

Mr. FOSTER. Ah! There is quite a difference, is not there? Marieville being in the parish, a post office built in Marieville will be in the parish, no doubt about that But there is equally little doubt that the $25,000 is spent for Marieville and not for the parish. Is there no post office in the parish outside of Marieville?

Mr. PUGSLEY. My information is that the parish of Ste. Marie de Monnoir will also use the post office.

Mr. FOSTER. There is no request from the Postmaster General, and no approval by him of this expenditure of $25,000. The Board of Trade have asked for it, we are told. This is not the money of the Board of Trade, this is the money of the country, and if it is spent at all it should be spent for no other purpose than to meet the postal requirements. Will the minister say that he has the approval and request of the Postmaster General for this vote, that he cannot carry on the postal business of this country in a proper way unless he gets $25,000 for a building in Marieville? I have too much respect for the Postmaster General to believe that he would stand up in this House and make any such statement. The truth is that this is a matter of mere patronage, this $25,000 which has been raised from the taxation of the people is simply a matter of patronage at Marieville, nothing more and nothing less. I for one am going to voice my protest against Marieville having such an expenditure until I get good reasons from the Postmaster General to the effect that this expenditure of $25,000 is necessary in order to properly carry on the post office business of the country. I think we ought to make a very vigorous protest against any expenditure of that kind. The minister says in his bland way: Well, we think. Who are we?

The ministry. We think that a village of 1,300 people ought to have $25,000 spent on a post office. If the government thinks that, are you going to carry out the principle to its logical conclusion, and are you going to plant $25,000 of the people's money in every place in this country which has a population of 1,300? What is the post office revenue there?

Mr. PUGSLEY. From the post office, $1,396.59 ; from customs, $4,061.56.

Mr. FOSTER. What is the cost of the administration of the post office?

Mr. PUGSLEY. The postmaster's salary is $643. The money orders, savings bank and postal notes afford a revenue of $774.25. This building is to be used for customs purposes also, and the customs revenue must also be included with the post office revenue.

Mr. FOSTER. I fancy the Minister of Customs will not say to this House that he wants $25,000 spent in Marieville in order to enable him to carry on the customs business of the country. So it is not germane at all to say that customs must be added in. Now you have a surplus on that transaction of about $500 or $600. Put your $25,000 building there, and what will be the standing and permanent charge upon the country? It is absolutely wrong and the minister knows it, and I think he would be well advised if he allowed this item to stand until he hears from the Postmaster General, and until this committee get sufficient reasons from the men who are conducting te business.

Mr. PUGSLEY. Notwithstanding the judgment of the hon. gentleman, I do intend to endeavour to pass the vote—unless the committee should determine against it. But why does my hon. friend make such a dead set—if I may use the expression—against this item? He allowed the item of a public building at Hillsborough, which is a no larger place than Marieville, to go through without opposition. He made no protest against the vote for the erection of a public building in Athabaska, which I think is no more important than Marieville. Is it because the Minister of Marine and Fisheries was elected in that constituency by acclamation, that my hon. friend makes such determined opposition to this item? I do not think he knows the importance of this town, or he would not make such a determined opposition. I gave the population of Marieville of 1901, when it was 1,306. In the parish of Ste. Marie de Monnoir at the same time the population was 1,054. My information is that both the parish and the village use the post office in Marieville. Now the building is required for both post office and customs purposes, and the revenue which the country receives from these two sources was upwards of $5,400 during the year 1908-9. Evidently a large business is being done there. The money orders issued amounted to $18,000, and the money orders paid to $14,000. My information is that Marieville is a progressive town, new industries are constantly springing up. There are two hat factories carrying on successfully a manufacturing business. While the population in 1901 was 1,306, it has been growing steadily, and according to a census taken in 1907 it showed a population of 1,671. That would be in addition to the population of Ste. Marie de Monnoir. Now Marieville contains in addition to the factories I have mentioned, a college, a Roman Catholic church, a Baptist church, an asylum for the aged and poor, a chamber of commerce, eleven stores, four hotels, one sawmill, a foundry, a threshing machine factory, a branch bank, and the ordinary express and telegraph offices. So it is a place of importance, and increasing in population, and I certainly do think that my hon. friend had better look around and find some other public building against which he can direct his opposition with better ground. So far as I know, this place has no public building, and we are simply giving to the people what they are fairly entitled to.

Mr. FOSTER. Does not my hon. friend think that he might just as well have left out one portion of his remarks when he asked the question, by way of insinuation, if I opposed this vote simply because a minister of the Crown happened to have been elected there?

Mr. PUGSLEY. You let so many others go through.

Mr. FOSTER. Does my hon. friend think that is a manly argument between a member and a minister? Does he really think so? I dare say he does or else he would not have used it. If he thinks so, I think very few people in this House will think so. Had he so poor a case that he had to appeal to his imagination and to a prejudiced imagination? Is that the kind of tactics my hon. friend has to use generally? Is his success due to that? He exemplifies it in this argument. I think my hon. friend would be better advised to leave insinuations like that out when we are discussing an important business matter of this kind. I have no doubt there will be a great many others that I might protest against just the same as this one here. When he attempts to put in places like this $25,000 of the people's money, where are we to end? I would like to have the Postmaster General's frank opinion in reference to this. I have found him a straight and honourable man and I would like to know whether he needs this. If he does

not that settles the question. I am looking into the eyes of people away out in the far distant districts that need things that they have not got, and why should we plant down $25,000 in these little places that are very well served now and leave the great development and progress of the country entirely unprovided for in so far as these extravagances in expenditure make it impossible to carry out these improvements? Are we not business men enough to look at it from a business point of view? Do we need to resort to petty insinuations to patch up a very bad case?

Mr. SAM. HUGHES. Will the minister give us the number of towns in the province which have not yet been favoured with post offices or public buildings whose population is greater than that of Marieville?

Mr. PUGSLEY. I could not give that.

Mr. SAM. HUGHES. What is the county seat of Rouville?

Mr. PUGSLEY. Marieville.

Mr. WRIGHT. I took occasion last year, when matters of this kind were up, to point out that post offices were being built under the Public Works Department where they were absolutely unnecessary. I went into this question, looked up the history of fifty post offices, and I found that the cost averaged about $30,000. Suppose we place the interest on that at $1,200 and the cost of maintenance and repairs at $1,200; that makes $2,400 annually for keeping up these little post offices per annum. I found that prior to the new offices being built the government were paying less than $150 per annum each. The business interests of this country would be better served by the government in these small places renting buildings for post offices purposes. They would save a large sum of money annually even if they were to raise the rental. There is no doubt that there are many men in Marieville and other small places who would be very glad to rent their premises to the government for, say, $200 a year and give the service that the public required. While we have large towns that have no public buildings and have no attention paid to their needs with respect to post office facilities, I think it is wrong to be spending public money in these small places. We have towns in the country having 7,000 population and whose gross postal income amounts to $10,000 that have no public buildings in which to conduct the post office business. They cannot secure buildings from the government which is ready to expend hundreds of thousands of dollars in villages where they are not required at all. In my riding we have three towns with a gross revenue in each one of them running from $5,500 to $7,000 and yet they cannot get a post office. They are not considered large or important enough to warrant the government in the expenditure of public money upon the erection of a post office, but in other sections of the country, in little villages with a gross revenue of $1,300, buildings are erected because they are able to successfully besiege the minister and get money appropriated for that purpose. There seems to be a lack of any business plan or system to guide the Minister of Public Works in the distribution of public money. Every minister who is at the head of a department should make his application to the Minister of Public Works before he undertakes to erect a public building. The Minister of Militia should father the expenditure for the armouries that are erected under his department. The Postmaster General ought to make the recommendation and father the responsibility for the erection of a post office and the same should apply with regard to all the other departments that are under the charge of the government. It is utterly impossible for a Minister of Public Works—I do not care how well qualified he may be—to have that varied knowledge with regard to all the departments of the government which would warrant him in coming to a conclusion upon every application placed before him. He ought to throw that responsibility on the heads of the department and then he should confine himself to carrying out the instructions that they give him and curtail his expenditure in proportion to the needs of the public. When the minister states that there is a population of 2,300 in these two villages that are supposed to be served by this post office and when he states that the total revenue is something over $1,300 he makes a most remarkable statement indeed. Any of the towns in my riding with a population of 2,300 would have a gross revenue of over $5,000 and I think there is something radically wrong with the statement of the minister when he says there is only a revenue of $1,300 from a population of 2,300. There is evidently not that number of people or they do not use the post office and if they do not use the post office I do not think we are justified in spending $25,000 in erecting a building of that size.

Mr. FOSTER. I want to call the attention of the committee, whether it be any use or not, to two other points. In a young country like Canada with a very large area and sparse population greatly scattered, the need for postal accommodation in the way of the carrying of letters and papers fortnightly, weekly, tri-weekly and daily is very great, and from all over that immense territory we have prayer after prayer, petition after petition asking for mail routes in reasonable quantity, which are absolute necessities at the pres-

ent time. Post offices costing $25,000 where the revenue is only $1,300 are absolutely and certainly not. They are luxuries. No, they are not even to be denominated luxuries; they are examples of wasteful extravagance. While hundreds and thousands of people living back in our country places are asking for weekly, tri-weekly and daily mail routes, in order that they may have the visit of the mail carrier and communication with others, allowing them to do their business, what is taking place under the management of this government? The revenues derived from the postal system of the country are being spent in unnecessary buildings, costing $25,000 and more so that there is not sufficient revenue to aid in the development of the mail carrying routes in order that the people in the distant parts of the country may have the visit of the postal carrier more frequently than they do to-day. Take that very instance and multiply it. You have to-day a surplus which goes into the postmaster's till of over $600,000. That surplus should be expended in giving mail service to the people in distant parts of the country, and if you go on erecting post offices out of it, instead of a surplus you will have an absolute deficit. By this means the earnings of the post office are robbed of their legitimate sphere which is to extend the postal facilities of the country. Such a system is not carried out in the United States or in Great Britain. The British post office could not exist for a single year if it undertook the policy of erecting post offices in towns of 1,300 inhabitants more or less. The British post office is managed to facilitate postal communications between the people and it is managed economically, and instead of $30,000 post offices scattered all through Great Britain and Ireland you have inexpensive and sufficient accommodation by rentals and the like. The United States is a rich country with a population of 90,000,000 and the United States is supposed to be very generous with the distribution of its money, but it does not pursue such a policy as is pursued in Canada. It places great post offices in great centres but in the smaller centres it goes on a less expensive plan. Its purpose is to increase the postal facilities for the people of the country. Why should Canada carry on this policy of robbing the post office revenue from its legitimate purpose of giving, more particularly, the people of the remote districts, to whom the arrival of the postman with a letter is a kind of benediction, far more frequent mail service than they have now. I do not make this protest in the hope that it will have any effect on the Minister of Public Works, but I do appeal to the business sense of this committee and I ask that before the vote is passed we shall have the opinion of the Postmaster General upon it.

Mr. PUGSLEY. It is wonderful how the views of the hon. gentleman (Mr. Foster) have changed since he was a member of the government and since he undertook the construction of a public building in the town of Marysville, New Brunswick, where the Gibson Manufacturing Company have their establishment, and in the constituency which I think he then represented, but of that I am not sure. In these days my hon. friend (Mr. Foster) thought that was all right.

Mr. CAMPBELL. I rise to a point of order. I want to know what this has to do with the case?

Mr. PUGSLEY. I am replying to the argument of the hon. member (Mr. Foster) who has charged that we have engaged in a policy of extravagance and are depriving the postal revenue of certain of its moneys, and I am showing that the policy we are now pursuing is that which he himself pursued when in office.

Mr. LENNOX. I rise to a point or order.

Mr. PUGSLEY. Don't you think the hon. member for North Toronto (Mr. Foster) can take care of himself?

Mr. LENNOX. I will ask the chairman to take care of you just now. Assuming for the moment that what the Minister of Public Works says is true, what we are discussing just now is the extravagance of the government in regard to the item before the chair, and what the member for Toronto has done in the past can have no bearing on that question.

Mr. DEPUTY SPEAKER. The hon. gentleman has risen to a point of order, but what he is doing is discussing a point of order raised by another member. If he rises to a point of order he must state his point.

Mr. LENNOX. I am supporting the point of order raised by my hon. friend (Mr. Campbell.)

Mr. DEPUTY SPEAKER. I realize that many of the arguments used and much of the debate is not strictly relevant, but I have hesitated to endeavour to draw the line closer because I believe the opposition are entitled to a large amount of latitude and to a large amount of information when the government asks for a vote. But, so far as the hon. minister has gone, while it did seem to me that it was some distance from this item, yet, he was entering into a question of comparison, and I think I am not called upon to stop him until his argument develops sufficiently to enable me to see whether his comparison is close enough to be relevant to the question before the chair.

Mr. PUGSLEY. I thought that were I able to quote the conduct of a gentleman so prudent and so economical as my hon. friend (Mr. Foster) when he was Minister of Finance, as against his words now, it would be a strong argument to influence gentlemen on the other side. I thought I was making quite a strong point when I endeavoured to remind the committee that the hon. member (Mr. Foster) had justified in the strongest way the erection of a public building in Marysville, New Brunswick, which was not so important a town as Marieville, province of Quebec, in which we purpose erecting this building. But apart from that, I am quite prepared to justify the expenditure of a reasonable amount of public money in the construction of public buildings in the various towns and cities of the Dominion, and particularly so where it means the erection of only one public building in a county. It would seem to meet with the general approval of the House that it was not unreasonable to erect one building in the county town of a county, and Marieville is not only an important manufacturing and a growing town, but it is the county town of Rouville. With regard to the statement made by my hon. friend (Mr. Foster) that it is robbing the postal reveune, I say it is nothing of the kind. There is not one dollar taken from the postal revenue in connection with the erection of this or any other public building.

The Public Works Department pays not only for the buildings, but for the upkeep, the lighting, heating and all the cost of maintenance. Therefore the postal revenue in no way suffers. It is simply a question of policy whether or not we should erect public buildings where they are reasonably required. My hon. friend from Muskoka (Mr. Wright) knows that he has made a demand that we should erect a public building in one of the towns of his constituency. I have not asked my colleagues to provide for it in the estimates this year, because we are spending public money in his constituency by building a much-needed wharf at the town of Gravenhurst, and I thought the matter of a public building might well stand over. My hon. friend from Halton (Mr. Henderson), who is always preaching economy, urged last year that we should erect a public building in the town of Milton, which is growing, and whose claims are no doubt worthy of consideration in the near future, and I do not think my hon. friend would support my hon. friend from North Toronto in the statement he makes that this is evidence of extravagance and waste of public moneys. I think I can very well justify this expenditure. I do not think we should go to a greater expenditure than is reasonably necessary; but when a public building is needed in this town, I think we can very well expend upon it between $20,000 and $25,000. It may be said that we could give a cheaper building. So we could; but the policy of the department is to erect buildings, whatever their size, of a substantial character, built of stone and brick, with solid foundations, and make them as fireproof as possible, so that they will last, and the cost of maintenance and repairs will be reduced to a minimum.

Mr. SAM. HUGHES. Has the site been purchased yet?

Mr. PUGSLEY. Yes, from the corporation, for the sum of $1,500.

Mr. SAM. HUGHES. Is the minister going to have space all around the building?

Mr. PUGSLEY. I think we can do so in this case, as the lot is 64 feet by 132 feet.

Mr. HENDERSON. The hon. minister has seen fit to refer to something which he alleges I said last year in support of his contention that a $25,000 post office should be erected in Marieville. If the minister will revise his recollection, he will remember that I stated that a gentleman who had been brought out from the city of Toronto, supported by the Minister of Agriculture, to contest a rural district, was the man who advocated a post office in the town of Milton and was going to have one if the people elected him. The people did not elect him, and the minister last year gave me to understand that the man had no promise from him of a post office in the town even if he had been elected. But, laying that aside, there is no comparison between the town of Milton and the village of Marieville either as to population or as to revenue. The revenue of the post office in Milton is about $4,000, that of Marieville about $1,300. True, the hon. gentleman adds in the surrounding country. If he did that in the case of Milton, he would get a population far in excess of that of Milton proper. This is a new departure; I think we had better stick by the old rule, when we want to know the requirements of a place, and take the population of the place itself without any reference to the suburbs. I would not have said anything on this matter if the hon. gentleman had not made a reference to the county I represent. I am not going to advocate a building, because if I did the minister would accuse me of being extravagant.

Mr. FIELDING. Then you do not want the building?

Mr. HENDERSON. I am not going to say that. The people would like very much to have the building; they are entitled to have it; but the disposition of this government is not to give them the building. The

hon. gentleman talks about these two hat factories in Marieville. No doubt they are important industries, but right in the village of Acton there is one factory which alone employs about 300 people.

Mr. SAM HUGHES. What do they make?

Mr. HENDERSON. Leather. We have no customs house there, and the people want one badly. But this government is not disposed to accommodate the people. It would rather fritter away money on a small place where there are few people living and a comparatively small business is being done, than give accommodation where a large business is being done. Not many years ago—and the business has increased very rapidly since—the stationmaster told me that for that one firm there were sixty-eight carloads of raw material between Boston and Acton at the same time coming into their large manufactory. That gives you an idea of the extent of that factory, but the Minister of Customs has never given us a customs house. There is another institution there which requires the use of the customs house practically daily, yet this government does not think it worth while to give these people a customs officer or make that place a port or even an outport. If the government do not think it worth while to accommodate the people—and people supporting them too—where large business is being done, they will take the responsibility; and when the proper time comes, no doubt these people will get a customs house and a customs officer. But what I rose particularly to speak of was this. The Minister of Public Works became very jocular a short time ago in his reference to a place down in New Brunswick called Marysville. He accused my hon. friend from North Toronto (Mr. Foster) of having supported the erection of a building in that place and advanced that as an argument for the erection of this one. Well, I have some recollection of the discussion that took place on that item some fifteen or twenty years ago. The hon. gentleman was not here then but his friends were, and hour after hour—I was almost going to say day after day—they used up the time of this House in denouncing the erection of that building. Yet now he makes use of that very structure as a justification for the erection of a building in this little town.

Mr. PUGSLEY. To meet the argument of the hon. member for North Toronto.

Mr. HENDERSON. And a very logical argument it was! I wonder what his friends behind him thought of it. True, I do not suppose there is a gentleman behind him who was in the House then, although possibly his colleague from Brome (Mr. Fisher) may have been there. But as he was out during one session, I am not sure that he either was present. I do not suppose there are more than eight or nine members in this House who were here then, and they have probably forgotten all about it. But I think the minister will admit that it was very illogical on his part to cite the erection of a public building in New Brunswick some fifteen or twenty years ago, which his friends then denounced as highly improper, as a justification for the erection of this one.

Mr. PUGSLEY. I did not say it was improper.

Mr. HENDERSON. But his political friends denounced it for many hours as highly improper.

Mr. HUGHES. The hon. minister advances the argument that the parish of St. Marie de Monnoir is also served by this post office. Well, St. Angèle de Monnoir post office is only three and three-quarter miles from Marieville, and Rougemont is about four and seven-eighths miles from Marieville, and Richelieu four and a half miles, so that the place is pretty well surrounded by post offices and cannot give much postal revenue. But have they no rural mail delivery there?

Mr. PUGSLEY. I am told there is none.

Mr. WRIGHT. The hon. minister has referred to my application a few years ago for a post office in one of the towns in my riding. I did press that matter very strongly on him. But as my riding gives a very large postal revenue, I thought that would entitle one of its towns to some consideration by this government. I was then met, however, by the same statement as that given to-night, namely, that on account of other public expenditure in that riding, the building of a post office could not be entertained. Two years ago there was an item to build a wharf in the district of Muskoka and the government carried that estimate through but they never built the wharf. Last year they left that item out; and when, at the end of two years, I ask for a post office, I am met with the same reply that they are going to spend $4,000 in building a wharf there. Well, we have been now waiting three years for that wharf, and I shall have to go back and tell my people that, although they contribute to the revenue of this country $200,000 per annum, the government can give them neither a wharf nor a post office. It seems absurd that they should be so parsimonious with respect to that county and then spend $30,000 in Rouville in one year. I would not venture to ask the minister for a post office in my riding for a village which only gives the government a gross revenue of $1,300. We have plenty of villages in my constituency that size, but I would never

dream of asking for a post office at any one of them, but where we have a good large town with a good postal revenue, I am justified in asking for such an expenditure. I would not want a post office costing $25,000 to be built in a little village which gives only $1,300 gross revenue.

Mr. FOSTER. I want to call the attention of the House to the way in which the minister argues. I leave it to the chairman of the committee if I did not address myself to the question in point. I made two or three arguments, and the Minister of Public Works has never attempted to touch one of them. I asked him why, if Great Britain pursued a certain policy with regard to these general post offices, we should not carry out something like that policy here. I made another statement, that the United States does not indulge in this kind of expenditure, but carries on its post office in much more economical way by a system of rental and gives its great and widespread population all the advantages they require. It did seem to me that what was good policy for Great Britain and good policy for the United States in that respect might be good policy for Canada. Did the Minister of Public Works touch that argument? He did not. I used the other argument that there was a dissipation of the post office revenues in the construction of these public buildings, thereby reducing the surplus of the post office and preventing the furnishing of better postal facilities for the people. And how did the Minister of Public Works meet that argument? With a blank negative. He says: It is not true; my department pays all this expenditure. Why, the other night the minister led the House to believe that he paid his own laundry bills when travelling in an official car, but a question put to him later brought out the information that he put in his bills to the government—

Mr. PUGSLEY. The hon. member will excuse me; I did not make such a statement.

Mr. FOSTER. I find him figuring in the departmental accounts for large amounts for travelling expenses.

Mr. PUGSLEY. But the hon. member (Mr. Foster) said that I figured there for my laundry bills. I say that is absolutely untrue.

Mr. FOSTER. I am bound to accept the hon. minister's statement. But what I have said was the understanding in the House at that time, it seems to me.

Mr. PUGSLEY. No, it was not.

Mr. FOSTER. Of course, I accept the hon. gentleman's statement and do not pursue the subject further. But the hon. gentleman is absolutely wrong when he says that the post office does not suffer a diminution of its revenue by the building of twenty-five thousand dollar buildings in such places as Marieville. The moment you put up such a building in such a place, the surplus of the post office is reduced by added expense. For, when you have a twenty-five thousand dollar post office, you have to pay your postmaster and his assistants more salary. Other expenses also are increased. The result is that the post office itself is affected in its revenue by this drain. But what an argument for the Minister of Public Works, a grown man, to use in this committee—that his department pays for it! Whence comes the money to meet the expenditures of his department? Part of it comes from the revenues of the Post Office Department. There is a yearly surplus of something up to $1,000,000 which goes into the general fund into which flow all the revenues of Canada. Therefore every useless expense that the hon. minister puts upon the country by paying $25,000 for a post office in a place with a population of 1,300 and with a revenue of $1,300 means just so much deducted from the revenues of the country and diminishes by that amount the possibility of a department like the Post Office extending its facilities as it otherwise might. Now, these are arguments addressed to the subject, and I call the attention of the committee to the way in which the minister does not meet them—or the way in which he thinks he meets them by going back twenty-five years or more to prove inconsistency on the part of the hon. member for North Toronto (Mr. Foster). The inconsistency of the member for North Toronto is not in question; the question before the committee is the proposed post office at Marieville. I have presented arguments on that subject and I believe they are good ones, but the minister slid around them on a side issue not touching one argument that I gave. I also put to him the question whether he did not think that, as this was an expenditure for the benefit of the Post Office Department, we should at least have the approval and request of the Postmaster General. Now, a new policy is laid down by the Minister of Public Works. It is that wherever you find a district with 1,300 people, having a village of about 1,300 more—

Mr. PUGSLEY. Seventeen hundred in 1907.

Mr. FOSTER. Well, give the minister the benefit of that—a district of 1,300 with a village of 1,700,—especially if it be a county town—you should spend $25,000 of the people's money in putting there a public building, no thought or question as to whether the public business requires that expenditure or not. But the moment you put up your building you saddle the country with an expenditure of 10 per cent annually for

depreciation, interest and so on. That is a charge forever upon the revenues of the country. Carry out this policy so that wherever you have this aggregation of 1,700 people with 1,300 around them and what is the result? Now, these, I think, were arguments, and the minister met them in his own peculiar way.

Mr. SEXSMITH. We have succeeded in getting quite a detailed description of the little village of Marieville which has been very interesting to me. I was glad to learn that it has manufactures, schools, churches and a population of 1,700. But the fact remains that the total post office revenue of this flourishing village is less than $1,400. In the riding I have the honour to represent there are a number of prosperous, thriving villages, each with its own churches, schools, manufactures, nice residences and so on, and each with a good country around it by including which you would have a population of 3,000 or 4,000. And in these places you have a post office revenue two or three times as much as that of Marieville. Yet these places never thought of asking this government to put up a $25,000 post office. I have no objection to this village, it being a county town, having a post office, but I do raise my protest against the spending of $25,000 to build a post office for a population of less than $2,000 and a revenue of less than $1,400. I consider it preposterous. If all the little villages and towns in the province of Ontario were to come down here thundering after the minister, and asking for post offices costing $25,000, places yielding a revenue twice the revenue of this little village, why, he would be overwhelmed. Now I enter my protest against the expenditure of $25,000 on a post office in a town of that size, with a revenue of less than $1,400. I can understand the minister wishing to build a post office there, but one costing $10,000 or $15,000 would be adequate. Why, we heard an hon. member of this House telling us last week of a town of 16,000 or 18,000 where the people were lined up outside waiting for their turn to enter and get their mail, and yet there is no effort to provide proper accommodation for those people.

Mr. SPROULE. For several years in succession I have drawn attention to what I consider to be a growing abuse. We have now a good example of that abuse in this proposal to build a post office in a place where the revenue is only $1,300. I have taken the trouble to look over the government returns, and I have found several villages and towns in the section of the country that I am acquainted with that have no post office, and every one of them have a revenue much larger than Marieville. Here they are:

Place.	Revenue.
Jarvis	$2,018
Keewatin	2,400
Huntsville	5,557
Iroquois	2,361
Kemptville	3,681
Lakefield	2,743
Lanark	1,800
Leamington	4,900
Little Current	2,235
Lucan	2,000
Lucknow	3,120
McDougall's Chute	2,212
Madoc	3,033
Markdale	2,706
Markham	2,170
Georgetown	4,020
Glencoe	2,050
Gore Bay	2,080
Grand Valley	2,309
Gravenhurst	5,015
Shelbourne	3,601

Mr. PUGSLEY. We have given Lakefield a very fine wharf.

Mr. SPROULE. But you have not given any public buildings?

Mr. PUGSLEY. We have just built a post office at Georgetown.

Mr. SPROULE. It is not so stated in the returns brought down by the government last year.

Mr. PUGSLEY. It has just been completed. We have also just completed a post office at Glencoe.

Mr. SPROULE. Probably, as in the case of Markham, it was put there in order to carry the riding. None of these places that I have mentioned have a post office, though every one of them has a much larger revenue than Marieville. Then go out to Lethbridge, where people are actually paying for the right of getting into the post office to get their letters, one in front of another, a large place with five times as much revenue as Marieville, and no effort is made to accommodate the public there. But when you come to this small village called Marieville with a revenue of $1,300, they must have a public building costing $25,000. Does not the minister think that is very unfair to these places with more business and of greater importance? I think it is unjustifiable, it is more, it is an absolute waste of public money. I venture to say that to-day, for fuel, lighting and so forth, we do not pay more than $175 a year; but after we have built this post office we will pay $400 to $600 for a man to take care of it, we will have to pay insurance, we will have to pay for repairs, and then we will have to pay for fuel, wood and light in addition. Is that fair to other places with a much larger population and of greater importance? Is it a business way of spending the country's money? I say that no logical defence can be made on business

principles for spending this amount of money in Marieville.

Mr. MARSHALL. I think I can present very good claims for a post office in my town of Aylmer. I was disappointed in looking over the estimates to find that the minister had not set aside something for a post office in Aylmer. I have taken the pains to look up some points where the government has given grants. Aylmer has 2,300 inhabitants, and the revenue from the post office is $6,000 or nearly $6,500. The following statement shows the expenditures that have been made by the government on post offices in other places:

	Population.	Revenue.	Grants.
Aylmer, Ont.. ..	2,395	6,405.26	
Aylmer, Que.. ..	2,291	1,611.14	5,000
Chesley..	1,734	4,471.00	1,500
Dresden	1,613	2,897.00	1,500
Elora	1,187	3,275.72	5,000
Essex Centre.. ..	1,391	3,310.00	1,500
Harriston..	1,637	1,643.34	1,500
Leamington	2,451	4,903.34	23,000
Tilbury..	2,209	2,842.00	10,000
Tilsonburg	2,241	7,084.00	1,500
Fergus	1,386	4,009.00	5,000
Kincardine	2,077	4,522.00	6,000
Listowel	2,692	6,213.00	15,000
Mount Forest.. ..	2,019	4,873.00	15,000
Glencoe..	1,118	2,959.40	26,000

There are a number of small towns also in which grants have been made but there is only one town among fifteen in which the revenue is greater than in Aylmer. The customs collected at Port Burwell amounted, during the last fiscal year, to $100,000; at Port Stanley to $98,000 and at Aylmer to $10,000, making $208,000. I think I have established the claim of this place to a post office. I differ from some of my friends on this side of the House. I believe that the government is perfectly justified in spending money where it is needed.

Mr. SAM. HUGHES. I have not heard anybody on this side of the House object to that.

Mr. MARSHALL. I do not think it is necessary to put large buildings and spend too much money, but I think I have established my claim for a post office at Aylmer. I have been in this House for four years and every year I have been trying to get a grant for a post office but I have not succeeded. I hope that when the Supplementary Estimates come down the minister will give us enough to start with.

Mr. PUGSLEY. My hon friend will find that in the estimates which are under consideration there are very few new items. There may be some exceptions to that but the great majority of the items asked for are in respect of public works which were in the estimates of two years ago. I think the claims of Aylmer, as presented to me now and as presented to me a year ago, are very strong and I beg to assure my hon. friend that they will have my most careful consideration. I am glad that my hon. friend takes such a reasonable view of this question. Without disparaging the view of hon. gentlemen opposite, because they have a perfect right to take any view that commends itself to their judgment, I must say that the view presented by the hon. gentleman is the only one which has been presented from that side of the House that appeals to my judgment. The hon. gentleman takes the correct view that it is not against the public interest to make reasonable expenditures for public buildings where these public buildings are reasonably and fairly required. I do not find that the hon. member for North Toronto (Mr. Foster) gets up and objects to the large expenditure in the city of Toronto. I do not suppose that the hon. gentleman who represents the city of Hamilton will object to the large expenditures in that city. But we ought not to forget that the small towns throughout the country are as much entitled to reasonable and fair consideration as these larger cities. If it were not for the people in the villages and small towns these large cities would not be as prosperous as they are to-day. They are fed by the rural districts and the small towns and villages. We are not expending upon all these small buildings in all the small towns and cities as much in one year as we sometimes spend upon one of these large cities such as Montreal and Toronto. Therefore, I think the request that is made by the hon. member for a reasonable recognition of the claims of the smaller cities and towns throughout the country is fair and just, and it will afford me very great pleasure as Minister of Public Works to recognize these claims when they are fairly presented to the House as they have been presented to me this evening by the hon. gentleman who has just taken his seat.

Mr. SAM. HUGHES. The question is all in the use of the word 'reasonable.' There has been no gentleman on this side of the House, that I have ever heard, object to any reasonable expenditure, but when the minister is satisfied to claim that a $25,000 post office in a little two by four village—

Mr. PUGSLEY. A growing town.

Mr. HUGHES. A little two by four village—that is all it is. I have half a dozen towns in the riding that I have the honour to represent larger than this and I would not insult the intelligence of the people of my riding or the House of Commons by coming here and asking for post offices to be scattered around like this. An ordinary building is ample in any one of these villages to accommodate the public as far as the post office is concerned. Twenty-five thousand dollars for a post office in a little

two by four town like Marieville is unreasonable and therefore the minister's argument does not hold good.

Mr. SPROULE. The minister advances the argument that many of these estimates were put in two years ago. They were just as unjustifiable then as they are to-day. Why were they put in? When there was an election coming on the estimates were padded by these large proposed expenditures and then after the election was over they were allowed to drop and the government did not go on with the expenditure. The minister advances that as a justification for voting this money now and going on with the expenditure. That is one line of defence. Another is that these small places are entitled to expenditure. I do not think his argument is worthy of the consideration of any intelligent man in this House. The first consideration that ought to engage the attention of this House is: What is required for the accommodation and service of the public? Where you can get a building for a rent that will be very much less than the interest upon the money which would build another suitable for the accommodation of the people, you are not justified in spending the money upon a public building. But if we are told that this is for the accommodation of the public, why not accommodate Lethbridge where there is such a large return?

Mr. PUGSLEY. We are going to accommodate Lethbridge.

Mr. SPROULE. This has been going on for two or three years and a most urgent appeal has been made by the member for the constituency but it has fallen upon deaf ears. We are not here for the purpose of distributing money over the country for the sake of making an expenditure where it is not needed. That should not be the aim of parliament. Therefore there is no force in the argument of the minister. Nor, is there any cogency in the argument, that because the estimates were padded two years ago in anticipation of an election we must carry them out in some cases while in other cases they must be dropped. We must be guided by the requirements of the public. If the public can be accommodated at a less expenditure to the country than by putting up a public building it should be done in that way. If you are justified in expending money in a small place like that in the province of Quebec, by the same parity of reasoning you are justified in spending public money in every similar small place in every province of the Dominion.

Mr. EDWARDS. It was thought originally that this post office would be constructed for $5,800.

Mr. PUGSLEY. I never made that statement.

Mr. EDWARDS. There was $5,800 orignally voted.

Mr. PUGSLEY. That was only to begin.

Mr. EDWARDS. There is nothing in the vote to show that it was only to begin, and when your estimates contain no explanation it is reasonable to suppose that the vote would cover the cost of the building. On behalf of the people in my county I protest against the squandering of money in this way. Last year I went to the Postmaster General with petitions from residents in different parts of Frontenac asking for better mail facilities. In one of the oldest settlements in the province of Ontario about ten miles from the city of Kingston, the residents have a mail service three times a week and for years they have been asking for a daily mail service the extra cost of which would amount to only $50 a year, and when I presented that petition to the Postmaster General I was told that the government did not have the money to spare for that. In another part of my county the nearest post office is five miles away from the nearest of the residents and seven miles distant on the average and they have been asking not for a daily mail service but simply begging and praying for post office facilities and a mail twice a week, and the minister has told me that they have no money for that purpose. There are many like instances in the county of Frontenac and I presume in other counties throughout the Dominion where the people in the rural communities are suffering for lack of proper mail facilities. The Minister of Public Works has laid down a new doctrine to-night and one which may give some light to the people of my county, when he told a gentleman on this side of the House that the reason they did not erect a public building in a large town in his riding was because they spent some money on the harbour in that constituency. I suppose then that the people of Frontenac are to take it for granted that the reason they have to walk seven miles for their mail is because nearly $100,000 was spent on providing residences at Kingston for men drawing a salary of $400 a year. I suppose, had the member for Frontenac asked some years ago for better postal facilities, he would have been told that the government had already spent a large amount of money in that county for erecting stables for the military college, which, although erected five years ago have never had a horse inside of them yet. That is the way the money of the people is squandered.

Mr. PUGSLEY. Is Kingston in the hon. gentleman's constituency?

Mr. EDWARDS. Kingston is not in the hon. gentleman's constituency, but it is in

the county of Frontenac and these stables are in Barriefield which is in my constituency, and I suppose because they have been erected in Barriefield and the money expended in the county, that is the reason why people in the county of Frontenac have to walk seven or eight miles to get their mail, although my constituents have not got any benefit from these stables, nor have the soldiers either.

Mr. HUGHES. Nor the horses.

Mr. PUGSLEY. I made no statement such as the hon. gentleman (Mr. Edwards) attributes to me.

Mr. EDWARDS. The minister gave as an excuse for not erecting a post office in a certain place where the revenue was far greater than it is in Marieville that the government had spent money in erecting other works in the constituency.

Mr. PUGSLEY. The hon. gentleman is speaking of rural mail delivery.

Mr. EDWARDS. I did not mention rural mail delivery to-night and the Minister of Public Works must be dreaming if he thinks I did. I am referring to the fact that there are people in my county who are not asking for rural mail delivery but who have to walk seven and eight miles to get their letters and who want a post office placed in their midst.

Mr. PUGSLEY. Has the hon. gentleman pressed for the erection of a post office building in his constituency?

Mr. EDWARDS. Of a $25,000 building?

Mr. PUGSLEY. Of any building?

Mr. EDWARDS. No, I have not.

Mr. PUGSLEY. What does the hon. gentleman complain about?

Mr. EDWARDS. I am not responsible for your understanding if I cannot make it clear to you. What we ask is that you allow some person in that neighbourhood to keep a post office in his house so that the people will not have to travel seven or eight miles to get their letters. Does the minister understand now what I am talking about? To bring this matter to a head, and believing this vote is not a reasonable one I move that this item be reduced by $6,500.

Mr. PUGSLEY. It seems to me that the hon. gentleman has not given any reason why this item should be reduced. Marieville is a progressive town, factories have been recently erected there and a large number of people employed.

Mr. SPROULE. According to the figures the minister gave us, it has only grown during the last six years at the rate of fifty a year.

Mr. EDWARDS.

Mr. PUGSLEY. It has increased from 1,300 to 1,600.

Mr. HUGHES. The minister has spoken of the population being up to 1,700. What authority has he for making that statement?

Mr. PUGSLEY. There was a census taken by the municipal authorities in 1907, and the population was then 1,671. It is estimated that now, including the students and attendants at the college, there is in the town of Marieville alone a population of 2,000, while if you add to that the population of the parish which immediately surrounds the town, you will have a population of about 3,000 people who will be accommodated by that public building. If we are going to erect a substantial building, I do not see how we can do it for much less than the amount named. Therefore, I hope the committee will see that it would not be reasonable to support the amendment of the hon. member for Frontenac.

Amendment negatived.

Megantic public building—revote of $4,900 lapsed, $10,000.

Mr. HUGHES. What is the population and revenue?

Mr. PUGSLEY. The population is nearly 2,000.

Mr. BLAIN. What about the site?

Mr. PUGSLEY. It has been purchased at $4,000.

Mr. HUGHES. When was it purchased?

Mr. PUGSLEY. In January, 1907, from the Presbyterian congregation. The postal revenue is $2,637 and the customs revenue $10,777.

Mr. EDWARDS. What is the estimated cost?

Mr. PUGSLEY. $25,000, including the site, heating and everything.

Montreal general post office—enlargement and alterations, $80,000.

Mr. PUGSLEY. This is for completion of the work which has been under contract. We are obliged to make considerable alterations to the old building so as to make it in harmony with the new building and more fireproof.

Mr. SPROULE. Is this intended to finish the work there?

Mr. PUGSLEY. No.

Mr. SPROULE. How much will be required?

Mr. PUGSLEY. That depends on what we do. If we make the old building fireproof, it is going to cost considerably more.

There is a strong inducement to do so, as we have made the new building fireproof.

Mr. SPROULE. Should not the minister have his mind made up as to what he is going to do before he comes and asks for a vote?

Mr. PUGSLEY. What we are asking for will just about complete the payments on the present contract. If we go on and remodel the old building and make it fireproof we shall have to come to parliament for another vote.

Mr. SPROULE. It is an insult to the intelligence of the people's representatives for ministers of the Crown to ask them to vote public money without giving them the information they are entitled to have. Twenty-five years ago the minister of the Crown would be shamed out of this House if he could not give more information than the hon. gentleman has given us to-night.

Mr. PUGSLEY. I have a great deal.

Mr. SPROULE. If the hon. minister has, he manages to keep it to himself most sedulously. He thinks he can jolly the House along without giving any information, and it is often to my mind a question whether he really desires to give the information even when he has it, and whether he does not think it infra dig to give information to members of the opposition. That conduct has so often shocked my sense of right that I cannot refrain from giving expression to my opinion concerning it.

Mr. PUGSLEY. The trouble with my hon. friend is that he gets unduly excited. What information does he desire with regard to this post office building?

Mr. SPROULE. I want to know how much we are committing ourselves to in the expenditure on this undertaking, what will it cost when completed, what is the outline of the building we propose to erect, is it fireproof, is it of wood, stone or brick, and will it give the service required? If contracts have been let, have they been let by tender and has the lowest tender been accepted? If plans have been made out, what do they show? He says that I am unduly excited. Has he ever sat in this House and heard the right hon. the Prime Minister explain his estimates. I never saw an occasion on which that right hon. gentleman had any trouble with them. Why? Because he is perfectly frank and candid and courteous, and when asked a question immediately answers, and shows no desire to jolly the House along or keep back information. How is it that it takes the Minister of Public Works so much longer to get his estimates through than the Prime Minister? Because the Prime Minister, and I may say the same of several others, shows a desire to give all the information he can without reserve.

Mr. PUGSLEY. As the hon. gentleman is an old member, I cannot allow to pass certain remarks and innuendos made by him without some reply, especially when he uses language so unparliamentary as to say that I am seeking to jolly the committee. When he does so, he shows that he has but a slight appreciation of the meaning of words.

Mr. SPROULE. What I said was that that was the impression left on my mind and what appeared to be the disposition of the hon. gentleman.

Mr. PUGSLEY. Not being able to look into the mind of my hon. friend to see what kind of a mind it is, I cannot know what gives him the impression of an attempt on my part to jolly the House. I have no desire to jolly the hon. member or any member of the committee. It is impossible for him to point to a single instance in which I refused to give all the information possible. He ought to bear in mind that there are some twelve hundred items in the estimates. I cannot keep them all in mind, but have to rely on my chief architect and my deputy and the memoranda I have for the information asked. On reflection my hon. friend will see that it was very unfair on his part to pass these reflections without asking a single question.

Mr. SPROULE. Did I not ask the hon. minister what he proposed to do with the $80,000?

Mr. PUGSLEY. I said I was considering the question of making that building fireproof and then said that this amount would just about cover the contract now had with Lyall and Sons. He asks why I did not tell him whether this contract was let after tender or not. Well, two years ago we made the contract for that building, and I then told him we would spend this whole sum on the building as then contemplated, but that if we decided to make it fireproof we would have to ask for a further vote. I think he will see on reflection that he does me a great injustice. I trust that he will let the item pass, and when he wants information be good enough to ask for it.

Mr. HUGHES. Who was the contractor?

Mr. PUGSLEY. P. Lyall and Sons.

Mr. HUGHES. What contracts have they with the government other than this?

Mr. PUGSLEY. First, the main contract which was for rebuilding the new part, then the heating apparatus. The electric wiring was given to Dawson & Company, Limited, of Montreal.

Mr. SPROULE. The hon. minister says I did not ask him a question. I asked him specifically whether this was all the expenditure that would be required, or whether he would require any more.

Mr. PUGSLEY. I said that if we decided to make the building fireproof we would require to ask for more.

Mr. SPROULE. I would suppose that before undertaking the expenditure of money the minister would have made some calculation and be able to give the House some information as to what this building will cost the country when completed. He replied that would depend on whether more expenditure would be made after this vote. In seven cases out of ten when I put him a question, the minister will turn to something else and try to divert attention and apparently does not desire to answer frankly.

Mr. PUGSLEY. Oh, no.

Mr. SPROULE. I have seen other Ministers of Public Works, I have seen Sir Hector Langevin, when Minister of Public Works, stand for hours with his book in his hand and his deputy beside him, and give all information regarding the item under discussion in advance without waiting to be asked. If anything were neglected or forgotten in his memo, he would ask his deputy. Sir Richard Cartwright, when he was in this House, did the same.

An hon. MEMBER. And the Minister of Agriculture.

Mr. SPROULE. The only trouble with him is that he is so anxious to give information that a few questions will keep him going all night.

Mr. HUGHES. Has this firm any other contracts with the Public Works Department in any other part of Canada?

Mr. PUGSLEY. No, no other.

Mr. EDWARDS. What is the amount of the contracts let?

Mr. PUGSLEY. For the addition to the main building, $487,527; heating apparatus, $18,407; electric wiring and fittings, $6,392.46.

Mr. EDWARDS. To whom are they let?

Mr. PUGSLEY. For the addition to the building and for the heating, Messrs. P. Lyall & Sons, and for the electric wiring and fittings, Dawson & Co., Ltd.

Montreal—new postal station 'D,' at Point St. Charles, $6,000.

Mr. SPROULE. I submit, we have done a pretty fair day's work, and the minister should let us go.

Mr. PUGSLEY. We ought to finish up Quebec; we have only a few items.

Mr. SPROULE. We are only about half through.

Mr. HUGHES. Finish Montreal.

Mr. PUGSLEY. This $6,000 will complete this new building.

Plessisville public building, $2,000.

Mr. SEXSMITH. What is the population of Plessisville?

Mr. PUGSLEY. In 1901 it was 1,586.

Mr. HUGHES. In what county is it?

Mr. PUGSLEY. In Megantic. This amount will complete the building. It is under contract.

Mr. EDWARDS. I do not think it fair to go on with the succeeding items, for they are for buildings for militia purposes, and the Minister of Militia is not here. He ought to be here when these items are under consideration.

Mr. PUGSLEY. I'll tell you what we might do,—let us pass over these votes for military buildings and take the next five small items.

Mr. BLAIN. There are members from Quebec who are not present, and I think these items should be left over.

Mr. PUGSLEY. We had better take the item for Roberval.

Mr. BLAIN. No matter when a suggestion is made to stop, the hon. minister always has three or four more items that he wants to put through.

Mr. PUGSLEY. I have left over these military items. We might take Roberval.

Mr. BLAIN. No, Mr. Chairman. I think it time to close the House. I do not want to be over anxious, but I think it only fair to the committee that proceedings should close.

Mr. SPROULE. We get along better if, when we have done a reasonable day's work, we stop.

Mr. PUGSLEY. I should be sorry to keep my hon. friends here too late.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. What business will be taken up to-morrow?

Mr. FIELDING. The first government order will be the French Treaty, and, if we reach other government orders, Supply.

Motion agreed to, and House adjourned at 12.05 a.m. Tuesday.

HOUSE OF COMMONS.

TUESDAY, November 30, 1909.

The SPEAKER took the Chair at Three o'clock.

CO-OPERATION.

Mr. LLOYD HARRISS (Brantford) moved for leave to introduce Bill (No. 50) respecting co-operation.

Sir WILFRID LAURIER. Explain.

Mr. HARRIS. I am introducing this Bill for the reason that our present laws do not appear to provide for the incorporation and supervision of co-operative societies. My hon. friend from Jacques Cartier (Mr. Monk) introduced the other day a Bill for the purpose of providing for the incorporation and supervision of co-operative societies confined solely to the loan and credit aspect. I had intended providing in my Bill for the incorporation and supervision of trading societies only. However, after consideration and consultation with my hon. friend, I thought it better to introduce a Bill which would cover both kinds of societies. Therefore the Bill I am introducing provides for the incorporation and supervision of all kinds of co-operative societies.

Motion agreed to, and Bill read the first time.

THE FRANCO-CANADIAN TREATY.

Hon. W. S. FIELDING moved second reading of Bill (No. 12), respecting a certain supplementary convention between His Majesty and the president of the French Republic. He said: Mr. Speaker, the purpose of this Bill is to obtain parliamentary approval of a small amendment which the government have agreed to make to the Franco-Canadian Treaty of 1907; an amendment which, from the Canadian point of view, is not of very great importance, though I will not say it is of no importance, but which nevertheless is somewhat important from the point of view of the French authorities, inasmuch as it served to disarm hostility which was manifested in the French Senate towards the approval of the treaty. I do not deem it necessary to discuss the merits of the main treaty. That measure was brought before parliament in the session before last, it was fully considered and fully discussed, and the House, by something approaching a unanimous vote, decided that it should receive approval. In due course that treaty was approved by the Senate of Canada, and an Act of parliament was passed accordingly. The treaty was approved within a reasonably short time by the French Chamber of Deputies, a body which corresponds to our own House of Commons. It then passed to the French Senate, and there considerable opposition arose, particularly from prominent gentlemen identified with the agricultural interest of France. They were very much alarmed by the concessions which were being granted by France to the Canadian farmer—possibly needlessly alarmed, certainly in some respects. At all events, the agricultural interest of France is one of the utmost importance, and any suggestion that the French government were agreeing to measures which would prejudice the agricultural interest found many listeners, and for some considerable time the treaty was delayed in the Senate. The French government were most loyal to the treaty which they themselves had made. By every reasonable effort within their power they were willing to have that treaty approved; but they had to realize the difficulties which were encountered in the French Senate. When I had the opportunity of discussing the matter with the French authorities in Paris, it was suggested by the French ministers that if we could make material concessions in the agricultural schedule, it would help them very much to obtain the approval of the treaty. I did not feel that I would be justified in consenting to any considerable change. As the negotiations proceeded, it became apparent that the item of cattle was one as respects which our French friends were particularly alarmed. Some paragraphs appeared in the French press about that time to the effect that certain American organizations were about to establish huge slaughter houses at one of the French ports, and it was expected that there would be a large importation of fat cattle ready for the butchers, and this would affect materially the French agricultural interest.

In the discussion, finding that the point was one which was regarded by the opponents of the treaty in the Senate as of the utmost importance, I thought we could find in it a solution of the difficulties between France and Canada in the matter. I found on inquiry that Canada had not been doing any considerable cattle trade with France, practically none, and that whatever we might hope for the future, it was not likely that we could in the early future send fat cattle to France ready for the butcher. And so, after due consideration, finding that the concession in regard to that particular class of things, would help to secure the French approval of the treaty, would be very agreeable to the French government, and would disarm to a very large extent, though not wholly, the opposition which had arisen in the French Senate, after communicating with my colleagues, I agreed that to the four items in the treaty which dealt with cattle we should add the qualifying words, 'to the exclusion of fat cattle ready for the butcher.' That is

to say, we still reserve the right to send in under the French treaty cattle which are not ready for the butcher, but which are to be finished in France before they pass to the slaughter house. The concession, as I have said, was one of only moderate importance from the Canadian point of view, but was regarded as a very important one by the French authorities, and was the means of disarming hostility to the treaty and ultimately obtaining the consent to the Senate thereto. We having consented to make this concession, a question arose as to what should be the method of determining the line of demarcation between fat cattle, which should be excluded and other cattle, which would be entitled to the privilege of the treaty. Our French friends proposed that the line of demarcation should be found by indicating what they called a percentage of neat meat, that is to say, the percentage of meat which an animal would produce ready to be placed in the butcher's stall, and excluding hides, horns and the various other elements which hon. gentlemen more familiar with the cattle industry will readily understand. While the proposal was not unreasonable in itself, I felt that it was a method not understood by our Canadian farmers, and that perhaps it would not be the best method of establishing the line of demarcation. Besides there was this further difficulty which arose in our minds, that if we should make a mistake by having a percentage of neat meat established which experience would show was not a correct one, which would be perhaps unfair to Canada, it would nevertheless be so definitely fixed in the treaty that we would have no right to revise it.

Mr. R. L. BORDEN. Is this test capable of ascertainment while the animal is alive?

Mr. FIELDING. Yes. Expert buyers in the French market are accustomed to estimate, from the general appearance of the animal as it passes before them, and I have no doubt with a fair degree of accuracy, what percentage of neat meat that animal will realize. It is done in practice in France; but, as I thought the method was not understood by our Canadian people, and there was a bare possibility that in fixing the percentage at that time an error should be made, I thought it well that the percentage should not be definitely fixed in the treaty. And so, I proposed to the French authorities that instead of defining it in the treaty, we should declare in general terms that what was meant was that fat cattle ready for the butcher should be excluded, and that we would leave the interpretation of that to the French government. Necessarily each case would have to be determined promptly. If a shipment of cattle should arrive, it would be necessary to determine that point at once, and we recognized the right and propriety of the French government deciding that at once, and that their decision should be final. But, we said, if it should appear at any time that the decisions you are giving on that question were unreasonable and unfair and at variance with the spirit of the treaty, then we shall ask the privilege of going over to your French office and making our representations and relying on the French government to correct any error that may be found. The French authorities agreed to accept the amendment in that way, and we were strongly of the opinion that, while we are leaving the matter for the moment absolutely to the judgment of the Department of Agriculture of France, we might rely on the French government receiving our representations and correcting any error that might be found in the conclusions reached. Added to the treaty there will be found an exchange of letters which practically form part of the treaty. I beg to be permitted to read these two, because they contain the whole case on that point. The first is from myself to Mr. Ruau, Minister of Agriculture of the French Republic.

Paris, February 8, 1909.

Sir,—As a result of the recent negotiations between members of the French government and myself with a view to the recasting of schedule A of the Franco-Canadian Commercial Convention of the 19th September, 1907, by the exclusion, from the list of the Canadian products enjoying the benefit of the minimum tariff, of animals in fat condition for butchering, I have considered your suggestion to adopt a percentage of neat meat as a line of demarcation between animals to be admitted under the minimum tariff and those three excluded therefrom. I am of opinion that it would not be expedient to include this modus operandi in the convention itself, as it touches only the methods of carrying out what is proposed.

I would prefer that the proposed formula be inscribed in our agreement in general terms indicating our mutual understanding, and I would leave with the French government the duty of giving to this complementary clause a fair and reasonable interpretation by means of customs regulations. We would have no objection whatever to the adoption by the French authorities of the percentage method, should they prefer that method, as it could be changed or modified in case a trial of it were to demonstrate that it did not give satisfaction, and the Canadian government would reserve then to itself the right of making necessary representations to your government.

I am, sir, with the highest regards,

Yours very truly,

W. S. FIELDING.

That letter was replied to in the following terms by the French Minister of Agriculture, Mr. Ruau:

Paris, January 8, 1909.

Excellency,—The object of the negotiations which have been proceeded with for

these last few days between yourself and the French government was as far as my own department is concerned, to modify schedule A of the Franco-Canadian convention of September 19, 1907, by the exclusion from items 4, 5, 6 and 7 of the list of the Canadian products admitted to the benefits of the minimum tariff, of animals in fat condition for butchering. By your letter dated January 8, 1909, you were good enough to let me know that, without rejecting the suggested system of a fixed percentage of neat meat as a fair line of demarcation between animals enjoying minimum tariff and those submitted to the general tariff, you will prefer that the proposed change should be inscribed in our agreement in general terms; and you add to this that you would leave to the French government the duty of interpreting this clause as fairly and reasonably as possible by means of regulations. In case of the adoption by the French authorities of the percentage system above mentioned, the Canadian government would make no objection to said adoption, it being understood that should the experiment be found unsatisfactory, your government would reserve to itself the right of making the necessary representations to the French government.

In answer to your communication, I have the honour to inform you that we are fully in accord as to the following formula to be used in schedule A of the convention of September 19, 1907, as to the Canadian products enjoying the minimum tariff:—

No. of the French tariff products.

4. Oxen (1).
5. Cows (1).
6. Bulls (1).
7. Bullocks, steers and heiffers (1).

To the exclusion of animals in fat condition for butchering.

With regard to the system to be applied in order to ascertain what animals are to be subject to the minimum tariff and what to the general tariff the French government reserves to itself the right to follow the method of the percentage of neat meat or any other fair and equitable method, it being well understood, that, in order to avoid any dispute between the importers and the French government, the condition of the animals, as to the matter in hand, shall be determined by duly sworn special agents of the ministry of agriculture, whose findings shall be final.

I beg to add that, in the unlikely event of experience founded on a series of well authenticated instances, demonstrating to our two governments that the method adopted by the French government is defective, the governments of Canada and France would jointly seek another modus operandi.

May I beg you kindly accept, Excellency, the assurance of my high esteem.

(Sgd.) J. RUAU,
The Minister of Agriculture.

So it was agreed that we should make this concession and that, rather than adopt at once the French system of percentage of neat meat, we should agree to leave the matter in the hands of the French government, accepting their assurance that it would be administered in good faith, and that, should any difference arise, we might rely on a friendly adjustment between the two nations. So far I have dealt with all that is in the treaty. The treaty itself contains only a few lines, and these letters annexed are to be read as part of it.

There is another point to which attention was drawn and which was dealt with, not in the treaty itself, but in a friendly correspondence. It touches the question of direct importation. In the main treaty, article 8 reads as follows:

To enjoy the benefits of the aforementioned tariff advantages, products originating in France, Algeria, the French colonies and possessions and the territories of the protectorate of Indo-China, shall be conveyed without transhipment from a port of those territories.

That is from a French port—or from a port of a territory enjoying the preferential tariff or intermediate tariff into a sea or river port of Canada.

The latter part of the clause corresponds exactly, in reversing the order, and provides that a Canadian product shall be conveyed for transhipment from a Canadian port or from a port in a country enjoying the French minimum tariff to a port in France. When the main treaty was under consideration, my hon. friend from Jacques Cartier (Mr. Monk) asked what interpretation we put on that clause, and my answer was to the effect that, in the absence of any qualifying or modifying words, where reference was made to a country enjoying the intermediate tariff or a country enjoying the preferential tariff, we thought it would be held to mean a country enjoying the whole of such tariff.

Mr. R. L. BORDEN. What article is that?

Mr. FIELDING. Article No. 8. We did not take any formal legal opinion on the point, but I gave at the time what seemed to be the general impression and what seemed to be the ground we, acting for Canada, should properly take. The question became of interest to Switzerland. Switzerland was a little impatient, hardly willing to wait until the treaty was ratified in due course, and desiring that an interpretation should be given the clause at an early date, made application, through the diplomatic channels, to know the Canadian interpretation. Switzerland is an inland country, ultimately determined to be one of the nations entitled to favoured nation treatment, and she was interested in knowing from what ports she should send her goods, these goods being of the same class as mentioned in the treaty. We did not, at that time, think it was desirable that we should undertake to interpret that in any formal and official way. We thought that if the matter was in doubt it ought to be the subject of negotiation with the French authorities before we should give any final

interpretation. What we understood from the reading of the treaty was that Switzerland might send her goods to Canada by way of England, because England enjoyed the whole preferential tariff. We were asked if we would care to give an expression of opinion. Having first pointed out that as the treaty had not been completed, was not yet ratified and had not gone into operation, we were indisposed to come to any official determination on that point and lay it before a third party, yet, in answer to the request of the imperial authorities, we stated the view which we had expressed in parliament in answer, if I recollect correctly, to the question of my hon. friend from Jacques Cartier (Mr. Monk). That interpretation was accepted and approved by the British government with, however, the remark that the point was not free from doubt.

Mr. R. L. BORDEN. What was the nature of the answer to the hon. member for Jacques Cartier?

Mr. FIELDING. The answer was to the effect that the words 'a country enjoying the benefits of the preferential tariff'—or the intermediate tariff or the minimum tariff—would mean in each case a country enjoying the full tariff. We gave the interpretation that we thought, from the Canadian point of view at the time, we should uphold, and the imperial authorities concurred in that interpretation, but with the remark that the matter was not free from doubt.

The treaty having been disposed of by the French Senate, it had to go back to the French Chamber of Deputies which had passed the main treaty, but had to deal with the supplementary treaty. Again some difficulty arose with regard to the position of the treaty. Although the Chamber of Deputies had accepted the main treaty, the discussions which had taken place in the Senate had attracted attention. Very influential members of the Senate had taken strong ground against the treaty, and when the supplementary treaty had to come before the Chamber of Deputies considerable opposition was developed there. That opposition was, however, ultimately overcome, and the Chamber of Deputies passed the treaty. So that all that remains is that the parliament of Canada shall give its approval to the supplementary treaty, and then will follow formal ratification.

Under later negotiations which, in some cases, did not take the form of correspondence, though in some cases they did, our French friends raised the same question that had been raised by Switzerland. We presented the same view that we presented to the parliament of Canada—that shipment of goods by way of a country under the preferential tariff would mean a country enjoying the whole preferential tariff, and so with respect to the other tariffs. But the French authorities took a different view. They pointed to provisions in their own customs regulations, founded, necessarily, upon the French statutes, showing that they were in the habit of interpreting a substantially similar clause, so that where a third country enjoyed a favourable tariff as respects the particular article to be exported, that covered all the conditions. In other words, they argued that if, for example, France wished to send her products by way of any other country which had the benefit of the Canadian intermediate tariff as respects the particular item referred to, she should be free to do so.

Mr. FOSTER. Free as regards that class of goods.

Mr. FIELDING. Yes, that was the point. Our contention, up to a certain point, was that, unless the country had the whole tariff, it could not claim that privilege. As I have said, they were able to show that, under somewhat similar conditions in the administration of their own custom laws, they recognized the principle that if there was favourable treatment as respects that one article the privilege should be given in relation to that article as though they had the benefit of the whole tariff. They urged us very strongly to agree to that. From our own point of view it did not seem a matter of very much importance. What we were aiming at was the cultivation of direct transatlantic trade. We desired the French goods to come direct from France to Canada. If they were to come through any other country, we would naturally prefer that they should come through Great Britain. But if the goods should come through the ports of any European country having a treaty with Canada, they would still be direct trans-atlantic shipments. While we preferred they should come by Britain, the vital matter, according to our views, was that the goods should come direct across the Atlantic to a Canadian port. According to our interpretation, Switzerland, being entitled to the benefit of the treaty, could only send her goods by way of Great Britain, because Great Britain alone had the complete preferential tariff. Under the interpretation which the French claimed, and which Switzerland was anxious to have, Switzerland could send any article under the treaty by way of Havre, a French port, because under our treaty France would have the benefit of the intermediate tariff as regards that article. If, for instance, Switzerland wanted to send a parcel of silks, under our first interpretation she would have to send it to a British port; under the later interpretation she could send it to a French port, because France has the benefit of our intermediate tariff as regards that article. Under either

interpretation, that would be accomplished which we principally desired—direct trade with Canada. As France thought it important, and as it did not seem to affect our policy in any material way, we came to the conclusion that we would accept the French interpretation. But I thought that, in view of what had occurred in this parliament, I should point out to the French government that we had given a different interpretation in parliament and that therefore the agreement I was disposed to make with them would be subject to the reservation that if on inquiry we found further legislation was necessary we should make the matter subject to revision by the parliament of Canada. However, on my return from France, having brought the matter to the notice of the Department of Justice in a more formal way, we asked if further legislation was necessary to enable us to accept the interpretation of that clause respecting direct shipment. After consideration, the department advised that it was not necessary to legislate on the question, that if the customs authorities saw fit to give that interpretation, they could do so and still be within their legal rights. Therefore, we have not proposed legislation on this point. It will be observed that the British government accepted our interpretation of the clause given in the first place as the correct one, though, at the same time, intimating that the point was not free from doubt. Seeing that it was a point to which our French friends attached importance, and that it did not affect our chief purpose of having direct transatlantic trade with Canada, we decided to accept that interpretation, and, under the advice of the Department of Justice, we have concluded that that can be done without further legislation.

Mr. FOSTER. One word before the minister sits down. He has given the theoretical part of it, will he kindly make the argument concrete and show us in how many ways, that is, by how many routes, French goods can get into Canada, and by how many routes Swiss goods can get into Canada and still come under the treaty?

Mr. FIELDING. By a route through any country which has a favoured-nation treaty with Great Britain, and a list of such countries has been given to the House. Practically it is only the countries having well known sea-ports, but any countries possessing a favoured-nation treaty with Great Britain will receive the benefit of the French treaty.

Mr. R. L. BORDEN. I understand that a favoured-nation treaty with Great Britain would be of no importance at all in connection with this treaty unless it extended to Canada, would it?

Mr. FIELDING. Although we go through the form of passing legislation to give effect to it, it has been held by the imperial authorities that these favoured-nation treaties apply to the whole British empire, and consequently apply to Canada.

Mr. R. L. BORDEN. But there is a marked distinction, as any one who has looked over the British treaties of the past twenty years will have discovered, between those which in terms cover the various dominions of the empire and those which do not. I would like to avoid any misapprehension. As I understand it, all the governments of Great Britain within the past fifteen or twenty years have made a distinction in framing their treaties in that regard.

Mr. FIELDING. In recent years of course, as every one knows, no treaty is made concerning Canada except with the co-operation and concurrence of the Canadian government, and any treaty made in recent years would not be included unless it is specifically made with Canada, that is, it would not apply to Canadian products. To-day there are a number of treaties which have been held to be binding on Canada, made many years ago, and it is these to which I refer.

Mr. R. L. BORDEN. The vital part, the essential part of it is that the most favoured-nations clause practically is one applying in respect of Canada to the foreign countries alluded to.

Mr. FIELDING. In the case of the older treaties there is no specific reference to Canada, in some cases there is no specific reference even to the colony.

Mr. R. L. BORDEN. I am not speaking of specific reference at all.

Mr. FIELDING. Some of the older treaties, such as the Swiss treaty, which was a subject of some doubt, and which was made away back in the fifties, do not specifically refer to Canada, or even to the colonies. But I suppose in the general terms of all such treaties there was room for debate as to what that meant.

Mr. R. L. BORDEN. I think my hon. friend does not quite understand me.

Mr. FIELDING. The hon member for North Toronto put the question. What are the countries through which these goods may be shipped from France.

Mr. R. L. BORDEN. My hon. friend, in answer to the member for North Toronto, defined it in respect to the United Kingdom. I say that it ought to be defined, so far as I understand the treaty, in respect to Canada, because there are some treaties that bind the United Kingdom and do not bind Canada.

Mr. FIELDING. My answer was that every one of the countries which, by virtue

of the favoured-nation treaties, become entitled to the privilege of this French treaty. Have I made the point clear?

Mr. R. L. BORDEN. Yes.

Mr. FIELDING. That is what I have in my mind. I think I have met the question of the hon. member for North Toronto.

Mr. DANIEL. Will that include the United States?

Mr. FIELDING. The United States has no favoured-nation treaty that affects us.

Mr. ARMSTRONG. How many other countries would receive similar advantages as France is receiving in this treaty?

Mr. FIELDING. That matter has been from time to time one of doubt; it is not as simple a problem as it looks. The language of some of these treaties is open to doubt, and there is sometimes a conflict of opinion as to what countries are entitled to favoured-nation treatment. But the countries which are recognized as entitled to the favoured-nation treatment are: The Argentine Republic, Austria-Hungary, Bolivia, Colombia, Denmark, Japan, Russia, Sweden, Venezuela, Norway and Switzerland. Most of these are old treaties, in the framing of which Canada was not asked to take part. But the Japanese treaty is one which was made directly with the co-operation of Canada.

Mr. ARMSTRONG. There is another question I would like to ask the minister. I sent a question into the Clerk of the House, but it has not appeared on the Order Paper to-day, though it appears in the Votes and Proceedings, I wish the minister would be good enough to answer it before we proceed with the discussion. Is the government prepared to grant to Germany a similar treaty to the one accepted with France?

Mr. FIELDING. I do not mind anticipating the orders of the day for to-morrow. But a similar question was put a few days ago, and the Minister of Customs replied that it was not deemed expedient, while these matters connected with the French treaty were still unsettled, that we should enter into negotiations with other foreign countries.

Mr. R. L. BORDEN. I have very little to say wtih regard to the treaty at this stage. My hon. friend has very correctly pointed out the situation. We already ratified the main treaty two years ago, and there was a subsequent delay owing to the inaction of the French Senate. My hon. friend said that the amendments and provisions of the supplementary treaty are regarded as important by those interests in the French Senate which objected to the original treaty. He considers that they should not be regarded as very important by this House. I am inclined to think he is correct. Perhaps I will give his argument a more comprehensive application than he himself would be inclined to do, because I have serious doubt indeed whether the treaty will have any great effect upon trade between France and this country. The treaty entered into by the Conservative government of 1893 did not, I think, have any great effect upon trade. I do not think that this treaty will give us any very marked change, either in the imports or exports of this country from or to France. We have to remember that France is a highly protectionist country. If we look for a moment at the articles to which the Minister of Finance has alluded, and to the French tariff applicable to them, we will see what the situation is. In regard to articles 4, 5, 6 and 7, the maximum of the French tariff is 30 francs per 100 kilograms, the minimum tariff is 20 francs for 100 kilograms.

In other words, under the minimum tariff which is available to Canadian exports, provided the cattle are not fat cattle for butchering, an animal weighing 2,000 pounds would pay $36; under the French maximum tariff, a similar animal would pay $54. The figures which I have given are not absolutely exact, but they are sufficiently accurate for practical purposes. These duties are in my opinion practically prohibitive. I think, therefore, the Minister of Finance is perfectly justified in saying that he would not anticipate a very large export from Canada to France under the minimum tariff, and I am sure he can be absolutely positive that there will be no export whatever under the maximum tariff. So when he points out that this supplementary treaty does not bring about any amendment which is of importance, I entirely concur with him, but perhaps not for the reason that he suggested. I concur with him because I do not think that the treaty in its original form, in respect of this item or any other touching especially the agricultural interests of this country, will be of the slightest benefit to Canada in the immediate future.

Something may be said by way of emphasis in addition to what was said when the treaty was under debate two years ago. It is hoped by a great many people in this country and throughout the empire that we may have under the British flag some day in the not too distant future a system of mutual preferences. We at the present time give to Great Britain a preference in our markets, a preference which is very much cut down by comparison under the provisions of this very treaty, so far as France is concerned. I doubt very much the wisdom of complicating our tariff by treaty provisions which would prevent Canada

from fully entering into a system of such mutual trade preferences. However, I did not vote against the treaty on that ground two years ago, and I am not disposed to vote against it to-day on that ground for the reason that the treaty includes a very important clause by which it may be brought to an early termination in case of necessity. There is a provision in the treaty that it can be denounced, that is brought to a termination, at any time upon twelve months' notice. If that provision were not in the treaty, I would be disposed to vote against it for the reason I have lastly given, but as that provision is in the treaty, I think probably it will safeguard our interests, so far as the probability of a system of mutual trade preferences between Great Britain and the rest of the empire is concerned.

Has the Minister of Finance given us, in his remarks this afternoon, everything which is of importance in the correspondence brought down? It was my expectation that before this treaty was brought on for debate, the correspondence would have been printed and placed in possession of every hon. member of this House. That would seem to be the usual and wise course; but if the Minister of Finance has placed before us everything of importance in that correspondence, of which we are not in possession except in some returns in the hands of one of the officials of the House, I will not be inclined to object on that account. Otherwise I think the treaty ought to stand until we have the correspondence printed and placed in the hands of every hon. member so that we may thoroughly realize what we are doing when we ratify the treaty.

Mr. FIELDING. If any intimation had been given that it was desired to have the correspondence printed, I would have had no objection. There is nothing in it as between France and Canada except a formal notice that the treaty has been, in due course, approved. But there is some correspondence which passed between the Canadian government and the British government on inquiries from Switzerland on the lines to which I have referred, not touching the treaty directly but raising this question as to the proper interpretation of one clause. I think I am correct in stating that the correspondence contains nothing between Canada and France with reference to the treaty, but there is correspondence incidental to it, respecting the inclusion of other countries, and that it will be found in the correspondence brought down.

Mr. J. E. ARMSTRONG (East Lambton). Mr. Speaker, I feel satisfied that the present treaty will complicate our trade arrangements with other lands. I am glad and willing to support any trade arrangement that will bring to Canada better trade facilities and means whereby we can get our products to the markets of the world, but I am satisfied that the present treaty, as it grants to practically every important country in Europe, except Italy and Germany, advantages similar to those granted to France, there is no doubt in my mind that it will create all kinds of trade disturbances.

In granting to France this treaty it seems to me that instead of our writing across it the title 'Franco-Canadian Treaty,' we might as well have entitled it 'The Switzerland Treaty' or the 'Austrian Treaty' or the treaty with any of the European nations.

I feel it my duty to place on 'Hansard' some statistics in regard to the effect it is likely to have on the agricultural interests of Canada. The total exports to France from Canada last year were $3,176,000. The exports of foreign produce amounted to $834,000, so that the total Canadian produce exported to France amounted to only $2,340,000. In looking over the Trade and Navigation returns, I find the following items of export which are interesting from a farmer's standpoint: Our exports from Canada to France of the following items of agricultural produce were: Butter, none; cheese, $81; eggs, none; animals, none; meats, viz. bacon, $40; beef, none; hams, $144; mutton, none; pork, none; poultry, dressed or undressed, none; meats, all others, not otherwise specified, none; milk and cream, condensed or canned, none; wool: none; dried apples, $3,000; green apples, $2,000; barley, none; buckwheat, none: Indian corn, none; oats, none; peas, $34,000; split peas, $3,000; rye, none; wheat, $105,000; other grain, none; bran, $6; flour of wheat, none; oatmeal, none; all other kinds of meal, none; hay, none; hops, none; clover seed, $730; flaxseed, none; grass seed, $1,120; all others, none; straw, none; trees, shrubs and plants, $2,500; vegetables, canned or preserved, $195; potatoes, none; turnips, none. It is quite an exception for Canada to export $105,000 worth of wheat to France because France is a large producer of wheat herself. In normal years our exports to France in wheat are very small. France is really an exporting country in farm products. Taking all the products of the farm last year the exports to France amounted to only $150,000. And yet the Finance Minister practically admits that Canadian farm products will not go in under any more favourable conditions and are not more likely to be exported to France under the new treaty than they were under the old. What you do by this treaty is to say to the steamship companies that you shall give them $200,000 per annum to trade with France directly when practically all the products exported from our farms to France

last year amounted to only $150,000. Let us see how you are going to benefit our trade with France. The imports into Canada from France amount to about $10,000,000 and you can depend upon it that the French manufacturers will be able to ship goods into this country in much larger quantities than they have in the past. But, are we Canadians getting any benefit from this treaty? Our exports of agricultural implements to France were as follows: Mowing machines, $184,000 worth; reapers, $62,000 worth; harvesters, $260,000; hay rakes, $4,000 worth; other manufactured agricultural implements, $194,000 worth; parts of agricultural implements, $44,000 worth; making in all $761,000 worth of agricultural implements that are being shipped by us into France. One other important item is canned lobsters and $990,000 worth of canned lobsters went into France last year. But with regard to canned lobsters the present treaty is the same as the old treaty so that our trade in that respect is not helped in any degree. However, these two items of export make a total of $1,750,000. and if you deduct this from our general exports you can readily see what a small amount of exports we have in other lines. Now, Mr. Speaker, I believe that we should have a definite tariff policy with regard to all countries in the world. Look at the sad plight our trade is in with the German empire. Surely it is time for the government to wake up to the fact that the time has come when we should improve our trade relations with Germany, and yet when I mentioned Germany a short time ago the Prime Minister indulged in a hearty laugh.

Sir WILFRID LAURIER. Oh, no.

Mr. ARMSTRONG. Let the Prime Minister look at the immense importations which Germany is making from the different nations of the world. Germany is today importing two billion dollars worth of goods, one billion dollars worth of which is in food products and over $300,000,000 worth of which is for just such agricultural products as we produce in the Dominion of Canada. Let the Prime Minister remember that Germany imported last year $96,000,000 bushels of barley, 41,000,000 bushels of oats, 25,000,000 bushels of rye, 73,000,000 bushels of wheat—not one bushel of which was from Canada—a total of 236,000,000 bushels of grain valued at $216,000,000 and yet Canada got into Germany out of that immense quantity only $2,619 worth. Surely the German trade is of some importance to the people of this country. France is self-supporting in the matter of agricultural products, but Germany is far from being so, and hence it is incumbent on the government to arrange a trade convention with the German empire and put an end to this trade war which has had such disastrous results for the last thirteen years. To-day we are supplying forty per cent of the British demand with the products of our farmers, and when you take into consideration that ten years hence our great western prairies will be producing 500,000,000 bushels of grain, must we not arrive at the conclusion that it is absolutely indispensable we should have a trade arrangement with Germany, which is the second best market in the world for agricultural products. Just take one other item; the United States sent into Germany 28,000,000 pounds of evaporated apples last year, valued at $2,400,000; 123,000 barrels of green apples, valued at $620,000 or an average of over $5 a barrel. The total quantity of apples imported into Germany was 2,839,000 barrels and Great Britain imports only about 2,500,000 barrels. Germany with its 63,000,000 of a population needs just such products as Canada produces and it is in our interest to trade with her. Look at some other figures which will be of interest: There was imported into Germany from Australia $42,000,000 worth, from Brazil $47,000,000 worth, and from the Argentine Republic $106,000,000, from Chili $46,000,000 worth, from the United States $16,000,000 worth, and from Canada a paltry $1,900,000 worth. The Prime Minister knows full well that perhaps eighty per cent of the exports of the Argentine Republic are agricultural products, and I would be safe in saying that at least $80,000,000 worth of her exports to Germany were agricultural products. The Minister of Customs told me that last year we sent to Germany $500,000 worth of agricultural products and that this year it would only reach $300,000 worth. When is this tariff war going to end? Should we not come here like business men and take steps to put an end to this disastrous condition. Does not the Prime Minister know that during the past few months there have been in Canada, speaking before our Canadian clubs and our Boards of Trade, representatives of the Board of Trade of Berlin, Germany, who realize that the tariff war between Germany and Canada has lasted long enough and who urge that some amicable arrangement should now be arrived at? I have met these gentlemen from time to time and I feel satisfied that were the Canadian government to make approaches to Germany their advances would be most cordially received. We have had enough of these tariff treaty blunders; the Minister of Finance has for years been neglectful of his duty in this respect, but I trust that now he and the other members of the government will realize the importance of making some sensible trade arrangement with Germany. Instead of more Canadian goods going into Germany from year to year, there are constantly less and less, and there are less German goods coming into Canada. We can not expect to obtain

control of a large portion of the German market in a short time, for it takes years to develop a trade in Germany. It is all very well for this government to spend thousands of dollars to try to develop a trade with Japan, when we have to educate the people of Japan to eat the products which we are producing. But here are 63,000,000 people who are importing a billion dollars worth of food products every year. It is time we got rid of this trade war with Germany and come to some understanding with this country.

Mr. LALOR. If I am not out of order, I would like to ask the Minister of Finance or the Minister of Customs what brought about the misunderstanding with Germany? Was it our British preference? In what year was it that Germany placed a surtax on Canadian goods, and in what year was it that Canada retaliated?

Mr. FIELDING. My hon. friend has correctly stated the cause of the difference between Germany and Canada. When Canada claimed the right to grant preferential treatment to Great Britain, the point was raised that we were debarred from doing so, not by reason of what is called the ordinary favoured nation treaty, but by two treaties of a different character. The favoured nation treaty demands only that whatever favour is given to one foreign nation shall be given to another. But in the cases of Germany and Belgium there were special treaties which provided that in the British colonies German goods and Belgian goods should be received on the same terms as the goods of Great Britain. It was felt, therefore, that we were not free to carry out our desire to grant a preference to Great Britain unless those treaties were removed. As a consequence, I think I may fairly say, of the action of the parliament of Canada in declaring for that preference, and in putting it into operation as far as we could, the British government gave notice to Germany and to Belgium that those treaties would be denounced; and they ceased to exist, if my memory serves me rightly, in 1898. Thereupon Germany complained that they were not receiving from Canada the favours which they had formerly received. After the denunciation of those treaties our British preference had full effect. We granted the preferential rates to Great Britain, while, of course, the products of Belgium and of Germany paid the rates of the general tariff.

Mr. R. L. BORDEN. The British preference had been granted before that.

Mr. FIELDING. The British preference was granted in the first instance in 1897. Out of that grew the discussion to which I am referring, and in 1908, on the first day of August, if my memory serves me, the German and Belgian treaties were denounced. I think the denunciation of the treaties took effect in the summer of 1898, and thereupon Great Britain received the preferential rates, while Germany and Belgium became liable to the rates of the general tariff. Belgium, it is only fair to say, never complained, but to her credit recognized the fact, apparently, that this was a family affair of the British empire, which we had a right to arrange as we pleased. Germany took exception to our action, and thereupon imposed her maximum tariff on imports from Canada. After the treaty was denounced, Germany entered into a new treaty with Great Britain, but from its benefits specifically excluded Canada, and from that time forward Canadian goods entering Germany were made to bear the maximum rates of duty. From that time forward we were obliged, under our policy, to impose the higher rates on German and Belgian goods. We entered on negotiations with Germany through the usual diplomatic channels, which occupied a long time. At a later stage we entered into negotiations directly with the German Consul General at Montreal, Mr. Bopp. Representations were made by the government of Canada to Germany, to this effect, that we were not denying to Germany anything that we gave to any other foreign country, but something that we were giving solely to the mother country; and we urged that Germany should not recognize what was a family affair of the British empire as discrimination against Germany. We urged that view of the matter in various ways, and several years passed before we reached the conclusion that nothing more could be done with Germany; and finally we imposed what is called the surtax on German goods imported into Canada. This was done because Germany claimed the right to interfere in the family affairs of the British empire, and that we would not agree to.

Mr. SPROULE. Sir Charles Tupper warned the government in 1897 that that would be likely to take place.

Mr. FIELDING. If we had not undertaken the step we did at that time, it is a moral certainty that the treaties would never have been denounced.

Mr. R. L. BORDEN. My recollection of the dates is that the new treaty between Great Britain and Germany was made on the very day the old treaty ceased to have operation, or on the day immediately afterwards.

Mr. FIELDING. Quite likely.

Mr. R. L. BORDEN. That treaty, then, must have been in process of negotiation for some months during the period imme-

diately anterior to the denunciation of the old treaty. Was this government aware that the British government was going to enter into a treaty with Germany from the benefits of which Canada would be excluded?

Mr. FIELDING. It might be understood that we would get the benefits of that treaty if we gave up our preferential policy.

Mr. R. L. BORDEN. There is another question. Did the new treaty give to Germany the same rights in the markets of the other British dominions as the mother country had?

Mr. FIELDING. I think that Canada and one of the West India Islands were excepted. Otherwise the treaty applied to the whole British empire.

Mr. R. L. BORDEN. That is not quite an answer to my question. The old treaty provided that Germany should have in the markets of Canada, Australia and all the other British colonies, the same rights as Great Britain herself had. In the new treaty, which must have been before the government, and the terms of which they must have been aware of, was there any provision similar to that?

Mr. FIELDING. I have not had the treaty before me for years, but I remember that it did exclude Canada and, if my memory serves me, one of the West India Islands.

Mr. R. L. BORDEN. I do not make myself clear to the hon. Minister of Finance. The new treaty might give the benefits of the minimum German tariff to Great Britain and all the British dominions without at the same time providing that Germany should have the same tariff rates in those dominions that Great Britain herself had. What I would like to know is whether that is the case. When the German minimum tariff is applied to all the British dominions except Canada, was that the consideration of the granting to Germany of the same rights in the markets of those dominions as Great Britain herself had?

Mr. FIELDING. I would not care to answer off hand as that applies to a matter now somewhat distant. As respects the other colonies, I would not care to say definitely how it affects them, but its relation to Canada we had clearly in our minds and that was as I have described.

Mr. R. L. BORDEN. In the despatch which announced the denunciation of the treaty, Lord Salisbury said it was denounced in the interests of the whole empire. That was the principle he affirmed. But when a new treaty was being made by which the minimum German tariff was to be applied to the remainder of the empire, why should it have been withheld from Canada?

Mr. FIELDING. At that time Canada was the only portion which adopted a preferential policy and the others were not affected as we were.

Mr. R. L. BORDEN. That shows the importance of the other question I put. Unless Germany retained the right within the markets of every dominion of the empire to have the same privileges as Britain herself, the answer of the Minister of Finance is absolutely without significance unless that particular provision were made in the new treaty.

Mr. FIELDING. We were chiefly concerned in the provisions respecting Canada and of these we have no doubt.

Mr. R. L. BORDEN. Still Canada has exactly the same right as any other dominion of the empire to be treated with consideration in a treaty made by the empire as a whole, particularly as that treaty was brought about under the circumstances to which the Minister of Finance has just alluded.

Mr. F. R. LALOR (Haldimand). My object in asking that question was in order that we might be put right as to what appears to be our present trade relations with Germany—whether Canada was in any way to blame for the surtax placed by Germany on Canadian goods and whether we are right in retaliating. My own view is that we were perfectly within our rights and that the government acted wisely and properly in placing a surtax on German goods to offset the surtax which Germany placed on our goods. My hon. friend from Lambton (Mr. Armstrong) appears very solicitous for our farmers in connection with the export trade of Canada to Germany. But we should not lose sight of the fact that notwithstanding the surtax, our trade with Germany is greater than it was previous to the imposition of that surtax. In 1890 we exported to Germany $507,000 worth of Canadian goods, both agricultural and manufactured. In 1891 we exported $532,000 worth. In 1892, $942,000; and in 1893 $750,000. And so on down to 1896 when we exported $757,000 worth. In 1898, when Germany placed a surtax on Canadian goods, we exported $1,837,000 worth to that country. When you look over the returns of the exports of this country to Germany, you will find that our trade with Germany has not been seriously affected by the German surtax, and I have no doubt that Germany, during the years previous to the present trade relations, was importing a large quantity of agricultural products. During those years their imports were just as great as to-day; and even though we had better trade relations then, our ex-

ports to the German market were not very great. I do not think that this is a question of much importance to Canada because our trade with Germany was very small even before the German surtax was placed on Canadian goods.

There is another side to the question. We know of the great advantages which Germany has in the way of manufacturing woollen and linen goods and a great many other lines of manufactured goods as well; and if we allow those goods to come into this country under any favourable arrangement such as the hon. member for Lambton (Mr. Armstrong) advocates, we will have a slaughter market in Canada for goods made in Germany to the detriment of the Canadian manufacturer and the people who work in the Canadian factories and those who have their money invested in them.

I do not want to speak longer on this question. My hon. friend from Lambton (Mr. Armstrong) says we should not sit idle and should not allow this sort of thing to go on without expressing our views. Well, I do not propose to sit idle any longer on this question which the hon. gentleman raises from time to time. I do not see what else the government could have done than place a retaliatory surtax upon German goods. The only way by which we can get better trade relations with Germany is by cancelling our present preference to Great Britain, and I do not suppose that the Canadian people generally are anxious that should be done.

Mr. ARMSTRONG. Would the hon. member for Haldimand (Mr. Lalor) not think it possible for the government to so arrange the tariff that they could protect the woollen industry in which he is interested?

Mr. T. CHISHOLM (East Huron). There is a very important question under consideration, the French treaty, and I think it would be well to give a little attention to that matter before taking up our trade relations with Germany. As one of those who voted against the French treaty on a previous occasion, I wish to put myself right. It has been said that I voted against it because it bore the name French. I wish to inform the House that such a statement is absolutely unwarranted, and I think I made myself very plain with regard to the matter on a previous occasion. But that is the only argument they can bring up to counteract what I have to say in opposition to the treaty. In any treaty to be made with France, we should be disposed to give it our most favourable consideration. Our French Canadian compatriots have been very kind in supporting us in giving the British preference, and I feel that if any favour can be done to them, the very name French treaty would induce me to swallow a great deal I would not otherwise accept. My objection to the French treaty was simply with regard to one or two items. I objected to the introduction of absinthe into this country, also to the introduction of imitation brandy, and my reason was that absinthe is one of the ingredients contained in those imitation brandies. To show the nature of the imitations, you can for about twenty cents buy a bottle of imitation brandy in France, while you have to pay twenty times that price for a bottle of the real stuff.

Now, I object to the introduction of these two things. When this matter first came up for consideration, I requested the government to make an effort to have these two things eliminated from the treaty. But I find them named in the schedule as receiving the benefits of our intermediate tariff. I hold that they should be prohibited altogether. It would appear that our French friends can get modifications made in the treaty which are expected to benefit them. They were able to exclude our fat cattle, and apparently our representatives were willing that these should be excluded. Could not our representatives seek modifications also and ask that absinthe be excluded from this country? When I last spoke I did not wish to take up the time of the House by reading from the documents then before me, not wishing to delay the House. But to-day I shall ask the House to listen to the reading of an article which appeared in the 'Daily Standard' of 23rd of November, in regard to absinthe. I believe the people of Canada do not know what they are doing in allowing this poisonous drug to be brought into this country. The article to which I refer says:

> Alarmed by the ravages of absinthe which is sapping the mental, moral and physical life of that nation, France is demanding a war of extermination upon the deadly drink.
>
> The trades unions of the country, leading members of the Chamber of Deputies, prominent physicians, business men and statesmen are organizing a national petition, demanding that the manufacture and sale of absinthe be prohibited. In France, this insidious poisonous liquor is held responsible, in great part, for the decadence of the nation, its falling birth rate, hundreds of murders and the appalling number of insane.
>
> Authorities among the petitioners assert that absinthe kills tens of thousands of people every year. More of it is consumed in France than in the rest of the world together, and it is causing epilepsy, tuberculosis, madness and crime.
>
> Formerly one of the soberest of men, the Frenchman has now become the heaviest drinker in the world. Brought to a per capita basis, he consumes each year liquors which contain no less than three and a half gallons of pure alcohol. The American consumes one and a third gallons.
>
> As this estimate includes women, children and many men who do not drink, the con-

sumption by the drinking population of France is, as may clearly be observed, somewhat startling. Alone, Paris swallows no fewer than 5,000 quarts of absinthe daily. It is estimated that at certain hours one-fifth of the entire population is engaged in drinking a liquor which is condemned by the entire medical world.

Belgium, long suffering from the same evil, has at last aroused. Its law-making body has just banished absinthe, in every shape and form from that country.

Absinthe is a liquor, the base of which is an alcoholic solution of certain essential oils derived from a number of plants. The chief source is a form of wormwood, or absinthium.

Other absinthe of inferior quality, is made from various herbs and essential oils, and adulterations are numerous and deleterious. As adulterants, turmeric and indigo, and, in some cases, sulphate of copper, have been used, chiefly for the production of the green colour in the lower grades.

And I may say that the green colour of absinthe has led to the name given to the liquor as 'the lady in green,' or, as some call it, 'the curse of France.'

When excessively used, absinthe gives at first a feeling of accelerating intoxication. Later, the digestive organs are deranged, the appetite destroyed, then thirst, giddiness, ringing in the ears, hallucinations of sight, heavy mental oppression, anxiety, loss of brain power and idiocy may succeed each other.– Encyclopædia.

Unquestionably, the effects of absinthe are far more harmful than those of whisky.

Alcoholic insanity, that is where the sufferer's mind is permanently unbalanced, is a comparative rarity. In France insanity from absinthe is common. For example, take fifty men and let them drink whisky steadily to excess, and fifty other men, under the same conditions, drinking absinthe.

I warrant that twenty or twenty-five of the latter will find their way to the madhouse, and I question whether in the same time one whisky drinker will have reached the insanity stage.

These statements were made a few years ago by Dr. Charles S. Potts, a specialist in nervous diseases. Dr. Horatio C. Wood, professor of materia medica and therapeutics in the University of Pennsylvania, had this to say: The effects of the decoction differ materially from those of pure alcohol drinks, though the percentage of alcohol in absinthe is greater than in almost any other intoxicant. This percentage ranges anywhere from 47·66 in the ordinary grades to 80·66 in the best Swiss absinthe.

You can judge what the effect will be when Switzerland also introduces her absinthe into this country, for in Switzerland, a great deal of absinthe is manufactured.

Effects manifest in an absinthe drinker constitute a series of symptoms designated as absinthism. Characteristic symptoms are restlessness at night, with disturbing dreams, great tremblings of hands and tongue, vertigo and the tendency to epileptiform convulsions.

Mr. T. CHISHOLM.

A strange feature of this national evil which has fastened itself upon France is the fact that it has developed within the memory of many persons now alive.

And I fear that some now living will see the time when Canada also will be cursed with absintheism as France is today.

The drink first made its appearance in the country upon the close of the Algerian war in 1847 or 1848. While in Algiers, the French soldiers adopted the custom of the natives in using the liquor to fight the low fever of that malarial climate, and they grew to like it so well that they carried it home with them.

Since then absinthe has been the steadily growing curse of the nation, says an authority, until now the French are the most nervous and excitable people under the sun.

Not only has the liquour its effect upon the drinker, but, through him, makes a marked impression on the succeeding generations. It is for this reason more than any other that the French as a nation are deteriorating.

Vast quantities of absinthe are used in that country. The annual importation from Switzerland alone reaches over 2,000,000 gallons, while the French distilleries produce many times that quantity.

In addition to the 5,000 quarts that Paris drinks each day, the proportion, according to figures given by the Minister of Finance, is almost as great in the provinces. It is estimated that every 5,000,000 of the population drink 10,000 quarts of absinthe daily—and there are many drinks in a quart bottle.

So it has come to pass that the Frenchman, with his annual consumption of liquors that put into his stomach three and a half gallons of alcohol, is now the hardest drinker in the world.

A much heavier statistical burden rests upon the shoulders of the actual drinkers, as the figures quoted as per capita, including men and women who do not drink, as well as children.

In point of alcoholic consumption the Swiss and Belgian come next, with two and two-fifths gallons each annually. The Spaniard gets away with two and a third gallons; the Italian with just a little less; the Englishman and German two and one-tenth, and the American with one and a third gallons. The most abstemious man in the world, the Norweigan, consumes only half a gallon in a year.

Not only then do the French people drink more than any other people, but they drink the most harmful intoxicant that is made.

Government officials and thinking men of the republic have long recognized the baneful affects and growing extent of the evil, but so far have been powerless to limit either.

Absinthe manufacture has become such a profitable, and even respectable, pursuit that the proposed legislation against it has always failed.

Visitors to Paris frequently remark that they see no drunkenness on the streets. Absinthe does not produce rowdyism or cause boisterous conduct. Its evil effects are subtle, quiet and insinuating.

One French characteristic of this drink habit, however, may be plainly noticeable to

the stranger, this is the arrival of the daily absinthe hour.

For the better classes—business men, clerks and similar workers—this is between 5 and 6 o'clock in the afternoon, when the man who has been confined at his desk or counter all day thinks he must have his appetizer on the eve of dinner.

Walking along the streets, if it be summer, one notices a warm, half-sickish, sweetish odour, somewhat resembling that of paregoric, filling the atmosphere.

Looking into the many cafes that line the street, the wondering visitor may perceive the source of this smell. Every drinking place is crowded; waiters rush about bearing bottles and glasses—Paris is busy drinking absinthe.

Those who take their liquor 'as gentlemen should' have the bottles brought to them as they sit about the cafe talking. Each man pours his drink—from one to three inches—into a tall narrow tumbler.

Over the top of this is held a perforated spoon, containing a lump of sugar. Ice water is dropped upon the sugar and allowed to trickle through into the liquid beneath until the glass is full.

Prepared in this way, absinthe is pleasant, and seems harmless to smell and taste. Nor are its immediate effects those of brandy or whisky. In fact, the immediate effects are scarcely discernible in any way.

For another class, the workmen—there are usually three drinking periods in the day, and these are recognized by employers.

At 10 o'clock in the morning the French labourer invariably lays down his implements of toil and hastens to the nearest drink shop for his absinthe. He does the same thing twice during the afternoon.

Wherever workmen are found in numbers there are generally plenty of drinking shops in the vicinity. Near where some large excavation is in progress or some big building being erected, it is not uncommon to see little canvas covered wagons or carts. Very often these may be presided over by women whose husbands are foremen in the nearest works.

The workman cannot take his absinthe with the degree of comfort enjoyed by the more prosperous or leisurely citizens. There are no chairs—he would not have time to sit down if there were.

One after another these men walk up to the cart, gulp down the poison which they erringly 'take for the good of the heart and stomach,' and go back to their labours.

Plenty of credit may be had until Saturday night, and he may take as large a drink as he likes. His 'bracer' costs him three or four cents a glass.

It is not good absinthe, as a rule, that these unfortunates drink, but the vilest and most dangerous imitations. They know this very well, saying that pure absinthe is not for the poor man but for the rich.

His drink does not make the labourer jovial or light-hearted, any more than it makes the wealthier consumer in the gilded cafes boisterous. He goes back to his work morosely, and labours in solemn silence.

Then come two more drinks during the afternoon, and a fourth, probably, as he goes wearily homeward at night. His legs are not affected, but horrible visions are forming in the weakened brain.

It is a curious thing that the absinthe drinker, especially among the lower classes, feels an acute sense of personal oppression under the spell of the insidious poison.

He hates everybody; the hand of every man is against him. Even his wife and his children are intriguing to destroy his peace and happiness.

When he passes the home of the wealthy man he mutters in anger—he is without a cent in his pocket because the rich steal it all. If he can jostle rudely a well dressed man or woman while on his way, the act gives him a savage sort of pleasure; ordered to move on by a policeman, an insane desire to kill the uniformed representative of law swells up in his heart.

Not long ago, labouring under the hallucination 'due to absinthe' that his wife was not faithful to him, a Paris labourer killed her and their child.

'Absinthe' said Senator Beranger recently, 'is responsible for the depopulation of the country and for more than two-thirds of the crime committed.' Even the judges who deal with criminal cases recognize the fact that to be a confirmed victim of 'absinthism' is a reason for almost any crime.

There are many dens throughout the poorest quarters of Paris where the wretched absinthe victim, sunk to the lowest depths of degradation, may have a glass of poison for two cents, and may be permitted the use of a dark corner in which to sleep.

Such haunts—and this is a sad commentary upon the gratification of human curiosity—are among the show places of that remarkable city. Professional guides conduct parties of tourists to these resorts in order that they may witness the fallen humanity at its deepest and darkest level.

As the visitors usually tip the proprietor liberally, he welcomes them with greater pleasure than he does the trembling wretches who come to buy his wares. They may gaze upon sin and misery to their heart's content.

One never sees evidences of merry-making or light-heartedness in these haunts of depravity. Everything is suggestive of hopeless misery. Men and women may be there—at least they were men and women at one time but are now simply absinthe drunkards through whose feeble brains the shadows of weird dreams are creeping.

But once in the grip of absinthe the victim is seldom able to set himself free. He will do anything to obtain money to purchase it. Not infrequently guides on the Alps have been known to murder tourists in their care in order to obtain money for this purpose.

Whether it is the result of bad example or not, the neighbours of France are drinking absinthe much more heavily than formerly, not without appreciable results. While the population of Belgium for instance has increased 30 per cent during the last 15 years, the consumption of alcohol has increased 37 per cent during the same period. Cases of insanity there have increased in number 45 per cent, suicides 80 per cent, and arrests for begging and vagabondage 150 per cent.

It was a recognition of the danger into which their country was steadily moving that

prompted the action of the Belgium legislature in banishing absinthe from that country.

Far-reaching is the Bill which passed both houses, by an overwhelming vote. It prohibits the manufacture, importation, transport, storage or sale of the liquor, or any substitute for it. Violations of the law are to be met with severe penalties.

Perhaps the most unfortunate result of the absinthe habit is the fact that its effect is so liable to be transmitted to children. Many of these who do not become drunkards themselves—which most of them do—give evidence of mental weakness, manifest a tendency toward epilepsy or become afflicted with some serious nervous trouble.

The lessons taught by the evils of absinthe drinking might well be labelled upon every bottle in the form of the Greek word from which the name of the liquor is derived, 'Apsinthion, that which must not be drunk.'

I was very sorry to take up the time of the House reading this long article, but it seems to me that the members of this House should know what they are voting for. I am not voting against the French treaty because it is French, I am voting against it because it allows that accursed drug to be introduced into this country, and my French Canadian friends would likely be the first to be injured by it. Instead of blaming me for voting against the French treaty, they should realize that I am trying to protect them from this cursed traffic. What has France done for the French Canadians? She deserted them in the hour of their need. What did a French king do? Why he, by a coup de plume, signed away the whole of Canada, adopting the words of Voltaire: 'Qu'importe quelques arpents de neige,' and here we are now because this has a French name, saying we will introduce this curse into this country. I am opposed to it and I hope there are men enough in this House to back me up in insisting on having this item expunged from the treaty. I do not object to the French treaty, because it is French, for although I do not think that it is going to be of any benefit to our farmers, I object to it on other grounds than this—and one of them is that I do not want to see our French Canadian friends go to the mad house through the use of absinthe.

Mr. J. J. DONNELLY (South Bruce). When introducing this measure to-day, the Minister of Finance (Mr. Fielding) told us in effect that after the representatives of this government and the representatives of the French government had arranged the terms of the treaty, the members of the French Senate were afraid that its terms would permit the finished product of the stock raisers of this country to enter into France and compete with the finished products of the stock raisers of France. They pressed for and secured an amendment which would allow only the lean cattle, or what you might call the raw material of the stock raisers of this country to enter into France. I was somewhat surprised that the minister passed over this change in the treaty as though it were of little or no importance. To me it appears that this alteration in the treaty removes the only part of it that might be of any benefit to the agricultural interests of this country. The fact that the members of the French Senate were so anxious to exclude our fat cattle is an evidence to me that under favourable conditions we might reasonably expect to find a market for our fat cattle in that country. I wish to enter my protest against having the agricultural interests of this country sacrificed in order that the manufacturers of our country may obtain an increased market for their output or in order that the people of France may find here in Canada a market for their wines, perfumes and other produce.

Mr. W. B. NANTEL (Terrebonne). (Translation.) Mr. Speaker this treaty is surely not above criticism, but we are told perfection is superhuman. Even admitting, as contended a moment ago by the hon. member for East Huron (Mr. Chisholm)—that in consequence, noxious liquors, such as absinthe and the like, will be introduced into this country, as a compensation we will have those good French wines. Although imperfect, that treaty has evidently its good points. On account of it we will be more favourably known abroad, and our business intercourse with France will be more active. At any rate, I do not think Canada will lose anything by it.

Now, that treaty is drawn pretty much on the same lines as that which as carried through by the Conservative government in 1893. If the treaty of 1893 was beneficial on the whole, I think this treaty also must have its good points. The fact of its having been negotiated by the hon. gentlemen opposite is not in itself an argument against its adoption.

It has been stated that it will stand in the way of the granting of the preference which we are seeking to obtain from the mother country. The preferential tariff as we have it to-day is a one-sided arrangement, of very little advantage to us. At all events, should the preferential arrangement be of any actual value, it will always be up to us, once it has been secured, to denounce the treaty. In fact, there is a clause in the treaty to that effect. Section 3 contains, among other things, the following:

It shall enter into force immediately after the carrying out of that formality, and shall so remain for a perod of ten years, unless however one of the contracting parties notifies the other of its intention to

cancel the agreement, in which case this agreement will cease to operate twelve months after the receipt by the other party of said notification.

Supposing a preferential agreement were entered into with the mother country, not a one-sided arrangement, but a preferential treaty actually on lines of reciprocity, it will be seen from the above quotation that there will always be an opportunity to cancel the French treaty which we are called upon to sanction to-day. To my mind, such an objection is without foundation.

Now, that treaty with France was concluded in good faith at a time when the Payne tariff had not yet been enacted in the United States. That tariff having been enacted in the meantime, I really do not believe that the ratification of this treaty would have the effect of inducing our neighbours to enforce their maximum tariff against our goods, not any more than the ratification of the treaty of 1893 brought about reprisals on their part. So that we should not be prevented from voting in favour of the ratification of the treaty by any fear of that kind.

As to our future intercourse with the United States, I may say that this government having at their disposal every means of getting information has no doubt in this respect taken the necessary steps, and should such reprisals on the part of the United States follow the ratification of this treaty, the government will bear the responsibility.

I am therefore favourable to the immediate ratification of this agreement, and I shall vote in its favour, not on the ground of sentiment, but on that of business.

Mr. W. S. MIDDLEBRO (North Grey). Mr. Speaker, in considering a question of this kind, the paramount consideration should be the commercial advantage that we are to obtain by the ratification of the treaty—as compared with the injury that may be entailed. In determining this we should examine closely the present state of trade between the two countries and the possibility of increasing the same with an increasing advantage to this country. What is the present state of our trade with France? We have an export trade to France amounting to $3,176,000 and an import trade from France amounting to something over $8,000,000 a little over a million of which is on the free list. We start out with a handicap because we are going to conclude a treaty with a country which now sends us at least twice the value of goods we send them. And speaking generally, other things being equal, that country is going to attain a greater advantage under such a commercial treaty than we are. Another view which should enter into the negotiation of treaties is the prospective profit which may accrue to us, and in that connection let me ask what are we going to gain by the ratification of this treaty with France? Are we going to increase to any extent the exports of our agricultural products to France? I think not. Our export of wheat to France has not exceeded 60,000 bushels a year until last year and our export of agricultural implements has not increased by more than 25 per cent, and to-day it stands at about $850,000 worth. We export to France about $1,000,000 worth of lobsters and what advantage is this treaty going to give us in that respect? I should think none whatever, because if I am correctly informed we have now all the market we want for our product of lobsters and there is even a deficiency to supply the local demand. Under these circumstances, I ask hon. gentlemen opposite to tell me in what way we are going to benefit by the ratification of this treaty. We might have benefited had we been permitted to send into France our fat cattle, but the French republic recognized that if they applied the minimum tariff to Canadian fat cattle that was a matter in which Canada would get a benefit, so she immediately withdrew that concession and said that the maximum tariff should apply on Canadian fat cattle exported to France. I am, therefore, I think, fair in saying that so far as the agricultural classes of Canada are concerned they will get no benefit whatever from the ratification of this treaty. Now to the republic to the south of us we exported $92,000,000 worth of goods during the last fiscal year and we imported from the United States $192,000,000 worth of goods. I quite agree with the Minister of Finance when he says that Canada has reached such a stage in her nationhood that in making these treaties we should make them to suit ourselves. With that idea in mind it is our bounden duty to look first to the benefits we will receive. I do not know whether or not the passage of this treaty with France is going to entail an extra 25 per cent duty on all products exported by Canada to the United States, but I do say there is a risk of that, and I also say that the risk of having a 25 per cent duty put upon $92,000,000 worth of our exports is not to be compensated by the trivial advantage we may possibly attain from a possible increase of our present trade with France. And, there is another question looming up which should be considered by us. We know that for years in the motherland her statesmen have been worshipping at the shrine of the Manchester school and we know that twenty years ago any man in England who advocated anything but free trade would be considered a mental incompetent. However, a change has come, and we find that to-day there are seventy or eighty tariff reformers in the British House of Commons, and that there is a great

battle on between tariff reform and free trade. I make bold to say that while the tariff reformers may not succeed at the approaching election—and there is a possibility that they will succeed—they will succeed ere long, and then we will be in a position to obtain mutual preferential trade with Great Britain. Therefore it behooves us not to tie ourselves up with these treaties and not to put ourselves in the position of passing this treaty to-day which will give a number of other nations most favoured terms without any corresponding return. It is, in view of this possibility, of considerable consequence that we should be free from these restrictions. It is quite true, as has been pointed out, that the treaty may be denounced upon twelve months' notice being given, but we all know that when you denounce a treaty, a great deal more ill-feeling is caused than if the treaty never were made. Therefore, if we pass this treaty now, and later on when we have an opportunity of negotiating with Great Britain for mutual preferential trade, we shall have to denounce this treaty, a good deal of ill-feeling may be thus created in France. I would like to ask the Minister of Finance whether or not the ratification of this treaty which gives to all these other nations most favoured treatment in Canada, will make them give to us the same favoured terms on Canadian goods entering their markets? I would like to ask also whether or not since this treaty was passed in 1907, the French government have in any way interfered with or raised their minimum tariff, because, if they did, that would be another reason for us refusing to ratify the treaty now. If it is also true that these other favoured nations which get these favoured terms in our markets are not compelled to give us a corresponding advantage in their markets, that is another reason why we should refuse to ratify this treaty.

Hon. SYDNEY FISHER (Minister of Agriculture). I do not know that I would have said anything on this question had it not been for the remarks of the hon. gentleman from Huron (Mr. Chisholm) in reference to the importation of absinthe. I do not think any one disputes the evils of the absinthe habit, and I should think that everybody would prevent, if they could, the introduction of such an evil into Canada. The impression may be created by the words of the hon. member (Mr. Chisholm) that this treaty contributes to the introduction of absinthe into this country and that its ratification may lead to the evils which he described. Let me say, Sir, that that is an entirely erroneous conception of the scope of the treaty. There is nothing in this treaty which will facilitate the importation of absinthe into Canada, and there is nothing in this treaty which in any way hampers Canada in placing any duties upon absinthe which she may deem fit, or which prevents Canada from absolutely prohibiting in the future the importation of absinthe. I wish to make this clear, and I shall read the clauses of the treaty which bear on this matter. In clause three of the treaty there is this:

> The natural and manufactured products enumerated in schedule B of this convention originated in France, Algeria, the French colonies and possessions, and the territories and the protectorate of Indo-China, shall enjoy on their importation into Canada the benefit of the intermediate tariff and of the lowest rates of customs duties applicable to like products of other foreign origin.

Now, schedule B of this treaty is the list of those French products which have the benefit of the intermediate tariff. That list refers to the different items of our tariff, amongst others to item 156, in which there is a long list of various spirituous liquors. Amongst those liquors is absinthe. That means that under this treaty absinthe, along with other spirituous liquors, will enjoy the benefit of the intermediate tariff of Canada. But when you come to examine our tariff, what is the duty on that particular item? It is this: The British preferential tariff, $2.40; the intermediate tariff, $2.40; the general tariff against all countries, $2.40. The item in the tariff includes the following:

> Ethyl alcohol, or the substance commonly known as alcohol, hydrated oxide of ethyl or spirits of wine, n.o.p.; gin of all kinds, n.o.p.; rum, whisky and all spirituous or alcoholic liquors, n.o.p.; amyl alcohol or fusel oil, or any substance known as potato spirit or potato oil; methyl alcohol, wood alcohol, wood naphtha, pyroxylic spirit or any substance known as wood spirit or methylated spirits, absinthe, arrack or palm spirit, brandy, including artificial brandy and imitations of brandy, n.o.p.; cordials and liqueurs of all kinds, n.o.p.; mescal, pulque, rum, schrub, schiedam and other schnapps; tafia, angostura and similar alcoholic bitters or beverages; and wines, n.o.p.; containing more than 40 per cent of proof spirit, per gallon of the strength of proof.

That is the item of our tariff, and the duties against these articles in all the three schedules of the tariff are exactly the same. They will be the same under the new French treaty as they were under the old French treaty, and exactly the same as they would have been if this treaty were not in existence. Therefore, the impression which has been sought to be created, I have no doubt quite honestly but entirely erroneously, that this treaty is creating a new facility for the introduction of absinthe and other spirituous liquors into Canada is entirely wrong. Furthermore, there is nothing in this treaty

to prevent this parliament raising or lowering those duties at any time; or, if we choose, we can prohibit the importation of any one or all of these spirituous liquors into Canada from France and all other countries. and this treaty does not hamper Canada or prevent us making such a prohibition. I think it well that this House and the people of Canada should understand that in this respect this treaty makes no change, so that no false impression as to the action of this government may be created. My hon. friend has referred to the fact that under this treaty fat cattle will no longer have the advantage of the minimum tariff on entering France. That is true. It is possible that may at some future day not facilitate a trade with France in fat cattle. But what are the conditions? For the last three years no fat cattle, no cattle of any sort, from Canada, have landed in France. In the future we are going to have the advantage, important or not important as the case may be, that cattle which are not ready for slaughter will have an entry into France under their minimum tariff. Without the treaty we would not have this advantage. If there is any benefit from that, we get it; if there is no benefit, it does not harm us to have the opportunity of that advantage. It happens that our greatest rival in France in that respect is the United States. It happens that until lately the United States have had a treaty with France, a small one it is true, which has lately been abrogated; and until they make another treaty which would give them the same advantages that we get, this treaty will give Canada an advantage over the United States in the French market, which may be sufficient to enable us to get the trade, instead of our neighbours to the south. My hon. friend from Lambton (Mr. Armstrong) has talked of agricultural implements. It is true that in the last few years we have sent about $750,000 worth of agricultural implements to France. I have no doubt that if this treaty comes into force, immediately the splendid establishments for the manufacture of agricultural implements in Canada will be able to get complete control of the French market, and will be able to oust from that market their rivals in the United States. This is an advantage which the farmers and everybody else in Canada will rejoice to see.

Mr. SPROULE. Will the hon. gentleman tell us what advantage we will have in the French market as compared with the United States, if this treaty is passed?

Mr. FISHER. We shall have the advantage of the minimum tariff, whereas the United States will have the disadvantage of the maximum tariff. This is a very substantial advantage to the manufacturers of agricultural implements in this country. Hon. gentlemen opposite appear to be somewhat divided in regard to the German treaty. I do not think the time to discuss that is when the French treaty is under consideration. Our conduct and action in regard to the German treaty has been abundantly endorsed by the people of Canada over and over again. And I do not see any reason to regret it, although at the same time acknowledging clearly, as I do, from my own personal conviction at all events, that the removal of the restrictions upon trade will be likely to redound to our advantage. And if we can remove restrictions upon trade with France or Germany or Italy or any other country with which we can make satisfactory trade relations, I personally will rejoice, because I consider that any restrictions upon trade are only justified where they are absolutely necessary for other purposes and other reasons. Fear has been expressed that this treaty may interfere with future possible mutual preference within the empire. I think that the action of the government of Canada with regard to preference within the empire was the right and proper one. I think that Canada took the lead in that respect, which the other countries of the empire are gradually likely to follow. I find that in England where to-day the tariff reform is under discussion, there is a tendency to minimize the question of preference to the colonies or outside dominions, and that straight protection is becoming more and more the watchword of the tariff reformers. Well, that is for them to consider and for them to decide and not for us to meddle with. But to my mind the Canadian plan of preference is the best one, and bargaining between the different parts of the empire is not likely to lead to satisfaction. Each dominion must deal with the other in accordance with its own views. That system, which was inaugurated in 1897 and which is maintained and carried out in Canada to-day, has received universal acceptance throughout the empire and is admitted to be the best and only sound plan of preference within the empire.

In answer to the hon. member for Grey (Mr. Middlebro) I find that as regards agricultural machinery, the difference between the minimum and the general tariff is as nine to fifteen.

Mr. HENDERSON. What is it in dollars and cents?

Mr. FISHER. Six francs or $1.20.

Mr. HENDERSON. For how much?

Mr. FISHER. Per hundred kilograms. A kilogram is 220 pounds. I cannot offhand give the difference in percentage, but the minimum is to the maximum as three to five.

Mr. E. A. LANCASTER (Lincoln). With regard to this measure, I must say a few words in answer to the hon. the Minister of Agriculture (Mr. Fisher) because I do not take the same view of the matter. The hon. minister says that we should make our own treaties and have regard to what is best to the interests of Canada without worrying about what other countries may think. That is a very good theory but it is not carried out in this treaty. Nobody on behalf of the government has said anything about the merits of this treaty. All they say is that they made a bargain two years ago—which I thought was a very bad bargain and which I had the temerity to vote against—and that we should now ratify it. But the bargain is now still a worse one. The French Republic rejected the treaty we first negotiated and wanted better terms. They wanted to prevent Canadian cattle from being sent into their country. They wanted to put an additional embargo on our fat cattle. If that were the only reason, it would be a good one for voting against this treaty. But that is not the only trouble. If we are going to adopt the principle that we should make treaties in the interests of Canada, we should have some evidence that the well-being of Canada is being served by this treaty. But what do we find? We find that we made a bargain, and were called upon to vote for that bargain because the government saw fit to make it. But the French government asked for a modification of that bargain, and forsooth we must agree to it. In that respect we are not carrying out the theory of the Minister of Finance that we should make our bargains from a Canadian standpoint.

When the Minister of Agriculture spoke about certain intoxicating and other spirits brought in here, I was hoping that he would give us the whole information and tell us about the cheap wines to be brought in by virtue of this treaty at a reduced rate, and which will have the effect of putting out of business to a great extent the large interest of grape-growing. If we are to have cheap wines, it is worth something to know that we are drinking honest Canadian wine, made from grapes grown here, produced under our own eyes, inspected by our own government inspectors, which are not injurious, which cannot be fraudulently marked and packed, rather than foreign wines about which we necessarily know very little, but which we know are impregnated frequently with some of the very things the Minister of Agriculture says are injurious and are not interfered with in any new way by this treaty. Those are shortly some of the reasons why I opposed the treaty two years ago. What reply have we to the arguments advanced by the hon. member for East Huron (Mr. Chisholm), and South Bruce (Mr. Donnelly), with regard to the cattle industry? Simply this, that whether the bargain be a much worse one than two years ago or not, the fact that it is presented to us by the government ought to suffice. The Minister of Agriculture did not appear to be at all concerned about the merits of the treaty but appeared to think that as it has been negotiated by the government and as the government had consented to the modification proposed by the French Republic there was nothing more to be said.

For the reasons I have mentioned and because this is a much worse bargain than the one made two years ago I shall be obliged to vote against the second reading.

Mr. JOSEPH PIERRE TURCOTTE (Quebec County). (Translation.) Mr. Speaker, allow me to explain briefly my personal views on the question which is now under consideration before this House. Two years ago the Canadian parliament ratified the main convention respecting the commercial relations between France and Canada. Since then, general elections were held in this country, and I do not think that a single one of the members who then voted in favour of the ratification of that treaty has been subjected to the least blame at the hands of the electorate.

Now, as this treaty is already ratified, there only remains to ratify the supplementary convention. I would be curious to know in what position we should find ourselves were we to refuse ratifying this convention. Is it not true that it would result in bringing again into question everything done so far by parliament and in putting an end to the treaty itself? I have come to this conclusion that it is our duty to ratify the measure voted upon by the House two years ago, a measure which the people did approve of at the general elections, and which the French Chambers themselves did sanction at the beginning of this year. Otherwise, we would have to fall back on the convention of 1893.

The question now under discussion is whether the supplementary convention which is before us is so detrimental to our interests that we should undo or abrogate what we have done so far in connection with the main convention.

It is true that the supplementary convention involves a change in the commercial convention of September 19, 1907, but should such a modification prevent us from ratifying the treaty? I do not think so. That modification is the consequence of the general policy of the French government. Their policy is one of strenuous protection, while we are living under a regimé of mitigated protection. It is easily understood that when it was proposed to give a preference to the products of the farm, as for example, in the case of animals in fat condition for butchery; the French agricultural interests were alarmed

by those concessions to Canada and they made representations to the members of the French Chamber of Deputies and of the Senate against that provision of the treaty which was threatening their interests. Such was the capital objection raised against the treaty. It was held, on good ground, that such a preference which was being granted to the Canadian agriculturists would result in creating a most detrimental competition to the French peasant. Undoubtedly, the shipping to the French market of cattle fattened on our farms would have dealt a very severe blow to similar products of the agricultural French industry. I see here a compliment paid to our Canadian farmer, to his enterprise and his activity.

The alarm felt was well grounded and justifiable. The granting of a preferential tariff to the Canadian farmer was withheld, in order not to trouble the economy of French agricultural interests. I believe that such a policy, considered from the standpoint of protection, such as it is being applied in France, is warranted. I am one of those who approve of the position taken by the hon. Minister of Finance (Mr. Fielding) and by the hon. Minister of Marine and Fisheries (Mr. Brodeur), who both represented us in France, as concerns their agreeing to that supplementary convention.

As the withholding of assent to that convention would have resulted in bringing us back to the convention of 1893, our plenipotentiaries, as the hon. member for Terrebonne (Mr. Nantel) has well said, have acted with wisdom in following the footsteps of their predecessors, and endeavouring to enlarge our commercial relations with France, in proportion to the immense development taken by our trade, our manufacturing and agricultural industries, during the last fifteen years. Our government have so well grasped the situation that they were the first to open negotiations and to take such necessary steps as were calculated to meet the needs of our trade.

On the other hand, we could hardly expect to reap all the benefits accruing from that convention, without giving anything in return. What we have received is some compensation for what we did give. I agree that we do not gain any new advantage as concerns the export of our cattle in fat condition for the butchery, but neither did we lose anything, seeing that we remain under the regimé created by the treaty of 1893, with the hope, as expressed by the minister, of bettering our position in a more or less remote future.

Meanwhile, we ought to benefit by the lesson which our French cousins have been teaching to such of us who represent here rural constituencies. Let no opportunity pass without our endeavouring to promote the interests of our constituents, of that agricultural class which constitute the sinews and backbone of the country and to whom are entrusted the primordial rights of our social and political economy.

Further, let us remember that this treaty confers upon us advantages which largely make up for the apparent loss of benefits as respects our farm products. If it be true that the failure to ratify this supplementary convention would result in placing us again under the regimé of the treaty of 1893, it is altogether out of the question that we would lose at once the benefits accruing to us from the main treaty as regards French literature, whether under that name come in sciences, law or political economy, whether it relates to works of fiction, &c. Thanks to our plenipotentiaries, under the new treaty we enjoy that advantage which Great Britain alone so far had been enjoying under the preferential tariff. Henceforward, the duty on literature of a lighter character, such as works of fiction printed in France are to pay 15 per cent, instead of the former rate of 25 per cent. As to works of a more serious character, books of science and political economy, the duty of 10 per cent is reduced to 5 per cent. It is then a foregone conclusion that henceforth French literature and English literature are to be placed at our disposal under identical conditions, and so we shall receive light from the two most powerful centres of intellectual activity in this twentieth century.

This provision is of an immense value to us from the standpoint of the intellectual development of our youth, the more so as nowadays those literary works of first necessity are out of our reach in this country. We have had so far to go to the fountain-heads of science, art and literature to supply our wants. Thanks to the lowered duties, all that wealth shall henceforth be within our reach.

I may be allowed to say further, in this connection, that outside of France itself, Canada is the only country in the world where those treasures of the French genius can be thoroughly appreciated. Therefore, in addition to such material advantages, we shall enjoy invaluable benefits in the intellectual sphere.

It behooves us therefore to ratify the supplementary convention to the French Canadian treaty, within the shortest time, so as to fully benefit by this treaty.

Mr. EUGENE PAQUET (L'Islet). (Translation.) Mr. Speaker, on February 28, 1908, during the debate concerning our commercial relations with France, I went over the grounds which induced me to give my support to the Franco-Canadian treaty. Consequently, in rising to address the House, I only intend to say a few words on the question.

The opposition discharged their duty in

calling the attention of the government to the dangers to the country from an undue haste in the ratification of the treaty. Should the attitude of the government be such as to disturb our commercial relations, they will have to shoulder the responsibility for such action.

I do not approve of the convention, as a French Canadian anxious to enlarge our trade relations with our old mother country, but I approve of it as a French Canadian, sincerely believing that this Franco-Canadian treaty will promote the growth of our trade with France.

In 1898, our trade with France amounted to $5,000,000. During the last fiscal year that trade reached as high a figure as $11,-204,902.

The Argentine Republic exports to France products to the value of $80,000,000. Does that same republic receive from France a more favourable treatment than is granted to Canada? Why should not our exports to France reach as high a figure as $80,-000,000?

I firmly believe that this convention shall result in promoting our trade with France and in increasing our relations with that country, from an intellectual as well as from a material standpoint, to quote the appropriate words uttered by the hon. member for Quebec (Mr. Turcotte). Should we increase our trade relations with France financiers will come over to Canada in order to investigate our natural resources, the great value of which they cannot fail to duly appreciate. French capitalists may also be induced to invest their capital in this country, for the development of our facilities of transportation between France and Canada. The development of our trade and our facilities of transportation, a wise investment of French capital, are efficacious means of promoting a sound French immigration. Such are the ideas and the opinion which I have formerly given expression to and nothing since has occurred to induce me to change my mind.

On these several grounds, I shall record my vote in favour of the Franco-Canadian treaty.

At six o'clock, House took recess.

AFTER RECESS.

House resumed at eight o'clock.

SECOND READINGS.

Bill (No. 42) respecting the Edmonton and Slave Lake Railway Company.—Mr. Cash.

Bill (No. 43) respecting the Hudson Bay Insurance Company.—Mr. Knowles.

Bill (No. 44) respecting the Montreal Central Terminal Company.—Mr. Ethier.

Bill (No. 45) respecting the Phœnix Assurance Company, Limited.—Mr. Macdonald.

Bill (No. 46) to incorporate the Pine Pass Railway Company.—Mr. W. H. White.

THE FRANCO-CANADIAN TREATY.

The order for Private Bills being exhausted, House resumed the debate on second reading of Bill (No. 12) respecting a certain supplementary convention between His Majesty and the president of the French Republic.

Mr. GLEN CAMPBELL (Dauphin). I had no intention of taking part in the debate on this motion until I heard the Minister of Finance speak of the change that had been insisted upon by the French authorities in regard to the importation of cattle. I come here, Sir, as a farmer representing farmers, and I can flatter myself that perhaps I know as much about the beef industry as any man in this House. And knowing that, I know that the Minister of Finance should have had with him, at the time when he agreed to that change, a chaperone or a caretaker. I made a note of a question which I intended to submit to the Minister of Agriculture (Mr. Fisher). But when that hon. gentleman spoke, I expected that as the member of the Cabinet specially charged with the conservation of the interests of the farmers, he would have stated that he did not approve of this particular clause in the treaty. But I was surprised to note the airy manner in which the hon. minister put aside this phase of the treaty referring to the cattle industry. His argument is virtually this: In the past Canada has not entered into the market of France in the matter of beef cattle, and therefore it matters not that the maximum tariff is charged against the beef cattle we desire to ship to that country. The hon. gentleman surely did not consider for a moment the difference in duty charged under the maximum and the minimum tariff. The maximum is $27 per 1,000 pounds, and the minimum is $18, a difference of $9 per 1,000 pounds, or an average of about $15 per steer. Surely, no man in his senses will say that that is not a matter of very vital importance. Perhaps, coming as I do from the west, I realize more than the Minister of Agriculture does what the beef trade means to Canada. Let me point out what evidently the hon. member does not know. The export trade in beef cattle in Manitoba commenced in 1882, when one shipment was made of two cars of 42 head, of a total value of about $1,500. In the years from 1900 to the present day, the annual shipments from Manitoba and the west have been between 50,000 and 100,000 head, of a value of from $1,750,000 to $2,750,000. This trade, already of such

large proportions, is growing year by year, and it must be taken care of. To take care of it in the proper way it is requisite that the government should take every opportunity to find a market for our products, and here was an opportunity to open a market for our surplus beef cattle. Let me call your attention for a moment to what has been done in the United States, in Chicago alone. In 1865, the Chicago market handled only some 600 head of cattle. Last year the Chicago market handled over 4,000,000 head of cattle. The growth that has taken place in forty years in Chicago is only a small example of the growth that is going to take place in the Canadian west in the next forty years, for the Canadian west is growing very much more rapidly in every branch of trade than even the United States did. The Minister of Agriculture argues at one time in one way and at another time in another way. Where he is speaking to farmers instead of to the lawgivers of this House he would not for a moment advocate the doctrine that through this treaty Canadians would be able to sell in the markets of France their stocker cattle. By stocker cattle, I mean cattle that are not finished. If he were speaking to agriculturists in this country he would tell them that the proper way to get the greatest benefit in the cattle industry is to finish the cattle here, use Canadian feed, and put them on the market not one moment sooner than they are absolutely ripe, and will fetch the greatest possible price. That is what he will say to the farmers speaking as Minister of Agriculture. But he tells this House, and I think we are justified in saying that he misleads this House when he says it, that it is a good thing that the French stocker market is left open to us, and that we have an advantage in that market over our American competitors. He did not tell the House, when he was speaking of the American competition, that we are sure to be up against it, that three years ago Secretary Root and Ambassador Jusserand, the French representative at Washington, had made a provisional arrangement of a reciprocal character wherein France agreed to afford to the United States several advantages: first, the admission of American meats upon a guarantee of their purity and soundness made in compliance with the meat inspection laws; secondly, the admission of American cattle for slaughter within ten days after arrival; thirdly, authority to transport American cattle through French territory, more considerate treatment of American salt meat imports, and greater leniency in the regulations for the entry of American imports generally. This arrangement still holds good between France and the United States, so it means that without any treaty Secretary Root and the French ambassador have agreed that Americans should have just as good if not better terms for their farmers and their producers than the Canadian government have procured for our farmers by this much vaunted treaty. It seems to me that the Minister of Agriculture, when he speaks on these subjects, should take the same stand at all times. He cannot prove to the farmers of this country what he tried to make good in his argument here to-day. I think he should be honest when he makes an argument in this House with regard to a matter of that kind. So, Sir, for that reason alone, if there were no other, I as a farmer, knowing the possibilities of the great west, will vote against this treaty if I have an opportunity. It is a matter of the greatest importance to the Canadian farmer, particularly in the west, that the future of this great cattle industry should be protected at all hazards. Why should we not follow the example of France in this matter? France saw the danger, and insisted on the protection of her farmers. Why should we not follow her example and insist on protecting our farmers when we make a treaty with France? Let me mention that in Chicago, the cattle industry of which I have already spoken, the live stock industry to-day exceeds in importance the grain industry of that great centre, the lumber industry, and the wholesale grocery business combined. That shows the immense proportions of the live stock industry in Chicago, which is the great centre of that industry in the United States, just as Winnipeg is of the Canadian west. Therefore I urge that care should be exercised in this regard by our government when signing treaties with foreign governments.

Another matter to which I wish to refer is that even under this minimum rate the Finance Minister had to admit that Canada had nothing whatever to do with the inspection of cattle when they land in France. Canada has nothing to say as to whether these cattle shall be considered as belonging to one class or another, it is left solely to the discretion of the French officials to say what treatment shall be accorded to shippers from Canada. Surely it would have been fair to provide that Canada should have a representative on the board of inspection, and I think the government was guilty of a great oversight in that respect. But knowing the record of this government in the past in the one treaty they have negotiated with a foreign country, the treaty with Japan, I do not wonder at their relegating to the authorities of another government the say-so with regard to what shall be or what shall not be done in the protection of our own interests.

In concluding, I desire to express a word of sympathy with my hon. friend for Centre Huron (Mr. Chisholm) in all he said of the

necessity of prohibiting the importation of absinthe. I intended to go fully into that matter, but as my hon. friend took up most of the points connected with it, I will add nothing more about it on this occasion. Mr. Speaker, I have pointed out several strong reasons why I intend to vote against this treaty. I think it is up to every representative of an agricultural constituency to lay aside his partyism and to remember that he is here representing the farmers whose interests it is his duty to conserve, and the best way he can conserve them is to vote against this treaty.

Mr. T. S. SPROULE (East Grey). When this treaty was passed two years ago I thought that very slight benefits were likely to accrue to Canada under its operation. In sizing it up, however, I reached the conclusion that if it was likely to be of any benefit to the agriculturists of Canada, it was in the privilege of introducing into that country our fat cattle. I scarcely expected that we would ever succeed in establishing a trade in stockers with France, because of the distance and other disadvantages that we would have to overcome.

But I would think that there might come a time when from either the importation of cattle disease into Canada or its outbreak in Canada, our cattle might be shut out from England entirely and would also be shut out from the United States. It seemed to me desirable to have some other string to our bow, some other market to which, in case of extreme need, we might be able to send our cattle, and I thought that although it might not be of much advantage it might afford an alternative market for our fat cattle. For that reason and that reason alone I supported the treaty. I did so with a good deal of reluctance because from my casual examination and all I could learn I thought it was going to be of very little benefit to Canada; but now, since the French people have amended that treaty and our own Finance Minister and the government of Canada have been consenting parties to those amendments, to a practical repeal of the very clause in the treaty above all others that would be of value to the agriculturists of Canada, I do not see any justification for supporting that treaty. Looking over the whole field of possible trade with France, there seemed to be but one line in which we could hope to derive any benefit from this treaty, and that is in the exportation of agricultural implements and our manufacturers of implements are not doing a very large trade there now.

Examining this treaty and recalling the history of the present government's treaty makng, I do not wonder that Canada derives little benefit because all their efforts heretofore at negotiations with other countries for the purpose of extending the markets of Canada or securing for Canada better markets than she has, nave resulted in one-sided, jug-handled arrangements. In 1897 they started off by throwing off part of the duty on English goods, giving a preference to England. That action was proclaimed all over the world as some wonderful act of great statesmanship, great prescience, great knowledge that was to bring some wonderful financial result to Canada. What has been the practical result of that course? It practically killed our woollen trade in Canada, closed up nearly all our woollen mills, threw the artisans employed in these mills out of employment, reduced the market for Canadian wool and swept away the greater part of the hundreds of thousands of dollars invested in the woollen trade of Canada. Yet this government have absolutely refused since to do anything to help that crippled industry. Which side derived the advantage from that one-sided arrangement? Not Canada. It is true that England got an advantage but Canada received no advantage from it whatever. I was rather amused to-night to hear the Minister of Agriculture say: I was in England and I found everybody satisfied, remarkably well pleased with what we had done, it was the very thing that suited them. Why would it not suit them? They received the whole advantage and we got nothing in return. The Minister of Agriculture went to England and discussing reciprocal preferential trade said that what we did we did voluntarily and of our own free will and accord, we did it for England's sake, we did not want anything in return, did not ask for a duty on grain imported from other countries, while ours got the freedom of the market, or anything else, and he asked them not to give us any preference in their markets over any other country in the world. Is it any wonder that they were satisfied? They were satisfied and he was satisfied. He thought he represented the whole Dominion of Canada, when if he had gone among the farmers of Canada they would have regarded him as one of Mark Twain's innocents abroad.

Before the Liberals came into power they said that the Conservative party were trying to find markets everywhere in the world except right at home, at our very door, where there was a market of 85,000,000 people. They said that if they were returned to power they would secure, by their sunny ways and their statesmanship, this market of 85,000,000 people that would be more valuable than any market that could be secured anywhere else in the world. They were returned to power but did not make any effort to secure that market and apparently have no desire to secure it. Have they ever attempted to secure it except on the one occasion when they went to Washington, for which trip Canada paid

$35,000 or $40,000? They came home with their heads down and we never heard a word about it. They made no success of their efforts there and only demonstrated how unsuited they were for carrying on negotiations with any country in the world in the interests of Canada. The arrangement they made with England was one-sided and Canada sustained a great injury from it without deriving any benefit in return. They not only gave that preference to England, but by it lost the important market of Germany which was likely to be of much more value in the future than it had been up to that time. Yet they were warned. I remember Sir Charles Tupper, over and over again, warning the Finance Minister that as sure as they forced that through the House, they would get into trouble with Germany over the favoured-nation clause. They answered that there was no fear, they knew too much about it, they had ways of doing these things that Sir Charles did not know. Sir Charles said: We have considered that carefully and made sufficient inquiry in the past to satisfy ourselves that there is a danger of complications arising from these foreign treaties. He said that if we could have them terminated in a friendly way we would have been glad to do so, but if the Canadian government first entered into negotiations that would afterwards compel the denouncing of these treaties then they would be denounced in an unfriendly way and the result would be that when Canada wished to resume negotiations the country whose treaty had been denounced would not be prepared to treat with us on reasonable terms. Sir Charles Tupper did everything he could to persuade them to abandon the suicidal course they were pursuing. The preference was forced through, and in less than nine months it was brought home to them in a way they could not ignore. And what were they obliged to do? They were compelled to ask England to help them out. England denounced the treaty and Germany has been a commercial enemy ever since. Any effort made since then to negotiate a treaty has been a signal failure. Why? Because they had offended Germany when they need not have done so, and Canada to-day would be in possession of all the advantages she ever enjoyed in regard to German trade. Then they made a blunder when they put a surtax on German goods. I do not think they then took the right way to commence negotiations in a proper and conciliatory way with Germany, but of course they were in trouble and were seeking to get out of it by whistling to keep their courage up, and they were very brave. In connection with this treaty, there seem to be two or three dangers ahead of us. One is that we may come in conflict with the Americans in the change in their tariff under the Aldrich Bill. I agree with those who say that our first duty as a parliament in passing any law in this country, whether it be a tariff law or any other, is to have regard to the interests of Canada.

Let us act in the interests of Canada; let us act in the conciliatory spirit always, but let us not forget that it is the interest of our own country which should be our first concern. I remember very well that in 1887 when the Conservatives were in power the Liberals complained that we could not negotiate with our neighbours to the south because our tariff policy was irritating to them. To-day, however, these gentlemen on the government benches have changed their tune, and the Minister of Finance has told us that it was not the duty of Canada to wait and see what action the United States might take with reference to any question of Canadian policy. I agree with the Minister of Finance in that and I only mention the matter to show the inconsistency of his party. Now, it appears to me to be well worthy of our attention that there is a probability of our being able to negotiate with the mother country in the near future for inter-imperial preferential trade. The House of Lords will no doubt throw out the budget by a large majority so as to force the present government to appeal to the country, and I am very much mistaken if the people of England will not in the near future express their desire for a readjustment of the tariff so that the mother country may negotiate for inter-imperial preferential trade with her dominions beyond the seas. If we have a treaty of this kind on our hands we will be hampered and restricted in these negotiations, and therefore it is that I say there should be no hurry on our part in ratifying it. The more I study this treaty the more I am convinced that we will get no great advantage from it. In the past our cattle trade on the great western prairies was a thriving business, but, as has been recently reported by the veterinary inspector of the government the ranching business of the west has been declining for years, largely because of the difficulty in sending live cattle to the English market so far distant from the western prairies. The need of the hour is to establish abattoirs all over the west, so that we may export chilled meat to England, but neither the government nor the Minister of Agriculture has taken any action in that regard. Some years ago a commission was appointed to look into this question and an elaborate report was presented recommending that Canada should engage in this chilled meat trade, but the government paid no attention to the recommendation of that report. If by any accident our live cattle were shut out of the American market, and out of the British market as well,

then no market would be left for us and the ranching trade would be ruined and those interested in it bankrupted. The home market of Canada is not able to absorb the products of both the eastern and western provinces and hon. gentlemen can easily see what a calamity it would be if we could not export our live cattle. If we had abattoirs spread throughout the west and if we had steamship lines supplied with chilled meat chambers we might get some advantage from this French treaty, but until the government exert themselves to establish such a trade in Canada little benefit will come to us from this treaty. It would seem to me that the benefit of the treaty is all on the side of France, and while we cannot but admire the French statesmen for making the best bargain they could for their country, we must regret that our own representatives did not look to the interests of Canada in this bargain. I supported this treaty before, but in view of the changed conditions, if there is a vote called I shall now vote against it. I represent an agricultural constituency from which we ship a good many fat cattle and I thought that this treaty might be of some advantage to us, but now that there is no advantage given us in the export of cattle to the French market the treaty is of no benefit to us at all. Many of those interested in the cattle trade in my constituency have pointed out this to me and have stated that the treaty had better never be signed. There is nothing now in this treaty to induce me to support it, and I sincerely believe that Canada would be better off without it.

Mr. A. HAGGART (Winnipeg). I would not have spoken on this question were it not that the Board of Trade of Winnipeg have been giving it consideration, and it would seem that the opinion of that influential body of business men is that although we want our commercial relations extended in every legitimate direction yet there is a very grave question as to whether the beneficial results of this French treaty will be worth the effort and trouble bestowed on it. France is a country which grows practically all her own food stuffs and in that respect she is very unlike her neighbour Germany which is a large importer of just such natural products as we have to export. Germany has a population of 62,000,000; she imports about one billion dollars worth of food stuffs a year, and of that Canada supplies practically not one dollar's worth. Germany imports $56,000,000 worth of horses in a year and Canada does not send a horse. Germany imports $216,000,000 worth of grain in a year and Canada supplies the merest fraction of that. If then we cannot get back this trade without forfeiting our own national self-respect, there is an end of it. But the people are not thinking in that direction; they are beginning to look in another direction. The city of Winnipeg has a fairly active Board of Trade. Many of the officers of that board are known personally to the members of this government. On the 28th of October last, at a meeting of that board, reported in the Winnipeg 'Free Press' of the 29th of October, I find that a resolution was moved by Mr. James H. Ashdown and seconded by Mr. F. W. Drewry, two of the most prominent members of that organization, and both engaged in trade in a very large way, as they have been for the last third of a century. Mr. Ashdown is a very strong supporter of this government, while Mr. Drewry is a good consistent Conservative. The report as given in the Winnipeg 'Free Press' is in these words:

The matter of Canadian trade with Germany, both import and export, was discussed by the meeting, which unanimously adopted the following resolution, moved by J. H. Ashdown and F. W. Drewry.

Whereas, in consequence of the late tariff legislation of the United States, there is a probability of increased restrictions being placed upon our trade with that country, and

Whereas, the increase in population, products and known resources of the Dominion of Canada is so large, and so rapidly increasing, that it is especially desirable that our trade relations should be extended as far as possible, and kept upon the most friendly basis, and

Whereas, the German government, forgetting our right to deal as we saw fit with our mother country, did impose an extra charge on goods from Canada, and as a consequence a surtax was placed on German goods entering this country, and it is advisable that the unfriendly relations brought about by these actions should cease;

Therefore, be it resolved, that this board would urge on the Dominion government the advisability of meeting in the most friendly spirit any advances made by the government of Germany looking toward again placing the trade relations of the two countries on a mutually satisfactory and friendly basis.

If the same efforts were expended in that direction, without any derogation to the honour or the self-respect of this country, I think the results would be much better than we are likely to obtain from the treaty which has been the subject of discussion in this House this afternoon.

Mr. J. W. EDWARDS (Frontenac). Mr. Speaker, in speaking of the ratification of the French treaty it is not my intention to make any extended remarks, as the ground has been pretty thoroughly covered already by men more competent to deal with the subject than I can pretend to be. But as I had not an opportunity of voting on this question when it came up two years ago, and as I represent a rural constituency, I think it only right that I should express my views on this occasion. I have listened with a great deal of interest

to the addresses which have been given on this subject by gentlemen on both sides of the House. I was very much impressed the other day with some remarks about the necessity of Canada maintaining her dignity in her international relations, and not submitting to anything of the nature of dictation from the United States or any other foreign country. With that sentiment I am entirely in accord. In regulating our trade relations with other nations we should be governed solely by business considerations in the interest of Canada. I was especially struck with a remark made by the hon. Minister of Customs (Mr. Paterson) to the effect that we should maintain the dignity of Canada in such matters. But I could not help contrasting the present attitude of that hon. gentleman with his attitude previous to this government coming into power, when his motto was free trade as they have it in England or unrestricted reciprocity, or anything or everything that would enable him to get into power, and he was ready to cast the dignity of Canada to the winds. I congratulate him on the different attitude he assumes to-day. Since he got a seat on the treasury benches, a change has come over the spirit of his dream, and he has been acquiring a little of that dignity as a Canadian that he should have had years ago. There is a phase of this trade question which has not yet been touched upon, and to which I wish briefly to allude. Reference has been made by speakers on this side of the House to our trade with other countries. It is absolutely necessary that the people of Canada should look about for other markets for the products which this country is bound to produce in the years to come. But while we are seeking markets in France, Germany or any other country, to which I have no objection, I contend that we should consider the best market of all, that is, the home market; and in this respect I claim that the present administration has not shown either dignity or good sound common sense. Is it good sound common sense, for instance, for us to allow the Americans to bring their hay into Canada by paying a duty of $2 a ton, while they charge us $4 a ton on all the hay we send over there? Is it consistent with our dignity as a people that we should permit American bacon to come into Canada to the extent of over 7,000,000 pounds at a duty of 2 cents per pound while they charge us a duty of 5 cents per pound on our bacon? Is it consistent with our position as a nation to permit them to export to this country potatoes, barley, oats, peas, beans, wheat and other products at less duty than they charge us on similar products? Is it good common sense for us to subsidize steamship lines which traverse the Atlantic and Pacific oceans and hunt up foreign markets while we allow American products to come in at an advantage although by their tariff they shut out our farm products? I protest against that jug handle policy. If the government would impose duties on American agricultural products equivalent to those imposed by the United States on our products, they would be doing more for the farmers of the Dominion than they could possibly do by five hundred French treaties.

Surprise has been expressed at the remarks made by the Minister of Agriculture (Mr. Fisher) with reference to our cattle going into France. I am sure there is not a member in this House who will not agree with me that, under the restrictions imposed by that treaty, not one head of Canadian cattle will ever enter the French market. Not one cattle dealer here would undertake to export cattle to France under the restrictions imposed by the French treaty. I am not surprised, however, at the remarks of the Minister of Agriculture because he has already stated in this House that the farmers of the Dominion are a slipshod set of people, that they are indifferent, that they lack industry and enterprise. That statement was made by him last session, as will be found on reference to page 2030 of the 'Hansard,' March 3 last.

Mr. MILLER. Will the hon. gentleman read the words he says are in 'Hansard?'

Mr. EDWARDS. Certainly, I am most happy to oblige my hon. friend. On the 3rd of March last in this House the hon. minister said, speaking of the farmers of Canada and of their failure to take advantage of the work of the Department of Agriculture:

> If they would make use of one-tenth of it and carry one hundredth part of it into their every day operations, the result would amount to tens of millions of dollars more from agricultural produce than there is to-day.

Then he went on to say, and I presume this is what my hon. friend is so anxious to hear:

> It is the farmers' slipshod methods in this country which is the limit of our agricultural production.

I want to enter my emphatic protest against that statement. I protest against it as an insult to the farmer. I have given the reason why our farmers are not making greater progress. That is due to the fact that the duties we impose on American farm produce militates against the farmers of our own country and in favour of the farmers of the United States. The hon, minister said further:

> We are fortunate in Canada in having established a reputation in the world's market for a fine quality of agricultural products.

A very strange remark in view of the hon. minister's statement that our farmers are a slipshod sort of people.

And to-day the great market of Great Britain and Ireland is reaching out and demanding more of our finished agricultural products than we are sending to it, and the prices we get for those articles which we do send are such as to give the farmers of this country who raise the goods and export them splendid results, and the only pity is that the farmers are not doubling and quadrupling their exports every year. If they do not do it, it is not for lack of teaching or for lack of knowledge; it is for their lack of interest in their work, their lack of industry and largely, I believe, for the lack of that labour which is necessary in the carrying on of our farming operations.

If that is not a straight accusation hurled by the Minister of Agriculture, the man who is specially supposed to have the interests of agriculture in this country at heart—if that is not a straight charge by him that the farmers of Canada are a slipshod, lazy set of people, I do not understand the English language.

We have had a statement made here by my hon. friend from East Elgin (Mr. Marshall) as regards the effect that the carrying out of this treaty would have on the industry in which he is interested and which is one of the most important in this country. That industry benefits the farmers of this country, and I am prepared to accept the statement made by the hon. gentleman that it will be seriously damaged if this treaty is ratified.

Other statements have been made by other members. The hon. member for Lincoln and Niagara (Mr. Lancaster) has expressed the opinion that the treaty will injuriously affect the farmers in the Niagara district. The hon. member for Dauphin (Mr. Campbell) has clearly pointed out that it will have a bad effect on the cattle industry of the west.

I am just going to make one statement further as to why I think this treaty should not be concluded at present. I am not going to say that we should not have a treaty with France. On the contrary I would hold up both hands for such a treaty as would increase the trade and prosperity of Canada. But the treaty now before us was brought up two years ago. Is it not true that the French Republic has taken ample time to consider how it affects their interests? No one will find fault with the French government for that. As business men they have given the matter very careful consideration. They have cut here and carved there and made the treaty to suit themselves, and in so doing they exercised their right as business men. But if they have taken ample time to consider the treaty from their standpoint, what harm will result from our taking a few months to consider it? There is undoubtedly a spirit of unrest in England regarding tariff matters. I cannot predict what will take place there, but some change is likely in the course of the next few months, and I think it will be in our interest to wait a few months before ratifying this agreement. We ought to wait, because I believe that if we ratify the treaty now we shall pave the way for difficulties with regard to our trade with other countries which may result in very serious disadvantages to this country in time to come.

Mr. R. BICKERDIKE (Montreal, St. Lawrence). As one of the farmers of this Dominion, I would like to say that I do not think we are going to suffer at all through our cattle trade not going to France. I am sure my hon. friend from Winnipeg (Mr. Haggart) will agree with me, because some of his own friends along with myself did try shipping cattle to France, and I only wish there had been some law against it ten or twenty years ago, for if there had, we would be all richer men to-day. It is impossible to ship cattle to France with any advantage to the shippers. I was struck, however, with the very unpatriotic speech made by my hon. friend from East Grey (Mr. Sproule). It is quite unusual for him to be pandering to the United States as against the British empire. I could hardly believe my ears when I heard his utterances. Judging by his remarks, I can only come to the conclusion that he would prefer to have free trade with the United States rather than a preference for England. We certainly had one of the most unpatriotic speeches from that hon. gentleman that I have ever heard of anywhere, except some utterances at Lachine, in the riding of Jacques Cartier, a few nights ago.

With regard to the shipping of dressed meat our friend complains that there are no abattoirs. I can tell the hon. gentleman —and I am sure the hon. member from Winnipeg (Mr. Haggart) will back me up —that one of the best abattoirs in America is established in the city of Winnipeg and is under the management of good friends of his, Messrs. Gordon, Ironside & Fares. But the shipping of dressed beef from this country to Europe will not be a success owing to the climatic conditions and the short season.

Mr. SPROULE. How comes it, then, that this trade has been made a great success in shipping from Chicago practically along the same lines of communication?

Mr. BICKERDIKE. I think my hon. friend (Mr. Sproule) knows as well as I do about the cattle trade of this country——

Mr. SPROULE. Will the hon. member answer my question?

Mr. BICKERDIKE. I was going to. The reason is that their climate is so different from ours. They can ship cattle all the year round and you cannot do that from Canada.

Mr. SPROULE. Why?

Mr. BICKERDIKE. Because of climatic conditions.

Mr. SPROULE. If the cattle were killed and the dressed meat shipped in cold storage, could not that be done?

Mr. BICKERDIKE. Certainly.

Mr. SPROULE. That is what I am advocating.

Mr. BICKERDIKE. But we have tried it for years and the hon. member knows that it has never been a success.

Mr. SPROULE. Because we never had suitable cold storage.

Mr. BICKERDIKE. We have had cold storage, and, as I have said, one of the best abattoirs in America is in Winnipeg. I do not wish to discuss the question further than to say that we never can ship cattle from this country to France. With regard to our shipments to England, they are hampered by the embargo, the only excuse for maintaining which, is to shut out disease from that country. But if the cattle are diseased they will be shut out of France as well as out of England. And while I am on that point I may say that it is about time that England should remove that embargo. There is no disease in this country, and never will be so long as there are the checks upon the importation of cattle that exist at present.

Mr. SPROULE. I would like to ask the hon. member, if we cannot ship cattle to France, why was France so anxious to prevent it under this treaty? Was not she trying to protect herself?

Mr. F. D. MONK (Jacques Cartier). I have listened with a great deal of attention to the discussion on the ratification of this treaty, and I think all who have listened to it will agree that the discussion has been exhaustive and very moderate and reasonable in tone. It seems to me that commercial arrangements of this kind need to be carefully examined. There is always something to be said pro and con. And I do not think that any one can complain of what has been said in this discussion. I do not wish to speak at length. I supported the treaty as it came before us originally, and voted for it—differing from my right hon. friend the prime minister (Sir Wilfrid Laurier), who, when we endeavoured to establish trade relations with France, marshalled all his forces against the treaty of 1893 and voted and spoke against it. What is the change we have to ratify to-day? It relates to cattle. I take the statement of my hon. friend from St. Lawernce, Montreal (Mr. Bickerdike)—who, it seems to me, has not said all with regard to myself that he would liked to have said—I take his statement as that of a man of large experience in this particular line of trade. He said we could never do any cattle trade with France, and I cordially agree with him. In fact, it seemed to me, when this treaty first came before us, that its importance was very much exaggerated. It is, I am sure, a treaty of small importance, viewed in itself, and outside of all surrounding circumstances. It will not give us any great advantage, nor do I think it will give any great advantage to France. I do not believe it will interfere with the vine growers or wine makers of this country to any appreciable degree; and, with regard to the manufacturers in certain lines where we can give some advantage to France, as perfumes, scented soap, &c., I do not think the competition of France will have any lasting effect upon our industries. It is a harmless treaty, and it has been unduly magnified. When the treaty first came before us I had the misfortune to be misunderstood by my hon. friend the Minister of Finance (Mr. Fieldnig). I was not opposed to the negotiation or to the agreement founded on those negotiations; but I wanted, in the interest of all, to reduce the treaty to its real value, to what it really was. Because what had been done in France was grossly exaggerated with a view to deceiving the people as to the effect. At that time, I mentioned the gorgeously expensive reception of welcome which was tendered to our Lord High Admiral—I mean the Minister of Marine and Fisheries (Mr. Brodeur). The whole of our fleet, such as it was then, was marshalled out to go down the river and meet my hon. friend (Mr. Brodeur)—for I must say that the hon. Minister of Finance (Mr. Fielding), who had, I believe, a clearer notion of what had been done, abstained from taking part in that deceptive demonstration. Well, they went down. All our boats were out; there were refreshments galore, and fireworks and a great display. I turned out with the others to see the fireworks, and I have always questioned since who paid for that large display. Not the French government, not any individual or body that I know of. I assume that the expenditure, which was very considerable and quite unjustifiable, had been paid by the country. And for what reason? The alleged reason was that this was a great boon obtained by our plenipotentiaries for the agricultural classes; and further that we had affirmed before

the whole world that Canada alone, with no intervention, with no assistance, for the first time since its discovery had negotiated its own treaty. That demonstration was organized by my hon. friend the Solicitor General (Mr. Bureau) for purposes of his own, and I believe that nobody was more surprised than the admiral himself when he became the recipient of all this upon his arrival in the St. Lawrence river. I endeavoured to reduce the thing to its true expression; there was no boon whatever for the agricultural classes; there was nothing in it—cannot be any thing in any treaty that we conclude with France. France is an immensely wealthy country, and agriculturally is the greatest country in the world. It requires no food products from other countries. France exports its agricultural products to England, to Italy, to Germany. It always has a superfluity of grain, it has wheat in abundance. I was surprised to hear this morning that we had sent some wheat to France.

An hon. MEMBER. Seed wheat.

Mr. MONK. Probably, because France exports wheat and always has, and it is the policy of France to keep immense stores of wheat in the country. Therefore, anybody who knew anything about France was surprised to hear the affirmation repeatedly made in the paper under the direction of my right hon. friend, that this treaty was going to make all the agriculturists of Canada rich. Particularly it was stated in 'Le Canada,' my right hon. friend's personal organ in Montreal, that in future we were going to export all our fat cattle to France and feed the French, they were going to eat nothing else but Canadian cattle. Then suddenly this difficulty arose in France, and the last hope that we might do something in the way of fat cattle had to be abandoned when the French public became alarmed and said they did not want to have our fat cattle there, and that item was struck out. The Minister of Finance has stated that the difficulty which occurred in France was in reference to fat cattle. He may be right, I do not think that is the whole story of the difficulty, as I understand it. What they discovered in the French Senate, when they discussed this treaty, was that we had handed them a gold brick when we offered them advantages which were not conceded to other countries. because they found out that not only Switzerland but twenty other countries had the same advantages. This led to further negotiations—that is what I understand—and finally we gave up the hope of exporting fat cattle, because it was discovered that we wanted to hand them a gold brick, and the fat cattle clause was struck out.

I say again that there is nothing of a serious character in this treaty. My hon. friend from Quebec County (Mr. Turcotte) gave up the agricultural boon that was to come to our province. I understood him to admit that from an agricultural standpoint there was nothing in this treaty that ever could be of advantage to Canada. He fell back on the advantages we might have in getting books from France. Certainly if this treaty was to open to us the admirable literature of France, I would hail it with great satisfaction. But as a matter of fact, it only comes to this, that those who wish for French books, which are very expensive, may have to pay some ten cents less for them. Although that is an advantage, I do not think it can seriously affect our trade in French books. If I thought the treaty would have that effect, that alone should commend it to us. We must not forget that the effect of these negotiations is to bring us into closer relations with France, which I consider, is a very great advantage. It will enable us to have here that in which the French excel, namely, the production of articles de luxe, of artistic industrialism, if I may use that expression, which cannot but be of great advantage to us, and which we cannot get from any other country. From the artistic point of view I think it is an advantage. Otherwise it seems to me, viewing the treaty in itself, it is of such a harmless character that we might accept it without much demur.

Very different, I must confess, would be the prospect of a treaty with Germany. There is no doubt in my mind that we can do a very large trade with Germany, for the very reasons that we cannot do that trade with France. Germany is a much poorer country, and has a much larger population. Agriculturally it is very poor, and it is certain that we would do an immense business with Germany if the unfortunate conditions existing at present could be eliminated. But with respect to France those very circumstances reversed become difficulties and objections, and I think that anybody who looks carefully at this treaty will see that there is not much element of harm in the treaty itself. I do not think we will do much trade with France in the way of agricultural implements. We may possibly do something in lumber and wood, but that is very doubtful. In the first place, France herself is abundantly supplied with wood, because it has an excellent forestry system, far superior to our own, and one which must ensure that rich country being well supplied with wood perpetually. She imports wood and lumber from the Black Sea, from Norway, Sweden, Denmark and Russia, and it is very improbable that we can compete with those countries in respect of wood. The only trade which I think we may ultimately develop with France is in

pulp; such a trade would be advantageous to ourselves if it could be developed. They use a great deal of pulp in France. It must be prepared in a special manner, and if we prepared pulp as they use it, we would possibly develop a trade with France in that article. It has been well said in regard to all treaties that very often they do not produce the effect they are expected to produce, while on the other hand they sometimes develop unforeseen and unexpected sources of interchange of products.

Now, Sir, I have heard it said several times this afternoon that sentiment has nothing to do with arrangements of this kind with other countries. I do not agree with that. I think sentiment has very much to do with commercial treaties, always has had, and I think properly so. We have not concluded a treaty, but we have established a tariff specially favourable to Great Britain, giving her a special favour, for which we receive nothing in return. It is a matter of sentiment. For my own part, I thought at the time, and have always expressed the view, that we were going very far. The results have demonstrated that those who raised that objection were right. Among the consequences has been the fact that our woollen industries have suffered immensely. In one or two instances our agricultural interests have been greatly affected in consequence. Take the pickle industry, because that touches the city of Montreal; the pickle industry, which was assuming very large proportions in Montreal, has been completely killed by the preferential tariff, and the agricultural population of my county and of the neighbouring counties has suffered extremely in consequence. The Ozon Manufactory, which cost the late Mr. Carsley over $250,000, and the adioining factory of great importance which manufactured boxes exclusively for the pickle industry, have both ceased to operate, and that particular industry which benefited manufacturers and agriculturalists has been ruined, at any rate in my part of the country. So this preferential tariff is a matter of sentiment, there is no doubt about that. The Minister of Finance says that we introduced this preferential tariff in order to favour the mother country. My hon. friend is mistaken. The Minister of Finance, when introducing it, stated in answer to a question from this side of the House, that this preferential tariff was open to the whole world. We all remember, I remember, although it is very long ago, our minister at that time, Sir Louis Davies, pretending that the variest tyro in legal matters, the first year law student, knew perfectly well that it could not affect in any way our relations with Germany or Belgium. The result showed that these gentlemen were absolutely mistaken and the treaties had to be denounced. In this particular case, viewing the treaty in itself, as I and many others outside of this House do as very unimportant in its results, there is the question of sentiment to be considered. France, one of the most powerful nations in Europe, after being separated from England for centuries by continuous strife has been brought by the stress of political events in Europe very close to England. They are allies, and in the conflict which must take place some day, they will be side by side. What has followed? The interchange of the most agreeable relations between the two countries, boards of trade from France visiting England and being received sumptuously, the aldermen of London visiting the French capital and there being received in the same manner. The relations are most agreeable and with respect to ourselves, if my view of the treaty is the correct one, and it involves no serious consequences, I think it would be a regrettable circumstance, from a sentimental point of view, to see us at this moment retroceding from the treaty because the element of fatted cattle has been removed from it.

Sir WILFRID LAURIER. Hear, hear.

Mr. MONK. It interests a large section of our population, who, from a sentimental standpoint, look with very natural favour on the renewal of our relations with that ancient country from which many of them sprang. An endeavour made in that connection to renew relations, if not absolutely detrimental to us cannot but be conducive to the very best results in every way. I think that is a consideration that might very properly have some weight with this parliament and this country in accepting the treaty in which, as I said before, I do not for my part see any very great possible injury to this country.

I said that the treaty in itself seemed to me to be unimportant. We cannot, as long as France remains a protectionist country and we a protectionist country situated as we are now, develop any very great commercial relations with that country. I do not believe that is possible. Allusion has been made here to the possibility of this treaty creating complications for ourselves in reference to our relation to other countries, and I must say for my own part that the Minister of Finance has seemed to me to be strangely lacking in not placing earlier before the House all the information possible concerning the different countries with which, as a consequence of this treaty, we place on the same favourable terms of commercial relationship. We have no information at all in respect to that and in respect also to the effect of the treaty in regard to our relations with the United States. It seems to me that we were en-

titled to fuller information upon that point. I asked the Minister of Finance very innocently the other day if he had taken the trouble to inquire as to the effects of this treaty in regard to our relations with the United States. I understood the hon. gentleman to say that he had not and would not. That seems to me to be a very faulty disposition on the part of the one who is engineering this treaty through the House, and I think it was a proper question to ask. Although I have been severely criticised outside the House for having asked that question, I say it was a pertinent question and one from which it could not be concluded that I was anxious to make our own dealings subservient to the dictates of any other country, and I maintain that position. The responsibility for this treaty rests with this government. Scanty or not as has been the information given us on that point, the responsibility under the circumstances of this treaty rests with this government and they cannot escape it, if evil consequences ensue on points on which we have been deprived of necessary information, easily obtainable.

I am led to state that it seems to me we ought to negotiate treaties with all countries that have any need for our products and with which we can deal advantageously. We have immense natural resources, there are markets in which we could advantageously dispose of these resources and these negotiations which we conduct for the purpose of business and the development of the vast possibilities of our trade are useful to us. The discussion of this treaty in the French chamber has made known this country to better advantage in France than all the money we have spent on useless immigration agents in that country. I desire to point out to this House that under the present system these commercial negotiations are extremely difficult, and that it is time for us to think of so adjusting or amending our procedure in that regard as to make these negotiations less complicated. At present, if we see prospects of trade with a country we have to present our representations to the chief imperial officer, to the Governor General of this country. He in turn forwards those representations to the colonial office in London, which turns them over to the foreign secretary, who afterwards communicates with the foreign secretary of the country with which we desire to negotiate. That foreign secretary turns over our representations to the Minister of Commerce of that country and any answer that we receive must come back through the same circuitous channel. That is an extremely disadvantageous way in modern times for us to negotiate our treaties and it is a great surprise to me that my right hon. friend who has attended the imperial conferences in London has not seen fit to bring this great disadvantage to the knowledge of the imperial conferences in order that some serious effort might be made to render more easy negotiations which, subjected to that particular procedure, become almost impossible and fruitless. We should also think seriously of removing another great disability which is found in the favoured nations treaties which are in considerable number and interfere with the extension in a profitable sense of our commercial relations. That can be done without any undue friction. We must get rid of those treaties if we are to extend our commerce throughout the world as we are justified in thinking we can do.

With regard to the German treaty, I was surprised to hear the Minister of Finance say that every possible effort had been made to prevent in the first place and then to remedy the state of affairs that exists at the present time. I remember asking the right hon. gentleman myself if at the time of the negotiation of the Anglo-Belgian and Anglo-German treaties this government had done anything for the purpose of intervening in the negotiations which led up to the conclusion of the new treaties. My recollection is that the Minister of Finance stated that nothing had been done, and in that the government were greatly in fault. A new treaty was being negotiated and we should have been notified to take part in the negotiations, or, if we were not notified, the duty of the government at that moment was to intervene and endeavour to secure the protection of our interests in the proper manner at the proper time. But, my hon. friend told me that nothing had been done then. If any correspondence has taken place it should be laid on the table of the House. The Minister of Finance stated afterwards that every possible endeavour had since been made to remedy that state of affairs, and I understood him to say that he had negotiated with the German consul here and that representations had been made, and we should have that correspondence.

Mr. FIELDING. That has been in possession of the House for years.

Mr. MONK. It cannot have been before the House for years because these are events of recent date. I would be very glad to know if there is correspondence between the imperial authorities and this government at the time of the renewal of the German treaty, and if there is has it been laid on the table of the House. There is none. There were no representations made and it is in consequence of the awkward manner in which the Canadian government acted at that time that our commercial relations with Germany were broken off just in the same way as this government, blind-

ly, concluded a treaty with Japan which obliged us, despite three warnings from the imperial government, to go on our knees to Japan a short time afterwards and ask them for favours which they conceded in a lofty letter in which they reserved their right at any time they deemed it necessary to insist on the full execution of the treaty.

Sir WILFRID LAURIER. I would not have taken part in this debate were it not for the character which my hon. friend (Mr. Monk) endeavoured to give to this treaty. In his opening remarks he paid some attention to me and he stated that I had spoken and voted against the treaty of 1893. That is a statement which I could dispute but I will pass it with the observation that if I spoke and voted against the treaty of 1893 I had the merit, which after all is not a very high one, of consistency. I remember very well that on the treaty, not of 1893, but of 1907, my hon. friend spoke one way and voted the other way, and I will be very much surprised if, although he spoke against this treaty tonight, he will not end by voting in favour of it. The hon. gentleman tries to run with the hare and hunt with the hounds, but that is his own business and the business of the electors of Jacques Cartier. The important statement made by my hon. friend (Mr. Monk) was that this is a mere childish treaty, that there is no necessity for it at all, that it is of no consequence to Canada whatever, and he gives as his reason that France is such a rich country that she does not need to import agricultural products. The hon. gentleman told us that France produces enough wheat, butter, cheese and other such commodities to render her independent of importations from other nations. Is the hon. gentleman serious in that statement? Why, he has not even read the blue-book which has been put in his hands and which gives the statistics upon which this treaty was negotiated. If he looks at his blue-book he will find that France imported in the year mentioned here, wheat to the value of 186,666,000 francs, or more than $27,000,000. And yet, the hon. gentleman says that France does not need to import one single bushel of wheat. Let me tell the hon. gentleman, further, that France imported flour to the value of 5,887,000 francs. But that is not all. If the hon. gentleman looks at this blue-book he will find that France imported oats to the value of 50,000,000 francs, barley to the value of 26,000.000 francs, maize to the value of 51,000,000 francs and other grains to the value of 25,000,000 francs. Still more, France imported horses to the value of 11,000,000 francs and eggs to the value of 36,000,000 francs. Now, it is true that France is an exporter of cheese, but France only exports certain qualities and in one year she imported 48,000,000 francs worth of cheese. These are the real facts and not the fancies which my hon. friend has given to the House. These are the facts which induced us to negotiate a treaty and to try to obtain some advantage in the French market for the products of Canada. Then, the hon. gentleman told us that France would not take our lumber because she has large forests of her own and a most admirable system of forest preservation. That is true, and in the preservation of her forests France is teaching us a lesson which I hope we shall soon learn. But though France takes good care of her forests and has large timber areas, France is a large importer of wood. If my hon. friend looks at the statistics in this blue-book he will find that France has imported:

Woods, common:

Logs, round, not squared with or without the bark, of any length and of a circumference at the thickest end of not more than 60 centimeters, 3,218,225 francs.

Wood, sawn or squared, 80 millimeters in thickness and above 10, 156,375 francs.

Wood, squared or sawn, less than 80 millimeters and exceeding 35 millimeters in thickness, 59,447,765 francs.

Wood, sawn 35 millimeters in thickness or less, 46,502,530 francs.

Stave wood, 26,461,770 francs.

In all, France imported about 200,000,000 francs worth of wood and yet the hon. gentleman says that the market of France is of no advantage to us.

Mr. MONK. I did not say that France did not import wood; I said that she imported wood from the Black Sea, from Russia and other countries, but I said that I did not think we could send her any.

Sir WILFRID LAURIER. Well, if France imports wood from the Black sea there is no reason why France cannot import wood from Canada, and if we have an advantage in the markets of France then I think the French people will buy their wood from Canada rather than from the Black sea. It is because France now imports her timber from the Black sea that, having the benefit of the minimum tariff, we will send her wood from Canada. Then, my hon. friend stated that he had no confidence that in agricultural implements we could make any impression on the French market or that we would have any advantage at all from this treaty. That is not the opinion of the manufacturers of agricultural implements. On the contrary they have been pressing for the ratification of this treaty, and my hon. friend the Minister of Agriculture did not exaggerate this afternoon when he said that we had a good hope of capturing that market. Sir, this is a most important treaty. My hon. friend is convinced of it, so much so that

I am pretty sure that I shall not be a false prophet when I say that although he has damned it with faint praise, he will end by supporting it with his vote. I have but one word to say to my hon. friend from East Lambton (Mr. Armstrong). He appeals for improved trade relations with Germany. I have no hesitation in saying to my hon. friend that for my part I am not satisfied with our relations with Germany; they are not natural or what they ought to be. But the fault is not ours. We have been compelled by the action of Germany to defend our own position, and we have succeeded. My hon. friend has told us that German agents are very anxious to open negotiations with us. My hon. friend the Minister of Finance has stated that as soon as we have disposed of the present treaty we shall be prepared to consider the other treaties. But let me warn my hon. friend that if we make a treaty with Germany, he will have difficulty, not with this side of the House, but with the other side. His own leader has told us that he has agreed to the ratification of this treaty simply because there is a provision in it that it can be terminated at any time on twelve months notice. If it were made for ten years, he would not vote for it, because later on it might complicate our relations with Great Britain. Therefore if the hon. leader of the opposition and those who support him vote for the ratification of this treaty because it can be terminated at any time, my hon. friend from East Lambton will have some difficulty in persuading his own friends to support a treaty with Germany. In my opinion, we should endeavour to push our commercial relations in every part of the world. We have opened our doors as widely as possible to British trade in the hope that at some time or other we shall have preferential treatment in the British market. But, Sir, I shall not complicate this matter. It is possible to have preferential arrangements with Great Britain without injuring our relations with other countries.

Mr. M. S. SCHELL (South Oxford). Mr. Speaker, it was not my intention to speak on this question, but I wish to utter my protest against some reflections which have been made on the opposition side of the House in regard to the agricultural interests of this country. Some hon. gentlemen have sought to convey the idea that the farmers of this country are not in a prosperous condition, and that this government has not been doing what is in their interest. I wish to dissent from that. We know that the cattle industry of this country has developed at a marvellous rate in the last few years, owing largely to the way in which this government has fostered the English market, and we know that to-day cattle are bringing a better price than they ever did before in the history of western Canada. Indeed, never in the history of Canada have the farmers obtained such high prices as they are getting at the present time for all their products, whether beef, pork, butter, cheese, eggs or any other product. A few years ago, when this government entered into a preferential trade arrangement with England, the opposition criticised them on the ground that they were not getting any preference from Great Britain in return. But what did we find? Immediately after that preference went into operation, the British people bought very largely of our agricultural products and paid for them a higher price, and they found that our goods were worthy of a better position on their market than they had hitherto obtained. The more they bought, the better they appreciated what we sent to them, so that our exports to England doubled in value in a few years after 1897, when the preferential arrangement with Great Britain was entered into.

Mr. ARMSTRONG. To what other country can we send our agricultural products at the present time?

Mr. SCHELL. We send some to the United States; but so long as we have captured the British market, which is the best market in the world, and are maintaining a position of supremacy there against all competitors with the exception perhaps of Denmark in one or two particulars, we need not worry about our trade with other countries.

Mr. ARMSTRONG. Can the hon. gentleman tell us whether we are getting in the British market any better terms than any other country in the world? Are we not all on the same footing?

Mr. SCHELL. That is quite true. We have no tariff arrangements in our favour, but we have the sentimental benefit upon which considerable stress was laid by the hon. member for Jacques Cartier (Mr. Monk) a few moments ago in regard to the French treaty. There is in our favour the power of English sentiment and the appreciation of a people who are willing to trade. And that brings out another thought in connection with this treaty with France. It opens up a larger field and a wider opportunity for the Dominion of Canada in the matter of making treaties with other countries. There is something even broader and more important than the effect of this treaty on our trade with France. I believe that it will make Germany desirous of negotiating with Canada a treaty by which our trade relations may be improved, and I want, not merely as a representative of an agricultural constituency, although representing as rich an agricultural county as there is in the Dominion of Canada, but as

a Canadian, speaking from a broader standpoint, to express my appreciation of the treaty that has been negotiated with France. I speak as a representative of manufacturing industries, of which we have a considerable number in the county of Oxford. I know that there is a large industry in Ingersoll that is very anxious to have this treaty ratified in order that it may obtain the advantages that will come to it as a manufacturer of agricultural implements. This will give that industry the advantage of some $6 or $7 per machine exported to France as compared with the American manufacturers. And we know that the trade in agricultural implements now amounts to $800,000 practically per year in round figures. Under this treaty there is reasonable prospect of that trade being more than doubled in the very near future unless possibly arrangements be made by which the United States may obtain entrance into that market on a somewhat similar basis.

I am surprised at the attempts which have been made to belittle our preferential trade with Great Britain and at the efforts of several speakers opposite to show that we should cultivate the United States market instead of the British and other foreign markets. Why, the English market is certainly the best in the world, and we obtain the benefit of it as already intimated. And in connection with the French treaty, I believe that we shall also obtain from it a benefit even greater than appears on the surface in the matter of concessions to us on the exports we may send to that country, besides the better feeling which will prevail and the advantages given to us of buying cheaper the French goods which we require. If there is something we want to buy and we can buy it more cheaply, that is quite as much advantage to us as getting better prices for the goods we sell. Several hon. gentlemen opposite have spoken of the danger of our getting French goods into the country. Sir, I consider it an advantage to buy cheaply something I want, and I look upon that treaty as advantageous which will enable us to buy cheaper the goods we require and give us better prices for the goods we sell. The government are to be congratulated on this arrangement and the people of this Dominion will appreciate, and appreciate thoroughly, this treaty which has been negotiated with France and which I believe will be ratified by this parliament.

Mr. SPROULE. Did I understand the hon. gentleman correctly to say that there never was a time in the history of Canada when the cattle trade was growing so much as of late years and the farmers getting such good returns?

Mr. SCHELL. I said that the prices of western cattle were never better than today.

Mr. SPROULE. How then does the hon. gentleman account for this fact that whereas in 1896 we shipped out to England and all foreign countries 211,000 head, in 1908 we only shipped 150,000; and that whereas in 1901 we got $1,500,000 for what we shipped out, last year we only got $1,300,000?

Mr. SCHELL. I would say that the mortality which took place among cattle in the western states three years ago, owing to the very severe winter, materially reduced their shipments.

Mr. SPROULE. These were not shipped from the western states but from Canada.

Mr. D. HENDERSON (Halton). Possibly I would not have arisen to say anything had it not been for the somewhat extraordinary statement made by the hon. gentleman who has just taken his seat. I was surprised to hear repeated, perhaps for the hundredth time, that worn out argument that we got a preference from Great Britain for the preference we gave, and the statement in support of that argument that we were shipping a larger amount of produce than ever before to Great Britain. Why, we produce more. Look at our great Northwest with its many million bushels of wheat going out and increasing year by year, how would it be possible that our exports to Great Britain should not increase? We are producing more cheese and more pork, how then would it be possible that our exports would not increase. Hon. gentlemen opposite talk about sentiment. Did you ever see an Englishman who would give you more money for an article or buy it simply out of pure love. I take an Englishman to be a man of business. They do not do business over there for the fun of it, but on business principles and I admire them for that. An Englishman gets all he can out of the preferential tariff. He knows that we cannot buy a yard of linen in this country outside of Great Britain unless we pay a duty of thirty per cent, or five per cent higher than it was before the preferential tariff was introduced. Do you mean to tell me that the Englishman would not increase his price by about four per cent or five per cent to the Canadian purchaser? Where is the sentiment? All on the side of the Englishman. Well, the sentiment he has is for his own pocket.

An hon. MEMBER. Or the Scotchman.

Mr. HENDERSON. Yes, just the same as the Englishman. Instead of saying the Englishman, I should have said the people of Great Britain. Do you mean to say that

under the preferential tariff, the manufacturer of Great Britain or the exporter does not charge the people of this country more for the goods we buy than he did before. I have before me a document which to my mind proves the whole question. We have heard a great deal about the increase in the cost of living in this country. What was it brought about that increase? Why, we had to come to the rescue last year of our civil servants and grant them increased salaries because of the enormous increase in the cost of living. I was not surprised at these men asking for an increase of salary. The policy of this country has compelled them to pay more for what they require. Here is a table prepared by the officers of this government. There can be no disputing it. At any rate I am not going to dispute it. Let me give a few examples from that table to show the actual increase in the cost of living. And where does that increase come from, if not from this double tariff which we have? I know I shall be charged with disloyalty if I say one word against the British preference, and consequently I am not going to speak along that line, but I do say that I am not one of those who approve of a double tariff. I do not approve of a double French tariff or a double tariff with Switzerland or Japan or any other country. I do not approve of one tariff to fix the amount of money that shall go into the treasury and another to fix the price of the goods which the purchaser shall pay. That is what we have under the British preference. The minimum or preferential tariff simply declares how much should go into the treasury of this country on goods imported into Canada. But the general tariff fixes the prices of those goods to the consumer; no doubt about that. The British manufacturer knows how much to charge for his linen goods, for instance, for he knows we cannot buy from the United States or any other country except Britain unless we pay the highest tariff. The same applies to cotton and any other classes of goods. And we have the evidence of this in the statement. I would not like to detain the House at this time by reading a very large number of items, but I will give hon. members some illustration of how the cost of living in this country is increased and how this increase has been brought about under the double tariff which has existed for some twelve years:

Article.	Increase.
Shirtings	27 per cent.
Sheetings	45 "
Factory cotton	60 "
Prints (crums)	25 "
Muslins	25 "
Denims	25 "
Ticking	36 "
Cashmeres	20 "
Linen (brown holland)	20 "
Table linens	33⅓ "
Towellings	25 "

I might go on by the hour enumerating these increases that have all taken place under the preferential tariff. If under the double tariff that we have had the result is what I have pointed out, what is going to be the consequence of the double tariff that we are to bring into force between Canada on the one side, and France, Switzerland and fifteen or twenty other countries on the other?

Now, I wish to refer for a moment to the remarks of the Prime Minister (Sir Wilfrid Laurier). Seldom indeed do I attempt to criticise what that right hon. gentleman has said. Nor do I seek to criticise now, but merely to make reference to it, and point out something that the right hon. gentleman neglected to give to the House, when he spoke of the large agricultural imports of France and the opportunity that would be afforded to Canada under this new treaty. How are we going to increase our exports to France under this treaty? No preference is given to our farmers under it. On wheat we do not get the minimum tariff; on wheat flour there is only the general tariff, not the minimum; on oats, whether grain or meal, there is only the general tariff; on barley, grain or meal, the general tariff is charged just as in the case of this grain from any other country. In the case of rye, both grain and meal, maize, both grain and meal, buckwheat, both grain and meal, malt and beans, the same is true. Chick peas are admitted free into France in any case. And in other grains we have only the French general tariff. How can we expect to increase our exportations to the French market when we are subjected to the same duty that every other country has to pay? I fail to see how the right hon. gentleman made any point on the exportation of grain to France under this treaty. After this treaty is ratified, we shall stand in exactly the same position as to-day, unless my hon. friend from South Oxford (Mr. Schell) will induce the people of the French republic to become very sentimental and pay more for our grain than they pay for grain from any other country. A good deal has been said about the cattle trade, and I do not think I can add much to the discussion of that subject. I was surprised to hear my hon. friend from St. Lawrence, Montreal (Mr. Bickerdike) speak as he did. I always listen with respect to the hon. gentleman's discussion of these questions, because I know that he is deeply interested and well informed with regard to such matters. Cattle will be imported into France under this treaty at $3.86 per 220 lbs., the maximum being $5.97 per 220 lbs. But we do not get the benefit of this lower duty of $3.86. The very cattle we want to send to France are to be excluded, and the treaty, so far as the cattle trade

is concerned, will be of no advantage to us whatever. And why should we wish to send our stocker cattle to France to be manufactured into beef? We have abundance of coarse grains for feed and every opportunity to finish these cattle for the market. Reference is made to the fact that it is not left with us to say when an animal is fat or when it is lean. The Canadian shipper sends a cargo of cattle to France as lean cattle, and as such to come under the minimum tariff of this treaty. It is the Minister of Agriculture in France that determines the class of cattle, and if he says they are fat or they are lean, that will fix the rate of duty to be paid. We give away the whole thing. An hon. gentleman just reminds me that after the cattle get there the French Minister of Agriculture determines their class, when there will be no alternative but to accept the terms the French government would impose. Now, whilst they have been very careful to cut out of the treaty of last year—for which I voted—but having cut out that clause this year I shall vote against it. I have no hesitation in doing that. I am the farmers' friend, and anything that savours of unfair dealing with the farmers of this country I am going to oppose. I take that stand without fear and without hesitation. I would not be justified in committing an act such as that against the farmers of this country.

Agricultural machinery, we are told, will be exported very largely to France. How extremely kind our friends are to the manufacturers of this country, extremely kind—the men from whom they draw their support in election times, the agricultural implement men who keep them in power; how extremely kind they are to them. They say: Never mind the farmers, they can send their lean cattle to France the people of France don't want their fat cattle; never mind, we will strike that out. Did they strike out anything in connection with the agricultural implement industry? Not at all. But under this treaty they are to have a preference over and above other countries of forty per cent, a larger preference, almost one of the highest preferences that are granted in any case.

Now some hon. members have made reference to local matters, and I think I may be excused if I make a reference to a local matter by way of illustration. This question is so broad that any man might talk on it by the hour. I submit that this treaty has been very crudely prepared. I do not mean to cast any improper reflections upon the admiral and his coadjutors who helped him in France, but I do mean to say that they have not fully considered the whole question. By that I mean that when they give a special preference to a manufactured article they should at the same time have given a preference to the raw material of which that manufactured article is made. That would be fair play; and to reduce the duty on manufactured goods coming into this country from France and fail to reduce the duty on the raw material of which those goods are made, I say is unfair. I will take the case of gloves, manufactured largely in the town in which I live, and manufactured in other parts of the country. I am not speaking for the village of Acton alone; but my attention was drawn to that matter from the fact that I knew it was a very important industry. You will find the industry carried on in other places, in the province of Quebec and they will be affected in the same way. Now the duty on gloves from France to Canada, under this treaty, will be reduced 14 2-7 per cent, that is a very considerable reduction; and the manufacturer of gloves in this country who has hard work to compete at the present time, will find it a very difficult matter indeed to compete with other countries, with these 15 or 20 countries that are brought under the operation of this treaty after it has been ratified. I fear it may be very disastrous to some of those who are engaged in that industry. Now had the government given a similar reduction on the raw material of which those gloves are made, I would not have blamed them so much. I will take the article of glove leather. Glove leather, dressed, coloured or uncoloured, when imported by glove manufacturers for use exclusively in their own factories in the manufacture of gloves, the duty in the intermediate tariff is 7½ per cent, and in the general tariff it is 10 per cent. Do you believe, hon. gentlemen, that these men, in the interest of the people of this country, actually left that clause of the tariff entirely out? It has no place in the French treaty; consequently the raw material of the glove manufacturer—and mind you a great deal of it can be obtained in France, France is a glove country—they did not even offer to admit the raw material of which gloves are made into this country at a lower rate of duty, but they said to the people of France: Whilst we won't admit the raw material into this country, either from France, from Switzerland, or from any other of those 15 or 20 countries, we will admit the finished article. Is it fair? I do not think it is and I do not believe the Minister of Finance, strongly opposed as he is to protection—I beg the hon. gentleman's pardon—as he was years ago.

Mr. FIELDING. My hon. friend is becoming a free trader, he has been complaining to-night of the duties.

Mr. HENDERSON. Well, I do not think the Finance Minister should blame me very much if I did turn a little along the

line of free trade. I do not think that I am advocating a free trade policy when I say that if you reduce the duty on a manufactured article you ought to reduce the duty on the raw material of which that article is made. That is not free trade, that is fair trade, but it does not seem to be part of the policy of this government. Fair trade is what the people of this country want. I will undertake to say that the glove manufacturer to whom I referred would not so seriously complain of the reduction in duty, of the advantage given to the French glove makers in the markets of this country, if he got a similar advantage in his raw material; the one would balance the other. But when you make it harder for the man in this country to carry on his trade, I think you ought at the same time to do something to help him carry on that trade.

Mr. FIELDING. We don't need a treaty to do that, the man can do it of his own motion.

Mr. HENDERSON. What is the use of this French treaty if you can do it of your own motion? I will tell you how the hon. gentleman tried to do it last time the tariff was revised, he actually tried to put through this House a change in the tariff raising the duty on this raw material, this kid leather, from ten per cent to thirteen per cent. That is the way he would do it by Act of parliament. I remember well appealing to my hon. friend the Minister of Customs, whom I always found fair; when I showed him the various samples of glove leathers and made my appeal to him, he saw the point, and came down, and said: Well, put it at ten per cent; and it is at ten per cent still, although in the first issue of the tariff of 1907 it was put at thirteen per cent.

Mr. FIELDING. That only proves how fair we are.

Mr. HENDERSON. Fair when you couldn't help it, fair when you were found out. The hon. gentleman became fair when he saw there was no justice in what he was doing. He was found out. Had he not been found out and exposed, I have no doubt it would have been thirteen instead of ten per cent. Sometimes I am accused of being a high tariff man. I advocated a low tariff in that case and I felt justified in doing it. I believe in a low tariff when a low tariff is the best for this country, and when a high tariff is justified and in the best interests of the country I am prepared to support it. Reference has been made to the question of wines. I have the honour of representing a county that grows a very considerable quantity of grapes from which a very good quality of wine can be made. I feel that I would only be voting in the interests of my constituents by declaring that I do not want these French wines to come in at such a largely reduced rate.

Mr. SPROULE. In the interests of temperance as well.

Mr. HENDERSON. The question of temperance I need not put before the Minister of Finance, because he understands that thoroughly. I do not think it will make much difference as far as temperance is concerned, whether the wine pays 25 cents or 15 cents a gallon. I am not opposing it on that ground, but on the ground of fair trade, fair play. The people of those counties in the Niagara district and along the north shore of Lake Ontario have invested very largely in expensive lands. They have planted these small high-priced farms out with grapes and are producing an excellent quality of grape. These grapes are being manufactured into wine and I say it would be unfair to these people now, after they have made their investment, to bring about such an enormous reduction in the rate of duty on wines, so that this country would be invaded by the products of France while our farmers are getting nothing in return to compensate them.

Hon. WM. PATERSON (Minister of Customs). Mr. Speaker, hon. gentlemen opposite representing largely agricultural constituencies have said that they are bound to look at this question in a measure from the agriculturists' standpoint, and so, representing that very important class in the community, I have come to the conclusion that I should support this treaty in their interests. The Prime Minister has pointed out that many million dollars' worth of farm products are imported into France with which country we are making this treaty. The last speaker (Mr. Henderson) thought there was no force in that argument because he said we were not sending any in there.

Mr. HENDERSON. I did not say that.

Mr. PATERSON. —and because of the duty.

Mr. HENDERSON. Yes, that part of it.

Mr. PATERSON. And because the duty was the same, there being no difference between the maximum and the minimum tariffs, therefore, to secure that for the farmers was of no value to him. He forgets this point, that that is a market into which the products of the farms of other countries find their way to the extent of millions of dollars, and the government in negotiating this treaty want to secure for the farmers of this country that they shall have access on the very best terms that that country gives to any other country for these millions of dollars worth of produce, that is to place them on a fair basis of competition.

Mr. ARMSTRONG. They had that before.

Mr. PATERSON. But they may change that at any minute, and on these millions of dollars' worth of farm products they may reduce their minimum tariff by treaty to another country which produces these farm products in competition with ours. What position would we be in then with this treaty in force? One of supreme ease because for every cent they take off the duty to any other country they have to take off a cent to our farmers. Is that nothing? That is where we are, that is the position we are in, and in the interests of our farmers, I think I would assume a great responsibility if I should lift my voice or give my vote against a treaty which secures to them that advantage. It is admitted that some of the manufacturers will derive very great material benefits. Have hon. gentlemen opposite discarded all their notions of a lifetime that I have heard advanced in this House, that if you can enlarge your manufacturing industries in this country you therefore enlarge the market for the farmers' products? Under a treaty that will give from $6 to $8 advantage to our agricultural manufacturers on a binder giving them the market of France, as against their American competitors, thus doubling the produce of our factories, according to the arguments I have heard advanced by the hon. gentlemen opposite time after time, the farmer is benefited as it enlarges his home market. What he wants is men to work in the factories, to be consumers of his products. What do hon. gentlemen, speaking in the interests of farmers, propose when they suggest voting against this treaty? What does the member for Frontenac (Mr. Edwards) say? He says: Do not legislate in that way, what does that amount to? What you want to do is, when the American charges you six cents on your butter, to raise your duty on butter from four cents to six cents and when he charges six cents on your cheese to raise your duty of three cents to six cents. That is the way he wants to benefit the farmer? What will that amount do? The American sends into Canada 473,805 pounds of butter in the course of the year, and this he says is ruining our farmers. What does it amount to? Multiply those pounds by 16, turn it into ounces and divide by seven millions, the number of people in Canada and it will be seen that the butter coming into Canada is one ounce for every man and woman and child in the country, enough to spread one slice of bread a year. That is the theory that we have set up against our policy of securing for the farmers of Canada the certainty that France, which imports millions of dollars worth of farm products, never can admit the products of any other country at a lower rate than ours. But then there is cheese. We import from the United States 231,811 pounds of cheese and we are going to save the farmer by raising the duty from 3 to 6 cents on cheese. Calculating as we did in the case of butter you will find that the Americans send into Canada about half an ounce of cheese for every man, woman and child a year. That is the Conservative way of benefiting the farmer. The member for Frontenac (Mr. Edwards) can go to his constituents and say: I voted down the French treaty. If they say to him: Are there not some good points about it, he will say: Well I do not know, we did not get any advantage. They may say: Were we not getting an advantage by securing the mimimum rate of duty allowed to any other nation? He will answer: Oh, but I think that the plan I have advocated is better, to have a higher duty to shut out the Yankee butter that comes into this country. How much comes in? There is an ounce in the year for every man, woman and child. But they say to him: We are in the county of Frontenac and you are representing us and there are hundreds of thousands of farmers in the other constituencies throughout the Dominion as well as in this, and we will be all scrambling to get a share of that ounce of butter. Just fancy the idea of talking to the farmers that way and voting down a treaty that secures for them entrance to a market that takes millions of dollars' worth of their products.

Mr. EDWARDS. Does the hon. gentleman advocate it on bacon and other things?

Mr. PATERSON. Yes, I will take the whole list, but I did not want to make my remarks too long. Our farmers after producing every pound of cheese that is used by our own people have over 160,000,000 pounds to export to other countries.

Mr. SPROULE. How much of that do they send to France?

Mr. PATERSON. They want to send some of it to France and that is why we are negotiating this treaty.

Mr. EDWARDS. The hon. gentleman misunderstood me. I asked him if he made the same remarks with regard to bacon and I asked him that because his argument was so oily.

Mr. PATERSON. The hon. gentleman spoke of cheese and butter.

Mr. EDWARDS. And also bacon.

Mr. PATERSON. He will find that we produce as much bacon as we required in this country and that we exported some too.

Mr. EDWARDS. We import over 7,000,000 pounds from the United States,

Mr. PATERSON. Oh, I know all about the imports and exports; it is my business to look after them all the time. The way to benefit the farmer is not the way the hon. gentleman recommended, but it is to ratify this treaty and get the best terms you possibly can in the export market for that which we produce a surplus of, and I think we produce a surplus of almost every agricultural product. And now, as to subsidizing the steamship line, I am not a prophet, but I do know as a business man that when you make transportation more certain, cheaper, and more frequent, you will extend your market as you could not extend it in the absence of such facilities. It may not come in a day or it may not come in a year, but once that steamship line is established and you have better transportation and lower rates, then I am hopeful that our live grain merchants and our farmers will avail themselves of that market which offers to them the best terms that are given to any other nation. That is what we secure by this treaty.

Mr. GEO. TAYLOR (Leeds). I rise, not to discuss the treaty but to correct the wrong impression that the hon. member for St. Lawrence (Mr. Bickerdike) left upon the House and perhaps upon the country. We all know that the hon. gentleman (Mr. Bickerdike) is one of the most extensive cattle exporters in the Dominion.

Mr. LANCASTER. He said he was a farmer.

Mr. GEO. TAYLOR. I suppose he is a farmer also. I understood the hon. gentleman to say that owing to the climatic conditions in Canada we could not be successful in the chilled meat trade, but the hon. gentleman knows very well that practically all the chilled meats exported from Chicago pass over the Grand Trunk railway through Canada and go to England via Boston, which is a very much warmer route than via the St. Lawrence. In view of that fact how could the hon. gentleman possibly be under the impression that we cannot compete with the United States in exporting chilled meat, unless it be that he himself wants to continue in the business of exporting live cattle? I believe that we can export chilled meats just as successfully as the Americans can and I know that the climatic conditions are more favourable in Canada than they are in the United States for that trade. Every day we see train loads of Armour's beef coming from Chicago to Coteau Junction and the cars re-iced there and sent to Boston. If the Minister of Agriculture will introduce this cold storage system that he has been talking about for years, we can bring our meat from Winnipeg to the east, re-ice the cars in transit and deliver the meat in England just as well as they can deliver it from Chicago.

House divided on the motion of Mr. Fielding.

YEAS:

Messieurs

Allen,	Loggie,
Aylesworth,	Lovell,
Béland,	MacNutt,
Bickerdike,	McCoig,
Black,	McColl,

Guthrie,	Thoburn.

Mr. MONK. Mr. Speaker, I rise to a point of order. It is a well-known rule of parliament, often applied in England, that when the finding of the Speaker on a vote is questioned, those who asked for the vote are obliged to vote negatively. This has very often been held in England by Mr. Speaker Denison. I noticed that the Prime Minister, the Minister of Finance, the Minister of Customs and the Minister of Marine and Fisheries, rose and questioned your findings so that under this rule these hon. gentlemen must be recorded as voting against the motion.

Mr. SPEAKER. I understand, from a rapid glance at the authorities, that the precedents are contradictory in the matter. The only guiding rule which we have in our rules is No. 8, which says:

Upon a division, the yeas and nays shall not be entered upon the minutes unless demanded by five members.

This does not indicate whether the members should vote on one side or on the other.

Motion agreed to, and Bill read the second time, considered in committee, and reported.

Mr. SPEAKER. When shall the Bill be read a third tome?

Mr. FIELDING. Now.

Mr. FOSTER. At the next sitting.

Mr. LANCASTER. I object to the Bill going on to-night—railroading this thing through altogether too fast.

On motion of Sir Wilfrid Laurier, House adjourned at 11.05 p.m.

HOUSE OF COMMONS.

WEDNESDAY, December 1, 1909.

The Speaker took the Chair at Two o'clock.

REPORT PRESENTED.

Report of the Department of Militia and Defence for the year ending March 31, 1909 —Sir Frederick Borden.

FIRST READINGS.

Bill (No. 51), respecting the Montmagny Mutual Fire Insurance Company, and to change its name to Manufacturers Fire Insurance Company.—Mr. C. Roy.

Bill (No. 52), to incorporate the Nelson River Railway Company.—Mr. Rutan.

RAILWAY ACT—AMENDMENT.

Mr. A. MEIGHEN (Portage la Prairie) moved for leave to introduce Bill (No. 53) to amend the Railway Act. He said: The sections of the Railway Act which I wish to amend are numbers 254, 294, 295 and 427. Section 294 is the one which governs the liabilities of railway companies for damages in the event of failure to erect fences, gates and cattle guards and maintain them. Section 295 refers to the same matter. Section 427 is the general section which involves a general liability in the event of failure to comply with any of the provisions of the Railway Act. Read alone, section 427 would seem to be sufficient for the purposes mentioned in this Bill, but by reason of the specific language of sections 294 and 295, the courts have interpreted the liability of railway companies, under section 427, in the event of failure to comply with the provisions respecting fences, gates and cattle guards, as limited only to such loss as may be sustained through the killing of cattle by trains and engines. The purpose of this Bill is to amend all three sections so as to extend the liabilities of railway companies to all direct damages suffered by reason of their neglect to comply with the law. Section 427 is wide enough in every respect except as regards fences, gates and cattle guards, but in that respect it is held not to be as wide as was intended, and the purpose is to make the railway company liable in case of default in that connection as they would be in any other.

QUESTIONS.

GRAIN EXPORTS FROM MONTREAL.

Mr. J. D. REID:

1. What quantity of grain of all kinds was exported from Montreal each year for the past ten years ending 1908?
2. What quantity of grain of all kinds was exported from Montreal during the year 1909 up to the present time?

Hon. WM. PATERSON:

1. The quantity of grain of all kinds exported from Montreal during the fiscal years from 1899 to 1908, inclusive, was as follows:

Years.	Bushels.
1899	34,313,023
1900	28,644,850
1901	32,742,243
1902	22,078,573
1903	21,960,416

Years.	Bushels.
1904..	22,233,248
1905..	14,617,221
1906..	23,266,716
1907 (9 months)..	19,422,524
1908..	27,071,331

MICHIPICOTEN DOCK.

Mr. BOYCE:

1. Have plans and estimates been prepared for the construction of a dock at Michipicoten river? If so, what is the estimated cost of the completion of the work?

2. Were any persons employed by the department to obtain at Michipicoten information with respect to the site of the dock, and to take soundings, &c., or to procure other information with respect to it? If so, who were so employed, when were they employed, for how long did they work, and how much were they paid?

3. What amount, if any, has been expended to date in preliminary work chargeable to the dock?

4. Have tenders been invited for the construction of the dock? If so, when were they invited, and what was the lowest tender?

5. If tenders have not been invited, is it the intention of the department to invite tenders at an early date, in order that the work may be proceeded with?

Hon. WM. PUGSLEY:

1. (a) Yes.
(b) $19,000.

2. An engineer from the department's office at Toronto made a survey and examination and took soundings, and employed to assist him, Mr. Kimball and his son, of Mission river, on the 17th and 18th June, 1907, and they were paid, including boat hire, $7, being $3.50 for services and $3.50 for boat.

3. $356.84.

4 and 5. Tenders invited from 31st October to 27th November, 1908. Lowest tender D. P. McPhail & Kenneth Wright, $21,550, upon which no action was taken. There is an amount for this work in the estimates now before parliament.

IMPERIAL DEFENCE CONFERENCE.

Mr. MONK:

What was the total amount expended by the government in connection with the Imperial Defence Conference, including travelling expenses and all other disbursements generally?

Sir FREDERICK BORDEN:

For Department of Militia and Defence, $3,656.38.

INDIAN LANDS SOLD.

Mr. ARMSTRONG:

1. What is the total number of acres of Indian lands sold by this government since 1896?

2. What is the total amount of money received from the sale of Indian lands since 1896?

3. What is the total number of islands owned by the Indians and sold by the government, and the total amount of money received for same since 1896?

Hon. FRANK OLIVER:

1. 725,517 acres of Indian lands were sold between the 1st of July, 1896, and the 31st of March, 1909.

2. The total amount of money accruing from the sale of Indian lands from the 1st of July, 1896, to the 31st of March, 1909, amounted to $2,156,020.

3. The total number of islands owned by the Indians and sold from the 1st of July, 1896, to the 31st of March, 1909, amounted to 1,020, including 242 rocks or islets situate in the Georgian bay, upon which the surveyor placed no value, but which the purchasers of larger islands were allowed to acquire at a nominal consideration. The total amount of money received for the same was $74,353.

RURAL MAIL DELIVERY.

Mr. ARMSTRONG:

Are locks furnished the patrons owning rural mail boxes? If so, at what cost, and where can they be purchased?

Sir WILFRID LAURIER. Locks are not furnished.

THE ROYAL MINT.

Mr. ARMSTRONG:

1. What is the amount of loss to Canada in the operation of the Royal Mint since it commenced?

2. What is the total amount of silver on hand in the Royal Mint at present?

Hon. W. S. FIELDING:

1. The profit on coinage since the opening of the mint has been greater than the cost of operation, including reasonable allowance for interest on capital.

2. On November 30, the silver on hand in the mint was:
Coin, $37,500.
Bullion, 119,000 ounces.

Mr. FOSTER. That does not seem to be an answer. The hon. gentleman has not given the amount of the loss.

Mr. FIELDING. What does the hon. member mean by 'the loss'?

Mr. FOSTER. The amount lost, over and above the amount expended.

Mr. FIELDING. I do not think the hon. member has made the difficulty quite clear. I have stated that the receipts on the coinage is greater than the cost of operation, making a reasonable allowance for interest on capital.

Mr. FOSTER. But still we do not get any amount. Is it $1,000 or $10,000?

Mr. FIELDING. From my point of view, the inference I would draw from the facts and the opinion I would express, is that there is no loss. The question of gain or loss of manufacturing anything in Canada is an economic question. But taking the operation of the mint, we find that we have paid out certain money and that we have received certain money; and on the basis of this comparison, we have not lost anything but are largely the gainers.

Mr. FOSTER. The minister might give the amounts he gained.

Mr. FIELDING. I will bring down a general statement of the mint, which, I think, will cover the whole matter.

TRADE RELATIONS WITH GERMANY.

Mr. ARMSTRONG:

Is this government prepared to grant to Germany a similar treaty to the one accepted by the government with France?

Mr. FIELDING. I answered that question in the course of yesterday's debate. The hon. member (Mr. Armstrong) anticipated the question and it was answered.

ARTILLERY HORSES.

Mr. MONK:

1. How much did the Department of Militia and Defence pay for the transport of artillery horses from the headquarters of the various batteries to the Petawawa and other camps of instruction for the years 1908 and 1909, both going and coming?

2. What amount was paid by the Department of Militia and Defence for the hire of artillery horses for the various batteries at the camps held during 1908 and 1909?

3. What amount was paid by the Department of Militia and Defence as compensation to the owners of artillery horses for animals injured during transport to and from the artillery camps during the years 1908 and 1909?

4. Is it the intention of the Department of Militia and Defence to change the present method of providing artillery horses for the militia?

Sir FREDERICK BORDEN:

1. (a) cost of transport artillery horses to camps, 1908.

Camps.	Corps.	No. of Horses.	Amount of Transport.
			$ cts.
Savard Park	6th Brigade Field Artillery	68	469 20
" "	7th Brigade Field Artillery	75	342 50
Charlottetown	4th Regiment Garrison Artillery	18	59 40
Niagara	2nd Brigade Field Artillery	168	415 40
Sussex	4th Brigade Field Artillery	113	1,491 10
"	19th Battery Field Artillery	60	233 00
Guelph	1st Brigade Field Artillery	132	17 20
Aldershot	7th N. S. Regiment Artillery	93	499 20
"	17th and 18th Batteries Artillery	124	404 00
Kingston	5th Battery Artillery	66	122 50
"	14th and 24th Batteries Artillery	114	500 10
Goderich	6th Battery Artillery	56	297 00
Tercentenary Review	A. and B. Batteries, R.C.H.A.	152	1,464 00
Petawawa	A. and B. Batteries, R.C.H.A.	165	528 00
"	Detachment of R.C.G.A.	35	420 00
		1,439	7,262 60

(b) It is impossible at the present time to give the cost of transport to the various camps for 1909.

These movements of troops and horses are all covered by transport requisitions, which are handed over by the commanding officers of the different corps to the railway companies to be claimed in one general account from the department.

These claims are often six months in arrears. At the present time not more than half of the bills for transport of 1909 camps have been received.

2.

1908	$18,940
1909	16,751
Total	35,691

3. (a) In 1908 $141 was paid as follows:

To F. Roop for horse used by 7th Field Battery, Canadian Artillery, injured en route Aldershot to Digby, N.S., 1908, $125

To P. Hanrahan for horse used by 18th Field Battery, Canadian Artillery injured en route Aldershot to Antigonish, 1908, $16.

(b) Nothing paid to date for such injuries in 1909.

4. No.

INSURANCE BILL—DECISION OF JUDGE LEET.

Mr. MONK:

1. Is it the intention of the government to institute an appeal from the judgment rendered at Montreal by Judge Seth P. Leet on the 24th November, 1909, in the case of the King vs. Willis Faber & Co.?

2. Pending said appeal, if such is taken, does the government propose delaying its projected legislation upon the subject of insurance?

3. What counsel represented the government in the suit recently decided by Justice Leet?

4. Has the government obtained the opinion of other counsel upon the question decided by Justice Leet? If so, who are said counsel?

Mr. FIELDING:

1. The government was not a party to the proceeding in question and is not advised to intervene in it.

2. It is not intended to delay the measure now before parliament on the subject of insurance.

3. None.

4. None.

NATIONAL BATTLEFIELDS COMMISSION.

Mr. MONK:

What is the total amount expended to date by the government in connection with the Quebec Tercentenary celebration, including the celebration itself, the cost of the commission, battlefields improvements, and all other incidental costs?

Mr. FIELDING: The total amount contributed by the government to date in connection with the National Battlefields Commission, for all purposes of the commission, including the Quebec Tercentenary celebration, is the sum of $300,000, authorized by section 8 of chapter 57 of the Statutes of 1908.

POST OFFICE SITE AT STE. THERESE, QUEBEC.

Mr. NANTEL:

1. Has the government obtained a site for a post office in the village of Ste. Thérèse, in the county of Terrebonne?

2. If so, when and from whom was the ground purchased, and how much was paid for it?

3. Have there been other additional expenditures in connection with this post office project?

4. When does the government intend to build it?

Mr. PUGSLEY:

1. Yes.

2. $5,000 paid to Wilfrid Desjardins on the 6th April, 1909.

3. Yes, $121.35, divided as follows:

Legal services	$ 44.85
Travelling expenses	76.50
	$121.35

4. I regret that I am unable to give my hon. friend definite information as to the time when construction will commence. There must first be an appropriation for the purpose.

Mr. MONK.

ARMOURIES AND DRILL HALLS IN MANITOBA.

Mr. ROCHE:

1. At what places in the province of Manitoba are armouries and drill halls erected?

2. What price was paid for site in each case, and the total cost of buildings?

Mr. PUGSLEY:

1 and 2. Brandon: Site, $3,100; building, $63,759.14; total, $66,859.14.

Virden: Site given free by city corporation, cost of building, $11,827.65.

Winnipeg: Built upon Crown land, cost of building, $27,492.07.

CHARTERING OF SS. 'LEEBRO.'

Mr. COWAN:

1. For what length of time was the steamship 'Leebro' in the employ of the government, and from what date?

2. What was the total amount paid for the services of the steamer?

3. Was the steamer employed by the day or by the trip, and at what rate?

Hon. L. P. BRODEUR:

1908-1909.

1. From the 4th June, 1908, to the 15th December, 1908.

From the 16th January, 1909, to the 11th March, 1909.

1909-1910.

From the 12th May, 1909, to the present time.

2. $57,105, including wages of crew, coal and provisions.

3. The steamer was chartered from the 4th of June, 1908, for a period of three months at $135 per day, including wages of crew, coal and provisions, with the privilege of employing her from day to day after the termination of the charter, as long as required at the same rate.

From the 16th of January to the 11th of March, the steamer was employed from day to day at the rate formerly paid.

The steamer was chartered from the 12th day of May, 1909, at the same rate for a period of two months with the privilege of employing her from day to day after the expiration of that time at the same price.

GOVERNMENT LAND AT NEW WESTMINSTER.

Mr. J. D. TAYLOR:

1. Have steps been taken to terminate the existing lease of a lot owned by the Dominion government situate at the northeast corner of Columbia and Begbie streets, in the city of New Westminster?

2. If so, what disposition, if any, is it intended to make of the lot?

3. If it is to be sold, will the sale be by public auction or by private arrangements?

4. Will the government, before sale, take steps to ascertain the value of the lot by reference to the price recently obtained for properties on opposite corners?

Mr. PUGSLEY:

1. Existing lease of lot owned by the Dominion government at the northeast corner of Columbia and Begbie streets, in the city of New Westminster, expires on the 31st day of July, 1910.

2, 3 and 4. The government will consider at the expiration of the lease what disposition will be made of the lot.

FENIAN RAID VETERANS—RECOGNITION OF SERVICES.

Mr. WORTHINGTON:

1. Is it the intention of the government to in any way recognize the services of those who took part in the repelling of the Fenian Raids of 1866-1870 by way of land grants or otherwise?

2. If not, have previous deputations in that behalf been so informed?

3. Is the government aware of arrangements having been made for the reception of a delegation in the matter on the 3rd proximo, and is it prepared to reconsider the question and to give a favourable ruling in the matter?

Sir FREDERICK BORDEN:

1. The services of those who took part in repelling the Fenian raids of 1866 and 1870 were recognized by the granting of a medal under the authority of Her Majesty, the late Queen. That medal was awarded to all those who took part in repelling the raids.

2. I am not aware that any promise has been made beyond that to which I have referred and which has been fulfilled.

3. The government is aware that a deputation is coming to Ottawa, and the representations made by the deputation will be most respectfully heard.

DEPARTMENT OF AGRICULTURE—MONTHLY BULLETINS.

Mr. PAQUET:

1. What is the number of monthly bulletins or monthly statistics distributed by the Department of Agriculture?

2. What is the number of monthly bulletins translated into French and distributed by the Department of Agriculture?

Mr. FISHER:

1. Total number 19,400.

2. Total number 2,400. By the Census and Statistical Branch, 7,200 English, 1,200 in French. By the Dairy and Cold Storage Branch, a monthly fruit crop report is published from May to September in each year. 12,200 copies of each issue in English are distributed, and 1,200 in French.

HISTORICAL MANUSCRIPTS COMMISSION

Mr. PAQUET:

Does the Commission of Historical Manuscripts, established in 1907, continue its work? If so, who are the members of that commission, and what work has been accomplished by them?

Mr. FISHER:

The Historical Manuscripts Commission for Canada established in 1907 is continuing its work. Four meetings have been held. The members of the commission are the Minister of Agriculture, chairman; the Abbé Gosselin, rector and professor of history, Laval University; C. W. Colby, professor of history, McGill University; G. M. Wrong, professor of history, Toronto Universit; Adam Shortt, late professor of Queen's University; the Dominion Archivist; and Jos. E. Roy, of the Archives Branch.

The commission has investigated methods of classification and made recommendations on the following subjects: Publication and editing of documents, translation, classfication and indexing, quest for documents.

IMMIGRATION AGENTS IN FRANCE.

Mr. MONK:

1. What is the total amount expended during the last fiscal year for immigration purposes in France?

2. Is the report of Mr. Paul Wiallard, immigration agent in Paris, printed with the last report of the Interior Department, the only report received by the department on immigration in France?

3. What is the date of other reports made during the year, by whom were they made, and will they be laid on the table of the House?

Mr. OLIVER:

1. $25,892.30.

2. No.

3. Arthur Geoffrion, July 20, 1908; February, 1909; March 2, 1909. Edouard Montpetit, December 15, 1908; January 31, 1909; March 15, 1909. L. Eauclaire, June 9, 1909. Abbé Le Floch, June 25, 1909. Copies of these reports will be laid upon table upon the order of the House.

NATIONAL PARK IN SASKATCHEWAN.

Mr. NEELY:

1. Is it the intention of the government to establish in the near future a national park in Saskatchewan similar to that of Wainwright, Alberta?

2. What disposition as to distribution does the government propose to make with the herd of buffalo located at present at Wainwright?

Mr. OLIVER:

1. The park at Wainwright was selected as the most suitable buffalo range available at the time in the three prairie pro-

vinces, and the government has not yet considered the advisability of establishing a similar park elsewhere. Although in Alberta the Wainwright park is only thirty miles from the western boundary of Saskatchewan.

2. It has not been thought advisable to adopt a policy of disposition or distribution of the buffalo at Wainwright until the whole of the Pablo herd has been secured, which it is hoped will be next spring.

WAR VESSELS ON THE GREAT LAKES.

Hon. GEO. E. FOSTER (North Toronto) moved:

For a copy of all correspondence, papers and letters in respect to the agreement between Great Britain and the United States for the maintenance of war vessels on the Great Lakes, including the agreement itself, the several requests made for permitting United States war vessels to pass the canals, and the outcome thereof, and a list of vessels which have passed the canals, with description and armament, the places where they are stationed, and the purposes for which they are used.

He said: I desire to lay before the House some information and facts so far as I have been able to gather them, with reference to the question implied in the resolution. I find that on April 28, 1818, a proclamation was issued by the President of the United States of America as follows:

Whereas, an arrangement was entered into at the city of Washington, in the month of April, in the year of Our Lord one thousand eight hundred and seventeen, between Richard Rush, Esquire, at that time acting as secretary for the Department of State of the United States, for and in behalf of the government of the United States, and the Right Hon. Charles Bagot, His Britannic Majesty's Envoy and Extraordinary and Minister Plenipotentiary, for and in behalf of His Britannic Majesty, which arrangement is in the words following, to wit:—

The naval force to be maintained upon the American lakes by His Majesty and the government of the United States shall henceforth be confined to the following vessels on each side, that is—

On Lake Ontario, to one vessel not exceeding 100 tons burden, and armed with one eighteen pound cannon.

On the upper lakes, to two vessels not exceeding like burden each, and armed with like force.

On the waters of Lake Champlain, to one vessel not exceeding like burden, and armed with like force.

All other armed vessels on these lakes shall be forthwith dismantled, and no other vessels of war shall be there built or armed.

If either party should be hereafter desirous of annulling this stipulation, and should give notice to that effect to the other party, it shall cease to be binding after the expiration of six months from the date of such notice.

The naval force so to be limited shall be restricted to such services as will, in no respect, interfere with the proper duties of the armed vessels of the other party.

And whereas the Senate of the United States have approved of the said arrangement, and recommended that it should be carried into effect, the same having also received the sanction of His Royal Highness the Prince Regent, acting in the name and on the behalf of His Britannic Majesty.

Now, therefore, I, James Monroe, President of the United States, do, by this proclamation, make known and declare that the arrangement aforesaid, and every stipulation thereof, has been duly entered into, concluded and confirmed, and is of full force and effect.

Given under my hand, at the city of Washington, this twenty-eighth day of April, in the year of our Lord one thousand eight hundred and eighteen, and of the independence of the United States the forty-second.

JAMES MONROE.

By the President:
JOHN QUINCY ADAMS,
Secretary of State.

This proclamation, therefore, brought into effect and made in every respect equivalent to a treaty, an exchange of notes that had taken place a little previously. It is interesting to find that the matter was first brought to the attention of the British governmen by Mr. Rush, the minister of the United States, who addressed a note, on the 2nd of August, 1816, to Mr. Bagot, to which Mr. Bagot replied on the 28th of April, 1817; and on the 29th of April, 1817, Mr. Rush accedes to the terms laid down in Mr. Bagot's communication, and the proclamation of the President took place thereafter. as the final act. The first fact then that confronts us is that in 1817 a treaty was made—I should call it that, because it has to all intents and purposes the effect and force of a treaty—a treaty was made upon the initiation of the United States of America between that country and Great Britain, which was in effect so long as that treaty lasted, to dominate, and control and condition naval construction and the maintenance of naval armaments on the Great Lakes.

Needless to say that this supervened upon the war of 1812-14 and was intended to prevent any cause for collision between the two countries on the Great Lakes and also to prevent any cost of armament as between these two countries. It was a condition of that arrangement that all armed vessels which, at that time, were maintained on the lakes, were to be dismantled and taken out. We were to commence, as it were, with a clean sheet of water in all of that vast region and from that time onward, so long as this treaty lasted, that clean sheet of water was not to be dotted by armed vessels excepting under the limiting conditions of the treaty. As will have been seen from the limiting conditions of the treaty the armaments which were supposed to be possible were very small and insignificant. On Lake Ontario there was not

to be more than one vessel not to exceed 100 tons, and to be armed with not more than an 18-lb. cannon; on the Upper Lakes two vessels having the same burthen and the same armament, and on Lake Champlain one vessel not exceeding 100 tons and armed with a like force. This certainly was an agreement which was not only wise in every respect, as it seems to me, but was also exceedingly economical. Now, let us place alongside of that, for this treaty has never been disturbed and is in existence to-day, the exact state of affairs as regards the armament on the Great Lakes so far as I have been able to gather it. I have not, of course, all the information; otherwise I would not be asking the House to pass this resolution and the government to bring down more information. But, in so far as I have been able to find from looking through the reports of the naval authorities of the United States the following table shows the condition of things to-day on the Great Lakes:

UNITED STATES WAR VESSELS ON GREAT LAKES.

Name.	Tons.	Type.	Speed, knots.	Horse-power.	Officers.	Men.	Battery.	Station.	Date of assignment.
Dorothea	594	Single screw, triple expansion	15	1,558	4	63	4 6-pr. 2 1-pr. 2 Colts.	Illinois	1901
Hawk	375	Single screw, quadruple expansion.	14½	1,000	4	46	Removed	Ohio	1900
Wasp	630	Single screw, triple expansion.	16½	1,800	4	32	2 6-pr. R.F 4 30 cal. A.	New York State	1908
Don Juan de Austria (gunboat).	1130	Single horizontal compound.	12·20	941	7	139	6 3 in. R.F. 4 6-pr. R.F. 2 1-pr. R.F. 2 30 cal. A.	Michigan	1907
Gopher (formerly Fern).	840		9	300	....	....		Minnesota	1905
Yantic	900		8·30	310	....	....		Michigan	1897
Sandoval (gunboat).	103	Single screw, vertical compound.	.....	.....	....	23	2 3-pr. R.F. 2 colts.	New York State, (Rochester).	1906
Nashville [gunboat).	1371	Twin screw, vertical quadruple.	16·30	2,524	11	171	8 4-in. R.F. 4 6-pr. R.F. 2 1-in. R.F. 2 30 cal. A.	Illinois	1907
Essex	1375		10·40	800	....	....	6 4-in. R.F. 4 6-pr. 2 1-pr. 2 colts.	Ohio	1904
Wolverine (gunboat).	685		10·50	365	....	75	6 6-pr. R.F. 2 1-in. R.F. 1 30 cal. M. 1 30 cal. A.	Great Lakes	....

The 'Wolverine' is a training ship belonging to the United States, not in the service of the state naval militia as the others are, and its duties are the drilling of the naval militia, recruiting, generally perambulating the lakes and showing the flag. All except the 'Wolverine' are vessels which have been transferred to the naval militia on the Great Lakes and all have been passed up—most of them within the last few years—through the canals under the authority and with the permission of the Canadian government.

Sir FREDERICK BORDEN. That would be state militia.

Mr. FOSTER. State naval militia. So that we have as a total ten vessels of 8,000 tons displacement, 30 officers and 549 men, as far as I have been able to get the number. There were several vessels, the names of which I read but the complements of which I could not find stated in the reports. There are 24 6-pounder rapid-firing guns, 10 1-pounder rapid-firing guns, 14 4-pounder rapid-firing guns, 8 3-pounder rapid-firing guns, 9 30-calibre 'A', 1 30-calibre 'M' and 6 colts.

I find that the 'Wolverine,' in the course of the last two years, has been visiting most of the ports of the Great Lakes, has been busy recruiting for the United States naval reserve, drilling, manoeuvering and generally showing the flag. This naval state militia is kept up in two ways. The states themselves make an appropriation
