The company claimed approximately an amount of $31,000 only, and after some discussion a sum of $36,950 was agreed upon. That was an opportune time for securing a receipt in full. Then the hon. Minister of Justice stated a moment ago that conscientiously he was satisfied that the company had no fair claim to make on the government, notwithstanding which he grants a fiat. On occasions such as this the minister is acting in a judicial capacity, and if he is satisfied that the party applying for a petition of right is not entitled to such a privilege, he should not grant the fiat. Lastly, the outcome of it all is that the government is now being sued for an amount of over $71,000 by a company unknown to him for the time being and possibly for-all time.

Mr. J. D. REID. I am greatly surprised that the hon. Minister of the Interior (Mr. Oliver) is defending the rascalities that have been going on in the Department of the Interior. We older members of the House will remember a time when the present Minister of the Interior occupied a seat at the back of the ministry, and when he was held up as the angel of the Liberal party He was for ever finding fault with what the government were doing and we all believed that there was no man in the Liberal party who was more anxious to remedy the rascalities that were going on in the government. At that time, as my hon. friend from Victoria and Haliburton (Mr. Hughes) says, he claimed he was an independent, but, strange to say, the minute he appeared on the ministerial benches he changed his tune. There is not a man in this House, on either side, if he will stand up and tell us what he conscientiously believes, but will admit that this was one of the greatest rascalities that was ever committed by any government. The Minister of the Interior tells this House now that he does not yet know who the gentlemen—

An hon. MEMBER. Men.

Mr. J. D. REID. Yes, the men were who composed this company. Yet he is doing business and going into this suit with these men although he does not know who he is dealing with. Can any person believe that the Deputy Minister of the Interior (Mr. Smart), who was occupying a good position, and who went over and made these arrangements on the other side, and then resigned and took the management of that concern, was not one of the company, and was not interested in it? Can any man in this country believe that there were not others in Canada also connected with this corporation? I do not believe there is a man in Canada who does not believe that in some way directly, or indirectly, men connected with the civil service or the government were interested and received benefits from this great piece of rascality which the Minister of the Interior did not hesitate to stand up and defend. Every man believed that a good, righteous, honourable gentleman like the Minister of the Interior, when he saw any rascality, would immediately try to remedy it. But right in his own department a man named Philip Wagner is convicted and sent to jail for robbing immigrants in the Northwest, and immediately when he gets out the min ister gives him a higher salary and a better position. Is there any justification for the minister doing a thing like that? He was one of the members who complained about giving away lands in the Northwest, yet, immediately he comes into the department he is willing to give away 250,000 acres for a dollar an acre when it was proved that these lands were worth $3 an acre and up. It is strange how the gentleman that we believed was the angel of the Liberal party could be converted so soon immediately upon occupying a seat on the ministerial benches. When I saw that contract and when I found out the way the government allowed the payments to be made it appeared to me that there was something wrong in the deal at this end. Instead of counting the immigrants they simply took the ship's register, and perhaps counted the crew, for all we know. They counted the number of people on board and paid $5 per head for all that came in that way. First-class passengers, second-class passengers and all were counted as immigrants and $5 per head was paid. I am awfully sorry to see good men like the Minister of the Interior getting into a mix-up like this. I would like to have seen the

minister continue to be the angel of the Liberal party, but I am afraid he will get down to the foot of the list, and he will find it hard work to get up to the top again unless he changes his ways. I think he will probably find before the session goes by, while he is administering the department, that some little things will appear, and I would suggest for his own good and for the good of the country that he would try and turn over a new leaf and get back to the same good upright ways that he followed while he was sitting in the back seat and when he was recognized as the angel of the Liberal party.

Mr. MONK. Just one word before the motion is adopted. I am beginning to think there is some foundation in the accusation of my hon. friend from Leeds and Grenville (Mr. Reid) that the Minister of the Interior is backsliding. It would have been better for my hon. friend the Minister of the Interior, instead of talking about immigration in general, to have gone to the very heart of this question and to have told us under what circumstances this final payment of $36,950 was made. I agree with what my hon. friend from Terrebonne (Mr. Nantel) has said as to the secret of the trouble which has come upon us to-day. The contract ceased its operation exactly on the 30th November, 1907. Why, after the Minister of the Interior had stated positively in this House that the only balance to readjust was one of $31,804.18 claimed by this company, did he, in the month of December of the year following, pay that $36,950, nearly $5,000 more than, according to the records of this House, they actually claimed? Why was this payment made? Who was it made to? Was it to Mr. Preston or was it to Mr. Smart? Was that amount, exceeding by nearly $5,000 the amount claimed, paid in London or in Montreal? Why, as my hon. friend from Terrebonne has said, should the minister make that final payment after the close of a contract which he had declared bad and which had given rise to endless discussion in this House and before the country without guarding against what has come to us since? Not one word upon any of these points has the Minister of the Interior said to-day when he should actually have brought down and put upon the table of the House the receipt which closed our relations with the company and explained to us why he was deceived at that time? I think that the Minister of Justice and the Minister of the Interior are wrong when they say that this is a trifling matter. It is not a trifling matter to have paid nearly $400,000 to these unknown people; nor, is it a trifling matter that we should be sued for a sum far exceeding any of the individual payments we made to that company. I will add this: That it is a matter upon which you cannot refresh the memory of the people too much, that at a given moment when members of this House desired to know the names of the contractors to whom we were paying this money, the government and the Liberal party were opposed to what I consider to be one of the fundamental principles which should govern the representatives of the people in this House.

Motion agreed to.

MONTREAL TURNPIKE TRUST.

Mr. F. D. MONK (Jacques Cartier) moved:

For a return showing: 1. The present indebtedness to the Dominion government of the Montreal Turnpike Trust (a) on capital account, (b) for arrears of interest.

2. The amount collected at each toll gate belonging to the said Turnpike Trust during the year ending December 31, 1908, and for the first six months of the year 1909.

3. The names of all parties who have commuted their tolls during each of the two above-mentioned periods and the amount of the commutation money paid to the Trust in each case.

4. The amount expended on each section or road division under the control of said Trust, during the year ending December 31, 1908, and the contracts given out during the said year, with the name of the contractor and the date and amount of money involved in each case; and a statement in each case also as to whether the contract was awarded after tender called through newspapers.

5. The amount paid out during the said two first above-mentioned periods at each toll gate for salaries of day and night guardians and any other expenditures at each of the toll-gates maintained.

6. The names of all parties holding passes for free use of the roads under control of said Trust during the period above-mentioned, with a statement, in each case, of the reason why the pass was so granted.

7. The expenses of the said Trust during each of the two periods above-mentioned for rent, salaries of the office, inside or outside service, giving name and remuneration of each official and amounts paid to any civil engineer employed by the Trust.

8. The actual present indebtedness in detail of said Trust outside of its bonds due to the government of Canada.

9. The amounts collected by said Trust during the above-mentioned periods from municipalities under special agreements made as to their share pro rata of the bonded indebtedness of the Turnpike Trust.

10. The names of all members of the Trust elected to represent the bondholders with date of election in each case, during said two periods.

11. The amounts paid by the Trust to any of its members or officials during said two periods, whether as travelling or personal expenses, or indemnity for attendance or for any other reason whatever.

12. The name of any auditor who has acted during said two periods, and the amount paid such auditor.

13. And exact statement of any amounts paid by the Trust for purchase or lease of any property outside of the city of Montreal and in defraying the travelling or displacement or maintenance expenses of the trustees or their officials generally.

He said: This is a motion which has been made very often since this government has been in power and no objection has been taken to its adoption. It is the only means which the people of the city of Montreal and of the Island of Montreal have to obtain a statement of the affairs of the Montreal Turnpike Trust. That body is governed by an old statute which puts upon it no obligations to give the people the result of its operations. It handles thousands of dollars yearly and the public have no other means than by such a motion as this to obtain information as to what becomes of that money. The statements which this House has obtained from time to time clearly demonstrated that the affairs of the Montreal Turnpike Trust were not being administered in the interest of the taxpayers and the road users of the Island of Montreal, and in February, 1908, I moved in this House for an inquiry under chapter 104, revised statutes of Canada, to ascertain the position of our claim as sole bond-holders of the debentures of the Montreal Turnpike Trust. Upon that motion the Prime Minister said:

My hon. friend by long experience knows that where he is right he can always expect the government to accede to anything he wants, and on this occasion we think he is right and therefore we accept his motion.

The motion for inquiry was adopted, but I regret to say that in the intervening almost two years, the government has not put the resolution of the House into execution and we have had no inquiry, that is a matter for very much regret. However, the Quebec government, aroused by the public opinion in the municipalities concerned and by the statements which were from year to year obtained as a result of this motion regarding the financial position of the trust, instituted a royal commission to inquire into the affairs of that body. The federal government not having instituted an inquiry on its own account I trust they will see that our interests as bond-holders to the extent of nearly $270,000 will be protected by our having a representative at the inquiry in Montreal, if it is ever held.

Motion agreed to.

POST OFFICES IN MONTREAL AND VICINITY.

Mr. F. D. MONK (Jacques Cartier) moved:

For a copy of the report, plans and correspondence in the hands of the government regarding the construction of branch post offices and postal substations in and around the city of Montreal, and of all proposals and suggestions made to the government by the post office authorities at Montreal for the establishment, in a systematic way, of postal branches and substations in said city and suburbs?

He said: The object of this motion is to place in the possession of the House a report which was made some years ago by the postal authorities, showing where within the limits of the city of Montreal and the adjoining municipalities it was intended to erect postal substations and branch post offices. That report together with a plan accompanying it was laid upon the table, and it seemed to commend itself to those interested as being the result of a careful examination of the postal needs of the locality. The question of having branch post offices in the city of Montreal and the suburban municipalities is very often raised, and I think it would be very advantageous for the members interested to have that report and plan before them so as to enable them to answer the inquiries that are made.

Motion agreed to.

CANADIAN ATTACHE AT WASHINGTON.

Mr. E. N. LEWIS (West Huron) moved:

That, in the opinion of this House, it is advisable that a petition be sent to His Majesty's government, praying that a Canadian Attaché be appointed to the British Embassy at Washington, with a view to providing a direct medium whereby the government of Canada may advise with the British Ambassador at Washington in respect to matters pertaining to international relations affecting solely the Dominion of Canada and the United States.

He said: Mr. Speaker, since I gave notice of this resolution it has been said to me that if I kept on much longer I would be a separatist. In justice to myself I may say that I am the grandson of one of those men who followed the flag in 1776 to Canada, and I take second place to no man in this House or out of it in loyalty to that flag. I am a great believer in the couplet of that English poet who wrote in reference to Canada:

Daughter am I in my mother's house,
But mistress in my own.

And, Sir, the question I raise now is not a matter of loyalty; it is a matter purely of business relations with our nearest great trade competitor. I submit, Sir, that the manner in which our business arrangements are now carried on are altogether too round-about and that we should have some one at Washington, not to conduct our business relations altogether but to advise the British Ambassador with regard to them. I have in support of this proposal the President of the United States who has said that it

would be a good thing. I believe it is an absolute fact that seven-tenths of the business of the British embassy at Washington concerns Canada. Now, the British Ambassador, as a rule, has never been in Canada and he knows nothing of Canada. The conditions in Canada are different from those in England; our business interests are different, and I submit that we would be better able to conduct purely business relations with this nearest great competitor of ours, in a friedly manner, if we had a representative of our own at Washington. I trust as time goes on we will be more and more friendly with that great nation to the south because we have all sprung from the same race; the great American republic was founded by George Washington and Alexander Hamilton. I may remark that for the first time in the history of Canada there is now in the press gallery of this House a representative of that great newspaper the New York 'Herald'. Some remarks on this question appeared in the New York 'Herald' on December 10. The Chicago 'Tribune' has also intimated its intention of sending a representative here and had some remarks on the subject in its issue of December 10. We have direct relations with the United States on almost every question. We deal with that great nation with regard to our waterways; why should we not do so in other matters? I could quote various hon. gentlemen who have expressed their opinion publicly in favour of this motion—the hon. member for North Lanark (Mr. Thoburn), the hon. member for East Huron (Mr. Chisholm), the hon. member for St. Lawrence Division, Montreal (Mr. Bickerdike), the hon. member for Hamilton (Mr. Stewart)—two from each side of the House. Though at one time I was not in favour of this, I have seen the importance of it, and the cost of it will be small in comparison with the benefit to be gained. I consider that under all the circumstances we should have a representative of Canada to advise the British Ambassador at Washington.

Sir WILFRID LAURIER. Mr. Speaker, everybody, I am sure, will agree with the sentiments which have been uttered by my hon. friend from West Huron (Mr. Lewis) as to the character of the relations which should prevail between these two great branches of the Anglo-Saxon race. The relations between the United States and the parent state ought naturally to be extremely cordial. I am glad to be able to say that at no time in the history of the two nations since the war of the revolution have the relations between Great Britain and the United States been so friendly as they have been for the last six or seven years. We do not hear any more, as we used to hear at one time, in the United States of British arrogance or in Great Britain of Yankee aggressiveness. The language uttered now in the two countries is one of mutual respect and cordiality. The war between the United States and Spain, if it did no other good—and I expect that good can very seldom come from war—has had the effect of showing that blood is thicker than water. From the time of that war the relations between Great Britain and the United States, which up to that time had been more or less strained, have become very cordial. Indeed, it was obvious that in that war, without going to the causes of it, the English speaking countries generally were friendly to the American side. This improved feeling on the part of the two nations towards each other has had its good effect in Canada's relations with the United States. Those relations have been on the whole very friendly. They have not always been as satisfactory as for my part I think they should have been. For instance, the Alaskan Boundary Treaty was not just what we thought it should have been; still, the arbitration had the good effect of removing a possible cause of contention and settling for ever a difficult question which might otherwise have become dangerous at a very inopportune moment. I am glad to acknowledge also that the British Ambassador at Washington at the present time is giving more attention to the affairs of Canada than was ever done before. There was a time, perhaps 20 years ago, when, if my hon. friend had made the motion he has now made, I would have been strongly inclined to vote for it; but I must say, in the present condition of things, that my ideas on this subject have been very much modified. If we had an attaché at Washington, I do not know that it would be possible to have more attention paid to the business of Canada than is paid to it by the present occupant of the office. Mr. Bryce has taken special pains to give to Canadian affairs as much attention as could be given to them by a native Canadian. First of all, he did one thing that was not done by any of his predecessors. As soon as he became ambassador, he visited Canada, coming to Ottawa and some of the other large cities of the country, to familiarize himself with all the issues between Canada and the United States. The result has been that, in all our relations to that country, if anything has not turned out well, no blame can be attached to Mr. Bryce, because he has taken no action with regard to Canada except after ample conference and with the full sanction of the Canadian authorities. I do not believe that if we had an attaché at Washington we could improve very much the conditions which exist at this moment. I do not know that it will always be so.

Perhaps the time will come when we shall think it advantageous to have somebody to take charge of our diplomatic business at Washington; but so long as the conditions continue to be what they are at this moment, I do not think this want will be seriously felt. It is also somewhat difficult to conceive what would be the status of a Canadian attaché at Washington. He would have to be under the British ambassador and at the same time be under instructions from the government of Canada. So that the position, while it would have good in it, would also have some very serious difficulties. If we had any cause of complaint in our present relations, or if our interests were not receiving justice, we might have to take a new step and try to improve those relations; but so long as they are what they are at present, I think my hon. friend will agree with me that it is best to leave well alone, and not try to improve when there is no cause of grievance. If my hon. friend agrees with these observations of mine, I hope he will not press his motion, but will withdraw it.

Mr. LEWIS. The right hon. the first minister may have slightly misinterpreted the meaning of the resolution. It is not to have a representative of Canada entirely separate, but one who is acquainted with the wants, manners and customs of Canada to advise with the British Ambassador. There is no intention on my part of expressing any want of confidence in the present conduct of affairs; but it can be readily understood that the business of Canada cannot be very well conducted by an almost absolute stranger. Mr. Bryce has endeavoured to remedy that by coming to Canada, and he is a very clever and able gentleman. He would be glad to have a representative of Canada there to confer with in regard to these matters. There are other ways in which it would be of value to Canada to have a representative in Washington. This representative of ours would be able to devote his time to some matters to which Mr. Bryce has not time to attend, and then Mr. Bryce is not accustomed to many things on this continent. Our representative would be advising this government in reference to matters on which an amicable arrangement now exists between the two countries, an agreement which I think will grow stronger and stronger and can be helped on by such advice, for I, for my part, look forward to the union of the English-speaking nations of the world and the Celts for the promotion of peace and harmony. I am perfectly willing to accept the suggestion of the first minister and to withdraw my motion.

Motion withdrawn.

At six o'clock the House adjourned.

HOUSE OF COMMONS.

THURSDAY, December 16, 1909.

The SPEAKER took the Chair at Three o'clock.

PETITION OUT OF ORDER.

Mr. SPEAKER. The petition of Robert Glover and others cannot be entertained as the granting of the prayer would involve the expenditure of public money.

HOURS OF LABOUR ON PUBLIC WORKS.

Hon. MACKENZIE KING presented the first report of the special committee to whom was referred Bill (No. 21) an Act respecting hours of labour on public works as follows:

Your committee beg leave to present the following as their first report:

Your committee recommend that leave be granted to have their proceedings and the eviaence taken by them printed from day to day and that rule 72 be suspended in relaaion thereto.

Mr. KING moved:

That the first report of the Special Committee to whom was referred Bill (No. 21), an Act respecting hours of labour on public works presented this day be concurred in.

Mr. R. L. BORDEN. Is the report purely formal?

Mr. KING. It recommends permission of the House to have the proceedings and evidence printed and that rule 72 be suspended.

Motion agreed to.

MESSAGE FROM HIS EXCELLENCY.

Sir WILFRID LAURIER presented a message from His Excellency the Governor General as follows:

Gentlemen of the House of Commons:

I have received with great pleasure the address which you have adopted in reply to my speech at the opening of the session of parliament, and thank you for it sincerely.

GREY.

Government House, Ottawa, 14th Dec., 1909.

QUESTION OF ORDER.

Mr. SPEAKER. The hon. member for Jacques Cartier (Mr. Monk), yesterday raised a question of order with reference to the answer by the hon. the Minister of Militia and Defence (Sir Frederick Borden) to question No. 10 on the Order Paper.

The answer given to the said question, in my opinion, did in some measure contravene the rules and practice of the House in that regard but, as the hon. minister stated, the answers were drawn from

him in that form in consequence of irregularities in the form of the question.

In my opinion the question as put by the hon. member for Sherbrooke was in several particulars irregular inasmuch as it contravened the provisions of rule 36, a portion of which rule reads as follows:

In putting any such question or in replying to the same no argument or opinion is to be offered, nor any facts stated, except so far as may be necessary to explain the same. And in answering any such question the matter to which the same refers shall not be debated.

Comments upon this rule will be found in Bourinot's Parliamentary Practice, pp. 433 to 435. Among the comments made in that work as to the form in which questions may be put, I would quote the following: (a). 'A question has been refused a reply because it referred to a matter of opinion'. (b). 'A question should be simply and severely accurate in its allegations. If it is hypothetical it is objectionable and should not be answered'. (c). 'It should not be ironical or convey any imputation'. Members are reminded that it is the duty of certain officers of the House to point out to a member when any question is put in improper form and to communicate with the member in order that the notice may be properly amended. Occasionally irregularity in questions is not noted by the officers of the House but in this respect instructions will be given to be more particular in the future in this regard.

FIRST READINGS.

Bill (No. 82) to incorporate the Merchants and General Insurance Company.—Mr. Monk.

Bill (No. 83) respecting the Vancouver, Westminster and Yukon Railway Company. —Mr. Ralph Smith.

CONSERVATION OF NATURAL RESOURCES.

Mr. J. E. ARMSTRONG (East Lambton) moved for leave to introduce Bill (No. 84) to amend an Act to establish a commission for the conservation of our natural resources.

Sir WILFRID LAURIER. Explain.

Mr. ARMSTRONG. As the Act at present stands the chairman of the commission can send a man out to investigate mines, and timber lands, and fisheries, and water-powers and practically any of the resources of the country; he can spend the money of the public in doing so and then there would be nothing to prevent him purchasing land or rights in water-powers and fisheries and making them his own. The members of the commission are practically in the same position in that regard. The Bill which I now introduce will provide as follows:

14. No member of the commission or person appointed as secretary or as officers or clerks under him, or person employed as an assistant for the purpose of any special work or investigation, shall, while a member of the commission or appointed or employed as aforesaid:

(a) purchase, lease, acquire or obtain, on royalty or otherwise, any Dominion or provincial franchise, fishery rights, water-powers, water privileges, lands, mines, mineral lands, or timber limits, or in any way contract therfor or acquire any interest therein, either for himself or as agent for any other person or corporation;

(b) locate military or bounty land warrants or land scrip or act as agent of any other person in such behalf;

(c) disclose to any person, except to members of the commission, any discovery made by him or by any of them, or any other matters in his possession relating to matters under the control of the commission, or in relation to their investigations, until such discovery or information has been reported to parliament.

15. Every person guilty of any violation of any of the provisions contained in section 14 of this Act shall forfeit to His Majesty all property or interest so acquired or obtained and shall also incur a penalty of one thousand dollars for each such violation.

(2.) The acquisition of each item of property or interest therein or contract therefor as aforesaid shall be deemed a separate violation of the said section.

(3.) Such penalties shall be recoverable on information filed in the name of the Attorney General of Canada, and a moiety thereof shall belong to His Majesty, and the other moiety thereof shall belong to the informer.

I may say that the first clause is similar to clause 14 of the Geological Survey Act and the last clause is similar to the penalty clause 376 of the Railway Act. I believe this amendment should be adopted at as early a date as possible and I ask the government to facilitate its passage during this session. In presenting this Bill I in no way reflect upon the chairman or upon the members of the commission. Many members of the commission are personal friends of mine and I am satisfied that they believe this Bill is in their interest as well as in the public interest.

Motion agreed to, and Bill read the first time.

CRIMINAL CODE AMENDMENT—THEFT OF SILVER ORE.

Mr. GEORGE GORDON (Nipissing) moved for leave to introduce Bill (No. 85) to amend the Criminal Code.

Some hon. MEMBERS. Explain.

Mr. GORDON. This Bill is an exact duplicate of one passed by this House and buried in the Senate last session, owing, I believe, to that honourable body not being aware of the extensive illegal traffic which is being carried on at the silver regions of Nipissing and which the law as it now stands, fails to cope with. Valuable ore, in many cases, nearly pure silver is being carried away in the pockets of persons who dispose of it in one of two ways: (1) It readily passes 'current' at the 'Blind Pigs' in exchange for cash for drinks, principally as I believe the latter, or, (2) It can be sold to persons who are making a business of dealing in it. When the receiver has accummulated a quantity he takes it to Toronto or elsewhere and sells it. The monthly losses to the mines are very large, the trade being a considerable one. It seems to be impossible to stop the business with the law as it at present is because it is practically impossible by examination of a piece of ore to tell from what mine it came, and on any prosecution for recovering stolen ore the prosecutor is not able to technically prove the theft. What is desired is to put the receivers out of business; if that is done these thefts will cease. What is aimed at is to throw upon any person found in the possession of ore the onus of proving where he got it.

Motion agreed to, and Bill read the first time.

LIGHTHOUSE-KEEPERS' SALARIES.

Mr. GAUVREAU—(Translation)—asked:

1. Does the minister of Marine intend to raise the salary of lighthouse keepers considering the increase of $30,000 mentioned in the estimates of 1910-1911? If so, how does he intend to distribute that sum?

2. Does the Department intend to re-establish the retreat fund of those lighthouse keepers?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries)—(Translation):—

1. The classification of the lighthouse-keepers of the Dominion, approved by order in council on September 24, 1908, says that all the keepers will receive a regular increase until a certain amount mentioned for each class is attained. Every keeper who has not yet received the maximum of his class will receive an increase during the next year, provided that his conduct be good and satisfactory.

2. Not now.

THE INDUSTRIAL DISPUTES ACT.

Mr. KNOWLES:

Does the government intend at the present session of parliament introducing legislation to amend the Industrial Disputes Investigation Act with a view to meeting the wishes of the railway brotherhood, to avoid expense and delay in the steps required prior to the declaration of a strike?

Hon. MACKENZIE KING. It is the government's intention to introduce legislation to amend the Industrial Disputes Act during the present session.

THE CONSERVATION COMMISSION.

Mr. ARMSTRONG:

Has the commission of conservation met? If so, on what date, and how many members were present?

Sir WILFRID LAURIER. I understand that the commission has met and organized, and that it will meet in January according to the terms of the statute.

SOUTH AFRICAN SCRIP.

Mr. BARNARD:

Is it the intention of the government to allow holders of South African scrip to locate in respect thereof on lands in British Columbia within the railway belt?

Sir FREDERICK BORDEN. The Volunteer Bounty Act does not make provision for the location of military scrip in the railway belt, British Columbia.

NORTHWEST POST OFFICES.

Mr. McCARTHY:

1. What was the postal revenue per month from the 1st day of December, 1908, to the 1st day of November, 1909, at the following post offices, namely: Edmonton, Alberta; Calgary, Alberta; Regina, Saskatchewan; Saskatoon, Saskatchewan; Prince Albert, Saskatchewan?

2. How many people were employed in each of said offices during said months?

3. What was the amount paid for salaries in each of the said offices during said months?

Sir WILFRID LAURIER. I will lay on the table a detailed statement which contains all the information sought for in that question:

	December, 1908.	January, 1909	February, 1909.	March, 1909.	April, 1909.	May, 1909.	June, 1909.	July, 1909.	August, 1909.	September, 1909.	October, 1909.
1.—	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.

BAIT FREEZERS.

Mr. JAMESON:

1. In what year was assistance first granted by the government in aid of the erection of bait freezers?
2. How many bait freezers have been erected with government assistance in the provinces of Nova Scotia, New Brunswick, Prince Edward Island and Quebec, respectively?
3. What sum has been expended in each of said provinces for such purpose?
4. How many government aided bait freezers were reported in operation in each of the said provinces during the year 1908?
5. From whom were the reports received?
6. Has any change been made in the regulations respecting the conditions upon which aid is granted towards the construction of bait freezers? If so, what is the nature of the change and why was it made?

Hon. L. P. BRODEUR:

1. 1899.
2. Nova Scotia, 49; New Brunswick, 5; Prince Edward Island, 5; Quebec, 16.
3. Nova Scotia, $46,816.28; New Brunswick, $4,277.19; Prince Edward Island, $3,536.21; Quebec, $14,141.10.
4. Nova Scotia, 20; New Brunswick, 1; Prince Edward Island, 1; Quebec, 12.
5. Peter Macfarlane, officer in charge of fishermen's bait freezers.
6. Yes. Instead of further assisting Fishermen's Bait Associations in the building of purely bait freezing establishments, at locations and under conditions approved by the minister, firms or persons building fish freezers, who will guarantee to keep on hand a supply of bait, which will be sold to fishermen at current market prices, will be aided in the building of such freezers to the extent of half the cost up to $2,000, and an annual bonus of $5 per ton on bait frozen for the first five years of operations.

MILITARY QUESTIONS.

Mr. WORTHINGTON:

Is it intended to supply the different regiments of garrison artillery with 12-pounder B. L. guns? If not, why not?

Sir FREDERICK BORDEN. I will read the answer that has been sent to me from the department: No, but the actual meaning of the question is not quite clear. Perhaps the hon. member will put a further question.

Mr. WORTHINGTON. What part does the minister not understand?

Sir FREDERICK BORDEN. I did not say I did not understand, but the officer who prepared the answer—which I did not see until this moment—said he did not understand. I presume he wanted to know what service or use these guns were to be put to. It would not be to arm the garrison artillery generally, because they are armed with a different arm.

Mr. WORTHINGTON. My object in asking was to ascertain if it was the general policy of the Militia Department to arm garrison artillery with twelve-pound guns; for this had been done a few weeks ago at Esquimalt.

Sir FREDERICK BORDEN. That is not the policy of the government.

Mr. WORTHINGTON:

1. What is the general policy of the government in the matter of furnishing the active militia with armouries or drill halls?
2. Are there any fixed regulations as to land being provided by municipalities and deeded to the Crown, upon which to erect such building? If so, where are such regulations to be found?

Sir FREDERICK BORDEN:

1. The policy of the government with regard to furnishing the active militia with armouries has been stated in parliament many times.

(a) City militia—As the regiments do not perform their drill in camps of instruction, it is absolutely necessary that drill halls sufficiently large for drill purposes should be supplied, and this has been largely done in all cities and towns where such regiments exist.

(b) Rural militia—So far as the militia units recruited from villages and small towns, which perform their annual drill in camps of instruction, are concerned, there is not the same necessity for drill halls, and such units of the active militia receive allowances in money to pay for care of arms, &c. It is, however, thought desirable that these units should be provided as rapidly as possible with small regimental or company armouries as a place for storing their arms and ammunition, also as furnishing lecture rooms for instructional purposes and affording sufficient accommodation for officers; with a view to promoting esprit de corps, and affording what might be called a 'home' for each unit.

2. None.

Mr. WORTHINGTON:

1. Are facilities for rifle practice available at the Royal School of Instruction, St. John, P.Q.? If so, to what extent?
2. What was the total cost of the Brandon drill hall, including site?
3. Have the buildings for guard-room and married quarters at the Winnipeg barracks been yet completed? If so, when?
4. What was the total cost for each of these buildings, and when were they occupied?
5. Are there any members of the permanent force at Winnipeg still drawing allowances in lieu of quarters? If so, how many, and at what rates?

Sir FREDERICK BORDEN:

1. Yes; a thirty-yard range consisting of four targets was constructed in October, 1908.

2. Total cost of Brandon drill hall was $52,954. A free site was deeded to the government by the city.

3. Yes. Guard-room and office building was inspected by a board of officers on December 15, 1908, and taken over for occupation on March 1, 1909. The married quarters were reported upon by a board of officers on June 21, 1909, and were taken over for occupation on October 1, 1909.

4. Cost of guard-room and married quarters is being answered by the Department of Public Works. For date of occupation, see answer to No. 3.

5. The following officers, non-commissioned officers and men of the permanent force at Winnipeg are still drawing lodging allowance at rates hereunder: 2 captains at $50 per month; 1 sergeant at 30 cents per diem; 1 private at 25 cents per diem. Leases of houses have been taken by the department and rent paid for the following: 2 warrant officers at $30 per month; 6 non-commissioned officers at $30 per month; 2 rank and file at $22 per month. Total: 2 officers, 2 warrant officers, 7 non-commissioned officers, 3 rank and file. Total cost per annum, $4,808.75.

Mr. WORTHINGTON:

1. Are officers of all ranks on the married establishment of the permanent force entitled, with their families, to free medical attendance?

2. Are money allowances paid to such officers in lieu of medical attendance at places where permanent medical officers are not available?

3. If such is the case, are these allowances based on rank, and without reference to whether the recipients are married or single?

4. Is there any reason why one officer, because he is superior to another officer in rank, should receive a higher rate of allowance for a service to which both are equally entitled to the same extent?

Sir FREDERICK BORDEN:

1. Yes.

2. Yes, except to officers on the headquarters staff.

3. Yes.

4. Only on the general principle that, as an officer advances in age and rank, he has more expenses to meet than a junior officer, and the practice in all military and naval services is to base allowance on rank.

Mr. WORTHINGTON:

1. Is the issue of efficiency pay in the active militia dependent upon the acquiring of a fixed standard of proficiency in rifle shooting, as well as other efficiency and good conduct?

2. Is any increased rate of pay in the permanent force dependent upon the acquiring of any standard of efficiency in rifle shooting, or upon the possession of any instructional qualifications?

3. Is the chief business of the permanent force to instruct the officers and men of the active militia?

4. Do officer instructors and sergeant instructors of the permanent force, who are in receipt of regular pay as such, draw extra duty pay when employed instructing the active militia in camps of training? If so, why so?

5. Do the members of the permanent force receive increased rates of ordinary pay after fixed periods of service without regard to either their instructional abilities or their shooting efficiency?

Sir FREDERICK BORDEN:

1. Yes, in the case of cavalry and infantry, with a few exceptions in cases of certain ranks and employed men.

2. No increase of pay for rifle shooting. Instructional qualifications enable a man to earn increased rates of pay or extra pay.

3. The duties of the permanent force are as set forth in paragraph 25 of the Militia Act, viz:

The permanent force shall furnish schools of instruction for the militia and provide instructors thereof; and it shall, also, be available at all times for general service.

4. Officers—No. Sergeant instructors—Yes, to place them on the same footing as other non-commissioned officers employed on the camp staff, and as a reward for their excellent work when instructing the militia.

5. Yes; a gunner or a private on enlistment receives fifty cents a day, and after three years' service, if satisfactory and he is re-engaged, he receives sixty cents a day, and after six years, seventy-five cents a day.

Other ranks are also graded for pay on completion of two periods of three years' service in rank.

ARCTIC EXPEDITION COMMEMORATIVE TABLET.

Mr. JAMESON:

1. By what authority was the tablet commemorative of the Arctic expedition placed in the vestibule of the library of parliament.

2. Was a sketch of the tablet proposed to be erected submitted? If so, what officer of the government was charged with the duty of examining and reporting on said sketch?

3. What has been the cost of the tablet, and to whom was the money paid?

Mr. PUGSLEY:

1. The Hon. the Speaker of this House.

2. This tablet is an exact copy of the tablet left on Parry's Rock, Winter Harhour, Melville Island, longitude 60 min. west to 141 min. west, by the crew of the 'Arctic,' 1st of July, 1909.

3. The tablet was made by the government employees on board the 'Arctic' and there was, therefore, no charge made for this work.

BUSINESS OF THE HOUSE.

Sir WILFRID LAURIER moved:

That, as the time for receiving petitions for Private Bills, and the time for presenting Private Bills without additional charges, will be curtailed through the Christmas adjournment of the House, the said times as fixed by rule 87 and rule 88, subsections 3 (b) and 3 (c) be extended to Wednesday, the 19th of January, Wednesday, the 2nd of February, and Wednesday, the 2nd of March, respectively.

Motion agreed to.

QUESTION OF ORDER—MR. WORTHINGTON.

Mr. A. N. WORTHINGTON (Sherbrooke). Mr. Speaker, I rise to a point of order. I refer to a statement made yesterday during the asking and answering of questions by the Minister of Militia (Sir Frederick Borden). As reported on page 1583 of the unrevised 'Hansard,' the hon. minister made the following statement:

These allegations are possibly improper in a question, but I answered according to the law of Scripture that we are bound to answer a fool according to his folly.

I think that answer was not only undignified on the part of the minister, but absolutely out of order, and I would ask that the same be withdrawn.

Sir FREDERICK BORDEN. Perhaps I might substitute other words—I do not know that they are a quotation—answer a wise man according to his wisdom. However, I am quite willing to withdraw the quotation if it is offensive to my hon. friend (Mr. Worthington).

ADJOURNMENT—LOSS OF LIFE ON LAKE ERIE.

Mr. A. C. MACDONELL (South Toronto). I desire to discuss for a moment a matter of great public importance which, I take it would be in charge of the Marine and Fisheries Department. I would have put what I have to say in the form of an interrogation addressed to the Minister of Marine and Fisheries (Mr. Brodeur) had that hon. gentleman been in his place. But, as he is not present at the moment, I shall make a motion for leave to move the adjournment of the House for the purpose of the discussion. The subject I wish to refer to is the loss of life by the foundering of the car ferry steamer 'Bessemer No. 2' on Lake Erie, off Port Stanley harbour. Despatches received from Toronto state that the Canadian Pacific Railway car ferry has been wrecked opposite Port Burwell. Forty members of the crew were on the boat, but from last accounts, it is hoped that these have been taken off. But the boat is a complete wreck and these forty lives were at least endangered. The matter is of very serious and urgent public importance and I bring it to the attention of the House because I think the government has been remiss in not having proper marine signals either at Port Stanley, Port Burwell or Rondeau Harbour.

Mr. SPEAKER. If the hon. member is going to discuss the matter, he must submit a motion.

Mr. MACDONELL. I have a motion drawn for the purpose. I move:

That leave be granted to move the adjournment of the House to discuss a matter of urgent public importance, viz.: The recent loss of the railway ferry 'Bessemer No. 2,' on Lake Erie, off Port Stanley, in which at least thirty-eight lives are known to have been lost.

Motion agreed to.

Mr. MACDONELL moved the adjournment of the House for the purpose stated. He said: I desire to bring to the attention of the government, and especially of the Minister of Marine and Fisheries, the great loss of life that occurred because of the foundering of the car ferry 'Bessemer No. 2.' At least thirty-eight of a crew were on the boat. As there is no passenger ferry across this part of the lake—or any part of the lake at this season—there is every reason to fear that a number of additional persons were on board that ferry as passengers. I am informed that, although there are these three harbours on the north shore of Lake Erie, harbours on which large sums of public money have recently been spent—I believe quite $250,000 at Port Stanley, $200,000 at Port Burwell, and large works going on at Rondeau—yet in all these cases there is no marine warning for incoming vessels. These are not ordinary harbours that are closed at the close of navigation; they are open all the year round, and these railway car ferries run to these three harbours from the south shore of the lake throughout the year. Therefore, additional precautions should be taken there by the government to protect navigation. I am informed that there are some lights at Port Stanley and Port Burwell, but at neither is there a fog horn or other means of giving a signal or answering a signal of distress from the water. On the night on which the 'Bessemer No. 2' went down, involving this shocking loss of life, a number of the residents of Port Stanley Harbour state the whistle of the steamer was heard blowing signals of distress again and again out in the lake. There were no means of answering that vessel. I am informed that during the progress of the work on the pier in the last year or two on many occasions signals of distress were sounded by this very boat and there being no means of answering these signals the contractors who were

doing the work would send out one of their tugs to the entrance of the harbour to answer these signals of distress, in that way enabling the captain and pilot of the boat to locate the harbour entrance. What happened on this occasion, apparently, was that during a blinding snow storm, when marine men could not see more than a boat's length or two ahead, the ferry had no means of knowing when it was near the harbour. Lights were of no avail, what was needed was a fog horn or proper marine signal which would warn them where the entrance to the harbour was and would answer their signals of distress. There were no means provided at the harbour of Port Stanley and as a direct consequence of that this boat foundered because she could not make the harbour and in turning to make shelter, either up or down the lake, in the opinion of marine men, the cars broke loose and she turned over and sank to the bottom.

In the opinion of marine men that loss of life and property could have been avoided had there been proper signals there to warn the vessel of its approach to the harbour. Practically the same thing happens thirty miles away further down the lake at Port Burwell, where we find the wrecked Canadian Pacific railway ferry steamer with forty men in danger from Sunday last until at least yesterday afternoon. It is incumbent upon the government to protect shipping at these points and I wish to point out to the Minister of Marine that this is not a case where navigation closes and signals are not needed. It is just after the ordinary navigation closes that these signals are required, during the snowstorm season and the storm season when lights cannot be made out that a fog horn or other means of signalling is absolutely indispensable. I wish to point out that there was no such means of warning at any of these harbours. It would have cost very little money to install these warnings, the lighthouse keepers at these different harbours could turn on steam and start the fog horn or steam whistle without the extra expense of one man. Thus the signals could have been given had the government taken the precaution to have installed a proper machine to give the usual warnings to mariners. I hope the government will take this matter seriously into consideration and that not only at the ports mentioned but at all other ports where ferries cross in the winter they will take the proper means to see that warnings for navigation are installed. Otherwise what is the use of spending millions on harbours and places of refuge if their approach is made impossible for want of proper aids to navigation?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Mr. Speaker, I am extremely sorry that my hon. friend has not thought fit to notify me that he was going to bring this question up to-day because then I would have taken the means of giving to the House whatever information the department may have on the question he has raised. I may say to my hon. friend that instructions have been given to make a formal inquiry into the matter to find out the reason of the accident and whether the complaint which has been made by my hon. friend might be remedied as he has suggested.

Mr. MARSHALL. Has not a petition already been presented to have these signals installed in different places?

Mr. BRODEUR. I could not answer off hand. I am extremely sorry the matter has been brought before the House without notice being given. I think it only fair when a question of this kind is being brought before the House the minister should be notified. I am not supposed to know all the details of aids to navigation, and I think it would be only fair that the minister should be notified in advance in order to be able to discuss such a question intelligently and to the satisfaction of the House.

THE NAVAL BILL.

On the orders of the day being called.

Mr. R. L. BORDEN. When may we expect the Bill embodying the naval proposals of the government? I presume we shall have it at the latest immediately after the reassembling of the House.

Sir WILFRID LAURIER. A notice will be placed on the Order Paper to-day to be taken up on the first reading on the 12th of January.

REPRESENTATION OF OTTAWA.

Mr. FOSTER. Has the Prime Minister made a decision as to which of these two loves he will ultimately adhere to, politically speaking?

Sir WILFRID LAURIER. The moment the question is placed in this way I have no hesitation in answering. I have made up my mind and if my hon. friend will allow me until perhaps to-morrow, I will tell him which it is.

UNOPPOSED MOTIONS.

Mr. R. L. BORDEN. I would like to mention to the Prime Minister motions numbers 28, 29, 31, 32, 34 and 35. Some hon. members on this side suggested that these might be called as they are probably unopposed motions. I did not think it worth while that the debate on the budget should be interrupted for this purpose and I would therefore ask that if there is no

objection to these motions the various departments concerned might get ready to bring the returns down immediately after recess so that upon the motions being made the returns will be ready.

Sir WILFRID LAURIER. I can see no objection to that but I would suggest to my hon. friend that to-morrow, before adjournment, we can pass them. I may have to consult some of my colleagues in regard to the matter but I see no objection to their being passed to-morrow.

WAYS AND MEANS—THE BUDGET DEBATE.

House resumed the adjourned debate on the proposed motion of Mr. Fielding: That Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the Ways and Means for raising the Supply to be granted to His Majesty.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, in continuing the debate on the budget deliverance of the hon. the Minister of Finance, I do not purpose making any lengthy remarks or discussing a large number of subjects. I have no doubt that I voice the sentiment of the country in expressing the satisfaction that it gave the people of Canada to hear the financial statement of the hon. the Finance Minister and to know that the country was in such a happy financial condition. I doubt not but it will be accepted with pleasure and satisfaction generally. It proclaimed a buoyant and expanding revenue, which is always desirable where extensive work is to be done; increasing commerce, and that I am sure will please every citizen of Canada; busy industrial life and heavy expenditure, that will please some, and it will displease others; a rapidly growing debt with our credit not improving but rather the reverse. With regard to the last two features, there may be some exception taken, some would desire that we had not have reached the record which we have reached to-day. Last year has been, according to the budget deliverance, a record year in the history of Canada in many respects. It has been a record year with regard to collections from the people. We collected $85,000,000, the largest sum perhaps, with one exception, that was ever collected from the people of Canada. Therefore it was a record year in that regard. We spent $126,000,000, the largest amount that has ever been spent in one year in the history of Canada. Therefore our expenditure was a record breaker as well. We increased the debt by $45,969,-414, in one year. I believe there is only one other year in the history of Canada where the increase of debt was larger than it was last year, and only one. We spent $31,317,132 on the Transcontinental railway and the Quebec bridge. With regard to that, I made an observation at the time the hon. Minister of Finance said that we had spent for the current year $31,000,-000; I asked the question if that was the railway which was to be built by the surplus of one year, and the Finance Minister's reply was 'I am afraid that was a pipe dream of my hon. friend'. Something imaginative rather than the reality. That statement was credited to this side of the House rather than to the source to which it properly belonged. Not desiring to infringe upon the right of others, I simply wish to refer to that statement in the 'Hansard' at the time it was made, so that the people of Canada may know that it was no pipe dream in the mind of the hon. member for East Grey (Mr. Sproule), or of any other member of this side of the House; but if pipe dream it was, it should be credited to the Prime Minister, and not to the member for East Grey. This is what the 'Hansard' says as the words of the Prime Minister when he was explaining the Transcontinental Railway Bill:

> The sum total of money to be spent by the government for the construction of that line of railway from Moncton to the Pacific ocean will be in the neighbourhood of $12,000,000 or $13,000,000, and not a cent more. . . . Now, Sir, what is $13,000,000 in 1903? It is about the surplus of revenue over expenditure; the surplus for this year will pay for the construction of this road.

Therefore the pipe dream, if pipe dream there was, ought to be credited to the hon. the First Minister instead of to the member for East Grey. I wish the country also to think over the fact that we have spent over $59,000,000 on a road that was going to cost less than the surplus of one year, less than $16,000,000 and the road is not half built yet. I want the country to think over the fact that we have recently voted over $20,000,000 this year, and we spent $31,000,000 last year, and a large amount the year before. So the people of Canada may understand whether they were misled by the pipe dreams of the government when they undertook this gigantic enterprise.

This is going to be a record session also, we are told. Well, I looked over the speech from the Throne to ascertain what there was in it that would indicate that it was going to be a record session, and I noticed that that speech deals with only one question that might be regarded as new matter, and that is Naval Defence. On that question, as the Bill is not before the House, I do not desire or intend to make any lengthy observations. But I may say in passing that the speech from the Throne rather indicated that the Bill would have been brought before parliament long ago, and I cannot understand why the delay at the present time. The Governor General said:

Two members of my government attended the Imperial Conference, called by His Majesty's government on the question of defence. A plan was adopted after consultation with the admiralty, for the organization of a Canadian naval service, on the lines of the resolution of the House of Commons of the 29th of March last. The papers will be immediately brought down, and a Bill introduced accordingly.

Well, I would take the language to mean forthwith after the papers had been brought down. But we have now passed five weeks of the session, and although the papers were brought down long ago there is no Bill yet. Now I have only to say with regard to that measure that in my judgment what Canada expects is that something should be done immediately and effectively. I am not going to pretend to say what it will be, but it did occur to me at the time that the speech was made that the observations of my hon. friend from North Toronto pointed directly to what was perhaps the sentiment of the country on the question then. Therefore, in order that it may be a reminder to the House and the country, may I be permitted to refer to those observations, and that is the only remark I intend to make on the subject. The hon. member for North Toronto said:

To-day parliament stands at the gateway. It is not for me to say how grave it is, but I cannot brush it aside. To-day it impresses itself upon the gravest statesmen of the old country; to-day it appeals to Australia until public subscriptions are taken and the government is being importuned to do even more than its settled policy to meet the emergency; to-day little New Zealand gives one Dreadnought and offers a second, and to-day Canada faces that position of peril, that imperial emergency. Let me say to my right hon. friend that if, after careful consideration, he proposes to this parliament a means for meeting that emergency adequately, by the gift of Dreadnoughts or the gift of money, this side of the House will stand beside him in thus vindicating Canada's honour and strengthening the empire's defence.

I have only to say that I believe the sentiment of the country remains to-day the same as when these observations were made, and that what Canada desires is immediate and effective action, whatever that action may be. I might for a moment ask what accounts for the good times that we have, the buoyant revenue and the general prosperity of the country as indicated by the budget deliverance? It is quite natural that the Finance Minister and his supporters would desire to have the country believe that in some way or other their conduct was responsible for these good times. What accounts for the favourable condition of affairs to-day? It is to be chiefly accounted for by the bountiful crop that we have had which brought a very large return to the labours of the field, to the agriculturists, who represent about 45 per cent of the population, and if you can give a good return to 45 per cent of the people and they are well employed, thus doing good to them, you necessarily do good to the whole population. The large return for their labours obtained by a great number of the people, and the very heavy expenditure carried on by the government in public works and in other lines, involving the distribution of 126 millions amongst the people of Canada, would help to make good times whether that expenditure was wise or unwise, extravagant, profligate or economical. The exceptionally heavy expenditure on railways, canals, telegraph and other lines would naturally help to make good times. Then, there is the expenditure which took place in connection with corporations outside of the government. Railway building is carried on extensively in the country to-day. The three great transcontinental railway companies are extending their branch lines in every direction at a very rapid rate and this as well means a heavy expenditure in the country. It means employment for labour at remunerative wages, and, therefore, it is one of the elements that assist in bringing about these good times. Then, there is the heavy influx of immigrants who bring with them all the money they possess, as well as their settlers' effects, which money must be spent immediately on arrival to support themselves and those dependent on them with the necessaries of life and to provide an outfit for commencing operations in the new country and in the new home. This money must be spent immediately, and it means a very large additional expenditure in the country. This means as well a valuable additional market for the products of the country that we have to sell because it is usually a market in which the highest prices are paid. A heavy expenditure is required to provide implements and other things necessary to the outfitting of the new-comers. This means not only an increased market, but it means a home market which is always the best market to be had. It means an enhanced value for everything that is produced in the country and that has to be sold. Compare that with a few years ago. It is undoubtedly due to the law of supply and demand, to increased consumption in the country, to the increased numbers to help to create the demand. But, what have the government to do with benefits derived by the people from the large harvest? Nothing whatever. To what extent were they responsible for the increased prices that were obtained by the people of the country for what they sold? They were in no way responsible for it. These increased prices were due entirely to the law of supply and

demand, with which the government had no connection. These things help materially to make good times and in consequence we have the good times that we now enjoy. Our trade and commerce affords a number of examples, but I will only mention one item and that is the enhanced value of everything that the country had to sell last year as compared with previous years. To show what this means to the people of Canada I will mention three articles of export and give a comparison of the prices that were obtained for them last year with the prices that were obtained for the same commodities a few years previously. First, take the exports of wheat. In 1896 we exported 9,919,000 bushels and the farmers got in return, $5,771,000 in round figures. What was that per bushel? It was 58¼ cents per bushel. That was a very low figure. That could not possibly mean good times for the farmers. But, we take 1906 and we find that the farmers of Canada exported 49,137,000 bushels, in return for which they received $48,000,000. In other words, they got 98 cents per bushel for their grain, whereas, in 1896, they only got 58¼ cents per bushel. What had the government to do with that? Nothing in the world. It means to the agriculturists of Canada a greatly increased return over what they received a few years previously and, therefore, they were benefited to that extent. Take cured meats. In 1897 we exported 1,861,000 pounds, for which we got $84,000. In 1909 we exported 1,610,000 pounds; that is over 250,000 pounds less. But instead of getting only $84,000 the farmers got $123,911 for it, or $34,493 more for 250,000 pounds less than they got in 1897. What had the government to do with that? Nothing at all. It was due to the markets of the world. Then, I take cheese. In 1897 the farmers of Canada exported 164,220,000 pounds of cheese, for which they got $14,676,000. In 1909 they exported exactly the same number of millions, or 164,907,000 pounds of cheese, for which they received $20,384,000. What had the government to do with that? Nothing whatever. But, it helped to make good times. It helped to make the farmer's return more profitable, but it is not attributable to anything that has been done by the government. It is attributable to the law of supply and demand.

I do not propose to travel over very extensive ground or to engage in anything like an analytical criticism of the budget utterances of the Finance Minister, but I wish, very briefly, to direct attention to one particular line where I think the government have been very remiss in their duty, and in connection with that I was rather surprised at the observations of the minister in closing his budget speech. The Finance Minister announced that there will be no changes in the tariff this year, and he used the following language:

> We have no tariff changes to propose on this occasion. It is not because we have entered a claim that the tariff is perfect. We have no doubt that wherever you have a custom tariff necessarily as full and intricate as ours has to be there will be room for criticism and certainly always room for demands for changes. But, we are of the opinion that it is not in the best interests of the country that there should be frequent changes. We believe that frequent tariff changes must have a disturbing influence on the interests of the country and we wish to have it generally understood that where there has been a general revision of the tariff as we had two years ago the government would not be disposed to make changes unless the need for them was very urgent indeed.

Language of somewhat the same kind was used by the Minister of Finance last year and the year before. Let me point out to him that one of the changes made in the tariff when it was revised some years ago, was a change which I have always regarded as unwise and injurious to the interests of the agricultural community who represent 45 per cent of our population, and also the woollen textile industries which were being rapidly developed in Canada; which gave employment to thousands of hands, which produced cheaper clothing than we can now obtain, and which gave a better market to the farmers of Canada for their wool. When we gave the British preference we struck a vital blow at the woollen industry. When the reduction was made in the tariff rate on woollen fabrics there were in Canada 207 woollen mills operating at full time, employing a large number of people and paying them good wages. These mills had 624 sets of cards, 2,645 looms, and 194,086 spindles moving all the time. But, a few years after the British preference was introduced instead of having 270 mills in operation in Canada there were only 197, instead of having 624 sets of cards there were only 521, and instead of having 2,654 looms there were only 1,706. That is the result of the tariff changes which the Minister of Finance told us were so valuable for the people of Canada, and which, as he said, the government gave out of the generosity of their heart. I am told that twenty more woollen mills have gone out of operation within the last year and that in all there are 73 fewer mills now operating in Canada than there were when the British preference came into force. The operatives in these mills have been thrown out of employment and the bread winners have had to find employment elsewhere. We admit into this country free of duty, or at a nominal duty, from 5,000,000 pounds to 12,000,000 pounds of wool and over 2,000,000 pounds of yarn every year which would have been produced in Canada had we kept

our tariff as we should have kept it against wool, and extended adequate protection to this woollen industry which at one period was developing so rapidly. In addition to that we have 7,000,000 pounds of tops, waste, and rags imported. We threw out of employment over 3,000 operatives on whom probably 15,000 people would be dependent, by virtue of that change in the tariff which was said to be in the interests of Canada. Why was this unwise policy introduced? For what purpose did the government give that British preference? The Minister of Finance told us it was in the first place to show our generosity and our liberality to the mother country. It is very well to be generous and liberal with what belongs to yourself, but it is not always wise to be liberal with what belongs to other people, and that is what the government did. We were told in the next place by the Minister of Finance that the consumer of clothing in Canada, especially those who purchased the cheaper wearing apparel, would be benefited by this change. Well, I do not dispute that we showed our generosity and liberality, but I do dispute that it has cheapened the cost of clothing to the people of this country. I think I shall be able to prove from the prices quoted by two large establishments in Toronto, that notwithstanding that we brought in over $22,000,000 worth of woollen textile fabrics last year, and notwithstanding that we closed down 73 Canadian mills and at the same time wiped out a valuable market for the wool produced by the farmers of the country, we did not reduce the price of clothing to the poorer people.

Why? Because the advertisements of these firms tell us plainly that this could not be done. I give the prices of clothing from the files of the Toronto daily papers in 1896, 1905 and 1907. In 1896, throughout November and December, the T. Eaton Company continuously offered ready-made four-button, all wool tweeds, with best Italian cloth lining, sizes 34 to 44, at $6 to $7.50 a suit. At the same time the R. Simpson Company advertised ready-made, all-wool, four-button sack suits of English and Canadian suits, at $5.99, $6.40 and $6.99. In 1905, nine years later, when, according to the Minister of Finance, if his policy had worked out as he seemed to desire and intend, they should have been a great deal cheaper, throughout November and December the T. Eaton Company continuously advertised the same classes of ready-made suits at $10.50, $15 and $18. These figures show that the Minister of Finance's judgment was bad, that instead of cheapening the cost of these articles to the consumer, that change in the tariff made them very much dearer. In 1905, throughout November and December, the R. Simpson Company advertised the same class of suits at $9, $11.75, $14 and $16 a suit. In 1907, the Eaton and Simpson companies advertised early in November all wool and worsted winter suits, sizes 36 to 44, at $12 and $14. The same class of suits that were offered previously at $5 and $6; and towards Christmas the R. Simpson Company advertised manufacturer's stocks at slaughter prices of $7.95 and $8.59. I give these prices to show that if it ever was intended or believed that the reduction of duty on British goods would reduce the cost of these goods to the poor consumer in Canada, the people know better to-day.

I have given evidence of what this policy has done for the poor people of the country by increasing the cost of the clothing they must wear. What has it done for the farmers of the country? It has destroyed the sheep raising and wool growing industry. I can give first the quantity of wool that was sent out of the country at the time when we commenced to build up the textile industry, as indicating the number of sheep that we owned in Canada. The trade and commerce returns show that in 1897 we exported 7,740,000 pounds of wool. Shortly after that we had the British preference, and what effect had it on the sheep raising and the wool industry of the country? In 1898 it fell off; in 1900 it amounted to 2,000,000 pounds; in 1901, 1,000,000 pounds; in 1902, 1,000,000 pounds; in 1903, 2,000,000 pounds; in 1904, 1,000,000 pounds; in 1905, 1,000,000 pounds; in 1906, 1,000,000 pounds; in 1907, 1,000,000 pounds; in 1908, 1,848,000 pounds, and in 1909, 1,224,000 pounds. These figures show conclusively that the farmers of Canada have found sheep raising unprofitable, and therefore have disposed of their sheep and gone out of the business. What was the cause of that? Undoubtedly one of the main causes was the destruction of the home market which they previously had for their wool, by the blow that was given to the woollen textile industry by that reduction on English goods. The provincial governments are doing all they can to induce our farmers to go more extensively into sheep raising, but the farmer does not do so, because he finds it unprofitable owing to there being no market for his wool. As our sheep cannot be transported very well by water, they are not being sent to the European market, but to the United States. The result is that the number of sheep in Canada to-day is only 2,510,000 as compared with 20,108,000 in New Zealand, a much smaller country; 30,011,000 in the United Kingdom, although our country is ten times as large; 53,240,000 in the United States of America, 74,000,000 in the Argentine Republic, and 87,000,000 in the Australian Commonwealth. There is not one of these countries that is not smaller than Canada, and the requisites for sheep raising are as good in Can-

ada as they are in any of these countries Why is it that we have not more sheep? Because of the very unwise policy of the government, first, in destroying the textile industry of the country, and secondly, in not providing a better market for mutton, of which we might send millions of pounds to other countries.

Let us compare our own country with some of the states of the Union. Take, for instance, Montana. That state produced last year, 45,000,000 pounds of wool. Why was she able to make so large an output? Because the textile industries of that country use up every pound of that wool, and the farmers who raised it could get a good price for every pound of their product. But when we cross into Alberta, a province which is larger than Montana and is capable of producing more sheep and raising more wool, we find that, instead of 45,000,000 pounds they raised only 400,000 pounds. In Alberta last year, they had 154,266 sheep, as against over twelve times that number in Montana. The whole clip of wool in Canada last year was only 4,500,000 pounds. How was it that we raised so little wool? Because the crop is not a profitable one and the farmer will not spend his time in raising it. Our country is as well adapted for raising wool as any of these other countries, our population is as large as that of most of them and our area certainly greater. This might be a very profitable industry if wise attention were given to it by the government. Instead of having only 154,266 sheep in Alberta, there should be two or three million sheep there, yielding a good return to the farmers. Why is it that these countries can raise sheep profitably and we cannot? Except the Australian colonies and Argentine Republic, the wool of which is finer than ours and therefore more valuable, these countries have no advantage over us except that they have a home market for their wool, and, a good market for mutton as well, whereas the Canadian farmer has not a home market for either. The mutton cannot be properly taken to the market because of our transportation arrangements, and, owing to the indifference of the government, we do not secure the better transportation system that we might have and that would enable the producers to send this material to market at prices that would yield much larger returns than at present. The United States produce 330,000,000 pounds of wool against 4,500,000 pounds in Canada. Why? Because their statesmen, years ago, saw the wisdom of fostering the woollen textile industry. It was first established on the wool of Canada. But it was fostered year after year through adequate protection, not at one stage only but at every stage of that production. This policy was continued steadily until now the woollen industry may be said to be the most important in that country. There are five million of people dependent upon it, and the spindles of the woollen factories turn out a greater product than any other line of industry except possibly that of iron and steel. The woollen industry gives employment to a larger number of people who receive more in return, and more people are supported by these lines than are supported by any other lines in the United States at the present time.

I have stated that England has 30,000,000 sheep, and England is a country not one-tenth the size of Canada. She grows 100,000,000 pounds of wool every pound of which is used in the factories in that country, besides which 557,000,000 pounds of raw wool are imported. England affords the farmers a good market for wool and for mutton also. Compare that with Canada. The Canadian wool consumed in Canadian factories in 1871 was 8,000,000 pounds; in 1881, 8,000,000 pounds; in 1908 a little less than 7,000,000 pounds. Last year, only 4,500,000 pounds. The Canadian farmer has gone out of sheep-raising because that industry is unprofitable. Let me give the figures showing the exports of sheep for some years in order that we may have some idea of what this industry has meant to the Canadian farmer. I begin with the year 1899, when the policy of the present government was coming into full effect. The following are the figures:

EXPORTS OF SHEEP FROM CANADA.

1899	405,322
1900	459,944
1901	394,681
1902	384,442
1903	401,443
1904	304,053
1905	288,319
1906	214,262
1907	354,665
1908	227,000
1909	118,000

This drop from 459,944 to 118,000 in a period of ten years was directly due to the destruction of the value of the market for the farmer's wool, causing the farmer to go out of the sheep-raising industry. And to-day there are only 2,478,688 sheep in Canada. We had more than that in 1861. We had more sheep in Canada fifteen years ago because sheep-raising was then more profitable than it is to-day. How is it that the farmers of Australia and the Argentine find sheep-raising profitable, although they have no local market whatever for their wool? Their wool is of fine quality, it is wanted abroad, it always commands a high figure and therefore they get a good return for it. At the same time the mutton is sent to the markets of the world in cold storage provided by their government and produces a good return. To give an idea of what

that means to the people of New Zealand I need only say that Great Britain takes annually from New Zealand of frozen mutton about 200,500,000 pounds and from the Argentine Republic 144,230,000 pounds. Canada, with a country as good for raising sheep and with mutton equally as good as the best they raise either in Argentine or in New Zealand, is not sending a pound of frozen mutton to the markets of the world. Why? Because our government have not thought it worth while to provide cold storage facilities so that the products of the farmers may be taken to the markets of the world where they realize a profitable return. The result is that all of our sheep, which we export have to be sent to the United States, while our home market is very limited. New South Wales exported of frozen meats last year 540,514,000 pounds, but, Canada, which could raise meat just as well and of just as good quality, is not able to send a pound to the markets of the world where the Australian and Argentine farmer is getting a good price. The industry of the farmers of Canada is destroyed by the carelessness of the Minister of Agriculture, who proclaims himself to be a farmer and is supposed to be looking after the interests of his fellow farmers. He has failed to do that. The Minister of Finance has struck them heavily on one side and the Minister of Agriculture has struck them on the other. What has this policy of the Finance Minister accomplished for the people of Canada? It has deprived 15,000 or 20,000 Canadians of the means of earning a living and left them in a state of starvation until they were obliged to turn to some other line to earn a living. It has swept away the capital invested in those industries that were running full time when the change was made in the tariff of our country. It has destroyed the machinery which is rusting or has been sold for scrap iron, and every year more and more of these industries are going down until in a few years there will not be one of them left, whereas there were 270 only a few years ago. That policy has destroyed the market furnished by these mills for the wool produced by these farmers. Sheep-raising, one of their best lines of industry, is made unprofitable and therefore they are going out of it at a rapid rate which is indicated by the increased cost of clothing to-day. Instead of getting an increased market and a better price for what he wishes to sell, the market the farmer had is being destroyed and no new market provided in its place. The government killed the Canadian farmers' market in Germany and destroyed the market for consumption at home by those who were engaged in the textile industry, in addition to sacrificing the home market for the wool the farmer raised. One of these things was done by the Minister of Finance and the other by the Minister of Agriculture.

This was all accomplished by the British preference, Then too, instead of cheapening the goods purchased by the poor people of the country it has increased these over 45 per cent in price. Do the government feel happy over it? Are they satisfied with their policy? Are the people of this country satisfied that that policy was a wise one for the country? I do not think they are. Are they grateful to the government for introducing that policy? I do not think they are. What do the farmers of Canada think of that policy? In my judgment they think that the government acted very unwisely, and they would be glad to have some one take up the question in their behalf and introduce a change that will be beneficial. This was accomplished by two members of the cabinet who above all others declared that they were most anxious to do good to two important classes, the poor people of the country who are consumers and the agriculturists who represent so many. The Minister of Finance was going to cheapen their clothing, but he has nearly doubled the price. The Minister of Agriculture was going to do so much for the farmers, being a farmer himself, and he jollies along in the same old slipshod way, he does not get new markets, he only destroys the markets they had, the German market and the home market here in Canada, providing nothing in their place. He did not even provide proper means to lay the products of the farm in the markets of the world and therefore the farmers are obliged to do without beneficial markets where their products might profitably have been sent. In considering these two lines only we have no reason to congratulate either the Finance Minister or the Minister of Agriculture for what they have done for the farmers of Canada or the poor people who are always needy and require to get the cheapest clothing the country can possibly afford. The very men who above all others should be most desirous to help the poor people are the men who have done them the greatest injury and injustice. The man above all others charged with the responsible task of dealing with that question has done nothing, he has destroyed the markets they had and provided no others in return.

I merely make these observations in order to draw the attention of the farmers of the country to what has been done, what accounts for the destruction of their valuable market, what accounts for the fact that sheep-raising is not profitable to-day. I want to draw the attention as well of the poor people of Canada and to let them know why it is they pay so much more for their clothing, about 45 per cent more than in 1897, when this new policy was introduced and put in operation.

Mr. F. L. FOWKE (South Ontario). Mr. Speaker, in the mother of parliaments as in the parliaments of the five nations, the financial statement or annual budget by the Chancellor of the Exchequer or the Finance Minister as the case may be, is always a theme of interesting discussion both in the House of parliament and out of parliament. In this country where history is being made very rapidly, where the events of to-day will be counted as ancient history to-morrow, it is not at all surprising that in a peculiar sense the budget of the Finance Minister is looked forward to with interest. I am very glad to-day to be able to say that during the last twelve or thirteen years in this Dominion the budget speech has been looked forward to with feelings of joy, not with feelings of apprehension. The budget to which we listened the other day is perhaps the most magnificent of all the splendid presentations which the able Finance Minister has presented to the Dominion House of Commons. I am delighted to find that the gentleman who preceded me in this discussion pays this compliment to the Finance Minister when he says that the budget is in most respects one to be rejoiced over rather than to be complained of; and yet, like the good cow that gives a fine bucket of milk and then proceeds to kick it over, the hon. gentleman spoiled the good effect of his speech by an adverse criticism which practically put him out of court. To the present Finance Minister is due the existing fiscal policy of this country, under which Canada enjoys, and has so long enjoyed, such great prosperity, and which has enabled him to make the magnificent showing he was able to make on Tuesday last. Now, Sir, I am in a way glad that the two gentlemen who have spoken for the opposition have, at least in their speeches, found more or less fault with the hon. the Finance Minister, and I will tell you why. The speech and the presentation by the Finance Minister are approved by almost every body, and I hold in my hand a Conservative newspaper, the 'Citizen' of Ottawa, which contains a despatch from Great Britain to the effect that the address there is received with marked favour by capitalists, who predict that the great prosperity of the Dominion is reflected by it, and that this prosperity is likely to increase. I say I am rather pleased to have heard the two gentlemen of the opposition speak on this question, one of them an ex-minister of Finance and who would like to be again Minister of Finance and the hon. gentleman who has preceded me (Mr. Sproule) whose heart has been made sick in waiting for an opportunity to be a member of a new government. They have found fault with the presentation of the Finance Minister, and so saved him from coming under the measure under this menace of the scripture: 'Woe unto that man of whom all men speak well.' Now the budget's presentation not only gives a splendid view of the condition of the business of the nation, but it gives a fair presentation of the social life of the people, and brings to our attention the growth and development of our trade and commerce. Yet it is too bad that even the opposition in this House should feel inclined to criticise the budget speech, and to pour out the vials of their wrath upon the administration as we have heard them do. Now let me suggest to you, Mr. Speaker, though not wishing to be disrespectful to the hon. gentlemen who preceded me, and to the hon. profession to which he belongs in life, I am bound to say that I can account for it on no other ground than that he is suffering from something like mental measles, and is unable fittingly to appreciate the real state of affairs in the Dominion of Canada. I do know that his desire for the treasury benches makes him feel to-day as melancholy as a pelican in the wilderness, as his colleague the other day showed himself to be as ferocious as a bear robbed of her cubs, when he came to think of the position which he now occupies and the position which he would like to occupy in the government of this country.

Now, Sir, the presentation made by the Finance Minister is remarkable in several particulars. First, it noted the fact of the splendid position this Dominion occupied during the panic that occurred in 1907 and 1908, and if we had time this afternoon to institute a comparison as to the effects of that panic on various countries, a panic which was world wide in its operation, you would find that this country resisted the effect of that panic as no other country was able to do. Why, Sir, in the great republic to the south of us, that wealthy and populous nation, what was the state of affairs? Not only was industry paralysed, but money could not be had to carry on the legitimate business of the country. Owing to the wise fiscal policy now prevailing in this country our business community was happily preserved from the disastrous effects which visited the republic. There was ample money for all legitimate business enterprises and business went on with slight interruption. Albeit the revenue of the country was somewhat diminished, and it was not at all surprising that such should be the case. Now, the Finance Minister's splendid speech also noted the fact that the trade and commerce of the country are growing by leaps and bounds. He was able to tell us of an overflowing treasury, of a great recovery in the revenue of the country which would enable the necessary expenditures to be met without

difficulty. He showed us that notwithstanding all the great expenditures that will have to be made upon the National Transcontinental railway, the increase of the public debt would be $2,250,000 less than the expenditure on that enterprise alone, and the naval expenditures ordinarily applied to capital account would this as would other years be paid out of revenue expenditures and be chargable to capital account?

Now, this is a remarkable condition of affairs in Canada, a very prosperous condition indeed. It is one that might well cause the hon. gentleman who preceded me to ask the question as to how this condition of affairs is to be accounted for. Well, Sir, it is to be accounted for in various ways. I cannot now follow him in all the paths in which he journeyed in trying to ascertain the cause of the country's prosperity. The way in which he tried to explain it, however, was a twice told tale. He laid emphasis upon the fact that much of the prosperity of the nation is due to the enterprise of the people, is due to the fact that agriculture is flourishing, is due to the fact that work and wages were never better, is due to the fact that we have a splendid industrialism in Canada. I would like to draw the attention of that hon. gentleman and of the House to the fact that all these vast interests in Canada are growing today, they are developing day by day, month by month and year by year. And how is it all to be accounted for? Sir, I think it is largely owing to the fact that we have a sane and sensible fiscal policy, one which not only ministers to the growth in trade and commerce abroad, but which has helped to build up an interprovincial trade which is vastly superior to that which we enjoy from imports and exports. I was glad to-day, in taking up the Ottawa 'Free Press,' to note the splendid influence that the fiscal arrangements of this country are now having upon foreign capital. The Ottawa 'Free Press' of December 15, has a statement from the State Department at Washintgon, noting that $226 500,000 of American capital has been invested in industrial enterprises in Canada. employing Canadian labour, on Canadian soil, and ministering to the comfort and convenience of the Canadian people. This is a point that is worthy of note. When these gentlemen come to discuss the ifs and ands of the prosperity of the day—and I shall go into detail in a moment more fully as to some of the things said by the hon. gentleman who preceded me—I listen in vain for a declaration from them as to what they themselves would do to improve the situation. I had hoped that they would have presented an alternative policy upon which they might have appealed to the Dominion of Canada. But, Sir, had we anything of the kind presented to us? No, Sir, we had not. They proceed upon the assumption that the government of the day are perfect men, that they are infallible, that they ought not to be expected to err in any single particular. Sir, high as my regard is for the hon. the Premier and the members of his cabinet, I do not claim for them absolute perfection. I do not pretend to say that there is no possibility of errors having been made, but if there have been errors made in the administration, these gentlemen have failed to point them out, and they have failed to show, if there have been errors, what they would do to meet the situation.

Mr. STAPLES. May I ask the hon. gentleman a question? Is this policy which this government has been administering during the last twelve years the policy that the right hon. the Prime Minister enunciated in Winnipeg in 1894, when he promised the people that if he were elected to power he would give them free trade as they have it in England?

Mr. FOWKE. I am very pleased to say that when the right hon the premier accepted office and opened that new era for Canada in which we are living now, an era of magnificent growth, development and prosperity, he established for this country the fiscal policy under which we have lived until this hour and which admirably meets the requirements of the situation.

Mr. MIDDLEBRO. May I ask the hon. gentleman what that fiscal policy was?

Mr. FOWKE. Is it that hon. gentlemen opposite are without a policy? I know that they were struggling to manufacture a policy. If I remember correctly there was such a thing spoken of as the Halifax platform and we were to have adequate protection, but since the hon. member for South York (Mr. Maclean) refused to be godfather to that policy and since a wet nurse could not be had for it among hon. gentlemen opposite it has faded into the distant past and we no longer hear of the Halifax policy I had expected, therefore, that by this time, on the eve of the convention which is called ostensibly, I suppose, to unite the party and to give them possibly a leader under whom they can serve, they would have outlined a policy of some kind. But we are quite in the dark as to what these hon. gentlemen wish us to do in that respect. There is nothing positive from that side of the House, nothing statesmanlike, only fault-finding and unsubstantial statements, and if the hon. gentleman will receive it from me his address to-day seemed very much like putting empty buckets down and drawing nothing up. I have simply to say a word in answer to a few of his criticisms

and to point out a few of the mistaken statements and wrong conclusions which he has arrived at from what he would call his argument this afternoon. There are some facts that we ought to know in connection with the history of this Dominion. I want to state openly, unreservedly and boldly that with the coming into power of the hon. the premier there was opened a new era in the Dominion of Canada, the era in which we are living now and one which is likely to continue for a very considerable time, we trust. I want these gentlemen opposite to have it impressed upon their minds that we are living in an era, which is one rejoiced in by all classes and sections of the Dominion of Canada, by three or four dates which I will venture to mention. Has not the year 1896 itself a meaning for them? Have not the years 1900, 1904 and 1908 a meaning for them? These are very impressive mile stones along the line of the history of this country which ought to convince hon. gentlemen opposite that in all of the appeals that have been had to the electorate since the advent to power of the present government until this day the masses of the Canadian people have been shown to be absolutely, with an almost united front, behind the premier and the government which he leads so successfully. There is nothing wonderful in relation to that.

The hon. gentleman who preceded me undertook to speak on behalf of agriculture and in doing so he made a slight comparison as to the prices of agricultural products last year and this. It would almost seem to me, although I had not intended to do so, that the hon. gentleman needs to have told him some very necessary truths, but in order to do that I should have to move the hands on the dial back not a year but probably thirteen years to direct his attention to the prices of agricultural produce, say, in 1896, and in 1909. If he wants a comparison of that kind he may have it. Let me tell him that the price of wheat, for instance, when the Tories were in power was 58 cents a bushel; to-day we are glad to know that it is a dollar a bushel. At that time the farmers eggs were 10 cents a dozen; to-day they are 25 cents a dozen. Then butter was 12 cents a pound; to-day it is worth a shilling a pound. And if he wants to tell me that the exports of dairy products have fallen off I will tell him that so greatly has the population grown, so numerous have the consumers become, so much better has the home market demand been made than the export market demand that we are glad to avail ourselves of it and the farming industry is flourishing accordingly. The farmer will have little regard for the argument of the hon. gentleman if he will ask him to turn out the present government and place himself and his asociates in power. Now, Sir, there is another change that I would like to speak of in relation to Dominion affairs. Let me contrast the condition then and now. I will not harrow the feelings of hon. gentlemen by speaking of the state of political corruption that was known to exist in Canada then and of the changed conditions now.

Some hon. MEMBERS. Oh, oh.

Mr. FOWKE. The people know it and the people rejoice in it.

Some hon. MEMBERS. Hear, hear.

Mr. FOWKE. Hon. gentlemen say: 'hear, hear'. In those days it was necessary for the leader of the government to expel from the House of Commons of his own party because of their corrupt acts. To-day we stand behind the ministry which is unimpeachable in its character--

Some hon. MEMBERS. Oh, oh.

Mr. FOWKE. And because of the wise economy and absolute honesty characterizing every department a majority of the people of Canada stand united behind this government and overwhelmingly declare that there is such a difference as between then and now that they want no more of the then and they want to cling to the now. At that time there were such things as national distress and stagnation all over Canada. To-day you find that agriculture flourished to a marked degree, that where there was but the prairie there are now villages—villages that have grown to towns and towns that have grown to metropolitan cities, and you find in the east of this country as well as in the west, in the two older provinces, that a large industrialism has been developed and is developing that was not known then and which is employing hundreds of thousands of men, giving them all the work they can do and at splendid wages too. Work and wages never were so plentiful and so much rejoiced in in Canada as they are to-day, and I will tell you why. It is very largely because of the sane and successful fiscal policy inaugurated in the early days of the present administration and persisted in to this hour. And, one of the greatest blessings that has come to us in connection with the fiscal policy is the very one which that hon. gentleman (Mr. Sproule) professed to condemn this afternoon, namely the imperial preference. I want to ask the hon. gentleman (Mr. Sproule) now, if he is prepared to recommend to his party that that preference should be withdrawn from the mother country? He will not make such a declaration. I am glad from the political point of view that he condemned the imperial preference as he did to-day, because the people of Canada have proclaimed time and again that nothing has ever pleased them better than

the manner in which, through the channels of trade and commerce, the government of Sir Wilfrid Laurier has linked Canada more thoroughly with the mother country than ever before. Is it that the hon. gentleman (Mr. Sproule) is simply to wave the old flag and shout loyalty on the 12th of July, and that when he is asked to render substantial service to Britain and to exhibit some evidence of true imperialism, he will, as he has done to-day, speak against a closer association with the motherland. The hon. gentleman (Mr. Sproule) dwelt in feeling terms on the woollen industry and of the farmers being deprived of a market for their wool.

Now, I happen to have a large woollen industry in my own town, one which was established a few years ago under rather adverse conditions for the firm was not then rich in material wealth. However, they began the industry there and it has grown and grown with the years until at this hour it is one of the finest of its kind in Canada, and has a plant which I suppose is worth not less than $100,000. From employing a few hands it has grown to employing many hands, and, before I came to Ottawa the president of that company said to me: Mr. Fowke, I hope you will do something to get the woollen industry on a better footing than it is at present when you go down to the session. I said to him: Why Mr. Schofield is not your industry prospering, is it not a growing industry? and he said: Oh, yes,I have nothing to complain of in respect to my particular industry but it is the woollen industry down some where else in some other part of the country. And I said: I suppose it is one of those industries which has failed to keep pace with the change in events, that has allowed its machinery to become out of date and has not applied proper business methods in order that it might grow and prosper as yours has. I told my electors on the eve of the election that any manufacturer in Canada who could not live and thrive and prosper under the present tariff ought to be allowed to perish and to go out of existence, and the manufacturers present applauded that sentiment. And, Sir, I stand here to applaud it to-day. The British preference has given us an association with the mother country in business such as we did not have before and such as we have the right to rejoice in now. It is no argument to say that the farmers are not producing sheep and wool to-day. I would like to point out to my hon. friend (Mr. Sproule) that the farmers of this country produce that which it is most profitable for them to produce, and that if they can raise cattle and wheat and other cereals, to greater advantage than they can raise sheep, these are the branches of industry they will undertake and the sheep raising will be neglected. I would like to tell the hon. gentleman further, that there is a large sheep industry in Canada and that it is known to be very profitable. Sheep are raised in this country not so much for wool as for mutton, and the fancy sheep of Canada are exported to the United States and to other parts of the world in large numbers and with great profit to those who raise them. The hon. gentleman attempted to compare Montana with Alberta, and because Alberta happens to be a larger district than Montana he said that sheep should be raised in Alberta even as they are in Montana. Well, I thank Heaven that Alberta is capable of producing something more than sheep, for Montana is not capable of producing anything but sheep. Montana is a country of hills and of valleys and of running water. In this country we do not have to confine our industry to any particular line, for the farmer as well as for the business man industry is diversified, and under the splendid guidance of the Minister of Agriculture we are getting something like intensified farming so that the Canadian farmer is able to make the most out of the calling in which he is engaged. The hon. gentleman (Mr. Sproule) quoted from the catalogue of the T. Eaton Company in an attempt to prove that clothing is dearer to-day than it was before the British preference. Of course the idea he was aiming at would refute his own argument because if we had not a tariff against woollen goods, woollen goods ought to be cheaper in Canada than they were before. But he contended they were dearer and he quoted this catalogue to prove it. Now, I want to tell the hon. gentleman the true state of the case in relation to that matter. Cheap clothing can be purchased to-day in Canada as cheaply as ever it could, but I thank this parliament, and I thank this government, and I thank Providence too, for the fact that the people of Canada do not have to wear cheap clothing any more. If they pay higher prices than formerly for their clothing it is because they have the money to buy better clothing. Our people to-day are better fed and better clothed and better housed and have larger bank deposits than was ever possible before Sir Wilfrid Laurier attained power. Sir, I had the pleasure of the acquaintance of the late Mr. Timothy Eaton, the merchant prince of Canada, and in the last conversation but one which I had with him I said: Mr. Eaton, what is the secret of your success in business life? And he said: Why, I have just one motto in my business life and it is this: A fair field and no favour. That was the expression of a true Britisher and a true Canadian, and the Eaton firm to-day is perhaps the largest employer of labour in the province of Ontario, and they minster to the wants and conveniences of the people to a very large extent, and they have succeeded by putting into effect the

principle enunciated by the founder of the firm. I venture to say that if the hon. gentleman (Mr. Sproule) will review the catalogue of the T. Eaton Company again he will find that if there is a man who wants cheap garments to-day he can have them just as cheaply as he could ten years ago. But, owing to the prosperity of the country the Eaton firm bring to the attention of the people not the cheaper but the better wares and the people are able and willing to buy them. Speaking from a party point of view I am glad that the hon. gentleman (Mr. Sproule) has assailed the British preference because in my judgment there is nothing in connection with the fiscal policy of this government that more commends itself to the people of Canada than the preference given to the mother country in our markets.

Mr. THOBURN. May I ask the hon. gentleman a question?

Mr. FOWKE. Yes.

Mr. THOBURN. As one who is largely interested in this preferential tariff that he speaks so loudly about and tells of the great advantage it has been to Canada—I have asked this question before but it has never been answered to my satisfaction although perhaps the hon. gentleman will answer it now—I want to know one solitary product of the Dominion of Canada that gets a preference in the old country. In what way does Canada benefit by that preferential tariff? Is there any preference given to any Canadian product to-day in the market of England that was not given to that Canadian product before the preferential tariff came into force?

Mr. FOWKE. The hon. member has asked a question. He belongs to a party that talks very loudly about its loyalty to Great Britain. I would like to illustrate its attitude by a story I once heard. At a school gathering in a country district the British flag was placed on the wall in full view of every one present, and one of the speakers commended the teacher for having it there, and drew from it many important lessons in loyalty for the scholars. When he finished, the teacher said: 'I must tell you, Sir, how the flag came to be there; there is a very bad hole in the wall, and it is very dirty anyway, and I put the flag there to hide it.' That is an illustration of the lip-loyalty of the hon. gentlemen who sit opposite, who loudly proclaim their loyalty from the house tops, but who, when it comes to giving concrete example of the fact that Canada stands heart to heart with the motherland, are ready to say: 'Our interests are here, and even though we would not be greatly hurt by it, we must not take the chance of doing anything for our mother at home.' The present government acted very differently. They said: 'Great Britain is the best market we have for the products of Canada, we wish it ever to be so, we wish to have our trade with you, both for export and import, we want to know you better, to have closer fellowship with you, and to that end the first statesman of Canada gave the preference to the mother country, the result of which is that there is to-day in the British market a sympathetic regard for the products of this country, even though that market is equally open to the products of the whole world. I am glad to know that transportation under this government is keeping pace with the marvellous development of the country, and I am sure the country will approve of what the First Minister has promised to do in a larger way when the finances of the country will warrant it, in the way of deepening the Welland canal, possibly building the Ottawa and Georgian Bay canal, and extending a railway line to Hudson bay. There is nothing too great to expect in that direction, as transportation facilities must be provided if we are to continue to have immigration in the volume in which we have it to-day. In that respect emphasis may be laid upon the fact that we are in a new era. You do not find that the population of Canada is simply stable, that the youth of Canada have to leave for foreign soil to make a living, as was the case formerly. We are not only retaining our own natural increase, but the best people of the United States and the best people of Europe are coming to us, after a searching investigation showing that they are worthy of admittance to this country. To-day we have an immigration of 150,000 per annum and a revenue of $100,000,000. This is something to rejoice in; but I ask hon. members to contemplate the time, not very far distant, when the immigration will be, not 150,000 a year, but 500,000, and when the revenues of the country will have gone up to 400 or 500 millions. There are gentlemen listening to my voice who will witness these things, which will come because the foundations for such a splendid superstructure are being laid by the present government. The marked difference between former years and the present time is emphasized by the trade and navigation returns. The trade of Canada under the Conservative administration was $239,000,000; last year it amounted to more than $571,000,000, showing an increase of over $332,000,000. I would like next to show very briefly how this government has materially assisted in the production of wealth in this country. The hon. gentleman who preceded me said, what is largely true, that it is by bringing brain and brawn into contact with the forces of mother nature, and compelling her to yield up her treasures that we get the advantages that we possess as a growing country

to-day. But not only by the fiscal policy of the government, but by the management of the various departments have the Canadian population been taught the way in which they can hope to make the most of their energies in the production of wealth for their own comfort and convenience, and also for the national growth and development. In no one department is this emphasized more fully than in the Department of Agriculture. The manner in which that department has assisted agriculture is of incalculable value to the agricultural interests of the country, by the experimental farms, by the dissemination of information, by the interchange of animal products with the various provinces. Time would fail me to tell of all the ways, so well known to this House and to the agriculturists of Canada, in which that department has assisted in the growth and development of agriculture. So that this government, through its various departments, is to be credited with the fact that the people of Canada, in their various callings, are so prosperous as they are known to be to-day. I have a great many statistics showing that the products of the farm have increased enormously in value; but I will not tire the House by reading them. They are in the blue-books, and may be seen by everybody. The Minister of the Interior, in his immigration policy, has pursued the policy of preserving this as a white man's country and of holding the public lands for the settlers.

The manner in which the Finance Minister presents the finances and deals with them is a subject of congratulation by all of us. And I am sure, accepting each of these departments as a great business department, I can with confidence ask you to come to a conclusion the exact opposite of that propounded by the ex-Finance Minister (Mr. Foster) the other evening when he said that this is not a business administration. I am glad to believe that on the record they have shown themselves to be a business administration, and I am glad to know that by the business community, the wage-earning community, the farming community, the banking community, the government is looked to with confidence in presenting its policies, because it is known to be a business government. Now, I would like, for a moment, to refer to one other department of government, that of Trade and Commerce. The hon. member (Mr. Sproule) who preceded me, asked how Canada's prosperity was to be accounted for? It is to be accounted for in part by the opening up of new markets for the products of Canada. That sort of thing has gone on and has grown with the growth of the government from 1896 to this hour.

Mr. SPROULE. Will the hon. member (Mr. Fowke) tell us what new markets have been opened up?

Mr. FOWKE. I will. In 1896, this country had only one trade commissioner to represent its interests abroad, and that commissioner was ten thousand miles away in the antipodes where there was comparatively little opportunity for trade and commerce with Canada to develop. Since then, eighteen trade commissioners have been appointed and are now engaged in their several fields, in Australla, British West Indies, China, Cuba, France, Holland, Japan, Mexico, Newfoundland, South Africa, Norway and the United Kingdom. It affords me pleasure to say that I have read correspondence with the department from interested manufacturers in this country, which any member of this House has equal opportunity to see, pointing to the fact that the information given to them through the department by the trade commissioners in the various countries has been beneficial in a very large degree indeed.

Mr. SPROULE. Did not we have these markets before?

Mr. FOWKE. We had not learned to cultivate these markets before. We are cultivating them now, and I have no doubt that because of the having our trade commissioner in Mexico, the fact that they had last year a small crop of barley has led to our exporting large quantities of that cereal at paying prices from the province of Ontario to that country. Such facts being brought to the attention of the department, and the department in turn directing the attention of the business community of Canada to these facts, is helping to extend and enlarge the trade and commerce of the country in a way alike creditable to the government and profitable to the people engaged in it.

There is another department of which I have not spoken, and yet I wish to speak of it because it is a department, I believe, whose operation will be of special advantage to a very large section of the Canadian community. I wish to commend the government for the creating of the new portfolio, that of Labour, and for the appointment of Mr. King to that portfolio. There has been a great deal of talk in the past about sympathy with the wage-earners, but until the present government came into power very little had been done in a practical way to manifest sincere regard for the benefit and advantage of that class. The wage-earners are beginning to appreciate the fact that the government has manifested its interest in them in a very fitting and practical way, and that it will see to it in the future that the interests of labour

are fairly and honestly guarded, that the wage-earner shall be entitled to feel that his interests are as sacred as those of any other person of the community and that no opportunity will be given to any one to trespass upon his rights and privileges. And I am very glad to know, in this connection, that the annuities established under the Trade and Commerce Department, and with which the members of this House are more or less familiar, have been planned so that the poor man can make an investment of his savings which will be absolutely secure and profitable to him as well. I am glad to know that so fully are the wage-earners and others of the country taking advantage of the Annuities Branch of the government that no less than $340,000 has been received in premiums in that connection.

If I were to attempt further to answer the hon. gentleman (Mr. Sproule) I should point out that the government are helping forward agriculture and other interests of the county by means of shipping subsidies and in other ways too numerous now to mention. I shall not trespass upon the attention of the House, nor attempt to present the case more fully than I have already done. But there is one other particular in which, with your consent, Mr. Speaker, I would like to say we are constantly reminded that we are living in a new era in this country since 1896. I am glad to be able to point out the fact that the government of the day are builders up of the Dominion of Canada and of all its varied interests so far as a government is able to further those interests. But, in my judgment, there is no more striking evidence of this result than the appreciation of it in the old land as never before, as it is being appreciated by the Canadian people as never before. Is it not the fact that the Canadian people have just begun to know their standing in a national sense? I am glad to realize that under the First Minister of the day a national sentiment has been formed in the Dominion of Canada, and that its evidences are to be seen from sea to sea, and from the region of the North Pole to the international boundary in the south. And I think it is important that we note the fact of the creation and prevalence of the national spirit. I hold in my hand a brief excerpt from a speech made by that great cosmopolite, Andrew Carnegie. I want to show how a gentleman of his standing can speak of the Canadian people and to leave it with you, with you whether we may not at all suitable times emphasize the fact that Canada is a nation. Mr. Carnegie, in an address on a remarkable occasion in New York, said:

Who made the American nation? A little more than a century ago who was the American? A puny, miserable colonist, a dependent of another nation. He was nothing higher, nothing better than a Canadian, a man without a country and therefore little of a man.

I as a native born Canadian rejoice in the fact that no man is longer entitled to speak of this country as a mere colony of Great Britain. I rejoice that we can to-day proclaim that we are one of the five nations which, with the British Isles, go to make up the most magnificent empire the world has ever seen. Sir, that spirit regarding us did not exist prior to 1896 in Great Britain, nor did we possess it to any such extent in this country as we possess it to-day. Not many years ago British statesmen were willing to say : We will let the colonies go and one distinguished English statesman is even credited with saying that the colonies are as a weight about the neck of the mother country, dragging her down to sorrow and to woe. To-day what do you find? You find the British statesmen outvying each other in speaking of Canada as she deserves to be spoken of, and, as I have already said, you find the Canadian people of every name and of every nationality to-day rejoicing in the fact that we are a united people and that we are a nation. No longer do we speak of the French Canadian, the Irish Canadian, the Dutch Canadian—we no longer write Canadian with a hyphen. But no matter who we are or where we come from, standing on the free soil of Canada, facing the future as we do and rejoicing in the present as we have a right to do, we proclaim the fact that we are a nation in the true sense of the term and that we intend to live the life of a nation, of a nation of free institutions, of large hopes and of noble aspirations.

I hope I have answered, in a way at any rate, the statement of the hon. gentleman who preceded me and that I have shown that one may with considerable pride and satisfaction stand in his place in this House and voice these sentiments as a supporter of the right. hon. gentleman (Sir Wilfrid Laurier) and of the government who have so successfully guided the destinies of this Dominion for the last 13 or 14 years and in whom to-day we rejoice as a government which present to this country not only a budget such as that which came to us on Tuesday last, but a policy which continues to make for the greatness and grandeur of the Dominion of Canada and for a closer association with the mother country for a larger place on behalf of this country in the affairs of the great continent of which we form a part, and of the empire to which we are so proud to belong.

Mr. W. F. MACLEAN (South York). Mr. Speaker, I hope the hon. gentleman will pardon me if in what I have to say I do not follow his line of argument; I have

another subject which I prefer to discuss. But should I care to be reminiscent I think I could safely recall an instance in my boyhood when I knew a man who on his own account and of his own notion undertook to preach the doctrine of protection in this country and who when he did that was not only derided but even despised. and that I, his son, have come to an age when, as a member of this House, I have seen, as I see this afternoon, both of the great parties of this country striving one with the other as to which is doing the most toward building up the industries of this country.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

Mr. W. F. MACLEAN. I have waited now for a long time to express my views in regard to the naval defence programme of the government. I waited last session for a good many days for some kind of tangible expression of that policy, and for a number of days this session I have waited for some tangible expression of that policy, and apparently we have got it in this budget speech. It may be that it is the policy, not only of the government, but of the whole House, because I am told that it is to be on the lines of the resolution that was unanimously carried in this House last March; so I suppose we have now got a tangible expression of their policy in the budget speech. Now, when the question of war is concerned, even when the question of defence is concerned, while sentiment has a great deal to do with it, the financial programme is everything. But in this matter of naval defence, whatever may have been the expression from a sentimental point of view, the Canadian people, the world at large, will view our naval defence policy as it is expressed in the budget statement, and a budget statement that deals with war, or even if it only deals with defence, if it has not something preponderating in it, something out of the usual, is not very much of a programme, and that is the opinion I have been forced to form in regard to the naval defence programme of the government as outlined by the Minister of Finance. All he said in the budget speech which he made the other day was that this government intended, out of the curernt revenue of the country, this year and succeeding years, to carry out their policy with regard to naval defence. There was to be no extraordinary financial arrangement, there were to be no loans incurred for the purpose of carrying out the naval defence of the country jointly with the empire, but the government intended, out of the ordinary revenues of the country, to provide a sum sufficient for the establishment of a Canadian navy. Now, that to my mind is altogether insufficient, it is not what this country ought to do, it is not what the Canadian people expect this government to do for naval defence. Let me read just what is that programme which is to be realized, as the Minister of Finance says, by an ordinary appropriation out of the ordinary revenues of the country:

> This House will accordingly approve of any expenditure designed to promote the speedy organization of a Canadian naval service, in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire, and the peace of the world.

Now, I say that if that programme is to be realized by an ordinary grant towards the establishment of a Canadian navy, it is not what this country is bound by its duty to do, and it is not what the people of this country expect parliament and expect the government to do in that matter. If the House will pardon me for a moment, I would like to refer to a statement I made in this House not so long ago, following the right hon. gentleman who leads this House, a statement wherein I tried to show that Canada was an essential, an integral part of the British empire. The right hon. gentleman put it in his way by saying that we were not only Canadians, but we were British; I put it in somewhat another way by reading from the constitutional Act of this country, namely, the British North America Act, wherein it was declared that the parliament of Great Britain created this Dominion of Canada, that the Queen was the head of it, that the Governor-General represented the Queen, and that the oath we all took, whether in connection with legislation or defence, was one of loyalty to the empire, and that we were in every sense of the term an integral part of the empire. From that I drew the conclusion that if we were of the empire and under the British Crown as intimately as we are, and that if we were British as well as Canadians, then it was our duty to do something substantial in connection with the defence of that empire and its Crown. Now, what is it we were asked to do? We were asked to do something, and I propose to read one or two sentences from the proceedings of the last imperial conference in relation to that matter. The British government was represented by Lord Tweedmouth, who was first lord of the Admiralty, and in addressing the conference he said:

> We welcome you, and we ask you to take some leading part in making more complete than it is at present the naval defence of the empire. . . . The only reservation that the

admiralty desire to make is, that they claim to have the charge of the strategical questions which are necessarily involved in naval defence, to hold command of the naval forces of the country, and to arrange the distribution of ships in the best possible manner to resist attack and to defend the empire at large, whether it be our own islands or the Dominions beyond the seas. We thoroughly recognize that we are responsible for that defence. We want you to help us in that defence. We want you to give us all the assistance you can, but we do not come to you as beggars; we gladly take all that you can give us, but at the same time, if you are not inclined to give us the help that we hope to have from you, we acknowledge our absolute obligation to defend the King's dominions across the seas to the best of our ability.

Now, there was a distinct invitation to the Canadian government, to all the associated states of the empire, to join in the defence of the empire. We were implored by the mother, it was the call of a mother to her children, to her sons and daughters, to these new states which have sprung from her loins, it was an invitation to join her in the defence of the empire. It was not merely a statement that you can do so and so if you like, or you need not do anything. There was a direct invitation on the responsibility of the British government to Canada, to Australia, to New Zealand, to South Africa, to all the conferees in that conference to join the mother country in the defence of the empire. That being the case, I say we are bound to give a better answer to that invitation than the proposal that is contained in the resolution which was passed here last session, notwithstanding the fact that it was said to be the unanimous opinion of this House, and is to be the policy of this government and of this House in answer to that invitation. Not only in this official invitation have we been invited to join in the defence of the empire, but there have come friends and kinsmen of ours from across the sea to visit us. One after the other they have come here, some in an official and some in an unofficial capacity. English papers have come here, English opinion has been expressed and in hundreds of ways outside of the official invitation that was given at the conference we have been asked to join in the defence of the empire. People have been looking to Canada all the world over to see what our action is to be not only in regard to the invitation that came from the British government but in regard to the invitation which has been given to us by so many who have visited us and by the English press and speakers on English platforms. So important is this question of naval defence that the budget which has caused so much trouble in England, is, to my mind, a naval defence budget. It is an effort on the part of the government there to provide for naval defence. It is an effort to raise money for naval defence. The government of the day in England have embarked on an enlarged programme of naval defence and expensive shipbuilding and in order to carry that out they have a budget which is a revenue producing budget based on the idea that the land of the country should pay a greater amount in taxes than it has paid in the past. And they believe that this additional tax should be, in a measure, used for carrying out the naval defence scheme of the home government. Not only that, but the budget programme of the Conservative party there—and this is the question before the English people to-day—is also a naval defence programme. They propose to reform the tariff so as to produce more revenue and in that way to increase the ability of the country to provide for naval defence. England to-day is busy with her naval defence. The government of the day have staked all on a programme of social reform and also on a programme that involves an increased revenue for the country. They have staked everything on that programme which means an increased revenue for naval defence; and the Conservatives in England are risking everything in the struggle for a programme which they declare means tariff reform, therefore, increased revenue and, therefore, increased ability to carry on the defence of the country and to provide for a greater navy. That is the condition in England and that condition is brought about by the fact that the whole country sees the peril ahead. It is no nightmare that the people have when they believe that England's naval supremacy is in danger of being lost. So the whole people of England, whether of the dominant party or the party that seeks ascendancy, are engaged in a great struggle, one with one programme, one with the other, the object of both programmes being, each in its own way, to increase the revenue of the country so that they can provide for naval defence and so that they can maintain what we ought to be glad to join in maintaining—the idea of British supremacy at sea, that Britannia still rules the waves and that she intends to do so. If this is the programme of the mother country and if the mother country has invited us to join in naval defence, I ask is the programme, as outlined by the Minister of Finance in his statement this week, in line with the duty of Canada, or is it in line with the expectation of the people? All that is proposed, as far as I can read it, and I do not think I misstate the minister's position, is that, out of the ordinary revenues of the country, at a time of great emergency, at a time when the empire is in peril, there shall be taken a sum of money each year for the foundation of a Canadian navy.

My contention is that that does not meet

the case, that it is not consonant with our duty to the empire, and that it is not consonant with what this country is able to do. We are a rich country. Why, when I heard the Minister of Finance state the figures the other day I was surprised at his hopefulness in regard to the buoyancy of our revenue. We are a rich country. We are a growing country. We know the great peril at our doors, and when we look at the peril to the empire I say that we are not doing our duty and that the statement of the Minister of Finance, which I suppose he made as representing the government, does not go as far as it ought to go towards realizing the views of the people in connection with naval defence.

What is it that we can do in this hour of peril? What is it that Canada ought to do at this time when the naval supremacy of the empire is at stake? We should, first of all, declare by a unanimous resolution in the most direct and pointed language, that we are of the empire, that we are glad to be of the empire, that we are behind the mother country in her hour of peril, that the resources of this country are ready to be spent generously in the maintenance of the naval integrity and supremacy of the empire and we should not only say it in words but say it in deeds and say it by a vote of money—say here, at least, is $10,000,000, or $20,000,000 of the people's money for the immediate construction of one, at least, or two super-Dreadnoughts. We will not be able to do that by the establishment of a navy of the modest pretensions that have been proposed by the Minister of Finance. If we wish to stand by the empire we must do it now. The peril may be now and to wait for years to establish a navy will do nothing to relieve the situation, will do nothing to show that we really are not only Canadian but that we are prepared now to accept our empire responsibilities. If this is our duty, and I believe it is our duty, not only to declare we are of the empire but that our money is freely at the disposal of our mother country towards increasing her supremacy and her line of Dreadnoughts, we ought to do it generously and we ought to do it now. The programme of the Finance Minister certainly does not do that. How would England be thrilled, how would the associated states of the empire be thrilled to-day if the statement came from this House that we had adopted such a measure as a recognition of our duty? It would thrill the mother country, it would give a warning to those other nations that are, to my mind, seeking to destroy British supremacy at sea.

Is there anything else we can do? Yes, there is something else we can do and we ought to do it now. What is that? Canada not only ought to declare and declare now that she is of the empire and prepared to give generously of her money for the increase of the fleet of Dreadnoughts, but she ought to say she is prepared to join the associated states in the establishment of a tariff against the produce of foreign nations, a certain percentage of the receipts of such tariff to be applied to a joint system of naval defence. It is in the air. This country, wherever you go, is ringing with this idea of preferential trade and it is in favour of giving some kind of preference. Hon. gentlemen opposite are on record, and it is to their credit and honour, let it be said, they were the first to do it. But it can go much farther. The thing can be made reciprocal and if we could set the example I say it would be the right thing to do. We should do it now and try to begin the realization of this idea not only of reciprocal trade arrangement but the idea that we are prepared to join with the other states of the empire in imposing a tariff on the products of foreign countries, a percentage of the revenue from such tariff to be set apart and devoted to a scheme of joint naval defence. The programme that I have outlined will not interfere in any way with our idea of having a Canadian navy. I am a Canadian; I want to see Canada complete in every one of the forms of nationhood; I want to see a Canadian navy; I want to see a great ship-building industry in this country; I want to see great docks in this country; I want to see this country building warships, if necessary. If we are to have them, we ought to build them here, and a policy of that kind is in the air and seems to be in the minds of the government. We do not interfere with that policy if we contribute our just share to the building of Dreadnoughts. That will come. But we in this country have been devoted mainly to the development of our country. We have not been seamen in the sense of a fighting navy. It takes a long time to develop a fighting navy, men who are masters of the art of war at sea. The mother country is competent in that respect. She has the shipyards and the men; all she wants is more ships and more men, and she can get them, but she will get them all the sooner if we show our devotion by giving the money rather than by saying that we think well of the old country and are willing to join, if necessary, in her defence. We must show our devotion in deeds, not words; in dollars, not sentiments; and we must do it now and not in the future, when the opportunity to save the situation has gone by for ever. The people of Canada are British; they are patriotic; they are prepared to do their just share in anything. They are not parsimonious. They know that British institutions are worth preserving, and Brit-

ish institutions to-day are jeopardized and British supremacy at sea is jeopardized. If that be the case, and if we are proud of our institutions, and I believe we are; if we are proud of our parliamentary institutions and our liberties, which we have derived from Great Britain, we have them by reason of British connection and because the strong arm of Britain is behind them. If that peril is on, it is our duty to join in the maintenance of these institutions. Our greatest asset to-day as Canadians is, first of all, our liberty; second, our parliamentary institutions, our free government. The greatest asset of the world at large to-day is British supremacy at sea; and these two things—Canadian liberty and Canadian institutions and British connection, are altogether dependent at the present moment on British supremacy at sea. Canadians recognize this, and if the appeal is made to them, that they should join in maintaining the naval defence of the country, they will respond as one man, and no government need be afraid to give freely and generously, to pledge the credit of the country, for the maintenance of British supremacy at sea at a time when that supremacy is threatened; and we know that if that threat is realized, these British institutions and this liberty of ours will suffer, this British connection of which we are so proud will disappear, and the mother country and the daughter states will pass into a secondary position in the world. The proposal I have made gives plenty of time to carry out the idea of a Canadian navy. Nothing is lost, but the situation is saved probably, and we get the credit, as the other nations will get the credit, of joining with the motherland in defending those institutions, and in maintaining those forms of goverment which we esteem so much. We not only ought to be prompt in doing this, but above all we ought to avoid imposing conditions in what we do. That is the danger of the situation. Some of us say that we not only ought to have a Canadian navy, but that its control ought to be absolutely in Canada.

Now, I cannot agree with that. If there is a policy of naval defence, it must be one of joint naval defence, and it must be by concessions on the part of every one joining in it. British supremacy hereafter is not to be maintained by the various British states working together with each one imposing conditions, but it is to be maintained by concessions all round, by a generous acceptance of the idea that naval strategy and leadership at present is in the motherland and that we are willing and glad to have it there. I altogether disagree with the idea of imposing conditions and making any Canadian naval movement separate and apart from the British movement or that of any of the other states. It must be a movement of unity, a movement of concessions, and not a discord of conditions imposed by one or another. It must be a unity on the line of concessions, and the leadership must be in the motherland. I say again that I will give way to no man in asserting my Canadianism. I am willing, and the people of this country, I take it, are not only willing to give generously for building Dreadnoughts or super-Dreadnoughts, but are willing to impose some kind of taxation for joint naval defence, and are willing for the present that leadership should be in the mother country, which, by long usage, by the traditions of her people and by her record at sea, is best fitted to maintain it. I read in the newspapers that the western farmer objects to being taxed for Canada assisting in the maintenance of British naval supremacy. I do not think that is so. I think that when the western farmer comes to see that British naval supremacy means for him the English market, that it may mean in a very short time a preference for the products of the western plains in the British market, he will be prepared—I believe to-day he is prepared—when he understands the question, to vote liberally for this purpose. But he has to be educated in the matter, and we who are in public life and sit in this House have a duty of leadership imposed upon us. It is for us, if what we say in this House and if the resolutions we have passed mean anything, to go to the people and tell them what we think they ought to do and try to persuade them to do it. I know there will be no trouble in the province of Ontario. There is no trouble in my own constituency. I do not believe there is any trouble in the west or in the province of Quebec or in the maritime provinces. Premier Gouin, in Toronto, yesterday, came out as boldly as an man in this country as an imperialist, a Canadian, a Britisher, saying on behalf of the people of Quebec that they are prepared to assume their part in the maintenance of British supremacy.

From one sea to the other, from the north to the south, that is the feeling of the people of Canada. All that is wanted is intelligent leadership, all that is wanted is a clear-cut declaration which the people can give their assent to, and once that declaration is made the parliament of Canada will be doing its duty and doing what the country expects from it, if it acts promptly. The only democracy in the world to-day is the democracy of England and her daughter states; the only democracy in the world to-day is to be found under the British flag; democracy is a true British institution and it is an institution worth defending. To-day Great Britain is in one of the greatest political crises in her history, but through the flexibility of her political in-

stitutions it will all be over in two months and the issue decided. There is no legislative assembly in the world that can compare in democracy to the House of Commons of England, and labour is represented there as in no other parliament. In New Zealand, in Australia and in Canada we have the only genuine examples of democracy. They boast of their republican institutions in the United States, but to-day the United States Senate has arrogated to itself all the political power in the land and it defies reform, while the House of Lords in England on the other hand has even of itself proposed reform. In the United States they have a plutocracy of wealth and although there is a theoretical democracy which says that one man's vote is as good as another man's, democracy has in reality disappeared and the banking institutions, and the railways, and the great trusts that control the supplies of oil and beef and coal are a ruling plutocracy there. Another reason why the people of Canada should be prepared to maintain British democracy in its entirety is because of its beneficial influence upon the world at large. If these British institutions are so valuable to the human race, if they constitute the best form of government, then enjoying them as we do we ought to be prepared to maintain them and the best way to maintain them is in my belief by a liberal money grant. Let us be prepared in this time of peril to take our stand by British institutions; let us declare that we are ready to do our share and ready to do it now, and let us not be led away from that idea by a mere proposal to start to build a navy which would take some years to accomplish. Let us, if you will, go on with a navy, but in the meantime let us do our duty and let it be done in the shape of a generous gift for the defence of the empire. The Prime Minister may be afraid of a bold proposition of this kind, and perhaps he may have to be led into it, but there was a time when, on his return from Chicago, he was afraid to send troops to defend the empire in South Africa, an idea which the country was glad he abandoned. And as he changed his views on that occasion, and as, when he declared for the defence of British rights in South Africa, and gave a good effect to his declaration, so in this case I believe he will come to the idea that Canada should contribute and contribute without delay. The right hon. gentleman can afford to lead this country in that matter, and I believe ere long he will go to the length of saying that Canadians are prepared to give a Dreadnought or two Dreadnoughts. Is the Minister of Finance prepared to give a Dreadnought? I am sure he is, and I am sure his province is prepared to give a Dreadnought and two if necessary. I am sure that every minister in that cabinet, if he reads his own heart and the hearts of his people, will declare in favour of coming out with a bold policy. The right hon. the Prime Minister has told us that he is prepared to stump the province of Quebec in support of a Canadian navy. Let him say that he is prepared to stump the province of Quebec in support of Canada building one or two Dreadnoughts and I will go with him, and I trust he will come to Ontario in return and help me to stump that province on the same ground. I believe that Canada is prepared to join in the defence of the empire on the lines I have suggested to-night, and no man in this parliament need be afraid to embark on such a policy. The Canadian people are patriotic, they are wealthy, they are generous, they are true to their institutions, they are prepared to maintain them. Let us give effect to the spirit of the people of Canada, let us not delay by long discussions, let us act now and act unanimously. I trust that before the holidays are over the government will complete their naval policy and that it shall be crowned with a determination that they shall propose to this House the making of a generous grant for the building of two Dreadnoughts, and when that proposal is made I believe this parliament will declare that Canada is of the empire and means to stand to the empire, and that we are ready if necessary to join in some system of taxation on foreign goods, a portion of which taxation shall be applied to a scheme of joint naval defence. Let this parliament send the message to the mother country and to the people of the sister states, that, believing as we do that British supremacy is the greatest asset the world has to-day, we are prepared to join in maintaining British naval supremacy in all its past glory.

Mr. J. R. STRATTON (Peterborough). I desire, Mr. Speaker, to join with others who have spoken on this side of the House in congratulating the Minister of Finance upon the splendid budget he has presented to the people of Canada. I believe that in the statement presented, if I may be allowed to use a general expression, honours are even; I believe that Canada is proud of her Finance Minister and I believe that the Finance Minister should be proud of his national constituency. The condition of the country being as my hon. friend the Finance Minister has presented it, we are in the most flourishing and happy condition, a condition which has continued practically from the time this administration took office in 1896. I think my friends opposite are rather retroactive in the speeches they have been delivering during the present session; I believe that there has been a tendency on their part to discuss reminiscences, matters that were settled in the

general election of 1908. And the worst sinner of them all was my hon. friend from North Toronto (Mr. Foster) the former Finance Minister of Canada. We have been told, for instance—and what individual is there of any consequence or importance in Canada who does not know?—that the Quebec bridge dropped into the river. Who does not know that that was a matter of distressing loss of life and of serious financial loss to Canada as well? But do hon. members opposite think for a moment that the people of this country believe that the government were responsible? Do the people believe that the government neglected any part of their duty in accepting the opinions of the engineers who were appointed by them to take charge of the work after most careful precautions to be assured of their reliability and responsibility? But, that the engineers made a mistake, that the bridge would not carry its own weight, this country is aware, and we here are aware. But I do think that has passed away and that there is no necessity of taking up the time of this House in discussing a matter that has been settled in the general election of not long ago.

There is a true test of this government, and that is its administration of the country's affairs. If we can judge by the results we have seen during the past thirteen years, there is no reason to complain of the advance that has been made in that time by 'this Canada of ours.' I desire for a moment or two, to present to the House a few facts to show the progress which has been made. The first essential to the development of the country is population. If we consider the facts, we shall find a decided advance in that direction. In 1896, Canada had a population of 5,086,061. Taking the figures of the ex-Finance Minister (Mr. Foster) given the other day, the population of Canada at the present time is 7,184,000, an increase in thirteen years of 2,097,945, as against an increase during the twenty-nine years when hon. gentlemen opposite had control of the destinies of Canada, of 1,714,067. And, if we accept the economic computation that each additional citizen is worth $1,000, we find that the wealth, the producing capital, of the country has been increased to the extent of over $2,000,000,000. Another criterion of the prosperity of the country is to be found in the business of our chartered banks. The stock in our banks in 1896 amounted to $62,498,183, and in 1909 to $97,436,424, an increase in thirteen years of $35,938,241, not taking into calculation the great increase in market value of the stock or the reserves created by each of the banks. During the last thirteen years of the model regime of hon. gentlemen opposite, from 1883 to 1896, there was only the paltry increase of $1,093,629. But as soon as the people of Canada had their eyes opened to the true condition of affairs and accepted the administration we now have in power things improved, and they have been going right along ever since until we have the conditions represented by the budget presented by the Minister of Finance the other day. Still keeping my fingers for a moment on the financial pulse, I find that the savings bank deposits have increased from $61,244,761 in 1896 to $89,384,146 in 1909, a difference of practically $30,000,000. So you will see that there is money in the banks for all purposes yet. If we consider the total bank deposits, we find that in 1896 these amounted to $245,020,143, and in 1909 to $771,043,090, a difference of over $500,000,000 in the total bank deposits of this contry, brought about by the efficient administration of affairs during this period.

Mr. LALOR. I would remind the hon. member (Mr. Stratton) that he has forgotten to tell us that the trees have grown also.

Mr. STRATTON. We will come to that later on. Another way we have of showing the progress of our country is in the post office receipts. In 1896, the post office receipts of this country amounted to $2,964,014; in 1909, these had increased to $7,401,624. In 1896, hon. gentlemen opposite had a deficit on account of post office of $700,000. From 1896 to 1906, a period of thirteen years, there have been surpluses totalling $4,500,000, besides a vastly better service and postal rates cut by fifty per cent. So it will be seen that there has been activity, prosperity and increase in the business world of Canada.

The postal activity is another index of the advance in the business of the country. The number of money orders issued in 1896 and in 1909 and their value were as follows:

Year.	Number.	Value.
1896..	1,131,152	$13,081,861
1909..	3,596,290	52,627,770

While the number of orders increased by three times their value increased four times.

Another index of national progress is the increase of the railway mileage. The figures of railway mileage in Canada are:

1896..	16,270 miles.
1909..	25,000 "

In the Liberal 13 years, 10,000 miles of railway were constructed and in the 13 years of Conservative administration, 6,000 miles.

Another method of gauging our national progress is to examine the figures of our mineral development. The mineral production of Canada has been:

1896..	$22,474,256
1908..	86,462,723

In these four or five instances that I have given you in order to be brief, I think I have shown that Canada has been making great progress and advancement. I desire, however, to give the hon. gentlemen opposite credit for one feature in which they excelled, that was for the number of commercial failures that took place in Canada during their regime. The number of commercial failures and the amounts involved were

Year.	Number of Failures.	Amount Involved.
1896..	2,118	$17,000,000
1908..	1,640	15,000,000

As our friends in the House well know 1908, was a year of extreme financial difficulty. If you take the year previous, 1907, the failures in Canada were only 1,278, of a very much less value. We know what stringency there was in 1908 and the extreme condition that prevailed in that period, and there is no doubt that many of these failures would not have taken place if the general financial conditions had been different. In the 13 years of Liberal administration the commercial failures have decreased year by year while during the Conservative regime they increased year by year until in 1896 they were the largest in the history of Canada

Another means of showing that our country is not going behind, is not increasing its expenditure beyond what it can bear, is by comparison with other countries similarly situated. According to the statements of the Minister of Finance and the hon. member for North Toronto (Mr. Foster) the public debt of Canada amounted to $324,000,000 or $325,000,000 in round figures; our population amounted to 7,184,000 so that the public debt amounted to $45.33 per head. In Australia we find that they have a debt of $1,200,000,000 and a population under 4,000,000. They have no canals to construct but it is fair to state that they have built and own their own railways. But we have a railway commission, one of the greatest legal reforms that ever took place in Canada. We have recently added to the jurisdiction of that commission, the telegraphs and telephones and although we do not own the railways, telegraphs and telephones, I think we are in a better position by placing them under the control of the Railway Commission and if the hon. member for South York (Mr. W. F. Maclean) still thinks that our policy is not sufficiently advanced to meet his views, I think he will agree that the advancement made in this direction has been one of the greatest advances, one of the greatest acts that this parliament has accomplished since confederation and that the people are reaping the advantage of having their claims and difficulties righted immediately on application to the Railway Commission, in a business-like and common sense way. It is satisfactory and effective legislation and the people are enjoying the advantage of it. In Australia, as I said begore, they have $1,200,000,000 of debt with a population under 4,000,000 or over $300 per head. Take little New Zealand with their million people and their £9,000,000 of revenue and their per capita debt of over $300 with their $300,000,000 indebtedness. That colony is offering Dreadnoughts as a man would offer a cigar to a friend. They seem to have, to use a common expression, 'money to burn' and they are offering Dreadnoughts to an empire that is able to turn out Dreadnoughts as fast as our friend Eddy in Hull would turn out bundles of laths or bundles of shingles. I do not desire to discuss that aspect of the case at present but I desire to call the attention of the House to the fact that although Canada is increasing its indebtedness we have absolute value for the money expended and our per capita debt is nothing like so great as that of any other country similarly situated. Another great and favourable advance that has been made in Canada is in the revenue as it was explained by the minister in his budget speech the other day. The revenue in 1896 amounted to about $37,000,000 and it has increased until I suppose I might say in round figures it is $100,000,000. The tangible results of this improvement are seen in a score of ways. One of the great advantages flowing from the rearrangement of the affairs of this country has been the great fostering of the agricultural industry, the spread of agricultural knowledge from end to end of Canada, the improved marketing facilities that have been provided to enable the farmer to get his products to market more easily, rapidly, satisfactorily and cheaply. Another industry that has received great assistance from parliament has been the iron and steel industry of the whole country. We have had an expansion of trade, we have had to provide public buildings and public conveniences for the people, we have had to strengthen our domestic defence.

We have improvement in our postal facilities, in the cheapening of the rates, and we have improvement in inter-imperial communication between Canada and England. In a word, with the increased revenue we have been laying the foundation for the future progress of this country, a progress which was referred to by a speaker on this side of the house before we adjourned for dinner. It may be accounted a small thing, as he pointed out, that the trade of this country in 1896 amounted to $239,000,000, while last year it amounted to the enormous figure of $650,790,000, an average for the past five years of $540,000,000; and for the year 1909 it was $571,769,000, equivalent to $100 per head on an estimated

population of 6,500,000. If the strings had not been loosened, if there had not been an easing of the conditions that prevailed in 1896, we would not have been able to bring about the expansion of trade we have enjoyed during the past few years. We have now in round figures an annual income of about $100,000,000. The revenue comes, I suppose about two-thirds of it, from customs, and I am satisfied that the expenditure of that income has been made for the general advantage of all the people of Canada, and it corresponds with the commercial activity and the commercial interests of the country. If we did not have this prosperity, if we were not able to supply our luxuries or necessities, I am sure the Customs Department would not have the revenue they have to-day. But with the change of conditions that has taken place since 1896, with the added material means afforded us to supply our necessities and wants, we are able as citizens of Canada, not by drawing blood, as a speaker intimated the other day, from the people of Canada, but we have been able to satisfy our necessities and luxuries while contributing to the revenues of the country the way I have mentioned. So we have, during the last few years, reached the highest revenue in the history of Canada. I say we are to be congratulated upon the extremely satisfactory conditions that the Minister of Finance announced the other day, and I am sure that if the British Chancellor of the Exchequer had been as well able to bridge the gap between income and outgo, between what they have to buy and what they have to spend the Lords would not have sent the ship of state out on the stormy sea, they would have congratulated themselves on the successful position of affairs, they would have approved of the budget, and there would not have been that trouble which the member for South York (Mr. Maclean) complained of this evening. We welcome the increased revenue, because there are certain requirements of Canada, certain needs, that have to be met in order that we may pursue the career of national development upon which we have entered. If we are to realize the prediction of the right hon. the Prime Minister when he said that the twentieth century belonged to Canada, we have some things to do, we must do what is required of us, we must see that we realize that prediction to the full. It may cost a good deal, but it is our opportunity, we have the facilities, we have the resources, and all it needs is that we should put our shoulders to the wheel in order to make the twentieth century the possession of Canada. I am sure the Prime Minister and his colleagues have never shrunk from doing their duty to Canada, I am sure that in the construction of the Grand Trunk Pacific and other public works that I propose to point out, they have taken the full responsibility of their position, they have grasped the great possibilities of this Dominion, and as far as they are concerned, they are bound to procure the greatest possible advantage from the expenditures that are necessary to be made. I think that for a population of 6,000,000 or 6,500,000 in Canada, we have accomplished a great deal, for instance by the expenditure of $100,000,000 upon railways and $100,000,000 upon canals. Canada has achieved a record that cannot be duplicated in the history of any country that I know of. Canada is laying the foundations of a great and prosperous nation. This country is in a far different condition from what it was a dozen years ago. At that time our revenue amounted to $36,000,000 and our annual expenditure to $37,750,000. For my part I do not attach much importance to a deficit of $1,750,000. But in these golden and hopeful days, in these days when money is rolling into the exchequer with such volume, Canadians will not be satisfied, the members of this House will not be satisfied, with conditions of that kind, because we have so much need of money, so much need of development, besides what we have undertaken and besides what we are endeavouring to complete. I have myself a good deal of sympathy for those who endeavoured at that time to make bricks without straw, and I am sure those hon. gentlemen now look with jealousy and envy upon the overflowing treasury of the Finance Minister at the present time. But hon. gentleman complain of the extravagance of this government. Hon. gentlemen mistake the meaning of the word extravagance. They desire to show that wherever this government expends money it is extravagance. No matter for what purpose this government may appropriate money, it is extravagance. If it happens to be in a Liberal constituency, it is a scandal, and the Conservative press cry out that the government are buying up the constituency.

Some hon. MEMBERS. Hear, hear.

Mr. STRATTON. Yes.

An hon. MEMBER. What about Kent county, New Brunswick?

Mr. STRATTON. I don't know anything about Kent county, New Brunswick, but if an appropriation has been made for Kent county, it was made in the public interest, or it would not have been made. I have no doubt whatever that my hon. friend will have some difficulty in proving the insinuation he has made at the present time. If we receive a reasonable return for the money spent, if we are getting all the people expect from the expenditure, and if necessity requires that the government should

appropriate a sum here and a sum there, if requirements have been more indicated in one constituency of this country than another, if it is necessary to get an appropriation for a public work or a public building, our hon. friends opposite say that it is done for the purpose of bribing the constituency. Yet my hon. friends will apply to the government of the day for grants for their constituencies and they will not find fault when the government makes the appropriation. But it is a scandal when money is appropriated for a constituency represented by a Liberal, and we are charged with attempting to buy up a constituency according to the statement of hon. gentlemen on the other side of the House. They are speaking, and they continuously speak with reproach to the members of the government because of these expenditures. Well, where have they been able to show that any public expenditure has been undertaken that is not required in the best interests of the country? They have been unable to show that any public building has been constructed that has not been required for public purposes. They may say that the government are extravagant for the time being, but I can remind hon. gentlemen opposite that in the city which I have the honour to represent they erected a post office twenty years ago which is absolutely inadequate to the requirements of the business to-day. They not only built a post office, but they had some trouble over the site which they purchased, and they afterwards, to satisfy the urgent demands of rival members of the Conservative party with corner lots to sell, erected a custom house on another property which the government of the day where forced to purchase for the sake of peace in the family. No doubt hon. gentlemen will say, although this is ancient history, that the government did right at that time in building beyond absolutely necessary present requirements. We have the advantage of the difficulties they created in their own party by not only having a custom house but a post office as well. I mention that to show that while it may look to-day as if the government are spending a larger sum than is necessary on the erection of public buildings. I hope that in twenty years from now there is no part of this fair Dominion that will not outlive any building that the government may erect for public purposes. I hope that the Minister of Public Works will go on in the way in the which he is going and erect buildings that will be in keeping with the advance of the country and that he will not be ashamed to look back twenty years from now upon what he has accomplished and that his judgment will not have been found at fault in having led him to erect buildings that had outlived their usefulness.

Mr. STRATTON.

The hon. member for North Toronto (Mr. Foster), if I took his words correctly, said that this government had taken from the pockets of the people $922,000,000, and, after endeavouring to create a misleading impression by an insinuating statement before the people of the country, with one sweep of the hand, he asked: What have they to show for it? Let us take one instance alone. The revenue of the Intercolonial railway, thirteen years ago, amounted to $4,000,000. To-day it amounts to about $10,000,000. That would account for $50,000,000 of expenditure alone. Yet, he asks: What have they done with the money? The money has been spent in the improvement of the rolling stock, in the extension and the renewal of the railway, in increased wages to the employees and in betterments. I would ask if this country has not received full value for the $7,000,000 or $8,000,000 which has been expended upon immigration? Have we not received full value for the work which we have undertaken? I see it stated in a newspaper to-day that 'the farmer, not Fielding' has produced the good times. The man who produced the good times in this country was the man who, thirteen years ago, assumed the full responsibility of the inauguration of a thorough immigration policy. That policy has been of such advantage to Canada that the farmers who have gone to the west have been able to produce the wealth that was spoken of the other day, and it is the man who instituted that immigration policy, who gave to the people of other lands the information which it was absolutely essential to let them have, who distributed broadcast, I suppose upon the doorstep of every farm house in the western United States, pamphlets setting forth the advantages of Canada, to whom must be given the credit in large measure for the prosperity we are enjoying to-day. Farmers came from the United States, two or three at a time, saw the great advantages of the west, and to-day we have them coming in hundreds, yes, in thousands, taking up the lands in the western portion of Canada that have proved so valuable, and it is this immigration that has done so much for our country. We have, I repeat, spent $7,000,000 and $8,000,000 in thirteen years. But hon. gentlemen opposite, when they were in power, only spent sufficient to show us that the money was wasted and that no good return came from it. It was, therefore, absolutely necessary to have money expended in a more effective way. The hon. member for North Toronto endeavoured to point out that the $922,000,000 had been expended improperly, or rather wasted. I have shown that $50,000,000 have been expended in connection with the Intercolonial railway. I have shown that $7,000,000 or $8,000,000 have been expended for immigration and

that Canada is having the full benefit and advantages therefrom, and I have shown that hon. gentlemen opposite only spent about enough to be wasted in the time that they were in power. I would like to ask if he thinks the improvements that have been made in our waterways, in our lighthouses, and in our coast line, not including large expenditures for services of similar usefulness, that have cost large sums of money have not resulted in advantage to the country? Does he think that the expenditure upon the St. Lawrence channel, which has been made almost as safe for navigation as a small mill pond, is not of general advantage to Canada? Was he justified in making the insinuation that he did make? When we see the Montreal harbour, which has been made an ocean port, when we see Montreal rivalling New York as a grain port, when we see the greatest vessels afloat landing their cargoes in the harbour of Montreal, can my hon. friend or any one else say that the expenditure which has been made upon this harbour has not been for the general advantage of Canada and for the improvement of our shipping facilities? Does he say that the money expended on Toronto harbour—from $500,000 to $750,000—is wasted money? He referred the other evening to the St. Andrew's rapids. He would hardly make that speech in Winnipeg; at least I am told that he forget to deliver it when he was in Winnipeg very recently, because we all know that the money that has been expended is of the greatest advantage to the people of Winnipeg and of the tributary district. He pointed to the premier of this country and told him that he was the custodian and president of the board and that the other members of his cabinet were his directors and jointly the custodians of the funds of the people. We know that he is the president of the council and that his colleagues are his directors, and we also know that they are prepared to take the full responsibility of the expenditure they have made. The advantages which the people of this country have derived are greater than the expenditures the government have made. Does my hon. friend say that the $500,000 spent on the western gap of Toronto harbour was money thrown away? If he does, the hon. member for West Toronto will not agree with him. Will my hon. friend from Victoria (Mr. Hughes) say that the money spent on the Trent Valley canal has been wasted?

Mr. HUGHES. Does the hon. member want an answer?

Mr. STRATTON. Yes.

Mr. HUGHES. I will say that this government has been sorely negligent in not expending the full amount in proper time on that canal. That canal should have been completed long ago. And if the hon. gentleman (Mr. Stratton) would only join me in seeing that the money is expended on the Trent canal instead of on ditches like the Newmarket canal we would accomplish something.

Mr. STRATTON. I can tell the hon. gentleman that in the last thirteen years in which the Liberal government has had control of the affairs of this country, they have expended more on the construction of the Trent Valley canal than the party which the hon. member (Mr. Hughes) supports expended during the previous forty years. And as to the Newmarket canal I may tell the hon. member that we have not forgotten there was at one time such a thing as a Haggart ditch otherwise called the Tay canal, and I do not know that to-day I would swap the Newmarket canal for the Haggart ditch. Will the hon. member from St. John say that the money proposed to be expended on improving the harbour of St. John is an improper expenditure? Will the Conservative members who come from the west say that the money that is being expended at Fort William and Port Arthur in making these harbours fit for the accommodation of the growing trade of the west is an expenditure in the wrong direction? Will these hon. gentlemen opposite say that the new piers in connection with the Quebec bridge should not be built? Will they say now that the Grand Trunk Pacific which has cost a great deal and is costing a great deal should not be constructed? We knew when it was undertaken that it would cost a great deal of money, but we believed it was the right thing to do for we knew it would be necessary to provide transportation facilities for the vastly increasing products of the western country. Will hon. gentlemen opposite say that the subsidies to the different provinces of this Dominion which have increased per year five million dollars, is money wasted? I do not think they will. I see by the papers that the premier of Quebec is consulting with the premier of Ontario to-day, and I would surmise that possibly one subject of their conference is that the provinces should ask more from the Dominion treasury. Will hon. gentlemen opposite say that the increased expenditure on the public service, the increased remuneration of employees, is not in the public interest? Will they say that the one and one-half million dollars expended on the militia in the days of the Conservative rule would be a sufficient expenditure on the militia of Canada to-day? My hon. friend from Victoria (Mr. Hughes) knows the condition our military forces were in during the Conservative regime, and he knows that although our militia service is probably not perfect at present, that it is vastly superior to what

it was then. And yet in view of all this the hon. member for North Toronto (Mr. Foster) rises and sets all these things aside with one sweep of the hand and he asks: What has become of the $922,000,000 expended by this government in twelve and three-quarter years? If time permitted, it could be easily shown that it was well expended and easily justified, the insinuation involved was most unfair. Will any man on the other side of the House say that the Minister of Agriculture has made any bad expenditure in giving to the farmers of Canada the advantages which they now enjoy? Will they say that the Minister of Agriculture did wrong in spending money to provide transportation facilities for the products of the farmers, and for enlarging and improving their markets?

Now, I have not asked the Minister of Agriculture for anything, and I may tell him in advance that I do not want anything, and therefore hon. gentlemen will recognize that I am disinterested in any compliment I may pay him. I will take the liberty of telling the right hon. the Prime Minister that if all the ministers in his cabinet have presided over their departments as acceptably to the people as the Minister of Agriculture has presided over his; if they have displayed, as I am sure they have done, the same anxiety for the public welfare as the Minister of Agriculture has displayed for the welfare of the farmers of Canada, if they have conducted the affairs of the country in as progressive a spirit as the Minister of Agriculture has, then the right hon. gentleman has been happy indeed in the choice of his confreres. And, if the government should see its way to increase the expenditure for the benefit of the farmers of Canada, I think I can safely say that we on this side of the House will give any proposal of that kind our warmest support. Now, let me point out that the fisheries of Canada last year gave a return of $25,451,985, and let me ask these gentlemen opposite if they can honestly complain of the money expended to stimulate that great industry? Will these gentlemen opposite say that the money that has been expended on immigration both by the former Minister of the Interior and the present minister is money that has not been well spent? Our friends from the west will tell us that fifteen years ago there were large areas of land as barren as the rocks of Muskoka, and which to-day are as productive as any soil in the world, and that as a result of the policy of this government. Will these gentlemen opposite say that the flower of the American farmers who are leaving their homes to the south of the line and flocking into this country are not welcome citizens of Canada? From 1903 to 1909, 299,603 immigrants came to Canada from the United States, and 700,391 came from all countries. In ten years, from 1898 to 1909, im migrants, cash and effects equivalent to over 200 millions of dollars have come to this country from foreign lands. Is that not a condition of affairs indicating the prosperity which the hon. member for North Toronto could not see about him? Does it not show that the $120,000 spent in 1896 on immigration by the government of that day was only sufficient to be ineffective, whereas in 1907-8, when an immigration policy that was a policy was adopted by the government, $1,074,697 was spent on immigration, and the results have justified the government in adopting an aggressive policy.

We on this side of the House are reproached, and perhaps properly so, for not contributing our fair share towards the defence of the empire, and to remove that reproach the Minister of Finance has placed in the estimates of this year a sum of $3,000,000. Will that be improper use of the public funds? I may again point out to my hon. friend from Victoria and Haliburton (Mr. Hughes) how the militia was starved in 1896. In that year there was spent on the militia a little over $1,136,000. They were not in a satisfactory condition. The annual drill was inefficient; the brigades throughout the country were in anything but a satisfied condition, but when this government came into power, they adopted a different mode of conducting the militia affairs of the country. They increased the expenditure year after year, until last year it amounted to six and half millions of dollars, and we have to-day a force perhaps as efficient as that of any colony or any country. Some time ago both sides of this House decided upon the beginning of a naval expenditure and upon assuming a share of the imperial burden. Last session a naval resolution was adopted unanimously by the House, but some on the opposite side have deserted our ranks. Some of our ships have sprung a leak; some of them have been foundered on the rock of Dreadnoughts, others on the rock of a cash contribution; and one noble barque has completely foundered in the deep water of no navy at all. There must be a divided opinion among the hon. gentlemen on the opposite side of the House with regard to how far they are prepared to go in a naval defence policy.

Mr. NANTEL. On the other side, what is it?

Mr. STRATTON. Yes, on the other side. They seem to be very much exercised about what the government policy will be on this matter. The Minister of Finance stated the other day that an appropriation would be made, and we are about to make a consider-

able expenditure in that direction. But we want our friends on the opposite side of the House, if possible, to have their minds made up to some course that will be loyal and patriotic to the empire, and if they do, we are satisfied that they will support the policy of the government when it is brought down.

Mr. BOYCE. May I ask the hon. gentleman a question? He has asked this side of the House to support a policy on the naval question, of which he himself is in favour. Will he be kind enough to state to the House what that policy is, if he knows what it is?

Mr. STRATTON. My hon. friend has before him the resolution of the House which was adopted unanimously last session, and for which he voted; and before he will be asked to vote on any question of policy, a Bill or resolution will be laid before the House by the government, and hon. members will then be asked to support or oppose that.

Mr. BOYCE. May I ask my hon. friend to implement what he has just said by stating whether the policy he has been speaking of is contained in that resolution, or whether he refers to something further?

Mr. STRATTON. The policy of the government will be presented at the proper time.

Mr. BOYCE. And yet my hon. friend was in favour of it, although he does not know what it is.

Mr. STRATTON. I said that the policy of the government when introduced would be such that I hoped hon. gentlemen opposite would have their minds settled and would be able to support it. I have never yet found the government of the day asking their supporters to vote blindly for anything.

An hon. MEMBER. They could not do it.

Mr. STRATTON. No, it could not be done. We desire to have some of the money of this country expended in other directions. In the province of Ontario, if I may be allowed to refer to a personal matter, while I was a private member of the local legislature, I made an address on the budget in which I endeavoured to point out to the people of the province that we had a large territory yet undeveloped and unexplored of which the ordinary member of that House and the ordinary citizen of the country knew practically nothing, and I pressed upon the government the desirability of having a development and exploration policy. The government adopted my view, and in the following year, when I was a member of the government, I had the pleasure and privilege of helping to put into force what I had advocated as a private member of the House. We sent about ten exploration parties into what was then known as New Ontario. They returned in the course of a year and reported to the minister that they had discovered a clay belt of about 1,500,000 acres, that they had found pine timber of considerable extent, and great areas of spruce and poplar of immense value as pulp wood to the people of the province.

Then the question arose, how were we going to get into that country? It was decided by the government to build a railway. No one came forward with offers to construct it, and the government of the province undertook the work. This was the first railway constructed by a provincial government in this Dominion, if my memory serves me correctly. In the construction of that railway, the object of which was to reach the clay belt and to bring into consumption the pulp wood of the north country, silver was found;—what is now known as Cobalt was one of the results of the building of that road. Since then, the people have had the advantage of about $29,000,000 taken from the mines of the Cobalt district. And my opinion is, Mr. Speaker, that if we spend a little more money in the development of our country, in the exploration of portions that have not yet been explored, we shall make other finds valuable as these in the province of Ontario. We have pulp-wood in this province that is not now available, we have minerals still undiscovered. We know that the route of the Transcontinental is through the rear portion of Quebec and Ontario, and the reports of the Transcontinental commissioners show that there is a vast quantity of agricultural lands in that region. They tell us that the line from Moncton to Winnipeg is divided into three sections. Section C contains 5,800 square miles, or 3,712,000 acres; section D contains 10,100 square miles, or 6,464,000 acres; section E contains 3,000 square miles, or 1,920,000 acres, a total of 18,900 square miles, or about 12,096,000 acres. And of this sixty per cent is of value as agricultural land. Passing down Sparks street in this city the other day, my attention was attracted by a photograph in a shop window. It was a photograph of a silver nugget of 2,100 pounds weight. It suggested the great wealth which has yet to be uncovered in this new territory of ours. I am hoping to see—and expecting every day to see—that, in the construction of the Transcontinental railway through Quebec there will be discovered mineral wealth equal to or greater than that we enjoy in the province of Ontario. I am hoping that the forest wealth, agricultural wealth and mineral wealth to be made available will be such as to more than ever attract attention to

our great resources. The area in the three sections mentioned from Moncton to Quebec is seven or eight times as large as Prince Edward Island. That is a territory of some importance to the people. And when we consider the great territory now being opened up west of Winnipeg by the Transcontinental, we find that over 200,000,000 acres will be made available for grain-growing. The hon. member for North Toronto stated the other day that in 1900 we had from the west 32,000,000 bushels of grain, in 1907 160,000,000, in 1908, 230,000,000, and in 1909 the crop amounted to 313,000,000 bushels. The hon. gentleman endeavoured to point out that the farmer, not Fielding, had brought these good times. But I would like to ask the hon. member, were he in his seat, who put the farmer in a position to give to Fielding the revenue that gave to the government the opportunity to present the budget we are now discussing? The hon. gentleman says that the increase produced by the farmer is worth $50,000,000 and may be more, and he asks what particular praise and honour are due to the government for that? And I say, the honour is due to the government for their foresight in the administration of our affairs, for adopting a policy when they came into power that has brought about the conditions we see to-day. Praise and honour are due the government for the wise immigration policy they adopted. In 1895-6, we received from Dominion lands $219,326.14. But what did this government receive last year? In 1908-9, our receipts from Dominion lands were $2,175,214.31. In 1900, the product of the west under the government of that day was 32,000,000 bushels. I do not know what it was in 1896; we have no returns to show. But, as I have already said, the crop in 1909 was 313,000,000 bushels. Deduct from this the 32,000,000 bushels produced in 1900, and we find an increase in nine years of 281,000,000 bushels of grain. And if we are able to induce the same influx of population into the west as has been going on—and I hope and believe they will come in far more speedily—we shall be able to demonstrate that which we have said so often, that Canada is the granary of the empire. Hon. members opposite deprecate expenditures; they criticise every appropriation made by the government to carry on the affairs of the country. Well, my experience is that there are no angels in the management of worldly affairs, but I believe the government are doing all they possibly can. They are liable to make mistakes, and the mistakes liable to our common humanity. But, on the other hand, if there are any angels on the other side of the House, they have taken good care to disguise themselves, for I have not found them since I had the honour of knowing them or knowing the way in which the country was being conducted under their regime. There is a provision in the estimates of $3,000,000 to assist in the maintenance of the navy, but that is being proposed by the government. I am not in favour personally of contributing any sum of money by way of cash contribution to the imperial defences. I believe that is against Liberal policy and against Liberal principles. I am opposed to that for two reasons. I believe that no British people should provide money to be expended except under their own supervision, that there should be no taxation to be expended by other people. It violates a broad principle that actuates this government and the people of Canada, and I do not believe that the country would be at all satisfied if a contribution were made by this government to the imperial government for the purpose of building Dreadnoughts.

I attempted to show that we still have in this province great mineral wealth, and that in the development of these now unexplored regions, we will be able to show the people of the world that Canada is as rich in minerals and other valuable natural resources, as we are sometimes fond of stating. We do know that the Cobalt district is the richest district of its character, in the world, and I hope that in the country yet undeveloped there will be opportunities for the uncovering of mineral rocks that have been moss covered and weather beaten for ages and that we will have more than one Cobalt district in this country.

Coming to the administration of our natural resources generally, I believe that we should adopt a policy that will give to our own country, all the development it is possible for it to have, that we should manufacture into the completed state all the iron and steel and pulp wood and nickel that it is possible for us to do in this country. By quoting a figure or two, I will be able to show the House—and I am speaking only for myself and not at all discussing the question of any export duty—what amount of money we are permitting to leave our country by allowing our timber to be exported in the condition it now is. At the same time, I believe that that perhaps can be better regulated in another parliament than this. A cord of pulp wood, whether in the tree or on the wharf, is worth from $2 to $7 a cord. In low grade paper, it is worth from $38 to $45 a ton, and when it is made into high grade paper it is worth $50 to $100 per ton. The quantity of pulp wood exported last year was 794,986 cords of a value of $4,356,391, or about $5.75 a cord. If that were made into paper at $50 per ton it would amount

to $37,749,300, a difference of $33,000,000 in favour of having it manufactured into paper in this country. That would be a ninefold increase. If in the next 10 years we exported 1,000,000 cords at $5.75 that would be $57,500,000. Taking the same quantity manufactured into paper at $50 per ton it would realize $513,750,000, a difference in favour of Canada of $462,250,000. That difference represents the gain between exporting raw products and manufacturing them to their completed condition — the employment of labour and industrial gain in the building and operation of machines.

If we take 1,000 feet board measure of pine lumber and have it cut, it would have a value of about $18 to $20 per thousand feet. The labour in that would represent about $7 or $8. Converted into paper, a similar quantity of pulp wood its value would be about $31.50, the labour being about $12. The proportion of investment would be about $5 in a sawmill to $41 in a pulp mill, so that from the point of view of investment of capital, there is an advantage in favour of the pulp mill of about $36. This will demonstrate to the people of this country that if we adopted a policy of having our pulp wood manufactured into paper,—I do not say for the government to do it, that is not my intenntion or desire—we would benefit our national industries to an extent almost beyond computation, that in allowing raw pulp wood to be exported to other countries we are sacrificing the great advantage it would be to Canada to have it manufactured here. If we allowed to be exported in the next ten years the proportionate quantity equal to the present export, we should only realize fifty-seven and a half million dollars. If we manufactured at home the same quantity of pulp wood into paper at the small value of $7.50 per ton, it would amount in round numbers to five hundred and fourteen millions of dollars. Deducting fifty-seven millions, the value of the raw material, from the gross value of the manufactured article, we have four hundred and sixty-three million to represent the positive gain to Canada by this manufacture of her pulp wood. I desire further to impresse on the House that our chief natural products, such as silver, nickel, iron and steel, steel being in my judgment a raw material, should, where it is at all possible, be converted into the manufactured article within the borders of Canada. I desire to see the equipment of the defensive sea force or, if it is necessary, the offensive sea force, manufactured in this country if it is at all possible. We have in one portion of the province of Ontario to-day, the Collingwood Shipbuilding Company. That company has done and is doing a great deal, and with proper encouragement, might become a stil more important industry. It can build ships for our inland waters and for our seas as well. The hon. member for South York, this afternoon, endeavoured to make, as he usually does in his newspaper, a scoop. He presented to the House a policy which I wish to discuss. It has been said that in the coal fields of the eastern provinces, we have the steel and the coal lying alongside of each other and I think it was Mr. Schwab, President of the United States steel corporation, who said there was coal and iron lying alongside each other in Nova Scotia, sufficient to last for 100 years. We have the same conditions on the Pacific as on the Atlantic, and we have similar conditions in the intermediate portions of Canada. I would like to see the government of the Dominion endeavour to have created in Canada a ship building industry that will give the people of Canada an opportunity of commencing to build their own fleet, their own navy on the soil of Canada.

As we have marked our great Transcontinental railway from the Atlantic to the Pacific with steel rails made in Canada, so I hope we shall have a navy with the same brand upon it, 'Made in Canada.' If this can be done, it would be a very satisfactory state of affairs. We see to-day a great Canadian combination of iron and steel capitalists, perhaps the greatest combination that Canada has ever seen, and yet I believe that combination is for the benefit of the people of this country as well as of those more immediately concerned. I hope that the government will call the attention of those great capitalists to the fact that it is possible to establish the nucleus of a ship building industry in this country that will give to our manufacturing establishments an impetus they never had before. The ship building industry of England was not created in a day; it was like Topsy, it 'jest growed,' it was like the British constitution, it was not created, but it grew. I suppose that Great Britain, if it were necessary, could turn out all the Dreadnoughts that she requires. I am not one of those who fear the downfall of England. I am just as loyal a British subject as any other member of this House, and I have no fears of England's bulwarks falling to pieces, and I have no fears that this Dominion and the other colonies will not do the best they can, and will not go as far as the people of this country desire them to go, in assisting in naval and imperial defence. I am satisfied that when the policy of the government is made known, the country will find that the government has done all that it is their duty to do.

There is one other question I desire to touch upon, and that is the expenditure in connection with Crow's Nest Pass railway. When the hon. member for North Toronto was telling what the government had done,

he forgot to say that this government had expended $3,500,000 in endeavouring to give the railway accommodation that is required in the country traversed by the Crow's Nest Pass railway. If he will turn to the customs receipts, he will find that from the territory served by the Crow's Nest Pass railway the customs receipts have amounted to three times over the cost of that railway, as far as government aid was concerned. I believe this government has done the best they could for the country. Of course they are human, and like every one else they will make mistakes, but I believe they have done the best that could be done. This country is increasing its expenditure, but at the same time it is growing rapidly in wealth, and I think in the main all the expenditure has been justified. I do not know that, having in mind the relations and record of the government in the matter of expenditure of public money for public purposes, I could say anything more suitable in closing than to repeat the remarks made by Sir Charles Tupper at a political meeting in the city from which I come, when he said:

> Although this country is increasing its debt, it is being incurred in the erection of those triumphs of peace—in public works that will stand for ages as the monuments of an energetic people who laid the foundation of Canadian nationality amid the wilds of North America.

I am sure that this utterance of Sir Charles Tupper, made thirteen or fourteen years ago, was justified, and would apply with greatly intensified force to the conditions of to-day under the present administration. I think it is the very general belief throughout Canada that we have never had in the history of this country a government that endeavoured more faithfully to act fairly and squarely by all the provinces, by all the varied interests of this country, than the government which we on this side have the pleasure of supporting.

Mr. ALEXANDER McCALL (Norfolk). It is not my intention to criticise at any length the speech of the hon. member who has just taken his seat (Mr. Stratton). The hon. gentleman strove to make it appear that in the great prosperity and development this country has enjoyed in recent years, the Conservative party had done nothing and that it was all due to the Liberal government. He intimated that the increase in population of this country has been due to the Liberal party, assisted by immigration. Does he really think that the Conservatives of this country have done nothing towards building up this country and towards peopling it? For my part I do not wish to be denied the credit of having done something to promote the prosperity of this country, and I am sure that my Conservative constituents also claim credit for having done something to bring about the prosperity which Canada now enjoys. That style of argument in which the hon. gentleman indulged is one well known throughout this country, and has been heard in every schoolhouse during the last eight years. It is just such an argument as one may hear in a corner grocery among politicians who sit around the stove. Sir, I think we have got beyond that, at least in this House and at this day. Now I must make some reference to the claim he and his friends make of having discovered New Ontario. If they discovered New Ontario they were a long time doing it. They were in power since 1873, and only during their last eight years did they make an effort to find out what New Ontario really was. When the Conservative government came into power they found the pulp wood areas parcelled out among a few friends of the government, a country equal to several of the smaller kingdoms of the old world, with an area larger than that of Belgium or Denmark, kingdoms containing a population of 3,000,000 or 4,000,000. These pulp wood areas were divided up and held until the change of affairs came. Then the concession was very promptly cancelled and the pulp wood was put on the market and sold to the highest bidder. The same thing is true with respect to the timber areas. Sales of timber were made in the closing days of the Ross administration in large blocks, townships and areas of 36 square miles at prices which did not exceed one third of the prices obtained by the present government by the method of putting timber up in small parcels and allowing the small jobber or mill man to come in, make his bid and get his limit. I venture to say that there was not a limit sold under the Ross regime that brought over $5 a thousand feet. Sales have since been made under the present regime at $13 per thousand feet, with $2 dues added; so that the reference to the methods that prevail in Ontario is not happy.

Mr. STRATTON. No timber was sold in Ontario under the Mowat government, the Hardy government or the Ross government except by public tender or public auction.

Mr. McCALL. I would ask the hon. member for Nipissing (Mr. Gordon) to say if he knows any thing about the burnt lands along Sturgeon river and if they were not parcelled out among the friends of the party and cut under permits. If I chose to take the time I could cite a number of other instances but I do not know that this really belongs to the discussion.

Reference was made again to the Trent Valley canal. This is an old scarred veteran of many an election campaign and

many an election speech. The hon. gentleman was mistaken in saying that more had been done upon that work since the Liberal party obtained power than had been done in forty years by the other party. But, he will bear me out in saying that the Trent Valley improvement was a provincial work and was carried on as a provincial work until quite recently; so that whatever failures or successes were achieved belong not to the old Conservative party alone. Objections have been taken in this House to the Trent Valley canal, but I shall not take up the time of the House in discussing it further than to say that in the estimates this year we find a very considerable sum provided for expenditure upon the Trent Valley canal, but we find nothing for the branch feeder known as the Newmarket canal. It is not unlikely that this has been hiding behind its big brother and so escaped observation. But, if the Newmarket canal is justifiable, and hon. gentleman say that no part of the expenditure can be pointed out as unwarranted, what is to prevent other towns in that vicinity from seeking the same facilities? Remember that these canals are called feeders. The hon. Minister of Agriculture (Mr. Fisher) will appreciate this phrase—feeders. It represents a branch of the farm stock that is allowed access to the trough day and night; so that those communities that get access to the canals or railways of the country may be well termed feeders because they are upon the public treasury and will be as long as time lasts. I dare say that Aurora, Schomberg and other towns near Newmarket will be glad to have the canal extended to their limits. Doubtless applications will be made on the eve of the next election for an expenditure. These people will not be deterred from applying for public money because the distance is too great. They will realize that the longer the canal the greater the expenditure. It is about time we heard some thing about the Georgian bay outlet of the Trent canal. That question has been before the people of North Simcoe and North Ontario for many years, but it will be in order, in about a year, or a year and a half, for engineers to go through there again and set the old farmers guessing whether it is the canal again or whether it is the election.

In discussing the budget, perhaps, like other hon. members, I have found it is a somewhat difficult matter to attempt to master all the details of our fiscal system and I will venture to say that an ordinary member like myself, coming from the common walks of life into this House, feels, to a great extent, that in our tariff and our transportation system there are a great many things that are of such a technical character that he cannot very well master all the questions that he would like to discuss intelligently. I acknowledge my inability to master all these details and I have heard from a great many others that they are in the same position. As this country developes, by the grace of the Liberal party here, not by the efforts of the Conservatives, our tariff will become still more complex. Our transportation problems will become more complex, the social and industrial questions which we have to face will be more pressing and the question has occurred to me if there was not some method by which all these questions that are out of the ordinary character could be discussed by people who had special abilities in that direction. I might venture to suggest to the House a remedy that has occurred to me. If the Liberal party desire to adopt some general scheme of reform would they not apply to the Senate such a reform as would bring into that body talent specially qualified to deal with these more difficult and complex questions? I know that I am trespassing upon dangerous ground. My hands are trembling as I speak upon the subject. I dare not touch it except in this casual way, but would it not be possible to limit the appointment to five, six or seven years and, by a convention between the two parties, make it a condition that the class of men who had made a special study of the problems we have to deal with should be appointed—some of the men who bulk big in the eyes of the people of this country, the big financiers, the big transportation men, and the men who have made a special study of industrial, social and tariff questions that perplex us. These questions could be discussed and threshed out in the upper Chamber and then passed along to this House. In that way we would save a great deal. With reference to our transportation affairs we would save duplication of railways from one end of this country to the other. If we had had the benefit of the advice of such men as Sir Thomas Shaughnessy, Mr. Hays, and Mr. McGuigan it would have prevented the duplication of the Intercolonial Railway and the New Brunswick section of the Grand Trunk Pacific, it would possibly have prevented the duplication and paralleling of tracks all through the west. It certainly would prevent two rival canal schemes traversing the country. I do not know that it is worth while for a member on this side of the House to offer a suggestion to the government, but nevertheless I throw this hint out as to one way in which this parliament and future parliaments can deal with these questions as they come up. Now, the tariff is complicated; we have a minimum tariff, and a maximum tariff, and a free list, and a list of articles upon which taxes may be put on or taken off, and we have the British Preference surtax, and we have treaties with several countries, and when the ordinary business man tries to under-

stand all this and to apply it to some fluctuation which may have taken place in the trade of the country he finds it incomprehensible. I think our present tariff could be easily simplified and it would be better for every one concerned if it were. Now, the keynote of this discussion has been the $100,000,000 budget, and I notice that while the Finance Minister did not take credit for securing all of this vast revenue, his friends and supporters seem inclined to make the people believe that it was the policy of the government which brought about this very prosperous fiscal condition. Well, $100,000,000 is a very large sum of money and it is well worth looking after. The complaint is made by the government and by gentlemen who support them that we on this side find fault, and criticise, and rake up old scandals. Well, we represent a large section of the people of this country, and is it to be thought that the Conservatives in this House are to take no part in the discussion of how this money has been raised and how it should be expended. With the evidence before our eyes that a great deal of this money of the people is wasted, are we to sit here dumb and not criticise the government for its extravagance? No; it is our duty to protest, and I would think very little of the members of an opposition who did not protest in view of such facts as we have before our eyes. Surely there is ground for our objecting to the manner in which the Minister of Public Works doles out his favours in public buildings. We have spent a great deal of time this session in trying to find out upon what principle grants of this kind are made by the minister, and I think we must conclude that there is no principle at all unless it be the principle of helping political favourites. We have in the estimates appropriations for buildings in towns with a population of 1,400 and thereabouts, and we know that these towns present no very strong claims for such consideration. It is true that they may be very common place towns before the item appears in the estimates, but the moment the Minister of Public Works decides that he is going to bestow his benevolence upon them he finds abundant reasons. Did he not tell us that Parrsboro, Nova Scotia, is quite a nice town, that Wolfville, Nova Scotia, was a very rising town, and that Fairville, New Brunswick, is a very important town which has mills and factories, as if it were something new to us to hear of a town having a mill and a factory. Did he not tell us that Grand Falls had a fine water-power, and that other towns were beautifully located and had fine residences, and that in consequence of these characteristics they were entitled to a public building. But, there are other towns which have all these qualities and more and which do not get public buildings from the Minister of Public Works. It would seem that the moment the hon. gentleman has decided to grant a sum of money for a building in a certain town he immediately applies his very great abilities to discovering some reason why that town should have a public building, and when the Minister of Public Works gets going in that line he is irresistible. Now, what is the result of all this? A few of my hon. friends around me are expecting public buildings for their towns and these gentlemen are just as meek as possible in the hands of the Minister of Public Works. They are not going to criticise the hon. gentleman while that promise is hanging over them; to use an agricultural expression, they are so tame that they will feed out of his hands. We had an exchange of compliments the other night between the hon. member for East Elgin (Mr. Marshall) and the Minister of Public Works. The hon. gentleman (Mr. Marshall) pointed out that the town of Aylmer in his constituency had a population of 2,500 and a postal revenue of $6,000, and he pressed his claim modestly but firmly, and the Minister of Public Works complimented him that he was not like some of his colleagues who were disposed to criticise unfairly and he thought he ought to do something for the member for East Elgin. Now, do you think the member for East Elgin will criticise the Minister of Public Works while he is waiting for a public building in Aylmer? Not a bit of it. You will find he will stay quiet the rest of this session until he gets the post office, and the same applies to other gentlemen who are sitting near me. Of course, I can speak boldly so far as I am concerned, for my town has got a post office without any effort on my part. I can hardly believe that it was given solely as a compliment to me, and I rather suspect it was intended to help the other fellow, but be that as it may, we have a public building. Well, Mr. Speaker, in all seriousness this is not a proper condition of things. Would it not be far more honest if a rule were established that when a town had a certain population and gave a certain revenue to the Dominion it would be entitled to a public building without any other consideration than that it was in the public interest to erect a building there? This holding out of a public building as a gift from the minister is altogether improper. I can imagine that possibly next summer the Minister of Public Works will go to Ontario, and he will be invited to the good town of Aylmer, and they will call a holiday, and the band will turn out, and the school children will march, and the band will play 'See the Conquering Hero Comes,' and the children will sing 'the Maple Leaf for Ever,' and speeches will be

made by the mayor and by the minister, and figures will be given as to the prosperity of the town and its factories and industries, and its beautiful location will be described and all that, and then the Minister of Public Works will say: You have made your case good and you shall have a post office from me, unless indeed you would prefer a wharf or a bridge, or one of these reversible wharfs that will be a bridge if you want it and a wharf if you prefer to have it so, and if there is no water near the town we will give you a wharf in the open field. I repeat that it would be in the interest of the country, and it would add to our dignity as a people, if the public works were bestowed where they are deserved and not as a bait held out by the minister for political support. I have no doubt that if a rule were established by which when a town arrived at a certain status it would have a public building, my hon. friend from Halton (Mr. Henderson) would claim it as a right to have two or three buildings erected in his county, but at present I question if he dare even criticise the policy of the government, for if he did he knows what his fate would be.

I say again, it is not dignified for this government to spend the people's money for public services in this manner. I earnestly hope that this will receive the attention of the government, and that next session we shall not have to question and cross-examine the whole night to get a definite answer as to what policy prevails in the distribution of public works, and then not get it. With regard to the expenditure of this $100,000,000, I wish to urge respectfully on those who have the expending of this money that no opportunity for scandal be given, but that the money be expended properly. Matters such as we have had discussed in this House this session and last session should not occur under any system of government. I wish to call attention to the sources from which this money comes; it comes through the custom house and the excise office. It comes from men whose hands are knotted and twisted with their daily toil, from men who are stooped with their labours until they will never see the bright sunlight again in the stature of a man; it comes from men working in mines, the forest and the fields, from men working on a railway section for $1.18 a day; it comes from the factory girls who rise in the morning at six o'clock, go two or three miles to their labour, work all day, and return; it comes also from the wrecked homes and the broken men who have paid their part of the tax through the internal revenue. Is it not, then, fair to say that money gathered from the people, and so much of it gathered through stress and toil, should be regarded as a trust of the most sacred character, and be expended in a way to benefit the people. Bear in mind that about 85 per cent of the people of this country get no other dollars than handmade dollars—dollars which they only obtain by exchanging them for their labour. This fact ought to be of value to those who have the expending of this money. Now, I am not one who is disposed to take a narrow view of this country. I can join with the gentlemen who have spoken in appreciation of the people who came here when this country was in the days of small things, and I claim the right, with all those who are not of the Liberal faith, to be accorded our fair share in its development, and this I believe the people of this country are willing to accord. There are hopeful signs all along the line. The discussion we had a few days ago regarding those who are attacked by the dread disease of consumption, participated in by men on both sides of the House, revealed the brotherhood of the family—the knowledge that was strong in the hearts of the members of this House, and the responsibility of the strong to protect the weak. The same thing was shown by the efforts of the Department of Labour to adjust the differences between capital and labour, giving, I trust, at all times to the man who toils an opportunity to secure his competency and the things that make his life desirable. We are drawing near to the holiday time, when we are going home to express good-will to our friends and all that it means in our lives. Would it not be well for us to part from here determined when we return in the early days of January, to try to conduct the affairs of the country in a worthy and dignified manner. The spirit expressed by the Minister of Finance at the close of his budget speech will rest with me, as I think it will with all the members of this House, when he said that we all must do our parts and acquit ourselves bravely as Canadians should.

Mr. W. M. MARTIN (Regina). Mr. Speaker, like other gentlemen who have spoken on this side of the House, I must extend my congratulations to the Minister of Finance on the splendid financial statement which he has been able to present to this House on this, the fourteenth occasion that he has had the pleasure and privilege of presenting such a statement. I must say that I have been rather surprised at the kind of criticism, if it can be called criticism, which has been directed by hon. members on the other side of the House to the budget speech. I have watched, but watched in vain, for any real criticism of the financial statement for this year. It is true, the hon. member for North Toronto (Mr. Foster) did deal to a certain extent with the finances of the country; but if you examine his speech closely, you will find that by far the greater part

of it is taken up in going over the history of the government for the last ten or twelve years, and selecting what he calls scandals. Some of the instances he gave were particularly unfortunate from his own point of view. He said that while in the city of Winnipeg, he had seen St. Andrew's locks, where the government is spending so much money. But when he was in Manitoba, the hon. gentleman did not venture to say anything against the expenditure on the St. Andrew's locks.

Mr. STAPLES. May I inform the hon. gentleman that Mr. Foster did discuss the St. Andrew's locks in a banquet that was given to him in the Royal Alexandra Hotel.

Mr. W. M. MARTIN. It is quite possible that the hon. member for North Toronto did discuss the St. Andrew's locks, but I venture to say that he did not say anything in Manitoba against the construction of that work.

Mr. STAPLES. Exactly what he said on the floor of parliament a few days ago.

Mr. W. M. MARTIN. The hon. member for North Toronto went farther west, the province of Saskatchewan, and selected for criticism the sale of land to the Saskatchewan Valley Land Company. If the hon. member had carefully examined everything that has taken place in this country during the past twelve or thirteen years, he could not have selected a more unfortunate instance, from his own point of view, for criticism. Let the best dozen or half dozen Tory orators in the country stump the province of Saskatchewan on the question of the Saskatchewan Valley Land Company's land grant, and I venture to say that, if they criticise it, they will not gain a single vote.

What was the contract with the Saskatchewan Valley Land Company? I may state for the benefit of hon. members opposite that, though they do not know it, the fact is that when this government came into power in 1896 every odd-numbered section of surveyed land in the Northwest Territories was tied up to some railway company and out of these lands the company had the right to make their selections. Between Regina and Saskatoon there was an area of 3,500,000 acres out of which the Qu'Appelle, Long Lake and Saskatchewan Valley Railway Company had the right to select 839,000 acres. Railway engineers and valuators were sent over the land, but the company refused to take it on the ground that it did not fulfil the agreement as it was not land fairly fit for settlement. And in 1902 the railway company had threatened to bring suit to compel the government to set apart another 3,500,000 acres out of which they would have the right to select 839,000 acres. The Saskatchewan Valley Land Company was formed and agreed to buy 839,000 acres out of the odd-numbered sections from the railway company, and they said they wanted also 250,000 acres out of the even-numbered sections. The price that the railway got was $1.65 an acre with no conditions attached. The government agreed to sell to the Saskatchewan Valley Land Company 250,000 acres of even numbered sections at $1 an acre, but on condition that the company should settle 32 homesteaders on every township before the grant should be earned. The first year that company brought in more than enough settlers to satisfy the terms of the grant. Further, the Saskatchewan Valley Land Company is the only instance that can be pointed to in which the present government sold any lands to or had any dealings with a colonization company. More than that, I contend that it was the Sasaktchewan Valley Land Company whose work led to the beginning of the tide of American immigration that has continued to come to this Dominion during the past six or eight years. When we look at the history of the late government, we find that it had dealings with 26 colonization companies. I have the names before me, but I will not trouble the House with them. The land set apart for the benefit of these companies made a total of 2,842,742 acres The companies chose from this 1,421,371 acres. And how many immigrants did they take into the territories? Only 1,243. It is estimated that, in addition to these immigrants having cost the country 1,421,371 acres of land of the Northwest Territories, each immigrant cost the country $475. That is the history of the Conservative party in relation to colonization companies.

The hon. member for North Toronto spoke of the reduction of the tariff under the present government, and he spoke with all the sophistry of which he is capable. He said that from 1896 to 1909 the present government had reduced the tariff by 89-100 of 1 per cent. But he did not take into consideration the goods that had been placed on the free list. I submit that it is only fair, in estimating the average duty on goods coming into the country that we should take into consideration non-dutiable as well as dutiable goods. If hon. gentlemen opposite will take the trouble to turn to volume one of the Report of the Department of Trade and Commerce for 1909, page 15, they will find that the average rate of duty on dutiable and non-dutiable goods in 1896 was 19.12 per cent and the average rate of duty at present is 16.58 per cent, a reduction of almost 3 per cent on the average of goods coming into this country.

Mr. HENDERSON. I am sure the hon. member does not wish erroneous figures to go in 'Hansard.' He has made a mistake. What he is talking about is only one class of goods, the dutiable goods, instead of

both classes as referred to by the hon. member for North Toronto (Mr. Foster).

Mr. W. M. MARTIN. I have before me the report of the Department of Trade and Commerce, and I say that the figures I have given are absolutely correct. The figures given by the hon. member for North Toronto do not take into consideration goods that have been placed on the free list, and I say that to make a fair statement of the reduction in the tariff you must take into consideration non-dutiable as well as dutiable goods. On this basis, as I have said, the reduction is almost 3 per cent. This may seem a small reduction, but the amount saved to the people of the country up to and including 1907—I have not the figures for the last two years—was in excess of $50,000,000.

The hon. member for North Toronto also travelled through the west and went over some of the railways in that country. He calls a part of the western country the 'double-track' country'. He says that you can sit at your car window and drop a pea on the track of some competing railway. There are only one or two places that I known of in the western country where there are what may be called parallel railways. Of course, railways may be parallel if one hundred miles apart. But the impression that these hon membes try to convey is that the two railways are not serving different parts of the country. If we consider the country between Winnipeg and Edmonton and take the main lines of the Grand Trunk Pacific and the Canadian Pacific, there is not a place where you can say the railways are parallel. It is true that the two lines converge at Portage la Prairie, but it is necessary that they should converge at competing points. They converge again at Saskatoon. And it is true that for some distance west of Saskatoon they run close together. But there is this fact to be remembered that the Grand Trunk Pacific had completed their survey and commenced construction before the Canadian Pacific Railway got there. West of Edmonton again, the Canadian Northern and the Grand Trunk Pacific run close together. But that is made necessary not only by the conformation of the country but by the fact that they both use the Yellowhead Pass to get through the mountains.

Mr. HUGHES. Who was there first?

Mr. W. M. MARTIN. I do not know that that matters. The Canadian Northern was probably constructed first, but the main point is that they are both going to use the Yellowhead Pass. This brings up the question of transportation in the west. I was bold enough to make an assertion here last session and I was sarcastically commented upon by some of the newspapers for saying that the transportation question was the most important question in the west to-day. Well, I risk another sarcastic reference by repeating the statement that the transportation question is the most important question to be dealt with in the west at the present time. It is true we have got practically three transcontinental railroads today, but we now need branch lines to feed these railways. Last year when I spoke in this House in connection with the loan to the Grand Trunk Pacific railway I said the farmers could not get their grain out of the country. The railways did not appear to be prepared to handle the grain, they had not sufficient cars or they were not capable of handling the large production of wheat and other grains. Owing to the railways having provided better facilities this year and also partially to the fact that the farmers have not marketed so much of their crop there has not been any scarcity of cars in Saskatchewan up to the present.

Mr. SPROULE. It seems by the returns they have marketed more of the crop.

Mr. W. M. MARTIN. That is a later report than I have seen. That goes to show only that the transportation facilities are better than they were last year. I am glad to hear that from my hon. friend because I believe he was one who opposed the building of the Grand Trunk Pacific in the west.

If there is one thing more than another that characterizes the present financial statement and the condition of Canada it is the word 'prosperity.' A great deal has been said about the natural resources of Canada but I believe, and no doubt other members in this House believe that the mineral resources of Canada will gradually become depleted. Our great timber resources are being gradually pushed farther, north by the axe of the lumberman and the ravages of forest fires. Our fisheries, if they have not reached their zenith have almost reached their zenith of production. There will come a time when all our great natural resources will be more or less depleted. When that time comes I believe Canada must resort to agriculture, as some one has said the prosperity of a country depends altogether on its basic industries, and in Canada the chief basic industry is agriculture. Has the government, the Department of Agriculture been doing anything towards the assistance and development of that industry in Canada? One thing that has been done has been the establishment of experimental farms.

Mr. SPROULE. They were all established before this government came into power.

Mr. W. M. MARTIN. I was just going to say something about that if the hon. gen-

tleman will give me an opportunity. It is true that the great majority of these experimental farms were established before 1896. Two have been established since 1896 in Alberta, and were established as soon as the needs of that province required it, and one additional agricultural farm has been estabilshed in Saskatchewan, at Rosthern. I wish to refer for a moment to the amount of money that has been expended upon experimental farms in Canada. The figures for a few years of the total expenditure and revenue on experimental farms are as follows:

Years.	Total Expenditure.	Total Revenue.
	$ cts.	$ cts.
1908-09	142,424 08	14,354 58
1907 (7 mos.)	102,555 12	*6,699 18
1906	110,452 24	11,864 51
1905	100,000 80	9,997 45
1902	101,940 55	5,329 40
1898	77,500 00	7,474 86
1896	77,500 00	6,338 58
1892	75,500 00	4,985 08
1888	95,569 04	201 88

*7 months only of revenue from Central Farm included.

I bring these figures to the attention of the House to show that throughout the whole history of experimental farms in Canada the object apparently has not been to make money out of them. I understood from the Department of Agriculture that owing to the system pursued of giving away free seed, &c., it is not possible to make money out of the experimental farms. I do not think that any hon. member expects that a revenue will be derived from the experimental farms, that was not the object of their establishment. But to show you what can be done along the lines of making an experimental farm pay, let me refer to the central experimental station at Ottawa, in connection with their dairy business. They have 55 cows and the revenue from the milk, cream, butter and buttermilk, amounts to $3,148.58, or about $58 per cow.

Mr. HUGHES. Is the government competing with and rivalling the farmer in producing the dairy products?

Mr. W. M. MARTIN. The only object is to teach the farmers what can be done with a proper handling of stock which I would say is a very laudable object for the Department of Agriculture to pursue.

With reference particularly to western Canada, I would point out some things that have been done by the Department of Agriculture in recent years to assist the farmers in raising their crops. It is quite true that in western Canada we have a great many new people coming in. A large number of these people had farmed in the east, and they possibly do not need the same teaching and the same example in the line of farming as some of the people who came from foreign countries. The American immigrants are on a par with the immigrants who come to western Canada from Ontario, but we have a large number of immigrants coming to Canada from Europe to whom a great deal of good can be done by having proper experimental farms or stations throughout the west. Some ten years ago the Department of Agriculture established what is known as the Canadian Seed Growers' Association, and for five years managed that association. Some five years ago it was decided by the department that it would be better to place the association on a similar basis to the various other associations in Canada, so that the management of its affairs might be under the direct control of the seed growers themselves who had identified themselves with it. The department has continued to supply the association, from year to year, with grants and such funds as this association can use. Over 600 farmers, most of them in western Canada, are at present growing seed for the Canadian Seed Growers' Association. These farmers are visited yearly by an officer of the department, and I understand that a great deal of good has been done in improving the variety of seed grown by the farmers in all parts of the country on account of the efforts made by the Seed Growers' Association. I might also refer to the competitions in fields of standing grain which take place every year throughout the west, and also to the provincial seed exhibitions and seed fairs held at different points in western Canada, at almost a hundred points last year, to exhibit seed and give the farmers a chance to get the best seed on the market. I believe, however, that a great deal more could be done by the Department of Agriculture in the west along the line of establishing small experimental stations. These experimental stations could be maintained at a very small cost. A very small quantity of land would be required, some eighty acres probably, would do for each experimental station, the idea being to make the farms smaller and have more of them so as to give every farmer in the neighbourhood a chance to go and see the most improved methods of agriculture and to learn the proper rotations of crops, the proper method of handling stock and other matters that interest the farmers, and go to build up a prosperous community. Now, in this connection I would like to refer to a statement which I saw in one of the papers the other day, and no doubt other members of this House saw it also. It was a statement made by Mr. James J. Hill, the great rail-

road magnate of the United States. Speaking, of course, of the United States, he said:

Within 20 years 125,000,000 people, and before the middle of the century more than 200,000,000 people must find room and food and employment within the United States. Where are they to live? What are they to do? By that time our mineral resources will have been so nearly exhausted that the industries related to them must fall into a minor place. By that time it is apparent that our dream of conquest of world markets will be a burst bubble.

He goes on to say:

The government should establish a small model farm on its own land in every rural congressional district, later, perhaps, in every county in the agricultural states. Let the Department of Agriculture show exactly what can be done on a small tract of land by proper cultivation, moderate fertilizing and due location of crops.

I would recommend these sentiments to the Minister of Agriculture and to the other members of this House. I would also like to call attention to an article which appears in the current number of McClure's Magazine entitled 'No deserted farms in Germany.' It shows what Germany has done by a system of intensive cultivation. I do not need to say that the west at the present time is scarcely prepared for intensive cultivation; but there are other portions of Canada, particularly of Ontario, that are ready and prepared for a system of intensive cultivation. But the west which is now filling up with new immigrants on new land, is not possibly in a position to adopt such methods of cultivation. But that time will come, and it may come within the lives of members of this House. This article entitled 'No deserted farms in Germany' says this:

The policy of conservation that made German forestry such a success is applied also to agriculture. As we have stated before, Germany is not at all a land flowing with milk and honey. In enormous parts of northern Germany the soil is decidedly poor. With that of the United States it cannot compare at all. But proper care did wonders. While the methods of farming used by many Americans resulted in the utter decline of good land in a comparatively short time, the farm land of Germany, even though they have been under cultivation for centuries, bring forth rich crops year in and year out.

Then it goes on to make a comparison between the average crop product in the United States and that in Germany, and it cites what Mr. James J. Hill said.

He made the remarkable statement that the soil of America, once the envy of every other country, gave during the ten years beginning with 1896 an average yield of 13·5 bushels of wheat per acre, while Germany produced 27·6. For the same decade the yield of oats was in America less than 30 bushels, in Germany 46. For barley the figures were 25 against 33, and for rye 15·4 against 24.

The article goes on to argue that the increased production of these lands in Germany, which are said not to compare with the average lands in the United States, is due entirely to the fact that the Germans have embarked upon a system of intensive cultivation. Now that the government will meet with approval in further establishing experimental farms, I think is shown by a statement which I see in an address delivered by one of the ex-presidents of the Canadian Manufacturers' Association, who says:

It is indeed a pleasure to note the steps our federal and provincial governments are taking to foster the growth of this important industry, and to establish it upon a sound and economic basis. No one will rejoice more heartily than the manufacturer in the success which has followed the work of the experimental farms. In so far as they have contributed to a better understanding of the scientific side of agriculture, and made it possible to grow two blades of grass where one grew before, they have benefited not alone the farmer, but the entire country. The same is equally true of the encouragement given by the government to agriculture in other ways.

He goes on to mention other efforts made by the various governments and I commend that statement also to the attention of the Minister of Agriculture and of the House generally. There is one other point I would like to refer to in connection with agriculture, and that is the working of the Fruit Marks Act. I do not know whether my experience has been the same as the experience of other western members in regard to the quality of the fruit imported into the western provinces. But I do know that the quality of fruit that has come into the province of Saskatchewan this year, has been beyond anything we ever had before. I believe that a part of that credit is justly due to the rigid method of inspection put in force by the Department of Agriculture, in conformity with the provisions of the Fruit Marks Act. Previous to 1909, there were only three inspectors in the west, one at Winnipeg, one at Calgary and one at Vancouver. The work was then extended last season by the establishment of a new inspector at Regina, whose territory included Moosejaw, Saskatoon, Prince Albert, Indian Head and other local points. A new inspector was located at Lethbridge and an assistant was appointed at Winnipeg, the Winnipeg district including Kenora, Portage la Prairie, Brandon and other Manitoba towns. There is also this fact, which no doubt will cause satisfaction to hon. members on both sides of this House, namely, that the

shipment of Ontario apples to the prairie provinces was largely increased during the past season. The fruit I refer to when I say that the quality has improved, was not fruit from the state of Washington, but from British Columbia and Ontario, and in both cases it was better than we ever got in the western provinces before.

Before I resume my seat, I want to say a few words on the question of the immigration policy of the government. The Department of Immigration has recognized the principle that Canada's growth and Canada's prosperity must, to a great extent depend upon the agriculturists, and to that end the department has always favoured the bringing in of men who will take up vacant land in the west and cultivate it. Now I have looked up the records in the Department of the Interior to find the instructions that were sent by the Commissioner of Immigration to the various agents in the different countries of the world, and I find that the following instructions have been sent out:

1. Money is expended and administration is exercised with the object of securing immigrants whose purpose in life is to occupy farm lands, either as owners, tenants, or labourers.

2. Money is voted and administration is exercised with the object of excluding those whose presence in Canada would tend to add to the congestion of our towns and cities.

Immigration effort is made in those countries which are considered most likely to furnish the people coming within the first of the two classes above specified.

Now the countries in which immigration effort is made are Great Britain and Ireland, France, Belgium, Holland, Germany, Denmark, Iceland, Norway, Sweden, Switzerland and the United States, all of which countries can supply to Canada the very best farmers, men who have been brought up to agriculture. Possibly the most important and useful immigrants we have got during the past two years have been coming from the states. We have got a certain amount of immigration from Sweden, and so far as I can judge from the habits of the Swedes, they make the very best settlers in the Canadian Northwest. They cultivate the soil well, they are industrious, they save their money, they make good citizens, and quickly adopt Canadian institutions. The same of course can be said of the immigrants who come from the south of the international boundary. Now one can scarcely estimate the wealth that is brought into Canada year by year by the American immigrants alone. I have here some figures which I would like to commend to the attention of this House in regard to the nationality of the various kinds of immigrants we have been getting during the past two years. I may say, before giving these figures, Mr. Speaker, that I must congratulate many of the hon. gentlemen on the other side of the House on their change of front with respect to our immigration policy. It is not many years since the hon. member from East Grey (Mr. Sproule) stated on the floor of this House, that we were getting into the country, the scum of the London slums. It is not many years since the hon. member for Victoria and Haliburton (Mr. Hughes) said in this House, that he would rather have a Hindu as an immigrant than a galvanized Yankee. We all know from what took place in the House yesterday, that there has been a great change of front on the part of the hon. gentlemen opposite.

Mr. HUGHES. Will the hon. gentleman be good enough to repeat that again?

Mr. W. M. MARTIN. If the hon. gentleman is not paying enough attention to hear what I say he will have to search 'Hansard' to find out. I must congratulate hon. gentlemen on their change of front with respect to the question of immigration. Hon. gentlemen who represent western constituencies on the other side of the House are beginning to vie with one another, to actually fall over one another, in their endeavours to pay compliments to the Galicians and Doukhobors whom, a very few years ago, they criticised so severely in this House. We are getting in this country now an average of nearly 200,000 immigrants or more each year. It is impossible that among this large number there would not be some that we would be better without. We might say that even in our own country there are some people whom we would be better without.

Some hon. MEMBERS. Oh, oh.

Mr. W. M. MARTIN. I did not refer to anybody on the other side of the House.

Mr. GEO. TAYLOR. It was on that side.

Mr. W. M. MARTIN. In a growing country like Canada it is necessary that we shall have men who will perform all kinds of labour. The average Canadian who goes to western Canada does not go there to work for some one else. He goes there to make a home for himself, to become independent, to own his own farm and in a great majority of instances Canadians who go from eastern Canada succeed in doing that. We need other men to perform construction work on the railways. You all know the situation that exists in British Columbia, where the Transcontinental railway was practically held up in its construction on account of the fact that they could not get labourers to perform their work. We must have in that western country a large number of men who will perform construction work. We need farmers and

we need the labouring man, and if the Department of Immigration devotes its attention, as it has in the past, to bringing in agriculturists and labouring men, it is performing a duty it owes to Canada and Canada will prosper under such a policy of immigration. I desire now to give the House some figures with respect to immigration taken from the records of the department. In the year 1894 we actually got 20,829 immigrants; in 1895, 18,790; in 1896, 16,835, and so on during the years following until the number has grown to such an extent that in 1907-8 we received 262,469. Why was it that under Conservative rule immigrants did not come to this country? It was not because the Conservative party did not try to get them in. I really believe that hon. gentlemen opposite worked hard to get immigrants into this country. I am informed, and I believe it is correct, that in 1896 they actually had an officer in Galicia trying to bring to this country the very people whom hon. gentlemen opposite have criticised this government so severely for bringing in. In nine months of the fiscal year 1907 we got 55,791 immigrants from Great Britain, 34,217 from continental Europe, and 34,659 from the United States. In 1907-8 we got 120,182 from Great Britain, 83,957 from continental Europe, and 58,312 from the United States. In the seven months that have passed of the present fiscal year we got 42,295 from Great Britain, 30,184 from continental Europe, and 65,755 from the United States. Let the increase of immigration from the United States continue, because every one of the American settlers brings settlers' effects and money. The value of the effects per capita of the immigrants coming from the United States in the fiscal year 1908-9 is estimated at $998. Taking the total immigration up to the present time at 59,835, it will be seen that these Americans have brought into Canada wealth estimated at $59,712,336.

I think that covers the points for which I rose to address the House and I have only to say in conclusion that I congratulate all the members of this House and the people of this country on the prosperity that characterizes Canada at the present time and I express the hope that the prosperity of future years will be equal to that of the years through which we are just passing.

Mr. G. H. BARNARD (Victoria, B. C.) Mr. Speaker, when I heard the speech of the hon. Minister of Finance (Mr. Fielding) in delivering the budget address the other day, I felt for a moment a cheery opulence stealing over me, but when I commenced to consider how this exceptional budget was going to affect the province which I have the honour to represent and when I began to search the estimates and to find out how much of the many millions which came tripping off his tongue he intended to expend in British Columbia I came to the conclusion that as far as I could see it did not matter very much to that province whether he had a large or small amount of money at his disposal. In going over his estimates and in going over the public expenditure as contemplated for the coming year I have made some little research into the blue-books and I wish to draw a few contrasts between the expenditure in that province and other provinces of Canada as they appear to me. In doing that I may say that I do not wish particularly to quarrel with what has been spent in the other provinces of which I am going to speak. I have not been in these provinces, I do not pretend to say whether that expenditure was all justified or not, but I do say that if it was justified in those provinces it is more than justified in British Columbia and that that province should have received equal treatment with those other provinces. The two provinces to which I now particularly refer are Nova Scotia and New Brunswick and I wish to refer to them in connection with a subject which is very dear to the hearts of the people of British Columbia at the present time in the question of expenditure upon harbours and rivers in that province and the question generally of navigation.

Last session I gave to the House some figures as to the general expenditure by the government on harbours east of Port Arthur as compared with the expenditure on harbours on the Pacific coast. In those figures I find that in the period from 1898 to 1908 there have been expended on eastern harbours $7,396,446, while during the same period there have been expended on the harbours on the west coast of the Dominion only $256,178. I find from these same figures that the city of Halifax up to the year 1908 had expended on its harbour the sum of $1,695,732 and that the city of St. John had expended on its harbour $988,442. In the year 1909, St John harbour received a further appropriation of $475,000 and in the estimates for 1909-10 there is a sum, made up of three items, amounting to $538,500 for that harbour, so that at the end of the year 1910 there will have been expended on the St. John harbour the sum of $1,999,142. In the estimates for the present year I find further that the province of New Brunswick is to receive, in addition to the $538,500 for the harbour of St. John, a sum of $375,850 for harbour and river improvements generally. I find also that there is provided for the two provinces of Nova Scotia and New Brunswick a sum of $750,000 for dredging and assuming that one half of that will be spent in each province, the total amount appropriated for the province of New Brunswick in the present year for this service amounts to $1,241,850.

Now, in these same estimates I find a general appropriation for the province of Nova Scotia of $649,000 and adding to that half of the dredging vote ($327,500) there will be a total of $1,076,900 for the province of Nova Scotia. But, when we come to the province of British Columbia we find a very different condition of things, we find that the harbour of Victoria is receiving $65,000, that the harbour of Vancouver is receiving $90,000, that the province of British Columbia generally is receiving for dredging $225,000, that there is a general appropriation for harbours and rivers of $138,850 making $418,650 in all for the province of British Columbia. That is to say, that the province of British Columbia is to receive on account of these expenditures a sum amounting to a little less than twenty per cent of the total appropriations for the provinces of New Brunswick and Nova Scotia. In trying to find out a reason for this, which appears to me unjust discrimination, I have examined the tonnage tables and I find that the tonnage of sea-going vessels entered and cleared in 1909 is as follows:

Tonnage of Sea-going Vessels entered and cleared, 1909.

	Tons.
Nova Scotia..	4,367,946
New Brunswick..	2,099,189
British Columbia..	6,386,315

This shows that the provinces of New Brunswick and Nova Scotia combined have only 80,000 more tons than the province of British Columbia, and that the British Columbia tonnage is more than three times that of New Brunswick. But notwithstanding that fact the province of British Columbia receives for its harbours only forty per cent of the amount that is to be expended by the government in the province of New Brunswick. I have also taken the figures relating to the vessels engaged in the coasting trade, and I find the following result:

Tonnage of Vessels in the Coasting Trade.

	Tons.
Nova Scotia..	4,136,956
New Brunswick..	1,727,930
British Columbia..	8,820,616

That is to say, that the province of British Columbia has a larger coasting tonnage than the provinces of Nova Scotia and New Brunswick combined by 2,955,730 tons, or the coasting tonnage of British Columbia is more than double the coasting tonnage of the province of Nova Scotia and more than five times that of the province of New Brunswick. These figures relate to the steamships only. The sailing vessels are a very small proportion, and the foreign vessels, which I am not taking into consideration, only amount to 10 per cent. The figures in connection with sailing vessels and foreign vessels make no change in the result.

Mr. BARNARD.

Now, it occurred to me that possibly this was a new condition of affairs, and, therefore, I thought it would be advisable to take the tonnage of ten years ago and to compare it with the tonnage of to-day, and see which province was increasing the most and the proportion of increase. This gave me the following results:

Tonnage, Sea-going Vessels.

	Tons.
New Brunswick, 1899..	1,490,243
" 1908..	2,099,189
Increase..	608,946
or 40 per cent.	
	Tons.
Nova Scotia, 1899..	2,773,200
" 1908..	4,367,946
Increase..	1,594,746
or an increase of 57 per cent.	
	Tons.
British Columbia, 1899.. ..	3,595,438
" 1908.. ..	6,386,315
Increase..	2,780,877
or an increase of 75 per cent.	

I find that the increase of tonnage for the province of British Columbia in that period is 2,780,877 tons, and it is not only greater than the increase of Nova Scotia and New Brunswick combined by some 500,000 tons, but the increase of tonnage for the province of British Columbia is greater than the whole of the present tonnage of the province of New Brunswick. Now, in case it should be said that the figures with regard to tonnage are not a fair criterion of the amount of business that is being done at the ports of these provinces, I have taken the figures relating to the revenue received by the Dominion from imports and exports from the different provinces and the following is the result:

Year 1908-9.

New Brunswick exports...	$27,214,741
" imports. .	9,508,306
Total..	$36,723,047
Nova Scotia exports.	$17,363,405
" imports.... ..	13,257,960
Total..	$30,621,365
British Columbia exports..	$22,240,699
" imports. .	20,898,381
Total..	$43,149,070

That is to say, the imports and exports of the province of British Columbia are six and a half million dollars more than those of the province of New Brunswick, and twelve and a half million dollars more than those of the province of Nova Scotia.

Then, with regard to the duties paid by these different provinces, I find the following result:

Duties paid, 1908-9.

New Brunswick..	$2,164,694
Nova Scotia..	1,533,046
British Columbia..	4,469,970

That is to say, British Columbia paid three quarters of a million dollars more than both the other provinces combined, more than twice the amount that was paid by the province of New Brunswick, and nearly three times the amount that was paid by Nova Scotia.

In regard to the excise revenue, I find that the following amounts were paid in 1908-9:

New Brunswick..	$232,551
Nova Scotia..	156,725
British Columbia..	633,506

That is to say, in excise duties the province of British Columbia pays $244,230 more than both the provinces of New Brunswick and Nova Scotia combined, nearly three times as much as New Brunswick, and more than four times as much as Nova Scotia. The postal transactions of the three provinces are as follows:

	Net postal revenue.	Money orders issued.	Money orders paid.
New Brunswick..	$366,531	$2,306,280	$1,792,153
Nova Scotia.. ..	516,630	3,863,258	2,963,677
British Columbia	596,800	6,136,009	2,756,447

In other words, the total of money orders bought and paid in the province of British Columbia is more than it is in the province of Nova Scotia by $3,165,521 and more than it is in the province of New Brunswick by $5,794,023. I also took the trouble to obtain the clearing house figures for the cities of Halifax, St. John, Victoria and Vancouver, and found that the figures for Victoria and Vancouver exceeded those for St. John and Halifax, the largest commercial cities of New Brunswick and Nova Scotia, by $80,000,000 in one year. I wish to ask the government, and particularly the Minister of Public Works, for justice for the province of British Columbia in view of these facts. Never at any time were the prospects of that province as bright as they are to-day. We have now building, the Grand Trunk Pacific, which is going to open up a new port in the north; we have the Canadian Northern coming to Vancouver; the Panama canal will be finished very shortly; I have noticed in the daily press that the Tehuantepec railway is double-tracking its line because of the great amount of traffic crossing the Pacific ocean; and we have the movement in the province of Alberta to ship wheat through our ports on the Pacific coast. Only the other day I saw the statement in the press that one of the ministers representing the government of Alberta had a consultation with the government of British Columbia with a view of establishing in Vancouver elevators, to be owned jointly by the two governments, for the shipment of wheat. In the near future the trade of the Pacific is going to more than equal that of the Atlantic ocean. We see annually in the estimates a very large sum, I think this year it is $675,000, for the purpose of ice breaking in the St. Lawrence river. Any money that is spent in British Columbia is not going to be spent without producing a return, such as that for ice-breaking, because our ports are open the year round, and for any money spent this government will have a good asset. I can only attribute the attitude with regard to these expenditures to the fact that I suppose no one minister has time to read the blue-books issued by the department of another minister, otherwise they could not justify for one moment the contrasts to which I have drawn their attention. In conclusion, I trust that the government will take this matter into consideration and see fit to make some further appropriations for public works in that province.

Mr. ERNEST ROY (Dorchester). (Translation.) Mr. Speaker, I would much prefer answering in English to the remarks uttered by the hon member for Victoria (Mr. Barnard, who has just spoken. However, as I am more familiar with the French language, I hope the House will bear with me while I address it in my native tongue. The discussion of the budget, if I understand aright the rules of parliament, affords an opportunity to review freely the policy of the country under its various aspects, and for that reason its importance is very great. Of course, Canada's policy is that followed by its government, which is for the time being a liberal government. Under a system of representative government such as ours, the task imposed on the leaders is a comprehensive, responsible and difficult one. They are bound to respect the rights of citizens, and if they have a clear understanding of their duties, they feel it incumbent on them to forward the welfare of the community in all spheres of action. In brief, they are called upon to exert all their powers towards insuring the happiness of the inhabitants of Canada as a whole.

What does that happiness consist in? Thinkers, writers, poets, philosophers of all nations, of all times, of all epochs, have agreed in acknowledging that worldly happiness is essentially relative. It embraces an almost infinite variety of forms. Neither should we wonder at this, since happiness is the state of the soul when satisfied, and since the soul, being infinite by nature, is also infinite in its manifestations. Since the opening of this discussion on the budget, human happiness has been considered, more especially in its relation to money matters. Those who have approved of the policy of the Liberal government have made the welkin ring with the sweet sounds of

the silver and gold pieces gleefully jingling and singing the material prosperity of the country. On the other hand, those who, in the best of worlds play the part of the pessimist, have filled the air with their desperate wailings, not noticing that such wailings find no echo here, no more than in any other part of Canada.

I said that the happiness of a people was a very variable entity. If the happiness of a people consists in wealth, it must consist in wealth under its various forms. What is wealth to the aged man who fears to look ahead, thinking that death lurks near by and calls to him? What is a million dollars even to the young man replete with health, physical vigour and self-confidence? The young man relies on his strength, has confidence in himself, and looks with confidence to the future. He knows that by dint of energy and ambition he will succeed in conquering all difficulties on the way to happiness, and it is in that happy disposition that his wealth consists, while the old man's wealth consists in the wisdom which he has gained through life from day to day.

What is Canada's particular wealth at the present time? The Dominion has not as yet reached maturity; it is still in its youth, a vigorous youthfulness which betokens a bright future. Such is the real wealth of the Dominion. Canada is full of self-reliance, a self-reliance which is not the result of giddiness, of inexperience, but rests on solid ground, for that young Dominion has just tested its strength in a venture which might have proved fatal, but from which we have come out victorious. Two years ago, in 1908, a financial crisis swept as an immense wave over all the nations of the world.

Canada, like every other nation, was to feel the force of it. Would it stand the shock? One well knew that Canada had increased considerably in strength of late years, but so far had met with hardly any but favourable circumstances. How would Canada make use of its strength when confronted with a serious obstacle, with this severe test? That was the question which the government answered in the affirmative, and which the opposition, in their usual pessimistic mood, answered negatively. That depression is now over, and of all the countries whose economical life came under our observation and judment, none better than Canada withstood the test. And if I were not afraid my modesty would overshadow my truthfulness, I would even assert that no country under the sun underwent the ordeal better. The hon. Minister of Finance (Mr. Fielding) gave us a convincing proof of it on Tuesday night. To-day, I say it again, Canada is self-reliant because it knows its strength.

Why is it that Canada in so few years acquired so much importance? Why is it that Canada is everywhere known, respected and courted, if I may use the expression? Why is it that those nations having interests at stake with Canada make so much of its opinions and of its understanding of justice? Why is it that young Canada is treated with due respect and fairness in England, in France and at Washington? The reason is this, and was given by the hon. member for North Toronto (Mr. Foster) himself when he stated that the trustees of the people since 1896 knew their responsibilities and discharged them properly. That is the reason, Sir and the reason is moreover that these trustees understood that their trust consisted not only of the material wealth of the country, but of the moral and intellectual wealth of its people as well. In fact, no country could take its place among the nations, despite all the riches of the world, unless the heart and mind of its people were developed, as well as its natural resources.

The government had a hard task to fulfil. The programme which it laid down was vast, immense, difficult, but not above its strength, and it has pursued it unceasingly and with undoubted success ever since. In our days, when money cuts such a large figure, the first thing to be done after finding out what unbounded undeveloped wealth Canada had was to find the means to advertise these resources to the world. How did the government proceed to do that? In the first place, we must recognize that the premier's personality had, as early as 1896, drawn the attention of Europe upon Canada. His masterly eloquence had turned all eyes towards this country But the Prime Minister had also surrounded himself with active, intellgent and clever men in his cabinet, and these soon showed that Canada, from 1896 to 1898, had not been a sleeping country, but a hustling country. Canadian products were to be seen everywhere, in every exhibition, and on the markets of Britain, France and America. Our commercial agents were met all over Europe, and not only that, but we have seen Canada grant a preference to the British market and upon such conditions as fairly stunned powerful Germany. Some hon. gentlemen opposite found fault with the British preference. If you narrow down to a mere question of economic proposition, possibly it might, to all appearances, be folly on our part to have given something for nothing. But can it be forgotten that this preference has ensured Canada's economical independence by getting new markets for us, which taught us to straighten up our backs and show our mighty neighbours that we are not dependent upon them, although they thought they had us at their feet. This would more than indemnify us for what we gave Britain. We must not overlook the fact

that the British market is the most important of all, and that England stands at the head of all nations in that respect. Our introduction to that market, thanks to the preference we gave Great Britain, has advertised us more extensively even among our rivals. Is it not a magnificent advertisement from a business point of view? What is trade's foremost object, if not to secure customers. And in order to secure such customers, you have to advertise yourself. Thus, Canada in seeking competition on the British market made itself known to the markets of the world. To that point of view, the preference would rank among the cleverest political deals of this government.

Having spread Canada's reputation broadcast, having advertised its mining and lumbering resources, something still remained to be done by the government. Wealth does not lie in undeveloped resources. There remained to open up the great Northwest, and the older provinces understood that the best way to recoup themselves of the money lavished upon the Canadian Pacific railway in the Territories was to create there a market for the manufactures of the east. It was then necessary to direct immigrants to these provinces, and it will be this government's everlasting glory that they have initated this stream of immigration in the Northwest. Numberless populations were almost unable to live on the impoverished soil of old Europe. Did it not belong to us to invite them here on our uncultivated fields, rather than allowing them to starve in their native land, while we had absolutely idle farms in our Northwest, on which they could live and acquire some wealth?

The government realized that they were consulting their own interest and at the same time achieving a humanitarian work, when initiating a great movement of immigration to that region.

What happened, Sir? It happened that in every immigrant induced to come over to Canada from Germany, Norway, Austria, France and Great Britain, we had forthwith an agent who, satisfied with his position, wrote to his own friends in the old country and told them what an immense and magnificent country this Canada of ours was and what a happiness it offered to many of their countrymen who starved in their native country.

That active immigration policy has produced great results. We are told that we are too lavish in the expenditure of public money in the Northwest, that the Grand Trunk Pacific is going to cost many millions of dollars.. Quite true. But since we started building this railway, is it not a fact that over one million people have settled upon the vacant lands of the Northwest, and so they already help us to bear our financial burdens? Is it not true that the millions of bushels of grain produced by these new settlers and which supply our railway companies with freight have already begun meeting the expenditure incurred by Canada in developing that portion of our territory?

I do not intend to speak at any length on these matters, by indulging in too many statistics, though I am free to say that statistics sometimes serve a good purpose in adorning an otherwise arid and uninteresting subject, a fact which has been well illustrated the other day by my hon. friend the Minister of Finance. It would be useless to dilate any further upon the already well known causes of our material prosperity. If the government have joined in the friendly conspiracy of events to make us prosperous from a material standpoint, they have also realized their duty and their mission, by contributing to our intellectual development. And how did they do so, Sir? By readjusting the subsidies granted to the provinces. The provincial governments, having under the constitution, the control of educational matters are now able to devote larger snms in favour of education. So, the province of Quebec, —to mention a province with which I am more familiar—was enabled by that increased subsidy, to make an additional appropriation of half a million dollars for educational purposes. Schools are being built everywhere. Technical schools are being established—a matter which was mooted, the other day before the House, in the cities of Montreal and Quebec, having at their head devoted teachers and scientists.

I may further mention the founding in the city of Montreal of a high commercial school. Montreal, it is true, is a city of the province of Quebec, but it is the commercial metropolis of Canada. This high school will serve a useful purpose in allowing those of our countrymen who wish to take special courses in certain branches of commerce and industry, to receive in that school the scientific training which they need.

As to moral progress, it is a trite saying that a contented man is a virtuous man and that poverty is the mother of all vices. Now, never before did the morality of Canada rank higher than nowadays.

When you inspire a man with hope, when you point out the future to him and when, by focussing his eyes on that future, he foresees happiness in store for himself, for his children and his posterity, he shrinks back from crime. Now, in Canada an era of moral progress, so to say, has been ushered in. Therefore I say that the government have fulfilled their mission

and they have acquitted themselves with honor.

True, there is always room for criticism. But this is what must be expected in the work carried out by a political party and this is what is understood by the Canadian people, by our enlightened electorate. Instead of criticising minor details, mistakes which may have been made and which only small minds are prone to criticise you have to take a general view of the achievements of those men, as a whole. A man should be judged in the light of his achievements, as a whole. It is but fair that a government should be judged in the same way. Should the blunder or mistakes of that government outweigh their good deeds, then it is the duty of the electorate to turn them out, as happened in 1896. When, on the contrary, the sum of their achievements is found to be considerable and their faults are a negligible quantity, the Canadian electors do just what they did in 1900, in 1904 and in 1908: Vote confidence in those men who have so well administered the public affairs.

I could reply in a few words to the statement made a little while ago by the hon. member for Victoria (Mr. Barnard) about the maritime provinces. He said: You are spending a great deal of money and making large appropriations for New Brunswick and Nova Scotia, and yet these provinces yield less revenue than British Columbia which is receiving less than the maritime provinces. I could give to that statement a reply which any intelligent man would understand and it is this: If to-day British Columbia is able to make so much money, it is indebted for it to the Eastern provinces which placed that province in the position which enabled it to realize those gains, and it is but fair that the Eastern provinces should now get compensation for that expenditure.

But additional argument could be brought forward in connection with the naval question. The government is criticised for having spent $1,000,000 upon the harbour of St. John and $400,000 on the harbour at Halifax, and yet, there is only such and such a tonnage of sea-going vessels passing through those ports. Let us be fair and say that if we made such large expenditures for those ports in order to allow the port of Montreal to develop and assume the importance it is enjoying to-day, why is it that up to 1896, out of the seventeen or eighteen lines of steamships which had been using the St. Lawrence route, only three, namely the Allan line, the Thompson line and the Donaldson line, did really survive?

It is because their trafic was regular during summer only, and a tramp business during winter.

Now, in order to give to the harbour of Montreal the possibility to compete with the ports of New York and Boston, we had only one way to choose, it was to afford a trafic during summer and winter for our lines. After having supplied with modern implements St. John and Halifax we could keep for us a part of the trade going by New York, Portland and Boston. Therefore the province of Quebec is concerned in that expenditure, because these three harbours, Montreal, St. John and Halifax are bound up together for summer trafic and the others for winter trafic.

After all what kind of objection has the opposition against this government? Up to the present time I have heard some arguments made during last election. Imagination is the only creating power which remains with our friends opposite. Before the last campaign they had found some scandals relating to the Intercolonial or to the North Atlantic Trading Company and others fantasticals. There were dreams from their imagination but those poor dreams were brutally disappointed by the general elections of the 26th of October, 1908. To-day the members of the opposition contemplate those dreams with tears in their eyes. Let us respect those tears ; they belong perhaps to people stung with remorse. Let the opposition with its sadness and sorrow. Let the dead bury the dead and let the government well alive continue the work of the living.

Mr. SINCLAIR moved the adjournment of the debate.

Motion agreed to.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. I suppose this debate will continue to-morrow?

Mr. FIELDING. This debate will be continued. If concluded, we will go into Supply.

Motion agreed to, and House adjourned at 12.10 a.m. Friday.

HOUSE OF COMMONS.

FRIDAY, December 17, 1909.

The SPEAKER took the Chair at Three o'clock.

LOSS OF LIFE ON LAKE ERIE.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Yesterday the hon. member for South Toronto (Mr. Macdonell) made reference to the subject of wrecks on Lake Erie. I have received the following statement from the officers of my department:

On December 8 and 9 a terrific storm passed over Lake Erie. At that time of the year most of the vessels were in winter quarters and navigation was practically closed. A few vessels were, however on the lakes, and several wrecks occurred, with, unfortunately, the loss of a number of human lives, and great damage to marine property; among these casualties, one of the most serious was the wreck, or disappearance, of the car ferry 'Marquette & Bessemer No. 2,' running from Conneaut to Port Stanley. This boat is a United States register vessel built in 1905. She is 338 feet long, 54 feet beam and 19½ feet in depth, with a tonnage of 2,514 tons. This vessel being a foreign vessel and not doing any Canadian coasting trade, and not being a passenger boat, is not subject to the inspection clauses of the Canada Shipping Act. She is inspected at her home port, which is Erie, Pennsylvania, and is manned by officers having American certificates.

From the information available, it would seem that this vessel had sailed for Port Stanley and was caught in the storm of the 8th instant and went down in the middle of the lake. No trace has been found of the vessel, but one of her boats was picked up with several members of the crew frozen to death.

The harbour of Port Stanley is provided with two lights guiding vessels into the harbour. The main light is a very satisfactory one and is visible far out on the lake. A new gas beacon has been installed on the outer end of the enlarged breakwater, specially to accommodate the car ferry.

There have been no complaints made to the department as to deficiency in aids to navigation at this harbour, and as a matter of fact these aids are efficient and in good condition.

On Saturday last the car ferry 'Ashtabula,' plying from American ports to Port Burwell grounded on entering the harbour. This grounding took place at 8 in the morning, on a clear day, with the aids to navigation perfectly visible.

This vessel is also of American register, of a tonnage of 2,670 tons, her home port being Cleveland, Ohio. This vessel, like the 'Marquette & Bessemer No. 2' is manned by American officers, and does not come under Canadian inspection.

The cause of the accident at Port Burwell was probably owing to lack of water in the entrance to the harbour.

The Department of Marine issued a notice to mariners on the 16th October, describing the aids to mariners at Port Burwell, and giving warning that there was a shallow spot in the approach to the entrance. At this time of the year the water in the lakes is low, and the water might be further lowered by the storm which raged last week. This is probably the cause of the accident to the 'Ashtabula.'

The aids at Port Burwell consist of one main coast lighthouse and two pairs of range lights, of a fog bell on the outer end of the pier and of a small bell buoy at the entrance of the channel, 2,000 feet from the piers.

In the matter of fog alarms, it is not usual to instal fog whistles at narrow entrances so as to guide vessels towards these points. These whistles are rather used as indications of danger and vessels are supposed to keep clear of the points so marked. It is very difficult for a vessel to steer exactly on the sound of the fog whistle, and these alarms are reserved for points of danger, which should be avoided.

It is also extremely difficult to operate fog alarms at exposed points in the winter season, as the spray from the water freezes on the alarms and prevents their being operated. This is especially the case on the lakes where the fresh water freezes much more easily than on the coast and where the temperature is liable to be lower.

In the case of the accident to the 'Marquette & Bessemer' and 'Ashtabula,' it does not seem as if these accidents were in any way due to the lack of proper aids to navigation on the Canadian coast, and it does not seem as if any additional fog alarms, or other aids to navigation, would have prevented these casualties.

The president of the Lake Carriers' Association is quoted in the American press as authority for the statement that all navigation should close on the lakes on the 1st of December.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Mr. GEORGE TAYLOR (Leeds). Yesterday the leader of the opposition asked the Prime Minister with reference to five or six motions on the Order Paper, that they be passed unopposed, and the Prime Minister stated if the matter were mentioned to-day he would say if they could be moved.

Sir WILFRID LAURIER. There is no objection to any of the motions except No. 33.

The following motions were then severally agreed to:

For a return showing:—1. A description by sections, townships and ranges with areas of all lands included in the area controlled by the Southern Alberta Land Company under agreements with the government, and the date of expiry of such agreements?

2. A description by sections, townships and ranges with areas of all lands held under grazing lease or leases or assignment of leases and now controlled by Messrs. Cowdry and Maunsall, or either of them, of lands which lie between the Bow and Belly rivers, bounded on the east by range 12 and on the west by range 19, west of the fourth meridian.—Mr. McCarthy.

For a copy of all certificates recommendations, letters, memoranda and documents in connection with the promotion of Mr. McIntosh, on the 16th of November, 1908, from the position of division engineer, division No. 6, district F, to the position of assistant district engineer, district F, and the increase of his salary from $200 to $275 per month; also of all complaints against the professional conduct or efficiency of Mr. McIntosh made to the Transcontinental railway or the Railway Department before the date of promotion. —Mr. Lennox.

For a copy of all papers, reports, correspondence, etc., between the Department of the

Interior, and its officers and agencies, and any other persons, relative to the s.w. ¼ section 16-30-9 w. 3rd M., and the respective claims thereto of Thos. Paterson and J. F. Sibbard.—Mr. Lake.

1. For a return showing the names and addresses of the engineers who surveyed and located the line of the eastern division of the Transcontinental railway, and the part of the railway covered by the work of each engineer.

2. The name and address of the engineer who prepared the estimate of quantities and prices of the section or portion of the line covered by each contract.

3. The names of the engineers acting upon behalf of the Railway Department or Railway Commission, and the Grand Trunk Pacific Railway Company, in determining upon the form and wording of the specifications, as provided for by the seventh section of the agreement between the government and the company.

4. The names of such of the engineers acting in any of the capacities aforesaid, as subsequently acted in connection with construction, when and for how long in what capacity, where their services have been dispensed with, and for what cause.

5. The names and addresses of all the engineers in the service of the Railway Commission, or Railway Department, on districts B and F of the said eastern division, since the commencement of the construction of the railway, the capacity in which each was employed, the salary in each case, the promotions, increases of salary, retirements and dismissals which have taken place, the cause for promotion, dismissal or retirement in each case, and a copy of all complaints lodged with the commissioners or their chief engineer or the department, against any of these engineers.

6. The names of the engineers now in charge of or engaged upon districts B and F, and the official position and salary of each.—Mr. Lennox.

For a copy of all documents and papers relating to the western shipment of grain.—Mr. McCarthy.

FIRST READING.

Bill (No. 86) respecting the Western Canada Power Company, Limited.—Mr. J. D. Taylor.

BOUNTY TO SOUTH AFRICAN VOLUNTEERS.

Mr. TURRIFF moved for leave to introduce Bill (No. 87) to amend an Act to authorize a bounty to volunteers who served the Crown in South Africa. He said: My object in introducing this Bill is to enable either a South African veteran who has located his half section of land, or his substitute who may have located it, and who afterwards finds that the land is practically worthless, to substitute another half section within a certain time for the one originally located. At the present time, if one is unfortunate enough to have made that mistake—and a few have done so—he suffers a total loss of the value of the warrant.

Motion agreed to, and Bill read the first time.

DOMINION LANDS ACT AMENDMENT.

Mr. TURRIFF moved for leave to introduce a Bill to amend the Dominion Lands Act. He said: The object of this Bill is to amend that part of the Dominion Lands Act affecting purchased homesteads. At present a man who is not entitled to take up a second free homestead, may secure a purchased homestead by residing six months in each year for three years on the homestead and doing the necessaray improvements, and in addition paying the sum of $3 per acre. When he makes his entry he is required to pay $1 per acre in addition to the $10 entry fee. The same thing has happened in a few of these cases as has happened in the location of South African warrants, that a purchased homestead for which a man has made an entry afterwards turns out to be worthless; and this amendment is to enable the minister to give him credit for the $160 he has paid on account of the purchase, and allow him to make entry for another quarter section.

Mr. BLAIN. Are there many such cases?

Mr. TURRIFF. No, but there are a few, and they occur in this way. A man goes out and spends a month or six weeks and $100 or $150 in locating a quarter section. He selects half a dozen, but there is such a rush now for land that five or six townships may be put on the market on a certain day, and when he goes to the land office he finds perhaps a hundred men lined up at the door. He may be the 40th or 50th in the line, and by the time he reaches the counter every one of the five or six quarter sections he has selected may have been taken up. A man beside him suggests another quarter section to him as a good one, and he, to avoide the trouble and expense of hunting up another, with possibly the same process to be gone through again, makes entry for the quarter section suggested to him, pays the $10 entry fee and the $160 on account. He then goes out and looks at the land and finds it worthless. The law at present allows him to take up another purchased homestead, but does not allow him to get credit for the $160 he has paid. The object I have in view is to enable him to get credit for the money he has already paid on the land.

Mr. J. A. CURRIE. Mr. Speaker, is the hon. gentleman in order in introducing a Bill dealing with the revenues? Does that not pertain to a member of the government?

Mr. SPEAKER. If the Bill affects the revenue of the land in any way, it is subject to the rule.

Mr. TURRIFF. I think I can satisfy the hon. gentleman that it does not affect the revenue. I am not asking that the money should be refunded. I am only asking that another quarter section should be substituted for the first one selected.

Mr. J. A. CURRIE. I think that is a matter that affects the revenue. There is no provision made by any of our laws that money can be refunded by any officer unless it comes out of the consolidated fund. I ask for your ruling, Mr. Speaker.

Mr. SPEAKER. Before ruling, I should like to look into the matter. If the Bill has to be preceded by a resolution, it will have to stand. In the meantime, will it be read a first time?

Mr. FOSTER. It does not seem to me that it ought to be read a first time. If a question is raised and you are not prepared to rule, but wish to take it into consideration, I think the Bill should stand.

Mr. TURRIFF. I have no objection to allowing it to stand.

Bill allowed to stand.

MANITOBA GRAIN ACT AMENDMENT.

Mr. J. A. CURRIE moved for leave to introduce Bill (No. 88) to amend the Manitoba Grain Act. He said: This Bill is an exact copy of the Bill of last year, which provided for the weighing of grain at all terminal elevators, as well as at the terminal elevators at Fort William and Port Arthur. The grain is weighed there by government officials, and the vessels when they unload at the lower end of the lake find a very large shortage. This shortage amounted last year to thousands of dollars, I then gave the figures. It has been a great loss to vessel owners who carry the grain. The Bill provides that the Act should apply in the same way to terminal elevators at the lower end of the lake as well as those at the northern end of the lake. It simply provides that in all cases where the grain is deposited in a terminal elevator it should be weighed in and weighed out.

Motion agreed to, and Bill read the first time.

REPRESENTATION OF OTTAWA.

Right Hon. Sir WILFRID LAURIER (Prime Minister). I beg to inform the House that having been elected at the last election for the electoral division of Quebec East, and also the electoral division of the city of Ottawa, I now elect to sit for Quebec East, and hereby vacate my seat for the city of Ottawa.

THE FRANCO-CANADIAN TREATY.

Mr. FOSTER. Before the orders of the day are called, I want to read a short paragraph in a newspaper, and ask the Finance Minister a question with reference to it. I find a despatch from Paris which says:

> During the consideration of the Tariff Bill in the Chamber of Deputies to-day a blackeye was given to the importation of agricultural machines by the adoption of an amendment fixing the maximum rate on machines of over 400 kilograms (881·6 lbs.) weight at 15 francs (approximately $2.85) per hundred weight and the minimum weight at 12 francs. On machines under 400 kilograms weight the maximum is 23 and the minimum 15 francs. The present rates are: Maximum 15 and minimum 9 francs, irrespective of weight.

I would like to ask the Finance Minister if he has any knowledge that this has taken place other than what appears in the newspapers; and if he has not, and cannot therefore give an answer, will he be kind enough to keep it in mind and give the House an answer after recess?

Hon. W. S. FIELDING (Minister of Finance). I have no information except that contained in the public press. I judge from the reports that the matter is under consideration in the French Chambers, and that nothing definite has been determined. Of course, it is unquestionably the right of the French Chambers to change the figures of their maximum and minimum tariff. We could not deny them the right to do that under the terms of our treaty. In like manner we can change the rates on importations under our intermediate tariff on most of the French products mentioned in the treaty. However, during the recess I will endeavour to obtain more accurate information about it.

WAYS AND MEANS—THE BUDGET.

House resumed adjourned debate on the proposed motion of Mr. Fielding that Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the ways and means for raising the supply to be granted to His Majesty.

Mr. J. H. SINCLAIR (Guysboro). Mr. Speaker, another year has added to the history of Canada, and I feel sure we are all grateful to the Giver of all good that Canada has been so prosperous. My hon. friends opposite will be ready to join me in that sentiment, for I am told that since they have been in opposition they are more inclined to acknowledge our dependence on Providence than they were when they occupied seats on this side of the House. I wish to congratulate my hon. friend the Minister of Finance on the fact that it has been his pleasant task to make known all this prosperity to the House and to the country. Was ever a Finance Minister in Canada as fortunate as the present Finance Minister? He has had

the same cheerful story to tell us for the past 13 years. Last year it was feared by some of his friends, and perhaps it is not too much to say that it was hoped by those who are not his friends, that his good fortune had deserted him. But he is here again this year to tell us of the bountiful harvest, of increasing population, of expanding trade, and of a revenue that has reached a point that was never before touched in the history of this country.

Now, Sir, in listening to the debate since its commencement I could not help contrasting the hopeful tone of the Minister of Finance with the doleful forebodings of some of our friends on the front benches of the opposition. For my part I was sincerely thankful as I listened to this debate, that I belonged to a party in Canada who believe that Canada has a future, a party whose leaders are not driven on occasions of this kind to talk about such post mortem questions as the adverse balance of trade and reciprocity with the United States. The expenditure has been made the chief ground of attack upon the government. We are condemned for what our friends opposite choose to call the alarming increase in the expenditure of this country. Now, Sir, it is quite true that there has been an increase in the expenditure since 1896, but instead of being alarmed about il, we ought to congratulate ourselves that we have been able ta make this increased expenditure. It has been said in this debate, and it will be found, that this expenditure can largely be accounted for by reason of the expansion and prosperity of the country. Take for example the expansion of our postal service. The expenditure on the postal service in 1896 was $3,650,000, and the revenue was $2,964,000. In 1908 the expenditure was $3,592,386.40; on the other hand the revenue was $7,401,623.93. Now, Sir, is any sane man in Canada losing sleep over the fact that we doubled our postal expenditure since 1896, especially when he looks at the other side and finds that we have collected nearly three times as much revenue, on a lower rate of postage, as we did in 1896. But that is what my hon. friend from East Grey (Mr. Sproule) would call taking money out of the pockets of the people. We can get a similar illustration in the case of the Intercolonial. The expenditure on the Intercolonial in 1896 was $3,029,304.08, and the revenue was $2,994,201.93.

In 1909, the expenditure was $9,364,256.10. But in the same year the revenue was $8,583,100.79. And is there any man in Canada alarmed at the fact that we have more than doubled our expenditures on the Intercolonial railway when, on turning the page, and looking at the other side of the account, he sees that we have more than doubled the revenue during the same period. I submit that the Canadian people are not opposed to a generous expenditure of money, especially if that money is used in the construction of railways or other works that will develop the resources of the country. The question of expenditure has been submitted to the people of Canada three times during the last ten years. Our friends opposite will remember that they raised that question in the elections of 1900; they stumped this country and condemned the government in every school-house and hall throughout Canada for having raised the expenditure during the time they had held office. But when the returns came in it was found that the country had sustained the government notwithstanding all that had been said on this question of expenditure. In the following election, in 1904, these hon. gentlemen were even more emphatic on this question than they had been in 1900, and they got a more emphatic answer from the people. You will remember, Sir, that in the election of 1908, this question was again brought to the attention of the people. We all recollect how this little book, 'Facts for the people'—they were not all facts, but that was the name on the title-page—was sent out from this building in cartloads day after day prior to the election. And in that book was page after page condemning the government for the increase of expenditure. But when the election came, when the boxes were opened and the ballots counted, it was found that the government was again sustained; these hon. gentlemen got their answer. And, Sir, if this question were submitted to the people of Canada to-morrow, I have not the slightest doubt that they would get the same answer as they got before. Their leaders, I have noticed, sometimes try to formulate some policy on which expenditures should be made. Only a few days ago, the hon. member for North Toronto endeavoured to lay down a policy in regard to the expenditure on public buildings. He said that, in the smaller towns of Canada, where buildings could be rented at a cheap rate, we should not go to the great expense of erecting expensive public buildings, and he condemned the government for its expenditure in such cases. The present policy, he said, was wrong. I notice that he did not get the same cheers from the gentlemen sitting behind him that he usually evokes when he makes a speech. I watched the proceedings for a few minutes, and what happened? Why, man after man of his own supporters rose in his place and demanded a public building for his own constituency. That is the way his principle was received by his supporters. My hon. friend from Norfolk (Mr. McCall), last night, said it was very important indeed that some principle of that kind should be laid down. And I should not be disposed to disagree with him very much,

but I would ask him, in the first place, to do some missionary work among the men who sit around him and see if he can get two of them to unite in the laying down of a principle or policy for regulating this matter of the erection of public buildings. My hon. friend from North Toronto (Mr. Foster) was not satisfied to leave the question there. He brought it up again in the debate on the address last night and condemned the government again in very severe language indeed for constructing so many of these buildings in small towns. He charactorized this way of doing business as not a policy at all, but a mere piece of 'paltry, petty patronage,' if I recollect his language. But let me ask, who began this practice and continued it for so many years of our history? I recollect very well that in the old days, when my hon. friend from North Toronto was Finance Minister of this country, two of these buildings were erected in towns in the county in which I live, neither of these towns being very large. Take, for example, the town of Pictou. The population of Pictou at that time was about 3,000—I think it was a little less. Rent was very low in Pictou at that time; a building could be secured at a very low rate; I question if the government would pay more than $200 or $300 for the post office that was serving the people in that town in those days. And what did my hon. friend do, when he was Finance Minister and held the purse strings? He advised the House to vote the large sum of some $40,000 to erect a post office in the town of Pictou, and the post office was accordingly erected.

Mr. GEO. TAYLOR. Post office and customs house was it not?

Mr. SINCLAIR. No, a building for a customs house had been erected in the town of Pictou prior to that date, and this was a new building devoted altogether to the post office service. Now, suppose that I should use the language of my hon. friend in describing on characterizing that transaction and apply it to himself. His language thus adapted would read something like this:

What does it mean? It means that the trustee sitting yonder——

In that case, of course, the trustee was my hon. friend from North Toronto.

—allows to be taken out from under his key where he has it in charge $40,000 of the people's money for a mere matter of paltry petty patronage; that is what it means, nothing more and nothing less.

Now, I do not want to be understood as objecting to a post office being built in the town of Pictou. I would have voted for the post office in the town of Pictou at that time if I had the honour then of a seat in the House. Pictou is the shire town of the county, an old historical town—no greater in that way in Canada. In its crooked and narrow streets, when this country was a forest, walked the men who struck the first blow for responsible government in this country. The town of Pictou is worthy of anything of that kind which this government can do for it. But I would ask the question, is it a seemly thing for an hon. gentleman, as long as he occupies office, to carry on the distribution of money in this way and as soon as he is voted out of office by the people to turn around and say that his successor in doing the very thing he did himself is committing a breach of trust and is actuated by motives of petty patronage? I say it is not seemly to do that.

Mr. GEORGE TAYLOR. It is not very fair to compare Pictou, with a population of 3,000, with Richibucto, with a population of 600.

Mr. SINCLAIR: I am discussing the principle laid down by my hon. friend who said that if a building could be rented at small rent it was a breach of trust to expend all that money in erecting a post office. He says that in a place where a building could be rented for $300, you spend $40,000 in the erection of a post office, you spend $1,500 or $2,000 a year to keep it heated and attended to after you have built it. That is the kind of doctrine my hon. friend has been placing before the House day after day and year after year, and if his principles were applied to the town of Pictou, the town of Pictou would not have received a post office. If it was wrong prior to 1896 then my hon. friend was the chief sinner because he was the trustee, as he says; he held the purse strings, and so far as I know he has never shown any signs of repentance and he does not seem to have shown any yet. I have not the slightest doubt if he was in office to-morrow he would do the very same thing again. People who are apt to be disturbed about the conduct of other people ought to set a good example. It is a bad sign when a man is more solicitous about the conduct of his neighbour than he is about his own.

Since 1896 this country has enjoyed a period of enormous expansion. You may refer to any department of the government you please or to any blue-book you please, and you will find the same splendid story, a story which is perhaps unequalled in the history of the world. Take, for example, the traffic in the Canadian canals. In the year 1885 the number of tons of freight that passed through the Canadian canals was 2,673,641 tons. Ten years afterwards, in 1895, the number of tons was 3,336,068. In ten years the increase had been only about 663,000 tons But take the period after 1895, and you find that in the year 1908 the figure is not 3,000,000 but 17,502,820 tons, an increase of 14,166,752 tons in the freight passing through the Canadian canals, dur-

ing the period of this administration as compared with 663,000 tons in the ten years of the prior administration.

Then look at the traffic on the Canadian steam railways. In 1885 the number of passengers carried on the Canadian steam railways was 9,672,599. In 1895 it was 13,987,580. In 1908 it was 34,044,992.

Mr. LALOR. Is the Minister of Finance responsible for the increase of travel on the railways?

Mr. SINCLAIR. I am not referring to the Minister of Finance at all in this matter especially. I am referring to the splendid progress the country has made during the present administration and there would be no difficulty at all in connecting it with the government of the country if I chose to take the time to do it.

Every one remembers the condition of the west prior to 1896. The west had made very slow progress. We had spent a great deal of money, we had poured out our millions to assist in the construction of the Canadian Pacific railway but we seemed to get very small returns. We had millions of acres of the richest land in the world but we had no men to till the soil. These rich prairies were the home of the coyote and the gopher. Then came a change of government, then came a Minister of the Interior who knew the west, who knew how to make the west known to the world. He bent his great energies to the task that was given him and he succeeded. You know how he made the west known; he performed his task with great success and we see the splendid results of his work to-day.

While the country has enjoyed a period of enormous expansion, as I have said, the trouble with my friends opposite is that their minds and ideas do not seem to have expanded in the same proportion as the country. Many of them are still living in the old days before the fall. Some of them actually appear to consider that it is a calamity that with a lower rate of taxation we have a revenue of about $100,000,000 instead of $38,000,000 or $40,000,000. They think that is a very serious thing indeed and they are fretting over it. Let me tell hon. gentlemen who look at it in that way that their troubles are only commencing, that if they are going to keep mourning over this thing they will have much more mourning to do, that if they live ten years longer we will have a revenue in this country of $200,000,000 instead of $100,000,000 as at present.

I would like to point out some of the benefits that have accompanied and flowed from these expenditures which these hon. gentlemen have been condemning, and I shall confine myself in what I say on this point to that part of Canada with which I am best acquainted. Prior to 1896, the fishing population on the Atlantic coast were not making much progress; the fresh fish business was almost unknown, bait was scarce and sometimes impossible to get at the seasons of the year when it was most wanted. There were few coasting steamers to carry the products of the coast to market. In many ports there were no wharfs where a passing steamer could call. Now, Sir, all this is changed. Bait freezers dot the coast from one end to the other, enabling the fishermen to carry on their work at all seasons of the year Whistling buoys, bell buoys and gas buoys are found along the shores marking the rocks and dangerous shoals and enabling the coaster and the fishermen to get into harbour in darkness and fog. Breakwaters have been built in many places along the coast to afford protection to shipping. Public wharfs have been built in many harbours, harbours that were inaccessible before have been dredged, and subsidized steamers are calling at these harbours, collecting the products of the people and taking them to market.

All these improvements have cost a great deal of money, but they have had splendid results in the country, and while hon. gentlemen opposite have been complaining about these expenditures, while they have been obstructing the passage of the estimates, by which these things were done in many cases, there have been growing up on the coast of Nova Scotia, thriving villages, where these expenditures were made and our young men are remaining at home and establishing themselves there in place of going to Gloucester or Boston, or some other point in the United States. These are the things that are resulting from the expenditures that these hon. gentlemen have complained about so much. There is one phase of the policy of the present government for which I wish to give them a good deal of credit, and that is that they have given a great deal of consideration always to the little places notwithstanding the opposition of my hon. friend from North Toronto (Mr. Foster) and some other gentlemen on the other side of the House. We cannot all live in the big cities, and it would be a bad thing for Canada if we could. The best blood of the country, or of the nation comes from the country districts, and what we should aim at, what we are endeavouring to do in this country, is to make the life of the common man who lives in a country district as prosperous, contented and happy as we can.

Something has been done in this direction, but I do not mean to say that the government have done everything or done as much as they might or ought to have done. We must give the people of the country a better postal service, and we must also give them better railway facilities if we expect the young men to remain

at home in the country districts, or if we expect the people on the coast to remain on those hamlets and harbours which are so isolated. A few days ago, in reply to a question I asked the hon. the acting Postmaster General, I was informed that there are 101 post offices in the province of Nova Scotia alone that receive only weekly mails. I was also informed that there are 292 post offices in that province that have only two mails a week, and that there are 586 that have only three mails a week. This does not reflect too much credit on the Post Office Department, and I trust that something will be done to improve that condition.

The hon. the Finance Minister pointed out the other day in his address the gratifying success that had followed the policy of granting bounties on steel and iron. He suggested that the country had received their money back through the customs offices in those places where thriving towns had been built up as a result of this expenditure. I think that it was my hon. friend from North Grey (Mr. Middlebro) who felt inclined to dispute that fact. I can not concerned very much whether it can be proven or not. We have established the steel and iron industry of Canada and that is the main thing; that is what we tried to do when we agreed to give this bounty and we have succeeded in doing it. We had the raw material, we had the iron ore, we had the limestone, we had the coal, we had everything that was necessary, but we did not have any steel industry. Now, we have the steel industry established in two Canadian provinces and a commencement has been made in a third. If we had never got a dollar out of the customs house I would say that we had made a good bargain if we had spent these millions in establishing the steel industry in Canada, and if there is any gentleman here who would like to have the money back again and turn back the clock to where it was thirteen or fourteen years ago without any steel industry in Canada, I would like to see him stand up so that we can get his photograph. I do not believe there is a man in Canada who would wish to go back to those old days.

I was very much interested in the proposal of the hon. the Minister of Railways (Mr. Graham) to acquire the right to take over branch lines along the route of the Intercolonial railway. I cordially support that policy. I would go farther, Sir, and I would build branch railways in places along the Intercolonial railway where they are not now in existence and where the traffic would warrant the expenditure that would necessarily have to be made. We have eight or nine railway companies in the province of Nova Scotia alone and each of these companies has a board of directors. Each company has a head office staff, repair shops and all the expensive paraphernalia of a railway company. Most of them are at present unprofitable. If they were merged into one great company with one central office and were used as feeders for the main line, a great deal of money that is now wasted in keeping up these establishments might be devoted to extensions and improvements. I am told that there is an idea, or rather let me call it a delusion, in some parts of Canada, that the Intercolonial railway in some way is a great advantage to the people of the maritime provinces at the expense of the rest of the people of Canada. It is not the case. The people of the maritime provinces pay well for what they receive from the Intercolonial railway. The rates on passenger traffic are the same there as they are on the other great railways of Canada. The through rates on freight are the same. If there are slight differences along the line they are accounted for largely by the competition of water carriage or some other reason. As a matter of fact the Intercolonial railway has in some ways been rather a handicap on the progress of the maritime provinces, and the reason why it has been is that it has not been progressive. I have some doubts whether it ever will be progressive under government management. The machinery we have here is too cumbersome to run a business enterprise. We have to wait sometimes eight or nine months to get a little money voted to build an ice house on the road to keep business going and to keep the refrigerator cars supplied with ice. For any special expenditure we must come here. The directors of a great company could arrange that at once with a stroke of the pen. There are difficulties under government ownership that have been a handicap on the maritime provinces for many years in connection with the Intercolonial railway. I will tell you some of the things that they feel to-day to prove the point I am now making. For example, instead of establishing an express business of their own at the time the road was built, they handed the express business over to an incorporated company, which has bled the people of the maritime provinces for a generation and is still bleeding them. The fact they had to wait for thirty years before they wakened up to get leave from parliament to acquire the branch lines shows you how slow they have been as a business proposition. They never made any genuine attempt to acquire or increase traffic along the line. The Intercolonial railway only touches a few points on the sea coast—such places as St. John, Halifax, Mulgrave and the Sydneys. At these places the population occupies chiefly a narrow fringe along the coast. Any

up-to-date railway company operating there would have provided boats to collect traffic from the towns and villages along the shore and deliver it to the railway.

The Intercolonial railway never did anything of the kind; it was left altogether to private enterprise. If the traffic came the Intercolonial railway carried it, and if the traffic did not come the Intercolonial railway did not care. That is the way that railway has been managed all through its history. This last proposal of the government to take over the branch lines and operate them as part of the system has been satisfactory to the people of the maritime provinces, and it gives us a little ray of hope. I am quite sure that the present Minister of Railways is anxious not only to make this road satisfactory to the people living along the line, but also to make it a good business proposition. Let these branches be taken over under the legislation we have passed this season; let new branches be built where the traffic probably warrants the expenditure. Let the Intercolonial railway take over the business of the Express Company and develop that business. Instead of controlling every little detail of management from Ottawa or from Moncton let the superintendent of each division be given full charge and make him responsible for the results. Let more energy be expended in the task of developing traffic along that railroad; cultivate what is known in the United States as business snap, and I venture to say that in five years the Intercolonial railway will not only pay working expenses but will have a good balance to its credit for extensions and improvements.

Just one word more. My hon. friend from South York (Mr. Maclean) in his speech last night, took occasion to criticise the naval policy of the government, and he suggested the presentation of a Dreadnought or two at enormous cost. The speech of the hon. gentleman (M. Maclean) was interesting because it was the first note we had from the opposition benches during the session on this very important question. They have sat tighter on this than on any other question since I have had the honour of a seat in this House. But, as the hon. gentleman from South York sometimes appears to try to head off his leader and sometimes kicks over the traces, it is difficult to say how much importance we should attach to his speech as foreshadowing the position that the opposition are going to take. In the resolution passed by this House on the 29th of March last we voted for the establishment of a Canadian naval service to act in co-operation with the imperial navy, and the resolution to that effect was very plain and very clear cut. There was no suggestion in that resolution of presenting any Dreadnoughts to anybody, and there was a direct negative given to the other proposition for a cash contribution. Now, when we on this side voted for that resolution, we did so in good faith. We intend to live up to the resolution; we stand for a Canadian navy manned by Canadian seamen, officered as far as possible by Canadians, and absolutely controlled by the government of Canada. We stand as one man behind our chief on that question; there is no dissention in our ranks. I wonder if my hon. friend from South York can say as much for the men who are sitting behind the leader of the opposition. If we are to judge by the Conservative press, our friends opposite are not a happy family on that question. In Nova Scotia, the Halifax 'Herald' is regarded as the organ of the leader of the opposition, but occasionally it gives currency to a blunt statement, and in a recent issue I find the following pronouncement:

> If the Conservative party ever expect to gain power they must do something more than follow in the footsteps of the government on national questions.

I would call that a pretty plain hint to my hon. friend the leader of the opposition. It will be recollected that when the Liberal party came into power in 1896, Sir Charles Tupper, who was then the leader of the Conservatives, gave the new government only six months to live. He said that the Liberals did not have the genius to govern Canada, that he could not see any statesmen in the Liberal party that were equal to the task of government, and with the eye of an experienced leader he swept the horizon of Canada to the sky line, and he declared: there was no Napoleon of finance in the Liberal ranks to take the place of the hon. gentleman from North Toronto (Mr. Foster), and there was no captain of transportation to stand in the shoes of the hon. gentleman from North Lanark (Mr. Haggart). And, Sir Charles Tupper prophesied the complete and utter downfall of the Liberal government within the short period of six months. But, Sir Charles is an older man to-day, and I suppose a little wiser, and after thirteen years and six months of additional experience he is now imploring his dear friend the leader of the opposition to stand by this policy of the Liberal government. I have shown you that the leader of the opposition's own organ in Halifax is asking him to get on deck and take the tiller and steer a course for himself; I have shown you that Sir Charles Tupper asks him to support the government; which will he do, I wonder? Under the circumstances is it strange that the leader of the opposition is perplexed and embarrassed? But, Mr. Speaker, the very fact that he finds

himself in this dilemma is the highest compliment that can be paid to the policy of the government.

Mr. J. A. CURRIE (Simcoe). Mr. Speaker, I crave the indulgence of the House as one of its youngest members while I offer a few remarks on the financial questions discussed by the Finance Minister in his budget speech. I have listened to two of the hon. gentleman's annual financial statements with a good deal of interest. On the first occasion he was evidently labouring greatly to turn what was palpably a deficit into a surplus, and on the second occasion, while he still laboured to make the best of a bad bargain, there was a cheerful note in his speech. The Minister of Finance is a student of affairs who recognizes that the historian of the future stands at his elbow, and when he comes before this House and claims a surplus when as a matter of fact he has no surplus, what can he expect the future historian will say of him? There is no question at all but that the Minister of Finance has burdened posterity with a huge debt for which they will have the privilege of paying, and as to the incurring of which posterity, of course, has had nothing whatever to say. The hon. gentleman is a student of history, and doubtless hopes to attain to a niche in the Temple of Fame. No wonder he hesitates and inwardly groans at the story he has to tell The ghost of the future historian confronts him. The name of the Minister of Fiannce will be associated with this carnival of extravagance as that of the great Colbert was associated with the ruin of old France. For the hon. Finance Minister is playing the same part to a master as absolute politically and as reckless financially as any Louis of France. Sir, the people of this country still have recollections of the system of the Intendant Bigot, but they are prone to forget that they have instituted in the affairs of government to-day a system more odious and more exacting than any established under the old regime.

Let me point out that in discussing the finances of this country it is extremely difficult for a young, or even for an old member to secure what may be called definite information. We have various sources of information, most of it published by various departments of the government. We have the Trade and Navigation returns which are the product of the Department of Customs. We have the report of the Department of Trade and Commerce; we have the Yearbook, which is published by the Census Department; we have the Canada Gazette; we have the speeches of my hon. friend the Minister of Finance; and we have what we call the Grit campaign literature. Leaving out of the question the last named publication and also the speeches of my hon. friend and the Canada Gazette, we have three sources of information left in the publications of the country, and when we compare the figures of these three publications we find that they do not agree, but show vast discrepancies in the figures for the same items. What are we to understand from this? Each of these departments have the same source of information, and yet there is a vast difference in their figures. Let me quote, for the benefit of the Minister of Finance and the House, some of these figures. Take the simplest table contained in the three volumes, that is the comparative statistics of the exports and the imports of the country from year to year:

Year.	——	Exports.	Imports.
		$	$
1896	Statistical Year Book	117,684,799	110,587,480
"	Trade and Navigation Report	121,013,852	118,011,508
1900	Year Book	186,433,212	180,804,316
"	Trade and Navigation Report	191,894,723	189,622,513
1901	Year Book	196,487,632	181,237,988
"	Trade and Navigation Report	196,487,632	190,415,525
1906	Year Book	256,586,630	290,360,807
"	Trade and Commerce Report	256,586,630	294,286,015

The members of this House naturally suppose that these figures are given by disinterested parties and must be accurate. If they are, they must necessarily agree in all these books. But when we find a discrepancy of millions of dollars in the corresponding statements given in these blue-books, what must we expect to find in the other accounts? Is it a fact that we are standing on a volcano, and that the statement as given every year by the Finance Minister is a cooked statement? I do not want to accuse him of that; but the fact is that when a banker is wrong in his accounts the first thing done is to examine his trial balances to see if they are correct.

Mr. FIELDING. The figures first quoted are not mine, but are those of the hon. member for North Toronto in 1896.

Mr. J. A. CURRIE. The books are those published by my hon. friend.

Mr. FIELDING. They are all right when you get the explanation.

Mr. J. A. CURRIE. Another point which I wish to discuss in this connection is the question of the surplus. My hon. friend has assured the House time and time again that we have a surplus. He has made this out by charging up a number of items to special accounts. I would like to ask

him what authority he has for charging up anything to special accounts. I have read the Consolidated Revenue Fund Act and I cannot find any authority there which permits the government of the day to charge anything to a special account. The custom in England, previous to the days of Pitt, was to keep the accounts separate, so that it was impossible for any one to tell from month to month how the country stood financially. Pitt had an Act passed providing that the moneys paid to the government should be paid into one fund and that all the payments made should come out of one fund. That Act was passed in 1786, and, to quote the language of the Act, its purpose was 'to provide a fund into which shall flow every stream of public revenue, and from which shall issue the supply for every public service.' By this system treasury management was unified and strengthened, and the people of the country were able to ascertain the exact state of affairs at the end of the year —whether the country had a surplus or a deficit. I do not wish to be partisan in this matter, but it is a fact, according to the statistics published by the government, that if you balance the statements from year to year, you will find that since confederation we have only had surpluses in 1871, 1882, 1900, 1903, 1904 and 1907.

Now, the hon. Minister of Finance will say that his predecessors adopted the plan of charging up bonus accounts and other accounts of that kind, as outside charges, not against the Consolidated Revenue Fund in order to hocus pocus the public into the belief that there was a surplus. Now, whether that is the case or not, and possibly it may be the case, the fact remains that it is not correct. It is not right, and I do not see that the law gives him any justification for doing so. For that reason, I think that in considering the exact state of the finances of the country, we should consider this fund from the standpoint of whether there is a surplus of revenue as a whole against expenditures as a whole. Let us now see what the hon. gentlemen, in the past twelve years, have got in the way of surpluses. I propose to take the figures and examine them as they are taken and treated by the British Treasury.

Surpluses and Deficits—Deficits on Consolidated Revenue Account, June. 1895.

Year.	Deficits.	Surpluses.
1896..	$ 5,422,506	
1897..	3,041,163	
1898..	2,417,802	
1899..	2,317,047	
1900..	.....	$ 779,639
1901..	2,986,197	
1902..	3,349,086	
1903..	.....	10,222,101
1904..	.....	739,270
1905..	5,356,448	
1906..	818,811	
1907..	.....	3,371,118
1908..	14,289,000	
1909..	45,969,419	
	$85,967,479	$15,112,128
Total deficits..		$85,967,479
Total surpluses.. ..		15,112,128
Net deficits ..		..$70,855,351

Roughly speaking the total deficits during the regime of the hon. gentleman was $85,967,479, and his total surpluses amounted to $15.112,128, or a net amount of deficit of $70,855,351.

Mr. FIELDING. Has my hon. friend a statement for the preceding regime?

Mr. J. A. CURRIE. I could get it out of the blue-book. No doubt there had been a great many deficits and surpluses in previous years, but what I claim is this, that my hon. friend assumes that there is a surplus when his deficit is so very large, and amounting altogether to $45,969,419. Still he states that he has a surplus of revenue, because he cuts off $47,000,000 of the total expenditure, and he says: We will charge that up against a special account, we have not spent that, and when we do that we have a surplus. Now, Sir, if a man pays out money, for instance, for a bonus, it is not an asset. There is nothing to show for it. It is nothing tangible that I can see. It is like money paid out for charity. Now, why shall that not be charged up against the revenue of the country, and not be put down as a charge against anything else? Why should it be put into a special account and kept out of the total revenue and expenditures of the country? I claim that the hon. gentleman is deceiving the public. His predecessors in the Ontario government adopted the same plan. Every year the Prime Minister of Ontario, now Senator Ross, came down and told the people of Ontario that they had $4,000,000 or $5,000,000 of a surplus, and the surpluses were piled up until the public were led to believe that the money was so plentiful in the treasury that they could close the lid down. But when the new government took hold of affairs and made an examination they couldn't find even a bad quarter of a dollar. They had to go to work and recast the accounts in order to show a true statement of the affairs of the province. Now the hon. gentleman, as I say, is actually deceiving the public by not following the system adopted in England. It would look far beter in the end when he had to go into foreign markets to borrow money to make up the deficiency

The Minister of Finance took unction to himself that he had been able to make favourable loans for this country, and when he was taxed with the fact that the

loans were at too high a rate, he said that the rates for this country were no higher than other countries were paying. I took the trouble to look into this matter of loans. I find that Australia was in the market for loans about the same time as the hon. gentleman, and I find that the Dominion of Australia secured its loans at a much lower rate, at the same time, than the Dominion of Canada. The reason of it is, without any doubt, owing to the great expenditures of this country, the adverse balance of trade, and also to the fact that our accounts really showed an annual deficit; because you can not fool a banker. He will look at the figures in the way I am looking at them, and he can tell how much you have spent more than you have got in. Now, I find that the Minister of Finance raised £20,800,000, and Australia was in the market at the same time for £25,600,000. Australia paid before redemption of its loans 4·07971 per cent, whilst after the loans were redeemed the rate of interest was reduced to 3·42337 per cent. That is a very substantial reduction, showing that their financial system was sound, even though their foreign trade balances did not show so large an expansion as ours. Now, this is the table in Australia.

—	Interest—Old Loans.		New Loans.	
	Amount	Rate.	Amount	Rate.
	£	p. c.	£	p. c.
New South Wales...	178,547	4·12	159,286	3·65
Victoria	611,455	4·14	521,128	3·35
South Australia.....	118,154	4·00	107,637	3·62
West Australia.....	68,239	3·77	63,277	3·21
Tasmania	26,863	3·52	26,384	3·23

The hon. Finance Minister is paying, since redemption, 4·9 per cent, 3·7 per cent, 4·3 per cent, 3·8 per cent, 4·5 per cent and 4·4 per cent. That does not speak well for the financing of the hon. Minister of Finance, and it shows that the financial affairs of this country are not looked upon with such a tremendous amount of favour as hon. gentlemen opposite look upon them. Now, I have explained the deficits as they should be taken in accordance with the English practice of finance, and it is the only correct practice that we should take.

Now, let us consider the question of expenditures. Hon. gentlemen opposite take great credit to themselves that they are expending large sums of money. It is one of the principles they lay down to everybody who wants to go on the stump for them; you must talk big expenditures to the people; they like it. We have heard it proclaimed here: Wait for eight or ten years more and we shall have $200,000,000 revenue to expend. Who provides this money? Does it not come out of the pockets of the people? I do not think that anybody, even on the other side, denies that the people pay for these large expenditures. These revenues do not come down like manna from the heavens. The people have to pay in 'hand-made dollars', as my hon. friend from Norfolk (Mr. McCall) says. We are told that the foreign trade of this country is growing by leaps and bounds. So it is. But when we consider the ratio of our expenditure to the foreign trade, we find that we are expending virtually fifty per cent of our total exports which are really the surplus of the earnings of our people. In 1906, our exports of home products amounted to $235,483,956, and our expenditures for that year were $67,204,641, or 27 per cent of the exports. In 1909, our exports amounted to $245,603,584 and our expenditures to $112,578,680, or 49 per cent. Where is the county council or municipal council that would dare to expend nearly half of the surplus products of the municipality in public works? The ordinary municipality will produce about $250,000 of surplus to be sold in the town. Would the township council dare to expend $125,000 a year on roads and in other public services? The government stands in the same capacity as trustees of the whole people of the Dominion, and it is from our exports, our surplus products, that they must derive their revenue. It is indeed a startling fact that the expenditures have reached such enormous figures, and that they are increasing so rapidly that if we continue, we shall soon see the time when we shall expend more than the total of our exports.

Now, compare Canada in these relationships with other countries, and we shall better understand our position. Canada, with a population of seven and a half millions, according to hon. members opposite has a revenue of $85,093,404, and a total trade of $571,268,707. Switzerland, with a population of eight millions, has a revenue of $25,000,000 and a total trade of about $500,000,000—practically the same as our own. So we are virtually spending the money of the people of this country nearly $60,000,000 more than is spent by the government of Switzerland for a similar population. That is one fact that goes to explain why our finances are not so rosy as those of Australia, as shown by the table I have already given.

Another question that is discussed in this debate is the question of capital account. The question is a very difficult one. What is capital account? It seems to be something like the question Pilate asked: What is truth? In an ordinary business, a man considers his capital to be what he pays for land, buildings and plant

and what he keeps for working cash in his business. If he puts money into a machine and that machine breaks down and proves a failure the expenditure is written off to profit and loss. But this government has been adding to its capital account without taking into consideration whether there was an asset to represent each expenditure. There is no loss account. The increases in our capital account since this government came into office have been as follows:

1896	$3,781,311 00
1897	3,523,160 00
1898	4,143,503 00
1899	5,936,343 00
1900	7,468,843 00
1901	7,695,488 00
1902	10,698,638 00
1903	7,052,725 00
1904	7,881,719 00
1905	11,933,492 00
1906	11,913,874 00
1907	11,329,144 00
1908	30,429,907 00
1909	49,224,000 00
	$172,392,154 00

This is the total of additions to capital account made by the hon. gentlemen opposite since they came into power. As the total addition to capital acount since confederation has been $372,535,315, this means that the additions made by previous administrations amount to about $200,000,000. For its share of these expenditures, the Conservative governments could show the Canadian Pacific railway, the northwest lands, the Welland canal, the Sault canal, the St. Lawrence canal and the Intercolonial railway. These are all substantial assets. Many of them are yielding an actual return. The canals would pay to-day if the government chose to charge for ships going through them. No doubt, the policy of not making a charge is a wise one. The Intercolonial makes no money return to the government. But private management would change it from an expensive luxury, as it is now, to a valuable and profitable asset. I believe there are railway men in America who would pay the government dollar for dollar what the Intercolonial cost if that road were handed over to them, showing that it is a substantial asset notwithstanding that under this government it is losing money every year. The northwest lands are returning about $2,500,000 a year of revenue. Thus, on the capital account expenditures made by Conservatives we are having satisfactory returns. In the majority of cases, these were capital expenditures in the true sense. But the capital expenditures of the hon. gentlemen opposite, in such things as post offices and so on, are of an entirely different character. I do not see how these can be counted capital expenditures, for I do not see that there is any substantial asset to represent them.

The question of trade balances has been touched on several times. There is a good deal of difference of opinion amongst financial men and political economists as to the value of trade balances. Some claim that what is known as an adverse trade balance is an advantage to a country like Great Britain. We must leave Great Britain out of the calculation altogether because we must remember that the vast amount of revenue of England and the English people is derived from one source, and that is that they have placed a tax for the carriage of goods, for transportation, upon all the commerce of the world. Their chief revenue is from that source, not so much from the actual trade done in Great Britain itself. I will leave that altogether out of the calculation and come down to our trade balances. If we have an adverse trade balance it must be paid for in some way. Hon. gentlemen may raise the point that then commodity must pay for commodity and that gold is only a commodity. We will satisfy them and say, for the time being, that gold is a commodity, include coin and bullion in the trade returns and find out where this country stands and whether we are going back or forward in relation to trade. That is the only true test. If you add in the gold and the goods you export and import; the question whether or not gold is a commodity does not arise at all. I have here a table giving the balances of trade for and against us during the present administration. The figures are:

Year		Amount.
1896	For	$ 749,319
1897	"	22,709,102
1898	"	28,826,947
1899	"	285,782
1900	"	5,628,896
1901	"	15,249,644
1902	"	7,848,671

Thus there was a total balance of trade in our favour from the beginning of the administration of the hon. gentleman up to 1902 of $87,646,381. The world began to realize that Canada was becoming a great country the moment the trade balances changed in that way in our favour, and times became good, as every hon. member knows.

From 1903, there has been a series of adverse balances as follows:

Year		Amount.
1903	Against	$ 7,840,791
1904	"	37,443,097
1905	"	58,608,682
1906	"	33,774,177
1907	"	51,977,685
1908	"	52,422,010
1909	"	48,244,449

Thus there has been a total adverse balance since 1903 of the enormous sum of

$290,310,892. If we subtract the favourable balances from the adverse balances during the administration of the hon. gentlemen opposite we find a total adverse balance of $202,664,511.

The hon. gentleman from Red Deer (Mr. M. Clark) is a great believer in the doctrines of Adam Smith and also of Jean Baptiste Say, his great disciple in France, Adam Smith says that a balance of trade being against a country is not good for it, because commodity must pay for commodity.

Mr. M. CLARK. Will the hon. gentleman tell me in what part of Adam Smith's work that occurs?

Mr. J. A. CURRIE. I am sorry I cannot find the book in the library, they have only a precis on it (The Wealth of Nations).

Mr. M. CLARK. I carefully reread and marked Adam Smith's Wealth of Nations this summer and did not come across any such statement.

Mr. J. A. CURRIE. Does he not say that commodity must pay for commodity?

Mr. M. CLARK. But he does not say that an adverse balance of trade is bad.

Mr. J. A. CURRIE. That is all I say, that commodity pays for commodity. The most advanced economists, such as Ricardo and Thorold Rogers, accept gold as a commodity, and I have added it here, by including the coin and bullion, and I find an adverse balance now of $200,000,000 against us. There is no denying that you have $200,000,000 to pay back in some form more than you had before, and I believe it is being paid back by extensive borrowings on the part of the people of this country. Hon. gentlemen opposite will not deny that almost every railway and even the government has gone into the markets for large sums of money. My claim is that the evil day is coming, there is no question about it. The hon. gentleman made an unfortunate remark last session in comparing the growth of this country with that of Egypt. If the hon. member examines the figures for Egypt prior to the time when bankruptcy overtook her and she refused to pay her bonds, he will find that the figures for trade and borrowings and expenditures corresponded almost to a dollar with what we are doing. Two very bad crops would put our customs houses in charge of the foreign. creditor The difficulty which the Finance Minister has experienced in floating his bonds shows that the world has not the same confidence in this country's finances as hon. gentlemen opposite.

The question of trade balances has to be considered in this way. It is really a question of whether domestic trade is better for a country than foreign trade. I do not think that any one will for one moment question the statement that a dollar put into trade at home is better than two dollars put into trade abroad. The number of times that dollar will turn over will increase its value or the earnings from it at a ratio three or four times greater than that of the dollar invested in foreign trade. Hon. gentlemen opposite point out that the export trade of the country has shown a great expansion and claim that as a point in favour of Canada. Let me point out that when there are hard times in any country, its total foreign trade is larger than when there are good times in the country. The question is simply this, if you are going to turn all the people in this country into producers of raw materials, and if they have to send these materials abroad, they must necessarily buy finished goods abroad and bring them into Canada. That will give you a large foreign trade. You are putting our people then in the position of those of whom the English traders said that they were forced to sell the hide for sixpence and buy the tail back for a shilling. Foreign trade in the first place is not so remunerative for the simple reason that a dollar expended in domestic trade gives a gain to two men who are in the country, the one who buys and the one who sells, whereas if that money is expended in foreign trade, it benefits only one person living in the country, the other beneficiary residing in a foreign country.

I do not wish to go into any long dissertation on the political economy of this question or the question of trade, but I want to point out that the tariff policy of the Finance Minister is not one that should commend itself to the country. There does not seem to be any effort on the part of hon. gentlemen opposite to find out exactly what policy they have. The Minister of Finance is a tariff-for-revenue-only-man. The right hon. the leader of the government (Sir Wilfrid Laurier) is a free-trader, I understand, that is his ultimate goal, he is a Cobden man. Others who have spoken in this debate are of another school altogether. The young men in this country and in the United States who are studying political economy are not overshadowed with that dead hand of Adam Smith and those old economists who taught only one thing and would not see outside their own narrow views These modernists have catalogued the various schools of economists, just as doctors are catalogued. If a doctor is a homeopathist, there is no other opathy for him. If another doctor is an osteopathist, there is in his eyes no cure for the human mind or body except osteopathy. It is the same way with most of these economists. Political economists of one kind think there is nothing good in political

economists of any other kind. They will argue blindly for their principles and in opposition to those of any other school. But the only true test of any form of economy, as it is with any of our modern sciences, is the actual test of experience. I said that I would, for the benefit of the hon. member for Red Deer, give him a list of a few of the schools of economy as they are catalogued. I do not wish to delay the House, but, while it is not of very much importacne to some hon. members, perhaps there may be people outside of this House who do not look upon it in that way.

We find first of all, in the history of economy, what is known as the Mercantile school. The Mercantile school claimed that the principal end of government was to have plenty of money in the treasury. I think that stamp of economy would fit the Minister of Finance to a nicety. The only thing that this government thinks essential to-day is to have plenty of money in the treasury. Amongst the men who advocated that theory of government was Turgot. The right hon. Prime Minister has quoted very often that famous old saying of Turgot that colonies are like ripe fruit; when they attain a certain ripeness they fall to the ground. Turgot was the first man to enunciate that doubtful principle and he was one of the leaders of that school. Colbert, the great French Finance Minister was a believer in the system of the Mercantile school advocated by Turgot. The result was that under this system of economy the country was exploited for the benefit of the treasury. I do not think any body can justly say but what this government are trying to get every dollar they possibly can out of the people in the form of the duties which are at present in force because they say that we must have more revenue in order that we may have more expenditure. This, I believe, places the Minister of Finance amongst the followers of the mercantile school. We come now to another school, that known as the Agricultural school. That school is represented by Quesnay, a French economist, who laid down the principle that there was no wealth in anything except agriculture. That agriculture alone produced wealth and that all other industries were sterile. That school flourished for a number of years led by Quesnay and his associates. Its teachings prevail to-day to some extent amongst hon. gentlemen opposite. They would like to drive manufacturing and other industries out of the country and have nothing except the agricultural interests. But that school, was not of very great importance. The next school that succeeded it was the cosmopolitan school. The cosmopolitan school claims Adam Smith as one of its leaders but Smith was too clear-headed a man to be a leader of the cosmopolitan school, and we find, in reading the books of Adam Smith, that his arguments are sometimes very strongly protectionist. Adam Smith was a clear-minded man and he had clear views on economic questions. Other economists of this school whom I might mention are Ricardo, Cobden, Thorold Rogers and writers of that description, coming down to Lloyd George who is the latest advocate in the field of this system of political economy. The principles of the school are that material interests as well as national interests are best advanced by being unobstructed by the intervention of government and that there should be free trade between the various countries. That is the school which prevails in England to-day. There is another school of which we have not heard very much, perhaps not enough, and that is the Indstrial or national school founded by Alexander Hamilton, the great financier and economist of the United States and a friend of General Washington. The principal laid down by Hamilton was that it was in the highest interests of the country that diversified industries should be fostered and that the United States government should be called upon to act in such a way that these industries would be protected from time to time especially in their infancy. I have stood in the churchyard of Trinity, at the corner of Wall street and Broadway, New York, and I have looked on the plain marble shaft that marks the spot where that man now rests and where he was laid after being slain by the bullet of an assassin.

Sir WILFRID LAURIER. No.

Mr. FIELDING. It was a duel.

Mr. J. A. CURRIE. In a duel with Aaron Burr.

Mr. FIELDING. Not an assassin.

Mr. J. A. CURRIE. Well, his own friends claimed that he was assassinated. You look around for several miles on each side of his grave and see signs of prosperity based upon the doctrine which he laid down. You can go for miles and see large buildings and factories costing millions in that city to-day and there is no question that the policy of Alexander Hamilton is at the base of the system of finance in the United States which made possible this prosperity and wealth. Any one who reads the state paper that he wrote to General Washington on the industries of the United States will find that it contains the germ of the principle of industrial protection which has brought the United States to be such a great country as it is to-day. But we find that the United States did not follow the system of Hamilton always. This country adopted that system. We adopted the protective system in 1878, but the pro-

tective system that we adopted in 1878 has not been adopted in its entirety or in line with the system which was adopted in the United States. This school of protection is not called the protective school. It is called the industrial school of economy. There is another school which followed, and which is not thought very much of by the people of this country, but which has attained to some eminence in the United States and that is the high protective school whch lays down the doctrine that it would be to the interest of the country to foster nothing else but the manufacturing industry. I do not think there is any hon. gentleman in this House who believes in that doctrine, although the Finance Minister is always very fond of calling some hon. members on this side of the House high protectionists. I do not wish to be considered a high protectionist. I believe the proper policy for this and every other great country should be the policy of industrial protection. I could, if time permitted, outline the struggle that took place between the school of Hamilton and the free trade school in the United States. The history of that struggle shows that on nine separate occasions the free traders scored a majority at the polls, and that on every occasion on which they succeeded in gaining their point one thing occurred—and we have it in this country—and that is that there was an excessive land speculation followed by panics, because the currents of trade ran too strong in the direction of agricultural pursuits. I could show that in one year, away back in 1846, $24,877,179 worth of public lands were sold in the United States. Those who have written on that period will tell you that town lots in places of two or three hundred population were selling for as much as some lots are selling for to-day in some villages in our Northwest. The natural tendency of any disposition to adopt free trade has been to accentuate land speculation in the country at the expense of legitimate trade. I do not think the House will object to my embalming in 'Hansard' the words of one of the most noted writers on this question in the United States. I shall do this for the benefit of the Finance Minister, who, I hope, will read them over carefully and will study the experience of the United States. The people of the United States are an extremely practical people. They will not accept the theory of any school or any principle, either in their science or arts or politics, without having satisfied themselves by the test of actual experience, because they have found that all their advancement has been made by following inductive principles rather than the deductive methods of the old school men. Professor Thomson, of the University of Pennsylvania, who is one of their leading economists, says:

> Nine times in one hundred years the American people have changed this fiscal policy. Sometimes carried from protection towards free trade by the influence of specious theories but as often driven back to protection by hard experience. The two periods of highest continuity under any policy is the protective period which follow the establishment of government, 1789-1801, and the protective period in which we are now living. Four times the scaffolding of the tariff has been thrown down from the uncompleted edifice of our industrial development, and as often the work has been begun again, if not from the foundation yet from a point much less advanced than has been reached under the previous protective tariff. This time it seems to be the nation's purpose that the scaffold shall be kept up till the roof is on.

Now, Sir, some of us have memories dating back to 1893, and we remember the troublous times they had in the United States, and that these troublous times were due to a strong agitation that had arisen for free trade. That free trade agitation was succeeded by a financial panic and the panic of two years ago was accentuated largely in the United States by the fact that no great enterprises were undertaken because they did not know whether the country was going to go back on the tariff or not. Some people in the United States threatened they would reduce the tariff, but as a matter of fact they did not do it. True, they revised the tariff in the United States last year, and, although there may be one or two small items of local significance on which the duty was reduced, yet, taking it on the whole, what they have done is to increase their tariff. I do not deny the United States the right to increase their tariff, but I do say that we should meet the United States with tariff for tariff. Let us see how the trade between Canada and the United States works out. In the fiscal year 1909, we purchased from the United States goods to the value of $170,056,179, and we sold to the United States only $91,022,389. Every year the balance of trade with the United States is against us to the extent of close on $100,000,000. But look at our trade with England: Our total imports from the United Kingdom were $70,682,101, and we exported to the United Kingdom $133,745,123, showing a large balance of trade in our favour. It is the same story every year, and the reason is that in spite of the so-called preferential tariff the average rate of duty upon British goods is higher than on goods purchased from the United States. Last year the average rate ad valorem on British goods subject to duty was 25·775, whilst the average rate on goods on which duty was paid coming from the United States was 24·868. This shows that in spite of all this flub-dub about loyalty and flag waving, and all this cry of Dear old England and the preference which we hear from the Lib-

erals nowadays, the actual fact is that the average duty on British goods is fully one per cent greater than the average duty on American goods. Now, I say that is not fair. Look at how the farmers who live along the boundary line between Canada and the United States are hit. In New Brunswick they have been shipping potatoes into the United States, but the American government has raised the duty on potatoes to 40 cents per bushel and our duty on potatoes coming into Canada from the United States remains at 20 cents per bushel. The Americans send thousands of bushels of potatoes into Canada because their potato crop ripens earlier than ours and yet the Canadian farmers in New Brunswick are practically prohibited from sending potatoes into the United States. In view of such things as this, I ask the House, and I ask the government, is it not fair that we should adopt the principle of putting tariff as against tariff. I think I have demonstrated conclusively that so far as this boasted preference is concerned, so far as this three or four column tariff is concerned, it works adversely to British interests and in favour of United States interests.

Now, the Macdonald National tariff was revised in 1894, and to my mind that revision was very unsatisfactory From the time the tariff of 1878 was adopted by the Conservative government there was a constant agitation by hon gentlemen opposite against it. They ask us to-day to forget the tariff and to take the tariff out of politics, but when they were in opposition, did they take the tariff out of politics? Not for one moment. They created an agitation in this country which in 1892, 1893 and 1894, led the people to think that they might wake up some fine morning and find Canada a part and parcel of the United States. The Liberals of those days spread a cry through the country which was closely akin to treason, and they railed as loud as they could against what they called the terrible tariff then in existence. The Conservative party wavered in the face of that struggle and they changed the tariff and to my mind they changed it in the wrong direction. I am a young member of this House, but in the honesty of my conviction I must say that the change which was made from a specific to an ad valorem tariff basis was not in the interest of Canada. That ad valorem basis is still present in the tariff to-day and how does it work out? When the Liberal party came into power they said they wanted an ad valorem tariff and they decided to keep the ad valorem tariff that was then in existence, and by it they declared that whilst the manufacturer might manufacture a few goods in this country they would see that half the stuff that goes into consumption is brought in from the outside and the government would collect a profit on it. What the government did was to divide with the manufacturer of this country half of his profit and put it in their pockets. What is worse, they divide a large proportion of the profit that the farmers are making, and they put that in their pocket also. Every one who reads the trade figures knows that the farming industry has suffered enormously from an ad valorem tariff. Let me say that if this country had during the last four or five years a tariff based on specific duties, we would not have been affected by the financial panics in other countries, because the producers of other countries could not have thrown into the Canadian market their surplus products. With an ad valorem duty in force they are enabled to do that. Do we not know that the government had to establish a dumping duty so that officials could be sent abroad to make sure that foreign goods were not dumped into this country at too low a valuation? Is it not plain to any man that if the duties were specific it would be much simpler and much better and that as a result we would not have had the panic accentuated as it was last year and the year before? I do not think there is any one who believes more in his heart than does the Minister of Customs that this is the absolute truth. We on this side of the House have been asked by the government what fiscal policy we would propose These gentlemen opposite are always very anxious to know from us what should be done, and of that we have had examples since this debate commenced. We have seen them trying to read the riddle of the sphinx. We have heard them asking what is the Conservative party going to do on the navy question. Well, Mr. Speaker, the answer is simple enough. The Conservative party will give that answer when the First Minister lays his policy on the table and not before, and that answer will be in the interest of Canada. In the language of Mrs. Pankhurst: We will be there, and the Conservative party will offer the country at least as good a policy as gentlemen opposite have to offer and we will be united on that policy.

Mr. LALOR. If you tell them now they will steal it.

Mr. J. A. CURRIE. Certainly, they would adopt it at once as they have in the case of other policies of the Conservative party. Let me point out how the present ad valorem tariff works disadvantageously to the farmers generally. I suppose everybody believes that the farmer is the happiest man in the world, and the hon. gentlemen opposite are very fond of boasting that the Canadian farmers were never as prosperous as they have been under this

government. They try to show that they are the people who make the sun shine and bring prosperity. These hon. gentlemen forget that if governments bring prospsrity there are certain sections of this country that are exceedingly prosperous at the present time. Let us see where they are. British Columbia is prosperous beyond a shadow of a doubt, with a local Conservative government. Oppressed for many years by the shadow of the Liberal government, with the withering hand on them, the people of that province never succeeded until there was a change, and they got a good Conservative government. Go to Manitoba, and what do you find? Since the Conservatives came into power there, every local interest has received a fresh stimulus. Come to the province of Ontario and you find that the prosperity there is due to the fact that the local interests of the province are looked after by the Conservative government of Mr. Whitney. Is the same measure of prosperity to be found in the province down by the sea? Ask any member from Nova Scotia. I would tell the gentleman from the maritime provinces that if they hope for prosperity in those provinces, they can bring it about, in both Nova Scotia and Prince Edward Island, only by turning out Liberal administrations and putting in Conservative administrations. My hon. friend the Minister of Finance takes all the credit to himself for the existing prosperity of the country; but the contrary is the fact. Wherever any of these provinces have tried to do something for their local interests, this government has been against it. I could enumerate a great many instances. They dis-allowed the anti-Japanese law in British Columbia, which was intended to preserve the labour of the province for the white people. The province of Ontario has tried to improve the facilities of manufacturers by providing cheaper electric power. Hon. gentlemen opposite have not dared too utter too strong a voice against that, but they have always made a silent attempt to put it down. Now, let us see whether the farmer has been benefited by this tariff or not. Let me remind the Minister of Finance that his government has never dared to go to the country on the question of a tariff for revenue only. Only once in the history of this country was that issue fought out at the polls: that was in 1878; and the hon. gentlemen opposite know the result. The hon. Minister of Finance and his leader know that if they dared to disclose their true form on that question, they would not come back with a majority. I have said that the present system of a low tariff that shifts both ways and takes a chunk out of the manufacturers and the producers and puts a lot of revenue into the public treasury, works adversely to the farmer. I will quote some figures of imports of foreign farm products to show how it works:

Year.	Amount.
Provisions—	
1905	$1,694,623
1908	4,155,908
Lard—	
1904	$ 67,914
1908	1,074,466
Eggs—	
1905	$ 74,107
1908	222,207
Butter—	
1906	$ 64,519
1908	192,663
Green fruit—	
1904	$2,676,648
1908	5,312,798
Canned fruit—	
1904	$4,925,499
1908	8,310,615
Vegetables—	
1895	$ 219,985
1908	1,117,253
Mits and gloves—	
1904	$ 945,495
1908	2,002,823
Woollen socks and stockings—	
1904	$ 420,588
1908	1,379,317
1908, Total imports of agricultural products:	
Grand total, 1908	31,585,114

These figures show that the farmers of this country are suffering from the effects of foreign imports just as much as the manufacturers. Something like 30 or 40 millions of dollars worth of products that the farmers of this country could produce have been rushed into the country from the United States—why? The reason is that across the line there is also a farming community, who can ship goods into this country at a good profit. This government has done nothing to protect Canadian farmers from the depreciations of the American farmers. Until it does that I do not think it can claim any credit for having established a fiscal policy that benefits Canadian farmers. Hon. members from the west are fond of pointing out that the production of wheat in the west now amounts to over 100,000,000 bushels per annum. If they look into the trade returns, they will find that 44,000,000 bushels of wheat is the largest amount exported from this country in any one year.

	Exports of Wheat. Bushels.
1904	18,225,525
1905	12,512,641
1906	34,159,082
1907	21,584,176
1908	44,504,327

Thus the other provinces of the Dominion are the best consumers of the wheat, oats and other crops of western Canada.

This shows that the bulk of the wheat produced in the west is con-

sumed by the diversified industries of Ontario and the east. You will find that we have been paying $2,000,000 a year in subsidies for foreign ships trading with this country, and to ships to trade with this country in return. Our total foreign tonnage is something like 7,000,000 tons. Now coming to look at the railway tonnage of the interior, you will find that the figures are something like 67,000,000 per annum. Therefore the local tonnage between the local consumers and the local producers is seven or eight times greater than the foreign trade. Now, if the northwest continues to grow wheat while constantly extending her area as she is doing now, it is only a matter of eight or nine years until the northwest is going to be capable of producing all the wheat we eat in this country, and also all that Great Britain will need. When that time comes, when their surplus grain is greater than the surplus requirements of the British empire, the price of wheat will not be $1 a bushel. The foreign trade will always endeavour to beat down the price as against the exporter, and the exporter always has to pay the burden of transportation, and he has got to pay the transportation of goods back from the other country here. He has got to pay interest on the money, and the result is that after all, the policy adopted by the United States whereby their enormous production of wheat is consumed in the country, is the only proper system to be adopted by this country.

Now, we have a country of great resources. We have had a committee appointed by this House to consider the conservation of our natural resources. I think one thing that must have struck every member in that connection is that if we have those great natural resources we should do our best to utilize them so that our own young men, our own people with money, and our own people without money, may be able to reap all the benefit possible from these great resources. Everybody knows that cheaper methods of transportation are every day placing the various countries more and more on a level, as far as raw products are concerned, and the country that will succeed in the future is that country which applies the modern system of industrialism and the modern system of tariffs in the fight against the combined nations of the world. Now, Sir, I think that the province of Nova Scotia, in view of its great natural wealth, should be the greatest manufacturing community on this continent. It has greater and better harbours than the United States; it has coal on the sea-board, which the United States has not; it has an intelligent population, possibly the most intelligent of any portion of this country; and yet we find that the industries of that province are not keeping pace with the development of trade and manufactures in other parts of the country. The same is true of New Brunswick. What is New Brunswick going to do when all its forests are cut away, and when its streams fail? What is it going to do with its population? I contend that it should be the policy of this government, and of every other government, to endeavour to maintain the population of these provinces at home and to keep their natural growth within their own borders, by the encouragement of natural provincial industries that will keep their population busy. Now, take the province of Quebec. The province of Quebec has the finest industrial population of any part of Canada. No other men on the continent are such industrial workers as the men in the province of Quebec. They are the leaders in the arts and manufactures. Everybody who has seen one of them working an intricate machine knows that. The province of Quebec is largely interested in the rough lumber trade. What is it going to do when that lumber is gone? And we can already see the day when it will be gone. The forests of this country are destined to come to an end unless we take steps at once to stop the depredation by exporters, and turn the products into some profitable form of industry. It is the duty of this government to do something to arrest the process. It is their duty to propagate the industries which are best suited for the province of Quebec, and especially the industry of manufacturing paper and pulp in the province itself, and other articles along that line. The province of Quebec is destined to be, and should be, necessarily one of the greatest, if not the greatest, manufacturing provinces in Canada. The right hon. gentleman who leads this House is a representative of that province, and he should see to it that nothing is done that would adversely injure the condition of the people of Quebec, or that will stop the future progress of that province. The province of Ontario has an agricultural and industrial population who have grappled successfully with diversified industries. They have a diversity of agriculture, they have a diversity of manufacturers, and by those means they have brought prosperity to the province. But the production of wheat in that province is not sufficient to maintain its industrial workers, the other products of the province are not sufficient for the demand of the local factories and the diversified industries you find in almost every small village and town in the province. It is only a matter of a few years when they will have to settle that great question of how its industrial progress may keep pace with the growth of the country. Go to the United States, go to Pittsburg,

go to Cleveland, and what do you find? You find there enormous factories producing millions of dollars worth of products. You ask: Where does the money come from to build these factories? The answer will be that these factories were all without exception built out of profits. Have there been any factories built or enlarged out of profits in Canada? In the last five or ten years the Manufacturers Association has given the leader of the government an answer to that question on more than one occasion, but I do not believe they have spoken with a loud enough voice. In the United States the policy that was laid down is this, that the money invested in a factory should not only return a fair dividend, such as bank stock will do, but that that factory should duplicate itself in seven or eight years out of profits. Where would these great factories have come from if that had not been the case? Can you point out a single industry in the United States that has had to go abroad to get money to build it? The men who are running the factory built it themselves, we have not that condition now in this country. Now, take the province of Manitoba and the Northwest provinces. Anybody acquainted with those provinces knows well that it is the hope and aspiration of their people some day to be also rich in diversified industries. Take the city of Winnipeg with its cheap power, which in a few years will rival that of Niagara Falls as necessarily as daylight follows the sun. Manufactures will follow the advent of that cheap power in the city of Winnipeg. Take the other provinces. Where can you find in the whole United States greater natural riches than are contained in those provinces? Go to Medicine Hat and you will find greater gas wells than at Pittsburg. Go into the Rockies and you will find greater coal areas than in Pennsylvania, than in any other state of the union. Do you not think it should be the duty of any government to utilize those great resources? Those provinces will not always be wheat growing provinces alone. Shall this government say to the people of those provinces: You must not be manufacturing provinces, you must be wheat growers, we are going to make a tariff that will keep you wheat growers. I do not believe that is a policy which will appeal to the people of the northwest. Look across the borders, and find how that question has been answered by the people of the United States. Look at the manufacturers of St. Louis? Do they believe in that policy that the people of the west country should be wheat growers and nothing else? Look at Kansas city and other great western cities in the United States, and you will get the same answer. The province of British Columbia is also rich in mineral wealth and coal, and that province is also destined to be one of the great manufacturing provinces of this country, as great as the province of Ontario. I say it should be the duty of this government, and of any other government that hopes to see this country prosper, to carry out an industrial policy along those lines.

Now, I wish to point out another matter in this connection, which, I think, will interest the Minister of Customs (Mr. Paterson). This government has not been content merely to narrow down the tariff in the lines I have indicated, but, with the strong desire to secure personal power in one or two individuals, they have come to this House and had passed by this House a law which virtually abrogates our charter. They have this Customs Act so amended that they can reduce duties, not by Act of parliament, but by the will of council. Mr. Speaker, that was the question of ship money in England. This government is endeavouring to make out of council a star chamber ruling over the Acts of this House in the matter of the tariff. That is a serious charge to make, but it is a fact nevertheless. The hon. gentleman knows very well the clause to which I refer; he knows that it gives them power to make almost any differences they please in the duties without coming to this House. It has always been the privilege of the House of Commons, both in England and here, to say what the taxes shall be and to grant supplies. But the hon. gentlemen opposite have secured legislation which gives them power to reduce taxation to suit themselves. Clause 286 of the Customs law says:

> The Governor General in Council may from time to time, and in the manner hereinafter provided, in addition to the other purposes and matters in this Act mentioned, make regulations for or relating to the following purposes and matters:—
>
> (k) Transferring to the list of goods which may be imported in Canada free of duty, any or all articles, whether natural products or products of manufactures, used as materials in Canadian manufactures;—
>
> It does not matter how they are used, nor how slight the manufacturing process which they go through.
>
> —any such materials transferred to the free list by such order in council, to be free of duty of customs for the time therein appointed for that purpose.

I claim that that is a direct challenge to the right of parliament to legislate on matters of taxation, and I think it is a——

Mr. PATERSON. Is there any power conferred in that under which the Governor in Council can impose taxes?

Mr. J. A. CURRIE. There is the power there to reduce taxation, and, having taken

that power, it is the most natural thing that the government will soon seek the power to impose taxation.

Mr. FIELDING. Don't you give it to them.

Mr. PATERSON. That is not ship money, is it?

Mr. J. A. CURRIE. It is pretty near it.

Mr. HUGHES. They could wreck a business.

Mr. J. A. CURRIE. Of course they could wreck a business. One man carries on business; he is a good Reformer and he wants his raw material free; that material is admitted free. Another fellow across the road, and also happens to be manufacturing something of raw material which he would like to have admitted free. But he is a Tory and he does not get any reduction. The hon. gentleman knows that that was one of the strongest levers used against the manufacturers of this country in the last election. They were told: You keep quiet; you follow in line with this party, and if you are good we will see if the raw material used in your factory cannot be introduced free. I think this parliament should consider in this budget debate whether it should approve a system of that kind.

Mr. NESBITT. May I ask the hon. member (Mr. J. A. Currie) a question?

Mr. J. A. CURRIE. Certainly, two or three of them. Is it an insurance question?

Mr. NESBITT. Does the hon. member know of any case in which the government has made exception in favour of a party follower?

Mr. J. A. CURRIE. Why, we have shown examples again and again. The leader of the government——

Mr. NESBITT. I mean with regard to manufacturing.

Mr. J. A. CURRIE. Let the hon. member (Mr. Nesbitt) wait. He will get his answer. He knows, as everybody in this House knows, that his leader and others on that side have said, again and again, virtually, that to the victors belong the spoils. They won't deny it——

Mr. NESBITT. Name the place; you needn't make a speech about it.

Mr. J. A. CURRIE. Let me point out another instance of giving an advantage to a party friend, one sitting opposite me now. We saw last session a Bill introduced in this House under which this gentleman was to be allowed to import raw cane sugar and beet-root sugar into this country to help out his beet-root sugar factory. Is not that helping a political friend? What is the use——

Mr. FIELDING. Did my hon. friend (Mr. J. A. Currie) vote for that?

Mr. J. A. CURRIE. I do not think I had that pleasure.

Mr. FIELDING. Then, I suppose, that if it was wrong we shall find his name recorded against it.

Mr. J. A. CURRIE. If the hon. minister (Mr. Fielding) continues to take that position, he will compel hon. members on this side to meet him. If on a measure before the House, or on a vote on concurrence in Supply a member on this side, though he may not agree refrains from calling for a vote in order to save the time of the House, but finds that he is told afterwards that, not having voted against it he is to be held as supporting it, that can have only one result; it will mean that we must vote against every thing, every vote in concurrence, with which we do not agree.

An hon. MEMBER. They will be the first to squeal.

Mr. J. A. CURRIE. Yes, they will squeal. They squealed last year when they were asked to vote on concurrence in certain items. I have a clear recollection of some of these hon. gentlemen bolting through the door rather than vote for the item of the Newmarket canal. They might find themselves at a great disadvantage if that policy were generally adopted.

Mr. NESBITT. I would again ask leave to ask the hon. gentleman a question Was the measure on the subject of sugar which he mentioned a measure in favour of Mr. Gordon and not in favour of any other beet-root sugar manufacturer?

Mr. J. A. CURRIE. There was only one manufacturer of beet-root sugar.

Mr. NESBITT. That does not matter. Any how, there are others.

Mr. J. A. CURRIE. No, there are no other manufacturers.

Mr. NESBITT. There are.

Mr. SPEAKER. Order.

Mr. J. A. CURRIE. Mr. Speaker, I wish to correct the hon. member (Mr. Nesbitt). I understand that, at the time referred to, there was no other manufacturer of beet-root sugar in this country. There were other factories, but the hon. gentleman's (Mr. D. A. Gordon's) was the only one running.

Mr. D. A. GORDON. The hon. gentleman (Mr. J. A. Currie) has made a statement that is incorrect. I would ask him to withdraw it or prove it.

Mr. J. A. CURRIE. I have nothing to withdraw.

Mr. FIELDING. The question is, was it right or was it wrong?

Mr. J. A. CURRIE. I have answered the question with which my address was interrupted. I have stated here that as I understand the matter, the hon. gentleman's (Mr. D. A. Gordon's) factory, at the time referred to was the only beet-root sugar factory running. It is a well known fact——

Mr. D. A. GORDON. Mr. Speaker——

Mr. SPEAKER. The hon. member (Mr. J. A. Currie) cannot be interrupted except on a point of order or with his consent.

Mr. J. A. CURRIE. The hon. member (Mr. D. A. Gordon) knows that the government brought down a Bill specifically to help him out in his beet-root sugar factory. As his factory was the only one running at that time.

An hon. MEMBER. There were others.

Mr. J. A. CURRIE. There had been others. But his was the only one that could keep going, and if he had had a Bill introduced for his own purposes it could not have applied more directly.

Mr. D. A. GORDON. The hon. member is in error.

Mr. J. A. CURRIE. The hon. gentleman will have a chance to take the floor when I am through.

Mr. FIELDING. I do not wish——

Mr. J. A. CURRIE. And so will the Finance Minister.

Mr. FIELDING. I was not seeking to interrupt the hon. member. I did not dispute whether this hon. gentleman or any other member was concerned. What I wished to ask is this: Was the thing right or was it wrong?

Mr. J. A. CURRIE. Why, it is right to protect any manufacturer. I say that plainly. But the Minister of Finance (Mr. Fielding) will not acknowledge that principle. He will not rise in his place now and repeat what I have said, that it is right to protect any manufacturer.

Mr. FIELDING. I say that it was right to pass the Bill referred to, and, having voted for it, I am ready to defend it. The hon. gentleman (Mr. J. A. Currie) voted for it and now finds fault with it.

Mr. J. A. CURRIE. He would not dare to get up in this House and say that he believed in the principle of protecting any natural industry of this country—he will not dare now to get up and announce that proposition. I await his reply.

Mr. FIELDING. I believe in protecting all the interests of this country, including the interests of the consumers.

Mr. J. A. CURRIE. Will the hon. gentleman then say it is not in the interests of this country that the woollen industry should be protected.

Mr. FIELDING. It is protected.

Mr. J. A. CURRIE. What part of it?

Mr. FIELDING. He knows very well it is protected.

Mr. J. A. CURRIE. If the hon. minister wants it I shall take up the woollen industry and explain distinctly where you are giving protection and where you are not. I have the goods right here and if I wanted to spend half an hour I could show the hon. gentleman how he has protected the industry as far as manufacturing foreign wools is concerned, but has taken good care not to protect it as far as the manufacturing of Canadian wools is concerned. There is a great difference.

Mr. PATERSON. Might I ask the hon. gentleman a question?

Mr. J. A. CURRIE. I will not answer these double-barrelled questions of the Minister of Customs. The minister will have to split his question in two so that the answer to one part may be 'yes' and to the other 'no.'

Mr. PATERSON. The hon. gentleman has insinuated, or more than insinuated, that in the administration of the customs law favour has been shown to a Liberal because he was a Liberal and justice withheld from a Conservative because he was a Conservative. I want to ask him if he can point to any single instance where that ever happened. I have a right to ask, and I have a right to an answer.

Mr. J. A. CURRIE. The hon. gentleman wishes me to throw him some bouquets. He has heard the Minister of Finance get a little bit the worst of it and he is afraid the people will think he got the worst of it too. I am very glad the minister has brought this matter up. I will say for his especial benefit that as far as his department is concerned, as near as I can know and ascertain, having had dealings with that department, that that department is straight and honest in that respect. I do not wish to be partisan in any respect in anything I say in this House, and I am satisfied his department is correct and is absolutely straight in its dealings with the public. But just while I am on his department, I may speak of the cost of collection of revenue. We find from the statement of the Minister of Finance that the chief charges against the consolidated revenue fund of

this country in 1896 and 1908 were as follows:

	1896.	1908.
Charges on the public debt..	$10,745,245	$11,324,287
Provincial subsidies.. ..	4,250,674	9,032,775
Collection of revenue ..	9,129,416	20,727,329

This last item is the property of my hon. friend the Minister of Customs, he will see how it has gone up. In order to collect something like $90,000,000, we have to pay to the collectors of revenue $20,000,000 a year, to those who have to collect these revenues. In other words—

Mr. PATERSON. What is that?

Mr. J. A. CURRIE. That is what I say. I will give the figures again.

Mr. PATERSON. Say it again.

Mr. J. A. CURRIE. The Minister of Customs in his department, the collection of the customs, because all collection of customs, collection of revenue of all kinds is included, has increased from $9,000,000 to $20,000,000.

Mr. PATERSON. Of the customs?

Mr. J. A. CURRIE. No, not of the customs altogether. I will give the hon. gentleman the customs figures. Of course the hon. gentleman likes to put himself up on a pedestal and have me throw bouquets at him.

Mr. PATERSON. Oh, no.

Mr. J. A. CURRIE. I will give the advance in the cost of collection of customs. In the Department of Customs the increase has been over $1,000,000 a year.

Mr. PATERSON. That is right.

Mr. J. A. CURRIE. I am just going to puncture a little bubble right there. The total cost of the collection of revenue has increased from $9,000,000 to $20,000,000 and our total revenue is something like $90,000,000. That means, in plain words, that for every dollar this government collects in revenue it pays to the army of collectors and people who sit in these beautiful customs houses and post offices, 25 cents commission.

Mr. GEORGE TAYLOR. There are too many feeding at the crib.

Mr. J. A. CURRIE. Yes, too many feeding at the crib. The Minister of Customs also knows that his army has increased and that his expenditure per annum on the collection of revenue has increased to double what it was in 1896. He cannot deny that.

Mr. PATERSON. I cannot, I do not want to; but it is different from an increase of $10,000,000.

Mr. J. A. CURRIE. Does he want to tell the House that he is the great practiser of economy in his department?

Mr. PATERSON. Not at all.

Mr. J. A. CURRIE. If so, we will have a little investigation into the expenditures of his money and ascertain how many hundreds of preventive officers who do not prevent anything but Conservatives voting on election day, are on the pay-roll. I think I have satisfied the Minister of Customs. I believe that the time has come when the government of the day should seriously consider the fiscal policy of the country. I think the time has come when the people of this country have satisfied themselves that they do not desire the tariff that is in existence at present. I think that the people of this country are dissatisfied with the checkerboard tariff which contains parallel columns for every country and takes every other country into consideration but our own. I think the day has come when we should have a tariff that deals directly with us as far as we are concerned—and that brings me to the question of preference. I have pointed out that this country does not give a preference to England when you figure it out on the cold basis of dollars and cents. That being the case, what is the use of putting up a pretense? Why not adopt a single column tariff and be straight? Why not deal with every nation on one and the same ground? In that way we will be on the safe, sound ground that brought this country into the prosperity which it has, and we will be kept from foreign entanglements. We will not need to have secret trade agents in foreign countries to keep those customs questions straight. We will not have entanglements that will bring us into trouble with Great Britain and our interests will be much more advanced than by having such a complicated tariff as we have to-day. Let the government adopt consistent policies of its own, not sticking close to the tailboard of the old Conservative party and taking no step in advance. I think the time has arrived when this country should consider the question of the tariff and it should be made an issue. The hon. gentlemen opposite have made it an issue before, and they cannot quell the voice of conscience. I am also opposed to delegating the tariff to a commission. What right has this parliament to vote money and to delegate its collection to a commission? It is the same way in regard to the tariff, we have a right here to discuss it, and to adjust it ourselves. Our tariff should be open to the world and we should have one tariff for all people.

On motion of Mr. Schell, the debate was adjourned.

PRIVATE BILLS.

SECOND READINGS.

Bill (No. 67) respecting the Improved Paper Machinery Company.—Mr. Worthington.

Bill (No. 68) respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 69) respecting the Prince Albert and Hudson Bay Railway Company.—Mr. Neely.

Bill (No. 70) to incorporate the Toronto Central Terminal Company.—Mr. Harris.

Bill (No. 78) respecting the Edmonton, Dunvegan and British Columbia Railway Company.—Mr. Douglas.

Bill (No. 79) respecting the Hamilton, Waterloo and Guelph Railway Company.—Mr. Harris.

REPRESENTATION OF OTTAWA.

Mr. SPEAKER. I have the honour to inform the House that Sir Wilfrid Laurier, G.C.M.G., P.C., member for electoral districts of Quebec East and Ottawa, respectively, having declared in his place in the House that he elected to sit for the electoral district of Quebec East, thereby causing a vacancy in the electoral district of Ottawa, I have in accordance with chapter 11, section 5, of the Revised Statutes of Canada, issued my warrant to the Clerk of the Crown in Chancery to make out a new writ of election for the electoral district of Ottawa.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. FOSTER. Before the House adjourns may I ask the right hon. Prime Minister if he is able to tell us when the election will take place in Ottawa?

Sir WILFRID LAURIER. I am afraid I am not able to tell him just now.

Mr. FOSTER. It takes the right hon. gentleman a long time to make up his mind.

Motion agreed to, and House adjourned at six o'clock.

HOUSE OF COMMONS.

WEDNESDAY, January 12, 1910.

The SPEAKER took the Chair at Two o'clock.

REPORTS PRESENTED.

Railway Statistics of Canada for the year 1909.—Hon. Geo. P. Graham.

Civil Service List of Canada for the year 1909.—Hon. Charles Murphy.

Report of the Auditor General for the year ended March 31, 1909 (Vol. II).—Hon. W. S. Fielding.

Report of the Royal Northwest Mounted Police for the year 1909.—Sir Wilfrid Laurier.

THE ARCTIC COMMEMORATIVE TABLET.

Hon. WM. PUGSLEY. Mr. Speaker, I would like permission to correct an answer which, as it is reported in 'Hansard,' was made to a question put by the hon. member for Digby (Mr. Jameson) on or about the 15th of December last, relating to the tablet which has been erected in the vestibule of the library of parliament. The following is the question:

1. By what authority was the tablet commemorative of the Arctic expedition placed in the vestibule of the Library of Parliament?
2. Was a sketch of the tablet proposed to be erected submitted? If so, what officer of the government was charged with the duty of examining and reporting on said sketch?
3. What has been the cost of the tablet, and to whom was the money paid?

The answer should be as follows:

1. The Honourable the Speaker of the House of Commons.
2. This tablet is an exact copy of the tablet left on Parry Rock, Winter harbour, Melville island, lat. 74—47, N. long. 110—50 W., by the crew of the 'Arctic,' 1st July, 1909.
3. The tablet was made by the government employees on board the 'Arctic,' and there was therefore no charge made for this work.

DOMINION LANDS ACT AMENDMENT—THE SPEAKER'S RULING.

Mr. SPEAKER. On December 17 last the hon. member for Assiniboia (Mr. Turriff) asked leave to introduce a Bill intituled 'An Act to amend the Dominion Lands Act.' An objection was raised, on a point of order, that the Bill should have been first considered by a Committee of the Whole before its introduction, on the ground that rule 77 applied to the case. Rule 77 provides that if any motion be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon, but shall be adjourned to a future day; and then should be referred to a Committee of the Whole House, before any vote do pass thereon. Not having had an opportunity of perusing the Bill at the time the objection was taken, the Bill was allowed to stand in order that this point might be considered. I have looked carefully through the Bill, which contains two clauses, the first of which provides that 'An entrant for

a purchased homestead may, within six months after the date of entry, abandon such homestead and make a second entry, and shall receive credit for the amount of principal paid on the first entry.' The second clause is substantially the same as far as the principle of rule 77 is concerned. I do not find here that any public aid or charge upon the people is provided for. The proposed Act simply provides that an entrant may abandon one lot of land to the government and take up another in lieu thereof, his cash payment to the government simply remaining to his credit on account of the second lot applied for. This is no charge upon the revenues of the country; nor can the substitution of one parcel of land for another be held to be equivalent to a charge or tax. Therefore, I think, the hon. member may introduce his Bill without reference to a Committee of the Whole House.

FIRST READINGS.

Bill (No. 89) respecting the Calgary and Edmonton Railway Company.—Mr. Douglas.

Bill (No. 90) respecting the Central Ontario railway.—Mr. Stratton.

Bill (No. 91) to incorporate the London and Lake Erie Railway and Transportation Company.—Mr. Harris.

Bill (No. 92) respecting a patent of the Mond Nickel Company, Limited.—Mr. McGiverin.

Bill (No. 93) respecting the Vancouver and Coast-Kootenay Railway Company.—Mr. R. Smith.

ELECTION OF MEMBERS.

Mr. SPEAKER—I have the honour to inform the House that the Clerk of the House has received from the Clerk of the Crown in Chancery certificates of the election to the House of Commons of John Best, Esq., for the electoral district of Dufferin, and John D. Sperry, Esq., for the electoral district of Lunenburg.

NEW MEMBER.

John Best, Esq., member elect for the electoral district of Dufferin, introduced by Mr. R. L. Borden and Mr. Sproule.

DOMINION LANDS ACT AMENDMENT.

Mr. TURRIFF moved for leave to introduce Bill (No. 94) to amend the Dominion Lands Act. He said: Mr. Speaker, this is the Bill which I explained briefly the day before the Christmas recess. The object I have in view is to provide relief in the case of a party who is entitled to a purchased homestead and who makes entry for a purchased homestead, but who, either through some fault of his own or from some misfortune, has entered for a piece of land that is absolutely worthless. In entering for a purchased homestead, for which the entrant has to pay $3 an acre, a payment of $1 per acre in addition to the entry fee of $10 has to be made when the entrant makes the entry. A number of instances have occurred in which the entrant has by some means or other got hold of a piece of land that is absolutely worthless. Under the present law it is impossible for that man to abandon that worthless land and get another quarter section without forfeiting not only his $10 entry fee, which would not be bad, but also the $160 which he has paid on account of principal. All I ask is that the man who has been so unfortunate as to get a quarter section that is absolutely worthless, shall, for the period of six months, have an opportunity of going to the land office, abandoning that particular quarter section, substituting another in its place and getting credit for the amount of money paid on account of principal on the first quarter section. It is very simple and very easy, it will not conflict with any interest or hurt any one, and it seems to me to be a desirable reform. No man in this country should be put in the position of forfeiting $160 of his hard earned money to the government and getting nothing in return. It is to enable the department to avoid such injustice that I am introducing this Bill.

Motion agreed to, and Bill read the first time.

NAVAL SERVICE OF CANADA.

Sir WILFRID LAURIER moved for leave to introduce Bill (No. 95) respecting the Naval Service of Canada. He said: Mr. Speaker, it was understood when the House adjourned for the Christmas recess that, upon resuming our sittings, my hon. friend the Minister of Marine and Fisheries (Mr. Brodeur) would introduce the Naval Bill which was foreshadowed in the speech from the Throne and expose the policy of the government in regard to it. Unfortunately, my hon. friend the Minister of Marine and Fisheries is to-day in such a condition of health that he cannot be present, but with a view of not disappointing the House and of expediting its business, my hon. friend has asked me to introduce the measure for him. He hopes, and still more I hope, that when the Bill is brought up for second reading early next week he will be able to be in his place to move the second reading and then go fully into the whole question and all the details of policy and administration connected with it. My object, therefore, to-day will be simply to introduce the Bill and give to the House its

salient features, reserving for the second reading the more general discussion of the measure.

The Bill which will be laid upon the table is entitled 'An Act respecting the Naval Service of Canada.' It provides for the creation of a naval force to be composed of a permanent corps, a reserve force, and a volunteer force on the same pattern absolutely as the present organization of the militia force. The Bill, I may say, follows the Militia Act in many respects, and does not materially depart from it except in one feature. Under the Militia Act it is provided that the whole male population of Canada, from the age of 18 to the age of 60, is liable to military service. Should an emergency arise the whole male population within these ages may be called upon for service. Some discretion is vested in the government under the law. The first class is composed of men from 18 to 30 years of age, the second class of men from 30 to 45, and the last class of men from 45 to 60 years of age, and should the volunteer force in its different classes not be sufficient there may be an enrolment and balloting under the law. Nothing of that kind is to take place under the present Bill, no man in this country, under the Naval Service Act or any other, will be liable to military service on the sea. In this matter the present Bill departs altogether from the Militia Act; every man who will be enrolled for naval service in Canada will be enrolled by voluntary engagement, there is no compulsion of any kind, no conscription, no enrolment and no balloting.

The Bill provides that the naval force shall be under the control of the Department of Marine and Fisheries.

It further provides that there shall be a director of naval service who must be of the rank of rear admiral or at least of captain.

The department shall be assisted by a naval board who will advise the department.

The terms of engagement will be determined by the governor in council.

Commissions in the naval militia will issue in the name of His Majesty.

These are the general features so far as the organization of the force is concerned.

Coming now to the service which will be required from the force, 'active service,' as defined by the Act, means service or duty during an emergency, and 'emergency' means war, invasion or insurrection, real or apprehended.

The Act provides also, that, at any time, when the Governor in Council deems it advisable, in case of war, invasion or insurrection, the force may be called into active service. There is also an important provision to which I at once call the attention of the House, that while the naval force is to be under the control of the Canadian government, and more directly under the control of the Department of Marine, yet, in case of emergency the Governor in Council may place at the disposal of His Majesty for general service in the royal navy the naval service or any part thereof and any ships or vessels of the naval service and any officers or men serving on these vessels or any officers or men of the naval service. There is a subsequent provision that, if such action is taken by the Governor in Council at a time when parliament is not sitting parliament shall immediately be called. This provision is taken from the Militia Act and reads as follows:

> Whenever the Governor in Council places the naval service, or any part thereof, on active service, if parliament is then separated by such adjournment or prorogation as will not expire within ten days, a proclamation shall be issued for the meeting of parliament within fifteen days, and parliament shall accordingly meet and sit upon the day appointed by such proclamation, and shall continue to sit and act in like manner as if it stood adjourned or prorogued to the same day.

Provision is made for pensions of the officers of the naval service, these provisions being closely akin to, if not actually taken from, the Militia Act now in force. Another important feature of the Bill is that it provides for the establishment of a naval college on the pattern of the military college now in existence at Kingston. It also declares that the naval discipline shall be in the form of the King's regulations.

These, Mr. Speaker, are the leading features of the Bill. Of course, the matter can be very largely elaborated, but I do not think that any elaboration is necessary to an understanding of the matter. In resumé, it provides for the creation of a naval force; in this there are to be three classes as in the militia, the permanent force, the reserve and the volunteer force. The naval service may be placed at the disposal of His Majesty in case of war.

Mr. FOSTER. In that connection, would the right hon. gentleman give us the clause that defines 'emergency'?

Sir WILFRID LAURIER. It is the clause taken from the Militia Act:

> Emergency means war, invasion, riot or insurrection, real or apprehended.

And, as I have already stated, in case of emergency the Governor in Council may exercise the power of calling out the naval force to be placed at the disposal of His Majesty, the only restriction being that parliament is to be immediately summoned.

Mr. SPROULE. Is the 'war' referred to war in any part of the empire or in Canada only?

Sir WILFRID LAURIER. War everywhere. When Britain is at war, Canada is at war; there is no distinction. If Great Britain, to which we are subject, is at war with any nation, Canada becomes liable to invasion, and so Canada is at war.

The question may be asked: What is to be the number of the permanent force? Under the Militia Act, the number of the permanent force is limited to 5,000 men. There is no limit specified in this Bill, for the very obvious reason that the number of men cannot exceed the number required to man the ships we may have.

These being the leading features of the Bill, I come now to the question of what armament it is contemplated to have at this juncture. If hon. members will look at the notes of the conference which took place in London, and which have been published, they will see that at that conference the idea was entertained that it would not be advisable for Canada to have a fleet unit on the Pacific ocean. I read from page 26 of the notes of the conference:

> The Canadian representatives explained in what respect they desired the advice of the admiralty in regard to the measures of naval defence, which might be considered consistent with the resolution adopted by the Canadian parliament on the 29th March, 1909.
>
> While, on naval strategical considerations, it was thought that a fleet unit on the Pacific, as outlined by the admiralty, might in future form an acceptable system of naval defence, it was recognized that Canada's double seaboard rendered the provisions of such a fleet unsuitable for the present.

And at page 22, in the summary of the proceedings given by Mr. Askwith after the conference had taken place, is the following:

> Separate meetings took place at the admiralty with the representatives of Canada, Australia and New Zealand, and general statements were agreed to in each case for further consideration by their respective governments.
>
> As regards Australia, the suggested arrangement is that with some temporary assistance from the imperial funds, the commonwealth government should provide and maintain the Australian unit of the Pacific fleet.
>
> The contribution of the New Zealand government would be applied towards the maintenance of the China unit, of which some of the smaller vessels would have New Zealand waters as their headquarters. The New Zealand armoured cruiser would be stationed in China waters.
>
> As regards Canada, it was considered that her double seaboard rendered the provision of a fleet unit of the same kind unsuitable for the present. It was proposed, according to the amount of money that might be available that Canada should make a start with cruisers of the Bristol class and destroyers of an improved river class—a part to be stationed on the Atlantic seaboard and a part on the Pacific.
>
> In accordance with an arrangement already made the Canadian government would undertake the maintenance of the dockyards at Halifax and Esquimalt, and it was a part of the arrangement proposed with the Australian representatives that the commonwealth government should eventually undertake the maintenance of the dockyard at Sydney.

The representatives of the Canadian government at the conference took the ground that it would not be advisable for Canada to have all her fleet on the Pacific ocean. Evidently, as I understand the conference, the British government were anxious to have a strong force on the Pacific. There are considerations the discussion of which I may reserve for a future occasion; at present I am only outlining our policy. I think that every body will agree that it would be very inadvisable that the whole of our force should be located on the Pacific. Our representatives, the Minister of Marine and Fisheries (Mr. Brodeur) and the Minister of Militia (Sir Frederick Borden) thought we should have our force partly on the Atlantic and partly on the Pacific.

The question arose as to what should be the extent and character of the fleet to be created in the beginning. Two plans were proposed and discussed, one involving the expenditure of $2,000,000 a year and the other involving the expenditure of $3,000,000 a year. The first one would have consisted of 7 ships; the second one would have consisted of 11 ships, namely, 4 Bristols, 1 Boadicea and 6 destroyers. We have determined to accept the second proposition, that is to say, the larger one of 11 ships. That is the force which we pretend to create and to start with; 4 Bristols, 1 Boadicea and 6 destroyers. Perhaps it will be interesting to the House to understand what is meant by a fleet unit, what is understood by a Bristol, by a Boadicea and by a destroyer. The fleet unit which was suggested, and which has been accepted by Australia, and to which the home government contributes a certain sum per annum, is to be composed of one armoured cruiser of the type of the Indomitable, 3 protected cruisers, 6 destroyers and 3 submarines.

Mr. FOSTER. Is that the definition of the unit given by the British government?

Sir WILFRID LAURIER. That is the definition of the unit accepted by Australia; but there is more than one class of units. This, I understand, is the unit which has been accepted for the Pacific ocean, and which Australia has undertaken to maintain with the assistance of the home government, and this was the unit proposed by the British government at first. Now the fleet which we have agreed with the British government to accept is to be composed, as I said a moment ago, of four

'Bristols,' one 'Boadicea' and six destroyers. These terms are new to the House, as they were new to me, and perhaps it would be advisable to explain what is understood by these terms. A 'Bristol' is a protected cruiser, which means that it has a steel deck which protects all the vital parts of the ship. It is of 4,800 tonnage, with a speed of twenty-five knots. The number of guns has not yet been determined upon, but the largest 'Indomitable' carries eight guns. A 'Boadicea' carries six guns, though it is probable that the number of guns will be made eight. It has a total crew of 391 men, of which twenty are officers.

Mr. FOSTER. What is the capacity of the guns?

Sir WILFRID LAURIER. I cannot speak as to that, because it has not yet been decided. The 'Boadicea' is an unarmed cruiser with a tonnage of 3,300, and carries six four-inch guns. It has a crew of 278 men, of whom seventeen are officers. We are to build six destroyers of what is known as the improved river class. I will state what is meant by this term. Until quite recently the class of torpedo boat destroyers were constructed for sea-keeping qualities, and were called after the rivers of India, and spoken of as the river class. The First Lord of the Admiralty suggested that we should build a later development of destroyer, which he spoke of as an improved river class, and he suggested this class on account of their sea-keeping qualities This is the class we have adopted.

The total cost of these eleven ships will be, according to the British figures, £2,338,000, or a little more than $11,000,000. According to Canadian prices, supposing the ships were to be built in Canada, we would have to add at least thirty-three per cent to the cost just given. I may say that it is our intention to start at the earliest possible moment with the construction of this fleet, and if possible, to have the construction done in Canada. These, Mr. Speaker, are the explanations I have to give upon this occasion, in introducing this Bill, of which I now beg to move the first reading.

Mr. LAKE. I would like to ask a question of the right hon. gentleman. When does he expect these ships will be ready to put in commission? Has he formed any estimate on that point?

Sir WILFRID LAURIER. I am sorry to say I have not formed any estimate yet.

Mr. MONK. I would like to ask the right hon. the Prime Minister a question. Is the object of this legislation to carry out an agreement or understanding reached at the conference of delegates last year or is there anything in this legislation which in any way varies or tends to change the agreement arrived at there?

Sir WILFRID LAURIER. There was no agreement arrived at, but the policy laid down by the conference is the policy which it is intended to carry out now.

Mr. R. L. BORDEN. Mr. Speaker, we all regret the indisposition of the hon. the Minister of Marine and Fisheries (Mr. Brodeur), and we trust, with the Prime Minister, that he will be speedily restored to health, and be able to give us upon the second reading of this Bill the fuller explanations which have been promised. It is very natural that so important a subject as this should have attracted a great deal of attention throughout the country, since the resolution which was passed unanimously by this House in the month of March last. That resolution was the outcome of a notice of motion placed upon the order paper by my hon. friend from North Toronto (Mr. Foster). In the discussion which arose upon it different views were expressed. While it may not have been satisfactory to every member of the House, and indeed in all its terms it was not absolutely satisfactory to myself, nevertheless it seemed eminently desirable at the time that it should receive the unanimous support of this House. The participation of Canada in the naval defence of the empire has naturally aroused a great deal of interest. The resolution itself has not escaped comment and criticism, and I am very glad so far as I am concerned, that that comment and that criticism have not altogether been along party lines.

I do not think that any one in this country is prepared to deny the advantage of the present relations and the present connection of Canada with the British empire. The safety of our commerce, the security of our shores, the safeguarding of our citizens and their property upon every sea and under every sky, the powerful protection of the British flag, the advantages of the diplomatic and consular service of the British empire, with all the might and influence and prestige which that service embodies, the principles of right and justice which are inseparably connected with British institutions and traditions—all these constitute advantages so enormous as to awaken the liveliest appreciation in the mind of every thoughtful citizen of Canada. More than that, Mr. Speaker, the outlook which Canada enjoys as a part of the British empire means a great deal. It is something for us in this country to be able to say to-day that any Canadian has the like legitimate right to aspire to be Prime Minister of Great Britain as to be Prime Minister of Canada.

My right. hon friend the Prime Minister, in days gone by, has not perhaps

taken the same view with regard to our connection with the empire which I myself entertain; but I do not desire to awaken any controversial discussion of that kind to-day. I was a little surprised at a statement which the right hon. the Prime Minister made during the early part of the session—a statement in which he declared that if we did have a Canadian navy or a Canadian naval service that Canadian navy or Canadian naval service would take no part in any war in which Great Britain might be involved unless this parliament should first consent. I am glad that my right hon. friend has receded, if I understand him rightly, from that position. I do not see how he could avoid receding from it because a declaration of that kind would mean Canada's absolute and complete independence of the British empire. My right hon. friend has admitted it here to-day in the brief remarks which he made. He has said that when the British empire is at war Canada is at war—and he has said that correctly. He is absolutely right in that regard because it would be impossible for the British empire to be involved with a great naval power or with any power unless, as a necessary consequence of that war, any naval service, or any fleet, which we might possess would be subject to attack by the ships of the enemy. Our coasts and our cities would be exposed to attack; and the suggestion that we, while preserving our connection with the British empire, can be at peace with any other power then at war with Great Britain, is the idle dream of some man who has not thought upon this subject at all. Look at the situation for one moment and my right hon. friend and other hon. gentlemen in this House will realize that to the full. Suppose that a Canadian unit of the British navy is organized—and I prefer to speak of it in that way rather than as of a Canadian navy pure and simple—suppose that a Canadian unit of the British navy, or of the imperial navy is organized and suppose that a cruiser of some great naval power should commit a wanton act of aggression upon our coasts, or should attack one of our cruisers, does not every hon. gentleman in this House understand that the whole might and power of the British navy would be available to this country to avenge that insult and redress that wrong? How would it be possible for any man in this country to imagine that Canada could be at peace with any great naval power in the world if that naval power at that very moment was at war with Great Britain? The thing is absolutely inconceivable. The nations of the Brtish empire are separated by great stretches of ocean, the empire covers every continent in the world and these great nations are divided by vast distances, but upon the sea, any British navy, any imperial navy, must be one. The jurisdiction and power of our government and of this parliament over expenditure and over control in time of peace must be maintained. I frankly admit that we must maintain that principle in view of our autonomy, but in time of war the naval force of Canada, or the Canadian unit of the British navy, must be part of the British navy when engaged in the preservation and defence of this great empire.

I realize that there are a great many people in Canada who have made their views heard in recent months in opposition to what they call militarism. I am opposed to militarism and I believe that every hon. member of this House is opposed to militarism, regarded as militarism. There is no doubt about the evil of war. The fact that war exists to-day, the fact that preparation for war is maintained upon so gigantic a scale on the continent of Europe is the best possible evidence that what we call the civilization of the twentieth century is only a very thin veneer over a certain underlying barbarism which has always prevailed throughout the world. War is an economic waste. It is pitiful to think of the suffering and starvation that prevail throughout the world while nations are spending untold millions in preparation for subjugating each other or in contending for the mastery of the world. But, let us realize that war between nations is the court of final appeal and that at the present time there is no other. In every constituted state there are courts, there is the majesty of the law, and the final vindication of the law must depend on the power of the state in every organized community. But as between the nations of the world, as organized at the present time there is no court of appeal. A Canadian writer, Mr. Carman, in a very interesting book which he has writen upon the ethics of imperialism, uses these words:

> Of course, war is costly. The world loses immensely by permitting it. The time will come when it will not allow destructive fighting between nations over any question between them, any more than a community will let two farmers burn each other's barns because they do not agree where a fence ought to run. But the world can only stop war in the same way that a community does; that is by providing an impartial court which the nations will trust, and then supporting its rulings with overwhelming force. . . Peace is only to be defended by the weapons of war.

And His Majesty King Edward, the peacemaker, in July last went to the root of the whole matter when he declared at Liverpool that readiness for defence is the strongest of the safeguards for peace. If you unroll the pages of history you will

find that no nation has ever survived whose people were too selfish or too cowardly to fight for the defence of their territory and for the preservation of their national existence. It has been suggested that Canada can never have need of a navy whether she belongs to the British empire, or otherwise. Look at the capture not many years ago of a Canadian ship on the high seas by one of the South American powers. Look at the pressure of oriental nations upon our western coast and realize if you will that it would be the most utter folly for Canada to attempt to isolate herself from the activities of the world. Canada can not be a hermit nation. Canadian interests will exist and must be protected not only upon the high seas, but in every quarter of the globe. The great empire of China attempted to isolate herself from the rest of the world and did so with some measure of success, but the result was not encouraging. To conceive that Canada could play any such part in these days of steam and electricity, when the oceans of the world have ceased to be an impassable barrier and have become magnificient highways, is but an idle dream.

There is another point that I would like to make and it is that those who oppose what they call militarism in this country are apparently under the impression that our participation in the defence of this great empire will impose upon the people of Canada greater burdens than would have to be endured if we were an independent nation or if we were absorbed into the great republic to the south of us. Let me point out the absolute and utter fallacy of that. Put aside for the moment, if you wish, the ties of blood and allegiance and tradition. Consider, if you like, the purely economic aspect; estimate the fair reasonable share which we ought to undertake in organizing an effective defence of the empire; estimate on the other side the cost of our naval and military defence, if Canada were an independent nation prepared to defend its territories and make its flag respected. Consider on which side the balance lies and it is my profound conviction that even upon this purely business basis you will find it largely in favour of our participation in the defence of the empire. The great Conservative leaders of bygone days, Sir John Macdonald and Sir George Etienne Cartier, fully realized the principle which I have just expressed.

The articles of war refer to the navy in these striking words:

The navy, under the good Providence of God, upon which the safety of the realm doth chiefly depend.

Gladstone used these words in 1878:

The strength of England is not to be found in alliances with great military powers, but is to be found henceforth in the efficiency and supremacy of her navy—a navy as powerful as the navies of all Europe.

That we enjoy British institutions, British liberty, British justice, that this wonderful majestic heritage of Canada is ours with all its infinity of promise for the future; all these blessings under Providence are ours because of the British navy. A well known American naval authority, Captain Mahan, has demonstrated in his well known work that in all the great naval wars recorded in history the issue depended upon the control of the sea. In one striking sentence he says:

At Trafalgar it was not Villeneuve that failed but Napoleon that was vanquished; not Nelson that won but England that was saved.

I might quote also the words of the present secretary for the colonies, Sir Edward Grey, who in June, 1909, giving his view as to the necessity of the navy for the permanency of the empire said:

The navy is the common security of the whole empire. If it ever fails to be that it will be of no use for us to discuss any other subjects, and the maintenance of the navy in that position must therefore be the care not only of us at home but of the self governing Dominions beyond the seas.

Now, Sir, I come to the resolution of March, 1909, and I desire to say that having heard all that has been said against that resolution, passed unanimously by the House of Commons; having given careful and deliberate attention to every criticism that has been urged against it, if I were speaking to-day under the same conditions that then existed I would support that resolution just as I did in March, 1909. I realize that the party system is not the best in international or defensive matters; I realize that it is desirable to keep these matters, whenever possible, above the controversy of party strife, and I realize fully that the statesmen of Great Britain, in respect to foreign affairs have endeavoured to act in the best interests of the empire for the time being and to put aside party considerations. I know that it has been urged, and with some force, that we in Canada cannot properly take a permanent part in the naval defence of the whole empire unless we are to have some voice as to the wars in which Great Britain may engage. Let me say in the first place, that I do not believe Great Britain will in the future engage in any great war—except indeed it may be a war forced upon her without a moment's notice—before consulting the great dominions of the empire. I have some warrant for that statement when I recollect that before Great Britain engaged in the South African war, which was in the end forced upon her, she came to the great dominions of the empire, she came to

Canada and she sought advice and counsel. And, my right hon. friend the Prime Minister, standing in his place in this House moved a resolution in 1899 expressing the sympathy of this House with the efforts which Great Britain was then making to bring about better conditions for her subjects in the Transvaal republic. I remember on that occasion that one of the followers of the right hon. gentleman—a man not now in this House, but one of the ablest and most faithful of the right hon. gentleman's supporters—said to me when it was mooted that such a resolution would be proposed: I shall support and vote for that resolution but only on the condition that if war does come in South Africa, Canada shall back the mother country up with all her resources and to the utmost of her power. And, Sir, I venture to believe that in future the self governing nations of the empire will have something to say about the wars of the empire. It is not wise to prophesy what the future may bring forth, but I would venture to hope that a defence committee or an imperial conference having special jurisdiction over defence matters, composed of men from both parties in Great Britain itself as well as in the self governing nations of the empire, would have some control over the organization of imperial defence, and as an outcome of such a committee or such a conference I would expect that in future Great Britain would engage in no great war without knowing before hand that she would have the support and the sympathy of every one of the great self governing nations of the empire. This would give to these dominions a voice in the control of war, because I thoroughly agree that if we are to take part in the permanent defence of this great empire we must have some control and some voice in such matters.

The criticisms upon the resolution of March, 1909, have been many and to some of them I shall refer. The Prime Minister has told us that the proposal which he has placed before the House implements, according to his view, the resolution of 1909, but I fear I cannot concur in that view in all respects. One of the criticisms which have been made upon the resolution is this: That parliament did not then proffer to the empire in the hour of peril anything more than an expression of desire to co-operate and an intention to perform. Well, Sir, so far as we on this side of the House are concerned, that is not our fault. My hon. friend from North Toronto (Mr. Foster) said, in that debate, with my concurrence:

> To-day peril stands at the gateway. It is not for me to say how great it is, but I cannot brush it aside. To-day it impresses itself upon the greatest statesmen of the old country; to-day it appeals to Australia until public subscriptions are taken, and the government is being importuned to do even more than its settled policy to meet the emergency; to-day little New Zealand gives one Dreadnought and offers a second, and to-day Canada faces that position of peril and emergency. Let me say to my right hon. friend, that if after careful consideration he proposes to this parliament a means for meeting that emergency adequately, now and as it should be, whether it be by the gift of Dreadnoughts or the gift of money of this country, this side of the House will stand beside him, and stand for Canada in supporting that measure.

It may not be generally known throughout the country and it may be well for me to mention it now, that under our constitution it would not be possible for any member of the opposition or for any private member of the House to propose to parliament a concrete resolution for 'Dreadnoughts' or for a gift of money. That could not be done by a private member under the terms of the British North America Act, because such a resolution can only be proposed to the parliament of Canada by a minister of the Crown who must first announce that he has the sanction of His Excellency the Governor General to such a resolution.

Then, it has been argued that the creation of a so-called Canadian navy will have a tendency towards the separation of this great Dominion from the empire. I do not see that it has such a tendency more than the organization of a militia force; less, I say, because the resolution of this House of March, 1909, expressly declared that the organization of a Canadian navy should be 'along the lines suggested by the admiralty at the last imperial conference.' That resolution, as introduced by the Prime Minister, was slightly modified in the end, and, as finally passed, was as follows:

> This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.
>
> The House is of opinion that under the present constitutional relations between the mother country and the self-governing dominions, the payment of regular and periodical contributions to the imperial treasury for naval and military purposes would not, so far as Canada is concerned, be the most satisfactory solution of the question of defence.
>
> The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

The chief amendments that were made in the resolution, as originally introduced by the Prime Minister, were the omission of one paragraph, to which I need not further allude, and the redrafting of the second paragraph. That paragraph, as originally proposed by the Prime Minister, read in this way:

The House reaffirms the opinion, repeatedly expressed by representatives of Canada, that under the present constitutional relations between the mother country and the self-governing dominions the payment of any stated contribution to the imperial treasury for naval and military purposes would not, so far as Canada is concerned, be a satisfactory solution of the question of defence.

The difference between the resolution as it was first proposed by the Prime Minister and the resolution as it eventually passed, was this, that the original resolution did not permit what I might call an emergency contribution when war might be impending or might be anticipated within a few years. The resolution as eventually passed, having been in that respect amended by the Prime Minister at my instance, does permit an emergency contribution to be made by Canada when the existence of the empire may be imperilled. You will observe that the organization of a Canadian naval service was to be in 'co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference.' What were the lines suggested by the admiralty at that conference in this respect? The Fist Lord of the Admiralty, at the conference of 1907, said this (page 129):

The only reservation that the admiralty desire to make is that they claim to have the charge of the strategical questions which are necessarily involved in naval defence, to hold the command of the naval forces of the country, and to arrange the distribution of ships in the best possible manner to resist attacks and to defend the empire at large whether it be our own islands or the dominions beyond the seas.

If my right hon. friend the Prime Minister is implementing the resolution of March, 1909, it goes without saying that the control and the command of the Canadian naval service in time of war must be vested in some central authority, in the admiralty, in order that the whole forces of the empire may be concentrated effectively for the purpose of meeting the issue, it may be in some great battle on our coasts or elsewhere. The control of our militia is vested very much in the same way. The statutes governing the militia of this country have been somewhat modified by the present government; but by the statutes of 1904, chapter 41, section 72, it is provided:

In time of war when the militia is called out for active service to serve conjointly with His Majesty's regular forces His Majesty may place in command thereof a senior general officer of His regular army.

Thus the control of the militia in war emergency is vested in His Majesty. So it is absolutely essential under the resolution of March last that the supreme control of the Canadian naval force shall be vested in one supreme authority in time of war, acting in the interests of the whole empire.

It has been urged also that the creation of a Canadian naval force will be attended with corruption, the exercise of patronage and all the dishonesty and extravagance which unfortunately have prevailed during recent years. Again, I say the remedy is in the hands of the people themselves, and unless we are prepared to abnegate the power of self government and to admit that we are unfit for the privileges we now enjoy, it is idle to put forward any such reason or excuse. The evil is serious, indeed, alarming, but is not to be met in that way. When the existence of this country and of the empire itself depends on honest and efficient administration, I believe the public conscience of this country will be more thoroughly awakened, and the creation of a Canadian naval force to co-operate with the other great naval forces of the empire may be the beginning of better days in that regard.

It has been suggested that instead of the organization of a Canadian naval force, there should be a system of annual contributions from this country to the mother country; and I am free to admit that, from the strategical point of view, I would be inclined to agree with the view of the admiralty that this would be the best way for the great self-governing dominions of the empire to make their contributions. But, Sir, from a constitutional and political standpoint, I am opposed to it, for many reasons. In the first place, I do not believe that it would endure. In the second place, it would be a source of friction. It would become a bone of partisan contention. It would be subject to criticism as to the character and the amount of the contribution in both parliaments. It would not be permanent or continuous. It would conduce, if anything could conduce, to severing the present connection between Canada and the empire. Let us remember that the British empire as it now exists is of recent constitution. We are apt to consider it as a very old empire. The present relations of the great self-governing dominions to the mother country are of recent

growth and have not yet received their full development. The British empire in some respects is a mere disorganization, and I for one believe that co-operation in trade and in defence are essential to its future development and even to its future existence. Permanent co-operation in defence, in my opinion, can only be accomplished by the use of our own material, the employment of our own people, the development and utilization of our own skill and resourcefulness, and above all by impressing upon the people a sense of responsibility for their share in international affairs.

I regard the resolution of March last as the most important step towards co-operation that has been taken in this country for 25 years. My right hon. friend the Prime Minister has taken a certain stand in the past with regard to that great question which it would be invidious for me to enlarge upon to-day. I do not intent to enlarge upon it. I refer to the attitude which he took in regard to participation in the defence of the empire before 1896. He has since said that when the beacon fires are lighted on the hills, Canada will come to the succour of the empire; but he told the British government, he told the statesmen of the mother country in 1907, that so far as any such scheme as this is concerned, he would none of it. There is no doubt about that, and I shall refer to it for a moment because it is not old history, but is a matter of very recent occurrence in the life of this nation. Mr. Smart, who was the colleague of Dr. Jameson, moved the following resolution at the Imperial Conference of 1907:

That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to maintain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contributions towards the upkeep of the navy as may be determined by their local legislatures—the contributions to take the form of a grant of money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with varying circumstances.

Sir, that was practically the resolution of March, 1909, but my right hon. friend the Prime Minister in 1907, would have none of it. He virtually declined to discuss it in the conference and he said in the end that those representing the other great self-governing dominions of the empire might vote for it if they choose but he would vote against it. So, I regarded it as a distinct advance on the part of the right hon. the first minister (Sir Wilfrid Laurier) when he was willing to accept or indeed to move a resolution of that kind in March, 1909. In that resolution, he formally acknowledged, in the most express and distinct language, Canada's duty and responsibility for the defence of the empire and the maintenance of the supremacy of the navy. So I was very glad to join with my right hon. friend on that occasion declaring Canada's duty and responsibility, a duty and responsibility which will be accepted, I believe, by the people of Canada when the question comes to be placed before them for their verdict, because I feel sure that the men of this country, of whatever race and whatever province, will not shrink from what is, after all, due to their own self-respect, the taking of a proper share in the defence of this great empire. The defence of the empire is not a defence of the British islands alone, not a defence of Australia, or New Zealand alone, but a defence of every part of the empire, Canada included, and a defence of every citizen of the empire, whether he be a resident of Canada or the British Isles.

The resolution of March last, as I have already pointed out, provided for action in emergency or peril. Speaking upon it I used these words:

The day might come—I do not know that it will come—the day might come; it might come to-morrow, it might come next week, it might come next month, when the only thing we could do in the absence of preparation in this country would be to make some kind of contribution.

The resolution, as I have already pointed out, was amended in accordance with that suggestion. Therefore, so far as the resolution of March, 1909, is concerned, it not only is consistent with an emergency contribution, but, so far as I understand it, it even authorizes an emergency contribution in time of peril. In what way would our autonomy be affected by a contribution of that kind? Have we not given subsidies to cable companies, to railway companies and to steamship companies? Have we not sent contributions to San Francisco and to Italy in times of great disaster? There is no disturbance of our autonomy by what I would call an emergency contribution, and indeed, if we take the example of Great Britain herself, we find that more than 100 years ago, when she was engaged in a struggle for her very existence, she was in the habit of subsidizing great continental nations who were her allies.

Let us go to the proceedings of the recent conference. The admiralty experts recommended the establishment of a fleet unit by such of the great dominions as were able so to contribute. A fleet unit comprises one powerful armoured cruiser (Dreadnought type), three unarmoured cruisers (Bristol class), six destroyers and

three submarines with the necessary auxiliaries such as depots and storeships. The memorandum of the First Lord of the Admiralty declared that the armoured cruiser is the essential part of a fleet unit. Australia with two millions less population than Canada and presumably with resources in proportion to its population unhesitatingly accepted the recommendation of the admiralty. New Zealand undertakes to furnish one Dreadnought. The total cost of a fleet unit is £3,695,000. The cost of an armoured cruiser alone is £2,000,000. . The contribution of New Zealand to imperial defence in proportion to population and resources is at least seven times that which is proposed by this government.

The proposals of the government seem to me inadequate; they are either too much or too little. They are too much for carrying on experiments in the organization of a Canadian naval service, they are too little for immediate and effective aid. I am convinced that the policy of the government will be attended with a very great waste of money and with no immediate effective result. We understand now, perhaps a little better than we did in March last, what time it takes to create a navy. The military correspondent of the 'Times' uses this language:

> An army takes twenty years to create and a navy half a century.

The speediest organization would not make our Canadian naval service effective in less than ten years.

Probably 15 or 20 years would be required; and the crisis, if a crisis is to be apprehended, will come and probably within three years.

My right hon. friend the Prime Minister (Sir Wilfrid Laurier) speaks eloquently of the perfect security afforded to Canadians in foreign lands by the talisman of the British flag. What gives that flag in distant seas and under alien skies its talismanic powers? I saw a great British fleet last summer arrayed in the River Thames preparatory to its subsequent review by His Majesty the King. There were 24 great battleships, 16 powerful armoured cruisers, with other craft such as are the adjuncts of a powerful navy to the number of 150 in all. There was the power, there was the might which gave the British flag its talismanic virtue, and it was not a proud thought for a Canadian surveying that mighty fleet to remember that all the protecting power which it embodied was paid for without the contribution of a single dollar by the Canadian people, although Canada and every Canadian throughout the world had the right to invoke and the just expectation to receive the protection afforded by that great armament. Yes, the flag is the protecting talisman of every Canadian. That flag represents the power and the might—as yet we trust invincible—of that great fleet and the Prime Minister proposes to sustain and support its talismanic virtue by ineffective proposals for petty cruisers, which as he at first declared, would go to no war unless the parliament of Canada chose to send them. I am glad the Prime Minister receded from that view to-day. Surely this would not be a fair conception of (to use the words of the resolution) :

> The sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

Surely this is not the Prime Minister's idea of

> A Canadian naval service in co-operation with and in close relation to the imperial navy.

But my right hon. friend the Prime Minister has spoken on this subject during the recess and he has taken the view that the British naval supremacy which he regards and properly regards as essential to the integrity of the empire, has not been challenged and is not likely to be challenged. That is the great question to-day. The right hon. gentleman says the British navy is supreme to-day. I do not dispute it; there is not a man in the empire disputes it. But the question is not of to-day, but of to-morrow; the question is of next year and the year after that. Britain, through the mouths of her wisest, sanest and ablest sons has told us within a few months that her hour of peril is fast approaching. Take the facts and nothing but the facts as they are known to-day, and no one can dispute that the naval supremacy of Great Britain which, as we declared in March last, is absolutely essential to the integrity of the empire, is openly and avowedly challenged as it has not been challenged for more than a century. I trust that in any remarks I may make I shall not be understood to be an alarmist. I trust that in anything I may have to say with regard to the growing power of the navy of one of the great European powers I may not be misunderstood. I have the highest possible respect and admiration for the German people, their patriotism, their ability, their powers of organization. So far as we in Canada are concerned, we have absolutely no better citizens, no worthier settlers in this country than those of German descent. In what I have to say, I do not propose to speak with disrespect of Germany or any other nation but simply to assert what I believe to be our own duty for the purpose of maintaining the supremacy of the British fleet and in that way the integrity of the empire.

The consolidation and organization of the German empire, the dominancy of the German military power, the progress and development of German industry and commerce, have been among the most notable events of the past fifty years. And the most astonishing and important incident of the present century in international affairs has been the growth and development of German naval power. And let me here quote briefly the admirable summing up in an article by Mr. C. Frederick Hamilton in the 'University Magazine':

When Sir Wilfrid Laurier became Prime Minister of Canada, the German battle fleet consisted of four small, badly-constructed, thoroughly inferior ships; the British navy consisted of from twenty to twenty-five battleships, enormously superior ship for ship to those of the Germans. To-day Germany (1) has eighteen fairly good battleships of the pre-Dreadnought type (2) is building Dreadnoughts so rapidly as to make it a subject for controversy whether she or Great Britain will be in the lead in 1912 or thereabouts.

And it is only fair to realize that Germany, in that regard, is expressly directing her attention to the navy of Britain simply because the navy of Britain is the most powerful navy in the world. I am not suggesting that war is in the minds of the German people or the German government. It is not known to any man in this country, or to any man in the world, whether or not we may have war or whether there is danger of war. But we have to take into account the fact that Germany to-day is the greatest military power in the world. Her military strength is at least five times, and perhaps ten times, that of the British empire, taking into consideration numbers, training, material and organization. She is supreme on land as Great Britain has been on the ocean. This is abundantly apparent from the extent of her preparation, the language of her statutes and the declarations of her citizens. We have no right to resent the challenge. If the Germans prove themselves the greater race, if they have greater resourcefulness, higher skill, superior organizing ability and more sincere and self-sacrificing patriotism, they are entitled to be supreme on the sea, as they now are on the land. We have no right to resent the challenge, but unless the ancestral blood flows less red in our veins we shall meet it with a heart no less firm than that with which our forefathers encountered the shock of the 'Invincible Armada.'

Even before the Dreadnought period, the Germans began the construction of a great navy. The Dreadnought type renders previous types obsolete either in the immediate or early future. This gave Germany an opportunity of starting on even terms. In 1906 the Germans made preparation for a great increase in the capacity of their shipbuilding yards. They did this by enlarging the gun factories and the manufactories of armour and gun mounting, the three things that take time in building a battleship. The British government discovered last winter that the German preparations of 1906 had enabled the Germans in effect to build as rapidly as Great Britain. Great Britain has many building slips and could construct many battleship hulls and engines simultaneously, but in providing armour and gun mountings could not surpass the German output. Just in order to impress upon the House the marvellous growth of the German navy as compared with the British navy, let me read a very few figures showing the British and the German expenditures in the construction of armament in the last ten years:

Year.	Great Britain.	Germany.
	£	£
1900..	9,788,146	3,401,907
1901..	10,420,256	4,921,036
1902..	10,426,520	5,039,725
1903..	11,436,520	4,929,110
1904..	13,508,178	4,644,862
1905..	11,291,002	4,968,738
1906..	10,859,500	5,342,466
1907..	9,227,000	6,285,225
1908..	8,660,202	8,366,438
1909..	10,256,194	10,751,468
1910. Estimate of German expenditure..		12,100,000

Germany has a naval programme which involves the construction within a few years of the most powerful fleet the world has ever known. I propose to refer to some statements, official statements, of British statesmen on this point. I confine myself absolutely to official statements of those who must be presumed to be in a position to know whether or not Britain is involved in peril at the present time. I quote no statement or observation on this subject made by Mr. Balfour or any of his associates, because they have not at the present time the responsibility of office. I quote no statement made by any man in the election campaign which is now proceeding in Great Britain; I prefer to take the statements made at a time when the fires of political controversy had not been kindled. I take the statements of the Prime Minister of Great Britain, Mr. Asquith; the Secretary for Foreign Affairs, Sir Edward Grey, and the First Lord of the Admiralty, Mr. McKenna, and I ask you to consider whether or not, having regard to the solemn, deliberate utterances of these men, my right hon. friend the Prime Minister is correct in the expression of opinion to which he gave utterance at Toronto that the supremacy of the British navy and the integrity of the British empire are not likely to be imperilled.

On the 16th of March, 1909, the First Lord

of the Admiralty declared that if twelve more Dreadnoughts and Invincibles were to be in commission by 1812, then (for reasons stated) twelve of the larger ships which Great Britain has at present must have passed out of commission, and in making our comparisons for 1912, we must reckon only such ships as would then be on the active list. The reason he gave was that to keep up these twelve ships of the pre-Dreadnought type after they had been replaced by ships of the Dreadnought type would impose an intolerable burden of taxation on the British taxpayer, and the resources of Britain were not equal to it. At page 938 of the 'Hansard,' to which I have alluded, he continues as follows:

There will come a day when, by an almost automatic process, all ships of an earlier type than the Dreadnought will be relegated to the scrap heap. The maintenance of our superiority then will depend upon our superiority in Dreadnoughts alone. The German power of constructing this particular type of vessel is at this time almost if not fully equal to our own owing to their rapid development within the past eighteen months.

Then coming to the Prime Minister, Mr. Asquith, on pages 959 to 961 of the 'Hansard,' he estimated that by November 1911, Great Britain would have 16 and Germany 13 Dreadnoughts. And remember, if you please, that according to the official statement which I have read, Dreadnoughts and Dreadnoughts alone will count in the very near future. Mr. Balfour, on the other hand, estimated that Great Britain would have 16 and Germany 17. Mr. Asquith estimated that in March 1912, Great Britain would have 20 and Germany 17 Dreadnoughts. Later, on the 29th of March, Mr. Asquith somewhat modified his estimate by saying that in March 1912, Germany might have only 11 or 13 instead of 17. But the circumstance that the Prime Minister of Great Britain found it necessary, within a period of about one fortnight, to modify his estimate in that regard, is a striking illustration of the fact that Great Britain really knows very little about the rate at which German construction is proceeding. Indeed that is said in so many words, because at page 934 of the 'Hansard' Mr. McKenna declared that the government had no reliable information as to how fast German construction was proceeding. Now let us see as to the actual situation. What are the official statements of these great statesmen of the empire with respect to the imperilling of the necessary supremacy of the British navy: What says Mr. McKenna?

Two years ago there were in Germany, with the possible exception of one or two slips in private yards no slips capable of carrying a Dreadnought. To-day there are no fewer than 14 of such slips and 3 more are under construction. What is true of the slips is also true of the guns, armour and mountings.

On the 29th of March, the Secretary of State for Foreign Affairs, Sir Edward Grey, spoke on this subject. Now all who have followed the career of Sir Edward Grey know that he is a man of calm and deliberate judgment, the last man who could be characterized as an alarmist. Yet in speaking upon a vote of censure moved by the opposition, he used the following significant language, to be found in volume 3 of the 'Hansard' for 1909, at page 54:

First of all the House and the country are perfectly right in the view that the situation is grave. A new situation in this country is created by the German programme. Whether that programme is carried out quickly or slowly the fact of its existence makes a new situation. When that programme is completed, Germany a great country close to our shore will have a fleet of 33 Dreadnoughts. That fleet would be the most powerful which the world has ever yet seen. It is true that there is not one of them in commission yet; but it is equally true that the whole programme comprises what I have said, and when completed the new fleet will be the most powerful fleet which the world has yet seen. That imposes upon us the necessity, of which we are now at the beginning—except so far as we have Dreadnoughts already—of rebuilding the whole of our fleet. That is what the situation is. What we do not know is the time in which we shall have to do it.

Now I venture to say, speaking not as an alarmist, but having a reasonable and necessary regard to these grave words of one of the ablest statesmen in Great Britain, one of the most reasonable and conservative as well, having regard, I say, to these words, is it open to us to-day to say that the integrity of the British empire is not threatened, and that the supremacy of the British navy is not imperilled? Sir Edward Gray emphasizes his statement a little further on:

No superiority of the British navy over the German navy could ever put us in a position to affect the independence or integrity of Germany, because our army is not maintained on a scale which unaided could do anything on German territory. But if the German navy were superior to ours, they maintaining the army which they do, for us it would not be a question of defeat. Our independence, our very existence would be at stake.

At page 70, he made the following reference to the overseas dominions:

We must be prepared to defend our national existence under the conditions which are imposed upon us in our own generation. I am glad that it is not to us alone that this feeling is confined. I am glad that the colonies, such as New Zealand recognized that their national existence is one with us in this matter.

I am very sure, Sir, that there are a great many people in Canada, the vast majority of the people of Canada to-day,

who devoutly wish that Sir Edward Grey, in making that statement, could have coupled the name of Canada with that of New Zealand and of the other overseas dominions.

On the 16th of March, 1909, Mr. Asquith, Prime Minister of Great Britain, the man who has more to do with the defence of the empire than any other man within the empire, the man who is more responsible for that defence than any other man within the empire, makes this declaration:

> There has been such an enormous development in Germany, not only in the provision of shipyards and slips on which the bulk or fabric of a ship can be built or repaired, but what is still more serious—in the provision for gun mountings and armaments of those great monsters those Dreadnoughts, which are now the dominanting type of ship—such an enormous development—and I will venture to say this without attempting to excite anything in the nature of unnecessary alarm in this country—such an enormous development as to be so serious a development from our national point of view that we could no longer take to ourselves as we could a year ago with reason the consoling and comforting reflection that we have the advantage in the speed and the rate at which ships can be constructed. This is a fatal and most serious fact. We have both these sets of considerations, both of them I agree invalidate the hypothesis which only a year ago I addressed to the House when speaking on this topic.

That statement of Mr. Asquith is significant in more ways than one. It is impossible for us to believe that such statements made by men holding the highest responsibilities of office, were not well considered. No Prime Minister of Great Britain, no Prime Minister of any one of the great dominions of the empire, could make such a statement as that if he did not believe that there was grave cause for concern. When we hear the Prime Minister of Great Britain declaring: 'This is a fatal and most serious fact, and when we hear him admitting that the considerations which apparently had only come to his notice a short time before, 'invalidate the hypothesis which only a year ago I addressed to the House,' surely there is no man in this country who will venture to say that there is not grave cause for concern, and that the supremacy of the empire is not threatened. On the 29th July, only six months ago, the Prime Minister, Mr. Asquith, made the following declaration:

> If we were permanently to lose the command of the sea, then whatever might be the strength and organization of our military forces, even allowing that you had an army like the army of Germany, whatever might be its strength and whatever might be its organization, it would not only be impossible that this country should escape invasion—invasion might not even be necessary—but the subjection of the country to the enemy would be inevitable. It followed from that proposition that it is the business of the admiralty to maintain our naval supremacy at such a point that we cannot lose the command of the sea and that against any reasonable possible combination that could be brought against us we must hold the sea and make invasion impracticable.

Now, let us look for a moment, at the provisions of the German Navy Bill and at the absolute declarations of prominent authorities in regard to the motives which have inspired Germany in entering upon its naval programme. Again I say that I do not pretend to argue that Germany has at this present moment any desire to make war upon Great Britain. But that is not the test because the disintegration, dismemberment and dissolution of the British empire will inevitably follow if British naval supremacy once passes away; it would follow without striking a blow and without the firing of a gun. The German Naval Bill of 1900 contains the following recital and preamble:

> Germany must possess a battle fleet so strong that a war with her would, even for the greatest naval power, be accompanied with such dangers as would render that power's position doubtful.

This seems to me to be an express declaration of intention, in case of conflict, to challenge the British navy for the mastery of the seas, because the words 'greatest naval power,' as contained in the recital of the German Naval Bill, can have reference to one power and one power alone and that is the British empire.

A prominent German authority and writer on naval and military affairs, Count Ernest Von Reventlow, in the last 'Navy League Annual' puts the case in a nutshell. This gentleman is a retired captain-lieutenant in the Germany navy, he is a writer on naval and military affairs, he is associated with the pan-Germanic party and I believe he is regarded as one of the leaders of that party. I do not believe he has any official position other than that which I have stated, but this is the way he expresses himself with regard to the matter to which I have been alluding:

> We do not doubt the pacific intentions of the British government, but we know that since the commencement of the new century a war between England and Germany has been more than once very imminent; and moreover there are in England quite a large number of people, who consider a preventive war very desirable. It is true that it is now too late for this, and that England has missed her opportunity.....The cordiality in the relations between any particular nation so frequently dwelt upon nowadays is nothing more than a phase, at times a very useful one; we decline to enter here into such trivialities..... Economically and politically every healthy

nation works only for its own advantage. This gives rise to competition, the earth unfortunately does not expand, and thus mutual strength is necessary in order to render equalization of power and consequently a pacific equilibrium possible.

In other words Germany, the dominant military power upon land beyond all challenge does not propose to rest satisfied until she can successfully challenge the control of the seas by Great Britain. That means either the dismemberment of the empire or its relegation to a condition of inferiority which would lead to its early dissolution. The highest authority in Great Britain has declared that ships of the 'Dreadnought' type will alone count at a very early date. No one pretends that the British navy is not supreme to-day, but the continuance of that supremacy will cease within the next two or three years at least, unless extraordinary efforts are made by the mother country and all the great dominions.

It may be said that upon the official figures and by the tonnage Great Britain has still a marked superiority to-day. My right hon. friend went into that in his speech in Toronto. No one doubts that for a moment, but it is not a question of to-day; it is a question of to-morrow. Does my right hon. friend realize that Great Britain, only two or three years ago, withdrew her fleets from all parts of the world to concentrate them in the North Sea? Does my right hon. friend realize for what reason that was done? Great Britain has to-day in the Mediterranean less than half the fleet she had there four years ago. She has withdrawn practically her entire fleet from the Pacific. She has concentrated the great majority of her vessels around the British islands, she has done that for some reason and that reason will be outlined by certain official utterances to which I shall direct the attention of the House later on. Further than that, speaking of pre-'Dreadnought' vessels, Mr. McKenna, the First Lord of the Admiralty, on the 16th March last, used the following language:

> What is the purpose of these vessels? To what extent could we concentrate them in the home waters? Clearly we cannot take out the number of ships in the navy, add them altogether and reckon the total tonnage without having some regard to the duties which the navy is called on to perform. We maintain squadrons in Chinese, Australian, South African and East Indian waters. There is another squadron, a cruiser squadron, always kept available for service in the Atlantic.

Does any hon. gentleman doubt that in the early future Great Britain will have to send at least four 'Dreadnoughts' to the Mediterranean and four to the Pacific?

A very great authority upon German military affairs, Professor Schiemann, whose weekly chronique of foreign affairs in the 'Kreutz-Zeitung' is said to be the most influential factor in moulding German opinion respecting foreign policy, has recently emphasized the necessity under which Great Britain labours of guarding not the North Sea or the British islands alone but the four quarters of the world. Here is his opinion which, according to some authorities at least, is German official opinion on this subject:

> We know quite well that the German navy will never be called upon to face the massed fleets of the greatest maritime power. At any moment disturbances may break out in distant parts of the earth and necessitate the urgent dispatch of powerful British squadrons for the protection of British interests. In point of fact we know very well that England will not be able to escape the necessity of sending a portion of her navy to the East Asiatic stations. Therefore we do not regard the vociferous demands of the British press for the maintenance of naval supremacy in too tragic a light.

I would like to ask my right hon. friend whether anything could be more definite or suggestive? Has he read the provisions of the German Navy Bill in regard to this matter? The provisions of the German Navy Bill I have alluded to in part. Let me quote another very significant passage which is to be found there:

> Germany must possess a battle fleet so strong that a war with her would, even for the greatest naval power, be accompanied with such dangers as would render that power's position doubtful. For this purpose it is not absolutely necessary that the German fleet should be as strong as that of the greatest sea power because generally the greatest sea power will not be in a position to concentrate all its forces against us.

That is not the utterance of any unofficial citizen in Germany. That is a direct and definite statement contained in the recital of the German Navy Bill of 1900, and it says as plainly as language can express it that in her attempt to challenge the British supremacy of the sea Germany relies upon the fact that the fleets of Great Britain must be scattered throughout the world. Germany needs to guard only her North Sea gate; Great Britain needs to guard all her dominions throughout the world.

There is another significant official utterance to which I would like to direct the attention of my right hon. friend before he finally concludes what shall be his naval programme proposed to this parliament. On the 5th of March, 1907, the parliamentary secretary of the admiralty, the right hon. Edmund Robertson, in explaining to the British parliament the distribution of the fleet and its concentration in the North Sea said:

> The chief feature is the concentration of strength in home waters, and its chief result

will be additional security to the people of these islands against what I believe is their only danger—a sudden raid—and that, I hope is not a serious one.

He takes into account the possibility of a sudden raid and expresses the hope that the danger may not be serious, and he explains to the parliament of Great Britain in the same breath that the possibility of this raid is sufficiently serious to justify England in recalling her warships from the Mediterranian and the Pacific and concentrating them in the North Sea. Could an official warning be couched in more significant language? The heart of the British empire is in the British isles and a fatal blow at the heart must result in the death of the entire organism. Thus, the existence of the British empire presently depends upon the safety of the British islands.

My right hon. friend may say: These statements were made eight or nine months ago, and although it may have seemed to the members of the British government, to the Prime Minister, to the Secretary for Foreign Affairs, and to the First Lord of the Admiralty that the crisis was imminent at that time, yet since then it has passed away and there is no need to take further care. These statements pointed to a crisis and an emergency and a peril which might face the British empire within two or three years at the outside. Has that peril passed? No, Sir, we are nearer to it by nearly a year. Has Germany's policy been modified in the meantime? No. On the contrary Germany has since put forward the greatest naval budget in her history: 443,000,000 marks ($105,434,000), $60,000,000 of which are to be devoted to construction and armament alone. My right hon. friend may dismiss all this with a wave of the hand and an eloquent phrase and he may say there is no danger and no peril. Sir, in Denmark, in 1864, in Austria in 1866, in France in 1870 a Prime Minister might have done the same, but that would not have altered the record of history. I do not say there will be war; I do not know nor does the Prime Minister know. I trust, I hope, I pray there will not be war. But, without war, without the firing of a shot or the striking of a blow, without invasion, German naval supremacy would bring the empire to an end. It is idle to assure us that there will be no war. The war has already begun, the war of construction, and victory will be as decisive there as in actual battle.

Does the dissolution of the empire signify nothing to Canada and her people? Laying aside other considerations, let us remember that we settled some matters to our satisfaction and to our advantage when the British North America Act was passed in 1867. Not only federal but provincial autonomy was secured and rights and privileges were recognized and are still maintained which are very dear to the hearts of all the Canadian people. But, Sir, when the British empire is dissolved the British North America Act goes also and with it there departs every constitutional guarantee which it contains. All beyond is chaos and darkness. What may be evolved out of that chaos and darkness, what constitutional status, what final relation, what ultimate balance of conflicting forces no one of us to-day is bold enough to prophesy or wise enough to foresee. This consideration ought to give food for thought to every one of us who has at heart the future interests of the people of this great country.

Said Lord Salisbury ten years ago:

> I do not believe in the perfection of the British constitution as an instrument of war. . . . It is evident that there is something in your machinery that is wrong.

He was comparing the party system of government in the British islands with the more strongly centralized systems which prevail in other countries. He concluded and doubtless rightly that the British system was not most effective for such purposes. If the organization of the British islands is thus unsuitable what can be said of the infinitely greater disorganization of the empire so far as concerns the concentration of its powers for defensive warfare. The mere circumstance that there are in Canada those who conscientiously object to co-operation in defence gives room for grave disquietude. I can understand the man who advocates independence. In that case with ten thousand miles of coast line and a great sea-borne commerce, we must of necessity become a naval power at enormously increased expense or else remain the plaything and laughing stock of the world. I can understand the man, if there be any such in Canada, who conscientiously advocates the union of this country with the great neighbouring republic, but let him remember that such a union would be followed by naval and military charges of from twenty to twenty-five millions per annum. I cannot, however, understand how any man receiving and accepting the protection of the British flag, the advantages of British citizenship, the safeguarding of our coasts, the security of our shores, the benefits and advantages of the diplomatic and consular service throughout the world, the talismanic protection of our flag, can reconcile it with our self-respect to have every dollar of the cost paid by the over-burdened taxpayers of the British islands. We have the power to adopt that position if we choose because our liberties which we hold as of right and of grace are in this regard absolute, but, with all respect for the conscientious opin-

ions of others, I cannot conceive it to be a worthy or honourable course. It is not so much a question of our duties or obligations to the mother country as of our own honour and self-respect. I am the descendant of those who have never lived under any other than the British flag since it first streamed to the free winds of heaven. I am as profoundly and unalterably attached to British institutions and connection, and as ready to work, and if necessary to fight for them as any man in Canada. But if my country, one of the richest in the world in proportion to its population, should accept the humiliating, the degrading, the pauperizing position of receiving future protection and safety at the hands and cost of the British taxpayer without contributing one dollar in aid or assistance, I would say that the sooner the empire was rid of her the better for all. When the battle of Armageddon comes, when the empire is fighting for its existence, when our kinsmen of the other great dominions are in the forefront of the battle, shall we sit silent and inactive while we contemplate with smug satisfaction our increasing crops and products, or shall we pauper-like seek fancied but delusive security in an appeal to the charity of some indefinite and high sounding political doctrine of a great neighbouring nation. No, a thousand times no. There will be no such outcome. It may be that the Canadian people absorbed in the development of their marvellous natural resources have paid little heed to the wideworld activities of the empire, and have realized but imperfectly the responsibilities and duties of their country as one of its greatest dominions. But they do not lack the intelligence, the vision, the courage, the patriotism necessary to realize those duties and accept those responsibilities. So, if Canada be true to herself she will not fail in the day of trial, but stand proud, powerful and resolute in the very forefront of the sister nations. But she must not stand unprepared. I say to my right hon. friend the Prime Minister, so far as my words have any weight with him: Go on with your naval service. Proceed slowly, cautiously and surely. Lay your proposals before the people and give them if necessary opportunity to be heard, but do not forget that we are confronted with an emergency which may rend this empire asunder before the proposed service is worthy of the name. In the face of such a situation immediate, vigorous, earnest action is necessary. We have no Dreadnought ready; we have no fleet unit at hand. But we have the resources and I trust the patriotism to provide a fleet unit or at least a Dreadnought without one moment's unnecessary delay. Or, and in my opinion this would be the better course, we can place the equivalent in cash at the disposal of the admiralty to be used for naval defence under such conditions as we may prescribe. In taking this course we shall fulfil not only in the letter, but in the spirit as well, the resolution of March last, and what is infinitely more important we shall discharge a great patriotic duty to our country and to the whole empire.

Mr. CLARENCE JAMESON (Digby, N.S.). Mr. Speaker, this is probably the most important measure that has ever been brought down to this House by any government since confederation. It involves a radical departure from the well defined policy of Canada. If carried out, its influence on the destiny of Canada, will, I believe, be more far reaching than any man can at the present time accurately forecast. I think it will be granted by all that it must tend either to draw closer the bonds which at present unite us with the empire or that it must lead in the opposite direction. Because of its vagueness and uncertainty, and because I do not think the naval policy as outlined by the government is in line with public opinion, the needs of Canada, or, if they have been considered at all, the requirements of the empire, I desire at the outset to submit that this question should be referred to the people for their verdict. In the first place, in my judgment, this House has no mandate from the people to bind them to this or any other permanent policy of naval service. The policy of a Canadian navy means—there is no use in attempting to disguise the fact—either a broadening of the community of interests which exist today between Canada and the other self-governing dominions and the centre of the empire, making them stand as against the world like Dumas' three guardsmen, 'each for all and all for each,' or it means a weakening of that natural and unfettered alliance. Which is it to be? It seems to me that it is for the people of Canada, and not this House, to decide. When the Canadian naval programme is framed, that question may as well be dealt with and settled once for all; and the people of Canada should and I believe eventually will settle it. The people have not an opportunity to express their will on the naval question. The press of the country is divided. Some of the most influential are diametrically opposed. The party press reflects what it considers to be the political expediency of the hour. The editorial columns of others contain the ideas of individuals, or at most of the little coterie that surrounds the directing mind. What is required, I believe, is an expression of the solid common sense of the people of Canada. I think the people of Canada should be consulted by means of a referendum or plebiscite. Will any hon. member

adventure his political existence by saying that the people should not be heard from before they are taxed for ships of war which they and their sons must pay for and man; and a permanent policy of this nature is grafted on to the political economy of this country and that grafting—who will doubt it? will prove an expensive process. Plebiscites are not new to this government. They found the need for one in 1898. At that time the government did not desire to deal energetically with the question of the liquor traffic, without, as they said, securing the endorsation of the people. To be sure they never did deal energetically in that regard. There seemed to be some misapprehension between the people and the government respecting it. The majority of the people who voted, said that they voted for prohibition, and the government in effect said that might be, but it was not the right people who had voted for it; that when those who were opposed to prohibition demanded it the government would grant it to the country. However, the point I wish to make is that the government then subscribed to the doctrine of consulting the people before declaring their intentions with regard to a matter of great public importance. Is not the present question of naval defence equally worthy of being submitted to the people for their consideration and verdict? When the right hon. Prime Minister discussed this question in March last he said:

> It behooves us as freemen to look at our position calmly and deliberately, to review the situation as it is, to ascertain where we are, and to determine whether we should alter or whether we should persist in the course we have adopted long ago.

The hon. member for North Toronto (Mr. Foster) said that 'the time had now come when the parliament and the people of Canada should sit down together and take stock of the position and come to some conclusion.' What opportunity do the government intend to give to the people of Canada to 'sit down and take stock of the position and come to some conclusion'; and of what avail, if they do come to a conclusion, if they are not to be permitted to express themselves thereon before the government bind them to a line of policy that may be altogether foreign to their wishes?

I propose to consider this question in its relation to the empire purely from the business standpoint as it presents itself to me. The government proposal is not one to meet an emergency, but is the beginning of a permanent policy. If the measure were one to meet a present pressing emergency that would not wait, the case would be different, and parliament would, I believe, be not only justified in providing, but would be required to provide, against that emergency. If the government were proposing action under what may be termed the emergency clause of the resolution of the 29th of March last, which reads:

> The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities a most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire——

The case would be entirely different. But the fact is that the government have not recognized that an emergency exists. By their policy to-day, they declare in effect that no danger threatens Britain's supremacy on the sea. As matters stand, it seems to me that is the large question. Upon the sufficiency of that navy depends the safety of Canada. Under the operation of the government's proposed policy, no effective number or class of ships can be placed in commission within a long period of years. In view of this fact, to deny the people the right to express their opinion of the proposed policy in a constitutional manner seems to me to be not only undemocratic but a usurpation of their prerogative. Nor do the proposals of the government contemplate the construction of ships of the class declared by naval experts to be the first essential in the case of a self-governing colony desiring to create a navy. Two members of the government, the Minister of Marine and Fisheries, and the Minister of Militia and Defence, journeyed to England last year to consult the British naval authorities on this subject. The report of that conference which the government have given to the House and to the country is somewhat meagre. It will not be disputed in this House I think that British naval experts lead the world, always granting, of course, the qualification, in their own minds at least, of the Minister of Militia and Defence and the Minister of Marine and Fisheries to review their opinions. In the report of the imperial conference of the representatives of the self-governing dominions on the naval and military defence of the empire, held in London in July and August last, at which the gentlemen I named were present, we find as paragraph 5 of the admiralty memorandum this statement:

> In the opinion of the admiralty, a Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, is capable of being used in its component parts in time of war.

And as paragraph 11 of that memorandum:

> As the armoured cruiser is the essential part of the fleet unit, it is important that an

'Indomitable' of the 'Dreadnought' type should be the first vessel to be built in commencing the formation of a unit fleet.

Here we find the large armoured parent ship spoken of as a necessity, the first essential in the creation of a fleet unit. Australia and New Zealand have adopted the plan of the naval experts, yet the government of Canada deliberately ignore it and propose placing in the water ships, which in the stern test of modern naval warfare, would be as helpless as a family of small children dumped down in a vacant tenement and told to shift for themselves. Again, the class of ships proposed to be built by the government would, in the event of war, compel Canada to take a position inferior to Australia and New Zealand, who are each preparing to provide ships capable of taking their place in the battle line. It was the boast of the people of Canada, irrespective of race or creed, that when the Canadian volunteers went to South Africa, they took their place on the firing line, they fought shoulder to shoulder with the best troops which Great Britain or any of the colonies sent to the front, they won honour for themselves and reflected honour on their country. To-day Australia and New Zealand are each preparing to provide cruisers of the Dreadnought type. These vessels will not only be a deterrent to our common enemy, but in time of war would take their place in the battlle line in defence as well of Canada as of every other part of the empire. Where would the proposed Canadian ships be if they are built, or obsolete craft such as the government are considering the purchase of? Too light to withstand the fire of a powerful enemy and only from such would an attack come; if they went to war at all they would be forced into a position inferior to that of the ships of the other self-governing dominions, and would actually have to accept the protection of the larger ships of the younger and smaller colonies. The self-respect of the people of Canada, including, I believe, the descendants of the veterans of Montcalm and Wolfe, would cry out against the indignity to which the government proposes to subject this country. And there is no man, in this government or out of it, who can tell where, this naval scheme once entered upon, the cost will end. Like the Grand Trunk Pacific scheme, when the government brought it down, they do not know within $50,000,000 or $100,000,000 what it will cost. The preliminary figures are small, just to accustom the people to the title so that they may not shy at it when they see it in its immensity hereafter. But we know this is the growing time. The expenditure of the Department of Militia and Defence, for instance, has increased from $1,574,013 in 1895 to $6,474,715 in 1908. This is getting close to a war tax in time of peace of $1 per head of the population of Canada. But the government have something to show for it. The Minister of Militia stated to the House a short time ago in reply to a question by the hon. member for Frontenac (Mr. Edwards) that the Kingston Battery of soldiers had recently performed a stunt for certain manufacturers of moving picture films. Thus, the people of Canada, on payment of the small additional sum of 5 cents a head, may be privileged to witness the daring military manoeuvres of the forces of the first war lord of Canada. The average cost per unmounted man in the force is $564 per year, and of a mounted man $674 per year, and since 1895 $10,818,180 have been charged to capital account and added to the public debt of the country for this service. Burdens of this character are not lightly to be taken on, and only in cases of emergency should they be heaped on the people with indecent haste.

The proposed naval programme is only calculated, in my judgment, to increase the burden of taxation in Canada without lessening the weight of taxation in Great Britain for the defence of the empire, Canada included. I am discussing only the business side of the question, the sentimental side has no part in it, at the moment. What useful purpose would be served by a navy of the proposed Canadian type aside from its use as training ships? It would not relieve the pressure on the British fleets on the Atlantic or the Pacific oceans for Great Britain has many ships of the variety proposed to be built or acquired, which naval experts declare will be comparatively useless in the prospective sea fights of the future unless they are supported by powerful armoured cruisers. It would not relieve the pressure on the British fleet in any other part of the globe; it would not, I venture to say, protect Canada; it would be too light to take its place in the firing line with the ships of other colonies. Against who then is it to be used? If we starved every public service in this country and utilized every available dollar for this purpose, it would take at least 25 years to create a navy which of itself would be effective. Meantime the decisive battles may be waged not by fleets of the sea but by fleets of the air. The British navy protects us to-day; on that navy Canada must depend for her protection for many years to come. If it were destroyed, no navy which Canada might possess would be capable of protecting us against a power capable of destroying the British fleet.

There are those who at times prate of the Monroe doctrine as being the bulwark of Canada. It may be beyond the question to say that the United States largely nullified the effect of the Monroe doctrine by

possessing themselves of territory in the far east. It may also be beyond the point to say that we might some day pray to be delivered from our friends. I have a high admiration for the people of the United States. They are a great and progressive people and their country reflects their greatness and progress; but the British navy is the bulwark of Canada. The people of the United States, with their great population bordering on 90,000,000, have serious problems of naval defence confronting themselves. In this connection I may be permitted to quote Congressman Richmond P. Hobson, the hero of Santiago, who in a speech at Washington on 'The Philosophy of Naval Policy for the United States,' is reported to have said:

As things are going the United States will probably be in for defeat in the first stages of the conflict.

And later on, speaking of the Japanese question on the Pacific coast:

Being defenceless in the Pacific ocean we cannot even discuss the question with Japan. Japan has practically compelled us to surrender the right of local self-government.

And the United States has been spending an average of almost one hundred million dollars yearly during the last ten years.

It is well known that had the suggestions of President Roosevelt been carried out the naval programme for the United States would have been a more energetic one than it has been in the past few years.

Let me state the cost of the navies of the great nations of the world during the past ten years as reported in 'Brassey's Naval Annual' for 1909, the figures being reduced to Canadian currency:

	Total naval expenditures. 10 years, 1900-1909.	Average yearly expenditure.
Great Britain.. ..	$1,640,293,035	$164,029,303
Germany..	604,246,755	60,424,675
United States.. ..	991,022,104	99,102,210
France..	636,659,160	63,665,916
Italy..	265,856,995	26,585,699
Russia (9 years)..	481,678,575	53,519,842
Japan (4 ")..	138,927,085	34,731,771

Does not this contain a lesson for Canada which it would be well for us to take to heart? This measure will furthermore give without warrant from the people additional tremendous spending powers to an administration proved beyond a shadow of a doubt by the report of the Civil Service Commission and the report of Mr. Justice Cassels' investigation to have absolutely run mad in extravagance, patronage and waste. The subject should only be dealt with from the broadest possible viewpoint and after most careful investigation and consideration. Yet, if appearances indicate anything, it is liable to be embarrassed with sectionalism from the outset. Certain sections will receive the shipbuilding plants, and others, no doubt, will demand and receive a sop as compensation. It will not be forgotten that the Minister of Public Works (Mr. Pugsley), last summer spent some time in the west, and during the course of his triumphal tour, he radiated promises of public works estimated to cost $25,000,000 to $30,000,000. The Secreary of State (Mr. Murphy) last year also went avisiting, and when, like young Lochinvar, he came out of the west from his courting of Miss Canada, the modern gallant warbled the lay 'box cars, not battleships.' This sounded like a bid for the vote of the new American settlers who are naturally not expected to bubble over with enthusiasm at the idea of assisting to provide a navy, whose guns will look into the muzzles of those of their quondam countrymen. And the Minister of Finance (Mr. Fielding) contributed his share to this policy of placation, by telling where the necessary money was to come from. He stated to the House that on March 31 next the population of Canada was estimated to be 7,450,990. He also stated to the House the ease with which he contemplated, next year, effecting the painless extraction of $100,000,000 from the pockets of the Canadian taxpayer, with which to stock the government's cornucopia. This would make the average tax per head of the people of Canada $13.42 in 1910; whereas in 1895, it was $7.05 per head. The minister also stated to the House during the course of his budget speech, that the cost of the naval service would next year be defrayed out of consolidated revenue account and not charged to capital. Then he paused for the applause which he evidently expected from his supporters; but none came. Even that declaration failed at that time to arouse their enthusiasm on this subject. Like the cheers of the young gentlemen students at Dotheboys Hall, when Mr. Squeers made his famous speech, the response of the minister's supporters, was merely sighs of extra strength with the chill on. The extravagance and recklessness of this government knows no bounds. Their system of patronage, I believe, is costing the country millions of dollars yearly. I do not think that voting more money to the government will make them more prudent, more capable or less anxious to benefit their friends at the public expense. If the government had recognized the existence of an emergency and were asking parliament for power to meet it, I would support any reasonable measure to that end. But they have, in effect, declared that no emergency exists. By their policy of to-day they propose to bind the people of this country, without asking their leave or opinion. They propose to spend the money of men who must man

the ships and pay the bills without deigning to consult them. They are denying the people their right to speak as to the government's action in disregarding the advice of naval experts; they are refusing to let their voice be heard as to the old policy of one empire, one navy. I do not think the administration or this House possess that right, and I submit, with all due deference, that this question should be referred to the people of Canada by means of a plebiscite before the adoption of a permanent naval policy upon the lines proposed by the government.

Mr. F. D. MONK (Jacques Cartier). Everything, Sir, connected with the discussion of this all-important matter seems to be a surprise. For my own part, I little anticipated the turn which the discussion has taken this afternoon, and reasonably so, I think. It seems to me that, having taken the opportunity of expressing my view about this matter upon another occasion, I was entitled, in the ordinary courtesy which exists within the working of a party, to some indication that, upon this occasion, at the first reading of this measure, the party itself, as I understand it, would express its policy. I say that has been a surprise to me which, I think, I have not deserved. But, Sir, even under these circumstances, I would have been prepared to await the moment usually chosen for the discussion of the principle of a Bill to defend before the House, as I have defended outside of it—and intend defending in the future—my opinion in this matter. Unfortunately, expressions have been used which make it necessary for me to at once challenge certain statements that have been made. And let me say this further, Mr. Speaker: Although I have the misfortune to differ from many on this side of the House—and apparently from all on the other side—on this question, I consider that advantage gained in this country, where we enjoy those free institutions which we have been so earnestly invited to maintain and defend, in speaking of people who do not hold our own views as people without sense of honour, without self respect. If that course is carried too far, those who have initiated such a mode of attack will be the first to suffer from it. I deem it now, at this stage of the discussion, necessary to point out how I and others like myself understood this resolution to which so much reference has been made and which was passed on the 29th of March last. The better to give the House my impression, I will relate the facts as I know them. At the opening of the session my hon. friend from North Toronto (Mr. Foster) gave notice of a motion, which is no doubt familiar to every member of this House, but the sense of which was, that it was time for Canada to have a navy of its own for the purpose of its own defence, of defending its own coasts and harbours. The moment I saw that motion upon the orders of the day, I said freely to those who sit on this side of the House, and to many of my friends on the other side, that I would not approve of that motion. I mentioned that to my hon. friend from Toronto, I think I spoke of it to the leader of the opposition; at least he was spoken to about it in that sense by others than myself. I said that I did not deem it opportune. Sir, one would suppose, from some of the arguments we have heard this afternoon, that we are a people prepared to lie down and allow ourselves to be killed. We are not that kind of people. We are discussing the assumption of serious, unusual and new responsibilities, and we pretend that we can discuss them freely. Well, what happened? It cannot have been my intimation surely which caused the delay of the presentation of that motion of my hon. friend from Toronto, for weeks. I have not the data here, I have not come here prepared to discuss this question fully, when I return I will have the data. I say the motion remained in abeyance. I say more than that, although my memory on that point is not fully clear, I think I was given to understand that the motion would not be pressed. If I were certain of that I would assert it here. But it remained in abeyance until nearly——

Mr. FOSTER. To make the question clear to my hon. friend, so far as I am concerned, no such promise was made by me.

Mr. MONK. No, it was not made by my hon. friend. But I did not say any promise was made. I said I had a distinct recollection of understanding that the motion would not be pressed, because many people in this country believed that the time was not ripe for Canada to build a navy. Some of those whom I have heard this afternoon are of that opinion still. I believe myself we are not fit at the present moment to build it. However, to return to the resolution of the 29th of March. On the 16th of March—I think that is the date—a very violent discussion took place in England upon the question of armaments. I have stated elsewhere, and I say it here, as my conviction that that discussion was brought on for political motives with which we have no concern, which we do not understand, to which we are strangers. But it seems to have fired people all over the empire. I have the testimony of people who were in England at the time. It created a panic which lasted nearly a month, and it blew over. Recent statements by responsible men from England lead us to believe that these violent and exaggerated statements are not borne out by the facts. But at the time, the discussion produced on the minds of people within the empire the impression

that the empire was in grave danger. On the 29th of March, strange to say, just about the time the news of that violent agitation reached here, we felt the effects of it, and that resolution of my hon. friend was presented to the House. Now, I appeal to my fellow members of this assembly as to what took place then. My hon. friend presented his resolution. Immediately the leader of the government presented an amendment, an amendment which entirely changed the sense of the original motion. Will anybody deny that? It gave the original motion an extension which nobody had dreamed of, which I had not dreamed of. What happened? Upon a question of such vital importance—which I trust before this discussion is ended we will be able to show has an immense influence upon the whole future destiny of this country—what took place? On that day several members of this House spoke on the amendment of my right hon. friend. There was, if I remember right, a speech from the hon. member from the Yukon (Mr. Congdon), and I think by the hon. member for Red Deer (Mr. Clark). I may be mistaken, but I am speaking without preparation. I think there was a speech by a gentleman on this side of the House, the hon. member for North Grey (Mr. Middlebro). The hon. member for Nicolet (Mr. Turcotte) spoke in French, against what he called at the time imperialism. I think also my hon. friend from Dorchester (Mr. Roy) spoke, but I cannot from memory recollect what he said. We were told then, being, as I said, under the impression that a war scare existed in England and throughout the empire, and feeling that a war by a powerful enemy was about to be waged against the United Kingdom and the Crown of England, that it was the duty of the dependencies of the empire to manifest their willingness in that emergency to stand by the empire. In the presence of an impending catastrophe of that kind, although it appeared to some of us, as it did to me, purely a matter of political partisanship, it was suggested, in face of this ado, through the whips to the leaders of both sides, to do—what? To frame such a resolution as I understood it, and as all understood it—let us be frank about it—such a resolution as would convey to the mother country, at the moment when she was threatened with an onslaught by a powerful enemy, an assurance that we were not going to choose that moment to desert her.

I wonder if there is any man in this House, whatever may be the blood that flows in his veins, who is a British subject, who, at that moment, would have felt himself called upon to get up and discuss fully this phase of the question, this system, the system which is going to be imposed upon us, and express his active dissent from that resolution? I would have been ashamed to do so; I never would have dreamed of doing so. The resolution was adopted. I believe I was not in the House when it was adopted. I believe, if my memory is right, that my hon. friend the whip of the Conservative party, reported to me the terms of this resolution tendered under these circumstances and which resolution was going to be cabled to England the next day and all over the world to show that at that moment, indeed as at every other moment, we were not going to back out. I went away and the resolution was adopted in my absence. Are we going to be told that under these circumstances to-day, after numberless discussions when this fever, this panic—I believe more designed than people generally knew—had been sprung upon us, when a conference had taken place and when, at that very conference, it was laid down expressly by the members of the British government themselves in so many words, because even in England they have other notions of freedom than what we apparently have here, that anything that had been settled there would not become effective until each of our parliaments had approved of it—are we going to be told here at the very outset of this discussion upon the presentation of the Bill that there is no discussion to be had, that the incident of the 29th March of last year, binds and fetters us, and that with the policy as laid before us in the Bill, the result of this discussion—we have nothing to do but that, as honourable men, we must subscribe to that policy? I deny that, Sir, and I say that there is going to be very full and ample discussion of this question, at any rate, as far as I am concerned. One would suppose, Mr. Speaker, that the discussion of these new relations, because they are new to the whole empire, these formidable responsibilities which we are going to assume and which we may have to assume—I do not pretend like other people to be infallible—would be essential to their proper understanding. But, we are told that we are not to be allowed to discuss them freely. We will see about that. That is my interpretation of this resolution of the 29th March. Had I known that the use was going to be made of it that I have seen made of it in the newspapers and elsewhere, had I known that all future discussion of the conditions of this new system was going to be forbidden, I would then and there, not have discussed it, because no man in this House could have discussed that phase of the problem intelligently upon the spur of the moment, but I would have asked for its postponement to a later date. I think that at this stage it is essential that I should make this statement as far as that particular incident is concerned.

Now, Sir, I certainly do not wish to de-

tain the House at this time. I had no idea whatever when I learned of the illness of my hon. friend the Minister of Marine and Fisheries that anything else would take place to-day than the introduction of the Bill by the Prime Minister; in fact this was announced by the newspapers. It was expected that the real discussion of this measure would be postponed.

It involves a great many questions, Mr. Speaker, that I will not trouble you or the House with this evening. Are we in a position to build a navy? Are we able to build something that will count, that will be worth anything at the present time? Have we the money for it? Can we, at present, with the immense works which we must necessarily execute undertake to build a navy? Have we more essential work at the present time even in the interests of the empire, not in our own interests alone? After all we belong to the empire, we are of the empire, but I suppose that many of us were born, bred and brought up here and that we have some special object and some special task here to perform. As between ourselves and the Fiji Islands, for instance. I suppose that a divine providence has placed me here with an object expecting me to exercise my activities here in a particular way, for a particular purpose and for this particular country. But, that is another question. I do not intend at the present moment to touch upon these questions, but they will be referred to later on if I have the advantage of being present when these matters are brought up. My hon. friend the leader of the opposition has stated that the idea that in case of war we should summon parliament is an idea which does not commend itself to him or indeed to anybody. I think that is very true. There is no man who reflects for a moment who will advance the proposition that if war is waged against us, we must, before defending ourselves, summon parliament. But, he has emphasized in that respect a point which I wish to indicate for the consideration of the House, and that is the enormous consequences of the step we are taking to-day.

I will do that and make no further observation at this preliminary stage of the Bill. I say that if Great Britain is involved in war, whether it be to suppress an insurrection in India, or against any foreign country, or in virtue of her numerous alliances or treaties, the moment that war breaks out —if we carry out this plan and the scheme generally laid down by the Imperial Defence Conference—we are into that war. It is said that that is absolutely necessary any way. I deny that. I am now speaking of war only, and, I deny that. I am not alone in that opinion, because it will be established here that statesmen of no mean repute, patriotic men who knew something about this country, have maintained that under our system as it has existed in the past, we were not necessarily drawn into the foreign wars of England. I will read to the House when the time comes a most able memorandum sent by the Macdonald-Sicotte ministry to England in answer to a request of the Duke of Newcastle that we should raise 50,000 troops in this country, and in that document it is clearly demonstrated that the consequence of the adoption of the plan offered by the Duke of Newcastle was to make us in a sense responsible for every war into which the British Crown entered. But what I wish to point out is this: does it not strike the members of this House—indeed in this very discussion it has been alluded to—that if we are to carry out this policy we shall find ourselves in the position that we become responsible jointly and severally with the people of the British isles for the whole foreign policy of the empire, and mind you without having had a single voice in the formation of that policy. The very first words which the right hon. the Secretary of State addressed to the conference of 1907 were these:' —and every representative of the British government at this conference from the very beginning spoke in the same sense. He said: ' The Rt. Hon. Sir Wilfrid Laurier has spoken of our inviting you to our councils. We do. We cannot possibly ask you to take up with us the burden of defence; we cannot decently do so without inviting you to participate in the formation of our policy, in our diplomacy. Why is it that that most vital side of imperial defence schemes has been left out? What! Are we going to be in the position that the whole foreign policy of the empire is going to be framed, and formed, and carried out by a cabinet of men in Downing street, men absolutely controlled and elected by the electorate of the British isles; that we, British subjects like themselves, are going to be placed upon a different footing, that we will not have a voice in the conduct of that policy, that we are to be responsible for everything while having no voice in the conduct of anything? That was not what on more than one occasion— I have simply mentioned the principal one —was stated at the conference, and stated not by colonials but by men who knew that it would never work with Anglo-Saxon people to have in any sense taxation without representation. Sir, if there were no other, but there are many others, that alone is a vital defect in this policy. My right hon. friend has on more than one occasion spoken of Paul of Tarsus. Paul was a Roman citizen by special favour and in Paul's time that special favour was not by any means extended to everybody. But, Rome, falling as she was beginning to fall recruited her strength and her legions from

the outlying provinces where there was no Roman citizenship. Rome went to these provinces for her soldiers and her gladiators and her armies to resist the invasions of the barbarians. And these men who held back the rising tide of invasion had no Roman citizenship; they were not consulted in the policy of Rome, and it was only two or three centuries after Paul of Tarsus that Caraculla, seeing that the Roman empire was going, constituted that general citizenship of Rome which brought every man who was of the empire into the full enjoyment of the rights of Roman citizenship. What is proposed to-day here is to invite us to assume responsibilities which I will claim we are not bound to assume. What is proposed to-day is to invite us to become responsible for the policy, for the diplomacy, for the treaties, for the alliances of which we know nothing, over which we have no control, made by men, excellent men no doubt, but men who are not responsible to us. And, the proposal is to ask us to assume all these responsibilities without our enjoying the privileges of representation. I do not speak for the province of Quebec; I say you will never find Anglo-Saxons who will willingly accept that responsibility, who will willingly bend their heads to what I consider to be an infraction of the ancient rights of British subjects established centuries ago in England. That is my view of it whatever it may be worth. Can we not more properly be likened to those who, from Gaul and Germania and Dacia, were brought down to Rome to enter the Roman armies and the Roman arena and who had no representation in the councils of the Roman republic? That is the condition which, I submit, this plan is imposing upon us, and it reminds me of the man in the gladiatorial arena dying:

> He heard it, but he heeded not—his eyes
> Were with his heart, and that was far away;
> He recked not of the life he lost nor prize,
> But where his rude hut by the Danube lay,
> There were his young barbarians all at play,
> There was their Dacian mother—he, their sire,
> Butchered to make a Roman holiday—
> All this rush'd with his blood—shall he expire
> And unavenged? Arise! ye Goths, and glut your ire!

That, much truer than the story of Paul of Tarsus, is the spectacle which is presented to me under the terms of this scheme. Mr. Speaker, I must apologize to the House, but it is free to every member of this parliament to express his opinions and it seemed to me that to be silent under what has been said this afternoon would not be proper because silence would amount in a sense to acquiescence. Although I may be in a very small minority, and although it is a matter of very great regret to me to have to differ from friends of mine on this side of the House, and indeed from any member of the House, upon a question of this magnitude, I claim the right to my conviction, and I intend expressing it most freely during the progress of this discussion.

Mr. FOSTER—Mr. Speaker, before the Bill is introduced, I would like to ask a question of the Prime Minister. I think I have seen reports in the newspapers of sundry negotiations amounting to purchases of war vessels and the like of that. I would like to ask the Prime Minister whether and to what extent there is truth in that statement; and if it is so, on what parliamentary authority the government has acted. We have had the promise of a policy to be submitted. Surely it cannot be that the government has forestalled parliament and has already made its purchases and entered into contracts?

Sir WILFRID LAURIER—The government has made no purchase whatever. The government has entered into negotiations with the imperial authorities for the passing over of a ship. The whole matter is subject to parliamentary approval, and nothing can be done until it is considered by parliament.

Mr. FOSTER. Will the right hon. gentleman have these papers brought down so that we can have them in this discussion?

Sir WILFRID LAURIER. As soon as the negotiations are completed, certainly.

Motion agreed to, and Bill read the first time.

QUESTIONS.

INTERCOLONIAL RAILWAY DISMISSALS.

Mr. SAMUEL SHARPE:

How many men were dismissed from service on the Intercolonial railway each month from October 1, 1908, to March 31, 1909?

Hon. CHAS. MURPHY. Number of men dismissed from Intercolonial railway: October, 8; November, 11; December, 20; January, 10; February, 5; March, 11; total, 65.

Mr. SAMUEL SHARPE:

How many men discharged from the Intercolonial railway from October 1, 1908, to March 31, 1909, would come within the provisions of and would be entitled to, the benefits conferred by Bill (No. 19), providing paragraph 2 was eliminated?

Mr. MURPHY. No men affected within period named.

MILITIA MATTERS.

Mr. WORTHINGTON:

1. Are facilities for rifle practice available at the Royal School of Instruction, St. John, Quebec? If so, to what extent?

2. What was the total cost of the Brandon drill hall, including site?

3. Have the buildings for guard-room and married quarters at the Winnipeg barracks been yet completed? If so, when?

4. What was the total cost for each of these buildings, and when were they occupied?

5. Are there any members of the permanent force at Winnipeg still drawing allowances in lieu of quarters? If so, how many, and at what rates?

Hon. WM. PUGSLEY:

2. Site, $3,100; building, $63,759.14; total, $66,859.14.

4. Guard-room, $28,993.02; quarters for N. C. officers, $48,880.32.

The first, third and fifth questions were answered by the Minister of Militia. He stated that a site had been given free to the government. As to that he was misinformed. The cost of the building as given by him was $52,954. That was the contract price. There were some additional expenditures for fittings and other work in connection with the building, which made the total what I have stated.

THE HERRING FISHERIES.

Mr. JAMESON:

1. Are the fresh herring which are carried from Passamaquoddy bay and adjacent waters to the United States carried in Canadian or American bottoms?

2. Do such boats, when so employed, regularly comply with the Canadian customs laws respecting entry and clearance?

3. Are the Canadian customs laws enforced in respect to said boats? If so, since when have they been so enforced?

4. If not, in what respect are they not so enforced, and why?

Hon. WM. PATERSON:

1. Principally in American bottoms.

2. Vessels carrying fresh fish from points in Passamaquoddy bay have not all entered and cleared regularly at the Canadian Custom House in the past.

3. The Canadian customs laws are being enforced in respect of these vessels more effectively since January 1, 1910, at which date a new custom house was opened at Indian island, in the county of Charlotte, New Brunswick, to facilitate entry and clearance of vessels.

THE RIVIERE DU LIEVRE.

Mr. MAJOR:

1. Have the inhabitants of the valley of the Rivière du Lièvre, in the county of Labelle, made known to the government the position in which they find themselves, from the fact that the McLaren Company claim to be the proprietors of the booms and slides of that river?

2. Have they sent to the government one or more deputations or petitions for the purpose of making known their complaints?

Hon. WM. PUGSLEY:

1. Yes.

2. Yes.

THE KINGSTON 'WHIG.'

Mr. EDWARDS:

How much money has been paid by the Dominion Government to the 'Whig' Publishing Company of Kingston, for printing and advertising in each year from 1896 to the present time?

Sir FREDERICK BORDEN. Statement of expenditure showing amount paid by Department of Militia and Defence to the 'Whig' Publishing Company of Kingston, Ontario, since 1896:

	Advertising.	Printing.
1896-7	$ 33.50	
1897-8	46.75	$ 18.75
1898-9	80.95	
1899-1900	21.00	52.00
1900-1	30.00	
1901-2		1.25
1902-3	14.00	
1903-4	26.20	4.75
1904-5	37.10	
1905-6		
1906-7	48.40	
1907-8	75.16	
1908-9	79.44	
1909-10	35.03	
	$527.53	$76.75

Advertising	$527.53
Printing	76.75
Total	$604.28

Sir WILFRID LAURIER. By the Department of Marine and Fisheries:

1905	$ 49 16
1906	92 92
1907	111 33
1908	215 18
1909	48 85
	$517 44

RIVIERE DU LOUP RAILWAY CROSSING.

Mr. GAUVREAU:

Is it within the knowledge of the Department of Railways and Canals that the railway crossing at the station of Rivière du Loup is said to be very dangerous, without gates and guards, and a source of very grievous accidents? If so, is it intended to grant a tunnel at this place for the safety of the public travellers and the passers by of that locality?

Mr. MURPHY. There is no public crossing at Riviere du Loup, as referred to, and it is not the intention to construct a subway or to facilitate in any way the passing of foot passengers at the point in question as ample and safe access is now provided, by the existing subway and roads.

MILITIA EXPENDITURE.

Mr. WORTHINGTON:

In the matter of expenditures by the government upon fortifications, reserve stores, mobilization, equipment, etc., upon particulars of which it is said to be in the public interest that there should be no discussion,

and for which no items appear in the estimates under specific descriptive headings, is the government prepared to adopt the policy of submitting the same, confidentially, to the leader of the opposition, previous to the House being asked to pass upon the estimates submitted for the ensuing financial year?

Sir FREDERICK BORDEN. The government has expressed its willingness on all occasions when such information has been requested to give the same to the leader of the opposition, and sees no objection to following the same course in the future.

SUB-TARGET RIFLE MACHINES.

Mr. WORTHINGTON:

1. How many sub-target rifle machines have been purchased by the government to date?
2. How many such machines are at present on issue to corps of active militia, military schools of instruction, cadet corps and rifle clubs, respectively?
3. What is the total cost of such machines to date?
4. Are such machines regularly employed at all military schools in imparting instruction to attending officers and men?

Sir FREDERICK BORDEN:

1. 552.

2. The issue of sub-target machines from District Ordnance Depots to units, rifle associations and cadet corps is authorized by the District Officer Commanding, and machines are withdrawn and re-issued in the district as may be considered necessary by that officer. The following is the distribution of these machines:

	No.
In Military District No. 1	53
" " 2	105
" " 3	48
" " 4	52
" " 5-6. . . .	110
" " 7	40
" " 8	33
" " 9	40
" " 10	35
" " 11	15
" " 12	5
" " 13	14
Total	550

The remaining two guns are retained as sealed patterns to govern manufacture and inspection.

3. $137,850.

4. Musketry forms part of the syllabus for attached officers and non-commissioned officers at Schools of Instruction, and sub-target gun machines are used for imparting instruction.

TENTS FOR MILITIA DEPARTMENT.

Mr. WORTHINGTON:

1. What number and description of tents have been manufactured for the Militia Department during the five years ended 31st March, 1909?
2. What was the average cost of each pattern of tent?
3. By whom were the same manufactured?
4. Were tenders called for in all cases? If so, how?
5. If by public advertisement, in what places and in what newspapers were such advertisements published?
6. From whom were tenders received, and what were the amounts thereof?
7. (a) Do any contracts at present exist for the supply of tents? (b) If so, when do such contracts terminate?

Sir FREDERICK BORDEN:

1. See Auditor General's Report for 1904-05, Part Q, pages 79, 97, 98; 1905-06, Part Q, pages 71, 117; 1906-07, Part Q, pages 67, 68, 101; 1907-08, Part Q, pages 80, 119; 1908-09. The honourable gentleman will be able to obtain the information required for the year 1908-9 so soon as that portion of the Auditor General's Report for the year dealing with the Department of Militia and Defence has been laid on the table of the House. This, no doubt, will shortly be done.

2. See above references.

3. Woods, Ltd., Ottawa; Merchants Awning Co., Montreal; The War Office.

4, 5 and 6. This information can be supplied on a motion for return of papers.

7. (a) Yes; (b) March 31, 1912.

SADDLERY FOR THE MILITIA DEPARTMENT.

Mr. WORTHINGTON:

1. What quantities and descriptions of harness and saddlery have been manufactured for the Militia Department during the five years ended 1st March, 1909?
2. What was the average cost of each set?
3. By whom were the same manufactured?
4. Were tenders called for? If so, how?
5. If by public advertisement, in what places and in what newspapers were such advertisements published?
6. From whom were tenders received and what were the amounts thereof?
7. Do any contracts at present exist for the supply of harness and saddlery? If so when do such contracts terminate?

Sir FREDERICK BORDEN:

1. See Auditor General's Report for 1904-05, Vol. 2, Part Q, pages 60, 67, 69, 77, 78, 95, 96; 1905-06, Vol. 2, Part Q, pages 69, 70, 72, 117; 1906-07, Vol. 2, Part Q, pages 66, 67; 1907-08, Vol. 2, Part P, pages 75, 77, 87, 119; 1908-09. The honourable gentleman will be able to obtain the information required for the year 1908-09 so soon as that portion of the Auditor General's Report for the year dealing with the Department of Militia and Defence has been laid on the table of the House. This, no doubt, will shortly be done.

2. See references already given.

3. By Adams Bros., Toronto; S. & H. Borbridge, Ottawa; Billington Bros., Winnipeg; Hugh Carson, Ltd., Ottawa; Craig Harness Co., Ltd., Ottawa; Kellys, Ltd., Halifax; Lamontagne, Ltd., Montreal; H. Lamontagne & Co., Montreal; A. Strachan, Kingston; M. J. Wilson & Sons, Ottawa.

Stores of this description were also obtained from the War Office.

4, 5 and 6. A motion should be made for the return of papers.

7. Yes. March 31, 1910.

COST OF UPKEEP, PERMANENT CORPS.

Mr. WORTHINGTON:

1. (a) What was the total cost of the upkeep of the permanent army service corps for the financial year ended 31st March, 1909, and (b) what is its numerical strength?

2. (a) What was the total cost of the upkeep of the permanent army pay corps for the financial year ended 31st March, 1909, and (b)) what is its numerical strength?

3. (a) What was the total cost of the upkeep of the permanent army medical corps for the financial year ended 31st March, 1909, and (b) what is its numerical strength?

4. (a) What was the total cost of the upkeep of the Canadian ordnance corps for the financial year ended 31st March, 1909, and (b) what is its numerical strength?

5. (a) What was the cost of administration of the militia stores branch of the Department of Militia and Defence, outside service, for the financial year ended 30th June, 1903, and (b) what was its numerical strength?

6. (a) What was the total cost of the upkeep of the corps of military staff clerks for the financial year ended 31st March, 1909, and (b) what is its numerical strength?

Sir FREDERICK BORDEN:

1. (a) $77,212.

(b) 10 officers, 3 warrant officers, 105 non-commissioned officers and men. In addition, 31 civilians are employed on water transport and barrack services at Halifax and Esquimalt in lieu of enlisted men at an expenditure of $18,528 for the year ended 31st March, 1909.

2. (a) $38,683.

(b) 10 officers, 6 warrant officers, 20 non-commissioned officers and men.

3. (a) $86,357.

(b) 22 officers, 1 warrant officer, 70 non-commissioned officers and men.

4. (a) $172,781.

(b) 28 officers, 24 warrant officers, 134 non-commissioned officers and men. In addition, 35 civilians are employed, in lieu of enlisted men, at an expenditure of $21,-185 for the year ended 31st March, 1909.

5. (a) $53,346.70.

(b) 90 permanent employees and 8 temporary labourers, &c.

6. (a) $26,823.

(b) 5 warrant officers and 25 non-commissioned officers.

HERRING FISHERY IN CHARLOTTE.

Mr. JAMESON:

1. How many barrels of herring were packed in the county of Charlotte, New Brunswick, during the years 1905, 1906, 1907 and 1908, and what was the respective annual value thereof?

2. How many barrels of britt or sardine herring were caught in waters contiguous to the county of Charlotte, New Brunswick, during the years 1905, 1906, 1907 and 1908?

3. To whom were they sold, and at what price per barrel, each year, respectively?

4. Is the Minister of Marine and Fisheries satisfied with the condition of this fishery?

5. If not, have any means been taken to improve it? If so, what means and when were same taken?

Sir WILFRID LAURIER:

	Year.	Barrels.	Value.
1.	1905	7,965	$35,842 50
	1906	7,384	29,536 00
	1907	2,210	8,840 00
	1908	2,420	10,890 00
2.	1905	332,496	
	1906	218,150	
	1907	246,644	
	1908	271,254	

3. Mainly to United States and Canadian sardine canners, but to some extent to Canadian fishermen for bait.

In 1905 at $2 00 per barrel.
1906 " 1 50 "
1907 " 1 50 "
1908 " 1 50

4. The conditions are peculiar to the particular locality and have obtained for the past thirty years, and it is for the people to deal with it.

5. Answered by No. 4.

DEEP WATER WEIRS IN CHARLOTTE COUNTY.

Mr. JAMESON:

1. How many licenses were annually issued for deep water weirs in the conuty of Charlotte during the years 1900 to 1909 inclusive, and what license fee was respectively charged during said years?

2. Were licenses issued to other than British subjects? If so, in what years and to whom?

Sir WILFRID LAURIER:

1. 1900 record not extant.
1901 469
1902 473
1903 453
1904 463
1905 443
1906 432
1907 433
1908 538
1909 557

$5 per weir.

2. No.

RURAL FREE MAIL DELIVERY BOXES.

Mr. ARMSTRONG:

1. How many different kinds of rural free mail delivery boxes are offered by the Post Office Department?
2. Has the government changed the design of the rural free mail delivery boxes? If so, why?
3. If any change has been made, what is the difference in the cost to the government in making the change, and can the new design, if any, that has been decided on, be locked?
4. Has the government received a petition asking for a mail route to be established between Dresden and Garville, in the county of Kent, Bentpath, Dawn Valley and Beaver Meadow, in the county of Lambton? If so, has the petition been granted? If not, why not?
5. Have locks to boxes been sent to those applying for same? If not, why not?

Hon. WM. PUGSLEY:

1. One.
2. No.
3. Answered by No. 2.
4. There has been a mail route between Bentpath and Dresden since 1st April, 1887.
5. The department has decided that for the present locks are not to be supplied.

KENSINGTON WHARF.

Mr. BOYCE:

1. Does the government own, or is it interested in, Kensington wharf, on the St. Mary's river, in West Algoma? If so, when was the wharf purchased, at what price, and subject to what conditions?
2. If the government does not own this wharf, are there any negotiations on foot for the purchase of it? If so, at what price, and upon what terms has the wharf been offered, by whom, through whom, and at what date, and has the government accepted the offer?
3. Has the government made an investigation as to the value of this wharf? If so, who made the investigation, and when was it made?

Mr. PUGSLEY:

1. No.
2. No.
3. In 1908, representations were made to the department that the Kensington wharf was in a very bad state of repair; a report was secured from Mr. J. G. Sing, district engineer, who estimated at $3,300 the cost of rebuilding and repairing the present structure which belongs to the Hiawatha Land Company.

COST OF PRAIRIE SECTION, G. T. P.

Mr. CAMPBELL:

1. What was the return made by the Grand Trunk Pacific Railway Company to the government as to the cost of construction of the line per mile across the prairie section in Manitoba, Saskatchewan and Alberta?
2. Is such a return sworn to, verified or otherwise?
3. How much of such cost is to be charged, respectively, to surveying and locating the line, clearing right of way, grading, ties and laying same, steel and laying same, station houses, telegraph lines, fences, locomotives and cars, if any such are included in cost?

Mr. MURPHY:

1. Up to the 31st October, 1909, the average expenditure per mile of the 'prairie section' as returned by the Grand Trunk Pacific Railway Company is $35,360.64. The average cost as certified to by the auditor of the Railway Department and the government engineer of the western division of the National Transcontinental railway, as being the amount for which the government is liable under the guarantee agreements with the Grand Trunk Pacific railway is $33,718.62. Unable to give information by provinces, as it is not kept in that manner.
2. The return is certified to by the president, third vice-president, and assistant chief engineer of the company, and after audit by Mr. G. A. Bell, departmental auditor of the Department of Railways and Canals, a similar certificate of cost on which is based the government's liability under the guarantee agreement is certified to by Mr. Collingwood Schreiber, C.M.G., government chief engineer of the western division of the National Transcontinental railway.
3. See statement attached.

MANITOBA—HOMESTEAD ENTRIES.

Mr. CAMPBELL:

1. How many homesteads have been entered for during the years 1908 and 1909 in Manitoba in township 19, range 15, west 1st meridian; township 20, range 15, west 1st meridian; township 21, range 16, west 1st meridian; township 22, ranges 16 and 17, west 1st meridian; and township 23, ranges 17, 18, 19 and 20, west 1st meridian?
2. Who were the original entrants, and the date of entry in each case?
3. How many have been cancelled or abandoned?
4. In the cases of abandonment or cancellation, who are the present entrants?
5. What lands are still open for homesteading in those townships?

Mr. OLIVER:

1. 98.
2.

ORIGINAL ENTRANT AND DATE OF ENTRY.

QUEBEC COMMAND—MEDICAL OFFICER.

Mr. ALLEN:

1. Is there a principal medical officer for Quebec command? If so, what is his name and how long has he held the appointment?

2. Does he receive pay for the appointment? If so, how much has he received?

3. What are the duties of his position, and has he performed them satisfactorily?

4. When did he last attend annual training?

5. Is it the intention of the government to retain him in this position for any length of time?

Sir FREDERICK BORDEN:

1. Yes; Lt.-Colonel A. N. Worthington. 1st May, 1905.

2. Yes; $1 per diem. Since May 1, 1905 to November 30, 1909, latest payment, he has received $1,663 as principal medical officer, Quebec command, and in addition he received $204 for attending annual training at Laprairie camp, 1905, and Sherbrooke camp, 1906.

3. (a) He is responsible to the officer commanding, Quebec command, for the medical administration, medical arrangements and sanitary duties within the command. (b) The manner in which an officer performs the duties of the position he holds is the subject of a confidential report every year. These reports are made confidentially, for the information of his superior officers and the Minister of Militia only, and it is, therefore, not considered desirable to answer this question.

Refusal to give such information is not to be understood to imply, in any way, that the confidential report on the officer in question has not been satisfactory.

4. 1906.

5. The period during which he will continue to hold his present position will be in accordance with the regulations governing the tenure of all such appointments.

GARRISON ARTILLERY.

On the question, Mr. BARNARD:

1. In how many instances have 12 pr. B. L. guns been supplied to regiments or units of

garrison artillery?

2. What regiments of garrison artillery is it the intention of the department to supply with these guns?

3. Are 12 pr. B. L. guns known as field artillery guns, and are they used for purposes of field artillery regiments?

4. Is it the policy of the department to require regiments or units of garrison artillery to train on 12 pr. B. L. guns?

5. Is it the policy of the department to arm for training or other purposes regiments of garrison artillery with field artillery guns?

6. Is any useful purpose to be served by requiring No. 1 company of the 5th regiment of Canadian artillery to train upon 12 pr. B. L. guns?

7. Why was this company selected out of said regiment to train upon these guns?

8. Is it the intention of the department to supply the 5th regiment of Canadian artillery with horses in order to enable them to train as a cavalry regiment?

Mr. SPEAKER. Dropped.

Sir FREDERICK BORDEN. I would like very much, Mr. Speaker, to answer that question if some hon. member will put it.

Mr. TALBOT. I ask to be allowed to ask this question.

Mr. FOSTER. Has the hon. gentleman (Mr. Talbot) had the consent of the hon. member (Mr. Barnard) who gave notice of the question?

Sir WILFRID LAURIER. No, that is not necessary.

Mr. FOSTER. But a member's question should not be taken from him by another member without his consent.

Sir FREDERICK BORDEN. I may state that there has been some misunderstanding as to this particular matter as the result of a question and answer given some days ago. I have had a statement prepared by the Inspector General, General Lake, who, in fact, thinking there was misapprehension regarding the matter, volunteered the information and desired me to place it before the House. It will reflect on nobody and I think it will be a decided advantage that it should be given.

Mr. FOSTER. I am not raising the question whether it would be advantageous or not, but I am discussing the principle. It does not seem to me the best course to follow.

Sir FREDERICK BORDEN. I could read the information some other time.

Mr. FOSTER. The hon. minister is not debarred from bringing it down.

Mr. SPEAKER. The point being raised whether a question should be put in the absence of the member who gave notice of it, it had better stand.

Mr. BARNARD.

BUSINESS OF THE HOUSE—PARTY PATRONAGE.

On the notice of motion:

That in the opinion of this House the prevailing system of party patronage constitutes a menace to honest and efficient government, incites to great waste of resources and extravagance of expenditures, tends inevitably to corrupt and lower the tone of public morals, and should forthwith be eliminated from our federal administration.

Mr. FOSTER. I wish to give notice to the Prime Minister (Sir Wilfrid Laurier) that next Wednesday, if this resolution is reached, I intend to move it.

JUDICIAL BUSINESS, DISTRICT OF MONTREAL.

Mr. F. D. MONK (Jacques Cartier) moved:

For a return showing the number of cases, en délibéré, or in which judgment has been reserved, before the Superior Court of Lower Canada or the judges thereof sitting in and for the district of Montreal, said return to be confined to the cases of said court heard in the city of Montreal, and to such as were en delibèré, or reserved, on the first day of December instant.

He said: This is rather a pressing matter, yet I do not intend to speak at any length upon it. I merely wish to call the attention of the government to a state of affairs which has now existed too long in the city of Montreal. There is, as the Prime Minister (Sir Wilfrid Laurier) knows, a demand for additional judges in Montreal, by the bar, by the public, and, if they could take any action, I think, by the judges themselves. The judges have power, under our law, to call to their assistance the judges from other districts, and they do so, otherwise they could not get along at all. These judges come as much as they can and render as efficient service as possible, but what I wish to insist upon is that the insufficiency of judges of the Superior Court in that particular district is now apparent. As my right hon. friend knows, the provincial legislature has altered the law and has provided for two additional judges for the city of Montreal. The legislation by the province that is required was passed two years ago. As the House is aware, the organization of the tribunal is in the hands of the province, but the nomination and payment of the judges is with the federal power. The government here made representations, or I believe they did—certainly the Prime Minister expressed the opinion on one occasion—that it was not necessary to have new judges in Montreal but that there were judges in the outlying districts sufficiently unoccupied to be able to attend to the business of the district of Montreal and that a judicial re-

organization was necessary. There is no doubt that a judicial reorganization is necessary. There are districts in the neighbourhood of Montreal whose judges have very little to do—almost nothing to do. But to change the organization of the district and put more judges in the district of the city of Montreal would involve a complete change in our system of judicature in the province of Quebec. It has been spoken of for years, and a Bill has been introduced to that effect in the legislature of the province of Quebec, but for some reason or another the government of the province hesitate to change the system and change the districts, which change, if properly carried out, would give to Montreal sufficient judges without the nomination of additional members of the bench. The position of the provincial government, I understand, is this: Whatever may be said as to judges in certain districts not being busy, and as to the utility of changing the system, the people of the province of Quebec at present are not ready for that change. That I understand is the argument. Now the consequence of that is that we ought to have at present 16 judges in the city of Montreal.

Sir WILFRID LAURIER. You have 14 now.

Mr. MONK. Well, there is another point to which I wish to call the attention of my right hon. friend. There was a long delay in replacing Judge Curran, I understand he has been replaced to-day. But the seat was long unfilled. There was also a long delay in replacing Judge Loranger, or Judge Mathieu. Anyway, for the past year, in the city of Montreal, we have only had 12 judges. When the House considers the extent of legal business in Montreal, it must conclude that those judges are overworked. They all do their very best, but they cannot get rid of the accumulating business. Let me give the House a few figures. Here is the certificate of the deputy prothonotary for the Superior Court in Montreal:

I do hereby certify that the number of cases inscribed for trial (enquete and merits) during the three last years was as follows: 1907, 1,817; 1908, 2,249; 1909, 2,758. On the 31st December last there were 1,545 cases left unheard.

I do further certify that the writs issued during the same period were: 1907, 5,884; 1908, 6,701; 1909, 7,000.

JOS. LOZEAU,
Deputy Prothonotary.

Montreal, January 3, 1910.

You can see how rapidly the business of the court has increased during the past few years. I have also another certificate from the Deputy Prothonotary in charge of the Court of Review, which is the Superior Court of three judges sitting in review on appeals from the judgment of the court below:

I hereby certify that the number of cases subscribed for hearing in review for 1907, was 225; in 1908, 244; in 1909, 278; and that on the 31st day of December, 1909, there were 128 cases left in hand unheard.

G. H. PLOURDE,
Deputy Prothonotary.

Montreal, 31st December, 1909.

I have stated that during the last year we have had practically only 12 judges. Let me point out how their work is distributed. The Superior Court has jurisdiction over cases involving from $100 upwards. There is an appeal from the judgment of the Superior Court judges to the Court of Review, which is composed of three other judges of the Superior Court, and from their jurisdiction you can appeal to the Court of Appeals, to the Supreme Court, and to the Privy Council, under certain conditions. We have four judges in the city of Montreal who are required for the Court of Review, three judges sitting in the court itself, and another judge in case one of the judges is disqualified to sit in a case of his own from which there is an appeal, or for other reasons. At the beginning of the month, four judges must be set aside for the purposes of the Court of Review, one for a jury trial, of which this month there are seven inscribed in the Superior Court, and two for the practice division. This leaves five judges of the twelve for the general business of the court. Of course if we get fourteen in working order, it will leave seven judges for the ordinary routine business of the court. But from the volume of litigation which I have just mentioned, it is evident that even seven judges must be extremely hard worked, and the cases must be easily disposed of, if they are to get rid of such an immense number as I have mentioned. As a matter of fact, they are not able to do so. The Chief Justice has to summon judges from the country districts in order to get through the business, which comes before the court as well as they can. Under these circumstances, it seems to me that the province, having seen fit to alter the constitution of the tribunal and to provide two additional judges in Montreal, it is incumbent on the federal power to name those judges. This is the way the question presents itself to me: Under the British North America Act you can constitute your tribunals as you like, but we will not name the judges. It seems to me that position is untenable. We are obliged to provide the judges after the provincial power has organized the tribunal. Of course, if it was a case of vexation, supposing a provincial government, without any valid motive, should change the tribunal so as to force the federal power to provide the judges, I suppose we might refuse the necessary supply. But outside

cases of vexation, or conspiracy, or an organization for putting the dominion power unnecessarily to expense, and for the sole purpose of providing places, I do not think we have a right to refuse to name the judges they require.

Now this provision was made nearly two years ago, and unless the government takes the ground I have suggested, I do not think it can delay any longer to provide additional judges. What, then, is the reason of the delay? It is whispered that my hon. friend is delaying for political reasons. I hope he will contradict that. It seems there is no difficulty in finding nominees for the positions. There are a great many gentlemen qualified and willing to serve. But the government, for reasons of its own, those nominees, as we are informed, being members sitting in this House, have seen fit to delay the supplying of a legitimate want. I do not think that is fair. The province has done its share and the duty of the government, without any other consideration of the question at all, is to make the appointment. If there has been any correspondence between the government of the Dominion and the provincial authorities in regard to this matter which would justify the government's delay, I think the government should lay it on the table. I moved for the number of cases en delibèré, but it seems to me that the data which I have given to the House are much surer indications of the volume and pressure of business. There are undoubtedly a large number of cases en delibèré, or under advisement, but no blame for that is attached to the judges. In fact, there is no complaint about the judges; they are overworked and what is required is that they should be given the necessary assistance and it is for this government to do so. I therefore will not press the motion in so far as requiring the statement of the cases en delibèré is concerned. It would be an unnecessary and invidious statement. But I suggest to the government that if there is any correspondence with the provincial government upon this subject it should be laid upon the table of the House. While I am referring to the administration of justice—this is a corollary subject—I would like to say one word with reference to the judges of the circuit court sitting in the city of Montreal. They have an immense volume of work and they are very much underpaid. I merely wish to read what I find in the 'Gazette' of the 15th of December last in reference to the state of administration of justice in the city of Montreal. These judges are also paid by the federal authorities. I quote:

The Circuit Court for the district of Montreal, composed of the city of Montreal and the counties of Laval, Chambly and Verchères, Laprairie and Napierville, Jacques Cartier Soulanges and Vaudreuil, was established in the year 1893, for the purpose of taking the smaller cases from the then, as now, overcharged docket of the Superior Court, yet today the accumulation of business before the Circuit Court is so great owing to the rapid growth of the city that there are no less than 3,100 cases now inscribed to be heard as soon as Judges Lebeuf, Dorion and Purcel can find time to hear them. This, in a word, is the extent of arrears for the last eleven months, and by the first of January, 1910, there will be at least 3,500 cases behind. There were on the first of February, 1908, 2,500 cases in arrears, so it will be seen that the work of this important court is going behindhand at the rate of one thousand cases per annum, and this with the three present judges working from 10 o'clock in the morning to 5 and 6 o'clock at night.

As a matter of fact, the amount of litigation before the Circuit Court of this district is so great that there have been no less than 12,729 judgments rendered during the eleven months of the present year. As for the work done by the three judges who at present constitute the Circuit Court there is not a lawyer or litigant who has a word of complaint as to the manner in which the business of the court is carried on, for it was only the other day that the members of the junior bar of this district congratulated Judge Lebeuf because of the improvements he had made, and of the efficient manner in which the court expedites the work on hand.

Twenty cases are disposed of every day by the two judges on the bench, as it is absolutely necessary that there shall be one of the three constantly sitting in chambers, and even then he finds time to sit twice a week.

Speaking for his colleagues yesterday, Judge Lebeuf declared that it would be quite impossible for them to work any harder than they do now, and he, furthermore, expressed the opinion that there was quite enough work for at least nine judges in the Circuit Court of the district. Without one new case being inscribed it would take the present judges a whole year to come up with the work in arrears.

As to the question of salary the $3,000 per annum received by these judges is regarded as a grave injustice when it is considered that the judges of the Superior Court receive $7,000, and the recorders and police magistrates receive from $4,000 to $5,000 yearly. Judges Lebeuf, Dorion and Purcel are called upon to follow the same procedure and apply the same civil law as the justices of the Superior Court.

I have quoted this as an act of justice to these three judges who are much overworked and underpaid. It would seem to me that the government, under these circumstances, might take up in a special manner this question of the administration of justice as far as it comes under its own control in the city of Montreal. We now have a city of over 500,000 people. There is an immense commercial business. It is the commercial centre of the Dominion, there is an enormous amount of litigation

and the cases are of the utmost importance. From the data which I have given to the House I think we, in the city of Montreal, who contribute very largely to the taxation, ought to be better provided in regard to the administration of justice. I hope that the government will take the matter up because it affects the interests of the bar and of the public in the highest degree.

Hon. A. B. AYLESWORTH (Minister of Justice). Mr. Speaker, the resolution which the hon. member (Mr. Monk) has moved is for a return giving certain information as to the number of cases standing for judgment before the Superior Court in Montreal. There would be no objection to the laying of any such information in the possession of the government before the House, but the hon. gentleman must be perfectly aware that no information of this nature is possessed by the government. No returns are made by any of the provincial courts to the Department of Justice or to any other department of the Dominion government in regard to the position of the business that may be standing for consideration.

Mr. MONK. I was told by the officials there that information of that kind had already been given here, but inasmuch as more instructive data have been cited by me to the House I do not insist upon that part of the motion.

Mr. AYLESWORTH. I can assure my hon. friend that there are no returns made by any of the judges, or by any of the officials of the courts to the Department of Justice, or to any other department of the Dominion government, except certain very general information for statistical purposes which comes, I understand, ordinarily, and regularly, to the Department of Agriculture. Therefore, if this motion were adopted by the House it would be quite impossible to afford, by way of a return or answer, any such information as is asked in any other way than by making a special application to the judges themselves for the information that is desired. I hope, therefore, that my hon. friend will see his way to withdrawing the resolution after it has been discussed, because I have no doubt that discussion and to call public attention to the situation was that which my hon. friend especially desired. Now, the hon. gentleman has addressed himself not only to the position of the judicial business in the superior courts in the city of Montreal but he has also spoken in regard to the circuit court and as the two stand in an entirely different position let me first say what I wish to say with regard to the circuit court. The circuit court is a small debtors' court, a court which corresponds, in a general way, with what in Ontario we call a division court. I have not the slightest doubt that the number of cases entered from month to month and from year to year in the debtors' court is exceedingly large. It could not fail to be so, but that there is in that court any such congestion of work at the present time as calls for additional judicial help, I must be given leave very strongly to doubt because the attorney general of the province, who is charged with full responsibility for the administration of justice within the province, and the provincial government have not proposed to add another to the number of circuit judges in the city of Montreal. Until that step is taken by the province; until the provincial legislature has provided for an additional judge to the Montreal circuit court, there is absolutely nothing that this parliament can do. No matter how much we might wish that there should be extra judicial assistance provided for the circuit court in Montreal we have no power to appoint an additional judge until the provincial legislature has acted, and the circumstance that the provincial legislature has taken no action is I think the best proof that there is no need of action in that regard. Increasing the salaries of the three judges who now constitute that court in Montreal manifestly would not lessen the amount of work these gentlemen have to do, and the only way in which congestion of work, if it exists in that court, is to be relieved is by a further judicial appointment. But, the Superior Court of Montreal or of the province of Quebec stands of course in a different position. The legislature of the province has provided for the appointment of an additional number of judges to that court. As yet this parliament has taken no action in that regard and for the propriety of the course which we have adopted in that respect there is the very best of reason. I think I could convince my hon. friend himself that that reason exists, but as it is six o'clock it would be impossible to finish the discussion and I shall have to reserve what I wish to say until it can be resumed.

On the motion of Mr. Aylesworth the debate was adjourned.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Sir WILFRID LAURIER. We intend to take up some of the Bills and go on with the budget debate.

At six o'clock, the House adjourned.

HOUSE OF COMMONS.

THURSDAY, January 13, 1910.

The SPEAKER took the Chair at Three o'clock.

PROCEDURE—WITHDRAWING OF QUESTIONS.

Mr. SPEAKER. In regard to Question No. 4 (which appeared in the orders of the day yesterday as Question No. 24), in the name of Mr. Barnard, I desire to make the following observations:

In my opinion, there are only two ways in which a question can be properly withdrawn when once it has been presented for answer in the House, that is, first by written notice by the member, putting the question, to the Clerk of the House stating that the question is withdrawn, or by the member, in his place in the House, informing the Speaker that he desired the question to be dropped or withdrawn.

In the British House of Commons the practice is that no member can ask a question in the name of another member unless upon the request of the member in whose name the question stands. (May 11th edit. p. 251.) The practice, however, in this House has hitherto not been so rigid as this, inasmuch as members have asked questions for other members under the assumption of an implied request, at least, and, in my opinion, it is not desirable that this practice should be changed.

On the subject of answers to questions the following is the practice of the British House. (See May, 251):

> A minister may, if he thinks fit, on the ground of public interest, answer a question appearing on the notice paper, although it is not asked. A minister may also, on the ground of public interest, or some other ground, decline to answer a question.

Having this practice in view, I think the hon. minister would be at liberty to answer the question of the hon. member even although the member did not call the same.

GARRISON ARTILLERY.

Mr. BARNARD. It was my intention to reframe this question, but if the hon. minister wishes to answer, I have no particular objection.

Sir FREDERICK BORDEN (Minister of Militia). I thought it would be in the public interest to read a statement prepared for me by Sir Percy Lake, chief military adviser of the government, and inspector general, as there seems to be some misapprehension in the mind of the hon. gentleman and that of the hon. member for Sherbrooke (Mr. Worthington), the latter of whom put the same question the other day. Therefore, on the ruling of Mr. Speaker, I shall proceed to read the statement prepared in answer to this question:

Sir WILFRID LAURIER.

Mr. BARNARD asked:

1. In how many instances have 12 pr. B. L. guns been supplied to regiments or units of garrison artillery?
2. What regiments of garrison artillery is it the intention of the department to supply with these guns?
3. Are 12 pr. B. L. guns known as field artillery guns, and are they used for purposes of field artillery regiments?
4. Is it the policy of the department to require regiments or units of garrison artillery to train on 12 pr. B. L. guns?
5. Is it the policy of the department to arm for training or other purposes regiments of garrison artillery with field artillery guns?
6. Is any useful purpose to be served by requiring No. 1 company of the 5th regiment of Canadian artillery to train upon 12 pr. B. L. guns?
7. Why was this company selected out of said regiment to train upon these guns?
8. Is it the intention of the department to supply the 5th regiment of Canadian artillery with horses in order to enable them to train as a cavalry regiment?

Sir FREDERICK BORDEN:

Instead of answering the question categorically I beg to read a statement on the subject prepared for me by Major-General Sir Percy Lake, chief military adviser of the government and inspector general:

In every fortress guns of various natures and power are permanently mounted in the batteries designed to protect the place, from guns of the largest calibre down to 12 pr. and 6 pr. quick-firing guns, and even machine guns. These are called its 'fixed armament,' and are mainly for use against ships and smaller vessels. Again, a certain number of guns are allotted to every fortress, as what is called 'movable armament,' i.e., mobile light guns capable of being moved about from place to place to meet attack in localities upon which the fixed armament of the fortress could not be brought to bear. The guns to which, it is presumed, the questions refer, belong to this latter description of armament.

When Esquimalt was taken over from the British government, the 'movable armament' which had been allotted to it was found to be one battery (6 guns) of 13-pr. muzzle loading guns. In other words, 13-pr. M. L. guns were included in its armament for use in repelling either a landing attack made outside the range of the fixed guns, or an attack from the land side of the fortress, upon which the guns of the 'fixed' armament could not be brought to bear. For a few years after the departure of the British troops, these 13-pr. guns were retained as part of the movable armament of the fortress, but, in view of the difficulties experienced in maintaining their ammunition (which was rapidly becoming obsolete) in an efficient condition, and the drawback that this gun used ordinary gunpowder, and not smokeless, it was always intended to replace them by 12-pr. B. L. guns firing smokeless powder, as soon as these latter should become available in consequence of the rearmament of the field artillery generally with the new 18-pr. guns.

The 12-pr. B. L. guns to which the question refers are assumed to be the battery of 12-pr. B. L. guns which has recently been sent to Victoria for this purpose.

Again, it is not correct to say that these 12-pr. guns, or indeed any guns of any nature, are 'supplied to regiments or units of garrison artillery.' All guns are supplied and belong to the fortress only, and the corps or men told off to work or drill with any particular gun may, at any time, be changed, and indeed often are changed as circumstances require. For the working of the particular guns in question, a company or part of a company of the 5th regiment, C. A., will now be detailed, probably the same company which, in previous years, has been detailed to train, and has trained, with the old 13-pr. muzzle loading guns, which have now been taken away. The selection of the particular company or part of a company of the 5th regiment to be trained in the use of these guns will be made by the officer commanding the regiment, in communication with the officer commanding the Esquimalt defences.

It may be noted that, in the case of Halifax, the movable armament includes, and has, for many years past, included, among others, 15-pr. B. L. field guns, while this gun and the 12-pr. B. L. gun are in use for the same purpose in many of the fortified ports of Great Britain and the empire generally. It is considered that, for the special conditions of Esquimalt, 12-pr. B. L. guns are well suited, probably better suited than would be the 15-pr., inasmuch as they are lighter and more easily handled on bad roads.

Note.—The new 18-pr. field guns are nowhere allotted for this purpose.

MANITOBA AND NORTHWEST TERRITORY FISHERIES.

Mr. GLEN CAMPBELL. Before the orders of the day are called, I would like to ask a question of the hon. the acting Minister of Marine and Fisheries. A report was made five or six years ago by the commission which lately sat in Manitoba and the Northwest territory inquiring into matters pertaining to the fisheries there. The hon. minister promised that the report would be printed as soon as possible and laid on the table. When will it be laid on the table? I regret that the hon. minister is not here to reply and regret still more the reason why.

The Right Hon. Sir WILFRID LAURIER (Prime Minister). I will have the matter inquired into at once and report as soon as I have an answer.

INDIAN LANDS IN ALBERTA.

Mr. HERRON. I asked for a return about the middle of November regarding a sale of Indian lands of the Peigan Indians in Alberta. I am very anxious to have the return and would like to know when we may expect it.

Hon. FRANK OLIVER. I laid it on the table a few minutes ago.

ST. PETER'S INDIAN RESERVE.

Mr. BRADBURY. I would like to call the attention of the hon. the Minister of the Interior to the fact that the return furnished this House on the 11th of March is incomplete. There was a letter written by one Rainway, at Selkirk, regarding the expenditure of $500 and there are no details. There is a letter from the Indian Department calling attention to the omission. Could the minister furnish details of that expenditure?

WATERWAYS TREATY.

Mr. R. L. BORDEN. Might I ask the right hon. the Prime Minister whether or not any further progress has been made with regard to the Waterways Treaty.

Sir WILFRID LAURIER. Yes, there are some subsidiary negotiations going on now with the view of forming our own judgment with regard to one of the points at issue.

FRENCH TREATY.

Mr. R. L. BORDEN. It is rumored that some difficulty has occurred in connection with the ratification of the French Treaty. Is there any ground for that rumour?

Hon. W. S. FIELDING (Minister of Finance). We are not aware of any difficulty, and presume that in due course it will be ratified. We have no official intimation to the contrary.

HALIFAX AND ESQUIMALT NAVY YARD.

Mr. R. L. BORDEN. Have the government had their attention drawn to some observations of Sir Wm. White, which are to be found in the London 'Times' of Nov. 19, regarding the conditions of the navy yards at Halifax and Esquimalt?

Sir WILFRID LAURIER. I could not answer that off hand.

Sir FREDERICK BORDEN. I am aware that some correspondence has taken place and will be able to give an answer tomorrow.

Mr. R. L. BORDEN. I can read the observations, if the minister would like to hear them. They are these :

During the past summer he had visited the naval yards at Esquimalt and obtained first knowledge of its condition. Considerable extensions had been made in comparatively recent times to its workshops, store houses and plants; fortification designed to protect the harbour had been modernized but the work was incomplete. He found the fort unarmed, the guns lying on the ground at the foot of the hill in the open. The navy yard was

without a staff capable of maintaining in good condition the expensive machinery left in the work shops and in the buildings. The stores had been disposed of locally at ridiculously low prices and the naval base had been virtually abandoned and was rapidly deteriorating. From information received he had reason to believe that the naval base at Halifax was in a similar condition. Facts of this nature made clear the importance attaching to the new agreement under which these naval bases were to be maintained by the Dominion government. It was to be hoped that before long all foreign naval stations would be restored to a condition of efficiency.

Sir FREDERICK BORDEN. I misunderstood my hon. friend regarding the question. I have no information on that matter, but will make inquiries and be able to give a report if there is anything in the department.

INTERCOLONIAL RAILWAY BRANCH LINES.

Sir WILFRID LAURIER moved the second reading of Bill (No. 17) to authorize the government of Canada to acquire, by lease, lines of railways connected with the government railways.

Mr. SPEAKER. Is the House ready for the question?

Carried.

Sir WILFRID LAURIER. My hon. friend from Westmorland (Mr. Emmerson) desires to speak. Stand.

Mr. SPEAKER. I have declared the motion carried, and I am now putting the question, shall the Bill be now passed. I suppose this latter motion might stand.

Mr. R. L. BORDEN. When any motion is passed under some misapprehension on the part of members, it has always been usual to regard it as not passed for the time being.

Sir WILFRID LAURIER. My hon. friend can speak on another like motion which will come up.

Mr. SPEAKER. The motion is that the Bill be now passed.

Mr. EMMERSON. By arrangement with the Minister of Railways, I was to have an opportunity to make a few observations with respect to the Bill. Unfortunately I was not here at the second reading, it was not possible for me to be here, and I have just now arrived. I would like the matter to stand until to-mororw.

Mr. SPEAKER. The matter stands until to-morrow.

WAYS AND MEANS—THE BUDGET.

House resumed the adjourned debate on the proposed motion of Mr. Fielding;

'That Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the ways and means for raising the supply to be granted to His Majesty.'

Mr. M. S. SCHELL (South Oxford). In resuming the debate on the budget, I desire to join the felicitations of those who have already addressed the House on the character of the budget, and to extend to the hon. the Finance Minister my congratulations on the splendid statement which he has again presented to this House and to the country. The position which he occupies is certainly unique and unparalleled in the history of this country, and I think in the history of any country. Occupying, as he has, for the long period of thirteen years, uninterruptedly, the position of Finance Minister, he has been able to present to this House a succession of budgets that have at once given an indication of a growth, a prosperity and a development on national lines that has perhaps been unequalled in the history of any country. It is all the more gratifying to us to listen to such a statement in view of the recent world-wide depression that prevailed throughout the United States as well as European countries, and which was in a measure reflected in our own country, and which resulted in a certain recession of our trade, so that our revenue was somewhat less than it had been the year before. Last year the revenue was in the neighbourhood of $11,000,000 less than in the previous year. But we all rejoice that now there is every evidence of an increased revenue, and of a return of prosperity that will even surpass that of the record year of 1907-8. I have here a return for the month of December, from which I find that the optimistic forecast of which the Finance Minister gave on the introduction of his budget, is more than likely to be fulfilled. For instance, we see that the total revenue for the month of December was $8,733,571, an increase of $1,550,216 or over 20 per cent compared with December of 1908. For the nine months, the revenue has been $73,390,008, an increase of $11,091,497. The increase in the customs revenue has been $9,361,421. If this increase for the month of December continues during the next three months of this fiscal year, there is no doubt that our revenue will exceed the $97,500,000 which the Minister of Finance estimated, and may possibly touch the $100,000,000 mark at the end of this current year. But there is also another pleasing fact about the returns. The expenditure, on the other hand, shows a decrease for the nine months of $3,034,492 on consolidated fund account, and of $2,290,206 on capital account. The total expenditure on consolidated fund account was $47,-

398,129, and on capital $24,026,137, of which about $17,000,000 was on the National Transcontinental railway. We rejoice in the return of prosperity that has come to us, and we believe that we are on the eve of a growth and a development that has not heretofore been reached in the Dominion of Canada.

Now, Sir, I do not propose to answer at any great length the speech that was delivered by the hon. member for North Simcoe (Mr. Currie) prior to the adjournment of the debate. But there are one or two statements he made which I wish to correct, and to give some information that will show that he was labouring under a misapprehension in some of the figures that he gave to the House. I would not for a moment hint that he was endeavouring to create a wrong impression, or that he wished to prejudice the country against the methods of book-keeping that prevail the government offices; but certainly he used some very strong language for one who apparently was not able to harmonize the records as they appear in the Statistical Year-book and the Trade and Navigation returns. For instance he says that the Statistical Year-book gives, for the exports in 1896, $117,684,799, while in the Trade and Navigation returns they are given as $121,013,852.

There is that difference, I presume. I have not looked up the Year-book but have simply taken the trade and navigation returns, from which it is easy to see how that difference occurs. For instance, the hon. gentleman has quoted the two years 1896 and 1900 in making these comparisons of exports. For 1896 there was an estimated amount short reported, as it appears in the Trade and Navigation report, of $3,329,053, which, if added to the figure given in the Statistical Year-book would correspond exactly with the total amount that is given in the trade and navigation returns. It will be observed that these two figures are given on the same page of our trade and navigation returns, no attempt is made to mislead or to falsify the accounts. The Statistical Year-book does not profess to give as complete a record as the returns published in the Trade and Navigation report. In the year 1900 there is an item ' estimated short reported $5,461,411.' That added to what appears in the Year-book would make exactly the amount which he has quoted as appearing in the trade and navigation returns. The circumstances in the other two years he has quoted are exactly the same, his figures are the same simply because there were no figures in that column ' estimated short reported.' Take the columns for imports. He says that the Statistical Year-book for 1896 gives $110,587,480, and that in the trade and navigation return the figure is $118,011,508. If he had given as much attention to the task of ascertaining the exact facts as he appeared desirous of prejudicing the House, he would have had no difficulty in seeing that these reports are exactly correct. On pages 2 and 3 of the Trade and Navigation report he will find both the amounts to which he has referred. The figures in the Statistical Year-book are taken from the imports that come into the country for consumption only, and he quotes from the trade and navigation returns the total imports. Both are given in the Trade and Navigation report and both are correct, but, as I said, the Statistical Year-book does not profess to go into these figures as elaborately and as fully. If he wished to have the facts they are there before his eyes. I shall not refer further to the different figures which he quoted, but an hon. member is not justified in using such language as this:

> But when we find a discrepancy of millions of dollars in corresponding statements given in these blue-books what must we expect to find in the other accounts? Is it a fact that we are standing on a volcano and that the statement given every year by the Finance Minister is a cooked statement?

Very strong language indeed, I think rather unbecoming language to be employed by a member without having made a very careful study of the accounts he proposes to criticise. I have been in the House five years and I do not think I have heard a single member question the correctness of the statements in the blue-books. The hon. member is apparently trying to create an impression in this country that there is at least carelessness in the manner of computing the statistics published in our blue-books.

Mr. J. A. CURRIE. What authority is there for these estimated shortages, except a fancied authority in the mind of some official?

Mr. SCHELL. I presume it was impossible to get the exact returns when the statements were published, but I would call attention to the fact that from 1868 to 1900 that column appears in the trade and navigation returns. Since 1900 it has been dispensed with.

The hon. member has taken exception to the methods that have been adopted in regard to the expenditure of the public funds of the country and he objects to the maintenance of the two funds, the consolidated fund account and the capital expenditure account. If he had his way he would unite these two accounts and have but one account in which all the moneys would be written up so that if there was any surplus whatever it would appear in excess over the total expenditure of the year. Personally, I prefer to take the hon. member for North Toronto (Mr. Foster) as a better critic in the matter of book-keeping. The system that has been followed by the present govern-

ment is exactly the same as that followed by the government prior to 1896 with one exception, and that is with regard to the bounties that have been paid by this government, which have been charged to capital expenditure. The Minister of Finance (Mr. Fielding) has clearly explained the reasons for that change, and I think the reasons he has advanced are very good reasons. An expenditure made for the building up one of the great basic industries of this country is practically on a par with an expenditure in the way of a railway subsidy in helping a great public work.

However, I do not wish to quarrel with my hon. friend from North Simcoe (Mr. J. A. Currie). He says that the former government had a surplus in only one year during the whole eighteen years they were in power, namely 1882, but he says the present government has had surpluses in four years. If the hon. member is willing to concede that this government has done four times as well in the matter of surpluses as the former government, I suppose we need not complain. Following the system that has been adopted by the present government, as well as the preceding government, I wish to consider briefly the matter of surpluses as they appear in the records. You will find that under the former government they had a number of surpluses. There were surpluses during the financial years 1886-7, 1888-9, 1889-90, 1890-91, 1891-92, 1892-93, or in six years in a period of twelve years, they had small surpluses amounting in all to over $9,000,000. But during that same period, from 1884 to 1896, they had deficits larger than their surpluses. These deficits were as follows:

1884-5..	$2,240,000
1885-6..	5,834,571
1887-8..	810,031
1893-4..	1,210,332
1894-5..	4,153,800
1895-6..	330,500

Or a total of deficits during that period of over $14,000,000. With the exception of the year 1896-7, I am glad to say that the present government have always had a surplus. In the first year after the Liberals assumed the reins of power there was a deficit of $519,981.44, but the following year and from that to the present time they have had each year a substantial surplus amounting to as high as $16,000,000 in one year, and giving in all a total of surpluses amounting to $114,558,259, from which deducting the deficit of the first year you have a total of surpluses during the Liberal regime amounting to $114,068,277.

Mr. HENDERSON. Would the hon. gentleman permit a question here?

Mr. SCHELL. Certainly.

Mr. HENDERSON. Would he be kind enough to tell us what has become of all these surpluses?

Mr. SCHELL. With very much pleasure. The surpluses that have accrued to the credit of the government have been expended on capital account, and I should suppose that my hon. friend who has been in the House for a great many years would know that.

Mr. HENDERSON. Then they were not surpluses.

Mr. SCHELL. They were surpluses over and above the ordinary or current expenditure. My hon. friend (Mr. Henderson) is too old a parliamentarian, I should judge, not to be better posted than he appears to be. He has been in the House long enough to be very well versed in the system of keeping the governmental accounts not only by this government but by the preceding Conservative government. However, he wants to know what has become of these surpluses and I have great pleasure in telling him that they have been expended on public works which stand as assets to the credit of the Dominion of Canada; not liquid assets in a sense, not interest bearing assets, but assets that indirectly contribute to the wealth and the growth and the prosperity of the country. For instance, I could give a statement of some of the expenditures that have been made from this source. Take the betterment of our canals. Does my hon. friend not consider that to be a wise expenditure on capital account; and on canals during the years of office of the present government there has been an expenditure of $28,385,227. Take again the Montreal harbour and the St. Lawrence ship channel. Who would say that is not a great national work in the interests of Canada and one which contributes immensely to the prosperity and the general welfare of our country? On improving the Montreal harbour and St. Lawrence ship channel there has been expended by this government $7,663,062. Then, in bonuses or subsidies to railways throughout the Dominion there have been expended $24,679,973; for harbours at Fort William, Port Arthur and Port Colborne there have been expended $2,276,303, and on the Quebec harbour $765,225. These are a few of the expenditures that have been made out of the surpluses to which I have already called the attention of the House. Now, I said that there had been surpluses to the amount of $114,000,000. Expenditures on capital account have been made to the amount of $212,000,000 during the twelve and three quarter years of Liberal government. It is true that our debt has increased somewhat, and of necessity it would have to increase when we have surpluses of $114,000,000 and capital expenditure of $212,000,000, and so we have had to borrow some money to meet these extra expenditures on capital account. But,

if you deduct the expenditure on the National Transcontinental railway and the Quebec bridge amounting to $58,500,000, you will see that all the government has had to borrow during the whole twelve and three-quarter years have been about $7,000,000. As I say, this has come from the wise management by this government of the finances of the country, so that they had a sufficiency to meet the demands of government, apart from the National Transcontinental railway, with the exception of some $7,000,000. On the other hand, how does that compare with the record of the former government? During the whole eighteen years of their term the total expenditure of the Conservative government on capital account was $167,162,252. Did they have nearly enough money to meet that capital expenditure? No. We find that they had to borrow money, that the revenue was not sufficient to meet the current expenditure and leave any considerable amount to apply on capital account, and out of that $167,000,000 during their whole eighteen years of office they only had $49,000,000 to apply on capital account. In other words, they had to go to the English market and borrow to the extent of $118,000,000 as against the $7,000,000 that this government has had to borrow during their twelve and three-quarter years. It will of course be said that the Conservative government built the Canadian Pacific railway. Well, eliminating the Transcontinental railway and eliminating the Canadian Pacific railway if you will, you will then see that the Conservative government had to borrow at least five times as much as the present government has had to borrow for the carrying on of the affairs of the country.

The hon. member for North Simcoe, as do many others on that side of the House, seems to think that because there is an adverse balance of trade against us it is an indication that the country is not prospering as it should. I am not very much surprised that our friends opposite sometimes think there is danger when they see an adverse balance of trade, because during their regime they had a very sad experience in that respect and perhaps it has made a very deep impression on their minds. In looking briefly into this question I find that from 1878 to 1896 the total imports were $2,044,807,768 and the total exports $1,682,592,467. There was an excess of imports over exports of $362,215,301, or an average of $20,123,000 per year for the whole 18 year period. If there had been compensating assets or sources of revenue or something to compensate for this adverse balance of trade it would not have seemed so bad, but we find that during their regime there was no material increase in population, there was no great inflow of immigrants to the country, no great public works, apart from the C.P.R., were constructed, to stand as great assets to the country. So, I say that this adverse balance of trade was a menace, and I am not surprised that they are so much concerned when they see a small adverse balance of trade accruing under the present government. The hon. member says that there is an adverse balance of trade during the twelve years up to the present time of $202,604,892. I do not know whether his figures are correct, but I have taken his own figures. With less than half the volume of trade, according to his figures, we have only about half the amount of an adverse balance. He says that when there is an adverse balance of trade, or even when trade is buoyant, times in the country are not so good. I take issue with him. In the first place, when trade is buoyant and is increasing rapidly, it is the best possible evidence of good times and prosperity as a whole in the country. I also take issue with him when he says that an adverse balance of trade is always a bad sign. Of course, there is a limit to which we can go with an adverse balance of trade without evil effects accruing to the finances of our country, but a small adverse balance of trade under certain conditions, is almost, I was going to say, a matter of necessity. I think I might use that expression in connection with the affairs of the country as we have seen them during the past twelve and three-quarter years. When the country is growing rapidly, when the population is increasing, when capital is coming to our shores for investment these things contribute to the increase of trade and especially do they contribute to the increase of imports. We will take, for instance, the money that has flowed into the Dominion of Canada for various purposes and see what we have as a compensating asset against this small amount of $202,000,000 which our friend says stands as an adverse balance of trade. For railway construction and for other public works it is estimated that at least $300,000,000 have come into the Dominion of Canada during the last twelve or fifteen years. The hon. member for South Ontario (Mr. Fowke), from a source that I suppose is fairly reliable, stated that at least $220,000,000 have come from the United States for investment in industrial enterprises during the last twelve years. We have had about 500,000 immigrants during the last nine years from the United States and it is estimated that last year alone the 90,148 immigrants who came into Canada from the United States brought with them, on the average, $1,000 apiece. That would amount to $90,000,000. Those that came in during preceding years, numbering, as I have said, some 500,000, less those who came

in last year, have brought in at least from $100,000,000 to $150,000,000. Some may say that this is an exaggerated estimate. It may be somewhat large but for those who have seen the class of immigrants who are coming in from the United States, farmers who have sold their farms at good prices and many of whom have brought in from $5,000 to $20,000, it is not unreasonable to suppose that this estimate is fairly correct. So that, from this source we have had brought into the Dominion money to the extent of about $250,000,000. I am leaving out entirely the money that has been brought by immigrants from Great Britain and other European countries. During the last twelve years immigration from Europe has totalled about 700,000 people. Possibly they have brought in $50,000,000, perhaps more; certainly they have brought in a considerable amount of money. Added to all that, political economists tell us that every able-bodied citizen who comes into the country becomes an asset worth, at least, $1,000. If we add that to the amount I have already named, you will see that we have a compensating asset to stand against any adverse balance of trade amounting to nearly $2,000,000,000. The figures are large but still they are figures that cannot be gainsaid. It is a fact that stands there and it, in a very large measure, answers the question: Why is it that our banks are receiving such an immense amount in deposits? Why is it that the general prosperity of the country is so evident? It is because of this large capital which has gone into circulation, and hence I say that this money which has come in and in some cases part of it going out for the purpose of buying imports, has materially contributed to what appears to be an adverse balance of trade. We know, however, that an adverse balance of trade is the usual experience of nearly all of the great countries of the world. Great Britain, Germany, France, Holland, Italy for the last thirty years have nearly always had an adverse balance of trade. The United States is frequently referred to as a country that has an excess of exports over imports, but if you go back and look at the history of the United States you will see that from 1855 to 1873 they had an excess of imports over exports amounting to $70,000,000 annually. So, I say there is no ground for alarm; in fact, there is no reason whatever for us feeling that there is any danger from the small balance of trade that has been referred to. I wish to call your attention to a statement that was made by the Vice President of the Montreal Bank in his annual report. He says:

> The adverse balance of trade has thus again begun to grow, but while men and money pour into Canada from abroad the disparity need not cause uneasiness. Domestic industries are, speaking generally, working well up to the limit of capacity. Labour is fully employed; the lumber trade has improved. The export of dairy produce has been larger than last year, with high prices ruling throughout the season, all farm products, indeed, are exceptionally dear.

That is the view that is entertained by this high authority that I have quoted.

Now, in the matter of loans, our friends opposite seem to think that the government are not effecting loans as cheaply as they were effected under their regime. Well, possibly some of the loans are not effected as cheaply. We know that money fluctuates in the money markets of the world like any other commodity. After the Boer war, money became much dearer, and in consequence of the increase in the rates of interest, it was not practicable, in the last few years, to renew loans on as favourable terms as in previous periods. Therefore our government as we have heard from the hon. the Finance Minister (Mr. Fielding) on more than one occasion, found it more difficult to replace loans as cheaply as they could a few years ago, and our Finance Minister only made loans at short terms so that he might be able to take advantage of the market when, in the natural order of things, money became more plentiful. Let me read a statement which appeared in the Toronto 'Saturday Night,' written by its financial editor, and which I think bears directly on the subject :

> OUR DEBT.
>
> It may be interesting to know that while the public debt of Canada is strictly increasing, the rate of interest is decreasing. At confederation, forty-two years ago, the dominion paid an average rate of 5·55 per cent on $67,069,115 which London had advanced. The interest on this which had to be remitted, either in the sale of produce or in gold, amounted to $3,700,000 yearly. After the lapse of ten years, or in 1877, the debt of the country to London had increased to $122,477,629, but the average interest rate had been scaled down to 4·74 per cent. In the next ten years the federal debt of Canada had reached $171,075,735, while the average rate of interest had fallen to 3·99 per cent. This entailed the sending abroad of $7,000,000 for the payment of interest on the debt. In the next decade, ending in 1897, Canada's obligations to London had increased to $218,225,503, necessitating an annual interest of $8,125,664, but the average rate of interest had fallen to 3·72 per cent. According to the return for the past fiscal year, our debt to London had swollen to $262,000,000, on which the interest charge will be about $9,300,000, which is at the rate of 3½ per cent. In the forty-two years, therefore, of the life of the Dominion of Canada, her obligations to London in borrowings had grown from $67,000,000 to $262,000,000, an increase of $195,000,000, and while the total annual cost to the government had expanded from $3,700,000 to $9,300,000 annually, the aver-

age rate at which the borrowings had been made were reduced from 5·55 per cent. to 3·56 per cent.

There, I think is a complete answer to the contention of our hon. friends opposite that the government is not effecting loans on as good terms as they should be able to do. Let me quote also from the remarks of Mr. Byron Walker, president of the Canadian Bank of Commerce, made on his return from England this last summer:

> There never was a time when the English investor was so ready to consider favourably Canadian investments. Mr. Walker said, 'As a matter of fact there never was a time when Canadian credit was so good. It is so good that we Canadians must be careful. I think I can truthfully say that we have never sold the English investor bad securities. We have given him good value for his money, and we must continue to do so.'

The London 'Standard' remarks:

> Having regard to the present monetary conditions we think the Canadian government is to be congratulated, first upon the policy of raising money at the present moment in short term maturities rather than on stock, and second upon the terms on which the bills were sold.

It was only a few days ago that our Finance Minister cabled to his financial agent in London that he wished to avail himself of the privilege stipulated in a loan, made in 1885, of £4,000,000, for fifty years at four per cent. That privilege allowed the government to replace that loan at the end of twenty-five years on giving six months' notice, and on the 31st of December, the hon. the Finance Minister cabled to London that he proposed taking advantage of that option. No doubt he believes that the present is an opportune time for the government to replace its four per cent loan effected in 1885 by the former government, and I have no doubt he will be able to do so on more favourable terms.

My hon. friend from North Simcoe (Mr. Currie) seemed very much concerned about the claims that are urged by our western friends, who claim to have a record wheat crop of 100,000,000 bushels, and he went on to say:

> If they look into the trade returns, they will find that 44,000,000 bushels of wheat is the largest amount exported from this country in any one year.

If my hon. friend had taken any pains, if he had looked up the trade and navigation returns he would have found that that is not a correct statement. For instance, we find that in 1898 the exports of wheat amounted to $44,000,000, which would represent a good deal more than 44,000,000 bushels, because wheat was not worth $1 a bushel in that year. That was of the crop of 1907 and previous years, not the crop of 1908. I do not see where the hon. member found his figures, for, in these returns, right in the adjoining column he would find the returns for 1909 showing an export of $57,891,304 worth of wheat—and this would be of the wheat crop of 1908 and not of 1909, and, in addition, $7,991,517 worth of flour, making a total value of $65,882,821 worth of wheat and flour exported of the crop of 1908 and preceding years.

Mr. J. A. CURRIE. For the information of the hon. member I may state that the quotation was for 1908 and was taken from the Statistical Year-book and not from the trade and navigation returns. The trade and navigation returns from which the hon. member is quoting are the unrevised returns for last year. I took the latest actual figures that I could get, which are to be found in the Canadian Statistical Year-book.

Mr. SCHELL. I am quoting from the revised figures. These trade and navigation returns are revised and absolute. The hon. member (Mr. Currie) went back to 1908, as I have stated, instead of 1909. The hon. member referred to the crop of 1909, but based his figures on the crop of 1907. Besides, he gave the figures for wheat alone, he quoted bushels instead of dollars and he left out flour entirely. These errors made a difference of fifty per cent in the statement he presented to the House.

A good deal of attention has been given to the average rate of duty on imports into Canada. Almost the only criticism of the present tariff by our opponents is levelled at the rate of duty on dutiable imports. In all their statements they totally ignore the free imports. Now, that is wholly unfair. The present government, when it came into power, declared that certain commodities should be put upon the free list. Surely, that is to be regarded as a reduction—it is a reduction to the limit. We must consider the free imports, then, if we seek to arrive at a fair idea of the tariff imposed on goods imported into Canada. We find that the total free imports from 1884 to 1896 were $457,739,263. The total free imports from 1897 to 1909, a period of equal length, were $1,108,199,713, or $650,459,950 more of free imports during the latter period than during the former. If these goods, instead of being admitted free, had been charged the average rate of duty which is now charged on dutiable goods, the Canadian people would have had to pay higher customs duties to the amount of $107,586,075.

Mr. J. A. CURRIE. What has that to do with it?

Mr. SCHELL. That shows that the government has been carrying on a policy that makes for free trade to the extent of allowing this amount of goods to come in free of tariff charge. Or, if you wish to look at

it another way: The total free and dutiable goods imported since 1896 amounted to $2,822,097,615, had these imports been charged at the difference between the rate of duty that obtained in 1896 and the present rate, the Canadian people would have had to pay into the Dominion treasury $71,681,279 more than they actually did pay. Some may doubt these figures, but I challenge any one to disprove them. The average rate of duty is shown here in the blue-book, and I have never heard the hon. member for North Toronto (Mr. Foster), who is the best authority on that side of the House, dispute the correctness of these figures. And I notice that in his reference to this matter he was very guarded and was careful always to state 'dutiable imports', thus leaving out the free imports in his comparison between the charges that were made by the former government and those made by the present government. If you take the dutiable and free imports, which is the only fair basis, you find that the average rate of duty in 1896 was 19·129 per cent, while in 1909 the average rate was 16·586 per cent, or a difference of $2.54 on every $100 worth of goods imported into Canada. At this rate, as I have stated, the people of Canada would have paid over $7,000,000 more than they actually have paid on the imports since 1896.

Great stress has been laid on the fact that our revenue has increased very materially, and so it is said our rate of taxation per capita is correspondingly increased. That is not a fair statement by any means. The rate of revenue has increased, it is true—it has increased per capita of the people of the Dominion from about $7 to $11. But the rate of taxation has not increased per capita, if it is properly and fairly analysed and put in its proper light. For instance, I want to mention as an illustration a simple fact which clearly explains this point. In the town of Tilsonburg, a small town of about 3,000 population in my constituency, an American firm has established a milk condensing factory, and they have brought into that town about $50,000 worth of machinery, upon which they have paid a duty, in round figures, of $9,500, and that has gone into the revenue of the country. You may say that the people of this country have been taxed to that extent, according to the argument that is made by our friends opposite. Now I take exception to that argument; it is not fair, it is not putting the matter in a fair light. If you apply that revenue to the people of that town of 3,000, there is an addition to the revenue of this country of over $3 for every man, woman and child in the town of Tilsonburg, on that one item alone. Consequently if the revenue has increased from $8 per head to $11 per head, here is $3 of it accounted for in that one item. Is it fair to say to the people of Tilsonburg, you are taxed $11 per head now, whereas you were only taxed $8 in 1896? But that is not all. This firm has also brought in capital to the extent of some $70,000, in addition to the $50,000 for machinery, which they have expended in that town for labour and material, and this also has gone to contribute, somewhat indirectly I admit, but has contributed somewhat to the revenue of the country. I mention this fact to make clear the point I am trying to put before the House. And this is an instance that might be multiplied a hundred-fold, perhaps a thousand-fold throughout the Dominion of Canada, if the subject were fully and thoroughly investigated. As I said a few minutes ago, it is believed that at least $220,000,000 of American capital has come into Canada for investment in our industrial enterprises. That capital has gone to pay revenue, directly and indirectly. Two to three hundred million dollars of capital have come in for the purpose of building our railways, and that has gone to a large extent into the Dominion treasury to pay for duties imposed on material used in the construction of these railways.

Mr. J. A. CURRIE. May I ask the hon. gentleman a question? I would like to know if there is a duty, or a protective tariff, on the product of the factory which he speaks of?

Mr. SCHELL. I understand there is.

Mr. J. A. CURRIE. Then, according to the principles of the hon. gentleman, it would be advisable to take that duty off. Would he, as a free trader, be in favour of taking that duty off?

Mr. SCHELL. I do not see that that has anything to do with my argument at all, I think it is entirely foreign to the argument I have been making.

Mr. J. A. CURRIE. I would also ask him if the machinery is made in Canada of the same kind that was imported?

Mr. SCHELL. No, I understand not.

Mr. J. A. CURRIE. Then would the hon. gentleman consider it fair——

Some hon. MEMBERS. Order.

Mr. SCHELL. I do not object to any questions the hon. gentleman may wish to ask me. I wish briefly to call the attention of the House to the very large increase in agricultural exports, and when we remember that the population of the country has increased about 30 per cent, these figures will be all the more striking, as they show that the products of our farms especially have increased at a much greater rate than has the population. We find that in 1896

our agricultural exports amounted to $14,083,361; in 1909 they had increased to $71,997,207, an increase of over 400 per cent. Taking animals and their products, we find that in 1896 we exported $36,507,641, while in 1909 we exported $51,349,646. Or if you take the total of agricultural products and of animals and their products, we find that we exported in 1896, $50,091,000, while in 1909 we exported $123,346,853.

Mr. THORNTON. I would like to ask the hon. gentleman a question. Where does he get these figures?

Mr. SCHELL. They are in the trade and navigation returns.

Mr. THORNTON. Where does he get his figures for 1909?

Mr. SCHELL. My hon. friend apparently does not know, but I will tell him, that the trade and navigation returns, while nominally for 1909, mean for 1908-9 ending the 31st of March last. So when I say 1909, I mean the figures that were given and verified up to the 31st of March last.

Mr. THORNTON. For 1908?

Mr. SCHELL. For 1909 up to the 31st of March last, and they are here for any one to see. They are verified and correct.

Mr. EDWARDS. Will the hon. gentleman pardon me? Has he the figures of the imports of animals and their products placed alongside the exports in those lines?

Mr. SCHELL. I have not.

Mr. J. A. CURRIE. Has the hon. gentleman the figures for the imports of grain and farm products, so that he can place them alongside the exports?

Mr. SCHELL. No, I have not, I have the total exports. But I have not the imports for the different articles that are referred to.

Mr. J. A. CURRIE. Is it not a fact that the imports——

Some hon. MEMBERS. Order.

Mr. J. A. CURRIE The hon. gentleman has given me permission. Will he be kind enough to state if it is not a fact that the percentage of increase in imports of farm products has been equally great with that of exports? If he reads the blue-book he will find that to be so.

Mr. SCHELL. I am not able to say positively on that point, but I think he is mistaken. However, I do not think it makes any difference, because the price of our farm products is regulated by the English market almost entirely; and any imports that have come into Canada have come to certain sections of the Dominion that could not get them quite as easily elsewhere in Canada as they could perhaps from the United States bordering on that particular portion of our country. The price of those products has been affected insignificantly by any imports coming from other countries; I claim that the amount is so small that it does not make much difference to the price that has been paid to the farmers of this country for the products they have sent to the English market.

Mr. J. A. CURRIE. How many millions?

Mr. SCHELL. Less than a million.

Mr. J. A. CURRIE. Does the hon member mean to say that the imports of farm products into this country do not amount to $1,000,000?

Mr. SCHELL. No, I said the difference in the price that might obtain would total less than $1,000,000.

The exports of Canadian manufactured goods have been as follows:

1896..	$ 9,365,384
1909..	28,957,050

This is an increase in our export of manufactured goods of nearly 200 per cent.

The exports of the products of our forests have also increased very materially, from $26,000,000 to $39,000,000. The exports of the products of our fisheries have increased from $11,000,000 to $13,000,000 and the exports of the products of our mines have increased from $8,059,650 in 1896 to $37,257,699 in 1909. Our total exports in 1896 were valued at $121,013.852 while in 1909 they amounted to $261,512,159.

Some may ask what has contributed to this very large increase? I do not think we will have far to seek or that it will be difficult to find why we have been enabled to increase our exports in every line to which I have referred. In regard to agriculture, I think we can see the cause directly in the very progressive policy that has been inaugurated by this government and the very excellent work that has been done by our Minister of Agriculture (Hon. Sydney Fisher) and his able staff of officers. I do not suppose that our friends opposite will agree with me when I say that I think we have the best Minister of Agriculture that the Dominion of Canada has ever had. He is a man superior in every way to any other man who has occupied the position which he now occupies. From the day that he assumed the position of Minister of Agriculture he has pursued a progressive policy. Our friends opposite sometimes say that the Dominion of Canada has not spent enough money on agriculture, and on the other hand they sometimes object because certain amounts are expended—I suppose that no matter which

policy is pursued they will find some grievance. May I call attention to one or two facts in connection with the Department of Agriculture? At confederation the staff employed under the department consisted of 23 permanent employees. To-day we have a staff of 516 of whom 246 are at Ottawa, and as the department is now organized it consists of 12 branches whose work is of the utmost importance. Among these branches we have experimental farms, the dairy and cold storage division, the live stock division, the health of animals division, census and statistics, seeds branch and other branches whose work may not come so prominently before the people. Shortly after this government assumed office, they decided to grant to Great Britain a preference in our markets. Following the introduction of that preference as a part of the fiscal policy of the Dominion of Canada, we find that our exports increased very rapidly. I suppose that some will ask how the granting of that preference could affect the exports from Canada? In this way, that the attention of the consumers of England was called to our products in a new way. Up to that time our food products had not attained the position in the English market to which they were entitled. When the English people saw what Canada had done in the matter of preference, coupled with the work that the Minister of Agriculture was doing in placing before the English consumers our products in the very best possible condition, the people of England saw that our goods were better than they had supposed and they paid a higher price for them, so that our exports to England increased in a very rapid manner. Since 1898 when the preference was granted, they have almost doubled. In 1896 we were exporting some $66,000,000 of agricultural products to England. In each of the years 1907-8-9, our exports of agricultural products to England were in round figures $133,000,000. That has come about, as I have stated, largely by the placing of those goods upon the English market in the best possible condition. Prior to that time our system of cold storage was not what it should be, in fact we had practically no installation of cold storage on our steamships. The government, as you know, took that matter in hand, they granted a subsidy to one or two of the steamship lines, cold storage systems were installed on two or three boats, and after that system had been in operation for two or three years it was found that all the other companies, if they wished to secure a fair share of the trade of Canada in the products of the soil, had to provide a similar service. The result has been that there is not a steamship sailing from Montreal, Quebec or St. John to English ports that has not a system of cold storage installed, so that ample space is offered to any exporter who may have perishable products to export to the European markets. Cool storage has also been introduced by this government and ample cool storage space is offered to the exporter. In 1900 Professor Robertson, before the Agriculture Committee of the House made the following statement:

Last season our cheese trade got the worst setback from poor boxes and heated quality it ever got. It is now in a precarious condition. I do not know of a time when it was in a more doubtful position than it is at present. We got good prices in the summer, but hot weather in August and September caused the cheese to be heated, and much of it was landed in England in poor condition. It looks as if we might receive this summer of 1901 to the extent of $2,000,000 less for our export of cheese trade, because of the bad impression made in England last season by the poor condition in which much of it was landed.

Mr. EDWARDS. Might I ask the hon. gentleman if this government has taken any steps since 1896 to see that our cheese and butter are properly handled in the old country?

Mr. SCHELL. I am pleased to be able to answer the question by stating that the Canadian government has an inspector at London, at Liverpool, at Manchester, at Bristol and at Glasgow, five of the leading ports of Great Britain.

Mr. EDWARDS. I call the attention of the hon. gentleman to the report of the Dairy and Cold Storage Commissioner for 1907, page 97, where it is stated that Canadian cheese is roughly handled in the English market, and that Canadian butter is left on the docks at Liverpool for two and three days at a time.

Mr. SCHELL. There may have been some difficulty in 1907, and the inspectors of the Canadian government are there just for the purpose of seeing that Canadian products are properly handled by the steamship companies. The good work they are doing is probably best testified to by extracts from letters written by English importers which I shall read to the House. I have here a letter written by Messrs. Frank Hamilton and Company, of Liverpool, dated January 19, 1909. This firm is one of the largest apple importers in Great Britain, and as I am personally acquainted with Mr. Hamilton, I feel the more confidence in quoting his statement. Mr. Hamilton has been in Montreal for many years during the apple season attending to the Canadian end of the business, and this is what he writes:

Taking transportation first, there can be no question whatever but that improvements in this direction have been greatly to the ad-

vantage of all shippers of perishable goods.

As you are no doubt aware, our firm has been for over twenty years personally represented in the port of Montreal during the shipping season, and we are therefore in a position to appreciate to the full the efforts your government have made to minimize the losses to shippers caused by neglect and delay at the ports of shipment. It is not so many years ago that a walk along the docks of Montreal would disclose thousands of barrels of apples piled in the open and exposed to the effects of the weather, both hot and cold, and with only the protection of a tarpaulin, if that, and the bottom tiers often covered with mud or coal dust.

The steamers in those days only carried some 5,000 to 10,000 barrels of apples apiece, and the shutting out of goods was the rule rather than the exception. It was no uncommon thing to have a through bill of lading in our Liverpool office a month before the goods put in an appearance. Such a state of things is now impossible, Montreal being equipped with some splendid cargo sheds which will compare favourably with those of any other port in the world, and as the railway tracks run alongside, the handling of goods has been reduced to a minimum. In conjunction with these improvements, the class of steamer using the port is also improved and it is seldom that perishable goods are shut out.

The recent concession of your government to fruit shippers of free icing of cars during transit has had a beneficial effect on the condition of the fruit arriving at port of export.

On the whole, the transportation conditions to-day are tremendously ahead of what they were some years ago, and in consequence better results are obtained when the goods are sold on the British markets.

In reference to cheese, Messrs. Lovell and Christmas, Limited, of London, write under date January 4, 1909:

In reply to yours of the 2nd inst., speaking from our personal experience, the percentage, of heated cheese throughout the past season has been practically nil. During the warm weather we brought all our cheese in cool storage, at a small additional freight, and found this precaution was of great advantage because the cheese arrived here in perfect condition, and the saving in the weight (shrinkage) almost, if not quite, covered the extra expense incurred by having the cheese in cool, instead of ordinary stowage.

In our opinion, there has been a vast improvement in the carrying of cheese during the last 10 years, and as far as the past season is concerned we do not think it could well have been improved on. We believe this is the general feeling of the trade here, especially on the part of those who have taken advantage of the cool storage on the vessels.

Messrs. Rowson, Hodgson and Company, Limited. of London, write under date January 7, 1909:

Heated cheese.—Our experience is that only a limited quantity of the imports from Canada this season have shown any external or internal signs of heat—we should not think 5 per cent of the entire quantity received into the country, whereas ten years ago probably fully 25 per cent of the goods arriving suffered from the defect referred to.

Regarding the ocean carriage and landing of butter and cheese, so far as London is concerned, there has been a gradual improvement during the last 15 years, and more especially since the time that the 'cool air' stowage has been adopted on two lines of steamers viz. the Thompson and the Allan lines.

Messrs. Herbertson and Hamilton, of Glasgow, under date of January 15, 1909, write:

We have pleasure in reporting that our shipments of Canadian cheese received the past season show a distinct improvement both in condition and quality compared with previous years, and are a great advance in all respects with that we were receiving, say ten years ago.

Messrs. Andrew Clement & Sons, Limited, Glasgow, write under date of January 19, 1909:

In 1908 heated cheese were too few to do any harm worth mentioning, and the present carrying arrangements are about as near perfect as we can reasonably expect.

Messrs. H. H. and S. Budgett & Company, Limited, of Bristol, write:

As regards condition, we are pleased to be able to report favourably taking the season as a whole, no cases of heated or badly carried cheese having come under our notice.

I might quote at considerable length from a number of others who are receivers of our Canadian products and who are just as emphatic in stating that the transportation of our products now is practically perfect, and that there is practically nothing to be desired.

Mr. THORNTON. Would the hon. gentleman tell me why Canadian bacon is sometimes sold as American bacon in the English market? Why is not some effort made to prevent that being done?

Mr. SCHELL. I think my hon. friend is entirely wrong. This is the first time I have ever heard that Canadian bacon was sold as American bacon, because Canadian bacon is infinitely better, and the English purchaser knows it is better and it would be to his interest to advertise it as Canadian.

Mr. FISHER. They try to sell American bacon as Canadian.

Mr. SCHELL. Yes, sometimes they try to do that, so that I think my hon. friend (Mr. Thornton) is entirely misinformed. I wish to read an extract from a report of the United States Consul, Charles N. Daniels, at Sheffield, England, published in the 'Daily Consular and Trade Reports,' dated Washington, December 17, 1909, a report

that I think is rather important and which, coming from a person representing another government, I think, is of some considerable value.

From a personal interview with a dozen or more of these firms (fruit dealers) selected at random, it is safe to say that this English city consumes $15,000 to $20,000 worth of apples weekly during the season from October 1 to the middle of March or April 1. Of this amount, about three-fifths are Canadian, the remaining American. Practically all of these apples are bought of or from commission men on the wharfs at Liverpool. The tendency of the trade here is to favour the Canadian grower and packer, the reason for this being that Canada exercises supervision over the grading, packing and branding of its fruit that is entirely lacking in the American product.

A testimony of that kind, I think, would convince any one that there has been some very good work done by this government in the matter of the inspection and the handling of apples. That is a very important branch. It is one of the new branches of work that this government has taken up. We know that the way that many of our packers were packing their apples had become a scandal. There was a tendency to dishonesty and we were shipping many apples that were injuring our trade in Great Britain and in other markets in which they were sold. This government took the matter in hand and passed the Fruit Marks Act, which has been in operation now for some four or five years and any one who knows anything about the fruit trade will at once admit that the enforcement of that Act has resulted in very great benefit to the apple trade of this country. We have, under the Fruit Marks Act, at the present time, about twenty-six inspectors whose duty it is to inspect fruit not only at shipping points but also throughout the country. We have also inspectors in the markets of Europe watching these goods as they are being disposed of there. The results that have accrued to the trade generally have, I think, meant a great deal to this great industry. This is becoming an industry of very great importance, although it has not yet attained to nearly the importance it deserves. There is, perhaps, a wider and better field for the extension and development of the fruit industry of Ontario and several other provinces of the Dominion, especially Nova Scotia and British Columbia, and if such a development takes place, instead of exporting perhaps, $4,000,000, or $5,000,000 annually to the European markets, we may expect to export three, four, five or ten times that quantity. I do not think there is any branch of agriculture that would give a better return than the proper growing, caring for, and handling of that premier fruit, the apple. I know from practical knowledge of this subject that it is not at all difficult to get a return of at least $100 a year an acre clear of all expenses, clear of the cost, if the care of the orchard, the treatment, cultivation and pruning of the trees, and the picking and sale of the apples. But some may say that you have to wait for ten or fifteen years for the trees to come into bearing. That is quite true, but during these years the soil can be cultivated and almost a full return can be got from it while the trees are becoming of an age sufficient to produce fruit. But, when they do come into bearing, say at fifteen years old, until these trees are sixty or seventy years old, they may be made to produce a return that will average a profit of $100 an acre clear to the grower. I know an orchard in the county of Norfolk to which I referred in this House a year or two ago. There are some forty acres in all, probably there are about thirty-five acres under apple culture. That farm changed hands a few years ago at some $2,000 or $3,000. Again it changed hands after it had been put into a little better shape at $4,000. Within the last few weeks it has changed hands at $17,000. Having been pruned, cultivated and sprayed, the return from that orchard this year, as I am told, is $4,000 for the fruit upon the trees. Two years ago the return was $5,500. I could give many instances that have come under my own observation of orchards that have produced a return over all expenses, of from $100 to $150 to $200 per acre. So that the work which the government have done in connection with this industry show their progressive spirit and methods. There is an item in this connection that I wish to give the government some credit for and I would like them to do a good deal more in this direction than they have yet done. They conducted some experimental work in the county of Oxford in the matter of spraying. Some six years ago they spent $200 in one locality in that county. For the last three or four years, following the work that was done in that neighbourhood, proving to the farmers the benefits of spraying, we have found that the orchards that had been taken care of by the farmers who saw the benefit of spraying, all resulting from the experiments carried on by this government have given a return of from $2.000 to $3.000 more annually than has been received from adjoining orchards where they have not introduced the methods of spraying that were then demonstrated. That work could and, I think, should be carried out to a larger extent. In every county in Ontario, Nova Scotia and New Brunswick, where this work can be done similarly, it should be done. Any money that this government might expend to advance the interests of agriculture in this way I believe could be returned a hundredfold, or a thousandfold, in a very few years. We had a very interesting debate on technical education in this

House a few weeks ago. I do not think there is any vocation or calling in life where there is a better field for the introduction of technical knowledge than in the carrying out of our farming operations, not but what many of our farmers who have no technical knowledge are successful. Keen, close observation, practical knowledge, experience, bright, clear, intellects and enterprise have combined to make many of our farmers successful, but if technical knowledge were given to our boys, if they knew the reason why certain results follow certain treatments of soils, if they knew the compositions of soils, the chemical properties of soils, the chemical properties of plants, the relation of plant life to soil, the action of air, of frost, of sun, of rain, on soils, if they had the technical knowledge that could be given to them it would be of immense importance to the agricultural industry. I do not know what is the best method. I believe that the government propose doing something in this matter, and I may say that there is no field which offers greater opportunity for the application of more advanced ideas and scientific principles than agriculture. I hope, therefore, that the government will lose no time in dealing with this subject as was proposed in the resolution discussed in this House some two or three weeks ago.

I do not wish to delay the House longer, but there is one other matter to which I wish briefly to refer, and that is the dairy industry, as it exists in the province of Ontario particularly. Our exports in that line have not increased as I would like to see them increase during the last few years. They are somewhat less than 1903 and 1904. That may be due to the seasons not being quite so favourable and the pastures not being quite so good, but it is perhaps due more to the fact that our home consumption has largely increased. Our towns and cities have been growing rapidly. As our people have increased in wealth, they are using more butter and cheese, and the increase in population has likewise called for a greater consumption of these products. I have no doubt that not less than $12,000,000 more is used at home now than five or six years ago. But I would also like to see our exports increasing. There has, however, been some development in the output. Our government has not been slow to recognize the possibility in this direction, and have introduced what are termed cow testing associations. A number of farmers in a neighbourhood associate together and agree to have their milk weighed and tested. Samples are taken regularly to the cheese factory and a record kept so that the farmers may know whether their cows are giving a good quality and quantity of milk or not. As the result of these associations, we find some very astonishing records. We have altogether seventy-two regular associations and fifteen smaller groups in eight provinces, with seven hundred and fifty-one members and 5,743 cows under test. I believe that the work is increasing. Certainly it is one which should be pushed, and everything which has been done so far only goes to prove what a vast field there is for further work in the same direction. Take the county of Oxford and let me draw attention to some herds in my own neighbourhood. There is one of eleven cows which, before the testing, produced 4,850 pounds of milk per year each. In 1908, after that operation was started, it produced 6,380 pounds. Another herd, which formerly produced 5,374 pounds each cow, increased its production to 7,243 pounds. Still another which had produced 4,360 pounds in 1903, is now producing 7,006 pounds per cow. I could give an individual instance of a special cow which has produced as much as 20,000 pounds in the one year, but that is a very rare occurrence. There is a record of a two-year-old cow at Innerkip in the county of Oxford which gave a production of 12,227 pounds, and the weight of the butter was 452 pounds. But of course these are record figures. I have a record of a herd of 65 cows which produced an average of 6,210 of milk each and the milk sold for practically $76 per cow. I have another herd in my mind which, I understand, has produced over 9,000 of milk per cow, and the number of cows is twenty. The milk brought in a return of nearly $100 per cow. Of course, the farmers adopted perhaps a little better method in the feeding and gave more intelligent attention to the care of their stock, and the result proves that this industry might easily be doubled without very materially increasing the number of cows kept. In the Dominion we have a little over 2,000,000 cows producing on an average about 3,500 pounds of milk, some make the average less, but I think if we had a correct record it would be found to be from 3,000 to 3,500 pounds a piece. If that can be increased to 5,000 or 6,000 pounds, and I believe it can, you can readily see that the dairy industry might be developed to such an extent that after supplying the whole market, which requires about $75,000,000 worth of butter, cheese and milk annually, we could export double the quantity we do now. Instead of exporting only $25,000,000 worth, we could easily double that quantity. The Minister of Agriculture (Mr. Fisher) deserves considerable credit for having taken this matter in hand, and I believe his officers are going to urge on the work along the lines I have indicated, and I hope for better results from year to year.

The wealth of Canada has been increas-

ing at an enormous rate through the wise policy of this government. I read a statement by Mr. George Parish, editor of the London 'Statist,' at a lecture given in New York recently, in which he said that the wealth of England had increased from $20,000,000,000 in 1850 to $80,000,000,000 at present. He also said that the wealth of the United States had increased from some $10,000,000,000 in 1850 to $107,000,000,000 at present; that the United States had been borrowers in the world's markets to the extent of some $6,000,000,000, and that England had been lenders to the extent of $15,000,000,000 in the last sixty years.

These figures, to my mind, were very suggestive, and I wondered where Canada would come in. Of course, we are a younger country; but when we look at the accumulating wealth in our banking institutions we cannot but realize that the wealth of Canada is becoming very considerable. Hon. members who have given any attention to the statistics of banking in Canada will appreciate that statement. In 1896 the deposits in our chartered banks and savings banks were $245,000,000. The Finance Minister told us the other day that these deposits were now $731,000,000. We find the assets of these banking institutions have increased in a similar ratio—from $350,000,000 in 1896 to considerably over $1,000,000,000 to-day. This money must certainly come from the people of this Dominion, and if they have enough money to be able to deposit $731,000,000, it will be seen that we have enough there alone to pay the national debt, to build the National Transcontinental railway and still leave $40 for every man, woman and child in the Dominion. According to the statistics that have been furnished by the Department of Agriculture, we have $2,800,000,000 invested in farm lands in Canada. We have 26,000 miles of railway which, at an estimated cost of $30,000 a mile, would represent an investment of about $780,000,000. And we know the growth that has taken place in our manufacturing industries, from an investment of $250,000,000 in 1896 to an investment to-day of nearly $1,000,000,000. If you look at the assessment of our towns and cities and consider the growth of wealth reflected in these figures for Toronto, Montreal, Winnipeg and other great cities, we begin to form some appreciative idea of the growing wealth of this Dominion. This has resulted in a very large degree—not wholly, of course—from the wise and progressive policy which this government inaugurated in 1896 and has been following ever since. I realize that every honest worker in the Dominion of Canada contributes to a certain extent to this wealth and prosperity. But the government of the day, working in unison with the people of the country, are helping the development of our resources and helping to build up our Canadian nationality. I hope that from the foundations which this government has laid will rise a superstructure that will ever stand as a monument to their wise and progressive policy.

Mr. R. S. LAKE (Qu'Appelle). Mr. Speaker, the supporters of the government of late years have made the debate on the budget an occasion for a grand eulogium of the government and all its works, and the hon. member (Mr. Schell) who has just preceded me for the space of about two hours devoted his attention almost wholly to the same purpose. It may be a very good thing as campaign literature, it may possibly be in the interests of the Liberal party in the riding of South Oxford, but I fail to see that it can be of very much service to the people of this country. In my opinion, the proper usage of parliament is that this occasion should be considered an occasion upon which members who have any criticism to offer in regard to the action of the government should offer that criticism and should make any suggestions which they believe might be in the interest of the country. And I believe that if the hon. member for South Oxford (Mr. Schell) had devoted a very few moments of the time he has taken up this afternoon to some little criticism—and he knows as well as any member of this House that there are many points on which the action of the government has been open to criticism—or had made any suggestion of action that they might take in the interest of the country, he might have done at least some small good by the remarks he offered to this House. It is in accordance with the view I have just expressed that I have for several years past offered a few mild criticisms of the action of the government and a few suggestions where I thought they might take action in the interest of the country. In some cases, government action has followed the suggestions I made. I do not feel inclined to take all the credit, in fact, I do not care who gets the credit so long as the country gets the benefit of the action taken. In the same spirit, I propose to offer a few criticisms this afternoon and make a few suggestions, and I intend to be as brief as I possibly can.

In the first place, I would like to say a word or two in regard to the naval programme. And at the beginning I may say that I do not intend to trespass upon the debate that is to take place on the Bill now before the House. But this is the first time the government has given us even a vague idea—and it is even yet but a vague idea—of the action which they propose to take in the expenditure for the naval defence of the country. It has been

a great disappointment to me, after the great promises which were made during the debate last March, that the government have finally come down to such a miserable proposition in regard to providing for the naval defence of Canada. What they have proposed to do is to expend some $2,719,000 a year for the protection of our commerce, our coast line, and, indeed, of our very existence as a self-governing community. When I compare with this the estimates for this purpose which have been passed in the great dependencies of Australia and New Zealand, I must say that I feel simply ashamed to call myself a Canadian. I am thankful, however, that it is generally known throughout the world that there are two parties in this country and that it is only one party that, while acknowledging that an obligation is placed upon us to take our proper, legitimate share in the defence of the country, estimate that share at a sum of something less than $3,000,000 per year. I have some respect for those who are prepared to stand up here and declare that they recognize no obligation at all, and consequently desire to see nothing done. But I have nothing but disapprobation of the conduct of those who acknowledge the obligation, and yet make up their minds that they will simply sponge upon the taxpayers of the mother country for as many years longer as the mother country will allow them to do so.

I may also be permitted to express my amazement that, after having six months to work out the plans which the government told us they had adopted for naval defence, they come down now with a statement that they are unable to give us the slightest idea as to when they expect to be able to put a single one of their new ships into commission, or to have one of them ready built, manned, armed and equipped so as to be of some use as a fighting factor. The Prime Minister stated yesterday they had made no estimate whatever with regard to this particular matter. We must remember that if the government finally decides that these ships are to be built in Canada, it will be eighteen months or two years before they can begin even to lay the keel of the first of the small ships they speak of building, and many years after that, no doubt, before these ships will be ready to be put in commission. During the whole of that time we are still to remain in the position we are now in, of practically doing nothing whatever that will be of any effectual use in the defence of the country. Is the country willing that that shall be the case? I, Sir, believe that the great mass of the people of Canada desire to see Canada doing her duty, and doing it at once, by giving the fleet unit which the imperial authorities have asked for, and giving it immediately.

Now, turning to other points in the policy of the government as they appear in the estimates, I desire to say a few words in regard to the Hudson Bay railway. All that appears in the estimates for the year ending March 31, 1911, is a small sum for a further survey of that route. I desire to voice my strong protest against delay in the construction of that railway. The House will remember that nearly three years ago, on the 22nd of February, 1907, the Prime Minister made a declaration that 'the time has come'—those were his words—the time has come for the construction of this railway. In June of the following year, 1908, the Minister of the Interior submitted to the House, in the Dominion Lands Act, certain provisions to create a new source of revenue adequate to build that railway—that is the language he used in explaining the provisions. The House adopted those provisions, and the funds to build the railway are now in process of being made up, and a large amount of money has already been collected in that connection. A general election was pending shortly after that time, and in opening the campaign the Prime Minister said, in September, 1908:

'The time is now—not to-morrow but now' that this railway should be constructed. He made a most definite promise that the construction of the Hudson Bay railway should be proceeded with, and the Liberal party waged the greater part of the election campaign in the Northwest upon that declaration. It was quoted from one end of the country to the other as a specific promise, that if the country returned the Prime Minister to finish his work, he intended to include in that work the building of the Hudson Bay railway. Yet we find that no provision whatever has been made in the estimates for the turning of a single sod on that railway, at least up to the 31st of March, 1911. I would urge upon the Minister of Finance that he should bring down supplementary estimates to provide for this necessary work. It is an absolutely necessary work if the produce of the Northwest is to find an outlet. During the past summer a large number of resolutions in favour of the building of this railway have been passed by various public bodies throughout the Northwest; they have doubtless all been placed in the hands of the Minister, and as some of them have been forwarded to me for my information, I propose to read one out of a great number, all couched in about the same terms. To show the feeling of the people of the Northwest in regard to this matter, I will read a copy of a resolution passed by one of the town councils in the district I have the honour to represent:

Whereas, the development and commercial prosperity of eastern Canada are largely dependent upon the grain production and pur-

chasing power of the prairie provinces of the west, and,

Whereas, the grain and cattle carrying capacity east of the head of Lake Superior is not keeping pace with the rapidly increasing production of wheat and other exports of the west, and,

Whereas, an amount equal to the entire cost of the Hudson Bay railway is annually expended by the west on unnecessary freight charges consequent upon the present long haul to Atlantic tide water, thus reducing the purchasing power of the west and the corresponding prosperity of the east, and,

Whereas, explorers, navigators, engineers, contractors, and others familiar with the Hudson bay route, are practically unanimous as to the practicability of the route, the easy and rapid construction of the railway, and the natural harbour facilities at Churchill.

Therefore be it resolved:

That the government of Canada be requested to get busy and build 165 miles of the Hudson Bay railway in 1910, and the remainder of the road, 160 miles from each end of the line, in 1911; and during 1910 and 1911 install the necessary terminal facilities, elevators, harbour improvements, etc., to be ready for the adequate handling of traffic not later than July 1, 1912.

The House will see how very little prospect there is of the wishes of the people of the Northwest being carried into effect, when we realize that no provision whatever is being made which will enable the construction of that railway to be commenced for the next fifteen months. Not only have towns, villages, boards of trade, and other public bodies in the Northwest passed resolutions on this subject, but the legislature of Saskatchewan has passed a resolution only the other day unanimously calling upon the Prime Minister to implement the promise he made to build this railway. I spoke just now of some provision being made already for the cost which this railway is likely to involve. In reply to a question I asked the other day, the Minister of the Interior stated that there had been a sale of pre-emption and purchased homesteads to the extent of 4,130,400 acres of land. That answer was given last month, and covered a period up to the 31st of October last. The total sum receivable on account of these purchased homesteads and pre-emptions amounted to $12,391,200, nearly the whole amount of the money which the Minister of the Interior calculated that this railway is likely to cost. Now, I spoke on this subject last year, and again I desire to call upon the Prime Minister to implement the promise which he made. The promise was made under peculiar circumstances, but circumstances which, to my mind, involved all the greater obligation, because they gave it much more weight than the people are accustomed to attach to most promises of the ministers of the Crown. The money has been provided. The House has been led to believe that this

construction would be gone on with as soon as that money was provided, and no criticism was offered on this side of the House with regard to the provision which it was proposed to make at that time.

I mentioned the subject of pre-emptions and I desire to urge upon the Minister of the Interior that he should not insist to the letter upon one of the provisions in regard to payment for pre-emptions and purchased homesteads. There is a provision in the law that interest should be payable yearly upon the whole amount of the obligation assumed, beginning at the end of the first twelve months. If the people when making entries for these pre-emptions and purchased homesteads had understood this provision, I should not be so much inclined to press it on the Minister of the Interior, but I believe that very few of those applying understood that there was any such provision. I looked through the advertisements which were inserted in the newspapers announcing the sale of pre-emptions and purchased homesteads, and while all other duties were insisted upon and set out at full length, nothing whatever was said about the annual interest, which amounts to $24 per annum, further than that a gentleman who had had a demand from the department to pay this interest came to me with a couple of circulars which he had received from the department, one dated in May last. That circular called attention to the duties he would have to perform in order to earn his pre-emption. It set out all the duties of residence and cultivation but said not one word in regard to the payment of annual interest, and it was only several months later, when the first payment of interest became due, that he received a notification that there was any payment of interest to be made. I think it would be found that a large number of people who in good faith made entry for these pre-emptions believed that no such payment would be demanded from them and a great number of them are not in a position to make such payments. A great deal of hardship will be caused if this is insisted upon. The Minister of the Interior told us the other day that those who did not pay would render their entries liable to cancellation. He said:

> His failure to do so renders his entry liable to cancellation.

It is a terrible position in which to place the enormous number of new settlers in that country who simply have not got this money to put up the payment of the annual interest, and I earnestly trust that the Minister of the Interior will take up this matter and will find some way out of the difficulty and not have all these homesteads liable to cancellation. I do not intend to discuss the policy by which the lands of the provinces in the Northwest are

being still retained in the hands of the Dominion government. To my mind this great hardship must sooner or later be redressed and the provinces of the Northwest must be placed on an equality with the other provinces of the Dominion in this respect. At the same time I think it right to call the attention of the House to a development that has recently taken place and which shows the difficulties which the retention of these lands by the Dominion government is creating. I may say that I do not consider that these questions of land in the Northwest ought to come before this House. They do not come before it in connection with the lands of any other province in Canada and yet every one of these matters has to be brought before this House and the time of this House occupied in discussing it. The lands of the different provinces, under the constitution of Canada, of right belong to the people of those provinces and they are the ones who should have the sole right to deal with them. A short time ago the statement appeared in the newspapers that the premiers of the three provinces of the Northwest, Manitoba, Alberta and Saskatchewan, had asked that the administration of the school lands and the funds arising from their sale should be handed over to the provinces. I need not mention that this was a policy which was advocated by the Conservatives time and again and opposed by the Liberals, even by those who represented constituencies in the Northwest. It was put into definite shape in the year 1908 when a resolution was moved by the hon. member for Souris (Mr. Schaffner) from this side of the House providing:

That the Bill be not now read the third time, but be referred back to the Committee of the Whole with instructions to amend the same by providing that, pending the transfer to the provinces of Alberta, Saskatchewan and Manitoba, of the Dominion lands within their respective boundaries, the school lands and all funds arising from the sale thereof, shall be handed over to the control and administration of the said respective provinces, according to their interests therein and according as the said respective provinces shall be ready to accept the same.

This resolution was voted down in this House and I regret to say with the assistance of members representing parts of the Northwestern provinces. I sincerely trust that the government will see the error of their way and will now reverse their policy in this respect, especially as the prime ministers of the two new provinces, in whose elevation to that position the government exercises such a very strong influence, are themselves now asking that this measure should be taken. I would again remind the Minister of the Interior of the necessity of providing for higher education in the new provinces, by means of grants of land as an endowment for their provincial universities. In 1885, the Conservative administration of the day set aside 150,000 acres of land as an endowment for the university of the province of Manitoba, and I think that in consideraion of the further advance that we have made in the knowledge of the great benefit that education is to everybody, we should not be behind hand in following such a good example and should not delay any longer in making a considerable grant of land to the two new western universities, especially as land is being taken up so rapidly now that the time is very limited within which there is likely to be good land still available for that purpose. In the year 1908 this matter was also brought very definitely before this House in the form of a resolution moved by myself:

That the Governor in Council shall forthwith institute such proper inquiries as may be necessary for the purpose of ascertaining what quantity of Dominion lands in each of the provinces of Alberta and Saskatchewan should be set aside and appropriated for the purposes of higher education, and that thereupon, after obtaining the consent and approval of the governments of the said respective provinces the Governor in Council shall set aside, appropriate and transfer, to the said respective provinces the quantities of said lands so ascertained for the purposes aforesaid.

That resolution also was voted down by gentlemen on the other side of the House, including members from the new provinces concerned. I again express the hope that the government will reverse their policy in this respect, and that they will, even at this eleventh hour make some provision for the universities of those two provinces.

Nothing whatever has been done to remove what my hon. friend from South Grey (Mr. Miller) called the villainous exemption from taxation which is enjoyed by the Canadian Pacific railway throughout Saskatchewan and Alberta. Rightly or wrongly the exemption was given; it was part of the bargain made by the Dominion government for the construction of a great federal undertaking the Canadian Pacific railway and it is not right I say that all that burden should be placed upon the shoulders of the prairie provinces. In 1905, Mr. Walter Scott the present premier of Saskatchewan made the statement in this House that the Prime Minister had promised him that measures would be taken to remove this unjust exemption from taxation, and although the Prime Minister stated that no such promise had been given he certainly led the House to understand that the government would take some steps to remove this injustice. I hope that the Prime Minister will now conclude that the time has come for him to take up the matter and give immediate relief.

The reports in connection with the distribution of seed grain in 1908 have now been brought down. It will be remembered that in the early spring of 1908 the government decided to make a distribution of seed grain to the settlers of Alberta and Saskatchewan who were suffering from the want of seed grain because of a frost which had visited certain sections. The government delayed action most unduly in my opinion, and great expense was caused by this delay as a considerable quantity of the seed had been sent out of the country and had to be brought back again at excessive cost. The price was so high and the conditions so onerous that a number of the settlers, although they were absolutely without seed, decided they would not accept it, and so a considerable quantity remained in the hands of the government and had in be disposed of at a loss of over $100,000, although at the same time certain settlers who wanted seed grain had to go without it. The opposition at the time called the attention of the government to the onerous nature of the conditions which they proposed and moved that the payment for the seed grain should not be insisted upon within one year as the government had proposed. Every Conservative member voted that at least two years should be given to the settlers to make payment, but I regret to say that every Liberal member voted against that proposal. The result was that although the value of the grain supplied by the government amounted to $401,027 within the one year specified by the government, only $28,118 had been paid back by the settlers. This shows how absurd the provision insisted upon by the government was, and it also shows what a lever was placed in the hands of the supporters of the government during the election which took place shortly afterwards who told the settlers that if they voted for Liberal candidates they would take care the government would not insist on payment for the grain within one year.

For the last two years the members on this side of the House have been urging upon the government a measure which the grain growers of the Northwest consider to be of vital importance to their industry. We have asked that the government should operate the terminal elevators at Fort William and Port Arthur. In this connection my hon. friend from Souris (Mr. Schaffner) moved last year:

> That it is the opinion of this House the present system of operating terminal and transfer elevators is detrimental to the interests of the western grain producer, and that the government should take immediate steps to operate the terminal elevators at Fort William and Port Arthur and the transfer elevators between these terminals and the Atlantic sea-board.

That resolution was opposed by the members on the other side of the House and was not carried. Since then new conditions have arisen: The government of Manitoba has agreed to introduce a Bill establishing a line of internal grain elevators as a public utility, owned by the public and operated by the public. The legislature of Saskatchewan has accepted the same principle. This means that so far as the elevators at initial points are concerned the provinces of Manitoba and Saskatchewan have promised to provide such elevators under government ownership and operation. Now, a great deal of the benefits which will undoubtedly be derived by the grain growers of the west from the policy of the local governments will be lost unless the Dominion government is prepared to implement that by taking over the operation of the elevators at Fort William and Port Arthur. I would prefer to see the federal government own these elevators, but it has been pointed out that it would involve a very large initial expenditure. I understand, however, that both the Canadian Pacific railway and the Canadian Northern railway companies have stated that they are prepared to let the government operate their elevators. I have no doubt that the owners of the other elevators would also agree to the proposal. So that the bugbear of finding a large sum of money to purchase these elevators outright need not stand in the way of the government taking them over, paying a rent for them, and operating them in the interests of the grain growers of the Northwest.

I notice that the government are bringing in Bills to amend the Grain and Inspection Acts in some minor details. I am prepared to agree that a considerable amount has been done of recent years in the way of improving these Acts, but they are not yet perfect, and I would earnestly commend to the Minister of Trade and Commerce certain proposals which were made at a meeting of the grain growers of Manitoba recently held in the city of Brandon for the amendment of the Grain and Inspection Acts. They are comparatively small matters and yet they are matters of very great importance to the grain growers of this country and I trust that we shall see most of them embodied in the Bills which the government now have before the House. The grain growers are a wide-awake, useful and a most able body of men, and I have been impressed by the splendid work that they have done at the conventions. The very high order of thinking and the high order of speaking that one hears at these conventions show that they are thoroughly imbued with a desire to promote the interests of the grain growers of that country. I trust that the very greatest consideration will be paid to the

proposals which they have made in regard to the important Acts which especially concern our interests in the prairie provinces.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

Mr. LAKE. There is another matter which I wish to bring to the notice of the government—another problem which I wish them to take in hand and endeavour to solve. It is not very difficult of solution, and if they will try to live up to the character given them this afternoon by the hon. member for South Oxford (Mr. Schell), they should certainly be able to provide a solution by a wave of their magic wand. I refer to the question of providing harvest help to the Northwest. That is a very serious question indeed. During the past harvest, we had most excellent weather and every facility for getting in the crop; and yet the difficulties in the way of procuring help were so great that it was only by the narrowest margin we got that crop saved before the winter set in. We have had an enormous growth throughout the Northwest, and there can be no doubt that the expansion is likely to increase in the near future, but unless some arrangement be made for a better supply of harvest help, that development is likely to be cut short. If people grow crops and then find it impossible to save them, they will not continue to increase their acreage, which would be a great set-back to the country. I would, therefore, most earnestly recommend the government to take this matter into their consideration. Up to the present it has been left entirely to the railway companies and to private enterprise and it is time the government took hold of it. If they cannot find a means of meeting the difficulty, they should appoint a commission to find out some way by which help can be obtained during the brief period of harvesting. I have had several suggestions made to me in the Northwest, but I do not think it necessary to enumerate them at present as there will be abundant suggestions if the government take up the inquiry, as I trust they will in the very near future.

My hon. friend the Minister of Agriculture (Mr. Fisher) has been held up to us just now by the hon. member for South Oxford (Mr. Schell) as the greatest Minister of Agriculture we have ever had. The minister has, according to my hon. friend, performed such great prodigies that I have no hesitation in asking him to perform one more, and that is to do something to put our cattle industry on a better basis. I am speaking more particularly of the cattle industry in the Northwest. I have been a very long time in that country and have seen the cattle industry there in a very flourishing condition, but for several years past it has been steadily going down hill, and it is time the government did something to put it on a better footing. For many years past the Minister of Agriculture has taken no steps whatever to have the cattle embargo removed by the mother country. He has taken, as far as I can learn, and as far as answers given in the British House of Commons indicate, no step whatever during many years past to have that embargo removed. The ministers in the old country ought to be very friendly to the hon. gentleman and no doubt should be anxious to do something in return for the indirect assistance he has given them. It was our minister who, by his utterances to a great extent, let them out of the preferential tariff difficulty. He made the statement that the farmers of this country did not desire any preferential treatment for their products in the markets of the old world. That was a statement which was certainly made use of by the ministers in the old country. It was very useful to them when the colonial prime ministers were endeavouring, at the conference of 1907 to obtain some concessions from the mother country in that respect. If the Minister of Agriculture is not able to prevail on the English government to remove that cattle embargo, he ought to turn his attention to some other means of getting our beef products marketed in a better condition in the mother country.

We had a disquisition this afternoon on the question of surpluses. Well, we are a practical people, and when we spend more money than we earn, we call the difference a deficit. They do the same thing in Great Britain and the United States. Why should we depart from that common sense policy and try to make out that we are having surpluses when, as a matter of fact, we are having deficits from year to year. I am very glad that the Finance Minister adopted the recommendation from this side at the last session of parliament, and charged the armaments of our militia and the expenditure on the Dominion land surveys to consolidated fund account instead of to capital account. The hon. gentleman told us that he did not think any particular reference had been made to the subject came from this side, but, speaking for myself, I made that suggestion when the budget was being discussed at the last session. The hon. gentleman cannot get rid of deficits by any juggling with accounts. They are there all the same. Take the bounties paid. They should be charged to consolidated fund account instead of to capital account, as is done at present. They certainly should be charged against current expenditure because they are only another form of protection and are given to the manufacturers in lieu of protection. Political economists generally speak of the bounty system as the most per-

nicious form of protection, and such I believe it to be. How has it worked out in our own case? We have given $18,000,000 from the treasury during the past few years, taken from the pockets of the people, to build up a new industry; yet, as was pointed out by the hon. member for South Grey (Mr. Miller), one of those industries was able to pay the other day, in addition to its dividends, a bounty of 20 per cent, in addition on the capital stock held by its shareholders. That is a very curious commentary on the necessity of applying bounties to industries. Why should the government pay bounties to industries which are in such extremely good shape?

I can join heartily in the congratulations expressed on the year of prosperity we have just passed through, and it is very gratifying to western men to hear the frank admission on all sides that the general prosperity is due in no small measure to our western country. We have had good crops and good prices. Our hon. friends opposite have become so accustomed to claim all the credit for this condition of things that, even in this debate, we have heard them claiming credit for the present price of wheat. But if they are to get the credit for the present price of wheat they should take the blame for the low prices of two years ago. The year before last our wheat was very much damaged and was of a very poor grade in certain districts so that it had to be absolutely sacrificed. Thirteen or fourteen cents per bushel were accepted in some cases for wheat which would have made good feed if it could have been got to the people who required it. Wheat, which had been damaged by the frost, was sold at from fifteen to twenty cents per bushel in many other cases. The government no doubt was greatly to blame for not having taken some steps to bring that damaged wheat from the northwest and place it in the hands of the Ontario farmers who were most anxious to get it for their cattle because they were suffering from a shortage of feed. Much credit for the prices prevailing for wheat in the northwest today is due to the careful marketing practised by our farmers during the present season, which prevented any serious wheat blockade on our railways. But while the Liberals take great credit for the prosperity of the country, they ought not to refuse the Conservatives credit for what they have done. It was a Conservative government that acquired that western country and added it to the Dominion, and it was a Conservative government which gave it the first transcontinental railway, the Canadian Pacific railway. It has been the custom to blame the Conservatives very much for having given so large a land grant to the Canadian Pacific railway, but we should bear in mind what were the conditions then existing. It was then absolutely necessary to offer strong inducements for the building of a railway, and, viewed from the standpoint of that time, the bargain made by the Conservative government was a fairly good one. As a matter of fact, it will be found by anybody who chooses to consult the record of that time that a law was left on the statute-book by the preceding government, the Mackenzie administration, offering to give away an immensely larger area of the lands of the northwest in return for the construction of only a portion of the railway, the whole of which the Conservatives were able subsequently to procure for a very much smaller grant. And the Mackenzie administration were willing to give these lands upon conditions which would seem to us now absolutely outrageous, and which, if carried out, would have been quite intolerable for the country to continue.

Even in their immigration policy, of which our friends are so proud, they have only been carrying out the work inaugurated by their predecessors. The member for Regina (Mr. W. M. Martin), the other day, asked why the Conservatives in 1894 and 1895 could not get immigrants. There were others who could not get immigrants at other times. I would like the hon. gentleman to employ his spare moments in looking up the record of immigration, for instance, under the Mackenzie government which represented the party to which he belongs. From 1874 to 1878, the Mackenzie government pursued an active immigration policy and succeeded in bringing in 149,000 immigrants at a cost to the country of $8.40 per head. From 1879 to 1883, the next period of five years, with the Conservatives in power, the government brought in 373,000 immigrants at a cost of only $3.52 per head, which, I think, my hon. friend from Regina will agree, shows a great advantage in favour of the Conservative methods both as regards numbers and as regards expense. The hon. member will find also that the moderate sums which the Conservative government asked for immigration were constantly attacked by their opponents, and that in the year 1889 the Liberal opposition of that time went so far as to move for a reduction of the very moderate estimate asked for. The amount asked for by the government of that day was $93,135, and the Liberals moved that it be reduced to $50,000. That was all the Liberals of that day were prepared to allow the government in order to carry on an active immigration policy. The entire Liberal party in the House at that time voted for that reduction, including the present Prime Minister of Canada (Sir Wilfrid Laurier) and several other hon. members, who now sit in the

Liberal cabinet. Compare that with the expense of the present time. We are spending something like $1,000,000 a year—sometimes more and sometimes a little less—and the Conservative opposition of to-day are offering no objection to the amount, they are only criticising the manner in which the money is spent. We want to see a generous immigration policy and as many immigrants brought into this country as can possibly be brought in. But we want to see the money devoted to the service properly, legitimately and economically expended. The last two years for which returns are made are 1908 and 1909. These returns show that in 1908 the immigrants brought in cost $4 a head, which is considerably more than the cost in Conservative days. The immigration in 1909 amounted to 146,908, at a cost of $6.60 per head. In 1883, under Conservative rule, the immigration amounted to 133,624 persons at a cost of only $3.15 per head. So, the immigration policy of the old Conservative government contrasted most favourably with the immigration policy of the present Liberal government. Besides, the present government have had the immense advantage of having a great period of trade expansion throughout the world beginning very shortly after they came into power, and that is the reason, to a great extent, why we are able to congratulate ourselves upon the continued prosperity of the country. If the policy of this government was the means of bringing prosperity into the country, why did it not have an immediate effect? If you turn up the records, you will find that it did not have the immediate effect that is claimed for it. I was looking through the report of the Minister of the Interior, and came across a very interesting table in regard to prices of land in the Northwest, and it struck me that it might be instructive to read the figures in that report to the House to show that, at any rate so far as land values in the Northwest are concerned, the advent of the Liberals to power in 1896 did not bring an immediate result. The following are the figures:

Average Price Obtained by Railways and Other Land Companies for Land in the Northwest.

1896	$3 34	per acre.
1897	3 23	"
1898	3 18	"
1899	3 28	"
1900	3 27	"
1901	3 36	"
1902	3 56	"
1903	3 46	"
1909	11 08	"

Thus we see that it was five years after the present government assumed office before the land values of the Northwest rose to the point at which they had been when the Conservatives went out of power. The price has been gradually rising since that year until now, this year, we have the magnificent average of $11.08 per acre. So, if it was the advent of the Liberals to power which is considered by our friends opposite to be accountable for the prosperity of this country, I think they will have to cut out the first five years and acknowledge that they were a failure at any rate for that time.

I have spoken at much greater length than I had intended and so I will leave undiscussed for the present other matters of general policy.

Mr. L. A. A. RIVET (Hochelaga). Mr. Speaker, I do not intend to answer either the criticisms or suggestions which the hon. member for Qu'Appelle (Mr. Lake) has offered to this House this afternoon. I believe, however, that I should devote one or two observations to some of the subjects he has touched upon. The greater part of the hon. member's address has been devoted to questions largely pertaining to the country which he represents particularly in this House, and, as I claim no special authority to discuss these subjects, I shall not follow him upon that ground. The hon. member prefaced his observations with a reference to the question which now occupies the attention of the whole country, the question of naval defence. If I remember his words correctly, he expressed his hearty concurrence in the policy adopted by this government.

Mr. LAKE. No.

Mr. RIVET. I understood him to say that—the principle of coming to the rescue of the mother country was the right principle, but the government was not going far enough, and should do a great deal more. That is the way I understood the hon. member.

Mr. LAKE. That is right. I did not understand the hon. gentleman's meaning.

Mr. RIVET. That is what I was coming to. I must say that I do not entirely share the views of the hon. gentleman; and I will not surprise any one in this House by say that I propose, in all earnestness and sincerity, to support the policy propounded by the government. It is my belief that this policy is based upon a sound principle, that it is an application of a principle which is common to every one, which is in the heart of every one, the principle of self-defence. But I do not propose to give my views on that subject to any extent, because I shall have an opportunity of doing so on the second reading of the Naval Defence Bill.

The hon. gentleman has also referred to another subject which I consider of vital interest to this country, he has touched upon the construction of the Hudson Bay

railway. I really cannot understand the criticism of the hon. gentleman, after the position taken by this government upon that question. If I understand correctly the position taken by this government, the country is pledged to the construction of the Hudson Bay railway, and so far as the resources of Canada will permit, the construction of this railway should be proceeded with as quickly as possible. But I may be permitted to observe that I am rather surprised to hear hon. gentlemen opposite criticise the expenditures of Canada as being extravagant, while on the other hand, hon. gentlemen like my hon. friend from Qu'Appelle (Mr. Lake), are constantly rising in this House and crying out for a larger expenditure.

Mr. LAKE. Does not the hon. gentleman know that the government has set aside a special source of revenue, created by Act of parliament a couple of years ago, to meet the construction of this railway?

Mr. RIVET. Does the hon. gentleman ask if the construction of this railway will create a new source of revenue?

Mr. LAKE. No. A source of revenue was provided for by the Minister of the Interior in the Dominion Lands Act in 1908, according to which the revenue from preemptions and purchased homesteads should be applied to the cost of building the Hudson Bay railway, and the fund already is something over $12,000,000.

Mr. RIVET. I am not familiar with that question. All I can say is that I am confident that the government will act fairly by the hon. gentlemen opposite, and will proceed with the construction of the Hudson Bay railway as soon as, and as fast as, the resources of the country will permit. Now, Sir, I propose to make some general observations upon some of the features of the document which is called the budget speech. About two months ago, in this House, an event took place of more than ordinary importance for the representatives of the people and for the entire country. In the fulfilment of a constitutional duty, with his accustomed eloquence, the Minister of Finance, as administrator of the finances of Canada, gave a solemn account of the national assets and liabilities of our Dominion. Even as men of precaution, so Canada needs each year to be posted on the true financial standing, the extent of her obligations and possibilities, so as to safely prepare for future contingencies; and it is the business of the Finance Minister to make known, clearly, loyally and exactly the situation.

It is a delicate and difficult task, and it demands complete impartiality, a jealousy of the truth, all the truth, be the consequences what they may for the minister and the government to which he belongs.

In full justice to the minister, and despite all assertions to the contrary, we must say that he fulfilled his duty, in this regard, most scrupulously and in the accomplishment of his mission he merged the politican in the guardian of the country's affairs. And, without any misgivings, the honourable minister was enabled to enter sincerely and honestly on an examination of Canada's financial situation—for, in all ways that situation is encouraging and should be, as it has been, approved of by the whole country.

Not only does the budget show a considerable and normal increase in revenue, expressed in round figures by 17 millions, but, from a hurried glance at the economic condition of the country, it is clear that such growth in revenue is merely the natural result of the general prosperity and not, as has been pretended, of increased taxation.

Yet, despite its favourable characteristics, the budget speech could not find favour with its official critics. Our friends on the left sought to drown the optimistic note in the minister's address with the old cry of alarm.

As usual it was the hon. member for Toronto (Mr. Foster) who constituted himself the apostle of pessimism. He is a powerful speaker, a well informed debator, possessing a prodigious memory, a great flow of language, and a remarkably sophistical talent. He excels especially in so manipulating facts and figures as to make them correspond with his own theories. In listening to him one might be tempted to apply to him the remarks of Beaconsfield in regard to his illustrious adversary Gladstone : 'A sophisticated rhetorician, inebriated with the exuberance of his own verbosity and gifted with an egoistical imagination that can at all times command an interminable and inconsistent series of arguments to malign an opponent or to glorify himself.'

Rising after the hon. minister, the hon. member felt the difficulty of his task; wherefore he saw fit to draw upon all the varied resources of his oratorical talent, and as usual with him, he made a great display of words. Yet, no matter what good or ill may be said of his financial criticism, it would be difficult to credit him with anything new; and the same may be said of all his friends who followed in his footsteps.

Despite their thirteen years of opposition, our opponents, like the Bourbons of France, have learned nothing and forgotten nothing. When, then, will they ever have any other criticisms than the following to make

(a). The assets in the budget increase

so much the worse for the poor consumer who has to bear the burden of the taxation imposed on him by the administration; notwithstanding the well known fact that the average of taxation on the consumer has been reduced three points, and that the total revenue could only increase in the direct ratio of the purchasing power of the Canadian people.

(b). The expenditure is lower than the revenue; that expenditure is still too high, is the chorus of our critics, for the government's policy is one of extravagance, as regards the public service, while, individually, in the estimates they complain that certain districts are ostracized as far as public works are concerned.

Here we have the amusing spectacle of an opposition that finds fault with the total expenditure, while it complains of its insufficiency in matters of detail. This was the position of the hon. member for Victoria, British Columbia, (Mr. Barnard), whose speech was a long philippic on the ill-treatment of his province by the government. According to him, British Columbia does not receive its due amount of public moneys, in proportion to the importance of its sea-ports. On that reasoning, Montreal ought to get 45 per cent of the moneys voted for public works since 45 per cent of the foreign business of Canada passes annually through Montreal. But our friends on the left have a logic that will not bear sifting.

The increase of the public debt is also a favourite theme with them. Canada's credit, they say, goes from bad to worse, because since 1896 the public debt has increased. It has long since been seen that such increase is not alarming and that it presents no analogy with what took place under the Conservatives. Under their government they borrowed to cover the rising deficits, and to meet expenditure chargeable to revenue. Under Liberal management the government borrow to defray the cost of permanent works that increase the assets of the country, such as the Transcontinental railway which marks the greatest addition to the debt, while Canada's credit is in no way decreased thereby, for in a few years the interest accrued will be paid by the Grand Trunk Pacific.

Again we have the eternal refrain of scandals in the administration of certain branches of the service, scandals that have been twenty times explained away and which are constantly repeated by those gentlemen, inspired perhaps by the old saying: 'Lie and lie ever, something will always stick.'

I do not propose discussing to-day, either the country's budget or the machinery of the public debt, or any other questions belonging to the financial aspect of affairs; no more do I desire to take up the criticisms of the opposition regarding the public service. That duty has been well performed and, moreover, by their votes in 1908, the Canadian people have done ample justice to the subject. But as the budget speech sets forth, in a proud and defiant manner, the admirable economic status of Canada, I desire to take advantage of the latitude allowed in this debate to briefly indicate the general effects of the government's policy as far as concerns the advancement and progress of the Dominion. Undeniable is the general and phenominal development of Canada under the Liberal government. But the contrast between this condition and the state of stagnation under the Conservative regime is calculated to afford subject matter for serious reflection to our friends opposite. Still, instead of taking a lesson and reforming their party, our friends to the left lose themselves in fruitless recriminations which constitute the main feature of their criticisms. Here are the leading samples: Canada's progress cannot be denied, they say, but that progress is the result of the general economic laws that are felt even in a more pronounced manner in all countries. Or else: Canada's development is fictitious, since our foreign trade shows an ever increasing balance against us. Or else: No matter how great that prosperity, the government has no hand in it, or, in any case, it is but the application of the policy and methods of administration taken from the old regime.

I do not now intend to dwell on all that is specious, contradictory and ill-founded in these arguments of the opposition. But I desire to give them an indirect answer and I invite your attention to those two propositions:

1. Since 1896 has Canada grown in proportion to the aspirations of its people?

2. Is that advancement absolutely foreign to the action of the public authorities, or, on the contrary, is it due in a certain degree to that influence?

1. To the first question statistics reply in the affirmative.

In every sense Canada's economic situation has been a revelation to the world. On this score our country to-day holds a model place, the envy of all civilized nations. Apart from the fluctuation of population, it is agreed that the best barometer of a country's material progress is the position of its leading industries, the volume of its trade, and the condition of its working classes. What does that barometer indicate for us? According to the Minister of Finance, Canada will soon have a population of seven millions. This increase of prosperity, inasmuch as it is the two-fold result of a regular repatriation of our people from the United States and an increased immigration of the best elements. Men do not seek homes in a coun-

try that is economically depressed and without a national future.

Agriculture is the fundamental source of Canada's prosperity. I've never yet heard any serious denial of this fact. Abundance, comfort, happiness and even wealth in our agricultural classes constitute a fact unprecedented in our annals. The law of supply and demand acts in their favour in a most marvellous manner, until through the increasing value of their products, they have become almost a privileged class in the community.

Statistics establish in a striking manner the industrial and commercial progress of Canada. I shall not at this moment weary the House with statistics which have very often been quoted. I shall simply say that Canada stands second to none in the list of new and developing countries. From the statistics supplied to me by the Department of Trade and Commerce, I see that in a comparison of the progress of trade per capita for Canada, France, Germany, Great Britain and the United States for the latest available period, Canada has a proportion of total trade per capital of $89.97 as against $58.11 for France, $60.24 for Germany, $118.29 for Great Britain, and $35.30 for the United States, so that in this respect we rank second to Great Britain. It has been claimed that this comparison is fictitious. This claim has been advanced by the hon. member for North Toronto (Mr. Foster). In order that I may do no injustice to the hon. gentleman I quote his own words:

The gentleman proceeds as follows:

I say that when under our adminstration and its policy you have an adverse balance continually increasing, something is wrong in connection with that trade policy, and it ought to be the duty and endeavour of the government to so arrange its policy that this adverse balance should be made as small as possible, that it should be reduced instead of continually advancing.

Now, Sir, how often are we called upon to refute this old friend the argument as to the balance of trade. The hon. member for North Simcoe also dwelt upon this question of the balance of trade and he was particularly eloquent in reference to the different schools of political economy. May I be allowed to quote from the French author who deals with this question very ably. Leroy Beaulieu writes :

That doctrine of the balance of trade, or of the utility of the excess of sales over purchases, attractive as it may be, is erroneous; it is based on an incomplete interpretation of facts. During the course of the 19th century experience has given it a most formal denial. Thus England, which is the richest country of the world, for over half a century, in a most energetic form, shows a very extensive excess of importations over exportations. Great Britain is not the only country in a like position. France is in the same case, though in a lesser degree.

Now, why is this? It is because certain elements which tend to bring to the country a certain proportion of gold are not taken into consideration in the official returns, and if you allow me I will refer to the case of the United States in this connection. It is true that our trade for the last fiscal year, with the United States, shows an adverse balance of $79,000,000 but we find from the immigration statistics that during the last year over 90,000 immigrants have come to this country from the United States and according to the superintendent of immigration they have brought with them property to the value of $90,000,000, and by this means alone more than compensating for the balance of trade against us with the United States. On this example the argument of hon. gentlemen opposite falls to the ground.

On another side, it seems to me that that excess in American imports could only seriously affect the economic situation in Canada by its effects on our manufactured products. But the regular advance and the extremely encouraging condition of our industries ought to reassure us on that score. In this sense our opponents' arguments fall flat and something else must be invented to mask our splendid development.

From a social standpoint Canada holds a most advantageous position. Warfare of classes is unknown here, and the relations between labour and capital are more harmonious and more beneficial than in any other part of the world. Contiguity of a country where the social questions often create nightmares, seems in no way to have affected the peaceful character of our labouring classes. Thus in every way the admirable material progress of Canada, and the magnificent national evolution that has realized the dream of its people, have justified for our country the title of a nation so aptly applied to it by the Prime Minister.

If we look into the causes that produced the state of things we find them divided into many different categories. Our opponents, as I said, have undertaken to explain away, in their own way, this sudden and marvellous change. For them, Providence, that treated them as would a stepmother, and in 1896 came back to maternal tenderness, the laws of economy and the initiative of our population, are the sources whence flow, they say, this wonderful phenomenon; this bad Liberal government was careful not to help in any way. A wonder they do not accuse it of having opposed the movement.

Thank God, Mr. Speaker, we do not forget that to Him we owe the fertility of the soil; our national resources, the development of which creates our wealth; our climate, rigorous but healthy, that is a mag-

net to draw to us the best possible immigration. Far be from us the idea of lessening the active and effective participation of our honest, laborious and progressive people in the grand work of Canadian prosperity. It would be equally childish to maintain that the application of economic law to the conditions of labour and to the natural elements found in the land, could be fruitless. But in contradistinction to the opposition, we claim that the co-operation of these elements is reduced to a minimum under the influence of a government that is unworthy of its mission. And this brings us to the answer to that question: In what consists the operation of power in a country like ours? Which of the two following ideas should prevail in the administration of the government? Is it the Cesarian idea of a state Providence that absorbs all the national life and constitutes itself the conservator and regulator of all individual energies which it paralyses with an excessive protection? Or, is it the doctrine of the free school—let go, let alone—that assigns to the state a merely passive role, under the false pretext that the economic and social mechanism should be completely abandoned to itself in order to produce a maximum of energy and wealth? Neither the one nor the other of these two extreme theories should serve as the basis of governmental action, and it is at an equal distance from both that the true function of a democratic state should be found. About seventy years ago, Lord Macaulay took upon himself to define that part in a precise manner in one of his admirable speeches on electoral reform. Lord Macaulay said:

> The end of government is not directly to make the people rich but to protect them in making themselves rich; and a government which attempts more than this is precisely the government which is likely to perform less. Government do not and cannot support the people. We have no miraculous powers, we have not the rod of the Hebrew law-giver —we cannot rain down bread upon the multitude from heaven—we cannot smite the rock and give them to drink, we can give them only freedom to employ their industry to the best advantage, and security in the engagement of what their industry has acquired. These advantages it is our duty to give them at the smallest possible cost.

It follows from this definition that if the government is not qualified to be and should not be the foster father of the people, it should not either be content with being exclusively the guardian of security, order and justice. While respecting the domain wherein private initiative finds most profitable action, the state owes it to itself and to the people it governs, to second with all its power the collective efforts of the community and to direct that community in the way of its temperament, its aptitudes and its calling. Now, we have ever held and we still hold that the government has faithfully fulfilled that mission, and because it knew better than did its predecessors its own role, it has powerfully contributed to the wonderful impetus that lifts Canada high up in the region of economics. In defying us to prove this assertion, our adversaries forget that it is often impossible to indicate the immediate results of a special measure, but it is easy to estimate or analyse the general work of a ministry, or of a parliamentary majority and to appreciate its influence on the life of the country. It is unnecessary to make that analysis or express appreciation of the ministerial work done, but, after the recent attempts to deprive the government of the credit due it, I may be pardoned if I briefly refer to the subject.

It suffices to glance at the geographical and ethnical conditions that obtain in Canada to be convinced that its development, economically speaking, depends on four principal factors: 1. A wise fiscal policy; 2. An active and sound immigration; 3. A rational policy in regard to means of transportation; 4. Harmony and peace between different classes and races. I claim that the Liberal government has approached and solved each of these problems in a vigorous manner, in a spirit and with a knowledge of the country's needs, all of which were absolutely unknown under the old regime.

The present fiscal policy is merely the protectionist policy of 1878, they say, with slight variations. Even were such the case, we could triumphantly answer that the success and beneficial results of a policy depend less upon the underlying principles thereof than upon the wise application of it.

But is such the truth? Are there not in the government's customs reforms special traits to which the old national policy of our friends to the left have no resemblance? What was the predominating characteristic of the old Conservative policy? Privilege; that is to say, being conceived and established to protect the manufacturing industry, that policy paid attention only to and was solicitous only for that one branch of national production.

From 1878 to 1896 the trend of the customs tariff bears the impress of that idea: the industries first, the other classes afterwards. So that, what originally, and in the mind of Sir John A. Macdonald was intended as a financial expedient became, under his successors, the base and pivot of a fiscal system under which the vast majority became tributary to a small minority.

So that, independent of the injury resulting to the larger number, from the two-fold point of view of finance and economy, that systematized protection brought about two principal results that its founders had not foreseen, that is to say, the insufficiency

of the revenue derived from that source, and the instability of a tariff that was constantly changed despite the incessant requests of manufacturers.

In order to remedy the injustice and inconveniences of such a policy the Liberal party proposed to substitute for it a revenue tariff based on an equitable redistribution of custom dues, in conformity with all the needs of all classes of society.

Having secured control in 1896 the Liberal party put its programme into execution, and the success which crowned its efforts prove it was right.

I heard the other day a very curious argument from the hon. member from North Toronto. After having given different classes of schools of economics, after having pointed to the mercantile school, to the agricultural school, the industrial school and to the high protectionist school, he said: 'Now, to what school do the members of the present government belong?' I have only to say that if some of the members of the present government profess to belong to one of these particular schools, they must not be judged by what they think, but they must be judged by what they do. That is to say, that the government of this country is not composed of theorists but of practical men who do not profess to belong to one school more than another, but who recognized conditions first and then endeavour to apply their measures to the facts as they arise according as the best interests of the country demand.

Now, that no radical change was effected in our fiscal system, that the tariff was only reduced three points, that some of our leaders were accused of going back on their 'free trade' flag, are all specious criticisms that do not very much interest the people of Canada. What the country knows and understands is that the fiscal policy of today is governed by facts and not theories, and that the tariff established by the Liberals feeds the public revenue in a manner unlooked for and assures a sufficient protection to Canadian industries.

I merely refer, in passing, to the different aspects of the present tariff: the preference given to England, which has had, despite all to the contrary, excellent results, and which our opponents would gladly hide if they could; the German surtax, a just return for lack of favour; the intermediary tariff which brought to our fiscal system an element of elasticity that increases its effectiveness; all measures of Liberal origin, which have imparted a great impetus and a lasting stability to our fiscal system.

If the Conservative party lays claim, as its own, to the fiscal policy of the government, it cannot surely have the same pretension regarding the immigration policy which it fought against in a most determined manner and which it still likes to criticise in every possible way. A large volume could be made of the speeches delivered by our friends on the left, great and small, in denouncing the methods adopted by the Interior Department, in the recruiting of immigrants. In their day they had a safe way to escape like criticism; simply by abstaining from all immigration. Their apathy in that direction, was as culpable as their indifference regarding the exodus of our own people to the American republic. To console themselves for having done nothing when in power, they now try to cover up the results obtained by the ministerial policy, under petty considerations of detail. It would be puerile to think for a moment that the opposition's criticisms and ill-advised curiosity regarding the North Atlantic Trading Company could change public opinion, for while the course of the opposition shows it to be devoid of public spirit, the influence of the stream of immigration to Canada since 1896 has been conducive to the progress of the Dominion. We are right in saying that our country is one of the largest, the most beautiful and the richest in national resources in the world. But the country, to reach its rightful economic rank, needs arms and capital. The immigration campaign carried on so actively and devotedly by the government has given us both of these.

The hon. member for North Toronto is glad to be able to say, with Sir Edward Clouston, that the magnificent harvests of the west saved Canada from the crisis of last year. Can the hon. member pretend that such harvest grew alone like mushrooms without the aid of the thousands of immigrants that the government's policy brought into the west? Here is another point on which the government can fairly lay claim to a share in the prosperity of the country.

I will now ask, Mr. Speaker, to be allowed to briefly touch upon the government's policy in regard to transportation. In a vast country like Canada the transportation highways are like the arteries and veins in the human body, they are indispensable to its economic life and its fecundity.

Acknowledging this truth the government was led to make the creation and development of the rail and water highways the two grand works of the administration; the Department of Railways and Canals and the Marine Department. Each year large sums are voted for these two great public services, either to improve the waterways and ports, in order to draw a share from the advantages afforded by nature to our country or for the construction or subsidizing of new railways. This is an expenditure that the people of Canada will always look upon with favour, as long as it is carried on in a judicious manner, for it ever contributes to the commercial and industrial supremacy of Canada.

The government's policy regarding our

transportation highways bears the mark of a solicitude and remarkable spirit of progress. I do not pretend that the Conservative government misunderstood its duty in this connection, but I fear not to say that the Liberal policy, in this regard, is more methodical, more enlightened and more daring than that of its predecessors.

From 1896 to 1908 statistics show that the sum of $121,215,115 was used in the improvement of transportation facilities. That sum was principally divided between the canals, the St. Lawrence channel, the Canadian defence harbours, the subsidies to railways and the cost of the Transcontinental. Which means that such expenditure was not made at hap-hazard for local works, more or less justifiable, but in accordance with a general plan of improvement confirmed by the recommendations of a special commission and in a manner to derive the most profit possible from the geographic conditions of Canada, in view of the traffic between the east and west and between the St. Lawrence ports and those of Europe.

Such is an essentially national policy that our opponents may have sometimes criticised in details but of which they can neither blame the directing spirit, nor disallow the beneficent results. Moreover the construction of a second transcontinental line and the henceforth assured supremacy of the St. Lawrence route, which have heretofore been two points of resistence in the government's transportation policy, exempt me from all necessity of commenting upon the effects of that policy on the destinies of the country.

A few days ago, the New York 'Herald,' in an editorial referring to the port of Montreal and the St. Lawrence route, pointed out the dangerous rival our country might become in regard to transportation. I am confident the government will not stop short in its splendid pathway, that it will save itself no sacrifice, compatible with its resources, to preserve and augment the advantages flowing from its water-ways. Our neighbours are not inactive; they devote vast sums to their ports and canals. During recent years, the project of the Georgian Bay canal has given them reason to reflect, and to redouble their efforts to improve their own water-ways. In the interests of our metropolis, in the interests of all Canada, I again appeal for the construction of that canal, the utility of which was foreseen by the great explorer Champlain, and the accomplishment of which is destined to affirm for all time the commercial supremacy of Canada.

In fine, Mr. Speaker, I desire to remark that the government, by its social legislation, and by its conciliatory policy between the different races, has succeeded in putting aside two great and serious obstacles to the general progress of Canada. In Canada, as elsewhere, two great forces co-operate in all industrial production—capital and labour. On the organization and functioning of these two forces, and their reciprocal harmonious relations, to a great extent, depends the success, as well as the industrial prosperity of the country. The Conservative party, during its long tenure of office, seems to have misunderstood the part taken by labour in the general economy, and to have exclusively showered its favours on capital.

No one would dream of blaming the Conservative government for having encouraged the use of capital in the industries had it not stopped half way, and neglected to accord the workman a share of its solicitude so generally granted to the capitalist and the industrial contractor. It was reserved for the Liberal party to look after the workman and to assign him a place in the legislation and administration of the country. From its first moment in power, that party set itself to re-establish between the two great elements of national production, that equilibrium of justice and protection necessary to harmonize their relations and to maintain social order. The measures flowing from that policy, amongst others, may be called the creation of a Labour Department, the 'Labour Gazette,' the Labour Act, the abolition of the sweating system, and the Fair Wage Act, and finally, the Lemieux Act, the success of which has challenged the admiration and envy of the older countries that had wrestled with the social problem. In this regard, the Liberal party not only has the well-merited approval of the labouring classes, but has also assured to the industries an indispensable element of progress and prosperity.

How can I pass over in silence the admirable work of national pacification which, for twelve years, the government has carried on with the marvellous results that have so affected Canadian unity? The favourite motto of the Conservative party, 'divide ut imperes' has vanished from the councils of the nation. In its place an ideal of harmony and union reigns, drawing the two races closer to each other, and inspiring them to common action and collaboration in the work of erecting the edifice of Canadian prosperity. It was that ideal of union and harmony that inspired the government with the conciliatory policy which allowed it to satisfactory settle the ticklish questions of religion and race which, at other times and under other conditions, would have widened the gulf between the two principal ethnical groupes of the Dominion. And yet, what violent assaults were not made upon this phase of the ministerial policy, when racial passions were kindled and fanned into fury by the extreme wings of the opposition. Do we not still hear the echoes of the

danger raised by the attitude of the statesman who personifies that policy, when, in the midst of the conflict of ideas, he arose to the heights of genius, calm and dignified, to apply the remedy suggested by both justice and national interest.

It may be too early yet, Mr. Speaker, to ask all parties and all political sections to praise without stint the great wisdom which saved Canada during the religious crisis of the years that have gone. But if it be true that distance imparts to men their true stature, and, when the jarrings and discords of their day are quieted, calm and immutable justice renders to each his due; if it be true that the judgment of posterity corrects the errors of contemporaries, I am certain that impartial history—the great judge—in speaking of the present premier, will say, as of the King now gloriously reigning, that he was the 'peacemaker' of his country; and thus will history accord him his most glorious title to the admiration and gratitude of the Canadian nation.

Allow me, Mr. Speaker, to say a word about the influence brought to bear on the national situation in Canada by the diplomacy of the present ministry. I know that the word 'diplomacy' makes our friends opposite smile, for they never could admit or understand our country enjoying the national prerogatives claimed for her by the Prime Minister of to-day. Yet, it is historically true, that abroad, as well as in the mother country, the diplomacy of our Canadian statesmen has brought to Canada an increase of autonomy that has enlarged its prestige and its possibilities of the future. We may well say that if the inflow of people and of capital is abundantly apparent in Canada to-day, it is thanks, in a great part, to the independence and extreme liberty that affects our relations with other countries and that gives a colour to our fiscal policy. In this sense again the external policy of the government has been a great factor in our economic system.

I beg pardon of the House for having inflicted upon it this long list of acts and facts that henceforth belong to history. I would not have gone over them had not our friends opposite, despite all evidence to the contrary, persisted in the fiction that Canada's progress has been absolutely foreign to the operation of our administration. It is, therefore, necessary, from time to time, to take up the gauntlet and to show, were it only briefly, that in ours as in all other countries there exists between the government and the people, between the life of the people and the action of the government or parliament, a close relationship, the real influence of which varies according to the spirit and the methods of the men in power.

I know that, as adversaries will pre-

tend that the ministerial party follows the pathways traced out by the Conservative policy; and they think thereby to silence us and to defy us to point to any new markets open to Canadian exportation. This last argument falls to the ground before the Franco-Canadian treaty, which in the minds of the most eminent business men, is destined to have a great effect upon our trade with France. I may add that the preference accorded New Zealand gained that colony as a market for our preserved goods from British Columbia. But there is a still better answer to that objection, as I believe experience has taught that it is more profitable and rational for Canada to foster systematically existing outlets by means of new agreements and more active and better organized propaganda, than to make new contracts, practically one-sided, with people who are, as yet, unacquainted with the advantages of trading with Canada.

To the general remark that the government's policy has been a Conservative policy with a Liberal label on it, I reply by drawing your attention to the two fundamental characteristics of the present administration—those that essentially distinguish it from it's predecessors. The first of these is the Liberal idea of liberty and progress, in contra-distinction to the reactionary principle that is at the bottom of all Conservative policies—especially in England and in Canada. It has been said of certain nations that by temperament, tradition and vocation they were advance guard nations. History also shows that the Liberal party, in England as in Canada, has been in the vanguard, that is to say, it ever saw higher and farther along the way that democracy travels.

Since 1896 the Canadian Liberal party has sought to be faithful to its principles and its mission and has applied to the entire administrative mechanism a spirit of initiative, a daring in conception and a sense of national responsibility, all of which you vainly seek for in the policy of lethargy, privilege and routine that marked the old system.

Such is the first mark of distinction between the present government and the Conservative government. There is also a second one—it consists in the judicious application of principles to the changing conditions of our society and to the fresh needs created by its evolution. Mr. W. J. Bryan, in 1896, in Chicago, said: 'Changing conditions make new issues. The principles upon which democracy rests are as everlasting as the hills, but they must be applied to new conditions as they arise.' An English statesman also said: 'Political doctrines were not like the axioms and definitions of the geometer, of intrinsic truth, wholly uninfluenced by time and place, their worth and force depended on

experience and were necessarily as changing as the circumstances on which all experience is founded.'

Such has been the Liberal party's line of conduct since 1896: to adapt the principles of governmental science, which science is essentially experimental, according to the conditions of a new country, which is in a state of economic and national transition.

It was by adhering faithfully to these two political truths—progress in liberty and the wise application of ideas—that the Liberal party was enabled to draw order from chaos, reform from inertia, prosperity from stagnation.

Beaten again on this latter issue, still our opponents will not lower their arms. With a zeal worthy of a better cause, and in default of better resources, they will try to view the government's administrative record, in order to point out, from time to time, in the glass of their imagination, the few specks that are to be seen on the bright sun of the Liberal policy.

Such were the tactics whereby they sought to regain that power that they certainly did not lose through any too pronounced administrative honesty. The success that has accompanied those tactics is far from causing us to regret it, but, it seems to me, that it should cause our friends opposite to open their eyes. Our opponents should prove that in the traditions of their party, in their programme and in their political ideas, they present the country with a more enlightened, more honest and more progressive administration.

Unhappily, for them, they have not and they cannot present such a certificate of capability. So far they have confined themselves to a purely negative role, and they have not revealed any of the characteristics required in the government such as a programme of positive reform, and a dominant and uniform political conception of the great problems of national interest. The programme formulated by their chief at Halifax, disregarded by some, repudiated by others, was soon wrecked and, I doubt, if one could even find some of its debris at the convention announced for next autumn.

Now I do not propose to dwell upon the hopeless division that prevails to-day in the councils of our good friends opposite. The leader of the opposition was eloquent yesterday when he propounded a policy of assistance to the mother country and of defence to Canada. Immediately after he sat down his lieutenant for the province of Quebec (Mr. Monk) rose and expressed his indignation because he had not been consulted on the policy to be adopted in this regard.

Driven about by winds that blow now from east, now from west, with a crew divided as to the course to follow, and in regard to command, very like a dismantled ship, without a compass, running aimlessly through a fog, the Conservative party is surely not sea-worthy, nor would it be safe to trust the destinies of our country to such a wreck.

Now, Sir, I do not wish to pose as a prophet, but I can see what is coming. I have good reason to fear that the opposition are preparing to raise prejudices in the province of Quebec against this government, and more particularly against its leader, in the coming election, on this very question of naval defence. The Liberal administration and its faithful supporters will be charged with having been traitors to the interests of Canada at large, and particularly with having betrayed the interests of the French Canadians of the province of Quebec by juggling this country into the vortex of militarism. On the other hand, I perceive the argument they will use in some of the other provinces. They will contend that the present government have not gone far enough in their policy of naval defence, and it should be driven out of power as unworthy of the confidence of the Canadian electorate. Under such circumstances, it is wise for the Canadian people to cling to their true friends, to support the men who have exercised their power with patriotism and devotedness, and whose ability and character are on a level with the grand and difficult task they so splendidly accomplish. To-day, as yesterday, problems, affecting the future of the nation are set for the consideration of the government. The solution of such problems requires unity in direction, regularity in administration, courage and devotedness in execution. Where are we to find these essential conditions if not in the government that has tested them for thirteen years, and that, in the face of an opposition divided beyond repair, is now prepared to settle, in a spirit of union and patriotism, one of the most vital questions that can possibly affect the Canadian nation?

Mr. THOMAS CHISHOLM (East Huron). We have listened to-day to two very well prepared and eloquent addresses from the government side of the House. The hon. gentleman (Mr. Rivet) who has just sat down has certainly made some very severe charges against the old Conservative party. I think, however, we can discern a certain weakness in the foundation of his arguments. He seems to have directed the greatest part of his energies against men who have ceased to be members of this House, men who are dead and gone, men who were in this House at one time but who can never return to it. Now I think we should always speak well of the dead. I would just say in regard to the Conservatives who have been so roundly abused here

to-night, that there are not half a dozen of them at present in the House. The Conservative party, with which much fault has been found, were driven from power in 1896, and there is no possibility that dead men can return. If they were here, if one of them should rise and take my place, I am sure that all that has been said against them would soon be annihilated and would have very little force in it. It is not, I think, a brave act to attack men who have gone, and who have no opportunity to return and defend themselves. It is not necessary to go into details in regard to this matter.

The two last speakers, who gave us a great deal of information and whose speeches certainly were very well delivered, seemed to be a little wrong in their bookkeeping. The hon. gentleman for South Oxford (Mr. Schell), in discussing the public debt, quoted a certain amount of debt with which he said the Conservative party had to contend at confederation. He forgot to tell us that the very act of confederation implied that the government in power at that time had to assume certain burdens as the very foundation of confederation. They had to assume $109,000,000 of debt from the different confederated provinces. This is laid to the charge of the Conservative government but it could certainly not have been avioded. They had also to build the Intercolonial railway as one of the conditions of confederation; the maritime provinces came into confederation with the understanding that the Intercolonial railway was to be built, the Conservative government of that day built it and it cost the country $50,000,000 to do so. They completed it, they were bound to complete it and no blame could be laid to their door for carrying out the agreement made at confederation. British Columbia came into confederation with the understanding that the Canadian Pacific railway was to be built to the Pacific ocean. The Conservative government agreed to do that at confederation and they fulfilled their contract. It cost the country $62,000,000 but the government was certainly not to blame for doing that, that was something which it was impossible for them to avoid. It was understood and it was only right that if these large amounts of money were to be spent on the maritime provinces, and for the benefit of British Columbia and the west, a certain amount of money should also be spent in the two older provinces and from $40,000,000 to $50,000,000 were spent in deepening the canals and improving the waterways. Adding these four items together, the $109,000,000 of debt taken over from the provinces, the $62,000,000 spent on the building of the Canadian Pacific railway, the $50,000,000 spent on the building of the Intercolonial railway and the $40,000,000 or $50,000,000 spent in deepening our canals in Ontario and Quebec, and it will be seen that every dollar of debt that was on the country when the Liberals came into power is accounted for, and every dollar of that debt was in fulfilment of the conditions of the pledges that we assumed at confederation. The Conservatives during all the years that they were in power did not run the country into debt a solitary dollar according to that estimate. They governed the country and built post offices, wharfs, harbours, public buildings, purchased and paid for the Northwest Territories and they also built these magnificent parliament buildings and paid for every one of those without leaving any debt on the country beyond what was involved in the very beginning of confederation. The Liberals came into power in 1896 and they have run this country into a debt of $80,000,000. What have they to show for it? They have a partially completed railway—they have completed no great work. However, it is not necessary for me to defend these Conservatives of old days, these men are not coming back to this country and it is not necessary that I or any other person should talk longer on that subject; that is ancient history and I feel that if the two eloquent speakers who addressed us to-day had spent their time in discussing present day affairs, it would have been much better for them and for us and we would not have lost so much time. They were also wrong in their book-keeping in some other respects; in fact as I followed the particulars as they were brought out item by item in regard to the finances of this country and the condition of affairs, I came to the conclusion that the whole system of government bookkeeping in the departments in Ottawa and elsewhere is defective, and misleading. The more it is examined, the worse it appears.

It seems to me that if it had been especially devised for the purpose of deceiving and misleading the Canadian public and the Canadian electorate it could scarcely have done so more effectually than it does. Every business man knows and we all know that in any properly arranged system of book-keeping vouchers or receipts must be produced to prove the accuracy and bona fides of every separate item of expenditure, fraternal societies, joint stock companies, school trustees, village, township, county, and town-councils are all rigidly particular in this respect. They insist that everything shall be made absolutely clear and satisfactory, not only to the auditors and the people's representatives, but also to the people themselves. Yet, in the highest book-keeping establishment in the land, in the departments here in Ottawa where we

are told that high salaried accountants are so numerous that they are said almost to be falling over each other, Conservative members of parliament who are really the peoples' auditors, are not allowed even to look at vouchers or original documents. It appears that the Liberals are treated very differently in these departments. Liberals from all over the country, it appears, can come into these departments and carry off anything they like, because in East Huron, in the last general election, Mr. Blair, a Liberal lawyer from Goderich, was able to flourish and to read in my presence in a public meeting original documents which he said had been taken from the files here in Ottawa. I would like to know why it is that Conservatives are not given equal privileges? We all know that the auditors of the people, that is the Conservative members of parliament, would not be allowed to go into the departments and look at these documents, much less to put them into their pockets and carry them away into the back lines to bulldoze the people and contradict those who rise to make statements and who have not equal opportunities and so are not in a position to prove the inaccuracy of the statements made. I would ask why is this unfair advantage given to Liberals? Why this lack of manhood and British fair play? Why this discrimination against Conservatives —and I would ask with particular emphasis why this secrecy? Is there something to hide? I really believe that there is. In fact there is suspicion abroad that if the truth and all the truth were known about the system of book-keeping that we have in this country and about the records that are made in the departments and the transactions that should be there recorded, whether they are or not, that then these brazen-faced Liberal heelers who go around the back lines with their pockets loaded with original documents taken from the files of the departments would be compelled to give up the game and hide their heads in shame. This thing has not been carried on very long in these departments, we can fix the time fairly well when this new system of book-keeping was introduced. It is only two or three years since one of our most open-minded and fairest minded ministers was compelled to admit that the book-keeping in his department was so entangled that it was absolutely necessary that expert accountants should be called in to unravel the difficulties.

It appears, however, that the confusion was so great and the blunders so numerous that no Canadian expert accountants could be found who were fit for the task and consequently a crowd of so called New York expert accountants were engaged and brought to Ottawa and some of these wonderful bookkeepers were paid by the government as high as $70 a day and their board. They began their instruction in true Tammany fashion by charging $85 each as railway fare between New York and Ottawa although at that time the first-class passenger rate between these two points was only $22, and they finished up their work by each of them charging something like $5 a day for board, although Mr. William Jackson, Conservative member for West Elgin, stood up in his place in parliament and stated that he had boarded and roomed in the same house with some of these men and he said he would stake his position in the House of Commons on the statement that these men did not pay more than $1 a day each for their board. To cap the climax they marched off to New York without leaving any proper vouchers for the $46,000 of good Canadian money which they had received. Expert accountants they certainly were. And I have no doubt that if a thorough investigation were made of the book-keeping in some of the departments of the government it would be found that they left behind them some very apt pupils and perhaps good imitators. Think of an accountant who after a year's book-keeping could hold out in one hand $16,000,000 of a surplus while in the other which he hides behind his back you find an accumulation of debts and liabilities amounting to the enormous sum of $45,000,000. That man may not be a Yankee but he is certainly an expert. In the good old days when there was nothing to hide, book keepers made use of a profit and loss account and they were always able to prove the accuracy of their work by means of a trial balance, but nowadays losses are charged up to capital account and paid out of moneys borrowed for permanent improvements, and then afterwards so manipulated that they are turned into profits, or made to look like profits, and I have no doubt that after a while many of them will be shown up as actual assets of the Canadian people. For example, the government let the job of building an important railway bridge over the St. Lawrence river to its friends under the name of a joint stock company, limited. Remember it was 'limited.' The company mismanaged the plans or the work or both, in such a way that when the structure was nearly completed it tumbled bodily into the river. In the meantime the individual members of that company are said to have become wealthy; in fact some say they have become immensely rich, while the poor little limited, paper, sham, company became bankrupt leaving something like $6,000,000 of debt. Well, the government took over the debt and charged it to capital account and paid it out of money borrowed for permanent improvements, and the result no doubt will be in time that this bridge—the real cost of which will have been im-

properly increased by $6,000,000—will be held up to the public by some future Liberal historian (or perhaps expert accountant) as one of the assets owned by the Canadian people.

Again, there is a collision between two tugs and $7,000 damages were paid by the government as a result of that collision, and the government charged that amount up to capital account and paid it out of moneys borrowed for permanent improvements, and I suppose that after a while they will be able to make out that $7,000 as an asset of the Dominion. Then again, there is an accident on the Intercolonial railway, the track is damaged, the rails are broken, the engines and cars are knocked to pieces, new equipment has to be bought to replace that which was damaged, and do you think the government charges that up to running expenses? Not a bit of it. Although the train was injured while it was running I suppose, they charged the damage up to capital account and they add that sum to the original cost of the Intercolonial railway. As I told you in the beginning of my little speech, up to the time the Liberals came into power the Intercolonial had cost $50,000,000, but to-day it has cost the country $81,000,000 or an addition of $31,000,000 to the cost in 13 years. Now, suppose a farmer had a farm and stock and implements valued at $6,000, and he employed a manager to run his farm for him and to keep his books. At the end of the year the farm manager may find he has $200 of a surplus; he may find that after paying all expenses his books not only balance but he has $200 cash on hand. He can honestly report to the farmer that he has a surplus of $200 and if he should invest that $200 in a horse that was worth $200 he could still honestly report that he had a surplus of $200. But, the next year when he would come to balance his accounts he might find no surplus. He would not like to report that to the farmer and he might call in a New York expert accountant and the New York expert accountant would say to him: take this horse valued at $200 and to the $200 add $5 for shoeing out of the current running expense and add it to the value of the horse, and in that way you can increase the value of the horse and decrease the current expenses. Then add again to that $60 for the veterinary surgeon who had to be called in to attend the horse, when he had run away and injured himself; deduct that from your running expenses also and add it to the price of the horse. Then, add to the value of the horse $30 for attendance and $70 for his feed and take that out of current expenses and you will add further to the value of the horse and lessen your current expenses. Then, take $100 for the new buggy that had to be purchased for the one which was destroyed when the horse ran away, and instead of charging that to current expenses put it on the price of the horse and you will be able to show by your books to your employer that you have a horse valued at $465, that you have lessened your current account by $265, and that you have a surplus of $530 for the year. That would be all right perhaps the first year, but after it had gone on for about twenty years and the old horse had come to be valued at $4,000 or $5,000 in the manager's books, the farmer might come to examine into this matter and he would say: It is very strange that the older this horse becomes, the oftener he runs away, the more he eats, the oftener you have to call in the veterinary surgeon to attend him and the more buggies he destroys when he runs away the more valuable he becomes. He would say: There is something wrong here. I think that is just about the kind of bookkeeping we have in the departments at Ottawa and that our surpluses have just about as much basis as the old horse surplus would have.

Mr. THOMAS A. LOW (South Rrenfrew). Mr. Speaker, like hon. members who have preceded me on this side of the House, my first word must be one of congratulation to my hon. friend the Minister of Finance (Mr. Fielding) for the magnificent statement he has presented to the House this year. Seldom, if ever, in the history of any country, has it been the good fortune of a Finance Minister to present so favourable a report upon fourteen successive occasions. Mr. Speaker, when I listened to my hon. friend from North Toronto (Mr. Foster) I was rather pleased when he compared the ministers of the Crown to a board of directors. As I listened to several hon. gentlemen speaking on the floor of the House I asked myself the question: Have these hon. gentlemen opposite offered any good reason why these gentlemen should not retain their seats on the board of directors? Is it because the Finance Minister, for fourteen years, has presented a report showing a balance on the right side of the loss and gain account, or is it because the trade of this country has increased from $239,000,000 in 1896 to the enormous sum of $650,000,000 in 1909? Is it because the people of Canada have deposited in the banks to-day $3 for every $1 they had in 1896, or the enormous sum of $771,000,000 as against $245,000,000 in 1896? Or, is it that a few disgruntled shareholders, like the hon. member for North Toronto, feel disappointed because they have not been elected to the board of directors? I think the best answer to my hon. friend from North Toronto is the verdict of 1908. From every hon. member on the other side of the House we hear the same complaint, that expenditures have increased, that in place of an

expenditure of $41,000,000 in 1896 we have almost an expenditure of $100,000,000 in 1909. I have before me the reports of two of the largest corporations in Canada and what do I find? I find that in 1896 the operating expenses of the Canadian Pacific railway amounted to $12,574,015, and that in 1909 they had reached the enormous sum of $53,357,000. I find that the operating expenses of the Grand Trunk railway in 1896 amounted to $7,142,485 and that in the year 1908, the last year for which I have the returns, they amounted to $11,771,955. In the case of the Canadian Pacific railway, the operating expenses are more than four and a quarter times what they were in 1896, while in the case of the Grand Trunk railway, they have almost doubled. Do hon. gentlemen on the other side of the House charge that these corporations are badly managed? I suppose my hon. friend will tell me that these corporations have extended their business. I say that the same thing applies to the government. The development of the country has increased. If the operating expenses of these large well managed corporations have increased so greatly, is it not natural that the expenditure of the Dominion of Canada should also increase? But, Mr. Speaker, the best reply I find to the charge of a large increase in the expenditure is contained in the words of the hon. member for North Toronto when he said:

> Don't their clothes cost them more than they did under the old regime? Don't they have to pay more for their lumber for every shack and every house they build? Is not their hardware more costly to them than it ever was before? And when they come to the labour which has to help them to till their fields, when have they had to pay so much for it as they do at the present time?

That is the very reason that the expenditure of this Dominion has increased as compared with 1896. The same thing applies in every other business and in every avenue of life. My hon. friend from North Toronto has gone to a great deal of bother in figuring up the percentage of increase in the different departments of government but, Sir, I would ask you, what does the average man care how much the operating expenses of his business have increased so long as at the end of the year he finds that his surplus has increased? What does the average man care so long as he knows that in the bank to-day there is $3 as against $1 in 1896? What do the people of Canada care what the increase in the expenditure is so long as they know that the trade of the Dominion has increased three-fold as compared to what it was in 1896? For a moment allow me to examine some of the statements giving the percentage of increase in the expenditure. What do I find? First, in the administration of justice there has been an increase of almost sixty per cent. Is not that a natural increase? The population of this country has increased almost fifty per cent. The Yukon territory has been added to the administration of justice, and I think there is nothing extraordinary about that increase. The expenditure of the Department of Agriculture has increased about 600 per cent, and surely my hon. friend from North Toronto will not find fault with the Minister of Agriculture because he has given aid to the farmers of this country to such a large extent. I think my hon. friend should add to his list the percentage of the surpluses that have accrued during the last fourteen years in order to make it complete. My hon. friend asked the question: What have the people to-day to show for an expenditure of $922,000,000? In reply to him I say, first, the affairs of this country have been carried on in a businesslike manner, and secondly, we have constructed large public works, we have granted aid to railways that have opened up and developed the country, we have improved our waterways and, best of all, we have a united, contented and prosperous people. My hon. friend thinks that the expenditure should have been curtailed in face of the depression that occurred in 1908. I would ask my hon. friend if he were in his seat to-night if he expected the Minister of Finance to cut off all the public works that were then under construction? A greater calamity could not have fallen upon this country than the stopping of these works. I believe that the hand of Providence was guiding our Prime Minister when he recommended the building of the Grand Trunk Pacific, because if there was one thing which helped to save Canada from the depression that swept over the United States in 1908-9, it was the building of that railway.

My hon. friend from North Toronto (Mr. Foster) asked the question, in referring to the lands of the Northwest, whether it was possible that lands which five years ago, were unfit for cultivation, had suddenly blossomed into fertility. I say no, they have not, but the conditions have, under a wise and capable administration, so changed that our lands have greatly increased in value.

Coming to the speech of my hon. friend from East Grey (Mr. Sproule), one would infer that our farmers have been badly used by the Minister of Agriculture, but what do we find? In 1896, the farm product of this country amounted to about $125,000,000, whereas in 1909 they amounted to $563,000,000. That certainly does not look too bad for the farmers. For the ten years prior to 1896, our total exports of bacon and ham amounted to $17,671,000 as against $115,000,000 for the ten years ending the 30th June, 1906. During the twelve years prior to 1896 our total exports of cheese amounted to $127,611,428 as against

$247,790,232 for the twelve years ending the 30th June, 1908. For the twelve years prior to 1896, our exports of butter amounted to 57,247,699 pounds as against 259,655,811 pounds during the twelve years ending 1908. For the ten years prior to 1896, the total products of the farm exported including butter, cheese, bacon and hams, am unted to $146,558,000; and for the ten years after 1896, under the able administration of the Minister of Agriculture, these same products amounted to $369,404,000, or more than two and a half times the total under the ten years of Conservative rule. These are some of the results due to the policy and expenditures made by the Minister of Agriculture.

Just a word about the woollen tariff, the pet theme of the hon. member for East Grey (Mr. Sproule). One would imagine from his speech that our farmers were materially affected by the woollen tariff of the present administration. But what do we find? Let us see how much my hon. friend and his associates assisted the farmers during the eighteen years they were in power and how their woollen tariff affected the farmers. I find that when the Conservative government came into power in 1878 our farmers were then receiving for their wool thirty cents per pound, and in 1881 they received twenty-five cents per pound. I hope my hon. friend from Lanark will listen to these figures. In 1884, wool took another drop, and for three years the farmers received an average of twenty-two cents per pound. In 1887, it took a further drop down to twenty cents, and in 1891, it went to eighteen and a half cents. Yet the gentlemen, whose party was then in power, congratulate the farmers for having received so much for their wool and for having benefited so much by the Conservative policy. During five years prior to 1896 under Conservative rule, the price paid was eighteen and a half cents; but for the last five years under the administration of this government, notwithstanding the claim that the preferential tariff worked so badly for the farmers, they received an average of twenty-four and a half cents per pound for their wool as compared with eighteen and a half cents. And the only reason why our farmers are going out of the wool-growing business is because there are more profitable things for them to go into. My hon. friend from East Grey (Mr. Sproule) criticised this government because our farmers are not exporting so much wool to-day as they did in 1896. Well, the government have no control over the exportation of wool, and the market is open to-day just as it was in 1896. But the hon. member for East Grey (Mr. Sproule) is liable to charge this government with anything. I heard him last session hold it responsible for the destruction of the business of a couple of mills which were burnt down some twenty or thirty years ago. Therefore I am not surprised that he should refer to the farmers' business as being destroyed by the government of the day. When I spoke last year on the wool tariff I referred to a woollen enterprise in which I am engaged in Renfrew. I am glad to tell my hon. friend that our year's business has just been made up and we find we have had another prosperous year under the tariff of the present administration. My hon. friend from North Lanark (Mr. Thoburn) will tell the House how the tariff works so much against the woollen men, but notwithstanding the tariff has been so damaging to the wool business, it is reported that out of that same business my hon. friend has made the large fortune of $250,000 and he is still a young man, and I have no doubt that before he leaves this world his fortune will be doubled, and I only hope it will. I myself am engaged in the woollen industry and I am particularly pleased with the tariff. But there is another industry in the town of Renfrew in which I am interested and in which the capital invested amounts to some fifty or sixty thousand dollars. If the Finance Minister, when he revises his tariff, will include the articles manufactured in that factory in his revision and give them the same protection as the woollen men receive, I shall be perfectly satisfied. I am not finding any fault with the tariff, but there are some fifteen or twenty factories manufacturing these articles in Canada, and the time has arrived when they should be protected to some extent, because the articles I refer to are on the free list.

And now in conclusion let me say that I hope the Prime Minister, as president, and the Finance Minister, as vice-president, of the great national company, may be long spared to guide the destinies of the people of Canada.

Mr. J. A. SEXSMITH (East Peterborough). I have listened with considerable interest to the speech on the budget and the lengthy debate which has followed. I was surprised to hear the hon. the Minister of Finance make the statement that there would be no tariff changes this year. There are many changes which should be made and made at the earliest possible date in the interests of our agricultural population. The hon. member for South Renfrew (Mr. Low) spoke quite fluently about the woollen industry. When the hon. member for East Grey (Mr. Sproule) talked about that industry a short time ago, judging by the expression of some of the members of the opposite side of the House, it was to them an industry to be laughed at rather than discussed. I am perfectly satisfied that the hon. member for South Renfrew has never taken the trouble to study the magnitude of that industry or what it has done for

other nations. Before I sit down, I hope to draw the attention of that hon. gentleman and of the House to what that industry has done and is doing for the great countries of the British empire and of America. Speaking on the subject of agriculture, I feel, as one inexperienced in making speeches and in view of the magnitude of that industry, that I shall not be able to do it justice. However, I am a farmer myself, and if there is anything in the world I am proud of it is of that fact. Not that there are not other high callings in life, but to my mind there is no higher calling than that of tilling the soil and producing food for the nation. According to the statistics of the government, the farmers of Canada last year, in one branch of their industry alone, added to the wealth of the nation, $432,992,100, this being the value of the field crops. I contend, I think, rightly so, that every dollar produced from the soil is a dollar added to the wealth of the country, for no part of it is taken from the natural resources of the country, but, if a proper system of cultivation be used, that production can go on and on through all time. In addition to the amount I have already stated, we may count $200,000,000 or $300,000,000 to represent the other products of the farm, bringing the sum total of the wealth produced by the farmers of Canada last year close to the billion dollar mark. Yet in the face of this, we find one of the ministers of this government, if he is correctly reported, a short time ago practically asking the people by their votes to discriminate against the farmers as representatives in this House, declaring against a candidate on the ground that he was not a trained advocate and therefore not able to represent his constituents. I think we have a right to hold the government responsible for these statements. It seems to me the reason they do not want farmers here is because the farmers, through long practice of economy in making a living, on coming here will be, as I was myself, astonished at the extravagant expenditure of the government along many lines and will go back and tell their fellow-farmers, so that it would not be well for the government. I cannot think of any other reason.

As to the woollen industry, concerning which my hon. friend (Mr. Low) has spoken so elaborately, I think that if that hon. gentleman had studied what this industry has done for other countries and how it has been fostered by other countries, he would have come to the conclusion that it is well worth while to do something for that industry in Canada. The Minister of Finance (Mr. Fielding) in his budget speech the other day told us that the government had paid $13,009,000 in subsidies to the steel and iron industry in nine years. That industry is not what you would call a natural industry of the country; yet we have fostered it and spent upon it millions of the hard-earned money taken from the pockets of the people of this country, while the woollen industry, which has done more for the nations of the world than any other, and which is a natural industry, and which did not cost this country one dollar, has been practically throttled and put out of business.

There are three great essentials in the foundation of a nation, especially in a country with a climate like ours—food, fuel and clothing. I am glad to be able to say that we are in a position to supply food for ourselves, and I hope that in a short time we shall be able to supply food for the whole British empire. As to fuel, we have it in abundance; we have deposits of coal that are practically inexhaustible. There is no reason why we should not provide clothing for the people, but that industry does not seem to be regarded by hon. members opposite as worthy of consideration. In 1899, there were 270 woollen mills in Canada; in 1908 these had decreased to 197. Now, I will ask the members of the government: Can we, having the remedy in our own hands, allow this condition of affairs to continue? According to the United States census of 1905, the capital employed in the textile industry in that country was $1,343,324,605, and the value of the goods produced per annum is $1,215,036,190. The woollen industry, which is one of the textile industries, employed $477,000,000 and the annual value of its product was $517,000,000. Now, these are figures that, in my opinion, are well worth looking into. When we look over the great manufacturing industries of the United States, we find that the production and manufacture of food employ more capital than does the textile industry. We find that the iron and steel industry employs more capital than does the woollen industry. But if you take into account the labour employed in the manufacture of textiles into clothes in the United States, you will find that that industry gives more employment to labour in that country than do the iron and steel industry and the food industry combined. I contend that the value of a great industry to a country is to be judged by the number of people to whom it gives employment. Taking that into consideration, surely every hon. member of this House will admit that the woollen industry far exceeds every other.

Now let us look at Great Britain. The textile industry in Great Britain represents a capital of $1,250,000,000. It is the greatest export industry in that country, and it employs directly and indirectly about 5,000,000 people. I would like hon. gentlemen to pay strict attention to these facts. The textile industry in Great Britain employs about one-tenth of the entire

population, according to the statistics of last year. One-half of the total exports of Great Britain are textile goods. They consume 657,000,000 pounds of wool, of which 100,000,000 pounds are home grown. Now we have been told that we cannot produce wool in Canada, but that we must turn our attention to something else. We find, however, that in England they are able to raise sheep on their high priced land, and to produce wool to such an extent that they have 100,000,000 pounds to consume at home, and exported besides 31,000,000 pounds.

Mr. LOW. Would the hon. gentleman like this country to adopt the woollen tariff of Great Britain?

Mr. SEXSMITH. I will deal with that point later on. I think I can show that it might be better to adopt a protective system all through. The woollen industry in England has grown up behind the most severe tariff walls that we ever read of.

Mr. LOW. Is that tariff in existence to-day?

Mr. SEXSMITH. It was in existence until the industry reached a position where it could compete with the whole world. There were produced last year in England 131,000,000 pounds of wool. I draw attention to these facts to show the great importance of the woollen industry. In France, the textile industry employs 2,008,000 people, and has an output worth 235,000,000 francs. Germany employs more people in the textile industry than in any other industry, and produces woollen goods to the value of 266,233,000 marks. It is the same with some of the smaller nations like Belgium, Holland and Switzerland. Now if the hon. gentleman will listen, I will tell him how this industry was fostered, and he will conclude that it was not by accident that it attained its present enormous proportions. I want to show the means adopted by some of the great nations to build up this industry. We will have to go back some distance in history. In the 12th century we find that under King Henry II wool was the greatest export of England. One writer says that all the nations of the world were clothed with English wool, made into cloth in Flanders. To become as rich as a Count of Flanders was to become very wealthy indeed. It was King Edward III who really created the woollen industry in England, for he sent into Flanders to introduce into England those Flemish wool workers who, at that time, were experts in the manufacture of cloth. Up to that time England hardly knew anything about the manufacture of cloth, nor she exported all her wool. King Edward III introduced these wool workers, who came and settled in England, and through them the manufacturing industry was brought to the very highest point. As soon as the King found he was in a position to manufacture the wool of Great Britain in his own country, what did he do? Sir, he imposed the death penalty on any man who exported wool out of England. Now is not that absolute protection? I would invite the hon. gentleman to delve into history a little, to go into the library and look up the history of this industry in England from the 14th century down to 1774, at which time the woollen industry had grown to such an extent that England was able to supply the world with woollen clothes. In 1774 an Act was passed to protect the machinery that had been invented for the manufacture of cloth. It forbade any one to export such machinery to any foreign country under a penalty of £200. In 1781 that Act was amended. I took the trouble to go into the library and dig up the data, and I would advise the hon. gentleman to look it up for himself, and he will find it very interesting reading. As I say, in 1781 that Act was amended, and the penalty for exporting machinery was one year in prison with fine of £200. If any one on board a British vessel was found exporting any machinery or any utensils used in the manufacture of wool or other textiles, he was subject to a fine of £200 and a year's imprisonment. If a captain of a British ship was found guilty of this, he was disqualified for life from acting as captain. That Act, with a few amendments, continued in force until 1842, at the time the Cobden policy was adopted, or down to the reign of Queen Victoria. Now will any hon. member in this House dispute the fact that that industry was fostered in England and brought to that great pitch of prosperity by the most rigorous protection? Why, Sir, it was fostered by the most active protection ever placed on the statute-book of any country, and it attained a position in which it could defy all the nations of the world. The English manufacturers could manufacture cheaper than any one else, they were supplying the world with the finished product, and it made them wealthy, and they became millionaires. That industry did as much to enrich the British empire as any other, and even more than any other industry.

Now let us look at the history of the growth and development of this industry in the United States. In the United States, in 1812, they found themselves at war with Great Britain; and after the war had been going on for a short time they discovered that they were dependent for their clothing on the very people they were at war with. The United States government found it necessary to do something to place the nation on a solid foundation with regard to

its textile industries. Some attempt was made there and in two years the woollen industry had doubled, but immediately after the declaration of peace with Great Britain we find that the superior position of Great Britain in the manufacturing of goods put the United States home-made form of manufacture out of business, and in 1816, four years after the war, England was supplying the United States with $70,000,000 worth of manufactured cloth. That condition practically prevailed from 1816 until 1865, and then congress took a hand and the patriotic spirit seems to have prevailed; they concluded that that industry should be put on a national basis and become a part of their national policy. In 1859 we see that the protective policy was brought into force. It is said in Canada that if the farmers had a protection on wool it would not make any difference because they would not raise sheep. But in 1859 a similar condition prevailed in the United States, and perhaps the opponent of the Bill in the congress there might have brought forward the same argument. But, Sir, let us look at the facts. In 1859 the wool clip of the United States amounted to 60,044,000 pounds, and in 1862, three years later, to 106,000,000 pounds. Now the average wool clip of the United States is over 300,000,000 pounds, and they use some 500,000,000 pounds in the woollen mills of the United States. We have different classes of wool manufactures in this country. The policy of the government in the past in connection with the woollen industry has not been logical, they began at the tail end. Instead of beginning, as the United States did, by protecting the raw material, the government of Canada started to protect the manufactured article first. Their action was like commencing to build a house at the top story. The manufacture of worsteds in the United States was founded on Canadian wool. In 1854, under the reciprocity tariff with Canada, the United States founded that industry. The worsted men petitioned congress at that time. In their petition they said that the worsted industry had been built upon the wools of Canada and if these wools were prohibited it would practically destroy their trade. I wish to read an extract and partial summary of their petition and its results:

Canadian Wool founded the United States Worsted Industry.

The manufacture of worsteds, which is just beginning to have an important development in this country, owes its existence to the reciprocity treaty, which admitted, free of duty, the wools of Canada. The farmers of Upper Canada, of English and Scotch descent, naturally prejudiced in favour of the sheep husbandry which prevails at home—as England is still called in the colonies—and having a taste for English mutton, imported sheep of the Leicester, Cotswold and Down races, which have thriven admirably on the naturally rich limestone soils of Upper Canada. The present production of wool from these sheep in Canada is about six million pounds. The Canadians have no fine-wooled sheep (meaning merinos). Protected by a tariff, they consume about two million pounds of their own wool in the manufacture of coarse cloths, including tweeds, which have been imported largely into the United States, notwithstanding the duty on cloths; and we use the balance of three to five millions. They added that the introduction of the finer lines of worsted goods and the unexampled development of this branch of textiles was due to the command of Canada wools, which were 'fully equal to the English combing wools,' but there was not enough of such wools grown in the United States to keep one of the worsted mills running. They were fair enough to admit that if these combing wools were to be grown in the United States the worsted manufacturers would fall into line with the national policy, provided their industry could be protected sufficiently to hold the trade during the period of transition. Their views were met by congress, with what results will be seen in figures elsewhere quoted.

It is interesting to observe from this extract that as far back as 1854, Canada had become an exporter of cloth. Had that industry been properly fostered since that time we would to-day have an industry that would give more employment than any combination of two or three industries that we have in Canada. It seems to me that with the facts before us of what this great industry has done in other countries, it is time that the people and the government of Canada should take a hand and see if something cannot be done to stimulate and build up that trade and let it go on as a national industry in the future. There is no reason why it should not go hand in hand with the great agricultural industry of Canada.

The first worsted industry in Canada was started in Hespeler in 1872. They received no assistance from the government and moved to the United States where they have made a fortune for their stockholders, and to-day that is one of the greatest industries in the United States.

I think I have said enough to convince the hon. members of the government, as well as the hon. members of the House, that this industry has not received fair treatment at the hands of the government. It is time the government took the matter up and tackled it in earnest and continue at it until they have made it a success. We were told by the hon. member for East Grey (Mr. Sproule) the other night that the state of Montana produced 45,000,000 pounds of wool last year, while Alberta produced only 400,000 pounds. The woollen industry is among the greatest industries of civilized nations and were it adequately protected along the whole line from the

production of the wool to the finished product it would mean many million dollars more for the farmers and labourers of Canada. As has been pointed out the balance of trade against us with the United States is something to be deplored. I have here a statement of our exports to the United States and our imports from the United States, and in that table I have been careful to include only purely agricultural products which are of interest to the farmers of Canada and of which we produce an abundance in this Dominion. The first table shows as follows:

IMPORTS FROM UNITED STATES TO CANADA, 1909.

Total breadstuffs (under duty).. ..	$11,425,804
" (free)..	3,795,734
Total..	$15,221,538
Green apples..	224,896
Total provisions (lard, butter, cheese, &c.)..	3,791,939
Animals (not including animals for export)..	960,584
Hay..	126,738
Vegetables..	795,791
Grain products (bran, flour, &c.)..	424,639
Total agricultural products..	$21,546,125

Now, the market gardeners of the United States have a market of 80,000,000 people in their own country and the market gardeners of Canada have a population of we will say between 7,000,000 and 8,000,000 people to supply, but the market gardeners of the United States are protected and the market gardeners of Canada are not equally protected and the market gardeners of the United States have been able to send to Canada vegetables to the value of $795,791. Now I have here a table showing the Canadian exports to the United States, and I have taken similar articles to those mentioned in the former table of the United States exports to Canada:

CANADA IMPORTS TO UNITED STATES.

Animals living..	$ 1,796,992
Total breadstuffs..	2,592,969
Fruits..	380,870
Hay..	35,008
Provisions (butter, cheese, eggs, bacon and ham)..	382,118
Vegetables..	507,119
Total..	$ 5,695,076
Total trade, exports and imports.	$285,265,717
Imports..	$192,661,360
Exports..	92,604,357
Difference in favour of United States..	$100,057,003

It will be seen, therefore, that the Canadian farmers and market gardeners have been able to sell to the 80,000,000 population of the United States only $5,695,000 worth of these natural products, while the American farmer and market gardeners have been able to sell to the 7,000,000 or 8,000,000 Canadians $21,546,000 worth. Thus, the farmers of Canada are to this extent forced out of their own market and obliged to pay the freight for the transportation of their products to other markets of the world. That is the kind of treatment the farmers of Canada are receiving from this government all along the line. I remember from my boyhood days hearing the Liberals when in opposition talking about capturing the markets of the United States for the Canadian farmers and having reciprocity. The Liberals are in power; have we reciprocity to-day?

Mr. EDWARDS. They forgot all about it.

Mr. SEXSMITH. Yes, they forgot all about it and the balance of the trade between us and the United States is to-day $98,000,000 worth in their favour, deducting the imports of bullion. I contend that the United States last year took that amount of money out of the pockets of the people of Canada and carried it away to their country. I do not believe there is a minister in the cabinet to-day who would conduct business privately with a man who always wanted an advantage of from ten to twenty per cent, and yet, that is the system under which the people of Canada are forced to do their business with the United States. I wish it to be distinctly understood that I am not a high protectionist, but I am an adequate protectionist. I believe in fair trade, and if the United States put up barriers against us I believe we should do likewise. Let us see how the duties on Canadian products going to the United States compares with the duty on United States products coming into Canada. The following statement will show.

	Canadian duty.	United States duty.
Hay, per ton.. ..	$2 00	$4 00
Butter, a lb..	0 04	0 06
Cheese, a lb..	0 03	0 06
Bacon and hams, a lb..	0 02	0 05
Eggs, per doz.. ..	0 03	0 05
Barley, per bush..	0 15	0 24
Potatoes, per bush.	0 20	0 25
Oats, per bush. ..	0 10	0 15
Pease, per bush. ..	0 15	0 40
Beans, per bush. ..	0 25	0 45
Wheat, per bush. .	0 12	0 25

Any fair minded member of this House will admit that there is nothing fair about that for the farmers of Canada. I do not think that the government have at all taken into consideration the interest of the producer. Had we similar tariff to that which they have in the United States on these articles they would not cost the people of this country one dollar more. There is another thing in connection with the woollen business that I was grieved about last year. I noticed that the Minis-

ter of Agriculture said something about our farmers raising sheep, and his remarks upon that occasion showed that he has not a very high opinion of them. He stated in the House last year that the farmers of the Dominion are a slip-shod set of people and that they lacked industry and enterprise. That will be found in 'Hansard' of March 31, last year. That seems to be a remarkable statement for the Minister of Agriculture to make about the farmers of this country.

In conclusion I would advise the government to take a little more interest in the farmer and spend a little more money upon them. This brings a thought to my mind. Technical education which was under discussion a little while ago, was shelved as far as this parliament is concerned, perhaps for twenty years. It is a very important question. There is no reason why the Dominion government should not have a technical school at least at every experimental farm and at any other points in the Dominion where they would deem it necessary. I had no intention at all of making any remarks on the budget but I was compelled to do so because of the indifferent way the agriculturists and labourers of this country have been treated and because of some of the remarks which have been made recently in regard to this matter. I would ask the government at the first opportunity to see if something cannot be done to protect the markets of the farmers and the market gardeners of Canada

Mr. M. CLARK moved the adjournment of the debate.

Motion agreed to and debate adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. HUGHES. What business will be taken up to-morrow?

Mr. FIELDING. We will continue the debate to-morrow.

Motion agreed to, and House adjourned at 11 p.m.

HOUSE OF COMMONS.

FRIDAY, January 14, 1910.

The SPEAKER took the Chair at Three o'clock.

MEMBER INTRODUCED.

John D. Sperry, Esquire, member for the electoral division of Lunenburg; introduced by Right Hon. Sir Wilfrid Laurier and Hon. W. S. Fielding.

FIRST READINGS.

Bill (No. 96) respecting the Canadian Pacific Railway Company.—Mr. German.

Bill (No. 97) respecting the Pacific and Atlantic Railway Company.—Mr. Tolmie.

Bill (No. 98) respecting the Trust and Loan Company of Canada.—Mr. Doherty.

Bill (No. 99) respecting the Vancouver, Victoria and Eastern Railway and Navigation Company.—Mr. Burrell.

FORM OF ADMINISTERING OATHS.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 100) respecting oaths. He said: For a considerable number of years there has been a feeling throughout the mother land, as evidenced by newspaper editorials I now have one before me the Stratford 'Beacon,' November, 1909, as well as in Canada, that the mode of administering oaths by kissing the book is insanitary—unsanitary. I do not mean to treat the matter lightly, I used the word 'insanitary' because that is the way in which it is described in some of the papers which are discussing it. There have been frequent efforts made in the imperial government to change that mode. I may say that I have a precedent for the Bill I now propose. On the 31st of December last a Bill was passed in the British parliament almost identically to the same effect as the Bill I now propose. This Bill reads as follows:

Section 1. This Bill may be cited as the Oath Act, 1910.

Section 2. (1) Any oath may be administered and taken in the form and manner following: The person taking the oath shall hold the New Testament in his uplifted hand (or, in the case of a Jew, the Old Testament), and shall say, or repeat, after the officer administering the oath, the words, 'I swear by Almighty God that (followed by the words of the oath prescribed by law).

(2) The officer shall (unless the person about to take the oath voluntarily objects thereto, or is physically incapable of so taking the oath) administer the oath in the form and manner aforesaid without question, provided that in the case of a person who is not a Christian, the oath shall be administered in any manner which is now lawful.

The words 'in any manner which is now lawful' are different from the words of the English Statutes passed on the 31st of last December. The words in the English statute are 'as nearly as may be in the form and manner aforesaid, but with such modifications of the words or ceremony as may make the same conformable to the religious

faith or binding on the conscience of such person.' I thought it was proper that the words should be added 'in any manner which is now lawful,' in order to simplify matters when a person is not a Christian.

Section 3. In this Act the word 'officer' is defined as including any person duly authorized to administer oaths.

Section 4. This Act shall come into operation one year from the passing thereof.

The following is another change from the English Act.

Provided, however, that after such last mentioned date the fact that the deponent kissed the Testament and took the oath as the same is now administered, will still render the person so taking the oath liable for perjury if such person swears falsely and wilfully.

Now there are a number of reasons besides the sanitary reason, why this change should be made in the mode of taking the oath. Persons of weak moral sense often think that by closing their lips when taking the oath they are evading the requirement of their conscience. There is no rule, so far as I can find, requiring the kissing of the book. I find in the Encyclopædia of the laws of England, page, 249:

The practice of supporting a promise by an oath is probably as old as the existence of belief in a God, and it appears to have been utilized from the very earliest times to ratify and ensure the fulfilment of any special contract or undertaking.

In the same book, on page 250, I find this:

It does not seem possible to fix the date of the first introduction of the objectionable practice of 'kissing the book' in swearing, for there is no trace of any direct authority for it in any Act of parliament, or rule, or book of pactice.

Until a few days ago, when the fact was called to my attention. I thought that the health objection could be overcome by opening the Testament and placing one's hand on it. But I think more importance and solemnity may be secured by the deponent holding up the book in his right or his left hand, as the case may be, and taking the oath. Now, Sir, I ask the consideration of the First Minister and of the Minister of Justice to this Bill. A few days ago I suggested that Bills of this nature should be left to a committee to investigate; and I now urge on the government that the Committee on Privileges and Elections, which has very little to do, and which is composed of gentlemen learned in the law, should have added to their duties the consideration of Bills regarding legal matters.

Motion agreed to, and Bill read the first time.

Mr. LEWIS.

WRECK OF THE 'HESTIA.'

Mr. DANIEL. Before the orders of the day are called, I would like to ask the Prime Minister, who, I presume, represents the Minister of Marine and Fisheries (Mr. Brodeur) for the time being, when the papers will be brought down that were ordered by the House on the 22nd of November, referring to the cause of the wreck of the 'Hestia.' The Minister of Marine and Fisheries promised them before recess, but they are not down yet.

Sir WILFRID LAURIER. I will inquire into the matter.

REGULATIONS CONCERNING INTERNATIONAL FISHERIES.

Mr. HENDERSON. I would like to ask the right hon. gentleman, in the absence of the Minister of Marine and Fisheries, if he can inform the House when the report of the two commissioners appointed to make new regulations regarding international fisheries, is likely to be laid on the table of the House. I may state the reason of my question. In the county I represent there are important herring fisheries, and the officer of the Ontario government who is in charge, has absolutely refused to grant licenses unless on terms of those heretofore passed, without waiting until the new regulations come down. It is most unfortunate for those men. They are thrown out of employment during the best part of the fishing season. I will be glad to know when the new regulations will be laid before the House.

Sir WILFRID LAURIER. On Monday I will be able to inform the hon. gentleman.

WAYS AND MEANS—THE BUDGET.

Houe resumed adiourned debate on the proposed motion of Mr. Fielding. 'That Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the Ways and Means for raising the Supply to be granted to His Majesty.'

Mr. M. CLARK (Red Deer). Mr. Speaker, you, Sir, and this House extended to me a very large measure of indulgence on the occasion of the last budget debate when I occupied perhaps more of the time of the House than was becoming in a new member. I shall endeavour to show my appreciation of that indulgence by compressing what I have to say on this occasion into the briefest possible compass. I think there are two distinct grounds on which I should like to congratulate my hon. friend the Minister of Finance (Mr. Fielding) upon the statement that he made to the House. I should like to congratulate him,

as so many hon. members have done, upon the excellent financial position that his surplus showed this country to be in at the present time. That statement, following upon many others, showed that we are steadily building up a great people in a great land with a great future and a great destiny, not by booms, not by fits and starts, but by slow, steady, sure and certain progress. My hon. friend from North Toronto (Mr. Foster) was not very generous in the congratulations which he offered to the Minister of Finance on this question. He elaborated to the House the point that that state of affairs was not to be attributed to anything like genius on the part of the Minister of Finance. Well, the reflection which occurs to the uninitiated upon such a remark is that it must in that case have required a very ordinary type of intellect to produce a series of deficits. I cannot help thinking that the country will take a more generous view of the ability of the Minister of Finance. But, I desire to congratulate the minister further on the fact that he was able to introduce this budget while making no increase in the tariff. I think it is well to remember in this connection, as was pointed out by the hon. member for Hochelaga (Mr. Rivet) yesterday in an exceedingly able and thoughtful speech, that Canada has never gone to the extremes that other nations have upon this tariff question. She has never, in what is becoming a very considerable history, gone to the extreme that the old country did before the days of free trade. She has never gone to the extreme that Germany, or the United States, have done in recent years. I think that a young country like Canada can congratulate herself upon the fact that she has been able at least to map out a course of her own and keep to that course. This is all the more a matter for congratulation when we look at the condition of the extremely protectionist nations of the world to-day and the trend of opinion which, I claim, is showing itself in no unmistakable way in these nations. The extreme protectionists of the world never find support for their theory by reference to Russia. Russia is the most highly protected country of Europe. They never find support for their theory by referring to Italy. Italy is another of the most highly protected countries of Europe. It would be far from the line of my political creed to say anything offensive to any other country of the world, but I am sure that those who know the facts of the case will not claim for Russia or Italy that they are bright and shining examples of economic prosperity or national progress. Protectionists mostly base their case upon Germany or the United States. Now, I have said that there is evidence that the system of high protection is breaking down in these two countries. Only the other week the second vice-president of the German Reichstag, addressing the Chamber of Commerce in London, a purely non-political body, a body of the acutest business men in the world, expressed the belief that the system of high protection of which Germany, France and the United States were examples, would become insupportable. Whatever might be the future development of the economic policy of Europe, he was convinced that the period of high protection was approaching its end. The other day there appeared a telegram from the city of Toledo, in the State of Ohio, embodying the information that Mr. O. J. C. Barber, a multi-millionaire and founder of the Diamond Match Company, predicted that:

> The people of the United States cannot long stand the increased cost of living without a revolt, and that unless something is done for their benefit a serious clash between capital and labour might be anticipated. The railways are extorting from the people, the trusts are extorting from the people, the politicians are hoodwinking the people.

Now, Sir, I say, in the presence of opinions like these from Germany and from the United States, it is a matter for congratulation that we have had a ministry in Canada for the last thirteen years which has not gone to the extreme which these nations have gone to.

I regret, because it is a matter of regret when one differs from one's friends, that I was not fully convinced by the argument which the Minister of Finance thought it wise to offer to the House in support of bounties. The minister drew an analogy between bounties on iron and steel and railway subsidies. I was not convinced about the clearness of the analogy. I think it breaks down in three distinct ways. In the first place, in giving bounties on iron and steel, we give bounties on articles that we can get from abroad. We are not compelled to make them in this country. I am not now discussing the question of whether it is wiser to get them from abroad or whether it is wiser to make them at home. I am merely stating the obvious fact that steel rails can be imported. That does not apply to railways. They are not ready-made; at least, I never heard of a business of that kind. In regard to steel rails, the fact is that we must have steel rails, but we must not, from the necessities of the case, make them, while in the case of railways we must have them and we must make them. I think that on that point, in the first place, the analogy of the minister breaks down. Then, I think, in the second place, there is a difference between the two in this respect, that when you make a railway by means of subsidies you establish a general policy applicable to the whole nation. When you subsidize the building of railways and apply that policy, you adopt

the policy clearly of the whole people for the benefit of the whole people. But, I was not convinced by anything the minister said that in giving bounties upon iron and steel you undertake a policy by the whole people for the benefit of the whole people. Why, Sir, to establish that position it would surely be necessary to give bounties upon everything we produce, and if we tried a policy like that we should have the iron people paying money out of their pockets as a bounty on the production of wheat and we should have the wheat people paying money out of their pockets to help the iron people to produce iron. We should have the Canadian people engaged in the not very beneficial process of trying to make themselves rich by taking the money out of one pocket and putting it into another.

Mr. HENDERSON. That is the government's policy.

Mr. M. CLARK. No, Sir, that is not the way bounties work. The fact of the matter is that the way the system works is that one portion of the country is helped at the expense of the rest of the country. I am reminded of a story. A Scotchman was suffering from a disease which had proved unamenable to all the ordinary remedies, and the suggestion was made that a perfectly new remedy should be tried on him in the shape of a tune on the bagpipes. The remedy was tried. The doctor going through the hospital the next morning met the nurse in charge and said: 'How is the patient on whom we tried that extraordinary remedy yesterday?' 'Oh,' she said, 'the Scotchman is wonderfully better, but the other patients are all dead.'

There is a third point at which the analogy of the Minister of Finance breaks down. So far as I have been able to inform myself, a bounty is invariably accompanied by a tariff upon the article receiving the bounty. In France they have been bountying for years, if not for generations, beet sugar, but the bounty there is accompanied by a duty on sugar and the effect of the tariff and the bounty together is that the Frenchman has been paying regularly more for his sugar than the people of wiser countries who follow the common sense plan of taking their sugar from those parts of the world where Providence evidently meant it to be made. How does that work out on these bounties on iron and steel? I remember very well that last session when my friend the Minister of Railways (Mr. Graham) was defending with his usual ability the increased expense of the Grand Trunk Pacific railway, he mentioned as one of the causes of that increase that more had to be paid for steel rails because the duty on steel rails had been increased. I do not think that any one would argue in this House that when you build an extra railway you decrease the amount of railway accommodation or make the railroad service worse for the people of the country; but you have this remarkable position in regard to the bounties on iron and steel accompanied by a tariff here, as they are always accompanied elsewhere, that while our country is calling and calling in the loudest tone for an extension of its railroad system—and you cannot build railroads without iron and steel—you have actually this fundamental material entering into the composition of railroads made dearer and more difficult to get. Thus while by your railroad system you are trying and trying successfully to bring people nearer to the realization of one of their great needs, better transportation in this country, by the bounty system on iron and steel you are putting difficulties in the way of the development of our railroad policy.

Speaking of the general aspect of this question, high authorities differ very largely in regard to the respective merits or demerits of a bounty as compared with a tariff. Gladstone once described bounties as the worst form of protection. I suppose he was looking at the question from the point of view of a Chancellor of the Exchequer and so viewed a bounty as bringing nothing into the treasury, as a clear handout of money to some interested section of the country or some interested portion of the commercial community. Bastiat, on the other hand, while he did not regard a bounty with any particular favour, described it in a phrase which is well translated into English by the words 'plunder by premium', but still he regarded it as not quite so bad as a tariff. His reason for this, however, was a somewhat whimsical one. His point of view I suppose was more that of a philosopher. He regarded a bounty as less harmful than a tariff simply because in his judgment the people were more likely to see through it sooner and remove it sooner. That is what happened to bounties in Great Britain, because I do not think they have paid any bounties worth speaking of since 1830, and it was sixteen years later before they established free trade by the practical abolition of tariffs.

I close my reference to this subject by expressing the hope that the time is not far distant when a nation exceptionally shrewd, exceptionally progressive, as it should be, seeing that we have come to our manhood in the fullness of the years of men, we come in the fullness of time to reap the advantage of the experience of all who have gone before us, that such a nation as Canada will not be long in finding out the folly of bounties. I would like to endorse what my hon. friend from South Grey (Mr. Miller) said when he ex-

pressed the hope that by the end of 1910 or the beginning of 1911 these bounties would disappear. Such curious views are held on this side of the Atlantic on the matter of building up industries. We have heard a great deal about wool during this budget debate. My hon. friend from East Grey (Mr. Sproule) introduced the woollen subject and if wool has not been pulled over our eyes it certainly has been pulled all over this House since. I am not very much concerned to go into the woollen industry at large, but my hon. friend from East Grey referred to the fact that there had been a decline in the number of sheep kept in the province from which I come, Alberta. I wonder it did not occur to my hon. friend to reflect that after all, if we have fewer sheep there we have more men, and that if those men are not engaged in raising sheep, they are probably engaged in some employment which they find easier for the moment and more profitable. If that be the case, I cannot see that Alberta has lost by the reduction of the tariff upon wool. I cannot see why the people of Alberta should not be employed in the kind of industry which they find most suitable and most profitable. There are reasons apart altogether from the tariff why sheep are not kept in Alberta. The fencing for sheep is difficult and the raising of horses and cattle is an easier line to get into. I speak from close experience in this matter. If the people of Alberta find that they are expanding their own fortunes and developing the country at the same time more easily by growing horses and cattle and wheat, I cannot see why we should have this mournful wail about woollens associated with the decline of the sheep industry in Alberta. The fact is that men are a good thing to be going forward in anyhow. The position of the hon. member for East Grey could be summed up in a parody of the well known lines of Goldsmith:

> Ill fares the land, to hastening ills a prey,
> Where men accumulate and sheep decay.

I cannot think that this is a grief which will be very largely shared by sensible people like the Canadians.

On this question, Sir, of the building up of industries, I should like to remind hon. gentlemen of that of which they must be aware because the theory has been often advanced, that there is a definite natural order according to which the industries of a country grow as it passes from the earlier period of its history to that of advanced commercial civilization. Occasionally, good friends of mine on both sides of this House, taunt me in a perfectly friendly way with being a theorist. Well, that proposition is a theory but it is also a fact. It is the history of every country in Europe, and it is the history of the United States, and it is the history of Canada so far as that history has been developed: that apart from tariff and special encouragement of bounties to certain industries there is a natural order for the development of the industries of a nation. In the early period of this journey of a nation you have primitive and pastoral agriculture. That is not theory; it is a fact illustrated in the history of every nation in the civilized world. Along with that primitive and pastoral agriculture you have primitive manufacture, for every nation in its early stages manufactures, for instance, most of its rough household furniture and of its rough clothing. As you pass from this, what I may call initial stage, a nation rapidly develops an excess of agricultural produce, and the next stage in the development of its industries invariably comes because to get rid of that excess of agricultural produce the nation is compelled to develop a foreign commerce. In the intercourse of foreign commerce we compare our primitive manufactures and our primitive agriculture with the more advanced manufactures and agriculture of other nations, and there follows naturally a more advanced condition of agriculture and manufacture in the nation which is visiting these foreign lands to dispose of its excess products. That is an excellent theory, and good practice always agrees with sound theory. It is not a matter of theory only; it is a fact demonstrated by the history of all nations. There was a time not very long ago, easily remembered by the oldest people living, when the manufactures of the United States were nearly all in the east, but with the growth of population and with the intermingling of the people from the west to east, and east to west, the area of manufacturing increased, and to-day Chicago is as large a manufacturing centre as there is in the world. Apart from tariffs altogether we are now at a stage where we should have our manufactures arising in the east, and in that connection I should like to say a word on the policy known as the national policy. I do not want to say anything that may be considered of a party character, and I do not want to say anything offensive, but I do say that in my judgment the policy known as the national policy failed because it neglected to recognize this natural order of development; it placed the cart before the horse, it tried to build up advanced manufacture and it neglected the agriculture of the country. The success of the present government of Canada has been due to the fact that it has to some extent at any rate reversed that process. The present government has built up an agricultural country, settled the people upon the land, and out of prosperous agriculture naturally grows manufacturing and commercial prosperity I was pleased to hear the recent

recruit to the ministry—a young man with a great deal of life, we all hope, in front of him I was pleased to hear the Minister of Labour say in emphatic tones: We must in Canada have a foreign commerce. And, if from my little humble experience and reading I were to give any advice, which I believe is useful to this country at this juncture in its history, or if I would further dare to give a little advice to the ministry, I would say that they should lose no opportunity that presents itself to promote the foreign commerce of Canada. Why, we cultivated last year in the three prairie provinces something like 10,000,000 acres, and it is estimated that there are 300,000,000 acres of splendid arable land in these same three provinces. We must in time have a huge surplus of agricultural products, and in the years that are before us, years of hope and promise to which we are eagerly looking forward, we can hardly realize to what vast extent agricultural produce must grow, and what an enormous surplus we must have. Are you going to let your wheat rot on the prairies; are you going to keep men like myself who may have a surplus of cattle to dispose of running a zoological garden in the wilderness with no market for our extra stock? Of course not; you are going to enable us to get rid of this surplus, and the only way you can do it is by the extension of Canada's foreign commerce. Holding these views, I voted with the very greatest satisfaction for the French treaty, and I heard with equal satisfaction the statement of the Minister of Finance that in the near future negotiations may be entered into with Italy and Belgium for more extended trade relations. I do not know either that I differ very much from the leader of the opposition as to the small effects that are likely to come from the French treaty as things are at present between the two countries; nevertheless, I hail all these as steps in the right direction, making for the peace of the world, making for the friendly intermingling of peoples along the lines of trade, which are the paths we must follow if ever the nations of the earth are to turn their swords into plough shares—and produces the other metamorphoses described in that text. I am not at all sure, Sir, that in this connection the commercial world will not attach greater importance to some simple words which fell from my right hon. friend the Prime Minister—not in this debate, but which have a distinct bearing upon this subject. I was exceedingly pleased to hear the right hon. gentleman use these words:

> I have no hesitation in saying that for my part I am not satisfied with our trade relations with Germany; they are not natural or what they should be.

In that statement, Sir, if I may say so without flattery, you have the instinct of the highest possible statesmanship, because coming at this time such language is calculated to do more for peaceful relationship with Germany than a dozen jingo orations about the greatness of the flag and our being ready to fight. From the commercial standpoint these words show a keen knowledge of the importance of the German market for Canadian goods, and I can only hope that this expression of opinion will lead my right hon. friend to bring under the early consideration of his cabinet and of the Minister of Finance especially, the policy known as the German surtax. I have thought about that subject, as I have thought for many years and read for many years about the general subject of retaliation of which the German surtax is an example, and the more I think of it the more I am inclined to believe that such legislation as the German surtax is unwise. It is very easy in such matters to appeal to the fighting instinct in man which is never very low down in any one of us, but what I want to know about the surtax as a Canadian business man is: Is it good for my country? Surely, Sir, whether I speak as a Canadian or a Britisher, I am not going to cut off my nose to spite my face. The surtax certainly was not calculated to extend Canadian trade with Germany, and I am bound to say that in the history of this subject I have not any where found evidence that retaliation does make for increased trade between peoples. Supposing the United States put a duty on some article of ours, we are compelled, in accordance with this fighting clause to put an equal duty on a similar article of theirs. Take an agricultural implement which costs $100—before the increase in duty, I as a farmer, am buying it for $100; but when you put a retaliatory duty on it, the effect is, according to the hon. gentleman's own doctrine, to increase the price by at least the amount of the duty, and I have to pay $120 for a $100 article. Upon whom then does this retaliation fall? Evidently on the Canadian farmer. Mr. Asquith quoted not very long ago Gladstone's way of putting the question, which cannot be easily beaten. Mr. Gladstone said: According to the old law of non-retaliation, when a man strikes you on the one cheek, you turn to him the other; but according to the new doctrine, when a man strikes you on the one cheek, you ought to strike yourself on the other.' Some one else has said very aptly that retaliation is a weapon with a blunt point and a sharp handle, and I think that is exactly how it works out economically. My hon. friends will tell me I am theorizing once more, but there are some practical facts resulting from the German surtax that have come to my mind. I was told by a Canadian the other day, who understands the business very thoroughly, that there is a kind of ladies' cloak

produced in Germany which is the best article in that line made in the world to-day. The result of the surtax was that Canadians ceased to buy those cloaks. Who benefits? Are the people engaged in making them paid any higher wages? No, they are working for the same wages. What then has been the effect on the consumer? My friend told me that the consumer had to pay a rather higher price for a slightly inferior article. But who does benefit? The one who benefits is the cloak manufacturer in Canada. The people employed do not get any higher wages and the one who loses is the Canadian consumer. The whole Canadian people suffer for the benefit of the producers of this article, and we are not hurting Germany but Canada. Let me hope that these few words on that subject will attract the attention of the Finance Minister and that he will give those talents, with which nature has so liberally endowed him, to a further examination of the German surtax before he makes another financial statement.

I have already spoken as long as I thought would be necessary and will refrain from taking up much more of the time of the House. In that speech of two hours and thirty-five minutes duration, which my hon. friend from North Toronto made, one would have thought that he would have paid some little attention to the economic aspects of the budget statement. But his speech consisted in the unfolding of a number of things, which certainly should be looked into in eastern Canada—some criticisms of the Department of Public Works. I shall not make the mistake that my hon. friend from Grey (Mr. Miller) did of endorsing some of these propositions and then saying that I do not know anything about them. In regard to what my hon. friend from North Toronto said about eastern affairs, inasmuch as his attention was taken up largely by the Department of Public Works, I think it would be wise for a western man to slightly alter the old proverb and set a New Brunswicker to catch a New Brunswicker. But my hon. friend also went to the west lately, and I am bound to say that if his eastern examples of maladministration and bad policy are no better than those he was able to gather in the west, I am afraid his case is an extremely thin one. There were two subjects to which he referred, and on which I should like to speak just a moment. He referred to what I thought would really be allowed to die a natural death as a cause of scandal, and that is the Saskatchewan Valley land deal. Now the statement which the opposition make at the outset is an inaccurate statement of fact. They say that $250,000 acres of land were sold for $1 an acre. That is not the case. The 250,000 acres were sold at $1 an acre with settlement conditions—a very different matter indeed. It would be just as accurate to say that when a homesteader comes into this country, he is sold 160 acres of land for $10; but having taken a homestead myself, I know that is not the case. I took it with settlement conditions, and after I had put the money into it, which I had to do under these conditions, it was an excellent bargain for Canada. These 250,000 acres were sold on settlement conditions. What is it we want in our western country? Is it not settlement? But the salient point is that the settlement conditions were carried out to the letter, and I am stating the facts when I say that you have in that district, in which that deal was carried through, one of the most successful portions of western Canada to-day.

The other matter in the west to which my hon. friend referred was the paralleling of railways. I was surprised to hear him make objection to the government policy on that score. Not long ago I had a conversation with an ex-judge of the Court of St. Louis who is now ranching some thousands of acres in my constituency—a man of long experience in the United States—and he said: You will never get any railway development until you lose the fear of paralleling railways. Where the trunk lines are parallel in a measure—although the distances between them at many points are greater than one would gather from the speech of the hon. member from North Toronto (Mr. Foster), —the two roads are in competition as to which will furnish the most branch lines and so supply people which the main trunks will not touch. I give that as my opinion, and the facts evidently indicate that in the west at any rate, we do not see anything of the complaints and we do not find the objections which my hon. friend did during his recent journey. If these were all the acts of maladministration or bad policy which the hon. member for North Toronto can find in a journey over the whole of the west, he could not have offered a more magnificent testimonial to my hon. friend the Minister of the Interior (Mr. Oliver) for the wise policy and administration which he is carrying out.

My hon. friend from North Toronto touched on the subject of prophecy; and I am glad to see that the advice I gave him last year has borne fruit, for he said that neither he nor any one man would be justified in prophesying concerning the British elections. I will not depart from my own advice of last year, but there is this comment to be made upon the state of things which ought to influence my hon. friend, that, on the other side, his protectionist allies have now given up the preference to the colonies

as the main portion of their programme. They are going for straight and pure protection, and their declaration on the preference ought to be a startling rebuke to those who object to the tariff policy of the Laurier administration. They are saying now over there that if they do give any colonial preference they will give it as a voluntary gift to the colonies exactly as this country of Canada gave a preference as a voluntary gift to the mother country.

I indicated dissent from my hon. friend in regard to the debt of Canada. I think it is well to keep one's eye on debt, whether as an individual, a statesman or a politician; but at the same time, I think there are good grounds for believing that in this matter Canada occupies an exceptionally sound position. When you reflect upon the fact that the New Zealand debt per head, as was pointed out by my hon. friend from Queens, Prince Edward Island, (Mr. Warburton) last year, is $345, and that of Canada $45, I do not think that we are in a condition that need cause us to worry, especially considering the admirable resources which are to be developed by the money for which that debt has been incurred.

Now, my hon. friend (Mr. Foster) returned to that old topic the balance of trade. I do not want to enter into that at length; but really it does seem to me unworthy of a gentleman of his standing in the economic world to recur to that subject. After correcting for the roundabout trade between Great Britain, Canada and the United States, he arrived at a figure—which I do not wish to question—of what he called a balance against us in our trade with the United States of $55,000,000. I do not know whether all the members of the House paid the same attention that I did to a calculation which was given a night or two before the adjournment by the hon. member for Regina (Mr. W. M. Martin) which went to show that by a careful calculation it could be arrived at that the wealth which had been brought to this country by the settlers who came in from the United States last year amounted to $59,000,000. The House must be struck with the correspondence between what my hon. friend (Mr. Foster) designates as an adverse balance of $55,000,000 and the $59,000,000 that came in as the capital of those who came from the United States to settle in Canada. As I understand this question, the capital of these immigrants from the United States comes into this country in the shape of goods, and is entered upon our list of imports. And this accounts for what my hon. friend is pleased to call an 'adverse balance of trade.' I can only say that it suggests to me a new reading of Shakespeare's line, 'Sweet are the uses of adversity.' For, after all, we are spending large sums of money in getting these immigrants to come and bring their capital with them. 'Adverse balance of trade!'—I wonder how any man can use that language in referring to an excess of imports over exports when all the world knows that for years and decades England has had a huge 'adverse balance of trade' even during the time she was building up the greatest commerce in the history of the world, the greatest that will be seen for many a day to come. But I know that Canadians like facts concerning Canada. Well, let me refer to a fact in the history of Canadian trade, which I referred to in the budget debate of last year. In the year 1895, after seventeen years of the National Policy, the total trade of Canada was less by some millions than it had been in 1883, twelve years before. I would like to point out this further fact, that in that year 1895, Canada had a correct balance of trade according to the protectionist theory. In that year, Canada was exporting more than she was importing. Will the hon. member who follows me—will any Conservative—rise in this debate and claim that Canada was more prosperous in 1895 than she is to-day? I do not notice any great alacrity to take up my challenge in that respect. The country would laugh at any such contention. I was not here, but I have read that at that time the population of Canada was stationary. I know, from the trade figures, that her trade had declined, as compared with twelve years before. Canada was doing her business on the back alley-ways of the earth as compared with to-day. And yet at that time she had what the hon. member would call a favourable balance of trade. I think hon. members in this House should not use again that phrase 'adverse balance of trade.' Why, we are prosperity itself this year as compared with what we were then, and this in spite of this adversity. Italy, to-day, is not one of the greatest commercial nations of Europe, but Italy has an excess of exports over imports. The best example that I know of a favourable balance of trade according to the protectionist theory is a bankrupt stock—it is all exports and no imports and the whole thing comes to an end at the end of six weeks.

I have only one point more to refer to, and then I shall endeavour to fulfil my promise of brevity. I was glad to hear the hon. member for North Toronto (Mr. Foster) say that the rising success of Canada was due to the farmers. Well, I am not so sure that that is not quite a new-found love on his part. I have examined, so far as I could, the record of what was done for the farmer before 1896, and I am bound to say that I have failed to find much in that record. I have referred to the fact just now that my hon. friend from North Toronto was in western Canada last year. In

the city of Edmonton, he gave exposition of the boons which had been conferred upon Canada by the National Policy. They were rather peculiar reading from my point of view. He said, amongst other things, that the National Policy built up the industries of Canada by putting up the tariff, and he said at the same time that the government had encouraged the shipping of Canada by giving subsidies for the building of ships. When I reflected upon these two heads of the policy, in the first place, I could not see much that was a benefit to the farmer. But, in the second place, I could see much that would lead to the failure of the policy. Because, for the life of me, I cannot see the common sense of subsidizing ships to carry out exports—and, presumably, bring in imports—while, at the same time, you build up a tariff wall to prevent the imports from coming in. I need information, doubtless, about the condition of Canada. I shall be glad if the hon. member who follows me will tell me, and will tell my constituents, who are largely an agricultural population, many of them new to this country and honestly seeking political truth, what was actually done for the farmer during the previous Conservative regime, or—what is equally to the point—what is going to be done by the hon. member for North Toronto and his friends if they are returned to office. An hon. friend asks what has been done for the farmer by this government. That is a point I had to study; I had to ask myself that question in all honesty. I am thankful to my hon. friend for the interruption. When I came to homestead land in western Canada I had to study that point, and I have learned in the school of experience how to answer my hon. friend's question. I found when I came to western Canada the first thing I needed was a bunch of milk cows, and some means of separating the cream from the milk. I had to get a separator, and when I bought the separator I found it had been put on the free list by the Laurier government. I will answer my hon. friend's question a little further. After I got my bunch of milk cows and began to separate the cream from the milk I had to get food for the cows in winter by tilling the soil. When I came to bind the crop in the harvest season I found binder twine on the free list, placed there by the Laurier government. Then I had to use fence wire to keep my cattle in the field, and I found that that wire was also on the free list, put there by the Laurier government. Then I had to buy some agricultural implements, and under the Bill of two sessions ago I found there was a reduction of duty in agricultural implements to the very moderate extent of two and a half per cent—it would have suited me better if it had been twelve and a half per cent—but even the two and a half per cent was secured against the determined opposition and resistance of Mr. Cockshutt and other members of the Conservative party.

Now, I will close by saying this, that I am glad to observe the tardy repentance of my hon. friend from North Toronto (Mr. Foster). I took him to be a sincere man, and he admits the claim the farmers make for themselves that they are doing a great deal for the prosperity of Canada. I hope that that thought will be present all the time with the members of any administration that rules the destinies of Canada for the next ten or fifteen years. Agriculture in this country is far more than in any other country the basic industry of all others, it is the true and solid foundation of the nation's prosperity. This truth was well expressed by the grandson of Confucius four hundred years before our era, who said: 'All the industries of a nation may be compared to a tree, of which agriculture is the bole or trunk, and the other industries are the branches.' Do not trouble yourselves about wool, the wool will come if you make your farm right. Sir, I offer my sincere, though not unqualified support to the administration which now rules Canada, because so far as I can examine the facts, they have got the right end of the stick in the matter of the development of the industries of this country. They have, at least, given more attention to the agricultural needs and wishes of this country than did the previous administration; and if a future Conservative administration is to do better upon this subject, I shall be glad to hear it from the hon. gentleman who is going to follow me.

Mr. T. W. CROTHERS (West Elgin). I do not propose to follow the hon. member for Red Deer (Mr. Clark) throughout the speech he has just addressed to this House. I would like to have heard him go a little further than he did, and tell us how much cheaper binder twine, and wire, and the other articles he mentioned as having been put upon the free list by the present government, are to-day than they were before by reason of having been so put upon the free list. I would suggest to the hon. member for Red Deer that he establish in Room No. 16 a series of revival meetings to bring back the government and their followers to the principles they advocated in 1896; and when he has succeeded in reconverting them to the great principles of free trade, it will be time enough for him to apply his logic and his eloquence to the members who sit on the Speaker's left.

Sir, viewing things upon the surface and with a somewhat circumscribed vision, one feels disposed to congratulate hon. members on the other side of the House upon the confidence and courage displayed in presenting their case to this House and through it to the people. Did the

status of this country depend upon its purely material advancement, one might rightly claim that it is in a fairly prosperous condition, indeed in some respects in a very satisfactory condition. Especially during the last few years we have had a marvellous growth of population, development and wealth. We have attained great domestic prosperity, and world-wide importance. Just what might have been expected in the circumstances. Were our conditions less favourable, we would be exposed to the charge of gross stupidity. In fact, I question very much whether our advancement has been at all commensurate with our opportunities. However, Mr. Speaker, had the hon. gentlemen, mindful of their past record, contented themselves with an enthusiastic recital of our achievements as young and robust people, and with becoming modesty had expressed their gratitude therefor, little criticism could have been justly made. But for hours and days we have listened to their bewildering arrays of figures and fictions, eager not so much to describe the prosperity of this country as to ascribe it to some imaginary sagacity exercised by themselves, eager rather to glorify themselves than to glorify the country. The hon. member for Hochelega (Mr. Rivet) last night charged us on this side of the House with never having forgotten anything. Well, Mr. Speaker, I take that as a compliment, knowing full well that a potent influence in the maintenance of character is a good memory. Were I disposed to make a counter charge, I should say that the hon. gentleman and his political friends forget everything—principles as well as facts, knowing full well that a treacherous memory is the ever constant companion of an unreliable politician. That remark does not apply to the hon. member for Red Deer, because he still holds to his principles of free trade, he still announces them before this House; and to be consistent, he should undertake to reconvert to the principles of free trade the great party of which he is a member.

Now, under these circumstances, it would seem expedient 'to stir up their sincere minds by putting them in remembrance' to dispel their mythical creations, and for a time to seek relief in the calmer regions of the real. To what do we really and truly owe our present position, appealing to facts and ignoring treacherous figures and pointless fiction? What of nature? What of Providence? What of world-wide circumstances? What of the fathers? Who piled up the majestic mountains and stored them with treasures untold? Who carved out the beautiful valleys and bedecked them with flowers and fruits? Who spread out the fertile plains and clothed them with verdure? Who established the seas and filled them with life? Who planted the forests to yield their millions of wealth? I suppose the answer will come from the other side of the House—the right hon. the leader of the government. Who gathered together these almost boundless territories, and provided them means of intercommunication, who put fleets upon the sea to carry our products to the markets of the world; who established the system under which our industrial life has been stimulated for the last thirty years? In natural resources this Canada of ours is probably the richest country on the face of the globe, stretching from ocean to ocean across the continent and northwards from the great inland seas and international boundary thousands of miles to the resting place of Sir John Franklin, in variety and salubrity of climate unsurpassed in wealth of field, forest, mine and sea unequalled half a continent committed to our keeping to maintain and develop. Enjoying all the privileges and rights of British institutions without the cost of monarchy, surely our lot is cast in pleasant places and we have a goodly heritage. What of our people? The great majority of them whether Liberals or Conservatives, are neither office holders nor office seekers, neither party heelers nor greedy grafters, but they are plain, self-reliant, honest workers, striving in industry and economy to improve their condition in life and to discharge their whole duty both to their families and to the state. At the same time, they desire a progressive and virtuous administration of public affairs to the end that the great natural resources of this country may be wisely developed, and that the intelligence and manhood of the people may be permanently promoted. They constitute the stability and moral fibre of the state and without them 'the rise and fall of Canada' would soon be written in the world's history. Some day—I hope in the not distant future—this important element of our people will abandon that intense partisanship, too prevalent to-day, and unite to exercise a more potent and salutary influence upon the public life of this country. Not only has nature provided the resources I have mentioned, but for a long period of years, with scarcely an exception, the tillers of the soil have been rewarded with bountiful harvests, abundance for ourselves, and an enormous surplus for others. In 1896 hon. gentlemen were transferred from your left to your right, Mr. Speaker, to govern a country possessing great natural wealth and singular advantages, a country wherein the great outlines of national pioneer work had already been performed. Systems of canals constructed and railways operating in and through every province, fleets carrying our products to the remotest nations, and an industrialism established, founded upon the principle of 'Canada for Canadians.' Shortly before the accession

to power of our friends opposite began a world-wide revival of trade, an era of bountiful harvests and of unprecedented material and industrial expansion which, with but slight interruption, have continued to this day. While we, Mr. Speaker, on this side of the House have some pride in the past as well as high hopes for the future we must not be expected to sit in silence and meekly submit to unfounded accusations and sophistical inferences. Had hon. gentlemen opposite, during this debate, while appropriating credit to themselves where due, meted out justice to their opponents, little objection could have been taken, but some of them, whose political faculties seem obscured by the intoxication of power and pride and consumed by the vices incident thereto, have accused us of deficiency in some of the important elements of good citizenship, and magnified the part they have played in the development of this country. If I remember right, the hon. member for South Ontario (Mr. Fowkes), was the most unfair in this regard. In these circumstances, it might be salutary to ask hon. gentlemen and others similarly affected a few questions, although the answers thereto might involve a slight knowledge of somewhat ancient history. What I would ask, Mr. Speaker, have hon. gentlemen on the other side of the House, as a political party, ever contributed, in a large way, either to the development of this country or to its very existence as the home of a distinct people. Where would this country be to-day, had the people accepted their guidance a few years agoé Where would Nova Scotia be to-day, where would British Columbia be, where would this whole country be had unrestricted reciprocity, advocated by the leader of the government and those sitting beside or behind him, been accepted by the people? Let the Hon. Edward Blake answer. Not a self-governing portion of the British empire but both politically and commercially a mere annex to the United States. Hon. gentlemen, to inspire or revive in them the virtue of political humility, need to be told that it was the great political party, of which we on this side are proud to be members, which conceived and executed every great project that has been conceived and executed for the acquisition, consolidation and development of this country, and that too in the face of the most strenuous opposition offered by hon. gentlemen opposite, who raised their puny arm in futile efforts to thwart all such projects. They opposed the acquisition of Prince Edward Island, of British Columbia, and of Prince Rupert's land, they opposed the construction of the Canadian Pacific railway which, with the activities of the company after its construction has done more to develop this country than all other agencies combined. I repeat, Mr. Speaker, that the construction of the Canadian Pacific railway and the activities of the company since its construction, have done more to develop this country than all other agencies combined, not excepting those put forth by the government itself. Hon. gentlemen opposite not only opposed all these projects, but they opposed the adoption of protection and for eighteen years characterized it as legalized robbery, and described manufacturers as robbers great and robbers small. When they came into power thirteen years ago—I see the Hon. Minister of Customs (Mr .Paterson) looking across here and he knows it as well as I do—they adopted and have practised during these thirteen years the very same principle of protection that they so denounced for eighteen years.

Now, when the superstructure is naturally rising on foundations thus laid, although thus so violently attacked, hon. gentlemen from the house tops shout: 'See what we have done.' As well might the faithless and ungrateful son whose father had felled the forest, fenced and drained the farm, removed the stumps and stones, erected the dwelling and built the outhouses, say: 'See what I have done'—although his only achievement was the erection of a modern windmill. Mr. Speaker, the consolidation of the various portions of this great country was effected and the foundations for the development of her great natural resources laid for all time by the late Sir John A. Macdonald, Sir George E. Cartier, Sir Leonard Tilley, Sir Charles Tupper, Sir Hector Langevin, Sir Mackenzie Bowell and others, some of whom still remain men wise in counsel and bold in execution, giant nation builders all, compared with whom their immediate and remote successors were and are—well the English language fails me. No Saskatchewan rifles for them, no ripe fruit dropping from the parent tree, no discrimination against the mother country, no mere fairweather sailors they, staunch in stress as well as in sunshine, from Alpha to Omega Canada must remain in the empire, now and ever. The hon. gentleman from South Ontario (Mr. Fowke) was bold enough to accuse those of us who have the honour of sitting on this side of the House of being wanting in loyalty to the mother country. He appreciated British connection, and trade relations with the mother country and lashed himself into paroxysms of eloquence over some imaginary statesmanship manifested somewhere or some time by the present leader of the government. Such wholesale and fulsome assertions have not a feather's weight when it is remembered that his worship was just as devout and demonstrative when his leader saw more beauty in the Yankee dollar than in a British shilling, and, so zealous a devotee at the shrine of

fame is the hon. gentleman that I have no doubt his hero worship would sustain him were the right hon. gentleman now to propose prohibition of British goods and unrestricted reciprocity with the Fiji Islands.

Hon. gentlemen who compare trade returns—when the Conservatives were in power with the trade that we have to-day, should remember that this is not the first Liberal government that has been in power in Canada. Although only a boy yet, I remember very well when the right hon. gentleman who leads the government to-day (Sir Wilfrid Laurier) sat upon the treasury benches before, and I also remember that during those days the trade of this country dwindled down to a point less than half what it had attained when he returned to power. Why, I would ask, did he withhold from his suffering country in those days the magic exercise of his masterful genius? Why did he, in those days, permit the wheels of progress to cease their accustomed revolutions? Why did he permit commercial stagnation to settle down on this country and industrial distress to exhibit its ghastly form in every populous centre? Why did he not, in those days, convert the soup kitchens into homes of plenty? In those days and later, hon. gentlemen opposite used to say that in respect to commercial prosperity governments were but flies upon the wheel and now they tell us that the success and prosperity of the country depends very largely upon their trade policy. A few years ago surpluses were stealings from the country. Let me read to you a few words uttered by the present Finance Minister in those days respecting surpluses:

> If these surpluses were created by the government in some magic way, there must be in them a cause for thankfulness. But when it is considered that every dollar of the surplus is taken out of the pockets of the people without the shadow of an excuse—money not required even by the reckless expenditure of the government, there is not much cause for rejoicing. A surplus of millions at the capital is just so much money withdrawn from the trade of the country. How long can the Dominion stand the drain?

And yet in the face of that we have hon. gentlemen boasting to-day of an aggregate of surpluses amounting to nearly $150,000,000, which, according to their statements a few years ago, are simply so many stealings from the people.

But we have had recently a new cause assigned for the great prosperity that this country is enjoying. I have noticed that the Prime Minister in Toronto last week accounts the restoration of peace and harmony in this country as the most signal triumph of his public career, that to it rather than to his trade policy should be attributed our prosperity. Let us see what he said, as reported in the Toronto 'Globe':

> The country was torn by agitation which threatened to take the form of civil war. It is a self-evident proposition that there can be no prosperity in a country where there is no harmony amongst all classes that inhabit it. There can be no such thing as progress where discord is rampant in the land. And our effort when we went into office in 1896 was to establish harmony, to establish concord amongst all classes of the population.

Mr. Speaker. this is a striking illustration of the suppressio veri. It requires a very high degree of courage as well as an assumption that memories are universally short, to so present events so recent in our history. In the first place these are gross overstatements of the facts of the case. The pertinent question is: What provoked the conditions to which he referred, and truth demands the answer that the discord such as it existed was the nefarious handiwork of his own political friends, performed with his own assent and expressed in the most eloquent terms of silence. When a word from him would have allayed the agitation he crouched behind the lines of Torres Vedras, preferring civil war to peace and harmony, so that it promised relief from the shivering shades of opposition. And when that discord, so started and nurtured. had attained its object, its authors were taken to his bosom and placed in the seats of the mighty. And in the face of these facts we are now seriously told that we were the authors of the discord and that he restored peace. It is too early. Mr. Speaker, thus to pervert the facts of history. The easy grace with which these hon. gentlemen pass from one side to the other of most important questions would invite hilarity in one unfamiliar with the dexterity usually exhibited in their mental gymnasium. To-day protection and surpluses are legalized robbery and stealings from the people, to-morrow they are evidences of statesmanship. Public lands for the settler to-day, to-morrow vast tracts of land and timber given to political favourites. Provincial rights to-day, to-morrow central control at Ottawa. Looking to Washington to-day. unfurling the old flag in a foreign capital to-morrow; all things to all men, principles abandoned, opportunism embraced. During the past thirteen years the government of this country has been carried on more with a view to strengthening one political party than to promoting the public weal. Every question that arises is determined by party considerations rather than by national interests. Under the patronage system as administered by hon. gentlemen opposite almost every institution in this country has been grossly degraded. The revenues have been squan-

dered and the public patrimony plundered to strengthen the party ascendant and that the party may remain in the ascendant. What was the explanation given a few days ago of the Newmarket canal transaction, and given by the right hon. the Prime Minister himself? He actually told us that a delegation composed of Liberals and Conservatives alike asked for the construction of that canal, and the Minister of Finance tells us that hon. gentlemen on this side of the House have asked for public buildings, and he thinks that is a sufficient answer to the charge of improper expenditure. Could affected political innocence go further? Fancy veteran politicians skilled in all the arts of the game making such innocent professions. They both know full well that if there was the slightest prospect to secure an expenditure of $1,000,000 on the most absurd proposition imaginable, a large and enthusiastic delegation could be gotten together from any constituency in Canada, even from that represented by the Minister of Customs himself. Were a child in any well regulated nursery found giving expression to so much innocence he would be told: 'The goblins will get you if you don't look out.' Seats in parliament have been exchanged solely for political consideration without regard to quality or patriotism. Even the bench, Mr. Speaker, even the judiciary has not been spared the blighting influence of this pernicious system. In many cases in the province of Ontario the County Court bench, and in some of the other provinces even the High Court bench has been prostituted to the necessities of political exigencies, and we have seen here about twelve months ago a high and important office of a judicial character bartered for a minimum of mentality plus a maximum of perpetual political pull. Mr. Speaker, hon. gentlemen opposite may learn some salutary lessons from instances occurring in the public life of other nations. It is recorded of the late President Lincoln that when about to fill the chief justiceship of the United States, a delegation waited upon him to try to dissuade him from appointing a man with whom he was not on friendly relations personally. Mr. Lincoln, great big man that he was, said: What has that to do with it? Here is one of the most important positions in the United States. It is my duty to appoint to it the best available man. In my opinion, Salmon P. Chase is that man, and I shall appoint him; and he did appoint him. I commend his conduct to the right hon. the Prime Minister. I implore him to study well the public career of that truly great man and to apply the lessons gleaned therefrom to the material and moral interests of his native land.

We have heard a great deal in favour of excluding the orientals from this country and I do not propose to discuss that question, but let me say here: It would be well were the public men of Canada to become inoculated with the characteristic virtues of the Japanese. If a great war, conducted on both land and sea with consummate skill unparalleled and unvarying success and with the tenderest regard for fallen foes is any test, then the Japanese are one of the greatest peoples known to history. Whether toiling in the trenches at Port Arthur, or bleeding upon the battlefields of Manchuria, or shattered on the decks in the sea of Japan, or lingering in the hospitals for the wounded, the sick and the dying, they manifested a courage, an endurance, a devotion to country and a humanity never witnessed in the annals of war before. In Japan one constantly hears the question: What can I do for my country? But in Canada under this government, one blushes to confess it, thousands are asking: How can I do my country? And those who do her to the greatest extent are those whom we most devoutly worship. Mr. Speaker, we are in danger of attaching too much importance to the lower, to the neglect of the higher elements of national weal. It is vastly more important, that the great natural resources of Canada should be wisely developed than that they should be speedily developed. It is very much more important that the multitude of the people should have an object lesson of righteous administration on parliament hill than that our immigration should increase by 10,000 or 50,000 a year. The people have been taught to believe that public property is legitimate game for all those cunning and bold enough to seize it; and as a consequence, we have them reaching out a greedy hand to grasp everything of a public character, whether seen or unseen. It seems to me that the most lasting impression which this government will leave on history is that their reign was signalled by the blight of greed and the decadence of patriotism and that this era will be known in Canadian history as the golden age of graft. Although many of us hope that the Finance Minister, as such, will not deliver many more budgets in this House, we all were pleased with his closing words. We all have confidence that Canada has a great future and that some day she will attain unto it, although on the way she may be obstructed and marred and scarred by scheming and selfish politicians. We are proud of our Canadian citizenship but prouder still of our British citizenship. Canada is only a small part of our country. Our country encircles the globe. We are proud of our British citizenship in which we desire to live and for which, if need be, we are prepared to die. I would

like at this stage to go into the question of the navy. What is involved is not simply the protection of this country. That is not the question. What did British statesmen say in the House of Commons? One after another they rose in their seats and declared—what? Did they declare that they must have a navy merely to defend the British isles in which they live? No, every one of them declared that what was wanted was a navy strong enough to defend the remotest part of the British empire—the one empire, strong, indivisible and perpetual, under one flag, presided over to-day by a King, a gentleman and a man—His Majesty Edward VII, long may he reign.

Mr. F. T. CONGDON (Yukon). When one gazes upon the venerable form of my hon. friend who has just taken his seat (Mr. Crothers), it is somewhat difficult to believe he is still a boy, but as one listens, the difficulty disappears. A gentleman who can imagine that he can carry on a tariff discussion by abandoning what he calls treacherous figures and by addressing himself instead to mountains, valleys, forests and streams, is giving the best proof that he is not yet past his boyhood. A gentleman who imagines that he can substitute strutting phrases for sound arguments and that, by making broad declarations, he can establish sane conclusions is, I think, entitled to all the benefit he can obtain from the most extreme youth.

My hon. friend wondered why the hon. member for Red Deer (Mr. Clark) addressed some of his arguments to the opposition. Well, it is perfectly plain that arguments of that kind, like sermons, are usually addressed to the vilest sinners in the hope of accomplishing most good, and one cannot doubt that the arguments in question are more needed on the opposition than on the government side of the House. My hon. friend from Red Deer pointed out that the whole policy of the Liberal government has been in the direction of an endeavour to secure a broader measure of free trade to this country. Whereas the policy on the other side has been exactly the reverse. But now we have my hon. friend (Mr. Crothers), who has just taken his seat, saying that the policy which has been the cause of such immense success in our manufacturing industries is that which was initiated by the late Conservative administration. Well, let me invite the attention of the hon. gentleman to the language used by Sir Charles Tupper, the leader of the Conservative party and by the hon. member for North Toronto, (Mr. Foster) with regard to the Fielding tariff. That language was to the effect that the Fielding tariff was of such a character that it would utterly ruin

and destroy the industries of this country. It was easy enough for those hon. gentlemen then, to make that prophecy, to point out that nothing but misery and ruin would follow; and it is just as easy now, when the very reverse is shown to have followed, to say that the tariff inaugurated in 1896 by this government was nothing but the old Conservative tariff. The hon. gentleman then claimed the distinction for his party of having initiated the construction of the Canadian Pacific railway, but it does seem to me that the Mackenzie government which was in power before 1878, had something to do with the construction of a road that corresponds with the Canadian Pacific railway. And the Mackenzie administration then initiated a policy with regard to the construction of railways which was much more in the interests of the country than the one subsequently followed. No one can doubt that the building of the Canadian Pacific railway has worked great benefits to Canada. No one can doubt that it has done much to open up our Northwest, but it must not be forgotten that that road had been opened twelve years before the present government came to power and that, until the hon. member for Brandon (Mr. Sifton) became Minister of the Interior and substituted for the old antique methods, modern, scientific, active and energetic efforts, there was absolutely no development commensurate with what the people had a right to expect from the great sacrifices they had made. And the end is not yet with regard to the injuries inflicted by the Canadian Pacific railway. If I am correctly informed that company, by virtue of the policy which hon. gentlemen opposite are responsible for, is now in possession of the alternate sections on the Grand Trunk Pacific and propose to hold the sections up and not sell them, merely in order to ruin the Grand Trunk Pacific. That is the policy which my hon. friend (Mr. Crothers) lauds so highly. It is one which has been a curse throughout the Northwest and is a curse to-day and will be more and more a curse as the country opens up.

It seems to me that my hon. friend differs somewhat from the hon. gentleman for North Toronto (Mr. Foster) with regard to the appearance of affairs at present. The hon. member for North Toronto, in his desperate gloom and horrible despondency, could see nothing cheerful except the countenance of the Minister of Finance (Mr. Fielding). Well, I think that most people in this country would like to see some of the cheerfulness exhibited in the countenance of the Minister of Finance reflected in the countenance and language of the hon. member for North Toronto (Mr. Foster).

The time has passed when it is wise for any man in this country to speak of the

affairs of Canada as being 'in a slough of despond.' I venture to say that there is no man who knows anything about our affairs—except the hon. member for North Toronto (Mr. Foster)—who would speak of the affairs of this country being now or having been at any time recently in anything like a slough of despond. There never was a time when Canada was more prosperous or more hopeful than at the present day. And the only man in this House, who does not realize that appears to be the hon. member for North Toronto. In order to make a point he said that, in the budget of 1908-9 the Finance Minister, instead of curtailing instead of trimming sail for the storm which every man saw approaching, he had continued under full sail risking disaster. It is not well for the captain who has been dismissed from his employment by reason of not being able to carry the ship of state through the storms to criticise another captain who has been successful on the ground that in such and such emergencies something might have happneed through his carrying too much sail. The member for North Toronto (Mr. Foster) said:

> The minister might have added to the financial position of this country very materially if he had done as every business man in the country did, as the chancellor of every exchequer that I know of did, as any prudent business man would do—curtail in the face of the storm that was yet to come and so save in that way what he could of the strength and credit of the country's finances.

Now, Sir, I do not know as much about the chancelleries of the world as the hon. member for North Toronto. Yet, I begin to think that even he does not know as much about them as his language would indicate. For, if he had gone to the budgets of Great Britain and the United States he would have found that the very contrary to that which he stated was the fact —that the masters of those ships of state, had the same confidence in their crafts to weather the financial storm that was approaching—and with as much reason as shown by the result—as had our Minister of Finance in the Dominion of Canada. For, in that year, and in the subsequent year, both in Great Britain and in the United States, not only the estimated but the actual expenditure exceeded any previous year except one from 1905 to that time.

Now, the hon. member for North Toronto is even despondent about the Grand Trunk Pacific railway. I do not see how any one who looks at the condition of affairs in the new provinces and in the Northwest Territories can doubt the wisdom of the policy which is endeavouring—and is succeeding —to provide for this country another great transcontinental railway. Not only was such construction necessary in view of the enlargement of the country and in view of the necessity of saving the great Northwest Territories of Canada from falling absolutely into the hands of the Canadian Pacific railway, but it was necessary in order to provide for the enormous development which was foreseen. And I venture to say that we are on the eve, as soon as that road is opened, of the most marvellous material and commercial development known in the history of the Dominion. You see, here and there, small towns which undoubtedly will blossom forth into large cities; you see villages ready to become towns; and from the Atlantic to the Pacific the whole Dominion will undoubtedly receive a great impetus from the construction of that road. It would not be surprising if the policy of the government should finally lead to the extension of that road to the port of Halifax. The eastern provinces, I believe, are in as hopeful a condition as ever they were and will soon begin to reap, more than they have done heretofore, some measure of the benefit of this prosperity spreading over the Dominion. There is nothing to hinder the Atlantic Canadian port, either Halifax or St. John—Halifax, I believe, for it seems to me to have been designed by nature as the seaport of the largest portion of the trade of the Dominion—I say I do not think there is anything that will hinder Halifax and St. John on the Atlantic and Vaucouver, Victoria or Prince Rupert or all of them, from being centres of as large a freight and passenger traffic as ever has been in the history of the world. How any hon. member can entertain any doubt with regard to the benefit that will accrue to this country from the construction of the Grand Trunk Pacific railway entirely passes my comprehension. My hon. friend from Red Deer (Mr. M. Clark) has dealt with another feature of the speech of the hon. member for North Toronto (Mr. Foster)—the question of the balance of trade. If the argument advanced not only by the hon. member for North Toronto, but also by the hon. member for North Simcoe (Mr. J. A. Currie) and some others in this House is correct, if it be really an adverse balance of trade for us to have more imports than exports, and if the favourable condition of trade be an excess of exports over imports, then India to-day is a prosperous country and Great Britain is very much the reverse. For, as pointed out by the hon. member for Red Deer, the imports of Great Britain for years and decades have exceeded the exports, whereas the exports of India for as many years have exceeded the imports. I believe that the reason can be found in the words of Fawcett—and I would invite the attention of my hon. friend from North Simcoe to some of portions of the works on political economy that he has been reading and ask

him to give some attention to what they say on the subject of the balance of trade upon which he talked a great deal but concerning which, apparently, he had not taken the trouble to read the very authorities to which he referred. Fawcett said:

If a country is in debt to other countries her exports will exceed in value her imports by an amount equivalent to her annual indebtedness. If, on the other hand, a country should be a creditor and not a debtor of other countries, the value of her imports will exceed that of her exports by an amount which will be equivalent to the indebtedness of other countries to her.

Now, it is perfectly apparent that Great Britain is a great creditor nation. Other countries all over the world must pay interest on their indebtedness to Great Britain, and the only way in which they can pay it is in the form of exports from their own countries which become imports into Great Britain, making an excess of imports into Great Britain. Most of the other political economists with whom I am acquainted—and I have been realing up the subject—claim that this idea of an adverse balance of trade is a foolish and exploded notion. As Blanqui says, it is 'proved a vagary.' Why, if there were anything in it the Minister of Customs and the Minister of the Interior make a very serious mistake in not instructing their officials all along the international boundary to meet the Americans coming into this country and say: 'Gentlemen, you can come in but you must not bring in your effects, for if you bring them in you will swell the adverse balance of trade against Canada.' One can understand that if you take some particular item of trade you might possibly say that, in regard to that particular item, it is desirable that our exports should exceed our imports—though, I must say I cannot think of anything of which that would be true. But to talk of the whole trade of a country and say that, because the imports exceed the exports, that country has an adverse balance of trade, appears to me a vagary which, if not exploded, ought to be exploded very shortly. Let me point out one way in which this so-called adverse balance of trade is swollen. In the Yukon territory, several million dollars worth of mining machinery has been imported and set up, machinery of a kind not now manufactured in Canada. To wait for the development of that country until the machinery was manufactured in Canada would mean the absolute abandonment of the country for many years. Consequently, I think every one will recognize the wisdom of going abroad to get the machinery, to hasten the development of the mining industry. The imports of Canada are swollen by the amount of the value of that machinery. Does any one say that it is not a desirable thing for Canada to purchase abroad the mining machinery that is required in the Yukon territory in order to start mining operations, and thus give employment to a large number of labouring men, increase the business of every merchant and every person engaged in business in that country, although it does create what the hon. gentlemen call an adverse balance of trade?

Another thing I wish to mention and that is trade between Canada and the United States. I have always frankly expressed my views on that question. Now, Sir, while I am as loyal a British subject as there is, I have the very highest regard and esteem also for the republic to the south of us, and I believe that the greatest function that Canada can perform, in her own interest and that of the empire, is to assist to bring about the most friendly relations between Great Britain and the United States of America. Speak of a fiscal policy which would make Canada an annex of the United States! What ridiculous nonsense! Do you imagine that because we are carrying on trade which is profitable both to Canada and the United States, therefore we must become annexed to the greater country? For my part I believe that the most desirable condition of Canada would be one of absolute freedom of commercial intercourse with the United States. Our social relations, our commercial relations and all other relations should be of the most friendly character. I say that so far from involving any danger of our political entity being absorbed in that of the United States, it would be postponing it, removing the danger of any such fusion of the two countries. There is a large and growing portion of the people of the United States who realize that our country is a magnificent example of an endeavour to carry on republican institutions. They are a republican democracy, we are a monarchial democracy. We believe, and some of them believe, that under our system of government we are accomplishing greater freedom for the community and for individuals even than they are in the United States; and the wisest, the sanest, and the most advanced minds in the United States realize that it may be well on this continent for two independent nations to exist side by side, aiming at the same object, the attainment of the best interests of the whole people, that these two experiments should be conducted concurrently, one learning from the other, so that if one fails in the experiment the other may take warning by the failure, and avoid the errors that led to it. So far from intimate and close trade relations between Canada and the United States involving any danger to our political institutions, I believe, and I think I am supported by all who have studied the

question carefully, that such relations will advance the interests of Canada and tend to our continued separation as a political entity.

Now hon. gentlemen think that it is a horrible thing that trade between Canada and the United States is greater than trade between Canada and Great Britain. Sir, the result is inevitable, and is a consequence of the ordinary movement of trade currents. Trade naturally follows meridians rather than parallels of latitude, for the simple reason that in pursuing parallels of latitude you are trading with a country similarly situated, whereas when trade follows meridians it is reaching out to countries differently situated, having different products, performing the mission which Tennyson ascribes to commerce 'to mix the seasons and the golden hours.' That doctrine is as applicable to Canada as it is to the rest of the world. It has been well established throughout the rest of the world; and, try as much as you please, give as great a preference as you will to Great Britain, it will not be possible for this country to make trade with any other country in the world which will exceed the trade of Canada with the United States. For my part I welcome it, believing as I do, that it is one of the best things that can happen, not only to Canada but to the United States, and that the soundest trade policy is one which will be as beneficial to the one country as to the other.

There was one portion of the address of the hon. member for North Toronto (Mr. Foster) to which I wish to direct the especial attention of the House, not that that it is a matter in which this House is especially interested, because I have found a most wonderful lack of interest in eastern Canada in anything relating to the northern part of Canada. The residents of eastern Canada, and also of western Canada, for that matter, are so deeply engaged in the development of their own sections of the country that they take very little interest in anything beyond. The common notion with regard to the Yukon territory, or of any other part of our northern territory, is that it is a great barren wilderness filled with icebergs, behind which the inhabitants are dodging and trying to keep themselves from freezing to death. A greater misconception never existed. The hon. member for North Toronto has never been able, in any speech made in this House, to mention the Yukon territory, or the officials, or the people, of the Yukon, without saying something derogatory of them. He knows no more about the Yukon territory, about the conditions there, than Balaam's ass knew about Hebrew grammar. Now, the hon. gentleman tries to belittle the Yukon territory by saying that it has a population of less than 8,000, probably 5,000. If it has only 5,000, I say they are one of the most remarkable 5,000 that have ever been collected together in any part of this mundane sphere. Imagine what would happen in the rest of Canada if every unit of 5,000 people added so greatly to the wealth of the country as the 5,000 people in the Yukon territory. Last year, and for several years before that, the gold production of the Yukon territory fell off. It was absolutely inevitable that it should fall off. In the earlier days there happened in the Yukon territory what happened in every other mining camp. Men flocked into the richest spots and these were capable of being easily worked. Men who knew nothing of mining, only enough to dig a hole in the ground, found a gold yield sufficient to make their fortune. But that ground naturally gets worked out in time, and if you could live in the Yukon territory and visit that ground which yielded these immense fortunes, you would still see gold bearing ground which I believe is richer than in any other part of the civilized world. The area which can be worked to-day is ten times as large as the area which could be worked nine or ten years ago. The area that can be profitably worked is increasing in extent and, is so enormous that its output only depends upon the cheapness with which it can be worked. Now hon. gentlemen should remember this fact. He blames this government for the falling off of the gold yield in the Yukon. I do not think the hon. gentleman seriously meant to say that, but perhaps he did. But I say that the falling off of the gold production was exactly what has happened in every other country between the first wild rush when riches are dug out easily, and the second stage when scientific methods are necessary to get the gold out of the ground. Last year our production in the Yukon was a little over two millions, this year it has jumped up to $3,662,000. I venture to say that for the next ten years you will see an annual increase in the production of gold from placer ground alone with a continued improvement in the scientific mode of mining.

Now with regard to the government of the Yukon, and the reflections made by the hon. member on the government of that territory. It must be remembered that in the beginning of the Yukon territory there occurred one of the most remarkable movements of men that has occurred since the Children of Israel started out from Egypt on their famous wanderings in search of easier work than making bricks without straw. That movement differed from all other movements that I know of. We had a large body of men moving together. Other movements of

men were homogeneous; they were composed of men of the same language and the same ideas, and because of that fact it was easier to control and manage them than a movement such as this in which were represented every nation of the world, every trade, every profession, every occupation and every degree of morality. We had the pious deacon and the pickpocket and we had the preacher deserting for a time his sacred calling in the hope of being able to add to his poor stipend by striking a good claim, and men of every description. The worst feature of the crowd, numbering about one hundred thousand, was that while there were splendid men amongst it—no better could be found in the world—and while the large majority was eminently fit, capable, respectable and good, there was a lack of confidence in one section of the crowd with respect to the others. The individuals did not know one another. It might be that a man in a little group knew the members of that group but he knew nothing whatever about other groups, and the consequence was that the crowd that rushed in there was filled with distrust of itself and of its different constituents. This naturally created in the government of this country, being guided, I suppose, by the reports of the authorities who had the management of the Yukon, a distrust which was likely to grow. I do not think that any government will be greatly blamed it if takes pains to maintain the integrity of its territory. That is one thing that every government, whether British or Canadian, will protect. No government will take any chance in regard to the integrity of its territory. This government took no chance with regard to maintaining the Yukon territory as a territory of the Dominion of Canada. It sent into that country a force which I think was needless. But, it is easy to be wise after the event. Those 155 battleships that the British government 'scrapped' a few years ago were unnecessary but at the time they were constructed they were not deemed unnecessary. They served a purpose and the fact that they were ultimately 'scrapped' is no condemnation of the action of the government in constructing them at a time when they were believed to be necessary. This government sent into the territory a large force of the Northwest Mounted Police. No better force could have been sent, although I am not given to overpraise of the Royal Northwest Mounted Police or any other body of men. I realize that they have their faults and failings. In addition they sent in a large field force. That field force cost Canada $721,737. That was merely the result of the foresight of the Dominion government in taking such measures as would ensure the retention of the Yukon territory to the Dominion of Canada. In the public accounts the cost is included as a charge against the Yukon territory. I do not think it is a fair item to include to make up the deficit to which the hon. member for North Toronto referred. At the time the Yukon territory was first opened up there was no idea that there would be any danger of an attempt to wrest that territory from the Dominion. It was at that time that the statement was made in this parliament that the Yukon would be made to pay for itself. There are some extraordinary expenditures which, as a matter of book-keeping, have been charged to the Yukon, but which are of such a character that they should not have been so charged. One is the $721,000 that is charged against the Yukon with respect to the field force. If there were danger of an invasion of Prince Edward Island, Nova Scotia, Ontario or any other part of the Dominion, and the Dominion government, in its wisdom and foresight, thought it necessary to incur an expense of that kind in order to ensure that portion of the Dominion against that danger, no one would think of charging that up to the particular province in which the danger arose. It would be treated as a national charge. And so, I say in regard to this charge, that the Canadian field force sent into the Yukon should not be considered as a charge against the Yukon. The Yukon did not ask for it, a good many people in there did not think it was necessary, and it was because the authorities of the Royal Northwest Mounted Police and others thought there was some danger from the promiscuous character of the people and the surrounding country of an attempt to wrest the Yukon from Canada that this force was sent in. So in regard to the expenditure upon the Royal Northwest Mounted Police in the Yukon territory. It is easy enough to say now that there was no excuse for expending upon that force the large amount shown in the Public Accounts. We are charged with an expenditure of five million and some hundreds of thousands of dollars upon the Royal Northwest Mounted Police. You will find that the major part of the expense was incurred during the few years when this danger of an attack upon the Yukon was feared—I do not mean an international attack but an attack from filibusters, and during that time the force was kept at a strength that certainly was not necessary to maintain order within the country. In regard to the expense of the Royal Northwest Mounted Police in the Yukon territory, it is reasonable and fair to charge against that territory the proportion of the expense of such a force as would be necessary to

maintain order within the territory. But the expense of that portion which was kept there as a sort of precaution against the danger of an attempt upon the country is a portion which should be charged not against the Yukon but should be considered a national charge, and I do hope that the Minister of Finance will so rectify these accounts in this regard. It was most natural to put them where they were put in the first instance, but they should not now be considered as charges against the Yukon. When one comes to ask for some vote for the Yukon, member after member will get up and say that the Yukon has been a loss to Canada instead of a profit, thus illustrating the unfairness of charging these extraordinary expenditures to that territory. In addition to that we are charged, not only with the original capital cost of the telegraph, but with the whole annual cost. I find that $600,000 of the cost was for the portion of the line in the province of British Columbia. Last year the expenses of operating that line were, in the Yukon territory, $62,000, and the total cost of operating it in British Columbia was $158,000. Although our cost was only $62,000 we are charged with $220,000. The total cost of constructing the telegraph line was something over $700,000; the cost of the portion in British Columbia was $600,000. That should be deducted. The cost of operating that line since its initiation in 1901 up to the present time has been $1,770,000, of which $500,000 have been expended in the Yukon, and have been charged against the Yukon. The way this occurs in regard to the telegraph is that originally it was treated as the Yukon system, and ever since all the expense incurred in British Columbia or anywhere else in connection with the Yukon telegraph system including even the branch line from Hazelton to Prince Rupert has been charged to the Yukon territory. I think the account should undergo revision in order to bring into it only those items which are legitimately and properly chargeable against the Yukon. I find in addition that $283,000, the amount paid as damages to Mackenzie and Mann are charged to the Yukon territory. I do not think it is fair to take that amount into consideration in estimating whether the Yukon has been a source of loss or profit to the Dominion of Canada. By including these various amounts the hon. member for North Toronto showed that the deficit of the Yukon amounted to $2,300,000. I think if that account were corrected in the way I have indicated and in the way that, I submit to the Finance Minister and this House, is the proper and legitimate way to correct it, it will be found that the Yukon has a surplus of over $3,500,000. In addition to that I wish to point out that it is utterly impossible to take the Yukon territory, or any other section of Canada, and make out from the public accounts the cost or benefit to the country of that particular section accurately and properly. The hon. member for North Toronto was surprised that while in 1900 and 1901 we had a surplus we had later used that up.

The government of this country adopted with the concurrence, with the express approval of the members of this House, a mistaken policy in the first place in respect to the Yukon Territory which was only corrected about 1901. It is the same policy as is being adopted to-day in the province of Ontario and, without any reflection on the motives for the enforcement of that policy, I repeat that it is a mistaken one. It is based on the idea that the rest of the country can take a large mining district and make money out of it for the other public services of the country. That is not right, it is not the correct policy with regard to any large mining territory to impose any taxes in addition to those which are imposed on the whole country and to expect that the rest of the country and not that particular territory will get the benefit of the special taxes so imposed. I think that a very few years will demonstrate the lack of wisdom, for instance of the province of Ontario, in thinking it can take such a large royalty from the mining production of Cobalt and other regions, and that the rest of Ontario outside those regions can derive any advantage from that royalty. Ontario will find a little later, when she has had more experience, that while it may be wise and proper to impose some measure of royalty upon the minerals produced in those districts it is absolutely essential that the income thus derived should be expended exclusively for the benefit of the districts from which it came. Down to 1901, the idea of this parliament and the idea generally prevailing was that these enormous sums of money that were coming out of the Yukon Territory should, some of them, find their way into the exchequer of Canada for the benefit of the rest of Canada, and as I say it was not until 1901 that this government realized, and adopted a policy founded on that realization, that the only sane and proper use to make of the royalty got from the Yukon territory was to devote it to local uses in the Yukon. Previous to that time we had no public building, the telegraph line was not constructed, we had no roads which are the absolutely essential needs of that country, and whatever large expenditure there was after 1900 was due to the fact that the government, as I think, realized that the royalty which they had received from that territory ought to be devoted to the development of that country. They adopted that policy and expended for these objects the surpluses which they had

previously piled up and the surplus of that year.

There are several causes which account for the reduction in the revenue from the Yukon since that time. In the first place, the royalty in the Yukon territory was ten per cent, which was subsequently reduced to five per cent and later to two and a half. Necessarily the year in which the royalty was reduced from ten per cent to five per cent showed a decrease in the revenue, and this decrease was still greater when the royalty was reduced to two and a half per cent. Then, in the beginning of the Yukon, the people of Canada made a greater mistake than any mistake which the government made. They were not very familiar with mining localities and made the great mistake of imagining that anything was good enough for a mining camp, whereas any one who knows anything about mining camps knows that nothing is too good for them. The miners have the money and will pay for good articles, especially if they are far away from commercial centres, because the cost of transportation is so great that they have adopted the wise policy of buying the very best. For instance, some Canadian manufacturers or merchants sent into the Yukon butter not fit for axle grease, and it took four or five years to get over the bad impression created in the Yukon by that horrible butter; only in recent years would people in that country eat Canadian butter which they now find as good as any produced in the world. That is one matter in which the farmers, or whoever were responsible for the butter made a mistake. Another matter in which the Canadian manufacturers erred was in respect to boilers. The country needed thousands of boilers. I have seen the streets of Dawson for half a mile piled up with small boilers and hoisting machinery. I came to manufacturers in the east and I know others came and asked them to meet that requirement of the Yukon and manufacture suitable boilers. Their answer was that their business was booming so rapidly that they could not undertake that business. One said that his business in the previous year had been so increased that he was obliged to double his capacity and if he attempted to fill the demand of the Yukon he would be obliged to still further increase his power of production and as a consequence he did not attempt to supply that market, and I venture to say that not one-half of one-quarter per cent of the boilers and hoisting machinery that went into that country came from Canada; it all came from the United States. The people of the Yukon were quite willing to buy in this country and made endeavours to buy here, but when Canada would not furnish the articles demanded, they were obliged to turn elsewhere.

Another cause of reduction in the revenue from the Yukon is the change of the customs, and if I may express my opinion on the subject I hope that the Ministers of Finance and Customs will recommend a further change, because I think there is no policy which can be wiser for Canada to pursue than the policy of making absolutely free those articles of machinery, those articles of necessity which go into a new country and are absolutely essential to build up its industries. Take the conditions in the Yukon. A mining proposition is of necessity always hazardous, and I maintain that as little taxation as possible should be imposed until the venture has been absolutely set afoot and has been proved to be a profitable one. By imposing large taxation at the beginning, you are crippling and perhaps rendering impossible an industry. Take for instance an industry that proposes to instal a large power plant to work mining machinery. It requires, in the first place, a large sum of money for installation. It is told that there is a heavy tariff on all machinery which it is required to import. That, of course, gives a little black eye to the scheme of promotion and then the promoters are obliged to pay a duty on that machinery at a time when their industry has not produced anything and is not in a position to produce anything, and when the promoters are not absolutely certain it will not be a failure. In one respect a royalty is the best of all taxes on a mining territory, because a man is only asked to pay when he has the money in his pocket to pay. A tariff on mining machinery is the worst form of taxation, because it is a tax at the very initiation of an industry, which may and does stop thousands of developments that otherwise would take place.

Another cause of reduction in revenue in the Yukon, is due to the increased proportion of Canadian manufactured products used in that country. In the earlier days the major part of the importations into the Yukon was of American origin. I shall not weary the House with figures, but, for instance, in 1899 the domestic importations into the Yukon amounted to only 9,800 odd tons. By St. Michael's there were imported 3,334 tons and via Whitehorse, 6,510 tons. a total of 9,844. Of foreign importations via St. Michael's. there were 12.000 tons, and via Whitehorse, 2,700 tons, making a total of foreign importations of 15,000 tons against 9,800 tons of domestic importations, the total importatons at that time being 24,856. Every effort was made by the Department of Customs and by every one in that country who had any authority to direct the trade of the Yukon territory into Canadian channels, and this effort was successful to the extent that in 1906 the do-

mestic importations into the Yukon were 14,309, and the foreign 10,698, so that you have about the same gross importations, but the proportions of Canadian and foreign goods are reversed between 1899 and 1906. The change in the source of the goods imported into the Yukon necessarily caused a falling off in the customs revenue from that territory, even although some of those goods that appear as domestic may be foreign. But let me give one instance to show how difficult it is to get at the exact revenue which the national treasury receives from any particular portion of Canadian territory. There is being installed about 40 or 50 miles below Dawson a large power plant which will distribute that power to Dawson and its vicinity, and furnish power which is absolutely essential for mining purposes. The company promoting that power plant were unable to make arrangements for the transportation of its machinery with the railway company that runs into the Yukon territory, and which I may say is the most horrible incubus that any country has ever laboured under. The power company were compelled to land their machinery at Vancouver, so that the province of British Columbia gets the credit for the revenue of $58,000 from the duty on that machinery, which is intended for and will eventually go to the Yukon. Of course it makes no difference so far as the revenue of the country as a whole is concerned, but if the Minister of Customs can find any way to credit that amount to the Yukon territory rather than to the province of British Columbia, I suggest that he should adopt it. That, however, is only one instance, and there are very many others of a similar kind which go to prove the suggestion with which I began, that it is impossible to show the revenue derived from any one section of the dominion. For example, I am informed that the customs revenue paid in the city of Montreal is one-third of the whole customs revenue of the Dominion of Canada, and while Montreal is a great city in a great province, yet there is no doubt that a very large part of the revenue paid there should be credited to other provinces in which the consumers who use the goods are located. In the same way, British Columbia gets credit for some of the revenue which should rightly be credited to the Yukon territory.

There is one other thing which I wish to say with regard to the Yukon territory before concluding my remarks, and that is that I think the government has adopted a correct policy in reducing to the very lowest possible amount the expenditure on the official administration of that territory. At one time undoubtedly the whole official staff employed in the Yukon was needed, and it is not an easy thing to determine the exact moment when a change in conditions renders it no longer necessary to retain the whole staff previously existing. However, I think that now the time has arrived when the official staff in the Yukon territory should be reduced, and I say that out of no spite or malice against any of the officials. I believe it has been intimated that I secured the dismissal of some of them for political reasons. Indeed, it has been stated in a despatch to the public press that they had incurred my displeasure because they refused to give $50 each as a contribution to a political campaign fund. Although, some newspapers have published that despatch, I notice that when these gentlemen who are alleged to have made the change were interviewed in Vancouver, if they were ever interviewed, they made no such statement as that credited to them. At all events I invite any hon. member of this House who wishes to investigate the charge, to go to any or all of these officials and I think he will find they will deny that they ever made such a statement. I might add that I never made a request from them or from any man in my life for a contribution to my own or to any other campaign fund, and any one who knows me knows that I am one of the worst collectors that ever appeared in any country; I cannot collect even my own debts not to speak of collecting campaign funds. I may point out also that not one of the gentlemen who have been dismissed in the Yukon territory has had his place supplied by another official. He was dismissed simply for the purpose of economizing, and so far from having any malice against them I have been eager to induce the government to adopt a system by which when it becomes necessary to get rid of an official in the Yukon he shall not be set adrift like an old horse but that he shall be transferred to some other branch of the service of the government, corresponding perhaps to the service he was in in the Yukon territory. I hope the members of the government will endeavour to carry out that idea, so that these officials may be transferred from places where they are not needed to offices where their services will be of benefit to the country. I am particularly desirous of reducing the expenses of administration in the Yukon in order that there may be a larger amount available for developing the resources of that rich country. I could spend hours, Mr. Speaker, dilating on the possibilities of the Canadian Yukon. There are I know some who imagine that its days of prosperity have passed, but I can assure them that the beginning of the development of the Yukon has not yet come. I am supported in this belief by those who know the territory best and who declare that the

output from placer gold mining will increase year by year for many years to come. It will continue beyond the life of even the youthful member for Elgin (Mr. Crothers). Apart from the placer yield of the country there are the most wonderful deposits of quartz. You cannot turn in any direction without finding quartz leads, quartz ledges, and stringers, which were it not for the excessive cost of transportation would be developed at once. We have scores and scores of mines which were they situated at an accessible place would to-day be developed and yielding profits. There are, however, mines at the threshold of the territory at Carcross which are being developed. No enormous amount has been expended upon them because in the development of a large mine half a million dollars is inconsiderable, but, they will no doubt greatly add to the mineral wealth of that territory. Then you pass to Whitehorse and you have at a crescent of territory twenty-five miles in extent on which you can scarcely go 200 yards without finding outcrop of copper of the highest grade. Recently on the dome between Hunker and Dominion Creeks they have struck at one place on the 550 foot level and at another place at the 100 foot level indications of the good paying quartz. Last summer from the Mackenzie river side, the prospectors returned with specimens of some of the richest quartz ever known. Of course I do not know whether it will turn out as anticipated, but at all events the existence of these minerals in every quarter shows that the mining industry in the Yukon territory is practically only in the same initial stage that it is in British Columbia and in Ontario. I do not think it would be rash to say that within twenty-five years Canada will exceed any country in the world in its mineral production. Then, experience has taught us, as in the case of the northern regions, and Cobalt, and Gowganda, that the best thing to promote settlement in a territory is mineral discovery, because the minerals will not only yield wealth themselves but they will bring in population which will remain there to develop agriculture and other natural resources. The subject is perhaps more entertaining to me than it is to the members of the House, and I must apologize for detaining hon. gentlemen at such length, but at all events I feel confident that the Yukon territory deserves the encouragement of the government and of the country in the development of its extraordinarily rich resources.

At six o'clock, the House took recess.

Mr. CONGDON.

After Recess.

House resumed at eight o'clock.

IN COMMITTEE—THIRD READING.

Bill (No. 30) An Act respecting the Eastern Townships Railway Company.—Mr. Lavergne.

SECOND READINGS.

Bill (No. 80) An Act to incorporate l'Institut Notre-Dame des Missions.—Mr. Martin (Regina).

Bill (No. 82) to incorporate the Merchants and General Insurance Company.—Mr. Monk.

Bill (No. 83) respecting the Vancouver, Westminster and Yukon Railway Company.—Mr. Smith (Nanaimo).

Bill (No. 86) respecting the Western Canada Power Company, Limited.—Mr. Taylor (New Westminster).

Bill (No. 89) respecting the Calgary and Edmonton Railway Company.—Mr. Douglas.

Bill (No. 90) respecting the Central Ontario Railway.—Mr. Stratton.

Bill (No. 91) to incorporate the London and Lake Erie Railway and Transportation Company.—Mr. Harris.

Bill (No. 92) respecting a Patent of the Mond Nickel Company, Limited.—Mr. McGiverin.

WAYS AND MEANS—THE BUDGET.

Mr. C. A. MAGRATH (Medicine Hat). The budget debate, Mr. Speaker, is a wonderful institution. It allows the erudite scholar to exhibit his knowledge of the dead languages, and to some others it gives the opportunity to expose their dense ignorance as to the conditions of this country. It appears to me that it is largely used by hon. gentlemen opposite to vie with one another in lavishing praise on the present administration; and I have no doubt that they have succeeded in impressing on our cabinet ministers the conviction that to their administration is due every advantage which the country now enjoys. To their wisdom is due everything from the copious rains that have blessed our soil as well as the withholding from the supposedly free citizens of Ottawa their rights and privileges in this House. Judging by this debate, we have to wander abroad in order to learn some things of our own country. I have lived in the west a considerable number of years and thought I knew something about it, but this debate has revealed some wonderful things about

it. We have heard a great deal about the railway development in that country, and I would like to give to the House some experience respecting the constituency I represent, a constituency consisting of 16,000,000 acres of land, or something over 25,000 square miles. When the Conservative party went out of power in 1896, there were 350 miles of railway in operation in that constituency. Since then there has been added, during all these years of peace and plenty, some 80 or 90 miles of railway to the mileage then in operation. We all know that the Railway Department receives statements from the railway corporations on the 30th of June each year, giving their mileage. I have not the figures before me, but I know that the statements made to the Railway Department on the 30th June, 1908 and 1909, in so far as Alberta is concerned, do not show the increase of one mile of railway, while in the province of Saskatchewan some 500 or 600 miles were added during 1909. We all know that railways are being built in Alberta as well as Saskatchewan; I merely mention these figures to show the preponderance of railway construction in Saskatchewan over that in Alberta.

Now, I had not the slightest thought of taking part in this debate, nor would I do so now were it not that the Minister of Finance, in his budget speech, made certain references to the postal revenues with which I cannot agree. And I feel that I would not be doing my duty to the people who sent me here if I allowed the views thus expressed to go unchallenged. There was evident pleasure in the announcement of that hon. gentleman that the policy of his government—a policy which undertakes to make money out of the Post Office—had yielded him such a handsome profit. Last session, when he was engaged in a similar task, I very well remember—if I may so put it—his gleeful reference to the splendid surplus from that department. The late administration has been criticised in this House and in the country because it conducted the Post Office Department with a deficit. I am not so sure that we should criticise that government for such a policy. I hold the opinion that an intelligent government, in upbuilding a young country, should not attempt to turn shekels from the post office into the treasury. We might as well turn our militia service into a money-making establishment. I assume we are an intelligent people. I presume the Minister of the Interior is endeavouring to get intelligent people to come into this country with whom we will share our citizenship. And I believe that one of the requisites of an intelligent people is an up-to-date mail service, in other words, I believe that the intelligence of a country, to a large extent, is measured by the character of its mail service. We invite people to come here and settle upon our undeveloped areas, and turn over the sod. They are the men who are making Canada. We ask them to take their families away from older settled sections in other countries, to deprive them of the privileges and comforts that they enjoy there and to go out pioneering for us, in short, to turn their backs upon civilization and to go forty or fifty or seventy miles away from railway facilities. And when they ask us to give them a new post office or more frequent service than a weekly one, I say we are not justified in sometimes returning the answer that the service will not warrant the expenditure—in other words, that the service must be self-supporting. In support of that statement, I wish to read an extract from a letter recently received from the Post Office Department:

> The offers received for the performance of the mail service to the proposed office, are moreover so high as compared with the probable revenue of the office as to render it impossible for the department to consider the establishment of a post office at this point at present.

I do not think it necessary to refer to other communications, but merely read that one in justification of the statement I made. Besides, we are specifically taxing the periodicals which follow our settlers from the United States into our country. I have before me an account rendered against myself by the 'Literary Digest,' published in the city of New York, the annual subscription to which is $3. That figure will deliver it in England, in Alaska or anywhere in the United States. But the first item that I see on this account is 'Canadian postage, 85 cents'—or 28 per cent of the price that will deliver it ten times further than Canada. And this has to be borne by the subscribers in this country on account of the regulations of our post office. If hon. gentlemen opposite wish to throw up their hats because of the results of the post office service, we have excellent opportunity to see how they are obtained, and for my part, I do not believe in such a system. The United States does not assume to tax the papers which follow our people who settle in their country—and I wish to announce that there are a few people going out of this country as well as coming in. The United States does not attempt to turn its post office service into a money-making establishment, and I do not think we should attempt it either. I am very sorry that the Postmaster General (Mr. Lemieux) is not in his seat. I told him this afternoon that I wished to make reference to some matters in his department. I believe that the officials of his department are doing all in their power to serve the public; I have no complaint to make against the officials.

Nor have I any complaint to make against the Postmaster General, but wish to acknowledge the courtesy he extends to me from his seat in this House. But when it comes to another feature of his administration, the political end of it, I am determinedly opposed to the system. I believe that in a free country like this, our Post Office Department should be organized free of political managers. I believe that local pooh-bahs should not be appointed as dispensers of post offices. If the people elect a representative to this House and select wisely but not well according to hon. gentlemen opposite, then there is a gentleman in the west selected as a pooh-bah, as purveyor of post offices. I have evidence of this—any quantity of it. And I say that this is wrong. It is immaterial to me what government adopts that policy, I say that the sooner it is changed the better it will be for a young country like Canada. I would like to see the Postmaster General place more post office inspectors at work in the west. And when a petition for a post office is handed in, if the inspector, on looking over the ground, states that a post office should be established and that John Smith would be a good man to appoint as postmaster, that should settle the matter clear of politicians. That is what the country wants. I received letters from the Postmaster General last session in which he informed me that he had done certain things and added a paragraph to the effect that he had done so at the request of a gentleman in the constituency whom he evidently constituted a purveyor of post offices. I do not object to any one assisting in securing a post office; it is a matter of indifference to me who helps to get it or by whom it is secured so long as it is secured. I wonder if the Postmaster General (Mr. Lemieux) has the idea that unless he puts such a paragraph in his letters, I will go into my constituency and say to the people: 'I have got the Widow Jones this post office at the munificent sum of $10 a year?' so that they will think I am a wonderful individual, or that I will try to impress the man who is keeping a stopping place at which the mail service passes once a week that I am a wonderful individual because I have succeeded in getting a service twice a week, whereby he is able to sell double the amount of oats for the mail driver's horses, which gives him that additional profit. If that is the conception of the Postmaster General as to the duties of a public man in this country, I may say that I do not see eye to eye with him.

The Finance Minister appeared to take a good deal of pleasure out of a statement which he presented to this House dealing with the debt per capita. So far as I can see, in a country which grows by natural means, the debt per head is a very fair measure of the intelligence of the financial administration of the country; but where a country is growing by leaps and bounds, I cannot see that the net debt per head is any measure of intelligence on the part of the hon. gentleman opposite. I have taken the liberty to extend the hon. gentleman's figures. His statement shows in its first column the population between the years 1891 and 1910, and in the next column the net debt. Then he gives the net debt per head. It indicates that in 1891 the net debt per head was $49.09, and that during the present year it will be about $45.85, or a reduction of $3.24. Now our net debt, I understand, represents money borrowed on the London market, and we have to pay on it, in the neighbourhood of 4 per cent interest. As to this reduction of $3.24, it simply means, a tax on a 4 per cent basis of about 13 cents per head each year. I believe I am correct in that. I have extended the hon. gentleman's figures, showing what that interest amounts to on the net debt per head, and I have added another column, showing taxes gathered from customs and excise during the year in question. I have added still another column showing what the taxes amount to per head during the years mentioned:

TABLE GIVING CERTAIN INFORMATION REGARDING POPULATION OF CANADA, TAXES COLLECTED AND NET DEBT PER HEAD, WITH 4 PER CENT INTEREST ON SAME.

Year.	Population.	Net Debt.	Net debt per head.	4 p. c. interest on Net Debt per head.	Taxes, Customs and Excise.	Taxes collected per head.	Taxes collected from average family of five and purposes to which applied.			Year
							Purposes to which applied.		Total collected.	
							General	4 p.c. Interest on Net Debt.

* Estimated. ** 9 months period.

These figures go to show that the present administration has received vastly greater sums of money from the people of Canada than the previous administration. My object is to place the figures on record, and people can do their own analysing. I do not believe in attempting to analyse figures for the constituency I represent in this House, because they have the intelligence to do that for themselves. As it is a frequent custom of hon. gentlemen opposite to compare the records of the past government with the present government, I have decided to place on record two statements showing what amounts of money have been placed in the hands of the two governments respectively. For instance, my first statement shows the moneys entrusted by the people of Canada to the present Liberal administration for expenditures during twelve and three-quarter years, from 30th June, 1896 to 31st March, 1909.

Total receipts from all sources collected by this government during above period..	$823,867,836 55
Total amount borrowed, thereby increasing public debt, during period named..	152,817,890 29
Total..	$976,685,726 84

The other statement I desire to present to the House shows the moneys entrusted by the people of Canada to the late Conservative administration for expenditure during the 13 years ending the 30th June, 1896:

Total receipts from all sources collected by that government during above period..	$468,803,460 35
Total amount borrowed, thereby increasing public debt, during period named..	123,558,432 43
Total..	$592,361,892 78

The difference in the two totals above is $384,323,834. In other words, the present administration has had the control of nearly $400,000,000 more during the twelve and three-quarter years mentioned, than the total moneys controlled by the late Conservative government during the thirteen years preceding the change of government. To be exact, the difference referred to means an average annual amount of $30,-

143,045 which the present government has yearly been expending (down to the date of the last available figures, 31st March, 1909) over and above the average annual amount which the preceding Conservative government controlled for expenditure during practically a similar period. These figures I have taken from the public accounts, and I am satisfied they are all right.

There is another matter to which I would like to refer briefly. We are frequently told that Canada is a great country. Unquestionably she is possessed of great natural resources, of vast virgin wealth. But if she is going to be great, she is already on the highroad towards great and grave crises. We need not attempt to overlook that, because the fact is evident. Great internal questions will arise, and none more important perhaps than the conservation of our natural resources for the people, so that predatory wealth may not get loose among our natural resources, as it unfortunately has done to a considerable extent in the United States. Then we will have great issues to settle with our neighbours, and with other countries. Let me take the case of a great industry which employs to look after its interests a prominent legal firm, which knows the business of that corporation from the ground up. Now, if that firm should have some legal controversy with another firm, its solicitors will be able to look after its interests properly. Now to what extent are we moving in that direction? Very slowly, so far as I can see. It is a great pleasure to me to visit the campus of some of our universities and see the young men they are turning out. It is a refreshing sight to see the photographs of the faculties of our different universities. They are loaded with intelligence. The young men who pass out of those universities are absorbed, largely, into our commercial and professional life, while many of them leave the country. Now, Mr. Speaker, I would be delighted to see this government make some arrangement with the presidents of our universities for throwing a mesh around the graduating classes in say, arts and engineering, and what the sieve held back to throw some of them into our Archives, and keep them there for a few years under proper direction, investigating old treaties, &c. Sir, if we should do that it would return us our expenditure ten times, nay, a hundred times, more than such a service would cost us. Let us start in this country an engineering branch, an engineering board, as other countries have done. These men will be of great utility to the nation when important questions come up in this country for consideration. If we could breed such an investigating force into the life of this country, it would mean much for Canada—that is, if we are going to be a great people; of course, if we are not going to be a great people, it is unnecessary to look into the future. But I believe we should do it, and if we do, my opinion is there will in the future be less opportunity to make the charge that Great Britain has surrendered our rights in an attempt to appease some other nation.

I want to offer a few remarks regarding our outside service. A few years ago, previous to the last general election, we had the inside service placed under a commission. The outside service is still in the same old condition. The members of the inside service were advised that they were to receive an increase in salary previous to election. The outside service have not been so treated. Unfortunately for them they are not hived together in any locality, but I believe, Sir, it is our duty to place the outside service under a commission and to do it at once. If they have any rights, if they are entitled to increases, by all means let them have increases, but put them in a position in which they can be properly looked after. I occasionally visit the public accounts committee of this House of parliament and I see some things that are not particularly agreeable to me as a citizen of this country. I see officials of the outside service brought before that committee. I have in my mind at the present time an instance in which a gentleman who almost forgot his name when under examination by hon gentlemen opposite on this side of the House but, when he happened to be taken in hand by hon. gentlemen opposite it took almost twenty gentlemen to carry away what he had to give. Was that gentleman so seriously to blame? It is true that he gave his sacred oath that he would tell the truth and nothing but the truth, but I fear very much, Sir, that he juggled with the truth. His bread and butter was at stake with the political head of his department gazing into his countenance conveying the intelligence that if he should allow himself to give away any idea that should injure the government his official position would not be worth the paper on which it was written. Was that right? I do not care what government is in power, the system is wrong. Probably that man has a family whose bread and butter is at stake. Let us get these things right because I realize that political parties are drawn from the people of this country and that the same policy might result in the same effects. I am not going to make an admission of that sort, but it is probable and we want on this side of the House to see that method done away with.

We had the sight in this House some few weeks ago of no less a personage than the Prime Minister so entangled in the rules and regulations that he could not get

footloose in order to let the people of the city of Ottawa have their proper representation in this House. I am not going to say anything against the premier. I have no thought or desire to do it, but I am going to say something else. Where do the people of Ottawa come in? The criticism is too frequently levelled at public men in this country that they are not doing their duty. I would like to know what the people of Ottawa have been doing all this time. Has there been any effort on their part to have this matter rectified? As far as I can see there has not. I may be treading on dangerous ground but the spice of life comes to a man who steps out of the beaten track and freely expresses his views and I want the people of Ottawa to know my view of the matter. If that condition of affairs existed in the city of London there would be a few processions passing back and forth in front of the Prime Minister's door in Downing street, and I think that if we had that kind of energy shown by the people in this new country it would be better for the country.

I do not see my hon. friend the Minister of Railways (Mr. Graham) in his seat, but I want to offer him my condolences, because I think I can sincerely offer them, in the loss of the deputy minister of Railways and Canals. The business of this government is the biggest business in the country and it is an astonishing state of affairs that the largest corporation—the country itself—can afford to allow smaller corporations to take from them men of that character. I suppose it is done by paying them more money. I say it is regrettable that this gentleman should be allowed to pass out of the service of this country. I have had the pleasure of meeting him occasionally, and I feel that we had occupying this position a gentleman of the very highest ability and a credit to whoever selected him for the place. I have had a very high opinion of him and not only of him but of many others among the deputy ministers. I merely wanted to put myself on record in that respect. Now, Sir, I have nothing further to say and I thank the hon. gentlemen for the attention they have given me.

Mr. E. PAQUET (L'Islet). (Translation.) Mr. Speaker, with the year 1908 the whole world entered into a most difficult period for industry and commerce.

Throughout the economic crisis, Canada has been able to preserve unscathed her financial prestige, and the people at large are to be congratulated upon their steadfastness in the midst of numerous difficulties. Our financial institutions have, by their prudent, skilful and enlightened policy avoided economic disaster. They now require from the government the opening of new avenues for the extension of our trade, in order to be able to compete successfully against the organized effort of foreign nations.

Foreign trade is a sure indication of the progress or decadence of any nation. There can therefore be no financial question of more paramount importance than the choice of our commercial representatives in the different countries with which we trade.

On May 14, 1909, we had seventeen trade commissioners and six commercial agents abroad. Did those gentlemen possess the requisite qualifications for the promotion of our commerce? Are they in a position to enlighten us as to the best means of shaping the national effort on the newest lines of production and sale? The greater nations have commercial representatives stationed systematically in all civilized countries. They are the great commercial travellers of trade and industry. Such servants of the state must be active and disinterested instruments of our commercial expansion.

In every country with which we trade in agricultural or manufactured products, our commercial agents should be men of good education and well informed as to our natural wealth and economic conditions. To Canada, the markets of Great Britain and of the United States are at present the most important. But we have only four commercial agents in the British Isles, and none in the United States, in Belgium or in Germany. We desire to extend our trade with France, but we have only one commercial agent at Paris. Every country desirous of extending its trade relations should secure influential commercial representatives.

A magnificent future may be reserved to the foreign trade of the Dominion if we make an effort towards training young men for such service, and take care to send out only carefully selected persons.

Our universities taking, as they do, so constant an interest in the progress of the Canadian people, might undertake the training of young men for our commercial and consular service.

If we desire that our agricultural, forest and mining products should be disposed of to the best advantage, we should endeavour to improve and perfect the means of transportation. During the financial year 1908-9, the ordinary and special expenditures of the country amounted to $126,000,000, and the public debt was increased by $45,000,000.

Among the special expenditures, those incurred by the construction of the National Transcontinental were the most important; they amounted to $24,892,351 during the fiscal year. This year we will spend, under the same head, twenty millions, and during the fiscal year 1910-11, twenty-seven millions.

I desire to make a few remarks concerning the section of the Transcontinental be-

tween Quebec and Moncton. On November 29, 1909, the hon. the Minister of Railways and Canals made the following statement: 'According to Mr. Lumsden's estimate, the total cost of this section will amount to $26,935,902, exclusive of the Quebec bridge, the section leading to it and the terminals at Quebec. On November 13, 1909, $17,334,113 had been spent.'

The construction of the Transcontinental is of vital importance to the people of southeastern Quebec, and I hope the government will make all speed in completing the Quebec-Moncton section. Farmers whose holdings are situated to the south of our beautiful hills, have contributed to the construction of the Canadian Pacific railway and to the prodigious development of the west. They have really earned their right to a legitimate share in the advantages of our great national undertakings.

In my opinion, the government should have long ago constructed a railway through the southeast region of the province of Quebec in order to develop its natural resources.

Such a railway might have joined the Intercolonial at certain points and thus perfected our national railway. We have sunk more than 80 millions in the Intercolonial and the financial results have been deplorable. A line running from Edmundston, through the colonization townships of Kamouraska, L'Islet, Montmagny, Bellechasse and Dorchester and joining the Intercolonial in the county of Levis, might have secured financial prosperity to the government railway.

A railway through that country would give a vigorous impulse to colonization, agriculture and forest industries in the valley beyond the southern hills. That is a country where the producer requires means of communication with the consumer, the same rule applying here as in all outlying regions aspiring to be linked with the centres of commercial activity. The agricultural and forest wealth of the country to be opened by the Transcontinental railway between Quebec and Moncton does not appear to be very generally understood.

The people of the district will not be content with the Transcontinental alone. Between that railway line and the frontier extends a broad plateau richly wooded and very fertile. We are at present negotiating with the directors of the Quebec Central railway for a road running from St. George, of Beauce, to the Temiscouata railway. The Quebec Central Railway Company has performed patriotic work in the county of Beauce and in the Eastern Townships, and we hope that their efforts will prove at least as useful in the southeastern part of the province. The proposed line is bound to develop a very important and brisk

trade throughout the region and with Quebec, its natural market for agricultural products. When the Transcontinental and Quebec Central railways come into operation there the wealth developed in the border townships will be a revelation. In a new country, agriculture, commerce and industry cannot develop without adequate means of transportation which, for the most part, must be by rail.

The directors of the Quebec Central railway have made considerable sacrifices and they deserve government help for the extension of their system.

Let me once more state that the city of Quebec is our agricultural market. On the prosperity of the city of Quebec depends in a great measure that of the whole of the eastern portion of the province. We are desirous of making a national mart of the old historic city and we hope that the government will help us in our endeavour. Our object and our desire is to place it on an equal footing with the ports of Boston, of Portland and even of New York. Deep water wharfs with modern appliances should be immediately constructed.

Very important deputations have waited upon the government representing the necessity of the immediate construction of a dry dock large enough to accommodate modern shipping. Government is also in a position to understand that the present legislation concerning dry docks has fallen behind the requirements of trade. I hope the minister will be able to accede to the wishes of the representatives of the district of Quebec.

No generous effort should be spared to promote agricultural progress. As the hon. the Minister of Agriculture said on the 3rd March, 1909, 'Without scientific guidance, practical agriculture in our country and on this continent, cannot hope to make that progress which would be otherwise assured.' The establishment of an experimental farm in the district of Quebec would secure many necessary reforms and render still more popular the ideal of scientific agricultural development. I am convinced that in the course of the present session the government will ask the House for an adequate sum of money with the view of establishing an experimental farm in the eastern portion of the province of Quebec. By this means we would be enabled to appreciate the beneficial effects of the important resolution submitted on March 3rd, 1909, by my hon. friend the member for Kamouraska, with respect to agricultural experimental stations.

All the people of this country are greatly interested in the Intercolonial railway, but those who are particularly concerned in the administration of this great national railway are the people of the maritime provinces and of the Lower St. Lawrence val-

ley. It would take too much time, at the present moment, to inquire into the causes of a deficit that has reached the enormous sum of $2,300,000 between 1905 and 1906. At a time when all the important railways give large returns to their shareholders, the financial results of the operation of the Intercolonial railway are most deplorable.

I wish to make a few remarks concerning the advisabilty, or even the necessity of having a French speaking representation of the province of Quebec on the Government Railways Commission. On the 20th April, 1909, the government instituted a commission for the administration of the state railways. The said commission, specially entrusted with the administration of the Intercolonial railway is composed of four commissioners: Messrs. J. Butler, Deputy Minister and Chief Engineer of Railways and Canals, D. Pottinger, E. Giffin, traffic manager, and T. P. Bready.

Mr. Butler resides at Ottawa, and the other commissioners are stationed at Moncton. At the opening of a new era in the history of the Intercolonial railway, the government had ample opportunity to deal justice to the French-speaking section of the population, I have nothing to say against the integrity of the present members of the commission, but the complete elimination of the French Caandians and of the French language, in the composition of the commission, constitute a most serious grievance. It is a hardship that is sorely resented by the population of that section of the country, as it might imply the inferiority of the French race in Canada.

The Intercolonial railway runs through a portion of the province of Quebec and is doing there a large traffic. In the maritime provinces the Intercolonial railway runs through large centres where the French-speaking population is taking an important part in agriculture, in commerce and in industry.

The Intercolonial railway has been constructed with the money of the people of this country. The province of Quebec contributes its full share to the federal treasury and in the receipts of the road.

The French province of the confederation has paid large sums for the construction, the maintenance and the improvement of the railway, and in spite of all that, the government did not think proper to appoint a single French Canadian on that commission.

I submit that the presence of a French commissioner is a necessity to properly discuss the great transportation problem in the province of Quebec, to deal wih the question of rates, of operation, of reorganization of the staff, of appointments and dismissals.

The French Canadians are obliged to use the English language in their dealing with that commission. Can it be said that that does not constitute an injustice?

Several workmen on the road, French-speaking workmen, have been dismissed by the commissioners, and they complain of race prejudice; they are under the impression that they are victims to organized plots to lessen French influence, and they look to the commissioners as oppressors of their nationality. Surely the commissioners are inspired by higher principles and purer motives, but nevertheless, it is with a sense of great humiliation that I see that the French race and the French language have been completely ignored in the composition of a commission appointed to deal with questions in which thousands and thousands of my fellow countrymen are interested.

I wish with all my heart that the administration of that commission will be successful. It should be composed of men having a thorough knowledge of the economic, and social and commercial conditions of the country, but I submit that we could find amongst the French Canadians men fully qualified to fill that high position.

All I am asking from the government is that they adhere to the spirit of the contract of 1867. I do not suppose that we could find in this House any one disposed to deny the rights of the French language, but it seems to me that the demands of our national life are not always well understood.

Two nationalities equally proud, equally strong, equally intelligent are engaged in the same progressive path, and happily, thanks to our constitution, all British subjects are guaranteed equal rights.

The French race has representatives in the federal cabinet, in the Supreme Court, in the Railway Commission, in the National Transcontinental Commission, and in all the great public institutions of the country.

In the provincial government of Quebec, in the courts of the French province the English speaking minority is also fully represented. The French speaking population of Ontario have a representative in the government of that province. In the name of justice, I say that the French Canadians should be represented in a commission appointed to deal with questions in which they are greatly interested. The appointment of a French speaking commissioner would be in the interest of the public and also in the interest of the employees of the road.

This exclusion of a French representative on the administrative board of the Intercolonial railway tends to strengthen a feeling that cannot be but distasteful to our nationality always so generous towards other nationalities. Unhappily, some people in this country are under the impression

that there is in Canada a dominant race, whose representatives are controlling all the highest positions and an inferior race, whose representatives are hardly fit for second rank.

I have exposed to the House a serious grievance and I hope that the government will see the necessity to appoint a French Canadian on the administrative board of the state railways.

We have just learned that Mr. Butler, the president of the board has resigned and the time seems to be well chosen to ask for justice. Here is a most significant article published by 'La Patrie' yesterday:

Who will succeed Mr. Butler as deputy minister of Railways and president of the Intercolonial Railway Commission?

It is very likely that the government will avail themselves of the departure of Mr. Butler to appoint a French Canadian on the Intercolonial Commission.

A good part of that road runs through our province, and is handling the traffic on the south shore between Quebec and Montreal. It seems to us that it would be only just to appoint a French Canadian on that board of administration.

We are inclined to think that Mr. Graham, so well known as a broad-minded minister, will be glad to accede to the wishes of our population.

I think my request is a just one and in line with the feelings of Canadians of all nationalities desirous of securing peace and prosperity to their country by mutual respect for all.

Mr. J. P. TURCOTTE (Quebec county). (Translation.) Mr. Speaker, it is a real pleasure for me to acknowledge that the hon. member for L'Islet (Mr. Paquet) has exhibited much moderation in his requests; it is a good point, not only for himself, but also for the party to which he belongs, a party from which, generally, we cannot expect such broad-mindedness and such a sense of justice.

I do not take into account the few last sentences uttered by my hon. friend. He has allowed his patriotic passion to get the best of him and he probably went further than he intended to go. In criticising a simple act of administration he, unhappily, said more than what he had in his mind and he has given the impression that there is amongst the members of this side of the House a preconcerted intention of humbling a section of the population of this country.

Mr. PAQUET. (Translation.) My hon. friend will allow me to tell him that my remarks were never intended to carry that impression.

Mr. TURCOTTE. (Translation.) I accept the explanation given by my hon. friend; it does him credit, and I will drop the matter. As for the other remarks of the hon. member for L'Islet, I think they are entirely in line with the ideas of the majority in this House, a majority that also represents the majority of the electors of the country.

In his opening remarks, the hon. member urged the necessity of further extending our commercial relations with foreign countries and of organizing a thorough system of consuls and commercial agents. The thing exists already, and though it may not be as perfect as the same institutions in other great countries, we have good reasons to believe that before long Canada will have its own diplomatic service for administrative and commercial purposes, and that legislation to that end will be submitted to the sanction of the electors, through their representatives in parliament.

That question is not a new one; it has been discussed before. I remember that when it was proposed to have a Canadian attaché at the English embassy in the United States, to watch Canadian interests in that country, the right hon. Prime Minister stated that the time had not come yet for a change. I do not think it would be proper for me to go beyond that statement made by the man entrusted with the administration of this country.

The hon. member for L'Islet, speaking of the National Transcontinental, said it was a national, a necessary and an indispensable enterprise. That admission on his part may go a long way to atone for a lot of sins of a party that for years has assailed the policy of the government in this matter. To-day it is readily admitted that the construction of that road must be pushed to completion as rapidly as possible, and that, as a consequence, it is necessary to provide the means, that is to say, the large sums without which it is not possible to complete a work of such magnitude.

I am totally in accord with the hon. member for L'Islet when he states that the progress of the city of Quebec is essential to the progress, the expansion and the development of eastern Canada. It is indispensable that we should have a connecting link between the city of Quebec and eastern Canada, and the construction of the Quebec bridge is an absolute necessity for the commercial and industrial development of the country.

I admit that a serious accident has occurred, and I have even heard an hon. member on the other side jeering at the matter. But an accident can be overcome, and the more so with a government such as the one which presides over the destinies of the country. The greatest misfortune can then be overcome, and that is the reason why, at this very session, we have in the estimates a vote of one million dollars for the preliminary disbursements entailed by the reconstruction of the Quebec bridge. I have not the least doubt that the money will be

voted without discussion, as it is the first step in the improvement of our transportation system.

The honourable member for l'Islet has also criticised the management of the Intercolonial. I feel rather inclined to share his views; still, if there have been deficits, it is not owing to the Liberal government's policy, but to that of the preceding Conservative governments. Since many years, the tradition of deficits has been transmitted by the Conservative governments that consecutively managed this line. A known fact is, that much efforts are being done towards covering those deficits, and amending the management generally.

I do not pretend that the work of reform undertaken by the hon. Minister of Railways shall at once put an end to the deficits of the Intercolonial; but, what I believe, and what seems to be the prevailing opinion of the moment is, that the information of a special commission such as the one appointed, is bound to bring the railway on the basis of a financial business. I do not mean to say that this commission has given everybody satisfaction, not in the manner in which the line has been managed by its members—I do not pretend that perfection has crowned the first efforts—as perfection does not exist in the world—but I state that under the circumstances, the creation of a commission formed of four members to manage this line constitutes a remarkable progress compared to the old system; it shows how anxious this government is to put an end to a very bad management.

The complaints on the members of this commission were filed independently of the channel of the member for l'Islet, and that, long ago. It is possible that the government met with unavoidable obstacles in the pursuance of its policy. There is a favourable occasion to redress a mistake or do what has been, so far, forgotten, and we think, on this side of the House, that the government will rectify such mistake or do what had been forgotten. We trust the government to be very just, and we believe that if wrongs exist, they shall be promptly redressed, since a favourable occasion is presently at hand. As regards the formation of this commission, we are all of opinion—not only the French-speaking members, but the English members also—that this board of management for national railways should contain at least one French commissioner. This request was often made in my presence, and I know it is the government's intention to grant it.

As a member of an agricultural county, it seems to me, that when the times comes to furnish the government with the necessary sums to administer the affairs of the country for the coming fiscal year, it is not strictly urgent to study, to weigh all the theories concerning free trade and protection, or to go backward to see if the methods of the past were ahead of or worse than the present. The people, whose attributions are to decide about these matters every four or five years, determine to the best of their judgment what party is more fit to hold the power. Now, one party has the supremacy, then it is the other. In certain details the methods are somewhat different; practically, I believe that the fundamental principles of the administration are the same with either party in power. What is certain, since 1896, when the actual government took the reins, the people thought the public affairs well directed since the same men were elected three or four different times to attend to public interests. Nobody, I think, except those whose ambition is to see the power come to their side—nobody, I think, amongst the people, has complained that the management was bad or dishonest and contrary to the pubic interest.

In the objections filed by the members of the opposition, what is most remarkable is that they each have their sore spot, and think they have discovered something crooked in the management of this country or region. But, as regards the country generally as a nation, the depression which was talked about does not exist either in commerce or in the industries, and as far as the citizen's pride is concerned, nothing shows that the people is wrongly governed nor that he has reasons to complain of the administration. It is all the contrary, it seems that the commerce is taking much extension, that industry is more active and makes much progress and that the people is generally satisfied of its lot. I do not pretend that this state of affairs is totally and exclusively due to the government; I don't belong to the class of people who believe that the governments can make the people happy or unhappy, prosperous or not; but on the other hand, I believe that in a society such as ours, where aspirations are apt to cause frictions and sometimes much dissentions, much credit is due to those who hold the power to administer the business of this immense country without bringing conflict amongst these different aspirations, but on the contrary to help to the harmony which contributes to the general welfare. It is the state of affairs that we witness actually, and as far as the agricultural counties are concerned, those on which the government is supposed to bestow more attention, I feel satisfied that things are going altogether well.

I know very well that the supporters of the protection policy who sit on the other side of the House would like to see a higher tax put on foreign industrial products. They are of opinion that it would be an issue to develop our national indus-

try, and that, consequently the farmers would have the benefit of it. The interests of the greater number is to be taken into consideration would be the answer to that argument which seems to be somewhat catchy.

All the question would be to find out whether the producers are more numerous than the consumers. As the industrial class is limited, and the consumers account for nearly the entire population, a financial standing for this country should be such as to give satisfaction to the larger portion of the population and to prevent any complaint from the consumers. It is an unquestioned fact that when protection was in full swing, at the time when scandalous fortunes were accumulated by the owners of industries, it is exactly the time when the mass of consumers were most unhappy, it was at that time also that the farm products were sold at the lowest figure, this statement is supported by the statistics.

I therefore, believe that the government, while imposing taxes sufficient to cover the expenses of administration without favouring the manufacturer at the expense of the consumer acted wisely. The great powers of Europe have been spoken of ; it has been stated that they were surrounded by protection, and in spite of that, strange to say, the money obtained that way by their government has been spent at the expense of the welfare of the public. For instance—and I am going to deal now with the question of militarism, the plague of Europe—which will soon be put forward as a stepping stone to frighten the people of this country, is it not a fact that the largest part of those incomes levied in order to encourage industry, has been spent in huge armaments, for the maintenance of troops brought together by compulsory service laws leaving their country in a state of poverty, after spending foolishly to a certain extent the money paid in by the people.

Mr. PAQUET. (Translation.) Does not the honourable member believe that the militarism they intend to organize in Canada will come to a result similar to that of Europe?

Mr. TURCOTTE. (Translation.) I lay down the principle so as to come to a conclusion, and I will reply that the militarism which is in existence in old countries, and which is an evil, has been treated in this very House, by the hon. the Prime Minister, in the famous and historical sitting of the 24th March, 1909, as a plague, of which effects he would protect this country. That was an unofficial statement made under such peculiar conditions and at the very same moment when the question of the introduction of a new principle of administration was under public consideration, that it must live, not only in the memory of those who then heard it, but in everybody's mind as a solemn pledge on behalf of the government headed to-day by the hon. the Prime Minister. That is exactly what was heard here about that subject, and which at first sight resembles the policy followed in the old countries, but which is entirely different. In fact, nobody has called for a compulsory military service to be established for one, two or three years for certain terms. Even, as concerns our militia, although every man from 18 to 60 years is legally bound to military service, the government does not force anybody to join the army nor does it have any drawing lots except in case of war, when the voluntary recruit is insufficient.

As for the navy service, the obligation will not reach such an extent, because under the proposed law voluntary engagements shall be made, even during war, though, as I stated, it is certain that they will not make use of this to frighten our population.

The question of plebiscite which was brought out in order that the people might express an opinion on the subject, and they supposed they were doing much by asking that the people be heard on the matter. The people of this country are not in favour of a plebiscite; it does not derive from the principles of our representative government. The nation is represented in the House by members chosen by itself, and as long as the latter are entrusted with its mandate, they enjoy an unlimited freedom, as long as they remain within the limits of the constitution. Some years ago we had a plebiscite on the question of alcoholic beverage. People wanted prohibition. The people's verdict is known. It would seem that the people would be in favour of prohibition, and what was the result? Nothing, and who has complained because the government did not see their way clear in prohibiting the sale of alcoholic liquors?

It cannot be gainsaid that such an appeal to the people on a particular issue would not be strictly in harmony with the principles of responsible government. Such a procedure would, to my mind, be only a means of misleading public opinion.

What would likely be the result were we to have a plebiscite on this question of naval defence? Hon. members opposite would flock to their various constituencies anxious to win the people over to their views, that is to say, to prevent the establishment of a navy. They would repair to the various parishes and villages, however distant, there to work on the prejudices of the people and fill their hearts with the fear of conscription, of warfare, and of warfare not on land, but on sea. They would persuade them that a heavy expenditure would be necessary, and that accordingly bankruptcy and ruin would be inevitable. We all know what effect

such appeals are apt to have on people's minds. I am satisfied it would bring about a state of things more fraught with danger than any witnessed since confederation. And herein would lie the danger: Supposing that in answer to that plebiscite a great majority of the people should declare themselves opposed to the building of a navy, that would not deprive the representatives of the people, in parliament assembled, of the right to ignore the verdict of the people and to estabish a naval service despite the hostile attitude of the people. Such might be the possible outcome of a plebiscite. Even should the people take a stand against the establishment of a navy parliament would in no way be deprived of the right to make provision for such a service and carry out such a measure. As a result, there would be much excitement, and widespread uneasiness.

Let me now take up and deal briefly with another matter. There is much cause for rejoicing in going through the estimates for 1910-11. When submitting last year the budget to the consideration of the House, the Minister of Finance did so not without many misgivings: he was not satisfied with the outcome of the current year's finances, as the revenue had fallen short of his expectations. A financial depression was making itself felt at the time, not only here, but throughout the world, and in consequence, the customs receipts had fallen. This year such fears no longer exist, and it is with genuine pleasure that the House and country have learned of the great improvement noticeable in the business of the country. Accordingly the Minister of Finance has thought fit to appropriate larger sums to various purposes and to provide for certain unavoidable and urgent requirements.

The hon. member from L'Islet has referred to the Tanscontinental. Well, $7,000,000 more will be expended this year in this connection. Last year, $20,000,000 were expended on the Transcontinental; this year, $27.000,000 will be expended for the same purpose. Further, $1,000,000 will be expended on the Quebec bridge. Toward the incease of the militia force, $2,000,000 more are provided this year. Toward the establishment of a marine, $3,000,000 appear in the estimates. That makes a total of $13,000,000, over and above our previous expenditure.

It is contended that the National Transcontinental is an undertaking which cannot be dispensed with; but could the same be said of a navy? There is no possible mistake on that point, such an expenditure cannot be dispensed with. It will be effected, and I think that the people of Canada, and especially the farming community, realizing what our requirements are for the time being, will gladly contribute their share towards providing for the naval defence. And why? Because the necessity of such a service is asserted by those faithful trustees who have held office for a number of years and know what is required just now. The farming community will approve of the expenditure made for the purpose of naval defence as heartily as they have approved of the building of the Transcontinental. The House has not forgotten how strenuously hon. gentlemen opposite criticised the proposal of such an undertaking. At the time, in 1904, these hon. gentlemen stated that the country would be ruined on that account; that Canada was not in a position to spend such a large sum. To-day, not only are they all agreeable to it, but they even go so far as finding fault with the government for not spending enough in this connection.

Mr. Speaker, we should not be forgetful of the prestige gained by our statesmen during the many years they have been in office. The right hon. Prime Minister and the Minister of Finance have been administering their departments ever since 1896. They have shown themselves to be loyal servants of the people. They have creditable records to show, and that is good reason why the people should trust them whenever they decide on taking a course. That question of the naval defence of Canada did not spring into existence on that memorable day of the 29th March, 1909. It was brought before the meeting of the Colonial delegates, in London, in 1902, and later on, in 1907, a complete scheme was submitted. The only question left in abeyance was the manner of providing the necessary funds. While some were of opinion that a money contribution should be forthcoming, and while others favoured the gift of warships, a third party among whom the right hon. Prime Minister, in 1907, were satisfied that the matter of naval defence should be left in the hands of the various colonial governments in accordance with their means, and under their own responsibility. In other words, the fleets were to be made up of vessels built, if possible, in the various colonies, with the labour and material available to them, and equipped with sailors recruited locally.

That proposal, Mr. Speaker, was patriotic in its inspiration. The other day, I heard the hon. member for Jacques Cartier (Mr. Monk) and the hon. leader of the opposition (Mr. R. L. Borden), state that the right hon. Prime Minister was inconsistent, having in 1907 informed Mr. Smart that he was opposed to the proposal of a contribution either of ships or money. As a matter of fact, the Prime Minister stated that he was opposed to contributing either money or warships to be handed over to the imperial authorities, as he wished that the various self-governing nations of the empire should be left free to organize, control and manage

their various naval services as they thought fit. That is what we are doing to-day, and I see no inconsistency in such a course.

To my mind, the expenditure which we are about to incur towards the establishment of a Canadian navy is not only in accord with our best interests, but also with the aspirations of the Canadian people. For, say what you will, in the more or less distant future, the ties which bind us to the mother country will become more and more distended. And, inevitably, a time will come, twenty or fifty years hence, may be later, may be sooner, when these self governing nations having little by little become more independent at home, will as it were through necessity, break the feeble colonial tie binding them to the mother country.

Great changes are wrought on the face of the earth in the space of a quarter of a century and great countries even are parcelled up. Of late years, and since confederation, we have seen Spain, for example, deprived of important dominions; we have seen great countries like France lose part of their territory. And we would accept as a foregone conclusion an everlasting state of dependency in regard to another nation, whatever its policy and whatever its destiny? Such is not my belief; and without wishing that such changes should come to pass, we should legislate not for to-day nor for tomorrow, but in the interests of future generations.

When the fathers of confederation, through an effort of genius, evolved the constitution under which we have the privilege of living to-day, there was opposition forthcoming; but these men foresaw the future, though perhaps not realizing the fullness of the resources of Canada. But they had that deep insight with which superior men are endowed, and they knew that a day would come when Canada would increase its territory through the acquisition of the great expanse of the far west. And those things came about. At the time nobody suspected what great riches lay within Manitoba, the western prairies and British Columbia. Since 1867 those various territories have been incorporated in this great Dominion of Canada, and possibly to-day the main strength of Canada lies in its western provinces.

Such facts of recent occurrences in the history of the world should induce us to look ahead and unhesitatingly make all necessary sacrifices towards protecting ourselves against any encroachment on our national territory. I certainly am of the opinion that a vote of $3,000,000 to start the building of a navy is in no way extravagant. It is not proposed to build a large fleet. If I rightly grasp the scope of the estimates submitted to our consideration in regard to this matter, that amount of $3,000,000 is required to make provision for naval defence, that is to say, not only the purchase, building and maintenance of ships, but also the maintenance of the dock yards at Esquimalt and Halifax, the building and maintenance of training schools for sailors. Now, with only $3,000,000 at our disposal, it seems to me we would not be in a position to do very much, we would this year have barely an amount sufficient to improve the ports of Esquimalt and Halifax, and possibly purchase a training ship for the Pacific, as was stated, to make a beginning in naval instructions. Nothing of that should cause any uneasiness in this country.

Our revenue will aggregate over $100,000,000 this year; so it is only 3 per cent of our total revenue that we are appropriating for this service.

It has been contended that other services would be depleted on that account. Well, let me show as against that expenditure of 3 per cent what we propose to spend for the benefit of the farming community. The estimates for this year exceed by $165,500 the amount voted last year for the same purpose. In 1909, $948,500 were expended; this year $1,114,000 are asked for, which represents $165,500, or 17 per cent more than last year. It will be seen from this that the farming community are not lost sight of.

The hon. member for l'Islet felt rather uneasy over the experimental farms. By referring to page 42 of the estimates he would have found that the Minister of Agriculture has put in, as provision for new experimental farms, an amount of $110,000 and still another amount of $55,000.

Mr. PAQUET (Translation.) Is that for an experimental farm in the vicinity of Quebec?

Mr. TURCOTTE (Translation.) I say that there are two amounts put in, in the first place, $110,000 for experimental farms; and, in the second place, $55,000 to make provision for the establishment and maintenance of additional farms.

Sir, this is an addition of $37,000 to the appropriation of last year, which only amounted to $128,000, whereas they aggregate $165,000 this year. This sum of $37,000 has not been put in the estimates without a purpose. I have even heard the Minister of Agriculture stating in this House that he approved of the establishment of an experimental farm in the province and district of Quebec. Though I am not aware of the program of the government—because these appropriations have not been voted and the minister will have to give explanations on that point—I think it is generally understood that a large sum will be placed at the disposal of the Department of Agri-

culture to enable them to establish this very year an experimental farm in the neighbourhood of Quebec. We do not know where it shall be located, but the government will let us know what their intentions are. We have always trusted the government statements and justly so because they have always kept their pledges.

In conclusion, three per cent of the revenue for the naval service and an increase of 17 per cent for agriculture; such an allotment showed that the government is well aware of the general interests of the country and know how to apportion the funds to serve public interest.

Mr. Speaker, I have taken more time than I intended. To conclude I shall say a few words about another public service. I mean the Marine Department and specially the deepening of the St. Lawrence river from Montreal as far as Father Point. Large sums have been placed in the estimates to further that end. Firstly, there is an amount of $800,000, and then another amount of $250,000. The government have been blamed on account of the deepening of the river above Quebec. I frankly believe that the further ships can go into the interior of the country the better it is for trade in general and that if we could do so, we should make Montreal the terminal point of our big ocean liners. But I am one of those who think that we should in the first place render an efficient and as safe as possible the service of sea-going steamers beween Quebec and the ocean. Until now Quebec has been the terminal port of large ocean vessels. Never a man-of-war of large tonnage has ventured in the channel beween Quebec and Montreal. On the other hand, we know that there are dangerous spots below Quebec such as St. Roch's crossing. Works must be done there, and so long as there is not a depth of 30 or 40 feet at low tide, it is useless to dig the bottom of the river and to try and have a depth of 35 feet beween Quebec and Montreal. I hope that the government will yield to the desire that has been expressed and that part of the sums appropriated this year will be expended in the necessary deepening of that part of the river which extends from Quebec to the seaboard.

In concluding my remarks and while I ask the House to excuse me for having taken so much time, I must say that I think I have played my part, however unimportant it be, in the solution of one of the most vital problems of administrative machinery. Because when it comes to a matter of dollars and cents everybody is concerned. All are called upon to play their part.

The Minister of Finance and the ministry in general must be congratulated for having met the largest expenses we have incurred since confederation, amounting to 127 millions, without adding anything to the taxation. That is the best evidence that the present government are worthy of the mandate they received from the people at the last general elections.

Mr. JAMES ARTHURS (Parry Sound). Mr. Speaker, I regret that my imperfect knowledge of French prevents me from answering the speeches which have been delivered by the two hon. gentlemen from the province of Quebec who have preceded me. There are, however, one or two matters which I wish to bring to the attention of the members of this House. Shortly before the Christmas holidays, the hon. member for West Peterborough (Mr. Stratton), made a very strong argument in this House in favour of an export duty on pulp wood. He demonstrated that this is one of the largest and growing industries of Canada, that we have practically the only large pulp wood areas in America, and that these should be preserved for our own Canadian people. The hon. member, however, is mistaken in the remedy he proposes, and I may say he is a very recent convert to the policy of manufacturing wood products in Canada.

The Conservative party at Toronto, then in opposition, tried for many years to have regulations made to have all logs cut on government lands manufactured in Ontario, and through their efforts the reform government were at last forced to adopt regulations to that effect. I believe that a regulation of the provincial government along the same lines should be made with regard to pulp wood, but I feel that any action by this government would be ill-advised, and might lead to tariff reprisals by other nations. In any event any action taken should apply to timber or pulp wood taken from government lands only. The settler who takes out a small quantity of pulp wood, or tan bark yearly, either in the course of clearing up land, or to add to his income, during the years he is engaged in making a home for himself, should have the chance to sell in any market, as otherwise the pulp mill or tannery near him can make prices to suit itself, and naturally these prices are lower than when there is outside competition.

In this connection, Mr. Speaker, I would like to call the attention of the House to an injustice suffered by the people of the county I have the honour to represent, and the people of northern Ontario generally. This part of Ontario is a large producer of hemlock bark and markets many thousands of cords annually. Some years ago, a tan bark buyers' association was formed and the price was fixed by them, as they supplied all the large tanneries in Canada, and in fact were the tanners themselves acting under another name. As Ontario bark could not be exported owing to an order in

council of the provincial government, these men had matters entirely in their own hands, and reduced prices accordingly, offering only a price which would ensure a sufficient supply. But they were not satisfied, and so came to this government in 1897 and secured the removal of the duty on Quebracho extract, or had this extract added to the list of free imports. This extract is manufactured or extracted in Mexico and South America by negro labour at a very low cost, and makes a cheap substitute for hemlock bark, but makes an inferior leather. At present some Canadian tanneries especially those manufacturing light upper leather use this extract only. The United States government has a duty of ½ cent per pound. This government had a duty which should never have been removed. There were about 19,000,000 pounds of this extract imported last year into Canada, the duty upon which would have amounted, at ½ cent per pound, to $95,000, or probably equal to about $2 per cord on the amount of bark used by Ontario tanneries. Through the increased use of this extract, the situation became so serious for the tan bark producers of Ontario, that representations were made to the provincial government showing that there were about 40,000 cords of bark unsaleable at that time in Ontario, and the Ontario government passed an order in council allowing tan bark to be exported for one year. This has since been extended for a second year, but the tanners are at present endeavouring to have the export prohibition renewed, and we have the spectacle of a tanner, who, according to his own statement, is thankful that he does not use a cord of bark, endeavouring as an officer of the Tanners Association to have this prohibition re-imposed.

However, while this concession of free export gave a measure of relief to bark owners, where the tan bark could be shipped by water to the United States, the shipper by rail is in almost as bad a position as before, as he is met by an almost prohibitory rate by rail to American points. From the point where I live, the rate to Niagara Falls is 8½ cents a hundred pounds, the distance being about 200 miles. The rate to Buffalo, 18 miles further, is 18½ cents, rather more than double and in addition there is a shunting charge at Buffalo of $5 a car or 50 cents a cord. In all, this railway discrimination is equal to a charge of $2.80 against export to the United States. I am not able to say whether or not our statutes permit the Railway Commission to regulate freight rates between Canada and foreign countries. If they do, this matter should be looked into by the Railway Commission. If the law as it at present stands does not permit them to oversee rates between Canada and the United States, the law should be amended.

Now, Mr. Speaker, it is unfair that the lumberman or settler who produces this tan bark should be deprived of the protection to which he is entitled against negro or coolie labour which is employed in producing this substitute. Surely the tanner who has a large measure of protection on his leather, and is allowed to import hides free of duty, has no reason to complain, and can afford to allow the same measure of protection to the labour of others that he demands for his own. At presnt, thousands of cords of bark are being wasted annually, the lumberman simply leaving the bark in the woods to rot, and taking out hemlock logs for lumber. This is surely a poor way to conserve our natural resources, and I think it is the duty of the government to look fully into this matter and remedy it at an early date.

A great deal has been said during this debate about the increase of our revenue, and I would like to say, Mr. Speaker, that there is no part of Canada that to-day is paying as much per capita to the revenue of Canada as Northern Ontario. That country affords a great market for Canadian manufacturers and there is no doubt that the mines of that portion of Canada are doing, and have done a great deal to make Canada known to the world, and have been a direct means of inducing many persons to emigrate to this country, and of bringing in capital. Yet, in spite of these facts, the government has done little or nothing to promote the interests of this part of the Dominion. Towns and villages in other parts of Canada having a postal revenue of $700 to $1,000, and a small and practically stationary population, get $30,000 to $40,000 post offices, while towns in Northern Ontario with a revenue ten times as great, and four or five times the population, rapidly growing, are left without a building of any kind.

We have seen wharfs built at $20,000 to $40,000 where there are perhaps one gasoline and one small steam launch, and no water, while the lakes and rivers of the section I have mentioned are left without any such accommodation or at most have small grants, though many have regular steamship lines.

The Temiskaming and Northern Ontario railway should be extended to the Georgian bay or to Toronto, and branches built to open up new territory, but while this government can find millions for certain roads either to build or bonus, they have refused to make a contribution of any kind to the Ontario government to assist in building this railway, which is of so much benefit to Canada as a whole.

Then we have the Georgian Bay canal,

which would benefit the whole of Canada, and particularly that northern section. Hundreds of thousands have been spent on survey. The different ministers have frequently stated that they are convinced that it is feasible and should be built. The right hon. Prime Minister, in an address given a few days ago in Toronto, spoke of it as one of the great works of the future. But I can tell the government that the people are tired of such speeches. They want the description changed, so that we can speak of the Georgian Bay canal as one of the great works, not of the future, but of the present.

Now, Mr. Speaker, this government spent millions to open up the Yukon country, and yet, the annual output of minerals in northern Ontario is greater than that of the Yukon ever was, and more men are employed. Millions of dollars worth of timber is being lost annually for want of railway facilities. Some of the finest land in Ontario is in the clay belt of northern Ontario. When is this government going to open up this section, and when will they give it the fair treatment it deserves? With a large and growing revenue no reasonable excuse can be offered, and the ministry should at once look fully into this matter and accord this portion of Canada the fair treatment it deserves.

Mr. C. J. THORNTON (Durham). Mr. Speaker, I intend that my remarks shall be brief in dealing with some of the questions which are pertinent to the present debate. There has been a disposition evinced on the part of hon. gentlemen, and indeed frankly expressed, that this session of parliament might be shorter than some of its predecessors, and while that is commendable, I believe it would be a great mistake that any action should be taken which might choke off discussion on the important subjects which we have to deal with. Let me say that I was pleased with that part of the address of the Minister of Finance in which he rejoiced in the prosperity of Canada, and that feeling is participated in, I am sure, by every member of the House and by every true Canadian. But, the cause of that prosperity ought not to be lost sight of. I believe that all wealth lies in the product of labour. While there may be wealth in the soil, wealth in our timber and mineral resources, wealth in our fisheries, yet these natural resources are valueless until labour is put into their development. It has been well said by the hon. member for Norfolk (Mr. McCall) that we must not forget the toilers who have produced the prosperity of this country, and for my part I believe that all legislation should point as much as possible in the direction of enabling the toilers of Canada to enjoy the fruits of their labour to the fullest extent. When the Liberals were in opposition they laid down a very excellent policy with respect to the lands and minerals of Canada, but unfortunately when they obtained power they did not put it into practice. Previous to the year 1896, the avowed policy of the Liberal party on the trade question was a policy of free trade, and the right hon the leader of the government in 1893 declared most emphatically that the Liberal policy was a policy of free trade which he qualified as 'free trade as they have it in England.' One cannot help but wonder what would have been the result to Canada had the Liberals when they came to power put their free trade policy into effect. Even the very preaching of it tended to breed annexationists in Canada and to make Canadians lose faith in their country. There was a time indeed when the Liberal party did look to Washington, as we were told by its former leader, the Hon. Edward Blake. If the Liberals meant what they said before they came to power, why did they not put their free trade policy into effect after 1896? Indeed the only fair conclusion is that during all these years the Liberal party and its leaders were deceiving the people. Do we not know that the right hon. the Prime Minister, before his party came to power, declared most emphatically that the taking of $36,000,000 in taxes from 5,000,000 of a population was robbery, and yet we have the Minister of Finance boasting now that he takes $97,000,000 in excise and customs duties from 7,000,000 people. To say the least of it, that is inconsistent. Now, Mr. Speaker, I was somewhat amused by the remarks of the member for South Ontario (Mr. Fowke) and by the hon. member for South Oxford (Mr. Schell), who both rejoiced at the tendency to free trade which they found in this country, but where they found it it is difficult to guess. These very gentlemen live in towns that have been built up and made prosperous and thriving by the protective policy which was inaugurated by Sir John A. Macdonald in 1878 and which continued in effect to 1896. The town of Oshawa has been built up and made prosperous by the national policy inaugurated by the leader of the Conservative government in 1878 and which he declared was the true policy for building up industries in towns and cities and creating large industrial centres of population in Canada. Not only that, but it meant the home consumption of large quantities of agricultural products. It meant that our producers and consumers were brought closely together, and it did effect the object which the leader of that government had in view. I am pleased to say that that policy to a large extent has not been interfered with by this government, for we may talk as we like on that question, but there are no free traders in Canada to-day. We are all protectionists without doubt. Go through the tariff

lists, and protection bristles on every page. In the case of the great majority of the articles, protection stands out as the leading feature.

Another question, which is of importance, is that of expenditure. Previous to 1896, hon. gentlemen then in opposition and now on the government side declared that $40,000,000 expenditure was excessive. In thirteen years, however, they have multiplied that expenditure by three, so that, under their administration, it is now 300 per cent greater than in 1896. Where does all the money go? No doubt there are large public expenditures necessary, but it is equally undoubted that a great deal of the money is wasted in such useless undertakings as the Newmarket canal and the Sawdust wharf. Just at this moment let me draw attention to a matter which was discussed here some two years ago. I refer to the expenditure in connection with Cobourg harbour. In the year 1906, because of the growing business of the Grand Trunk railway system, it became necessary for that company to have a coaling harbour on the north shore of Lake Ontario, and the company, at its annual meeting, decided to have such a harbour. The directors began to examine into the feasibility of instituting a ferry service, which would carry thirty or forty cars across from a port on the south shore to one on the north shore. The only port on the north shore which they saw suitable was the town of Port Hope, which has a safe harbour and which is the terminus of the Midland system of the Grand Trunk railway. But as soon as the politicians found there was to be a port selected on the north shore to accommodate the car ferry, they got busy. They interviewed the government and so did the Grand Trunk railway. The Grand Trunk railway wanted the government to make Port Hope the harbour for the car trade, but the politicians had the greater pull and the government decided on Cobourg. That decision was taken in the face of the evidence given by the expert brought by the Grand Trunk railway—a gentleman who had charge of the ferry between Milwaukee and Grand Haven on Lake Michigan. He made a close examination of both Cobourg and Port Hope, and decided that Port Hope was the better fitted of the two and that it could be made a safe harbour with much less expense. The government, however, decided on Cobourg, and they gave as a reason that the expenditure there would be much less. I can quote the words of the then acting Minister of Public Works (Mr. Fisher) and also the words of the Finance Minister. They said that their decision was arrived at purely on the ground that it would cost much less to make a suitable harbour at Cobourg than at Port Hope. They said it would take $145,000 to make Port Hope suitable and only $67,000 to properly equip Cobourg. But what are the facts? The expert sent by the Grand Trunk railway to examine the two harbours decided in favour of Port Hope. He said it would cost less to make Port Hope suitable than it would Cobourg. The government, however, sent their own engineer, and he estimated that Port Hope would cost $145,000 and Cobourg only $67,000. But what has been the result? The result is that on Cobourg harbour they have already spent $195,000, and the probability is that over $200,000 will be required to make it suitable, and even then it will never compare with the harbour which Port Hope would have furnished at much less expenditure. That shows that the government have had something else in view besides the public interest. If time would permit, I could furnish the evidence that it was purely political pull which caused the government to decide as it did. That is what I object to in the administration of our public affairs. Were the true conditions of affairs known to the people, they would give a strong condemnation of this reckless extravagance. Expenditures should be made on the merits of the work required and not because of any political pull. The requirements of the people should be the first consideration, and if our public expenditures were made on that principle, they would be largely decreased. I hope, Mr. Speaker, that the discussion of these questions that have come up in connection with the budget debate will have a salutary effect on this government.

Mr. W. H. SHARPE (Lisgar). Mr. Speaker, I had not intended making a speech in connection with the budget this year, and even had I undertaken to discuss the general subjects presented I fear I should only have had to repeat what has been already said. But I have a very important matter on which I wish to speak for a few moments, and, as you have always allowed such great latitude in the budget discussion, I take this opportunity of referring to the matter. The subject on which I wish to speak is the Hudson Bay railway and the navigation of Hudson bay and Hudson straits. The Department of Railways and Canals, a few days ago, laid on the table a report of this route. Now, the question of this railway is a very important one so far as Western Canada is concerned, in fact the opening up of the route by way of Hudson bay and straits means to western Canada, in many, many years, the difference between prosperity and failure. The report that has been issued by the Department of Railways and Canals of this government, I consider, is a long way from the facts of the case. In fact, there is no doubt in my mind that this report was inspired by the railway interests throughout Canada and it has been issued by the

Railway Department of this government. We, in western Canada have been looking toward this outlet for our products for the last thirty-five years. Two years ago, just before the last general election, this government sent forth a cry that they were going to build the Hudson Bay railway. In that year, you had in the estimates $100,000 for survey work on this route. Last year, we had another $100,000 in the estimates for further survey work. This year, we find an item of $180,000 for still more survey work. Just as we in western Canada were looking for the carrying out of this great project to completion, this report is issued which practically knocks the whole proposition on the head. The part of this report to which I wish particularly to refer is as follows:

I find considerable difficulty in deciding upon what basis to provide accommodation for a railway that, in the nature of things, cannot be operated to its capacity for more than two months in the year——

That means, if it means anything, that the navigation of Hudson bay and Hudson straits are not navigable for more than two months in the year. The report goes on:

—to a lessened extent for a possible three months, and for the remainder of the year still less.

I take it that it means that for three months the road can be operated for through traffic and the remainder of the year local traffic will give a certain amount of work. A little further on, the report says:

The route will pass to the north of Ireland, and the distance from Liverpool to Port Nelson is 3,200 miles.

I have looked up the reports and maps in connection with this matter, and I have found that not one of these reports gives this distance at more than 2,900 miles. The report also says:

I assume that ships can be secured wherever there is sufficient business offered. It is apparent that at least nine per day would need to be loaded, or say, 135 to 140, to do the business—allowing two trips to each ship. Any additional business taken to the bay would have to be stored until the following August—nine months.

And still further on—

It appears, therefore, to be a difficult proposition for independent operation, and would seem to require to be worked by one of the large corporations, so that the men and rolling stock could be utilized the whole year. . . . Capt. Bernier is of the opinion that it is unsafe to be caught in the vicinity of the Fox channel with a steamer of ordinary construction, any later than October 15.

I claim that this report is very misleading indeed. As I have said, it is not in accordance with the facts of the case as I see them. To show how important a matter this is to western Canada, let me say that the average wheat field in western Canada is just as near Port Nelson on the Hudson bay as it is to Fort William and Port Arthur on the great lakes, and Port Nelson is almost as near to Liverpool as is Montreal, the difference being only about one hundred miles. So, if it were possible to cut out the distance between Port Arthur and Fort William and Montreal, the two routes would be practically on a par so far as mileage is concerned. Now, I have not the figures for last year of the amount of grain we shipped between Fort William and Montreal, but I have the figures for 1907-8. We shipped in that year 62,107,513 bushels of grain. We shipped all rail 14,364,176 bushels, which cost us 12 cents a bushel, or $1,723,791.24. We shipped by lake and rail 49,743,336 bushels, on which we paid 8 cents per bushel, or $3,819,466.88. So the total amount of freight we paid on our grain between Fort William and Montreal, or the sea-board, was $5,543,258.12. This year I am satisfied that the freight we will pay on our grain between these two points will amount to over $7,000,000. Now, Mr. Speaker, I want to say that we in western Canada believe that if this Hudson Bay route is feasible, as we think it is, then this $7,000,000 we are paying on freight rates between these two points is, so far as we are concerned, absolutely burnt money.

Now I do not intend recounting the great advantage that this route will offer to western Canada, and I am not going to discuss the great natural resources of the country through which this road will run, any more than to say for 200 miles north of the present boundary of the province of Manitoba they are successfully growing wheat at the present time. I am going to confine myself chiefly to navigation on the Hudson bay and straits and showing that this report, issued by the Department of Railways and Canals is not true. Let us see how long Port Nelson will be open under ordinary conditions. I may say that no records have been kept at Fort Nelson, but the Hudson Bay Company's official here kept the records for the past 100 years at York Factory, a short distance away. It appears that the average date of the opening of navigation was May 19, and the average date of the closing of navigation was November 20, or six months. The earliest date of the opening of navigation at York Factory was May 7, in 1846; the earliest day of closing was November 3, in 1878. The latest date of opening was June 1, in 1828, and the latest date of closing was December 9, in 1851. The longest season that York Factory was open to navigation was six months and eighteen days, in 1846; the

shortest season was five months and thirteen days, in 1853. There has been no record kept of Port Nelson, but the Hudson bay officials there tell us that Port Nelson is open a month longer each year for navigation, so that would make Port Nelson open seven months in the year. There is no doubt in my mind that with an ice breaker at Port Nelson, that port could be kept open all the year round without any trouble. This report goes on to quote what Captain Bernier says:

He is of the opinion that it is unsafe to be caught in the vicinity of the Fox channel with a steamer of ordinary construction, any later than October 15.

That means, if this report is correct, that according to Captain Bernier, the 15th of August to the 15th of October are the only dates between which Hudson straits are open to navigation. Now I wish to read what Captain Bernier really did say in his report, I am quoting from the 'Cruise of the 'Arctic'' in 1906-7.

There is no doubt that the strait is navigable for four months in the year with suitable steamers, and that Hudson bay is navigable for one month longer.

So that report issued by the government is quoting Captain Bernier falsely. Let me give the evidence of other men who explored the straits and bay. Captain William Kennedy, who commanded an expedition in search of Sir John Franklin, and who had eight years experience on the straits, says that from June 1 to November, five months, the straits are perfectly safe. Mr. W. Archibald, for many years in the service of the Hudson Bay Company at Moose Factory says:

The bay and straits can be navigated from June to December, six months.

Captain John Macpherson, for twenty years in the employ of the Hudson Bay Company, made forty trips through the straits and across the bay. He says:

There is no reason why steamships could not make the passage through the straits and bay as early as the 15th of June, and return as late as the middle of November, five months.

Commander Wakeham, who visited the bay and straits in 1897, says the same. Commander Gordon spent a year there. and he says the straits and bay are open to navigation for at least four months. These men were sent out by this government, and their reports are quoted. Then I have another report here, that of the Select Committee appointed by the legislative assembly of the province of Manitoba in the year 1884. This committee took the evidence of a great many men who were in the employ of the Hudson Bay Company for many years, and of others who had a personal knowledge of this matter, and whose evidence can be relied on fully. Captain James Hackland was employed by the Hudson Bay Company for thirty-nine years, first navigated Hudson bay in 1843, and was in command of the Hudson Bay schooner for sixteen years from that time. He says:

The straits are open all year round, never freeze. There is no reason why steamships should not navigate the straits at any time. The navigation of Hudson bay and straits is not considered dangerous. There are no shoals, there are no fogs. During sixteen years, navigation of Hudson bay was never impeded by fog.

Walter Dickson was twenty years in the employ of the Hudson Bay Company. He says:

Have been requested to furnish information respecting Hudson bay to the Committee of the House of Commons at Ottawa. I have answered these questions substantially as follows: I lived for thirteen years on the coast of Hudson bay and for seven years in the interior between James bay and Lake Superior. I have had an opportunity of gaining information respecting Hudson straits from my long acquaintance with Esquimaux who reside about the straits, and from my personal observation of the bay itself. I have reason to believe that the Hudson straits and a great body of the bay proper are navigable at all seasons of the year and afford no particular difficulty to ordinary navigation.

The advantages to Canada generally of opening up communication via Hudson bay would be, first, gaining access to a mineral region which for richness, variety and extent is equal and perhaps superior to any other region on this continent; second, gaining access to whaling and sealing gounds that are already highly remunerative and are capable of great development; third, gaining access to salmon and other fisheries, to game in unlimited quantity and to the richest fur producing region in the Dominion. To Manitoba and the Northwest the route via Hudson bay is all important, giving them a shorter and cheaper route for both export and import than can possibly be had by any other route. . . . I believe that Hudson straits are never frozen over in winter. My reasons are, 1st, that the latitude is too high; 2nd, that the current and tide are too strong to allow of a general freezing over at any time and, 3rd, that the Esquimaux makes use of skin boats for ordinary hunting and travelling purposes in winter, and during a residence of thirteen years amongst them I never heard of any Esquimaux crossing the straits on the ice. Icebergs, properly so-called, are not formed in Hudson bay and straits, nor can they get there as far as I am aware. The nature of ice found in Hudson bay is shore ice, generally from two and a half to three feet thick, and in many places along the coast is porous at all seasons. . . . To my knowledge there have been fewer losses and disasters to shipping in Hudson bay and straits than on any route of travel during the past 250 years. I do not know the rate of insurance, but believe it to be less than the

average. I believe the Hudson Bay Company have ceased to insure their vessels, deeming the route so safe as not to call for it. . . . Hudson bay is less subject to storms than the Great Lakes. Hudson bay is from 1,000 to 1,200 miles in length and its greatest breadth from 600 to 700 miles. . . . From what I have observed of the movements of ice in Hudson bay during the summers I passed there, I am perfectly assured that an ordinary iron screw steamer would never have any difficulty in getting through or around that which is usually met with in the bay and straits. The chief reason why the old sailing vessels of the Hudson Bay Company often met with detention in the ice was and is that at the season when floe ice is met with there is generally very little wind, and sailing vessels are consequently as helpless amongst the ice as they would be in a dead calm in the centre of the Atlantic or elsewhere. Hudson bay has always been found of easy access to a good and careful navigator.

Mr. C. N. Bell, of the city of Winnipeg, gave the following evidence:

It is found on investigation that fully 750 vessels have passed through Hudson strait, and this does not cover, it is known, the whole number. The list includes British troop ships, emigrant ships, war vessels of the English and French (some of them carrying 74 guns), as well as ships bound on voyages of discovery, trade and whaling. As early as 1619, Capt. John Munck was sent by the King of Denmark, and he wintered at Churchill, a brass gun of his being taken out of the river some time about the date of the appearance of Fox in that harbour.

Dr. Bell obtained from the company's offices in London, a record, which, printed in his report, shows the date of arriving and sailing of their vessels at York Factory for 93 years, and at Moose Factory for 147 years. These lists show that in some years several vessels were sent in charge of British men-of-war, and there has been almost every year during the past two centuries, ships of various classes and sizes navigating the strait without loss, and it seems almost incredible that such a number of voyages could be made, extending over 274 years, without the loss of over one, or as is claimed by some writers, two small sailing vessels. . . . It is but a comparatively short time since it was claimed that it would be impossible to navigate the St. Lawrence with steamships, and, indeed, several steamers were lost in proving that it would be possible for an immense fleet to pass up to Montreal during each summer. . . . The lower St. Lawrence (notwithstanding its comparative narrowness) is partly open even in the middle of winter. But the difficulty, as in the case of Hudson bay, is the apparent impossibility of getting into harbours. Harbours such as Churchill or York on Hudson bay, would have the advantage over Quebec or Montreal of connecting directly with the open sea, and hence in autumn vessels would not be liable to be frozen in, as occasionally happens in the St. Lawrence, as for example in the autumn of 1880, also in the autumn of 1870, when the outward bound shipping got frozen in below Quebec, occasioning a loss, it was said, of over a million dollars.

Mr. C. S. Drummond, a financial agent and a man who was connected with the early project of building the Hudson's Bay railway, gave the following evidence:

Am interested in the carrying out of the Hudson Bay railway scheme, and during the time I was in England in January last I conversed with many persons in Liverpool and London as to the project. I also met in London some gentlemen from Berlin and conversed with them. The opinion of all with whom I conversed was that the straits and bay were navigable for powerful steamers the whole year round, except perhaps during the period from the 15th May to 15th July, and even then they supposed the navigation to be difficult, but not impossible. There is a strong syndicate formed in Liverpool in which are some of the largest steamship companies who are willing to furnish vessels for opening an ocean route between the ports on Hudson bay and Liverpool, on the assurance to them that a railway will be built. They have gone into the question very thoroughly, having had at their command the latest charts, log books, and information respecting the navigation of the northern seas, and have also obtained valuable information from the 'Département des Cartes de la Marine et Colonies.' The very fact of this syndicate being prepared to enter into this scheme at their own risk after having obtained such full information, proves the practicability of the route.

James Ward was in the employ of the company for a number of years and he gave the following evidence:

I am surprised how people can doubt the navigation of the straits or bay on account of ice. Not one man that has come over that route but believes in its practicability. Mansfield island will be a good place for a lighthouse station. There is a little lake of good water on that island.

I have here the report brought in by the committee who were appointed by the local legislature of Manitoba. The Hon. Mr. Brown was chairman and this is the report he gave:

Many of the gentlemen examined have had personal and extended experience as officers and servants of the Hudson Bay Company at their posts on Hudson and Ungava bays and the rivers entering into those bays.

No evidence has been given that goes to prove that the Hudson straits and bay proper ever freeze over, or that the ice met within those waters is sufficient to prevent navigation at any time of the year.

That consequently the period of navigation is defined by the time during which the ports, harbours, or roadsteads on the shores of the bay can be entered by vessels of a suitable description for such navigation.

That, from the evidence adduced, it appears that such ports or harbours are open on an average, from 4½ to 5 months in each year to ordinary vessels.

That Hudson bay and straits appear, from all the evidence taken, to be singularly free from obstruction to navigation in the shape of

shoals or reefs; and, during the period of open water, from storms or fogs.

This is the evidence given before the committee and these are the conclusions that these hon. gentlemen came to at that time.

But I have still another very important piece of evidence from which I wish to quote. I quote now from a book issued by the Minister of the Interior, 'Canada's Fertile Northland.' The evidence which I now quote was given by Dr. Bell, on March 12, 1907.

Dr. Bell explained that he had been through Hudson straits nine times. The first time was in 1880 in a ship called the 'Ocean Nymph,' a small sailing vessel, and the last time was in 1897 with Commander Wakeham. His trips were distributed over those 17 years between 1880 and 1887. All his trips were between June 22 and about October 10. In navigating the straits during the season between those dates with a steamship they never had any difficulty. . . . Witness never heard that the straits was frozen across in winter. There is ice there, but always more or less open water with it at all times. . . . Dr. Bell said that he did not know any more desirable piece of navigation in the world excepting the middle of the ocean, and even then a common sailor who could not take an astronomical observation could sail through the straits with perfect safety. That is what Henry Hudson's men did after putting him and part of the crew into an open boat and leaving them behind. . . . Neither the bay nor the straits are frozen up any more than the Atlantic ocean. . . . The sailing vessels that had been passing through the strait would all be in the neighbourhood of 300 tons. They were not always specially constructed for that service, but of late years a steamer 'The Eric' takes the place of sailing ships. Old sailing vessels could scarcely hold their own in a head wind, and if there were scattered ice in the strait, they could hardly get through at all, and then it would be reported that they were stopped by the ice.

These reports are all from reliable men who have been over the ground, who have navigated those straits and the bay from time to time and there is no doubt in my mind that with modern aids to navigation and a proper telephone system on the straits so that the ships could be informed where the floating ice was, they could navigate the straits at all times in the year.

Eastern members may naturally think that this proposition is one simply for western Canada. But I wish to assure you and the hon. members from eastern Canada that it is almost as important to them as it is to western Canada. Twenty-five years ago the Canadian Pacific Railway company, sent their first trains from the Atlantic to the Pacific. That country was then almost a barren plain, but during this past year we have grown 360,000,000 bushels of grain. The people of eastern Canada are stretching

out and wish to get hold of the trade in western Canada. It seems to me that they are trying to tie up western Canada to eastern Canada. They are afraid to let us get any other outlet, they are bound to tie us up and keep us coming this way just as long as possible. But I tell you, Mr. Speaker, they will make a great mistake in this because every dollar we pay in freight rates on our produce coming east between Fort William and Montreal is that much money thrown away so far as we are concerned. Had the Hudson Bay route been in operation this year the people of western Canada would have $7,000,000 more in their pockets to enable them to make their homes more comfortable and to pay for the manufactured goods they buy from eastern Canada. This proposition may not be altogether roseate so far as Ontario is concerned, but for Quebec, Nova Scotia, New Brunswick and Prince Edward Island it is a different proposition altogether, because the ports of these provinces are accessible to the open sea; they are manufacturing goods which we are using every day, and their manufactured goods can be loaded into ocean going vessels and taken around by the Hudson bay and delivered right into the heart of western Canada at two-thirds the freight rates they are at present paying. Just take the province of Nova Scotia as an example. Her shipping and manufacturing amounted last year to $33,000,000, her coal output to $16,500,000, her manufacture of steel rails and steel structures to $11,000,000, and her product of pig iron to $5,500,000, making a total of $66,000,000 for these four articles alone, all of which we are using in the west and all of which could be consigned to us at cheap freight rates by the Hudson bay route. I have not referred to the great advantage which the Hudson bay route would be to our cattle trade, but it goes without saying that it would afford splendid facilities for the export trade in cattle. Now, this government has definitely promised to build a railroad to the Hudson bay, and although the people of the west have never seen the fruition of the many promises which the right hon. the Prime Minister has made to them, now that the word has gone out that he is pretty soon going to give up his office to a younger man, I would ask the right hon. gentleman before he takes off his robes of office to do at least one thing for the people of western Canada so that they may be able to thank God he has not lived in vain. I trust the right hon. gentleman and his government will revise this report and build this road and open up this route which means so much to the people of the west.

On motion of Mr. Paterson the debate was adjourned.

On motion of Mr. Paterson the House adjourned at 11.20 p.m.

INDEX

SECOND SESSION—ELEVENTH PARLIAMENT, 1909-1910.
