and the United States also makes an appropriation which is distributed amongst the states for the different stations and vessels. Something more has been done for amongst the accounts I find these items: For naval training station, there was an appropriation in 1909, of $1,095,600 and an estimate for 1910 of $413,400. There was expended in 1907-8 a total of $1,939,611, as far as I can get at the figures. That was expended by the United States government in erecting buildings and equipping a naval training station on the Great Lakes. I find also that there was a coterminous appropriation by the United States for a naval hospital building, of $250,000 and that that building is now progressing. These then are the two contrasting pictures: First, there was an agreement between the two countries, absolute, in force until to-day, without a shred of correspondence, so far as I can learn from either country, looking towards its abrogation and yet under that condition of a solemn treaty and agreement, there is a very considerable naval force consisting of state naval militia and of buildings and naval training stations, hospitals and other things contributed to or maintained directly by the United States of America. I find from what correspondence has come down that the larger part of these vessels have gone up within the last eight years. Some correspondence was previously brought down to the House and from it we learn two or three things: For instance, that when the United States wish one of these vessels to go up, having come to the conclusion to lend it to the naval militia of a state, they make application to the British Minister who makes application to the Dominion government to take it into consideration and that the Canadian government in every case, so far as the correspondence that I have seen goes, have granted the permission and have done so speedily and with very little reserve. I notice that in 1907, when the 'San Juan d'Austria' asked to go through, the British minister refers back to the case of the 'Essex and says:

> In 1904, the 'Essex' was passed on the assumption that the United States government did not contemplate departing in any way from the existing treaty stipulations relevant to the maintenance of warships on the Great Lakes. It is presumed, therefore, that the Canadian government would, in the present instance, wish a similar condition to be made.

From the correspondence I do not find that any similar condition was made and the vessels were passed up on two conditions. One was that they should not be armed while passing through the canals or water-reaches of Canada to reach their stations and the other that they were to be used for training purposes. That is, no armament was allowed whilst they were passing through Canadian waters and the general condition was attached that they were to be used for training purposes and confined to that use.

In the case of the 'Nashville' on February 15, 1908, what appears to be another step was taken, for we find the British Minister says:

> The whole question of armed vessels on the Great Lakes has been referred by His Majesty's government to the Imperial Defence Commission and His Majesty's government will further consult your government (that is the Dominion government); but pending results of the discussion, do your ministers, in the case of the 'Nashville,' see any objection to permission being granted?

The 'Nashville' was passed through in 1909, and, it is said, received her armament at Buffalo after she had safely passed the dangers and difficulties of the canal passage. I do not propose to make any criticism with reference to this matter at present, but wished to draw the attention of the House to the existing state of affairs which had not come to my attention until I looked into the matter, and possibly many other members of the House may not have been aware of it; certainly I do not think the Canadian public is quite aware of the situation as it has developed. I find that the state naval militia or naval reserve of the United States on the great lakes is of the following enrolled strength:

Illinois	629
Michigan	177
Minnesota	117
New York	583
Ohio	143
Total	1,649

It may be that a portion of the New York militia is at New York on the Atlantic side, but I was not able to ascertain that definitely. Thus there is a body of men trained as a naval reserve, 1,649 in number, that would be available on an hour's notice for any work on the Great Lakes in connection with the purpose for which they are organized. Of course the United States maintains revenue cutters on the Great Lakes, but they are not within the terms of the treaty, and I cannot find that any larger number are kept there by the United States than are necessary for their customs work, nor do I find that they are at all formidable vessels.

If it was good policy in 1817 to mitigate the cost of maintaining vessels and decrease the probabilities of armed collision on the great lakes by a treaty between these two great countries, a solemn engagement to keep their expenditure within a certain amount and their armament and vessels within a certain limit, it certainly ought to be good policy to-day. I am not, of course, oblivious to the fact that great changes have taken place. An 18-pounder

then might have been a formidable gun, but to-day it would not be considered in a very high class as regards armament. A vessel of 100 tons was the same size then as it is now, and if all that was required at that time was a vessel of that size, possibly all that is required for the same work to-day would be a vessel of that size. I do not imagine that the waters of the lakes are any more stormy or their navigation any more difficult than in 1817, and as there is no armed force threatening our neighbours in the United States, they did not need to have either heavier vesesls or heavier armaments in order to protect them from danger. But even if it be argued that the times and circumstances have changed, there is one way to bring about a change in respect to the subject I have mentioned, and that is for the two countries to agree upon the amount of change that is necessary and, having agreed upon that to modify, if necessary, the old treaty to that extent. But it certainly cannot be argued that so long as the same intention exists, and so long as the same treaty exists, either party would be justified in going beyond the terms of the treaty without first striving to have a new arrangement made to permit what they might call the improvements that are necessary owing to the progress of things. There has been a vast growth in wealth and in population since 1817. That is just where the importance and possibly the danger of the position arises. I speak with bated breath in the presence of the coming Lord High Admiral when I say that I do not imagine that our equipment on the Great Lakes is at present very formidable. I do not think that all the bristling guns and towering decks that we have there for the purpose of either defence or training have caused a shudder to run down the spine of Uncle Sam in the last few years, and so led to the extension of his naval defences and armaments on the Great Lakes. I am not sure that the little boat which we have there has a gun on her at all. I think at one time she had one, but it seems to me that I have heard a rumour that men were apt to injure themselves with so unusual piece of machinery, and so it was removed. However that may be, I am safe in saying that we have not been threatening our neighbours in that respect. Now, if population and business interests have increased, if trade has grown and great cities have arisen, on the Great Lakes, so far as the United States is concerned, this is also true of Canada; and what I want to bring to the attention of the House and to the attention of the people of Canada to-day is this, that as matters stand to-day in actuality, our whole lake population, our whole lake wealth, and our whole lake trade, are absolutely at the mercy of the armament which the United States has on those lakes to-day. I read the armament and the vessels; and if it did so happen, as I hope it never may happen, that difficulty arose, within 24 hours the whole lake trade, with all our improvements for the conveyance of trade, would be absolutely at the mercy and in the hands of the United States of America. If you take into account the relative equipments of the two countries on the lakes, Canada has absolutely nothing, while the United States has the armament which I have mentioned. While we may be all advocates of peace and may be all believers in peace, most of us believe in some sort of insurance, and if hostilities did arise between the United States and Canada, what protection would we have under present circumstances that would be worth a single rush leaf? We have none, and from the top of the Great Lakes, where our great continental railways make their connections with the water, all down through the ports and harbours, with their docks and other equipment for trade, our canal system at the Sault and our canal system between Lakes Ontario and Erie, our cities on the lakes of Ontario down to Kingston and the Thousand Islands, and still further our communications along the River St. Lawrence—all of these would be absolutely at the mercy of a force under the flag of the United States. which is quite sufficient to annihilate for the time being our trade. This is a state of things which evidently ought not to exist; and though we be the greatest advocates of peace and the most optimistic believers in peace, there is absolutely no insurance in that respect. No business man would put his business in such a condition of risk, and Canada itself surely cannot feel that it ought to do so. But a strange thing took place, to which I must refer. Although we have not had information in this regard. the government has had plenty of information, and that information has been collated and the Minister of Marine has evidently gone pretty particularly into it. He has made calculations and has raised a claim for non-participation in the naval defence of the empire by telling the empire, at the conference in London in 1907, what risks there were to Canada and what a burden Canada had thrust upon her, and what a burden the minister had specially thrust upon himself, in order to safeguard our interests on the Great Lakes. I think it is well that I should read the portion that refers to this matter, although I read it the other day. Although no such information had been given to us in Canada, the Minister of Marine and Fisheries made this statement at the conference:

> We have to-day on the lakes a boat which is an armed boat.

I can understand how the members of the conference pictured in their minds this contribution to the imperial navy, being used to seeing in the Thames the great 18-mile procession of warships, the armed boats of the empire. No doubt their imagination flew easily to the turreted ship or the armoured cruiser which the minister was talking about as a great burden economically and a great engine of defence.

We have to-day on the lakes a boat which is an armed boat, which is looking specially after the protection of our fisheries against the American fishermen, not only for the carrying out of the local regulations, but mostly and I may say almost exclusively for preventing the Americans from coming and fishing in our waters. We have on the Great Lakes (large seas, properly speaking) American states bordering these great lakes, and they are having navies of their own now. I think that three states bordering on the three great lakes, Ohio, Michigan and Illinois are spending not less than $15,000,000 themselves for keeping up a navy on these lakes,——

One unit that Canada was asked to present would cost that amount, maybe a little more—

—and are drilling their men on the shore of the lakes. Besides they have some ships which are not on—because it would be against the conclusions of the treaty—but built in order to be prepared in case of emergency.

So that the minister himself there makes a statement tantamount to this, that we have been allowing these vessels to pass through our waters provided they were unarmed, but with the perfect knowledge that after they got into the lakes they were ready for a case of emergency. My hon. friend says:

Besides they have some ships which are not on—because that would be against the conclusions of the treaty—but built in order to be prepared in case of emergency. As far as Canada is concerned one of the first duties we shall have to look after is our protection in connection with the great lakes. I may say that the wars we have had since 1763, since Canada has become part of the British empire, came from the United States. We had an invasion in 1775, we had an invasion in 1812, and we had the Fenian Raid in the 60s. All those invasions came from the United States, so we have to look especially in that direction to protect ourselves, and I may say we have been doing it as far as the Great Lakes are concerned, not to a very large extent it is true, but to the extent of spending a sum of money which is quite important for a country of the size of ours.

It seems to me that proves a very thorough and complete knowledge on the part of the government of just what has been going on in the Great Lakes; and whilst we have been asking in this House for information, we have never got anything so full as the minister communicated to the imperial conference in 1907.

It also shows that in the minister's opinion so great was the burden thrown on Canada to make proper provision for protection against possible enemies on the Great Lakes, that it was sufficient to put that forward as an excuse for not making a contribution or should be counted as an important contribution to the naval outlay of Canada.

My whole purpose is to call the attention of the premier to this matter and particularly the attention of the government. I do not say that it may be found practicable that modifications should take place on both sides as regards the keeping of armaments on the Great Lakes, but any armament maintained there should be in accord with treaty arrangements and not in violation of the terms of the treaty now existing. It may be that there is some argument for reasonable modification, but I do hope that as between the United States and ourselves, on these border-line waters, consisting of the St. Lawrence and the Great Lakes, it may never become necessary for the two countries to spend large amounts in vieing with each other in the building of warships. But the present condition of things is one which I think should give us some cause for reflection. When we look at the immense value of property along this line of Great Lakes and realize that, in contravention of the treaty, there is a formidable armed force on the other side and absolutely nothing on ours, that condition is sufficiently grave to warrant our making some move in the matter. What action has taken place I do not know. I am told that negotiations have been going on and the right hon. the Prime Minister may perhaps be in a position to give us more information than we have had up to the present. It may be that there are confidential communications, and of course I am not asking that confidential papers be brought down, but simply that we should be given such information as can properly be divulged and to which we are entitled, and if the resolution passes, it will pass with that understanding.

Sir WILFRID LAURIER. The observations of my hon. friend would have been more apposite if, when following the attention of the country to a condition of things which must cause anxiety to everybody and certainly to the government, he had been able to suggest a remedy. My hon. friend premised his remarks by stating that we have a convention with the United States since 1817 limiting armaments on the lakes. Under its conditions, four war vessels only are allowed in what waters are between the two countries. This agreement has been in existence nearly one hundred years and has served a very good purpose. Since the United States have reached their present

development, the states which border on the Great Lakes, have been pressing the Federal authorities to participate in the war expenditure which has been going on from time to time in these states. The Federal government could not do so unless the conditions of the convention of 1817 were interfered with, and I shall not say that although perhaps they have not been absolutely maintained, they have been unfairly interfered with. My hon. friend knows that the tenure of life of that convention is a very slender thread. It can be put an end to in six months time:

If either party should be hereafter desirous of annulling this stipulation and should give notice to that effect to the other party, it shall cease to be binding after the expiration of six months from the date of such notice.

If the American government so desired, they could put an end to the treaty in six months' time. They could give that notice to-day or at any time. Under the circumstances, what are we to do? My hon. friend says we should have a modification of the treaty. That is more easily said perhaps than done. He may say put an end to the treaty, but that would be worse. In that case whatever armament might be established on the one side, we would have to follow suit. My hon. friend will realize that the condition of things is one in which we ought to be very careful as to what we do and what we say; and I do not think that perhaps he has served as good a purpose as no doubt he had in his mind in bringing this matter to the attention of the country as he has done. It is a matter which has been engaging our attention again and again. When we were at Washington in 1899, at the time of the Joint High Commission, it engaged the attention of the two parties. There were modifications suggested then but we could not agree, and the matter was left as it stood. Even had that conference resulted in an agreement, I do not know that it would have come to a conclusion on the point in question. There is correspondence of a nature that can be brought down and I shall be glad to lay that on the table, but there is also other correspondence of a confidential nature, but such papers as can be brought down I shall submit to the House.

Motion agreed to.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Copy of all papers in connection with the alleged securing and sale or distribution of passes on the Intercolonial railway within the last two years, and also of all papers of every kind in connection with the alleged padding of pay-lists on the Windsor Branch railway, and the resale of mutilated railway ties to the government.—Mr. Foster.

Return showing all casualties and accidents attended with danger or loss to human life that have occurred in the Marine and Fisheries Department owing to the operation of Pintsch and acetylene gas as an illuminant for each year since 1880, together with a copy of all papers and reports in connection therewith.—Mr. Foster.

PRIVILEGE—REPRESENTATION OF QUEBEC EAST AND OTTAWA.

Mr. ARTHUR MEIGHEN (Portage la Prairie). Mr. Speaker: Before the orders of the day are called, I wish to call the attention of the House and of yourself to the position of a member of the House, the right hon. the first minister (Sir Wilfrid Laurier) in connection with his dual capacity, sitting as he does for Ottawa and also for Quebec East. I take it for granted that if I were to ask the right hon. the first minister whether he has yet made up his mind for what constituency he will sit, I should receive the same reply as did my hon. friend from Digby (Mr. Jameson) a week ago. If I am wrong, I can be corrected, and in that case there is no need of my proceeding further. I propose, however, to argue that—

Mr. SPEAKER. May I ask the hon. member (Mr. Meighen) how he desires to bring the matter up?

Mr. MEIGHEN. By putting the question to you, Mr. Speaker, whether or not the right hon. the first minister can, at the present time, refuse longer to elect for which seat he will sit.

Mr. SPEAKER. I would like to hear an expression of opinion on the subject. I do not know that the argument can proceed at this stage.

Mr. MEIGHEN. I cannot express an opinion without reference to the authorities—

Sir WILFRID LAURIER. My hon. friend (Mr. Meighen) is clearly out of order. He cannot argue the question at this stage. Possibly, in a few minutes, the House will be moved into Committee of Supply when he will have an opportunity. But, at present, he knows he cannot speak.

Mr. MEIGHEN. Is it not a question of privilege?

Sir WILFRID LAURIER. No privilege that I can see.

Mr. MEIGHEN. As I understand the rules, it is a question of privilege. A matter referring to the seat of any member of the House is a question of privilege?

Mr. SPEAKER. Had I had prior notice, I should have looked up the question. But, unfortunately, I was not notified. I cannot allow the discussion to take place at this stage. We have a rule which says that

no matter of this kind may be brought up in this way.

Mr. MEIGHEN. Perhaps, Mr. Speaker, you will allow me to cite the authorities.

Mr. SPEAKER. If the hon. member invokes the rule, he must do it by motion. There is nothing before the Chair, and we cannot proceed.

Mr. SPROULE. Cannot the hon. member proceed on a question of privilege?

Sir WILFRID LAURIER. What is the privilege?

Mr. SPEAKER. As a question of privilege, I will not—

Mr. MEIGHEN. It is well known that the first minister does sit at the present time for two seats. It is true that his election for one of the seats was contested, and, as a consequence, until that protest was disposed of or dissolved by the courts, no election could be made. The protest related to the seat for the city of Ottawa. It was brought up by motion on the 29th of June last in Toronto, and the right hon. the first minister was confirmed in his seat. It would enable me, perhaps, to make my remarks briefer if I were to put the question to you, Mr. Speaker, whether or not you have received from the judges, as provided under section 58 of the Controverted Elections Act, any certificate or report as to how this election protest was disposed of? Under this section of the Act, the judges are bound, immediately at the conclusion, to certify, to you, by way of report, the result of their finding. I trust I have made my question clear, whether or not you have received, in pursuance of sections 58, 59 and 60, of the Controverted Elections Act, such a report as to the disposal or dissolution of the protest respecting the status of the right hon. first minister in regard to the seat for the city of Ottawa?

Mr. SPEAKER. I can inform the hon. member (Mr. Meighen) that anything I have received is on the records of the House.

Mr. MEIGHEN. That was all I could expect.

Mr. SPEAKER. Had I been notified of the question, I could have prepared myself to give the information exactly. I think a matter of this kind should be given notice of and that we should not be taken unawares.

Mr. MEIGHEN. Your answer, Mr. Speaker, is quite sufficient for me—that if the report has been received it is on the records of the House.

Mr. SPEAKER. It suits the hon. gentleman (Mr. Meighen), but it does not suit the Speaker to be taken unaware. I think that, by the rules of the House, the hon. member might be required to give notice of his question.

Mr. MEIGHEN. But the answer, I apprehend, can be given without notice. The answer is quite satisfactory.

Mr. SPEAKER. But the Speaker is not required to answer. It is a matter of the records of the House.

Mr. MEIGHEN. That being the case, it must be that, the election protest never having come to trial, the judges did not certify to you, Mr. Speaker, the result which they found on the 29th of June last. However, whether or not that is the fact, or whether or not it is necessary under the Controverted Elections Act that it should be received, does not, as it seems to me, affect the status of the right hon. Prime Minister. Under the rules of the House, and under the statutes, there is no regulation in force in this country in the way of a time limit within which a member who has been elected for two seats must elect which he will sit for. Consequently, the matter comes under the provision of rule 1 of the House of Commons, which brings into force in all such cases the rules, regulations and orders in force in the British House of Commons on the 1st of July, 1867. Now, the rule in force in the British House of Commons on the 1st of July, 1867, was this: That, in case of a member being elected for two seats, he should, within one week, elect which seat he will sit for or, in the event of protest, that he should make his election within one week after the disposal of that protest. I would refer you to page 424 of Bourinot, where the rule of the British House is very clearly laid down. It is also clearly laid down in May, at page 652; and in May particularly it is shown that this rule which is now in force in the British House of Commons comes into force by sessional order at the commencement of each session, and has done so since at least 1842, and was therefore in force on the 1st of July, 1867. A case is pointed out in May where Mr. Daniel O'Connell, on the 24th of May, 1842, was compelled to elect as to which of two seats he should sit for. Consequently it has evidently been in force since the 24th of May, 1842, and was consequently in force on the 1st of July, 1867. Therefore, in the absence of any sessional order of this House, and in the absence of any statute, we must follow the sessional order of the British House, which was in force on the 1st July, 1867, and which would have required the right hon. gentleman who leads this government to make his selection within one week after the disposal of the protest, and after the meeting of the House of Commons. That is to say, that following the correct practice, the right hon. gentleman should have made his elec-

tion as to which seat he would sit for within the first week of this session. The first week, of course, is now past. The question of privilege, therefore, I have now spoken to. I had purposed, Mr. Speaker, asking for your ruling as to whether the right hon. gentleman is now properly withholding his election as to which seat he will sit for; but if you prefer my question to stand as a question until to-morrow, I am willing. But I do purpose asking for your ruling as to whether the right hon. gentleman can longer withhold his election in this matter.

Sir WILFRID LAURIER. If your ruling, Mr. Speaker, is that I must make my election, of course I shall have to do so at once. But I might give you my views; I do not know if you have any ruling to make on this point. For my part, I have no objection at all. I may say to my hon. friend, however, that I was particularly anxious to make a choice between Quebec and Ottawa, but so far no one in the city of Quebec and no one in the city of Ottawa has asked me to make a choice; therefore, I was waiting until I was prompted by some of those gentlemen who have done me the honour to elect me to both seats. But if I am not within the rules of the House, I shall have to put myself within the rules when I know what your ruling is.

Mr. SPEAKER. I will give my ruling to-morrow.

CRIMINAL CODE AMENDMENT — INFRINGEMENT OF COPYRIGHTS.

Mr. H. LENNOX (South Simcoe) moved for leave to introduce Bill (No. 41) to amend the Criminal Code. He said: A year ago, among the amendments introduced by the Minister of Justice to the Criminal Code, I suggested this amendment. At that time the Minister of Justice, after taking time for consideration, was of the opinion that the amendment was a good one, I presumed, at all events, he offered no opposition to it, and it passed. The amendment is to secure those persons who have valuable copyrights in dramatic productions against the unwarranted infringement thereof. At present they have no remedy except to bring action against the person who infringes their copyright, and as the person who steals the copyright has usually no worldly substance the aggrieved persons are practically without remedy. I am instructed by the parties who wish me to bring this matter before the House, that in many instances those dramatic productions are worth a royalty of $500 or $600 a night, and notwithstanding that a spurious imitation is presented to the public by some wandering troop, the head of which has no substance by which he can answer in damages, and therefore the party entitled to the royalty is defrauded of his rights and is practically without remedy. At the time when I brought this matter forward last year, not only the Minister of Justice but the Minister of Agriculture as well, who is interested in matters of this kind, were in the House, and as I recollect the remarks of the Minister of Agriculture at that time, he did not see any objection to it. But I must add that he also said that he had not had an opportunity of studying carefully the wording of the clause I introduced. I have no personal interest in this matter, though I think it is a matter of public importance. I understand that the copyright laws are defective in this respect, as well as in some other respects, and I offer this amendment as an improvement upon the law as it now exists. At the time I presented this amendment last year, the Minister of Justice had then, as an amendment of the same section, a provision in reference to musical competitions. That, I understand, emanated from the Minister of Justice himself and this was a further subsection to the same section of the Criminal Code. The subsection of the Minister of Justice with reference to musical compositions went to the Senate with this subsection that I introduced with reference to dramatic compositions. As you will recollect, Mr. Speaker, both of these amendments were introduced in the last days of the session, they went over to the Senate and, as I am instructed, without any reasonable consideration, these two clauses were struck out. I therefore move the second reading of this Bill in the hope that the Minister of Justice and the Minister of Agriculture will consider the matter, and in the hope, from what took place last year, that they will see the advisability of having this amendment again enacted and sent to the Senate.

Hon. SYDNEY FISHER (Minister of Agriculture). I note what the hon. gentleman (Mr. Lennox) says and I can say quite frankly at once that I quite agree with his amendment to the Criminal Code for the purpose of dealing with dramatic copyright. I am not lawyer enough to say whether the wording here is exactly correct, but I believe it is, and I am quite willing to leave it to my hon. friend on the other side of the House and the Minister of Justice who says it is correct. My hon. friend is quite correct in saying that last year my colleague, the Minister of Justice, introduced an amendment to the Criminal Code in regard to musical copyright. Both of these amendments were sent to the Senate but the Bill did not pass. I do not think that these clauses were in any way objectionable to the Senate, but some other clauses proposed were. I think it would be well therefore that these clauses should be incorporated

in a Bill independent of other amendments to the Criminal Code. I would like, before the Bill advances beyond the committee stage, to suggest that a clause with regard to musical copyright should be included with the clause proposed by my hon. friend.

Mr. LENNOX. I should be very glad.

Mr. FISHER. We would then have an opportunity of dealing in this way with this amendment to the Criminal Code in so far as the question of copyright, including both of these points, is concerned. Therefore, I am quite willing to ask for the second reading of this Bill.

Motion agreed to, Bill read the second time and House went into committe thereon.

On section 1,

Mr. FISHER. I think my hon. friend says that these are the exact words of the amendment last year?

Mr. LENNOX. Yes, they are.

Mr. FISHER. Before we proceed further I would ask that the committee rise and report progress until we can secure the other amendment which I suggest inserting in this Bill and which will be prepared for a future sitting of the House by the Minister of Justice.

Mr. LENNOX. That would be quite satisfactory.

Progress reported.

INSPECTION AND SALE ACT—AMENDMENT.

House went into committee on the following proposed resolution:

That it is expedient to amend 'The Inspection and Sale Act,' so as to provide that when potatoes are sold or offered for sale by the barrel, the barrel shall contain one hundred and sixty pounds.

Mr. J. D. REID. The Prime Minister, the other day raised the question that this was interfering with provincial rights as far as the weighing of potatoes was concerned.

Sir WILFRID LAURIER. For my part I saw no difference between potatoes and bread, but this House saw differently, because I find some years ago there was a Bill passed on this very same subject of potatoes.

Mr. J. D. REID. Then, is it all right to proceed with bread? Are you going to object to bread?

Sir WILFRID LAURIER. Well, we will stick to potatoes.

Resolution reported, read the second time and agreed to.

Mr. FISHER moved for leave to introduce Bill (No. 54) to amend the Inspection and Sale Act.

Mr. LENNOX. Perhaps we might get the opinion of the Minister of Agriculture as to whether this does invade the rights of the provinces.

Mr. FISHER. I am not prepared to give a legal opinion upon that point. I find in other statutes the same kind of provision, and that being the case I take it that parliament is acting within its legal rights.

Mr. LENNOX. Would the minister be disposed to get the opinion of the Minister of Justice upon the point?

Mr. FISHER. I shall certainly do so.

Motion agreed to, and Bill read the first time.

SEED CONTROL ACT—AMENDMENT.

House in committee on the following proposed resolution:

Resolved that it is expedient to amend 'The Seed Control Act,' (a) by making regulations determining the standard of vitality of seeds; (b) with regard to the freedom of certain seeds from weeds; (c) prohibiting the sale, offering, exposing or having in possession for sale, for the purpose of seeding, any seeds of alfalfa, if there are present in any mixture any noxious weed seeds in a greater proportion than five to one thousand of the seeds sold, offered, exposed or had in possession for sale; and (d) prohibiting the sale, offering, exposing or having in possession for sale, for seeding, certain seeds not having the standard percentage of vitality, unless every receptacle containing such seeds is marked with the name of the seed and the percentage capable of germination.—Mr. Fisher.

Mr. FISHER. I wish to add to section 2, subsection 1 of the original Act, which defines what regulations the Governor General in Council may make, another clause authorizing us to make regulations determining the standard and vitality of seeds, fixing a minimum percentage of vitality. It is also proposed to bring Alfalfa under the provisions of the Act in the same way as other clover and grass seeds. The percentage standards of vitality for good seed are made by regulations of the Governor in Council under the Act. The following are the percentage standards of the various kinds of cereals, grasses, clovers, forage plants, field roots and garden vegetable seeds:

Kind of Seeds.	Standard.
Cereal grains (including indian corn).	95 p. c.
Peas and vetches..	95 "
Beans..	90 "
Clovers (including alsike and alfalfa)	95 "
Flax..	95 "
Millet..	95 "
Timothy..	95 "

Cocksfoot, brome, meadow fescue, blue grass	85 p.c.
Rye grasses	80 "
Mangels and beets	90 "

Mr. BLAIN. I would like to ask the minister whether in the proposed Bill any provision is made for stamping on small packages of seeds the date when the seeds were put into the package? This is a matter of considerable interest in the province of Ontario. For example, a wholesale seed merchant puts small packages of seeds into a box and sends them to the retailer. The retailer sells a number of the small packages during the season, and in many cases returns the unsold packages to the wholesaler. There is a complaint that the wholesale merchant continues to send out these packages, year after year, without any investigation as to whether any vitality is left in the seeds or not; and it is suggested that the wholesale merchant should be required to put on all small packages of seeds he sends out for sale the date on which the seed was put into the package, so that the farmer or gardener buying it would have some assurance of the vitality of the seed.

Mr. FISHER. My hon. friend is quite right as to that point, except that the provisions of the Act cover it and more. When the standard of vitality is fixed, it does not matter whether the loss of vitality is due to the age of the seed or to any other cause. By the amendments to the Act, the percentage of vitality in the seed is fixed. In the case my hon. friend refers to, there are some seeds which are perfectly good for many years, while others are not good for more than one year. The average buyer is not usually aware which seeds are good for many years and which seeds are good for only one year; but the law, as we propose to make it, will require a certain percentage of the seeds in each package to be vital. In that way the buyer is protected better than he would be by having the date put on the package. I may say that in the discussion which occurred before this amendment was decided upon, with the seed growers and the seed users, especially in Ontario, where the seed commissioner met these people, that point of the date was not insisted upon or asked for.

Mr. BLAIN. I can understand very well that those engaged in the seed trade would not ask for it.

Mr. FISHER. I am speaking of those who buy the seed.

Mr. BLAIN. But the legislation of the government does not always meet the requirements of the farmers. The minister's explanation is satisfactory to those who understand it; but the farmer or market gardener would have to wait one year to find out whether there was vitality in the seed or not, whereas it would be a plain measure of protection to him if the date were on the package. As my hon. friend knows, these seeds are sold by every class of merchant: the druggist has them on his counter, and these people do not make any pretense of knowing anything about them. A child comes in and buys a package of seeds for five or ten cents and takes it to the gardener, who plants it. I do not see any objection to requiring the date to be put on the package, and I think it would be of great value and quite satisfactory to the purchasers of seeds. I am quite sure that many of these seeds are kept in warehouses for years until every particle of vitality has left them.

Mr. FISHER. My hon. friend must not suppose that we have been discussing this matter chiefly with the men who sell seeds. The representations that have come to us have been largely those of the association known as the Vegetable Growers of Ontario. They are the purchasers of seeds in large quantities, and they are especially interested in the seeds being right. They have not asked that the date should be put on the packages and do not think it necessary. I am afraid it would be a delusion rather than a protection. There would be nothing to prevent false dates being put on packages of seeds offered for sale. Of course, we could make that a criminal offence. But at the same time it would be almost impossible for us to prove it. No analysis we could make would prove that they had actually put the old seeds in. All we can prove is whether the seeds are vital or not.

Mr. BLAIN. The one would not interfere with the other.

Mr. FISHER. There is no objection to doing it if there be any way of doing it which would be of use to the purchasers. The purchaser might think he was getting protection, whereas he really was not. I would not trust the date on a packet, but the testing of the seeds in the laboratory will show whether they are vital or not. If they are vital, I do not care in what year they were grown.

Mr. BLAIN. I am not referring to the case of farmers who buy seeds in large quantities, but I am speaking of the thousands of small packages sold in small towns where they have small gardens. A

merchant lays in a stock of some hundreds of small packages of seeds. At the end of the year he puts the unsold packages away to be sold the coming year. His customers are buying the old seeds, whereas if the Act were altered so as to compel the wholesale man to put a date on each packet, the consumer would know how old the seed was which he was purchasing, and would not buy seeds which had probably lost their vitality through age.

Mr. FISHER. I am not adverse to the suggestion, and am quite willing to look into the matter. In the majority of cases at the end of the season, the packages which are not sold by the country store keeper are taken back by the wholesale merchant. There would be nothing to prevent the wholesale merchant from putting seeds taken from the package of one season into a package dated the following season.

Mr. R. L. BORDEN. How does it work out in actual practice? Suppose the seeds are sown after they have lost their vitality through age, how is the standard enforced?

Mr. FISHER. The Act provides that any purchaser may take a sample and send it to the government laboratory and get it tested, and the results are lawful evidence in a court of justice. We prosecute in many instances, and the individual has recourse under the common law for damages. We always ask purchasers to buy their seeds long enough before seeding time to be able to send them to be tested and have a report back before they are sown. If they do not do that, it is difficult to prove the lack of vitality in the seeds.

Resolution read the second time, and agreed to.

Mr. FISHER moved for leave to introduce Bill (No. 55) to amend the Seed Control Act.

Motion agreed to, Bill read the first time.

INLAND REVENUE ACT AMENDMENT—IMPORTATION OF CIGARETTES.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) moved the third reading of Bill (No. 9) to amend the Inland Revenue Act.

Mr. RICHARD BLAIN (Peel). What difference will this Bill make in respect of the sale of cigarettes in Canada?

Mr. TEMPLEMAN. It will have no effect that I can see.

Mr. BLAIN. Then, why the change?

Mr. TEMPLEMAN. We are providing for the admission of cigarettes in packages of twenty-five. There is no provision now, and we have no inland revenue stamp to put on packages of twenty-five. Consequently, when such packages come in, they have to be broken up at the custom House and repacked, so that we may put stamps on them in conformity with the law. Whether the change will have any effect on the sale of cigarettes, I do not know positively, but I do not think it will.

Mr. DAVID HENDERSON (Halton). It seems to me that it might have a very material effect. To reduce the size of the package, the minister will see, will be to facilitate the sale of cigarettes which the minister does not desire to encourage.

Mr. TEMPLEMAN. I do not think the hon. member's argument is sound. There are already packages smaller than twenty-five—the package of ten is probably the commonest package. The sale of cigarettes has decreased by about 30,000,000.

Mr. HENDERSON. I am not a cigarette smoker and am not informed as to the handling of them.

Mr. BLAIN. At whose request was this change made?

Mr. TEMPLEMAN. At the request of the importers. Hon. members will see that it is quite lawful to import cigarettes, and the law provides in what sized packages they shall be stamped. There is no provision for a package of twenty-five, and when such packages come in there is the expense and trouble of repacking. The importers request that this should be changed.

Motion agreed to, and Bill read the third time and passed.

THE FRANCO-CANADIAN TREATY.

Hon. W. S. FIELDING (Minister of Finance) moved the third reading of Bill (No. 12) respecting a certain supplementary convention between His Majesty and the President of the French Republic.

Mr. MARTIN BURRELL (Yale-Cariboo). Without wishing to delay the House, at this stage of the Bill, I would like to present a few considerations with regard to the treaty generally and also to refer briefly to one or two remarks made on the second reading by hon. members opposite. The Prime Minister and his colleagues laboured to show that this was a very good treaty in the interests of Canada and especially of the agricultural classes. Although I was not in the House when the treaty was first brought down two years ago, and had an open mind on the subject to some extent, I have failed to be convinced that there is strong reason for ratifying the treaty at the present time. I speak particularly from the point of view of one industry with which I have been connected for some time,

fruit-growing, and especially the culture of the grape. While, in British Columbia, we are not very heavily interested as yet in the production of grapes, in my old home district, the Niagara peninsula, this is a very important industry. There are at present about 18,000 acres in vineyards, the land used being expensive, with fairly expensive methods of cultivation involving some years before any results are obtained. I remember when, in 1883-86, the grape-growers, of whom I was one, were fortunate enough to get from eight cents to ten cents per pound for their crop. Naturally, this price decreased as the area of cultivation was extended, until, in 1890, the price obtainable was only about four cents gradually decreasing to less than a cent and a half. At these figures, it was problematical whether there would be any return to the grower. It was at this time that the wine-making industry was inaugurated, improving the market and affording relief to the growers. Another assistance to the growers was the establishment of the canning industry. The effect of these new industries was to steady the whole market for our fruits by relieving congestion and taking care of what would otherwise have been a surplus product. The result was better prices for the product and a stimulus to the industry generally. So far as the grape-growing industry in Ontario is concerned, the effect of this treaty must be to unsettle the minds of those embarked in this wine industry. In the fruit district in which I lived, one manufacturer was crushing from 400 to 600 tons of grapes every season. It can easily be understood what a relief it would be to the growers to have such a market for their product. As I understand the matter, these wine-producers apprehend that the lighter wines of France, those under twenty per cent proof spirit on which the duty is reduced, will have the effect of increasing the competition with not the most desirable class of French wines. Feeling that, as I believe they have ground to feel, they believe that the treaty is not a good one for this country as it affects the grape-growers. And the same may be said to some extent in regard to the canning industry especially as regards vegetables.

Now, I wish to refer to one or two things that were said in the debate yesterday. So far as I can find out, the attitude taken by the hon. member for Jacques Cartier (Mr. Monk) may, to some extent, be the true one. That hon. member says that this treaty is neither good nor bad; it does not offer any great advantages nor does it involve any serious disadvantages. But I understand that it is to cost, indirectly, something like $200,000 a year—that is, in subsidy to a line of steamships. They also indulged in heavy expenditures for our plenipotentiaries when they went at great expense to this country to put that treaty through. I have been unable to see that the cost in connection with these two matters will not far more than outweigh any monetary benefit we will gain under the treaty. If we come to some of the remarks that were made by the Minister of Customs yesterday in pointing out some of the expected benefits, they were effectually dispelled, so far as cattle are concerned, by the hon. member for St. Lawrence Division, Montreal (Mr. Bickerdike), who stated that Canada could not expect to get any benefit from trade with France in respect to our cattle. So out goes from the argument one of the chief benefits which we were told would come to us from this treaty. If there was one part of that treaty which seemed to promise us any benefit, it might be in fat cattle. But here again we find that little consideration has also been knocked out by the supplementary treaty. I think, however, that my hon. friends opposite have themselves been the prodigal sons and have sacrificed the fatted calf in this respect on behalf of the French government.

Now let me refer to another matter. I was much struck with the speech of my right hon. friend the first minister. He addressed himself to the argument of my hon. friend from Jacques Cartier (Mr. Monk), who had said that in the main France was a self-supporting country, and being largely agricultural she would not therefore require many of our agricultural products. If I understand the right hon gentleman aright, he gave us to understand that France was the very reverse of such a country, and the fact that she imported such an enormous amount of agricultural products was a proof that she would become a most valuable market for our agriculturists. Now, if the right hon. gentleman will allow me to say it, I think his remarks were rather disingenuous, because while it is true that he was careful to speak of the imports of France—and I do not dispute his figures—he forgot to make any mention of her exports, which would put a different face on the whole situation. Let me take up one or two items. I will take an item which my hon. friend the Minister of Customs spread himself over, and that is butter. It is perfectly true, as he said, that large quantities of butter are imported into France. But far from that fact promising us a heavy market in France for our butter, I think the contrary will be the case. Now, I am not quoting from last year's imports into France, but I have before me the Statistical Abstract published by the British government, covering each year from 1896 to 1906. I find that while France, in 1906, imported actually 15,964,000 francs worth of butter, she exported in the same year 53,972,000 francs worth of butter.

Now I will take up the question of eggs. It is rather astonishing to me to infer from the First Minister's remarks that the

French hen was by no means equal to the occasion, that she was not laying enough eggs to supply the French people, and the Canadian hen, therefore, would find lots of room for her products in that market. I think the first minister stated that about 6,000,000 francs worth of eggs were imported into France. Well, in 1906 I find no entry of the import of eggs, but when I turn to her exports of eggs, I find that France in that same year exported 14,720,000 francs worth. I might go on and follow down this table and deal with eggs, fruit, vegetables and things of that kind, which would show similar results. When we come to the item of potatoes, I find that France although no figure is given here of imports, exported 28,000,000 francs worth in 1906. She also exported 12,000,000 francs worth of fruit and vegetables over and above the value of her imports in those lines. I think the House will at all events get some clear idea of the nature of the first minister's argument, and will agree that it was rather misleading. We might have assumed that France was importing much in excess of what she was exporting, and that therefore we would find a ready market for our agricultural products in her market, whereas the contrary is evidently the case. In the markets of Great Britain you will find that France is our most serious competitor in respect of many of those articles. No member of the government will attempt to argue that France offers us a better market for grain than the world's great market where we all have to meet each other on an equal footing. France does not give any inducement or any lower tariff to Canadian grain.

There was another thing which struck me as rather strange. The first minister took occasion to animadvert on the attitude of my hon. friend from Jacques Cartier (Mr. Monk) when he said that my hon friend had been doing a great deal of talking against the French treaty, and yet he was perfectly sure that he would vote for it. But surely the first minister is the last gentleman in the world who should find fault with people who talk a long time one way and then vote another way. When we look at the hon. gentleman's career, and remember that in 1896 he talked for two or three months steadily in one direction and then voted in exactly the opposite direction, and when we remember how often since 1896 up to 1909 he has voted and acted contrary to his previously expressed principles, we must admit that he is not in a position to criticise my hon. friend from Jacques Cartier. It does seem strange to me that the Minister of Customs, who in stentorian tones—I think that is the proper word—previously to 1896 almost shouted himself hoarse in advocating free trade if possible, is now shouting himself hoarse in exactly the opposite direction.

It is an extraordinary thing, and I will be only too glad if, when they come to speak to the farmers in connection with this treaty, they will make some effort to show what they mean by free trade. In 1906, when they were talking about revising the tariff, a large meeting of farmers in Toronto expressed their views to the government on tariff matters. I find here a little article in the official organ of the Liberal party, the Toronto 'Globe':

> The memorial declares a genuine alarm at the aggressive campaign of the protected interests, cites the promise that protection was to be only a temporary aid to allow the manufacturers to secure a foothold, and points out in contrast the continuous demand of the full grown and even gigantic industries for greater favours. It is argued that the protection accorded by the tariff enables manufacturers of certain classes of agricultural implements to charge Canadian consumers 25 per cent more than the value of the articles, and permits an overcharge of from 30 per cent to nearly 50 per cent on the cheaper lines of farm carriages.

I must say that one of the most singular phenomena, I think, in the whole history of our trade matters and our fiscal matters in Canada is the fact that gentlemen like my hon. friend the Minister of Customs who, as I say, talks himself hoarse previous to 1896 saying that he was going to abolish all these things, now stands up in this House to speak on behalf of those who are protected at the rate of thirty and even thirty-five per cent. This is the position that I find in connection with this treaty, and I have to apologize for taking up so much of the time of the House. I do not believe the treaty will be any good when it goes into operation, but I do believe that in some degree it will do a certain amount of injury to the agricultural classes, and that is the explanation of my complaint against it.

Hon. W. S. FIELDING (Minister of Finance). The particular point with which my hon. friend (Mr. Burrell) began his speech, that is the objection of the grape growing industry, was very fully considered when this treaty was before the House in its earlier stages. I remember that a deputation of gentlemen representing that very important industry came down to Ottawa and were heard at very great length. It was not unnatural that they should be somewhat anxious about that particular part of the treaty to which my hon. friend refers. I remember that when the treaty of 1893 was adopted by the House there was similar alarm on the part of the grape growers of the country; yet, I think that experience has shown that they probably did not suffer anything like the injury that they had anticipated. I will not undertake to speak for the grape growers, but I think I am justi-

fied in saying that the full discussion of the question that took place at that time tended to relieve their anxiety. They made at the same time one or two suggestions as to advantages which they thought might properly be conceded to them, to relieve them of what they thought might be an embarrassment and a disadvantage. Their suggestions in that direction were very carefully considered. Although the moment for action has not yet arrived I think I can safely say, as to one particular thing which they desired, that there is every disposition on the part of the government to meet them and that we anticipate that by the time this treaty is finally dealt with in such form as to make it effective such concessions will be granted to the grape growers or the wine makers—probably I should say the wine makers, although both interests are very closely identified—as will make them reasonably satisfied, and I anticipate that we shall not hear any serious complaints from them.

Mr. SPROULE. I understood the minister to say that experience had demonstrated that the treaty had not done them any harm. Have there been any importations of wine under the original treaty since we discussed the question two years ago?

Mr. FIELDING. The explanation is to be found in the fact that Canada is not a wine drinking country. The fear that large quantities of these French wines would come in was expressed when the treaty of 1893 was before the House, and yet I think statistics will show that the importation of these wines did not greatly increase. I have no doubt that we will have the same experience under this treaty. Our friends the French are producers of wines and naturally they will ask in making a treaty that regard shall be had to the things which are their particular specialties. Whilst they asked for some concession on wines we felt that we might give to them that, but at the same time we frankly told them that Canada is not a great wine growing country, nor a wine consuming country to any large degree.

Mr. SPROULE. Was that concession greater than they had under the treaty of 1893?

Mr. FIELDING. I presented the figures when the treaty was up for discussion and they will show as to that, but my recollection is that there was no very material increase in the consumption of the light French wines. Even though the treaty did give them some advantage our people are not a wine drinking people to any great extent. There may be some increase; if it were not so I suppose the French people would not have desired it. But, I do not think there is going to be any alarming increase in the drinking of wines because of this treaty. If our people want to drink they will drink other things which perhaps are not so good for them as these light wines would be.

But, the argument for this treaty may be put in a rather brief form. Suppose we begin by asking ourselves: Is it desirable that we should have a commercial treaty with France? I am sure there is hardly a member of the House who will say 'no' to that proposition. Almost every member who addressed the House, while taking exception to some particular part of the treaty, said: Surely, we want a treaty with France. Let us assume that that is unanimously agreed to or nearly so; are we satisfied that the present treaty is sufficient? Any hon. gentleman who will give the matter his careful consideration must reach the conclusion that the old treaty, which may have had some good qualities, which was a step in the right direction, was a very incomplete and unsatisfactory treaty and that if we desired to have a treaty with France it should be a broader one than the old treaty of 1893. The world has moved since that period. I am not attacking the treaty of 1893, I am not finding any fault with it, I am simply pointing out that whatever may have been its value since that time circumstances have changed and it fails to meet the conditions of the present day. If we want a new treaty we must learn to give and take. It is the easiest thing in the world to say: Why did you not do this, and why did you not get that? Anybody who has to do with bargaining in any way knows that it takes two to make a bargain, and I think that would be a reasonable view to take in reference to this question, and that we should ask ourselves if the Canadian government, by making every reasonable effort, have been able to secure such concessions as seem to promise now or in the future some advantage to Canadian trade. I might put it to a test in this way: Would any hon. gentleman stop and think and ask himself what article of Canadian output, in the way of agricultural produce, or the produce of our factories, or our mines, or the sea, would he desire to see sent to France which is not included in the treaty? Although hon. gentlemen may think there are things in the treaty which are not of great value, it will be difficult, I think, for any hon. gentleman, who will give the question careful attention, to name an article which Canada is now exporting that is not included in the treaty. If that be true then I think it is not unreasonable to believe——

Mr. BLAIN. What about fatted cattle?

Mr. FIELDING. I say to my hon. friend (Mr. Blain) frankly that while we

thought it desirable that cattle should be included we were by no means sure that we were going to do a great trade in that, and when I found that a small concession upon that point would be the means of disarming hostility in the French Senate I had to ask the question: Is this privilege a valuable one? I made the most careful inquiry I could make, from my hon. friend from St. Lawrence, Montreal (Mr. Bickerdike)—though I did not come into immediate touch with him—and I ascertained that that gentleman, from his own personal experience, was able to certify that the privilege of selling fatted cattle in France was not a valuable privilege, and was one, which, if given to us under the treaty, we were not likely to exercise. Therefore, we were making a concession which served a very excellent purpose from the point of view of our French friends, but which from the point of view of Canada was not of very great importance.

Mr. BLAIN. I would like to ask my hon. friend if he could name a list of articles produced upon the Canadian farm in which the trade with France will increase because of this treaty?

Mr. FIELDING. I am not going to boast of that. The worst that can be said of these things is that we get the privilege of the treaty for them. If we cannot do any business in that line nobody is hurt.

Now, hon. gentlemen call our attention to the fact, and dwell upon it, that we put grain in the treaty—that we have the benefit of the minimum tariff on grain. But they say there is no minimum tariff on grain in France and some ungenerous soul said that you are humbugging the people, you are conveying the impression that you are getting a concession on grain when you are getting none at all. That is a very short sighted view of the situation. Suppose we had not put grain on the list. France would have been free to enter into an arrangement with the United States and give them a concession on grain and would have been free to deny it to Canada. And so we stipulated that although we get no concession to-day grain should be put on the list in order that if at any time France should grant a concession on that article to any country in the wide world, she must also give it to Canada. Is that not something of value to us? Suppose we had proceeded differently. Suppose we had left grain out of the matter altogether, and suppose a year later our enterprising American brethren should make a new treaty—and they are trying to make a treaty now—in which they obtained a lower rate on their grain than we had on Canadian grain entering France, every hon. gentlemen opposite would have stood up and said: What were these men about, why had they not sense enough to foresee that condition and guard against it? We happily did see it and guarded against it. It gives us no concession for the moment, it does not give any advantage, the hon. member for Yale (Mr. Burrell) is quite right in saying that on grain we are not getting more than any other country is going to get. Sir, no nation, least of all a great nation like France, will give to any country a monoply of its trade. All that any country can expect to get is the agreement that at any time she shall not be placed at a disadvantage as compared with any other country. That guarantee we have secured as respects the articles mentioned in the treaty. But there is another consideration of great importance which has not been referred to in the recent discussion. The hon. member for Jacques Cartier (Mr. Monk) said it was very desirable that Canada should make many treaties of commerce with the nations of the world. My hon. friend from East Lambton (Mr. Armstrong) specialized. He said: You ought not to mind this French treaty but ought to make a large, liberal treaty with Germany. I shall not stop to say whether he was right or wrong. The reasons why we dealt with France and did not for the moment deal with Germany are well understood. I hope we will yet be able, in due course, to deal with Germany. But I wish to point out the effect of the various criticisms that have been offered. Suppose we had taken the view of the hon. member for East Lambton (Mr. Armstrong) had agreed to make a treaty with Germany and granted certain concessions in our markets to Germany, I wonder if my hon. friend is aware that we would then have been obliged to give every concession thus granted to Germany to France without any return at all? There is in the old treaty of 1893 a provision—again I say I am not finding fault with it, at the time it may have been the best for the moment—which is the strongest justification of our making a new treaty. The old treaty of 1893 contains this clause:

> Any commercial advantage granted by Canada to any third power, especially in tariff matters, shall be enjoyed fully by France, Algeria, and the French colonies.

Observe the wording, 'any commercial advantage.' That was not a reciprocal privilege. There is no clause in that treaty which says that any commercial advantage granted by France to any foreign country shall be granted to Canada. There is a condition in it that if any commercial advantage be granted by France as respects the small list—and it was a very small list—of articles mentioned, to any other country, then on the items in that small list, Canada should get an equal advantage. But for all the thousand and one things outside of that small list, France was left free to discriminate against Canada. But:

Any commercial advantage granted by Canada to any third power especially in tariff matters shall be enjoyed fully by France, Algeria and the French colonies.

My hon. friends will see that while that clause remained in the treaty unrepealed, while that treaty remained outstanding—and it is outstanding and in operation to-day—if we had made a treaty with Germany as suggested by the hon. member for East Lambton, every concession that we granted to Germany in that treaty we would be obliged to give to France—and we would get nothing in return. The argument of my hon. friend for Jacques Cartier (Mr. Monk) was deeper and wider. He said it was desirable that we should make treaties with all the nations. Very well, the more treaties you make the stronger my argument becomes. If you had made a treaty with Germany, with Belgium, with Italy, with the United States, with any country in the world, then whatever advantage you gave to that country in the markets of Canada, for compensation which might have been adequate, you would be obliged to give to France without any compensation at all. That is the position to-day and is the strongest argument that this old treaty should be got rid of. We went to the French government and said: That is not a fair deal, that is not reciprocity; you give us favoured-nation treatment upon a few small items, and we, in return, have been obliged to give you favoured-nation treatment upon the whole range of your products; we think that is not fair, we do not think that you should ask us to do it any longer and we ask you to make it reciprocal. And now it is reciprocal. We have an agreement that upon the list of articles mentioned in that treaty, upon one side or the other, there shall be favoured nation treatment. That is to say, if France shall grant to any country any favour of a commercial character with respect to any one of the items named in that list of our Canadian products, she must also give that advantage to Canada; and, per contra, if we grant any favour to any country as respects the corresponding list on the other side of the treaty, we must also give that to France. That is reciprocity, that is fair. This is an aspect of the question that I would like my hon. friends opposite to understand. I am sure they will see the reasonableness of my argument. While the old treaty remains we are crippled, we cannot negotiate with any foreign country because any concession that we might grant to any foreign country we would be obliged to give to France for nothing. I think that argument is exceedingly strong; to my mind it is one of the strongest arguments in favour of getting rid of the old treaty and adopting the new one.

Mr. FOSTER. Would it not have been perfectly possible for the minister to get rid of the old treaty without making a new one?

Mr. FIELDING. Yes, and if we got rid of the old treaty we would be in the position that at any time other countries could get an advantage in the markets of France that we could not get. We could have asked the British government to denounce the treaty, and I have no doubt they would have done so, although they would be reluctant to adopt such a course. They would have done so, I have no doubt, because it is their pride and our pride to recognize the fact that in all these matters affecting trade, the imperial government desires us to have and exercise the largest possible measure of independence. The freedom which Great Britain now gives us in the negotiation of these treaties is something for which we should all be grateful and proud, and I am sure if we had asked Great Britain to denounce that treaty she would have done so—but would have done so with great reluctance. As was pointed out by one hon. gentleman who spoke yesterday, after years of estrangement France and Great Britain had been brought together and there seemed to be a prospect that they would now work together for their mutual advantage and the promotion of the peace of the world. At such a time it would not have been wise for Canada to have asked for the denunciation of that treaty.

Mr. THOMAS CHISHOLM. Might I ask the minister if the wine growers in Canada are to have the same advantages as the wine growers in France in regard to the excise on the alcohol that is necessary for the fortification of the wine?

Mr. FIELDING. I think there has been a misunderstanding. The wine growers were of opinion and represented to us that in France those who produced wine were permitted to take alcohol in bond for the purpose of fortifying their wines, and the wine growers of Canada asked for a similar concession here. I investigated the matter and found that they were mistaken, that the wine growers of France did not enjoy any such advantage. On that point I think the wine growers are now satisfied that they were mistaken and they are not asking that concession. They are asking a concession of another character which I think is reasonable and which I hope may be granted to them.

Mr. R. L. BORDEN. What was the nature of that concession?

Mr. FIELDING. It was in regard to the use of sugar. If we can make proper customs regulations to guard against abuse,

we are desirous of exempting from duty the sugar which they may use in the production of their wine.

Motion agreed to, and Bill read the third time and passed.

SUPPLY.

House in Committee of Supply.

Public buildings, Quebec—Quebec detention hospital in Savard Park—repairs, &c., $1,000.

Hon. WM. PUGSLEY (Minister of Public Works.) This amount is required for repairs, and also to build a proper fence around the lower portion of the yard. This is under the Immigration Department.

Mr. FOSTER. What is the building worth?

Mr. PUGSLEY. It is a two story brick building on a stone foundation, 115 feet in length by 100 feet in breadth. I do not know the cost of it.

Quebec immigration buildings—additions, renewals, repairs, &c., $6,000.

Mr. PUGSLEY. There was an appropriation for 1909 of $7,500, and there was expended up to the 31st of March, $2,180.95; so that there remains of that vote $5,319.05. It is proposed to spend $2,000 in building a covered way to the building, $595 on the old Marine hospital and $3,419.30 on the immigration buildings generally. This is asked for by the Department of Interior.

Quebec observatory—renewal of water supply pipe, &c., $1,800.

Mr. PUGSLEY. This is asked to make provision for the renewal of 1,200 feet of water-supply pipe which runs from the Grande Allée to the observatory.

Mr. FOSTER. What is the size of the pipe?

Mr. PUGSLEY. Three-inch cast-iron pipe. The cost of the pipe is $600 and the cost of the excavation $1 per running foot.

Mr. FOSTER. How deep do you go?

Mr. PUGSLEY. Below the frost line, I would suppose five or six feet.

Quebec post office—elevator, improvements, repairs and fittings, $20,000.

Mr. PUGSLEY. This is asked to make provision towards placing an additional story on the head post office building, also to provide an elevator to the ground floor, first and second floors and the attic, also rewiring the building for electric light, and repointing the exterior wall. The total expenditure up to the 31st of October, 1909, was $14,224.62. The estimated cost of rewiring the building is $1,800; raising one story of the extension at the rear, 66 feet by 35 feet, $12,000; providing for hot water, $1,000; repointing the exterior of the building, $5,000; steamfittings, $1,500; contingencies, $1,644. That makes the total cost of the proposed improvements $37,168.62. Then there is the expenditure from 1st April, 1908, to 31st October, 1908, $14,224.62; assumed expenditure to March 31, 1909, $1,794; revote, $7,000; new vote, $13,000. Total, $36,018.62, which still leaves an estimated amount of $1,150 to complete the improvements.

Mr. FOSTER. What do you get in the way of space?

Mr. PUGSLEY. We get an additional story on the extension in the rear of 66 feet by 35. This accommodation is very much required by both the Post Office Department and the Customs.

Mr. FOSTER. Do you get any other extension besides that rear extension?

Mr. PUGSLEY. That is the only one. We are also putting an elevator into the building and making quite a number of improvements indicated in the details I have given.

Mr. FOSTER. What is the cost of the whole?

Mr. PUGSLEY. Up to the 31st March, $298,000. That of course runs over many years.

Mr. FOSTER. It must be in pretty bad state of repairs now.

Mr. PUGSLEY. It requires considerable repairs.

Mr. URIAH WILSON. Is it used for a post office alone?

Mr. PUGSLEY. It is used for post office and customs purposes.

Quebec custom house, $50,000.

Mr. PUGSLEY. This is to enter upon the restoration of the customs house in the city of Quebec which was partially destroyed in the recent fire. At first it was thought we might repair the present building, and this amount was inserted in the estimates for this purpose, but we have had very strong representations on behalf of the Harbour Commissioners that we should acquire a site and erect a custom house in another portion of the city. It is urged that the present site would afford terminal railway facilities to the Transcontinental and it would be very much better for us to build a custom House in some other place. That matter is under consideration.

Mr. FOSTER. How much will it cost?

Mr. PUGSLEY. If we enter upon the construction of a new customs house, that would cost in the vicinity of half a million dollars. If we repair the present customs

house, that will cost between $50,000 and $75,000.

Mr. FOSTER. It is very important that we should repair the old house unless we have money to burn. Here you have a customs house, which is pretty well situated, and, although injured by fire, may be repaired at a trifling cost. If the minister can do his work there fairly well, we should consider very carefully before going into an expenditure of half a million dollars because the Harbour Board wants us to do so. There does not seem to be any limit at all to the excursions which the Minister of Public Works is willing to take in the matter of public buildings.

Mr. GEO. TAYLOR (Leeds). I understood the minister to say that the customs work was done elsewhere and that this building was simply down at the shipping centre for the use of landing waiters. My opinion is that it has no business to be down there. There ought to be a building rented or some other provision made for having that building in another part of the city. I understand the customs house is in connection with the post office.

Mr. PUGSLEY. They use the customs house proper for offices.

Mr. FOSTER. This is for a warehouse.

Mr. PUGSLEY. There are customs officials who have offices in the building. The post office is used simply for the postal parcel business in connection with the customs.

Mr. FOSTER. What was this place used for which was damaged by fire?

Mr. PUGSLEY. Perhaps I might be allowed to make a few remarks regarding the manner in which the question of removal has come up. Immediately after the fire, which destroyed a very considerable amount of other property, the question occurred to the Transcontinental Commissioners and the Harbour Board whether it would not be desirable to utilize the space burnt over in connection with railway terminal facilities for the Transcontinental. It has been represented to me that, in the opinion both of the Harbour Board and the Transcontinental Commissioners, there is no part of the city which could afford as good opportunities for providing these terminal facilities as this area which has been burnt over. If that part were selected for the terminal facilities, that would necessitate the removal of the customs house to another place. I do not wish to be understood as saying that this site will be given over to the Transcontinental or the Harbour Commission. If they take it, they will have to pay the Department of Public Works what the property is fairly worth. If it should form part of the Transcontinental railway terminal facilities, of course the Grand Trunk Pacific will pay a rental on the cost. It is a matter of very great importance. It has not yet been decided what we shall do, but it is certainly worthy of most careful consideration.

Mr. FOSTER. Does the Minister of Customs require a half million dollar building there?

Mr. PATERSON. That matter is with the Public Works Department. I do not know what the building may cost.

Mr. FOSTER. Do I understand the Minister of Customs (Mr. Paterson) to say that he abdicates his position entirely with reference to the working of his department in this respect and leaves the matter to the Minister of Public Works? The hon. gentleman (Mr. Paterson) is responsible to the country for the expenditure of his department, and he must have an idea what facilities he requires. Does he want a half million dollar plant, or will a less expensive one do?

Mr. PATERSON. I am responsible for the expenditure of my department, but this does not pertain to the expenditure of my department. We have been burned out and must go somewhere. We are temporarily using the present premises, I fear at great inconvenience to the officers. We wished to rent a building there, but the commissioner thought—and his opinion was concurred in by the Public Works Department—that the rent was such that it was not advisable for us to pay it. What we want is to have a custom house in which the business can be properly transacted.

Mr. FOSTER. What does the hon. minister think would be a proper provision to give him a place for his work? Does he think it would cost half a million dollars?

Mr. PATERSON. I cannot express an opinion on that.

Mr. FOSTER. Then, better let this item stand in the meantime until the Minister of Customs has made up his mind. For I am ready to fight this thing all winter, if necessary, unless we get the views of the Minister of Customs as to what he wants. This method under which the minister whose work is to be done has no wish, desire or plan as to the buildings to be erected for the work of his department, but leaves it entirely with another minister, is one which we have not recognized in this House. This building, if required at all, is required for the work of the Department of Customs. The Minister of Customs, as the head of that department, is the man who ought to requisition the Minister of Public Works for a sufficient building for the service.

Mr. PATERSON. That is what we have done.

Mr. FOSTER. Then, does the hon. minister agree that an expenditure of half a million will be required?

Mr. PATERSON. I have not seen either the estimates or the plans.

Mr. FOSTER. Then, I think the estimates and the plans had better wait.

Mr. PUGSLEY. I think I can satisfy the hon. member (Mr. Foster). When the estimates were made up and this item of $50,000 put in, the money was intended to repair the custom house building which had been injured by the fire. Since that time, we have had this urgent request to remove the custom house to another site. If we do that, it will necessitate the erection of a new building. In that case, of course, we would sell the present site and building for what they are worth to either the Harbour Commissioners or the Commissioners of the Transcontinental railway. But, before I can properly ask this committee for a vote to erect a new building, I ought to be in a position to state definitely the character of that building and where it is to be erected. Therefore, I would say to the committee that unless we utilize this vote of $50,000 to repair the present custom house we will let the item lapse and come to the House and ask for another appropriation for the new building.

Mr. FOSTER. That is perfectly fair. Now, all we have to look at is the sum of $50,000. Is that sum required to repair the present building?

Mr. PUGSLEY. That is the architect's estimate.

Mr. FOSTER. What are the figures in detail?

Mr. PUGSLEY. I have not the details of that estimate before me. But I may say that the attic and half the first floor were completely destroyed.

Mr. FOSTER. What was the cost of the building?

Mr. PUGSLEY. About $400,000.

Mr. FOSTER. If the minister will make it clear in the item that this is for repairs, that will make it all right.

Mr. PUGSLEY. Perhaps the committee will take my assurance upon that. I do not feel competent to alter the estimates.

Mr. FOSTER. But——

Mr. PUGSLEY. Of course, if the Minister of Finance (Mr. Fielding) says so, the alteration can be made.

Mr. FIELDING. So long as the amount is not changed, or the meaning destroyed, it can be done.

Mr. PATERSON.

Mr. PUGSLEY. Then, there is no objection.

Mr. DEPUTY SPEAKER. The item will read:

Quebec custom house—repairs, $50,000.

Mr. PUGSLEY. I would suggest that we pass over the items for military buildings and go on with that relating to the Quebec East public building.

Quebec East—public building, $40,000.

Mr. PUGSLEY. This is to provide for the completion of the public building now being erected on the corner of St. Joseph and Dorchester streets in Quebec East, frequently spoken of as St. Roch. The building is required for post office purposes.

Mr. FOSTER. Post office purposes alone?

Mr. PUGSLEY. Yes. The building is to be 49 feet by 48 feet 3 inches; three stories and basement; wall of brick faced with cut stone on the street fronts and stone dressings on the remainder. The estimated cost is as follows: Site, $23,400; legal services, printing, advertising and architect's commission, $1,006.50; paid to the contractor on account of his contract to October 31 last, $18,680, making a total expenditure to that date of $43,086.50. The amount due on the contract is $29,031. We have been obliged to purchase additional land which cost us $3,770. The cost of heating and boilers will be $2,500; electric wiring and fixtures, $1,000; fittings, furniture and lock-boxes, $5,000; sidewalks and fences, $1,000; contingencies and superintendence, $8,319. This makes a total estimated cost, including site, of $9,762.50. The total expenditure to October 31, already given, is $43,086; estimated expenditure prior to March 31, 1910, $10,676, so that this vote of $40,000, of which $20,000 is a revote, will make up the entire expenditure.

Mr. FOSTER. What was the amount of the contract?

Mr. PUGSLEY. $47,711.

Mr. FOSTER. How did the minister get the site, $27,000?

Mr. PUGSLEY. $23,400 was the first payment. The site was valued by arbitrators.

Mr. FOSTER. What was the reason for the additional $3,770?

Mr. PUGSLEY. We found, in locating the building, that the lot was not quite large enough, the site would be cramped, and we had to purchase additional land.

Mr. FOSTER. What were the dimensions of the first site?

Mr. PUGSLEY. 66 feet frontage on the two streets, the lot is 66 feet square. Then it was decided to set the building back a little from the street, and we found there was not space enough in the rear, and we had to buy an addition of 10 feet, I think, in order to give the requisite light.

Mr. MAGRATH. Does the minister know the revenue of that postal division?

Mr. PUGSLEY. For 1908-9 it was $14,623,-60. Money orders issued, $70,692; money orders paid, $7,484. It is a very important division of the city of Quebec. As hon. gentlemen are no doubt aware, by reason of the configuration of the city, there are to all intents and purposes so far as post office requirements are concerned two cities, there is an upper city and a lower city. The erection of this building has been strongly urged by the Postmaster General, and he satisfied the department that it was absolutely essential for the accommodation of the public.

Mr. FOSTER. What is the population to be served by that office?

Mr. PUGSLEY. About 40,000.

Mr. CROCKET. Does the $47,000 contract cover the heating and wiring?

Mr. PUGSLEY. No, just the building.

Mr. CROCKET. Were tenders called for heating, wiring and other matters?

Mr. PUGSLEY. Yes.

Mr. BLAIN. Does not the minister think the language of this item is rather indefinite? It says: 'Quebec East, public building'. It does not say whether it is for a post office or not. Does he not think we should specify what the money is required for?

Mr. PUGSLEY. There is only one public building in Quebec East, that is the building under contract. Last session we put in a vote in exactly the same terms, so I do not think it would be desirable to make any change.

Mr. FOSTER. I would suggest that you add the words 'post office' after the words 'public building'.

Mr. PUGSLEY. There is no objection to adding those words.

Mr. FOSTER. What is the present cost of the service, and where is it being carried on?

Mr. PUGSLEY. In St. Roch, the rent paid for the post office is $700 per annum, in St. Sauveur, $225. The total is $925. This one building will accommodate both divisions.

Mr. MAGRATH. The minister said the Postmaster General supported the construction of this building. Is it the custom of the Department of Public Works always to get the support of the Postmaster General before post offices are constructed?

Mr. PUGSLEY. Not always.

Mr. FOSTER. Before this building was planned, was there any communication between the Department of Public Works and the Postmaster General as to the nature and kind of building he wanted in which to carry on the post office work?

Mr. PUGSLEY. Yes, there were a number of consultations, in which the Postmaster General informed us what was the accommodation required; and plans were submitted to the Post Office Department and approved.

Mr. FOSTER. Of course the minister sees what he is doing. Whereas to-day you are paying less than $1,000 for accommodation, the yearly cost of this new building will be close on $10,000.

Mr. PUGSLEY. My hon. friend estimates a 10 per cent basis, I think that is considerably too high.

Mr. FOSTER. I do not think so, from 30 years experience. It will come to that.

Mr. BLAIN. How are sites of buildings of this kind selected in the province of Quebec?

Mr. PUGSLEY. The same as in all the the other provinces of Canada.

Mr. LANCASTER. In the province of Quebec are sites furnished by municipalities free to the government, or does the government pay for them?

Mr. PUGSLEY. I have not observed any difference in the custom in the province of Quebec from the custom in other provinces. Sometimes the sites are furnished. I can call to mind cases in which sites have been furnished by municipalities in Quebec as well as in other provinces.

Mr. LANCASTER. What is the rule?

Mr. PUGSLEY. The rule is that the department purchases the sites in all the provinces of Canada.

Mr. LANCASTER. In St. Catharines, two years ago, the government insisted on the city paying $6,500 for the land before they would erect a public building. That is in Ontario.

Mr. PUGSLEY. That is a matter of agreement. In Quebec there are large numbers of public buildings constructed on sites which are purchased by the Crown. I have now in mind Shawenegan Falls, in

the province of Quebec, where the county and the municipality furnished the site free. In Iberville I think the same way. I have never found that there is any difference between one province and another in that respect. Occasionally sites are furnished free, but in most cases we have to buy them.

Mr. CROCKET. I understand the minister to say that this price was fixed by arbitration.

Mr. PUGSLEY. Yes.

Mr. CROCKET. How are the arbitrators appointed—one by the Department of Public Works and one by the owner of the property?

Mr. PUGSLEY. Yes, and these two generally chose a third.

Mr. CROCKET. The property not expropriated but submitted to arbitration?

Mr. PUGSLEY. Yes, and the price agreed upon.

Mr. CROCKET. Is the minister able to state that the price fixed by arbitration was greater or smaller than the price offered by the owner?

Mr. PUGSLEY. My recollection is that the owner did not make any offer as to the price he required because he was informed by the department that it would be necessary to fix the value by arbitration.

Mr. CROCKET. Who were the arbitrators? The minister having in mind the fact that they were very able men should remember the names.

Mr. PUGSLEY. I satisfied myself that the department was represented by a thoroughly competent and reliable man, but I cannot at present give my hon. friend the name because I have no memorandum of it. I would have no objection at all to submitting the name later on.

Mr. BLAIN. The reason I ask the minister if there is any difference in the selection of sites in the province of Quebec and other provinces is on account of an article that I have before me from the province of Ontario. It says:

Fergus post office—Liberals hold meeting to decide on the site.

Fergus, Dec. 1.—A public meeting of local Liberals was held to-night for the purpose of recommending to the government a site for the proposed post office. Four sites were voted upon, the final vote giving the Monroe property a majority of six over the Watt property.

It seems to be the policy at Fergus in Ontario, that when a site is to be selected the Liberals are called together, the different sites are submitted and voted upon, and I suppose that the policy will be that the majority shall rule. I want to know whether the same policy is applied in Quebec and other provinces or whether the minister is going to abolish this in favour of the new policy which he is introducing.

Mr. PUGSLEY. There is no policy in Ontario, or any other province, by which we accept the recommendation of the Liberal committee or of anybody else in the locality as to the selection of a site. Of course, we cannot prevent people in a locality, no matter what political party they belong to, making a recommendation as to what, in their judgment, would be the best site for a public building. But we do in every case send one of our own officials to make an examination of the site, to compare the price at which one site can be obtained with that asked for other eligible sites and to make his report and recommendation as to which in his judgment is most desirable for the public building. In the case of Fergus we sent a very experienced representative of the department to that town and it was upon his examination and report that the purchase of the property was made.

Mr. BLAIN. Would my hon. friend state to the committee which of these properties was selected?

Mr. PUGSLEY. We will come to that when we reach the Ontario items, and I would ask my hon. friend to wait.

Mr. BLAIN. I am quite willing, only I want to give a note of warning to my hon. friend.

Mr. PUGSLEY. I will have the information.

Mr. BLAIN. I hope my hon. friend will state whether it was the Munro site or the Watt site.

Mr. PUGSLEY. Yes, I will.

Mr. BLAIN. Then we are to understand that in no province of Canada are the local Liberals consulted with respect to the location of sites?

Mr. PUGSLEY. I will not say that. My hon. friend will see the reason. It might very well be that when our representative goes into a locality he naturally confers with the most intelligent, the most influential and the most disinterested people, and he would get their views.

Mr. BLAIN. If that is the policy of my hon. friend it would not take his officers long to consult the Liberals of Ontario now.

Mr. PUGSLEY. That makes the work easier.

Mr. BLAIN. Yes, it makes it easier and very much cheaper for my hon. friend.

Mr. MONK. Did my hon. friend state what the dimensions of this lot were?

Mr. PUGSLEY. 66 feet square and then we made a subsequent purchase of 10 feet.

Mr. MONK. At what price per foot?

Mr. PUGSLEY. The first purchase amounted to $23,400. That would be about $6 per square foot. The second purchase was made at $6.50 per square foot.

Mr. CROCKET. Was it a vacant lot?

Mr. PUGSLEY. There may have been some cheap buildings upon it, but it was practically a vacant lot.

Mr. BLAIN. The member for the city (Mr. Turcotte) is suggesting what the site is. I think it would be only fair to the committee, he being a resident of the city, that he would explain it.

Mr. J. P. TURCOTTE. It is a very simple thing to explain this matter. St. Roch, as hon. gentlemen know is represented by the right hon. the Prime Minister. It was proposed a long time ago to have a public building erected there. A new post office is necessary there because the main post office is now in the upper part of the city and this is a very important business centre. At present there are two post offices; one in St. Roch and one in St. Sauveur. As the result of an agreement these two services were combined and it was proposed to erect one new post office on the main street of St. Roch, St. Joseph street, in the centre of a locality where there are many important industrial establishments, a large population and extensive commerce. The price was not very high. It was fixed by arbitrators and I can assure the committee that it was agreed by all people in that locality that this action of the government was in the public interest. The building is not quite finished and all the commercial and industrial people in the locality are anxious to get the benefit of this new public building. Commerce in that locality is increasing rapidly and population is also increasing and so it is fair to say that the action of the government was a proper one.

Some resolutions reported.

House adjourned at six o'clock.

HOUSE OF COMMONS.

THURSDAY, December 2, 1909.

The SPEAKER took the Chair at Three o'clock.

PRIVILEGE—REPRESENTATION OF QUEBEC EAST AND OTTAWA.

Mr. SPEAKER. The hon. member for Portage la Prairie (Mr. Meighen) yesterday, (December 1), called my attention, as a matter of privilege, to the position of another hon. member of this House who had been returned for two constituencies and had not yet declared or elected for which of the two constituencies he would continue to retain his seat.

The contention was made that a certain sessional order of the House of Commons of Great Britain, requiring a member under such circumstances if within one week that it should be made to appear that there was no question as to his return, &c., was applicable to the case referred to inasmuch as such a case was not provided for by the rules and orders of this House. Rule No. 1 of this House is as follows:

> In all cases not provided for hereinafter or by sessional or other orders, the rules, usages and forms of proceeding of the House of Commons of the United Kingdom of Great Britain and Ireland in force on the first day of July, 1867, shall be followed.

In the imperial parliament the matter under consideration is dealt with by sessional orders which are renewed by the House of Commons from session to session and which expire at prorogation.

The sessional order on the subject which was, presumably, passed by the imperial House in 1867 may or may not have been in force on the first day of July in that year depending on whether the House was then in session or had been prorogued before that date. Even if that sessional order was in force on the first day of July, 1867, the question as to whether that order in all its terms is applicable to the House of Commons of Canada is one of importance and not without difficulty. As far as I have been able to ascertain in the limited time allowed me since the question was raised, I have not been able to find that it has been observed in this country. In fact, from a somewhat hasty consideration of the precedents, I think I would be safe in saying that the practice of this House as to the time in which the member's choice shall be made, has been far from uniform and to the present time no formal ruling on the subject has been made in this House.

The question is, are such sessional orders as are annually passed by the British House of Commons at the beginning of each session included in the meaning of the words 'rules, usages and forms of proceeding' mentioned in rule 1 of this House. Those sessional orders are clearly neither rules nor forms of proceeding nor in the strict meaning of the term are they to be considered 'usages' and consequently are not applicable to this House in cases not specifically provided for. The practice of this House has so far not recognized them as binding.

In 1873, Hon. Mr. Blake having been elected for Durham and Bruce announced his choice of constituency fifteen days after

the beginning of the session, and in 1896 Mr. Dalton McCarthy elected which of the two seats (Brandon and Simcoe) he would sit for, on the seventh day after the opening of the session. The case of the honourable the present Postmaster General, returned for both Nicolet and Gaspé in 1904, is one of the latest in point. He only resigned for Nicolet on the third of December, 1906, and after some fifteen months had elapsed during which he might have exercised his privilege of choice. No doubt a search of the journals and records would show many similar cases.

A strict adherence to the British rule would therefore to a certain extent form an alteration in the customs and usages of this House in that regard.

My ruling is, therefore, that there is nothing in the rule of this House requiring a member who has been returned for more than one constituency to elect within any prescribed time for which of such constituencies he will sit. But, in my opinion, it is eminently desirable that some definite rule and practice on the subject should be established. The House has a Standing Committee for the purpose of considering such questions—the Committee on Privileges and Elections—and I would suggest that at an early date the matter should be considered by the House, or by the committee, with a view to the fixing of a definite period within which such election is to be made.

QUESTIONS.

NUMBER OF EMPLOYEES ON INTERCOLONIAL.

Mr. PAQUET:

How many employees of all kinds were in the service of the Intercolonial Railway and its several branches in the course of the fiscal years 1907-8, 1908-9, and the 1st October, 1909?

Hon. GEO. P. GRAHAM :

Average number of employees of all kinds on Intercolonial railway during fiscal year 1907-8, was 8,861; during 1908-9, 9,285; until 1st October, 1909, 8,610.

W. W. KRICK, INSPECTOR, PORT MAITLAND.

Mr. LALOR :

1. Was W. W. Krick, the government inspector of Port Maitland east pier?
2. If so, when was he appointed, and on what date did he commence his duties?
3. What was the date of his resignation?
4. What was his salary and the total amount of money paid to him?
5. Did he report to the government that he was not satisfied with the work being done and giving that as his reason for resigning?

Mr. SPEAKER.

Mr. GRAHAM :

1. W. W. Krick was the government inspector of Port Maitland west pier (not east pier).
2. He commenced his duties 26th May, 1909.
3. He resigned by letter to superintending engineer dated 2nd September, 1909, the resignation to take effect September 4, 1909.
4. Salary $3 per day, 26th May to 30th June, 1909.

Salary $3.50 per day July 1 to September 4, 1909.

Total amount paid him $292.50.

5. No, although it appears some correspondence took place between Mr. Krick and the superintending engineer.

NATIONAL TRANSCONTINENTAL RAILWAY—BOARD OF ARBITRATORS.

Mr. SAM. SHARPE :

1. Who composes the board of arbitrators to decide the question of over-classification in the construction of the National Transcontinental Railway?
2. Should the board of arbitration find that there has been over-classification, is it the intention of the government to compel the contractors to make good the loss or is the loss to fall upon the people of Canada?
3. If the government purpose fixing the loss, if any, for this alleged over-classification upon the contractors, has the government considered the advisability of having the contractors represented by a member on the board of arbitrators

Mr. GRAHAM :

1. Gordon Grant, chief engineer, of the the National Transcontinental railway, eastern division.

B. B. Kelliher, chief engineer, of the Grand Trunk Pacific railway.

Collingwood Schreiber, chief engineer to the government, for the western division of the National Transcontinental railway.

2. It is thought inadvisable in the public interest to reply to this question while the matters in dispute are still being arbitrated upon.

3. The composition of the board of arbitrators is fixed by statute.

EXPORTS OF PULP AND PULP WOOD FROM SAULT STE. MARIE.

Mr. BOYCE:

I. What quantity of pulp and pulp wood, respectively, were exported from Sault Ste. Marie, Ontario, during the years 1900 and 1909, inclusive?
2. What was the value of such exports, respectively?

Hon. WM. PATERSON:

The exports of pulp wood and wood pulp from the port of Sault Ste. Marie during the fiscal years from 1900 to 1909, inclusive, have been as follows:

	Pulp Wood.		Wood Pulp.	
	Cords.	Value.	Cords.	Value.
1900..	.....	155,614	.....	362,243

NOTE.—The quantity of pulp wood was not recorded during the fiscal years 1900 to 1903, inclusive.

The quantity of wood pulp was not recorded during the fiscal years 1900 to 1907, inclusive.

ACCIDENT TO LOCKS AT SAULT STE. MARIE.

Mr. BOYCE:

1. What investigation, if any, was made by the government into the cause of the accident which occurred during the past summer at Sault Ste. Marie, by which the gates of the Canadian locks were broken and injuries were caused to shipping in the locks? If so, when and where was the investigation held, and by whom?

2. Has any report yet been made as a result of any such investigation? If so, when was it made and where is it filed?

3. What was the total cost entailed upon the government by the accident.

4. Have any steps been taken to recover this amount from those responsible for the accident? If not, is the department contemplating taking any such steps?

5. Has the department had any correspondence with reference to recovering compensation for the loss sustained? If so. with whom and with what result?

6. Who was employed to report upon and estimate the damage caused?

Mr. GRAHAM:

1. An investigation was made by the superintending enginneer of the canal under the observation of the staff.

2. Yes; a report from the superintending engineer, dated June 18, 1909, which is now on file in the department.

3. Amount of expenditure on account of the damage to date is $67,229.67.

4. Yes; the matter is now in the hands of the Department of Justice, through whom all negotiations for settlement are being made.

5. Answered by No. 4. The claim is pending for settlement.

6. The superintending engineer of the canal.

ORDNANCE STORES BUILDINGS AT OTTAWA.

Mr. WORTHINGTON:

1. What are the detailed instructions to the Dominion Police as to the patrolling of the Ordnance Stores buildings at Ottawa?

2. At what hours did such patrol visit the building between 6 o'clock a.m. of the 21st November, 1909, and 6 o'clock a.m. of the 22nd November, 1909?

3. Did the duties of the patrol include visits to the interior of the building in which a fire recently occurred? If not, why not?

4. Do military customs and regulations require that night guards shall be mounted wherever fires are maintained in store buildings? If so, what official is responsible for the absence of a night guard in the building in which fire recently caused damages and loss estimated at $170,000?

5. Who is the official responsible for the custody of the valuable accumulation of clothing and stores at the headquarters ordnance station, and has this official made any representations of the lack of sufficient men to carry on the ordinary duties of the service for which he is responsible?

6. Do the ordnance stores buildings at Ottawa accommodate all clothing and stores on ordnance charged at such station? If not, what nature and quantity of stores or clothing are otherwise provided for, where stored, rental, if any, paid for buildings or space, and what provision was made for night watch thereon?

7. Was any insurance carried on stores damaged by fire? If not, why not?

Sir FREDERICK BORDEN. Answers to first three parts supplied by Minister of Justice:

1. A constable for the past five years has been detailed to visit the Ordnance Stores building three times nightly, going from the Militia Department, where he is regularly stationed. Time 11 to 11.25 p.m.; 1 to 1.25, and 3 to 3.25 a.m., to ascertain that all doors and windows were securely fastened and that no appearance of fire existed. In the event of anything unusual being observed to notify the sergeant on duty at police headquarters, East Block. In event of noticing fire, in addition to above, to turn in a fire alarm, a box for that purpose being installed close by.

2. As the building was burned on the morning of the 20th it is taken for granted that the question was intended to read from the 19th to the 20th. A constable was on duty at the main door of the Ordnance Stores building on the 19th from 8.30 a.m. till the building closed at about 4.30 p.m. The night visits were made as indicated in the foregoing answer, 11 to 11.25 p.m., 19th; 1 to 1.25 a.m., and 3 to 3.25 a.m., 20th.

3. Their duties did not require them to visit the interior of the building, the visits mentioned being deemed a sufficient precaution.

4. No, but the Regulations for Canadian Ordnance Services hold officers in charge of a store building responsible that all fires are made ' safe ' at night.

5. The Senior Ordnance Officer, Ottawa. No special application has been made, but all officers commanding Commands and In-

dependent Districts have recommended increases to the establishment of the Canadian Ordnance Corps, and these have been met as far as funds will permit.

6. No. The following are stored in a rented building on Sparks street, viz.:

Caps, forage, soft band	3,000
" " hard band	2,000
Trousers, infantry, serge	1,500
Pants, cloth	300
Tunics, Hussars	400
Frocks, blue, N. P	500
Trousers, khaki	800
Greatcoats, grey	6,844
Cloaks, grey	500
" khaki	1,760

The rent of the building is $960. The lessor paying the taxes.

This building is used simply as a warehouse. The building is not heated, and it is only opened when an officer of the corps inspects it, or when articles are required to be removed therefrom. Under these circumstances the appointment of a special night watchman is not considered necessary. The building is under the special protection of the city police.

7. No. The government does not insure.

NATIONAL TRANSCONTINENTAL RAILWAY—MR. McINTOSH.

Mr. LENNOX:

1. Is Mr. McIntosh, of whom Major Hodgins complained for alleged over classification and of whom Mr. Grant, now chief engineer, is said to have approved (see letter Major Hodgins to Mr. Lumsden, 14th Sept., 1907, Exhibit 6, before Special Committee), still in service of the National Transcontinental Railway Commission? If so, where, in what capacity, at what salary, and has his salary been increased since Sept., 1907? If so, from what amount to what amount?

2. If not in the service of the commission, when and why were his services dispensed with?

Mr. GRAHAM. The Transcontinental Railway Commission furnishes the following information:

1. Mr. McIntosh was promoted November 16, 1908, from division engineer, division No. 6, District 'F,' at salary of $200 per month, to position of assistant district engineer, District 'F,' at salary of $275 per month, being the salary attached to that position on reports of District Engineer Poulin and Chief Engineer Lumsden. He still occupies this position.

2. Answered by No. 1.

NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. LENNOX:

1. Referring to a letter of Oct. 30, 1907, from Mr. Hugh D. Lumsden to the Commissioners of the Transcontinental railway, in which he says among other things, 'I can only say that I do not concur with the interpretation placed on clauses 34, 35 and 36 of the general specifications by Mr. Doucet, or the engineers under him,' and after giving his own interpretation and stating the action to be taken, concludes: 'In any event, I ask that this correspondence be at once submitted to the government,' was the correspondence referred to submitted to the government? If so, when and how?

2. What action, if any, did the government take in reference to that matter, when was the conclusion arrived at, where is this recorded and was the result communicated to the engineer and the commissioners? If so, how and when?

3. Were the records, papers and documents in reference to this matter included in the return brought down on the 22nd of April, 1909, sessional paper No. 46F? If not, will the minister now lay them upon the table of the House?

Mr. GRAHAM:

1. Yes; by letter of secretary, Transcontinental Railway Commission, dated Nov. 23, 1907, to the honourable the Minister of Railways and Canals.

2. The matter was referred back to the commissioners by the hon. the Minister of Railways, by letter, Dated December 5, 1907, for the reason that by the National Transcontinental Railway Act, full power is vested in the commissioners and the chief engineer to carry on the work, and under the form of contract and specifications approved by the government the duties of the chief engineer are fully set forth. The whole correspondence appears as exhibits in Hodgins' investigation. (See pages 65 and 66, Proceedings of Special Committee).

QUEBEC BRIDGE—TENDERS FOR NEW PIERS, &c.

Mr. LENNOX:

1. Has the government asked for tenders for the construction of the new piers for the Quebec bridge?

2. Are the existing piers in good condition? If not, what is the defect and how was it caused?

3. Are these piers to be utilized for the new bridge? If not, why not?

4. What did these piers cost, and are they to be demolished?

5. What is the estimated cost of the new piers?

6. What was to have been the weight of the steel to be used in the former structure, what kind of steel, what is the estimated weight of steel to be used in the new structure, and what kind of steel is provided for?

7. What is the estimated percentage of increased strength to be secured by the new plans as compared to the former plans?

8. What is the estimated cost of the new bridge?

Mr. GRAHAM:

1. Yes.

2. The existing piers have shown no defects whatever.

3. The south pier caisson will be fully used, and enlarged to carry the greater load that will be required for new superstructure. At the north pier; borings have demonstrated that the caisson can be founded on the rock and the span reduced from 1,800 to 1,758 feet, the existing north pier will then be demolished.

4. (a) The total cost of the old substructure, including anchor piers and abutments was $1,217,400.

(b) Answered by number three.

5. Tenders are now before the government, pending action no reply can be made.

6. The old bridge was estimated to weigh 35,000 tons and was to have been built of carbon steel. The new bridge will be built in part of carbon steel using nickel steel in the more important members—the weight cannot be given at present pending the receipt of tenders for the superstructure.

7. Impossible to answer. The new bridge will be strong enough to carry all the loads that may possibly be brought upon it.

8. It is not in the public interest to publish any information at this stage of the work.

ST. LAWRENCE CHANNEL.

Mr. MONK:

1. What is the total amount expended to date for dredging and deepening the channel from Batiscan, P.Q., across to St. Pierre les Becquets?

2. Is the work in question terminated?

3. What depth has the said channel?

4. Are any steamers using the said channel to convey passengers or freight to St. Pierre les Becquets? If so, what steamers have used said channel during the past year?

Hon. W. PUGSLEY:

1. $27,775.95.

2. No.

3. Part of the channel has been dredged to a depth of 8 feet and part to 5 feet.

4. (a) Yes. (b) Two boats, one gasoline and one steam, have conveyed passengers and freight between Batiscan and St. Pierre les Becquets during the past summer.

DEEPENING OF ST. LAWRENCE CHANNEL.

Mr. WORTHINGTON:

1. What provision has been made as respects arms, clothing, ammunition, &c., to meet any possible sudden increase of the active militia from training to war establishment?

2. What provision has been made as to the mobilization stores of authorized establishments being available if required for active service?

3. Has provision been made for an adequate reserve of arms, clothing, ammunition, &c., being maintained between the Great Lakes and the Rocky mountains and between Calgary and the Pacific coast?

4. Is it the intention of the government to establish an arsenal west of Lake Superior?

5. Has any pattern of gun sleigh been yet approved for the use of the Canadian Horse and Field Artillery?

Sir FREDERICK BORDEN: The kind of information asked for in questions 1, 2 and 3 has not very often been required and, in so far as I know, has never been given, as it is not considered in the public interest to do so. With my hon. friend's intimate knowledge of military customs I think he will agree with me that it is undesirable in this case that it should be given. As to question 4, the answer is: Not at present.

5. Yes, a pattern has been approved which will be further tested during the present winter.

IMPORTATION OF COAL.

Mr. G. V. WHITE:

What quantity of coal has been imported into the Dominion of Canada and the province of Ontario, respectively, from the United States, during each year from 1905 to 1909, inclusive?

Mr. PATERSON: The quantity of coal imported into Canada and the province of Ontario, from the United States, during the fiscal years 1905 to 1909, inclusive, was as follows:

	Dominion of Canada.			Province of Ontario.		
	Bituminous.	Slack.	Anthracite.	Bituminous.	Slack.	Anthracite.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1905	4,424,179	614,429	2,584,338	4,314,347	591,609	1,874,068
1906	4,742,485	750,489	2,152,616	4,657,254	730,623	1,473,753
1907 (9 mos.)	4,081,682	635,726	1,991,926	3,981,460	591,633	1,384,094
1908	7,220,672	1,236,503	3,056,600	6,652,624	1,107,756	2,151,077
1909	6,036,621	1,083,207	3,022,970	5,671,963	963,425	2,035,117

DEEPENING OF THE ST. LAWRENCE CHANNEL.

Mr. G. V. WHITE:

Has the government made an estimate of the cost of enlarging and deepening the St. Lawrence route from Port Colborne to Montreal? If so, what would be the cost of deepening said route to a minimum depth of 22 feet?

Mr. GRAHAM. No.

PERMANENT CORPS.

Mr. WORTHINGTON:

1. Is it the intention of the government to increase the existing establishment of any of the permanent corps during the next financial year, or to raise any new permanent corps during that period?

2. If so, what are the details of proposed increases to existing corps and what station will be affected?

3. What new units are to be raised, of what strength, and where to be located?

Sir FREDERICK BORDON. The answer is : No.

BREEDING OF HORSES FOR MILITARY PURPOSES.

Mr. WORTHINGTON:

Has the government considered the advisability of starting a government farm or ranch for the breeding of horses suitable for military purposes, and thus providing against the reduction of the normal supply available to the rapidly increasing new settlers, beside ensuring a separate suitable supply for army and military purposes?

Hon. SYDNEY FISHER. The answer is: No.

Sir FREDERICK BORDEN. And also for the Militia Department.

MOUNTED POLICE — ARRANGEMENT WITH SASKATCHEWAN AND ALBERTA.

Mr. WORTHINGTON:

What arrangements exist between the federal government and the governments of Saskatchewan and Alberta as respects the employment of the Royal Northwest Mounted Police in the administration of law in those provinces?

Sir WILFRID LAURIER. Each province, Alberta and Saskatchewan, pays $75,000 per annum to the Dominion for the services of the Mounted Police, also sixty cents per diem for the maintenance of prisoners or lunatics in police guard rooms, and the expenses of transportation from the guard rooms to the penitentiary or asylum. The existing arrangement is for five years and will terminate, if not renewed, on the 31st March, 1911.

SALE OF TIMBER ON WATHA INDIAN RESERVE.

Mr. WRIGHT:

1. Has any timber been sold by the Indian Department on the Watha Indian reserve, in the township of Gibson, district of Muskoka?

2. If so, how many acres have been sold, what was the price received, how many tenders were put in, and what was the amount of each tender?

3. Has there been any timber and bark seized by the Indian Department? If so, how many thousands of feet of logs and how many cords of bark, and has any of this been sold? If so, what was the price received for logs and bark, respectively?

4. Where sales have been made, who have been the purchasers?

Hon. F. OLIVER:

1. Yes.

2. No land has been sold. Tenders were asked for a number of hemlock trees slightly damaged by fire on the Watha reserve on the 15th of August, 1908, the estimated quantity being 150,000 feet, b.m. Two tenders were received, namely from Jas. Parke, 75 cents per M. feet, b.m., and from F. McGibbon & Sons, $1.75 per M. feet, b.m.

3. Yes. The exact quantity is unknown and cannot be ascertained until after measurements are made. The department is at present in correspondence with the Indian Superintendent on the subject. The timber seized was cut by Indians without authority. Some of it is green and some is standing and burned.

Tenders were asked for the burned standing hemlock on the 29th of October last, for an estimated quantity of 200,000 feet, b.m., and 75,000 feet, b.m., of green hemlock, also a quantity of hemlock bark. Only one tender was received, namely, from F. McGibbon & Sons, $3,26 per M. feet, b.m., for the burnt hemlock. No offer was made for the green, or hemlock bark.

4. Messrs. McGibbon & Sons tenders were accepted. No other sales were made.

SHIP-BUILDING YARDS ON INLAND LAKES.

Mr. J. A. CURRIE:

1. Will ship-building yards on the great inland lakes be asked to tender for the construction of some of the ships for the Canadian navy?

2. Can ships for the Canadian navy be built, armed and equipped in Canadian ship yards on the Great Lakes without interfering with the terms of the Rush-Bagot Convention of April 29, 1817, between Great Britain and the United States, or any other treaty or convention in force between these two countries?

3. Is it the intention of this government to ask Great Britain and the United States to abrogate the terms of the Rush-Bagot Convention or Treaty of 1817?

4. Could Canada give six months notice of the abrogation or annulling of the stipulation of this convention without the consent of Great Britain?

Sir WILFRID LAURIER:

1. This is a question which will be considered at the proper time.

2. This question will also be considered at the proper time.

3. It is not the intention of the government to take any steps with a view to the abrogation of the convention of 1870.

4. No.

SALARY OF OUTSIDE SERVICE.

Mr. RIVET:

1. Does the government intend to grant an increase of salary this year to the employees in the outside service?

2. If so, will a vote of credit for the purpose be soon submitted to the House?

Mr. FISHER. Not when it would involve any expenditure further than is provided in the estimates for the various outside services.

ORDNANCE STORES BUILDINGS AT OTTAWA.

Mr. SPROULE:

1. Was the $120,000 worth of militia clothing said to be destroyed in the recent fire which took place in the Ordnance building, a total loss? If not, what disposal was made of it, and how much of it can be made suitable for use by cleaning, pressing, &c.?

2. What was done with the $30,000 worth said to be damaged by smoke and water?

3. Has a contract or contracts been let to do the cleaning, pressing and repairing of it? If so, to whom and at what price or prices?

4. (a) Were tenders asked for to do the work by advertisement or otherwise; (b) if by advertisement in what papers did they appear; (c) if otherwise, in what way were tenders invited; (d) to whom were the invitations sent inviting tenders; (e) how many and from whom were tenders received for doing the work, what was the price of each tender; (f) and to whom was the contract or contracts awarded, and at what price?

Sir FREDERICK BORDEN:

1. Yes; $120,000 is the estimated cost of the total loss.

2. This stock is being dried and pressed, or cleaned, dried and pressed for further use.

3. Contracts have been made as follows:

(a) With the Good Shepherd Laundry for drying and pressing at the following prices:

	Cents.
Frocks, serge, scarlet, blue, green or khaki, each, at..	15
Tunics, cloth, scarlet, each, at.. ..	25
Tunics, cloth, blue or green, each, at	20
Trousers and pantaloons, cloth, blue, each, at..	10
Trousers and pantaloons, serge, blue or green, each, at..	10
Trousers and pantaloons, khaki, each, at..	10
Pantaloons, Bedford cord, each, at..	15
For drying only any of the above garments, each, at..	05

(b) With Parker's Dye Works, the Ottawa Sanitary Laundry and the Imperial Laundry Company, all of Ottawa, at the following prices, for drying, cleaning and pressing:

	Cents.
Frocks, serge, scarlet, each, at.. ..	75
Frocks, serge, blue or green, each, at	65
Frocks, serge, khaki, each, at.. ..	65
Tunics, cloth, scarlet, each, at.. ..	75
Tunics, cloth, blue or green, each, at	65
Trousers, serge, blue or green, each, at	50
Trousers, serge, khaki, each, at.. ..	50
Trousers, cloth, blue, each, at.. ..	50
Pantaloons, cloth, blue, each, at.. ..	60
Pantaloons, cloth, B. C., each at.. ..	60
Pantaloons, serge, blue, each, at.. ..	60

(c) With the Ottawa Sanitary Laundry Company, for washing, ironing, folding and parcelling white cap covers at $1 per 100.

4. (a) Tenders were obtained by telephone.

(b) Answered by (a).

(c) Answered by (a).

(d) Tenders were invited as follows:

For cleaning, drying and pressing.—From the Ottawa Sanitary Laundry, Imperial Laundry, Parker's Dye Works, W. H. Martin & Co. (My Valet), Home Laundry, Baker's Laundry.

For drying and pressing.—From the Ottawa Sanitary Laundry, Imperial Laundry, Parker's Dye Works, W. H. Martin & Co., Home Laundry, Baker's Laundry and Good Shepherd's Laundry.

For cleaning cap covers.—The Ottawa Sanitary Laundry, Imperial Laundry.

(e) Tenders were received for cleaning and pressing from the Ottawa Sanitary Laundry, Imperial Laundry, Parker's Dye Works. Tenders were received for drying and pressing from Good Shepherd's Laundry, W. H. Martin & Co., Imperial Laundry, Parker's Dye Works, Ottawa Sanitary Laundry.

Tenders were received for washing, &c., cap covers, from the Ottawa Sanitary Laundry and the Imperial Laundry.

The prices of each tender are given on the accompanying schedules. The tender of the Imperial Laundry for cleaning cap covers was received after the contract had been made with the Ottawa Sanitary Laundry. It was delivered by mistake at the Ordnance Stores instead of at the office of the Director of Contracts.

The tenders of the Imperial Laundry and Parker's Dye Works for cleaning and pressing were subsequently withdrawn because:

1. The work was divided among three firms; and their tenders were based on obtaining the whole of the work.

2. On further examination of the clothing, they discovered it to be in worse condition and therefore more expensive to clean than at first supposed.

3. The total quantity to be cleaned was much less then they had first estimated.

The work was therefore divided among these three firms at the price of the only

remaining tender, that of the Ottawa Sanitary Laundry.

(f) Answered by No. 3.

The condition of this clothing after the fire was such that only the greatest promptitude could save it from much greater damage. Much of it was thoroughly soaked with water and stained with smoke, tar, oil and dirt. It was impossible to dry it in the drill shed, the temporary place of storage, and every day's delay increased the chance of further loss by mildew or staining. This was understood not only by the officials of the department but was emphasized by all of the tenderers who examined the clothing.

The necessity for immediate action was therefore urgent. As soon as the clothing was sorted and piled, so as to ascertain the character of the work required, tenders were sought, as nearly as possible, from every laundry or cleaning establishment in the city. The newspapers were not used because it was believed that time would be saved by going direct to the tenderers by telephone; and the result appears to have justified that view.

HOMESTEADS IN SASKATCHEWAN AND ALBERTA.

Mr. LAKE:

1. What has been the amount of money collected by the government from the 1st January, 1908, to date, respectively, in each of the provinces of Saskatchewan and Alberta, on account of homestead fees, pre-emption, and purchased homstead fees, other payments on account of lands, whether homesteads, pre-emptions purchased, homesteads or other lands?

2. What has been the total acreage of pre-emption and purchased homesteads sold in each of the provinces of Saskatchewan and Alberta, respectively, since the 1st January, 1908?

Hon. FRANK OLIVER:

To 31st October, 1909—Returns for November not complete.

1. Province of Alberta, $1,737,291.98.

Sir FREDERICK BORDEN.

Province of Saskatchewan, $1,081,519.57.
2. Province of Alberta, 1,504,960 acres.
Province of Saskatchewan, 2,625,440 acres.

DOMINION DREDGING COMPANY.

Mr. GEO. TAYLOR:

What amounts have been paid by the government to the Dominion Dredging Company during the present fiscal year to date?

Mr. PUGSLEY: $77,755.52.

MARITIME DREDGING COMPANY.

Mr. GEO TAYLOR:

What amounts have been paid by the government to the Maritime Dredging and Construction Company during the present fiscal year to date?

Mr. PUGSLEY: $195,016.24.

SECRETARY OF STATE DEPARTMENT—CHARTERS.

Mr. WALLACE:

1. In the judgment of the government, is the Secretary of State under obligation to issue a charter, with all its privileges, to any and every group of persons complying with the law who apply for it, no matter who they are or what their character or purpose may be?
2. Have any such applications ever been refused by this government?
3. Is the government aware that a charter granted to practically the same individual for the same purpose as that granted by this government to the Metropolitan Racing Association had been previously cancelled by the government of Ontario?

Hon. CHAS. MURPHY:

1. In the judgment of the government, where, as in the case of the Secretary of State under the Companies Act, a power is deposited with a public officer for the purpose of being used for the benefit of persons, with regard to whom a definition is supplied by parliament of the conditions upon which they are entitled to call for its exercise, that power ought to be exercised and the courts will require it to be exercised.

In carrying out the provisions of the Companies Act the Secretary of State acts as an administrative, not as a judicial officer, not as an adviser of the Crown.

It would be an arbitrary and unwarranted exercise of power on the part of the Secretary of State to discriminate between persons who apply for charters in conformity with the provisions of the Companies Act.

It is the duty of the Secretary of State to scrutinize the objects enumerated in every application for incorporation and to ascertain whether they are within the provisions of the Companies Act. and are otherwise legal. In practice this is done with every application; and, by law, each company is limited in the scope of its operations to the objects set out in its charter.

2. It would entail an examination of over 3,300 files of the Department of the Secretary of State to ascertain how many applications have been refused and the reasons therefor. A partial search reveals that certain applications were refused because the objects sought were not within the purview of the Companies Act or were solely within the jurisdiction of the provincial governments. If the hon. member desires detailed information it will be necessary to move for a return.

3. The applicants for incorporation of The Metropolitan Racing Association of Canada, Limited, were: William Alexander Cotton, manufacturer; Arthur Edwin Melhuish, veterinary surgeon; Alfred Jordan Rattray, architect; Arthur Clarkson, Hornby, accountant; and Peter Edward Callen, hotel manager; all of the city of Toronto, in the province of Ontario, and John McBean, merchant, of the town of Georgetown, in the said province of Ontario. The government is not aware that these persons or any of them were interested in any other racing association, nor that they or any of them held a charter that was cancelled by the Ontario government.

LAKE NIPISSING ROLLER DAMS.

Mr. ARTHURS:

1. When were the roller dams at the outlet of Lake Nipissing built, and why?
2. What is the total cost of such dams?
3. Have these dams been removed? If so, why?
4. What amounts have been paid as damages for flooding, and what additional claims have been made for damages?

Mr. PUGSLEY:

1. (a) In 1907 and 1908. (b) To raise the low water level of the lake, in the interests of navigation and lumber industry.
2. $18,778.91.
3. (a) Yes. (b) Owing to the extraordinary high water which prevailed for several weeks last spring throughout the entire Nipissing district, as well as throughout the Upper Ottawa river valley, upon representations made by the municipal council of the town of North Bay and other parties, the department deemed it in the public interest to remedy as much as possible this condition, by enlarging the lake outlets and mitigate possible damages to land owners.
4. (a) 17 claims have been adjusted and paid: total, $868. (b) 65 additional claims have been made, of which 53 have been adjusted.

PAYMENTS TO MR. T. C. NORRIS.

Mr. BRADBURY:

What amount of moneys has been paid by any or all departments of the government to

Mr. T. C. Norris, of Manitoba, since January, 1902, up to date?

Mr. OLIVER. As far as the Department of Interior is concerned, $9,096.84.

ALLEGED KIDNAPPING OF CANADIAN CITIZEN.

Mr. F. B. CARVELL (Carleton, N.B.). Mr. Speaker, before the orders of the day are called, I desire to call the attention of the Prime Minister (Sir Wilfrid Laurier) and of the Minister of Justice (Mr. Aylesworth) to a matter of considerable importance to a portion of the constituency which I represent. It is stated that a man named William J. Kelly, living in Richmond, in the county of Carleton, N.B., has been kidnapped by United States officers and is now incarcerated in gaol in Portland, in the State of Maine. Of course, of this I have no proofs such as might be required in a court of law, but I have sufficient evidence in my hands to convince me that the man has been kidnapped. The circumstances of the case are as follows:

Mr. SPEAKER. I do not think that the hon. gentleman is permitted at this stage to go beyond a question except with the indulgence of the House. Of course there will be a motion later on, at which time this subject may be brought up.

Mr. CARVELL. It is my intention only to ask a question. It seems that about seven years ago this man was one night teaming a load of produce into the United States and was confronted by a gentleman who turned out to be a United States officer.

Mr. FOSTER. That is a positive statement.

Mr. CARVELL. I cannot make the matter plain to ask a question without laying some little foundation for it. The result was that the United States officer fired on this man Kelly twice, one bullet taking effect in his cheek and another striking a buckle on a belt which he wore. Kelly seized a stick and in the end the officer was laid out and Kelly returned to his own side of the line. That was seven years ago. About three weeks ago a gentleman came to Kelly's residence in Richmond and wanted to buy some produce from him. Kelly succeeded in selling him some produce at a good price. Then the man wanted him to haul it to the United States but Kelly refused to do so. However, after considerable dickering, he agreed to take it to the boundary line. They started in the evening and came to a place called Union Corners where for about a quarter of a mile the highway road is, for all practical purposes, the boundary line. They had proceeded along this line 30 or 40 rods when a number of men appeared on the scene and Kelly was arrested, gagged, and carried off into the United States. I am satisfied that the boundary line is at least 3 or 4 rods to the west of the point where Kelly was arrested. He is now incarcerated in gaol in Portland and I would like to know if the government have any information on the subject and if they have if they will give it to the House. Will they do whatever is possible in order to have this man set at liberty and to see that the rights of British subjects are not thus interfered with by American officers?

Hon. A. B. AYLESWORTH (Minister of Justice). Mr. Speaker, the matter to which my hon. friend (Mr. Carvell) has called attention is certainly one of very grave importance and one which will be, I have no doubt, on its being brought to the attention of the government of the United States, given the most careful consideration. I may say to my hon. friend (Mr. Carvell) that in a very general way the facts to which he has referred were a few days ago brought to my attention in the shape of a letter from a gentleman of the vicinity who stated in substance what my hon. friend has just stated to this House. I replied immediately, pointing out the necessity for the most careful accuracy in regard to the particulars of such an allegation, the importance of establishing, as definitely and certainly as evidence could establish such a fact, just where upon this highway, the actual arrest of Kelly took place and also, if it was possible to establish it, whether or not the men who arrested him and carried him into the United States were officers authorized by any competent authority of either the federal or state government. I have not yet received any answer to the request for this information and until it is supplied in definite form and supported by the ordinary verification of affidavit or statutory declaration, we should hardly be in a position to ask the government of the United States to investigate the matter. But as soon as we are placed in possession of the necessary evidence in that regard, I shall see that steps are taken to bring it to the attention of His Majesty's representative in Washington and through him to that of the United States government.

Such cases as this, I may say, do occasionally arise, possibly from the over-zeal of officers upon either side of the boundary. Occasionally a complaint is received that the sacred soil of the United States has been violated by some Canadian officer and similar cases, such as the hon. gentleman has mentioned, sometimes have been shown to exist where some officer of the United States has undertaken to execute his warrant upon the soil of Canada, which I need not say is equally sacred and which I am sure the government of the United States desires to preserve as equally sacred with their own. There has never been any

difficulty put in the way of the most careful and thorough investigation of such charges when they are made, and if it can be established that in point of actual fact this man was deprived of his liberty while upon the soil of Canada, I think I can confidently assure my hon. friend that the fullest reparation will be made by the restoration of the man to Canadian soil.

Mr. FOSTER. I did not catch to whom the minister had applied for information with reference to this matter?

Mr. AYLESWORTH. I applied to the gentleman whose letter I had received, a clergyman of the vicinity. I think his name was the Rev. Father Murphy, although I am not certain.

Mr. FOSTER. Not through any legal source?

Mr. AYLESWORTH. Not a lawyer, a clergyman.

OFFICIAL STATUS OF FOREIGN CONSULS.

Mr. E. N. LEWIS (West Huron). Before the orders of the day are called, I wish to ask the government a question with reference to the courtesy due or which should be due the representatives of foreign nations in Canada as a country making her own treaties. My question is founded on an article which I now have before me from the daily 'Free Press,' which reads:

All the Consuls stayed away from it—Drawing Room sees them not because of the ruling of Downing Street.

None of the foreign Consuls General resident in Ottawa attended the Governor General's 'Drawing Room' on Saturday night.

There is a reason and an interesting one.

Consuls General have no official status in Canada—they are not officially recognized.

When a new Consul General comes to Ottawa, no official calls are made upon him. He has to paddle around in his own canoe and trust to his own ingenuity in getting acquainted.

A Consul General is the highest official that any foreign country can send to Canada. If they could, some of them would doubtless send ambassadors.

The recent establishment of a Chinese consulate in Ottawa, with a gentleman of very high standing in his own country in charge, was regarded by Canadians as a pleasing development of our nationality. It was a recognition of Canada's growing importance.

It has been said that Germany and France are both desirous of establishing Consuls General in Ottawa. But in the case of each, there is reason to believe that the refusal to grant official status stands in the way.

Although the Consuls General at present resident in Ottawa refuse to discuss the matter, the 'Free Press' understands that it is for the same reason that none of them attend the Drawing Room.

They do not demand recognition; they do not even ask for it; but they do take the ground that they cannot permit their respective countries to be discriminated against in Canada's official functions. Consequently they absent themselves.

The official order of precedence at the Drawing Room, published in the newspapers, places the Consuls General at the very end of the list.

In refusing official recognition the Dominion is acting upon definite instructions received from Downing street.

But Canada's natural reply to this would be that England is able to show official courtesy to these foreign countries by recognizing their Ambassadors, whereas the foreign governments are not permitted to send Ambassadors to Canada.

No general instructions to colonial governors respecting the position and treatment of consuls appear to have been issued since a date nearly forty years ago, when it was intimated that if in any colony precedence was, as a matter of courtesy, already accorded to the foreign consular body, no alteration should be made, with the view of assimilating the practice to that in force in this country, without reference to the Secretary of State.

It was observed, however, that foreign consuls in England have no claim to precedency, and are treated like any other foreigners resident in England.

Toronto 'Daily Star,' Monday, Nov. 8, 1909.

'Ambassador from Germany'—New Consulate General at Ottawa to be a Big Thing.

(Canadian Associated Press.)

London, Eng., Nov. 10.—The Canadian Associated Press learns that the German government is considering the advisability of establishing a new Consulate General at Ottawa, which will be almost ambassadorial in its scope, character, and plans. Already plans have been suggested for the erection of a building.

The imperial army and navy recognize officially consuls in every foreign port. Why should not this be in our own country? I wish to ask the right hon. gentleman if any steps have been taken to remedy this state of affairs under a ruling which was made under different conditions. When we had not the power of making our own treaties; and if the government have not taken any steps, I should like to know whether they intend doing something. The consuls general are in Canada the highest representatives of foreign states, and while the matter of attending the drawing room may be, to a certain extent, a small one, still when we consider that the important question as to the size of a lady's foot occasioned a war which consumed millions of money and thousands of lives, this matter may not seem to be one which should be lightly treated.

Sir WILFRID LAURIER. The question which my hon. friend has brought to our attention is an important one, not perhaps so much on account of the drawing room as on account of the duties which consuls general now discharge in Canada. We have

no diplomatic service in Canada, and the consuls general are exercising by tolerance some, I shall not say diplomatic powers, but powers very often cognate to such. The question is one which should be settled, and the matter is now engaging the attention of the government.

THE NAVAL DEFENCE BILL.

Mr. FOSTER. Can the right hon. gentleman give any information as to when the Naval Bill will be introduced? I think there is an impression that we were to have a statement from my right hon. friend regarding that matter on some occasion previous even to the present.

Sir WILFRID LAURIER. I thought that we would have been in a position to introduce the Bill 'ere this, but my hon. friend himself has called attention to certain correspondence which it will be desirable to have. We have not yet received that correspondence, and perhaps we would be better to wait until we receive it before bringing down the measure.

Mr. FOSTER. May we expect it next week?

Sir WILFRID LAURIER. I could not say definitely, but have no intention to delay the Bill, and will bring it down as soon as we get the correspondence.

Mr. J. D. REID. Why should this correspondence interfere with bringing down the Bill? Two weeks ago the right hon. gentleman said the Bill would be introduced soon. He knows that it will have to be printed, which will take some days. Is that correspondence going to affect the Bill? If not, why not bring down the Bill and give hon. members a chance to study it before taking any action on it.

Sir WILFRID LAURIER. My hon. friend from North Toronto (Mr. Foster) asked for some information, which I supposed would be valuable to the members of the opposition and also to the government.

Mr. J. D. REID. Why should that interfere with bringing down the Bill. I understood that the Bill was practically all ready some two weeks ago. If it is ready, the House is entitled to have the Bill immediately, and that need not interfere with the bringing down of the correspondence. The correspondence may be brought down afterwards and be made use of during the discussion. Does the right hon. gentleman refuse to introduce the Bill until we have the correspondence?

Sir WILFRID LAURIER. If the correspondence is to be unduly delayed, we shall not wait for it. I do not think it will affect my own judgment, but I see no harm in having the correspondence before we give our decision.

Sir WILFRID LAURIER.

THE IMPERIAL CONFERENCE.

Mr. MONK. Will the government not supplement the information contained in the blue-book recently brought down entituled ' The Imperial Conference ' by placing before the House, for the convenience of members, a conversion into Canadian currency of the statements of the cost of the scheme. At pages 27 and 28 of the blue-book and elsewhere, the cost is given in sterling. I would suggest that the government should have these statements completed by giving us the cost in Canadian currency, where it is possible, and approximately the cost in Canadian currency, instead of the cost at British rates, such as for the payment of men and wherever else it is possible to give the cost in Canadian currency. I have seen it stated that, speaking generally, the cost in England at £100 sterling would reach in Canada £170. It may not be possible always to give the figures exactly, but if the cost be given approximately that would be of great use to members.

Sir WILFRID LAURIER. I do not think it would be possible to give additions to the blue-book, but no doubt my colleague, the Minister of Marine, when bringing in the measure, will give all the information asked for.

CRIMINAL CODE AMENDMENT—RACE-TRACK GAMBLING.

Mr. H. H. MILLER (South Grey) moved the second reading of Bill (No. 6) to amend the Criminal Code. He said: Mr. Speaker, before going into the discussion of this Bill, let me now, lest I forget it, give notice that, when the House is in committee on this Bill, I will move the following:

That the said Bill be amended by adding the following as paragraph (e) to section 230:—

Being the owner or other person in control of premises occupied or used as a disorderly house, knowingly allows any contrivance whatsoever upon the said premises for the purpose of preventing, obstructing or delaying the entry of any constable or officer authorized as aforesaid into any such disorderly house of any part thereof.

The reason for that amendment is that it is complained by constables and police officers that, in seeking to inspect or gain entry to Chinese gambling houses in many cases, they find that the occupants of the house have their inner rooms barricaded with very stout doors, thus preventing the police from gaining entry until the inmates have had an opportunity to escape.

In discussing the Bill itself, I wish first to state what is the object of the Bill. Its object is to utterly, entirely, completely suppress and prevent the business of betting, pool-making, book-making, the busi-

ness of betting or gambling in connection with or upon race tracks in any place in Canada. If the Bill should become law and fail of its object, it will be because the persons who have laboured to produce the Bill have not been able to find language that will accomplish the object they have in view. And I desire, at the beginning of my remarks, to say that I do not claim the credit, if credit be due to any person, for the framing of the Bill that is now before the House. The Bill that we are considering is based upon the work of three well known and able members of the legal profession. At least two of the three gentlemen upon whose very careful work the Bill is based have had peculiar experience and occupy positions that have made it possible for them with special ability to frame a law to meet the evils that we are endeavouring to combat. I have stated the object of the Bill; now let me state as frankly what the Bill does not endeavour to do. I want to impress the House with this, that the Bill does not endeavour to interfere in any way or to any extent with the racing of horses. Men will be just as free after this Bill becomes law to race horses or carry on a race meet as they are to-day or ever have been. Neither does this Bill seek to prevent betting upon horse races. If this Bill becomes law, two men will be just as free to make a bet upon which horse will win a race as they will to make a bet upon which of themselves can throw a stone the greater distance. The Bill does not, then, endeavour to affect horse-racing or to prevent betting between private individuals in connection with horse-racing, and I trust that every one who hears me will bear that in mind. Neither is it the endeavour by this legislation to correct any past bungling on the part of this parliament. I say that because many people have had the idea that the present state of the law, which appears to them absurd, is the result of error or lack of skill on the part of legislators of the past. One prominent Ontario newspaper, in a somewhat recent editorial, said:

> The Department of Justice has failed so far to frame a statute that will do what parliament manifestly intended should be done.

Very many people have had that opinion, but the opinion is an erroneous one. Parliament has never, up to this time, endeavoured to prohibit the business of betting or gambling upon race-tracks. Quite the contrary is the case, as I will endeavour to show. And I trust the House will pardon me if I take a little time—I shall not be long—to trace the history of the legislation that we have at present and that people have endeavoured to use to suppress race-track gambling.

Several years ago, men in Canada began to recognize the growing evil of race-track gambling, the business of race-track betting. This was not so much because public opinion has changed—partly, perhaps, for that reason and because, it may be, we demand to-day a somewhat higher standard than we did a few years ago—but more largely because circumstances in Canada have been changing. Race-track gambling is much more prevalent to-day than it was in Canada a few years ago. There are more race horses in the Dominion, race meets are held for a great deal longer time, and the book-maker is doing a work to-day that he did not attempt to do ten or fifteen years ago, that is, to anything like the same extent. I say that the people realized some years ago the grave evils attending race-track gambling. With that realization they turned to the statutes we had then and have now to see by what means they could suppress or prevent this gambling. They turned to the Criminal Code, section 235—which was section 204 of the Code as first passed in 1892. They found that to be the only section of the Code making reference to race-track gambling. That section, under paragraph (a) provides that every one is liable to the punishment inflicted by the section who uses or knowingly allows any part of any premises under his control to be used for the purpose of recording or registering any bet or wager, or selling any pool. Now that section might probably have been used with considerable effect to suppress race-track gambling had not it been that attached to the section as subsection 2 was the following:

> The provisions of this section shall not extend to any person by reason of his becoming the custodian or depository of any money, property, or valuable thing, to be paid as a prize to the winner of any lawful race, sport, game or exercise, or to be paid to the owner of any horse engaged in any lawful race, or to bets between individuals or made on the race course of any incorporated association during the actual progress of a race meeting.

Now, this language in section 235 does not appear to have been inserted in error. In order to show that it was deliberately placed there, let me refer to the remarks of Sir John Thompson and others which will be found in the 'Hansard' of 1892, page 2976. In 1892, as hon. members of the House are aware, the Criminal Code was first placed upon the statute-book. When the House was in committee considering this section 235, Sir John Thompson said:

> I suppose it is my duty to call the attention of the committee to the addition of subsection 2, which proposes a relaxation in regard to betting on the race course of an incorporated association while a race is going on.

So, Sir John Thompson frankly said that this was a relaxation of the law in connection with race-track betting. And Mr.—now Sir Louis Davies said:

It is just as well that the committee should understand that we are legalizing betting on a race course. I do not know that the committee is prepared to do that.

Then Mr. Curran said in reply:

The law has always allowed betting on horse races.

The matter was allowed to drop, and the section was passed, and included in the Code as we have it before us to-day. Then these people who, rightly or wrongly, were endeavouring some years ago to restrict race-track gambling, finding that section 235 was of no avail, turned to sections 225, 227 and 228 which, in the Criminal Code of 1892, are sections 196, 197 and 198. These sections were not supposed to relate to the restriction of race-track betting at all and an endeavour so to use them was only due to the absence of any legislation intended or enacted for such purpose. Section 235, to which I have already referred, had been in the criminal law of Canada for some years before 1892, but the addition exempting race-track gambling during the course of a meet on a race-track association, was inserted in 1892. But the sections 226, 227 and 228 had not been previously in our criminal law, they were adopted in 1892 from the English Betting Act. Without wearying the House by reading sections 226 and 227, I may say that section 226 defines a common gaming house, 227 defines a common betting house, and 228 imposes the penalty for persons who are guilty of a breach of 226 and 227. Sec-227 reads as follows:

A common betting house is a house, office, room or other place opened, kept or used for the purpose of betting between persons resorting thereto.

I will not read the remainder of the section, but that is the part of it that was relied upon to suppress race-track gambling, and it was the only section, together with the following one, imposing a penalty, that would be of any use, or could possibly be of any use, to bring about the object in view. Somewhere about 1906, I think it was, a man named Saunders, and some companions, were carrying on the business of book-makers during a meet of the Ontario Jockey Club in the city of Toronto. Complaint was laid against them for keeping a common betting house. They were convicted before the police magistrate of Toronto, and convicted under these sections, 226 and 227. They appealed from his decision, and at their request he stated a case, and it was taken to the Ontario Court of Appeal. The Court of Appeal upheld the magistrate in his decision. Judges Garrow and Meredith, however, dissented, and were of the opinion that the conviction of the magistrate ought to be quashed. The solicitors acting for the defendants in that case, argued that Saunders and his companions, while they used a booth upon castors which moved from one part of the race-track to the other, could not be said to be using a house, room or other place as defined by the Act; and if it were held otherwise that they were using such house, room or other place, under section 235 they were exempt, because they did what they did on a race-track of a regularly incorporated racing association. The Court of Appeal, as I have already said, notwithstanding these arguments, upheld the magistrate in his decision. Judges Garrow and Meredith dissented from the other judges, and Judge Garrow said:

The proper construction in a word is in my opinion to hold that sections 197 and 198 (now sections 226 and 227) have no application to the case of betting carried on upon the race course of an incorporated association during the actual progress of a race meeting, whether or not such betting takes place within or without doors, or in any particular 'house, office, room or other place,' so long as it is within the boundaries of the race course and so long as the betting is confined to the races in progress upon that race course.

That was the view of Judge Garrow. But the Court of Appeal having sustained the magistrate in his decision, the case was carried to the Supreme Court. The judges of the Supreme Court confirmed the judgment of the Court of Appeal, and in upholding the magistrate here again two judges dissented from their brother judges and gave their opinion. Mr. Justice Davies and Mr. Justice Girouard differed from the other judges of the Supreme Court. Chief Justice Fitzpatrick, in delivering judgment, said:

I quite agree that the amendment of 1892 was intended to reserve the race courses of incorporated associations as places where bets might be recorded and registered, and any apparatus or structures used for more conveniently recording such bets or wagers, provided this was done during the actual progress of a race meeting, were exempted from the operation of that section.

But using a place for the purpose of recording or registering bets or wagers is something entirely different from using the place for the purpose of betting between persons resorting thereto and the owner or occupier thereof.

Chief Justice Fitzpatrick was drawing a nice distinction between the language of sections 227 and 235. Section 235 says that a penalty is imposed upon any person who uses or knowingly allows any part of any premises under his control to be used for the purpose, not of betting, but of recording or registering any bet or wager. Section 227, on the other hand, imposes a penalty on any person who has opened, kept or used a place for the purpose of betting between persons resorting thereto. The one relates

to betting, the other to recording and registering a bet. Drawing this distinction, Chief Justice Fitzpatrick said:

Bets between individuals or bets made on the race course of an incorporated association during the actual progress of a race meeting can be recorded in any place used for that purpose, but to keep a place, whether within or without the grounds of a racing association for the purpose of betting, whether during the progress of a race meeting or not, is an offence under section 197. In my opinion two distinct and separate statutory offences are created by sections 197 and 204, and that which may be invoked successfully as a defence in one case cannot avail in the other. To keep a place for making bets which may be recorded at that place or elsewhere and to keep a place for recording bets wherever made are distinct and separate acts, each of which has been made an offence and each of which is declared to subject the offenders to a different penalty. The exception created by subsection 2 of section 204 with respect to anything therein, does not apply to those places that are kept for the purpose of betting. I do not understand the rule of construction to be that all the sections of the Code dealing with nuisances are to be read together to see how they can be made to harmonize any more than the sections dealing with offences against the person or against property. Distinct and separate acts are by these sections declared to be common nuisances and the only question to be considered is: Do the facts proved in evidence support that charge as laid in each particular case? The appeal is dismissed with costs.

Mr. Justice Davies quoted the words of Judge Garrow as given in the Court of Appeal. Nevertheless the Court of Appeal decided to uphold the decision of the magistrate. The result of that decision in the Saunders case was this: That a man who used any structure, any house, office, room or other place, including a booth or other such thing which might be designated as a place was subject to the penalties imposed by that section 227. That, then, perhaps, for a time, checked the business of race-track gambling, but some time after that a man named Moylett, a book-maker, with his companions at the Woodbine track in Toronto, continued the very same business of race-track gambling which had been done by Saunders, only, in place of having a booth or tent that moved about, they simply stood on the ground within a limited area, walking from place to place and carrying on exactly the same kind of business. A complaint was made against them and the police magistrate, under the same section of the Code, convicted them of keeping a common betting place. Then Moylett appealed, as Saunders had done and the police magistrate as he had done in the other case, granted a stated case which was taken to the Court of Appeal. In this case the Court of Appeal quashed the conviction of the magistrate and Chief Justice Moss, in giving judgment, said:

The defendants and their assistants did not use any desk, stool, umbrella, tent or booth, or erection of any kind to mark any place where bets were made.

He continued:

Viewed apart from the authorities by which we are bound, the words themselves seem almost naturally to suggest a structure of some sort, and to import fixity or localization.

They also import rights peculiar to the persons designated as the owner, occupier or keeper, which rights are not shared by others. It is obvious that there must be not only a house, office, room or other place, but it must be one capable of being opened, kept or used for the purpose of betting. And there must also be some person who is entitled to exercise the right of opening, keeping or using to the exclusion of the exercise of a similar right by others except with his permission.

He said, in conclusion:

But, whatever doubts might possibly have existed before the decision of the House of Lords in the leading case of Powell vs. The Kempton Park Race Course Company (1899) must now be considered as set at rest by the result of that case.

The Kempton Park case, which ruled in this case, was under the English Betting Act where the language used was almost exactly the same as the language in sections 226 and 227 of our own Code and the judges held that the evidence of the facts in the one case corresponded almost exactly with the facts in the other case. In the Kempton Park case Judge Escher said:

It is not betting, whatever be its kind, which, independent of locality, is struck at; but it is the preventing of a locality for particular kinds of betting which is the mischief to be dealt with.

Again, Judge Halsbury said:

The legislature has not prohibited betting at all; but prohibited keeping a house for betting.

Chief Justice Moss, in giving judgment in the Moylett case, said:

If the user of any place where the better happens to stand, makes the place a common betting house, the words 'house, office or room' were unnecessary, and the words 'other places' therefore, necessarily take their colour and meaning from the words which precede them, and must be construed as meaning a place ejusdem generis, e. g. a booth, tent, etc., or otherwise equally clearly defined and capable of being used as the former.

The effect of this decision was that a man carrying on the business of race-track gambling would be practically exempt from the operation of the statute if he kept mov-

ing about, upon the ground and was not occupying any fixture such as a tent, booth or anything of that kind within which or upon which to carry on his business. I quote further words from the judgment of Chief Justice Moss. He summed the matter up in this way:

> Betting or the business of a book-maker, whether carried on upon a race course or elsewhere, is not prohibited by the Act. If the legislature intends to prohibit it, it is easy for it to say so. It is the opening, keeping or using a common betting house which is penalized.

Let me repeat his words. He said:

> If the legislature intends to prohibit it it is easy for it to say so.

The facts appear to have been as stated by Chief Justice Moss that this parliament never intended to prohibit race-track gambling, and if it be true that it is parliament's intention to prohibit race-track gambling it is easy for it to say so. If race-track gambling is an evil, if it is something that ought to be suppressed, it becomes the duty of this parliament to suppress it and the whole responsibility rests upon this parliament. What we seek to do by this Bill is to amend sections 226, 227, 228 and 235 of the Criminal Code which were never intended to suppress race-track gambling and to change them so as to make them effective, so that they will utterly and completely prevent and suppress the business of gambling upon or in connection with a race track. Now I will point out the changes that we seek to make in the Act as it is. Turning to section 226 of the Code which defines a 'common gaming house' we strike out the word 'house' and define not a 'common gaming house' but a 'common gaming place'. We strike out the words 'a house, room or' and leave simply the word 'place,' so that the section will read a 'place used by any person for gaming, betting' etc. Turning to Stroud's Judicial Dictionary, an English work, Stroud defines the word 'place' in this way:

> The word 'place' is generally found in conjunction with other words which give it a colour, and it is usually controlled by its context.

Referring to the words 'house, office, room or other place' in the English Betting Act he quotes Judge Channell in Brown vs. Patch as follows:

> The statute is directed against betting places, not against betting persons.

We are now endeavouring to make the statute apply to betting persons as well as to betting places. Wherever the words 'house, room or' appear in section 226 they are struck out and simply the word 'place' is left. I have no doubt that the person who drafted this section intended and endeavoured by the use of this collection of words to make the language more comprehensive, but what he really did was to make the language narrower in effect rather than broader, less comprehensive rather than more so. In section 227 we strike out the words 'house, room or' and leave the one word 'place' again, and in place of defining 'any betting house' we define 'any betting place'. There is another important change in section 227. We add as subsection 2 of this section a definition of the word 'place' wherever it occurs in the Act.

> The word 'place' as used in this section and in the preceding section, includes any place, whether inclosed or not, whether it is or is not a fixed place, and whether there is or is not an exclusive right of user.

This, then, will do away with the argument that a man standing on the ground is not occupying a place. Section 228, which imposes the penalty, has also the word 'house' struck out and the word 'place' substituted therefor. The words 'or other disorderly place' are inserted after the words 'disorderly house'. Section 232 is amended in the same way to make it consistent with the others. Turning to section 235—and perhaps this section is the most important of any—three important new paragraphs are added to this section the first paragraph of which section defines the penalty which is imposed, that is to say, that every one is guilty of an indictable offence and liable to one year's imprisonment and to a fine not exceeding $1,000. These new sections are as follows:

> (d) Engages in pool selling or book-making or in the business or occupation of betting or wagering or makes any agreement for the purchase or sale of betting or gaming privileges.
>
> (e) Advertises, publishes, exhibits, posts up, sells or supplies or offers to sell or supply any information relating to pool selling, book-making, betting, or wagering.
>
> (f) Aids or assists in any manner any of the said acts which are by this section forbidden.

Then, in the present Act that section 235 is amended by leaving out subsection 2, which contains a number of exemptions by which certain persons under certain circumstances are exempted from the penalties provided by the Act. These are the changes sought to be made.

Now, Sir, it may be asked why we seek to amend the law at all, or what necessity there is for the Bill I have introduced. Sir, I am willing to admit that one of the reasons why it has been thought proper to introduce this Bill is because it has been asked for by the Moral and Social Reform Council of Canada. And, whom does this association include? It represents the Church of England in Canada, the Presby-

terian Church, the Methodist Church, the Baptist Church, the Congregational Church, the Salvation Army, the Canadian Purity Educational Association, the Trades and Labour Congress of Canada, the Dominion Grange and Farmers' Association. I have heard it said that no layman has asked for this legislation, that it is a movement upon the part of the ministers, and that the ministers are not practical men and have no knowledge of the subject. But, Sir, let me say that at the various conferences, synods, presbyteries and meetings of the various churches in Canada resolutions have been unanimously passed urging this government to support just such a Bill as we have now before us, and a large number of the men attending these associations have been laymen, business men, men of the world, men having a knowledge of the subject they were considering and which they have asked this House to consider. But if it be contended that these people have been unduly influenced, it may be by the impractical clergy, let me say that legislation similar to that which I now propose has been passed by the following states: New Mexico, Missouri, Illinois, Washington, South Carolina, Colorado, Texas, New Jersey, Ohio, Virginia, Alabama, Arkansas, Massachusetts, West Virginia, Michigan, Louisiana, California and New York, and the last four of these states are among the greatest horse-breeding states in the American union. I take it that the very fact that this legislation has been passed by this large number of the states of the union is an evidence to us of the necessity of such legislation. I say that because these various states, perhaps without exception, have had a greater, wider, longer experience with race-track gambling than we have had in Canada. These states of the American union have not hitherto been supposed by the Canadian people to live up to any higher moral standard than we live up to. They are not supposed to aim at any higher moral plane than we should aspire to, but these states have practical business reasons for passing the legislation such as we have before us now. I not only ask the House to take this as evidence of the necessity for the legislation, but I ask hon. gentlemen to consider the effect upon Canada and the Canadian people of the passing of this prohibitory legislation by the various states. The effect has been to flood Canada with American book-makers. Prevented from carrying on their business in these several states they have come into our Dominion with the result that race-track gambling is much more prevalent in Canada now than it would have been had it not been for this prohibitory law on the other side of the line. Recently a grand jury assembled in Toronto declared that the province of Ontario had become a paradise for gambling. That was not the verdict of an assembly of clergymen, but the verdict of a grand jury. And, if the province of Ontario has become a paradise for gambling, it is not alone among the provinces; because the province of British Columbia is fast becoming cursed by race-track gambling, and if there be no change in the law, so soon as our prairie provinces have greater population and greater wealth they will be afflicted with the same curse. I have said that race-track gambling is becoming a nuisance in the province of British Columbia. I was speaking a few days ago with a very prominent citizen of Victoria, British Columbia, and he told me that race-track gambling had become alarmingly prevalent in that city, and a great evil. An editorial in a Victoria daily newspaper, shortly after the holding of a recent race meet in that city, said that the racing was not true horse-racing, but racing of horses as an excuse for gambling. The board of trade of the city of Vancouver, after the holding of a recent race meet in that city, adopted a resolution urging this government to pass such legislation as I am now asking the House to pass. Not only that, but Japan has legislated against race-track gambling. We cannot say that the population of Japan are a goody-goody people, but we can say that perhaps more than any other nation in the world to-day, Japan realizes that the strength of a nation depends upon the strength of the individual citizens, and if Japan has passed legislation to do away with race-track gambling, it is because Japan wants to have virtuous citizens and to build up a strong people. I have received a letter from Chief Inspector Archibald, of the Toronto police force, and he manifests a great deal of interest in the legislation which is now before the House. In this letter, dated the 16th of last month, he says:

> I would respectfully call your attention to subsection 2 of section 235 of the Criminal Code which you will observe has given colour of right and is in the main responsible for the present undesirable conditions; hence the necessity to expunge this subsection from the statute absolutely.

That is what we are endeavouring to do. Now, Sir, for economic reasons, from the point of view of dollars and cents, it behooves us to pass this legislation. The Toronto 'Telegram' of the fifth of June last describes what took place during the race meeting which was held in the city of Toronto shortly before that date. The Toronto 'Telegram' said that at the Woodbine the race meeting had lasted last spring for thirteen days, that on the first day there were 72 book-makers on the track and that for the remaining 12 days of the meet there were from 50 to 80 book-makers present each

day. It said that not more than eight or ten of them were from the city of Toronto, the rest being from outside. And the 'Telegram' went on to say that, as I have before stated, the legislation recently enacted in all these states of the American Union had very much increased race-track gambling within this Dominion. Coming to the matter of dollars and cents, The 'Telegram' said, not as its opinion, not as an estimate but as a fact, that during that 13 days of the race meeting on the Woodbine our people had placed in the hands of book-makers $2,600,000 or $200,000 a day for 13 consecutive days.

An hon. MEMBER. The growing time.

Mr. MILLER. It is indeed the growing time, but the growth is the wrong way. The Toronto 'Telegram' further says it cost these book-makers to be on the ground $115,000. I ask whether it is a desirable state of things that anything should induce or be permitted to induce people, most of whom cannot afford it, to place $2,600,000 in 13 days in the custody of American book-makers.

There are many people who appear to fear that if this Bill becomes law it will interfere in some way with Canadian horses. Sir, there is no man in Canada, who loves a good horse, a beautiful horse, much more than I do. I would say of the man who does not love a horse what Shakespeare said of the man who hath not music in his soul. But there is nothing in connection with this Bill that will in any way affect injuriously horses or the lovers of good horses. Men like clean sport, but they do like the sport to be clean; otherwise it is not sport. I claim that race-track gambling does much to deteriorate sport and does nothing to elevate it and that we can have much cleaner and better sport without the gambling. It has been said that we must have men to ride horses, that it is men who are accustomed to riding upon horseback who will be of use to us in time of war and that for the purposes of our militia, for military reasons, it is a good thing to encourage riding. There is nothing in this Bill in any way to discourage riding. A man is permitted to ride, to ride any kind of horse or to hold any kind of race meeting as surely and as freely under this Act as he could do if there was no such Act. But I want to say more, that while horse-racing, and especially race-track gambling, has been rapidly increasing in Canada, horse-back riding has been growing less and less common, and that there are in Canada to-day fewer people who ride horseback than there were 50 years ago. As to the manner in which it may affect the breed of horses, I wish to say that we have in Canada the draught horse which is not affected in any way by any action that may be taken as regards the thoroughbred. We have the hackney, and the trotting horse and the various breeds of coach horses which are not affected even by horse-racing et alone this Bill, and for the breeding of which thorough-bred or running horses are not used. There are many counties in this Dominion and in every province in Canada where no thoroughbred horses have been used for breeding purposes, not so many are used, I think, as there ought to be. I go further and say that whether for the improvement of trotting, or saddle or riding or any other breed of horses, the thoroughbred used is not the stamp of thoroughbred that is found upon the race-track.

I was talking a few days ago to a member of this House who loves horses, as many of us do, and who is fond of seeing a good horse-race. Once in a while he adds to the zest of the sport and the relish of the race by putting up a small bet. He is a man of good judgment—by that I do not mean that he always bets on the winning horse, but that he is a man of sufficient self-control not to wager more than he can afford to lose and he may have bet many times without being injured in the slightest degree. He told me that a short time ago, coming up from the Woodbine on the street car, he saw a little boy probably twelve years old, certainly not more than fourteen, who was exultantly exclaiming to every one in the car that he had won $2 on a horse-race. This member said to me that he thought: Is there not, after all, an element of evil in this whole thing and may not the winning of that $2 injure and probably spoil that boy's whole life? I was talking to a prominent Canadian manufacturer who informed me that he had in his office a young man who had held a position of trust in some financial institution. The young man got to playing the races, and lost a considerable amount. At first he took a small sum of his employer's money and losing it took out another sum to make another bet, hoping to make good his losses, but with the usual result, the book-maker had the best of the contest. The young man's losses and embezzlements increased until he lost his situation. His father had to make good the money he had lost, the young man was to that extent disgraced and his father, an estimable man, came to my friend, and asked him whether he would not, for kindness sake, take the young man into his office and endeavour to make something of him. He did so. The young man was an estimable fellow, every one liked him, but every fall or spring, when the time of the races at the Woodbine comes around, he becomes uneasy and makes some excuse or other to get off to the Woodbine. This manufacturer stated that last year he secured $50 from one member of the firm, $50 from another person

and $50 from some one else. He went to the races with the usual result, he lost his money. He said that the young man, not only lost money he could not afford to lose. but he unfitted himself for business and, so reduced his value as an employee that his employer would have dismissed him were it not for the sake of his father.

Personally I represent a rural constituency within which no horse-racing takes place. I have not the opportunity, whether I would embrace it or not, of watching horse-races or seeing personally much of race-track gambling. But a sad instance came close within my own view. A young man of my own town, more than ordinarily clever, was given a place of considerable trust in Toronto where he handled a good deal of money. He began to play the races, and embezzled the funds of his employer in order that he might bet on the Toronto race track. He was detected and sent to prison for two years. His young wife, a very estimable woman, whom I knew very well, appealed to me to endeavour, if possible, to have her husband liberated because as he had been the bread winner his family were suffering in consequence of his imprisonment. She had two little children to support whom, she laboured with her needle. I appealed to the Minister of Justice, first having said to the young wife that it would be no use to make an appeal until after one half the time had expired. After that time I appealed to the Minister of Justice who said to me: Much as I would like to meet your wishes, I cannot do so; I do not think it would be in the public interest or in the interest of this young man that he should be set at liberty until he had served the greater part of his two years. His wife told me very pathetically of the endeavours she constantly made to hide from her little children the fact that their father was behind prison bars. You may judge whether it would be possible to hide that fact from her children. Sir, there are other wives, there are other fathers and mothers, there are other children, who are being cursed by the results of race-track gambling. I ask you, because of the evils resulting to Canada as a nation and the people of Canada economically, morally and every other way, to support the Bill, and I trust it may become law.

Mr. CAMPBELL. Will the hon. gentleman allow me to put him a question? Did I understand him correctly to say that the object of the Bill is not to suppress betting, but only some forms of race-track gambling?

Mr. MILLER. I am glad that question has been asked. It does endeavour to suppress entirely the business of race-track gambling, but we have carefully avoided any attempt to suppress the making of private bets between private individuals.

Mr. CAMPBELL. Does my hon. friend think it perfectly right for him to make a bet on a horse-race with any one he choses but illegal to make the same bet with the book-maker?

Mr. MILLER. We have not endeavoured to suppress the making of private bets between private individuals for two reasons. First because, whatever my own private opinion may be, there are many persons who would not support a Bill to prevent the making of private bets, and I doubt whether public opinion would endorse such a Bill. There are many who desire to do away with race-track gambling but who would not desire to do away with private betting; and if we should enact legislation to prevent the making of private bets, it would be impossible to enforce it.

Mr. CAMPBELL. There are many of us who do not understand the methods adopted by book-makers and pool sellers and perhaps the hon. gentleman would explain what are these methods, and what are the objectionable features in book-making and pool selling so that we would be in a better position to exercise our judgment in this matter.

Mr. MILLER. I think my hon. friend has an experience in these matters which will enable him to give me pointers.

Mr. CAMPBELL. That is not an answer to my question. It is purely a matter of opinion and conjecture on the part of the hon. gentleman as to whether I have had personal experience or not. I have asked the question for the benefit of members who do not understand book-making and pool selling.

Mr. MONK. Before the question is put, I should like to offer a few observations. I may say that I did not anticipate that my hon. friend would discuss this measure at this afternoon's session, and consequently am not prepared to go as fully into it as I think it would be my duty to do if I had had sufficient time for preparation. But I would point out that we have in the vicinity of Montreal a very important association connected with racing, and I feel it my duty to offer the House some observations on this measure. There is a point in the remarks of my hon. friend which I think one cannot emphasize too much because the general impression created throughout the country—and it is one which I shared myself to a certain extent—is that those who are pressing this measure are absolutely opposed to betting in any form. My hon. friend, however, has said that there is nothing immoral or wrong in two men on a race-course engaging in any betting operations provided they do not make it a business. I understand from him that a man can go on a race-course and make

bets with another without doing anything wrong and that there is no intention of legislating against any such transaction, but that the evil is done the moment he makes a bet with a book-maker. If I am wrong, I would like my hon. friend to correct me. The occasion for this Bill has been stated by my hon. friend. It is the invasion into the province of Ontario of American book-makers.

Mr. MILLER. Not alone the province of Ontario.

Mr. MONK. Well, all of the western provinces. The fact that book-makers have come from certain states of the Union where book-making has been prohibited, is the occasion of this measure, and that the prohibition of book-making, in the state of New York more particularly, has caused that invasion and that some abuses have resulted. I would like to say, with regard to the province of Quebec and more particularly the race-course I have in view in the immediate vicinity of Montreal, that, so far as I have been able to observe, this invasion has not yet reached us to any appreciable degree. The race-meetings I have attended there and the observations I have made myself and those made by others do not bear out the statement that the book-makers from the United States have invaded that race-course to such an extent that great abuses have resulted. That is one point I desire to make more particularly as regards the province of Quebec, because my observations do not extend outside of that province. I take it as an admitted fact that the racing of horses has the effect of greatly improving the breed of horses. You cannot improve the breed of horses unless you have trials or tests of speed and endurance, and you cannot have these trials and tests successfully unless you have prizes and betting, and I will even go the length of saying book-making at any rate has been the result of experience. My hon. friend says that there is nothing in his Bill to prevent these trials and tests. That is true, but on the other hand you cannot have these tests which result in the improvement of horse breeding, without the accompanying prizes, the bets and even upon the race-course the book-maker, in order that that betting may be conducted in such a way as to make the race meeting a success.

I would not like to be understood as approving of abuses, nor as denying that abuses do exist sometimes—even often; nor would I say anything derogatory of the bodies and individuals whom my hon. friend (Mr. Miller) has quoted here as having encouraged the movement intended to bring about this legislation—nothing of that sort by any means. But I say that, in my opinion, we can take it for granted that successful race-meetings cannot possibly be held if betting be prohibited, or even book-making; and that without race-meetings conducted as they are in England and as we have conducted them hitherto in this country, you cannot have that encouragement of horse breeding that is absolutely essential not only in my province but throughout the whole country. In the province of Quebec—I wish now to become a little more specific—a number of gentlemen of means and immensely interested in the encouragement of horse-breeding and to whom we in that province are greatly indebted for what they have done in that regard, have at very great expense, organized a race-meeting association. And the kind of encouragement that they have given to horse-breeding, even in the short time for which the association has existed, has produced very good results indeed. Of course, in an association of that kind where a large expenditure is made, they must take means to obtain some return. Hitherto, their returns have been very small indeed; I doubt very much, though I am not authorized or qualified to speak for them, that they have realized any dividend whatever. Their object was the encouragement of horse-breeding and not at all the encouragement of abuses in the way of betting or book-making. They have succeeded in improving the breeding of horses in our province, as can be testified to, I am sure, by our agricultural societies and others who are interested in the promotion of that very important national industry. The government of the province of Quebec have realized this also, and have encouraged that association by giving it a grant. I do not know exactly what the amount of that grant is, but I know that the government have testified publicly to the usefulness of the association by making such a grant. But what is more important—and I call the attention of the government and of my hon. friends who belong to the legal profession particularly to this point—the association is working under a charter granted by the provincial authorities of the province of Quebec. That charter, if I am not mistaken, authorizes fully all the operations of whatever nature which that association is carrying on on the Blue Bonnets race-course in Montreal. The reason I point this out to the government, and to my hon. friend the Minister of Justice (Mr. Aylesworth) particularly, is that it seems to me questionable whether we can, by such legislation as this, interfere with the operations of that association, by declaring criminal operations which they are carrying on under a provincial charter—operations, I would furthermore particularly emphasize, which, if this Bill carries, will have to be interrupted, for I start with the principle that it is impossible successfully to carry on a racing association without allowing

not only betting, which my hon. friend (Mr. Miller) states he does not intend to discountenance, but also that particular form of betting which is carried on by book-makers.

The question presented to my mind is, can we legislate that association out of existence?—for that would be the practical result, as I believe, of such a law as is here proposed. I question very much if there does not appear to be there a very serious conflict of jurisdiction between our own power and the power of the legislature. I am not prepared to discuss that at length. But I remember that the question was raised before the Judicial Committee of the Privy Council in the case of Lamb versus the Bank of Toronto. Lamb was a collector of the provincial revenues, and he was endeavouring to collect a tax imposed upon the banks by the province. The decision which condemned the bank was carried to the Privy Council. I have not the report of the case here, but my recollection is that the members of the Judicial Committee stated that if the legislation of the province imposing the tax upon the bank was of such a nature as to strike at the existence of the bank itself the Privy Council would be prepared to pronounce that legislation ultra vires, but they went on to express the opinion that the province had not intended, nor was it the result of its legislation, to deprive the banks of existence or of the power of carrying on their operations, but merely to impose what appeared upon the surface to be a legitimate tax. In this instance—if I am right in stating that to suppress the book-makers would be to render the holding of race-meetings impossible—you could apply the observation made by the Privy Council that it would be a case of legislating out of existence a body created by the province acting within its jurisdiction, by declaring criminal, an operation which, of course, becomes criminal by its abuse but is not criminal if carried on under proper supervision and in such a way as to prevent abuse. I mention this point, because, so far as I have been able to observe, the abuses which exist in the United States, and which since the prohibition there have resulted in the inundation of the province of Ontario and other provinces by the parties guilty of these abuses, have not become evident in the race-courses in the province of Quebec, at any rate in the race-course in the vicinity of the city of Montreal. In this case, as was recognized, I believe, in the case of the Sunday Observance Act, the duty of enforcing the criminal law, the administration of criminal justice, is, under our constitution, left to the provinces; and it seems to me right that the application of this proposed Bill, should it become law, should be left in the hands of the Attorney General of each province. Thus, the Attorney General of the province of Quebec, should the abuse of race-track betting spread to that province and be brought to the notice of the government charged particularly with the administration of the criminal law, could, by proclamation, bring this law into operation in our own province. It seems to me that would be just and fair; because the movement to bring about this legislation has resulted, as my hon. friend has stated, from the chasing out of the United States, or of certain states, the men who created those abuses, or carried on operations in an abusive manner. Their presence, I think, has not yet been felt in our own province, at any rate, on the race courses in question. Why should the men who originated this association, the men interested in horse-breeding, horsemen of high repute—why should these men, having started that association and gone to considerable expense to establish it in an important centre of our province, where their operations are doing good to agriculture, are improving the breed of horses—

Mr. MILLER. Would my hon. friend allow me a question? Has the association in Quebec a charter to carry on race-track gambling, and if not, how will this Bill interfere with that association, or with its work?

Mr. MONK. I have not the charter of that association. But I said a moment ago, so far as I know they are empowered under their charter to carry on betting on their race-track in any form.

Mr. MILLER. If the hon. gentleman is not certain of that, I think he is mistaken. The charter means that they may carry on racing but not betting.

Mr. MONK. I have great difficulty in finding out what my hon. friend means by race-track gambling. I think he said that it was far from his intention to prevent race-track gambling, my hon. friend began with that observation. What he wishes to repress is the abuse by men who make a business of it, the book-makers. But race-track gambling in the sense in which my hon. friend understands it, is, I think, authorized by, or at any rate can be implied from, the powers granted by this charter in Quebec. I have no doubt that if this law passes, a conflict will arise as to whether the association in question, chartered by the province, cannot independently of that law carry on its operations. What objection, might I ask my hon. friend, has he to the insertion of a clause in this Bill that the Attorneys General of the provinces themselves should have the power of bringing the law into operation in our province, where the abuses he has pointed out have not, so far as I am aware, yet manifested themselves? Why should we

suffer because the province of my hon. friend is at the present moment suffering from those abuses? Why should our legitimate operations be interfered with?

Mr. MILLER. If my hon. friend asks me a question I will answer it. If there are in his province no offenders, the law will not apply; but if in his province there are offenders, then the insertion of anything such as he requests in the Act will make it difficult to enforce the Act.

Mr. MONK. Of course, in a large city like Montreal, I have seen a great many results of speculation, results that, among young men, are indeed melancholy. But as far as I am personally concerned, I have not seen a young man in Montreal yet, or in the vicinity, who has come to grief in the way my hon. friend explained a moment ago, through betting on race-tracks. I have not yet seen any such case, though I have seen a great many cases of young men falling and being sent to the penitentiary through speculation, gambling of different kinds. But of gambling on race-tracks, I have not seen yet any cases. Of course there are abuses in Montreal, as everywhere else. I have seen abuses in bazaars, in kermesses, in election competitions, carried on even for the erection of churches and other laudable objects. But I have not yet seen on race-courses the abuses to which my hon. friend has referred. They have in France a system of betting in which one is not exposed to make great losses or great gains. I would not like the House to think I am a betting man, because I am not, nor am I familiar with that particular kind of betting which is called Pari-Mutuel. But I know it has been countenanced in France, for the reason, I suppose, that the system is carried on under the control of the state, and as it is a source of gain, the state has distributed such gain for agricultural purposes throughout France. The gains resulting from this Pari-Mutuel amounts to millions of francs every year, and this sum the government distributes for public purposes. I do not know whether it would be possible to introduce that system here which exists in different countries of Europe. But it has that advantage that you cannot lose a great deal nor gain a great deal, according to the principle that you cannot have a proper risk without betting. It might be a good idea for the government to allow the system of Pari-Mutuel to be carried on by the racing authorities under proper supervision.

Mr. J. B. McCOLL (West Northumberland). I am of opinion that this Bill should pass its second reading without prolonged discussion, and should then be referred to a select committee of this House to investigate the whole matter and report.. My hon. friend who introduced the Bill (Mr. Miller) has given an involved legal argument, and I do not think that many members of this House can, by a discussion of these clauses in committee, get at all the abuses that my hon. friend is attempting to suppress by this Bill. Now, my hon. friend has used the expression, 'Playing the races,' As I understand it, betting upon horse-races takes place every day in the year, and in other places than on the race-tracks at actual meetings. But I am of the opinion, although I would not like to be positive, that the greatest abuses in connection with race-track gambling take place in the pool-rooms, or among what are called hand-book operators, betters of that kind. Last night, in taking up the Toronto 'World,' I found on one page nine different advertisements, one of which I will read, as it will give an idea of all the others.

C. R. James & Co.,
Room 4, 21 Leader Lane.

Monday I gave out, Patsy 8 to 1, won. Yesterday I gave out, Woolstone, 3 to 1, won.

Follow me at Jacksonville, boys, and you'll get the money.

To-day—8 to 1—to-day.

This is a sure winner and one that you can go as far as you like on. I have the word to-day that there is no chance to go wrong. Don't miss this one, boys.

That is the purport of nine different advertisements that appear in this paper, and all in the city of Toronto. In the first place, I point out that it mentions Jacksonville. There is a race-meeting going on in Jacksonville at the present time, and that would imply that there are eight or nine concerns, in the city of Toronto, doing business and recording bets, or that there was some sort of betting carried on in connection with the races at Jacksonville. If that be true, that is something that should be prohibited. I am not sure whether my hon. friend's Bill covers cases of that kind or not, but I fully believe that the great abuses that exist in what is called playing the races arise from outside betting, that is the betting that goes on from day to day and year to year, and not the betting that goes on at a properly regulated race-course. I heard an expression about pool-rooms, hand-book operators and that sort of thing. I never was in a pool-room, and I do not know how they are operated or carried on. I have never seen a hand-book operator to my knowledge. I do not know exactly how he carries on his business, but I have been at one race-track in Canada on several occasions, that is the Woodbine at Toronto, and I must say that if no greater abuses exist on the other race-tracks in Canada than what I have been able to see at the Woodbine, I do not see very much cause for this legislation. As I say, I have not very much information on this subject, my

information may be erroneous and that is why I would like to see it go to a special committee of the House in order that we might find out all about the subject and be able to legislate intelligently. Betting with the book-maker on the race-track is a different proposition from betting with a book-maker in a pool-room or on the street outside of the race-track. If I am correctly informed, when you go into a pool-room the book-maker who conducts the business, or the hand-book maker, fixes the odds and you are betting upon his judgment entirely and upon such information as he is able to get, but when you go to the race-track and bet against that book-maker the book-maker does not make the odds; it is the public that make the odds. Everything is done in the open and above board. It is true that the book-maker produces his slate and suggests the odds, but the public actually make the odds. The book-maker may open the betting on a certain horse at ten to one, but the price is brought down to five to one, or perhaps even money. Why? Because the public take up the proposition and force the price down. So, I say that on the race-track the public make the odds and not the book-maker. If the racing association properly regulates its business, and the association is properly regulated, I do not see any very great harm in betting on the race-track. I am informed, however, that there are many race-tracks in Canada that do not carry on their business in the same manner as it is carried on at the Woodbine. As to that, I do not know. That is one thing I would like to have investigated by a select committee of the House. I am informed that there are race-tracks that are really owned, controlled and operated by professional gamblers or book-makers. They advertise a race-meeting and carry it on for three or four weeks, or thirty or sixty days, so that they are carrying on at the race-track a similar business to that which they carry on in the pool-rooms. If that be true certainly that class of race-tracks should be regulated. That class of betting on race-tracks should be, in my opinion, entirely prohibited. How can that be done? Supposing that some Act were passed to restrict the length of these meetings to a week or ten days and to limit the number of meetings in a year, or something of that sort it would have the effect probably of putting that class of race-tracks out of operation. As far as race-track gambling is concerned the foundation of the thing is the regulation of the race-track associations instead of resorting to the Criminal Code. However, as I say, I am not absolutely certain upon this. I would like to see the question referred to a select committee, so that we could get exact, full and complete information regarding it. If what I have suggested is true I fear that my hon. friend's Bill will not regulate many abuses, that, I am informed, do exist in certain parts of the country.

Mr. MILLER. Would the hon. gentleman tell me to what particular point he refers now?

Mr. McCOLL. Regulating the length of the meetings. I do not see anything in the Bill that at all regulates racing associations. I think that it is the racing associations, the jockey clubs that carry on race meetings and permit gambling upon their premises that should be dealt with first. I do not think the Bill touches that feature of the case at all and I think that is the first thing that should be dealt with. My hon. friend stated, and it appears in the numerous petitions that have been presented to parliament day after day for the last week, that race-track gambling had been prohibited in Japan and in several of the states of the American Union. They do not say that it has been prohibited in Great Britain, France, Austria, Russia, Italy Australia, New Zealand or in any of those countries in which horse-racing and race-track betting were in existence long before they were known in the United States. From that I think I have the right to assume that when, in these countries that I have just mentioned, racing associations are in existence and where betting takes place on the race-tracks, they must have some way of regulating them because the evils do not exist that appear to exist in some of the states and on some of the race-tracks in Canada. It may be that in those particular states that have been referred to by my hon. friend the race-tracks are controlled by the book-makers or professional gamblers and not by men who are in the business for the sport that is in it. I would judge that from reading this advertisement which I have just now given to the House, because these men pretend to get, and perhaps do get, information from Jacksonville as to what horse is going to win on a certain day.

That would lead me to believe that the track at Jacksonville is operated and manipulated by men who are in the gambling business and not actually in the racing business, and probably such was the reason for prohibiting betting in these various states. I believe there are very many strong reasons why this matter should be referred to a special committee of the House. Horse-racing has been called the sport of kings and I suppose there is no country in the world to which that description more aptly applies than our own, so that, if the absolute prohibition of betting would ruin this kingly sport as is alleged it may be well for us to inquire in the matter. I agree with my hon. friend (Mr. Monk) that I cannot see very much

difference—I can see no difference in principle—between private persons betting with one another at a race-track and betting with a book-maker. That is particularly so when you have an even chance with the book-maker. And I maintain that as betting is carried on at the Woodbine you have that even chance. Probably that chance may be modified by the fact that the book-maker has an advantage in that he visits all the races in the country and may be a better judge of the form of the different horses, but at all events he proposes the odds and the people who bet take their chance, and if these race-tracks are properly conducted the public have an equal chance with the book-maker. However, I may be all wrong as to that and so I would like a special committee of the House to consider the matter so that we may know what the conditions are and legislate accordingly. If this Bill should pass its second reading, as I think it ought, I shall move that it be referred to a special committee.

Mr. CAMPBELL. I agree with the hon. gentleman (Mr. McColl) that a special committee should be appointed to inquire into the question of race-track gambling, and particularly so as the hon. gentleman who introduced the Bill was unable to explain to us what the abuses were that he asked us to legislate against. When the Bill gets its second reading I shall have much pleasure in seconding the motion that it be referred to a special committee.

Mr. GEORGE H. COWAN (Vancouver). In so far as this amendment is intended to remove the inconsistencies in section 227 of the Criminal Code I am in favour of it. Section 227 defines a common betting house as 'a house, place, room, or other place', and the courts in interpreting that section have held that a book-maker in a booth or stall or in a hand wagon run about the inclosure commits an offence under the Criminal Code, but that if he walks about even though he has placards all over him declaring himself to be a book-maker, and even though he uses all the arts of a book-maker, he is not within this section. The courts have gone further and have held that if the book-maker is standing on a chair he is liable to a penalty, but that if he gets down from that chair and walks about he is not committing an offence. It seems to me that the provisions of the Criminal Code should square with our moral sense, and our moral sense teaches us that in the one case the crime is as great as in the other. I cannot agree with the hon. member for Jacques Cartier (Mr. Monk) when he says that book-making is a necessary concomitant of races. I believe that the lover of horses needs no such incitement to induce him to take part in clean races, conducted in a clean way, and I believe that when this parliament passed section 227 and gave the definition it did, it really meant to put an end to book-making whether a man stands on a chair, sits in a booth or stall, goes about in a hand wagon, or walks about covered with placards proclaiming himself to be a book-maker. The amendment offered by my hon. friend (Mr. Miller) seems well calculated to remove the anomaly I have referred to and for that reason I shall support it.

Mr. C. A. WILSON (Laval). (Translation.) Mr. Speaker, I think it is my duty to say a few words in favour of the motion of the hon. member from West Northumberland (Mr. McColl), that this Bill be referred to a special committee.

Without entering upon the merits of this question, and, consequently, without saying what stand I might take should the Bill come back before us, I shall state that the chief motive which urges me in voting for the motion to refer is that, apart from the race track at Blue-Bonnets to which the hon. member from Jacques Cartier (Mr. Monk) has alluded, there is also the 'Montreal Driving Club' at De Lorimier Park. I do not know what goes on in Toronto, on the Woodbine race track, but I am aware of what happens at Blue-Bonnets and at De Lorimier's Park, and I can corroborate what the hon. member from Jacques Cartier has said on this subject.

I am in favour of referring this Bill to a special committee because both the associations I have just mentioned claim that they have provincial charters, and, consequently, that they are entitled to engage in betting transactions. I know that during last summer war was waged against the 'Montreal Driving Club;' one newspaper has even deemed proper to enter upon a crusade against the association. I am not aware that the association has been blamed or has been warned by any magistrate, but I know that the proprietors of the 'Montreal Driving Club' claim and assert publicly, as they did at that time, in all the Montreal newspapers, that they had the right to act as they did and that matters were left in abevance.

We are not here to find out new crimes, especially when they relate to actions that the legislatures permit. Thus, in the province of Quebec, the civil code authorizes betting when it tends to the improvement of the breed of horses.

I shall not dilate longer on the subject and, and as already stated, I shall vote for the motion introduced by the hon. member from Northumberland asking that this Bill be referred back to a special committee for consideration and report.

Mr. THOMAS BEATTIE (London). Mr. Speaker, this is a question that does not properly belong to this House. The ad-

dress of my hon. friend is an attack upon the province of Ontario within the jurisdiction of whose legislature this matter properly falls. The province of Ontario is one of the best provinces in this Dominion. Such a charge as has been made against race-track-gambling by the hon. member for South Grey (Mr. Miller) should not be laid in this House. It is a question with which the local legislature of Ontario alone ought to deal. I must say that I have been on the race-track in Toronto once or twice, but I saw nothing at all like what the hon. member describes. He told a most pathetic story about a small boy going home with $2 in his pocket. I saw a boy going home with a dollar in his pocket and I asked him how he got it. He said that ten little newsboys each put a ticket in a hat and had each put in ten cents and he happened to draw the lucky ticket. The hon. member calls that gambling. There is no gambling about it at all. I know of no race-track in this country that amounts to much except the Woodbine in Toronto and it is a credit to Canada. We did have a batch of Americans who came over to Fort Erie and set up a race-track and another similar institution was established at Windsor. These men should have been put out of the country. They were not Canadians and their race-tracks were not desirable, but they should have been dealt with by the government of the province of Ontario, not by this government. If the effect of this Bill would be to do away with gambling in this country I would be glad to support it, but there is other gambling in Canada far worse than race-track gambling which is not affected by this proposed legislation. This Bill, in fact, only touches the fringe of the gambling in Canada. The hon. member for South Grey (Mr. Miller) very wisely keeps clear of that. Thousands of petitions have been presented to this House upon this subject and I have examined many of them. Sir, many of these petitions are signed by young girls who know nothing about the subject and who have never been on a race-track. I am proud to say that I am perhaps the only member of this House who lives in a thoroughly respectable, non-gambling community—I have not received one petition from the city of London on this subject.

Mr. MILLER. Does the hon. member resent having been so neglected by the young ladies of his riding?

Mr. BEATTIE. No, I am pleased to know that our young ladies do not know anything about the gambling evil to which the hon. member has referred this afternoon. I protest against the hon. member's description of a state of things that I hope does not exist in this country; if it does exist it is the legislature of the province of Ontario who are responsible for this alleged evil, they should right it and not the Dominion of Canada.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. BEATTIE. Mr. Speaker, before the House rose at six o'clock, I referred to a small boy having won one dollar by ten of them putting up ten cents each and drawing tickets from a hat. I wish to state that did not take place at the Woodbine track, because the Woodbine course is so well conducted that no small boys such as the member for South Grey referred to are allowed within the grounds. I understand this Bill is likely to go before a special committee, and I do not know that I shall make further remarks but wait the report of that committee, and if that committee can show me that the statements of the hon. member for South Grey are founded on fact, I shall only be too pleased to vote for this Bill.

Mr. J. W. MADDIN (South Cape Breton). I have much pleasure in endorsing this amendment to the Criminal Code introduced by the hon. member for South Grey (Mr. Miller). The view appears to be entertained by a number of hon. gentlemen that horse-racing improves the stock of the country, and that for this reason we should allow horse-racing to be indulged in, because if repressed we would thereby be preventing the improvement of the breed of horses. I do not know how that may be in other provinces, but in the province of Nova Scotia, the horses that usually get away with the money in contested events are brought either directly from the United States to take part in those events or are horses that have been imported from the United States, and very few of the prize-winners are bred in the province. Furthermore, the horses which participate in track events, whether running, trotting or pacing are not such as the people of the country are most deeply interested in. But while supporting this legislation, I would venture with some apprehension, to offer a suggestion to my hon. friend from South Grey, and that is to remedy what I consider an irregularity in the Bill itself. He has told us that the Bill was drafted by three well known legal gentlemen at the instance of the Reform Association in Canada. Well, if I may be permitted to refer to the law as it originally stood, I would mention that under the common law, in the old country, the business of gambling was prohibited, and in the imperial draft code, when the common law was modified, that prohibition was embodied in certain sections from which the general sections in our Code of

1896 were drafted. Sections 226 and 227 of our Code of 1906 follow verbatim the sections 197 and 198 of the Criminal Code of 1892. Section 226, for instance, defines a common gaming house as a house erected or place kept by any person for gaming. Under the amendment now before the House, the word 'space' is substituted for house, and a common gaming place is a place used by any one—the words 'house, room or' being struck out and the word 'kept,' which is significant, is changed to 'used.' The same is true with regard to 227. Now the punitive or penal section 228 in the amendment goes on to say:

> Every one is guilty of an indictable offence and liable to one year's imprisonment who keeps any disorderly house or other disorderly place, that is to say, any common bawdy house, common gaming place, common betting place or common opium joint as hereinbefore defined.

It must be quite apparent that the user of the place is not punished under the penal section of this amendment, and as the law stood under the old sections 226 and 227, as was pointed out by hon. gentlemen on this side before dinner recess, if a person making and registering bets, commonly called a book-maker, carries on his nefarious business within a building, room or generally in some fixed place, then the old sections, as they stood, would reach and punish him, but under the decisions of our court, as pointed out by my hon. friend from South Grey, it was found that a book-maker who moved around on the grounds and in front of the grand stand amongst the crowd and who moved on, when requested by the police, was not such a one as is contemplated by the Code and could not be punished as keeping a gaming place. This amendment then is to reach book-makers moving about the race-track ground, and whilst the defining sections 226 and 227 would reach him well enough, the punitive does not. Subsection 2 of section 228 says:

> Any one who appears, acts or behaves as master or mistress, or as a person having the care, government or management of any disorderly house, or other disorderly place, shall be termed to be the keeper thereof and shall be liable to be prosecuted and punished as such, although in fact he or she is not the owner or the keeper thereof.

Well, if any one who appears to be the keeper of such a place is the one who is to be punished, it must be quite apparent that a book-maker moving to and fro in front of the grand stand and meeting shows very little appearance of being the keeper, and is in fact not the keeper, and so this Bill would not reach him. I venture the suggestion to my hon. friend from South Grey that he would consider the advisability of inserting after the first word 'keeps' in the thirty-first line of page 2 the words 'or uses' so that the section will then read:

> Every one is guilty of an indictable offence and liable to one year's imprisonment who keeps or uses any disorderly house or other disorderly place, that is to say, any common bawdy house, common gaming place, common betting place or common opium joint as hereinbefore defined.

If the words 'or uses' were introduced after the word 'keeps,' that would reach a book-maker on the race-track. Then again it would punish unduly the frequenter of a house of ill-fame, which is not contemplated by this Bill. I would, therefore, recommend that irregularity to the hon. member for South Grey in order that he may prepare an amendment at the third reading of that Bill, or in order that it be submitted to the committee should the Bill go before a committee. So much with regard to the Bill itself.

I submit that the benefits to be derived from horse-racing are not commensurate with the evil consequences which flow from gambling on race-tracks. This Bill is intended to punish book-makers, that is, people who make a business of gambling, whilst it does not pretend to punish a person for gambling itself. The real evil flowing from the book-makers' business is that tricksters and people who pretend to give pointers to those who follow the turf, and also to many who know little or nothing about the turf, publish their pointers and tips and circulate their agents on the race-tracks and sell these tips at so much per day with a view to leading the unsophisticated and credulous to believe that they can make money by betting to win without any chance against them. The man who deals in pointers, the tipster, is one of the evils incident to the work of the book-maker. I submit, further, that the business of the book-maker has the effect of cultivating in the young people of our country the habit of gambling and destroys the true sporting spirit of the rising generation, blunting their sense of sporting morality and fair-play.

Now, I have only to say, in conclusion, that I commend the hon. member for South Grey (Mr. Miller) for the manner in which he presented this Bill to the House. Though he is a layman, I think it is safe to say that no member of the bar on either side of the House could have presented the case with greater ability than did the hon. gentleman. He handled the legal aspect of the subject with all the skill of a trained student of Blackstone, and the moral aspect almost as well as a Spurgeon or a Moody. I am not sure that the isolated instances of moral degeneration and social dislocation which the hon. member has pictured could fairly be called the outcome of race-track

gambling only. Still, I submit that the evils flowing from the traffic of book-making on the race-tracks of this country are such as to warrant this House in passing this legislation. As pointed out this evening, this legislation is not new. The very acts which will make a person guilty under this amendment would always have made a person guilty under the law as it stood if they had been carried out in any fixed place, under cover, in some room, in one spot. It has now become necessary to enlarge the operation of the criminal law in order to catch the book-maker who has been shrewd enough to discover that by keeping on the move, by abandoning any place of abode or fixed point of operation, he can evade the consequences of his conduct. It is in order to bring home to him the consequences of his crime that this legislation is sought. I support the measure because I believe it in the best interest of the country and because I believe it is right.

Mr. W. M. MARTIN (Regina). I have listened with great interest to this discussion, and I cannot let the opportunity go by without putting myself on record as absolutely in favour of the amendment of the Criminal Code here proposed. In fact, I know of no question that touches a greater mass of the people than the question of race-track gambling. I think the House cannot pass a better measure during the present session than this, and I hope it will be passed unanimously. I must congratulate the hon. member for South Grey (Mr. Miller) on the exceedingly clear way in which he placed the question before the House. Personally, I would support this measure if for nothing else than because it properly defines the word 'place' under the criminal law. It seems a most peculiar anomaly of the criminal law that a man can act as book-maker wandering around from place to place and be held quite innocent under the law, but the moment he becomes stationary he is liable to punishment. The question at issue, I think, was well put in the judgment of Chief Justice Moss in the Moylett case. Let me read a word from that decision: In speaking of the so called 'place' in question in this case, he said: There was an absence of 'that measure of localization and fixity and exclusive right of user which is necessary to constitute a place.'

It is to meet this difficulty, as I understand it, that this measure has been brought before the House. I believe that by passing this Bill and thus defining the word 'place' we would go far to overcome the difficulty which stands in the way of putting a stop to illegitimate race-track gambling in Canada. I do not know the conditions in Quebec or the maritime provinces, but I do know the conditions in the prairie provinces. Outside of Winnipeg, the race-meets are small, but at every meet there are a number of people who make it their business to follow the race-track—do nothing else. If a man got a fair deal in dealing with book-makers, possibly it would not be of so much importance to pass legislation. But every body knows that the dice are loaded against the person dealing with the book-maker. So far as the portion of the west in which I reside is concerned, every one will be in favour of this amendment. No better legislation could be passed by this House.

Mr. G. H. BARNARD (Victoria, B.C.). I have but a few words to say on this Bill. I wish to go on record as being heartily in support of the measure. I also wish to take exception to a statement of the hon. member (Mr. Miller) who introduced the Bill wherein he represented that there was an extended race-meet in the city of Victoria during the past summer. I call attention to the fact that the meeting was not in my constituency, but in that of the hon. member for Nanaimo (Mr. Ralph Smith). At the same time, I am prepared to admit that some gentlemen who reside in my constituency extended a moderate support to that race-meet. But we have had in that constituency an experience of what this business means when carried to the extent to which the people who support it are prepared to carry it. The state of California prohibited betting on race-tracks with the result that we had all the thugs and undesirable characters of the Pacific coast landed on the constituency which I represent for a period of sixty days last summer, and the experience of that town, both commercially and morally was the reverse of satisfactory. I am in hearty support of this measure and will do everything I can to see it carried through.

Mr. ARMSTRONG. I merely rise to express my sympathy with the measure which is before us, and ask that it be taken into consideration, and that an amendment be introduced to meet a case to which I am going to call attention. I notice in yesterdays issue of the Toronto 'World' 10 advertisements similar to the one which I will read:

DO YOU PLAY THE RACES AT JACKSONVILLE?

IF SO

I AM ON THE SPOT.

I own a stable of horses and am in the know when many a good thing will be cut loose here this winter. I want to put you next when I have them on tap. I don't want any money in advance, merely the winnings of a two-dollar commission on each horse I send you, and they may be one, or two, or even three, a week.

Can I put you on my list?

I will make some money for you.

Send me $2 (two) American money, as a guarantee that you will accept my wires, and we can do business.

GEORGE J. HEWSON
326 West Ashley Street, Jacksonville, Florida.

I will not make any further remarks on this question, as it has been already so fully discussed. But I would like to see an amendment introduced to this effect:

That all advertisements soliciting patronage for betting on race-tracks shall be prohibited.

Mr. J. D. REID (Grenville). I do not wish this Bill to go through without voicing my sentiments in its favour. So far as this Bill is concerned, or any other Bill calculated to effect moral reform, I am willing to support it. What I object to is that the hon. member who introduced this Bill is willing to allow gambling on one side to be carried on, while on the other he wishes people to be prosecuted. I would like to see a Bill carried that would make all kinds of gambling illegal, and render every person engaging in gambling liable to prosecution. Now this matter of gambling restrictions was brought to the attention of the government some time ago, and the Secretary of State, instead of taking it into his consideration and trying to carry out the wishes of the people, was willing to legalize it and give the applicants a Bill that made it legal to do gambling throughout the Dominion of Canada.

Mr. MURPHY. May I interrupt my hon. friend? The Secretary of State never did anything of the kind, nor was he asked to do anything of the kind.

Mr. J. D. REID. I may say that an application was made to the Secretary of State to grant a charter that would legalize gambling in the city of Toronto, and the Secretary of State gave a charter which legalizes gambling in the city of Toronto to-day.

Mr. MURPHY. Mr. Speaker, I wish to reiterate my denial that the Secretary of State was asked to issue any charter legalizing gambling, and to assert that he did not do so.

Mr. J. D. REID. Well, Mr. Speaker, I wish to say that the Secretary of State issued a charter that, perhaps, does not mention gambling, but it is part of the law to-day that they can carry on bookmaking under the charter that was issued by the Secretary of State, and which legalizes gambling. But I do not find so much fault with the Secretary of State, because he was a young member of the cabinet; but he took good care to go to the Prime Minister of the Dominion of Canada, who was responsible for the whole matter, and the Prime Minister authorized him to issue that charter to make it legal to carry on gambling in the city of Toronto. That charter is in existence to-day, and it is a part of the laws of this country that in the city of Toronto they can carry on gambling under a charter issued by the Dominion government, through order of the Prime Minister of Canada. Now, as I say, I would like to see this government pass a law prohibiting gambling of every kind. When the matter came up before the Prime Minister and his government why didn't he suppress that charter? We know that petitions have been pouring in here every day by the hundreds, asking this government to suppress gambling. What did they do in this case? Instead of going to the Minister of Justice and asking him to present a Bill to amend the Criminal Code, the right hon. gentleman hands the matter over to a backbencher and gets him to present the Bill in order to ascertain the feelings of the House before the government acts. Why, Sir, this is one of the most important matters that ever came before this House to improve the morals of this country, and yet the government have not courage to bring in a Bill themselves. Even if they do bring in a Bill, they have to ask one of the backbenchers to present it. So far as I am concerned, so long as this Bill is in the interest of moral reform I am willing to support it.

Mr. E. B. OSLER (West Toronto). I dare say it would be better for me if I held my tongue on this occasion. I am vice-president of that terribly and horribly wicked concern, the Ontario Jockey Club, and I am not ashamed of it. Now I am a man with a large family, and have seen much of young men. I have always had a belief, and it grows stronger as I grow older, that you may restrict but you cannot suppress vice. Nobody who has attended the Woodbine races but can bear testimony to the strong ground the management of that concern takes in trying to make sport clean and decent. The hon. member who introduced this Bill, if I heard him aright, gave as a very melancholy instance a young man who had been contaminated by winning $2 at a race, and I think he gave his age at twelve years. Now, Sir, one of the strongest rules and regulations of the Woodbine is that no boy or girl under eighteen years of age is allowed on the track. That rule has been carried out in the strictest possible manner. I do not believe that anybody who has been at the Woodbine races for years past has ever seen a boy—of course a boy of sixteen may say he is eighteen—but you absolutely see no children there.

Mr. BLACK. Let me ask the hon. member a question. What is the motive of regulating the age in the case of the Woodbine? Why not permit boys under eighteen under sixteen, down to twelve, even little

children, and girls under sixteen—why prohibit them attending the Woodbine?

Mr. OSLER. Let me ask the hon. member, why do we impose any restrictions at all in a family on young children? Why not permit them to do just as they like? Why exercise any control over a family? Why do a father and mother control their children until they arrive at years of discretion?

Mr. BLACK. May I ask another question?

Some hon. MEMBERS. Order.

Mr. SPEAKER. Only with the consent of the hon. member who has the floor.

Mr. OSLER. I have no objection.

Mr. BLACK. I have no desire to interrupt the hon. gentleman, I simply want to ask a question for information. In restricting the age of persons going to the race track, is there not an acknowledgment that there is a moral wrong somewhere in the sport?

Mr. OSLER. I do not think it necessary to answer such a question, if he does not see the difference himself. I cannot explain it to the hon. gentleman if he does not know the difference between ten years old and twenty years old. If I could, by my vote and influence, prevent all gambling I would do it very soon, but my experience is that you cannot prevent by Act of parliament many of the evils incident to human nature. The difficulty that is before the people of Canada to-day, in my mind, is, to a very great extent, that those who are looking after the morals of the country are trying to put those morals on the lines which they think is right by Act of parliament and not by home and church influences. The Woodbine race track has the approval of all men who are more or less familiar with racing and betting, and I think the testimony of all these men will be that it is possibly the best conducted race track in the world—except none. Yet, with all that, if it were possible by Act of parliament, to stop betting I would give my vote and influence to do it to-day and for all time. I have been in very active business for more than forty years. I have come in contact with hundreds and thousands of young men in banks and offices. My experience may be quite exceptional but I make this statement now that I have never known in, all my experience, of the case of one young man who has gone wrong from betting on the races.

Some hon. MEMBERS. Oh, oh,.

Mr. OSLER. I make that statement. It may not be the experience of others. I also make the statement that there is hardly a day in the week in which I do not come across cruel, hard cases, not only of boys and of young men but of women who have entangled themselves, lost money and brought themselves and their friends into terrible conditions through gambling in stocks. To-day, all over Canada, there is wild gambling in mining stocks. Flotations are put up at one dollar a share and inducements are held out through every advertising medium in this country to buy these stocks and make a great amount of money. Perhaps it is not necessary to say it, perhaps it is a hard thing to say, and perhaps it may be a thing for which one should not take credit, but for many years no women speculator has been allowed to do business in my office. I have seen the evil of it and I think that the women are the ones in this country who are to be protected infinitely more than the men and the boys who are referred to more particularly in connection with this Bill. Bank clerks, and clerks in offices buy 10, 20, 30, or 40 shares of mining stock. They go into debt for it and the gambling in that particular class of stocks just now is causing infinite trouble and ruin to hundreds of thousands of people in Canada. Servant girls are brought within the range of this kind of stock transaction. If any one going through the city of Toronto will go to any of the evening newspaper offices during a baseball game or a football match he will see thousands—I am not exaggerating—of young men, mechanics and boys, eagerly awaiting the result. I will venture to say that in connection with the football match played between 'Varsity and the Ottawa Rough Riders in Toronto last Saturday, a match played as cleanly and as finely as any match could be played, more money was won and lost, not only in Toronto alone but all over Canada, than there was lost or won during any week of the Woodbine races. I say that because I saw in my own office, from friends of the clerks, telegrams from many outside points asking them to put up $10, to put up $50, or to put up some other amount of money—not in a business way—but on one side or the other of that football match. In the ordinary everyday life throughout Ontario there is more money won or lost by women and men at games of bridge every day than is won or lost at the Woodbine in a week.

Mr. FOSTER. Not excluding Sundays.

Mr. OSLER. Not excluding Sundays. I felt moved to say a few words in connection with this proposed Bill, and I say now that if that Bill could effect the purpose which is aimed at and could suppress gambling, I would vote and work for it heart and soul. But, I do not believe that it will have any good effect. The Woodbine races have become a social affair in Canada, they naturally attract a good deal of attention, and it

is a very easy and pleasant matter for the reformers to train their guns on that one particular event and make very strong and serious statements in connection with it. I know I shall probably be misunderstood very seriously among my constituents and among many of my friends, but I have here a letter from the clerk of the Presbytery of Toronto in which he writes to me inclosing many petitions signed in connection with this gambling Bill and also one or two petitions signed in connection with immorality and vice. I know a little bit about the reason for the gambling evil, but I must say that when I read the resolution of the Presbytery about immorality and vice I thought I knew a little of the bad that was going on in Canada and that I was fairly in touch with those who do know it because I do not always attend to business and I take a very serious and keen interest in many things that are not business. Than the Presbytery of Toronto, there is no more able, no more sincere, no more honourable body of men. They are men who want to do their very best for Canada and in the interest of morality, but, I read in this resolution passed for the Presbytery of Toronto:

> Whereas habitual, open and notorious adultery, and habitual, open and notorious lewd cohabitation are not unlawful in the present state of the Criminal Code of Canada.

Now, the statement is made by that body:

> Whereas many of them living in this disgraceful state, having been driven from the American frontier states, are making their homes on Canadian soil.

That assumes that many of the people of Canada are living in that criminal and disgraceful state and that that class is being added to largely by men and women who are being driven from the American border states to live in Canada because the laws of Canada are more lax and open than the laws of the American states bordering on the Dominion. This resolution goes on:

> Whereas our Dominion is in grave peril because of this evil, owing to the inflowing tide of foreign immigration, thus threatening the sanctity of marriage and destroying the home;
>
> Therefore this Presbytery would urge the Dominion parliament to enact such legislation as will protect Canadian society and morals against this great evil.

I, for one, as a Canadian, born here, living here all my life, seeing, I think, the ins and the outs and the good and the bad of a great city—and not only of a great city, but of most of the outlying districts of Canada—I repudiate absolutely that statement. I do not believe that such a state of things exists. I have written to the reverend gentleman who sends me this letter, saying that I, with many members who have received that circular, are astonished and pained at it, and that we believe it is a slur upon the morals and the character of the men and women of Canada. Now, the meeting which passed that resolution, also passed that terrible indictment against race-track gambling, and if the meeting had only the same information as to race-track gambling that they had with regard to immorality and the social evil, I say they are making much of little and that they are trying to have suppressed by Act of parliament that which can only be suppressed by the moral teaching of the ministers of this country and the mothers and the fathers of the children.

Mr. SAMUEL BARKER (East Hamilton). I did not intend to say one word on this subject. I was here to listen, and to listen carefully, to everything that was said against racing in Canada, and I was particularly anxious about the matter, because for a good many years I have been connected with the Hamilton Jockey Club, of which for some years, I was president. I gave careful personal attention to everything connected with that club from top to bottom, and therefore I honestly think I know perhaps more about it than the hon. member for South Grey (Mr. Miller) who probably has never been at a race meeting in his life.

Mr. HUGHES. He goes to camp meetings.

Mr. BARKER. I do not care where he goes, but I do think it would have been wiser for those who wish some reform in this connection, to have placed the Bill in the charge of a gentleman who can speak of his own knowledge of that which he discusses. I have a great respect for the hon. member (Mr. Miller) as an industrious and indefatigable man in anything which he undertakes, but I always like to hear him when he is talking of something he knows a little about. The hon. gentleman may know something about morals in the abstract, but he is as ignorant as the babe unborn about morals as applied to racing and race-horses. I am sure he will not take any offence when I say so; he will no doubt consider it a compliment. Sir, I have been a member of a jockey club and I am not ashamed to say it. I have watched every act and proceeding of that club, from those of the directors down to those of the men who have conducted what is called 'professional betting' on the race-course. I may say that it has been the object of every member of the board of that club, to which I have the honour to belong, to see that everything connected with the Hamilton Jockey Club is conducted in a gentlemanly and honourable manner which would bring the blush of shame to no man's cheek. I am

happy to say here to-night, that I have heard highly respectable men from the United States and from England, express the opinion that there could be no more honourable methods than those adopted by that club, and that everything they did was very very remote, indeed, from the rascality that has been imputed by the hon. gentleman (Mr. Miller). It has been our effort from first to last to stamp out every-evil thing that the hon. member (Mr. Miller) has imputed such a club and to those connected with it. From the day I entered that club, I acted with a view to seeing that nothing was done that could not be published to the world, and that nothing should occur which would cast a shadow of a suspicion on our characters as gentlemen. One broad idea that the hon. gentleman (Mr. Miller) has brought forward here is, that betting is an evil, but he starts out by saying that he does not object to all betting. Betting in the abstract is no sin according to the hon. gentleman, but betting in a particular way is wrong, and I would like to know how much that gentleman knows about the particular sort of betting he objects to. I venture to say he has not the remotest idea about it, and yet he appears here in the parliament of Canada to lecture the people of Canada on their immorality as regards a thing which he knows as much about as he does about the precise question as to whether Dr. Cook or the other gentleman discovered the north pole.

I have been a member of a jockey club for some years, and although a fairly busy man I have given time and attention, without any personal monetary interest, to the supervision of every detail of the Hamilton Jockey Club while I was its president, and I deny what he has charged. That club and every member of it has done everything that could be done by them to put down what is really the mischief, an evil which the hon. gentleman and those whom he represents could have abolished, had they given their attention to it. We have felt that the whole odium of the betting evil is due to a matter with which he does not attempt to deal, that is the maintenance in small shops, barber shops and other small places, of betting places where small wage-earners can wager small sums upon horse-racing, football or any other sport. That evil was known to exist as far back as the passing of Sir John Thompson's Criminal Procedure Act. That, Sir, is the great mischief to-day and it is an evil which is known to every one who chooses to study the subject. The small wage-earner frequents these places, tempted by advertisements such as that read by the hon. member for West Northumberland (Mr. McColl). In these places betting goes on from New Years Day to the 31st of December. That is the curse of the business, and if the hon. gentleman has thought of the subject he knows it. These people induce clerks and small wage-earners to speculate for a few cents or a few dollars on races that are taking place at San Francisco, New Orleans or New York, betting on the advertisements they read in the newspapers. You never see one of these small bettors at a race meeting such as that of the Woodbine or the Hamilton Jockey Club. To enter the Hamilton Jockey Club would cost them more than they are willing to venture on their bets. Those who attend these race meets are not the class of people touched by this evil. The injury is done to the unfortunate man who is addicted to betting, as a man may be to drinking or smoking or any other habit. Such a man loses his money in thus betting, because the other fellows live upon his bets. These are the cases you will see in the newspaper reports of the police courts of Hamilton, Montreal, or any other city. At any of the great race meets the people you see around you are not of the class for whom the hon. gentleman is appealing. He tells a pitiful cock-and-bull story about a boy twelve years of age who was boasting to some gentlemen in Toronto of what he had won at the Woodbine. Does the hon. gentleman himself believe that story? I do not. I know that the whole effort of the Hamilton club is to keep such boys out, and even a member of the club, I myself, if I wanted to bring a son of mine or a daughter of mine under sixteen years of age into that race meeting, could not do it. Yet the hon. gentleman tells a story about a boy of twelve years of age who had been betting and making money. If the hon. gentleman had been in the habit of attending these meetings, he would not have told such a story. The hon. member for West Toronto (Mr. Osler) has properly said that these things are guarded against by the clubs. I have no doubt that the Montreal, Toronto and Hamilton clubs are as anxious to protect the youth of this country against danger of that sort as is the hon. member for South Grey (Mr. Miller). Does he arrogate to himself a greater anxiety for the morality of the youth of Canada than I have, or than the hon. member for West Toronto (Mr. Osler) has? Does he suppose that because I happen to be a member of a jockey club, I am less anxious than he to guard our youth? The only privilege I enjoy as a member is that I have paid out some money to establish the club. I have never received one cent in dividends or in any form from it and I pay the same as any one else to enter the club grounds. I have given labour to protecting and advancing the respectability of the club, to keeping it as something worthy of and not a disgrace to

this country. I have given time and labour and paid out my money, and all the reward I have ever received has been to hear a little abuse occasionally from gentlemen who do not know what they are talking about. Sir, we see the King of England, the ruler of this British empire, honoured and respected by every man and woman in the land, running horses at the races in England. What a rascal he must be! Probably he would even offer or take a bet with a friend. I do not know whether he gets near enough to bet with any one else, but if he did, I think no man would be afraid of the temptation into which he was running, or fear that he was leading boys of twelve to ruin. The trouble they have in England is that there are a lot of touts who use the love that the British man has for a good horse and for the best horse of the day, to draw a shilling or two out of some poor devil who cannot afford to lose it, and the laws there are framed to stamp out that sort of thing. It has been a slow process, but they are always advancing. But here you do not find the gentlemen who are so anxious for reform trying to abolish the real evils or make them impossible. I heard what the hon. member for East Northumberland (Mr. McColl) said as to a certain class of advertisements. There is much more in it than appears on the surface. Few men here can appreciate the amount of money that has been expended by gentlemen whose hearts are in the improvement of the horses of this country. There is a general impression that these men make fortunes out of this thing. Why, the men that spend the most make the least. There are men who have devoted their whole lives to the improvement of horses and who have never made one dollar. The desire for gain is not what moves them. It is the love of the thing they go in for, just as in the case of a great many people who go into trotting racing for the pleasure of seeing tests of speed between good horses. I do not object in the least to what the hon. member for West Northumberland (Mr. McColl) has proposed. I should be very sorry to object to any full inquiry into a subject of this kind affecting the moral welfare of the country. I would like nothing better, so far as I am concerned, than to submit every dollar that is invested in the club to which I belong to the impartial investigation of a committee of this House which would honestly decide whether, taking it all in all, there is not good done by horse-racing. I do not want to further occupy the time of the House. I did not intend to say one word, but I speak honestly what is in my own mind from what I know, and I can honestly say this, that if I had to go back upon the last ten years in which I have been connected with a jockey club, and go through them again with the proper sense of what is due the people of this country and the upholding of its morality, I would not hesitate to follow the same course, so far as my connection with the Hamilton Jockey Club is concerned.

Mr. F. B. CARVELL (Carleton, N.B.). I have listened with much interest to the very exhaustive after dinner speech we have just heard from my hon. friend from Hamilton (Mr. Barker). He seems to think that somebody has evil designs on the Hamilton Jockey Club. At least that is the only logical conclusion to be drawn from his remarks. Well, he entirely misconstrues the purpose of the Bill. The hon. member for West Toronto (Mr. Osler) appears to have a similar impression regarding the Woodbine Club. Let me say that the hon. member for Hamilton is hardly justified in the severe castigation he has given my hon. friend from South Grey (Mr. Miller). Any one who has listened to the very exhaustive argument made by him cannot fail to come to the conclusion that while that hon. gentleman may be a layman, he has given more care and study to the legal side of the case than many legal gentlemen in this House, and presented it in a more masterly manner than many of these legal gentlemen could have done. The hon. members for Hamilton and Toronto take the ground that this Bill is aimed at the respective jockey clubs to which they happen to belong. That is the only logical conclusion to be drawn from their speeches. They practically admit that these jockey clubs would not exist, if these betting arrangements were not allowed. But that is the very thing we find fault with. This Bill does not say anything about jockey clubs and does not want to put down either the Woodbine or the Hamilton Jockey Clubs. There is nothing in it to prevent these clubs having racing meets unless they are willing to admit that such meets cannot be a success if gambling be not allowed to go on at them. Well, I think that other hon. gentlemen in this House have just as good a right to their views as the hon. members for West Toronto and Hamilton. Like the hon. member for East Grey I have never lost a dollar in betting on a race-horse, but I think we both know what is going on perhaps as well as the hon. member for Hamilton. He took good care not to make any reference to the remarks of the hon. member for Victoria, B.C., (Mr. Cowan) who spoke of the influx at those race-meets of American horses and jockeys from California, and what he said can be argued of every race-meet in eastern Canada during the last ten years. At such meets the entries are practically monopolized by American horses and jockeys, and in the great majority of instances there is an arrangement between the jockeys and

book-makers and every race is sold out before it is trotted. Consequently no man is safe who goes there and risks his money.

An hon. MEMBER. You need not buy if you do not want to.

Mr. CARVELL. My hon. friend says you need not buy unless you chose to, but I ask the best thinking people is it proper that we should allow such institutions in this country, and allow those connected with them to hold out this bait to the people, especially to the younger men? When I say that such a course is not proper, I believe I am voicing the sentiment of the best people in this country. If you take the flood of petitions we have had during the past three or four weeks, you must admit that they mean something. You may say that these petitions are signed by innocent parties who know nothing about race-meets, but I have only to reply that if these institutions were the splendid ones my hon. friend from Hamilton has pictured them to be, it would not be necessary to make any argument against the gambling connected with them. There has been a proposition made this afternoon to refer this Bill to a special committee. That is something with which I have very little to do. My own opinion however, is that if we refer it to a special committee, that will give the hon. member for Hamilton (Mr. Barker) and the hon. member for Toronto (Mr. Osler) a chance to bring down the officers of these jockey clubs, and of course they will say there is nothing wrong with these clubs. I do not think that the members of the Canadian House of Commons need the evidence of these gentlemen to inform them whether there is gambling going on at these race-meets or not. Every one here to-night knows that gambling transactions are there taking place. We have as much information on that point to-night as if we were to investigate the matter during months, and I see no reason why we should refer this Bill to a special committee or follow any other course than the one usually pursued. Therefore, I shall vote that this Bill be taken up in the ordinary course and I hope it will pass and become law.

Mr. S. HUGHES (Victoria and Haliburton). It was not my intention to offer any remarks on this matter; but, as an old sport, I thought that probably—seeing this appears to be a time for a confession of faith on the part of the members of the House—a little of my own experience might do no harm. From my early boyhood, I have been engaged in athletic sports of every description. And I never, directly or indirectly, wagered a farthing on any game in my life. I am not claiming any special virtue for that. All I say is that I was not prevented from doing it by any Act of parliament. Fortunately, I had the training in my home and in my school life that taught me that it was not very creditable for a fellow to try to get something for nothing. The virtuous outburst over race-track gambling that we have heard to-night reminds me of two instances in the history of this country. One was the Sunday Observance law—as great a fake as ever was placed on the statute-book of any land. The gentleman who led in putting that enactment through refused point-blank to make duck-hunting on the Sabbath illegal, but they provided that if a young fellow hired a rig to go and see his best girl he was guilty of a crime. The other incident took place a few years ago in Toronto. The exhibition people there, with the desire of affording those who were inclined to be pleased with the classic in sculpture, organized what they termed 'living pictures'. They picked up a lot of old girls from all over the United States, decked them out in tights and showed them as 'living pictures' at the exhibition. There was a great outcry and the ministerial association of Toronto took the matter up. And, in order to decide whether this thing was moral or immoral, those who were appointed as a committee went out there day after day. Finally, on the last day of the fair, they reported—well, I really forget how the report ran, but at all events they had enjoyed the exhibition immensely. I do not believe in gambling, but I have read this Bill from start to finish and I do not see that gambling is even attempted to be suppressed by the measure. Book-making is condemned, but gambling is not condemned, and gambling after all is the evil. You start a person gambling for matches in one of these pious games of bridge that are played in home parlours or in church parlours, and it is just as seductive to the youth of our country as to allow a boy to go on the race-track and bet his money on the horses. Now, what is all this agitation for? Why, it is just to let my genial fellow countryman, the Secretary of State (Mr. Murphy) out of a nice little hole into which he plumped himself during the past year. There was a little Liberal ring in the city of Toronto, engineered by a very able man connected with some race-track institution in the suburbs. That race-track, owing to offences against decency carried on there, was suppressed by the provincial authorities—and, I believe, very properly suppressed. But these gentlemen said: We will teach this Tory outfit that we have pals at Ottawa. So they came down here, and—I suppose, under the law; I am not questioning the procedure—a charter was granted to this company. Forthwith, there was indignation, and that eminent authority on Christianity, the Toronto 'Globe' came out and demanded—in a moment of weakness—that this charter be cancelled. My Irish friend, the Secretary of State, not only stood his ground but went to Toronto to talk it out with them. And it was

delightful to see how the poor old Globe crawled—got under the lid and stayed there for some days until the Secretary of State came back to Ottawa. The next step was to attempt to suppress betting on race-tracks all over the country—if gambling on race-tracks in Toronto was to be suppressed, it must be suppressed on race-tracks every where. And the pious clergymen—good fellows as a rule; I am not saying a word against them—took up the agitation. But let me say here that if the clergy, instead of trying to govern the people by repression, would follow the lines of education, of building up the individual, there would be less necessity for this race-track gambling legislation. Well, the 'Globe' got back in this way, and petitions were hawked about the country for signature. And I asked several splendid fellows in my own county, 'Do you know what all this means?' Not a man of them could tell me the first thing about it. Thousands of names have been signed to these petitions, but I venture to say that not one out of five hundred of the signers knows the first thing of the history of what he was signing. I want gambling suppressed, whether on the race-track or any where else. At the same time, here in my place in the House I want to place myself on record as believing that this system of governing people by repression is not what has given the nineteenth century the place in history it occupies or that will make the twentieth century what we hope it will be. We must build up the manhood of the nation, and that repression cannot do. Point, if you can, to any period in history where repression has built up manhood. It cannot be done. It is educational, it is kindly teaching the mother with the child, the father taking his boy by the hand. I have a son—I do not want to bring in my own case but I want to show that I am not afraid to practice what I preach—and I am proud of that boy. He is able to hold his own in any place in which he goes in life. And that boy never was repressed, directly or indirectly, either by his father or by his mother. I resent the effort of any man, in politics or out of politics, to repress me, and I have never sought to repress any man; I have never found it necessary. To my mind, this Bill should be relegated to a committee, in order that we may know what there is in this race-track gambling that should be repressed. I have been at the Woodbine a couple of times, and I have seen young fellows bet their fifty cents or whatever it may be on a horse, sometimes winning, sometimes losing. Whether there was any thing wrong with that I do not say. Let us have the committee suggested by the hon. member for West Northumberland (Mr. McColl) that we may consider what we shall do, not only with race-track gambling but with gambling in connection with games of all kinds. Why not consider the gambling in connection with bridge-playing? Why, Sir, in this very city of Ottawa homes have been wrecked by bridge-playing; whole properties have changed hands and people have been led to ruin through gambling at bridge.

Gambling in bridge is to my mind even more criminal than gambling on a race-track, because the latter is something for the moment, while the other becomes a craze and is carried to an extreme extent. Let me point out another thing. There was a football match in Toronto last Saturday, and thousands and thousands of young fellows in this city and other parts of the country put up their all on that match and lost. Why is it wrong to bet on a horse-race and right to bet on football? There is another point that I think our hon. friend from South Grey (Mr. Miller) might well include in this Bill of his. We frequently find another species of gambling indulged in when a public lecture is advertised, or a football match is advertised, and the admission is placed at a certain figure. The tickets are all corralled up, and when a person wishing to obtain admission and is ready to pay the advertised price, calls for his ticket, he is told: Hand out $4 or $5 or you cannot go through. Possibly a thing like that would come under the law regulating combines in restraint of trade, or against increasing the price of commodities. At all events, it is a species of gambling, and to my mind it is more contemptible than gambling on a horse race. Mark you, Mr. Speaker, I am not a horse-race gambler; I claim no credit for it, because I never had any inclination for it. I was trained in my infancy by a good mother to believe that there was nothing honourable in it, but that on the contrary it was disgraceful to be connected with a horse race. I would therefore make a suggestion to those gentlemen throughout this country, the clergymen, and they are a lot of fine fellows, a great many of them, a splendid lot, but they are a little too prone, as I have told them on more than one occasion, to take a crack at the politicians. Now politicians are no better than they should be, but I will say this, that I think the politicians of the parliament of Canada, take both sides—I will include the other side too, although it will bring down the scale a little—I say the politicians in this House will compare favourably with any other class, even the clerical class, in the Dominion of Canada to-day. But I wish here, from my place in the House of Commons, to give a word of suggestion to the clergymen, that splendid lot of fellows in this country, and that is that they should direct their zeal along other lines than the present line. It is so convenient to press

and to grind people down, to crush somebody, and I would suggest that another plan be taken, that they try to reach these people who are going wrong, to extend to them the right hand of fellowship, and show them a better way of earning money than to indulge in gambling, in the effort to get something for nothing. Let the clergymen develop that feeling in the individual, and in their congregations, and throughout the nation, and there will be no longer any need of laws against race-track gambling or any other laws of that nature. But I would say, and I want this to go on record, that I am opposed to gambling; and if my hon. friend from South Grey will make his Bill cover gambling of all classes, betting in every shape, I will support it heartily. To that end I would be pleased to see it referred to a committee, as suggested by the hon. member for West Northumberland (Mr. McColl), in order that all the facts in connection with the matter may be ascertained.

Hon. A. B. AYLESWORTH (Minister of Justice). The subject under discussion is a troublesome one to legislate upon, for the reason, I suppose, that in essence the thing struck at by the Bill under consideration is the making or taking part in a bet. Now the trouble is that the making of a bet is not considered by a large portion of the people of this country to be in itself a crime, and that by this legislation which is now proposed, as by legislation already on our statute-book, you are making by statute that thing a criminal offence which, in the eyes of the average citizen, is not an evil thing. It seems to me an innate propensity of the Anglo-Saxon human being to make a bet, to calculate chances, to take those chances, and to stake his property upon his judgment or his skill. The small boy that plays on the sidewalk in the springtime, stakes his marble against that of his playmate upon his ability to make a shot, and if he misses his shot he loses his property, while if he wins, he pockets the marble of his adversary. When that small boy gets a little older, and is able to make or to borrow money enough to waste, he probably ventures into a larger form of gambling, he probably indulges in the purchase of many thousands of bushels of wheat, or many thousands of pounds of bacon or of pork, which the seller never owned and which the purchaser never meant to buy. He simply makes his bet upon his faith that the price of the commodity he purports to buy will rise in the market. Or perhaps he indulges in some other form of stock gambling. Perhaps he goes to the more legitimate broker and engages in speculation by making what is in all substance a merely theoretical purchase of stock in some well known public company. It may be a company whose stock, if he bought a hundred shares, would cost him more money than he might ever hope to possess. He lodges with his broker a percentage, he takes his chance upon the price going up or going down. He never sees any certificate for the stock he has bought, in all human probability no such certificate is ever issued by the company the shares of which he purports to be dealing in. If the price goes up he sells, he wins the bet, and his broker pays him the difference. If on the other hand it goes down, he probably loses his deposit. Well, everybody I suppose calls transactions of that kind gambling, and it is merely gratifying the innate propensity of mankind, or of English mankind at any rate, to make a bet.

But these very gentlemen who have been referred to in the course of the discussion to-day as advocating this measure are, I venture to think, perhaps unconsciously to themselves, engaging in substantially the same sort of business transaction, and considering it an eminently laudable thing for them to do. Suppose I go to a life insurance company and want to obtain a policy of insurance upon my life. What else does the company do but avail itself of its knowledge, by experience or by the experience of others, as to the chances that I will die within a year, and make its bet that I will not so die. They calculate the odds, they know what those odds, in the ordinary experience of mankind, amount to, and they tell me, if you pay us so much money, then, if you die within the twelve months, we will pay many times a larger amount. If I die I win my bet; if I live the year out I lose and the company pockets my money—undertaking on their part that if I live they will renew the bet upon the same terms for the succeeding year, and so it goes through a man's life. Such a contract is in its essence a contract of wagering, a contract of betting in which each party pits his knowledge, or want of knowledge, upon the chance whether or not that particular man will live for a certain prescribed period. Nobody thinks it is wrong, everybody thinks it is right and laudable and this legislation has the defect, that I think every one must appreciate in it that in substance and essence it is running counter to that all but universal propensity—I think I may very properly call it—on the part of the average man to back his judgment or skill by his money.

Now, the practical question here is, I think, whether indulging to excess in this propensity is a thing to be prohibited, or an evil by reason of which you should seek to prohibit absolutely the whole thing, or is a reason why you should seek to regulate it and to prevent, if you can, the excess. Betting upon a horse-race, or upon any

trial of skill, has been the subject of legislation in the old country for centuries at least. As long ago as the days of the Stuart kings statutes were passed in the United Kingdom upon this subject. Very probably before that time it was a matter of legislation and some forms of betting upon trials or contests of skill, or speed, or strength, were considered at all times by the parliament of Great Britain as perfectly legitimate. When we came in Canada to frame our Criminal Code, which contains the present law on this subject, that condition of the antecedent English criminal law was perfectly understood by the men of that day and perfectly recognized in the legislation which is now in question. A great deal of ridicule has been poured upon this legislation, or upon the interpretation of it which has been made by the courts, on the part of newspapers and public speakers who have advocated some change in the law —ridicule, which, I think, is entirely unfair and unjust. I have been brought up to believe, and I do believe, that law is the perfection of human reason and I think that our law upon this subject, as it has been interpreted and declared by our judges, is not any legitimate subject to ridicule, but that the judges have correctly interpreted that which the legislature, whether wisely or unwisely, some seventeen years ago deliberately enacted in this House. They wanted to prevent the keeping of common gaming houses; they were not striking at the individual bet, at one man meeting his neighbour, betting with him upon anything he pleased and depositing the money in the hands of a third person as stake-holder. They were not striking at the comparatively harmless bet of a pair of gloves with a lady, or a pound of candy, or some other trifle of that character, but they were striking at the wholesale, promiscuous betting engaged in in public gaming or betting-houses. They accordingly prohibited, under heavy penalties, the keeping of a public gaming-house or place. In section 235 of the Criminal Code they addressed themselves to the wholesale betting, if I may so describe betting by means of pool selling at race-tracks, or upon contests of that character where the parties to the wagering contract do not individually come at all into contact with each other, but where the bet is arranged through intermediaries on either side, and with the aid, perhaps, of the telegraph wires or other apparatus. Accordingly, they declared by section 235 that every one was guilty of an indictable offence, and liable to one years' imprisonment and to a fine not exceeding a thousand dollars, who did one or the other of several different things—used or allowed any part of his premises to be used for the purpose of registering bets or wagers or selling pools; or kept or used in his premises any device or apparatus for the purpose of recording bets or selling pools; or became the stake-holder or recorded or registered any bet or wager upon, among other things, the result of any race. In passing that enactment the legislatures of that day saw, as any one must, on considering it, that it would render the stake-holder in not only the ordinary innocent bet between two men, but also the stake-holder in the case of a contest for a prize, liable to the penalty of the Act. At every agricultural fair in the province of Ontario each fall I suppose one of the most attractive features is the speeding of horses in the ring for a prize given to the fastest trotting animal, or given for other contests of speed between horses. The owners compete and it was never intended by this legislation to make the treasurer of the association, who held the prize money, a criminal liable to be sent to jail for his conduct. Accordingly they provided by a subsection that:

> The provisions of this section of the Act shall not extend to any person who has become the custodian of any money, property or valuable thing staked to be paid to the winner of any lawful race.

That was the first exception. That exception is swept away by the legislation of my hon. friend. He proposes to re-enact the clause as it stands already on the statute-book, to make it criminal to be in the position of assisting at anything in the nature of a bet upon the result of a race or contest of skill or endurance of man or beast, but does not include the three exceptions which were deliberately put into the Act when it was passed as part of the Criminal Code in 1892. The second exception which was made and which, at the same time, recognized, what I may speak of almost as a standing principle of English law, so great is its age, was that the provisions of this section were not to apply to the owner of any horse engaged in a lawful race. Legislation against betting upon horse races is as old as the Stuarts. In the days of Charles II, in the days of Queen Anne, during the reign of George I and George II, repeated statutes were passed on the subject in England; introduced into Ontario when the law of England as it stood at the date of the meeting of the First Parliament of Upper Canada was adopted as the basis of the law of that province. Under those statutes of Charles II, of Anne and of George II, while there was illegality declared in the making of bets on certain kinds of races and under certain circumstances, the owner of the animal was not penalized if he bet upon his own horse in a lawful race. It was as if he were contesting for a money prize, for plate, or for any prize that was offered to the speediest animal. And so our parliament in 1892, recognizing that condition of the English law which had then obtained for

one hundred and fifty or two hundred years, made that second exception, that nothing in this enactment was to apply to the owner of any horse engaged in any lawful race. Then came the third exception, as to bets between individuals; and finally the exceptional specially made and deliberately enacted by the parliament of Canada in 1892 in order to protect racing upon the race-tracks of an incorporated association.

'Nor to any bets made on the race course of an incorporated association during the actual progress of a race meeting'.

The parliament of that day adopted that final exception with its eyes wide open. Sir John Thompson in introducing the Bill, called attention to the effect of the legislation. Mr. Davies—now Sir Louis Davies of the Supreme Court—pointedly called attention to it by saying: 'It is just as well the committee should understand that we are legalizing betting on a race-course' The Solicitor General of the day took part in the discussion pointing out that the law had always allowed betting on horse-races, and so, with fullest knowledge in 1892, a law was enacted which permitted betting between individuals, or on the race-course of an incorporated association, during the actual progress of a race-meeting. And just here let me pause to say that it was with some astonishment—unless my infirm ears much deceive me—that I heard a few minutes ago my hon. friend from Grenville charging against the Secretary of State that by some administrative act of his, within the last few months he had legalized betting upon race-tracks in Toronto. Why, the Secretary of State had no need to do anything to legalize betting. My hon. friend's honoured chieftain, Sir John Thompson had done that in this country years ago. If there is anything improper in betting upon the race-track of an incorporated association during the actual progress of a race-meeting, you must strike at it as my hon. friend from South Grey proposes to strike at it, meeting it squarely by repealing the exception which seventeen years ago was put upon the statute-book.

Now, the question, I take it, for consideration to-night by this House is, whether or no that should be done. It is simply a question of policy. Those who support the institution of the race-track in its legitimate form say, either impliedly or in so many words, that if you prevent betting upon the race-track, if you destroy the revenue to the association which they derive directly from the sale of book-making privileges, and if you also deprive that association of the revenue which indirectly they make out of the circumstance that betting is permitted upon the race-track and out of the attraction which that circumstance affords to many of those who otherwise would not attend, you are going to destroy legitimate racing altogether. Now, I do not know for myself, whether that is so or not. Several members of this House during the day, seem to have made more or less confession, and perhaps I may do so too. I had lived in Toronto before I came down to Ottawa four years ago, I had lived in Toronto within a mile or so of the Woodbine race-track for thirty-five years or more, I once went with a friend to see what it was like, I did not stay more than an hour because it did not interest me at any rate, and I never was at the Woodbine under any other circumstance. I never won or lost one cent upon a horse-race—I prefer to take my form of gambling with my broker. In these circumstances, I think I am in the position of the ordinary member of this House, of being able to pass impartially upon this question. Certainly I do not claim to be and do not consider I am in any way a champion or an advocate of the race-track or of race-track associations. But I find this state of things: We have had day after day during the few days this House has been in session, hundreds upon hundreds of petitions upon this subject. Every one knows who has had any practical experience, how readily people sign petitions and very possibly too much credence and weight can be given to petitions. But I cannot think that all those petitions are meaningless. I have had the honour of presenting a considerable number signed by men from my own county whom I know personally; petitions signed without any regard to the political feeling of the men who sign, but petitions which I see signed by substantial men of the constituency and not, at all events, altogether signed by women and children, even if women and children are to be ignored. These petitions were signed by the sober, serious minded back bone of this country. I do not think that we can afford to disregard petitions of that sort. I do not think we can close our eyes to the fact that whether or no it is manufactured, or whether or no it is spontaneous, there has grown up and there does exist in this country at the present time, a strong body of public sentiment upon this question. But, while that is to my mind well established, I think it is equally the fact that public sentiment upon the subject is by no means unanimous.

The debate in this House to-day has demonstrated that and we cannot close our eyes to the fact that if this legislation of my hon. friend from South Grey (Mr. Miller) would have, in fact, the effect of shutting up such race meetings as those of the Woodbine in Toronto or of the equally beneficial meetings held at Montreal or at Winnipeg or at Hamilton, we should be legislating counter to the sentiments and the views of a great many people who can with all propriety be spoken of as, socially and in every other respect,

among the best people in the community. If we think of the class of people who attend our races, we see among them the highest in the land, and when we know that these race meetings are patronized by people of the best standing, people of repute, people who have the best interests of the country at heart and who would never dream of breaking the law or of doing anything which they thought would work any injury to their fellow man, I think it is a subject upon which we certainly ought not to act without the advantage of all the light we can obtain. For that reason, and just because it would be important to know what the effect of withdrawing the revenue from betting privileges would be upon the race-track meetings of legitimate, incorporated associations, I certainly should favour the course which has been proposed by my hon. friend from West Northumberland (Mr. McColl). It cannot do any harm, the session is young yet, there is ample time and after the special committee has heard both sides of this question, has heard whatever evidence may be offered before it by those who are interested in racing and who want to keep up the breed and the excellence of our horses as well as by those who think that the evils which necessarily attend a race-track meeting are so great that the whole thing ought to be suppressed, we shall be in a much better position to deal with this legislation than we could possibly be at present.

I alluded a little while ago to the ridicule which had been in some quarters poured upon the law and the interpretation of it with regard to the question of its being against the law, an illegal thing, for a man to take a bet in the way of book-making at a race-track if he stood still and not at all illegal if he moved about. Many of the petitions which have been presented to the House have referred to that circumstance as an absurd position of things and they put the fault of it upon the judges and of their work in interpreting this legislation. That, I say is a very unfair thing, unfair to the law and unfair to the judges, and it only needs to be understood to be appreciated. When this legislation was passed in 1892, with the deliberate exception permitting bets made on a race-course of an incorporated association during the actual course of a race meeting, it did not meet the approval of those of our citizens who on principle were opposed to all betting, and it was not long before what was considered a test case was made by prosecuting some one under this provision of the law. It was found impossible to secure a conviction, the case was within the exception. Then the ingenuity of lawyers engaged by those who wanted to stop the betting at race-tracks was brought into play and some one conceived the idea of prosecuting the book-maker who occupied perhaps an upturned soap box or stood under an umbrella on the race-track, as the keeper of a common gambling house under the other sections of the Act. That was devised on the part of the godly people. That was an effort on their part to circumvent the legislature and it succeeded to this extent. The court said it does not need four walls or a roof to make a place. The statute prevents any one keeping a common, open gambling house or place, and if he occupies any fixed place, in or on a box, or under a stationary umbrella, any definite fixed location, he may be held to be keeping a common betting place if he holds himself open to the public as a man willing to accept bets from all-comers. Accordingly the law was tortured, if the law ever can be tortured, the law was distorted from the intention of the lawmakers at the instance and upon the argument of those who wanted to repress betting on race-tracks, although it had been deliberately permitted by the legislature seventeen years ago. The next step, of course, on their part, was to attack the man who kept moving about, but the courts said that was going a little too far and they could not say that a man who walked up and down, who was continually on the move, was keeping a common betting house or place even although he was taking bets from every one who would walk along with him. I think then if one remembers how this question has arisen he will acquit our learned judges, who have honestly sought to interpret the law as it was set down for them, from any decision which deserves the ridicule that has been lavished upon it.

I observe in the legislation under discussion that my hon. friend has proposed to get over this last difficulty and, if legislation can do it, to make the man who perambulates about but never stands still for a moment, the keeper of a common betting house, because he takes bets from those who speak with him, and makes bets as he so moves around. The legislation in question proposes, in the second subsection of the second section to define the word 'place' and it says that the word 'place' means something that is not a place.

> The word 'place,' as used in this section and in the preceding section includes any place, whether inclosed or not and whether it is or is not a fixed place, and whether there is or is not exclusive right of user.

We have all heard the ancient conundrum, 'when is a dog's tail not a dog's tail,' with the answer, 'when it is a-waggin'. It seems to me that this is something of the same sort, when is a place not a place? The definition is that the word 'place' is to include any place, whether it is or is not a fixed place. Now to my mind, the word 'place' necessarily implies and carries with it the idea of

localization and of definite fixity. I cannot understand a place that is not a fixed place, and I cannot therefore think that the object which the framers of this Bill had in view in endeavouring to get over the decision of the courts I have described, can be accomplished by any juggling with words or verbal trickery such as, it seems to me, with all respect to the draftsman of this Bill, the definition I have referred to, literally amounts to.

Just one word more because of a misunderstanding which possibly exists on the part of my hon. friend who introduced this Bill. I understood him to express the opinion, in answer to the observations of the hon. member for Jacques Cartier (Mr. Monk), that this Bill would not prohibit or affect individual bets between man and man. To my mind that is far from clear. The new section, which is submitted for section 235, in distinct terms, makes it a criminal offence for any man to record a bet, so that if any gentleman, who has made more bets than he can keep in his memory, ventures to take out his pocket diary and make the merest jotting, he would, under the proposed legislation, undoubtedly render himself liable to one year's imprisonment and possibly a fine in addition not exceeding a thousand dollars. If the House means to enact such a law, well and good, but it should be pointed out that the whole effect of the proposed legislation is to sweep away the exceptions which were deliberately inserted into our present legislation, when the Code was enacted in 1892.

I sympathize to the fullest extent with the efforts of my hon. friend from South Grey (Mr. Miller) and those who think with him, to lessen or put an end to the evils of gambling. But if their efforts will necessarily and inevitably carry with them the destruction of property, which is already represented by many hundreds of thousands of dollars in investments of our race track associations if those efforts will necessarily involve the suppression of our race-track meetings and the encouragement which they give to the improvement of the breed of our horses I should hesitate before supporting any change in the present law; and just because I want information on that head and because it seems to me that information can best be obtained by a reference to a special committee, such as has been suggested, I propose to vote for the second reading of this Bill and then to support the amendment or motion which the hon. member for West Northumberland (Mr. McColl) says he intends proposing, to refer the Bill to a special committee of this House.

Mr. STEWART. Representing, as I do, a constituency which has a race course, I do not think I would be doing my duty to that constituency were I not to say where I stand on this question. I am in favour of the principle of the Bill but not in favour of the Bill, as submitted to the House, and I think that the proper course would be to give it a second reading and then send it to a special committee, and in that way obtain information on the subject and hear the different views held regarding it better than we can by following the usual course. It is only fair that those who hold different views should have a chance to come here and give expression to their views. We cannot get too much information on the subject before passing a measure which may have such an important effect on this country, and if the Bill were sent to a special committee and there properly threshed out, we could then vote more intelligently than we can at present.

Hon. C. MURPHY (Secretary of State). At this late hour I do not intend to delay the House for more than a few minutes. At the outset let me associate myself with the gentlemen in and out of this House who do not believe that you can legislate morality into the people of this or any other country. At the same time I desire to associate myself also with the members of this House who earnestly and honestly desire to correct or remove what they believe to be a very serious evil. For that reason I am in sympathy with the objects of the Bill which has been introduced by my hon. friend from South Grey. It is my intention to vote for its second reading; and if the hon. member for South Grey approves of its going to a special committee, I shall support a motion to that effect. Permit me to say, Sir, that, in common with other gentlemen in this House, who have been sent here to represent public opinion, I resent the attitude of people who are not members of this House and who declare that this parliament must pass this or that measure of legislation. The members of the House of Commons are the mirror of the public opinion of this country, and I submit that it is not competent for any man or set of men to tell us what legislation we must pass and what we must not. Speaking for myself, I am not affected by any views of that kind either in connection with this or any other measure that may come before this or any other parliament.

Let me refer very briefly to one or two observations that have fallen from hon. gentlemen who have addressed the House. I regret that the hon. member for Grenville (Mr. Reid) is not here, as I would like to return him good for evil. My hon. colleague the Minister of Justice has made it unnecessary for me to point out to that hon. gentleman that it was not a charter issued by the Department of the Secretary of State which legalized gambling, as he asserted, in the city of Toronto, but it was

the Criminal Code introduced by the late Sir John Thompson. But the hon. gentleman objected to this Bill for the reason that it is proposed to remove the opportunity to bet or gamble at race-tracks. Therefore, it is a fair deduction that he favours betting and gambling at these race meets. Yet in the very same breath, he condemns the Secretary of State for having issued a charter which, he claims, legalized that very thing. I commend his consistency to the very serious consideration of his mother's son. Then the hon. member for West Toronto (Mr. Osler), for whose opinion I have the very greatest respect, drew attention to the fact that the race-meetings at the Woodbine track are conducted in a manner which is entirely proper and regarding which he asserted no criticism could fairly be indulged in. He illustrated what he says took place in connection with other branches of sport in this country by drawing attention to the crowds that assemble to hear the results of football matches and baseball games and ventured the assertion that more money was wagered and lost on a certain game of football in Toronto last week than is wagered and lost in any one week on the Woodbine track. As to that, I shall not venture an opinion, but let me draw the attention of the hon. gentleman and of my hon. friend from Jacques Cartier (Mr. Monk) to the fact that the attendance at these football games, unlike the attendance at the race-track meets, which my hon. friend from Jacques Cartier affirms could not be successfully conducted unless betting were permitted, is not marked by the presence of bookmakers or by the practice of betting, and the same can be said of hockey matches. Now, Mr. Speaker, it is a fact that at these matches the average attendance is much greater, I venture to say, than the attendance at race meets. What does that prove? It proves that two of our most popular sports are not dependent upon betting for their existence. I submit that the whole case against the Bill of my hon. friend from South Grey (Mr. Miller) was given away, to use a colloquial phrase, by the hon. member for Jacques Cartier (Mr. Monk) when he stated that, in his opinion, horse-racing could not be successfully conducted without gambling. Now, my hon. and gallant friend from Victoria and Haliburton (Mr. Hughes), whom I am sorry not to see in his seat—

Some hon. MEMBERS. Oh, oh.

Mr. MURPHY—whom I am pleased now to see on his way to his seat—referred to a family discussion which took place a few months ago in which the Secretary of State (Mr. Murphy) figured, and with regard to which it is not necessary for me to give the House any particulars beyond those given by my hon. and gallant friend. But let me point out to my hon. friend that the charter of the association in Toronto which he was under the impression had been cancelled by the provincial government because of some improper practices on the track of that association, was not cancelled for any such reason. That charter was cancelled because of non-user—because it had not been used at a time prior to its coming into the hands of the gentlemen who were operating under the charter at the time it was cancelled. And, in this connection, it may be well to point out that the cancellation of that charter illustrates a very important, a vital, difference, between the Provincial Companies' Act and the Dominion Companies' Act. Whereas under the Provincial Companies' Act there is provision for cancelling a charter, there is no such provision under the Dominion Companies' Act. So that the strength of lung and quantity of ink expended in demanding of the Secretary of State the cancellation of the charter that he issued was very uselessly spent. All that might have been saved if the gentlemen who were making the demand had only taken the trouble to look up the law or consult the nearest solicitor.

Now, the Minister of Justice (Mr. Aylesworth) has pointed out certain features of the Bill which render doubtful the effect it may have in actual practice. These are matters, which, I presume, can all be considered in committee. My hon. friend from Cape Breton South (Mr. Maddin) has drawn attention to what may turn out to be a very necessary amendment in subsection 1 of section 228. That also may be considered in committee. I desire to draw the attention of the House to one or two other amendments that may be made in the direction of broadening this Bill and making it extend to a class of the population who have been very vociferous in demanding this legislation. In my estimation, section 235 as amended by my hon. friend does not go quite far enough. This section provides that every one is guilty of an indictable offence and liable to one year's imprisonment and a fine not exceeding $1,000, who —according to subsection (e) as here proposed:

Advertises, publishes, exhibits, posts up, sells or supplies, or offers to sell or supply, any information relating to pool-selling, bookmaking, betting or wagering.

If it is a crime on the part of the men who do this, I want this section 235, so far as I am concerned, extended to the newspapers that assist in disseminating this information. I am going to propose in committee that after the word 'any' in the twenty-fifth line, the words 'news or' be inserted. That line will then read 'news or information.' And I will further propose

in committee that after the word 'wagering' in the twenty-sixth line, these words be inserted:

Upon any horse-race or other race, fight, game or sport, whether at the time of advertising, publishing, exhibiting, posting up, selling or supplying such news or information such horse-race or other race, fight, game or sport, has or has not taken place.

I submit that the necessity for this amendment must have been impressed upon every hon. member of this House when listening this afternoon to the extracts read by one of the hon. members on this side and by an hon. member on the other side of the House. I do not intend to offer any further observations at this moment, but when this Bill reaches committee, I shall ask the indulgence of the committee to allow me to have something further to say.

Mr. J. A. CURRIE. I would ask the hon. member (Mr. Murphy) whether he intends to suppress all news relating to the event, or simply betting news?

Mr. MURPHY. The news relating to the events specified in my proposed amendment.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). In the case of railway Bills proposed by private members of the House, I have invariably taken the position that where they affect large vested interests, and where there is difference of opinion it is the duty of the House to afford opportunity for those interests to be heard. I think that is only fair. We are here to legislate not alone for the people whose opinions we endorse, but for all the people. If we were sent to legislate only for those who think as we do, we should have only one kind of legislation—and if hon. members opposite were in power, I fear it might be bad legislation. But I have taken the position in railway Bills—fairly, I think—and I intend to take it hereafter, that these Bills should be referred to a committee, not in an unfriendly but in a friendly way, so that the people who are opposed to them can have an opportunity to present their views and so that the members of the House themselves can thus be placed in a better position to judge. I am in sympathy with the Bill of my hon. friend (Mr. Miller) and intend now to vote for the second reading to advance it a step and to get it where we can, perhaps, hew it into better shape. But I am strongly of opinion that, in fairness to all classes, and in line with the view I have held on other Bills introduced by private members where interests are affected, we ought to give those concerned a chance to be heard, and consequently will support the motion to refer it to a committee.

So far as betting itself is concerned, I believe that the insanity which pervades a portion of the people of Canada on the question of bridge-whist is training people up to be racing touts and book-makers throughout this and other countries, and that the foundation of much of the trouble we shall have from betting in years to come is being laid in the homes of this Dominion in playing bridge-whist and other games for money. So far as the sport of horse-racing itself is concerned, I am guilty of liking it. I would rather own a string of fast horses than be the ruler of any of the smaller countries of the world at least. I see nothing wrong in it, I see every thing good in it. The lover of animals is generally a man of broad mind, and a lover of humanity also. I am fond of good horses, and I pretend to know something about good horses, and when I am in the vicinity where men are trying to see which horse will go the fastest, call it a horse-race, or a trial of speed, or what you like, I am there to enjoy it. Nevertheless I am opposed to some of the evils that go with it, gambling to excess, men betting their last cent on these races, and I am in sympathy with the Bill of my hon. friend. But in fairness to all classes I take the position I do on other public Bills, and say that all parties ought to be heard.

Mr. MILLER. I have to thank, in the first place, some members of the House on both sides who said some kindly things of me, much more kindly than I deserve, in connection with my address in favour of this Bill. At this hour of the night I will not keep the House many moments for fear I would lose their good opinion, which I desire to retain for at least 24 hours. I do feel, however, some responsibility in taking charge of a Bill of so great interest to the people of this Dominion. I would like to refer briefly to some remarks made by hon. gentlemen who have spoken in opposition to the Bill. The hon. member for Jacques Cartier (Mr. Monk) was the first one to speak. He said that the evil we are endeavouring to combat has not yet reached the province of Quebec. He is fortunate, and the people of Quebec are fortunate that it has not. But I wish to say that when it does reach Quebec, as it will, the machinery of this Bill, if we pass it, will be all ready at hand. The hon. member for Jacques Cartier said that though they had successful race-meets in the province of Quebec, they are not troubled with the evil of book-making, thus proving by good evidence that racing is possible without book-making. I think the hon. gentleman was scarcely fair to his own province, which he would have us believe to be very tolerant with and generous to professional gamblers. I think that his words will create a misapprehension that would not be

complimentary to his own province. He said that a certain racing association within his own riding, I think he referred to the Blue Bonnet race-course, had some privilege in its charter that permitted gambling or betting. Now, Sir, I have looked at the Quebec statutes incorporating the old Belair Jockey Club, which was at one time one of the first jockey clubs of the province of Quebec, and find that it gives no permission to its members to gamble or to bet, but it does, on the other hand, give them permission to suppress betting and gambling.

Mr. MONK. The charter of the present association is much more recent than that by letters patent.

Mr. MILLER. I have turned, not to the charter, but to the Act of incorporation of the more recently incorporated company, that is the Montreal Jockey Club, and the statute, in defining the rights of the jockey club, says:

> The club shall not permit any form of gambling to be carried on upon its premises; but this shall not affect wagers upon exercises for promoting skill in the use of arms or upon horse or foot races or other lawful games requiring bodily activity or address within the meaning of the Civil Code.

Mr. MONK. What is the date of that?

Mr. MILLER. 1909. Now the Civil Code of Quebec, speaking of betting says:

> There is no right of action for the recovery of any money or anything claimed under a gaming contract or a bet. But if the money or thing have been paid by the losing party he cannot recover it back unless fraud be proved.

The next section says:

> Denial of the right of action declared in the preceding article is subject to exception in favour of exercises for promoting skill in the use of arms and of horse and foot races, and other lawful games which require bodily activity or address.
>
> Nevertheless the court may in its discretion reject the action when the sum demanded appears to be excessive.

Now there is no greater right given in the act of incorporating that society, that jockey club, than is given by the Code, and the Code gives no right for professional gambling, or book-making, or anything of the kind, but simply says that there may be betting, and the Bill that is before the House does not in any way seek to prevent betting, as I have repeatedly stated.

Mr. MONK. The Code does not prevent betting.

Mr. MILLER. Neither does it permit it. Now, the hon. member for Jacques Cartier and others coming after him have spoken of lacrosse and football, and they say that the Bill I have introduced does not say anything either about lacrosse or football. It does not particularly. The Bill I have introduced does not, unless it does what I do not mean it to do, prevent betting upon a horse-race; neither does it prevent private betting in connection with a football or a lacrosse match, but it does prevent the business of gambling and book-making, either upon a lacrosse game, a football game or a horse-race. It has been well pointed out by the Secretary of State that football associations and lacrosse associations forbid book-making or anything of the kind upon their grounds, and they have large crowds to witness their games, they get large gate receipts, and they can continue lacrosse and football without selling or permitting to any body the privilege of book-making. If they can do that, I would like to know why the same thing cannot be done with horse-racing. My hon. friend has said, and others have followed him in the same line, that we must have horse-racing in order to improve the breed of horses. I have spoken of that before, and I will not now speak of it at any length save to say this, that the 'Farmers' Advocate,' the leading agricultural paper published in the province of Ontario, and as good an agricultural paper as there is in the Dominion of Canada, wholly devoted to agriculture and stock-breeding, has been loudly clamouring for the passing of just such a Bill as this, and those gentlemen are at least as solicitous to encourage the breeding of good horses as my hon. friend from Jacques Cartier. My hon. friend from Northumberland (Mr. McColl) has said that the great evil is the outside betting. Now, I think he will agree with me that the Bill is a good one in so far as that it prevents outside betting. The hon. member for West Toronto (Mr. Osler), the vice-president of the Woodbine association, did not endeavour in any way to deny or lessen the strength of my statement taken from the Toronto 'Telegram' that $2,600,000 was placed in the hands of book-makers in the last meet of thirteen days on the Woodbine track. This was not on outside tracks, and was not the outside betting referred to by the member for Northumberland. The hon. member for Northumberland has said that while they have done away with book-making in several states of the union—a majority, I believe, of the states of the union—they have not in Britain, or in Austria, and in some other places. If the abolition of book-making, of professional race-track gambling, is a good thing, must we as Canadians, be the last people in the world to enact such legislation? Must we wait till every other country in the world has so legislated? Sir, I am a Briton, I believe a true Briton, but there are many things in Canada that I believe are superior to similar things in

Britain. I believe our temperance legislation in Canada and control of the liquor traffic is vastly ahead of such legislation in Britain, and we have better results on every hand throughout the Dominion. My hon. friend from Northumberland suggested short meets, and in this he has been followed by others. Now, I am not seeking to attack horse-racing. I am a lover of horses, and the member for Norhumberland says horse-racing is necessary in order to encourage the breeding of good horses. If horse-racing is necessary to develop a good breed of horses, then surely the more horse-racing we have the better, and it is better that the meet should continue, and that instead of being limited to six days, it should last for ninety days. If horse-racing is going to encourage the breeding of good horses, then the more horse-racing the better. I am not seeking to lessen horse-racing, I am seeking to lessen gambling and gambling has nothing to do with the breeding of horses.

One thing I had thought in listening to the speech of the hon. member for Northumberland; I had thought that he was somewhat conversant with the ways of the race-track until about the last statement that he made. Then he said that the Woodbine is run in such a way that the public have an even chance with the bookmaker. Then I thought that my hon. friend was not so well informed as I had thought he was. Would the American book-makers come every year to the city of Toronto and pay large sums for the privilege of making books on the race course if they meant to give the innocent public an even chance with themselves? The hon. member for London (Mr. Beattie) has said that this is an Ontario matter and that it ought to be left to Ontario to deal with. Contrast that with the statement of his friend and my friend, the hon. member for Victoria (Mr. Barnard) as to the extent of the evil in British Columbia and in his own city of Victoria. My hon. friend from Grenville (Mr. Reid) is not in his seat. I was going to say to him that he very much hurt my feelings and pierced my very thin skin when he spoke of me as a back bencher because I sit one seat farther back than he does. But, Sir, it is not for that that I make reference to him. He said, as other members have said to-night, that I did not oppose gambling in the Bill and that I said I had no objection to gambling. I said nothing of the kind. I said nothing to indicate that that was my attitude. I do not practise gambling for two reasons; in the first place, I do not believe in it, and, in the second place, I would be afraid that I would bet on the losing horse. I have given my reasons why I have not attempted to penalize the man who engages in a private bet. The hon. member for West Toronto (Mr. Osler), a gentleman whom we all respect, has rather ridiculed the statement that I made as to the boy of twelve or fourteen years of age returning from the Woodbine where he had won his $2. That story was not one which had come to my own notice, but the story was told to me by a member of this House who was on the spot, who saw the occurrence, who would sympathize with horse-racing and the race-track and who will, I believe, vote against this Bill. I do not know whether that bet was made on the race-track or whether it was made with the bookmaker off the race-track, but I have no doubt that it was made. The hon. member for West Toronto told us that he is vice-president of the Woodbine Association. I fancy the member said this for fear that if he did not make the statement it would be on the tongue or in the mind of somebody else, but I am sure that those who know the hon. gentleman would not impute any action that he might take or any word that he might utter to any wrong or unworthy motive. I would not think for a moment, nor would any member of this House, that the hon. gentleman would be influenced in his action or in his words because of any connection that he might have with the Woodbine. I do not think for one single moment that the hon. gentleman ever invested a dollar in the Woodbine for the sake of making money out of it. If he did go into it as a money-making investment and if he lost the whole cost of the Woodbine it would not make any particular difference to a man of his wealth. But, I do say this that a man who is vice-president of the Woodbine Association naturally perforce, unconsciously, it may be, sees the whole matter from a rather different view point that many other people will. A man having the wealth of the hon. member for West Toronto moves in a circle and upon a plane where he naturally does not come in contact, as other people with less means and different associations do, with the evil results of race track gambling. The hon. gentleman is not any better qualified to judge of the evils of race-track gambling than I am simply because he is vice-president of that association. He has said that this Bill does not provide a penalty to deal with mining stocks and that it does not deal with the playing of bridge. If the hon. gentleman thought that I was going to concoct some sort of a patent medicine for the remedy of every evil man can think of and if I have not endeavoured to prevent the evil of bridge or gambling in stocks it is no reason why the hon. gentleman should oppose this Bill before the House. It may be his duty to introduce a Bill preventing the playing of bridge and preventing stock gambling and if he does I will be glad, for one, to give his Bill my very careful and honest consideration.

The hon. gentleman has said that many women gamble in stocks, and that women

ought to be protected rather than the men whom we are seeking to protect by the Bill before the House. He spoke of the housemaids who invest their money in mining stocks. I want to know which woman is in greater need of protection—the housemaid who earns her $10, or $12, or $15 a month and then invests some of it unwisely in mining stocks, with no family to support and no children dependent upon her, or the wife of the wage earner who invests his wages at the race-track and, losing them, reduces his wife to want and his children to disgrace. The hon. member for East Hamilton (Mr. Barker), president of the Hamilton Jockey Club, thinks his knowledge of race-track gambling superior to my own. I admit his superior knowledge. I did not take any offence at anything he said respecting myself. I admire the hon. gentleman so much that nothing he would say, I think, could offend me. But, I say to him as I say to the hon. member for West Toronto that while these gentlemen, connected with racing-tracks and associations as they are, no doubt have honestly endeavoured to engage in the sport as gentlemen should do, and while they may not be responsible in other respects for the evils that attend race-track gambling, they and other men who have an official connection with a racing association have this responsibility that they sell and sell for gain and sell as a means of maintaining their race-tracks the privilege to men to make books. For this we will at any rate hold them responsible. The hon. member for East Hamilton has told us of their efforts to keep the race-track clean, but he has not given us any evidence at all of the success of those efforts. The hon. member for Victoria and Haliburton (Mr. Hughes) speaks of the petitions that have come before this House, that I thought, was well replied to by my hon. friend the Minister of Justice. I had thought that we ought to pay a great deal of attention to these petitions, and that for the most part the people who had signed them knew what they were doing, but I have often thought that the voters in Victoria and Halburton must be a peculiar people. The hon. gentleman says that hundreds of people in his riding had signed these petitions without understanding what they had signed. I think they must have been in the same mood and had the same dazed understanding election after election when they marked their ballots for the hon. gentleman. The Minister of Justice has said that there is, in many transactions, the element of gambling. He said that when a man insures his life or property with an insurance company or association it is a gamble. Sir, there is absolutely no parallel between the man who insures his life or his property and the man who bets upon the race-track. The man who insures his life gets his policy of life insurance, the man who insures his barn, or his stock of merchandise, gets his policy and the moment he gets his policy he gets some value for the money he has invested. He gets protection the very moment he pays his money and makes his contract. What protection, what thing of value does a man get who invests his money with a book-maker on the race-track? I say again there is no parallel at all between the two cases. The Minister of Justice rather conveyed the idea that this Act would penalize the treasurer of any society, for instance an agricultural society who would pay a prize to the owner of a horse. I do not so understand the Act, but I bow to the superior wisdom and great legal learning of the Minister of Justice which we all admire and in which we all have a great deal of confidence. I do not think the Act penalizes the owner of a horse who bets on his own horse. The Act does not mention the owner of a horse, the owner of a horse is at liberty to bet on his own horse or on any other man's horse, but he is not permitted, whether he be the owner of a horse or not, to engage in the business of book-making or in the business of gambling.

The Minister of Justice has said that if this Bill would cause the loss of many thousands of dollars that are invested in race-tracks and in racing associations, it would be a matter that would deserve our very serious consideration. Sir, I do not consider, and I do not think this House ought to consider this matter for one single moment; I do not think it has anything to do with the matter before us. If these gentlemen have invested their thousands of dollars for the purpose of perpetuating horse-racing, then I say I have no quarrel with them and I do not endeavour to interfere with their horse-racing—they can carry it on every day in the week except on Sunday, which is forbidden. But, if they have invested their money to carry on a system of gambling then I do not care how much money they have invested it ought not to be perpetuated. Some one has very tersely said that this whole matter is a question of the horse-race versus the human race and if that be so, I, Sir, will endeavour to be the humble champion of the human race. It has been suggested that this Bill be sent to a select committee, and to this I have no objection. I believe I have a very excellent case, I believe that those who with me support the Bill have an excellent case; I am not afraid of all the inquiry that can be made, I am not afraid of all the evidence that may be produced, and I am willing that it should be referred to a special committee. But I do ask that that shall not be the means of shelving the Bill, I do ask that if it is referred to a select committee, that the committee will act with reasonable promptness so that they may report to the

House in time to have this Bill become law in such shape as it will be agreed upon.

Motion (Mr. Miller) agreed to, and Bill read a second time.

Mr. McCOLL. As I intimated, I shall now move that this Bill be referred to a special committee of the House. In selecting that committee I have thought that every portion of the country shall be represented. I have in no sense considered it a party question and have consequently selected an equal number of members from each political party. Then, as there are legal questions involved, I have selected a number of legal gentlemen and I have thought further that members composing that committee should be selected from those particular localities in which they have jockey clubs and racing associations as these gentlemen would be more likely to know the conditions actually existing. As, for instance, one of the British Columbia members spoke of the position of affairs in his part of the country and I have consequently named him on the committee. I therefore move, seconded by Dr. Black:

That Bill (No. 6) to amend the Criminal Code be referred to a select committee of this House composed as follows:—Messrs. Miller, Bristol, Macdonell, Monk, Gervais, Barker, German, Lalor, Harris, Clarke (Essex), Haggart (Winnipeg), Campbell, Neely, Barnard, Macdonald and the mover.

Sir WILFRID LAURIER. I am sorry to say to my hon. friend, (Mr. McColl) that I cannot agree to the composition of his committee. The committee proposed by him is too large. It ought to be composed of not more than seven members so that it may be a business committee to work a prompt solution of the problem which is referred to it. If we had such a large committee as that I am afraid that the anticipation of my hon. friend (Mr. Miller) might not be realized and that the Bill might not receive proper treatment. I therefore beg to move as an amendment:

That the committee be composed of seven members, namely: Messrs. Miller, McColl (Northumberland), Monk, Blain, Sinclair Stratton and Martin (Regina).

Amendment agreed to.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. FOSTER. What business will be taken up to-morrow?

Mr. FIELDING. The Public Works estimates will be taken up again.

Mr. FOSTER. I suppose they will take the whole day.

Mr. FIELDING Unless they can be got through more rapidly than usual.

Motion agreed to, and the House adjourned at 1.00 p.m.

HOUSE OF COMMONS.

FRIDAY, December 3, 1909.

The SPEAKER took the Chair at Three o'clock.

ROYAL ASSENT.

Mr. SPEAKER. I have the honour to communicate the following letter to the House:

Ottawa, Dec. 3, 1909.

Sir,—I have the honour to inform you that Chief Justice, the Right Hon. Sir Charles Fitzpatrick, acting as Deputy Governor General, will proceed to the Senate Chamber this afternoon at 3.15 for the purpose of assenting to a certain Bill which has passed the Senate and the House of Commons during the present session of parliament.

I have the honour to be, Sir,
Your obedient servant,
C. J. JONES,
Assistant Governor General's Secretary.

To the Honourable
The Speaker of the House of Commons.

A message was delivered by Captain J. Ernest Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour the Deputy of His Excellency the Governor General desires the immediate attendance of your honourable House in the Chamber of the honourable the Senate.

Accordingly the House went up to the Senate Chamber.

And the House being returned.

Mr. SPEAKER informed the House that his honour the deputy of His Excellency the Governor General had been pleased to give, in His Majesty's name, the Royal assent to the following Bill:

An Act respecting a certain supplementary convention between His Majesty and the President of the French Republic.

BANK ACT AMENDMENTS.

Mr. J. DEMERS (St. John and Iberville) —(Translation)—moved for leave to introduce Bill (No. 56) to amend the Bank Act. He said: These amendments are made primo, in order that banking operations may be more known to the shareholders when advances to a considerable amount are made to the bank's customers; second, to make the special general meeting of the shareholders more easy by allowing fifteen amongst them, in possession of one-twentieth of a bank share, to ask for the convocation of such meeting, instead of twenty-five shareholders in possession of one-tenth of these shares, such as prescribed by law; certio, this Bill is designed to get rid of those dishonest or undesirable shareholders; last, the object of the fourth amendment is to establish a system of banks' inspection through the Department of Finance of Canada.

Bill read first time.

BANK ACT AMENDMENT.

Mr. SAMUEL SHARPE moved for leave to introduce Bill (No. 57) to amend the Bank Act. He said: This is the same Bill as that which I introduced in the early part of the session with the exception of the clause with regard to the payment of interest. It was suggested to me, that, owing to that clause, if the Bill became law, it might involve a charge upon the consolidated revenue of the country and in consequence would be irregular. It was suggested that I should secure the discharge of the order and reintroduce the Bill with the omission of that clause. The object of the Bill, as I explained on a former occasion, is to provide that the unclaimed balances at the banks should be transferred to the government who shall become the custodians and trustees thereof.

Motion agreed to, and Bill read the first time.

BUSINESS OF THE HOUSE.

Sir WILFRID LAURIER moved:

That when this House adjourns on Tuesday the 7th inst. it stands adjourned until Thursday the 9th.

Mr. FOSTER. What is the trouble with Wednesday?

Sir WILFRID LAURIER. Wednesday is a legal holiday by statute—the feast of the Immaculate Conception.

INQUIRIES FOR PAPERS.

Mr. FOSTER. I want to ask the right hon. the Prime Minister (Sir Wilfrid Laurier) if there is any correspondence in existence between himself and the two ministers who went over to the conference this summer, or with any member of the British government, concerning the negotiations, business and attitude to be taken by the representatives of Canada, or any letters of instruction or anything of the kind? I had a motion prepared to ask for all the papers and correspondence. I did not push it because these papers that we have came down but they do not include anything except that it took place over there. If there is any correspondence, in the nature of instructions, letters or otherwise I think we ought to have that before the discussion on the second reading of the Bill comes on. I am not sure whether there is any or not.

Sir WILFRID LAURIER. All the correspondence upon this subject has been brought down. If there had been any correspondence of a confidential nature, of course, it would not have been proper for me to have brought it down, but I can tell my hon. friend that there is not even correspondence of a confidential nature. Everything is before the House.

Mr. DEMERS.

Mr. DANIEL. I would like to ask the government when those papers ordered on the 22nd November will be brought down. The hon. Minister of Marine and Fisheries (Mr. Brodeur) is not in his place. Perhaps the Prime Minister will call his attention to it.

Sir WILFRID LAURIER. I will take a note of it.

IMPRISONMENT OF MRS. ROBINSON

Mr. GEO. GORDON. I would like to ask the hon. Minister of Justice (Mr Aylesworth) whether he has under consideration a recommendation of further executive clemency in the case of Mrs. Robinson, recently found guilty of murder at the Sudbury assizes and whose sentence was subsequently, upon the petition of upwards of 100,000 Canadian citizens, commuted by His Excellency in Council to imprisonment in the penitentiary of Kingston for ten years. Is it the intention of the Minister of Justice or the government to release Mrs. Robinson on parole or otherwise, or in any other way to effect any further mitigation of the very severe punishment which she is suffering, which will result in her release at any early day?

Hon. A. B. AYLESWORTH (Minister of Justice). The case referred to was the subject of very anxious and careful consideration before the date fixed for the execution of the capital sentence with the result that His Excellency was advised to commute the capital sentence into a sentence of imprisonment in the penitentiary for a period of ten years. Since the announcement of the decision on the part of His Excellency, I have received a few letters from different individuals who were interested in the case, some of them in the nature of expressing their appreciation and gratitude as to the course which was taken in the matter, one or two expressing the hope that at some future time it might be possible to extend a further measure of clemency in the case of this particular prisoner. No formal application and no suggestion of further clemency, except of the nature I have described, have been made and the matter is not therefore at the present time under consideration.

Mr. GEORGE GORDON. I would like to elicit the sympathy of the Prime Minister, of the Minister of Justice, and of the whole cabinet on behalf of Mrs. Robinson, who is imprisoned for a crime which she was forced to commit. There is no doubt that this poor woman had to face a position which no other woman was confronted with since the time of Eve. I am sure that if the Prime Minister and the Minister of Justice should consider this matter care-

fully they will come to the conclusion that each hour and each minute this poor woman remains in prison is a blot on the justice of this country. I shall not go into the details of this horrible crime, and when I call it a horrible crime I do not refer to what this unfortunate woman did, but to what she was forced into by her monstrosity of a husband. I hope the Minister of Justice, and the Prime Minister particularly who we all know has a sympathetic heart will have mercy on this unfortunate woman.

SUPPLY—RAILWAY ACT AMENDMENTS.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. LANCASTER. Mr. Speaker, before that motion is carried I would like to draw the attention of the government to matters of legislation that, I think, should be attended to. Over a week ago this House dealt with two measures to amend the Railway Act, and saw fit at the instance of the government, to send these measures to the Railway Committee for consideration. These Bills passed their second reading in this House, and then at the instance of the government they were sent to the Railway Committee. That is over a week ago and the Railway Committee has not yet met to consider these Bills. When it does meet it will be so congested with Private Bills that these public measures which provide a remedy for evils which the people of Canada are suffering under will be relegated to the background. The government is responsible for sending these Bills to the Railway Committee, and the government should see that they are dealt with there. I, with other members of the House, am opposed to sending these Public Bills to committees appointed to deal with private legislation, but as the government has taken the responsibility of that course they should see that no delay occurs. We all know that these Bills are necessary legislation in the interest of the country, and that if they are not dealt with early in the session and reported to the House, the government will later on have taken all the sittings for government business, and even though the committee should report in favour of them, if they are presented to the House at that stage they would only be so much waste paper. I appeal to the Prime Minister to see that these Bills are dealt with by the Railway Committee immediately.

Sir WILFRID LAURIER. The committees of the House are under the control of the House itself and not under the control of the government. I believe that had the attention of the chairman of the Railway Committee been directed to this matter he would have promptly called the committee together. I shall deem it my duty to call his attention to it at once.

GOVERNMENT BUSINESS.

Mr. FOSTER. When does the Minister of Finance intend to introduce the Banking Bill?

Mr. FIELDING. Not for some little time. There are one or two measures before the House which in due course will, I hope, be referred to committee, and if so I shall ask them to be detained in the committee until other legislation is brought forward. The matter has engaged our attention, but I fear I will not be able to promise the Bill before the Christmas recess. In the meantime there are other matters concerning my department which will engage our attention.

Mr. FOSTER. Is there any probability that the budget speech will be delivered before Christmas?

Mr. FIELDING. I would like if possible that it should be, but I will make an announcement with reference to it next week.

Mr. FOSTER. There is so much delay in bringing down the Naval Bill that we might take some of the legislation of the Finance Department if it were ready.

Mr. FIELDING. There are a large number of measures to be dealt with.

Mr. LENNOX. Mountains of them.

Motion agreed to, and House went into Committee of Supply.

Quebec Province Immigrant buildings generally, $5,000.

Hon. WM. PUGSLEY (Minister of Public Works.) This is to make provision for repairs to various immigration buildings. $5,000 was voted last year and $975 expended.

Mr. FOSTER. How many immigrant buildings are there in Quebec?

Mr. PUGSLEY. There is one at Montreal, one at Nominingue, one at Peribonka, one at Roberval and one at Quebec, also others. Each year it has been customary to take a vote for making repairs to the immigrant buildings and to cover what is not otherwise provided for.

Mr. FOSTER. I think we shall have to have some further information on this vote. The difficulty about discussing these matters arises from the fact that the minister who is concerned in the public works for which the vote is taken makes it his business to be absent. The ministers who are concerned in the votes ought to make a point of

being here when they are being put through. If they do not, their absence is going to retard the business very much. I would like to know what the policy of the minister is in regard to the construction of immigrant buildings at these small places?

Mr. PUGSLEY. If my hon. friend desires, I will allow this item to stand until the Minister of the Interior can be here.

Item allowed to stand.

Roberval Public Building—revote of $1,000 lapsed, $15,000.

Mr. PUGSLEY. This building is required for post office purposes. There was an appropriation last session of $5,000, out of which we paid $4,000 for a site in April, 1909. The lot has a frontage of 70 feet by a depth of 170 feet. Roberval is a rapidly growing town. It has three churches—two Roman Catholic and one Episcopal, twenty-one stores, three hotels, three flour mills, a branch bank, telegraph and express office. The population of the town is somewhat over 3,000. The revenue is $3,334.18. The money orders issued amount to $30,168.10 and the money orders paid amount to $22,443.79.

Mr. CROCKET. Was there arbitration on the site?

Mr. PUGSLEY. I regret that I am unable to tell my hon. friend at this moment, as my deputy is absent, but will be here shortly.

Mr. ARMSTRONG. What is the total cost?

Mr. PUGSLEY. It is estimated at $25,000, exclusive of the site.

Mr. ARMSTRONG. Will that cover lighting and heating?

Mr. PUGSLEY. Yes.

Mr. ARMSTRONG. Is it the custom of the minister to grant to towns of 3,000 inhabitants and with a similar amount of revenue, a public building similar to the one he proposes to build at Roberval?

Mr. PUGSLEY. To a certain extent that is correct. We have laid it down as a principle that a county town, with a population of 2,000 or 3,000, might very well be given a public building; but we have not decided as to when that should be done. We cannot give all the county towns public buildings at once. We have to proceed gradually, according to our financial ability; but speaking generally, I myself would be favourable to giving a county town, with a population of 2,000 or 3,000 people, a public building at as early a date as possible. Of course, if the town has ample post office accommodation, situated in a good building and suited to the requirements of the people, we might very well postpone for a considerable time the erection of a public building.

Mr. FOSTER.

Mr. ARMSTRONG. Does the minister set apart a certain portion of the moneys of the department for the building of post offices in towns of about 3,000 inhabitants or is it only to party friends that he allots this money?

Mr. PUGSLEY. I may say no to both my hon. friend's questions.

Mr. LANCASTER. Is there any particular policy about it or is it all surmise? It would be well if the public could have some idea of what may be expected in these matters. For instance, some years ago I brought to the attention of Sir William Mulock, then the Postmaster General, the post office at Grimsby, a post office that produces a revenue of over $4,000, serving a population in the village of 1,400 or 1,500 and including the immediate surrounding portion of the township of North Grimsby which is thickly settled by fruit farmers, a population of about 3,000. The postmaster's salary is about $1,300 and he is allowed a rental of $120 a year for the use of his store where the space for the accommodation of the public is about four feet by perhaps eighteen or twenty-five feet, so that in inclement weather hundreds of people have to wait on the sidewalk for their mails as not more than two or three dozen people can enter the post office at once. Sir William promised that he would have this remedied within a year but nothing has been done yet.

Mr. PUGSLEY. Is this a county town?

Mr. LANCASTER. No.

Mr. PUGSLEY. Are there any public buildings in the county?

Mr. LANCASTER. There are in the county, certainly. Grimsby is half way between the two county towns, Hamilton and St. Catharines. It is a very prosperous and up to date place. The people of Grimsby and the district being engaged largely in the fruit business, have a great deal of correspondence in connection with the disposal of their fruit and the postal revenue would justify much better accommodation than they now receive. I am not finding fault with the government for not having erected a public building in that particular place, but I do say that when money is being expended for the erection of post offices the fact that a town is not a county town is not important. The government are not using a good system to ascertain whether the needs of the public require increased postal accommodation. There is no need to have better accommodation than the business warrants, but there is a class of places like Grimsby that I think should have some attention from the Public Works Department. The customs business at Grimsby is large but the citizens have to go to Hamilton or St. Catharines to make payments. A build-

ing costing $4,000 or $5,000 could be built there with the customs office up stairs and the post office down stairs. It would be a mighty good investment for the country. I hope that next year the minister will do something to bring about a more equitable and fair arrangement, generally speaking, throughout the country to serve the people in regard to these public buildings.

Mr. PUGSLEY. I would judge from what my hon. friend says that speaking in a general way the town of Grimsby is about of equal importance, from the standpoint of post office receipts and business, with the town of Roberval, in regard to which we are now asking a vote for a public building. But, if I know anything about the people of Grimsby, I am satisfied that they would not be content to have a public building erected there for post office and customs purposes not to cost more than $4,000. If my hon. friend, speaking on behalf of the people of Grimsby, is prepared to say that they would desire a public building and would be thoroughly satisfied with a building costing $4,000, I would take the matter into my favourable consideration with a view to complying with their request.

Mr. LANCASTER. I shall take the minister up right now on that, he can take it right into his serious consideration forthwith, because many prominent people in Grimsby have told me that $4,000 would build a building that would give five times as much accommodation as we are now getting, for which the country is paying $120 a year. They said that the interest on a building of $4,000, at the rate at which the government can borrow money, would involve little more expense than the $120 rent which is now paid annually, and for which practically no accommodation is obtained. The people of Grimsby would be very glad indeed, rather than have the present state of affairs continue, to see a little, narrow $4,000 building built there that would accommodate them. The people of Grimsby know that they cannot expect such a building as a city or large town would have but they do think that the revenue they pay entitles them to a better service and more accommodation than they now enjoy. The people of Grimsby would thank the minister if he would erect a $4,000 building as soon as possible.

Mr. LENNOX. The minister has spoken several times of county towns, justifying his expenditure where it was not otherwise justifiable largely upon the fact that although the population was very sparse, still it was a county town. I submit to the hon. minister that that is no justification for expenditure, if the expenditure be not otherwise justifiable, and he ought to revise his opinion. In any case there can be no additional claim by reason of the fact alone that the place is a county town. I do not understand that this government erects the public buildings required for the administration of the law or municipal government. What reason therefore is there why a small place of two or three thousand inhabitants should be supplied with a public building while places with a population of from five to ten thousand are denied the same accommodation, and denied it simply because they do not happen to be county towns? We are continually getting these lame excuses, these palpably unfair excuses, for the expenditure of public money, and I hope, therefore, the hon. minister will change his policy and not select county towns, no matter how small and insignificant, in preference to larger and more important towns.

Mr. ARTHURS. I would like to call the attention of the hon. minister again to the claims of Parry Sound. That town fulfils all the requirements stated by the minister as essential. It is a county town with a population of four or five thousand. It has a postal revenue of over $9,000 per year, and during the last fiscal year the Postmaster General's report shows that the post office money orders issued there exceeded $200,000. It is also a customs port with a revenue of over $50,000 per year and is quite a large and progressive town, and so far it has not any public building. Last session I drew the matter to the attention of the minister and he said he would consider it and I again call his attention to it.

Mr. PUGSLEY. I have had the claims of Parry Sound under consideration. When my hon. friend brought the matter up last session, I said that I was considering the possibility of erecting a public building there; but as my hon. friend knows, there were very few votes for public buildings in the estimates of last session, and in the estimates now under consideration there are few new items. They are nearly all for public works provided for two years ago, but which were allowed to stand over. I fully realize the fact that Parry Sound is a growing town, and that it has claims for a public building, and I do not think it will be long before I shall ask parliament to recognize its legitimate claim.

Mr. OWEN. Might I bring to the notice of the minister the claims of the town of Campbellford? It is a flourishing town with a population of probably 3,000 and a postal revenue of between $5,000 and $6,000 and a customs revenue of about $15,000. Our assessed valuation is slightly over a million dollars. There is not a government building in the riding I have the honour to represent, and I think we are entitled to a customs house and post office combined. I know that all

I have to do is to bring this matter to the notice of the minister and he will grant my request.

Mr. WRIGHT. I should like to know by what process the minister arrives at his estimates of the population of the different towns he is favouring with public buildings. Roberval, he said, was a place with a population of 3,000 and so on. Well, the official figures show that the population is but 1,248.

Mr. PUGSLEY. My hon. friend is taking the village of Roberval as it was in 1901.

Mr. WRIGHT. I am taking the last official figures, and these are the figures which are given us in the case of other places in Ontario or Quebec. If we take the estimates given by other parties, we know how utterly unreliable they are, so that we have to fall back on the official figures, except in the case of some town which is growing very fast. I have frequently drawn attention to the fact that the riding I represent has not a single public building. We have not any place in which we can do our customs work, and have to go to Toronto to get anything through the customs in the district where I live. I have been informed by the manager of one of the leading concerns in the town which I represent that they have to put goods through the customs house amounting to a million of dollars annually, and one can easily imagine what trouble and difficulty that entails on that firm. Perhaps the postal business is not suffering to the same extent, but it is utterly unfair that the minister should leave these places out and give his preference to places with a revenue of a thousand dollars and sometimes less, simply because larger places do not happen to elect government supporters. After all it is the public money which is spent on these buildings, and when a constituency sends a representative to parliament it does so on other grounds than simply the amount of public money spent there. It is not right that the minister should single out those smaller places for the erection of public works and discriminate against more important places simply because the latter do not favour the government. I hope he will revise his method of determining in what places he will put up public buildings and select instead places yielding the largest postal revenue and which have no public buildings. He is now putting up public buildings in such places as Roberval and other little villages in Quebec and Ontario and the other provinces, which entail an average annual expenditure of $2,400 each, when an expenditure of $300 or $400 at the outside would be ample. In fact, I have heard of one place, not in my riding, where the people do not want the government to put up a post office. They said that the government would be called upon to pay an enormous amount to some favourite for a site and that would remove the property from the tax roll.

Mr. PUGSLEY. Might I ask the name?

Mr. WRIGHT. I will give it when I am ready. I said it was not in my riding. I think it is time to look at this thing seriously. It is a serious matter when we are rolling up a vast debt in this country, going to the old country and borrowing money to put up these buildings in places where the country gets no return for years to come. When we are obliged to borrow enormous sums of money annually to meet this deficiency, it is time that we put an end to the custom of a minister carrying through the estimates of another department when the minister charged with that department is not here to justify the expenditure. Some of us might wish to inquire as to the necessity of this public building, and there is no one here to give us any information about it. That is altogether wrong. There is no one here to tell us whether this post office ought to be built or not. Did the hon. gentleman go to the Postmaster General and get him to say that this place was in sad need of a post office, and that there would be a return from the office that would justify its erection? Nothing of the kind. But somebody comes down from the riding and says: We want so much money spent in this riding; and the hon. gentleman will tell us that he cannot put up a post office in some place where it is much needed because he is building a wharf or something else there. What in the world has that got to do with it? If a post office is needed, it ought to be put up; and if it is not needed, it ought not to be put up. It seems to me this whole thing is altogether wrong.

Mr. BLONDIN. Last year the minister put in the estimates a sum of $5,000, if my memory serves me right, for the erection of a post office in the town of Grand-Mère. I do not see such an amount in the estimates for this year. I would like to know why it is that the minister has failed to put in such an amount this year for a post office in a place of the importance of Grand-Mère? Grand-Mère has a population of considerably over 5,000; I could not say what the revenue is, but I am sure there is sufficient revenue to justify the government in allotting the amount which I mentioned. I would ask the hon. gentleman to tell me whether he will make such a provision during the course of the present session.

Mr. PUGSLEY. I may say to my hon. friend that it is quite true that two years

ago there was an amount put in the estimates for a public building at Grand-Mère, and I have left it out of the estimates this year. But I may say to him that my attention had not been called to the urgent necessity of that building at Grand-Mère, and as I had not heard from my hon. friend on the subject, I thought perhaps the matter was not extremely urgent, and that possibly there might be sufficient post office accommodation at present, and that the erection of a new building might be postponed, at all events, for a short time. Therefore, there is no item in the estimates for this building, and I am not able to give my hon. friend any assurance as to when a public building will be undertaken there. Now, with regard to Campbellford, which has been so forcibly presented to my attention by my hon. friend from East Northumberland (Mr. Owen), and who also mentioned the necessity for a public building during the last session of parliament. I will say to him now, as I said then, that I am impressed with the arguments he has advanced, and I think the claims of Campbellford are entitled to my careful consideration. A little later I will have the matter more carefully looked into, and I trust it will be possible before long to take the necessary steps towards the erection of a public building at Campbellford.

With regard to the remarks of the hon. member for Muskoka (Mr. Wright), I desire to say that he does me a great injustice when he makes the statement to this committee that we pick out places for the erection of public works simply in view of the support which we have got from the constituencies. If it were necessary, I could appeal to hon. gentlemen on the other side of the House, going over different constituencies all the way from Prince Edward Island to the Pacific ocean, and I am sure that if the hon. members from these constituencies were to rise in their places, they would bear testimony to the fact that I have endeavoured to do complete justice to the various constituencies which they represent, as well as to those which have returned supporters of the government. Let me ask the hon. member who represents the district of Nipissing (Mr. Gordon) whether he thinks the charge of the hon. member for Muskoka is well founded. Let me ask the hon. member who represents the constituency of Digby (Mr. Jameson) if he thinks the charge is well founded. Let me ask my hon. friend who represents the constituency of Cumberland (Mr. Rhodes) if he thinks the charge is well founded. Let me ask my hon. friend who represents the city of St. John (Mr. Daniel) if he thinks the charge is well founded. The people of St. John, by a majority of the votes, supported the hon. gentleman who represents that city, and whom I do not now see in his place. I might go all over the Dominion of Canada, I might go to the city of Vancouver, to the city of Victoria, to the city of New Westminster and to various other constituencies in the province of British Columbia, and the hon. gentleman will find that I have recognized the legitimate claims of the various sections of that province, entirely irrespective of political and party considerations. Go to the city of Toronto, a city which for years has been sending only members in opposition to this government, and where we are spending, not merely $100,000, but in the vicinity of $700,000 in much needed improvements. I say we might go all over the Dominion, and the facts will show that I have endeavoured, and it has been my honest endeavour, so far as I possibly could, to recognize the legitimate claims of the various sections of Canada. I know there are many public buildings and there are many wharfs which ought to be attended to, but we are not able to do all these things at once. I am doing all I can with the limited amount of money which has been placed at my disposal by the Minister of Finance, and have endeavoured to meet the most urgent needs, and have done so, as I say, entirely irrespective of political and party considerations. It is a matter of regret to me that I am not able now to meet the demands of all sections of the country, but the best I can do is to attend to those needs as I have the means of doing. So I can assure my hon. friends opposite that any legitimate demands which they present to me for consideration with respect to public buildings, wharfs, dredging, or other improvements, will receive my most careful consideration.

Now one word with regard to the erection of public buildings in the smaller towns. Some hon. gentlemen opposite take the view that any kind of a building is good enough for the smaller towns and cities throughout the country, and that we ought not to put up a public building in any city or town where the interest upon the cost and the expense of caretaking will amount to more than the postal revenue. Now, Sir, I entirely disagree with that proposition. In the larger cities, in the city of Ottawa, in the city of Montreal, in the city of Toronto and other larger cities of Canada, when we are proceeding to erect public buildings, we do not limit the class of building to one which is immediately sufficient for the purpose, but we look to the question of beauty, we look to the providing in that city of a public building of which the people will be proud, in which they will take a just pride and which they can point to strangers as being worthy of the Dominion of Canada. Now, if that is the case, why should we not do a little something in the smaller cities and towns towards the erection of suitable public buildings which will be somewhat ornamen-

tal in character and to which the people in those communities can point with pride and say, this is a public building which has been given us by the Dominion of Canada. In the great majority of these towns there is no other public expenditure. They have no harbours to be dredged, they have no navigable channels to be improved, there are no wharfs to be built, and the only public expenditure which they get is the small amount of money which may be expended in the erection of a public building. Therefore, I am prepared to say that so long as I remain Minister of Public Works I shall give reasonable and fair consideration to the requests which may be made to me for the construction of public buildings in the thriving towns throughout Canada no matter in which counties they may be situate and no matter what may be the political complexion of the representatives whom they send to parliament.

Mr. SCHAFFNER. I am delighted to hear the remarks made by the Minister of Public Works. I am not inclined to too severely criticise him, but as he has made the statement that his aim as Minister of Public Works is to distribute public money over this country regardless of what may be the political complexion of any particular constituency, I have a case right in point. He did not ask me, he asked others, but I think I might as well state the situation with reference to my own constituency. There is the constituency of Brandon and there is the constituency of Souris immediately south of Brandon. Brandon has had hundreds of thousands of dollars of expenditure in it because it was the home of the late Minister of the Interior, while the constituency which I have the honour to represent, lying immediately south of Brandon, has never had one dollar of public money expended in it although I have several times, during the last two or three years, tried to bring the claim of my town and my constituency before the Minister of Public Works. I do not ask for a large amount of money. I do not just exactly agree with the Minister of Public Works that it is necessary to expend as large an amount of money in a town of 2,000 or 3,000 inhabitants for a post office as it would be in a larger place. If you could erect a solid brick building, say, 30 x 50 or 60 feet in dimensions for $6,000 or $8,000 I know you would have a very good building, and I believe it would be adequate for post office purposes in any of these towns and that these towns would be very glad to get it; in fact, if a larger amount were expended upon such a building they would consider it a matter of extravagance. The town of Souris is in the constituency of the late Minister of the Interior and the late Minister of the Interior has the town of Souris to thank for his seat at the present time. He formerly had a majority of some 800 or 900 but he came out of the last election with a majority of 65. I brought up the question of the dismissal of the postmaster at Souris, another which must be added to disgraceful acts of the late Minister of the Interior in connection with that post office. He turned a man out of that office who had held it for years and years and who had gone to considerable expense in preparing the office according to the instructions of the inspector. But, that is not what I am talking about now. The town of Souris and my own town of Boissevain are about the same size. I have asked the Minister of Public Works to give me a post office in Boissevain. I think that for $12,000 you can buy a corner site in the centre of the town and erect the building. I believe a site can be secured for between $3,500 and $4,000 and the remainder will erect a building with which we will be well satisfied. I find that the little town of Souris is down in the estimates this year for $15,000 for a public building. I have been unable to get anything. Will any hon. member of this House say that the political complexion of the constituency of Brandon had nothing to do with putting $15,000 into Souris and nothing to do with absolutely refusing to give me anything for my constituency. I think the minister will have to take back some of the arguments he used in that respect. I could not present to this House a better argument to show that the political complexion of the constituencies is very largely taken into account in giving necessary public buildings to this country. However, he has got so near to my constituency now that I want to put in a plea for the town of Boissevain to be considered and I want to express the hope that in the supplementary estimates provision will be made for a $12,000 building in that town.

Mr. PUGSLEY. What is the population of Boissevain?

Mr. SCHAFFNER. About 1,300.

Mr. PUGSLEY. Will my hon. friend guarantee me against the most—I shall not say violent—but against attack from the other side?

Mr. SCHAFFNER. Yes, sir, I will defend you against all comers.

Mr. CROCKET. I would like to know if the minister justifies this Roberval vote on the ground that it is the county town aside from the question of whether the business requirements of the place warrant the expenditure?

Mr. PUGSLEY. No, I did not mention that Roberval was the county town, but I understand that Roberval has a population of some 3,000 and that it is a rapidly growing town. Its population has increased

from 1,248 in 1901 to something over 3,000 at the present time.

Mr. CROCKET. Where does the minister get his figures as to population?

Mr. PUGSLEY. I am told that it is a county town as well.

Mr. CROCKET. The hon. member for Muskoka (Mr. Wright) referred to the census figures as, I think, 1,200. Where would the minister get any figures showing the population since that time?

Mr. PUGSLEY. We had a petition from the municipal council of the town, but I do not know whether that states the population or not. Then, we have an assurance from the member for the county that the population is over 3,000. I made inquiry from other sources and that is verified.

Mr. CROCKET. Certainly the minister made some reference to the rule upon which the department has been acting as to the propriety of public buildings being erected in county towns, but I think he laid it down that there must also exist the condition that there is no other public building in the riding.

Mr. PUGSLEY. I did not lay down any hard and fast rule. What I said was that it had been laid down as a rule that each county in the Dominion might fairly claim a public building and that, as a rule, that could be placed in the county town, but I did not say that there should never be more than one building in a county. There might be a county town, a thriving town, and there might be another town somewhat larger and at a considerable distance away from the county town. One cannot lay down a hard and fast rule.

Mr. CROCKET. I understood the minister to lay down the rule that the Minister of Finance laid down two or three years ago and that was that claims would be recognized for public buildings in county towns and in constituencies in which there was no other public building. That is the rule, as I understood the Minister of Finance to lay it down a few years ago, and the one which I understand the Minister of Public Works to rely upon this afternoon.

Mr. CROCKET. In what constituency is Roberval?

Mr. PUGSLEY. Chicoutimi and Saguenay.

Mr. CROCKET. Are there no other public buildings in that county?

Mr. PUGSLEY. There is one at Chicoutimi.

Mr. TALBOT. Roberval is the chief town of the county of Lake St. John. Lake St. John and Saguenay, for local purposes, are two distinct counties, and they are of immense territory, occupying the northern part of the province of Quebec and extending as far as Labrador. In that federal district there are two chief towns for judicial purposes, and Roberval has a population of at least 3,000.

Mr. CROCKET. Was there any request from the Post Office Department for this building?

Mr. PUGSLEY. I assume there was not or otherwise I would have a record of it here.

Mr. CROCKET. On whose request was the building erected?

Mr. PUGSLEY. There was a petition presented from the municipal council of the town of Roberval, and also a strong recommendation from Mr. Girard, the member for the constituency.

Mr. CROCKET. Is it not a rule that the Post Office Department should send a requisition to the Public Works Department for a building which it considers necessary?

Mr. PUGSLEY. It is not the rule.

Mr. CROCKET. Is it not customary?

Mr. PUGSLEY. It is not.

Mr. CROCKET. Was there an arbitration on the value of this site which cost $4,000?

Mr. PUGSLEY. No. We sent Mr. Gingras, clerk of works at Montreal, who reported this was a fair and reasonable price.

Mr. CROCKET. Did the owner offer it for $4,000 in the first instance?

Mr. PUGSLEY. He wanted more, and Mr. Gingras recommended $4,000 as a fair price. The lot is a large one having a frontage of 70 feet and a depth of 170.

Mr. CROCKET. I understood the minister to tell us the other night that it was the practice of the department to have the value of these sites determined by arbitration.

Mr. PUGSLEY. I did not intend to convey that it was a general practice. We did it in the case of the St. Roch property, and the arbitrators in that case were: Thomas M. McCarthy, C.E., acting for the government, J. A. Gignac for the property owners and Joseph Gauthier was the third arbitrator. We have in the department some officers who are accustomed to value property and upon whose judgment we rely when we do not have arbitration.

Mr. CROCKET. Upon whose recommendation was the government arbitrator in the St. Roch case appointed?

Mr. PUGSLEY. My recollection is that in that case I consulted with the Prime Minister. We satisfied ourselves that he was a reliable man and acquainted with the value of property.

Mr. LANCASTER. The minister spoke about buildings that the people could point to with pride as beautiful in architecture and meritorious from the aesthetic point of view, and that is all very well if we had money to burn. But the minister is limited in his expenditure on these buildings, and the business people of the country would prefer to have ten $10,000 buildings suitable to accommodate the business offering rather than five $20,000 buildings which were not necessary except as beautiful pictures.

Mr. PUGSLEY. Would the hon. gentleman say that, in reference to these buildings in Ottawa which could be erected for half the money if they were plain buildings?

Mr. LANCASTER. This is the capital of the Dominion and the buildings here are a concern of national pride, and you cannot compare them with a post office building in a small town of 3,000 inhabitants.

Mr. PUGSLEY. But why waste money on ornamentation?

Mr. LANCASTER. The buildings in the capital city of this Dominion are in a different position altogether from the small buildings in country towns, and even in the capital it is just a question whether you should not erect buildings free from expensive ornamentation but which would supply twice as much space and light in which to transact the business of the country.

Mr. PUGSLEY. Does the hon. gentleman think that in a town where the people take a pride in their private buildings, we should put up a plain building which the citizens would be ashamed of?

Mr. LANCASTER. That is the other extreme, and I do not go that far.

Mr. PUGSLEY. What we should aim at is to be moderate in our expenditure.

Mr. LANCASTER. Yes.

Mr. PUGSLEY. And at the same time recognize that these people in the smaller towns are just as much a part of the Dominion as are the people in the larger cities. My hon. friend from the constituency in which the town of Boissevain is situated stated that the town of Souris gave to the Hon. Mr. Sifton a majority, and so saved his election in that constituency, and that is the reason why we are giving it a public building. My information is that the town of Souris went strongly Conservative in the last election, giving a majority against Mr. Sifton. So that the reason assigned by my hon. friend falls to the ground.

Mr. ROCHE. If the minister looks up the figures, he will find that although Souris is strongly Conservative, the majority was very small.

Mr. LANCASTER. It seems to me that the item for that building first appeared in the estimates before the general election, when it gave a different majority.

Mr. PUGSLEY. Yes, it appeared before the general election.

Mr. G. GORDON. The hon. gentleman referred to Nipissing as one of the constituencies which has been fairly treated in the matter of public buildings. I am pleased to be able to say that that is the case. In fact, the minister has done more than I expected. I want to speak fairly and frankly. In North Bay, which is a county town, and which yields a postal revenue of $12,000 or $14,000, a good building has been erected. For Sudbury I notice an appropriation of $20,000 in the estimates this year. That town produces a postal revenue of $8,000 or $10,000, and is larger than any of the towns mentioned here to-day. The town of Cobalt, which has a population of over 6,000, while there are over 12,000 people in the immediate vicinity, has at present very poor postal accommodation. I called the minister's attention to this last session, and he told me that owing to the falling revenues of the country he could not do anything then; but I hope that this year he can see his way clear to do something. The fact of the minister being pretty fair to Nipissing I attribute to our asking for public buildings only in places which absolutely require them. I thank the minister very much for what he has done for us, and I hope he will keep on in the good work.

Mr. SMYTH. I am delighted to hear that my hon. friend from Nipissing is so well satisfied with what the Minister of Public Works has done for his riding. I would be delighted if I could say the same thing about my riding, but things are entirely different there. In almost every part of the riding where I went last fall, I found that public works of various kinds had been promised from the platform; but in looking over the estimates I find that only two points in my riding have been taken notice of at all—Providence Bay and Little Current. The town of Sudbury, which my hon. friend from Nipissing has mentioned, is a growing town which, in the near future, will be a city. The Ontario government has spent a great deal of money in erecting public buildings there. My hon. friend is satisfied with an appropriation of $20,000 for

a public building in Sudbury, whereas a little town of 1,500 inhabitants is getting a $25,000 post office.

Mr. PUGSLEY. $20,000 is only the start.

Mr. SMYTH. Perhaps the minister will give us the estimated cost of the post office at Sudbury?

Mr. PUGSLEY. I will get the information when we come to that item; but the amount of $20,000 is only for the work to be done during the coming year.

Mr. SMYTH. I will be delighted if the the minister will take notice that there are some very large towns giving large revenues to the Post Office Department in my constituency which have great need of good buildings; for instance, the town of Thessalon with a population of 2,000, Blind River with a population of over 3,000, Massey, Webbwood, Gore Bay, Little Current and Manitowaning; and they would be entirely satisfied with buildings costing $4,000 or $5,000. So, while everybody is asking the minister to think of their ridings, I hope, out of the goodness of his heart, he will not forget the most important riding in the province of Ontario.

Mr. PUGSLEY. Are Sault Ste. Marie and Michipicoten in the hon. gentleman's riding?

Mr. SMYTH. No.

Mr. MAGRATH. I am not going to ask the minister out of the goodness of his heart to do anything for me. I take for granted that this country can afford to pay officials to attend to the public business. I take for granted that there is a Post Office Department that knows its needs and is able to communicate them to another department. If that were done in a businesslike way, I would not be placed in the humiliating position of having from time to time to come here and urge the necessity of a post office at Lethbridge. The difficulty is that the minister seems to think that his function is to please certain people, whereas it seems to me that the function of parliament is to spend the public money where the requirements of the people demand it. I put a question to the hon. member a few days ago. I asked him in simple English:

Has the Post Office Department made any demand or representation to the Public Works Department for better post office accommodation in the city of Lethbridge?

Evidently the hon. gentleman thought himself exceedingly clever in the way he answered the question. He did not give me the information I asked, if he had I would have been satisfied. He told me a story about the building that was erected in Lethbridge in 1892 or 1893, which he said was used for customs and inland revenue purposes.

Mr. PUGSLEY. May I say to my hon. friend that when I received the answer from my department I thought myself there possibly might have been some later request to which my hon. friend was referring, but I am informed by my deputy and was then informed that there had been no late request from the Postmaster General and therefore the answer was correct.

Mr. MAGRATH. I should be very sorry to misrepresent the hon. gentleman or any one else. I do not want to waste the time of the House in matters of this kind but I wish to place before the House the exact situation that exists. The hon. minister does not seem to know it. If he will come to the House when asking for a post office and say that the application is endorsed by the Post Office Department, well and good, but when he says these applications were endorsed by boards of trade and by town councils, it is time for us to have something to say in this matter. I picked up a copy of the Montreal 'Star' only on Saturday last in which reference was made to the business activities in various cities in this country. It gives a list of 21 cities and refers to the value of the building permits for the month of October. Here is the order in which they stand: Toronto 1; Montreal 2; Winnipeg 3; Vancouver 4; Calgary 5; Hamilton 6, Lethbridge 7; Victoria 8; Fort William 9; Edmonton 10. Thus Lethbridge stands next to Hamilton.

Mr. PUGSLEY. Is that not simply the percentage of increase?

Mr. MAGRATH. It is the actual building permits for October, 1909. The city of Lethbridge last year had a postal revenue of $19,000 and I venture to say that by now it has reached $25,000 a year, and they are suffering from the lack of postal facilities. I do not want the money of this country shoved into Lethbridge to put up buildings, the people going in there can put up the buildings, but I want to see the people there put in a position to attend to their business in a proper way and if it is a question of getting petitions from boards of trade or city councils, the hon. gentleman can get all he wants. Political snipes went through that constituency at the time I was running that election, saying: It is no use electing this man; you want a post office and if you elect him you will not get it. Yet, in the face of that, the hon. gentleman gets up here and says there is no politics in this matter. Is the hon. gentleman satisfied from the clipping I have sent him that the reference was to building permits?

Mr. PUGSLEY. Yes, the hon. gentleman seems to be correct.

Mr. MAGRATH. Lethbridge stands next to Hamilton and Edmonton, which stands 10th on the list, has a $200,000 building while Lethbridge has nothing. The hon. gentleman knows nothing about the situation there or he would have brought down some appropriation for Lethbridge. This appears to me to be the only opportunity of bringing this matter forward. It is humiliating to have to do this; I do not conceive that the people of Canada sent me here to do this work, I think there is something else to attend to, and if the hon. gentleman had a force of competent men going through the country to pass on these things there would be less said about them in the House. I hope I shall not have to discuss this again and that I have said enough to convince the hon. gentleman of the necessity of granting this building. Every one is crying out for it, and why the minister is giving a small place with a population of 1,300 and a postal revenue of $1,500, a public building costing $25,000, without a request as the hon. gentleman himself admitted, from the Post Office Department or from the Customs Department, is something that I cannot understand in any country where they are attempting to have their affairs administered with some system of business.

Mr. FOSTER. What are the rental and salary at present?

Mr. PUGSLEY. The postmaster's salary is $1,192 besides $75 for commissions on money orders and $7.65 on postal notes. The rental paid is $175, a total of $1,308.97.

Mr. MAGRATH. I want to hear from the hon. gentleman about this matter. Has he got this thing thoroughly in the back of his head?

Mr. PUGSLEY. My hon. friend is so genial and he has such a good cause to plead, that I cannot refrain from saying a word in reply. The hon. gentleman sent me a statement of figures showing the number of building permits in Lethbridge, and they show, what I was told when I was in the west, that Lethbridge has recently taken on a very rapid growth. If my hon. friend will look at these figures which he has sent me he will see that in October, 1908, there was not a single building permit in Lethbridge.

Mr. MAGRATH. There were building permits but this paper did not get them, that is all.

Mr. PUGSLEY. That may be. At all events, by the statement the hon. gentleman sent me, there does not seem to have been a building permit in Lethbridge in October, 1908. That, of course, would show that there has been a very sudden increase in growth. But I know and my hon. friend knows that it is within the last year or so that Lethbridge has suddenly begun to forge ahead, and it is forging ahead with great rapidity. I told my hon. friend the other day and I tell him now that I recognize the strong claims of Lethbridge for better postal accommodation. I have unfortunately no amount in these estimates for the purpose, but, as I explained to the committee before, there are very few new items in these estimates, they are mostly for public works provided for two years ago. But I would say to my hon. friend that I will consider carefully the claims of Lethbridge, and if there should be supplementary estimates—I do not know whether there will be—these claims will be noted for consideration in connection with these estimates. I can make no promise further than may be implied in this statement at the present time, but I beg to assure my hon. friend that no one can recognize more strongly than I do the necessity for giving better postal accommodation in Lethbridge than they have there now.

Mr. MAGRATH. Will the hon. gentleman take this up with the Post Office Department? He said that there is nothing from the Post Office Department in connection with this matter.

Mr. PUGSLEY. Nothing beyond what was returned to the House.

Mr. MAGRATH. My information is different, I am sorry to say. I would like to get the minister in touch with the Post Office Department. I am sorry to have to say that if the Post Office Department does not know its business better than that there is something wrong there. I was given to understand the hon. gentleman had been written to about this matter in April last by the Post Office Department.

Mr. BLAIN. I understood the minister to say that there was some requisition from the sitting member for the county. Will he read that communication?

Mr. PUGSLEY. I have not the communication here but can give the gist of it.

Mr. BLAIN. We ought to have the document itself.

Mr. PUGSLEY. I cannot give it now. The effect of the communication was that the town was increasing rapidly, that it has a population of over 3,000, that numerous tourists frequent it in the summer months, that the post office is in the postmaster's house and not at all suited to the public convenience, and that, in the interest of the good reputation of the Dominion, a public building should be provided adequate to the wants of this growing town.

Mr. BLAIN. That is a very nice statement, but it would be only fair to the committee that the minister should bring down the letter itself. It would be interesting to have that part of the communication which he has not quoted, and I suppose he has no objection to bringing down the letter.

Mr. PUGSLEY. None whatever, but I have really stated all it contains.

Mr. BLAIN. What we are trying to find out is, if possible, the policy of the department in the construction of public buildings.

Mr. PUGSLEY. That policy is to construct, to as reasonable an extent as possible, public buildings where they are required in the public interests.

Mr. BLAIN. Of course we could not expect the hon. minister to say anything else, but I think he was rather severe in his criticism of my hon. friend from Muskoka. My hon. friend suggested that possibly somewhere in the department there was political partisanship, and if that suspicion be aroused, the government is responsible for it. Before the hon. gentleman was Minister of Public Works the department had a clear cut policy, well understood in the country. Prior to the general election of 1900, the Department of Public Works sent out a letter, a copy of which I have under my hand. The late Mr. Tarte, who was then Minister of Public Works, had absented himself a little while from the department, and Sir William Mullock, who was then Postmaster General, was acting in his stead, and Sir William Mullock sent out a circular to Reform members of parliament and defeated government candidates, but was careful to leave out altogether Conservative members and the defeated Conservative candidates. In that circular he called upon those to whom it was sent to state what public buildings they wanted in their counties, whether they would recommend that the contracts be given after public competition, and also a number of other inquiries along that line.

Mr. PUGSLEY. Perhaps he was merely seeking information.

Mr. BLAIN. But it was rather peculiar that he only sought it from government supporters. My hon. friend says there is no partisanship in his department. Would he then explain how this circular came to be sent to government members and government defeated candidates and not to any others?

Mr. PUGSLEY. Sir William Mulock may not have thought that hon. gentleman opposite would give him the information he required.

Mr. BLAIN. There is another reason far more likely. My hon. friend ought certainly to be sparing in his criticisms on my hon. friend from Muskoka, who suggested that somewhere in the department there was a taint of political partisanship. Who can be responsible for that suspicion, if not the government that sent out a circular of that kind, more especially as the circular was issued shortly before the general election of 1900 and read on the public platform in every province. The hon. minister cannot therefore complain if the public suspect that instead of spending public money where the public interests may best be served, he selects here and there a county, where the issue is uncertain, and where it would be likely such expenditure would have the greatest effect, and where the proposed expenditure for the purposes of erecting a public building or a wharf or doing some dredging in that locality might influence the public vote in the government's behalf. Since the hon. gentleman will not explain what the policy of his department is now, we are perfectly justified in assuming that this policy, which was inaugurated in 1900, is still in force. I understand my hon. friend to say he will bring down the letter.

Mr. PUGSLEY. I will.

Mr. BLAIN. Perhaps in the future it will be better for the hon. gentleman to produce the original documents than give synopses of them.

Mr. PUGSLEY. Not unless specially desired.

Mr. BLAIN. It would be less troublesome for the department to give him the letter itself, than to copy passages out of it which might suit his purpose.

Mr. PUGSLEY. These selections which I have quoted never came to my knowledge, but were simply made by the officials of the department with the view of giving the requisite information as to who had applied for public works. I had no more to do with the selections than my hon. friend.

Rock Island public building, $5,000.

Mr. PUGSLEY. This is to provide for the purchase of a site and the erection of a public building in the village of Rock Island, Stanstead county. The proposed building is required for post office and customs purposes. I may say that this matter had been under consideration some little time, and when first pressed upon my attention by the member for that constituency, I made particular inquiries of the Minister of Customs. He in turn inquired of the officials of his department and I am in a position to say that this building is urgently required there for customs purposes, and I can say the same with regard to its necessity for post office purposes.

Rock Island is close to the boundary between Canada and the United States, and it is necessary to give accommodation there for the customs officials. A good deal of postal business also is done there.

Mr. FOSTER. What is the population?

Mr. PUGSLEY. It was only 615 in 1901, but has grown considerable since.

Mr. FOSTER. What is the revenue?

Mr. PUGSLEY. $3,013—very much larger than one would expect from its comparatively small population.

Mr. FOSTER. What is to be the cost of the building?

Mr. PUGSLEY. From $15,000 to $20,000 including the site.

Mr. FOSTER. What is the cost of the service?

Mr. PUGSLEY. Salary $1,252, besides commissions on money orders. The rent is $175 per annum.

Mr. WRIGHT. Will the hon. minister read the requisition from the Customs Department?

Mr. PUGSLEY. The commissioner came to the department and gave verbal assurance that this building was urgently needed. This item was agreed to after consideration extending over several weeks.

Mr. FOSTER. How many customs officers are there permanently?

Mr. PUGSLEY. I cannot say, but quite a number. Then some three miles away from Rock Island there is another place where a good deal of customs business is transacted. But Rock Island is the principal place.

Mr. MAGRATH. Has there been any demand for this particular service from the Post Office Department?

Mr. PUGSLEY. No demand from the Post Office Department.

Mr. MAGRATH. I think the time has arrived in this country when these departments that are being served should be held responsible. I realize that the hon. gentleman is in a very disagreeable position, he has to put these matters through. I say that these departments which are being served should be held responsible, and the hon. gentleman should not be allowed to pass an item until he produces evidence from the department that they need the service.

Mr. FOSTER. I would like to know whether Rock Island is a customs port.

Mr. PUGSLEY. I think the actual customs port is about three miles away, at Beebe Plain, but Rock Island is an important place.

Mr. FOSTER. How far is Rock Island from Stanstead Plain?

Mr. FISHER. Rock Island itself is not the customs port, but it is the place at which the customs work of the port of Stanstead is done. Stanstead village which, in years gone by, used to be an important village, has not grown, while Rock Island is a manufacturing and industrial place on the border line, and has been growing rapidly. I think it has a population of about 3,000.

Mr. FOSTER. The Minister of Public Works told us it was 615.

Mr. PUGSLEY. I gave that population as of nine years ago.

Mr. FISHER. I have been there several times, and I was told the population was about 3,000.

Mr. PUGSLEY. My information is that there are twelve stores, two hotels, a grist mill and ten factories at Rock Island; also a bank, and the ordinary express and telegraph offices.

Mr. WRIGHT. Is it intended to close down the customs office at the other town?

Mr. FISHER. The real business of the Customs Department is now being done at a place called Stanstead Junction, which is, I think, a little over two miles to the west of Rock Island. The reason the business is done there is that it is a junction of the railway. But Rock Island itself is the place where nearly all the duties are paid, being an industrial centre. Beebe Plain, where the railway junction is, and where the manifesting is done, is a hamlet of only three or four houses and a railroad station. Rock Island is an important industrial village on the border line; there is a little spur from the railroad which runs up to Rock Island, and which serves the Canadian village as well as the American village. The station is almost on the boundary line. The real business of the port is largely done at Rock Island, and it is at Rock Island that the customs officers want their accommodation.

Mr. FOSTER. How many customs officers?

Mr. FISHER. At the whole port, I think five. A part of the work is done at Beebe Plain where the station is.

Shawenegan Falls, revote, $8,000.

Mr. PUGSLEY. This is to make provision for the construction of a public building at Shawenegan Falls. The commit-

tee are aware that Shawenegan Falls is an important manufacturing centre. It has a superior water-power, a large number of factories, and the population is growing rapidly. The population is estimated at 2,300. The postal revenue last year was $2,586, and from the Customs Department, $42,000. The cost of the building will run from $30,000 to $35,000, and is intended to give accommodation, not only to the Post Office Department, but to the Customs and Inland Revenue also. That price does not include the site, which has been given free by the municipality. At present we pay a rental of $175 per annum for the post office, and $143 for customs. The salary of the postmaster, including commissions, is $1,300. That is outside of customs.

Mr. LANCASTER. Does the hon. gentleman really think a building of that price is required under those circumstances?

Mr. PUGSLEY. I think so. My hon. friend will observe that it is to accommodate three departments, post office, customs and inland revenue. Last year, as I say, the customs revenue amounted to $42,521.53; the year before it was over $80,000, when, I suppose, a considerable quantity of machinery was imported.

Mr. LANCASTER. There are a great many places where comparatively small buildings would answer the purpose, costing $10,000 to $12,000, and I would suggest to the hon. gentleman that instead of spending so large a sum of money at a place like Shawenegan Falls, he should spread it over a larger number of places, putting up less expensive buildings. At present he is erecting expensive buildings at some places, and leaving other places, perhaps with a larger population and more business, entirely unserved, or served inadequately.

Mr. BUREAU. I think the hon. gentleman (Mr. Lancaster) has not chosen a good instance to illustrate his theory in the case of Shawenegan Falls. If he does not know, let me tell him that Shawenegan Falls was practically a desert ten years ago, whereas during the last two years alone between $10,000,000 and $12,000,000 have been invested to develop the water-power. There has been invested by the Northern Aluminum Company, which is a branch of the Pittsburgh Reduction Works, over $2,000,000 in establishing and enlarging their works. Besides, there is a vast amount of capital invested by foreigners, for instance by the Belgo-Canadian Pulp and Paper Company, who are supposed to have the most modern and best equipped pulp and paper mill in Canada. It is true that last year the revenue fell off from the preceding year. In 1907-8 the customs revenue at Shawenegan Falls was $83,539.41, whilst in 1908-9 it was $42,521.53. I see that the customs entries have decreased all over the county in the last fiscal year. The population decreased at Shawenegan Falls because of the fact that the Northern Aluminum Company had to close down their works for a while for want of orders. When the aluminum business was started at Shawenegan Falls there was a great demand for the products of this industry and prices were very high. The large prices that they were getting for that commodity caused new mills to spring up and induced those that were already in existence to enlarge their plants. Therefore, there was an over production which caused a falling off in the orders of the Northern Aluminum Company. They had to close down their works for a while which caused a considerable emigration from Shawenegan Falls because a number of men were left without employment. I may say that they have entered into a number of contracts lately and that the shops have been re-opened. They have had a contract from the government of Ontario for a transmission wire for the Hydro-Electric Power Commission. For the last seven months the customs revenue collected at Shawenegan Falls, including the entries for Grand Mère, amounted to $27,367.36.

Mr. FOSTER. Would the hon. gentleman tell us the nature of the imports there?

Mr. BUREAU. New machinery was imported from the United States to be installed in the Northern Aluminum plant. Machinery is now being imported for a large cotton mill which is being constructed on the same improved principle as the mill of the Wabasso Cotton Company at Three Rivers. They propose to manufacture a finer kind of cotton than is now manufactured by the other mills in Canada. They will manufacture the kind used in underclothing and shirts—what we commonly call linen.

Mr. FOSTER. Linen faced?

Mr. BUREAU. I do not know what they call it, but it is the linen used in shirts, collars, cuffs, &c. When the Shawenegan Falls was divided into town lots the Shawenegan Water and Power Company, who owned most of the land, would not sell a lot unless the buyer agreed to put up a house of certain dimensions, a certain height and plan and costing so much money. They wanted to have a fine town.

Mr. LANCASTER. Does the hon. gentleman remember the minimum amount that they had to spend on each building?

Mr. BUREAU. It depended on the street where the building was located. They had to spend more on business streets than on residential streets. I do not know but that certain streets were exempt from that. Shawenegan Falls is a growing town, and

it will grow more in the future because they are putting up new plants every day.

Mr. LANCASTER. The hon. gentleman has not disposed of the suggestion that I was making to the minister. I am not objecting to Shawenegan Falls or any other part of the country being properly served with a public building, but I do not think that the hon. gentleman has proved that a $10,000 or $12,000 building would not serve that town. You can put up quite a chunk of a building if you are not going in for a lot of style and waste space for $10,000 or $12,000.

Mr. PUGSLEY. Surely my hon. friend does not pretend seriously to assert that you can erect a suitable building for the post office officials, for the accommodation of the public, for the customs officials and for the accommodation of the public doing business with that department, for the inland revenue officials and for the accommodation of the public doing business with that department, provide accommodation for the caretaker, as there must be a caretaker for these public buildings, all that for $10,000—a good substantial building of stone and brick with proper sanitary arrangements, heat and light.

Mr. LANCASTER. I do.

Mr. PUGSLEY. I have had a great deal of experience in building and I am unable to agree with my hon. friend. I do not think that a suitable building for the accommodation of these three departments, such a building as one ought to put up in an important town like Shawenegan, which is destined to be a very important place in the near future, could be erected for less than $30,000.

Mr. LANCASTER. All you would need in that place is practically three good large rooms. You could erect a building of three, or perhaps two stories, and have three good large rooms in it, one for the post office, another for the customs and another for the Inland Revenue Department, and you could do it for $10,000 or $12,000 if you did not want to waste the money.

Mr. BLONDIN. I agree with what the hon. Solicitor General (Mr. Bureau) has said. I think that if there are any young towns which justify the government in spending money certainly Shawenegan is one of them. I must say that Shawenegan and Grand-Mère have grown and are growing very quickly. I think that before long these towns will have a population of at least 20,000 and it may go beyond that mark in the near future. But I must remark that what the hon. gentleman said with reference to Shawenegan Falls applies with doubled force to the town of Grand-Mère. While Shawenegan Falls has a population of 2,000 and a few hundred, and while I agree that it has a right to have this public building, we have in Grand-Mère a population of 5,300. While they have a gross total revenue of $2,500 from the post office we have a total revenue of $4,221. I see that the government are spending large sums of money in towns which give little or no promise of future development. For instance, there is the town of Nicolet, which has a gross total revenue of $3,800, and I think I am safe in saying that the post office which the government are building there will not cost less than $20,000 or $30,000. The same applies to Roberval, where the revenue is only $3,300. I would say to the minister that petition after petition has been sent to the government asking for the erection of a public building in Grand-Mère. I remember coming as a delegate to ask the government to erect a post office in that growing town. We were promised that something would be done, but while $5,000 was granted for the erection of a building the government made it a condition that the corporation should supply the land. We did not accept this offer, because we maintained that $5,000 would not erect the building which we would like to see in our town.

Mr. PUGSLEY. That was only to make a start.

Mr. BLONDIN. I think I have a right to ask the minister to grant us at least $5,000 for a building in Grand-Mère.

St. Henri Post Office—improvements—revote of $270 lapsed, $7,000.

Mr. PUGSLEY. This is to be applied to the erection of a one-story addition to the post office at St. Henri, as requested by the Post Office Department as long ago as 1908. The acting Deputy Postmaster General asked for this extension, and as one argument in favour of it he said that the letter-carriers for St. Cunegonde, Cote St. Paul and St. Henri are massed at the St. Henri depot and that an enlargement of the building is absolutely necessary. The appropriation for 1908-9 was $1,200, of which we expended $930 upon inside improvements and $270 lapsed. The chief architect estimates it would take $7,000 to make the addition required. St. Henri is an important suburb of Montreal.

Mr. WRIGHT. Will that complete the work?

Mr. PUGSLEY. Yes.

St. Jacques de l'Achigan public building, $15,000.

Mr. PUGSLEY. This is to make provision towards the erection of a building for post office purposes. There is a largely

signed petition of the people and also of the municipal council. The site was purchased in October, 1909, for $3,000; it is 53 feet on the main street by 123. The population at the last census was 2,580.

Mr. FOSTER. What is the revenue?

Mr. PUGSLEY. $779.

Mr. FOSTER. What is to be the cost of the building?

Mr. PUGSLEY. It will not exceed $20,000.

Mr. FOSTER. Including the site?

Mr. PUGSLEY. Including the site.

Mr. FOSTER. What is the present cost of that post office, salary and rental?

Mr. PUGSLEY. $340, and commissions $42.

Mr. NANTEL. Is it in the county of Montcalm?

Mr. PUGSLEY. Yes.

Mr. FOSTER. What is the present rental for the building?

Mr. PUGSLEY. Very small, only $38.

Mr. FOSTER. Has the minister received any request from the Post Office Department for this building?

Mr. PUGSLEY. No.

Mr. FOSTER. The whole revenue here is $779, and with a population of 2,500 in the town, that is not much of an argument for the expenditure of $20,000 on a post office building. We must protest most strongly against this. I agree with the hon. member for Medicine Hat (Mr. Magrath) that in these cases there should be a request from the responsible minister of the department whose business is to be conducted in these buildings. I had always supposed that to be done and that there was consultation between the minister for whose department the building was to be erected and the Minister of Public Works as to what kind of accommodation would be necessary. The moment this building is erected it will mean an annual charge of $2,000 which will swallow up more than three times the entire revenue. I do not know whether this is a growing town or not.

Mr. PUGSLEY. It has a tobacco factory, a branch bank, three saw-mills, and it is on the line of the new Canadian Northern.

Mr. FOSTER. Well, it is a large recommendation that it is on a railway line. Is it the policy of the government now to build $25,000 buildings in each county town and $20,000 buildings in each town that is on the line of a railway? This is one of the worst cases yet, and as a protest against that kind of thing, I move that the vote be reduced by $10,000.

Amendment (Mr. Foster) negatived.

Yeas 17; nays 33.

Mr. LENNOX. The practice indulged in by the Minister of Public Works this session is to present an item on behalf of say the Post Office Department, for the erection of a building and then to tell us that he knows nothing about it. In this case he has told us that the request for the building did not originate with the Post Office Department. The Post Office Department is supposed to know the needs of the country for increased postal facilities. The Postmaster General should know how much money is to be expended and having looked over the whole Dominion he would, if his department were properly conducted, select the most deserving cases for public expenditure in view of the means at his disposal. But nothing of this kind is done, and the Minister of Public Works, simply because he gets a petition from some people in a locality, decides to erect a post office without consulting the Postmaster General as to the necessity for it. The head of the Post Office Department, having determined upon a scheme of public expenditure within the resources of the country, shall submit to the cabinet his proposals, showing just what is required and why it is required. This, having been properly brought before council, it will be or will not be, according as it is considered right, brought in as an estimate and submitted to this committee. If we, as a committee, do not insist upon procedure of that kind, we are not discharging our duties to our constituents. All these preliminaries have been disregarded in this case. But assuming that they had all been complied with, that is not enough. When the Minister of Public Works submits an estimate to the committee, it is most unreasonable that he should be alone in the matter. He does not profess to have, and we could not expect him to have, a competent knowledge of the requirements. It is absolutely necessary, in the consideration of estimates for another department, that the responsible head of that department should be here to explain why the money is demanded. We are proceeding to-day on an entirely improper basis. We have the fact that no demand has been made by the Post Office Department for this expenditure. We have the fact that the Minister of Public Works has no competent knowledge of the matter. We have the fact that there is no pretense that the Post Office Department has taken a broad, general survey of what should be the expenditure in Canada as a whole, and how that expenditure should be distributed. We are pro-

ceeding on a piece-meal policy, based on certain local and perhaps political demands made upon the minister and based upon those alone. I appeal to the members of this committee on both sides. It is our duty as a committee to insist that this matter should be dealt with in a different manner. I do not often talk on the estimates, but I wish to enter my protest as earnestly as I can against the manner in which we have been proceeding.

Mr. BLAIN. Since the hon. minister has promised so much to my hon. friend from Medicine Hat, I would like to put on record the fact that Lethbridge has eleven banks, that the value of goods which have passed customs at that port of entry was last year $800,000 and the duties collected thereon $136,000.

Mr. PUGSLEY. It is a very important town and is growing very rapidly.

St. Lambert public building, $10,000.

Mr. PUGSLEY. This is to make provision for the construction of a public building to be used chiefly for post office purposes. There has been a petition signed by influential inhabitants of the town as early as March, 1907. This came to the Post Office Department first and was transmitted by the deputy Postmaster General to the Minister of Public Works. It is represented, I have no doubt correctly, that St. Lambert is rapidly increasing in population, having doubled in ten years, and that it is a town with all the modern improvements —waterworks and a sewerage system—and is going ahead very rapidly.

Mr. FOSTER. What is the population?

Mr. PUGSLEY. Nine years ago, according to the census, it was 1,362; but that is no criterion of what it is to-day.

Mr. FOSTER. The minister ought really to have that information in definite form.

Mr. PUGSLEY. I do not carry in my pocket information as to the population of all these places.

Mr. FOSTER. The minister's first duty is to give us information as to the number of people to be served.

Mr. PUGSLEY. I can only give the hon. gentleman the population according to the last census. I am not supposed to go and take a census of these places from year to year. The population of St. Lambert to-day is probably from 2,000 to 2,500. The revenue last year was $2,615, and the year before it was $1,756.

Mr. FOSTER. What has the site cost?

Mr. PUGSLEY. It has not been purchased yet.

Mr. LENNOX.

Mr. FOSTER. What is the estimated cost of the building and site?

Mr. PUGSLEY. Not exceeding $20,000.

Mr. FOSTER. Have the plans been prepared?

Mr. PUGSLEY. No.

Mr. FOSTER. No plans, no estimate, no statement of population?

Mr. CAMPBELL. In whose riding is this?

Mr. PUGSLEY. Chambly and Verchères, represented by Mr. Geoffrion.

Mr. FOSTER. What is the salary?

Mr. PUGSLEY. $730.

Mr. FOSTER. And what is the present rental?

Mr. PUGSLEY. $100.

Mr. SPROULE. One would naturally expect that when the Minister of Public Works is submitting his estimates to Council, for the consideration of that body, he would supply them with better data than he furnishes this House to justify council in passing the estimates. There does not seem to be any system whereby he can reach a conclusion regarding the absolute need of buildings or the wisdom or otherwise of erecting buildings in these places. He has a request from somebody and cannot tell us, in some cases, from whom Not from the Post Office Department, the Post Office Department does not seem to give him any information whether there is a need for a public building or not. He does not seem to go to the trouble of making any inquiries from the Post Office Department or from any other source as to what the population of the place is or what its needs are. In defending the building of a post office costing about $20,000 in one place he said that it was on a railway. He could find places of three, four, or five times the size and importance of that place on railways all over this country that have no public buildings and no post offices erected by the government. I think that is no justification at all and no information.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

SECOND READINGS.

Bill (No. 51) respecting the Montmagny Mutual Fire Insurance Company, and to change its name to Manufacturers Fire Insurance Company.—Mr. Roy (Montmagny).

Bill (No. 52) to incorporate the Nelson River Railway Company.—Mr. Rutan.

SUPPLY.

House in Committee of Supply.

Mr. PUGSLEY. Before recess, we were at the item for a post office building at St. Lambert, which, I think, I explained very fully. I might, however, add that the present post office accommodation there is very poor. The postal service is transacted in a small grocery store with little or no accommodation for the people waiting for their mails, and there has been a very strong request from the people of that locality for a suitable building.

Mr. SPROULE. How did the hon. gentleman happen to get that information?

Mr. PUGSLEY. From a petition of the inhabitants.

Mr. SPROULE. Is that the way in which he usually gets his information regarding the necessity of a public building in any locality? In my part of the country, whenever the public need demands anything in the post office line, we usually apply to the Postmaster General, and one would naturally expect that he would be better posted on the matter than the Minister of Public Works. The Minister of Public Works has no one to rely on. He may have the member for the constituency, and it would be natural to expect that he would urge the requirements of his constituency as strongly as possible. In other cases he may have the defeated candidate, who may not happen to be in the locality and may pay very little attention to it. It would be natural therefore to expect that there would be some communication to the Postmaster General from the locality and that the minister would look to him for information. Take the Public Works Department, when a public work has to be done in connection with harbours and rivers, the department usually sends its own engineer to examine the locality; and if the department desires to get information regarding postal matters, it can call on the post office inspector to examine and report; but in none of these cases has the minister said he applied to the inspector for information to know whether the public building asked for is needed or not. What is the result? We have items in the estimates for the building of post offices in small places where there is little or no revenue and larger places are neglected, and in those small places buildings are provided at a cost out of all proportion to the needs of the locality. It seems to me that the minister ought to have some businesslike system by means of which he could obtain reliable information which he could submit to council and afterwards to the House in justification of the proposed expenditure.

Mr. PUGSLEY. I thought that before recess I had shown clearly the needs of this town for a public building. The place in the last eight years has about doubled its population. Its population is given by the directory to-day as 2,500. It is a very important suburb of Montreal. A large number of very fine residences have been erected in it, and the present post office accommodation is utterly inadequate. I did not depend solely on this petition but made inquiry of the sitting member who at first did not say he would urge it at present, but I asked him to look into the matter further, and give me his more matured judgment. After he had been to St. Lambert, he urged very strongly that I should comply with the request of the petitioners. The building will not cost more than $25,000 at the outside. It will be a substantial structure which ought to serve the wants of the people there for the next half century, and I do not think I am asking any extravagant amount. With regard to consulting the Post Office Department, my hon. friend rightly says that, in respect of post office matters, the people generally communicate with the Postmaster General or his department. Speaking in a general way that is true. But that remark applies to postal services such as the establishment of additional post offices, and the giving of increased accommodation. I venture to say that not once in a hundred times do the people, when they desire a public building erected for a post office, apply directly to the Postmaster General, they make their application to the Department of Public Works. That has been my experience, and it is then my duty to get the best information I can as to the need of that work, and I do not know of any more reliable source to which I can apply than the sitting member for the county. When my hon. friend from Northumberland (Mr. Owen) told me of the population and needs of Campbellford, I felt that I could rely on his statement, as I feel I can rely on the statement of any other member of this House.

Mr. SPROULE. I am not opposing this expenditure, I am only speaking in general terms with reference to what principle the Department of Public Works adopts in determining whether these buildings are required or not. The minister said he depends on the member. I do not object to that. But there are many places where there is no supporter of the government, and he does not seem to rely quite as much on the information he gets from an opposition member as he does on that he gets from a supporter of his own side. But I was speaking more particularly with regard to the general principle. Take the case we dealt with before six o'clock, a proposal to expend $20,000 in a village where the

revenue is only $700. I gave to the House a list of cases in a radius of, perhaps, less than 100 miles, in a locality with which I am well acquainted, where there are villages and towns much larger than this, and where the revenue was ten times as great, and yet there was no effort displayed on the part of the Minister of Public Works to serve the needs of the public in these places. Therefore, it is reasonable to conclude that the principle which guides the Minister of Public Works is not the urgent needs of the people. I do not think he can justify these expenditures in so many instances in the province of Quebec and so few in the province of Ontario.

Mr. PUGSLEY. Just as many in Ontario.

Mr. SPROULE. I do not think so, but I have not verified it. He cannot justify passing by so many places like Lethbridge, and other places in the west and in Ontario, where, notwithstanding every effort on the part of the people to get better accommodation, it has been heartlessly refused them; whereas in other places where the people scarcely asked for it, it has been given them. Now the minister says that when people want additional postal service and the like of that, they apply to the Post Office Department, but not in the matter of buildings. Now I know, speaking from long experience, that the very reverse of what the minister says is the case. Over and over again, in my own constituency and in others, have I been consulted, written to and urged by the people who told me that they had communicated with the Post Office Department and could get no satisfaction.

Three Rivers—new public building—to replace buildings destroyed by fire, June 22, 1908, $60,000.

Mr. PUGSLEY. This is to provide for a new post office and customs building in the city of Three Rivers to replace those that were destroyed in the great fire. We have been using a temporary building in the meantime, but we think the time has now arrived when we should begin the erection of a new and permanent building. The appropriation for 1909-10 was $40,000. Of that, however, we only expended $10,000 to provide temporary quarters; so $30,000 is a revote, and we are now asking for an additional $30,000. This amount of $60,000 will be sufficient to enable us to enter into a contract for the construction of the building. We estimate it will probably cost somewhere from $125,000 to $150,000 when the building is entirely completed.

Quebec province—immigrant buildings generally, $5,000.

Mr. PUGSLEY. I would ask the committee to go back to this item in regard to which the hon. member for North Toronto asked some explanations before recess. I mentioned that in addition to those at the city of Montreal and the city of Quebec, there was an immigrant building at, I think, Peribonka, Nominingue and, I think, Temiskaming. The question was asked as to the principle upon which these small immigrant buildings were erected, and now that the Minister of the Interior is present, I thought he might make some statement.

Mr. NANTEL. What kind of immigrants do the government provide for at Nominingue?

Mr. PUGSLEY. Ordinary immigrants. I may say to my hon. friend that there is an immigration society which is working quite industriously in bringing immigrants into that locality and settling them upon the land.

Mr. NANTEL. The only settlers there are from the province of Quebec. They are not, as I understand, from outside.

Mr. FISHER. I think my hon. friend is mistaken, because there is a considerable repatriation.

Mr. NANTEL. From where?

Mr. FISHER. From the United States into the northern parts of Quebec. This work is carried on by one of the immigration societies formed in Quebec, which societies are subsidized by the government for that express purpose.

Mr. NANTEL. So much the better.

Mr. S. SHARPE. If these societies are paid for that work, what is the necessity of the government erecting buildings for them? Is it for the accommodation of the immigrants?

Mr. FISHER. Certainly.

Mr. S. SHARPE. How many would be brought in at a time?

Mr. FISHER. I cannot say as to that.

Mr. OLIVER. The immigrants are not brought in, they come in of their own accord.

Mr. S. SHARPE. I thought the society was bringing them in.

Mr. OLIVER. The society employs special means of bringing the attractions of a special district before the immigrant. The government's business is to bring the advantages of the country at large before the immigrant, but the society is organized for the purpose of bringing to the attention of the immigrant a certain district, and that is the business of the societies that my hon. friend (Mr. Fisher) has alluded to.

Mr. S. SHARPE. What are the buildings that are used for this purpose?

Mr. OLIVER. There are, first, the Quebec immigration building on the Louise embankment; second, the Detention Hospital erected in 1907 at a cost of $75,000; third, the immigration building at Montreal, which serves the purposes of a hospital and immigration quarters, on St. Antoine street, and which costs $3,000 rental per annum. Then, there is the immigration building at Nomininge. This is a shelter for immigrants, the building being 45 by 27 feet 10 inches, and being the property of the government. This building is at the point which was the terminus of a branch of the Canadian Pacific Railway system and was the distributing point for immigrants in the northern part of Labelle. It was built for the purpose of giving accommodation for these settlers at the end of their railway journey before setting out for their locations in the surrounding country. In this building, and for the accommodation of the settlers, the Quebec government have their local land agent. The building contains four large rooms, two downstairs and two upstairs with cooking stoves, so that the immigrants have the advantage of being able to rest and cook during the time that they are preparing to go on their locations. There is an immigration building at Roberval, in the Lake St. John district, or a shelter for immigrants, the dimensions of which building are 60 by 30. The conditions are the same as in the case of Nomininge. There is the Peribonka immigration building, also in the Lake St. John district, for the same purpose. The dimensions are 45 by 25. This is the list of immigration buildings in the province of Quebec.

Mr. NANTEL. Is the minister in a position to give the cost of the building in Nomininge?

Mr. PUGSLEY. I cannot do so to-night, because the amount we are asking for is simply for repairs for the different immigration buildings in the province as a whole, but I will get it and lay it on the table.

Mr. NANTEL. Is the building used for post office purposes or only for immigration?

Mr. PUGSLEY. Only for immigration.

Mr. ARMSTRONG. I would like to ask the minister whether he knows anything with regard to the report which appears in the press to the effect that several thousand Doukhobors are coming to our country in the near future and whether they are likely to be received?

Mr. OLIVER. I have no knowledge of any such movement, and I have no belief that any such movement is likely to take place.

Mr. SPROULE. Has the minister any information as to the number of immigrants who have come into these localities within the last few years?

Mr. OLIVER. The estimates under consideration are those of the Public Works Department, and I am not able to give my hon. friend the information at the present time, but when the immigration estimates are up, and I have the assistance of the officers of the department, I hope to be able to give my hon. friend an answer.

Mr. SPROULE. I would like to ask the minister if it is the policy of the government to erect these immigration buildings in all of the provinces for local needs? I thought that would rather be an expenditure which would be expected from the provincial governments. Do they do that in other provinces where immigration work is carried on by the provincial authorities?

Mr. PUGSLEY. Yes, it has been done in other parts of Canada, for instance, I think in Alberta and Saskatchewan.

Mr. SPROULE. But these have been under the direct control of this federal government all the time?

Mr. PUGSLEY. Well, the Dominion is just as much interested in securing immigrants for the provinces of Ontario, Quebec and the maritime provinces—

Mr. SPROULE. But you do not put up any buildings in these provinces?

Mr. PUGSLEY.—as it is in securing immigrants for the west with the exception that it has land in the west. Still, to the ordinary settler, that land is given away upon the ordinary homestead conditions but even then the federal government is just as much interested in getting immigrants into the eastern provinces as it is in getting them into the western provinces. It is not undesirable to take care of the immigrants when they arrive in a new and unsettled district and make them as reasonably comfortable as you can until they set out for the land which they are going to occupy. There seems to be a considerable immigration into the Lake St. John district and to the westward. There has been quite an extensive movement in the way of repatriation from the United States and I think that the small amount of money which has been expended upon these immigrant buildings has been very well expended and certainly has been productive of good results.

Mr. SPROULE. I am not complaining of the amount of money which has been spent there. I am only asking what is the general principle, if it is the principle to erect these buildings in the different provinces, or have the provinces been doing this work themselves? There is a good deal of immigration going into the northern

part of Ontario, but I am not aware that the government has gone to the trouble of erecting immigration buildings to accommodate those who go there. The minister says that we have done this in the northwest. There is good reason why we should do it there because we practically owned that country until the new provinces were established. Are there any other provinces where this is being done except that which the minister has referred to to-night? We should do the best we can for the immigrants who come to our shores, and I am not complaining if this is to be a general policy, but I was not aware that the federal government provided accommodation for immigrants brought here under the auspices of the different provinces.

Mr. PUGSLEY. We have immigration buildings in all the provinces, in Halifax, St. John, Montreal.

Mr. SPROULE. But these are sea-port towns.

Mr. PUGSLEY. What difference does it make in principle whether the immigrants come by train or by steamer; should we not provide accommodation for them? I can quite conceive that an immigrant building in the Lake St. John district from which the immigrants are distributed may do as effective work as an immigrant building in St. John or Halifax.

Mr. SPROULE. There is a good deal of immigration into the Cobalt district; would a proposition to erect an immigration building there be entertained by the minister?

Mr. PUGSLEY. If the immigrants were sent to Cobalt and distributed thence through that northern country and it would be desirable to house them comfortably, I think such a proposition might be entertained. For instance, we have an immigration building at Port Arthur.

Mr. SPROULE. That again is a sea-port and immigrants come to it by water and by rail.

Mr. PUGSLEY. The object is to make the immigrant comfortable until he gets located, and it does not make any difference by what means of transportation he arrives.

Mr. SPROULE. I see all the difference in the world between providing a building for immigrants at Port Arthur whence the immigrants are distributed all over the country, and providing a building at Lake St. John.

Westmount Public Buildings, $25,000.

Mr. PUGSLEY. Westmount is a very important suburb of Montreal, and this vote is asked to make provision for the purchase of a site and towards the erection of a post office building. It will be known as the St. Catharines Street West Postal Station. It will be admitted that the building to be erected in Westmount should be of a substantial character and in keeping with the other handsome buildings in that city. The rent paid for the post office and letter carriers' depot last year was $1,200; the postal revenue was $9,131.43; money orders issued, $41,330, and money orders paid, $10,791. We have not prepared the plans as yet, nor purchased the site, but I should think that the site and building, all complete, will cost somewhere in the vicinity of $100,000.

Mr. ARMSTRONG. What is the population of Westmount?

Mr. PUGSLEY. I understand that two or three years ago it was 11,000, but Westmount has grown rapidly and the population is now estimated at 15,000.

Mr. ARMSTRONG. I do not think it is quite as large as that. I understand that in some of the smaller cities of from 10,000 to 12,000 population the post office has practically been closed, only a small portion of it being used for the purpose of getting the mail matter ready for the carriers. That brings up the question whether we should expend such a large amount of money on a post office in a small city.

Mr. PUGSLEY. If what the hon. gentleman says is the case, it is a matter for the post office authorities to consider. But I am not aware that the establishment of free delivery in any city has been the means of doing away with the post office or lessening the business done there. This building is going to be a centre from which the mail will be distributed over all that western part of Montreal.

Mr. SAMUEL SHARPE. I understand that Westmount is a part of Montreal or will ultimately be brought within the city; and if so, the postal business will be done through the general post office, this building will become a sub-station, and should not cost more than $15,000 or $20,000.

Mr. SPROULE. What is this building expected to cost?

Mr. PUGSLEY. Between $100,000 and $125,000.

Mr. BLAIN. I would like to ask the hon. minister how many of these expenditures in the province of Quebec, covering about 40 items, are in constituencies represented by members on the opposition side. I ask this question because this afternoon we were endeavouring to ascertain the policy of the minister as to the expenditure of public money.

Mr. PUGSLEY. If my hon. friend will tell me how many opposition members there

are from the province of Quebec and in what constituencies there are demands for public buildings, I will give him the information. I think my hon. friend is not serious, because he can tell as well as I. For instance, there are expenditures at Lachine, at Sherbrooke, in the city of Montreal and in the city of Quebec. So if my hon. friend counts them, I think he will find that they are doing pretty well, considering their numbers.

Mr. BLAIN. Perhaps a little more specific answer would be more satisfactory to the committee. I understand there is a small item for repairing the post office in Sherbrooke. My hon. friend would not suggest that that is an expenditure of public money other than to keep up a building erected several years ago.

Mr. PUGSLEY. An absolutely necessary expenditure, like all the others.

Mr. BLAIN. I am not objecting to that. I am asking the minister to state how many expenditures for new buildings are to be made in counties represented on the opposition side. My hon. friend would be able I am sure, having all the information before him, to give us an answer to that question.

Mr. PUGSLEY. I regret to say that I have not had that classified in that way and therefore I could not just at this moment give my hon. friend all the information, but really I do not think it is fair that my hon. friend should ask me. He knows that I am the target of a dozen or more of my hon. friends opposite; I have to answer legitimate and proper questions. My hon. friend is entirely a gentleman at leisure just at the moment and he could make up the figures just as readily as I could, and he would be obliging me very much if he would do it himself.

Mr. BLAIN. That may be all right for my hon. friend the minister, but I do not think the committee will gather very much information from that statement.

Mr. PUGSLEY. They will take my hon. friend's statement.

Mr. BLAIN. Well, I will ask the minister to give an answer to the question with a list of the expenditures, and if my hon. friend is unable to do it now, he has a good many clerks in his department and perhaps it could be made up and submitted at a future sitting, if my hon. friend would say he would bring a list——

Mr. PUGSLEY. No, I cannot say I would like to undertake that.

Mr. BLAIN. Perhaps he had better take it now.

Mr. PUGSLEY. Does my hon. friend intimate that he is going to force me to do this? In what way does he propose to force it?

Mr. BLAIN. I have no thought in my mind of anything of the kind.

Mr. PUGSLEY. I am glad of that.

Mr. BLAIN. My hon. friend knows very well that we on this side are not anxious to force my hon. friend to do anything—he is doing too many things now without any suggestion from this side. I think it has been made clear that what the committee are anxious to know is whether it is the policy of the government to grant public buildings in all towns where there is a large revenue from the customs and postal service or if that is a policy that applies only to constituencies represented by supporters of my hon. friend. I thought my hon. friend would be glad of an opportunity to assure the committee that there was no partisanship in the expenditure of this money.

Mr. PUGSLEY. I think that before my hon. friend asks whether these improvements are in constituencies represented by Liberals or Conservatives, he ought to be able to show that in some case in the province of Quebec represented by a Conservative there has been a real necessity for some public work which I have refused. The only cases which have been referred to are those of Grand-Mère and Ste. Thérèse, and I explained that in these towns the public buildings have been allowed to stand over simply because I had no representations made to me before these estimates were prepared that public buildings were urgently required in those two places. This afternoon I was able to appeal to hon. gentlemen opposite representing constituencies in all parts of Canada as to whether or not I had discriminated against their constituencies and my hon. friend must remember that strong testimonly was borne to the fact by at least one gentleman on his side of the House—and I think if other hon. gentlemen had an opportunity they would bear like testimony—that their constituencies had been treated not generously, because we do not treat constituencies generously, but justly, that the reasonable requirements of the people had been met as far as their constituencies were concerned, and I do think, under these circumstances, that my hon. friend will see that it is not reasonable that he should take up the time of the committee by asking consideration of this matter. If my hon. friend wishes to point out where I have done any injustice to any constituency represented by a Conservative let him do so, but I am not aware of any such case.

Mr. BLAIN. I need not go very far to answer that. Take my own county, for example.

Mr. PUGSLEY. That is not Quebec, these are Quebec buildings that are under consideration.

Mr. BLAIN. I understand that, but my hon. friend knows that the statements made by the hon. gentlemen on this side were from other portions of Canada and not from Quebec at all. My hon. friend from Nipissing was the member to whom the minister particularly referred. That was not in Quebec. My own county is an example. My hon. friend's two immediate predecessors both stated in this Chamber that a very necessary expenditure of money in the county of Peel would be made. When I directed the attention of my hon. friend to that statement in 'Hansard,' my hon. friend was not prepared to fulfil the pledges of his predecessors to this House, and to my constituency. I do not wish to make a personal matter of this. I am expecting, of course, that out of the fulness of my hon. friend's heart the work will be done this coming year, and therefore I shall not enter into any severe criticism of that matter.

Quebec Citadel—drill shed for school of gunnery, $16,000.

Sir FREDERICK BORDEN. The object of this is to afford a school of gunnery for the whole Dominion in which lectures can be delivered and the use of every type of gun in Canada illustrated and taught. There will be lecture rooms for instruction on ammunition, coast defence, electricity, range, &c., a complete gunnery school.

Military Buildings—additional storage to ordnance stores, $5,000.

Mr. PUGSLEY. This is an additional story to the ordnance stores as requested by the Department of Militia and Defence, May 26, 1909.

Sir FREDERICK BORDEN. This is simply additional accommodation absolutely required.

Quebec Military Buildings—additional storage to ordnance stores.

Sir FREDERICK BORDEN. This is to provide additional accommodation for stores of every kind. There is a large storage building in Quebec, but it has become too small. The stores there are issued as required in different parts of the country. In many respects perhaps next to Ottawa, and in some respects larger than in Ottawa, stores of the Dominion are lodged there. In particular there is a much larger quantity of rifles stored in Quebec than any where else.

Mr. DANIEL. Is the building fire-proof?

Sir FREDERICK BORDEN. I hope the new part will be at least.

Mr. BOYCE. What is the capacity of stores buildings in Quebec?

Mr. PUGSLEY. 10,000 square feet.

Mr. BOYCE. What is the total capacity for storage in the city of Quebec for military purposes?

Sir FREDERICK BORDEN. I could not say just now but will get the information.

Mr. ARMSTRONG. Have tenders been asked for?

Mr. PUGSLEY. We have not started this yet, but of course will call for tenders.

Mr. CROCKET. Are any buildings provided for military purposes without requisition from the Militia Department?

Sir FREDERICK BORDEN. No.

Mr. CROCKET. Why is that rule not adopted in the case of the post offices and customs houses?

Sir FREDERICK BORDEN. Because that never has been the rule, and the conditions are entirely different.

Mr. CROCKET. I do not see that they are. It seems most extraordinary that the Minister of Public Works should go on spending money erecting post offices and customs houses in different constituencies without any report from the Post Office or Customs Department that such buildings are required. I should think that a new practice ought to be adopted and that in every case there should be a requisition from the department for whose use the building is provided, and such requisition should set forth the necessity for it.

Mr. WORTHINGTON. Are the stores under the care of the Ordnance Stores Department and are they for the use of the permanent corps or active militia?

Sir FREDERICK BORDEN. All the stores are issued from the same building. The stores, both for the permanent force and active militia, are put in this building. I believe the stores are entirely under the control of the ordnance store corps except in so far as some police protection naturally would be given by the city authorities.

Mr. SPROULE. Are the stores there under the same supervision as here in Ottawa?

Sir FREDERICK BORDEN. Yes.

Mr. SPROULE. No insurance?

Sir FREDERICK BORDEN. No.

Mr. SPROULE. No watchman?

Sir FREDERICK BORDEN. Yes, there are watchmen.

Mr. SPROULE. The care taken seems to be of very imperfect character. In Ottawa by one fire we lost $120,000 in stores and $30,000 in damage to the building. There was neither insurance, nor regular watchmen who visited the building at stated periods in twenty-four hours.

Sir FREDERICK BORDEN. The government never insure but simply follow the rule which has been followed in every department since confederation. The $30,000 loss was caused by damage to the building, and I hope that the loss in clothing will not amount to $120,000. Some of the clothing, I might mention, was clothing which would not have been issued again.

Mr. SPROULE. Let me remind the hon. gentleman that I put a question on the paper as to whether this $120,000 worth of goods was a total loss, and his answer was yes.

Sir FREDERICK BORDEN. I understand that the damage to the building was $30,000 and the damage to the clothing $120,000. As to whether proper precaution was taken that might be a matter of opinion, but we believe that we were taking proper precautions, and it was understood that the building was fire-proof. I have had a careful investigation made, and when the time comes I propose to make a statement to the House. But I may mention that the result of the investigation went to show that the fire resulted from a defective electric wire.

Mr. J. A. CURRIE. What is the value of the new clothing in the building?

Sir FREDERICK BORDEN. About $900,000.

Mr. WORTHINGTON. Is it not a fact that the regulations of the ordnance stores department require that where a large quantity of stores are kept, it is necessary to keep a military guard at night?

Sir FREDERICK BORDEN. No.

Mr. SPROULE. I think that the consensus of opinion of good business men would be that there ought to be some insurance in the case of valuable property stored. It seems to me that would be money well invested. Only a short time ago a portion of the legislative buildings in Toronto was burnt down. The present government there did what this government might do to good purpose. When they came into power they found that there was no insurance on the building; they put an insurance on it, and now they have something to fall back upon in the way of insurance; otherwise there would not have been a dollar to help replace the building that was burned. Would it not be better for the minister to consider making a new departure, and to provide, either insurance, or better care by watchmen?

Sir FREDERICK BORDEN. I agree that that is a fair question for investigation and inquiry. It would be necessary to carry the inquiry over a good many years, and to see what amount of property would be risked in this way, what the actual losses have been, and what it would cost to insure the buildings. I think that is a very desirable thing to do.

Mr. J. A. CURRIE. Do I understand that the total value of the clothing destroyed was $900,000?

Sir FREDERICK BORDEN. No, the total amount in the building was $900,000, of which about $120,000 was destroyed. I misunderstood the hon. gentleman's question.

Mr. J. A. CURRIE. A question arises in connection with this fire which I think the minister should seriously consider. The equipment and clothing of most of the militia men in Canada is kept in a stores building at Ottawa. In case war or trouble of any kind should occur, it would take three or four weeks to get that clothing out of this central depot and distribute it all over the country. Should not the minister consider, when we are building barracks or drill sheds in various places, whether the policy of decentralization would not be better in regard to these stores than the present system under which the country has lost $120,000? It has often been a subject of comment by military men, that if they wanted a pair of trousers, or a Glengarry, for one of their men 200 miles away, they had to send along a requisition and that has to come from Ottawa. Under the system that obtains in other countries, every district is equipped with its own stores, its own ammunition, its own rifles, it is a complete unit by itself, and is capable of taking the field armed inside of two or three days. Under no system could this clothing be distributed from Ottawa in case of war, and sent to the various quarters inside of four or five weeks. It seems to me that the old policy of the department of centralizing everything at Ottawa in order that somebody may have a job of overlooking it, is at the bottom of this, and when we get to the bottom of the whole thing, we find there is nobody looking after it when it takes fire. These stores might just as well have been at Toronto, at Kingston, at Esquimalt, distributed equitably amongst them in that way, and then in case of emergency the stores could be got out in two or three days.

Sir FREDERICK BORDEN. I do not think it desirable to enter into this discussion now very fully. But I may tell my hon. friend that he is quite mistaken if he

supposes that all the stores are here in Ottawa, that is not the case.

Mr. J. A. CURRIE. I did not say that.

Sir FREDERICK BORDEN. It is true that the reserve stores are here. But I quite agree with him that it would be desirable to distribute these stores more than they are distributed now, and that is our intention. Unfortunately at the present time we have not a suitable building, and we have been unable to get one. We are now occupying some buildings rented before this fire, a year ago, a large building in Montreal and one in Toronto, and it is intended to distribute the stores more than they have been. My hon. friend refers to other countries. Well, this country, for instance, compared with the mother country, is a country of magnificent distances; and while in England the stores are kept pretty much together, and possibly we might have been governed to some extent by that fact, we must remember that the centres in Canada are widely distributed, and it will be necessary for us to have several centres of distribution. At the present time we keep a certain amount of stores in Winnipeg, considerably more than the usual quantity; nearly all the saddlery stores are in Toronto, and there are stores at London, some at Kingston, some in Montreal, a large quantity; there are stores in Halifax, in Quebec, and on the Pacific coast. I agree that the point raised by the hon. gentleman is worthy of consideration.

Mr. J. A. CURRIE. Is the ammunition distributed in such a way that it can be got at?

Sir FREDERICK BORDEN. Yes.

Mr. J. A. CURRIE. I understand there is a small quantity stored at various points; but what proportion of ammunition is centralized and what proportion is at Ottawa?

Sir FREDERICK BORDEN. That is a question which I think my hon. friend, being a military man himself, must understand is not one that it is desirable to answer. That question has been raised more than once, and the answer I have given is that if any hon. gentleman, a member of this House, will come to my office, I will be glad to tell him the distribution of the ammunition. But I do not think it is desirable to publish to the world exactly how the ammunition in Canada is distributed.

Mr. J. A. CURRIE. That is like the right hon. gentleman when an embarrassing question is asked him; he takes refuge by saying: If you ask me privately I will tell you this, that, or the other thing. Let me tell the Minister of Militia that in the mother country a government was upset on this question of ammunition. The question was brought up in the House of Commons, and the minister had to answer that he had not sufficient ammunition to meet the country's needs, and the government was thrown out of office. Questions of this kind must be answered in some place where the people will know. The minister says he will answer me privately how this ammunition is distributed. I am not asking how many cartridges he has at various points, but if he has inaugurated a fair system of distribution, in order to avoid the abuse that has occurred where, when a man requires a shell, he has to wire to Ottawa to get it.

Sir FREDERICK BORDEN. I don't think that is the case.

Mr. WORTHINGTON. The minister says that questions of this kind have been asked several times in the House. I asked the other day something about the stores on the Great Lakes, and I received the same answer. Now, as my hon. friend from Simcoe (Mr. Currie) says, you can always find out these things in the United Kingdom. You can go most anywhere and buy a little manual for one and six and find out where the different stores are. I do not see any objection in giving the information to the public.

Mr. FIELDING. To return to the question of insurance, particularly to what has been said by the hon. member for East Grey as to the good luck that the Ontario government had in having its building insured at the time of the fire. It might be a wise and proper policy for a provincial government to insure its property, and not necessarily a wise policy for the Dominion government to do so. From my own experience in the provincial government, it seemed desirable that we should carry a large amount of insurance. But in every large business the principle is adopted that, as you increase the volume of your property, the need of insurance in a certain sense diminishes. A man can afford to insure for himself, but the steamship people who have a large number of vessels do not find it advantageous to do so. If a man has only one or two vessels, he may insure them; but those who are fortunate enough to have a dozen vessels, in many cases do not insure; they simply open an insurance account; and they have found that, take it all in all, they were making a profit by not taking their business to the companies. I am not saying the province of Ontario was not wise, and from my own experience in the provincial government, I believed in carrying an insurance. But when you have the vast volume of property which the Dominion government has, stretched over the whole continent, it might be the best policy

not to insure. That seems to have been the policy of all the governments in Canada. I am bound to say the fact that we occasionally have a fire does not by any means prove that that policy is a mistake.

Mr. SPROULE. If the government had gone into a calculation to determine whether, from their experience of the last 50 years, it would be better not to insure, I could understand such an argument. But this day and age, when insurance is so very reasonable in cities and towns, where you have good fire protection, waterworks and fireproof buildings, it seems to me that it is doubtful wisdom to have great stores of supplies in any building without being insured. I would at least expect that the government would be in a position to present the House with some data which would justify that conclusion. If they have not got it, I think it would not be amiss for them to take the earliest opportunity to make some such calculation. I think the experience of most business people would be that it is not the part of wisdom to allow large collections of property to remain anywhere without some insurance, or some better protection, than that which we had for the military clothing and supplies that are stored in Ottawa, Quebec and elsewhere

Mr. FIELDING. So far as protection is concerned, I am with my hon. friend when he says that the government is bound to see that every possible care is taken for the protection of its property. I do not differ from him on that. If there be a large volume of property accumulated at one centre where the risk is very great, certainly it calls for insurance, but where you have the same volume of property distributed over a wide area the risk is reduced to a small figure and I do not think it needs any calculation to justify the non-insurance of such property. It is a principle that where your property is widely distributed you can just as well insure it yourself as any insurance company could do it. It might be a matter of convenience and of curiosity to make a statement, but a government is not bound to do it to the same extent as a private corporation. Even if a big fire burned down these magnificent parliament buildings I do not think it would necessarily prove that the policy of the administration is wrong.

Mr. PUGSLEY. Assuming that we have $50,000,000 worth of property belonging to the government and that the average insurance rate would probably be one per cent, there would be $500,000 a year.

Mr. SPROULE. Oh, the average insurance rate would not amount to that.

Mr. PUGSLEY. Put it at one-half per cent, which is very low; there is $250,000 a year. I doubt if, in the forty-two years since confederation, there has been a million dollars worth of property destroyed, whereas the insurance premiums would have amounted to a great deal more than that. As my hon. friend, the Minister of Finance said, it is purely a question of the amount of property you have. The experience of our St. John ship-owners is just the same as that of those to whom my hon. friend refers in Nova Scotia. These firms, owning a large number of vessels, never thought of insuring their vessels because it would be cheaper to lose a ship ocasionally than to pay the premiums. If we could tell when a fire was going to occur and insure just before it took place it would be all right, but we should have to take the insurance year by year and it would cost a great deal more, as experience since confederation has shown, than the fire losses would amount to.

Mr. SPROULE. The minister says that there might have been a loss of a million dollars since confederation. Why, two or three years ago we had a loss of a good portion of a million dollars when the fire in the west block occurred. Then, take the fire which occurred in the militia stores building when $120,000 worth of clothing was entirely destroyed and $30,000 damage was done to other clothing, not entirely destroyed, besides the loss to the building. These are only two fires out of others which could be mentioned. But then the same principles would apply to a private corporation or to the government. Would any business man in this country follow out the same principle in dealing with his own private business?

Mr. PUGSLEY. Ship-owners do it constantly.

Mr. SPROULE. I am not familiar with their business, therefore I do not know, but the argument that because the risks are distributed amongst a large number of centres reduces the need for insurance I do not think carries any weight at all, because a man worth $10,000,000 having property distributed all over the continent insures on the same principle as though he had it only in one province. He regards that as a good business principle, and it is generally recognized as a good one.

Mr. PUGSLEY. But the loss is lessened by the distribution of the property?

Mr. SPROULE. It may be lessened to a certain extent by distribution of property, but if it is lessened the insurance will cost less. Take the mill owners, factory men or merchants who are handling produce or cattle—they all insure, but the government do not think it wise to insure. I do not think they can give any data to justify them in reaching that conclusion.

Mr. MILLER. I think there is quite a difference between the Dominion government insuring its property, scattered all over the broad Dominion, and the case of a private party insuring his property whether it be a large or a small property. An insurance company, calculating its rates and business, expects to reach an average rate of loss and be able to fix, on that average, the premium it should collect. The Dominion government has so much property scattered all over the Dominion that it will reach about the same average of loss that the insurance company will and that being the case the government, in doing without insurance, saves the commissions paid to agents, office management of the insurance company and all the profits that the insurance company expects to receive.

Mr. SPROULE. If the hon. gentleman's argument is worth a cent it applies to insurance in every line, whether there is one centre or a dozen, because every man who insures pays for carrying the risk and pays a profit to the party who is carrying it whether it is upon a barn in the country or a factory in the city. If it applies to the government property that may be distributed in a hundred centres it applies on the same parity of reasoning to the property which is distributed in three centres, or is in one place.

Mr. MILLER. Perhaps I have not made myself clear, but it would be utterly impossible that all the property of the government would be destroyed at or near the one time. Because of the law of average, the saving that through non-insurance will be effected at the very many points where no losses occur will make up, or more than make up, the occasional losses of properties that do burn.

Mr. SPROULE. You might say that of any business.

Mr. J. A. CURRIE. Might I suggest to the minister that buildings containing valuable government property should be in the future built with a system of sprinklers and the protection called for by the insurance companies which reduces the risk, they claim, from about one per cent to one fifteenth of one per cent. It does not add very much to the cost of the building and if the government is not going to carry any insurance it would be a very wise investment.

Mr. PUGSLEY. It is worthy of careful consideration.

Military Buildings—barrack accommodation for Canadian Permanent Army Service Corps, $8,000.

Sir FREDERICK BORDEN. This is to provide accommodation for 25 officers, non-commissioned officers and men. These troops have been stationed at Quebec during the last two years and no baracks have been available. They have been temporarily quartered at the Riding School. This vote is to provide new quarters for them. The proposed site is in the Cove Fields near the Riding School.

Mr. SPROULE. What is to be the cost of the building?

Sir FREDERICK BORDEN. $8,000.

Harbours and Rivers, Nova Scotia—Annapolis harbour — improvements, ice piers, $15,000.

Mr. JAMESON. This matter was under discussion at considerable length last year and the minister gave a very fair statement to the committee so far as he was able at the time. Who has the contract, what is the amount of the contract, and does the minister believe that the work will be satisfactory in fulfilling its purpose?

Mr. PUGSLEY. The contract was first awarded to Messrs. Reid and Archibald for $34,400, but they declined to sign the contract as drawn by the department because it made them responsible for the work during construction. New tenders were called for and three tenders were received, ranging from $46,736 to $47,000. The lowest tender was that of the Nova Scotia Construction Company, Limited, and the contract was awarded to them. Their tender was a little above the chief engineer's estimate, which was $45,625. The work is going on satisfactorily and it is expected that this amount will complete the payments to the contractors. The work is designed to resist the flow of the ice coming down the river and so keep the harbour of Annapolis open all the year round.

Mr. DANIEL. Is it the intention to connect these piers with any superstructure?

Mr. PUGSLEY. It is not the present intention.

Mr. DANIEL. Is it intended to do so in the future?

Mr. PUGSLEY. No; it is not like the wharfs at St. Geneviève that were referred to the other day.

Mr. DANIEL. It is not intended to make a bridge of it?

Mr. PUGSLEY. Not that I am aware of; it could not be.

Mr. CROSBY. Who are the officers of the Nova Scotia Construction Company?

Mr. PUGSLEY. The names are on the contract, but I have not the contract with me. I shall be glad to get the names if the hon. gentleman desires.

Mr. CROSBY. I should like to have them.

Arichat wharf, $10,000.

Mr. PUGSLEY. It is understood that the Plant line of steamers are going to make Arichat a port of call when this wharf is completed. The total estimated cost is $25,000.

Mr. JAMESON. Is it the intention to have this work done by contract?

Mr. PUGSLEY. Yes.

Mr. JAMESON. Is there any policy in the department as to when work shall be done by contract and when by day work?

Mr. PUGSLEY. In all cases where the work can be as well done by contract as by day work we call for tenders, but where there is repairing to be done it can often better be done by day work where you have a good foreman. However, we prefer to call for tenders whenever we can.

Black Point breakwater, $5,000.

Mr. JAMESON. Will this work be done by contract?

Mr. PUGSLEY. I think it will be, unless it should be better to do it by day work.

Mr. CROSBY. What would make it better?

Mr. PUGSLEY. It may be more economical. This is an out-of-the-way place, and it might be better to send a competent foreman to do the work.

Mr. CROSBY. Will this cover the whole cost?

Mr. PUGSLEY. No, we will require $3,300 more. The total cost of the work will be $8,300.

Blue Rocks Island—breakwater at western end, $5,000.

Mr. PUGSLEY. The total estimated cost of this work is $15,000.

Bluff Head—breakwater extension, $2,500.

Mr. PUGSLEY. This is to extend the breakwater 90 feet, recommended by the resident engineer. This amount it is expected will complete the work.

Breen's Pond—breakwater, $8,000.

Mr. PUGSLEY. This is to build a breakwater to provide shelter for fishing boats. The estimated cost is $14,000.

Mr. JAMESON. Will tenders be asked for this work?

Mr. PUGSLEY. Yes.

Mr. RHODES. The minister mentioned that the Bluff Head breakwater extension had been recommended by the resident engineer. Do I understand that such a recommendation is peculiar to that item alone?

Mr. PUGSLEY. Oh, no. My memorandum happened to be to that effect. The course pursued with regard to all works is that when an application is made, it is referred to the chief engineer for the purpose of obtaining a report from the resident engineer as to the public necessity which exists for the work, the extent of traffic which will be accommodated or the protection which will be given, and the estimated cost of the work.

Mr. RHODES. I wish to bring to the attention of the minister the fact that the wharf or pier at Parrsboro is in a very bad condition. The planks upon it are so rotten that horses and carriages cannot go on it with safety. Parrsboro is an important point, not only as a railway terminus, but because there is a daily steamship service between that point and Canning in the county of Kings. The condition of the wharf has been a serious matter to the ship-owners this year. The repairs would not cost much, as there is on the wharf a large quantity of plank owned by the department which could be used for the purpose. I brought the matter to the attention of the minister and the deputy minister some time ago, and was informed that it would be referred to the resident engineer for a report.

Mr. PUGSLEY. Direction was given some time ago to have a report made on the wharf at Parrsboro. I do not at this moment remember what the report was, but the matter will receive consideration. It may be that the work can be done out of the general vote for repairs.

Mr. RHODES. I inspected this wharf personally last summer and I think $50 for labour, with the material on hand, would put the wharf in repair. It is very urgently needed.

Brooklyn—towards reconstruction of breakwater, $25,000.

Mr. PUGSLEY. This is not a new work, but it is to rebuild a work which was constructed a good many years ago, and which has gone to considerable decay.

Mr. JAMESON. In this connection I wish to mention the landing wharf at Centreville. This work is not only in the interest of the people of that locality, but in the interest of the department itself. As I am informed, owing to the fact that the toredo has eaten off the lower end of the piling, the whole work is in danger of collapsing in any heavy storm. I brought this matter to the attention of the minister by correspondence, and he informed me that it would be put into the hands of the engineer for inquiry. Has the minister ascertained just what the state of the work is, and if so, will steps be taken to protect

it at an early date in order that the work will not be entirely destroyed? The work itself is not sufficient to furnish the facilities required by that place. It was constructed prior to confederation and lengthened twelve or fifteen years ago and a comparatively small expenditure of $500 or $600 was made later. A prosperous settlement has developed there and the business now warrants much greater harbour facilities than are available. A steamboat makes connection with St. John, and there is perhaps the largest manufacuring plant for the putting up of fish in the county of Digby. Many hundreds of people are absolutely dependent on the industry prosecuted within the protection of this particular harbour. If the wharf or breakwater were extended, or indeed if a new structure were built, as I believe will be necessary, further to the right of the present structure, a much larger business would develop there. But in the meantime it is absolutely necessary that some work should be done to protect the present structure from destruction.

Mr. PUGSLEY. As there is no item in the estimates for the wharf at Centreville, I have no memorandum with me about it, but I shall look the matter up and give my hon. friend the information later on. I regret that I have not the information.

Brulé wharf—repairs and extension, revote of lapsed amount, $2,200.

Mr. PUGSLEY. This is for repairs and extension of the wharf at Brulé. This is the total estimated cost.

Burk's Head or Robert's Cove, North Ingonish—breakwater, $28,500.

Mr. PUGSLEY. This is the total estimated cost of this breakwater. It is to be 300 feet in length with an 'L' on the outer end, 75 feet long. It will have to be heavily built as it is exposed to severe gales, and the full sweep of the Atlantic.

Mr. CROSBY. What accommodation will this afford and how many vessels or ships will be accommodated by it?

Mr. PUGSLEY. Perhaps my hon. friend from Cape Breton North (Mr. McKenzie) who is personally familiar with the situation could give the most satisfactory information.

Mr. McKENZIE. The breakwater at Burke's Head is required like the few breakwaters we have along North Victoria for the purpose of protecting the fishermen. We have at Ingonish, North Bay and South Bay a large settlement of fishermen who are entirely dependent for their living upon fishing. The coast is exposed to the full swing of the Atlantic, and when it is blowing at all they cannot go out or come in without something in the shape of a breakwater. The making of a harbour is out of the question and this protection is absolutely necessary. This breakwater has been asked for many years to create a shelter behind which boats can run when coming in and where they can be moored at nights in safety even in a storm. Hon. members who are familiar with the use of breakwaters will not require any further information about it except that it is absolutely necessary for the protection of the fishermen, that without it they are suffering great loss. We are very pleased indeed that this vote is in the estimates. No hon. gentleman who is familiar with the needs of the fishermen will object to it.

Mr. CROSBY. I have no desire to object to it but I wish to know what accommodation it is going to afford to people in that end of the province. We require many breakwaters in Nova Scotia, our fishermen require a great deal of assistance, and I only wish to ascertain whether it is essential that we should spend so much money at that particular point or whether it would not be well to spend some in other ports. If the hon. gentleman would state whether there is any shipping there, we would have more information than we have at present.

Mr. McKENZIE. It will serve as a wharf at which the steamboat now plying between North Sydney and North Victoria will call. It is impossible for the boat to call without a dock and the fishermen, in order to send out their fish and land supplies, have to run out a couple of miles to meet the steamboat. That is a very inconvenient and hazardous way of doing business and one which causes a great deal of loss to these men because they cannot make any definite contract to send away their fish as they have to depend entirely on weather conditions as to whether they can put their freight on board the steamer or not. This will enable the steamer to come in in all reasonable conditions of weather. I cannot promise that any large shipping will get shelter there because to make a breakwater which would protect large vessels would involve much more expenditure than the comparatively small amount required here. It will, however, afford shelter to 50 or 60 boats that are fishing off there and to other boats from Neill's harbour or North shore which may be caught in bad weather when fishing off Ingonish.

Mr. CROSBY. What is the size of the steamer which this breakwater is to accommodate?

Mr. McKENZIE. The 'Weymouth' is the steamer doing the business now but I cannot tell her size. We are getting a new steamer called the 'Aspey', a very much larger boat, built recently at Shelburne and fitted out at Weymouth. My hon. friend may perhaps remember the 'Scotia' running between Halifax and somewhere

down in Guysboro. The 'Aspey' is largely on the lines of the 'Scotia' and a little larger.

Mr. CROSBY. Now that the Minister of Public Works has handed over his task to my hon. friend, we cannot fail to be convinced that there is no question of politics in this. I have no desire whatever to interfere with any estimate because the only trouble we have is that we have not sufficient money to go round, but when he says this breakwater is to accommodate a steamer of between ten and fifteen tons, one cannot help questioning the necessity for it.

Mr. McKENZIE. I do not think my hon. friend would like to venture on the North Atlantic along that coast in a ten ton steamer.

Mr. CROSBY. I know the steamer very well and he does not. She is not over fifteen tons, as he will find if he refers to the blue-book.

Mr. McKENZIE. I am quite willing to have the records in the blue-books produced, and if so my hon. friend will find himself in a very ridiculous position. The 'Weymouth' is seven times that capacity.

Mr. CROSBY. I did not understand there was more than one boat running to this place. When will this new boat commence running there?

Mr. McKENZIE. There is only one boat making regular trips along that shore as there is not enough traffic for more than one. The 'Aspey' is taking the place of the 'Weymouth' which has been running there the last ten years, subsidized both by the Nova Scotia government and this government. She is getting to be old and not equal to the business, and a new boat has been built called the 'Aspey', but I do not think she is yet on the route. The hon. gentleman will find a photograph and description of her in the office of the Minister of Trade and Commerce.

Mr. CROSBY. What is the tonnage of this new boat?

Mr. McKENZIE. Not being a shipping man myself, I do not carry her dimensions in my mind, but my hon. friend can get all the details he requires from the Department of Trade and Commerce.

Mr. LAW. When the hon. gentleman says that the 'Weymouth' is only ten or fifteen tons, he cannot have ever seen her. She is five times that tonnage. I know the boat for she ran between Weymouth and Yarmouth a number of years.

Mr. LANCASTER. How many feet of water does she draw?

Mr. McKENZIE. About 8 feet and the new boat about 10 feet.

Mr. LANCASTER. What is the depth of water at low tide?

Mr. McKENZIE. That will depend on how far you run out the breakwater. This breakwater, when built will have a depth of water at low tide of ten feet to accommodate that boat.

Mr. LANCASTER. We ought to know, before we vote to build a breakwater, how far out we shall have to build it and what are its dimensions.

Mr. PUGSLEY. I have said already that the breakwater is to be 300 feet in length with an L on the western side 75 feet in length.

Mr. ARMSTRONG. How comes it that in the province of Nova Scotia with a population of 450,000, you have 111 separate items in the estimates and are going to spend there just about the same amount as in Ontario with a population of 2,114,000, not including the city of Ottawa.

Mr. PUGSLEY. The principle which has guided me, is, as far as possible, to get appropriations for what seems to be necessary for public works which have been brought to my notice. The size of a province or its population is not always the governing factor as to the amount of money required to be expended there on wharfs and breakwaters. Ontario is a very large province but a great deal of it is inland and does not call for expenditures on wharfs. But when the hon. gentleman speaks of the amount being expended in Ontario, he forgets altogether the very large expenditure made in Toronto, amounting to something like $700,000, which alone overtops all the expenditures in all the harbours along the whole coast of Nova Scotia. He leaves out altogether also the expenditure of some $900,000 at Fort William and Port Arthur, which is $300,000 more than all the expenditures asked for upon harbours and rivers in Nova Scotia. He likewise omits the expenditures at Tiffin and Victoria Harbour, which together amount to one-half the total expenditures on wharfs and breakwaters in Nova Scotia, also the expenditures at Collingwood and Goderich.

Mr. ARMSTRONG. Do these appear under the heading of expenditure in the estimates for Ontario?

Mr. PUGSLEY. No, Tiffin and Victoria do not, Goderich does.

Mr. FIELDING. My hon. friend knows they are in Ontario, does he not?

Mr. PUGSLEY. Tiffin and Victoria are in capital account, and do not appear in these items, because there is no capital account for the province of Nova Scotia, whereas there are $1,200,000 for harbour im-

provements in the province of Ontario which are charged to capital account. You have in those three places alone twice as much as we are asking for in respect to all the harbours, breakwaters and wharfs in the province of Nova Scotia, and that leaves out altogether the large improvements going on in the city of Toronto.

Mr. ARMSTRONG. Let the minister look at his own book in the matter of current expenditures, and he will find $684,000 is spent in the province of Ontario on current expenditure. While some of these other expenditures are being made in Ontario, the large ones have been made in the eastern provinces.

Mr. PUGSLEY. Look at page 55 and you will see the harbours in Ontario.

Mr. ARMSTRONG. I am taking the items in Ontario, 44 items, and 111 separate items in the province of Nova Scotia. I merely ask the minister to explain that.

Mr. FIELDING. The hon. gentleman has in his hands the estimate which shows that for harbours and rivers in the fresh water province of Ontario you have $1,262,000; while in the inland province of Nova Scotia out in the ocean, you have $600,000. Yet the hon. gentleman thinks it is too much.

Mr. RHODES. I would like to say just a word here. Since I came to Ottawa I have heard in the corridors, and outside as well, this same remark made by some members from Ontario on both sides of the House. I think they forget the fact that every one of the 18 counties of Nova Scotia fronts on the sea, and it is necessary that these counties should be provided with wharfs. As a matter of fact, whichever government might be in power, I have no doubt that there will be misappropriations and male expenditures from time to time. But in any case it is necessary that these expenditures should be made, and there is no other body to make them but the Dominion government. I think it ill becomes members from the other provinces to criticise the small amount the province of Nova Scotia is getting, which is only a fair proportion of the amount expended on public works.

Mr. ARMSTRONG. I was just asking for my own information. If the hon. gentleman will look at the province of Ontario, he will see that there are a large number of counties fronting on the great lakes and on the river, and he will recognize that they have important wharfs to build and maintain. If the Minister of Finance had been here this afternoon he would have heard from a number of gentlemen from the province of Ontario who have been pleading with the Minister of Public Works for years, not only with this minister but with his predecessors, begging him, I might almost say, to spend a small amount of money in making public works where they were really necessary. We know that he has been making expenditures in other parts of the country where they were not nearly as necessary as many of the towns mentioned this afternoon.

Mr. PUGSLEY. I do not believe the people of the great province of Ontario will justify my hon. friend in seeking to raise prejudice against one section with respect to these expenditures. He asked how it was that there was only the small sum of $600,000 being expended in similar works in Ontario, while there was about an equal amount being expended in Nova Scotia. But as the Minister of Finance has pointed out, for public works chargeable to income in the province of Ontario, the amount which we ask is $1,262,850, for harbours and rivers only, outside of public buildings altogether. To that is to be added the amounts found in page 55, $800,000 for harbour improvements in Port Arthur and Fort William, also in the province of Ontario, $120,000 for improvements at Tiffin harbour, in the province of Ontario, and $145,000 for improvements at Victoria harbour, also in Ontario. There you have altogether upwards of two million and a quarter dollars being expended in the inland province of Ontario for harbours and rivers alone.

Mr. ARMSTRONG. I do not wish the minister to try to lead this House to believe that I am attempting to raise prejudice between the provinces. Of the amounts that he has mentioned, a large portion is for capital account.

Mr. FIELDING. What difference does it make?

Mr. ARMSTRONG. I might say the same in Nova Scotia, a large portion, I suppose in Halifax would be.

Mr. FIELDING. Nothing in capital account for harbours and rivers in Nova Scotia.

Mr. ARMSTRONG. Possibly not this year.

Mr. FIELDING. For harbours and rivers in Nova Scotia I do not recollect a dollar being voted on capital account.

Mr. LANCASTER. For harbours and rivers in Ontario, has a dollar been voted on capital account?

Mr. FIELDING. Yes, here to-day my hon. friend has just shown you sums amounting to $2,000,000.

Mr. LANCASTER. These were for special improvements such as were necessary on the Welland canal. You might as well call that harbours and rivers.

Mr. FIELDING. It is for the harbour of Fort William, the harbour of Port Arthur, the harbour of Collingwood, the harbour of Goderich. What are these but harbours?

Mr. LANCASTER. Are they on capital account?

Mr. FIELDING. Many of them. Tiffin and Victoria harbours and Fort William, these are all capital account, and there is not a dollar for capital account in the province of Nova Scotia, in that service.

Mr. LANCASTER. Some of the harbours and rivers are put into capital account and some into current account. Explain your system of book-keeping.

Mr. FIELDING. Large development works, such as the class of works in the river St. Lawrence, have for years been charged to capital account. They differ only in volume. The smaller works are usually charged to income account. The province has nothing to do with it.

Central Economy Wharf—renewal of stem —revote of $1,200 lapsed, $2,000.

Mr. JAMESON. What is the nature of the work?

Mr. PUGSLEY. Some four years ago this work was damaged by ice, it had not been completely close piled. There was a heavy run of ice and the wharf was damaged, and it required to be repaired. I may say the stem of the wharf at a distance of 120 feet from the shore was lifted by the ice, and the crib-work abutment at the shore end was undermined.

Chapel Cove Breakwater—revote of $3,000 lapsed, $5,000.

Mr. PUGSLEY. This is for a breakwater 240 feet in length and twenty feet wide on top. It is to be constructed partially of creosoted timber. The estimated cost is $7,800.

David's Cove Breakwater—wharf extension, $4,300.

Mr. PUGSLEY. This is for the purpose of extending the breakwater and is urgently required.

Mr. JAMESON. Will that work be done by contract?

Mr. PUGSLEY. I think this will probably be done by day labour, but we have not decided.

Mr. JAMESON. I know the locality and the people there and I would like to suggest to the minister that tenders should be asked and that if possible the work should be done by contract. I think it could be done more satisfactorily for a variety of reasons. I think the department will get much better value for the expenditure, and that the people would be better satisfied.

Mr. PUGSLEY. That matter will be carefully considered.

Deep Brook—pile wharf—revote of $500 lapsed, $1,500.

Mr. PUGSLEY. This is to make provision towards constructing a substantial wharf and pile work about 200 feet long with a return at the outer end, giving a frontage of 150 feet. It will cost about $3,500. We will have probably next year to ask for a further vote, but $1,500 is all we require this year.

Delap's Cove Breakwater—part reconstruction of shore end—revote of $800, lapsed, $1,000.

Mr. PUGSLEY. This is to complete the reconstruction of a portion, being about half, of the shore end block of the breakwater at this place. This will finish the work.

Delorey's Beach, Monk's Head—breakwater —revote of $4,000, lapsed, $6,500.

Mr. PUGSLEY. This is to complete the breakwater which is 300 feet long.

Devil's Island—breakwater—extension of— revote of $4,800, lapsed, $6,000.

Mr. PUGSLEY. This is to provide for the extension of Devil's island breakwater with an arm at the outer end. The object is to provide a shelter for motor and other boats of the fishermen. There is a large fishing industry at this place.

Digby Harbour—improvements, including repairs and additions to pier, $30,000.

Mr. PUGSLEY. This is to continue the improvements now under way at Digby harbour.

Diligent River Harbour—breakwater—revote of $1,600, lapsed, $7,500.

Mr. RHODES. How much money has been expended at Diligent river, what is it proposed to construct and what is the total cost of the work estimated at?

Mr. PUGSLEY. This is for the construction of a breakwater to make it safe for vessels going in and out of this harbour.

Mr. RHODES. How much has been expended?

Mr. PUGSLEY. Only a small amount— $400.

Mr. RHODES. What is the estimated total cost?

Mr. PUGSLEY. $7,500.

Mr. RHODES. Would the minister state what the dimensions of the wharf are?

Mr. PUGSLEY. 360 feet in length, 14 feet wide on top and 30 feet high at the outer end.

Mr. RHODES. Is it the intention of the department to call for tenders and begin operations on this work during the coming year?

Mr. PUGSLEY. I cannot say anything beyond this to my hon. friend, that we are now asking for the amount in the estimates and I have no reason to suppose but what the work will be proceeded with during the coming year. Of course, we have a great many works and we have to get the plans and specifications all ready before we can call for tenders, but I have no reason to suppose that there will be any unnecessary delay in connection with the work.

Mr. RHODES. That answer does not convey very much meaning to me. I can see that this item is in the estimates, and apparently it is the intention at some time or other to construct this work. But am I to understand that the department say that they will spend $7,500 to construct this wharf, and that after the plans and specifications are brought down they will go ahead and construct it? Surely the department does not do business in that slap-dash sort of fashion. I would like seriously to know if it is the intention of the minister to see that this work is constructed. That is a plain question and I would like to have a plain answer.

Mr. PUGSLEY. The fact of the amount appearing in the estimates is evidence of the intention of the government to proceed with the work. But, before going on with the work, after this appropriation is passed, there will be a very careful survey made by the engineer, plans and specifications will be prepared and in the ordinary course, speaking generally, tenders will be invited. When the tenders come in it may be that the amount will be very considerably higher than what we estimate. I happen to have in my mind a case in my own province last year where an amount was put in the estimates and I expected to go on with a work, but when the tenders came in the amount was considerably higher than the chief engineer estimated and we did not proceed with it. Therefore, I am unable to give my hon. friend the positive assurance that the work will be proceeded with.

Mr. RHODES. I do not profess to be an expert wharf builder but I can say without any hesitation that the department can construct a wharf of splendid quality and of the dimensions mentioned by the minister for the sum placed in the estimates. He need not have the slightest worry about exceeding the amount in the estimates. I find, on looking at the Auditor General's Report for last year V—150, that the sum of $367.77 has already been expended upon this work.

Mr. PUGSLEY.

Mr. LANCASTER. Was that on election day?

Mr. RHODES. Just prior to the election. Am I to understand from the minister that this amount has been expended without any serious intention on the part of the department to proceed with the work, no plans or specifications having been prepared? The minister is unable to say when this work is to be constructed. He even intimated that if the work cost more than the amount in the appropriation it might not be constructed. It surely is a most remarkable position for a minister of the Crown to be put in. Could the minister give me an explanation of what this sum was spent for?

Mr. PUGSLEY. My hon. friend has not given me the particulars of the expenditure.

Mr. RHODES. I indicated the page of the Auditor General's Report V—150.

Conductor, Douglas Lambe, services, July, 1908, 15 days at $2.50, $37.50.

This man proved to be so expert that he lost his life in the operation.

Mr. PUGSLEY. That appears to have been some work done on the Diligent Harbour breakwater. I see there was a foreman and there have evidently been a rock driller, a quarryman and some labourers employed.

Mr. RHODES. I can see that quite as well as the minister can by reading the Auditor General's Report.

Mr. PUGSLEY. What does my hon. friend desire me to give him?

Mr. RHODES. I am asking what this sum was expended for and was it expended as a matter of experiment to know whether this wharf should be constructed at a certain point, or was it intended to be a partial sum expended on this wharf which will be completed with the estimate now under consideration?

Mr. PUGSLEY. I cannot tell my hon. friend at this moment but I will look at the engineer's report and give him the information at a later date.

Mr. RHODES. I would like to have the information because it is in my constituency, and if one of my constituents wants to know when the department is going to proceed with this work I want to be able to answer him. That is one of the reasons why I am here. I do not object to the work; indeed I may say it is a very necessary public work. I want to be able to say to my constituents when I go home that this work will be constructed and I feel like pressing the Minister of Public Works to tell me

when he will have it done. There is a very large lumber district around here and large quantities of lumber are shipped, so that the immediate completion of the work is of great interest to Liberals and Conservatives alike.

Mr. FIELDING. If every hon. gentleman should demand a similar pledge with respect to the particular work in his constituency the Minister of Public Works might have a larger contract on hand than he could fill. I take it that the presentation of these estimates shows the desire of the minister to carry out the work. If he is asked to say that every one of these works should be commenced at a particular time and carried to completion during the year I certainly should advise him not to give such a pledge.

Mr. PUGSLEY. I would assume that the $367 was for making the testing and boring in the bottom of the harbour which is necessary in all works of this kind in order to estimate the cost.

Mr. RHODES. I do not wish the Minister of Finance for one moment to think that I am unreasonable, but this item has appeared in the estimates at least once before.

Mr. FIELDING. There are quite a number like it.

Mr. RHODES. It is an old friend in the county and I wanted to know whether it was the intention of the minister to complete it in the near future, so that I may be able to tell the shippers in that locality when they will have a wharf on which to land their goods.

Mr. PUGSLEY. The hon. gentleman can tell them what has taken place to-night.

Dover Wharf, $5,000.

Mr. CROSBY. Will this be done by tender and contract?

Mr. PUGSLEY. We have not decided.

Mr. CROSBY. I thought that all public works were to be done by contract.

Mr. PUGSLEY. I have explained that all work which can be done as economically by contract as by day work will be done by contract. It sometimes happens that the tenders are higher than the estimate of the chief engineer and he recommends that it be done by day labour, or that the work is so remote from the contractors that it can be more economically done the other way.

Mr. CROSBY. Dover is not far from Halifax and there is no difficulty in getting contractors.

Mr. PUGSLEY. This Dover is in Guysboro' county.

Mr. CROSBY. I might have supposed that it was not in my county.

Mr. PUGSLEY. There are some public works to be done in your county.

Dublin Shore—breakwater pier, $10,000.

Mr. PUGSLEY. We expect to finish the work this summer.

Duncan Cove, $6,000.

Mr. PUGSLEY. This is to build an adequate shelter for the lifeboat station, to protect the wharf, and to accommodate fishing boats. The estimated cost is $19,000. This is in the county of Halifax.

Eastern passage harbour, $8,500.

Mr. PUGSLEY. This is also in the county of Halifax. It is for the improvement of the boat harbour which has become almost filled with sand to the great inconvenience of the fishermen. The total probable cost is $13,500.

Mr. CROSBY. Will this be done by contract?

Mr. PUGSLEY. I think this will have to be done by day labour.

Mr. CROSBY. This work is badly needed but I think that every working man applying for work there, no matter what his politics, should have a fair show. Of course, there is a lot of favouritism shown and it always will be shown by politicians, but at the same time when a man asks for a day's work he should not be asked what his politics are or to bring a certificate from some party man before he is employed. Men living in the locality should be employed regardless of their political opinions or of anything else except that they give a fair day's work for a fair day's pay.

Mr. PUGSLEY. My hon. friend will see how impossible it is for the minister to interfere in these cases. We endeavour to get a competent foreman, and we leave him free to employ good men in the locality. We give him no instruction about their politics at all. He is expected to use his own judgment and to select men who will give an honest day's work for a fair day's pay.

Fox Island—extension of beach protection work, &c., $1,500.

Mr. PUGSLEY. This is to construct a breakwater. The materials were purchased in 1908-9. This is to complete the work.

Mr. JAMESON. Is this to be in the nature of beach protection or the construction of a breakwater?

Mr. PUGSLEY. There is a breakwater there now, which operates, I take it, as a means of protection from the sea. This is merely for an extension of that work.

Mr. JAMESON. Last year there was an item for beach protection, if I remember rightly, in the county represented by the Minister of Finance. On that occasion the Minister of Public Works justified the work as being necessary to protect certain properties on the water-front which were being more or less carried away from year to year by the action of the water and the tides. At that time I drew his attention to the fact that a certain property owned by the Dominion government, and known as Battery Point, at Digby, was becoming from year to year worn away by the action of the tides and the water. Not only was the property diminished in area, but the earth and rocks which were being washed away were being carried into the harbour and forming a very serious sandbar. The minister said he would make a note of my remarks, and he thought some protection would be thrown up in front of the Point to prevent this erosion. Guns owned by the Militia Department are mounted there, and I think the property is under the control of the department. I would ask the minister to bear it in mind and provide for it in the estimates, if not this year, then next year. It is a very serious detriment to the harbour of Digby.

Mr. PUGSLEY. I will have a note made of it and perhaps confer with the Minister of Militia about it.

Gulf Shore—to complete breakwater between Pugwash and Northport, $1,200.

Mr. RHODES. A year or a year and a half ago the government partly constructed a wharf at the Gulf Shore in the county of Cumberland. At the same time a survey was taken between Pugwash and Northport. These are two entirely different places. Northport and Pugwash are 18 miles apart.

Mr. PUGSLEY. This is six miles from Pugwash. There was expended on the work last year $2,489.95, and the total cost will be $3,700, and this vote is to complete it.

Mr. RHODES. Gulf Shore, Pugwash and Northport would form a triangle. There has been no work other than a survey between Northport and Pugwash, and these points are 18 miles apart. I would ask the minister to make a memorandum and let me know later if it is the intention of the department to also construct a wharf between Northport and Pugwash, or if this is only to complete the breakwater at Gulf Shore.

Mr. PUGSLEY. This is to complete the breakwater at Gulf Shore. We have expended $2,489.85, and this amount is asked to complete the work. The hon. member says that the statement that it is between Pugwash and Northport is an error.

Mr. PUGSLEY.

Mr. RHODES. Yes, it was in contemplation at one time to construct a wharf near Northport.

Mr. PUGSLEY. That is probably how the error has occurred. I would move to amend the item by striking out the words 'between Pugwash and Northport.'

Mr. RHODES. It is not the intention to do anything further towards the construction of a wharf between Northport and Pugwash?

Mr. PUGSLEY. We cannot at present, because there is no appropriation.

Habitant River—to lengthen and complete approach to wharf at Canning, $2,000.

Mr. PUGSLEY. The estimated cost of this extension is $25,000. The expenditure to the 31st of March, 1909, was $2,763.17. The expenditure for this year has been $5,256.83 and we are asking for $2,000. That will make $10,000 which will have been expended, and if the further extension is carried on it will take $15,000 more but we are not asking for that now.

Mr. JAMESON. That is merely to complete the approach to the wharf at Canning?

Mr. PUGSLEY. Yes.

Mr. JAMESON. And the additional $15,000 of which the minister spoke would be required to complete an extension of the wharf, not on the approach.

Mr. PUGSLEY. Yes, that would extend it 750 feet down stream.

Mr. JAMESON. Where is this public work?

Mr. PUGSLEY. In the county of Kings.

Mr. JAMESON. Represented by the Minister of Militia?

Mr. PUGSLEY. Yes.

Hampton Breakwater—extension—revote of lapsed amount, $3,000.

Mr. PUGSLEY. This is to extend the existing wharf about 100 feet. The object is to prevent the silt and gravel from being washed into the schooner berths which are there alongside the pier. There was a previous vote of $3,000 of which none was used, and we are asking a revote to complete this work.

Harbours, rivers and bridges generally—repairs and improvements, $37,500.

Mr. PUGSLEY. This is the usual general vote, but it is less than last year.

Mr. JAMESON. I spoke to the minister with reference to Churchpoint breakwater a few days ago. The minister was kind enough to say then that out of this general vote he would endeavour to provide a berth

on the shoreward end of that wharf which would cost a comparatively insignificant sum, $300 or $400. I would like to have the matter noted now so it may appear as a matter of record.

Mr. PUGSLEY. That is under consideration and if it is decided to proceed with it it can be done out of the general vote.

Mr. CROSBY. I would ask the minister to consider the breakwater at Portuguese Cove. They have a very good breakwater there, but it is not as useful as it would be if it had a T across the end. That would make it much more commodious for the people there and would greatly improve the breakwater. I brought the matter to the minister's attention last year and would be glad if he would take it into his consideration with this general vote and could see his way clear to do the work in that way.

Mr. PUGSLEY. It would be an improvement but still it is not an actually necessary work, and I am afraid that the T would cost more than the amount we could take out of the general vote. The general vote is for repairs and small works not exceeding $500. We are providing for a good many wharfs and breakwaters and I did not feel that I could make a special provision for it this year, but I will have it carefully looked into.

Mr. RHODES. What has been the policy in the last few years in purchasing piles for the repairs on existing wharfs and for the construction of new wharfs? Have they been purchased in large quantities for the whole province, or does the department purchase a few here and there in the districts where the work happened to be? Is there any uniformity of price in the purchase of piles?

Mr. PUGSLEY. There has been annually in the maritime provinces an appropriation of a lump sum to purchase creosoted piling. That piling is purchased in the Southern States, creosoted there and used for various public works. We like to keep a quantity on hand to be used in the construction on wharfs, in the waters affected by the teredo. In harbours into which there is a flow of fresh water the teredo is not nearly so destructive as in harbours not so supplied with fresh water. We endeavour to get it under competition getting prices from the different firms dealing in creosoted timber. There are two large companies in the Southern States which deal in this and we endeavour to buy in fair quantities and at the lowest possible price.

Mr. RHODES. I had not in mind the question of creosoted timber because that cannot be purchased locally. My point was whether there was any policy of purchasing piling in quantities in order that it might be obtained at a uniform and comparatively reasonable price or if the piling was purchased from different persons in various parts of the province, where work happened to be going on, at any price that the person chose to charge the department, within comparative reason.

Mr. PUGSLEY. We are not in the habit of purchasing ordinary piling in large quantities. We purchase for each particular work. Where we let the work by contract the contractor buys the material himself. If we do the work by day work, we purchase the material for the particular wharf we are proposing to construct. Our engineer or foreman looks around and advises what is best to be done. The piling suitable for one wharf would not do for another. It may depend on the foundation, on the distance before you strike rock, on the rise and fall of the tide, &c., so that we have to buy the piling we require from time to time, and it would not do to buy in large quantities.

Mr. RHODES. I can quite understand that piling varies in size and is purchased at so much per foot. Does the department call for tenders for a certain quantity of piling at so much per foot, or allow the engineer or foreman to go into the locality and do what he thinks best?

Mr. PUGSLEY. It is largely left to the judgment of the engineer to purchase at the lowest market price.

Mr. JAMESON. Is this creosote timber purchased direct from the company?

Mr. PUGSLEY. There are two southern companies which supply the timber, and the custom of the department is to keep a fairly large quantity on hand.

Mr. JAMESON. It has been brought to my notice that this timber is not purchased from the companies direct, but from a purchasing agent or private individual, who gets the middle man's profit.

Mr. PUGSLEY. That is not the case. The government purchase from these companies through their authorized agents.

Mr. JAMESON. Have they agents in every province in Canada?

Mr. PUGSLEY. I think there are two in the lower provinces.

Mr. JAMESON. Then the rule of the department is to purchase from the agents of these companies?

Mr. PUGSLEY. Yes, from their authorized agents.

Inverness, Broad Cove Mines—harbour improvements, $10,000.

Mr. PUGSLEY. This is to provide for the carrying on of the proposed works for the accommodation of vessels and to acquire the necessary property from the Inverness Railway and Coal Company. The matter has been under consideration quite a number of years and we have expropriated certain properties from the Inverness Railway and Coal Company. The resident engineer estimates the cost at some $60,000.

Mr. RHODES. Will this complete?

Mr. PUGSLEY. No.

Joggin's Mines—breakwater wharf—repairs and extension, $9,000.

Mr. PUGSLEY. This is to extend the breakwater. The total estimated cost is $9,000.

Judique—approach to breakwater at Mckay's Point, $1,350.

Mr. PUGSLEY. That is the estimated cost to provide for an approach.

Kingsport breakwater pier — extension, $12,000.

Mr. PUGSLEY. This is to extend the breakwater piers some 200 feet. The present pier is 700 feet long and 40 feet wide, and it is necessary to extend it further to get deeper water and give much needed accommodation to vessels.

LaHave River—to provide for the disposal of saw-dust and other dredged material deposited on foreshore, $4,000.

Mr. PUGSLEY. This is to provide for the removal of dredged material which was deposited at convenient places instead of being carried a good many miles further to the sea.

Lake Ainslie—protected boat channel leading to wharf at Kenlock (Lockbay railway station), $8,000.

Mr. PUGSLEY. This is to give a channel of 15 feet wide and 6 feet at low water at the eastern end of the pier and give access to the wharf.

Leitche's Creek—wharf, $3,500.

Mr. PUGSLEY. This is to afford protection to that wharf. The total cost is estimated at $7,000.

Liscombe Harbour Wharf, $3,000.

Mr. PUGSLEY. That is the estimated total cost.

Litchfield—extension of breakwater, $4,000.

Mr. PUGSLEY. This will be sufficient for the extension of the breakwater.

Little Anse—breakwater, $10,000.

Mr. PUGSLEY. This is to afford protection to fishing vessels. The total cost will be $24,000.

Little River—breakwater—wharf, $4,000.

Mr. PUGSLEY. The total cost will be $10,000. This is to construct a landing pier 165 feet long right out to the depth of 12 feet at low water to afford proper landing and shipping facilities.

Mr. JAMESON. Is it intended to call for tenders and give the work by contract?

Mr. PUGSLEY. Yes.

Mr. JAMESON. Have the plans been prepared.

Mr. PUGSLEY. Not the working plans.

Mr. JAMESON. I suppose that after the New Year this work will be taken in hand?

Mr. PUGSLEY. Yes, after the Appropriation Act passes. There will be some 45,000 cubic feet of crib-work.

Little Tancook Island—breakwater pier, $5,000.

Mr. PUGSLEY. This breakwater pier will cost about $18,000. It is to protect the cove formed by a long projection of the southwest part of the island. It is to afford a well sheltered harbour.

Lower Argyle—wharf, $5,000.

Mr. PUGSLEY. There is an old wharf there now almost useless and this is to construct a new one. This is the estimated cost.

McNair's Cove—extension and repairs to breakwater wharf, $6,300.

Mr. PUGSLEY. The total estimated cost is $10,000 but we have expended $3,900 and this will complete.

Main à Dieu—wharf at outer end of eastern breakwater, $10,000.

Mr. PUGSLEY. The total estimated cost is $15,000.

Meteghan—breakwater — renewals and repairs, $4,000.

Mr. PUGSLEY. I move that we amend that item to read 'Meteghan River Breakwater.'

Mr. JAMESON. I would be surprised if the minister made that change. There is a place known as Meteghan River wharf, where there is a breakwater, and there is also a place known as Meteghan where there is a public wharf now in a sad state of dilapidation, and which, unless it is speedily protected, will certainly be carried away by storms this winter. I had hoped when I saw this item that it was to be an expenditure at Meteghan where the work is sadly needed. The breakwater at Meteghan, as I have also shown the minister by means of photographs, is in a bad condition, and unless some repairs are speedily made upon it, it will be damaged if not destroyed. If the minister wishes to amend his estimates by inserting an item for the extension or improvement of the

Meteghan River breakwater, I will have no objection. But where the amount is mentioned in the estimates for Meteghan, which is an entirely different place from Meteghan river, I should object to the change.

Mr. PUGSLEY. The work is very much needed at Meteghan river, and it will take this amount to repair it, while it would take a comparatively small amount to repair the breakwter at Meteghan. This is needed for Meteghan river. But if it is necessary to get a special vote for Meteghan, I will consider that a little later. But I had thought that the repairs there were so comparatively small that they could be done out of the general vote. In the meantime, I ask that this be passed for Meteghan river.

Mr. DEPUTY SPEAKER. If the motion means a diversion of the vote from its original intent, I could not receive it.

Mr. PUGSLEY. It was originally intended for Meteghan river, and it is necessary to alter the reading of the estimate in order definitely to show where the work is to be done.

Mr. JAMESON. I have no desire to prevent the expenditure of this sum at Meteghan river. But I have to say with regard to Meteghan that I believe an amount is absolutely necessary to effect the repairs there which are required in the interest, not only of the people who have to use this work, but of the department itself which owns the work. The minister is confusing the breakwater at Meteghan, for which a comparatively small expenditure is required, with the public landing which is inside that breakwater, and which is an entirely separate structure.

Mr. PUGSLEY. Supposing we voted the money for Meteghan breakwater, it could not be used for a wharf inside the breakwater. We would have to get another vote for that.

Mr. JAMESON. As the minister has inserted the word 'breakwater,' meaning a breakwater or a public wharf, I think the amount might be applied to that. But as an amount corresponding to this is necessary for that breakwater and public wharf at Meteghan, I do not think it would be desirable to divert the sum. I do not think the minister would be justified in saying that there could be any possible confusion between the two. I think the work at Meteghan stands in greater need of this expenditure than the work at Meteghan river. The latter is a comparatively new work, while that at Meteghan is in need of this expenditure to keep it from being carried away. If the minister, however, feels that under the circumstances he could not amend this then providing that a further sum corresponding in amount should be granted for Meteghan, I think would be the most suitable way of meeting the difficulty.

Mr. PUGSLEY. I could not do that, I could not amend these estimates except inso far as the amount is concerned. As to Meteghan, that is a matter that would be considered later. Suppose that this amount had been allotted to Meteghan breakwater, it could not have been used for the purpose of repairing a wharf at Meteghan, as it is inside the breakwater, while the sum you require for the breakwater at Meteghan is very small, and could be done out of the general vote. There are two Meteghans, and there is a breakwater at each place. One is known as Meteghan river and the other as Meteghan. Now this was intended for Meteghan river, therefore I would ask the committee to change this to Meteghan river for greater definiteness. If you, Mr. Chairman, feel that you could not make the change, I shall have to ask you to strike the amount out of the estimates altogether. It is true that my hon. friend spoke to me about the breakwater at Meteghan, and he certainly led me to suppose, whether intentionally or otherwise, that only a small amount would be required to make these repairs.

Mr. JAMESON. I do not wish that there should be any misapprehension between the committee or the minister, and myself with regard to this matter. I did state that the expenditure necessary on the Meteghan breakwater would be comparatively trifling, but I also pointed out that the expenditure upon the wharf at Meteghan would be a more serious matter, and I understood from the minister that the matter was receiving attention, and that it would be provided for in the estimates. When I saw this item I concluded that the minister had conceded the necessity and was preparing to meet the emergency. As for his suggestion that if this amendment is not made he will have to move to strike out the item, if that is meant as a mild kind of threat, it does not affect me in the least. I do think that if the minister is unable to allow this item to stand, as it seems to me proper that it should stand, he should be prepared to take the matter of Meteghan breakwater and public landing into immediate consideration because, in the interest of the department over which he presides, repairs are very urgently necessary at a very early date.

Mr. PUGSLEY. I have to tell my hon. friend I would be very glad to do that, but I could not allow an amount which was voted for Meteghan river to go to a breakwater in another place, and I could not allow a single dollar of that to go to the wharf at Meteghan because it is for a

breakwater. Therefore, it would not help my hon. friend, but at the same time I would say that repairs at Meteghan can be met out of the general vote. I will look into the question. If the chairman does not feel that the committee can make this amendment then I shall have to do only what I have power to do and that would be to strike it out altogether.

Mr. DEPUTY SPEAKER. If it appeared that the change was actually a diversion of the vote I would be inclined not to receive the motion, but in so far as it appears to me to be for the purpose of greater definiteness I think I am at liberty to receive the motion.

Mr. PUGSLEY. I therefore beg to move that the word 'river' be added between the words 'Meteghan' and 'breakwater.'

Item as amended agreed to.

Middle Island—Port Medway—breakwater—revote of $1,800, lapsed, $2,500.

Mr. PUGSLEY. This is to construct a breakwater on the north side of Middle Island and this is the total estimated cost of the work.

Mira River—wharfs—revote of $700, lapsed, $750.

Mr. PUGSLEY. This is to construct a wharf on the east side of Mira river 3½ miles below Victoria bridge. The total estimated cost is $1,160 of which $414 has been expended, leaving what we are asking for to finish the work.

New Harbour—repairs to breakwater at Black Point, $1,000.

Mr. PUGSLEY. This is to repair the breakwater, some fifty feet of which was carried away by a storm. This is the total estimated cost.

Northport—pile wharf—revote of lapsed amount, $3,000.

Mr. PUGSLEY. This is in the county of Cumberland and it is to construct a wharf 200 feet long 30 feet wide and 14 feet high. This will complete the work.

Mr. RHODES. Has any money been expended?

Mr. PUGSLEY. No, this is probably the one that my hon. friend spoke of.

Mr. RHODES. I think so.

Nyanza Wharf—extension of, &c., $2,500.

Mr. PUGSLEY. This is to extend the wharf fifty feet, using creosoted timber and the object is to enable three vessels to lie at the wharf at the same time. It will provide an increased depth of from eleven to 14 feet of water and the total estimated cost is $2,500.

Mr. RHODES. Where is this?

Mr. PUGSLEY. In Cape Breton at North Victoria.

Mr. JAMESON. Perhaps it would not be inadvisable for the minister to say what he means by the word '&c'?

Mr. PUGSLEY. Strike out '&c'. Mr. Chairman, if it is objectionable. This is only for the extension. I move that the word '&c.' be struck out.

Item, as amended, agreed to.

Owl's Head—to complete wharf, $900.

Mr. PUGSLEY. This is to make provision for the completion of a ballast and crib-work wharf, about 180 feet long, 20 feet wide, for 120 feet from the shore and 30 feet wide for the outer 60 feet. This is to give increased depth of water at the end of the wharf. This will complete it.

Parker's Cove—harbour improvements—revote of $1,600 lapsed, $2,000.

Mr. PUGSLEY. This is to complete the breakwater on the west side of the stream flowing in at Parker's Cove, in order to improve and enlarge the sheltered area for fishing boats and schooners.

Pictou Island—removal of wrecked portion of east wharf and addition of new sheathed cribwork, &c.—revote of $4,200 lapsed, $6,800.

Mr. PUGSLEY. This will complete the work.

Mr. McKENZIE. Before the committee rises, there was a statement made by the hon. member for Halifax (Mr. Crosby) in connection with an item in the estimates which would give a wrong impression and I desire as a matter of explanation of the merits of the item, to present the facts. He made an attack upon the building of a wharf to accommodate a steamer of only 10 tons capacity which he said was the capacity of the 'Weymouth.' I have the record of the Department of Marine and Fisheries in which the name of the steamer appears and she is put down as being 102·7 feet long, 19 feet wide 7·6 feet in depth, gross capacity 154 tons, net tonnage 106 tons and 26 horse-power. He made a similar attack upon the new boat. That boat was built after the pattern of the 'Scotia' and has a tonnage of 350. This is a fair sample of the valuable information that we received from the hon. member from Halifax.

Mr. CROSBY. It is necessary for me to give some explanation. I thought the hon. gentleman spoke of the 'Acadia' which is a very small boat. We do not consider this as anything more than an ordinary boat, a boat that runs along the coast and if we have to build a breakwater at Ingonish costing $30,000 for the accommodation of a boat that might run there once a week or

once a fortnight it is quite a large sum to pay for the service which we would receive. It is a serious matter for us in Nova Scotia where we have a great deal to do with the small amount of money that is spent. We think of our province as the wharf of Canada jutting away out into the Atlantic ocean and therefore we require a great deal. The province of Nova Scotia has done much for the west and for other parts of Canada. There is not a harbour in that province that does not require some expenditure in the line of providing breakwater accommodation for the fishermen. Therefore, I was anxious that this sum should be divided up amongst some of the other ports. I have no objection at all if the government are willing to spend $30,000 for the accommodation of a very small steamer which will run perhaps not more than once a week or once a fortnight to Ingonish. I think it is not fair to other parts of the province of Nova Scotia which are really in need of breakwaters and wharfs, and which will continue to be in need of them as everybody knows in that part of the country.

Some resolutions reported.

On motion of Mr. Fielding, House adjourned at 11.40 p.m.

HOUSE OF COMMONS.

MONDAY, December 6, 1909.

The SPEAKER took the Chair at Three o'clock.

MEMBER INTRODUCED.

Oliver James Wilcox, Esquire, member for the north riding of Essex, by Mr. R. L. Borden and Mr. Armstrong.

SELECT STANDING COMMITTEES.

Sir WILFRID LAURIER moved:

That the name of Mr. Ross (Middlesex) be added to the following select standing committees: 1. Railways, Canals and Telegraph lines. 2. Miscellaneous, Private Bills. 3. Banking and Commerce, and (4) Agriculture and Colonization.

Motion agreed to.

Sir WILFRID LAURIER moved:

That the name of Mr. Wilcox be added to the following select standing committees: 1. Railways, Canals and Telegraph Lines. 2. Miscellaneous, Private Bills. 3. Public Accounts. 4. Agriculture and Colonization, and 5. Library.

Motion agreed to.

THE BUDGET.

Mr. FIELDING. With regard to the budget, I would propose to move that Thursday be made a government day and on that day I expect to make the budget speech, if there be no objection to taking Thursday for that purpose.

Mr. FOSTER. I do not often have to ask for delay in these matters but there is an engagement made several months ago that is due on Thursday, and I will not be able to be here. Of course, the Finance Minister may go on, but it would deprive me of the pleasure of listening to his speech.

Mr. FIELDING. I would not care to go on in the absence of my hon. friend. His face opposite is always an inspiration to me.

Mr. R. L. BORDEN. Thursday is government day, I think, without any motion.

Mr. FIELDING. Not this week.

Sir WILFRID LAURIER. One month after the opening of parliament.

Mr. R. L. BORDEN. I thought it was after the third week.

Mr. FIELDING. I think the fourth week. I believe it is the last Thursday which is private members' day. Thursday would be the only day available. The trouble is that if we get into the following week we are getting dangerously near the recess. However, I will not bring it up on Thursday, if my hon. friend will not be present. I will probably bring it up on Tuesday of the following week, but I will later make a more definite statement.

QUESTIONS.

DISTRIBUTION OF SEED GRAIN.

Mr. LAKE:

1. What was the average price paid by the government per bushel for each of the different grades of wheat, oats and barley distributed as seed grain in the year 1908?
2. What was the additional cost incurred per bushel for cleaning the grain, sacking, freight, distribution, customs duties, and other expenses in connection therewith?
3. What was the charge per bushel for each grade made to the farmers to whom the seed grain was supplied?
4. What was the average price per bushel at which the surplus of each grade, not distributed as seed grain, was sold by the government?
5. What was the contract price paid for wheat and oat sacks and at what price were the unused sacks sold?
6. What was the total amount charged against farmers to whom the seed grain was supplied, and how much was paid on account of such seed grain by the farmers to the government up to March 1, 1909?

7. What was the net profit or loss to the government in connection with the seed grain distribution?

Mr. LAKE.

BUILDING OF GOVERNMENT STEAMERS.

Mr. J. A. CURRIE:

1. Has the government called for tenders for the building of the ships for which this House voted money last session?
2. If so, when were these tenders called for and from whom?
3. Were any tenders received? If so, from whom, and what were the respective amounts?
4. Were the contracts let? If so, to whom?

Hon. L. P. BRODEUR:

1. Yes.

Department of Marine and Fisheries:

2. Lighthouse and buoy steamer for the Great Lakes and Georgian Bay, 9th March, 1908—public advertisement. Ice-breaker for the Northumberland Straits, 5th March, 1908—public advertisement. Hydrographic survey steamer, 27th October, 1908—public advertisement. Fisheries protection cruiser, 2nd April, 1908—public advertisement.

Department of Agriculture:

Quarantine vessel for Halifax, N. S., 4th August, 1909—public advertisement.

Department of Marine and Fisheries:

3. Yes. Buoy steamer—Great Lakes and Georgian Bay—Swan Hunter & Wigham Richardson, Wallsend, England, $158,527.78, or with Babcock & Wilcox natural draft boiler for $160,966.67. Vickers Sons & Maxim, London, England, $216,605.59, or with Babcock & Wilcox boiler for $219,360.13. Collingwood Shipbuilding Company, Collingwood, Ontario, $217,000. Polson Iron Works, Toronto, with Scotch boilers, $245,600, or with Thornycroft Marshall boilers for $248,600, or with Babcock & Wilcox boilers, $249,900. Ice-breaker for the Northumberland Straits, Fleming & Ferguson, Paisley, Scotland, £76,160; William Hamilton & Company, Port Glasgow, Scotland, £81,700; Swan Hunter & Wigham Richardson, Wallsend, England, £82,800; William Beardmore & Company, Near Glasgow, £90,570; John Reid & Company, Glasgow, £95,100; Fairfield Shipbuilding Company, Glasgow, £97,638; London & Glasgow Shipbuilding Company, Glasgow £98,575, Palmer Shipbuilding & Iron Company, Limited, Jarrow, England, £101,100; W. G. Armstrong, Whitworth & Company, Newcastle-on-Tyne, £103,400; Vickers Sons & Maxim, Limited, London, England, £103,000; F. W. Hallstrom Bloom & Voss, Hamburg, Germany, £117,250; John C. Ticklenborg, Hamburg, £117,250; John C. Ticklenborg, Hamburg, Germany, £128,600. Hydrographic steamer for the Atlantic Coast: Fleming & Ferguson, Paisley, Scotland, $169,846.66; Swan Hunter & Wigham Richardson, Wallsend-on-Tyne, $177,633.33; Collingwood-Shipbuilding Company, Collingwood, Ontario, $181,462; Polson Iron Works, Toronto, Ontario, $249,983.

Department of Agriculture:

Collingwood Shipbuilding Company, Collingwood, Ontario, $35,000; Toronto Ship Yards, Toronto, Ontario, $39,850; Philip &

Son, Limited, Dartmouth, England, $22,600; Edward Norman, Toronto, Ontario, (for Crabtree & Company, Limited, Yarmouth, England), $28,310; John Reid & Company, Montreal, province of Quebec (representing British builders) $28,500; Halifax Graving Dock Company, Limited, Halifax, Nova Scotia, $37,362; Laurie & Lamb, Montreal, province of Quebec (representing British builders) $27,215; Polson Iron Works, Limited, Toronto, Ontario, $36,450; La Cie Pontbriand, Sorel, province of Quebec, $37,750; The New Burrell-Johnson Iron Company, Limited, Yarmouth, Nova Scotia, $32,750; Mordey, Carney, Cardiff, Wales (per Ed. Norman, Toronto, Ontario), $27,143; P. J. Powers Company, Limited, Ottawa, Ontario, $38,500.

Department of Marine and Fisheries:

4. Yes. The contract for the construction of a buoy steamer for the Great Lakes and Georgian Bay was awarded to Messrs. Swan Hunter & Wigham Richardson. The contract for the construction of the ice-breaking steamer for the Northumberland Straits was awarded to Messrs. Vickers Sons & Maxim, whose tender was considered the most satisfactory. The contract for the construction of a hydrographic steamer for the Atlantic Coast was awarded to Messrs. Swan Hunter & Wigham Richardson; Messrs. Fleming & Ferguson's tender being irregular.

Department of Agriculture:

Yes. Philip & Son, Limited, Dartmouth, England.

LACHINE CANAL EMPLOYEES.

Mr. VERVILLE:

1. How many men, what are their names, and the length of time in the service, who were employed in the carpenter shop on the Lachine canal under the supervision of Denis O'Brien, from May 1 to November 25, 1909?

2. Was there any one suspended or discharged during the same period?

3. If so, what are their names, their length of time in the service and the date of their dismissal?

4. Was there any one dismissed or suspended and reinstated during the same period? If so, what is their names and the length of time in the service?

Hon. GEO. P. GRAHAM:

1. See statement No. 1.

2. Yes.

3. Names and length of time in service, given in statement No. 2.

4. See names in statement No. 3.

DOMINION POLICE FORCE.

Mr. SMYTH:

1. How many members of the Dominion Police Force were sent into the districts of Thunder Bay and Rainy River, West Algoma, East Algoma and Nipissing, at the last general election, respectively?

2. Upon whose request, and by what representations were such police sent into the ridings, and for what purpose?

3. Who ordered them to go, and what instructions were given them?

4. Were they, or any of them, in any instance sent upon a special train? If so, why, upon whose request, what was the cost of special transportation, and who paid it?

5. What was the total cost per constituency of sending out and maintaining these police?

6. Has it been the custom of the government to utilize the Dominion Police Force for this purpose? If not, why was an exception made in these instances, and upon what authority?

7. Was the sending out of these police preceded by any request of the Ontario government to provide such? If so, by whom was such request made, and with what result?

8. Was there any correspondence with the provincial government on the subject?

Hon. A. B. AYLESWORTH:

1. To Thunder Bay and Rainy River, none; to West Algoma, three; to East Algoma, eight; to Nipissing, none.

2 and 3. It was stated in the Toronto Conservative newspapers of 19th October, 1908, that a number of men, not regular constables, were being given special authority by the government of Ontario to make arrests and were to go into the constituencies of East and West Algoma in connection with the elections then proceeding, to polling places called backwoods polls to patrol the approaches to such polls on the voting day and make arrests as they might think fit. It is the ancient and undoubted privilege and right of this House to conduct its own elections by its own officials, who are responsible to it alone. The House of Commons has at all times been jealous to guard this privilege and right, and quick to resent any interference with it. In these circumstances, believing the statements in the newspapers above referred to, to be true, I, upon my own responsibility as a servant of this House, directed that sufficient Dominion police to protect honest voters from intimidation or interference with the free exercise of their franchise and under instructions to arrest and prosecute under section 269 of the Dominion Elections Act any one guilty of such indictable offences should be sent at once from Ottawa to the Electoral Districts of East and West Algoma. I directed the Commissioner of Dominion Police to despatch the men and to give them their instructions in the words above stated.

4. Two of the men went on a special train

which, for a different purpose altogether, left Ottawa for Sault Ste. Marie on 25th October, 1908. No request was made by anybody that men should be sent on that train and there was no cost of special transportation. The circumstance that the train was going was simply taken advantage of.

5. $338.12 in all, for the two constituencies.

6. No, because this is the first instance, so far as known, in which any such interference with the conduct of elections to this House has been attempted. What was done in this case was done upon my authority alone.

7. Certainly not.

8. No.

GOVERNMENT REVENUE AT DUNNVILLE, ONT.

Mr. LALOR:

1. What was the total amount of postal revenue for the town of Dunnville, Ontario, during each of the years from 1900 to 1909, inclusive?

2. What was the total customs revenue of the Port of Dunnville, Ontario, for each of the years from 1900 to 1909, inclusive?

Sir WILFRID LAURIER:

1. Postal revenue of the town of Dunnville, Ont., during each of the years from 1900 to 1909, inclusive:

Year ended June 30,	1900	$3,057 72
" " "	1901	3,225 12
" " "	1902	3,628 28
" " "	1903	3,960 48
" " "	1904	4,178 63
" " "	1905	4,684 95
" " "	1906	5,686 87
Nine months ended March 30,	1907	4,437 98
Year ended March 31,	1908	6,010 86
" " "	1909	7,463 84

Hon. WM. PATERSON:

2. The total customs revenue of the outport of Dunnville was as follows:

Fiscal year ending June 30,	1900..	$ 4,644 16
" " "	1901..	5,747 28
" " "	1902..	7,202 25
" " "	1903..	9,017 51
" " "	1904..	13,653 87
" " "	1905..	16,367 51
" " "	1906..	30,856 00
Nine months ending March 31,	1907	24,398 27
Fiscal year ending March 31,	1908	25,286 44
" " "	1909	22,499 94

OTTAWA GOVERNMENT BUILDINGS.

Mr. PERLEY:

1. Does the government pay the taxes and local improvement rate on the building which it has rented on the northeast corner of O'Connor and Queen streets?

2. Who is to pay the water rates, street sprinkling and snow cleaning?

3. Does the government heat and light the building and pay the janitor and elevator expenses?

4. Who is to make the ordinary repairs and any changes that may be required by the government hereafter?

5. In figuring the floor space as 23,470 superficial feet, has any deduction been made for the halls, stairways, &c., and has the basement been included in such estimate?

Hon. WM. PUGSLEY:

1. No.

2. The government.

3. Yes.

4. The government.

5. Deduction made for halls, stairways, elevator, boiler and fuel rooms.

ALBERTA COAL AREAS.

Mr. MAGRATH:

1. What is the estimated total area of coal-bearing lands in Alberta and the estimate total tonnage of coal within such area?

2. What is the total area of such lands disposed of up to 31st of March last, and the average price per acre obtained therefor?

Mr. OLIVER:

1. From the information at present available an estimate cannot be given of the number of acres of coal lands there are in the province of Alberta. Coal has been discovered in many parts of the province, but in the large majority of cases the development of these several discoveries has not been sufficient upon which to base an estimate as to the extent of the coal-measures. In addition to this, more than one-half of the province lies north of Edmonton, and as no great demand for coal in this northern part of the province has yet arisen, very little prospecting has been carried on. New discoveries of coal in the southern portion of the province are still being made, and while it is known that the coal-measures of the province are of very great extent no estimate has been attempted as to the number of acres of such lands or the total tonnage of coal within such areas.

2. The total area of coal lands disposed of up to the 31st of March last is: Disposed of by sale, 259,525·33 acres; disposed of under lease, 83,830·28 acres; the average price per acre obtained for coal lands under sale is: For surface and coal mining rights, about $10 an acre; for surface rights only, about $7 an acre; under lease, about 85 cents an acre per annum.

HALIFAX AND ESQUIMALT DEFENCES.

Mr. WORTHINGTON:

1. Is proper care being given to the expensive machinery in the workshops and other buildings taken over from the imperial government at Halifax and Esquimalt to prevent undue deterioration?

2. Is sufficient care being given to the defence works, fortifications, mines, buildings, machinery and defence appliances of every nature on ordnance, command or district

gunners charge at Halifax and Esquimalt, to preserve the same so that they may be constantly fit for service?

3. Have stores or material of any description whatsoever, taken over from the imperial government at Halifax or Esquimalt, been since sold? If so, under what instructions, description and quantity, what prices were obtained, and in what manner were such sales conducted?

4. Has the attention of the government been called to a speech alleged to have been recently made in England by Sir William Henry White, K.C.B., F.R.S., LL.D., B.Sc., in which great reflections are said to have been cast upon the administration of the Canadian authorities as respects the care of properties and materials handed over by the imperial government in connection with the defences at Halifax and Esquimalt? If not, will the government cause inquiries to be made and the correctness, or otherwise, of the assertions established?

Sir FREDERICK BORDEN:

1. Yes.

2. Yes.

3. It is not practicable to reply to this question at once. Obsolete articles are disposed of annually under regulations for Canadian Ordnance Services, and it is impossible to state from records at headquarters whether some of the articles disposed of, such as tools, &c., formerly belonged to the imperial government or not. A report on this subject has been called for from the senior ordnance officers concerned.

4. The attention of the government has not been called to a speech alleged to have been recently made in England by Sir William Henry White, K.C.B., F.R.S., LL.D., B.Sc.

THE PERMANENT FORCE.

Mr. WORTHINGTON:

1. Are all recruits of the permanent force required to follow such courses of instruction immediately after enlistment as will qualify them to act as instructors to the active militia?

2. How many competent instructors are the permanent force able to supply from its present strength of 2,710 for the training of active militia?

3. Does the permanent force at Esquimalt provide courses of instruction for officers and men of the artillery branches of the active militia? If not, why not?

Sir FREDERICK BORDEN:

1. In the combatant branches of the permanent force the course of instruction given to a recruit is such as to qualify a man, who has the faculty for imparting instruction, to be an instructor to the active militia.

2. 441 hold certificates as first-class instructors. A large number are qualified to instruct, but are not so highly competent. It must be remembered that the duties of the permanent force include others beside those of instruction.

3. Yes.

Mr. WORTHINGTON:

1. Are all officers of the permanent force who are performing command or district duties paid according to the scale of consolidated rates of pay and allowances fixed by regulations for their appointments?

2. If any such officers are paid according to the regimental or daily rates of pay and allowances, what is the additional cost to the public, how long have such officers been so employed, under what authority is the scale fixed by regulations departed from, and what reasons exist for such discrimination?

3. Are any public quarters, that are owned or rented by the Crown or any department thereof, occupied by any officers in receipt of consolidated rates of allowances, or by any government officials whose incomes were so fixed as to include the hire of quarters? If so, by what officials and at what stations?

Sir FREDERICK BORDEN:

1. Yes, except in two cases in which officers in command of permanent units were seconded to fill staff appointments with the same rates of pay and allowances as they were drawing previous to transfers. The staff officers of Winnipeg and Calgary are also drawing a special rate of lodging allowance.

2. The two officers in command of permanent units, seconded to fill staff appointments, above referred to, are paid the regimental rates of pay and allowances according to rank at following additional cost over the consolidated rates fixed for the appointments: Deputy assistant adjutant general, Eastern Ontario command, $200 per annum; district staff adjutant, military district No. 12, $705.75 per annum. The staff officers at Winnipeg and Calgary draw from $300 to $362 extra for lodging allowance on account of the high rents there. These rates have been drawn since the following dates: Deputy assistant adjutant general, Eastern Ontario command, May 1, 1905; district staff adjutant, military district No. 12 (previously D.S.A., military district No. 8), May 15, 1907; district officer commanding, military district No. 10, June 15, 1907; district officer commanding, military district No. 13, May 1, 1909; district staff adjutants, military districts Nos. 10 and 13, February 2, 1909. The regulations have not been departed from, as in the first two cases the officers are drawing the pay, &c., of their rank, and were only seconded for duty on the staff. In the other cases the rates were fixed by order in council and hence became regulations.

3. Yes. Officer commanding, Western Ontario command, Toronto; district officer commanding, military district No. 7, Quebec; chief staff officer, Quebec command,

Montreal. In each of the above cases the amount of lodging allowance included in the consolidated rates, is deducted from the salary of the officer concerned. In addition, the district officer commanding military district No. 1 has been permitted to occupy quarters at Wolseley Barracks, temporarily, until required by the officer commanding regimental depot, Royal Canadian Regiment, London.

ANNUAL COST OF PERMANENT FORCE.

Mr. WORTHINGTON:

1. What is the full average cost to the public per annum for one soldier of the permanent force?

2. What is the average cost per annum for the keep of one horse for the permanent force, inclusive of shoeing, veterinary attention and all other incidental expenses?

3. (a) What is the average cost per annum of remounts.; (b) where are they chiefly procured; (c) by whom are purchases made; (d) how many were purchased during the last financial year, and at what total cost inclusive of all expenses incidental thereto, such as commission to purchasing agents, travelling expenses of purchasing officers, and transportation charges of purchased animals to destination?

4. (a) How many horses have been cast by the permanent force during the five years ended 31st March, 1909, and (b) were any such cast within three years of their purchase? If so, for what causes?

Sir FREDERICK BORDEN:

1. $564, with, in the case of mounted units, an additional $110 per man per annum for purchase of remounts and forage.

2. Approximately, $130.

3. (a) This includes travelling expenses of purchasing officer and all other incidentals. $184.65 average first cost each remount, based on three years' purchases. (b)Remounts are generally procured locally, but a few have been purchased in the Northwest for the use of the Royal Canadian Dragoons. (c) Purchases are made by the officers commanding the units requiring remounts, assisted by the veterinary officers, and acting under authority from headquarters. (d) 46 horses were purchased in 1908-9 at a total cost, including all incidentals, of $9,000.68.

4. (a) 73. (b) 27, for the following causes:

Diseases.	Number of horses cast.
Sprained shoulder and rheumatism....	1
Navicular disease..	3
Chronic laminitis..	1
String halt..	1
Ringbone..	1
Rupture..	1
Vicious and incorrigible..	4
Ataxia of hind legs..	1
Unsound in wind..	1
Thick leg..	1
Weak pastern joint..	2
Injury to pubic region..	1
Atrophied shoulder..	1
Muscular weakness of loins..	1
Sprained perforans tendon..	1
Dropsy..	1
Sprained and ruined tendon..	1
Valvular affection of heart..	1
Larnygitis and bronchitis..	1
	27

CONTRACT RE IMPROVEMENTS ON MONTREAL RIVER.

Mr. GEO. GORDON:

1. What is the name of the contractor to whom contract has been awarded for construction of improvements on Montreal river?

2. Is the contractor bound to commence and complete the work in any definite time? If so, when?

3. Have any arrangements been made to provide Cobalt with a suitable post office and customs building?

Mr. PUGSLEY:

1 and 2. Tenders have been called; the lowest tender received is from W. H. Sinclair and D. B. Campbell, $38,705. Contract has not yet been awarded.

3. No, as far as the Department of Public Works is concerned.

CRUISE OF THE 'ARCTIC.'

Mr. JAMESON:

1. Has Captain Bernier made an official report covering the last cruise of the 'Arctic' in the northern waters?

2. If not printed, will the report if any, be laid on the table of the House, and when?

Mr. BRODEUR:

1. The reports covering the last cruise of the 'Arctic' in the northern waters are now being prepared.

2. These reports are generally included in the Annual Report of the department, which is laid on the table of the House at the beginning of each session of parliament. There is, however, no objection to these reports being brought down earlier, and when they are received by the department they will be laid on the table of the House.

FREE MAIL DELIVERY IN CITY OF SYDNEY, NOVA SCOTIA.

Mr. MADDIN:

Why has the free mail delivery service promised the city of Sydney, Nova Scotia, not been put in operation, and what has occasioned the delay?

Sir WILFRID LAURIER. The delay referred to has been occasioned by the fact that the department has only recently been

able to ascertain that the city had the necessary population to entitle it to free letter carrier delivery. Moreover, the service cannot be put into operation until after the houses have been properly numbered, and the streets labelled at intersecting points, and this latter requirement is only now being supplied.

IMPORTS OF MACHINERY STEEL.

Mr. RHODES:

What quantities of single-reeled and double-reeled machinery steel were imported into Canada during the years 1907 and 1908, and what was the value of each kind in each year?

Mr. PATERSON. Single-reeled and double-reeled machinery steel are not classified separately in the customs returns. The imports of round steel shafting not exceeding 2½ inches in diameter, during the years ended 31st March, 1908 and 1909, were as follows:

Year	Quantity.	Value.
1908..	43,387 cwt.	$89,428
1909..	28,322 "	53,747

FISHERMEN'S BAIT ASSOCIATIONS.

Mr. MADDIN:

1. What amount per ton has been paid to Fishermen's Bait Associations for storage of bait?

2. What amounts were paid during the years ending March 31, 1908 and 1909, as allowances to Fishermen's Bait Associations for storage of bait at Canso, Half Island Cove, Larry's River, New Harbour, Whitehead, Port Beckerton and Drum Head, in Nova Scotia, to whom paid and the dates of the various payments?

3. What is the total amount that has been paid by the government towards the cost of construction of the freezers at Larry's River, Nova Scotia, and to whom were these sums paid?

4. What quantity of bait was stored in each of the freezers mentioned in question 2, during the years ending 31st March, 1908 and 1909?

5. What are the names of the persons in these places who report to the government as to the quantity of bait stored in the freezers?

6. What amounts have been paid by the government to the steamer known as 'Drift No. 33,' during the years 1908 and 1909, and for what services has this steamer been used?

Mr. BRODEUR:

1. $5 per ton of bait frozen up to twenty tons for the first five years of operation.

2. The bonuses to the Fishermen's Bait Associations were paid for the calendar years:

	1907.	1908.
Half Id. Cove..	100	$100
Larry's River..	100	100
New Harbour..	100	100
Whitehead..	...	...
Port Beckerton..	100	...
Drum Head..	100	100

Sir WILFRID LAURIER.

11th February, 1908, and 28th January, 1909.

3. $915.92, made up as follows:

Material supplied..	$118.85
Cheque..	797.07

The cheques were issued in favour of the Larry's River Fishermen's Bait Association.

4.—	1907. Lbs.	1908. Lbs.
Half Id. Cove..	42,000	98,000
Larry's River	48,076	115,416
New Harbour..	60,923	104,826
Whitehead..	.....	.....
Port Beckerton..	49,912	.....
Drum Head..	53,894	112,615

5. Mr. Peter Macfarlane, the department's outside officer in charge of this service, on whose certificate the bonuses were paid.

6. Nothing has been paid to this steamer, as she is the property of the department. She is employed as a tender to the Canso-Dogfish Reduction Works.

POSTMASTER AT CAMBORNE B.C.

Mr. GOODEVE:

Was a petition received by the Post Office Department from the citizens of Camborne, B.C., complaining about the appointment of a postmaster there, and objecting to being compelled to go into an hotel to receive their mail? If so, what action, if any, was taken in regard to it?

Sir WILFRID LAURIER. No petition has been received from the citizens of Camborne, British Columbia, complaining about the appointment of a postmaster there, or objecting to being compelled to go into an hotel to receive their mail, but a telegram and letter were received from Mr. W. G. Marten, who informed the department that he was acting on behalf of the citizens of Camborne, stating that there was objection to the appointment of the present postmaster, inasmuch as the post office would be kept in an hotel, but the department was assured when making the appointment that the post office would be kept in a drug store, of which the present appointee, Mr. Abey, is the proprietor, and has no reason to believe that the postmaster has not kept good faith with the department, and that the office is now situated in a drug store according to agreement. If the hon. member for Kootenay will assert that the post office is now being kept in a hotel, the department will have immediate inquiry made and take such action as will protect the public.

EXPORTS OF FARM AND DAIRY PRODUCE.

Mr. ARMSTRONG:

1. How many bushels of wheat, oats, barley and pease were exported from Canada in the year ending 31st March, 1909, and the total amount received in each case?

2. How many dollars worth of butter and cheese, respectively, were exported from Canada in the year ending March 31, 1909?

Hon. SYDNEY FISHER:

1. The exports of the produce of Canada and imports for consumption, respectively, of wheat, oats, barley and pease during the fiscal year ended March 31, 1909, were as follows:

	Exports. (produce of Canada.) Bushels.	Imports. (for consumption.) Bushels.
Wheat..	49,137,449	46,366
Oats..	5,255,610	454,693
Barley..	2,959,335	97,730
Pease..	801,309	30,210

2. The value of butter and cheese the produce of Canada exported from Canada during the fiscal year ended March 31, 1909, was as follows:

Butter	$ 1,521,436
Cheese..	20,384,666

TITLE OF LOT 73, BAIE ST. PAUL, MANITOBA.

Mr. STAPLES:

1. Is the title of lot 73, Baie St. Paul, province of Manitoba, vested in the Crown? If so, is it for sale? If not, why not?

2. Are there any unsettled claims against said lot?

3. If so, how many, who makes the claims, and what is the nature of the respective claims?

4. Has there been any applications made to purchase said lot? If so, who are the applicants and when did they make application?

5. Is it the intention of the government to offer said lot for sale? If so, when and on what terms and conditions?

Mr. PUGSLEY:

1. Yes; not for sale, pending settlement of claims thereto.

2. Yes.

3. Two, Louis St. Denis and Susé Gladu, respectively, on the ground of ownership before the transfer of the territories, July 15, 1870.

4. Yes, John Merigold on the 14th September, 1876; Peter Kirton, 7th October, 1890; J. Lenfestey, 6th September, 1902; Alfred Hogue, 19th June, 1908, and John Cameron, 30th October, 1909.

5. No; pending settlement of claims referred to in answer to question No. 3.

ESQUIMALT ARMAMENT.

Mr. BARNARD:

1. What was the cost of transporting the six twelve-pounders, B.L. 6 cwt. guns with lumber, wagons, stores and ammunition, &c., to Esquimalt, British Columbia?

2. Where did these guns come from, what regiment had last been using them, and what guns have been supplied in place of them to such last mentioned regiment?

3. For what purpose were these guns sent to Esquimalt, British Columbia, and what unit is to train on these guns?

4. Has this type of gun been discarded by the imperial authorities as useless for modern warfare?

5. Has the department withdrawn these guns from eastern Canadian regiments and armed them with more modern weapons?

6. It it the intention of the department to send any more of these guns to the Pacific coast?

Sir FREDERICK BORDEN:

1. $957.27.

2. (a) Montreal and Granby, P.Q. (b) 6th and 7th brigades, Canadian Field Artillery. (c) Q.F. 18-prs.

3. (a) To replace 13-pr. muzzle loading guns. (b) No. 1 company, 5th 'British Columbia' regiment, Canadian Garrison Artillery.

4. No.

5. Answered by No. 2.

6. This will depend upon circumstances.

MILITIA CLOTHING.

Mr. WORTHINGTON:

1. Have articles of clothing issued to the active militia a fixed life, at the expiration of which the militia corps become entitled to a new issue, or is a new issue held back until the previous issue is produced, examined, and condemned as unfit for further service?

2. Have articles of clothing issued to the permanent corps a fixed life at the expiration of which they are replaced by a new issue, without reference to their fitness, or otherwise, for further use?

3. If, at the expiration of a fixed life for clothing issued to the permanent force, such articles are found to be still fit for further use, are men permitted to continue to use the same, and in lieu of a new issue, draw a cash allowance for their personal benefit?

4. Is the government aware that under existing regulations as to the issue of clothing to the active militia, purchases from the department have frequently to be made by militia officers, from private funds, in order to provide uniforms for their men?

5. If so, does the government consider it proper to exercise such discrimination in establishing regulations to govern administration principles, as operates to the financial gain of the permanent soldier and the financial loss of the active militia?

Sir FREDERICK BORDEN:

1. A minimum period of duration of wear is fixed for all articles of clothing issued to non-permanent units. If, after this period has expired, an article is considered by the inspecting officer fit for further service, such article must be continued in use until worn out.

2 and 3. Clothing issued to permanent units is divided into two classes, 'public property' and 'personal property.' All articles of public clothing have a fixed period of duration of wear, during which

time the militiaman is financially responsible for the same. They are continued in use beyond this period until condemned as unfit by a board of officers. Articles of personal clothing are issued at stated intervals as part of the original contract with the militiaman. If an article of personal clothing is in sufficiently good condition to last another period, compensation in lieu of issue is authorized.

4 and 5. No. This should not be the case, as articles of clothing with a fixed period of duration of say three years, are, generally speaking, only used for three annual camps, that is for thirty-six days. The only charges made against officers commanding non-permanent units are for deficiencies or damages due to carelessness or neglect.

PROVISIONAL SCHOOL ALLOWANCES.

Mr. WORTHINGTON:

Is the government aware that the allowance made to the officers of the active militia to cover lodging and subsistence while attending provisional schools of instruction is fixed at one dollar per diem, while that for officers of the permenent force detailed for duty at the same schools, is fixed at two dollars and fifty cents per diem? If so, what is the basis for the discrimination in favour of the permanent force and against the active militia for the same service?

Sir FREDERICK BORDEN:

The permanent force officer makes soldiering his profession; is ordered to the provisional school, and has to be allowed a suitable rate of subsistence while away from his station.

As regards the active militia officer, the provisional school is opened in his neighbourhood at his request and to suit his convenience. Usually no allowance is paid, but, where such is granted, the same rate is paid as at the royal schools, viz., $1 per diem.

PROTECTION OF ARCHIVES.

Mr. PAQUET:

1. Are the archives of the various federal departments secured against fire?

2. Are these archives now, or will they be, transferred to our Archives Building?

Mr. PUGSLEY:

1. The departmental buildings, at the time of erection, were of fireproof construction so far as then practised. When the west block was rebuilt after the fire, it was made entirely fireproof. The records, plans, &c., of the departments are nearly all kept in steel files, which system has been generally adopted.

2. About 350 old plans belonging to the Department of Public Works have so far been transferred to the Archives building and others will be transferred as may be advisable.

Sir FREDERICK BORDEN.

CANADIAN YEAR-BOOK.

Mr. PAQUET:

1. What amount has been expended during the last fiscal year for the book containing the annual statistics of Canada, called the Year-book?

2. What was the number of French copies distributed?

3. To whom is this book generally sent?

Sir WILFRID LAURIER:

1. $6,951.21.

2. $1,465.

3. Members of the House of Commons and Senate, provincial ministers, managers of banks, consular and diplomatic representatives, libraries of public institutions, universities, classical colleges, superior schools, school inspectors, boards of trade and newspapers as per file in the reading room of the House of Commons. The mailing list is revised each year.

RURAL MAIL DELIVERY IN ALGOMA.

Mr. BOYCE:

1. Has the Post Office Department had any application or applications for the organization of any system of rural mail delivery in any portion of the ridings of East and West Algoma? If so, when and by whom were such applications made, in respect of what territory or districts, and what decision was arrived at with respect to them?

2. Has the department under consideration any plans or scheme for rural mail delivery in portions of any or either of the above ridings? If so, in what portions, and what would be the nature of the service to be given to the public?

Sir WILFRID LAURIER:

1. The only application for rural delivery in East and West Algoma was for the mail route between Goulais Bay and Sault Ste. Marie. Dr. R. J. Gibson, of Sault Ste. Marie submitted a petition on the 15th December, 1908. After inquiry and report by the chief post office superintendent, the delivery was authorized on the 29th March, 1909, but the inspector has since reported that only two of the seventeen petitioners have agreed to purchase boxes and the service has not yet been established.

2. The department is prepared to consider the establishment of rural delivery on any existing mail route on receipt of a petition from the residents on or contiguous thereto.

TARIFF COMMISSION AT MIDDLETON, NOVA SCOTIA.

Mr. JAMESON:

1. What members of the government composed the Tariff Commission of 1906?

2. Did the commission sit at Middleton, Nova Scotia? If so, upon what date or dates?

3. What subjects were then presented to the commission for consideration, and by whom, respectively?

4. Was the evidence taken by the commission printed and distributed? If not, why not?

5. Did the commission make a report? If so, was same printed and distributed? If not, why not?

6. What recommendations, if any, did the Tariff Commission make respecting the subjects brought before it at Middleton?

7. What action did the government subsequently take in regard to said matters?

Hon. W. S. FIELDING. A committee of ministers of the Crown, commonly spoken of as the Tariff Commission, conducted inquiries into the operation of the tariff at many places throughout the Dominion in the autumn of 1905 and the beginning of 1906. The committee sat at Middleton, Nova Scotia, on January 16, 1906, and the ministers present were the Ministers of Finance, Customs and Inland Revenue (Mr. Brodeur).

All the proceedings of the committee at every point were open to the public and were widely reported in the newspapers of the day. The names of all witnesses and the full report of their evidence were submitted to this House in the session of 1906 and are on file for the information of any member who may wish to consult the reports. The House of Commons ordered that these reports be not printed. The ministers made no formal report, but the information received by them, during the inquiry, was used in the revision of the tariff at the session of 1907.

FISHERY REVENUES IN ALBERTA AND SASKATCHEWAN.

Mr. LAKE:

What revenue has the government derived from licenses, fees, sales, &c., in connection with the fisheries of Alberta and Saskatchewan, respectively, from 31st August, 1905, to date?

Mr. BRODEUR:

Saskatchewan—	
Leases and licenses	$3,693 00
Sales	13 00
Fines	155 10
Alberta—	
Leases and licenses	$1,170 90
Fines	67 50

MOTIONS AGREED TO WITHOUT DISCUSSION.

1. For a return of such information as has not already been brought down, showing the purpose for which, and the persons to whom, the $18,118,133.58 mentioned in the answer of the Minister of Railways and Canals of the 17th November, 1909, was paid, the information in the foregoing to be classified under the various heads.

2. The names of the 1,434 employees referred to in the answer of the Minister of Railways and Canals of same date; the position occupied by each; the salary each received; the place to which each belongs; the place where each is engaged; the dates of their respective appointments, and upon whose recommendation such appointments were respectively made, and the several employees classified under the heads of the various positions they occupy.—Mr. Jameson.

For a copy of all papers, reports, correspondence, &c., between the Department of the Interior and its officers and agencies and any other persons, relative to the s.w. ¼ section 24-38-10 w. 3rd M., and the respective claims thereto of Allen R. Mudie and Thos. G. Warwick.—Mr. Lake.

For a copy of all letters, communications, petitions and correspondence with and by the government, or any minister, with regard to the acquiring or building by the government of terminal elevators at any point or points in Canada.—Mr. Campbell.

For a return showing in detail all the sums of money expended by the government of Canada in connection with the imperial defence conference held at London, England, during the present year, with the names of all persons to whom payments were made in connection with said conference, the date and reasons of payment and the department interested.—Mr. Monk.

For a copy of all correspondence, petitions, and other papers between any person or persons and the governement or any member thereof, or any official thereof, with reference to the dredging of the Napanee river.—Mr. Uriah Wilson.

For a copy of all papers, letters, telegrams, documents and correspondence with reference to or in any way concerning the installation of free mail delivery in the city of Sydney, N.S.—Mr. Maddin.

For a copy of all correspondence, documents and reports since the 1st January, 1908, between our immigration agents in Belgium and the Minister of the Interior.—Mr. Paquet.

For a copy of all correspondence, reports, documents and papers touching the matter of the salmon fishery of Salmon river, Digby County, N.S., and the fishways or passes in said river.—Mr. Jameson.

For a return showing all moneys paid by the government in connection with the surrender of St. Peter's reserve, to whom paid, and for what; also, all moneys paid in connection with the moving of Indians to the new reserve on Lake Winnipeg, to whom paid, and for what.—Mr. Bradbury.

For a return showing the amount received by the Minister of Finance under Land Titles Act, section 159, chapter 110, R.S.C., 57 and 58 Victoria, chapter 28, section 116; how such fund is invested under section 160 of the same Act; the amount of interest which has accrued from said fund; and the amount paid for losses arising from bad titles guaranteed by said fund.—Mr. Macdonell.

For a copy of all letters, communications, petitions and correspondence with and by the

government, or any minister, with regard to the appointment of some one to fill the vacancy on the Board of Railway Commissioners, caused by the demise of the late Hon. Thos. Greenway.—Mr. Campbell.

For a return showing how many officials of the government, or of the Senate or House of Commons, have residences or living rooms in Ottawa supplied by the Crown, with the estimated yearly value and the rent charged in each case.—Mr. Blain.

TECHNICAL EDUCATION.

Mr. HUGH GUTHRIE (South Wellington) moved:

That in the opinion of this House it is advisable that a commission of inquiry be forthwith appointed to investigate the needs of Canada in respect to technical education, and to report on ways and means by which these needs may be best met.

He said: During the session of this House in 1907, I had the honour to move a motion framed in terms very similar to those of the motion which I have now the honour of bringing to the attention of the House. But on that occasion the motion came up for discussion at a very late hour of the evening, and before a very thin attendance of members; the discussion was exceedingly limited, and the subject did not, I think, receive the attention which its importance deserved. I do not think that upon that occasion I was able to impress either the House or the government with the soundness of my argument, or with the propriety or necessity for the motion, strongly as I was able to impress myself. I may say that the views which I then expressed I still hold; and in presenting my case on this occasion, I shall discuss it from the same point of view as I did on the former occasion.

I hope that on the present occasion the discussion may become more general, as I am fully aware that there are many hon. members in this House far better able to discuss it than I am, men who have greater experience, more information, fuller knowledge in regard to the subject of technical education than I have. I bring it forward on this occasion, as I did on the former occasion, at the request of the Trades and Labour Congress of Canada and of the Canadian Manufacturers' Association, two very prominent and important bodies in this community. Both those bodies have passed very strong resolutions upon the subject, and have honoured me with the request that I bring the matter once more to the attention of this House.

The Canadian Manufacturers' Association has not only taken action in concrete form upon the subject itself, but has gone to the trouble of consulting many of the men who are at the head of the leading educational institutions in this country, for the purpose of obtaining their views upon the proposal contained in this motion. I think almost without exception the association has received replies from those men who are leaders of education in this country, commending the course proposed in this motion. The association has also sought to find the opinion of the leading Boards of Trade and Chambers of Commerce in Canada on this question, and has consulted probably all the Boards of Trade and Chambers of Commerce from east to west, in all towns and cities of any consequence. Out of fifty or sixty communications received from these bodies, I think, without exception, they have passed resolutions in favour of the proposal contained in the resolution. Furthermore, the Manufacturers' Association, realizing perhaps what was the most serious objection to the proposal, have taken the trouble of consulting the premiers of the various provinces of Canada as to the necessity and propriety of the motion and as to the question of its being brought up in this parliament, and I believe that without a single exception the premiers throughout the various self-governing provinces in Canada have replied consenting to the proposal, or, at all events, offering no objection to the appointment of a commission by this government for the purpose of making an inquiry such as is asked for in this motion. I would like, for the sake of placing them upon the record, to read some of the resolutions which have been passed by the various bodies which I have mentioned. They are particularly pointed, and, to begin with, I would like to place before the House the resolution of the Trades and Labour Congress of Canada, which is in the following words:

Resolved, that inasmuch as the natural resources of Canada in its rivers, in its forests and in its farm lands—are of immeasurable extent and commercial value, and are urgently calling for the best and most approved means of development and utilization; and whereas the present methods of production require further scientific stimulus—more especially in the mechanical branches—of a broadly national character, through a proper and special educational system; be it resolved, that this Trades and Labour Congress of Canada place itself on record as in favour of the establishment of industrial technical schools throughout the Dominion, and it is hereby an imperative instruction to the executive of this body to use its best efforts, at an early date, in urging the importance of the subject upon the serious attention of the Dominion government with a view to the establishment of such a system of special education throughout Canada.

Then, the Trades and Labour Congress, in addition to the resolution which I have just read, have presented memorials to the government on more than one occasion in the same direction, and I quote from one

of the memorials which have been presented the following language:

The workmen of Canada are strongly of opinion that the welfare and development of Canada demand some large scheme of technical education. It is not a matter alone for the welfare of the workmen or of the employer, but of the whole Canadian people. We want Canada to be foremost in the arts and manufactures, and we are just at that stage of industrial development when the institution of technical schools would be of most value.

The Manufacturers' Association of Canada has passed a resolution very similar in terms to the resolution which I have just read, but I do not find that I have before me a copy of it, although it was quoted by me in the remarks which I made to the House in the session of 1907 and is upon 'Hansard.' The various boards of trade and chambers of commerce from the Atlantic to the Pacific have passed upon this question, but, without reading all the resolutions, I take that passed by the Halifax Board of Trade as a fair sample of the resolutions which have been passed by the other boards and chambers. It is in the following language:

Be it resolved, that in view of the facts that the foremost nations of the world have definitely proven that the technical education is the greatest weapon of modern industrial warfare, and that Canada's immense natural resources should be intelligently and efficiently developed by the most modern methods, and whereas, Canada owes it to Canadians to furnish them the technical training adequate to carry on such development, that the Dominion government be requested to appoint an able commission of investigation to ascertain the best measures for establishing technical education in this Dominion of Canada.

I quote these various resolutions for the purpose of showing that the demand for technical education is by no means local or sectional, but is entirely national in its character.

During the last thirty or forty years great changes have taken place in the educational methods of many of the older countries of the world. Notably is this the fact in the case of Germany, France, Holland, Belgium, Great Britain and the United States. Each of these countries has calmly sat down to consider its educational system, and each will be found to-day expending very large sums of money, not upon the old scholastic routine, but more particularly in looking after the actual needs of its great industrial classes for the purpose, in the first instance, of enabling the individual citizen the better to gain a livelihood, and, in the second place, for the purpose of enabling the nation itself to maintain its proper place in the markets of the world. The demand for technical education on the part of the craftsman, the artisan and the workman of this country arises, no doubt, from the laudable desire of the mechanic to better himself in his own art or his own trade, in the hope thereby that he might increase his remuneration, and in the hope thereby that he might perform his work under less laborious conditions than hitherto. The demand for a system of technical education on the part of the employer or the manufacturer arises from the fact that in recent years the manufacturers of this country have from experience found that it is a difficult matter for them, either in the home market or in foreign markets, to compete against manufacturers of countries where there is a large staff of technically instructed artisans at their disposal.

I am well aware, Mr. Speaker, that perhaps the most formidable objection which can be made to the proposal which I have the honour to lay before the House, will be the constitutional objection. The objection will be that under the constitution under which we in Canada are governed the whole question of education, by section 93 of the British North America Act, is a matter for the exclusive jurisdiction of the various provinces, and at first blush, upon a superficial examination of the question, that objection might be most formidable, indeed, might prove an absolute barrier to any action upon this subject by this House. However, I think that upon an examination of the Act and proper appreciation of what is meant by technical education the House will agree with me that there are many things that this parliament might do in regard to technical education which will in no way infringe upon the rights or the exclusive jurisdiction of the various provinces under section 93 of the British North America Act. Unfortunately, the term used, I think universally, in the English speaking world, to describe this particular kind of training, is technical education. A more correct phrase, to my mind, would be industrial training and probably, if the phrase were industrial training and not technical education, there would be less objection from the point of view of those who maintain that this is a matter now which infringes upon the right of the provinces in the matter of education. I am not positive that I can quote the exact language of section 93 of the British North America Act, but its provision generally is that, in regard to education the provinces shall have exclusive jurisdiction.

In answer to the objection upon the constitutional ground, I would state, in the first place, that one must consider the exact or precise meaning of the word 'education' as used in the 93rd section of the British North America Act. That Act was passed as far back as 1867. At that

time there was no such thing as technical education known within the confines of British America, and so technical education or industrial training did not enter into the contemplation of the men who framed that section. I submit that the word education as expressed in that section must receive its plain ordinary meaning, which is that course of instruction which we give to the youth of this country in the public schools, the high schools, the collegiate institutes and the universities; a training in languages, classics and moderns, in mathematics, in arts, in science and kindred subjects. It is entirely a scholastic training, one destined to turn out cultured and refined scholars in the Dominion, and that I submit is the meaning of the word education as used in the 93rd section. But technical education is an entirely different thing. It is a matter of economics rather than of culture; it is a matter of dollars and cents rather than of scholarship or refinement. That is the distinction I draw between the two, and in order to bring that distinction more plainly to the attention of the hon. members who hitherto have probably treated the subject with more or less indifference, let me place before the House the ordinary curriculum which is prescribed in the average institute of technology, whether it be in Europe, in Britain or in the United States. We all know the ordinary curricula of the colleges and universities of the country, but the curriculum of an institute of technology is an entirely different matter. In the average curriculum of a technical institute there will be a department of physics, including such subjects as light, heat, sound, electricity and magnetism; a department of hydrostatics treating of such things as liquids, gases, hydraulic engineering and machinery; a department of mechanics, treating of force, motion, gravitation and kindred subjects; a department of chemistry, where chemistry will be taught in all its branches, embracing theory and practical research; a department of mathematics, where mathematics will be taught so far as is required for practical application to scientific work; a department of free hand and industrial drawing and design; a department of machine construction and pattern making; a department of architectural design and decoration, clay modelling and leather cutting, and a complete course in mineralogy, metallurgy, geology, and engineering in all its branches.

Mr. SPROULE. Are not all these subjects now taught in the higher branches of education?

Mr. GUTHRIE. In a few institutions, yes. It may be argued that all the subjects I have enumerated are at the present day taught in some way or other in the schools of the country. We know that the University of Toronto has its faculty of applied science, that McGill University has a very elaborate faculty of applied science, that Queens University has its department of mines, and that other universities are similarly equipped, so that it is possible for one to obtain instruction in almost any of the subjects I have enumerated at one or other of the great Canadian universities. But, Sir, that is accounted for by the fact that these universities have gone beyond what was the original intention of their founders; they have deemed it necessary in order to meet the needs of the people to go beyond the scholastic or academic training which in former years was considered sufficient. But, Sir, these institutions are only for the favoured few, and it is for that reason that I urge the view upon the House which I now do. The demand for technical education in Canada does not come from the children of parents who can give them a university education; it does not come from the rich, it comes from the moulder and the machinist, the metal worker and the wood worker, the weaver and the spinner, the shipwright and the millwright, the stonemason and the bricklayer. These are the men who are today making demands, not only upon this government but upon the provincial legislatures, for a more advanced system of industrial training.

Mr. SPROULE. Does the hon. gentleman pretend to argue that when the British North America Act was enacted these subjects were not included in the higher branches of education then?

Mr. GUTHRIE. I think I can say without fear of contradiction that every subject I have read to the House as part of the curriculum of an institute of technology, with the single exception of chemistry, would not be found in the ordinary curriculum of any Canadian university in 1867. These subjects have only been taught in the university course within 15 or 20 years at the most indeed it is only within the last ten years that faculties of applied science in our universities have become of any very great importance. But, my argument simply is that when the word education was placed in the British North America Act it meant the scholastic training to which I have referred and it did not mean industrial training at all. But, another answer to any objections which may be taken upon constitutional grounds as against the federal government carrying into effect such a motion as I present, may fairly be found in the language of section 91 of the British North America Act. Section 91 prescribes among other things that in

matters concerning trade and commerce this parliament shall have jurisdiction, and I submit that the question of industrial training is really a matter pertaining to the trade and commerce of the Dominion. It vitally affects the trade and commerce of Canada, it vitally affects our manufactured product as to its quality, its quantity and its means of transportation. It also affects the question of obtaining foreign markets for our products and the prices to be obtained. Indeed the Department of Trade and Commerce is to-day carrying on what in the German empire is a distinct branch of their technical training, because our department is sending out trade agents to various parts of the world to secure trade and to make reports on trade conditions. I submit then that the training meant by the term technical education is a matter which closely affects the commercial standing of the country, that it is a matter which this parliament might well deal with, and that it cannot be open to the objection that it comes within the term 'education' in section 93 and so belongs to the provinces. Let me submit a parallel case. At the city of Kingston we have the Royal Military College, where this government is actually engaged in the work of tuition. A general education is afforded in that institution. They teach mathematics, languages, English literature, general subjects. They give a man a good all-round education apart entirely from military requirements. It may be asked, why does the government do that in the face of section 93 of the British North America Act? It is immediately answered that this is a matter of militia and defence, over which this government has exclusive jurisdiction. Might we not say the same of industrial training as related to the trade and commerce of the country? We engage in the work of tuition at Kingston simply as a sort of adjunct to militia and defence; why not engage in industrial training as an adjunct to our trade and commerce?

I think I may fairly ask the House to consider another answer to the argument that the adoption of this motion would be an encroachment upon the constitutional rights of the provinces of this Dominion, that is, that the question is of national concern, and not a local or sectional matter. Let us see how other countries have dealt with this question, and what they include under the term technical education. No other country so far as I know has a constitutional Act precisely similar to the British North America Act; but there are other countries in which are applied general principles very similar to those under which we live in Canada. Notably is this the case in Switzerland, where there is a federal authority with a number of autonomous cantonal governments. Notably also is this the case in the United States, under their federal system, with their state governments. I might also point to the great empire of Germany, which is made up of a great number of states or principalities, with a federal authority presiding over all. In each of these countries industrial training is looked on entirely as a national matter, not as a state or municipal matter, and not as a matter of education in the sense of scholarship.

Germany has been the great pioneer, the great progenitor, in this work. The first technical institute in Germany was established at Carlsruhe in 1825, another at Munich in 1827, another at Dresden in 1828, and another at Stuttgart in 1832. These were the pioneer schools of industrial training, no other country in the world having adopted the system up to that time. But the work that Germany started 85 years ago has spread enormously until to-dav it has the most complex system of industrial training known to the civilized world. That system is briefly as follows. They have their public schools very similar to those in this and other countries, and in connection with the public schools they have a system of manual training very similar to what we have in the public schools of Ontario and probably in those of other provinces. It is not with the manual training part of the work that my resolution deals. That may be looked on more as a matter of education in the strict sense of the word. Indeed, I do not think the Trades and Labour Congress is in favour of manual training, because it has a tendency to turn out on the country a great many unfinished mechanics. After the public school course has been taken by the German youth, he selects his trade or occupation, and, as an apprentice, is eligible for entrance into one of the technical continuation schools. This is really the first step in his industrial training. There are something like 2,200 of these schools in Germany to-day, attended by over 325,000 pupils. After having taken a course in a continuation school, the pupil is eligible for entrance to a higher grade technical institute, or specialized trade school.

Mr. FOSTER. What is the length of that course?

Mr. GUTHRIE. It varies from two to three years consecutively, a great deal of the instruction being given at night. Some of the schools are free, and in some a small fee is charged. At the conclusion of that course, on which the German youth enters as an apprentice, he comes out as a more or less finished mechanic. But there is a much higher grade in the specialized trade schools, to which he then becomes eligible. In Germany there are 524 of these, subdivided as follows: Schools of mechanics, 25; schools of mining, 58; schools of architecture and construction, 53; schools of

metallurgy, 10; schools of textiles, 117; schools of wood-carving, 24; schools of industrial art and design, 27; schools of ocean navigation, 41; schools of fresh water navigation, 52; schools of shipbuilding, 5. According to the curriculum of an ordinary building trade school, we find that a man who is otherwise looked on as a very good mechanic is taught there, stone-cutting and laying, brick making, plastering, carpentry, scientific construction, uses, strength and value of materials, designing, modelling and ornamentation, heating and ventilation, road and bridge building, drainage and irrigation. In that whole curiculum there is not a single subject that one would say came within the definition of the word education as used in the 93rd section of the British North America Act. The course of instruction in a textile school covers the whole process from the lowest grade of primary weaving to textile and mechanical engineering. This is taught not only in the 117 textile schools, but also in 8 universities. The course including weaving, spinning, bleaching, dyeing, machinery, properties of raw materials, manufacturing of all woven and all spun materials. In the curriculum of one of these textile schools there is no subject taught that one could argue came within the meaning of the word education as used in the 93rd section of our Constitutional Act. Take the curriculum of the art trade school and these schools are schools of the highest consequence. They are not schools in the strict sense of the word, but deal more with commercial art, more with ornamentation and design. The courses there consist of drawing, modelling, ornamentation, painting, furniture designing, wood carving, pottery and leather cutting. These are the highest classes of trade schools, but in addition they have in Germany nine technical universities and three technical mining universities.

Mr. FOSTER. Are there stated courses in these schools?

Mr. GUTHRIE. I do not know the length of time. I have not come across that in my researches, but I fancy there must be some stated time and system of examination. To show the length to which the system has been carried in Germany, take the Principality of Wurtemburg, with a less population than Ontario, and you will find that in Wurtemburg there is one state university, one technical school, one textile school, one mechanical school, one building trades school, three weaving schools, two hundred and thirty-one industrial improvement schools, eighteen domestic schools for women, a commercial college and an agricultural high school. And all these are in but one state or province of the German empire, with a population less than that of Ontario. That great institute of technology instituted at Berlin and maintained entirely by the empire itself—the Berlin Royal Technical College—has 140 professors, 260 assistants, 3,500 students, and gives courses in engineering, chemistry, metallurgy, and there are besides free museums, free art galleries and free laboratories. The expenditure on technical education and industrial training in Germany amounts to a tremendous sum annually.

One question for us to consider is how is the cost of all these met? These are maintained according to the following contributions: Tuition fees constitute 23 per cent of the cost, municipal grants for school funds and other donations 49 per cent, and the German empire itself contributes 28 per cent. I mention this to show that in the empire of Germany, the question of industrial training is looked at as a great national undertaking and not as a local matter at all.

Mr. R. L. BORDEN. Are these schools all under the control of the empire or of the individual states?

Mr. GUTHRIE. I cannot inform my hon. friend on that point, but from such facts as have been brought before me, I think the control rests with the municipalities, though with regard to some universities, not only are they controlled but they are maintained to the extent of 28 per cent by the empire.

It may be asked what has that system resulted in? In the first place it has resulted in furnishing a population with a larger percentage of highly skilled artisans than can be found in any other country. It has resulted in transferring some of the trade heretofore enjoyed by other countries to the German empire. Its results can be found in the records of the manufacture of aniline dyes. Twenty-five years ago the dye stuffs of the whole world were manufactured in Great Britain. To-day the dye stuffs of the whole world are manufactured in Germany. This is one of the direct results of the work of the German students in the technical laboratories of the German empire. So with the coal tar products. To-day Germany controls the whole trade in these products, and the reason is that she has discovered improved processes through the researches in her laboratories. In textiles, the German trade became so enormous about 1890 that the merchants and manufacturers of Great Britain, at their own expense, appointed a commission to inquire into the conditions and discover the reason for the increase in German trade and the diminution in their own. That commission reported that the reason was to be found in the improved machinery, methods and higher standing of the German mechanical workman. And that report being submitted to the trade at Manchester,

steps were at once taken to institute technical education, and a scheme has gradually been developed, not only in Manchester, but in other parts of Great Britain.

So in the iron and steel trade. Twenty-five years ago the British exports of manufactured iron and steel were five and six times as great as those of Germany. To-day, according to a recent article in the London 'Financial News,' German exports are almost on a par with those of England, and it is pointed out that raw material is more expensive in Germany than in England. According to this article, wages are higher perhaps in Germany than in England, and yet the German trade in iron and steel is rapidly equalling that of Great Britain. What is the reason? It is not to be found in the tariff legislation of either country but in the greater skill and improved methods of Germany arising from the development of her system of industrial training.

Turn for a moment to Switzerland as a fair example. It is made up of a number of cantons, with a federal government and constitution somewhat similar to our own In 1901 Switzerland spent, in round numbers, a million francs on technical education; 75 per cent was contributed by the various cantons and 25 per cent by the federal government.

Let us take a glance at the United States. Up to 1862 they did little or nothing with regard to technical education. During that year Congress passed an Act which provided that a substantial land grant should be given each state which would establish colleges with special courses in agriculture and mechanical arts. This offer was taken advantage of by many of the states. The State of New York received a land grant of some 800,000 acres, Pennsylvania 700,000 acres, Ohio 400,000, and other states lesser quantities. The Act was supplemented in 1890 by an Act which provided that each of the states which had established colleges, with these particular courses in agriculture and the mechanical arts, should receive a cash grant of $15,000 for the year 1890, and an additional grant of $1,000 for each succeeding year until the grant for each particular college should reach the sum of $25,000. That system of land grant and money grant has been in operation since that day, with the result that the federal government of the United States has paid in cash to such colleges the sum of $15,000,000 in round numbers and has given land grants aggregating about $16,000,000. The cash grant paid last year by the federal government of the United States to such colleges was about $2,500,000. What has that resulted in? It has resulted in the establishment of about sixty technical schools or colleges. In 44 of these colleges, courses are provided in mechanical engineering; in 38, in electrical engineering; in 37, in civil engineering; in 21, in mining engineering; in 6, in architecture; in 4, in metallurgical, technical and railway engineering. It is true that in all these cases where money has been granted by the federal authority in the United States, it has been to some college or state university where these courses were added to the ordinary courses of the university for the purpose, no doubt, of obtaining the land or money grant; but that does not affect the question and viewed from a constitutional point, it is of no importance whether the institute of technology be by itself or be an adjunct of a college or a university. If we undertook to establish it in Canada purely and simply as a matter of industrial training, it would not be necessary in any sense of the word—

Mr. BRODEUR. Are you aware that in the Act making these appropriations the federal government say:

> Nothing in this Act shall interfere with the right of the state to deal with this particular matter.

—acknowledging in full the state's right of control.

Mr. GUTHRIE. I was not aware of that, but I think it would be a very reasonable provision, and I am sure that no state or province would object to such federal grant.

Mr. BRODEUR. The federal grant does not interfere with the autonomy of the state.

Mr. GUTHRIE. I think we might adopt some safeguard of that kind in this country. We find to-day that industrial training has been inaugurated practically all over the eastern and middle states of America. The New England states are full of technical institutes, and they have been of great benefit to American industry. One recent achievement in the schools of Massachusetts has been in regard to Canadian wool, which had for many years been regarded as a coarse wool fit only for the manufacture of blankets and carpets. Not long ago I had occasion to discuss this question and the question of leather goods with a man from Massachusetts who told me that, through the work carried on in one of the technical institutes in Massachusetts, it was found that the coarse wool of Canada could be used to a very large extent in the manufacture of the best quality of tweed and worsted they are producing in the United States, and Canadian wool is now being used in the proportion of about 70 per cent to 30 per cent of other wools and other materials in the manufacture of these high class cloths. That is one result, perhaps a minor one, of a system of industrial training and industrial investigation.

In Great Britain practically nothing was done in reference to industrial training until the Manchester manufacturers and merchants took the matter up in 1891 in the manner I have outlined. In the next year the British goverment appointed a commission to visit Germany and the United States, and I think France and Belgium, for the purpose of acquiring the fullest possible information in regard to industrial training. The result of these inquiries was that the question of industrial training attracted the attention of the great manufacturers of Great Britain and a large number of very successful technical institutes have been established there and are attended by a large number of workmen. Indeed, some British manufacturers have gone the length of offering bonuses to their workmen to take a course in some one or other of these technical institutes. One result of this movement on the part of Great Britain came to my attention recently in discussing this question with the same man who gave me the information on the question of wool. He said that until recently the United States was certainly supreme in regard to the manufacture of boots and shoes. They not only supplied their own market, but largely the Canadian market and very largely the British market. He said that recently British manufacturers of boots and shoes have been making articles of a quality that will sell in the United States and certain consignments have come in and have been sold in the United States. How was that done? That was done by the British manufacturer bringing from the United States certain American machinery, American processes of manufacture and American lasts, placing them in Great Britain, teaching the work in some one or other of the technical institutes of Great Britain and producing an article which resembles in appearance to all intents and purposes, the American shoe, but is of a superior quality. My information on that subject came about a year ago from a man from Massachusetts and I notice in this morning's newspaper that the editor of the Toronto 'Globe', speaking before the Canadian Club at Ottawa on Saturday, referred to this same question of the manufacture of leather goods from Great Britain being sold in the United States, this information having been gained last summer in Great Britain, mine having come from a man residing in Massachusetts. Information coming from two points so diverse is, I think, probably reliable. The change that has taken place in the shoe trade is certainly to be attributed to the courses of technical training which the British workman has undergone in one or other of the technical institutes of Great Britain.

May I point to one other answer which I think is a complete reply to any objection that might be raised on constitutional grounds, and that is that the Dominion government has already to a considerable extent entered upon the field of industrial training and that so far no objection has been raised. In regard to agriculture, we have established a system of technical education under this government in the experimental farm that is conducted here in Ottawa. Many of the institutes of Germany and some of the United States which are purely and simply technical institutes, do nothing more than what is done at the experimental farm here. They carry on experiments as to new and improved machinery and as to new processes, they issue bulletins and in that way inform the public upon these various matters—just the work that is being carried on at the experimental farm. That is certainly a work of instruction, and if you like, a work of education. It is educating Canadian farmers, it is done for that purpose and has had the effect of raising the standard of farming very greatly throughout the Dominion of Canada. What this motion asks is that this government will do in regard to manufacturers, or with regard to our natural resources, just what it has been and is doing with regard to agriculture. It is carrying on technical work, it is engaged in technical education in regard to agriculture, and we ask that the same principles precisely be applied to other natural resources of Canada, and also to the manufactured products of Canada. I mention also the work of education which we are carrying on at the Royal Military College at Kingston to-day. We are carrying on also work at the School of Navigation at Kingston, teaching the science of navigation. That is a technical work, and in the German empire they have a large number of schools specially appointed for the work of teaching navigation pure and simple which this government has engaged in. Then we have two marine biological research stations carrying on work at Gaspé and on the Georgian Bay. This government, through the Intercolonial railroad, is indirectly providing for educational work at the University of McGill; the Intercolonial railway makes an annual grant to the Faculty of Applied Science of McGill University for carrying on experiments and work in testing different materials. That is an indirect contribution of this parliament to the University of McGill College. Then we are carrying on extensive experiments and a good deal of research work under Prof. Haanel. He has been investigating various ways of smelting Canadian ores. That is the very work which is taught at all the greater technical institutes in Germany and the United States. He has been engaged recently in carrying on experiments with a view of rendering the large and valuable peat lands of Ontario of some value. That

is a work of technical education and technical investigation, which we ask should be continued. Those are works which the Dominion government is carrying on to-day, and carrying on successfully for the good of the people. We ask that the work be continued.

In what way would you suggest? I have not at my disposal or within my knowledge all the avenues in which the government might put forth some effort, but I think it certainly could make money grants to institutions that are carrying on this work. I think they could, as the German empire has done, establish experimental stations and museums throughout Canada, where the work might be carried on with new and improved machinery, in new and improved processes of manufacture. They might carry their investigations further in regard to electrical smelting, and the treatment of all native Canadian ores. They might carry on successfully serious experiments in regard to the great pulpwood growth of this country, in the way of seeing how this could be rendered a greater national asset than it is now, how that could be best manufactured and best transported. They could carry further their investigation, particularly in regard to naval construction and architecture. This is a mater which has been taken up very largely by Germany. Germany has five ship-building schools and about 100 navigation schools; whereas twenty-five years ago it had none. It is now building a number of its own craft, twenty-five years ago it did not build any. That is an achievement in Germany also due most directly to the result of technical education and training.

I know it is sometimes said that this is a matter which only pertains to a few of the larger cities, perhaps, and to bodies of workmen in those various cities. But I can assure you, Mr. Speaker, that in the villages and towns of this country there is a tremendous demand for opportunity on the part of our workingmen to improve themselves in the various trades and crafts. Time was not so many years ago when a certain institution in the United States, called the Scranton Correspondence School, was looked upon as more or less of a joke, as one of those sharp Yankee money making concerns which, by expensive advertising, would be able to gull the public and rake in the people's money. However, from what I know of that institution in Scranton, it is by no means a joke, and while it is a very successful commercial undertaking, and pays most handsome dividends, it has disseminated a tremendous amount of valuable information, not only in the United States, but in Canada. I was surprised to hear from a man interested in that school, that last year it drew from Canadian workingmen and artisans nearly $800,000 in fees for tuition, and from the city of Montreal alone last year over $100,000. That money was drawn directly from the pockets of mechanics and artisans in this country, from men who were endeavouring by all means in their power to secure what is necessary to give them perfect knowledge of their craft, and who have no opportunity either to go to McGill, or the University of Toronto, where schools in science are certainly afforded to the children of the rich. I am glad to say that in Montreal an institution of technology has been founded. I believe that when it is at work it will have the effect immediately of keeping that $100,000 of the workmen and mechanics of Montreal within the city of Montreal instead of sending it over to the Scranton School of Correspondence and others. The Scranton school is only one of many schools; but it is the most prominent of those in the United States, and has been the subject of a special report by the British commission who went thoroughly into the institutions in the United States. I am glad also that in Nova Scotia a very large institution has been opened, and work is to be carried on there, I trust, on a very large scale. In Ontario, too, something has been done. But if we compare what has been done by any of the provinces of Canada with what has been accomplished in the little principality of Wurtemburg, we can see in a moment what is yet to be done in Canada in regard to this great question.

Now I submit, Mr. Speaker, that the passage of a motion like this cannot in any way prejudice the right or interest of any provincial authority. If such a commission were appointed, a small commission of five or six capable men, to visit Great Britain, and several European countries, and the United States, the expense involved would not be considerable. If it should turn out as a result of their investigation that there is nothing which this parliament could do in the way of furthering the great cause of industrial training, we will know it; that is one thing. But if the information will be of value to the various provinces of Canada, the money will not be lost, and I am personally satisfied that there are a great many things this government can do. I have not sufficient time to enumerate them, but I simply place before the House such facts as I have been able to gain from conversation, from the ordinary means of research. I know that I am but poorly equipped to discuss the question intelligently as it should be discussed. I sincerely hope that some other hon. members will continue the debate, as I know that there are those in this House who are well aware of all the facts and all the circumstances, and far better able to discuss the subject than I am.

Mr. ALEXANDER HAGGART (Winnipeg). I am sure, Mr. Speaker, that this House is under a debt of gratitude to the hon. member for South Wellington (Mr. Guthrie) for the able address he has just delivered. It is rich with information and replete with reasonings, conclusive reasonings, it seems to me, in affirmation of the proposition laid down in this resolution. I think this is one of the best things that have emanated from the other side of the House this session, perhaps because it was not inspired by a Liberal caucus or by a Liberal government. I have great pleasure in paying a personal compliment to the hon. gentleman who has brought this matter before the House. If this resolution were amended as suggested and instead of the word 'technical education' the words 'industrial training' were inserted I think it would better meet the occasion. As to the jurisdiction of this House, it has been said, and truly, that this parliament is doing to-day for the farmers what we are asking it to do for the industrial population. We are, by our experimental farms and by the machinery and efforts of the Department of Agriculture, acquiring information which is being used by the different agricultural colleges and other institutions. Even the public schools which are under the control of the provinces are availing themselves of this knowledge. In Belgium, Switzerland, Germany and all the older countries, they are doing this work of sheer necessity. For centuries their natural resources have been developed and their increase of wealth and importance come from the work of the hand and the brain. In our country it is perhaps different at the present time. The farmer, the merchant, the holder of bonds, the possessor of property finds, without any individual effort on his own part, that, by reason of the development going on around him, his possessions in four or five years have doubled in value. We may expect greater results if this question is taken up at the present time. If we can make one acre of the farmer's land produce what an acre and a half formerly yielded, if we can make two pairs of hands do the work formerly done by three pairs, that adds so much to the general wealth of the country. A trained industrial people is one of the best assets that any country can have, and if I were to look for some phrase to illumine or brighten this thought I would take the words of Whittier who, when paying a tribute to his own state, does not refer to the visible or latent wealth of the forest, the field or the mine, to the accumulation of capital or to the vast volume of commerce, but he says that:

The riches of the commonwealth
Are clear, strong minds and hearts of health:
And more to her than gold or gain,
The cunning hand and cultured brain.

I do not think there will be any objection from the different provinces on the score that this parliament is exceeding its jurisdiction. If the parliament is animated by the spirit of the people of Winnipeg, the city which I have the honour to represent, I am sure that its action will meet with the approval of the people generally. The city of Winnipeg has dumped down upon it a large foreign population. There are something like fifty or sixty languages spoken there, and the people of Winnipeg have established night schools during the winter season at a cost of thousands of dollars to themselves. There was nothing to compel them to do that, but they are satisfied to do it and there is no objection to it on the part of the citizens although it considerably increases the taxes. This motion does not commit the House to the principle of technical education or to any other principle. All it asks for is a commission of inquiry, a commission composed of the most competent men entirely clear of politics to get all the information available upon the subject and if they gain that information, whether in Europe, or Massachusetts, or in any other place, it will be available for the benefit of all the province and every educational institution in the different provinces of the Dominion.

Mr. RALPH SMITH (Nanaimo). Mr. Speaker, I agree with my hon. friend from Winnipeg (Mr. Haggart) that my hon. friend from South Wellington (Mr. Guthrie) has made one of the most important contributions to the discussions of this House that has ever been made in my experience as a member and that he has dealt with a subject second to none in relation to the industrial and commercial development of this country. He has given us a very exhaustive explanation of technical education and of its application in the older European countries. He has given us some very exhaustive and lengthy reasons and arguments why technical education, so-called, should not be read into the conditions of the constitution which provides that authority with respect to education shall remain in the hands of the provinces. I want to emphasize those reasons and perhaps my hon. friend will permit me to add a few more practical reasons why this government should be prepared to take up this question as set forth in this resolution, appoint this commission, provide an appropriation and control the technical education of this country. I can quite understand how the government will be naturally cautious before taking upon itself financial responsibility which constitutional authority may declare legitimately was intended to belong to the provinces. When we consider the extent of this country, the enormous cost of its development in matters

appertaining exclusively to the authority of the Dominion parliament that the provinces cannot manage for Canada, I do not blame the Dominion authority for exercising some little care before it takes increased responsibility in reference to expenditures upon questions of education. But, I agree entirely with my hon. friend from South Wellington that the question of technical education is not associated or related to the question of general education, which, in my opinion, was placed by the constitution under the exclusive control of the provinces. My hon. friend made reference to two or three kinds of industrial training. He referred to the manual training schools and to the system of technical education. Considerable confusion has existed in the minds of some people as to the difference between these classes of education. I only know them as they exist in England and I noticed, as my hon. friend pointed out, that the labour organizations of this country had declared by resolution that they were opposed to any system of manual training, because a system of manual training turned out mechanics who were brought into competition with the ordinary artisans of the country. My hon. friend presented a resolution from an important body of men. Trade schools, as they exist in England, are schools that take the place of the old system of apprenticeship. The system of apprenticeship in England was based upon a contract between the man who owned a business and the son of some other man to the effect that the apprentice would confine himself to this man's business for a given number of years. The system of trade schools was inaugurated in England as a substitute for the apprenticeship system and in these schools young men are taught the specialties of a particular trade. If a man wants to be a carpenter he is instructed in these trade schools in everything that appertains to that calling and so it is with respect to all other trades. I want to put myself on record as being entirely opposed to the conclusion of anybody or organization of labourmen who would object to a system of manual training.

Some hon. MEMBERS. Hear, hear.

Mr. RALPH SMITH. Yes, Mr. Speaker, I go further and I say that I am astonished that any organization of labour men should oppose any system of education. In doing so they evince the very spirit that prompted certain classes of wealthy Englishmen, sixty or seventy years ago, to oppose in the British parliament appropriations of money for the advancement of education. These wealthy Englishmen proclaimed that it would be a serious disadvantage if the rural communities were educated, and there are yet men living in England who made the statement on the floor of the House of Commons that if the artisans of England had a knowledge of history and science then representative government would be in danger. I say, Sir, that the spirit which actuated these men of the classes in England to restrict the intelligence of the masses is the self same spirit which prompts a labour organization to seek to restrict manual training in this country. Why ! above all others, labour men ought to stand for everything which conduces to developing the intelligence of the great masses of the community. A few years ago Andrew Carnegie gave a contribution of $50,000 to the city of Ottawa for a library, and the labour associations of this city passed resolutions against accepting that contribution for the reason that they declared the money was gained from the blood and sweat of the men whom Carnegie employed in his mills. At that time I wrote a letter to the Citizen over my own signature repudiating that contention and I held that if the tyrannies which makes it possible for capitalisits to secure unreasonable divisions of the profits of a business is ever to be subdued it can only be subdued by increasing the intelligence and knowledge of the workingmen and using such donations as that given by Carnegie towards that end. I am opposed to all kinds of restrictions, and when it comes to restricting the intelligence of my fellow men I am its avowed and open enemy.

Now, I want to give the government two or three practical reasons why they should support this resolution and appoint the commission which it asks for. My first reason has been expressed by my hon. friend from Winnipeg, and it is because technical training contributes to the development of the country, to its increased wealth, and to the protection of its citizens. My hon. friend (Mr. Haggart) said that technically trained artisans were the greatest asset of any country, and let me add that no country in the world to-day is suffering a greater disadvantage in the development of its resources than is Canada because of this. She has to come into competition in the open markets of the world with the older nations who have workingmen trained under high class systems of technical education, and Canada has to draw her supplies not from the men who are the most technical in the old countries, but generally speaking from the men who are denied the same high educational advantages in this country. When I think of the rapid development of our country and when I see the few facilities for industrial training that we have, it has been a great surprise to me how our large industrial concerns and especially the railways, have ever managed to equip themselves with the number of trained men

required to carry on their enterprise. On the railways of Canada you have as highly trained men as are to be found in any craft, and considering the numbers necessary to cope with the extensive development of our railway system it has always been a surprise to me how the railways managed to procure the trained labour required. Now, it is a well established fact that the value of a product increases with the increased intelligence of the workman, and perhaps the noblest and certainly the most profitable contribution we could make to the welfare of our people would be the expenditure of public money for the purpose of increasing the intelligence of our craftsmen. That is the purpose of this resolution. Another thing which concerns us very intimately is the providing of increased safety for our industrial classes, and this can most effectually be done by affording them technical education in their particular calling. In this connection I shall make special reference to the coal mining industry on the Pacific coast. It is deplorable to think that the highest percentage of mine accidents in any country is to be found in Canada, and the province of British Columbia, I regret to say, is lamentably pre-eminent in that respect. I should say in justice to my friends from Nova Scotia who are largely interested in coal mining that the accidents in their mines are relatively fewer than in the mines of British Columbia. Now, the explanation for that condition of things in Canada is that a large number of men without training are employed in working the mines. We have been startled in the last few months by accounts of explosions in coal mines; sometime ago there was one near Nanaimo, and just a few days ago 300 men were buried in an Illinois mine. Now, the royalties from the mines go to the provincial revenue and the supervision of mines lies with the province; but in the United States the geological department has extended its authority over the operation of coal mines and whenever serious accidents occur there the federal government sends their technical officers to make investigation and to find the cause. The history of mining and mining accidents in England shows that it is the scientific men who discover the causes of these accidents. The Dominion government has a Mining Department with its technical officers, and I want to suggest to my hon. friend the Minister of Mines that whenever a mining accident occurs in any part of this country one of those technical officers be sent to investigate the cause of the accident. Let me mention one or two mining accidents that occurred in British Columbia, the causes of which are not likely to be discovered by the ordinary practising engineer. The accident at the Fernie coal mine was due to a freak in the geological formation, which could only be discovered and remedied by scientific technical men who understand the business of mining. In England they have had very many explosions in mines, just as we have in British Columbia, and they have never been certain that they have found the real causes of these explosions.

Let me bring to the attention of the House another matter which has a very practical bearing on this question. Some months ago we were startled by the great number of accidents that occurred in the handling of dynamite in the construction of the Grand Trunk railway. Have we ever endeavoured to discover the cause of these accidents? In my opinion there is just one answer. In the first place, we have not the technically trained men who understand how to handle high explosives, and in the next place, we have no testing plant in Canada to enable even intelligent workmen to learn the properties of these high explosives. This is a matter that should be taken up by the Mining Department of the government. If we consider the practical importance of that department, it seems to me impossible for the government to avoid the responsibility of providing for technical education along these lines. Let us consider what the government has been doing. It has discovered from experience that it is impossible to avoid technical education in connection with the operations of certain departments. My hon. friend mentioned the Marine Department with its schools of navigation. The scope of these schools must constantly expand with the growth of the Dominion. My hon. friend also referred to the educational work of the Department of Agriculture. The lands in the settled parts of this country are owned by the provinces, and the revenues derived from them go to the provinces; and yet this government, on its own initiative, has established a very important system of agricultural education in the form of experimental farms, farming and dairy schools, and especially in the circulation of lectures that have been given by scientific men connected with the Central Experimental Farm at Ottawa. I venture to say from my experience that there is nothing more appreciated to-day by the people of the west than the scientific agricultural literature distributed by the Dominion government. I do not believe it is possible to have the results of the technical education provided by the several provinces of this Dominion distributed throughout this large country unless it is done by the Dominion authorities. For instance, Nova Scotia has a technical school of mining at Halifax. It is to the credit of Nova Scotia that it has done so much along this line. As a matter of fact, Nova Scotia has practically supplied the mining engineers

for the Dominion. My hon. friend referred to the correspondence schools. Although British Columbia is a mining province, it has no institution for technical training in mining, and but for the correspondence schools of the United States, we could not have had a sufficient number of mining engineers for the mining operations of the province. The mining engineer who wants to advance in his profession, must of necessity increase his knowledge by means of these schools. Let me say also that this system of education is not central, it is one which has to be distributed. It has to be taken to the door of the men who labour. My hon. friend from South Wellington (Mr. Guthrie) said that they only began this system of technical education in England in 1892. Let me say this, that 30 or 35 years ago the British government had a science and art department and spent thousands of pounds sending scientific lecturers all over the country, and let me add that the mining engineers of that country to-day are men who took advantage of these lectures. Further, 30 years ago there was a thorough system of technical education in the way of university lecture courses in the old country. The head men in the universities were distributed all over England to give lecture courses in technical matters and their expenses were to a large extent met by voluntary subscription.

My hon. friend has said a great deal about Germany, and no one will be disposed to undervalue the technical educational system of that country. But we know that the whole system of education there is part of their colossal militarism. Personally I prefer the free English system to the German. In Germany every man is compelled by the state to take advantage of the education provided, but I doubt very much that the German system has raised the mechanic and artisan of that country above the capacity of the British artisan. I have not yet been convinced that the system of educational training in Germany has done more for the workman than the British system has done for the British workman. But whatever system we adopt, it must be brought to the door of the ordinary workingman. You cannot expect a working man to leave his work at Vancouver in order to take up a university course elsewhere. Any system of education, to be useful to the industrial classes, must be distributed, so that the people can avail themselves of it without detriment to their daily work. Any system of education should provide for the sending out of lecturers all over the country. That could be done now by the Department of Mining. Scientific trained men could be sent out to the mining centres all over Canada to give lectures in the different mining schools.

I think sufficient has been said to induce the government to take advantage of this resolution and provide a good appropriation by means of which important evidence may be collected on this subject, and the Dominion authority is the only one which can make the information thus collected profitable to every part of this Dominion.

Mr. J. H. SINCLAIR (Guysborough). The House is, I am sure, very much indebted to the hon. member for South Wellington (Mr. Guthrie) for the very able speech he has made on this important question. I was very much interested also in the remarks of the hon. member for Winnipeg (Mr. Haggart) and those of the hon. gentleman who has just sat down (Mr. Smith). I do not rise for the purpose of discussing the question of technical education itself. I assume that every hon. gentleman here is convinced that the question is one of the greatest importance to the Dominion, and it ought not to be necessary to say anything in favour of technical education at this stage in our history. My object in rising is to point out, in a few words, that the desire to have something done in this line by the federal authorities is not a local one, that it is not confined to the province of Ontario or British Columbia, or Manitoba, but that it exists in eastern Canada as well as the west. It is certainly not a new question in the province from which I have the honour to come. Some years ago I had the privilege of acting as chairman of a committee of the local legislature in that province appointed to investigate and report to the local government on this question, which has been a live one in Nova Scotia for a good many years. Some 15 or 20 years ago, when our present Finance Minister (Mr. Fielding) was premier of that province, the demand arose that something should be done in the way of training the miners who were operating the coal mines. In answer to that demand, the local government established mining schools in the various industrial mining centres. These schools have been in operation ever since and have done very good work. Some 300 men have graduated from them and now occupy important positions of trust in the mines, not only of our own province, but of other provinces as well, and the United States.

Later on the fruit growers thought that something should be done for them, and an agricultural school was established in the Annapolis valley. That was carried on some years and then merged into the provincial agricultural college at Truro. That college has done splendid work. Some three or four hundred men trained there, go but that it exists in eastern Canada as and spread the knowledge gained in that

college among the farmers of the maritime provinces. There is no expense by the local government which has given better results than the money spent on the agricultural college at Truro.

But after the industrial expansion at Sydney, Amherst, New Glasgow and other places, it was felt something further should be done and two years ago, the Nova Scotia legislature devoted the large sum of $100,000 for the establishment of a technical school. The building has been erected and the college has been opened, and I trust it is doing good work.

I mention these facts to show that the subject of technical education is one which has taken deep root in the eastern as well as in the central provinces and the west. The technical school established at Halifax has formed branches throughout all the industrial centres of the province, and they are working together and no doubt will show very beneficial results. I might add that the progress which has been made is not confined to Nova Scotia. Similar good work is being done in Ontario. We all know that the agricultural college of Guelph has turned out men who have been of great benefit, not only to Ontario, but to every other province. We have some of those men in Nova Scotia. One of them is the principal of our agricultural college there and he is one of whom neither the college nor his province need in any way be ashamed. The Royal Military College at Kingston is also doing technical work and the McGill university students are known the world over. McGill university has earned a great reputation as a school of technical education. But, as has been pointed out by my hon. friend from South Wellington, these larger universities, such as Toronto and McGill, are only for the sons of rich men who can afford to send them to the city to attend the regular courses and spend two or three years in training, but are not open to the general run of people, and the want is keenly felt for something to be done in a general way.

The mover of the motion has pointed out what has been done in Germany. Something also has been done in France, Austria, Sweden and even in Russia and also in Great Britain. The people of Great Britain were a little slow to take up the idea. It was not until the prestige of their industrial establishments was threatened to some extent by Germany and others that they did adopt it. But good work is now being done in Great Britain in this line. There is no country in the world to-day which needs technical education so much as Canada. It is not money we require for the development of our country so much as men. We want in every department captains of industry who can take hold of our undeveloped resources and turn them into wealth. We are about to embark on the construction of a Canadian navy and I will venture to say that the great difficulty the government will meet will not be the question of money, although money is always a serious question as the Finance Minister will tell you, but the question of men, of trained men to build these ships, to lay down plans, to make the models and turn them out as they ought to be turned out. This will be the most difficult question the government will have to meet. A few years ago we were all humiliated at the inception of the Grand Trunk Pacific railway to find that the skilled men were imported from the United States. It may not have been absolutely necessary to do this but it was done to a very large extent in order to inaugurate that great enterprise. It will not again be found necessary to do this because we have now a considerable number of trained men among ourselves. The same thing happened at Sydney when the industrial expansion took place there. We had not a sufficient number of trained men and had to import them from a foreign country in order to start the steel works. I would suggest that something in the nature of the Morel Act be adopted in Canada, some scheme by which the local and municipal governments would contribute perhaps the largest share to this kind of education, the central government contributing a stated amount in cases where the local governments came up to a certain standard. I see no reason, under the circumstances, why that should not be done. I hope the government will take it into their serious consideration and that some forward movement will take place in regard to this very important matter.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. A. C. MACDONELL (South Toronto). I would like to say a word or two in support of this resolution before it is finally dealt with. I desire to preface my remarks by congratulating the hon. gentleman (Mr. Guthrie) who moved this resolution, both upon the resolution itself and upon the able manner in which he supported it. I am quite aware that the matter is not without difficulties if it is to be dealt with by the government, because it is a matter that calls for the expenditure of money, not a large sum, but still an expenditure of money along the lines of what is in a sense, at least, education. Now the fact that this question is of an educational nature has been mentioned as presenting a difficulty in the way of the federal government dealing with it. But I think that difficulty has been largely met by the hon. member who moved this resolution, and by the hon. member for Winnipeg (Mr. Haggart) and

others who have spoken. In a sense it is not a matter of education, using the word in a narrow sense, but it is a matter of practical training, of industrial training, in technical knowledge. There is no occasion to use the word 'education' in this resolution at all. It seems to me something apart altogether from education as the word is ordinarily used, even if it were necessary to differentiate the matter in that way.

As has been pointed out to-day, the government in years gone by has undertaken to deal with matters that are no less matters of education than this. For instance, the attention which the government devotes to agriculture has been referred to, and the sums spent on agriculture have been mentioned as a precedent for government action in relation to this case. Certainly the government has spent large sums of money in what is practically the education of the farming class all over Canada, a work which is carried on by the Department of Agriculture. Now I have no complaint to make with the government on that score. But this matter of technical training is to the mechanic and the artisan what agricultural training and the agricultural college are to the student of agriculture and to farmers' sons. I believe the government has undertaken the work of education in several other branches of public affairs in this country. For instance, the military college at Kingston has been referred to, and the instruction given by the government in marine navigation and the examination of candidates for various departments in navigation. So there are to-day abundant precedents for legislation along the lines of what we are now discussing.

But that is not the only instance relevant to the question of whether it is one within the exclusive jurisdiction of the provinces; because, as has been pointed out by the mover of the resolution, the object sought to be attained is primarily the appointment of a commission to take evidence. Even if the government acted upon that suggestion and issued a commission, and then chose afterwards, in accordance with the recommendations of that commission, to go further and embark on an expenditure of money for the purpose, it could still be done in conjunction and in connection with the various provinces or municipalities in different parts of Canada, whose moneys or other assets could be joined with federal assistance. So that, even if it were a matter of education, it need not be taken out of the domain of provincial control, because it could be dealt with primarily as a matter of education by the provinces, assisted by some substantial contribution on the part of the Dominion government. So that difficulty, if it be one, could be got over.

But what this resolution asks for is simply that a commission be appointed. Now if the government did no more than appoint that commission to take evidence, the commission would probably report its evidence and findings, it would bring down to this House its recommendations, and even if the government went no further, they would be doing a large measure of substantial justice in this matter. We know that in various provinces action is being taken along the lines of this resolution, and if every province were to act in turn and issue just as many commissions as we have provinces, it would mean looking at the subject from so many different points of view, and if followed by legislation it would mean probably legislation of various kinds, showing a want of harmony and of breadth of view in dealing with a matter which requires some broad and comprehensive scheme. Now this is not education in a primary sense, because, as we all know, the provinces have undertaken that work. Time was when the state did not consider it a duty to educate the youth of a country; that period has happily long since passed, and no sane man would to-day for a moment suggest that it was not a proper and essential thing for the state to educate the youth. But there has arisen a need of what may be called secondary education, an education that has already been undertaken by many modern civilized countries, and that is the kind of education we are now considering. It is an education that is needed to fit the youth for the business of life, and this secondary education at the present time is given freely and unstintedly by every important country of Europe, and very largely by Great Britain. One would think that the time had come in this country when we could not afford to lag behind Europe. We are accustomed to refer to certain parts of southern Europe as being backward and unprogressive, but those countries are far ahead of us in this matter, they have solved the problems of technical education in a way that those countries find highly satisfactory. As has been pointed out this afternoon, some of the European countries have undertaken specially to deal with particular trades or callings, and in that way such trade or calling is dealt with in the most efficient manner possible. The days of apprenticeship are past, as has been pointed out by the hon. member for Nanaimo, and an age has succeeded by which the state has intervened and assumed the burden of what was formerly performed by the master to the employee. Technical education is engaging the attention of every large city in Canada. These communities naturally look to the government for something to guide them in putting into actual practice this method of education. They naturally look to the government to provide them with the very latest knowledge available on this very important

question. It is too much to expect that municipalities, even if they be large cities like Toronto and Montreal, will go on a meandering trip around the world to find the latest system of technical education, and they are looking to this central government to take the first steps along the line of at least supplying them with all available information on this question. We have some technical education in Toronto, but it is of the higher order, being in connection with the University of Toronto. But, the board of education in Toronto is dealing with this matter. It is considering a question of the establishment of technical schools as an adjunct to the common school education in that city, so that that vast body of people, the sons of the labouring classes and the toilers, can get some kind of a reasonable education in the various trades and crafts. Everything has been said, I think, that can be said upon this matter.

I would like to refer simply to this fact that we all know that unemployment is one of the pressing and most distressing matters that the governments, not only of this country, but of European countries, have to deal with. Happily the unemployment question is not a very prominent one in Canada at the present time, but the time has been when the question of unemployment was a serious matter and that time may come again. In the city of Berlin they have a clearing house for labour, known as the Berlin Labour Exchange, to which go those who are out of employment on the one hand and employers who want men on the other. It is an immense place where thousands of men assemble every day and where hundreds are placed in employment. At this clearing house it has been ascertained that very much the largest number of people who are seeking employment are unskilled labourers, that there is more unskilled labour seeking employment every day than there is labour in all the other trades combined. What does this prove? It proves that if men can get an education in some trade, business, or calling, they are not apt to be out of employment. The man who cannot get employment is the unskilled mechanic, while, if a man skilled in any line of business or in any trade does get out of employment, it is only as a rule temporary. The great body of men who are, practically, permanently out of employment are those belonging to the unskilled labour class. Surely that is a sufficient argument to prove to any government that it is the duty of the government to, as far as possible, educate the labouring classes in some trade or calling so that they may at all times have a trade upon which to rely and to fall back upon. If this commission were to issue I have no doubt whatever but that almost immediately upon its being returned to this House and the report distributed throughout the country it would be made use of and be available in all parts of Canada. It would have a double use. It could be used for the purpose of giving information to the trades in different communities and provinces and it could be made the basis of further action by this government if the government sees fit to take this up, as it has taken up other matters of a kindred nature. As to the provincial aspect of this case, kindred subjects have already been dealt with by the government and therefore I do not anticipate any difficulty in dealing with it in such a way as not to violate the principle of provincial autonomy in regard to matters of education. It would not form a precedent for interference at any future time by this government with the matter of education. I think the resolution has been ably presented to this House. The difficulty of dealing with a question of education, which is entirely of provincial character, has been fully met by the arguments which have been presented and a few of which I have endeavoured to elucidate in the remarks which I have addressed to the House.

Mr. ALPHONSE VERVILLE (Maisonneuve). Mr. Speaker, the question which is now before the House interests me to a large degree, and it is especially interesting to those whom I represent. I strongly favour the resolution that has been presented by the hon. member for South Wellington (Mr. Guthrie). As has been truly said a change has taken place in the apprenticeship system. Now, it appears that they are anxious to produce a mechanic in three, four or five months instead of making him serve three or four years as they did in the past. I am not at this moment disposed to discuss the reasons which have brought about this change of affairs in the apprenticeship system, but I may state that this is one question and probably the only one in regard to which organized labour and the Manufacturers' Association agree. It is a very important question. My hon. friend who presented this resolution, as well as my hon. friend from Nanaimo (Mr. Smith), spoke about manual training. It was stated that organized labour is against manual training. In the real sense of the word organized labour is not against manual training, but it is against the taking of a clerk in a store, for instance, or anybody else, putting him into a training school for three months and trying to make a mechanic out of him. We claim, and I think justly, that it is impossible to teach a man how to do the work of a mechanic in three months. That has been the case in many trades. In the United States there are schools which advertise that if an employer wants a man of a certain trade they will produce him in three or four months. I might mention the Coyne

school in the plumbing trade which is carried on in New York and which follows this practice to a large extent. I am not disposed to say in the House why this is done. The labour people are not against manual training. We have that ourselves in the city of Montreal. In my own trade, for instance, regular training is provided. We have two nights every week when young men can come and receive instruction in addition to the practical training which they get while working during the day. We want men in the trade, but we do not want to spoil our trade any more than a lawyer wants to spoil his profession. A trade is a profession after all. As far as I am concerned I see very little difference between a trade and a profession. Just as long as we have no law to protect ourselves, as long as we cannot come before this House or the provincial legislature and have our rules and regulations sanctioned, we have, to a large extent, to protect our profession. I want to go on record as saying right here, that labour is not against manual training provided it is done in the proper way. I am strongly in favour of and I hope the government will see its way clear to furnish sufficient money to train the labouring classes of this country in the higher walks of artisanship. It is a great pity that to-day Canada has to send to different countries in the world for men to occupy the highest positions, and that Canadians should have to be satisfied to work under them. We Canadians have as much intelligence and as much energy as the people of any country in the world, and if facilities were afforded to the labouring classes to develop their natural ability I have not the slightest doubt that you would see the very best men springing from the ranks of the people who labour.

Mr. F. L. FOWKE (South Ontario). Mr. Speaker; it is refreshing to know that occasionally a question may be brought before this House which can be considered from the national standpoint of what is best for Canada, and regardless altogether of party bias. I am glad that such a one is the question we have for consideration this evening. Any question that deals with the education of the masses of the people is important, and that the question now before us is important we are all agreed, as we also agree that it has been presented in a most able manner by the hon. member for Wellington (Mr. Guthrie) who moved the resolution. That hon. gentleman has submitted to us a very practical question and he has asked that it be dealt with in a particular way. I venture to express the hope that the government may be willing to accede to the proposition set forth in the resolution, since, under the British North America Act, the provinces have had relegated to them the work of providing systems of education. I am glad that learned gentlemen of the legal profession in this House are able to assure us that no strain will be placed upon the constitution should the resolution before us be adopted. For my own part I have always felt, and as the years go by I feel it more and more, that we have not in the truest sense of the term a national system of education in Canada. Since we cannot have that I am rejoiced to know that we will not be held to be trenching on the prerogative of the provinces should we adopt the scheme outlined in the resolution of my hon. friend. I trust, Sir, that the day may yet come when we will have a technical or trade school in every town of the land, and that the system will reach its apex in a national university established in the capital city of the Dominion. The resolution before us simply asks that an inquiry be instituted as to the merits of the proposition therein set forth. We ought not be unwilling to investigate; we ought not be unwilling to obtain from any and every quarter information which may tend towards the advancement of our people. I have no doubt that the commission which under this resolution would be appointed will view the question from a Canadian point of view, that they will see with Canadian eyes, hear with Canadian ears, and report back to us what is best in the older countries to suit our conditions and environment. It is something to have it recognized that there is such a thing as a Canadian point of view. To-day, I see that idea very fittingly given effect to by the Toronto 'Globe which is sending one of the best known newspaper men of Canada, Mr. Stewart Lyon, to report back to the Canadian people the conditions under which the political battle is being waged in England so that Canadians will not have the news filtered through American or even British sources, but through a Canadian channel and from the viewpoint of the Canadian people. Now, these centres of the old world. Germany, England, Belgium, and other continental countries in which for a long time they have had trade schools in operation will be visited by Canadian representatives and we shall have described from the Canadian point of view the adaptability of these various systems of education to the Dominion of Canada. That ought to be of considerable value to us. I was glad indeed to hear the mover of the resolution express himself as willing that the scope of this inquiry should be enlarged. The resolution speaks of an inquiry only into the matter of technical education, and my hon. friend (Mr. Guthrie) has stated his willingness to include an inquiry into manual training and trade schools; a fact which I hope the government will note in connection with the proposed appointment of the commission. In Blisses' encyclopedia of social reform pub-

lished in 1908 there is given a modern definition of technical education and manual training, and if you bear with me I will read that definition because it appears to me that it may be helpful to a clarifying of views held on this question outside this House even though those within its precincts may be already thoroughly informed on the subject I read:

Technical education and manual training: We include under this general heading three subjects which are distinct, although continually confounded in the public mind—trade education, technical education, and manual training. We consider them under one head, in order that, by placing the subjects side by side, the important differences between them may be clearly brought out. We commence with definitions. Trade education is the preparing of craftsmen for practical work in a particular trade. Technical education is the teaching of the sciences in their particular application to the material interests of man. A good trade-school may be a very poor technical school, while a good technical school is not of necessity a good trade-school. Manual training is different from either; it is instruction in the use of tools as a part of a complete educational discipline. Trade-schools seek to turn out craftsmen; technical schools seek to turn out scientific specialists and professional men, such as civil engineers, architects, &c.; manual training seeks to develop complete manhood and womanhood by developing dexterity of hand as well as head.

I trust that definition will be borne in mind should the government conclude to accede to the wishes of the mover of the resolution. A very charming and interesting contribution has been made to the debate by those gentlemen who may in the proper sense be held to be representatives of labour in this House. I was glad to hear the hon. gentleman from Nanaimo (Mr. Smith) and the hon. gentleman from Maisonneuve (Mr. Verville) express their acquiescence in the suggestion that labour has no objection whatever to manual training in the proper acceptation of the term, being introduced into our schools. The knowledge that men have is of course only of value as it expresses itself in action, and the proposition is that the industrial classes of Canada may be as well equipped for their particular callings in life, for the duties and responsibilities of citizenship, by reason of the schooling placed at their disposal, as are those who are able to participate in the higher branches of learning and in the higher walks of life; and surely one of the duties of a representative institution in a democratic country like this should be to provide to the utmost facilities for the advancement and betterment of all sections of society which together make up the commonwealth of this great Dominion. I am well aware that outside of this House there are those who are altogether opposed to the proposition contained in the resolution before the House. There are those who think that the educational system should continue as it is, devoting itself entirely to the classics, and that no man should be held to be educated unless he takes a classical course at one of our universities. The time was when two or three learned professions were very much looked up to and admired and were thought to be the sine qua non of everything proper in human society. I do not say that that day is past or will ever be past. I am bound to say, however, that useful as the physician may be in society, we prefer the prophylactics of common sense; we prefer to keep well rather than to apply ourselves to any system of therapeutics whose only purpose is to make us well after we become sick. With regard to the lawyer, I suppose we may be asked to acquiesce in the suggestion that without him truth would perish from off the face of the earth. I do not deny the proposition. The lawyer has his place in society, but we are glad to give him as wide a berth as possible. The clergyman, another member of the learned professions, has an important place. I see that the hon. member for Victoria and Haliburton (Mr. Hughes) is not present this evening to pay his compliments to the clergy. We are perhaps all in the frame of mind to believe that a little teaching of the doctrine of total depravity would not be amiss—like the old lady who wanted to join a certain church and was told that she would have to pass an examination by a board of elders and answer certain questions. 'What questions?' she asked. 'For instance, do you believe in total depravity?' 'That's easy,' said she; 'I not only believe in it, but hope to practise it too.' So we do not hope to get along without the learned professions. I am glad that gentlemen of the learned professions this afternoon have emphasized the fact that the classical is not the only method by which men may be educated in order that they may make the best of themselves in life, and may attain to positions of importance in the industrial life of Canada and of the world.

The fact has been adverted to that we are already doing a good deal in aid of technical education. The hon. member for South Toronto (Mr. Macdonell) a few moments ago pointed out that the great agricultural industry in Canada has been marvellously helped by what is really a course of technical education given on the experimental farms of this Dominion and in the laboratories of those farms. This is an age of the chemist in agriculture as well as in other departments of life, and I have no doubt that millions of dollars have been added to the wealth of this Dominion by reason of the technical education which the farmers have been able to avail themselves of through the reports issued by the Dominion government in relation to their par-

ticular calling, and I hope that this work will go on and increase. But I am also glad to reflect that this country long ago came to believe that it could never attain to greatness as a nation by remaining a pastoral people. So we have entered the field of industrialism, and this has grown in all the provinces of the Dominion until it is estimated that we have to-day invested in industrial pursuits $850,000,000, having an output of $750,000,000 per annum, with perhaps one fourth of our total population dependent upon those pursuits. Yet we are only in our infancy as an industrial community, and we could not do a wiser thing than avail ourselves of the knowledge, the wisdom, the experience, of the countries of the old world which have brought industrialism to a high state of perfection, and with whom we have to compete if we send our products into the marts of the world. Another reason for the appointment of a commission arises from the fact that this is a country of untold wealth in natural products. Some of these have been referred to this afternoon, and speakers have dwelt upon the importance of our training men to be experts in particular departments of industrialism, so that we may, with Canadian capital and Canadian labour, avail ourselves to the full of those natural advantages which Providence has placed at our disposal. Some natural products of great importance I could mention that have not been named this afternoon. This is a country of fur-bearing animals. Canada exports millions of dollars' worth of furs every year, and why? Simply because in the old world, by reason of technical education, men have learned to treat those furs in such a way as to make them the desire of all who may be able to purchase them. Why may we not hope to teach and train men on our own soil so that they will be able to treat those furs which are now sent to Leipsic and London to be returned here in a finished state? In the same way the long lustre wools of Canada are being sent to the United States under a tariff of ten cents a pound, netting to our farmers only about ten cents a pound, whereas if we had skill and machinery to apply to the raw product, we could have the same market and the same profits as now go to the manufacturers of the eastern states. To stop the export of these raw materials and to enable our people to work them up into finished articles by the use of Canadian capital and Canadian labour on Canadian soil is surely worthy the attention of Canadian legislators. In this new era upon which we are entering, this business era, this era of trade and commerce and manufacture, it ought to come as an inspiring thought to us that the opportunity is presented now to place ourselves on record as true to the belief within us and to take such action that the men of this generation, the youth coming on the stage of activity, the boys and girls in our schools who are destined to enter upon the industrial life, may have every opportunity and priyilege to make the best of themselves, each in his particular calling, that, any boy or girl anywhere under the sun is known to possess at this hour.

At the risk of wearying the House, I would like to tell you of some concrete instances myself, which prove the advantage of having our own experts in the manufacturing interests. I come from a town which has had a varied experience in industrial life. We have had corporations formed to carry on industries in that community, without the advantage of technical knowledge in relation to their undertaking. They had plenty of capital, the world was all before them, and yet they came to naught. To-day, however, we have a number of flourishing industries in that town—the town of Oshawa—which may be called the Manchester of Canada. One of these industries is the largest of its kind within the boundaries of the British empire; another is the largest of its kind in the Dominion. Both are what they really are to-day—one employing nearly a thousand men, and its capacity circumscribed only by its ability to get men, and it could enlarge its plant at any time if labour were at hand—both these industries owe their success, not to their abundance of capital, but to the expert knowledge and training of the men in charge. One of these establishments started as a blacksmith shop on the side of the road, but the owner was a skilled mechanic, and under his management that has grown to be the largest institution of the kind in the empire to-day Why? Simply because the man at its head has skill and knowledge and is an expert in his particular line. The other industry I refer to owes its growth to the very same reason. One of its proprietors, and one of the finest inventors in the Dominion, is the manager of that business, and the president of the company told me only a few days ago that because of the skill of that particular man, of whom he is very proud, he is able to-day to start three new industries of a kind not now being operated anywhere in Canada, and will do so as soon as the right sort of men to manage them are available. So that there is any amount of scope for an educational institution such as we have in our mind to-night.

It has been shown by the hon. gentleman who introduced the resolution (Mr. Guthrie) that there is a current of public opin-

ion all over the country behind this movement. It is endorsed by the trade and labour councils and by the boards of trade and chambers of commerce, and the public sentiment in every manufacturing town and mercantile community is entirely favourable to the proposition. I therefore sincerely hope, in view of all the circumstances, that the government will not be frightened away from the adoption of the idea by any regard for the small cost which the appointment of a commission would entail, and I hope they will not be alarmed by the bogey that it would place a strain on the constitution greater than it could bear. I trust that the House and government will give their favourable consideration to this most important resolution, so ably presented by the hon. member for South Wellington (Mr. Guthrie) this afternoon.

Mr. A. B. CROSBY (Halifax). I do not rise for the purpose of making any extensive remarks upon the resolution before the House, but for the purpose of tendering my sincere thanks to the hon. member for South Wellington (Mr. Guthrie) for having introduced this resolution. I am sure that any hon. gentleman who heard him present this matter before the House must have come to the conclusion that there is nothing to prevent the government coming to the assistance of industrial training. Coming from the province of Nova Scotia, where we have already a splendid technical school, established lately in the city of Halifax by the local government, and also a manual training school, second to none in the Dominion, of which we are very proud, I might be content with that condition and give no heed to the rest of Canada. But that is not the way we are built down there. We are always glad to help the rest of Canada, even though sometimes, when we seek a little consideration for our province, the rest of Canada looks at us with rather a forbidding eye. However, should this government come to the conclusion to assist technical education throughout Canada—while I am not in the position to speak for the government of Nova Scotia—yet I am sure I can say that the government of that province will be very glad indeed to accept any assistance for the carrying on of that school, without feeling that such a grant would interfere with their provincial rights in any way.

Ship building has been referred to by the mover of this resolution. One of the good reasons for instituting a technical school in Nova Scotia is that we expect to have a ship building plant there very shortly and we hope—because our people are very apt and quick to learn—to have men competent to take charge of the principal positions in connection with that industry. Navigation has also been referred to. I am sorry to say that in the maritime provinces we have no navigation school, and if there be any school this government should establish, it ought to be a school of navigation. Trade and navigation go hand in hand, and this government would be doing a great deal for trade and commerce and navigation by giving its assistance to the establishment of a school of navigation. It is a great disadvantage to the maritime provinces not to have a school. Several men competent to teach that branch have taken it up but could not carry it on because, although at times they had sufficient pupils, at other times they had not. Therefore it would be a good thing for this government to take that question into consideration. While I think that the government should contribute to all branches of industrial training, certainly I think it should contribute to the teaching of navigation, some contribution should be made towards the teaching of that subject in our technical school in Nova Scotia. We have been accustomed, particularly in the eastern mining sections of Canada, to go across the border for our mining engineers, but the government of Nova Scotia have now established mining schools which have done a great deal for us in providing and preparing men to act as mining engineers. Some of the industries which have been established fn Nova Scotia almost went to destruction shortly after their inception. When the sugar refinery was established in Halifax technical men were brought from the United States to conduct it. The result was that it looks suspiciously as if these men did not attempt to carry on the industry properly and in a very few years the industry had gone altogether and the capital invested in it was practically sunk. After getting a fresh start and depending more on the men who had gained a little information in regard to the manufacture of sugar in our own province, that industry has become a great success. If we had had technical education it would have been of great assistance to us in the establishment of that industry as well as in connection with our cotton factory and many other industries.

While I should be glad to see this resolution passed, I do not think that the appointment of a commission is necessary. I do not believe that a commission could obtain any more information, any better collection of facts and could place them before this House in better order than has been done by my hon. friend from South Wellington (Mr. Guthrie) this afternoon. The commission is not necessary. This matter should be taken up by the government at once, and they could easily see the advantage from every standpoint of taking action in this direction. As has

been well stated here, there are many industries in the Dominion of Canada that have barely been touched upon yet. Take, for instance, the pulp wood industry. Great quantities of pulp as well as many other products of Canada are shipped to the United States in the raw state. If we had technical education, if our people were prepared to take hold of the different industries, such as the pulp wood industry and in place of sending abroad partly manufactured products to be returned to us in the finished state, should send out finished products, it would be greatly to the benefit of Canadian manufactures and of Canada generally. I believe that if the government would take action on the statement of facts as presented by the hon. member for South Wellington (Mr. Guthrie) the country would endorse them in providing at least 25 to 30 per cent of the cost of taking care of any technical school that may be started in any province. The hon. member (Mr. Guthrie) stated that in the German empire they pay 28 per cent, and I think that this government would be perfectly justified in arranging to contribute to the extent of 25 to 30 per cent of the cost of running any technical school in any province in the Dominion of Canada.

Hon. MACKENZIE KING (Minister of Labour). Mr. Speaker, I feel that I am only voicing the opinion of every member of this House when I say that our thanks are due to the hon. member for South Wellington (Mr. Guthrie) for having brought this important subject to the attention of parliament and for the exceptionally able, forceful and comprehensive manner in which he introduced his resolution. I think, too, Sir, the House is to be congratulated on the very full discussion which has taken place on this resolution, to be congratulated because the subject is one which, no matter what view we may take as to the jurisdiction of this government or a provincial government to deal with it, cannot be viewed other than as one of great national concern. I should like to add a few words to what has already been said from that point of view, but before doing so I would like to refer to the remarks of the hon. member for Nanaimo (Mr. R. Smith) in reference to industrial accidents in the coal mines of Nova Scotia and the coal mines of British Columbia.

The hon. member has drawn the attention of the House to the great difference in the number of accidents which have taken place in the mines of those two provinces, and I do not know that a more fortunate example could have been brought forth to illustrate the important part which technical education may play in the industrial development of a nation than the example the hon. gentleman has cited. During recess I took advantage of the oportunity to look up a table showing the number of fatal and serious accidents in the coal mines of Nova Scotia and British Columbia, and I find that in the last ten years in Nova Scotia 264 miners have been killed outright in the course of their employment, while in the province of British Columbia, 624 miners have been killed outright in the course of their employment. Reducing the figures to averages, the difference is still more striking. Taking the rate per thousand men employed in Nova Scotia and comparing it with the ratio per thousand men employed in the mines of British Columbia, we find that the fatal accidents in Nova Scotia have been 2·64 per thousand men employed and in British Columbia, 9·21. That, Sir, is to be accounted for, it seems to me, mostly by the different advantages given to the miners of those two provinces in the way of technical education. My hon. friend knows, as every member of this House knows, that factory legislation and legislation in regard to mines is enacted by the provincial legislatures. He knows that the mining inspectors, as the factory inspectors, are appointed by the governments of the respective provinces, and I believe that from the point of view of laws and numbers of inspectors, the conditions in British Columbia will compare favourably with those in Nova Scotia. But there is this difference between the two provinces: In the province of Nova Scotia you have to-day a Department of Technical Education and since the Minister of Finance (Mr. Fielding) was Prime Minister of Nova Scotia, you have had technical schools in connection with the mines of that province so that when the miners who are spending their day time in the mine have an evening or have leisure, they may get the advantages of a technical training which will help to acquaint them with the difficulties and the hazardous conditions of their calling, with the scientific side of the work in which they are engaged. The result of that is shown in the figures that have been placed before the House. It seems to me the hon. gentleman has rendered to this country a great service in drawing attention to the fact that technical education may be the means of saving to the nation a large part of its working population.

Let me supplement these figures in regard to mining by some figures which the Department of Labour has been gathering during the last few years in regard to the subject of industrial accidents generally. Although the figures are imperfect, although they do not begin to include the total number of accidents which have taken place, they are, I think, sufficiently large to show how important this particular phase of industrial life is. Taking the figures as reported in the annual report of the Depart-

ment of Labour, for the year ending March 31, 1909, I find that the number of persons engaged in industrial occupations who were killed outright from accidents occurring in the course of their work, was 1,271 and during the preceding year, the total number was 1,353. Take that average for a period of ten years, and what does it amount to? Between 13,000 and 14,000 of the wage earners, of the wealth producers of this country, killed outright in the course of their employment. What a tremendous national loss this is, to say nothing of the great loss to industry, to say nothing of what it means to the friends and families of those who are victims of these disasters. We see here the necessity for an extension of governmental action which may help to acquaint workingmen with the difficulties and dangers attendant on their callings, and which may tend in some way to reduce the number of fatal accidents which are likely to occur.

Now, I would like to say a word or two on another phase of the importance of technical education. And first of all, let me draw attention to the important part which technical education must necessarily play in the industrial development of this or of any other nation at the present time—must play because of the change which has taken place in the methods under which industry is carried on to-day in comparison with the methods under which it was carried on in the past. Under the old system as it prevailed before the mechanical inventions that have taken place during the last century, under the old domestic system, it was the custom of the employer to work with his men in his own home or in the shop. There were not then the large factories, there were not the large organizations of capital and of labour as we find them to-day. Under the old system of industry the training of the artisan was a comparatively simple matter, but under the system as it has developed to-day through the introduction of different powers the harnessing of the forces of nature, be they water, steam or electricity, we have entered into an entirely different industrial era, we have an industrial condition in which technical education must play a tremendous part. No man, for instance, can deal with electricity unless he is something more than an ordinary workingman, something more than an ordinary mechanic; he must have scientific training if he is to take any part in the application of electrical power to industry. Our whole industrial system being carried on to-day by factory organization and organization of capital and labour on a large scale, renders it absolutely essential that a nation which is going to progress and keep abreast of the times must equip its workers along the most modern lines, provide its workers with a practical technical training to enable them to deal with the new conditions under which they are obliged to work.

But not only has the industrial system vastly changed from what it was some years ago, the nature of the competition in industry has become vastly different from what it was not so long ago. It is no longer in any line of manufacture a question of competition as between municipality and municipality, as between province and province, but it is a world wide competition, competition between one nation and another, between different countries forming a part of the same empire, and between different empires, a struggle for industrial supremacy so vast that it is difficult for the imagination to grasp its significance. Now, in a struggle such as that carried on under our industrial system, the slightest difference in processes, in technical devices, the slightest advantage in scientific knowledge, in the adaptability of machinery for different purposes, may have a far reaching effect. It may affect the whole of one industry, or the industries of one country, as compared with those of another country, and we in Canada, who at this time are endeavouring, as we all are, to become one of the foremost peoples in the industrial struggle of our time, should be prepared to consider carefully this question of technical education, since upon technical education will largely depend the success of our manufacturers in obtaining the advantage of the latest scientific processes. Not only the men who are directing an industry, but also those who are taking part in it, must be well educated to enable our country to hold its own and make headway against all competitors.

Sir, while speaking on this question of foreign competition, I would like to touch for a moment on the question of foreign trade. No nation that is worthy the name can hope to accomplish much unless it develops a large foreign trade, and this country, while it has already made considerable strides in the direction of gaining a foothold in the markets of Europe and elsewhere, will, we hope, go much further, and not only maintain a foothold in the markets of Europe, but also gain an entrance in the markets of the Orient, for which we are so well fitted by our geographical position. Perhaps the House will pardon me if I make a reference to one or two facts which came under my observation during the time I was privileged to be in the Orient last year. What impressed me almost more than anything else was the extent to which the manufacturers of England, the manufacturers of Germany and the manufacturers of the United States were finding a sale for their goods in those distant parts. In the cities of China, in the towns and cities of Japan, one saw

everywhere articles of manufacture, products of one kind or another, coming from Great Britain, from Germany and other countries of Europe, and also from the United States; and I could not but wonder as a Canadian that we had not found our way into those distant parts, possessing, as I have mentioned, a great natural geographical advantage in the matter of trade with the far east. Going down from China to Japan, one travels through Manchuria on a road over rails that are made in Europe, and on cars that are made in the United States. The table service is made up of cutlery and china that comes from Great Britain. Much of the food has been prepared in European countries or in the United States. Surely we can hope that before long the manufacturers and producers of this country will be finding a market for their goods in those distant regions, and this market, I believe, once it is obtained, will be one of the largest and most profitable in the world. But if we are to find an entrance to that market, and if we are to hold our own when we get there, it will be only in virtue of the fact that our industries are equipped in a manner second to none as compared with those of other countries, and that we are doing a business as up-to-date as that which any other nation can do.

But, if there was one thing that impressed me more than another it was the extraordinary industrial development which has taken place in those countries themselves, and that is one of the main reasons why we should spare neither time nor money in an endeavour to equip our industrial communities in the most efficient manner if we are going, not only to obtain a foothold in those foreign countries, but if at the same time we are to retain our own markets in face of the competition which is sure to come from the far east. Let me mention only one case. I had the privilege of visiting the city of Hankow, which is three days' journey up the Yangtsze river, just opposite on the other side of the river, is located a large iron and steel industry. At the time I was there, this concern, established by Chinese capital, employed in the vicinity of 20,000 Chinese workmen, and they were shipping pig iron and steel ingots not only to other cities of China but to the United States as well, paying the duty on the steel ingots all that distance from the interior of China, across the Pacific, paying the duty and landing that steel at a profit in the very districts in which steel is being manufactured in the United States. I asked myself how it was possible that the Chinese nation that we had supposed to be asleep was carrying on so successfully such an industry in the far east, and the answer I found in connection with the very subject we are considering to-night. The men who were directing those industries were highly trained specialists, some of these young Chinese who had gone to Germany, who had gone to the United States, who had gone to Great Britain to receive a technical education in the schools and colleges there, and with that fine intellectuality characteristic of Chinamen, were able to return to their own country and to take part in an industrial development which will be second to none in the near future.

Now, if we are going to hold our own against that kind of competition it will only be by bringing our workmen up to the highest degree of efficiency, and by seeing that our industries are managed by men who are second to none in technical knowledge and training. They talk of the Yellow peril. Sir, I find no danger in the Yellow peril if you consider it under the aspect of immigration. I believe that can be dealt with by diplomacy; I believe it will be possible to keep the oriental to his own side of the Pacific, as it is in every way desirable he should be kept. The real Yellow peril, a peril that is surely coming, is that of industrial competition with the Orient, and when it does come in all its power, it will present to us the greatest problem with which this continent has yet been faced. Let me show wherein it is at our doors at this very moment. I have in my pocket a letter I received from a gentleman in San Francisco, who says that the company with which he is concerned is to-day in a position to control the imports of steel billets, from the company in China to which I have referred, and his company is arranging with that company in Hankow to secure their products, the steel billets and pig iron they are manufacturing there, and he writes to know what are the possibilities of his developing with this material a large iron and steel industry and rolling mills on our Pacific coast. His company is proposing to establish a manufacturing concern somewhere on the western slope of the United States and Canada to carry on the manufacture of steel with their products coming from this old country of China. Now what is true there is going to be true in one industry after another, and how are we to meet it? It will not be met by our shorter hours of labour. We work eight to ten hours a day in our factories, whereas the orientals are working twenty-four hours in the concern to which I have referred, they never stop even for Sundays, the Chinese New Year being the only day in which that industry closes down. Our regard for women in industry is not going to save us, our laws exempting little children from working in these industries is not going to

save us. Our higher wages will not the better enable us to meet this competition. What then is going to save us? Two things, and two things alone will enable this country to face the competition with which it is destined to be brought into conflict in the far east. One of these is the extent which the future witnesses the spreading of the light of the new world over the old, spreading of the light from the lamp of knowledge, and the still brighter radiance of Christian truth and Christian influence. Where that goes will come with it a greater regard and respect for women, a greater reverence for the little child, a greater and truer insight into the nature and dignity of manhood itself. With these things will come a shortening in the hours of labour, a lessening of the employment of women and children, and a respect for the Sunday which we observe as a day of rest, and a hundred and one other considerations which makes this our standard of living what it is among our own people. The other thing that may help us to meet this competition is the greatness of our natural resources, combined with the industrial efficiency of our own working people, and this industrial efficiency can only be brought about by the development on a general scale throughout the whole Dominion of sound technical education, carried on by the authorities whose duty it is to do it. Only by the development of this system of technical education so far as we can possibly carry it, will we be in a position to face the future with a confidence of success.

Now, Sir, perhaps I have spoken on this point at greater length than the circumstances would warrant. But I have thought that perhaps another opportunity may not occur very soon to enable me to express my views on a question which seems to me of paramount importance. It seems to me there is great need for the development of a system of technical education in Canada. This need has been demonstrated in half a dozen different ways. First of all, it has been demonstrated by comparison of conditions in this country with conditions as they are in Germany, in France, in England, in Switzerland and in the United States. It has been shown by the hon. gentleman who moved this resolution and by others who have spoken on it, how much has been done by each of these countries in the matter of promoting technical education. The hon. leader of the opposition asked, I think, in speaking of Germany, whether the work that has been carried on there had been done for the most part by the states. I think the work has been carried on by the states in Germany, for the most part. The work was started in Germany, as the member for South Wellington said this afternoon, away back early in the last century, and it has been taken up by one state after another. But the federal government in Germany has also done something to further this work. They have done nothing in the way of teaching, but they have established an institute for physical and technical research, they have an industrial museum, and they are giving financial assistance to ship-building and navigation schools. In the United States while most of the work has been carried on by the individual states, the federal government contributed land away back in 1862 for the purpose of aiding in the development of the agricultural and mechanical arts. They have had one or two commissions which have made inquiries into these questions, and a department of education which conducts researches along these lines. The federal government has also granted financial aid to the several states. In Great Britain there have been a large number of polytechnic schools, continuation classes, and technical schools and commercial and technical universities. All these countries are competitors of Canada, and are doing a great deal to equip their army of workers and enable them to take their part in this world wide competition. And were there no other reason why the authorities of this country should do their part in promoting the work of technical education than that our competitors are doing so that of itself would be a strong reason why much should be done. But there is another reason that was mentioned by the hon. member for South Ontario (Mr. Fowke) and the hon. member for Guysboro (Mr. Sinclair), and that is that the employers of labour in this country are crying out for skilled workmen. We all know that this demand comes from every part of the Dominion, one industry after another complaining that they have not enough skilled workmen. They allege that they have to send to other countries to get foremen, and import men skilled in certain industries. Why is this? It is not because we have not in Canada men who are capable of becoming skilled in scientific knowledge, and of carrying on any industry after the most modern scientific methods, but it is because we have not in Canada a sufficient number of institutes to enable our artisans and workingmen to qualify for these high positions the number of which is daily increasing. Not only is there a desire on the part of the employers for a greater number of skilled workmen but there is also, as the hon. member for Maisonneuve, the mover of the resolution and the hon. member for Nanaimo have said, a desire on the part of the workingmen themselves to avail themselves of greater opportunities of education in this direction. I think it was the hon. member for South Wellington who pointed out that not less than three-quarters of a million of dollars was spent by the work-

men of this country in payments to the correspondence schools in the United States in the furthering of this work of self-education along technical lines. Where there is a desire to that extent, manifesting itself in that particular way, surely we have before us the strongest reason why the authorities, whose duty it may be to undertake this work, should undertake it to the greatest degree possible.

And, Sir, there is another reason, much akin to the one which I have already mentioned, and that is the need at this time for a better system of apprenticeship. Our industries are suffering in every direction because workingmen do not go through the form of apprenticeship now that they went through in the olden days. It is inevitable that it should be so. In the olden days the apprentice worked with his employer in his master's shop, but to-day the employer is a large corporation and this personal relationship which formerly existed is now impossible. There is the greatest diversity of industry, and the greatest division of labour, so that the work of the ordinary mechanic comes often to be that of simply performing one particular kind of action, doing that in a monotonous, routine fashion and knowing nothing of the whole process of which his labour forms a part. That being so it seems to me there is a greater need for some system of education which will make intelligible to the man who has the work to do the part which he is performing in industrial development and that service might be performed by an extension of the system of technical education throughout the country.

There is a further feature which I think should be considered in this connection and it is the obligation which society owes to workingmen to enable them to realize the best of the capacity which they have within them. This is something which we, in this day, are too apt to forget. We have all the comforts in our homes, we think of the enjoyments that we possess of one kind and another, but we fail to realize to what a considerable extent, I was going to say, the almost illimitable extent, the whole enjoyment and routine of our daily life rests upon the manner in which the great mass of men who are day labourers or ordinary mechanics discharge the duties which they are called upon to perform. Let me read an extract from the report of the Industrial Committee of the American Federation of Labour which recently held its session in the city of Toronto. It was a report brought in by a committee of the workingmen composing that body in regard to this question of industrial education and the sentence or two which I shall read is deserving of the consideration not only of this House but of every man in this country:

We must never lose sight of the fact that a large majority of the working people are poor, and because of this they are forced to begin the battle of life at an early age. The need of the day is that something be done for the children of this great wage-working class.

Formerly the apprentice system offered the boy an opportunity to learn a trade and become a thoroughly trained mechanic, but of late years the scheme of specialization has supplanted the old apprenticeship system, even to extreme specialization. It ought to be recognized as a scientific truth that the higher the skill possessed by the mechanic the more valuable his labour, both to himself, his employer and the community.

The one trouble in America to-day is that too many of our youths who have graduated from the grammar or high schools are misfits industrially. If we are to secure industrial supremacy, or even maintain our present standards in the industrial world, we must in some way in our educational system acquire an equivalent to our old apprenticeship system.

It is to the first paragraph of that extract that I would like to direct special attention.

A large majority of the working people are poor, and because of this they are forced to begin the battle of life at an early age. The need of the day is that something be done for the children of this great wage-working class.

We leave these halls of parliament, we go to our homes in the evening, we take a street car, we go to our rooms and sit down by our firesides and unless there is a strike on the street railway, or a strike of plumbers so that our houses are cold when we go into them, unless there is a strike of miners so that we cannot get coal for our fires, or unless there is some other kind of industrial disturbance to direct our attention to the fact that there is a great industrial community working ceaselessly day and night, we are all too apt to forget that this great body of workers exists at all. For that reason we cannot too often remind ourselves of the fact that society does owe something to the great body of working people who are obliged to begin life early, to begin to toil before their education is completed, that we owe something to them in the way of conferring an opportunity at least to each to realize the capacities of which his nature may be capable. Carlyle says, in one of his famous works, that for a man to die ignorant who has capacity for knowledge, is a tragedy. Well, Sir, if this be true, the crime must somewhere rest upon the heads of those who have it within their power to confer the opportunity and who yet withhold it. It seems to me therefore that if we recognize the imperative ethical obligation which is upon us we will find it our duty to do something to put in the way of the miner who daily risks his life in underground toil the opportunty for education which will better enable him to rise in the calling

which he has been forced to take up in his youth and which may enable him to move up from the position of a hewer of ore to that of overseer or manager of the mine in which he is employed, and similarly a like opportunity to all engaged in the other classes of employment.

Further, take it in our large industrial cities looked at from the point of view of national strength as this may be gauged by the efficiency and calibre of our workingmen. In our large cities what do we see at night?—groups and groups of our young men aimlessly walking in one direction along the streets meeting groups of other young men aimlessly walking in another direction. Each and every one of these young men might be educating himself in some branch of technical education if the opportunity were there for them. I was much impressed by what can be done in that direction in a talk I had, last summer, with the headmaster of the Berlin Collegiate and Technical Institute, Mr. Forsyth. He has been one of the pioneers in technical education in the province of Ontario, and he has helped to place the Collegiate Institute of my native town in the very front rank of the collegiate and technical institutes of Canada. It is Mr. Forsyth's desire that the work which is carried on there in the day time may be so arranged that in the evenings it will be open to classes of students composed of young mechanics who are pursuing their trades during the daytime and who will be given a chance of training and equipping themselves to take higher positions in the work in which they are engaged. Something might be done by the different provinces that have already commenced a system of technical education in extending the work so as to bring it more within the reach of every mechanic in the community. In this way the nation will be substituting for possible determination a guarantee of increased efficiency. If I had not already taken up the time of the House at such length I would speak a little of the work that has been done in Canada along these lines.

Some hon. MEMBERS. Go on.

Mr. KING. While I have endeavoured to lay emphasis on the need for the extension of the work I would have failed to have properly presented to the House what I had in my mind had I conveyed the impression that Canada is not at the present time doing a great deal considering the number of other things that we have been called upon to do and the comparatively early stage of our industrial development. Just running over in a very rapid way what has been accomplished, let me direct the atttention of the House to the province of Nova Scotia. They have in that province a department of technical education. In that respect the province of Nova Scotia, as in some other respects, has gone far and away ahead of any of the other provinces of the Dominion. They have recognized the great importance of this work to the extent of having a department of the government under an able and efficient officer, Dr. Sexton, devoting its time exclusively to the work of technical education.

They have, I understand, 21 technical schools established in different districts throughout the province and these schools are attended by miners, by stationary engineers, by fishermen, and by craftsmen generally. It is, I believe, the intention of the provincial government to still further extend that work which was initiated by the Hon. Mr. Fielding, when he was premier of Nova Scotia. In Prince Edward Island something is being done in the way of manual training and in New Brunswick there is a department of forestry connected with the university, but little has been undertaken in the way of technical education in either of these provinces. In the province of Quebec a good deal has already been done and more is promised. Recently, Sir Lomer Gouin, the premier, in connection with the laying of the foundation stone of a new technical institute in Montreal promised that the government recognizing the needs of the mechanics and working classes, would make for still further progress in this line. There are at present 11 schools of arts and manufactures in the province of Quebec; there have been liberal grants to existing institutions and the premier has promised to the city of Quebec a technical institute similar to that in course of construction in Montreal. The Canadian Pacific Railway Company, experiencing the need for skilled mechanics, has started in connection with the Angus shops, classes for the technical education of its employees, and the classes, I am informed, are well attended. The universities of McGill and Laval have done good work in their technical branches, so that the province of Quebec has set to the other provinces of the Dominion an example which is only paralleled by Nova Scotia and Ontario. In Ontario, the development of technical education and manual training through the high schools and collegiate institutes has gone a long way, and there are also well equipped technical high schools at Hamilton and Toronto. The university has its school of Practical Science and department of forestry, there is the agricultural school at Guelph, and the department of mines at Kingston. Within the last few months the technical high schools at Toronto sent a commissioner to the United States to inquire into the conditions there, and the pro-

vincial government has sent another commissioner to Europe to inquire into technical education, so that it may be said that Ontario is doing good work in this direction. The hon. member for Winnipeg (Mr. Haggart) has spoken of what is being done in his own province and in his own city, and I would like to mention the commendable example set by the late David A. Mitchell, of Winnipeg, who, in his will, provided a large sum to be devoted to the erection of technical schools in which workingmen and artisans may receive free of charge technical training at evening classes in their particular callings. This probably sums up all that has been done throughout the Dominion in the way of technical education. It is only a few years since the start was made, but what has been done thus far gives us reason to hope that these provinces will advance in the work and that their example will be followed by the other provinces.

The resolution before the House expresses the opinion that it is advisable that a committee of inquiry should be forthwith appointed to investigate the needs of Canada in this respect to technical education and to report the ways and means by which these needs may best be met. There can be no doubt that such a commission would render great service to the Dominion, and to all the provinces of the Dominion. The reports of the British consular agents afford very interesting information as to what is being done by other countries in the way of gathering information on the subject of technical education. I have here a list of British consular reports on technical education in Germany which I find in the library of the Department of Labour, and I will read it to show what information may be acquired by gentlemen who make researches into existing conditions in other countries. There is one report of 83 pages which deals with special schools and courses for mechanical engineering in Germany. There is another report of 91 pages dealing with what Germany has done for the development of the textile interests, another report on navigation schools, another report on the special technical schools for the ceramic industry, another report on agricultural instruction in Germany, another report on engineering schools, another report on the technical schools for the branches of the metal industry, another on technical instruction in naval construction and architecture, another on special schools for ship engineers, and another on special schools for the woodworking industry.

Now, if the great nation of Britain finds it to her commercial and industrial advantage to have her consular agents prepare reports on what a rival nation is doing to develop industries along technical lines, that should be evidence enough to show wherein a similar course adopted by the governments that have charge of this particular work could be found advantageous to them, and that the work of any commission properly performed would be of great service to this country. I may say that the Department of Labour has already commenced to gather a large amount of information on this subject of technical education in other countries, and any work which a commission would undertake would be in part of that nature. So far as it has been possible to do it by means of correspondence we have endeavoured in the Department of Labour to gather in the library reports on what is being done for technical education in the different countries of the world. We shall be only too glad in the department to have any persons who are interested in this subject take advantage of the information which is gathered there. Mr. Acland, the deputy minister, who has made a very full and careful study of this whole question would be pleased, I am sure, to lend his assistance towards facilitating the work of representatives of the provincial governments or others who may desire to consult any of the documents in the department.

There does not seem to be any difference of opinion as to the desire in many quarters for a commission of this kind. That has been made plain to us by the manufacturers as well as the workingmen through their representatives in the Dominion Trades and Labour Congress and the Canadian Federation of Labour, each of which bodies have made requests that something should be done in this direction. It goes without saying that the recommendations on this subject from boards of trade, universities and other public bodies, are also entitled to the greatest respect and consideration. But that leads to a further point which has been mentioned this evening. All that I have said thus far has had relation to the importance of technical education; and I think every member of the House will agree that there is little room for difference of opinion as to the importance of this matter to Canada as a young nation seeking industrial supremacy be it ever so far removed. We cannot, I think, overestimate the importance of this work, no matter by whom it may be carried on. Much has been said of Germany. I think the commercial and industrial history of Germany is most enlightening to this country. It was after the downfall of Napoleon that Prussia saw her opportunity to become a great nation. She started in the work of nation-building by laying the foundations sure and strong, by endeavouring to establish without delay systems of technical training which would make her working-

men and artisans second to no others on earth. Then, after the Franco-German war, the large indemnity paid by France left the provinces free to expend on technical education what they would otherwise not have been able to devote to that object. From the fact that the provinces themselves made the beginning at the time they did, and from this other exceptional advantage, Germany has been able, since the time of the birth of the empire, to take the strides that have brought her to the position of industrial importance she holds in the world at the present time; and I think Canada is a young country, looking forward to the part she shall play, as the largest and most important part of the British empire, can afford to take lessons out of the books of any other nation in the world and profit by them.

But there is left the doubt on the question of jurisdiction, and that is a matter which cannot be too carefully considered. I do not believe that too much importance can be attached to the work of technical education to be done by the authorities whose duty it is to perform that work. But it is another question whether or not this parliament has the power to go into this question to the extent to which some speakers this evening have indicated they would like to see it do. The resolution asks only for a commission to inquire into the needs of this country. It suggests, however, that the commission should also report on ways and means. Other speakers have suggested that the government should do more than that—that it should assist in a financial way; and other speakers, the hon. member for Halifax (Mr. Crosby) in particular, went so far as to express the wish that the word 'commission' had been left out of the resolution altogether—though if it had been, I fail to see how there would have been any resolution left—and would prefer that the government should do something in a practical way, in the direction of instruction along technical lines. All of this raises a question which has been debated many times in this House, and one which we cannot consider too carefully—whether or not the good which might be done by the appointment of a body by this government to further the work of technical education might not be in part undone by the mischief which the appointment of such a body might create were the motives and purposes of this government in establishing such a commission not fully comprehended and understood. The hon. member for South Wellington (Mr. Guthrie) has said that communications have already been received to the effect that there would be no objection on the part of the provinces to such a course. Well, Sir, it seems to me that before the Dominion government should take the step suggested in the resolution, there should be something more than this negative attitude on the part of the provinces. It should not be a case of no objection, but a case of an earnestly expressed desire which the government should be asked to listen to. I think, the risk should not be run of raising a great constitutional question in a matter of such great national importance until at least the exact position of this government with regard to this question is fully and rightly understood by the different provinces and by the people in the country. To my mind the section of the British North America Act which says that 'the legislatures may exclusively make laws in relation to education, undoubtedly gives to the provinces the right of legislation in all matters respecting education; and if this parliament were to attempt to legislate on matters affecting education, as set forth in this section. I think this parliament would be going beyond the powers which are given to it in the British North America Act. But I am not so sure that the exclusive right to make laws with regard to education means the right to exclude the Dominion from gathering information on any subject which may be deemed a subject of national importance. However, that may be a debatable constitutional question, and in view of the importance of the subject of this discussinon, I think it would be well if the mover of this resolution would allow the government a further opportunity to consider the question from this point of view, and not press it to a division to-night. Assuming that we got over the question of jurisdiction all right, there is still the question of the advisability and the expediency of taking this step so long as there is any likelihood of that step being misunderstood; and I hope that one of the results of this debate will be that the true relationship of the provinces to the Dominion on this question of great national concern will be brought out in bolder and clearer relief than ever before, and if the subject be brought up again, as I hope it will be, there will be no doubt in the mind of any member of this House, or in any group of responsible persons outside, as to whether or not the Dominion would be trespassing in endeavouring to co-operate with the provinces—for it is co-operation alone that would be expected—to the extent the mover of this resolution would desire. I would beg to move therefore the adjournment of the debate.

Mr. R. L. BORDEN. Before the debate is adjourned, I desire to congratulate the mover of this resolution, (Mr. Guthrie) and the various other gentlemen who have spoken and who have shown such a wide range of information, upon having brought this matter so forcibly and clearly to the attention of the country. In a comparatively new and almost undeveloped country such as Canada, it would be seen to be eminently

wise, in the first place, to take stock, as it were, of the resources which the country possesses, and in the next place endeavour to come to a conclusion as to the most effective way by which those resources can be developed. The industrial development of Germany has been alluded to by more than one speaker to-day. When we consider the thoroughness with which the German empire has laid the foundations of its great industrial development, and when we realize how comparatively nothing has been done in this country along the same lines, we cannot but wonder that Canada has made so great an industral advance as she has attained to. Her progress in that respect speaks volumes for the ability, energy and aptitude of our people. I do not desire to labour the question of how important it is that there should be industrial training and technical education in this country. We are all pretty much agreed with regard to that. Take the professional man, the lawyer, the clergyman, you find that each of them has the advantage of a special training after he has finished his academic course. To a certain extent a farmer also has the advantage of such a technical training or education. But, as has been well said by the mover of this resolution (Mr. Guthrie) and my hon. friend from Nanaimo (Mr. Smith) and others, when we come to look at the great majority of the labouring population, we find that they remain, in this respect, under enormous disabilities, which ought to be removed at the earliest possible moment.

My hon. friend the Minister of Labour (Mr. King) has made a very comprehensive speech. He has spoken very warmly on this point. He has spoken of the Yellow peril in the shape of industrial competition from the oriental countries, and this peril, he says, is not remote but it is at our door to-day. He has spoken of the disabilities of the working classes and the inability of our labouring population to utilize their time to the best advantage. He discussed many matters, and one would have thought that even so mild a resolution as that of my hon. friend from South Wellington (Mr. Guthrie) would have seemed to the hon. minister but a lame and impotent conclusion. The Minister of Labour, however, is not prepared to go even that far, and he conjures up some imaginary constitutional objection. I listened to the hon. member for South Wellington (Mr. Guthrie) with a great deal of interest, and I think that as regards the constitutional question, he need not have laboured it to one-tenth the extent he did. He made an absolutely convincing case so far as that is concerned. If the position of the Minister of Labour (Mr. King) be correct, the government has been violating the constitution of Canada for 35 or 40 years in the establishment of the military school in Kingston. But I have not heard of any province raising any objection. But the hon. minister need not stop at the Kingston military school, let him look at the estimates of this year or any year, and he will find over and over again, where the government has spent money by the million on matters absolutely within the jurisdiction of the provincial legislatures. Does not my hon. friend know that his own estimates which he has just brought down, contain dozens of items for aid to undertakings purely local and absolutely within the jurisdiction of the local legislatures. Local works and undertakings, except in so far as they connect one province with another or some province with a country outside Canada, are purely and absolutely within provincial control, yet you can take the estimates and on page after page you will find money given by the $5,000, $10,000 and $100,000 to undertakings of that kind. The parliament of Canada has the right to vote money for any purpose that it may deem proper. It has voted money for purposes absolutely outside Canada. For example to aid the sufferers at San Francisco, to industrial exhibitions within our own country, subsidies to provincial railways which are purely works of a local character and under provincial jurisdiction, aid to arts schools, special lectures upon the advantages of the metric system, a grant to McGill university in aid of work of this kind, schools for the examinations of masters and mates, to keep up the school at Kingston and for the establishment of experimental farms. When we have had illustrations of the sort every year for the last 15 or 25 years in every set of estimates brought down, is it not absolutely perfect folly to talk about there being any constitutional objection whatever to granting aid immediately to technical education in this country. We can do it and no one can say us nay. If the Minister of Labour has no better answer to his own impressive speech than the one he gave at the end of it, I venture to think, he would do better to adhere to the first part of his speech, and not the last, and that the government should act in this matter at once. I would have thought that, after the information vouchsafed this afternoon, he would have said to my hon. friend from South Wellington: Your motion is well intended, you desire that a commission shall be appointed for the purpose of inquiring into the needs of Canada in respect of technical education, but we know the needs of Canada now, we know that this country is behind almost every country in the world in that respect, we have the example of Germany, we have the reports of the commissions in Germany, we have the example of the United States and the reports of the technical commissions in that country, we have the example of the British Islands and the reports of the technical commissions there, and consequently we have at least enough to know that some-

thing ought to be done and done quickly in this regard. Therefore, inasmuch as the last part of the motion simply desires a report on ways and means, and inasmuch as we know where the ways and means are to come from so far as the Dominion of Canada is to furnish them, namely out of the public treasury of this country, there seems to be no need for a resolution in this form. For this reason, I would have expected the Minister of Labour to say: I will propose to amend this motion by a more definite motion setting forth the absolute need of urgent and immediate action by the Dominion of Canada in order that Canada may no longer labour in this respect under the disadvantages from which she has suffered so long. Instead of that the Minister of Labour was constrained to suggest that the debate should be adjourned, that the motion should be, in effect, withdrawn, and that this session should pass without a single step being taken in this matter. I have thought it desirable to place this aspect of the question before the House. I say to the hon. member for South Wellington (Mr. Guthrie) that I am entirely in sympathy with the object he has in view, that I trust action will be taken along the line he has suggested, if no other action can be taken, but so far as I am concerned I would greatly and infinitely prefer that a more definite and practical and speedy action should be taken than that which has been suggested in this resolution itself.

Mr. J. D. REID. Mr. Speaker, I must say I was greatly surprised at the stand taken by the Minister of Labour (Mr. King) upon this question. I would have supposed that we would have taken this matter into consideration and would have placed an amount in the estimates to at least make a commencement on the line suggested by the member for South Wellington (Mr. Guthrie). Therefore, I was surprised that the minister should move to sidetrack this issue. The action of the minister shows that the government have decided to take no further interest in the subject this session, and I hope that the House will divide and let us see whether the Minister of Labour is to be supported in his effort to sidetrack this important issue.

Mr. MORLEY CURRIE (Prince Edward County). Mr. Speaker, the question raised by the resolution of my hon. friend from South Wellington (Mr. Guthrie) has been shown by the discussion this afternoon to be perhaps of as much importance to the industry and commerce of this country as that of the tariff. Resolutions and memorials have been mentioned which have been presented to this House to show the importance of the subject. I believe there are other indications which are perhaps of as great importance as these in showing the tendency of public opinion on this question. In the first place, I wish to refer to the schools already established in the United States. We have there many schools for special industries, and a point which I believe is of importance is that there are in all parts of this country to-day young men who have learned their trades here and who are emigrating to the United States to take these courses in technical education in these schools. We have now stopped almost every other class of emigration to the United States, but with this one class we have not interfered, and I think it is high time that we took some steps to furnish our young men with the facilities which they are at present obliged to seek for in a foreign country. In the second place, it has been well said that the correspondence schools are attempting to carry out this work of technical education. That is very true, an immense amount of money is going to these schools. I do not believe that most people are aware of the number of men taking the courses in these correspondence schools. Some years ago I looked into this subject for a short time and I was surprised to find that one of these schools had enrolled as students at least 200,000 in the United States and Canada. That this large number of young men are attempting to obtain practical education in such an imperfect way shows the great need for education of this kind to-day.

I shall not discuss the importance of technical education; I believe we are fully seized of that. What we have to discuss to-night is the question: Has the parliament of Canada a jurisdiction in this matter of technical education which it can take up and should take up and define? If it has such jurisdiction, I believe we should take advantage of the present occasion to take some steps in the direction of acting under that jurisdiction.

If the contention is raised, as I believe it was by the leader of the opposition (Mr. R. L. Borden) that this parliament has jurisdiction in the actual work of instruction in technical education, I cannot agree with it for several reasons. From the simple reading of the British North America Act it is seen that by article 91 the federal government is given jurisdiction over those subjects not assigned exclusively to the provinces, and by article 93 education is assigned exclusively to the provinces. Some say that education should be subdivided, that we have in technical education something different from ordinary education. But I believe that the result of the thought of the best men to-day on this subject is that there is actually no dividing line be-

tween cultural education and technical education, that the one merges insensibly into the other and that this attempt to differentiate technical and cultural education has been a great obstacle in the advancement of all systems of the former. Again, it has been said that we have examples already, such as the Royal Military College at Kingston. I draw attention to the fact that the latter part of article 91 of the British North America Act says that subjects coming within the classes of subjects assigned to the legislative authority of Canada shall not be deemed to come within the classes of subjects of a private character assigned exclusively to the legislatures of the provinces, and it is only fair to consider the subject of military training as one which comes naturally within the jurisdiction of the Department of Militia and Defence. This being the case, in establishing the Royal Military College we have simply acted in accordance with the latter part of article 91 of the British North America Act. Again, in the case of agriculture, we see that by article 95 the Dominion parliament and the provincial legislatures are given concurrent jurisdiction, so that these two cases are exceptions and the rule, I think, judging by the simple reading of the British North America Act, is that in the matter of actual instruction in technical education this parliament has no jurisdiction. However, I believe there is another and a more important reason why we should not interfere with the actual work of instruction in technical education. We have an example to go by in Germany. Thirty years ago they had the same discussion on the jurisdiction of the federal and state legislatures on technical education. At that time good reasons were given why technical education in Germany should be left to the states. In the first place, it grafted itself naturally on the system of common education; in the second place giving the states jurisdiction would give elasticity to the system, and in the third place, competition would be introduced. For these three reasons, the opinion of those who held that technical education should be placed under the jurisdiction of the states instead of the federal government in Germany had precedence. That action was taken in Germany on purely theoretical grounds. We have to-day the practical experience of Germany extending over a period of twenty or thirty years. The system has worked out splendidly and for that reason I believe we should not consider the advisability of this parliament undertaking any part of the actual instruction in the work of technical education. There is a third reason why I think we should not undertake that work and that is that we should be interfering with the excellent system of technical education which we already have in embryo in the various provinces. The province of Nova Scotia and some of the other provinces have been referred to by preceding speakers and I wish for one moment to refer to the system in the province of Ontario. About a year ago there was a petition from the city of Brantford for the formation of industrial continuation classes in that city. This system of industrial continuation classes is a most important part of the system of technical education, and while I do not know what the result of the petition was, I know that it aroused discussion and every one feels to-day, in so far as industrial continuation classes go, that they are something that graft themselves naturally upon the public school system because these industrial continuation classes would utilize the public school buildings as well as many of the teachers and they would be simply for the most part classes continued in the public schools as they exist to-day. There is also a transformation going on in the province of Ontario in our high school system. We have a manual training department, a commercial department, an agricultural department, and it will probably be but a short time before we will have the remaining courses composed of the industrial, scientific and classical parts. When we have this one further change made in the high school system of Ontario, we will have the prototype of the gymnasia and the pro-gymnasia of the German system. In addition we have in Ontario the school of practical science in Toronto which corresponds with the third class of technical education in Germany represented by the great technical high schools. We have the fourth class represented in Germany by schools for particular industries and in Ontario this class is represented by the dairy school, the school of mines at Kingston and the agricultural college at Guelph. So, we have in Ontario already the skeleton of a system of technical education such as exists in the German states. For these reasons, for the reason that we have a good example in Germany of what can be accomplished by leaving the matter of technical instruction to the individual states, because of the reading of the British North America Act and from the fact that already we have in the provinces a system under way, I believe that this parliament will be very unwise in discussing seriously the question as to whether they have jurisdiction in this matter which would justify them in undertaking actual instruction in technical education. That being the case, the question arises: Is there any function left which this parliament can assume in the matter of technical education which would advance it? I want to refer to two or three things that I think are of some importance and which would result in some action be-

ing taken on the part of the parliament of Canada.

In the first place I want to say that if we took some action now we would define our exact position on this subject. It is evident to any one to-night that there is not a consensus of opinion as to what our exact position is, but if we took some action at the present time we would define that position and we would not have, as we had a year ago, the Minister of Education of the province of Ontario going about the country, making speeches, as reported in the press, to the effect that the province of Ontario were waiting to see what action the Dominion parliament would be prepared to take, before they took any action upon this matter of technical education. The mere fact that we have not already acted and defined our position has, for the time being, put off the discussion of the matter of technical education in Ontario, and I think that if this commission were appointed, or if some other action were taken by the government resulting in the definition of our position it would be an important thing for technical education in Ontario at least.

Reference has been made in some of the speeches to the fact that this parliament would have it within its powers to grant money. While it is possible, I do not believe that it is an important subject. I just wish to refer in that connection for a moment to the cost of a system of technical education. The fact that we lay so much stress upon the granting of money for this purpose is owing to our belief that a system of technical education is a very expensive thing. Looking over a system such as that which exists in Germany we find that in some of the states the cost of the complicated system which they have there is between $200,000 and $300,000 a year. So that, I believe it fair to assume that a system of technical education could be established and put in a fair way of operation in any of the provinces for an annual expenditure of $100,000. That would not by any means be a very serious obstacle.

There is another reason and one which I think will appeal strongly to the Minister of Labour. In any consideration of the development of a system of technical education, as it exists in Germany, one is strongly impressed by the fact that unless you have the interest of the manufacturers and others interested in technical education aroused, the establishment of any system is bound to result in failure. You have to have the interest aroused first. You have to have a demand for a system before it can be a success. That being the case, I hope, Mr. Speaker, that I will be pardoned if I refer for a moment or two to some personal experiences. I have been interested in this subject for some time and often in travelling over the country I take occasion to talk with manufacturers on the train and in other places in regard to this subject. I usually find that there is amongst manufacturers an idea that this subject is important, but they usually think that it is of importance to some other manufacture than their own. They have no personal interest in it from the standpoint of their own manufacture. I want to illustrate that by a concrete example. In the part of the country that I have the honour to represent the manufacturing industry is represented chiefly by the canning factories where fruits and vegetables are canned. The first man to undertake that work was Mr. W. Boutter, in Prince Edward county, over twenty years ago, and since I was a boy I have had a chance of seeing these factories in actual operation. I have seen valleys converted into level ground by being filled with spoiled fruit that went bad in the process of manufacture. I have seen the site for a factory made out of a marsh by being filled with spoiled goods. If we had a system of technical education for the instruction of those interested in canning factories it would be a great advantage to that industry. With that object in view, about seven years ago, I wrote out as complete a plan as I could for the establishment of an institution of that kind in connection with the Agricultural college at Guelph, where, in their chemical and bacteriological laboratories, they have facilities for such a course. At the same time I explained to the Hon. John Dryden that it would, of course, be necessary to get the interest of the manufacturers in this subject. It may be that at that time we did not have such intelligent manufacturers as the hon. member for Elgin (Mr. Marshall) and the hon. member for Haldimand (Mr. Lalor), but at any rate, after talking the matter over with them for six or seven years, I could never find any of them who would bring the subject to the attention of the Canners' convention. I only mention that to show that many of the manufacturers have not the active interest in the subject that they should have. It has been mentioned that steps have been taken in the United States to accomplish something in this matter of technical education. This brings me up to the point as to how it has been accomplished. The best work that has come into my hands on the question of technical education is the report of the commissioner of labour of the United States. That was distributed broadcast through the United States and has done more than any other one thing to give the people generally information on this subject and to stimulate the interest of all classes of people in it. There is a work that we can do, and I was very glad to hear that the Minister of Labour was about to collect material along this line. If the steps taken by the government re-

sulted only in one thing and that was the Department of Labour being instructed to arouse the interest of manufacturers and others in this subject the establishment of that department would be a thing that we might be thankful for in the future. Therefore, I say that one of the great functions of this government is the stimulation of interest on the part of all classes in this great subject.

In the third place, there is something of a suggestion in a remark made by one of the speakers in regard to the Imperial Technical Institute of Berlin. This is a country of great resources; I think I am safe in saying that our undeveloped resoures are far and away greater than any we have yet developed. Our efforts should be directed towards developing our unknown resources and towards the utilization of the by-products of our different manufacturers which now go to waste. I believe it would be well within the jurisdiction of this parliament to establish a technical institute of the highest class, and manned by men of the highest technical ability who would have as their duty the investigation of our unknown resources. For instance, just to mention only one out of the number, we have in Canada unlimited supplies of clay, felspar, and quartz which are the raw products of the china and porcelain industry, and I doubt if we have a single manufacturer of these articles in the Dominion. Again, if we look out of the windows of this building we can see at the mills on the other side of the river the great waste of sawdust which is going on, and it would be well within the duty of such an institute to devise means for its commercial utilization. I have been told that bearings could be made from this by-product which would be more useful than babbit metal or brass for the shafting of machinery. I will speak of only two examples of the utilization of by-products. Not many years ago a gentleman interested in the fish packing industry in Maine hired a young man named Lepage to look into some of the problems in connection with the curing fish, and within a year Mr. Lepage had discovered that a certain variety of glue could be made from the fish refuse, a simple discovery which resulted in his becoming a multi-millionaire. Take again the dye industry which has so enormously developed in Germany as a by-product of coal tar. As late as 1892, London had practically the monopoly of the indigo trade of the world, and Germany then imported about 4,000 tons of indigo yearly; but then came the discovery of Professor Hoffman, and to-day Germany produces three-fourths of the indigo product of the world, and instead of importing 4,000 tons a year, as formerly, she now exports 8,000 tons. The experiments in connection with coal tar and other by-products have resulted in chemical discoveries which a year or two ago accounted for an export trade of about $200,000,000 a year in Germany. In view of these results it is well that this parliament should consider the establishment of a Dominion institute of technology which would look to the development of our unknown resources and the utilization of the by-products of our existing manufactures.

Now, I believe that the general system of education in Canada is not excelled by that of any country in the world. The graduate in mathematics from one of our Canadian universities can go to one of the best schools in the United States and he will find that his Canadian mathematical training has resulted in putting him at least one year in advance of the graduate of Harvard, Yale or Princeton. If you look at the curricula of the engineering schools of the United States you will find that mathematics are superficial and elementary compared with what is taught to the Canadian student. In the department of science you find the same condition. But when we want a man with high technical knowledge we have to take one of these American graduates who has been able to avail himself of the facilities afforded by technical education in the United States, although the ground work of his general education may be greatly inferior to that of the Canadian. It would be a grand thing for Canada if we were able to furnish our young men with the technical knowledge which would enable them to become great engineers and to erect, for example, such works as the Quebec bridge, without having to send for our experts to the United States. One Quebec bridge on top of the water instead of under the water would pay for a system of technical education in Canada for a long time.

Now, the function of the government of the German empire in connection with education is not, I fear, thoroughly understood in other countries. The pre-eminent function lies in the encouragement it gives to the associations of teachers and the associations of manufacturers and others interested in technical education, and under this system technical education in Germany has been unified and brought to its high standard. In most of the published works on technical education in Germany, in the English works at any rate, the assistance given by the German federal government to these associations is passed over as unimportant, while the Germans themselves look upon it from an entirely different view point. I notice that in the report of the Commissioner of Labour of the United States there are only a few lines dealing with this branch of the subject, and in consequence of this lack of information, until

three years ago the people of the United States were not seized of the importance of the relation of the federal government to the promotion of technical education. In the year 1906 there was formed the American association for the advancement of technical education in the United States, which at its second meeting in Chicago provided for an expenditure of $25,000 during the coming year for the advancement of technical education. At the second meeting of that association 18 states were represented, and at the third meeting every state in the Union had a representative present, so that our cousins across the line are now fully aware of the great importance of these federal associations for the advance of technical education. There again is a function which this parliament could assume. One of the recommendations of the American association at its second annual meeting was that the United States government should appoint a commissioner who would devote his entire time to a propaganda for the development and upbuilding of technical education throughout the states of the Union.

Now, Mr. Speaker, while I do not believe that the federal government has jurisdiction with regard to the actual instructional part of technical education, I do say that we can do something towards stimulating the interest of our Canadian people in this subject. I believe we could establish a chemical institution of the very highest order for the Dominion, and I believe we could give assistance to these large Dominion associations for the advancement of the cause. Perhaps in the future we might appoint a commission.

I was glad to hear from the Minister of Labour that the government was likely to give the matter serious consideration and I trust that the best men in the country will come to their aid. When this question became a very live one in Germany twenty years ago, Prince Bismarck did not consider it beneath him to give a great deal of his time and consideration to the question, and I shall quote a prediction made by Prince Bismarck at that time, After looking thoroughly into the subject, he said in substance that the nation which has technical schools has secured itself for commercial and industrial supremacy. That was said by Bismarck not twenty years ago, and at the present time we see that it has almost come true in Germany. I believe that will go down to history as one of the greatest predictions of one of the greatest statesmen. To-day we are giving a great deal of attention and thought to the matter of the Germany navy; but to-night we may well reflect that under the protecting influence of a system of technical education, Germany has already constructed a fleet of ironclads of commerce before which the old wooden frigates of her commercial competitors have faded away like a toy flotilla. Mr. Speaker, I am in hearty sympathy with any effiorts which this parliament make make in forwarding a system of technical education in any way that lies within its jurisdiction.

Mr. WILLIAM THOBURN (North Lanark). Mr. Speaker, I have listened with a great deal of interest to the speech of the hon. member for South Wellington (Mr. Guthrie) and those of other hon. gentlemen in favour of technical education. Indeed the textile trade of Canada owes a debt of gratitude to the hon. member for South Wellington for introducing to this House this most important question. Speaking from practical experience, I can assure this House that it would be a great benefit to the textile trade of Canada if we had technical schools established in the various provinces where textile manufacturing is carried on. While I say that on behalf of the textile manufacturers, I fully agree that technical schools should be established for every other industry that is carried on in this great Dominion. One of the things the workmen of Canada lack is technical education, and there is very limited means of getting such an education in Canada at the present time.

The hon. member for South Wellington has referred to the fact that the coarse wools of Canada are exported to the United States. These wools are manipulated there in a manner in which they cannot be in Canada, because there are in the United States a better educated class of mechanics, men who have had a thorough technical training, to manipulate that kind of wool. I know of no class of manufacturers in Canada who suffer more for the want of technically educated men than the textile manufacturers. In England and Germany this class of people get a thorough technical education, and consequently they are able to manipulate cheap raw material in such a way as to make it into a good-looking article which is sent to this country to the detriment of the Canadian manufacturers. Nobody knows better than the hon. Minister of Finance and the hon. Minister of Customs the difficultes which Canadian manufacturers have to contend with along that line. Deputation after deputation have waited on these hon. gentlemen in the effort to get this state of affairs remedied. The hon. Minister of Finance told us this afternoon that we might expect the budget speech before the holidays. Well, I can assure him that the textile manufacturers, especially those engaged in the woollen industry, are looking forward to that speech with a great deal of interest, in the hope that some measure of relief may be given to them. However, the question we are dealing with to-night has nothing to do with

the tariff. This is a question on which we may be thankful to find both sides of the House heartily agreed. Consider the great beneficial results that have come from the agricultural colleges established in the different provinces of this Dominion. Young men attend those colleges and get a technical education, and then go back to their farms and produce more grain to the acre and a better quality of grain, and breed better classes of cattle and horses. There are young men from these colleges attending farmers institutes and giving lectures, thus educating the young men who attend these institutes, but who cannot afford to attend the agricultural colleges. If we get such beneficial results from agricultural colleges, military colleges, medical colleges and business colleges, why not have established in this country technical schools in order that the manufacturers of this country may receive from those colleges similar benefits to those received from colleges I have referred to. I do not wish to prolong this debate, because it is getting late, but I do want to take the opportunty, from a manufacturer's standpoint, of expressing my conviction that no institutions of learning could be established in Canada that would impart more useful knowledge than technical schools. For these reasons, Mr. Speaker, I trust that the government will see its way clear to appoint a commission asked for by the hon. member for South Wellington.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, I regret that I had not the pleasure of being present in the earlier stages of the debate and consequently have missed a part of this very interesting discussion. I shall have to content myself with reading the earlier part of the debate in 'Hansard.' But what I have heard has enabled me to appreciate thoroughly the great importance of the subject under discussion. I must take exception entirely to the observation of an hon. gentleman opposite that the motion to adjourn is a motion to sidetrack this resolution; and while I propose to vote for the motion to adjourn, I do so on altogether a different ground. After the discussion we have had, after the abundance of information brought before the House, showing the great need of this movement in Canada, it would indeed be strange if nothing further should be done. We are all of the opinion that something should be done, and the only question is what is the better way of doing it. I have no doubt that we have the power to spend our own money in the way we please. If, as a layman, I should venture to express an opinion on a constitutional question, I would on that point agree heartily with my hon. friend the leader of the opposition; but there may be room for doubt as to whether we should organize the machinery for an elaborate educational system, even though we had the right to grant the money. It is not, however, necessary to enter on that branch of the question. If we agree that it is an important matter and something should be done, then it is for us to look about and see what is the best way to do it. An hon. member of the opposition side said there should be no inquiry but that the Dominion should go right ahead and do something. Well, while appreciating the spirit that prompted the hon. gentleman to take that view, I do not agree in it at all. I think it is the duty of the provincial authorities in the first place to institute the work, but should they not do it efficiently, I do not say that the Dominion parliament should not step in and assist them. I am going to vote for the adjournment of the debate, not for the purpose of sidetracking the matter, but that we may have further opportunity of considering, not the wisdom of doing something, but the best way in which to do it. Take the province of Nova Scotia: that province has done a great deal of work and spent much money in the establishment of a system of technical education, and it would be eminently wise, before we proceed to deal with the question, to put ourselves in communication with its educational authorities and see how the Dominion and provincial authorities can work together. What is true of that province is equally true of the others. There is every desire on the part of the government to show our appreciation of this work, and I join most heartily in all I have heard this afternoon with regard to its necessity and importance, and in voting for the motion to adjourn, I do so in order that we may have the opportunity of considering further what is the best way to aid a movement which seems to have received the favour of the whole House.

Mr. SAM. HUGHES (Victoria). Last year I asked the government some questions regarding its intention to establish some such institution in Ottawa or some other suitable part of Canada for the consideration of similar questions to those brought to our notice by the hon. member for South Wellington. There are three classes of technical education. One is such as might be granted by cities and municipalities for the development of artisans and mechanics along certain lines. The other would be such as come under the influence of the provincial authorities, for the development of matters purely connected with their own province; but there are many matters which evidently affect the Dominion as a commercial nation, a part of the great British empire, to be still closer connected with it in a very short time, I trust. These matters I think should be treated by the Dom-

inion at large. Let me name some of these, concerning which people from every part of the country are reaching for information. Take the question of the manufacture of steel. Patents are being held on the advanced processes of producing steel such as may drive every other industry, not using these advanced patents, out of the markets. Why should there not, in connection with this development, be some institution at Ottawa where encouragement would be given and experiments carried on in order that the highest perfection might be attained in this very important industry? Only last year two patents were brought out, each of which, in its own sphere, practically revolutionized the trade and put every industry not using it at the mercy of those who do. The same may be said regarding copper. Then there is the question of sewage disposal. It is estimated by competent authorities that in a very few years our farms will be depleted of fertilizing elements and there will be nothing at the disposal of our farmers with which to replace them. I understand that the Americans are making gigantic strides in this regard. They are producing bacteria which, when mixed with the grain when sown, will draw the nitrogen from the atmosphere, and thus encourage the plant's life. There are various other processes of uniting carbon and phosphate with nitrogen. Why should not this government take up this matter, which is of vital interest to this country as a farming community, and have the experiments carried on in a government institution. I might also point to the question of producer gas being made from peat and all the various industries in that connection, which have been referred to by the Minister of Mines (Mr. Templeman). All our great northern country is rich in peat. Why should not the government pay the cost of carrying on these experiments in their establishments in the city of Ottawa, and thus save the cost to the individual. If this peat could be utilized profitably, it would place Canada in the front rank of manufacturing communities by giving us power cheaper even than the electricity from water-power. Moreover our supply of coal in central Canada depends on the United States. If peat could be profitably utilized for fuel, we would be absolutely independent of the United States in that regard. The experiment of utilizing peat should be conducted by the government. I know three or four gentlemen who have carried on experiments to develop that industry, and they lost their money. It ought to be the duty of the government to carry out these things in the experimental stages.

Every one knows that the dyeing and the dyes used in the trades and manufactures are also of very great importance to the development of the nation. There should be a scientific branch in connection with the government to take up all this class of work. Progress in mining knowledge is being made all over the world, but I believe that if the government established an institution with highly skilled officers, advancement would be made very much more efficiently than by mere hap-hazard work on the part of individuals in mines here and there over the country. A very interesting matter was brought to my notice yesterday by Mr. Murray of Toronto. He had given an address in Montreal a few days before on the chemistry of the wool trade, a subject of which I had never heard before, but an explanation showed me that in this line there was a very important interest for the whole Dominion of Canada and an absolute need of a scientific investigation into the whole business. Then there is the development of nickel. One could mention a score of other branches of commercial industry all of which could be improved by having a bureau or a school of technology, an institute of some kind in Ottawa or elsewhere, where the best men in the country could be kept, even at high salaries. I am certain the country would endorse such an expenditure and it would be justified by the results.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, the Minister of Finance (Mr. Fielding) expressed a strong desire to do something. He said the Dominion government recognized the importance of the subject and had all the information necessary to deal with it. It seems strange to me if the government are so anxious to do something, the Minister of Labour, the hon. member for South Wellington (Mr. Guthrie) are also anxious to do something, they should forget that we had a long discussion on this two years ago. At that time most of the members were anxious to see something done, but it was shelved in much the same way as it is being shelved to-night and we heard nothing more of it until to-night. The motion was placed on the Order Paper last year on January 28, it remained there until May 19, when we prorogued, but nothing was done. Now we have had the motion discussed at great length for the third time, and the Minister of Labour admits it is so very important he drew arguments from China and Japan and told us of the danger we were confronted with to-day from the industrial life of China. What was the remedy? To Christianize the Chinese so they would work less and keep more Sabbaths and I presume let the Canadians fall into the Chinese habits, work longer hours, and keep fewer Sabbaths, and then we would be able to compete with them. If it is so important that we should do so much to help the labouring class in this country why is it that the minister who is at the head of a department brought into being for that especial purpose, has allowed the whole summer to go

by and has permitted one of the most unfortunate disputes between capital and labour that this country has experienced to continue, apparently without making any effort to bring it to a close. I thought that he might have been of value to the country in this matter but he did not seem desirous to make any effort to be valuable. He will elaborate great theories and present strong arguments to the House on lines on which he is making no effort whatever to help the people. I think that if he had more of the practical in him and less of the theory it would be to better purpose. This is the third year we are going to sidetrack this question. How long will it be before it will be taken up in a practical way by the present government. The ministers admit that they have all the information that is required, but beyond collecting that information there is no effort on the part of the government to doing anything.

Mr. J. D. TAYLOR (New Westminster). I have pleasure in adding my voice to those raised in favour of the resolution of the hon. member for South Wellington (Mr. Guthrie) that this matter of the appointment of a commission on technical education be decided forthwith as opposed to the suggestion in amendment of the Minister of Labour that the matter should be indefinitely postponed. The Minister of Labour at least has the excuse that he was not personally cognizant of, and was not a party personally to the promises made by this government to the representatives of organized labour in Canada when early in this year they interviewed Sir Wilfrid Laurier and Mr. Lemieux, as representing the government and laid before them a series of requests for legislation which the Trades and Labour Congress of Canada desired to have passed. Replying to that delegation on the subject of technical education, Mr. Lemieux, on the 12th of January, 1909, nearly a year ago, stated, according to the published official report of the Trades and Labour Congress, that the appointment of a commission on technical education was under consideration. To my mind it is surprising that other members of the government who must be cognizant of the promise made by the Prime Minister and the then Minister of Labour, have not corrected the present Minister of Labour in the extraordinary position he takes on this occasion, and that when for the third year in succession the promoters of the idea of a commission on technical education come to this parliament they are told that they must wait indefinitely until the government gives consideration to this matter. As one of those interested in promoting the cause of technical education, interested particularly in seeing that effect is given in this parliament to the desires of the Trades and Labour Congress of Canada, I must say that I can only regard the suggestion made to-night to adjourn the debate as evidence of the intention of the government to resist the suggestion to participate in the movement for technical education and to shelve the matter indefinitely. If there is any intention on the part of the government to appoint a commission later in the session I think it would well become some minister to tell us of that fact, to take us into his confidence and give us some reason for supporting the suggestion that instead of pressing the motion on the Order Paper we shall wait until it suits the pleasure of the government to tell us when the appointment is to be made. While I rose mainly to call attention to the definite statement made on the 12th of January last that the government had then under consideration the appointment of just such a commission. I wish to refer to one or two incidents brought out in the same report of the Trades and Labour Congress. The present Minister of Labour honoured that congress with his presence and he obtained, as might be expected, because the report of his eloquence had reached the congress before him, a most hearty reception. We read that the Minister of Labour received a tremendous ovation on entering the chamber. He made reference to many of the points the congress had under discussion and he also referred particularly to a matter which he has brought before us to-night. We heard with great interest that there was no other way under Heaven by which we could be saved from the menace of oriental competition except the adoption of some active measures in connection with technical education. We find that when the Minister of Labour addressed the congress he had a different idea as to what we should do to save ourselves from Chinese competition. We find it expressed in this extraordinary way:

> He also referred to investigations conducted by the home and Canadian governments in China, and gave a brief synopsis of his observations while assisting in conducting these investigations in China, and stated that it might be well for the representatives of labour to study the effect the poll tax of $500 Canada had placed upon the Chinese was having upon the trade which the manufacturers of Canada were endeavouring to develop in China and the Orient.

Now when we contrast that as a chief menace to our trade with the orient in September last, with the statement to-night that the one thing we must do to save ourselves from oriental competition is to adopt a scheme of technical education, I think we must come to the conclusion that the Minister of Labour, at least, is not serious. We find that the Trades and Labour Congress have a very different idea as to what this government means when it postpones from time to time the action which

their representatives have urged upon this House. We have a report in this book on the Bill introduced by the congress respecting an eight-hour law on government contracts; and on that occasion, as well as on this, the bug-a-boo of provincial rights was introduced as a reason why we should not deal with it. We find the parliamentary committee thus reporting:

His argument (speaking of the Hon. Mr. Lemieux) as to interference with provincial rights was answered by himself when he said that we could only pass such legislation as regards public works. That is all Mr. Verville's Bill dealt with. But in any event there would be no conflict with provincial jurisdiction. The government did not think of provincial rights when it enacted the fair-wage clause nor when it made provision to prevent sweat-shop labour being employed on government work. There is no more conflict in the one case than in the other, and as for 'respect for the usages and customs' of different localities, the very reason given, during the discussion of the fair-wage clause, by the then Minister of Labour, was, that the government should be a model employer and an example to other employers. It is all very well to refer to the dignity of labour, but it would be a greater compliment to assume that labour is intelligent enough to see through such arguments as those used by the Hon. Minister of Labour in the discussion of this Bill. The debate served a useful purpose at all events in showing what we have to meet when the Bill is next introduced.

Now, Mr. Speaker, I appeal to members of this House to remove from it the reproach levelled at it by the Trades and Labour Congress when they say in this official report that when the labour representatives introduced this Bill it was trifled with, and subterfuges instead of solid facts were advanced why it should not be dealt with. I say let us be men. If we are in favour of a grant for technical education, let us say so, to-night. If we are not in favour of it, let us be manly enough to say that we will not take up this matter, that the provinces must bear the sole burden, and that we will pay no heed to the resolution of the Trades and Labour Congress. Let us say so openly, and not put them off with the suggestion that this matter shall be postponed till some indefinite time. In conclusion I will read the request which is now before the government from the Trades and Labour Congress of Canada with respect to technical education.

Resolved, that this congress emphatically reaffirm its declaration in favour of the immediate appointment by the Dominion government of a commission on technical education, and that copies of this resolution be immediately sent to the Rt. Hon. Sir Wilfrid Laurier, and the Hon. W. L. Mackenzie King, Minister of Labour.

Mr. LOUIS LAVERGNE (Drummond and Arthabaska). (Translation.) Mr. Speaker, I wish to say a few words in regard to that question. Though I sympathize with the idea which has inspired the hon. member for South Wellington (Mr. Guthrie), I confess that I cannot agree with the motion as it is framed. Therefore, if the wording of that motion were put to the vote on its own merit, I would be obliged to vote against it, whereas I am in favour of the proposed adjournment. We know that everything relating to education is under the jurisdiction of the local governments, and for my part I would like the authority to remain vested with those governments. I do not want the federal government to interfere later on with our education affairs.

Just now we are secure from all danger with regard to education. I am anxious to keep for my province its self-government in its integrity, and I believe that all the other provinces are anxious also to preserve their autonomy. I would not therefore let anybody infringe upon it.

We have heard so much talk about the question of separate schools that we should not desire that matter to be brought up again. Our system is perfectly good, and I confess that I am against that motion if it is intended to deprive us of our rights with regard to education. If, on the contrary, the question is for the federal government to interfere only in order to give moneys with a view to assist provinces in the establishment of technical schools, I shall approve the motion, provided the moneys be given to the provincial governments and they have the right to control the appropriation of the funds and to manage them as they think proper, but not otherwise.

I think this motion is actually dangerous, because if it were adopted we in favour of separate schools would find ourselves, later on, in a very bad position.

As I have already said, if I were obliged to vote on the merits of this proposition, I would vote against it. But as the question is on the adjournment of the debate, I am in favour of this latter motion.

Mr. GUTHRIE. As mover of the resolution I may say a word on the motion to adjourn. After dealing with the question somewhat fully this afternoon, and endeavouring to impress upon the government the propriety of the motion, and also the expediency of appointing a commission forthwith, I hardly think it would be consistent for me now to vote for the postponement of my own motion. However, I accept in absolute good faith the statement made by the Minister of Labour in asking for an adjournment of this debate in order to give the government further time to consider the question. If I thought there was the slightest foundation for the statement of the hon. member for Grenville (Mr.

Reid) I would be the more inclined to press the matter with all the resources at my command. But I accept the statement of my hon. friend the Minister of Labour, and the positive assurance given to this House by the Minister of Finance that the government does feel in sympathy with the main purpose of this resolution, but requires further time for consideration. I was somewhat amused by the statement of my hon. friend from East Grey (Mr. Sproule) who seemed to complain that on this occasion there was a possibility of adjourning the debate, and that the question had been similarly adjourned indefinitely on a former occasion; and if the few members who were present on the former occasion were here now, they will perhaps also be surprised when they are told that the hon. member who moved the adjournment of the debate and postponed the question on that occasion, was my hon. friend from East Grey.

I might just state that while I myself am reasonably clear as to the constitutional rights of this parliament to go as far as this motion asks—and I am glad to know that I am supported in this view by the hon. leader of the opposition—I can tell the leader of the opposition that the gentleman who sits immediately to his right is not so clear. The hon. member for East Grey (Mr. Sproule) was good enough. at the six o'clock adjournment, to compliment me on the general tenor of my remarks but he saw fit to say that on the constitutional question I talked utter nonsense. So that, there is some difference of opinion on that subject also. However, as I feel satisfied that the government has evidently the intention of going ahead on this matter and desires only time for consideration, I do not ask any one to support what may be my vote if a division is taken. I would, for the sake of consistency, if there is a decision, have to vote for my motion, but I do not do so with the idea of antagonizing the government or of placing myself in a false position with regard to it. I realize that antagonizing the government cannot help the matter at all. I desire the support of the government, I desire the government to act, as I desire my motion to be carried out, whether amended or not, after consideration.

House divided on the amendment of Mr. King.

Meighen,	

Amendment agreed to, and debate adjourned.

Mr. BEATTIE. Mr. Speaker, I wish to apologize. I had forgotten that I was paired with my hon. friend (Mr. Lloyd Harris) and I ask that my vote be stricken off.

Mr. SMYTH. The hon. member for Selkirk (Mr. Bradbury) has not voted.

Mr. BRADBURY. I was paired with the hon. member for Assiniboia. Had I voted I would have voted against the adjournment of the debate.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken to-morrow?

Mr. FIELDING. The railways branch Bill, the Bill respecting the government employees provident fund, the Bill of the Minister of Marine respecting water carriage of goods, and if we have time we will go into supply.

Mr. R. L. BORDEN. What estimates?

Mr. FIELDING. If the Minister of Public Works can be here we will take his estimates; if not we will take Inland Revenue and Customs.

Motion agreed to, and the House adjourned at 11.30 p.m.

HOUSE OF COMMONS.

TUESDAY, December 7, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 58) respecting the Montreal, Ottawa and Georgian Bay Canal Company.—Mr. McGiverin.

Bill (No. 59) respecting the Saint Maurice Valley Railway Company.—Mr. Mayrand.

NEWMARKET CANAL—HOLLAND RIVER CHANNEL.

Hon. G. P. GRAHAM. I wish to make a slight correction in answer to a question asked by the hon. member for South Simcoe (Mr. Lennox) about a week ago. The question was as follows:

1. Has the Department of Railways and Canals had a survey or investigation made into the feasibility and cost of constructing a channel from the Devil's Elbow on the Holland river to a point in the neighbourhood of the Bradford Railway station, in South Simcoe?

2. If not, will the department have this done at an early date, and if done, is the report favourable, and what is the estimated cost?

The answer is:

1. Yes.

2. The Bradford survey was begun on the west branch of the Holland river at the junction of the Newmarket canal, which point is 4·9 miles from the mouth of the river, Cook's bay, and carried up the west branch of the river to a point about 3 miles above the Bradford and Holland Landing road.

The canal or channel leading to the proposed basin in front of the Grand Trunk station, Bradford, would leave the west branch at the Devil's Elbow, 7 miles from Cook's bay, and the Bradford basin would be at 8·2 miles, or in other words the canal would be 1·2 miles long with a bottom width of 50 feet. The proposed Bradford basin is estimated for 200 feet width, inclosed with concrete dock walls. No work is required in the 2·1 miles of river between the junction of the Newmarket canal and the Devil's Elbow. The estimated cost of the work is $52,947.

QUESTION.

IMPERIAL EXPORT COMPANY.

Mr. DANIEL:

1. Has an application been made to the government by the Imperial Export Company for assistance in establishing a regular freight steamship service between Atlantic ports in Canada and Australia and New Zealand?

2. Has the government received any communications from the trade agents in Australia and New Zealand favouring the establishment of such service?

3. Has the Minister of Trade and Commerce received any communications from Canadian shippers or others requesting the establishment of such a service? If so, what communications and from whom?

Sir WILFRID LAURIER:

1. Yes.

2. Yes.

3. Yes, but it is not thought advisable until the matter has been adjusted to bring down the information sought for.

NAVAL DEFENCE.

Mr. R. L. BORDEN. Before the orders of the day are called I wish to ask the Prime Minister when we may expect the Navy Bill? We were promised some information on that point a week ago yesterday.

Sir WILFRID LAURIER. I think we will be able to take up the Navy Bill immediately after the disposal of the Budget or about that time.

Mr. MONK. I would ask the government to lay on the table of the House the correspondence, despatches, cables and communications between the imperial government and the government of Canada concerning naval defence, since the Imperial Defence Conference last July and up to the present date.

Sir WILFRID LAURIER. There is no objection.

CANADIANS ENTERING THE UNITED STATES

Mr. SCHAFFNER. I wish to call the attention of the First Minister and of the government to a matter of considerable importance, and one which we discussed last session. It is a question which is causing considerable feeling in southwestern Manitoba. I read from this morning's Ottawa 'Citizen'.

Stopped Pastor returning to Ireland from Winnipeg via U.S.A.

(Special to the 'Citizen.')

Winnipeg, Dec. 6.—Rev. T. Davidson, famous pastor of Belfast, Ireland, who has been preaching special services here for several weeks left on Friday last for home via the United States. He was stopped at the boundary by immigration agents and compelled to return to Winnipeg to have papers filled out showing he was not an undesirable.

Such occurences are becoming so frequent that it is creating a strong feeling here. No one regrets it more than United States Consul General Jones, who is doing everything possible to create good feeling. He ascribes it all to ignorant and over zealous officials.

I did not suppose that I would be in order in discussing the question at this stage but it is certainly one which needs the serious consideration of the government. I refer to the manner in which the United States officials are dealing with people of almost all classes who are crossing over the boundary into the United States.

Hon. Mr. OLIVER. We have no jurisdiction over the immigration officials of the United States. They exercise jurisdiction on their side of the line and we exercise jurisdiction on our side. I cannot give any answer to my hon. friend on this matter at all.

Mr. FOSTER. It seems to me that the Minister of the Interior and the government cannot afford to treat such a matter in this fashion. The Prime Minister will remember that last year we had a discussion over some rather outrageous cases and I think the Prime Minister himself promised that the matter would be looked into. Perhaps he can tell us if anything has been done, and if so what? Such things as these referred to by the hon. member (Mr. Schaffner) are indignities and we have no spirit unless we resent them. We ought at least try to make fair inquiry and see whether the conditions cannot be ameliorated.

Sir WILFRID LAURIER. I did not trust my memory about what occurred last session and I thought the Minister of the Interior would know. My impression is that representations have been made on this subject, but I will look into the matter and give further information to my hon. friend. I thought we had some arrangement about it.

FIRST READING.

Bill (No. 60) respecting the House of Commons.—Mr. Campbell.

INTERCOLONIAL RAILWAY BRANCH LINES.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals) moved second reading of Bill (No. 17) to authorize the government of Canada to acquire by lease lines of railways connected with the government railways.

Some hon. MEMBERS. Explain.

Mr. GRAHAM. I explained this Bill on its introduction, and as the question of acquiring branch lines has been so thoroughly discussed in this House time and again, I think it hardly necessary to go into details. The Bill provides that the government shall have power to lease such line or lines as connect with the government railways and on the report of the board of management that such lines will be of benefit to the government railways. The Bill also provides that no line shall be taken over unless the chief engineer of the Department of Railways and Canals reports that it is in good order and in safe condition for operating. That provision is to obviate the necessity for expending a large amount of money on the line after it has been taken over. If it should be thought desirable to take over any line of railway under this Act, the government will not take it over unless the owners put it in such condition that we can operate it without having to undertake an expenditure on capital account to put that line into proper condition. In other words, we do not propose to lease any lines that are not workable and not in good operating order. The third clause is a safeguard to parliament that no line shall be leased and no contract of lease entered into without first submitting it to parliament for approval.

Mr. W. F. MACLEAN. Is the tendency of this proposal along the lines of increasing government ownership? Is the government fully committed to that principle now and do they intend to work it out to its full extent?

Mr. GRAHAM. That question covers a very vast territory, and I could hardly be expected to give an answer to it. If advantage be taken of this Act to lease any line or lines that now connect with the railway, on the face of it it certainly widens the field of government ownership.

Mr. W. F. MACLEAN. And therefore it shows that the stories as to the government giving up the control and administration of the Intercolonial, are pure fiction?

Hon. J. HAGGART. I do not clearly understand the necessity for this Bill. The minister has not stated what lines he has at present in view that might be taken over, but I assume it is his intention to follow out the proposal made by the hon. member for Westmorland (Mr. Emmerson) who has advocated from year to year the acquisition of these different lines by the government. I do not clearly understand the necessity of it. Why do you want authority from parliament to make a lease of these lines and afterwards come to parliament to ratify it? Why cannot you make a lease without the authority of parliament at all, and then come to parliament to get the lease ratified? I think that would have been the best plan. An acquisition of a property would be more fully considered if the whole of the reasons were to be given by the minister for the acquisition of a particular line. The pros and cons might be fully discussed, instead of the government coming to parliament with a cut and dried lease entered into by the government with the approval of the commission. That, I think, would be the more parliamentary course, and the better course to pursue if the government had not authority to enter into a lease, because once having entered into a lease, we would have no power of altering or amending it; the lease would come to us holus bolus, take it or leave it. According to the other plan, if the lease was entered into conditionally without the government being bound until parliament had given its approval, I think that would be a far better plan than the one proposed by the Minister of Railways. But the Minister of Railways surely has some object in view, he has surely considered the question whether there are any railways in the maritime provinces which would, if acquired by the government, benefit the operation of the Intercolonial. If that be his object, he should take the House into his confidence and state what line he has in view, what railways he thinks would be for the benefit of the Intercolonial if they were acquired by the government.

Mr. GRAHAM. My hon. friend is in error in thinking that I have some particular line or lines in view. The introduction of this Bill is the result of consideration by the government after repeated discussions in this House, and after considering, not only a report made by commissioners appointed by the New Brunswick government, but a report made by a commission appointed by this government over a year ago. They reported on some twenty railways in the provinces of Quebec, Nova Scotia and New Brunswick. I am free to admit that I have not entered into the merits of any of these lines to ascertain which one or ones it would be proper for us to acquire. Until this year we have not had the machinery for that purpose which we have now, a body thoroughly well qualified, as I think the present board is, to judge of the merits of any of these lines, and to judge whether they might be of benefit and of how much benefit to the government line. That is the point of view from which the question would be approached. The other point of view, of course, would be the benefit of transportation to the people. But the first object, from my standpoint, would be the benefit that the leasing of these lines would be to the government system itself. As I say, I have not gone into the merits of any of these roads to see which ones if any we should lease. My hon. friend will see that any lease we might make, or any negotiations we might enter upon for making a lease, would always be made on the distinct understanding that they would not be binding until parliament gave its approval.

Mr. CROCKET. Would that mean that the government railway would not operate the lines until parliament approved?

Mr. GRAHAM. Certainly.

Mr. CROCKET. I can hardly see the purpose of the Bill.

Mr. GRAHAM. My hon. friend will understand that the government could have gone ahead without a Bill. We could have entered into negotiations without parliament having first said: We are agreeable, and if you find a line that will be of benefit to the government road, you may enter upon negotiations. By the passage of this Bill parliament approves of the principle of leasing any line or lines if they are found to be of benefit to the government system, although the details of such lease must be approved by parliament before they can become effective. One of the safeguards we will have in considering questions of that kind is the fact that the government line will not consider any proposition unless the board of management first approves or recommends it; and secondly, the chief engineer of the department must approve the standard of the road before the government will enter into negotiations for its acquisition, it being understood that an arrangement would not come into force until parliament had given its approval.

Mr. SPROULE. I would expect that the government would not propose a Bill like this unless they were prepared to inform the House whether it is the fixed policy of the government to extend the principle of government ownership of railways. If that is not their policy, it does not seem to be the part of wisdom to proceed along this line without some definite object in

view. I would naturally expect that the Minister of Railways had gone into an inquiry, through this board or through his chief engineer, with regard to the situation of the Intercolonial railway and the conditions which make it a non-paying concern, and that the object of these leases was to make it a paying concern in the future. I think also he ought to be able to tell the House whether it is the determination of the government to go on and extend government ownership, because there is a great deal of controversy going on over that matter, some being in favour of it and some against it. I think there is a motion on the Order Paper for passing the Intercolonial over to some other railway to run it. Now, that indicates that there are some persons, at least from the maritime provinces, who are opposed to this principle. I think the Minister of Railways ought to be able to furnish such data to the House as will justify us in saying now that we are giving you a free hand, you have something in view, you have looked carefully over the ground, there are many feeders to this railway that would be valuable if put in good condition, providing we can lease them at a reasonable figure. But I agree with the ex-Minister of Railways (Hon. Mr. Haggart) that the government have such power already. Did they not do it with the Gibson railway, and with the Drummond County railway? Have they not done it several times during the last 14 or 15 years with reference to railways in the maritime provinces? Now, what different relation will the government be in with regard to this work after the Bill has been passed from what they were in before? They could already make a lease subject to ratification by parliament if they thought proper to do so. They will be able to do the same thing in future, so I cannot see what great benefit is going to be accomplished by this Bill. At any rate, if we pass the Bill it is assenting to the principle, and if that principle means the extension of government ownership of railways we ought to be given some better information than we possess at present. I am not opposing the Bill, but I think the Minister of Railways ought to be able to furnish the House with better data than he has, and a more elaborate scheme, and show us that he has carefully considered this subject, and that he thinks it will be wise for us to extend the principle.

Mr. GRAHAM. I would be glad to give my hon. friend an outline of an elaborate scheme if I had one; but I frankly stated to the House what my view is, that it is proposed to obtain from parliament authority to have the Board of Management investigate any line that they think would be beneficial to the government line of railways, and authority to lease any such line. As to the enlargement of government ownership, I am not prepared to announce any particular policy. The present policy of the government is public ownership of the Intercolonial railway; and so long as we own that line, which will probably be quite a while, I propose to make the best of it. But my hon. friend says there is a question on the Order Paper suggesting that the Intercolonial be leased. If the government were proposing to lease the government road, such a movement as this would neither help nor hinder the leasing of the government road. My own opinion is that if a company owned the Intercolonial, it would have had possession of some at least of these branch lines long before this. If it be true, as has been argued time and again in this House, that the leasing of certain lines would not only improve the transportation facilities for the people, but also increase the usefulness of the government line, then parliament ought to be prepared to give us the power asked for in this Bill—to investigate and see if this be true in any case, and, if so, to act accordingly.

Mr. CROCKET. Does the minister say that the government has not already the power to investigate a railway and enter into negotiations to lease without the passing of this Bill?

Mr. GRAHAM. As I explained a few moments ago, the government can investigate this or any other question. But there is this difference, that with this measure on the statute book, parliament has approved of the principle of leasing any branch line which it may be found, after investigation, to be in the interest of the government railway to lease. We are starting on that investigation with the approval of parliament to the policy of leasing these lines if proper conditions do exist, the details to be submitted to parliament.

Mr. CROCKET. But the lease is not to become effective, I understood the minister to say, until it is submitted to parliament and is approved by parliament. If so, I cannot see the purpose of this Bill at all, unless as a meaningless sop offered to the member for Westmorland (Mr. Emmerson).

Mr. R. L. BORDEN. The Minister of Railways has perhaps properly described the effect of this Bill when he says that it gives the government a general authority to negotiate. He says, as I understand him, that general authority to negotiate ought to be granted by parliament, but in that case he should make it clear to us that there are some lines of railway in Quebec and in the maritime provinces which may usefully be acquired by the Intercolonial railway, having regard to

the interests of the people in respect to transportation, and having regard to the interests of the Intercolonial railway as a going concern. I may say in passing that I rather object to the expression of government ownership. I would like the government to understand that they do not own the Intercolonial railway. They are for the time being, unfortunately for the people of this country, entrusted with its management and control; but the railway is owned by the people of Canada, and not by the government at all. I must confess that I would have expected the Minister of Railways and Canals, according to his own definition, to have given us a little more information than he has given us so far. He has not made it clear that, in his own opinion, there are any railways of that character. He has referred us to certain reports of certain gentlemen appointed by this government and certain other gentlemen appointed by the government of New Brunswick, who have arrived at certain conclusions. I am not very familiar with these reports, and the minister appears to be no more familiar. However, he has not stated to what extent he has acepted their conclusions, nor has he given us the name of any railway which he thinks it advisable for the government to acquire. More than that, he has not intimated to us the principle upon which the government or the Government Railway Management Board will proceed in dealing with this question. Although the minister very cleverly introduced into his speech words that are not in the Bill, I do not observe in the Bill itself any statement of policy upon which the Government Railway Management Board will proceed. I understand that they have full discretionary powers of management and control so far as the operation of the Intercolonial railway is concerned; but I do not understand what discretionary powers they are to have in regard to leasing branch lines. I do not understand what considerations they are to have regard to in coming to a conclusion. The Bill leaves us entirely ignorant on this point, and the minister also leaves us ignorant of that. If the minister asks us for this Bill as a general authority to negotiate, and that is all it can amount to, ought he not to give to the House some explanation of the principles upon which they will proceed to negotiate—what considerations they will have regard to and upon what lines they will proceed, in coming to a conclusion as to whether they shall recommend or not? I can understand that the Intercolonial railway might embark upon a policy of acquiring ultimately every one of these branch lines. That is perfectly intelligible whether we approve of it or not. I can understand that the policy might be very much more restricted than that—that it might relate only to such of these lines as would in the immediate future become financially profitable to the Intercolonial railway as a going concern. I can understand that lines would be acquired because they would give increased transportation facilities to the people, and although not immediately profitable, would become profitable within a reasonable period. There are other lines of policy that might be suggested. The minister does not commit himself to anything, and only asks for general power to negotiate. He does not give us the slightest idea of the lines on which the action of the government or the Railway Management Board is to be conducted. I am bound to say that I am in favour, so far as I am personally concerned, of coming to parliament first and stating what the government proposes to do and getting this general authority to negotiate. I think that, perhaps, on the whole—although there may be a difference of opinion—that is the wiser and fairer course to pursue. But I do not think it a very advantageous course to pursue unless we get from the minister some intimation of the lines upon which the general power to negotiate will be exercised and the policy which will influence the government in coming to a conclusion, one way or the other, with regard to any of these lines.

Mr. BLACK. I would like very much to have a little more light on this question. When it comes to a vote, I propose to vote on this Bill. At the present juncture, I do not know whether I shall vote for it or against it. Unless I get a little more light on the subject, a little more information than I have now, I shall be strongly inclined to vote against it. I think that the minister must surely have had in mind, when he prepared that Bill, some branch railways or some number of branch railways that he was going to acquire. For myself, I would like to have some definite information what branches are to be taken in. Is it for a few branches in New Brunswick that are not paying a dividend and never will pay a dividend, under present management? Is it for some branches in the province of Quebec that are in trouble? Is it for certain branches in Nova Scotia that are not paying dividends? I remember that, last autumn, a commission was appointed to examine and report on the subject of branch railways. And I was astonished to learn afterwards that the most prosperous branch, the branch that runs through the best part of the maritime provinces, the Dominion Atlantic railway, had not been examined or reported on at all. This road, as many hon. members know, runs through the richest part of the maritime provinces——

An hon. MEMBER. Oh, oh.

Mr. BLACK. Perhaps the hon. member for Pictou (Mr. Macdonald) does not know,

but I know that this road runs through the richest part of the maritime provinces; that we send over that road between half a million and a million barrels of apples alone every year; that the country through which it runs is handicapped by that railway, a country that would be alive with manufactures if we had a railway that was assisting manufacturing development, in stead of taking out of the manufacturers all they can. This is a railway which is managed from London, and anything in Canada managed from London has hardly ever been prosperous so far as Canadians are concerned. I say I was astounded to learn that this road had never been examined or reported on by the commissioners. And when I inquired the reason, I found that there had been a difference between the management of that road and the commission in regard to the cost of running over the road. I believe—of course, I am not speaking positively, but the information came to me from a very good source—the management wanted $30 a day for taking the commissioners over the road, and the commissioners, in an economical frame of mind, refused to give it, and made no report on the road. I should like to know, before I vote, if it is contemplated to take over the Dominion Atlantic as one of the branches of the Intercolonial. It can be bought, and it is not in bankruptcy. All that any one has to do is to look at the report sent to the government every year, and he will find it to be a good paying road. A part of it is leased from the Intercolonial railway. This private company actually leases part of its road from the Intercolonial. And it is one of the best paying pieces of road in Canada. I would like to know if the government intend to withdraw that lease. It was a foolish lease in the beginning, it has been a foolish lease so far as as the people of Nova Scotia are concerned ever since, and it will continue to be a foolish lease until the end. I repeat that I should like very much to have a little more information before deciding whether I shall oppose this Bill or support it.

Mr. SPROULE. How would it do to use this power as a means to extend the Intercolonial westward to Georgian bay?

Mr. TALBOT. I have opposed any further purchase, lease or administration of any railway in addition to what the government possesses. And I oppose it now. And I am prepared to say that, unless things happen that should change my mind—and they will have to be very real and important things, I shall oppose it for many years to come.

Mr. HENDERSON. The Bill before us is, to my mind, an extraordinary one; it is something new, I think, in the way of railway legislation. The powers asked for by the government are very unusual, and they are asked upon a basis of very little information as to how the Bill will actually be carried into effect. I understand that the Bill will authorize the government to lease certain railways—we do not know what railways, nor do we know whether they are rich corporations or poor ones. They may be corporations whose bonds are not worth ten cents on the dollar; but the moment the government gets this power to lease these roads, no doubt the bonds will go up very quickly. To my mind, there is an open door there for a good speculation on the part of some one down in New Brunswick or Quebec. I should like more information before we are called upon to vote on the question. I do not wish to oppose anything that is in the interests of the Intercolonial railway or will promote the interests of the maritime provinces or Quebec in relation to their railway systems. But it does seem to me that there is something about this Bill that is rather dark. Under it, the Minister of Railways is to be authorized to lease certain roads in whole or in part, in fact, any line or lines connected with the government railway. And he is authorized to do this upon the recommendation of the Government Railways Managing Board. In effect, the Minister of Railways is authorized to do this on his own recommendation, because, practically, the Minister of Railways and the Managing Board of the Intercolonial are one and the same power—I do not think they are very far apart yet. I confess that the legislation is of a character new to me; it seems to me to give the Minister of Railways extraordinary powers. Now, if the recommendations of the government Railways Managing Board would go so far as to tell before the purchase is gone into who the owners of the railway are, and what is the value of the road, whether it is a bankrupt road or one paying dividends, and so on, I could see my way more clearly to giving the minister this power. But, if the Bill passes, he is to get this power without our having any information as to the value of the road or roads to be leased. That, to my mind, is a very strong objection, and I think the minister ought to see his way to remedying that defect. I assume that the minister will not press this to a conclusion at once, but that he will give members a further opportunity of looking into the matter and by all means that he will be able to place before the House, before the Bill passes its second reading, definite information with regard to the names of the railways he proposes to purchase, their value, the value of their securities and the holders of these securities, practically a statement of the persons who are to be benefited by this leasing or

purchase. It looks to me like a dark horse. I think we are taking a great deal for granted if we confer on the minister a power like this on the limited information he has given.

Hon. W. S. FIELDING. I am afraid the hon. member for Halton (Mr. Henderson) is unduly suspicious. It never occurred to me that there was anything very dark or dangerous about the Bill; it seemed one of the most moderate and reasonable Bills ever submitted to parliament and I should be surprised if, after a fair consideration of the Bill, there is any serious opposition to it. The adoption of this Bill simply asserts a principle which has frequently found expression in the debates of this House and which every man in any way acquainted with railway matters will readily approve. That principle is that where there are branch lines connected with a large and important system it would undoubtedly be in the interest of economy and efficiency that these branch lines should be consolidated with the general system if such a consolidation can be brought about on fair and reasonable terms. It needs no argument to say that a short branch line of railway may be economically a failure, its expensive management may be so great that it cannot pay even its working expenses. Take that same branch line and consolidate it with a large system and instead of a burden it might become a useful feeder to the larger system. Any hon. gentleman who has the slightest knowledge of railways will at once agree to this general principle. It is well known that along the line of the Intercolonial railway there are a number of branches worked more or less inefficiently—I will not say more or less efficiently, some of them are not worked efficiently, and it is believed that if these branches were consolidated with the Intercolonial railway better results could be obtained. I do not agree with the hon. gentlemen opposite that it is essential to specify what branches are in contemplation. For myself I have no idea of a single branch which will be leased under this Bill, while I have no doubt that some branches will be acquired by way of lease. The criticism of the hon. member for Lanark (Mr. Haggart) rather goes to the fact that the minister will have to come back to parliament for approval. That goes to show that the Minister of Railways has not been taking to himself some unwarranted power but has been unduly modest. He does not ask authority to enter into any binding arrangement with anybody but he does ask the House to accept the principle involved in this Bill that the consolidation of branch lines with the Intercolonial railway is a desirable thing if it can be brought about on fair and reasonable terms. Any branch of the Intercolonial railway may properly be brought within the operation of this Bill.

Mr. HENDERSON

Mr. R. L. BORDEN. My criticism was confined to the absence of any statement by the minister as to the principle upon which the government intended to proceed. What will be the government's policy after getting this power to negotiate? I approve of their coming here to get the power to negotiate as I have said, but I think we are entitled to some statement of what the policy of the government will be.

Mr. FIELDING. It is certainly desirable that there should be as clear an understanding as possible, but my hon. friend will agree that inasmuch as we must come back to parliament for approval, even although the government should be unwise enough not to negotiate in the right direction, the rights of parliament are fully protected. The Bill sets forth, in the first place, that the road must be in good and safe condition. There is a very important assertion of principle. If you take a dilapidated road and acquire it by lease, although on the surface it may seem to be a good arrangement, you may have to spend a large amount in putting it in order. Therefore the Minister of Railways has wisely determined that he will not consider the acquisition of any branch line unless it is in a safe condition.

Mr. W. F. MACLEAN. Railway managers often take over a road just because it is in a poor condition and put it in good order.

Mr. FIELDING. No doubt there might be cases where the Minister of Railways would say to the parties: Your road is not in a condition to enable me to negotiate for it; put it in a substantial position so that we will not have to spend a large amount of money on it and we will deal with you. There are a number of railways that might be acquired, notably in New Brunswick. There are very few in Nova Scotia that would be willing to be called branch lines. The hon. member for Hants (Mr. Black) has spoken of the Dominion Atlantic. I am afraid the Dominion Atlantic would be offended if it were called a branch line.

Mr. BLACK. I do not mind offending them, they have offended us often enough.

Mr. FIELDING. People are often very glad to get railway accommodation and when they get it are sometimes too ready to find fault with the railway company. However that may be, I think the House ought to adopt the principle of this Bill. It is a principle of what might be called the economy of railway management.

Mr. R. L. BORDEN. The Dominion Atlantic could come under this.

Mr. FIELDING. Yes.

Mr. LENNOX. It is not confined to branch lines, it is any line connecting. It might be a railway 1,000 miles in length.

Mr. FIELDING. It might be, but we have not any railways of that length down there.

Mr. LENNOX. It might be anywhere, it might be the Canadian Northern.

Mr. FIELDING. I do not think there is any danger of a branch of 1,000 miles in length being brought under this Bill and anyhow, as we must come back to parliament for ratification of any agreement made, my hon. friend will see that the public interests are adequately protected. This Bill simply authorizes the Minister of Railways to enter upon the consideration of a policy that has again and again found advocates on both sides of this House. True the minister could have gone ahead made his negotiations and then come back to parliament, but he has thought it best to pursue the policy, which I am glad to say has won the approval of the leader of the opposition (Mr. R. L. Borden), of coming here and asking a general declaration in favour of the principle. I would take it for granted that the managing board would have to satisfy the Minister of Railways that the road will either from the beginning or at a very early stage pay its own working expenses and a sufficient sum to protect the government against loss. That leads me to repeat the observation I ventured to make that it is quite possible a branch railway which is losing money as a branch line might even make a little when consolidated with the general system. I think the Bill is reasonable, I think the criticism of the hon. member for Lanark (Mr. John Haggart) that we do not need to come to parliament as we have the power to negotiate without coming to parliament, while true is not important; in fact I think it is much wiser that the minister should come here and ask parliament to give general approval to the principle laid down and then I think it is not too much to ask the House to believe that the Minister of Railways and the managing board will not recommend the acquisition, even by way of lease, of any railway which would not be a helper to the Intercolonial railway. But if the Minister of Railways should be so unwise as to do that and if his colleagues in the government should be so unwise as to encourage him to do it, you still have the safeguard of this House of Commons and this parliament, because no lease that the minister might propose could be of any binding effect until it had been submitted to this House and had received the approval of parliament.

Mr. FOSTER. The hon. member for Hants (Mr. Black) was asking for light a little while ago. I watched him quite closely while the Minister of Railways (Mr. Graham) was diffusing such light as he has diffused on this Bill; I did not see much of an answering gleam on the face of my hon. friend, and when the Minister of Finance got up I noticed that my hon. friend fixed both eyes on him. I do not believe I am far astray when I venture the guess that no very great light has gone into the cranium of the hon. member for Hants as a result of the explanation or the diffusing of light by the hon. Finance Minister.

Mr. BLACK. I am still waiting for light.

Mr. FOSTER. Still waiting! Then, I want to give the hon. member for Hants some of the light he was asking for. If he will just remove the little blur before his eyes and look back and down he will see a certain figure, not long ago upon the ministerial benches. He will see that that figure is no longer on the ministerial benches, but is removed a little farther to the right, and he will remember that that gentleman has had for some years a very decided liking for the absorption of maritime province railways by the Intercolonial railway, that he has advocated it in the country before his constituents, advocated it in the House, that he has pestered and bothered the present Minister of Railways and Canals considerably by the persistent advocacy and criticism which accompanied that advocacy, and that as a result the Minister of Railways, bothered with the fellow, gave a commission and had some of his wise men sail around about the maritime provinces. They had a good time, looked over all these roads, drew their money, got their expenses and then prepared a report for him which, strange to say, the Minister of Railways has not yet read. Am I wrong in that?

Mr. GRAHAM. My hon. friend is wrong to this extent, that it was laid on the table last year and he should have read it if he has not.

Mr. FOSTER. I am not talking about myself. The hon. member for Hants has not been asking me for light.

Mr. GRAHAM. But you are attempting to give it to him.

Mr. FOSTER. And I thought that it was a fair assumption from what the minister said that he had not looked within the pages of the report. Has he?

Mr. GRAHAM. I have read it through twice.

Mr. FOSTER. Then, if my hon. friend has read it through twice, it is a very poor report or he would be able to give his opinions in reference to it. Now, he certainly says that he has not bestowed any thought upon it at all. Meanwhile the hon. member for Westmorland, still somewhat critical, a little on the offside, bothers the minister again, and the minister says: I

will have another whack at him; I will put some enabling measure on the law-book; I will have a statute that will enable me to take in these railways. Of course, I am not going to bestow any bother upon looking into the question whether there are or are not any roads. This is sufficient for my purpose at the present time. My purpose is to get another stepping stone away from that bothersome man from Westmorland. That is about all the light there is in it except that a little more may be shed upon it in this way. I see a splendid arrangement for future good work about the time of the coming elections. The minister comes down and says: Here is a matter of sufficient gravity to be called to the attention of two hundred and odd gentlemen whose time is precious and who are here to consider serious, honest and earnest legislation. He first calls the attention of his colleagues to it and says: This is the measure that I propose to bring down, and then he calls the attention of the House to it. When he calls the attention of the House to it, asks them to pass it, and they ask him for his policy he has no more policy than the man in the moon. He cannot tell us whether he believes there are any roads that would come under this category. He does not say whether he will find the branches in Nova Scotia, New Brunswick or Quebec, or whether he will use this power as a possible negotiating instrument to obtain a road and join it on to the Intercolonial railway at the city of Montreal running to the Great Lakes, or a road running across the prairies, or a road running all the way across to the Pacific ocean, because, under the enabling power of this Act, he can enter into negotiations with the Canadian Pacific railway to-morrow or any day and can acquire these roads by lease, provided they are willing.

Mr. FIELDING. But he could do that without the Act.

Mr. FOSTER. He could do that without the Act, but let me tell you what I say is the difference between doing it with and without the Act. You have done it without an Act. The government have done things equal to this and like it, as the government are doing time after time. Instance after instance is given. But, there is this difference which is two-fold. The moment you pass this Act everybody knows that the minister will have every branch and small railway which joins with or is in close proximity to the Intercolonial railway on his back and he will no longer have the advantage of being able to say to them: The government has not made up its mind in reference to this; I have no authority for this sort of thing. The best I can do would be to make a sort of arrangement with you and to take it to parliament. But the moment the Act is passed he is in a very different position. They come to him and say: You have no excuse for not entering into negotiations for this road. Here is a branch road, we want you to take it over; what is your excuse for not doing it? You have the approval of the House to do the very thing that we are asking you to do. Does not the minister see that his powers of resistance are absolutely taken away from him and he cannot help but enter into negotiations with them and yield to their pressure? Then, when it comes down to the House, the House itself is restricted and restrained when the minister rises and says: Here is the report of my board of managers, here is the report of my engineer, I am doing exactly what parliament has sanctioned and ordered to be done under certain conditions and why are you opposing it? So, the power is made all the greater as against any opposing force because the government would say: We have the authority of parliament; we have simply entered into a contract with the authority of parliament and it must be passed. It is difficult for the opposition, even though part of it is composed of men on the government side, to make headway against a government measure when it is brought down for the first time, but it is infinitely more difficult when it is brought down in sequence of a measure that approves of the principle involved in the transaction. The House will have committed itself to the principle once it passes this Act, and that is the reason why I rather agree with my hon. friend the late Minister of Railways and Canals in reference to this matter. But there has not been a single assertion made by the government or the minister who is bringing down this measure as to how extensive or how limited this power may be. Does the minister think this proper to ask us to confirm a power which might be applied to all the great railways of the country because they all merge into either the city of Montreal, or the city of Quebec, as well as the points along the Intercolonial railway. It is of continental application and the ministers, in bringing in their Bill, do not even say that they do not contemplate going beyond branch lines. It is giving them a tremendous omnibus power and this parliament is binding itself that if certain conditions are fulfilled they may carry out the operation. Then, there is another point in connection with the matter and it was hinted at by my hon. friend from Halton. What a splendid avenue this opens up to the ingenious and skilful schemer. Here is an omnibus proposition. Here are some people who to-day own the bonds of a crippled railway. They say: The government has the power to take this railway over and operate it. Once it is taken over and operated and the blood of the Intercolonial railway system runs in its deadened veins,

it will suddenly come to the point of not only sustaining itself but of giving profits, and what a splendid avenue it opens up to companies of every kind to bring influence upon the minister and the government to negotiate with reference to the absorption of a certain road and possibly to carry it out. We will wake up after the negotiations have carried through probably to the fact that somebody has got the worthless bonds, worthless up to that time and that these people will then have made a fortunate speculation for themselves. As to the recommendation upon which the minister acts, what does it amount to as it is outlined in this section? Nothing at all. They need not give a single reason to the minister. If the minister communes with himself or with his creatures for he is the creator of these creatures; if he communes with himself and satisfies himself he takes that part of himself which is outside himself, to wit his board of managers and he says: Write me a recommendation. They write him a recommendation which may be in five lines or less and he comes down to the House with that recommendation and it is not worth a hill of beans simply because it is not a reasoned recommendation. He does not provide for a reasoned recommendation in this Bill and he ought to provide for it. The grounds upon which the recommendation is based should be set out and should become the property of the House when they are asked to consider the matter. It does seem to me that the minister and the government have not thought about this thing sufficiently to give us light on it. I join in the pitiful cry of the member for Hants: Light, more light upon this subject before we can consider it.

Mr. MACDONALD. This little preliminary discussion has swung in a rather wide circle ranging from the position of my hon. friend from York that this Bill had absolutely no meaning whatever, to the wild flights of imagination indulged in by the hon. gentleman (Mr. Foster). Now that we have had these preliminary fireworks it might be well for us to consider just what this proposition really means. We do not need to soar to imagination nor descend to misrepresentation to arrive at the proper conclusion which is quite apparent to any one who looks at the measure with calmness and deliberation. It is nothing more nor less than that the government has asked this House to affirm the principle that it would be desirable for them to go into the question of obtaining a lease of certain branch lines along the Intercolonial railway to be utilized as feeders thereof and in connection therewith. My hon. friend from Toronto has no doubt overlooked the preamble of this measure which expressly limits the railways to be leased under this Act to such railways as are feeders of and are in connection with the Intercolonial railway. I do think that this proposition is sufficiently important to engage the attention of hon. members in a somewhat more serious discussion. Is it wise that this parliament should say to the government that they should look into the question of what branch lines lying along the Intercolonial railway would be advantageous to the people of the country generally as well as to the people of the country living along the lines of the railways in question. We have had the matter discussed at various sessions in the abstract, but parliament has never declared one way or the other on the proposition, and now this Bill asks for a declaration in favour of it. Of course hon. gentlemen know that it is impossible for the minister to say that he proposes to lease this, that or the other railway, but it is well within the knowledge of every member of this House that last year a return was brought down showing that after investigation it was found that there were 15 branch railways lying along the Intercolonial. Some of which it might be advisable to incorporate with that trunk line of railway. Let me premise by saying that so far as the operation of the Intercolonial is concerned, after you leave the city of Quebec and until you come to Campbellton it can hardly be said that the Intercolonial strikes any point that is accessible to the ocean. From Campbellton you run through a country that does not connect with any ocean port until you come to St. John; thence you run along to Halifax and the railway touches at one or two points only in Nova Scotia which are available for ocean transportation.

Mr. W. F. MACLEAN. Could you not connect at Metapedia and get an ocean port along the Bay Chaleur to Gaspé?

Mr. PUGSLEY. That railway is only constructed to Paspebiac.

Mr. W. F. MACLEAN. That is an ocean port.

Mr. MACDONALD. The railway is not yet constructed to Gaspé, and we have the Intercolonial railway in the anomalous position that with the exception of some points in Nova Scotia and at St. John, the whole of that vast range of coast along the maritime provinces is not reached directly by the Intercolonial but is reached by some 15 or 16 branch lines. That is a condition of affairs that invites attention. Some of us dream of the time when this country will be sufficiently self-contained that at least in the winter season we will be able to control Canadian exports through Canadian ports, and make our own ports the avenue through which will come our imports. That seems to me to be a laudable idea and one which we should aim to attain. And, in order that we may control the traffic to the sea the proposition now before us be-

comes a very important one. What this Bill does is that it asks parliament to say whether or not parliament approves of the idea of incorporating these branch line feeders with the trunk line. Upon the wisdom of that proposition a gentleman of such wide experience as Mr. Tiffin, the traffic manager of the Intercolonial, and formerly of the Canadian Pacific railway, and Mr. Story, say:

> The want of proper facilities for the conduct of even the existing traffic is detrimentally affecting the business interests of the districts interested in these branches, and preventing that development of industries, enhancement of property values, and general betterment that would undoubtedly follow on an improved service.
>
> The present branches are hampered by lack of capital and insufficient equipment, and are not in a financial position to increase their inadequate traffic facilities, and the absorption of these lines into the Intercolonial system would beyond question result in a greatly improved condition of affairs.
>
> It is a well established fact that in nearly every case where branch lines have been absorbed by trunk lines, and extended markets have thus been opened up for business along the main lines, such a policy has not only proved to be of great value to the branch lines, but has provided additional revenue for the main line, they becoming valuable feeders, increasing the traffic and the earning powers of the trunk lines.

One need not argue that proposition further. The magnificent success which has attended the Canadian Pacific railway throughout this country and which has made it the pride of every Canadian, has been very largely due to the wise policy of its directors in reaching out here and there and absorbing the feeders of the Canadian Pacific railway which has developed the territory through which they ran. The position of the Minister of Railways simply is: that the government should be permitted to look into the advisability of acquiring the branch lines and feeders of the peoples' railway as the Canadian Pacific railway and the Grand Trunk and other railway systems in Canada have done with regard to their connecting lines. To that proposition the House cannot fail to give assent. The interests concerned are not merely local or provincial but they are great national issues in that the object sought is to obtain an outlet for the Intercolonial railway to the various ocean ports of the maritime provinces and a connection with the mineral resources of these provinces. As to whether or not any one is to be injured by the minister entering into negotiations for the purpose of obtaining a lease of a railway which is in proper condition for operation, I think the Bill throws around that the very proper safeguard that nothing can be eventually done without the sanction of parliament.

I venture to say that my hon. friend from North Toronto, who conjured up some difficulties that might result from the adoption of this Bill, would not be deterred from the most energetic opposition to any proposal which the Minister of Railways might bring down if he chose to think that the proper thing to do was to oppose it. It is perfectly understood that the House does not commit itself to the adoption of any particular proposal under this Act until it is submitted; but by this Bill, if it is adopted, parliament will commit itself to the proposal that it is wise that the Intecolonial railway should enter upon the policy of incorporating branch lines.

Mr. SPROULE. Will the hon. member tell me what difference there is between the power the Minister of Railways and the government possess now and the power they will possess after this Bill passes?

Mr. MACDONALD. If my hon. friend had listened to the argument of his hon. leader who sits beside him, he would not have found it necessary to ask me that question. The hon. leader of the opposition and the hon. member for North Toronto both made it clear that this Bill does do a very important and serious thing, in that it declares that the policy of this country shall be to incorporate with the Intercolonial railway such branch lines as it may be advantageous to the country to incorporate with it, and the minister is authorized to go on and negotiate subject to the ratification of this House. It affirms an important principle that has never before been affirmed by parliament, and for that reason this is an important measure. The question of the acquisition of branch lines is one in which not only the people of the maritime provinces, but the people of the whole of Canada, are interested. I would like as a sequence to this proposition that my hon. friend the Minister of Railways would look into one or two other matters relating to the extension of the Intercolonial railway. The construction of a line of railway from Moncton to Pugwash, along the north shore of Nova Scotia, and the construction of a comparatively small addition from New Glasgow to Country Harbour in Guysboro would give the people of this country a line of railway exactly the same in length as that part of the Intercolonial now running from Moncton to Halifax, and would place the ocean-going trade 100 miles nearer to the other side it is at present by the line to Halifax.

Mr. BLACK. And by a good port too.

Mr. MACDONALD. That is a matter beyond doubt. I have frequently pressed this proposal on the minister privately. It is to be hoped that

the people of Canada generally will appreciate the ambition of this little province down by the sea, that as we go on developing Canada it may more and more become the entry and the exit for the trade of this country. We look to measures such as the one before the House as hastening the time when our ideas and ambitions in that respect may be realized.

Mr. J. A. CURRIE. I would like to ask the hon. gentleman if he can point to any Act on the statutes of this country that enacts a theory. I have always thought that parliament enacted something, and not merely a theory or a principle without anything being done.

Mr. MACDONALD. My hon. friend will find that this proposal is no mere theory, but a very practical piece of legislation which I hope will be for the good of Canada.

Mr. SAMUEL BARKER (East Hamilton). Mr. Speaker, the hon. member for Pictou (Mr. E. M. Macdonald) appears to think that the hon. member for North Toronto (Mr. Geo. E. Foster) has been indulging in a little imagination. On the contrary, I think that what the hon. member for North Toronto said is very hard business, and it is just the kind of business that I would expect from him. Before I heard a word that he uttered, I had prepared and intended to introduce an amendment on the very point he raised, and I do not think I am much given to imagination. The hon. member for Pictou tells us that everything is made right by the preamble—that satisfies the general idea. But the point is that the preamble does not say how much of the preamble is to be looked to by the minister, how much by the board of management and how much by the chief engineer. When we come to clause 3, however, we find how very little the board of management have to do. The minister will go to his board of management and will say: Do you think we ought to lease such a railway or such half dozen railways? And they will say: Perhaps we ought to, the line would be more or less valuable to the government railway; yes, we recommend that. Then the minister enters into negotiation and ascertains what the terms are likely to be; but there is not a word in that clause that requires him to obtain from the board of management their approval of the terms. It is very little use to ask, as protection to the people of this country, the approval of the board of management unless that approval covers the terms of the lease, and that is the very question raised by the hon. member for North Toronto. Now, I propose to ask the House to amend that clause to that effect. Then we shall have a recommendation that will be worth something to us. I might very easily recommend the minister to take a lease of a piece of property; but when I saw the terms of the lease. I might advise him not to have anything to do with it on those terms. I hope the minister will not object to making that point clear. So far as I am concerned, if it is made perfectly clear, I approve his getting the recommendation from his board of management, which consists of practical railway men and experts in railway management. In committee I propose to move an amendment to that effect.

Mr. CONGDON. I think the hon. gentleman is mistaken with respect to the purport of this section 3. The recommendation of the Government Railways Managing Board must cover the whole terms of the lease, and it is only the report of the chief engineer that relates to the good and safe condition of the road. So that objection appears to me to be removed by the terms of section 3 of the Bill itself. I think it is a matter of common knowledge to this House that the Intercolonial needs some extension in order that it may become efficient and effective, and serve the country through which it runs. It is also a matter of common knowledge to this House that there are many branch roads connecting with the Intercolonial which it would be in the interest of that system to acquire. It appears to me, therefore that there is some soundness in the contention that this Bill does not give any additional power to the Minister of Railways, but is merely an intimation that this parliament supports him in the endeavour he contemplates making to add to the effectiveness of the service of the Intercolonial. Ample protection is thrown around the whole operation under this section, by providing at the end that any lease made under it is of no effect until ratified by the parliament of Canada.

Mr. GRAHAM. I do not think it is necessary to add much to what has been said. I assure the House that this Bill was not introduced, as the hon. member for North Toronto (Mr. Foster) thinks, to placate a certain gentleman lest by his continual coming he might weary me. It is a sincere desire to make the best possible out of the government railway; that is the only desire I have, not to try to serve any friends, or disconcert any enemies. I want to make it clear to the House that my Bill is introduced with the object in view of taking parliament into the entire confidence of the government, and having a decision on this question before we enter upon negotiations; and then, after negotiations have been entered upon, to submit the details to parliament for ratification. We want everything to be done openly and above board, after the fullest investigation and scrutiny are made. I can assure my

hon. friend from Hamilton (Mr. Barker), who discussed this question from a practical point of view, that I certainly thought I had covered the point he has mentioned. The minister does not propose to enter upon negotiations to lease any line unless upon the recommendation of the board, which recommendation shall include the terms of the lease also. Certainly that is my intention, and if it is not clear we will make it clear in committee. I assure the House again that this Bill is for the sole purpose of rendering, if possible, the government railways more efficient. We take the step in the interest of the public and of the government line, and if it is found after investigation by practical men, that they are lines, the leasing of which would bring about this object, then we will proceed to negotiate for a lease.

Mr. MIDDLEBRO. Might I ask if any applications have been made to the government, or any negotiations have been entered into with any branch line company?

Mr. GRAHAM. The only discussion I have had as to branch lines, hon. gentlemen have heard it all in the House. There has been no application for leasing any line from any company that has come to my knowledge.

Mr. JOHN HAGGART. Allow me briefly to draw the distinction between the position of the government before this Bill is passed and their position after it is passed. The House and the minister must remember that by the passage of this Bill we affirm the principle that branch lines may be a necessity of government railways, and we empower the government to enter into arrangements for acquiring them. When we affirm the principle and give power to the government, it is the duty of the government to acquire them. Look at the different position you are in after the passage of this Bill from the position you are in before. Before, the option was left entirely with the government to enter into an arrangement of this kind or not; but after the passage of this Bill, if my reasoning is correct, it is compulsory upon the government to do so, you have no longer an option. If a branch line, or any railway that connects with the Intercolonial, is considered to be necessary for the Intercolonial, and will increase the earnings of the Intercolonial, we affirm the principle that under certain circumstances the government must acquire that branch line. My contention is that you are not merely passing an empowering Act, but you are laying down a principle which the government must enforce. Now I differ from my hon. friend the leader of the opposition, who thought perhaps it was best to come to parliament and get the power. He qualified that statement, however, by saying that the principle should be laid down before exercising the power, and that a principle could be laid down in an Act of parliament which would guide the commission in making the inquiry, and the government in exercising the option. The better plan I think the government may act upon at the present time. If they think, in the interests of this road, that it is desirable to enter into an agreement with branch line companies to acquire their property, then let the government come to parliament and get the necessary power, after they have obtained the opinion of the board of management that the road is likely to be useful to the Intercolonial, and the opinion of the chief engineer that the road is in a proper condition. Then parliament would authorize the government to go on and acquire the road.

Mr. NESBITT. I am sorry to disagree with my hon. friend from Lanark (Mr. Haggart), who is much older and more experienced than myself in these matters. But I cannot see that if we adopt the principle of authorizing the Minister of Railways and his board of management to inquire whether it would be well to acquire a branch line or lines, that we thereby force the government to do so. I do not believe there is anything in the whole Bill that would suggest such a thing. If the Bill is not clear enough on the question that the hon. member for Hamilton (Mr. Barker) raised, let it be made clear, but I think it is perfectly clear. When I read the Bill I thought that was the intention of the Minister of Railways, but if that intention is not clear let it be made clear. Now as I am not of a suspicious turn of mind like my hon. friends of the opposition, who think that this Bill hides some sinister purpose, I must say that for my part I commend the Minister of Railways for coming to this House and asking us to lay down a principle before he proceeds with the investigation of any particular road with a view of taking it over. I understand it is the intention that the board shall investigate any particular road which in their judgment they think would be serviceable in increasing the earning power of the Intercolonial. If this board are not capable of doing that, they are not capable of managing the Intercolonial, they are not capable of doing what they are supposed to be doing now.

Therefore, as I think, personally, that they are capable, and as I think the minister is wholly capable. I believe this House runs no risk in trusting to this board the further addition to their duties of examining into whether branch railways will be a benefit to this railway or not. The principle of branch railways has been adopted not only by the great roads of this country but by the great roads of the United States as well. Feeders are absolutely necessary in order to get re-

turns, and it is returns we want, after all, from the Intercolonial. I believe that when we have the statement of the Intercolonial before us, it will show that we were justified in appointing this board of management. As I have stated before, that I believe we do not run any risk. The minister has to come back to this House with all the terms and particulars; he has to get sanction for every piece of road he proposes to take over. It seems to me there is no reason for the suspicion which seems to exist in the minds of some hon. members, judging by the expressions we have heard this afternoon. We must trust to a very large extent to the management. The minister has to report to the governor in council and get their sanction and he has to get also the sanction of parliament. How can it be necessary to hedge him around more than with these precautions? Again I say that, for my part, I commend the minister for asking the authority of this House to the principle before taking action.

Mr. RHODES. I quite agree with the hon. member for South Lanark (Mr. Haggart) that the passage of this Bill will mean the affirmation by this House of the principle of the acquirement of branch roads. Upon that ground alone I am prepared to support the measure now before the House. It was not my intention to speak on this subject, because it seemed to me obvious that the Bill ought to pass. Privately-owned railways, whether in Canada or elsewhere, make their business successful in proportion as they acquire or build feeders for their lines, and, if the Intercolonial is to be run as a business proposition, to my mind it is obvious that it must acquire feeders along its route. So much from that standpoint; but there is another phase of the question which has not been discussed at all, and one to my mind that is of vital importance to the people of the constituency in which I live in common with many others in the maritime provinces and in Quebec. That point is that where there is a multiplicity of small railways, a shipper of freight who lives on a branch line has to pay two, and sometimes three, freights. In my own county, for instance, to send freight for a distance of only twelve miles in a certain direction three railways must be used. I speak of freight shipped from River Hebert via Maccan to Springhill. The freight must be sent over the Maritime Coal, Railway and Power Company's line to Maccan, then over the Intercolonial to Springhill Junction, and then over the Cumberland Railway and Coal Company's line to Springhill. Consequently, to cover this distance of nineteen miles a shipper is called upon to pay a larger sum for freight than he would have to pay for perhaps 100 miles over a line of railway owned by a single company or by the government, as the case may be. Without discussing the question further, I wish to say that I am in hearty accord with the principle of the Bill, and if it comes to a vote it is my intention to vote for it.

Mr. BLACK. I desire——

Mr. SPEAKER. The hon. member has spoken.

Mr. BLACK. Others have spoken twice——

Mr. SPEAKER. I did not call attention to the Minister of Railways (Mr. Graham) speaking in answer to a question.

Mr. BLACK. But the hon. member for South Lanark (Mr. Haggart) spoke twice, and he is not a minister of the Crown.

Some hon. MEMBERS. Go on.

Mr. BLACK. Have I the right, Mr. Speaker, to ask a question?

Mr. SPEAKER. I would warn the House that if the right to speak twice is given to one member, it can hardly be refused to another. The rule is against, but it is for the House to say whether the rule is to be lived up to.

Mr. FIELDING. Only a question.

Mr. SPEAKER. I suppose a question might be allowed.

Mr. BLACK. Before this vote is taken, I wish to ask the Minister of Railways (Mr. Graham) if the refusal of his commission to examine and report on the Dominion Atlantic railway means that the minister does not consider that the Dominion Atlantic is a branch or connection of the Intercolonial and so is barred from the operation of this Bill? I feel very strongly on this subject, because we have been for years paying two freights on almost everything imported into that country. If we get a barrel of flour from Montreal, we pay two freights; if we get a parcel by express, two express charges must be paid. All our manufacturers who export have to pay double freight, and so have all the people who import goods into that country. I cannot help feeling warmly on this question, because the interests of the people I represent, the prosperity of the manufacturers and importers are vitally concerned. So far as the Act of the commissioners is concerned, I think they treated the country from Windsor to Annapolis not exactly very courteously. I would like to know in what position the Dominion Atlantic railway stands in regard to this scheme before I cast my vote.

Mr. GRAHAM. That is a pretty long question; I am afraid it will take a long answer. As to the latter part of what the hon. member (Mr. Black) says, it rather proves what has been said before, that the Intercolonial so far as rates are concerned, is more beneficial to a community than an ordinary company road, else my hon. friend would not prefer that the Intercolonial should have the Dominion Atlantic. The second part of the hon. member's question is easily answered: There is nothing that would preclude the Dominion Atlantic from coming within the scope of this Bill.

Mr. W. F. MACLEAN. Mr. Speaker——

Mr. SPEAKER. The hon. member (Mr. W. F. Maclean) has already spoken.

Mr. W. F. MACLEAN. I have not spoken on the general subject; I only asked a question.

Mr. SPEAKER. It is an infraction of the rules——

Mr. W. F. MACLEAN. I still say that I am within the rules, Mr. Speaker, as I only asked a question.

Mr. SPEAKER. The rule is that a member may not speak twice on the same motion.

Mr. W. F. MACLEAN. With all due respect, Mr. Speaker, I submit that asking a question is not interpreted as making a speech. I shall not occupy the attention of the House for more than a moment. I am an absolute believer in the public ownership of railways in Canada. Therefore, I believe in this country owning and maintaining in the highest efficiency the Intercolonial. I would like to see it extended and improved on the line indicated by the hon. member for Cumberland (Mr. Rhodes). I take this measure to be a declaration in favour of the acquisition of local lines, and that it will mean an end to the talk and rumours and secret negotiations said to be under way concerning the handing over of the Intercolonial either to the Canadian Pacific or the Canadian Northern. And with this new departure in favour of public ownership, I believe there will come an absence——

Mr. SPEAKER. The hon. member should confine himself to the question he wishes to ask.

Mr. W. F. MACLEAN. I think, Mr. Speaker, I can set myself right in your eyes by explaining that I said I had asked a question only, but had not spoken on the subject. I think I am quite within your previous ruling, having only asked a question, in speaking on the question now. There is a declaration to-day in favour of the extension of the principle of government ownership of railways to the wide extent of taking in all or most of the local lines in the provinces where the Intercolonial railway now runs. But if they are to be taken in, they must be taken in on business terms and on reasonable values, and the roads so acquired and the Intercolonial railway itself must be administered from the point of view of business and efficiency and must be absolutely separated from politics. I believe if public ownership is attempted in this country on those lines it will succeed, and I hope that not only will the Intercolonial railway be widened and broadened in the maritime provinces, but that at an early date this state-owned road, which to-day is Canada's greatest asset, will be extended from the Atlantic to the Pacific. I want to see the state-owned road extended into Ontario, I want to see it at the Niagara river and the Detroit river, and most of all I wish to see it extended where there is abundance of traffic and where the competition of such a road would discipline the great private-owned roads, that is in the west. We were told a while ago that it was very much in the air that the Intercolonial railway was to pass into the hands of the Canadian Pacific railway or the Canadian Northern. Instead of the disappearance of that road, I wish to see it extended, its administration made efficient, and its operations extended to the west. If there is room in this country for the extension of the Grand Trunk railway to the Canadian west, there should have been room and there is to-day room for the extension of the state-owned road to the Canadian west. My objection to the Transcontinental system is not so much that it was not required, it was required very much, but that I thought it should have been a part of the present state-owned road, the Intercolonial railway system. The government which is to-day taking the power to lease these roads could a short time ago have taken over the Parry Sound road which the Grand Trunk railway have now acquired. If they had acquired that road on reasonable terms, or on lease, the Intercolonial railway would to-day have been at the Georgian bay, which is now the source of the greatest amount of traffic for the roads going east. The Canadian Pacific railway are now double-tracking their system from the Georgian bay to Montreal and the ports of the St. Lawrence in order that they may handle the traffic of the west. In the same way, if the Intercolonial railway had taken a lease of the Canada Atlantic, the policy which is now begun in the east where there is very little traffic, would have produced such results that the Intercolonial railway, the state-owned road, would be in a much better position, would be able to pay all its expenses and even some interest on the cost of construction. So I agree

with the hon. member for Cumberland (Mr. Rhodes) that the principle is not a bad one, but that it ought to be lived up to in the best way. Speaking of state ownership and taking over leases, one way of bedevilling public ownership, and it has been practised a good deal in this country, is to apply the principle only where there is very little traffic or business, and then you have public ownership condemned. Take the instance of the government telegraph systems. The only government owned telegraph systems in Canada are those supplying the coast where there is very little or no business, and as a consequence, if you want to cite a horrible example of public ownership, you say: Oh, look at the government telegraph system! The only way to apply government ownership is to apply it where there is business and traffic, and the only way in which the Intercolonial railway will become the success it ought to become is to extend it into the province of Ontario, extend it to the Niagara boundary, to the Detroit river, put it in touch with the Georgian bay and extend it through the great Canadian west. That is the way to work government ownership in this country, and that is the way I hope we will yet see it.

Mr. OSLER. Mr. Speaker, there is no doubt that the taking over of short branch lines connecting with the trunk line is, as a rule a very wise and proper policy. I understand from the Minister of Railways that in connection with the report which he proposed to get from his advisory board, the business aspect of these lines will be considered as well as their physical fitness. If they are taken over on a business basis, there is no doubt it should be a good thing for the branch lines, a good thing for the Intercolonial railway, and a good thing for the country. The danger is that very often branch lines are taken over as feeders and they turn out to be suckers. If that can be avoided I think the principle of the Bill is exceedingly good.

Mr. DANIEL. It has been stated this afternoon that this Bill, if passed, will not confer on the government any more power than it has already. That of course may be the case but the Bill is important because it will be, if passed, the adoption by this House of the principle of the Intercolonial railway taking over the branch lines in the maritime provinces. We listened a couple of years ago to a very interesting discourse on this subject by the present member for Westmorland (Mr. Emmerson). He went into the matter very fully and I think gave very good reasons indeed why the branch lines in the maritime provinces should be taken over by the Intercolonial railway. I agreed with the remarks of that hon. gentleman when he made them in this House. I thought his reasoning was sound and I am prepared to vote for this Bill which gives the Minister of Railways power to go into the taking over of these branch lines under certain favourable conditions. Why, Sir, in the rest of Canada, leaving out the maritime provinces, the uniform policy of the great through lines has been the taking over of branch lines, the building of branch lines, the grid-ironing of the country with their own lines and feeders, and in that way they have succeeded in becoming prosperous and in serving the country to a far greater extent than they otherwise would have done. There can be no doubt that the policy which has succeeded so well in the western part of Canada would succeed equally well in regard to the eastern provinces. I cannot see any reason why this Bill should not pass, especially as, by its adoption, parliament will approve of the principle of taking over these branch lines. I do not support it because the Intercolonial is owned and operated by the government. I quite agree with those who think that perhaps the Intercolonial railway might have been much better operated and governed under a private owner than it has been under the government. At the same time the Intercolonial railway remains there one of the guarantees of confederation; and I am quite sure that the people of the maritime provinces are determined to keep that line in the ownership of the people of this country. I do not believe that the large majority of the people of the maritime provinces will consent to its passing out of the hands of the people of this country. For these reasons I shall be pleased to vote for the Bill.

Motion agreed to, and House went into committee on the Bill.

Mr. GRAHAM. As intimated a few minutes ago there is no objection at all to the amendment proposed by the hon. member for Hamilton (Mr. Barker) to make clear our intention, except that there is a correction of one clerical error which I have made. I have inserted the word 'chief' so as to make it read 'chief engineer.' I propose this amendment to section 3:

That clause 3 of the Bill be amended by inserting, in the 26th line thereof, after the word 'Canada' the words 'nor shall any such connecting railway be entered upon or operated on behalf of the government of Canada until the said managing board and the said chief engineer shall have approved the terms and conditions of such lease having regard to the beneficial results to the government railways and until the parliament of Canada has ratified such lease.

Mr. RHODES. I think the clause would be better drafted if the words 'line or' were inserted between the words 'such' and 'lines' in line 20. I therefore beg to move:

That in line 20 after the word 'such' the words 'line or' be inserted.

Amendment (Mr. Rhodes) agreed to.

Mr. DEPUTY SPEAKER. Is the committee ready for the amendment proposed by the Minister of Railways and Canals?

Mr. FOSTER. That meets the objection that I raised provided the meaning is clear. 'Having regard to the beneficial results to the government railways.' How broad is that? I had a thought like this—may be this carries it out—that the board of managers would write a full report showing that the line of railway in question, from its situation, condition and traffic resources, is one the acquisition of which, under the proposed terms of the lease, will result beneficially to the net revenue of the government railways.

Mr. GRAHAM. This covers the point.

Mr. FOSTER. If it covers it that is what I want. I want a reasoned report.

Mr. GRAHAM. A report will be required giving reasons.

Mr. FOSTER. And showing that good will result to the goverment road from a money point of view.

Amendment (Mr. Graham) agreed to.

Mr. CONGDON moved:

That the words 'be binding upon the government of Canada' in the 26th line be struck out and instead thereof there be inserted the words 'have any force or effect.'

He said: I suggest this for the reason that the lease is made in the first instance by the Minister of Railways, and I do not see why the proviso should substitute for the minister the government of Canada. I submit that it would be better to use general words and say that no such lease shall have any force or effect until the parliament of Canada has ratified the same.

Amendment agreed to.

Mr. CROCKET. In view of the amendment which has been added to the Bill I think it would be safe in striking out the words: If such lines are reported by the chief engineer of the Department of Railways to be in a good and safe condition for operation. I can conceive of a railway not being in a good and safe condition for operation, but which it might be advantageous to the country to take over and put in good condition, and operate as part of the system. There are perhaps some lines of railway in New Brunswick of which it might be said that they are not in first-class condition for operation, but which might be taken over and operated very advantageously from the standpoint of the country and of the Intercolonial railway itself. The words added to the Bill: 'Having regard to the beneficial results to the government railway,' make it possible for us to safely strike out the words I have referred to, and leave the question entirely in the hands of the board and of the engineer. I take it that any proposition of the kind must now be submitted to parliament for approval and that the facts will be stated in regard to the condition of any railway which it may be thought desirable to take over, and therefore it would be just as well to authorize the government to negotiate for the taking over of any branch railway which might be thought advantageous to the government railway system.

Mr. PUGSLEY. I suppose the province of New Brunswick is more interested in this question than any other province because it has a greater number of branches of the Intercolonial than Nova Scotia or Quebec. But while that is so there would be very serious objection to changing the Bill in the way proposed by my hon. friend (Mr. Crocket). It is one of the essential features of this Bill that parliament shall not adopt the principle of entering upon a large capital expenditure in connection with any of these branch railways. One great objection which would be raised in other portions of Canada would be that such a proposition as that set forth by the hon. gentleman might involve the country in a large capital expenditure. The Bill provides that the managing board can only make a recommendation for the leasing of a road when it is certified by the chief engineer that that road is in good and efficient condition for operation as part of the government railway system. That is a safeguard which it seems to me will commend itself to prudent men all over Canada whether they live within the sphere of the influence of the Intercolonial railway or not. It would be very unwise to change the Bill in this respect. If there is a railway which is not at present in good condition and which the board of management may think it desirable to acquire it would not be a very difficult thing for the owners of that road to make the necessary financial arrangements to put it in proper condition, on the assurance that it might then be leased to the government. Of course the rental to be paid by the government upon the recommendation of the board of management would be to some extent based upon the expenditure incurred by the company in bringing the road up to the required standard. If any special case should arise which the board could not deal with under this Act that case could be brought before parliament and considered by itself. It seems to me that in adopting this general principle we ought to be very careful that we do not authorize the Minister of Railways or the managing board to enter into negotiations with respect to any road which

would involve any large capital expenditure, or indeed any capital expenditure at all on the part of the government.

Mr. CROCKET. I would agree with the Minister of Public Works if under the terms of this Bill parliament were not to be consulted before any such road was leased. But, when we provide that a Bill shall be submitted to parliament for the leasing of the road it does seem to me that no harm can be done if we authorized the Minister of Railways to negotiate so that even although a road may not at present be such as the engineering department would describe as in good and working condition, that road might advantageously be taken over by the government and put in good condition afterwards. My idea is that if it is intended to take over such a road it would be far better to have the government put it in good condition than to have the railway company do it simply for the purpose of leasing it to the government.

Mr. W. F. MACLEAN. I agree with the remarks of my hon. friend (Mr. Crocket). We have this afternoon adopted this principle largely on the ground that it is the invariable practice of all the big roads to take in the smaller lines and to improve the service and give better facilities to the people. If a road happens to be in bad condition and it would be advantageous for the country to take it, and the owners could not get the money to put it in proper condition, the improved service will not be given to the people and our idea will not be realized. If the principle is sound it ought to be applied to any road which when put in good condition by the government would serve the general public and would be advantageous to the government system of railways.

Mr. RHODES. It seems to me that the principle upon which the government, on the advice of the Railway Board, is to take over any given branch line is the consideration whether that line would be a paying one for the government.

Mr. GRAHAM. Not that alone.

Mr. RHODES. If that be the principle then we need not object to capital expenditure on these lines if we can get a fair return for our money. I think there is much in the suggestion of my hon. friend from York.

Mr. GRAHAM. I quite appreciate that hon. gentlemen opposite are now willing to go much further than I contemplated. But, if it is found that this Bill works out in the interests of the people and in the interests of the government railways it would be possible to meet their views later on. However, we must be very careful that the power which we take under this Bill shall meet with the approval of the people of Canada. There is no use disguising the fact that there has been a good deal of criticism on both sides of the House on the large expenditure of capital on the Intercolonial. In submitting this Bill to parliament I wanted to guard against the criticism which would have at once been launched, that we were opening the door which perhaps might lead to an enormous addition to the capital expenditure on the Intercolonial. It is well to proceed gradually. If we find that the lines that we take over meet with acceptation we perhaps may come to parliament later and change the Act as is suggested. But for the present I want to tie up the Board of Railway Management so that they cannot recommend the acquisition of a line unless it is placed in such a condition that it would not require an immediate large outlay of capital. With that condition, the question of whether it would be profitable or beneficial would be largely problematical. Once started on the expenditure of capital for the improvement of a line, we do not know where that expenditure will end. We merely say to the company, we propose to lease your line if after full investigation we come to the conclusion that if it were put in proper condition it would at least support itself. There is no trouble about a company under such circumstances being able to finance such improvements as would put it into good condition. Thus we avoid opening the door to a large capital expenditure; but if such a door is opened it will not be closed if it turns out to be for the benefit of the country and of the government railway.

Mr. JAMESON. While on the subject of the possible cost of improvement to these railways and the expenditure likely to be incurred by the government in acquiring them, I would like to ask the minister if he has any plan as to the fixing of the basis of rental which would be paid for any roads that might be taken over; whether the amounts which have been paid, either by a provincial government or the Dominion government, in the way of subsidies to aid in the construction of any of these branch lines or connecting roads, will be taken into consideration by him when the rents are determined? I have in mind particularly the case of the Halifax and South Western railway, one of the connecting roads which may possibly receive some benefit under this Bill. The minister, in reply to a question asked by the hon. member for North Grey (Mr. Middlebro), has very frankly stated that, so far as he is aware at the present time, no application has been made by any branch or connecting road to participate in the benefits of this Act. At the same time, from the information which I have been able to obtain from time to time regarding the oper-

ation of the Halifax and South Western railway, and the results of its operations so far as revenue is concerned, I am very much inclined to think that it is not altogether unlikely that in the comparatively near future that railway will be one of those brought under this Act. According to Poor's Manual of Railways, 1908, the government of the Dominion of Canada paid toward the construction of that road, including the Middleton and Victoria Beach branches, the sum of $1,147,069, and the province of Nova Scotia contributed $2,213,173 in subsidy and by way of loan. It has been stated to me, though I am not prepared to say that the information is correct, that the company is not at the present time earning the operating expenses and fixed charges of the road. If that be the case, it is not unlikely that when the door is opened, this company will ask, or possibly the government of Nova Scotia, being the mortgagor, may ask, that the government of Canada enter into arrangements for the leasing of that line. Under these circumstances, I think it might very properly be asked of the minister that he should state to the committee whether he has arrived at any conclusion as to the basis upon which these rentals would be fixed, and as to whether he is in a position to say that the amount of such subsidies which have been paid would be taken into consideration and would in any way lessen the amount of rental which would ordinarily be paid in cases where large subsidies and loans had not obtained.

Mr. GRAHAM. I have not thought much along that line, but my idea was riveted to this point, outlined in the Bill and the amendment, that the chief thing to be kept in mind is, can we lease this line so that it will be a benefit to the government railway and to the country. The details will all lead to that point. If what my hon. friend says be true, that the Halifax and South Western railway is losing money all the time in its operation, perhaps it would not be up to the standard which the board would require in any line proposed to be taken over. As a matter of fact, I think the Nova Scotia government has a mortgage on the Halifax and South Western railway, and if anything were done with regard to that line—I have no intimation that anything of the kind would be done—it would probably be that the Nova Scotia government would proceed against the railway or would become the interested party. I can assure my hon. friend that his statement is the first intimation that I have had that the Halifax and South Western Railway Company had any idea of leasing their line to the government. But all the questions brought up by my hon. friend will be considered from this point of view: will this road benefit the Intercolonial railway and assist the people in the transportation of their products?

Mr. W. F. MACLEAN. And will the terms be reasonable?

Mr. GRAHAM. Of course.

On the question, that the Bill be reported:

Mr. HENDERSON. After this lengthened discussion, I feel that I have a very slight knowledge of this Bill, and I think other members are in the same position. I think it a pity that a Bill of such far-reaching importance as this, and cut and slashed in the manner in which this has been, should be dealt with without having some expert draftsmen go over it and make all these clauses fit one into the other. I think the minister would be well advised if he would ask the committee to rise, report progress and ask leave to sit again, and in the meantime have this Bill submitted to the law officers of his department to see if its various clauses are well fitted together.

Mr. GRAHAM. This Bill was drawn by the legal adviser of my department and was submitted to the law clerk of the House of Commons, and the amendment is that of the hon. member for Hamilton, who is himself a good lawyer and draftsman.

Mr. HENDERSON. If the hon. minister had allowed the amendment of the hon. member for Hamilton to remain as he suggested it, I would have much more faith in it.

Mr. GRAHAM. I did exactly.

Mr. HENDERSON. Was there not an amendment to the amendment? At any rate, the Bill has been amended and reamended so much that I think it should receive the mature consideration of some expert draftsman to see that the different parts properly fit into each other and in such a manner that the Bill will be workable.

Bill reported as amended, and amendments read the first and second time and agreed to.

GOVERNMENT RAILWAYS PENSION FUND.

Mr. GRAHAM moved the second reading of Bill (No. 19) to amend the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act. He said: As hon. gentlemen know, the Provident Fund Act is an Act under which the employees of the government railways contribute a certain amount, the government duplicates the amount, and on retirement of the employees they get a certain allowance. It is along the lines adopted by

the other great railways of Canada and the United States, and this amendment is designed to make the terms of the Provident Fund Act a trifle more liberal to employees. I will tell the House frankly my object in introducing this Bill. Owing to the large reduction in the staff of the government railways, quite a number of the older employees have been for the time being dropped from the service; I would not like to use the term 'dismissed,' because if opportunity offers these will be the first men to be re-employed.

Mr. HUGHES. What does the minister mean by employees? Does he mean merely workmen, or does that include railway officers?

Mr. GRAHAM. It includes some of the railway officers, but some of them are under the old Superannuation Act. The term 'employees' includes the workmen, who are by far the larger number. Not a few of the older men who have been working on the government railways for many years were dropped. The hardship to them came from the fact that some of them, perhaps from 75 to 100 in number, speaking roughly, were within a few years of the time at which they could have had some benefit from the provident fund, but dropping them at this time precluded them from receiving that benefit. The case was represented to me, not pushed at all; but a few months ago a gentleman pointed out that this was a hardship to some of the old employees, and after thinking the matter over I came to the conclusion that, looking at it from the human side, it was a hardship. Men who had worked for a number of years for the government, and contributed to the provident fund a certain amount, and were then dropped out, although in a few years they would have become entitled to the benefit of the fund, that seemed to be a hardship.

Mr. FOSTER. Would the minister define what he means by 'a few' years.

Mr. GRAHAM. Under the present statute, the number of years an employee has to work before he is entitled to be placed upon the provident fund is 15; my Bill proposes to reduce that time to 10 years, and to apply it to those who were in the employ of the government up to March 31 last. My sole object is to meet the situation that has arisen by dropping a lot of these men, and depriving them of the benefit they would have had if they had remained a little longer; in other words, those who were dropped since March 31 last, and have been in the employ of the government for 10 years, can be placed under the provident fund.

Mr. FOSTER. Can the minister say whether there are not some men who, on March 31, were within a month or a few days of being entitled to the fund?

Mr. GRAHAM. The reason we take that arbitrary position is that before that time there were very few men who were dropped except for cause, dismissed absolutely. But here are men who were dropped because the board of management thought the staff was too large, they were not dropped because of any fault of their own.

Mr. HUGHES. Are those men now in the service that have been retired?

Mr. GRAHAM. The men have been dropped. Advisedly I did not use the word 'dismissed,' because it is the intention of the board, if at any time the services of these men are again required, to re-engage them.

Mr. BARKER. This Act will apply to a few men who may hereafter be retired.

Mr. GRAHAM. This will apply to a few. It reduces the time, and makes that reduction to all men who were retired since March 31 last.

Mr. MACDONALD. I would ask the minister to consider a proposition to extend the advantages of that section to men who have been permanently disabled while in the employ of the government but who had not yet served long enough to obtain the advantages of the retirement fund, having served perhaps a couple of years short of the 15. I think there ought to be some reasonable limitations to cover that class of men.

Mr. HUGHES. The minister says in the second section of the Bill that this amendment should not apply to any person retired prior to the 1st day of April, 1909. What about the persons who were retired between the 1st day of April and the coming into force of this Act?

Mr. GRAHAM. I think these will be included.

Mr. HUGHES. It does not state that it should apply to persons retired between those dates.

Mr. GRAHAM. We must read into it the consequence that it does apply to any person retired since the 1st day of April of this year. All but those who are excepted will be included.

Motion agreed to, Bill read the second time, and House went into committee thereon.

Mr. LENNOX. Are the men referred to by the minister a few minutes ago those who were under investigation recently by Judge Barron, Mr. O'Donaghue and

another? I understand there was an investigation quite recently into the cause of the dismissal of 350 men from the Intercolonial road. Are these the men referred to?

Mr. GRAHAM. That takes a little explanation. It does not apply to any particular class, but to all employees that come within the scope of the Act. In the case of certain employees, a conciliation board was asked for by the men themselves. A conciliation board was asked for by the men of Halifax, and that conciliation board was formed with Sir George Garneau as chairman. That board made a report a few days ago. This other board, to which the hon. member (Mr. Lennox) refers, was asked for by the men at Moncton who have their own brotherhoods. This board will make a report on the grievances complained of. It may be of interest to hon. members to know that, from the despatch I have just seen in the Toronto papers, the board suggested that this measure should be passed, as it will assist in meeting some of the difficulties that in the opinion of the board, seem to exist.

Mr. LENNOX. That is what I was referring to. These gentlemen recommend that some legislation should be passed that would enable the minister to deal with companies of this kind; and I presume that some of these men dealt with in that report would be covered by this legislation.

Mr. GRAHAM. Yes, they would.

Mr. HUGHES. What was the necessity of appointing this commission consisting of Judge Barron, Mr. O'Donoghue and another? Why did the minister feel called upon to appoint them?

Mr. GRAHAM. The minister did not feel called upon to appoint them and did not do so.

Mr. HUGHES. Who made the appointment?

Mr. GRAHAM. They were a board of conciliation appointed under the Act, asked for by the men themselves.

Mr. HUGHES. Who appointed them?

Mr. GRAHAM. A board of conciliation, under the Act, is constituted in this manner: When the workmen of the Intercolonial, or any other railway, let us say, think they have a grievance against the management, they ask the Department of Labour to appoint a board of conciliation.

Mr. HUGHES. Then, they were appointed by the government?

Mr. GRAHAM. The men select one member, the management selects another, and if these two do not agree on the third, the appointment of the third is made by the Department of Labour.

Mr. LENNOX.

Mr. HUGHES. Whom did the Department of Labour appoint in this case to this commission?

Mr. GRAHAM. It is not a commission, but a board of conciliation. And there were two such boards that have been spoken of here; to which does the hon. member (Mr. Hughes) refer?

Mr. HUGHES. The one of which Judge Barron and Mr. O'Donoghue were members.

Mr. GRAHAM. The Department of Labour appointed Judge Barron.

Mr. MACDONALD. I desire to express my entire disapproval of the minister appointing a board in the manner he has done. No provision is made for the appointment of such a board as sat for the consideration of these matters. The Industrial Disputes Act does not apply to the Crown, in the absence of any specific provision making it so applicable. It seems to me that for the Crown to resort to the provisions of an Act of that kind to settle disputes with its servants is a very unfortunate principle, one that ought not to be acted upon in the Railway Department or any other. Until we have a declaration on the statute-book and some method by which the Act is to be applied, it seems to me that no department of the government should be made a party to such a proceeding.

Mr. CROCKET. Do I understand the hon. member (Mr. Macdonald) to say that the Minister of Labour had no right to make the appointment?

Mr. MACDONALD. My hon. friend (Mr. Crocket) is a member of the legal profession and will appreciate what I said. I ventured the opinion that the Industrial Disputes Act did not apply to any department of the government. That is my position as a lawyer. The hon. member can draw his own conclusions.

Mr. CROCKET. Did this appointment purport to be made under the Industrial Disputes Act?

Mr. R. L. BORDEN. I think we ought to have that point understood. It is a very important one. We should have some explanation.

Mr. GRAHAM. I suppose this raises the whole question of the Crown's prerogative.

Mr. FOSTER. It raises the question of King's prerogative.

Mr. GRAHAM. It is a very large question, and I do not intend to discuss it. I may be all wrong, but I think that when the Crown goes into running a railway it might conform to all the conditions that govern other people in the same line of business. The employees on the government railway have the same brotherhoods,

the same rules and regulations as the employees of any other road. They would consider it rather arbitrary, if, having provided machinery by which the employees of company roads can ask for boards to settle a grievance, the very authority that created the machinery should refuse the use of that machinery to correct grievances on the government line. Speaking broadly, I suppose, the Crown is not subject to any of these laws. But I am told that when the Industrial Disputes Act was up for discussion in this House, it was generally understood that the employees of the Intercolonial railway should have the same privileges under the Act as the employees of any other railway. As to the legal part of it, I will leave that out of the question, because the road, during the whole of my time, and, I believe, ever since the introduction of the Industrial Disputes Act, has allowed the employees to apply for a board of conciliation and it has been granted.

Mr. R. L. BORDEN. But the minister has not touched the point raised by the hon. member for Pictou (Mr. E. M. Macdonald). If it is the policy that boards of conciliation be created in respect of employees of the Intercolonial, the only means by which that can properly be done is by a statute. That is perfectly plain and straightforward. But when you undertake to apply to the employees of the Intercolonial a statute which is not legally applicable, though, of course, the Minister of Railways has not any regard for the legal side of the question —it seems to me a curious——

Mr. GRAHAM. I did not say that.

Mr. R. L. BORDEN. It seemed to amount to that. Of course, there is a great deal of force in what the minister says, that if the Crown carries on business it ought to carry it on under the usual methods. But it is absolutely true, as the hon. member for Pictou (Mr. E. M. Macdonald) has said, that no statute is binding on the Crown unless the Crown is expressly made subject to the provisions of that statute, and no consensus of opinion of the House of Commons, no expression of that kind in the progress of debate, has any more effect on that statute than the deliberations of any debating society. The difficulty of the situation is that when you are proceeding under a statute which has no application whatever, the whole matter is without any legal foundation, the persons appointed are not properly appointed, they have no right to subpoena witnesses, the witnesses have no right to be paid and any witness can insult the commissioners, disregard their authority, treat them with contempt and nothing can be done about it. The result would be to bring the whole operation into public contempt of the community upon occasion. That is if my hon. friend from Pictou is correct in the statement that there is nothing in the statute which makes it binding upon the Crown, and my recollection is the same as his.

Sir WILFRID LAURIER. There is some misapprehension, I believe, in the impression derived from the position taken by my hon. friend from Pictou. The Conciliation Act, as I understand it, does not apply to the Intercolonial railway men. The consequence is that the railway employees can refuse to be bound by that Act, they could go on strike with impunity. But in this matter the railway authorities thought it advisable voluntarily to apply to themselves the provisions of the Conciliation Act. They had certain disputes with the management, and it was thought advisable, very properly, to have a conciliation board, to bring themselves under the Act. It was not perhaps legal, but it was voluntary and was acted upon in a voluntary manner. They agreed to have a conciliation, they selected their own arbitrator, the management selected another and these two called upon the Minister of Labour to select a third. All this was done in a voluntary manner. I do not think it was done under the law, but it was done by consent, and the result was the same, a satisfactory conclusion of the dispute between the railway men and the board of management. If the men had refused to be bound by that Act, no authority would have been able to force them to act on it, but of their own motion they chose to come under the provisions of the statute.

Mr. R. L. BORDEN. Then it is just the same as if some other body of men to whom the Act does not apply had done the same thing? The difficulty is that whenever anyone chooses to treat the court as having no legal position and, for instance, refuses to obey a subpoena or to acknowledge the authority of the court, all the proceedings fall into contempt. Therefore, I say if the Intercolonial railway employees are to have the benefit of this Act, their rights should be given to them by a statute of this country, they should not be dealt with in this way. If it is worth while putting such a provision on the statute-book, and if it is desirable to give it a more extended application, the way to do so is by passing a proper amending Act.

Mr. E. M. MACDONALD. I think you will look in vain for any proceeding where the Crown has abrogated the right to deal with its own servants in whatever way it deems best, and the responsibility of the Crown on the advice of the different ministers to take a certain course in regard to its servants is a matter in regard to which it is responsible to parliament, and the minister's responsibility in such a case cannot be abrogated by saying that a conciliation

board has come to a certain conclusion and therefore the government is rid of the responsibility. Personally, I do not think that in the case of the Intercolonial railway it is wise that the provisions of this Act should apply. These men are servants of the Crown. I know of no case in which they have threatened to strike, or have struck, and I cannot conceive of a case in which they would strike. I think the minister is the proper person to remedy the grievances that exist and to deal with them, and he is responsible to parliament for his course in regard to them. I mention this matter because I not only think there was no legal authority for the appointment of the board, but I think that as a matter of policy the board should not have been appointed.

Mr. HUGHES. Why not change the reading of clause (f) to make it apply to those who were in the service on the 1st day of April, 1909?

Mr. GRAHAM. The law clerk of the House advises me that that clause refers to the original Act and this amendment is passed as if it were part of the original Act. Therefore, the form used is necessary.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. R. L. BORDEN. I observe that this fund is provided, one half by the government and one half by the monthly contributions of the employees of the Intercolonial railway and the Prince Edward Island railway. The fund is to be administered by a board consisting of five persons, of whom one is the general manager of the Intercolonial railway, who shall be the chairman and preside at meetings of the board; two members appointed by the minister from among the chief officers of the railway, one of whom shall always act as chairman in the absence of the general manager and the remaining two shall be elected annually by the employees contributing to the fund. I would like to know whether the proposed amendment has been submitted to the board or the representatives of the employees who contribute half the amount of the fund and, if not, whether the minister does not think it would be fair to give them an opportunity of being heard.

Mr. GRAHAM. I have received a communication, not in reference to this, but in reference to some other things that the employees want to place before me. There is no doubt in the world about them being in harmony with this Bill, I think, but they are going to submit some other matters to me early in January. I thought that if we put this Bill through the committee stage I would let it stand for the third reading, and then, if there is anything that they desire by way of amendment, it can be dealt with before the Bill receives its third reading. There is a committee representing the men who were on the provident fund, or those who were interested, and I will ask them to present to me in writing the matters which they desire to bring to my attention so that I can submit their proposals to the board before we assemble again after recess. I expect that will be done.

Mr. R. L. BORDEN. Of course, I am quite prepared to accept the assurance of the minister that they are entirely in harmony with the proposals, but at the same time I do not see how they can be in harmony with them if they do not know anything about them; nor do I see how the minister can be sure that they are in harmony with them if he has not heard anything from them. That, however, is a matter for himself and the committee will be bound to accept his assurance. I am under the impression that the minister added to the rules of the fund a note to the following effect:

> No absolute right of retirement exists under this Act. It must be clearly understood that the fund is a provident fund for the purpose of caring for disabled, worn out and old employees and not a retiring fund for the purpose of allowing men to secure other employment and at the same time draw an allowance.

I understood that that was the memorandum of the minister and I am not sure that it met the approval of the board. The minister will know about that. Does the minister consider that the proposal contained in clause (f) is quite in harmony with this note, for which he, I understand, is responsible.

Mr. GRAHAM. I am not responsible for that note, but the object of that was to prevent applications being made by men for retirement who really left the employment of the road to better themselves. We have had men who left their employment whom the board did not consider as being entitled to be put on the provident fund at all. No man may demand to go on the provident fund. He may make his application and that application is referred to the board, which is composed of the representatives of the men as well as of the government, each furnishing a portion of the money for the purpose. That board, after taking into consideration all the circumstances, pass upon the application before it comes to the minister. Then, it comes to the minister for his approval, and I think that no injustice can be done to any person. Some circumstances have arisen in which men have no right to the benefits of the retirement fund, because they took other employment and simply

wished to better their positions. They endeavoured to get their retirement allowance and to better their position at the same time.

Mr. R. L. BORDEN. It will still be necessary to secure the recommendation of the board in order to be placed on the fund?

Mr. GRAHAM. Yes, absolutely.

Mr. R. L. BORDEN. That provision is not interfered with in any way?

Mr. GRAHAM. Not at all.

Mr. LENNOX. I do not think the minister has mentioned how many people will probably come within the scope of this Act.

Mr. GRAHAM. Yes.

Mr. LENNOX. About how many?

Mr. GRAHAM. The chairman of the board told me that he thought between 75 and 100. It is a little difficult to say because we have not the ages of the men, but from the information he received he thought the number would not be more than 100.

Mr. CROSBY. Some reference has been made to the conciliation boards. We have had two conciliation boards. The last conciliation board which was referred to this afternoon was a board called together for the purpose of ascertaining the rights of some men who had been dismissed from the Intercolonial railway within the last year. I think that is what they were called together for.

Mr. GRAHAM. That was one of the questions before the board.

Mr. CROSBY. Has it anything to do with this Bill?

Mr. GRAHAM. No.

Mr. CROSBY. Because if it has I would like to bring up some other matters in connection with it.

Mr. LENNOX. The minister said that it had to do with it, that a number of the men who had been dismissed and whose case was investigated would, with others, come within the scope of this Bill.

Mr. GRAHAM. The board itself would not have anything to do with this Bill. Any person whose services were dispensed with would come under this arrangement, whether they were in that class or some other class. They would be affected by this Bill, but the conciliation board itself would have nothing to do with it.

Mr. CROSBY. Then, if I understand it, the Bill is intended only to apply to employees from April, 1909? It does not go any further back than that? These men who have had this conciliation board dealing with their affairs certainly were dismissed. They were all out of employment before that time and consequently this Bill would not cover them.

Mr. GRAHAM. One of the things for which the employees asked for the conciliation board was to ascertain if the management of the road had not violated some agreement with them in dispensing with the services of several of them since April 1 last, because that is when the board took charge. This Bill deals with the employees who were dismissed since April 1, 1909, and any man of them who had then served ten years would be entitled to superannuation if the board recommends it. Without this amendment he could not be superannuated unless he had served fifteen years.

Mr. MACDONALD. Is there any restriction as to the age of the employees who will be entitled to the advantages of this section?

Mr. GRAHAM. It only applies to men who are seventy years of age and have been ten years in the service, we substitute ten years for fifteen.

Mr. MACDONALD. Yes, but are you not making provision for another class of people who no matter what their age, were removed since April the 1st, 1899. Under the wording of this would they be entitled to superannuation?

Mr. GRAHAM. They have to fulfil all the other conditions.

Mr. MACDONALD. Yes, but there are different classes mentioned and in all these classes an age limit is specified and now you are adding an additional section in which there is no age limit.

Mr. R. L. BORDEN. I should think that the point mentioned by my hon. friend (Mr. Macdonald) is well taken. I am not discussing the question of policy but simply the construction of the statute, and if the clause is passed as it now reads there would be no age limit stipulated.

Mr. GRAHAM. I think the point is well taken. Under the old Act men who withdrew from the service for any reason would not participate in the provident fund until they had reached 60 years, and I do not think we would be doing any injustice if we put the age limit here at 55 years, then they would have the benefit of five years in the two ways.

Mr. DANIEL. What is the object of restricting this Act to those who are retired since April the 1st 1909?

Mr. GRAHAM. Before that date there were practically few compulsory retirements except for cause, and a man who was dis-

missed for cause would not have any claim on the provident fund. But since April the 1st the board has dispensed with a large number of men whose only fault was that they were not required in the service. By this legislation I am trying to meet the well founded complaint that they were harshly dealt with.

Mr. DANIEL. Does the minister say that men were not dismissed before April, 1909?

Mr. GRAHAM. I would not say that, but as a rule the men retired before that time were retired for some cause.

Mr. TAYLOR. Political or otherwise.

Mr. GRAHAM. No.

Mr. CROCKET. How many men have dropped from the service since April the 1st last?

Mr. GRAHAM. I gave the number in 'Hansard' the other day; I think about 500.

Mr. CROSBY. I understand that there were quite a number of men dismissed and particularly in Halifax, between the 1st of December, 1908, and April, 1909, and some of these were men who had served 25 years but who not having reached the age limit of 60 years were not provided for out of the provident fund. They were dismissed simply because their services were not required.

Mr. GRAHAM. I have not had any cases of that kind brought to my notice.

Mr. CROSBY. If there are cases of that kind would it not be very unjust to provide for those whose services were dispensed with since April, while you make no provision for those who were dropped between December and April.

Mr. GRAHAM. If there are such cases I imagine that the committee which is to wait on me will probably present them. We will not press the Bill to the third reading until we hear from that delegation.

Mr. CROSBY. I should think that would be satisfactory. One class of employees should be provided for as well as the other.

Mr. R. L. BORDEN. We are to understand then definitely that the Bill will not be read a third time until this delegation makes its views known to the minister.

Mr. GRAHAM. Yes.

Mr. LENNOX. Would it not be better to leave the Bill in committee?

Mr. GRAHAM. We can refer it back to committee if there is any difficulty.

Mr. LENNOX. It is much better to leave it in committee. There is a great deal in what has been said by the hon. member for Halifax (Mr. Crosby). Here we have men who have not been in the service for more than 10 years who are being dismissed, which is proof of what we have contended often from this side of the House that we have had a small army of men on that railroad who were not required at all. If it is fair and equitable—and I am not going to object to it, because I have a good deal of sympathy with the men—to make compensation to those men who have been in the service only 10 years, many of whom admittedly should not have been in the service at all, would it not be far more equitable to make provision for men who have been probably 25 years in the service, and yet have not reached the age of 60 years? I think it is pretty harsh that a man who is 59 years of age and has been say 25 years in the service, is to get no consideration at all. When we are reconsidering the Act, let us reconsider fully, and do justice all round. The question arises from the fact that we have had a large number of people employed on the railway who should never have been employed there at all. This is no fault of these men, though a great deal of fault to the government, and I am disposed to treat these men generously, or at all events justly. We shall not be doing even-handed justice if we do not consider the cases of the men who have almost reached the age limit. I do not think the minister should object to leave the Bill in the committee for fuller investigation.

Mr. BARKER. Let us understand clearly what we are talking about. In the first section the wording of the Bill is: 'Those who are in the service at the time of the coming into force of this Act'. As I understand the minister, those words do not mean at the time of the coming into force of this Bill as an Act, but they mean those who were in the service on the 22nd of March, 1907.

Mr. GRAHAM. That is correct.

Mr. BARKER. I think perhaps the minister would have avoided some confusion if, instead of saying 'at the time of the coming into force of this Act', he had said, on the 22nd of March, 1907, which is the date he is referring to.

Mr. GRAHAM. I had not the Bill drafted in this way originally, but on being referred to the law clerk of the House of Commons, he redrafted it in this form in order to keep it within the four corners of the original Act.

Mr. BARKER. There was no objection to the words 'the 22nd of March, 1907', in the original Act, and if they were put into this Bill there would be no confusion.

Mr. R. L. BORDEN. I think the first section is perfectly clear as it is. It is incorporated in the original Act and is to be construed as if it had been there when the

Act was originally passed. Therefore the date is when the Act was originally passed.

Mr. GRAHAM. The Act referred to is the original Act, and this section becomes part of that Act. I wish to move to add the following words at the end of the section 'and had at the time of such retirement reached the age of 55 years'.

Mr. DANIEL. Perhaps the minister will explain a little more fully why he is adding those words. He mentions a specific age, which might cause a good deal of injustice.

Mr. GRAHAM. My hon. friend will see that had the old Act remained, only those persons who had reached the age of 60 years could be retired. We are reducing the length of time they have to be in the service by five years, and we are also reducing the age limit by five years.

Mr. DANIEL. At the same time, this Act is intended to apply to only a few men—those who are relieved of duty after the first of April, 1909. That appears to me to be an extremely arbitrary arrangement. I think section 2 had better be allowed to stand until this whole matter can be considered again. I do not think the committee has sufficient information to be able to deal with this matter in a proper and judicial way.

Mr. LENNOX. This affords an additional reason why this Bill should remain in committee. I understand that a deputation of parties who are interested is going to wait on the minister. I understand from a newspaper report to-day that there has been forwarded to the Minister of Labour a report and recommendation from the recent conciliation board with reference to 350 men. We shall have this deputation waiting on the minister, and yet not have afforded, up to this moment, any of the men interested any notice whatever that we propose to put a time limit on this provision. The Act has been announced in the press, the men interested know something of it, they understand it to be an Act providing that any man who has been ten years in the service will be entitled to recovery. Now we propose to make an age limit of 55 years. The minister may be right in that or wrong, but the men interested have had no opportunity to present their case. Why amend these sections now when in all probability we shall have to refer the Bill back to the committee for reconsideration in a few days? Will it not be more sensible to leave the Act unamended, report progress and ask leave to sit again, and leave the Bill in committee?

Mr. GRAHAM. It is not worth while arguing about it. What I want is to get the measure advanced a stage, and the interests concerned will be protected just the same as under my hon. friend's suggestion.

Mr. LENNOX. Except if we determine on 55 years, whether right or wrong, it will be more difficult to alter it afterwards.

Mr. GRAHAM. It will not make a whit of difference. I do not want to urge the Bill through, but merely as a matter of expedition to get it off the Order Paper, after giving the assurance that I would have it referred back to the committee if necessary. When my hon. friend starts to make out a case, he must see that no matter what limit we may fix, it would be open to question. There must be a line drawn somewhere. The Act is arbitrary, and I am just changing the terms a little to meet the condition of the people referred to and who may have some reason for complaining. When the Act was passed, the argument of my hon. friend could have been used just as well as to-day. Section (a) provides:

> Those who have attained the age of 70 years after being 15 years in the service.

Why, according to the hon. gentleman's argument, exclude those who were in the service fourteen years and six months? Why exclude people who were fourteen years in office and let in those who were fifteen? You have to draw the line somewhere and make an arbitrary ruling, and any Act to help a certain class of men will give reason for others to complain because they are not included. Take another class, class (b) which covers those, who, after being fifteen years in the service, become physically or mentally incapacitated. But here is a poor man who was fourteen years in the service when he became incapable. Why do injustice to him by excluding him? Take the other class:

> Those who have attained the age of 60 years after being 15 years in the service, and request to be retired from the service.

Why not include those who served 13 or 14 years? While there may be something in the contention of my hon. friend, draw the line where you like, it must be arbitrary, and some will come just short of meeting the conditions you impose, no matter how lenient.

Mr. BARKER. We may as well be quite frank in discussing these things. There is an impression, rightly or wrongly, among some people, that men have been dismissed otherwise than for lawful cause, and that possibly some of these clauses may affect the rights of such men. There would not be any difficulty about the first part of section (1). The difficulty seems to be about section (2); and I propose to discuss section (2) with relation only to these 55-year men, leaving the other to be discussed separately. Why not make paragraph (2) read:

> The paragraph added to section 12 of the said Act by section 1 of this Act shall not ap-

ply to anybody retired prior to the 1st April, 1909, otherwise than for lawful cause.

This cannot affect the hon. gentleman, as he knows he has not dismissed anybody except for lawful cause.

Mr. GRAHAM. I am not trying to open the door for a great many years back, but to meet the complaint which has arisen among a large number of the men who have been dismissed by the board. There was no complaint along that line, so far as I have heard, previous to the establishment of the Railway Managing Board. Rightly or wrongly, they have dispensed with the services of many men, and both sides of politics have complained to me that they thought the action of the board was perhaps not wrong in dispensing with the services of these men, but there was quite a number whose services were dispensed with through no fault of their own. This is to meet the conditions which have arisen since the board took charge and dispensed with the services of a large number of men.

Mr. TALBOT. I believe this measure is particularly intended to relieve 75 or 100 people who have complied with the conditions of ten-year service. But what will happen the other 350 who have given good service during 4 to 9 years and have been put out in the cold without an hour's notice?

Mr. GRAHAM. The Provident Funds Act was passed to relieve those who had attained a certain age and men could not be employed, since that Act came into force, over 35 years of age. In the case of men who were employed fairly young and had not served the railway ten years, of course their claim on that fund is not so strong as that of those who have attained a certain age. No one regrets more than I that men should lose their positions. That part of the management of the road has worried my mind more than any other, but in all great industrial enterprises that occurs, and fewer have lost positions on the Intercolonial railway than on any other railway during the last five years.

Mr. LENNOX. The hon. member for Pictou (Mr. Macdonald) suggests that there is less reason for pensioning a man who has been improperly employed for ten years and who has been a charge upon the public funds than one so employed for lesser number of years. There is logic in that, as the minister must see. The whole thing comes back to this—that the difficulty arises through the fact that the government would not take any action until this Railway Managing Board was appointed. The Managing Board now has discharged men who ought never to have been employed. The fact that these men have been employed ten years rather than five is not a very logical reason why they should get a pension rather than the five-year men. At the same time, no doubt, it would be a hardship on the men, and I suppose we should have to let it go in the end. It arises from having too many men on the railway.

Mr. DEPUTY SPEAKER. Is section 1 amended as agreed to?

Mr. LENNOX. No, the minister said he would allow it to stand.

Mr. GRAHAM. If the hon. member (Mr. Lennox) does not wish to carry out the arrangement made between his leader and myself. I am quite willing that it should remain in committee.

Mr. LENNOX. I did not understand that any arrangement was made.

Mr. GRAHAM. The hon. leader of the opposition (Mr. R. L. Borden) was satisfied that I should leave it until the third reading.

Mr. LENNOX. I would not have made objection had I understood that. But I hold to what I said.

Mr. DEPUTY SPEAKER. Is the committee ready for the amendment to section 1?

Mr. LENNOX. No.

Mr. DEPUTY SPEAKER. Carried.

Mr. GRAHAM. I would like to get the Bill into shape so that it can be reprinted, for I propose to send a copy to this committee for their consideration as well as to ask them to send me their suggestions.

Mr. BARKER. And the whole Bill will be open for consideration?

Mr. GRAHAM. And leave it to the third reading.

Mr. LENNOX. We have settled this matter. If we are going to argue further, let us argue it all. If the minister is not prepared to do what he suggested a few minutes ago, there are many things we can discuss. I understood that the minister was ready to move that the committee report progress.

Mr. GRAHAM. As far as I am concerned, it does not make any difference to me. I submitted the matter to the leader of the opposition (Mr. R. L. Borden) and the gentlemen from the section particularly affected who will probably be waited on by those concerned. If I can get this through to the third reading, I will have it reprinted and a copy sent to the committee. If the hon. gentleman (Mr. Lennox) does not want it that way, I am not particular.

Mr. LENNOX. That can be done without it going through Committee of the Whole.

Mr. GRAHAM. It will not be printed unless it passes the committee.

Mr. R. L. BORDEN. If the minister says he will, on request, send it back to the Committee of the Whole, I think that covers the point.

Mr. LENNOX. If my leader says that he is satisfied with the proposal, I will certainly submit. At the same time, I do not feel that that is the best way, and I will give my reason: There are a good many things in connection with this Bill that we shall want to discuss more at length, and it is advisable that we should have the fullest information before we discuss them. It is not advisable that we should discuss them piecemeal and from time to time. If this Bill remains in committee we should have an opportunity to bring them forward. I submit to the judgment of my leader that it would be better to leave the Bill in committee.

Mr. R. L. BORDEN. Of course, I do not wish to force my views on any hon. member. But I understand the minister to say that he desires to get the Bill out of committee that he may have it printed. And he undertakes, on the request of any hon. member, to send it back to the committee after it is reprinted.

Mr. GRAHAM. Certainly—no trouble.

Mr. R. L. BORDEN. So, we have only to make the request and we should be where we are now.

Mr. LENNOX. As I plainly see that my leader thinks that the proper course, I certainly take his suggestion, and allow the matter to go.

On section 2:

The paragraph added to section 12 of the said Act by section 1 of this Act shall not apply to any person retired prior to the first day of April, one thousand nine hundred and nine.

Mr. DANIEL. What objection would there be to striking out this section altogether and allowing this measure to apply from the passage of the Bill of 1907?

Mr. GRAHAM. That would open up the whole Act very much more than is intended. It would be popular, I have no doubt, but I have no idea what it would cost the country or how much it would cost the men. On the basis of the present section, we have a pretty good idea of how many men would come under it. That matter will be discussed with the representatives of the men when they come.

Mr. DANIEL. The hon. minister stated that there had been no dismissals except for cause. So, I thought there could be no objection to striking out this section. I ask it for the sake of those cases, if there are any, that the minister does not call to mind and to whom injustice may have been done and who would be cut out by this paragraph.

Mr. SAMUEL SHARPE. The Minister of Railways (Mr. Graham) as head of the department knows the position of the employees prior to April, 1907. If there have been no dismissals prior to that, the elimination of this section will not enlarge the scope of the Act or increase the expenditure necessary to carry it into effect. The hon. minister knows who has been dismissed, and whether dismissed for cause or not. I think the point taken by the hon. member for St. John (Mr. Daniel) is well taken.

Mr. GRAHAM. If the hon. member (Mr. Samuel Sharpe) had the responsibility of carrying out such an Act and realized the scope of it he would not, I am inclined to think, make the remarks he has made. The men were under certain conditions up to the introduction of this amendment, that is up to April 1, 1909. A new system of management was introduced. The hon. gentleman must remember that there are, if I recall the number correctly, some 8,000 employees on the government railways. If we open the door for those back to 1907 some hon. member may say, 'Why 1907? Let us go back further.' There must be a line, and it must be, in a measure, arbitrary. This Act was passed in 1907. I was not here then, but no doubt many hon. members before me were here at that time. The line was drawn strongly and arbitrarily and an age limit fixed. All I pretend to be attempting to do is to make the Act a little more lenient owing to the new conditions having arisen by the change in management. My hon. friend suggests that I know just who were dismissed out of all these men. I suppose he is not serious in that.

Mr. SAMUEL SHARPE. The minister would know the number.

Mr. DANIEL. The minister stated there were none.

Mr. GRAHAM. I did not state anything of the kind.

Mr. DANIEL. Except for cause.

Mr. GRAHAM. I said once or twice that I did not make that statement, but my hon. friend has put it in my mouth twice since. Generally speaking, before this A t men were dismissed for cause as they would be in any railway or any other line. But when the management was changed the conditions changed, the circumstances to which the old Act applied were altered and a general reduction of the staff all over the system was entered upon. New conditions arose which acquired a new Act. I am trying to meet the conditions

that have arisen owing to a large number of men having been dismissed at once by the board of management. It must be remembered that the men still in the employ of the road will have to pay their share to those men who retire, and this Act has met with their approval. I do not know why in attempting to meet new conditions we should drag in all the old conditions existing before the passage of the Act of 1907. My only attempt was to meet the new conditions that have arisen since the board was appointed.

Mr. S. SHARPE. How many men have been dismissed from October last to the 1st of April?

Mr. GRAHAM. I think I gave that information in answer to a question.

Mr. R. L. BORDEN. Information of that kind was given in answer to a question of mine, but it related only to the county of Halifax. When the Bill is again in committee perhaps the minister would be good enough to have all this information ready so that we can discuss it a little more intelligently.

Bill reported.

SUPPLY—THE NAPANEE RIVER.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. U. WILSON (Lennox and Addington). Mr. Speaker, I wish to call attention to a matter of considerable importance to many people in my riding. At a public meeting on November 30, of representative men in the town of Napanee, the state of the Napanee river was discussed. In justice to the Minister of Public Works I would say that last year, although there was no appropriation for the dredging of the river, he gave me a pledge across the floor of the House that he would see if he could get a dredge and have a certain amount of dredging done. He made an appropriation of $2,800. I talked the matter over with him and I supposed if he did some dredging in the shallow places it would greatly assist the navigation of the river. But it turns out that there was only a very narrow channel made about twenty-five feet wide. The captain of the dredge was at that public meeting and explained the condition of the river. Marine men stated that the river was worse than it had been before any dredging was done. The captain said that only a narrow cut was made and when the dipper of the dredge came up it would bring up an overflow and pile up logs and stones and mud, forming a ridge on one side of the cut. Thus, if the vessel happens to get out of the channel she is in much shallower water than before the dredging was done. Captain Christie, of the steamer 'Brockville', quite a considerable steamboat, says that it is very important to his company to know what is going to be done about the dredging of the river, because unless the navigation of the river is improved his company will have to withdraw their boats from that route. He is anxious to know because he says they always make their routes the year before, so they will know what they are going to do in the spring. A question of mine as to whether it was intended to make an appropriation this year for the dredging of the Napanee river has not been answered. My constituency is one of the counties that get very little public money in return for what we contribute to the revenues of the country. We do not wish to be unreasonable, but we think this is a very important matter, inasmuch as the town of Napanee and the entire surrounding country are deeply interested because we get our coal from the United States, it has to come in vessels, and the river is so low for want of dredging in certain places that only the smallest vessels can come in, and they are decreasing in number. Having to use the small vessels naturally increases our freight rates. The Minister of Public Works is, I think, disposed to deal fairly by us, and I hope that a reasonable appropriation will be made in the supplementary estimates for this work of prime necessity. I hope I will not be told, as the Minister of Finance often tells members on this side, that we are continually finding fault with the large expenditure that is made but are still asking for more. What we want is that the appropriations should be made for useful public works, not for works like the Newmarket canal. You could dredge twenty-five rivers like the Napanee for the money wasted on the Newmarket canal. I allude to this in order that the minister may not think I am unreasonable and want expenditures for purposes which are not necessary. I now leave this matter in the hands of the government, hoping the minister will reply and give us fair reason to believe he will do what I have asked.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, as my hon. friend (Mr. U. Wilson) has mentioned the subject of the dredging of the Napanee river and has intimated that one of the captains has made the statement that navigation is more dangerous than before, I think perhaps I should call the attention of the House to what has actually been done during the past season. Before doing so I may say that before we began working upon that river during the past season the river, for seven miles, was full of obstructions, such as sunken logs and stumps. There was also a wreck right in the channel of the river and it was a serious menace to navigation. It was reported to me, not only by my hon. friend but also by prominent citizens of

Napanee, by captains of vessels as well, that the dredging of this river was necessary in order to give satisfactory navigation. Well, Sir, it is true, as I told my hon. friend and a number of other gentlemen in Napanee, who communicated with me upon this subject, that there was no special appropriation made at the last session of parliament for this work, but I stated that if possible I would endeavour to get a dredge and have the work done. We had no government dredge available for the purpose because our dredges were all busily engaged elsewhere, but we did succeed in making a very satisfactory arrangement with the Windsor Dredging Company, what I think every one who is familiar with the condition of affairs in that river will say was a satisfactory arrangement, the price being 14 cents per cubic yard with a special allowance of $150 for removing the wreck. The report which I have is that dredging has been performed to a depth of 12 feet below low water at various points in the river where most required, the cuts were widened from 25 to 30 feet and the remains of the old wreck were entirely removed. Altogether during the past season this company dredged some 20,000 cubic yards of material in addition to removing the wreck. The total expenditure has been in the vicinity of $2,800. I think from this report and from what I have heard outside of the report the work which has been done has been very satisfactory and excellent value has been got for the money which has been expended. I may say to my hon. friend that the question of continuing the dredging will receive careful consideration, but I do trust that my hon. friend recognizes, that, at his own request and at the urgent request of a number of prominent citizens of Napanee, I made arrangements under considerable difficulty to do this work, believing that it was a justifiable work, just as all other work which is done by my department is justifiable work and necessary in the public interest. I can assure my hon. friend that he would make a stronger case for the dredging of the Napanee river if he would simply rely upon the merits of the work which we have on hand and not seek to disparage the public work which is being done in other places. I think it is a great mistake, when one desires that some work should be done in his own locality, that he should feel it necessary to throw out the suggestion that every expenditure made in any other part of the country is a waste of money and that the only place in the whole Dominion of Canada where money can be expended to public advantage is in the particular locality in which he resides.

Mr. U. WILSON. I did not throw out any such insinuation, I did not intend to and I think, Mr. Speaker, you will bear me out when I say that I gave the minister full credit for his generosity last year. I acknowledge that under difficulties he made this appropriation. I have a letter from Captain Christie which bears out everything I have said in reference to the dredging. I will let the minister see it.

Motion agreed to, and the House went into Committee of Supply.

Public Works—chargeable to income, harbours and rivers, Nova Scotia—Pinckney Point breakwater—extension of, $1,000.

Hon. WM. PUGSLEY (Minister of Public Works). This is for the purpose of extending the breakwater at Pinckney Point. The difficulty which we are seeking to obviate there is that silt and gravel wash away through the action of the sea and obstruct the berth. We find it necessary to build an extension of the block 40 feet long, the whole cost of which will be $1,000.

Piper's Cove—breakwater—pier, $8,000.

Mr. PUGSLEY. This is to provide for the construction of a breakwater pier at Piper's cove on the Bras D'Or lake. The proposed structure will extend to eight feet at low water, and it proposed to construct blocks and spans 224 feet in length. There is to be a road bridge 270 feet long as well. The total cost is $8,000.

Mr. JAMESON. Will this work be done by tender and contract?

Mr. PUGSLEY. Yes, I think this will be done by public tender and contract.

Mr. JAMESON. I would like to urge upon the minister the advisability, wherever possible, of having these works done by contract. There is a variety of very good reasons why this course is preferable to the alternative of having the work done by day labour. In most of these communities there is a large number of people who are very anxious to secure employment upon these public works at certain times of the year when they have not very much to do and when it is a great boon to them to be able to make a few dollars. It very often happens that when a work is done by day labour only the personal friends of those who have the management or control of it are placed upon the work, and others, who are equally deserving, are debarred from that privilege. There is another reason why it is desirable to have this work done by contract and that is that it reduces the number of foremen, sub-foremen, supervisers and officials of that character, and saves expense. The cost of construction is lessened, perhaps I may say the cost of officials who do not work is lessened, and a saving is thereby effected to the department. I have found in my own constituency that where the work is done by day labour and not by contract, the privilege of supplying timber and other materials is usually given only to a few individuals who are often compelled

to take the value of the material, out of the store of the person who has charge of the work. In like manner the workmen are obliged to take out their wages under what is called the truck system. For these reasons it is desirable that the work should be done by contract wherever possible so that all may have a fair chance of participating in the distribution of the money. When work is let by contract this truck system is broken up and that in itself is a good thing. When we were considering the other day the appropriation for David's cove in Digby county I expressed the desire that the work should, if possible, be done by contract, and I urged it because the experience in that county at least has been that very great hardship has been entailed in the past on the workingmen and on those who supplied materials in that they had not been able to draw their pay in cash but were frequently compelled to draw it through the shop of the man in charge of the work. I know that the minister has the welfare of his department and of the public works of Canada at heart, and it is for this reason that I bring this to his attention.

Mr. PUGSLEY. I have already stated that it was the rule of the department to do work by contract except in cases where it clearly appeared to the responsible officers that it could be done better by day work. With regard to workmen being obliged to take goods from a store in lieu of their pay I wish to state publicly that no foreman has the right to require a man to take his pay otherwise than in cash, and if any complaint is made to the department that a foreman has required those under him to resort to the truck system that foreman would be reprimanded and unless a satisfactory explanation is given he would be dismissed. Of course it may happen sometimes that workmen in anticipation of a cheque coming for their wages desire to obtain supplies in advance from a store, but in all cases it is the well understood duty of the foreman to pay promptly in cash when the money is available in the hands of the engineer.

Mr. JAMESON. I may say for the information of the minister that I know a case in which men who are willing to work and who had applied for work were flatly told that unless they took their wages out of the store of the man who had charge of the work he would not give them employment, and, those who were willing to supply material were told that they would have to take their payment in a similar way in respect to this particular work. I think that is a very serious hardship.

Mr. PUGSLEY. Would my hon. friend object to giving me the name of the foreman who made that condition and if he does I assure him that I will have the matter investigated and will see that such a foreman will not receive further employment. Any foreman who insists upon that condition of employment is certainly not discharging his duty.

Mr. JAMESON. I will have great pleasure in giving to the minister privately the name of the foreman.

Mr. PUGSLEY. That will do.

Mr. JAMESON. I do not suppose it is necessary to publish the name in 'Hansard' but I shall give the name to him privately.

Mr. PUGSLEY. Very well.

Mr. JAMESON. The view taken by the Minister of Public Works is the proper one and I was quite confident he would take such a view when the matter was brought to his notice. Let me say that if foremen generally have notice from the department that such conduct would not be recognized it would go far towards effecting a cure of this pernicious system.

Mr. FIELDING. I like the contract system best, but I am bound to say that I am not so satisfied as my hon. friend (Mr. Jameson) as to its popularity in any given district. I do not say that because it is unpopular it should not be adopted but there are views that may be offered on the other side. The contractor may come from a distant part of the country and very often he brings with him his staff and some of his employees to the exclusion of those living in the neighbourhood, a thing which is never very popular. Then again it sometimes happens that the contractor not having sufficient resources gets into difficulties, and I have known cases where the contractors went away leaving claims unpaid and very much discontent. The contract system, as a rule, is the better one, but there is another side to the question.

Mr. JAMESON. If a contractor should bring from outside a considerable portion of the labour to be employed I can well understand that it would not be satisfactory, but in the case of these works ranging from $7,000 to $8,000 I think the contractor would be very likely to find sufficient local labour and would not import any. As to a contractor leaving the workingmen unpaid I do not think there is any excuse whatever for such a condition, because it would be a proof that the officers of the department, who had the money in their hands had not exercised proper supervision and had been derelict in their duty.

Mr. FIELDING. No. I could give my hon. friend a case where no one was at fault; where the contractor took his work at too low a price and although his intentions were honest enough he got into difficulties and he was not able to pay the workmen. The usual percentage was kept

back but that did not suffice. He was a man of honest purpose but there was not enough money to give him his contract price and a fair profit.

Mr. JAMESON. That would be an exceptional case.

Mr. FIELDING. Yes.

Port Dufferin — breakwater at Smiley's Point, $2,550.

Mr. PUGSLEY. This will complete the work.

Mr. STANFIELD. What is the total cost?

Mr. PUGSLEY. $7,000.

Porter's Lake—boat channel to Three-Fathom harbour, $4,500.

Mr. PUGSLEY. This is an important work, Porter's lake being 17 miles in length and surrounded by a good farming country, well settled. The total cost of the work, including breakwater, will be $17,000.

Mr. JAMESON. Where is this?

Mr. PUGSLEY. In Halifax county. There have been expenditures in 1907-8 and 1908-9.

Mr. CROSBY. How much more will be required to complete the work?

Mr. PUGSLEY. It is estimated that it will take $10,000 more.

Mr. CROSBY. As the minister states, this is in a very fertile part of the county of Halifax, and the work gives access to a very beautiful lake. I suppose it is intended that the work shall be continued during the coming summer?

Mr. PUGSLEY. Yes.

Port Hood harbour—closing northern entrance, $40,000.

Mr. PUGSLEY. This is a very important work. A good deal of coal is shipped from Port Hood. Formerly there was a natural breakwater extending from the island to the mainland, but some years ago it was carried away by a violent storm, and we have been for some years gradually closing the entrance so that it will afford a sheltered harbour. We are asking this year for a larger vote than usual, with a view to proceeding vigorously with the work.

Mr. JAMESON. How much has been expended on this work, and what does the minister estimate the total expenditure will be? Also, what material is used in the construction of the breakwater?

Mr. PUGSLEY. The material used has been brush and stone. The total estimated cost was originally $215,000. The work has been carried on continuously since 1903. There has been expended $92,796.67, and with this $40,000 it is estimated that $82,250 will still be required to complete the work. I may say that this work has been asked for not only by the people of the locality, but by resolutions of various boards of trade, including the Maritime Board of Trade, which has urged the importance of continuing the work as rapidly as possible.

Mr. WRIGHT. We are frequently told of wharfs being washed away on the Atlantic coast. Is it not possible to devise some method of constructing these wharfs so that this will not happen so frequently? There must be some fault in construction.

Mr. PUGSLEY. What was washed away was the natural connection between the island and the mainland—not an artificial structure, but a natural breakwater or bar, and the fact of its being washed away deprived the harbour of its natural shelter, and it is for that reason that we are erecting a breakwater.

Mr. WRIGHT. I may have misunderstood the hon. minister in this case, but all the same we do have constantly recurring cases of wharfs being washed away.

Mr. FIELDING. I do not think it often happens that a wharf is washed away. Undoubtedly wharfs are damaged from time to time, and I am afraid that my hon. friend is not sufficiently acquainted with the force of the Atlantic waves, or he would not see anything surprising in that. I am not sure that even concrete works would withstand some of the storms on the Atlantic coast.

Mr. EDWARDS. I want to call the minister's attention to the fact that while large sums are being expended on wharfs and breakwaters along the coasts of the maritime provinces, some expenditures are necessary on the inland waters. I have had occasion to refer to the need of a little dredging near Wolfe island. The people there build their own wharfs, but in the latter part of last session I informed the minister that an expenditure of $150 or $200 in dredging would enable vessels to land coal on the island, whereas otherwise the people would be obliged to haul their coal on the ice from Kingston. This would mean a saving of fifty or sixty cents a ton on all the coal used on Wolfe island. I simply want to draw attention to that. The hon. minister said last session that it was then too late to consider the matter. I want now to call his attention to it before it is too late. This is a matter of great importance to the people there, and while we are making these large expenditures down by the sea, we should not forget the people living along the lakes.

Mr. PUGSLEY. The hon. gentleman is speaking of dredging required at Wolfe island. The result of the inquiry I made is

that this is a private wharf, owned by a company, and the business down there is the business of this company, and the work could not be properly regarded as work for the general benefit of the public.

Mr. EDWARDS. The wharf, I believe, was constructed by private parties who were living on the island, but it is used by the general public without charge. I can only repeat that the dredging would result in great and general benefit to the people on that island inasmuch as it would enable coal vessels to land cargoes there, and the people would then get their coal at 50 cents to 60 cents a ton less.

Mr. PUGSLEY. If the hon. gentleman would write me a letter stating the number of people accommodated by that wharf and mentioning the fact that the wharf is open to public use without charge, I shall be glad to take a note of it for further consideration.

Mr. EDWARDS. The population is some 1,200.

Mr. CROCKET. How long has this work been in progress?

Mr. PUGSLEY. Since 1903.

Mr. EDWARDS. When will it be completed?

Mr. PUGSLEY. It is proposed to let the contract now and we hope to finish it in about two more years.

Mr. CROCKET. When the work was begun in 1903, how is it the department is only giving a contract now?

Mr. PUGSLEY. The work was experimental. To have made a solid breakwater of crib-work and stone would have cost a great deal more perhaps than we felt justified in spending. This mode of construction was an experiment and we went along gradually to see whether it would stand the action of the waves. It has certainly stood remarkably well, and the department is convinced it will be permanent, so that we feel justified in asking a larger appropriation with the view of entering into a contract.

Mr. CROCKET. What has it cost up to the present?

Mr. PUGSLEY. $92,000.

Mr. CROCKET. All that was done by day labour?

Mr. PUGSLEY. Yes.

Mr. CROCKET. What is the estimate of the work yet to be done?

Mr. PUGSLEY. $122,250 to finish the whole work.

Port Joly—extension of Herring Rocks breakwater, $2,000.

Mr. PUGSLEY. This is for an extension.

Port Malcolm—wharf, $2,500.

Mr. PUGSLEY. This is to reconstruct. There is a private wharf there now, owned by Mr. Malcolm. The department is going to acquire that for some $2,100, including the right of way. The department will make it a public wharf and reconstruct it. The total estimated cost, including cost of the property, will be $7,000. I am now asking $2,500 and will require a further $2,500 to complete the reconstruction.

Mr. CROCKET. What are the dimensions of the wharf the department is buying?

Mr. PUGSLEY. 225 feet in length and it extends to 6½ feet below water. For a distance of 105 feet it is 64 feet wide; for a distance of 24 feet, 42 feet wide; for a distance of 70 feet, 18 feet wide; and for the remaining distance of 26 feet, 22 feet wide. That is the existing wharf. We propose to reconstruct it.

Mr. CROCKET. How was this figure arrived at? Was that just the amount asked or was an officer of the department sent to examine the wharf?

Mr. PUGSLEY. The resident engineer, Mr. Bernard Sconi was instructed to make an examination and report, and he estimated its value at $2,100. It is on his report that we propose to buy the property.

Mr. CROCKET. Has the deed been executed?

Mr. PUGSLEY. No, we could not take a deed until we got the vote.

Mr. CROCKET. How large a place is it?

Mr. PUGSLEY. It has a population of 600; the residents are farmers, who engage in fishing during the fishing season. There is a freight and passenger steamer which calls there.

Mr. G. TAYLOR. What county?

Mr. PUGSLEY. Richmond.

Mr. G. TAYLOR. If this wharf belongs to a private individual why should the government acquire it?

Mr. KYTE. The parties who own the wharf are out of business. They conducted a large mercantile establishment there until a few years ago. The senior member of the firm died, and the property is in the market. Up to the present it has been used by the public without charge, but the wharf is not in proper condition at present and a request was made to the department to furnish a new one.

Mr. G. TAYLOR. We have hundreds of cases throughout Ontario of wharfs owned

by private parties and used by the public. We have three or four at Gananoque which the owners would be glad to sell to the government if the government feel disposed to buy old wharfs. I do not see why the government should furnish a wharf at this place.

Mr. PUGSLEY. In Ontario the department has done that frequently. It sometimes happens that a private wharf, owing to the owner having gone out of business, becomes neglected, and there is a justifiable demand for a public wharf. It is often considered best that, instead of building another wharf, the private wharf should be taken over, where it can be had at a fair and reasonable price, and repaired and devoted to the public use. It has been done in several cases in the province of Ontario and in Quebec also. It is not confined to the province of Nova Scotia, I can assure my hon. friend.

Mr. STANFIELD. Is this engineer, Bernard Sconi, one of the regular men?

Mr. PUGSLEY. Yes.

Mr. STANFIELD. In Halifax?

Mr. PUGSLEY. No, in Antigonish.

Mr. EDWARDS. I would call attention to the wharf at Wolfe Island to which I have already referred. In view of what the minister has said in regard to the policy of acquiring wharfs owned by private individuals who have gone out of mercantile business—

Mr. PUGSLEY. Perhaps the hon. member (Mr. Edwards) will pardon me a suggestion. If he wishes to make a suggestion as to the government acquiring a wharf in Ontario, perhaps it might be more convenient to wait until the Ontario items are before the committee.

Mr. EDWARDS. If the minister prefers it. It struck me that it would be cheaper for the people if the government will buy the wharf. It could be got for less money than is being paid for this one.

Mr. CROCKET. By whom was the department asked to buy this wharf? Was there any request from the municipality?

Mr. PUGSLEY. My hon. friend from Richmond (Mr. Kyte) informs me that he presented a petition of the people urging strongly that this wharf should be acquired. I do not recollect the petition at the moment, but no doubt it is on file.

Mr. CROCKET. Was there any request from the municipality?

Mr. PUGSLEY. No.

Mr. EDWARDS. Is there any income?

Mr. PUGSLEY. The hon. member for Richmond informs me that Mr. Malcolm gave the public free use of the wharf while he was in business.

Port Maitland breakwater, $2,000.

Mr. PUGSLEY. This is to complete the reinforcing block of creosoted timber on the outer face and partial renewal of the flooring.

Mr. CROCKET. How long is it since the work was begun?

Mr. PUGSLEY. In 1908. The total estimated cost is $6,700, and this $2,000 is intended to complete the work.

Mr. STANFIELD. Is this in Hants?

Mr. PUGSLEY. No, Yarmouth.

Mr. CROCKET. Has the work been done by contract?

Mr. PUGSLEY. No, by day labour.

Mr. CROCKET. Is that the principle upon which the department proceeds in works of this kind?

Mr. PUGSLEY. The total work in any one year did not amount to more than $3,000, and it was considered by the engineer better to do it by day work. It was repairing work and, while that class of work can sometimes be done by contract, it is not always so.

Mr. STANFIELD. Is this Mr. Perry, the foreman, one of the faithful?

Mr. PUGSLEY. Does the hon member wish to ask if he is a faithful workman? I think he is.

Mr. LAW. Mr. Perry belongs to one of the oldest Tory families in the county of Yarmouth. I may say that it would be impossible to have that work done by contract. The breakwater came near being washed away last winter. The work is the tearing down of old work and building new.

Mr. STANFIELD. I did not intend to raise talk over this matter, but I know that in the county I have the honour to represent the only people appointed on these jobs are the faithful. Occasionally, a man on our side gets a position by promising to help my opponent.

Mr. PUGSLEY. I do not hesitate to say that, so far as the foremen are concerned, if, in any locality, we can get a competent reliable man who is a Liberal I think it is our duty to appoint him. For, a Liberal is interested in doing satisfactory work, work that will be creditable to the government; a Conservative would be interested rather the other way—in work that will bring discredit upon the government. So far as men under the foremen are concerned, let him employ good workmen whatever their politics may be.

Mr. BLAIN. Are there no good Liberals at this place to be recommended?

Mr. LAW. If the hon. member (Mr. Blain) heard what I said, he will know that I stated that this gentleman belonged to one of the oldest Tory families in the county. But I wish to add that he has seen the light.

Mr. BLAIN. That is the explanation. By whose recommendation was the gentleman appointed and what were his special qualifications for the position?

Mr. PUGSLEY. He was appointed by my direction.

Mr. LAW. Further, the resident engineer, Mr. Dodwell, has told me several times lately that Mr. Perry was one of the best foreman he had had for men in the province of Nova Scotia.

Mr. BLAIN. At whose recommendation was he appointed?

Mr. PUGSLEY. I do not carry in my head the names of those who make such representations. I have no doubt that I satisfied myself that Mr. Perry was a thoroughly competent man. And I may say also that it is one of the instructions to the resident engineer that when a foreman is recommended he must satisfy himself of the competency of that foreman.

Mr. STANFIELD. I suppose we shall have to agree with the minister that, when a position is open, a Liberal must get it. But I would ask him to instruct his resident engineer and director to occasionally give a Tory a job, if it is nothing better than as a labourer. In my county, a Tory cannot get even day's work on one of these government jobs.

Mr. PUGSLEY. I think the labourers are employed irrespective of party.

Mr. STANFIELD. In my county, our Liberal friends go at these things as though it were their own money and we had nothing to do with it. I don't see why a poor Tory might not have a chance occasionally. You might kindly make a note of that.

Mr. FIELDING. Was it the practice to give the poor Liberals a show in former years?

Mr. G. TAYLOR. Always.

Mr. STANFIELD. I have only been in politics a short time, I am a mere lamb in politics, but I understand the Liberals did get a job occasionally. If I remember, one or two Liberals were appointed to the Senate.

Mr. McCOIG. It might be a good idea for the hon. gentleman to send some of that advice up to the government at Toronto.

Mr. CROCKET. Was there a subforeman on this work as well as a foreman?

Mr. PUGSLEY.

Mr. PUGSLEY. An assistant foreman.

Mr. CROCKET. How many men were employed?

Mr. PUGSLEY. I cannot give that information, I have no memorandum as to that.

Mr. CROCKET. Was there also an inspector?

Mr. PUGSLEY. The work would be inspected by the resident engineer, Mr. Dodwell, of Halifax.

Mr. CROCKET. Is the resident engineer always relied on to inspect the work?

Mr. PUGSLEY. The foreman is relied on first of all to see that the work is well done, but the engineer is relied on to visit the work from time to time to see that it is done properly.

Mr. CROCKET. I see that in the majority of cases of construction of wharfs and breakwaters there is an inspector.

Mr. PUGSLEY. That is where the work is being done under contract.

Mr. CROCKET. Only where it is under contract?

Mr. PUGSLEY. Done under contract.

Mr. CROCKET. Is that the practice?

Mr. PUGSLEY. Unless you call the foreman an inspector.

Mr. CROCKET. What is the foreman's duty?

Mr. PUGSLEY. The foreman is in charge. It is his duty to see, where the work is done by the day, that it is done according to the plans and specifications. We do not have an inspector where work is being done by the day, in addition to the foreman, but where it is done under contract we have an inspector.

Mr. CROCKET. As a matter of fact, those are the chief duties of a foreman, to inspect the work. Does he engage the workmen?

Mr. PUGSLEY. He employs them.

Mr. CROCKET. And purchases the materials?

Mr. PUGSLEY. He purchases the materials and sees that the work is done.

Mr. CROCKET. What are the duties of the subforeman?

Mr. PUGSLEY. To assist the foreman. He is really more like the head labourer.

Mr. CROCKET. But the foreman does not take any part in the work, he supervises it.

Mr. PUGSLEY. Oh, yes, the foreman, if he is a good man, very often takes off his coat and works with the rest.

Mr. JAMESON. The minister was very kind in stating that wherever there was a qualified Liberal available he preferred to have him appointed to the supervision of work of this character. Does he think it is good policy that these men, good Liberals as they are, where they are so appointed, should discriminate between Liberals and Conservatives when it comes to engaging a labourer on this work? I mean that a man should be asked his political leanings, how he is going to vote, in order to determine whether or not he is entitled to labour on that government work.

Mr. PUGSLEY. The foremen are left free, so far as it has ever come under my observation, to employ such labouring men as in their judgment are best qualified to do the work. The government has never interfered in connection with the politics of a labouring man. The foreman is left free to exercise his good judgment, to get good workmen at fair wages, and to see that they do their work properly.

Mr. JAMESON. Would the minister approve of such a policy? It has been the practice for them to ask workmen how they were going to vote before they were engaged. When the answer came: I am not going to vote Liberal, the men were turned away. I do not suppose the minister is aware that that position exists to-day in Nova Scotia.

Mr. FIELDING. I think it would be highly improper that a man should be asked how he is going to vote, that he should be asked to make any promise as to his vote in connection with his employment. The first consideration should be to get good capable men and it generally happens that men are found in both political parties for work of that character. But suppose there is a limited number of men required, what harm would there be if a preference were given to the friends of the government? I do not think we should have any hypocrisy in this matter. I propose every time, all other things being equal, to give a preference to my friend in every relation of life. What is wrong with it?

Mr. SCHAFFNER. We have heard the hon. gentleman express that opinion many times in the House but when it comes to employing labourers in work of this kind I am surprised that the minister should make such a statement. It is not the government's money.

Mr. FIELDING. I did not say it was.

Mr. SCHAFFNER. It is the money of the people of this country and surely if a man happens to be a Conservative, he has been taxed for that money and why has he not a perfect right to participate in that work?

Mr. FIELDING. I do not see any distinction in respect to the labouring man and the man who might be a candidate for the highest office in the country. Our system of government is a party system. With all its faults it is the best that has been discovered. It is the British system and a preference is given by the government wherever the party system prevails to its own friends. There is nothing wrong in that. It would be perfect hypocrisy to pretend that the Conservative party did not practice that during the whole 18 years they were in power. My hon. friend from Colchester (Mr. Stanfield) says he is only a lamb. He is old enough to know that in his own county that rule was thoroughly enforced, he knows that a man could not get employment on the Intercolonial railway in the days of the Conservative administration unless he was identified with the Conservative party, and we did not kick about it either, we recognized it and we did not squeal. When these hon. gentlemen opposite talk about the poor Tory not getting any chance, I wish they had a little of that compassion for the poor Liberal in the olden days.

Mr. SCHAFFNER. I simply wished to remind the minister that this was not his money.

Mr. FIELDING. I did not say it was our money. It is the money of the people of Canada, but the government of Canada are the custodians of that money and they are answerable to the people of Canada for the way in which they expend it. If it is a crime to give a preference to a Liberal the government will have to be turned out for that crime.

Mr. JAMESON. The Minister of Finance has been very frank in his statement to the committee. His frankness deserves that I should be equally candid. He has stated that he considers it perfectly proper that a man should be asked his politics.

Mr. FIELDING. No, I did not say that. I said I would regard it as highly improper that when a man comes to work he should be asked anything about his politics. In every small community in Canada every man's politics is thoroughly well known, and I say that if a preference was given by the government of the day, be it Liberal or Conservative, to its own friends, always with the condition that they are capable, good men, I do not think there is anything to complain of. No one is hurt, the public interest does not suffer so long as the work is done properly. It can be as well done by a good Liberal as by a good Tory. What is the difference?

Mr. JAMESON. The minister stated that in the good old times the poor Liberals did not get any share.

Mr. TALBOT. They were not the good old times, say the old times.

Mr. JAMESON. Well, call it any kind of a time you like. Now, he says that he considers that in every district in Canada it is unnecessary to ask a man's politics because the politics of the people are generally pretty well known. I am going to say, with regard to the work which was done at Digby during the election of 1908, that men who went to the government pier to make application for work were asked: How are you going to vote?—and if they said that they were not going to vote Liberal, as many of them frankly did, they were told that they could not get any work, that they were bleu. Consequently they were not permitted to share in the labour which was available. The minister has said that in the good old days the poor Liberals did not get an opportunity to share in any of this labour or to receive any benefit from it. On that same public wharf at Digby, when money was expended under the Conservative regime, Liberals and Conservatives indiscriminately were given and had equal opportunities for employment. That is a matter of fact and it is a matter of record which the minister, I dare say, can verify if he chooses to look up the returns in the department, because, as he says, the poltical leanings of the people are so well known in these different districts. I am not finding any fault. The minister does not, I hope, think that I am one of those who squeal, as he has expressed it, because I do not squeal ; I merely ask that every person in the community, without regard to his political qualifications, be permitted to share in this work.

Mr. FIELDING. I do not say that I would approve of what the hon. gentleman says occurred at Digby. If it is a fact that men came and asked for work and were told that they could not get it unless they voted in a certain way I certainly would not approve of it, and, while I am bound to accept my hon. friend's statement, I would be very much surprised if it occurred.

Mr. JAMESON. I can assure my hon. friend that it did occur.

Mr. EDWARDS. The minister would dispose of that fact by the statement that those in charge of these works were not thoroughly versed in the politics of the people.

Mr. FIELDING. I would assume that as a rule they do know.

Mr. EDWARDS. They do know what their politics are?

Mr. FIELDING. As a rule they do know. I may say to my hon. friend that they are well informed people in Nova Scotia and as a rule in any of the small districts the average man knows the politics of his neighbour. If a preference were given to men who were friends of the government, always provided they were good men, nobody would be hurt.

Mr. CROSBY. I spoke about this the other evening when we were discussing this matter, and I told of men applying for work being required to bring a certificate from the local committee as to their politics. Nobody expects the Liberal government to give a position of importance to any but their friends—I think that is a fair proposition—but, all things being equal, we do expect that the workingmen shall not be subjected to the necessity of bringing a certificate from any committee when they are prepared to give an honest day's work for an honest day's pay. I can remember the Minister of Finance in the city of Halifax, time and time again, getting up and thanking, not the Liberals, but the Conservatives of the county of Halifax for electing him. I know he can remember that and I know he can remember that if the Conservative party had been as decided in seeing that the local government should be in line with the federal government my hon. friend would not have occupied the position that he did very long. He knows that he was elected time and time again by the votes of good Conservatives. I know many good Conservatives who supported him, but it was only on the ground that local and Dominion politics should not be mixed up together. My hon. friend was always willing that that should be the case, but a fellow has a pretty poor show now in both local and Dominion affairs if he happens to be a Conservative or a Tory. I am not complaining of it. We put the evidence on record in the city of Halifax. We had men brought up who had the signatures of the late members representing Halifax and we proved in court that these members gave orders to men to get work before the last election. We had the same thing prevailing in the Eastern Passage, a district in our county. I do not complain, but I say be fair, reasonable and honest. Give them all a chance; God knows you are spending enough money to enable you to do so. Do not turn the Conservatives down . Do not make them go and get certificates from the committees because the committee is pretty hard upon them. Sometimes it is well to be nice to your opponents, because, if you are, you may get them to assist you. We find that we have to be nice to the Liberals. I could not have been elected in Halifax last year if it had not been for the kind-

ness of the Liberals. I ask for nothing that is unfair or unjust. Appoint your foremen and those occupying the principal positions from your own ranks, but do not say to the poor honest, decent fellow who comes along that he shall not have a job until he goes to some Tom, Dick or Harry and brings a certificate to say that he is this, that or the other thing. I appeal in all fairness that when day's work is done we shall not look into a man's mouth or at his teeth to see if we can find how he is going to vote. Let us have a little fairness in that regard, and I know it is only necessary to bring the matter to the notice of the Minister of Public Works.

Mr. PUGSLEY. What do you suppose would happen if we appointed a good Tory foreman?

Mr. CROSBY. I presume he would do about the same as anybody else.

Mr. PUGSLEY. He would employ Tory labourers.

Mr. CROSBY. Perhaps he would. If he did I would say he would not be doing right. But I do not deny that the Minister of Public Works or any other minister has the right to employ anybody else than his own friends in positions of trust. Perhaps that is a fair proposition, but I am simply speaking of the labourers. This is public money and let the people have the money. There are always men who are particular to say that they are a great help to the party when sometimes they are not much of a help after all. All I plead for is that the ordinary workman shall be given a fair show and that he shall not be handicapped on account of his politics.

Mr. FIELDING. I should be surprised if it could be shown in the case of any work requiring any considerable number of labourers that the men were all of one political faith. It has generally happened in cases that have come under my observation that men of both parties have been employed. It generally happens that if you want a good many men you have to take men at certain seasons because you cannot get them at other seasons. My observation is that as a rule there are men of both political parties employed. My hon. friend seems to think that it is a great crime for a member of parliament or a prominent Liberal to give a recommendation to anybody to get employment. I cannot quite see it in that light. I have no doubt that every member in this House is in the habit of getting a recommendation from some one asking him to be good enough to do something to help somebody. What is wrong in that?

Mr. CROSBY. It is perfectly proper to give a man a recommendation, but what I complain of is that the rule was made that a man could not get work unless he was recommended by a Liberal.

Mr. FIELDING. The hon. gentleman was good enough to say that he has heard me many a time in Halifax express my gratitude to good Conservatives. That is true, but don't make any mistake about it, I never had anything to thank the Conservative party machine for. I never ran an election in Nova Scotia that I did not have to fight the whole Conservative party machine for what is was worth. I never owed them anything, but I do owe much to high-minded independent Conservatives who were good enough to vote for me and I have always been ready to express my indebtedness to them. I never ran an election for the local legislature that I was not opposed by every power the federal government could bring to bear against me.

Mr. McCOIG. The conditions must be very different in Nova Scotia from what they are in Ontario if opponents of the Nova Scotia government are employed on public works. In my riding of West Kent, where the federal government has very kindly given an appropriation for public works, we have Mr. Fluke, a Liberal contractor, doing the work, and at the last elections he had eight or ten men in his employment who were nearly all Conservatives. We also had another contract where a Conservative was the contractor and he had many Conservatives working for him drawing the money which was appropriated by this government. If the Conservatives have any grievance in Nova Scotia they certainly have not in the other provinces.

Mr. BLAIN. Was that contract let after public competition, or is the work being done by day work?

Mr. McCOIG. The work was let after public competition and Mr. Fluke was the contractor and the men working on the job were nearly all Conservatives. I can assure you that as far as my riding is concerned the Conservatives are not discriminated against. They have the same chance of getting work as the Liberals have, and I only wish the Conservative government in Toronto would be as generous to the Liberals as the Liberal government here is to the Conservatives.

Mr. BLAIN. I am glad to hear the hon. gentleman compliment the Conservative government of Toronto on the policy they adopt of letting public works by open competition.

Mr. McCOIG. I did not say anything about that. I merely expressed the hope that the Ontario government would be as willing to give employment to Liberals as the Liberal government here is to give employment to Conservatives on public works.

Mr. BLAIN. The policy of the Ontario government is to put everything possible up to public competition but the hon. gentleman (Mr. McCoig) was a member of the Ontario legislature and he supported a government which did not carry out that kind of a policy.

Mr. McCOIG. No.

Mr. BLAIN. Take for instance the policy of the Ross government with regard to the school books.

Mr. TALBOT. Is the question of the Ontario school books before the Chair?

Mr. BLAIN. No, but my hon. friend (Mr. McCoig) introduced the subject and I tell him he was a supporter of a government in Ontario which instituted a school book monopoly that was put out of business when the Conservative party came into office. The Conservatives put the publication of the school books up to public competition and awarded the contract to Timothy Eaton & Company, the heads of which firm are prominent Liberals.

Mr. STRATTON. I desire to correct the hon. gentleman. I was a member of the Ross government in the province of Ontario and there is no doubt at all that Mr. Ross, who was Minister of Education at the time, invited competition for the publication of the school books and awarded the contract after public competition on the merits of the tenders.

Mr. WRIGHT. The Minister of Finance advocates the employment on public works of the party friends of the government, and he says that is the British system. I say that in Britain the government never distinguishes between the two parties in such matters and the Minister of Finance cannot convince the House that such is the case. It is not the British system; it is un-British and the present government here has carried it on to an extent never before equalled by any government either federal or provincial. I deny that the present government of Ontario pays any attention whatever to the party leanings of its officials. There never was a government in power in Canada, less partisan in this respect than the government of Mr. Whitney. In my riding there are men in the employment of the provincial government to-day who during my election of 1904 were in the employ of the Ross government and who chased me all over the riding. These men are still in the employ of the Ontario government and every time I go on the streets I have to meet these officials with a smile on their faces, still they are holding office. It is an unjust charge to make against the Whitney government that in any way it discriminates in favour of its party friends. The system in Ontario is very different from the system followed by the Nova Scotia government if we are to take as a standard of its doings the dictum laid down by the Minister of Finance.

Saw pit—block and span wharf, $1,500.

Mr. BLAIN. What county is that in?

Mr. PUGSLEY. Lunenburg.

Mr. BLAIN. There is to be a by-election there very shortly, and I hope the Finance Minister will not send down the policy which he has announced to-night. The hon. gentleman is getting bolder every year in announcing that policy. A few years ago he was very mild, but later he announced that it was the policy of the government to give work to their own political supporters. Now he announces it with a flourish of trumpets, and I thought he would probably go to Lunenburg and announce it in the by-election. May I ask when this money will be expended?

Mr. PUGSLEY. Some time next summer.

Mr. BLAIN. Will there be competition for this work?

Mr. PUGSLEY. No, it will be done by day work. It is to repair damage done by ice, and cannot very well be done by contract.

Shelburne harbour — deep water wharf, $10,000.

Mr. PUGSLEY. This is new work. It is the construction of a much-needed deep-water wharf.

Mr. EDWARDS. When was the lapsed vote of $8,000 taken?

Mr. PUGSLEY. Two years ago.

Mr. EDWARDS. Why has the vote been increased by $2,000?

Mr. PUGSLEY. The reason is that we propose calling for tenders for the work, the total estimated cost of which is $30,000, and we expect to expend $10,000 during the coming year.

Mr. EDWARDS. Will this be a revenue-producing wharf?

Mr. PUGSLEY. It will be when it is handed over to the Department of Marine and Fisheries.

Mr. CROCKET. Has the government any other wharf accommodation at Shelburne?

Mr. PUGSLEY. Not at this point.

Mr. CROCKET. Who makes the estimate of $30,000?

Mr. PUGSLEY. The resident engineer, and his figures are verified by the chief engineer.

Mr. CROCKET. When did he make his report?

Mr. PUGSLEY. About two years ago, when this item was first voted.

South Ingonish—wharf, $5,000.

Mr. PUGSLEY. This is to make provision towards extending the wharf by adding a new block 24 feet square to the present structure. The new block will be in deep water. It is going to cost altogether $6,200, of which we are asking $5,000 now, and a balance of $1,200 will be required to finish it.

Mr. CROCKET. Is the present wharf the property of the government?

Mr. PUGSLEY. Yes.

Mr. CROCKET. When was it built?

Mr. PUGSLEY. In 1903 or 1904.

Mr. CROCKET. What was the cost of the original wharf?

Mr. PUGSLEY. I have not the statement of the cost of the present wharf, but if the hon. gentleman desires it, I will give it to him at a later stage.

Mr. CROCKET. Will that be done by contract?

Mr. PUGSLEY. That is my present view.

Spanish Ship bay (Liscomb)—wharf on west side of bay, $1,800.

Mr. PUGSLEY. This is a revote. The total estimated cost is $1,800.

South Cove—wharf, $6,300.

Mr. PUGSLEY. This is to give a water frontage of forty feet. This is the total estimated cost of the work to be done by contract.

Mr. BLAIN. What request was there for the expenditure?

Mr. PUGSLEY. I have no record of any, but it was very strongly recommended by the member for the county (Mr. McKenzie). It is in North Victoria, Cape Breton.

Mr. HUGHES. What were the reasons given?

Mr. PUGSLEY. That large shipments would be made from this place if this wharf were constructed. A daily steamer passes within a short distance, but does not call there as there is no landing place.

Mr. HUGHES. What is the population of the town?

Mr. PUGSLEY. There is no town, but in the locality there are a hundred farmers who would ship their produce by this wharf.

Mr. BLAIN. Has there never been a wharf there?

Mr. PUGSLEY. No, not within seven or eight miles.

Mr. BLAIN. How is it the hon. gentleman has neglected this important part of the county so long?

Mr. PUGSLEY. There are so many important works to be attended to, that we cannot do them all at once.

Mr. BLAIN. Last session a great many votes were allowed to stand over on the promise of the minister to take them up before any new expenditures were incurred. Have all these been attended to?

Mr. PUGSLEY. I can safely say they all have except in some cases where, on further consideration, I have not been convinced of their urgent necessity.

Mr. BLAIN. Will there be any revenue from this wharf?

Mr. PUGSLEY. When handed over to the Marine Department, I think there should be some revenue, but it will be a great accommodation to a considerable number of people.

Swim's Point and West Head—removal of rocks from approaches to wharfs, &c., $1,000.

Mr. PUGSLEY. There is a very good wharf there, but there are rocks quite near which are a menace to vessels, and it is necessary to have them removed.

Sydney Mines—wharf at Barrington Cove, $15,000.

Mr. PUGSLEY. This is to make provision towards reconstructing the wharf so as to enable it to accommodate at all tides vessels drawing ten to twelve feet of water. It is proposed to build out to a distance of 730 feet from the end of the public road. It is going to be quite expensive, but the work is very important. There is a large shipping business done there. This is going to cost about $35,000 in all.

Mr. CAMPBELL. In whose riding is it?

Mr. PUGSLEY. Cape Breton, North Victoria.

Mr. CAMPBELL. Has the contract been let?

Mr. PUGSLEY. No, but the work will be let by contract.

Mr. CROCKET. Is there any other government wharf there?

Mr. PUGSLEY. No.

Mr. EDWARDS. What population will this accommodate?

Mr. PUGSLEY. 8,000.

Tenecape breakwater—addition, $7,000.

Mr. PUGSLEY. This is to build an extension eighty feet long and forty feet wide. This will complete.

'The Wharfs,' Lunenburg county breakwater, $2,000

Mr. PUGSLEY. This is to construct a breakwater. It is a fishing station; $2,000 will do the work. This is a new work and will afford shelter for the fishing boats.

Mr. CROCKET. Will this be done by day labour.

Mr. PUGSLEY. We have not decided. I think it would be better done that way.

Three-Fathom harbour—renewal and repairs to breakwater, $1,000.

Mr. PUGSLEY. This is in the county of Halifax. It is to repair damage done by storms.

Toney river—extension of channel protection piers at mouth of piers, $2,000.

Mr. PUGSLEY. This is to afford an extension fifty feet long and ten feet wide and will complete the work.

Tusket Wedge wharf—restoration and extension of, $6,000.

Mr. PUGSLEY. This is a government wharf in the county of Yarmouth. This will complete.

Mr. HUGHES. Is any provision made for placing a light on the rock where the 'Hestia' was wrecked?

Mr. PUGSLEY. That matter has been attended to, I believe.

Upper Prospect breakwater, $3,000.

Mr. PUGSLEY. This is to make provision for the construction of a breakwater 200 feet long by 30 feet wide and with a height of 19 feet at the outer end, as a shelter for the fishermen of the locality. It is in the county of Halifax. This sum will complete the work.

Upper Washabuck (McDougal's) — wharf, $1,800.

Mr. PUGSLEY. This is to construct a pile wharf, 40 by 50 feet, with an approach 110 feet. The timber of the wharf will be creosoted to resist the ravages of the teredo. The amount asked for will complete the work.

West Advocate — breakwater — revote of $4,800 lapsed, $10,000.

Mr. PUGSLEY. This is in the county of Cumberland. The work is to provide proper shipping accommodation and for the protection of vessels entering the port. A large number of vesseds go to West Advocate.

Mr. CROCKET. Is it a new work?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Will this vote complete it?

Mr. PUGSLEY. No, it will require $20,000.

Mr. CROCKET. Will it be done by contract?

Mr. PUGSLEY. Yes.

West Baccaro—extension of breakwater, $2,000.

Mr. PUGSLEY. This is in the county of Halifax. It is a necessary work, and all that is asked is an extension of existing breakwater.

West Dublin bay—dredging approach to wharf, $9,000.

Mr. PUGSLEY. This is to remove some 30,000 cubic yards of mud to make a channel from Curry's wharf to the main channel, 100 feet in length, allowing a depth of 9 feet. The estimated cost is $9,000. This is in Lunenburg county.

Mr. EDWARDS. What population has this place?

Mr. PUGSLEY. About 200. It is a farming and fishing population.

Mr. CROCKET. Is this to be done by government dredge or will it be given out by contract?

Mr. PUGSLEY. We have not decided that yet.

Mr. EDWARDS. Do many vessels call there?

Mr. PUGSLEY. Considerable shipping is done and vessels are not able to get to the wharf conveniently owing to the channel being filled in.

Mr. EDWARDS. Are there any regular passenger boats to this place?

Mr. PUGSLEY. They are mostly sailing vessels.

Mr. EDWARDS. Fishing vessels?

Mr. PUGSLEY. And trading vessels, too.

Mr. CROCKET. It seems to me that when the minister asks for money for dredging he ought to be able to state whether the work is to be done by government dredges or under contract. A great deal of dredging goes on all over the country, contracts are let and immense sums are wasted. I am satisfied that the sums paid for dredging are excessive to the extent of fifty per cent in many cases. In the province of New Brunswick there are many dredging contracts. One spoken of last year was the dredging of Maquapit lake in the constituency of Queen's and Sunbury. A channel was to be dredged from a depth of seven feet, and it cost the people of this country no less than $48,000.

Mr. PUGSLEY. How many cubic yards were dredged?

Mr. CROCKET. I do not know.

Mr. PUGSLEY. Before the hon. member can say whether there was any money wasted or not, he ought to know the quantity of work done.

Mr. CROCKET. I remember that it was at the rate of 50 cents a yard. And I have heard it stated by men competent to judge that it was not worth 10 cents a yard.

Mr. PUGSLEY. It is a great wonder they did not tender for the work.

Mr. CROCKET. They did not get a chance.

Mr. PUGSLEY. They did; tenders were called for by public advertisement and every one had a chance to tender.

Mr. CROCKET. I know the minister stated that last year, but it developed that the work was actually in progress by the Maritime Dredging Company when the tenders were called for.

Mr. PUGSLEY. That does not make any difference.

Mr. CROCKET. The minister takes steps to give these things good appearance. But the result was that the Maritime Dredging Company and Mr. John E. Moore, the minister's friend, received three or four times the value of the work. And the Auditor General's Report, which I have consulted, shows that the inspection charges require investigation. About $600 or $700 was spent for inspection on this work. There were three or four inspectors, one at $5 a day, one at $3, and another at $2.50, and my recollection is that they had seventy or eighty days more than the time within which the work was in progress. These inspectors are appointed by the ministers, and I have not the slightest doubt appointed upon the recommendation of the contractor.

Mr. PUGSLEY. Unless the hon. member has information to that effect, he ought not to make that statement. I tell him that there is no foundation whatever for the statement. No inspector in New Brunswick or elsewhere is put on at the recommendation of the contractor. The hon. member ought to know that he should have the most positive evidence before making a statement of that kind.

Mr. CROCKET. Notwithstanding the minister's statement, I have no hesitation in expressing my opinion that, in the dredging that goes on in New Brunswick, the inspectors are in league with the contractors. What does the hon. minister think of the dredging at Dalhousie and the inspection certificates put through in that case? It developed in court that the dredging inspection was done and the records kept by an employee of the firm of A. & R. Loggie, who sued the inspector, issuing a summons against him in the magistrate's court. And the matter was fixed up. Does the minister mean to say that Mr. Alleyne, the dredging inspector, was thoroughly independent of the firm of A. & R. Loggie, or that the inspection was done without reference to the interests of the firm? It is very well for the minister to make such statements as that which he has made, but it has been and will be pretty difficult to make the people in communities where the dredging is done believe that fraud is not being committed on the public treasury in connection with these dredging contracts in different parts of the country. It is only necessary to examine the certificates and note the handwriting of some of these inspectors. They are men who write with the greatest difficulty and could not possibly figure a cube. Such things are reported to me from different parts of the country. I have no hesitation in expressing my belief that these dredging grafts are worked in many cases by dishonest and fraudulent inspection. So, I think that when the minister comes down with an estimate of this kind for dredging, the House is entitled to have information as to just how that money is to be expended—whether it is to be expended by contract given out in this way or upon dredges owned by the government. It seems to me that there is a great deal of dredging done and let by contract to private contractors that ought to be done by the government dredges. The government own a very extensive dredging plant and I thought it was the intention that as much dredging as possible should be done by the dredges owned by the government. There is no doubt that men have gone into this dredging business who had no experience and have gone into it to make money out of it relying on their political pull with the department and with the government. Since my hon. friend became Minister of Public Works the firm of A. & R. Loggie has embarked upon that business with very profitable results to them. They have not been in the business very long but they have contracts to the extent of thousands of dollars. That firm is composed of gentlemen who have been very close to the Minister of Public Works.

Mr. PUGSLEY. Close in what way?

Mr. CROCKET. Politically and in every other way.

Mr. PUGSLEY. In what other way?

Mr. CROCKET. In every other way——

Mr. PUGSLEY. What does the hon. gentleman mean now, 'in every other way.'

Mr. CROCKET. I say they were close friends and closely associated with the Minister of Public Works.

Mr. PUGSLEY. In what way?

Mr. CROCKET. The minister regards A. and R. Loggie as among his closest friends in the province of New Brunswick. Then there is the McAvity and the John E. Moore interest, who have also formed a dredging company. They are also very close to the Minister of Public Works, and I think when we see the thousands and thousands of dollars going to these firms, we should scrutinize these dredging contracts closely. I have no desire to make any reflections on any of these gentlemen, I am not here for that purpose. Any reflections I make are upon the department for allowing these things to take place. I have no hesitation in criticising them as wasteful expenditures. Dredging could be done in some cases for one-quarter or one-fifth of what has been paid by this government.

Mr. PUGSLEY. The hon. gentleman said that there was fraudulent dealing in connection with the dredging. There can be nothing fraudulent unless the contractor is guilty of fraud. How does the hon. gentleman reconcile that statement with his other statement that he makes no reflection on the contractors? If there is fraud, the contractors must be a party to it, and I cannot imagine a more serious charge for a member to make than to allege that the contractors have conspired together with the inspectors to send in fraudulent returns and so defraud the government. Let me say to my hon. friend that if he has information of that character, if he has information which would justify him as a public man in making that statement behind the backs of these contractors and sending it broadcast throughout this country, giving to it all the authority and weight that should be attached to the statement of a respectable and honourable member of this parliament, then he is negligent in his duty as a public man if he fails to give the necessary information to the officers of my department or to the officers of the Department of Justice in the province from which he comes, so that they may take the necessary proceedings in order to prevent any further defrauding of the public revenue, and to punish those whom he believes guilty of fraud. That is the duty the hon. member owes to himself, to parliament and the people whom he represents. Let me say to my hon. friend that he should be careful and take warning by the fate that has befallen some gentlemen who have preceded him in this parliament. I remember that an hon. member representing one of the Simcoes was in the habit of rising in his place in this parliament and making similar accusations with regard to the treasury being defrauded by dredging contracts. He was never able to prove the assertions he made and when he went back to his people where a considerable amount of this dredging was being carried on and where he had alleged fraudulent transactions were going on from week to week and from month to month, the people of the constituency let that hon. gentleman know what they thought of the exaggerated accusations he had so often made in this House. Let me say to my hon. friend that as one occupying a seat in a parliament of gentlemen he ought not to make these accusations unless he is prepared to back them up and give the proof of the statements he makes.

In regard to A. and R. Loggie, I do not know whether they went into the dredging business after I became minister or not. I think they were in the business before I became minister, in fact I am satisfied they were, and my deputy so informs me. Let me say further that they are not intimate personal friends of mine, I do not know whether I can say they are active political friends. I think that they but seldom take an active part in politics. They are men who stand in the very front rank of merchants and manufacturers in the Dominion of Canada. They are men who by patience and energy and devotion to their business have built up a very large business which extends over various parts of the provinces of New Brunswick, Nova Scotia and Prince Edward Island, and I think it extends up into the province of Quebec. Until to-night I have never heard any insinuations thrown out against their integrity. The hon. gentleman has chosen to insinuate that they have gone into the dredging business because they are friends of the Minister of Public Works, and he throws out the insinuation that they hope in some way by reason of that fact to secure benefits at the expense of the treasury of this country. Let me say that, so far as I know, since I became minister the Messrs. Loggie have never secured a single contract except by public competition when they were the lowest tenderers, and I know of no misconduct on the part of inspectors, I know of no misconduct or wrong doing on the part of Messrs. Loggie, and I have yet to learn that it is any crime for any man in this country to tender for a public work. I have yet to learn that it is any crime on the part of the minister to award a contract for any public work to the man who happens to be the lowest tenderer, even although he may belong to the same political party as the minister.

With regard to Messrs. Moore and McAvity it is true they are engaged in the dredging business, but they are both men of large activities, they are men who en-

gage in many lines of business, they are active, energetic, enterprising men. One of them Mr. Moore, is the president of the Maritime Dredging Company. What connection Mr. McAvity has with the company I do not know, but whether he has any connection or not makes no difference. Let me say that the contract for dredging both upon the St. John river and Maquapit lake and the harbour of St. John were let to the Maritime Dredging Company after public competition and after everybody had had full and fair opportunity of tendering for the work.

Mr. CROCKET. And after they had been put to work on the job.

Mr. PUGSLEY. I do not remember whether they were on the work, but if so it was distinctly under this agreement that the work should be let by public tender and that for any work which they did in the meantime, pending the awarding of the contracts, the Maritime Dredging Company were to receive the price at which the work was tendered for by the lowest tenderer. But no assurance was given them and they had no expectation that they would receive the contract unless they happened to be the lowest tenderers. Tenders were advertised for in the leading daily newspapers of St. John and everybody had an opportunity of tendering for this work. Take the case that my hon. friend spoke of. The hon. gentleman says that it is well known that the money is being wasted and that the contractors are receiving amounts larger than they are entitled to. Upon what does my hon. friend base that statement?

Mr. CROCKET. I did not say that in reference to the St. John Harbour contract.

Mr. PUGSLEY. Then, my hon. friend, I understand, limits his charge to the Maquapit lake work.

Mr. CROCKET. That and the payment of 90 cents per cubic yard to the Maritime Dredging Company for the Gasperaux river work.

Mr. PUGSLEY. I will deal first with the Maquapit lake work. This is out of order and I would not have referred to it but for the extraordinary statement of the hon. gentleman. As to the Maquapit lake work, my hon. friend ought to know that dredging in different places does not always cost the same amount of money. A good deal depends upon the extent of the work that is to be done. Then, the question of the cost of a dredge enters into the calculation of the contractor. A good deal depends upon the nature of the soil which has to be excavated. But it so happens that all these considerations were taken into account, I presume, by the contractors who tendered for this work at 50 cents per cubic yard. My chief engineer, who has had a large experience in these matters and who had the report of the resident engineer before him, certified that the price was fair and reasonable and the contract was awarded to the Maritime Dredging Company.

Now, let me speak of the work which my hon. friend referred to at the Gasperaux river. Tenders were called for the work. I am not quite sure whether there was any tender put in except that of the Maritime Dredging Company. The work was very widely advertised but there were very few people, if any, outside that company who were willing to undertake it. The work is at a very exposed place, at Port Elgin—whether it is upon the straits of Northumberland or not I do not remember at this moment—and the cost of towing the dredge there was very large. There was a great deal of danger connected with it. While the work of dredging was going on one of the scows was wrecked involving a very large loss to the contractors. Although the Maritime Dredging Company were offered the work for the next season at the same price of 90 cents per cubic yard, they refused to again enter into a contract and declined to go back there last spring. In consequence of that we were obliged to wait for a number of months before we could make any arrangements for doing the work, and, being unable to get them to send their dredge back, we were obliged, late in the fall, to undertake the continuance of that work by means of the government dredge which we brought from Nova Scotia.

Now then, in face of these facts, how can the hon. gentleman expect this committee to believe there was anything wrong in the awarding of that contract to the Maritime Dredging Company? The only other contract to which reference has been made is that in the city of St. John. What took place there? You have the right to look at all the work which this company is doing. Before I became Minister of Public Works my predecessor, having invited tenders by public competition, received tenders for this work and the lowest tender received was 90 cents per cubic yard. When I became minister, recognizing the necessity of continuing that work, I asked myself how it would be possible to get the work done at a lower price? In past years the practice had been to let contracts from year to year. I determined that I would let a contract extending over a number of years because I thought that in that case there would be an encouragement to the contractors to purchase a dredge and that they would be willing, as they would be sure of the work extending over a number of years, to tender at a lower price than they would be if they only had the contract for one year. I called for tenders and the result was that the Maritime Dredging Company tendered for the work at 39 cents per cubic

yard, a little more than one-third of what had been previously paid for dredging in St. John harbour. The hon. gentleman referred to the dredging work that Mr. Mayes did at one time at 55 cents per cubic yard, and afterwards at 90 cents per cubic yard. We are getting the dredging done, and a very important work it is, in the harbour of St. John, by the Maritime Dredging Company at either 39 or 39½ cents per cubic yard.

Just a word in regard to the inspectors. I say to my hon. friend that in no single case has an inspector been appointed who was supposed to have any relations of any kind or description with the contractors. So far, I know of no inspector having been appointed upon the recommendation of the contractors, and we have always been careful to see that they have no connection of any kind or description with the contractors so that they would not be likely to be in the slightest degree influenced in favour of the contractors. We have endeavoured to get honest men, and I believe we have honest men. I believe we have honest men in the employ of the government to-day as dredge inspectors, and until I have some better evidence than the mere statement of my hon. friend that these inspectors are dishonest, I shall continue to believe that they are honest. I shall continue to believe they are honest until I have evidence to the contrary.

I would say to my hon. friend that I think the fair thing for him to do would be to investigate these accounts thoroughly. I have no objection to the most thorough investigation before the Public Accounts Committee, but I do say to him that in all fairness to those who are not here to defend themselves he ought not to be throwing out these insinuations unless he has the facts to support such statements, and if he has the facts to support them, then it is his duty to submit these facts to the proper officers of the Crown whose duty it is to take criminal proceedings and give them an opportunity of taking such a course as they may deem to be best in the public interest. The hon. gentleman has now the opportunity of going to his own political friends. It so happens that the Premier of New Brunswick, who is also the Attorney General of that province, is a political friend of the hon. member who represents the county of York and who has made these insinuations. I have no doubt that if he goes, in the discharge of his duty, and submits the facts to the Attorney General he will feel it to be his duty to take the necessary steps in order to punish those who have defrauded the treasury of this country, if there has been any defrauding of the treasury, although I do not hesitate to tell the committee that I do not believe it, and I shall refuse to believe it until I have some positive evidence that there has been such fraud as my hon. friend insinuates.

Mr. CROCKET. I think I have a full sense of my responsibilities and duties as a member of this House, and that I do not require any instructions from the Minister of Public Works in that behalf. I stated that I believed in many cases in connection with dredging contracts in New Brunswick the public treasury had been defrauded of large sums of money. I stated that and I reiterate that now as my firm belief. I say this after having investigated, to some extent, the accounts in connection with the dredging operations and after having had communicated to me information by letter and by personal interview by several very reliable men in different parts of New Brunswick. I referred to one case, the contract of A. and R. Loggie for dredging at Dalhousie. I state what is my absolute and firm belief founded on information communicated to me by persons of unquestioned reliability. I have a letter from Dalhousie stating that Mr. Alleyne who was appointed—and I have since discovered that he was appointed upon the order of the Minister of Public Works to do the inspecting at that place—has been paid day after day during the whole season, and that for many days he was not there at all. There is a memorandum upon the file signed by the Minister of Public Works asking that this same Mr. Alleyne be appointed. He was appointed, but the work was done by another person, and my information is that he was an employee of the firm of A. and R. Loggie and that a summons was issued in the magistrate's court.

Mr. PUGSLEY. Issued by whom?

Mr. CROCKET. Issued by the man who did the inspecting.

Mr. PUGSLEY. Against whom?

Mr. CROCKET. Against the inspector who was receiving the money from the government. That is my information, and when the summons was issued and served it was fixed up through the intervention of the contractor. As to the dredging of Maquapit lake this was the easiest sort of dredging, dredging a channel where there was three feet of water to the depth of seven feet. The minister has said that there has been no case in which a contract has been let to the firm of A. & R. Loggie, and I think he added, or to any other firm in New Brunswick, without a tender. What has the Minister of Public Works to say as to this? I hold in my hand a copy of a telegram which reads:

Dalhousie, Oct. 14, 1908.

Eugene D. Lafleur, Ottawa.

Kindly authorize resident engineer Stead to put dredge 'Hayward' at work at Bathurst

at same price as Caraquet contract, to be certified fair and reasonable by Mr. Stead, work not to exceed $5,000.

Signed, WM. PUGSLEY.

Mr. PUGSLEY. What is the date?

Mr. CROCKET. The 14th October at Dalhousie, when the minister was down there in the election campaign and after no doubt he had seen his friend, Mr. Loggie.

Mr. PUGSLEY. Was that to be at the same rate as the other?

Mr. CROCKET. Prices to be certified fair and reasonable by Mr. Stead. Well, I have had occasion to look into some of Mr. Stead's certificates and to judge of the value of his certificates as to what is fair and reasonable, and perhaps when we come to some other matters that have occurred in the province of New Brunswick this House will have more light as to the value to be attached to any certificate furnished by Mr. Stead as to fairness and reasonableness. But there is the telegram signed by the minister himself telegraphing from Dalhousie, where Mr. Loggie was, to his engineer and instructing him to give Loggie's dredge this work at prices to be fixed by the minister's engineer, Mr. Stead. I think, Mr. Chairman, that the people of the province of New Brunswick, where this work is being done, will require something more than a display of affected indignation on the part of the Minister of Public Works. He invariably shields himself—that has been his habit for many years—when a statement is made which reflects upon himself or his department by trying to treat it as something said against somebody else, and then he proceeds to laud that somebody else to the skies and to speak of him as some one of the highest reputation for honour and integrity and righteousness in which he is excelled by no man in the Dominion of Canada. He has said that of his friend, Mr. McAvity, he has said that of his friend, Mr. Loggie. Well, these are private contractors and I am not here to criticise them, but to criticise the Department of Public Works which is the trustee and servant of the people for not properly guarding the people's interests.

Mr. PUGSLEY. Does the hon. gentlemen say that a contractor has conspired with an inspector to defraud the department and yet makes no reflection on him?

Mr. CROCKET. What I said was that I was not here for the purpose of making reflections on these people who were dealing with the department, but my criticism is directed against the department.

Mr. PUGSLEY. Why do you do it then?

Mr. CROCKET. Because I am here as a representative of the people to criticise the conduct of the department. I have no hestitation in saying that my firm belief is that there has been fraud in this connection and that the country is paying as much as fifty per cent and one hundred per cent in same cases for dredging above fair and honest prices.

Mr. PUGSLEY. Does the hon. gentleman suggest to this committee that there can be fraud unless the inspector and the contractor are parties to that fraud?

Mr. CROCKET. I am not saying whether that is so or not, but I do say and the great majority of the people in the communities who know what is going on, believe it, that these certificates upon which payment is being made to these very contractors are certificates which cannot be relied upon. I have referred to the certificate of Mr. Alleyne, appointed by the minister himself in connection with the Loggie contract; a certificate which has been brought down, and which would convince anybody that the man was not competent to estimate the quantity of dredging material worked by that firm or any other firm. In addition to that there is the information which has been communicated to me by a prominent resident of that community in reference to Mr. Alleyne's neglect of his duty, and the fact that it was known that he was not there day after day and for weeks at a time, but he signed these certificates upon statements prepared by another man who was in close relation with the Loggie firm. Now, Mr. Chairman, in view of these facts the House will be in a better position to properly judge the weight of the statement which the minister made, and as I say, it will require more than these exhibitions of affected indignation to which the minister always resorts when he claims that there are foul insinuations made against him or his friends; it will require more than his affected indignation to change the opinion of the residents of these communities where these things have gone on. So far as I am concerned it is not an insinuation. I state, as a member of this House, my firm belief, after examining the documents which have been brought down in connection with these contracts, and after having had communicated to me by reliable people these facts of which I have made mention.

Mr. CROSBY. The minister said he did not know whether this work would be done by contract or by the government dredge. Is there not a government dredge in that vicinity.

Mr. PUGSLEY. No.

Mr. CROSBY. Is there not one at Lunenburg?

Mr. PUGSLEY. Not a government dredge; it belonged to the W. J. Poupore Company.

Mr. CROSBY. I understood there was a government dredge at Bridgewater not very long ago.

Mr. PUGSLEY. That was a Poupore dredge, but of course we have dredges at several places.

Yarmouth harbour improvements, $60,000.

Mr. PUGSLEY. This is to continue the very necessary work of improving the harbour at Yarmouth.

Mr. DANIEL. How is the dredging being done there?

Mr. PUGSLEY. It is done under contract. Tenders were called for, several were received, and the lowest tender was that of the Dominion Dredging Company, which is doing the work. The prices are 50 cents a yard for taking out to sea, and 30 cents to cast over.

Mr. DANIEL. How far do they have to take the material?

Mr. PUGSLEY. I have not that information.

Mr. LAW. About five miles.

Mr. BLAIN. What will be the total cost of the work?

Mr. PUGSLEY. That will depend on the extent of the improvement we shall make. We are widening and deepening the channel so as to accommodate the large steamers which now come to Yarmouth, especially those running to Boston. If we were to continue the work to the full extent that would be useful the cost would run up to a large amount; but we do not think it necessary to do that. We can keep widening the channel gradually. At present we have in contemplation only the work for which we are now asking for an appropriation.

Mr. JAMESON. Will the work at Westport be done by contract?

Mr. PUGSLEY. Yes. The hon. member for Cumberland asked what the $367.77 was expended for at Diligent River harbour. It was for removing what is known as the Gore rock, which was a menace to navigation, about 225 tons of stone having been removed. Then, the hon. member for Digby asked me with regard to the wharf at Centreville. I may say that I have had a report made upon that wharf, and while it is a fairly useful work, I find that it will cost from $75,000 to $85,000. Therefore I am afraid that I cannot hold out much expectation that that work will be done in the near future.

Mr. JAMESON. I do not want the minister to confuse the repairs necessary to sustain the present structure with the very elaborate harbour improvement referred to in the report. The wharf at present there is liable to be carried away during any tempestuous weather and a comparatively small sum would retain that, and that is what I referred to.

Mr. PUGSLEY. The difficulty, in the opinion of the resident engineer is that it would be a waste of money to repair the present wharf, while to build a new one, which would be the only way to make it effective, would cost the sum I have stated.

Mr. JAMESON. All I can say is that it would be a most disastrous thing to allow that wharf to go down for the lack of a comparatively small sum of money. I know the wharf quite as well as the resident engineer. The entire business carried on there is dependent on that structure, and if it is allowed to go down, the business done there will be brought to an immediate termination, and many thousands of dollars invested in valuable plants will be entirely lost and hundreds of people thrown out of employment. So I hope the minister will either ask the resident engineer for a special report on that wharf, or send a special engineer to make a special report.

Mr. PUGSLEY. I cannot promise to send a special engineer, but I will again look carefully into the report. My hon. friend also mentioned Battery Point, Digby, Nova Scotia. I find that a part of it belongs to the Department of Militia and Defence and the other part to the Dominion Atlantic Railway Company. Therefore, there is no obligation on my department to make any improvements.

Some resolutions reported.

On motion of Mr. Fielding, House adjourned at 11.35 p.m.

HOUSE OF COMMONS.

THURSDAY, December 9, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 61) respecting the Canadian Northern Railway Company.—Mr. Cash.

Bill (No. 62) respecting the Esquimalt and Nanaimo Railway Company.—Mr. Smith (Nanaimo).

Bill (No. 63) respecting the Manitoba and North-western Railway Company of Canada. —Mr Cash.

Bill (No. 64) respecting the Ottawa Valley Railway Company.—Mr. Ethier.

WINDING-UP ACT AMENDMENT.

Mr. A. MEIGHEN (Portage la Prairie) moved for leave to introduce Bill (No. 65) to amend the Winding-Up Act, R. S., 1906, c. 144. He said: I may say that I went to see the Minister of Justice a couple of times for the purpose of getting remedied an oversight in this Act. As I was not able to see him, I introduce this Bill for that purpose. The amendment is rendered necessary by the creation of the Manitoba Court of Appeal. When the Manitoba Court of Appeal was established, it was necessary to amend the Winding-up Act and others so as to provide for apealing to this Court of Appeal from the order of a single judge, instead of to what was called the Court en Banc. That provision was made by 7-8 Edward VII. chapter 74; but there was an oversight, I think, in paragraph (c) of section 106, not making provision for an appeal from the Court of Appeal in Manitoba to the Supreme Court of Canada. This Bill is to remedy that oversight.

Mr. MURPHY. Does the Bill apply only to the Court of Appeal of Manitoba?

Mr. MEIGHEN. That is all.

Motion agreed to, and Bill read the first time.

QUESTIONS.

KINGSTON BATTERY SOLDIERS.

Mr. EDWARDS:

1. At whose request and by what authority have the battery soldiers at Kingston been employed in producing films for a five cent moving picture theatre?

2. Has any money been paid for such services? If so, how much and to whom?

Sir FREDERICK BORDEN:

1. At the request of the Kalem Company, manufacturers of moving picture films, authority was granted by the O. C. Eastern Ontario Command, who saw no objection to the men taking part in these pictures.

2. All the men taking part did so voluntarily, and were paid 75 cents each time they turned out, which was on half holidays and during their spare time.

The money was paid to the men direct by the Kalem Company each afternoon they turned out. Some $65 to $75 was paid to the men but the exact amounts are not known.

EMPLOYMENT OF J. NAPOLEON AUCTIL.

Mr. PAQUET:

1. Has the government in its employment J. Napoléon Auctil, of Rivière du Loup station?

2. If so, from what time has he been employed by the government? What are his duties and salary?

3. What are his qualifications for the employment he is now engaged in?

Hon. GEO. P. GRAHAM:

1. Yes.

2. (a) His employment with the railway has been continuous since 26th April, last. (b) His duties are inspecting the construction of the machine shop, boiler house and chimney, brick store and office building, addition to freight shed and addition to engine house at Rivière du Loup. His salary is $3 per day.

3. His services have been quite satisfactory.

LAKE NIPISSING IMPROVEMENTS.

Mr. ARTHURS:

1. Has the canal of Lake Nipissing improvements to Monetteville been completed? If not, why has it been delayed?

2. If completed, what tonnage has passed through the canal during season of 1909?

Mr. GRAHAM:

1 and 2. Not yet completed; delay mainly due to unfavourable conditions for economical work on account of continuous high water during past season and also to consideration being given to possibility of controlling Lake Nipissing water level, which is now under study and which would govern depth of cuts to be completed.

NAPANEE RIVER DREDGING.

Mr. URIAH WILSON:

1. Is it the intention of the government to do any dredging during the coming season in the Napanee river?

2. Is the government aware that the said Napanee river is in a very bad state for navigation purposes owing to the inefficiency of the dredging of the past season?

Mr. GRAHAM:

1. Until the large number of applications, which are before the department, for dredging during the next season have been carefully considered, it is impossible to say whether or not it will be possible to do any dredging next season in the Napanee river.

2. The district engineer reports that the present condition of the Napanee river is not due to the inefficiency of the dredging performed during the past season by the department, but rather to the extreme low stage of water in Lake Ontario and the Bay of Quinte which governs the depth of the Napanee river; the difference between the level in September last, when the work was performed, and to-day, or up to the close of navigation, is 14 inches.

DAM AT LONG SAULT RAPIDS.

Mr. J. D. REID:

1. Has an application been made by any persons or persons, or corporation for permission to dam the St. Lawrence river at Long Sault rapids, for power purposes?

2. If so, what is the name of the person or corporation making such application?
3. Has a report been made by the International Waterways Commission re proposed dam?
4. Is it the intention of the government to grant such privilege?

Mr. GRAHAM:

1. Application has been made for permission to construct a dam at Long Sault rapids, for power purposes.
2. St. Lawrence Power Company, Limited.
3. No.
4. The government has not yet considered the application.

ST. LAURENT, MANITOBA, PIERS.

Mr. STAPLES:

1. Has the government spent any moneys on a wharf at St. Laurent, on Lake Manitoba? If so, when, and how much?
2. At whose request was the expenditure made, and what is the nature of the work done, and the object for doing it?
3. Are the moneys expended, if any, of value to the public?
4. Is it the intention of the government to complete the undertaking? If so, when?

Mr. GRAHAM:

1. Expenditure for construction and repairs of piers, exclusive of dredging, in 1903, 1904, 1906 and 1909: $15,988.87.
2. (a) Petitions received from residents of St. Laurent and surrounding district and from Winnipeg Board of Trade. (b) Construction of guide piers and dredging of a channel and basin inside of these piers. (c) The object was to afford greater facilities for traffic and transportation on Lake Manitoba and develop traffic by way of said lake and the connected lakes to the north. It was expected, at the time, that this place would be the main shipping point at the south end of Lake Manitoba and that the Canadian Northern railway would build a spur from their main line, which passes close by; the erection of freezers by the fishing industry was contemplated and it was also thought that the Manitoba Gypsum Company would make this their shipping point.
3. The work that has already been done is in excellent condition and is sufficient to provide for any shipping on Lake Manitoba.
4. Further expenditure at this point will be considered should the shipping increase to such an extent as to warrant same.

DISTRIBUTION OF SEED GRAIN.

Mr. LAKE:

1. Who are the present holders of homesteads for the northwest and southwest quarters of sections 24, township 38, range 10, west of 3rd meridian?
2. Was seed grain supplied to any of these men? If so, to whom, and how much to each?

Mr. J. D. REID.

Mr. OLIVER:

1. Northwest ¼ section 24, township 38, range 10, west 3rd meridian, Thomas Warwick; southwest ¼ no entry at present. Allan R. Mudie allowed 30 days from 25th November, 1909, to make entry. Entry not reported up to date of last return received from Saskatoon agency which is dated 23rd November.
2. No.

FREE MAIL DELIVERY.

Mr. ARMSTRONG:

Are there any cities in Canada in which free mail delivery has been established, and in which the distribution office has been closed? If so, what are the names of the cities?

Mr. FIELDING:

In all cities where letter carrier delivery has been established it has been the practice to close all post offices, except the head office, within the city limits and continue them as sub-post offices. As sub-post offices they do not deliver mail to the public, but all mail matter for the different neighbourhoods is deposited in a letter box placed at the door and collected by the department and sent to the head office. All other post office business, such as registering letters, issuing money orders, taking savings bank deposits and sale of stamps is carried on by sub-post offices. The delivery of mail formerly undertaken by these offices is, of course, carried on by the letter carriers.

GOVERNMENT WEIGHER AT MONTREAL.

Mr. ARMSTRONG:

Has a government weigher been appointed at the port of Montreal?

Mr. FIELDING. A weighmaster has been appointed under the Inspection and Sale Act, but his powers are confined to grain.

FRANCO-CANADIAN TREATY.

Mr. ARMSTRONG:

Referring to the ratification of the Franco-Canadian treaty, is the Canadian government now prepared to establish a similar treaty between Canada and the German empire?

Mr. FIELDING. The ratification of the Franco-Canadian convention has not yet taken place. The question of treaties with other countries is under consideration.

NATIONAL RESOURCES COMMISSION.

Mr. ARMSTRONG:

What are the names of the chairman and members of the commission appointed to conserve our national resources, and what salaries, if any, are paid to them?

Mr. FIELDING. The Hon. Clifford Sifton is chairman. The other members are as follows:

The Hon. Benjamin Rogers, of Alberton, Prince Edward Island; Professor Howard Murray, B.A., of Dalhousie University, Halifax, Nova Scotia; Mr. Frank Davison, of Bridgewater, Nova Scotia; Mr. Cecil C. Jones, M.A., Ph.D., LL.D., chancellor of University of New Brunswick, of Fredericton, New Brunswick; Mr. William B. Snowball, lumber merchant, of Chatham, New Brunswick; Mr. Henri S. Béland, M.D., M.P., of St. Joseph de Beauce, Quebec; Mr. Frederick Debartzch Monk, K.C., D.C.L., M.P., of Montreal, Quebec; Doctor J. W. Robertson, C.M.G., director of Macdonald Agricultural College, of Ste. Anne de Bellevue, Quebec; Monseigneur J. C. K. Laflamme, superior and rector of University of Laval, of Quebec, Quebec; Sir Sanford Fleming, K.C.M.G., LL.D., M.I.C.E., chancellor of Queens University, of Ottawa, Ontario; the Hon. Senator William Cameron Edwards, of Ottawa, Ontario; Mr. Edmund Boyd Osler, M.P., of Toronto, Ontario; Mr. Charles Arthur McCool, lumber merchant, of Ottawa, Ontario; Mr. J. F. Mackay, journalist, of Toronto, Ontario; Professor Bernhard Fernow, of Toronto, Ontario; the Reverend George Bryce, M.A., D.D., LL.D., F.R.S.C., of the University of Manitoba, Winnipeg, Manitoba; Doctor W. J. Rutherford, Deputy Minister of Agriculture and member of the faculty of the University of Saskatchewan, of Regina, Saskatchewan; Professor H. M. Troy, M.A., D.Sc., LL.D., president of University of Alberta, of Edmonton, Alberta; Mr. John Hendry, lumber merchant, of Vancouver, British Columbia; and the following who are members ex-officio: the Hon. Sydney Fisher, of Ottawa, Minister of Agriculture; the Hon. Frank Oliver, of Ottawa, Minister of the Interior; the Hon. William Templeman, of Ottawa, Minister of Mines; the Hon. Francis L. Haszard, of Charlottetown, Premier of the province of Prince Edward Island; Attorney General of the province of Nova Scotia; the Hon. Ward Chipman Hazen Grimmer, of Fredericton, Surveyor General of the province of New Brunswick; the Hon. Jules Allard, of Quebec, Minister of Lands and Forests of the province of Quebec; the Hon. Frank Cochrane, of Toronto, Minister of Lands and Mines of the province of Ontario; the Hon. Hugh Armstrong, of Winnipeg, Provincial Treasurer of the province of Manitoba; the Hon. James Alexander Calder, of Regina, Commissioner of Education and Provincial Treasurer of the province of Saskatchewan; the Hon. Alexander Cameron Rutherford, of Edmonton, Premier and President of the Executive Council of the province of Alberta; the Hon. Frederick John Fulton, of Victoria, Chief Commissioner of Lands of the province of British Columbia.

Under the provisions of section 9, chapter 27, 8-9 Edward VII., no fees or emoluments of any kind shall be received by the chairman or other members of the commission. Their expenses are paid.

LEVEL CROSSINGS PROTECTION.

Mr. STANFIELD:

Has the railway department received Mr. John Murphy's report on electric devices, electric bells, &c., for the better protection of level crossings? If so, will the minister lay copy of same on the table of the House?

Mr. GRAHAM: The department has not received any such report from Mr. John Murphy.

CANADIAN FISHERIES COMMISSION.

Mr. JAMESON:

1. How many commissions have been appointed to inquire into the condition of the Canadian fisheries since 1896?
2. Of whom did they, respectively, consist, what was the date of appointments and date of completion of duties of each?
3. What special branches of the fishery and what territory did each, respectively, deal with?
4. In what instances were reports made?
5. In what instances were reports made and evidence taken, printed, and in such cases how many copies were printed?
6. How many copies of the respective reports and evidence, if printed, were distributed, by whom and among whom?
7. In what instances were recommendations made to the Minister of Marine and Fisheries by said reports?
8. In what instances were the recommendations as made, carried out?
9. What was the cost of the respective commissions?

Hon. L. P. BRODEUR:

1. Nine.

2, 3 and 9. On the 27th September, 1898, the following persons were appointed to inquire into the condition and requirements of the Canadian Lobster Fishery: Professor E. E. Prince, Moses H. Nickerson, Wm. Whitman, H. C. V. LeVatte, S. E. Gallant, Patrick Sweeney, Robert Lindsay, Archibald Currie and Donald Campbell. The commission reported April 25, 1899. It cost $7,437.24.

On January 25, 1902, the following commissioners were appointed to inquire into the salmon fishery of British Columbia: Professor E. E. Prince, G. R. Maxwell, Aulay Morrison and Ralph Smith. Interim report March 4, 1902. Cost of commission, $878.70.

(Note.—George Riley was appointed to fill vacancy caused by death of G. R. Maxwell by order in council January 9, 1903.

Commission never finally reported and was ultimately superseded by another commission in 1905.)

On November 14, 1903, the following commissioners were appointed to inquire into the conditions and requirements of the herring and sardine fisheries and industry, in the Bay of Fundy and tributary waters, and of the lobster fishery of the western portion of the Bay of Fundy and St. Mary's Bay, as well as the dogfish pest: R. N. Venning, Col. J. J. Tucker, A. J. S. Copp, R. E. Armstrong and E. C. Bowers. Their final report was dated March 3, 1905.

These commissioners, together with Reverend J. S. Turbide, were at the same time empowered to investigate the conditions and requirements of the lobster fishery and the dogfish pest, at the Magdalen Islands, and they also finally reported in this connection on the 3rd March, 1905. Cost of both commissions, $3,943.11.

On April 11, 1904, Professor E. E. Prince and P. Morais were appointed a commission to inquire into the salmon and lobster fishery, as well as the dogfish pest, of Gloucester county, New Brunswick. Their report was dated May 5, 1904. Commission cost $389.32.

On July 22, 1905, the following commissioners were appointed to investigate the conditions and requirements of the fisheries of Georgian bay: Professor E. E. Prince, John Birnie and James J. Noble. They reported on February 16, 1909. The cost of the commission was $21,546.99.

(Note.—The powers of this commission were extended by order in council 14th August, 1906, so as to include the fisheries of Lake Erie; but owing to the subsequent appointment of the International Fisheries Commission, it did not report in regard thereto.)

On July 22, 1905, the following persons were appointed a commission to inquire into the condition and requirements of the fisheries of British Columbia: Professor E. E. Prince, Campbell Sweeney, J. C. Brown, Richard Hall, Reverend G. W. Taylor and J. P. Babcock. They reported on July 24, 1907. The cost of the commission was $16,934.06.

On June 4, 1908, Professor E. E. Prince and S. F. Morrison were appointed a commission to investigate the condition and requirements of the shad fishery of Minas Basin and adjacent rivers and Bay of Fundy waters, and Simon Melanson was added to the commission when investigating the New Brunswick waters affected. The commission reported on February 6, 1909. It cost $2,651.07.

On March 16, 1909, Professor E. E. Prince, T. L. Metcalfe and D. F. Reid were appointed a commission to inquire into the condition and requirements of the fisheries of Manitoba, Saskatchewan and Alberta, and on September 3, 1909, J. B. Hugg was appointed to fill the vacancy caused by the resignation of Mr. Metcalfe, on his appointment to the Bench.

Interim report submitted December 2, 1909. Work of commission not yet completed. Cost to date $1,070.85.

On June 25, 1909, Commander W. Wakeham was appointed a commissioner to inquire into the condition and requirements of the Canadian lobster fishery.

His report has not yet been submitted. Cost to date $1,375.97.

4. In all.

5. The reports of the Lobster Commission of 1898, the British Columbia Commission of 1905 and the Georgian Bay Commission of 1905, were printed. 4,500, 1,500 and 1,200 respectively, but no evidence printed in any case.

6. A number of copies were sent to the inspectors of fisheries of the districts affected for distribution among those interested and all applicants to the department were supplied with copies.

7. In all.

8. The recommendations of the Lobster Commission of 1898 were practically all carried out. The recommendations of the commission appointed 14th November, 1903, so far as the lobster fishery of the Bay of Fundy and St. Mary's bay and of the Magdalen islands is concerned, were carried out. In the case of the British Columbia Commission appointed on July 22, 1905, the recommendations were carried out. The recommendations of the Georgian bay, the Shad and Manitoba Commission are under consideration.

MOBILIZATION EQUIPMENT.

Mr. WORTHINGTON:

1. Is the government aware that in the imperial army the fullest details as to mobilization equipment is carefully tabulated, periodically promulgated through army orders, and that copies thereof may be procured by the public either directly or through any bookseller?

2. Was not the establishing of a similar system contemplated in Canada by paragraph 250 of the Regulations for Canadian Ordnance services, Part 1?

3. Have the mobilization store tables, required under this paragraph to be issued for the regulating of the details of mobilization stores, been yet prepared and promulgated through general orders? If not, why not?

4. In view of the English practice, and of its apparent adoption by Canadian Regulations, why should such information have been refused to this House by the Minister of Militia and Defence, on December 2, 1909, on the ground of the publication thereof not being in the public interest?

Sir FREDERICK BORDEN:

1. Details as to the complete equipment required by each unit of the regular army on moblization are tabulated, and are 'pro-

mulgated ' in imperial army orders. Copies of ' war establishments ' which contain certain of the details, and of mobilization regulations can be procured on repayment by the public, but the only tables which contain complete details, known as ' Mobilization Store Tables ', though promulgated, are not on sale, and are only issued to officers concerned.

2. Yes.

3. A number of detailed tables have already been compiled and promulgated in Militia Orders, but the preparation of complete Moblization Store Tables involves a very large amount of detailed work, and these tables are not yet complete.

4. It is not the English practice to make public information as to the quantities of stores and equipment which are in existence and in possession of the War Office, nor to state in what localities the several stores or articles of equipment are held in charge. It is information on this point which was refused, in the answer given to the hon. gentleman on December 2, on the ground of the publication thereof not being in the public interest.

STEAMER CHRISTINE.

Mr. JAMESON:

1. From whom was the Dominion government steamer ' Christine ' purchased, on what date, upon whose recommendation, and what was the price paid?

2. How much has since been expended in improvements?

3. When and where was the ' Christine ' built, and for what service?

4. In what service had she been employed previous to her purchase by the government, and for what department was she purchased?

5. To what department was she transferred, and for what reason?

6. What is her maximum speed and average speed, respectively, as recorded in the log?

7. What is the established standard speed required of vessels in the Atlantic Fishery Protection Service of Canada?

Mr. BRODEUR:

1. Captain J. A. Farquhar. June 30, 1908. The steamboat inspector's. $17,000.

2. $10,479.92.

3. In 1881, at Glasgow, Scotland. She is a steam yacht.

4. Do not know. The Department of Customs.

5. The Customs Department. In exchange for the cruiser ' Constance ' to enable her use in the Fisheries Protection Service.

6. Maximum speed 10 knots. Average speed 9 knots.

7. No standard is required.

' FIELD ALLOWANCE.'

Mr. WORTHINGTON:

1. Are officers of the camp staff and of the permanent forces paid a special allowance during the annual camps of training, in addition to regular pay and rations, for the alleged purpose of aiding in the expense of being placed under canvas? If so, what are the daily rates of such allowances?

2. Are such allowances paid to the officers of the active militia who are attending the same camps of training with their regiments?

3. If not, what nature of expense is entailed by staff officers, and officers of the permanent force, by being placed under canvas, which is not also entailed by officers of the active militia, and why is such distinction made?

Sir FREDERICK BORDEN:

1. Yes, they are paid the 'field allowance' at the following daily rates:

(a) Officers on the camp, divisional or brigade staffs, whether of the permanent or non-permanent active militia:

	At Camps of not more than 16 days.	At Camps over 16 days.
Commandant..	$5 00	$3 00
Other officers duly appointed..	2 50	1 50
Warrant officers..	0 75	0 40

(b) All ranks of the permanent force, whenever encamped, and not only in 'annual camp' receive the 'field allowance' of, for officers:

Field officer..	$2 00	$1 50
Captain..	1 75	1 25
Lieutenant..	1 50	1 00

2. Not unless they are appointed to the camp, divisional or brigade staff:

3. Regimental officers of the active militia who attend camp have their own regimental messes and are allowed the use of batmen or soldier servants for the mess and themselves from their own corps. And they have other ways of cheapening the cost of messing. And unless they are mounted officers they are not required to find grooms and mounted kit.

Officers of the camp, divisional or brigade staff have to form their own mess afresh for each camp. The mess is necessarily smaller than a regimental one, and, as all mess equipment has to be hired from the contractor as well, is, therefore, an expensive one. They are all required to be mounted and have to provide mounted kit, and to find their own servants and grooms, who are only paid by the public if they belong to the militia. They have to do much more official and other entertaining than regimental officers. And it is considered desirable to make their allowance suitable to the positions they have to fill, and so to attract regimental officers to qualify themselves for these posts.

As regards officers of the permanent force, they draw 'field allowance' like other ranks of the corps whenever under canvas. The allowance, which before 1900 was a flat rate of $2.50 per diem for all officers, is intended to compensate for the extra ex-

pense of establishing a mess in camp, which is necessarily a smaller and much more expensive one than in quarters (a fair estimate of the additional expense would be $1 per diem), and to make up for the extra wear and tear on clothing, which for the men at least forms part of their emoluments. They are usually employed for much longer hours than the regimental officers of the active militia, and they have to do more entertaining.

HEATING AND LIGHTING CONTRACT FOR PUBLIC BUILDINGS.

Mr. WORTHINGTON:

1. When contracts are awarded for the construction of public buildings, is due care exercised that heating systems and electric wiring are installed concurrently with the main construction?

2. Is it the case that many such buildings are otherwise completed for some time before lighting and heating contracts are awarded, or even called for? If so, does the government consider the same a sound practice?

Mr. PUGSLEY.

1. Yes.

2. It is the case that heating and lighting contracts have been let separately from the main contract, but the practice now is to include both these in the main contract.

ORDNANCE CORPS LODGING ALLOWANCES — ORDNANCE LANDS — LEASE TO OTTAWA COLLEGIATE.

Mr. WORTHINGTON:

1. What amount of money is now being paid out monthly to all ranks of the Ordnance Corps at Ottawa as lodging allowances and upon what amount do such allowances represent interest at the rate of 4 per cent per annum?

2. Is the property upon which the Ottawa Collegiate Institute stands Ordnance lands? If so, what are the terms of the lease thereof from the Crown?

3. (a) May possession of such lands be resumed by the Crown if required for military purposes; (b) has the Collegiate building been, somewhat recently, further extended? If so, when?

4. If the growth of the Ordnance services has necessitated the hiring of space as an overflow storehouse, why was not the possession of the unoccupied land resumed, previous to the extension, to provide for such increasing requirements?

Sir FREDERICK BORDEN:

1. The monthly amount for lodging allowance paid to all ranks of the Canadian Ordnance Corps stationed at Ottawa is $416.95, making an annual cost of $5,000.

2 The building, with the exception of the northern ends of the centre and eastern wings, which encroach some 30 and 15 feet, respectively, upon the adjacent ordnance property, stands on land belonging to the Collegiate Institute. The land thus encroached on forms part of a strip, some 45 feet x 312 feet, of ordnance property, adjoining the northern boundary of the Collegiate Institute property, which is leased to the institute for a period of 99 years from the 1st June, 1900, being a continuation of a previous lease granted the institute in 1871, at an annual rental of $1, on the condition that the government can assume possession of the whole or any part thereof at any time if required for military purposes.

3. (a) Answered by No. 2; (b) Yes; last year.

4. The recent addition to the Collegiate building is not on ordnance property.

CANADIAN SOUTH AFRICAN CONTINGENTS—EXPENDITURES BY CANADIAN AND IMPERIAL GOVERNMENTS.

Mr. FOSTER:

1. What forces and at what periods were dispatched from Canada to South Africa during the Boer war?

2. What part of the expenditure in each case was undertaken by Canada, and what by the British government?

3. What was the total amount paid by the Canadian government, and what by the British government, for the Canadian contingents?

Sir FREDERICK BORDEN:

Corps.	Date of Embarkation.
First Contingent—	
2nd (Special Service) Battalion, Royal Canadian Regiment	Oct. 30, '99
Second Contingent—	
Canadian Mounted Rifles, two battalions	Jan. 21, '00
" "	" 27, '00
Three batteries of Field Artillery	Feb. 21, '00
The Strathcona Horse	Mar. 16, '00
Canadian Mounted Rifles, (2nd Regt.)	Jan. 14, '01
10th Canadian Field Hospital Co	" 28, '01
South African Constabulary	Mar. 28, '01
Canadian Mounted Rifles, (3rd Regt.)	May 8, '02
" " (4th Regt.)	" 17, '02
" " (5th Regt.)	" 23, '02
" " (6th Regt.)	.....

2. With regard to the first and second contingents, Canada equipped, transported to South Africa and paid them up to the time of arrival in that country, the British government paid and maintained them while in South Africa, and transported them home.

With regard to the third, fourth, fifth and sixth contingents, the British government paid all expenses.

As regards the Strathcona Horse and the South African Constabulary, the expenses

were borne in the case of the former partly by Lord Strathcona and partly by the British government, in the case of the latter by the government of Cape Colony.

3. The total amount paid by the Canadian government was $1,972,255.20. The government is not aware of the total amount expended by the British government in this connection.

GRAND TRUNK PACIFIC RAILWAY—EXPENDITURES FOR TERMINALS.

Mr. FOSTER:

1. What has already been paid by the government for terminals in connection with the Grand Trunk Pacific railway, and at what points?

2. What is the estimated total cost to the government of these terminals at each point?

Mr. GRAHAM:

1. (a) So far as the eastern division is concerned nothing has been paid for terminals, except $2,187.50 per month paid to the Canadian Northern railway being the government's proportion of rental for terminal facilities at Winnipeg under the agreement of March 1, 1907. (See Cap. 52, ED. VII., 6-7).

(b) The government pay no sum for terminals on the western division (Winnipeg to Prince Rupert) of the Grand Trunk Pacific railway. They merely guarantee the Grand Trunk Pacific Railway Company's bonds to the extent of $13,000 per mile on the prairie section' and to the extent of 75 per cent of the cost of the 'mountain section.'

2. No estimate has been made of the total cost of terminals.

QUEBEC BRIDGE.

Mr. FOSTER:

1. What is the total cost to the government to date of the Quebec bridge, and what is the approximate sum required to complete it?

Mr. GRAHAM:

1. (a) The total cost to date, to the government is $6,905,852.35; including subsidies paid of $374,353.33.

(b) A contract has been awarded to M. P. Davis for the substructure of two pneumatic caissons; two abutments; two anchor piers; one intermediate pier which will be all required, if the ultimate decision is for a cantilever bridge, at $2,448,475. If the decision is that a suspension bridge is to be built, the abutment, centre pier, and anchor pier, will not be required; but anchorage piers for the cables will be required. No estimate for the latter has been made pending requirement for same.

There is a provision for withdrawing the items named. The cost of the two pneumatic caissons is $2,000,800, and will be required as planned whatever type of bridge superstructure is ultimately decided upon. Pending such decision it is not in the public interest to give the estimate of cost of superstructure.

TEMPORARY LOANS.

Mr. FOSTER:

Have any temporary loans been made by the government since the beginning of this session? If so, where and on what conditions?

Mr. FIELDING:

No temporary loans have been obtained by the government since the beginning of the session. The cable despatches in the press recently no doubt arose from arrangements that were being made for obtaining a temporary loan at an early date.

NATIONAL TRANSCONTINENTAL RAILWAY—SHIPMENT OF WHEAT.

Mr. SCHAFFNER:

1. How many carloads of wheat have been transported over the National Transcontinental railway from Winnipeg to Fort William or Port Arthur up to November, 30 1909?

Mr. GRAHAM:

1. Ten car loads.

BREAKWATER AT GULLIVER'S COVE.

Mr. JAMESON:

1. Have any petitions been received by the government or by the Department of Public Works from the residents of Gulliver's Cove, Digby county, asking for the construction of a breakwater?

2. If so, when were the same received, from whom, and what action was taken thereon?

Mr. GRAHAM:

1. Yes.

2. (a) A petition signed by the residents of Gulliver's Cove was transmitted to the department by Mr. A. J. S. Copp, M.P., on April 18, 1901. (b) A report was secured from the resident engineer, estimating the cost of the proposed breakwater at $12,000.

NORTHWEST MOUNTED POLICE BARRACKS AT CALGARY.

Mr. McCARTHY:

1. Have any applications been received by the government for the transfer to any railway corporation or corporations, or person, of the grounds now occupied by the Northwest Mounted Police in connection with their barracks at the city of Calgary?

2. If so, from whom have such applications been received for the transfer of the same, on what date, and for what portion of said property?

Mr. OLIVER:

1. Yes.

2. The Grand Trunk Pacific railway, on March 23, 1909. Sufficient area for a terminal.

FRANKING PRIVILEGE IN DEPARTMENT OF JUSTICE.

Mr. J. D. TAYLOR:

1. What employee, if any, is responsible for the franking of free mail matter dispatched from the Department of Justice?
2. What are the several franks, if more than one, recognized as indicating that the missives to which they are affixed are entitled to be sent by the Department of Justice free of Canadian postage?
3. What official, if any, is charged with the supervision of the franking privilege in this department, and the duty of checking improper use of any frank?

Hon. A. B. AYLESWORTH:

1. The deputy minister.
2. Those of the minister and Solicitor General and of the deputy minister.
3. The deputy minister.

DRY DOCK ON THE TRENT CANAL.

Mr. HUGHES:

Is it the intention of the government to construct a dry dock on the Trent canal at Fenelon Falls, or Buckom, or Burleigh, or some similar point on the canal where the lift is such that the dock could be unwatered without any cost of pumping?

Mr. GRAHAM:

The matter has not been considered by the government.

SUBSIDIES TO CANADIAN NORTHERN RAILWAY.

Mr. RALPH SMITH:

1. Does the Canadian Northern Railway Company own or in any way control any of the following railway companies: the Ontario and Rainy River Railway Company, the Port Arthur, Duluth & Western Railway Company, the Manitoba and South Eastern Railway Company, the Minnesota and Manitoba Railway Company, the Minnesota and Ontario Bridge Company, the Saskatchewan North Western Railway Company, the Qu'Appelle, Long Lake and Saskatchewan Railway Company, the Alberta Midland Railway Company, the Edmonton, Yukon and Pacific Railway Company?
2. What subsidies either in land, money, or by way of guarantee of securities have been granted to any of the railway companies mentioned in question on account of the main or branch lines or both, of the said companies, either by the Dominion government, or the provincial governments of Ontario, Manitoba, Saskatchewan and Alberta, or any municipality through which their lines run?
3. How much of these subsidies have been earned to date?
4. How many miles west of Edmonton is there a line of railway constructed and in operation by the Canadian Northern Railway Company?
5. Has any work other than location survey work been done west of this point up to date? If so, how much and of what nature?
6. If any, will it eventually form part of the proposed line to Vancouver?
7. When was the location plan of the route of the Canadian Northern railway between Edmonton and Vancouver, by way of the Yellow Head Pass, approved by the Minister of Railways and the Board of Railway Commissioners?
8. Has any application been made since to change or in any way alter this location plan?
9. To what extent, if any, has the government of Manitoba exercised its right of control of freight rates under section 8 of schedule B of the Act 1 Edward VII, chapter 53?
10. Has this section of said Act had any effect in reducing freight rates in the province of Manitoba?

Mr. GRAHAM. This is a voluminous question and the answers would be voluminous. If the hon. gentleman will let it stand, I will investigate.

QUARANTINE FRONTIER INSPECTORS.

Mr. WM. H. SHARPE:

Referring to page D—73, volume 1, of the Auditor General's Report, where Dr. A. Bradford, Dr. L. J. Carter, Dr. J. D. Duncan, Dr. R. S. Thornton, Dr. M. Wallace, Dr. J. May, Dr. T. D. McKenty, Dr. J. C. Little, Dr. D. Henderson, and Dr. L. B. Scott are described as inspectors, and were inspectors from March 14 to August 15, 1908, each having drawn $508.06, what were their duties, and how many reports did each send in to the government?

Mr. FIELDING (for Minister of Agriculture). Quarantine frontier inspectors of persons entering from the United States during the prevalence of an epidemic of small-pox south of the line. Dr. Bradford, 5; Dr. Carter, 5; Dr. Duncan, 5; Dr. Thornton, 1; Dr. Wallace, 5; Dr. May, 2; Dr. McKenty, 5; Dr. Little, 5; Dr. Henderson, 4; Dr. Scott, 4.

ALCOHOLIC GOODS IN SCOTT ACT COUNTIES.

Mr. DANIEL. Before the orders of the day are called, I would ask the Minister of Railways if he will place on the table of the House the instructions which have been given to the employees of the Intercolonial railway with regard to the handling of alcoholic goods taken into Scott Act counties. He will remember that the Supreme Court of New Brunswick gave a decision to the effect that so far as that amendment to the Canadian Temperance Act was concerned, if did not apply to the Intercolonial, and the minister I believe has given some instructions to the employees. It is to obtain a copy of these instructions that I ask the minister to place them on the table of the House.

Mr. GRAHAM. As my hon. friend says, a difficulty arose, and certain instructions

were given to the Intercolonial management of the Intercolonial railway which, I think, have obviated the difficulty. It is questionable whether my hon. friend ought to ask for instructions passing between the management of a railway and its employees, or whether they ought to be laid on the table. However, if he will move for the documents, I will consider it carefully. The same request has been made to me half a dozen times by other people who appear interested, and I am informed that the purpose sought to be attained has been accomplished by the instructions given at that time. I thought if that was the case, then the object of laying the correspondence on the table, or even of giving it to the public, was not obvious. However, if my hon. friend will move for the correspondence. I will look into it, and will give him a further answer.

CRIMINAL CODE AMENDMENT.

On order for House again in committee on Bill (No. 41) to amend the Criminal Code.

Mr. LENNOX. I do not see the Minister of Agriculture present. The other day he asked this order to stand, and probably he desires it to stand yet. I am ready to go on.

Mr. FIELDING. I would be obliged if the hon. gentleman would permit it to stand until the return of the Minister of Agriculture. It would be a convenience.

INTEREST ACT AMENDMENT.

Order called for resuming the adjourned debate on the proposed motion of Mr. Miller for the second reading of Bill (No. 8) to amend the Interest Act.

Mr. MILLER. I ask the permission of the House to withdraw this Bill, having given notice of the introduction of another Bill to the same purpose. I move that the order be discharged.

Motion agreed to.

BANK ACT AMENDMENT.

On order for second reading of Bill (No. 18) to amend the Bank Act.

Mr. SAMUEL SHARPE. I move that this order be discharged as the purpose of the Bill is covered by another proposed Bill.

Motion agreed to.

HOURS OF LAROUR ON PUBLIC WORKS.

Mr. A. VERVILLE (Maissoneuve) moved the second reading of Bill (No. 21) respecting the hours of labour on public works. He said: In moving the second reading of this Bill, I do not propose to go at length into details, inasmuch as a discussion took place last year when this Bill was before the House. At that time it was proven conclusively that the hours of labour ought to be shortened. Of course, during that discussion it developed that some hon. members were in favour of the measure, and some were opposed to it; others stated that they had not had time to give to the Bill the careful study which a measure of its importance deserved. I think, Sir, that if the hon. members of this House gave as much care and as keen study to this Bill as some of them give to Bills of private interest, this measure would already have been enacted into law. Now during the discussion last year it was stated that by shortening the hours from 10 to 8, or from 9 to 8, we would probably diminish production by one-fifth. At that time the Minister of Labour, then the Postmaster General, stated that he had not studied the measure, but he believed that it would have the effect of reducing production by one-fifth. It was proven clearly by those who spoke in favour of the Bill that such was not the case. It was also shown on that occasion that the deputy Minister of Labour had made investigations in British Columbia, and recommended the adoption of an eight hour law for the miners. It was also proven that in Alberta they had adopted an eight hour day, and that a commission had been appointed in other provinces to study the question.

Of course, it may be said, that we should leave this question to the different provinces to discuss and pass laws upon. I claim that this government must be a model employer, that we should start at the head and pass a law on this subject so that we can at least study the question from observing its operation. During the discussion last year some hon. members of this House said that long hours of labour had no effect mentally or physically upon man. Is it reasonable to believe that long hours of labour, especially in some of our large industries, will not have a detrimental effect, morally, physically and otherwise, on our working people? The question of the rate of wages has nothing whatever to do with the Bill before the House. Some hon. gentlemen say that if you shorten the hours of labour organized labour will want more money. I want to know if this House has anything to do with that question. Let the working people ask what they think is right and let them discuss it with their employers. The hon. member for Chicoutimi (Mr. Girard), when we were discussing this question last year, remarked that fifteen hours of labour was not any too long for farm hands. I claim that there is a vast difference between working on a farm, or in the open air, and working in the large industries of the country. Then, some one made the statement that the best way to

solve the problem was to abolish day work altogether and let everybody work by the hour and work as long as he chose. Are we in this twentieth century going to allow every man to work as many hours as he likes? Are we not supposed to protect the weak members of society? That is why ten, and nine hour laws have been passed in different states of the United States. Last year, while this discussion was on, one hon. member of the House—I believe it was the hon. member for Halton (Mr. Henderson—made the statement that this was class legislation. I would like to know what kind of legislation we generally pass if it is not class legislation. It is all class legislation. There are classes of one kind and classes of another kind, but we never specify it as being class legislation unless it is legislation in the interests of labour. It was stated that I wanted to make a lion of myself by posing as a defender of labour in this House. I have nothing to fear and I have nothing to hide in connection with my conduct and the labour movement in this country or in this House. Under these conditions it is absolutely unfair to bring such a charge against me. To command the respect of my fellow workers in this country it is not necessary, as some hon. members have asserted, to bring a measure of this kind before the House and I am not actuated by any such motive. If I have brought this measure before the House it is because I am perfectly convinced that it is absolutely necessary for this and every other parliament to study this question and study it at as early a date as possible in order to bring relief to those who are labouring to-day under trying conditions. It was stated further that the country is not quite ready for a measure of this kind. The question was also asked: Why should we give more leisure to the men who are working for the government than to others, and why should we be asked to adopt legislation of this kind in the interest of government employees any more than for any body else? That will be found on the 'Hansard' of last year. I believe that it was the hon. member for Halton who used these words. I am a young man, I am not as old a parliamentarian as my hon. friend, but I studied the rules of this House when I came here and I saw that it was impossible under the British North America Act for any body to present legislation in respect to this subject except it had reference to the men who were working for the government. When it is asked: How is it possible to grant an eight hour day on one side of the street and a ten hour day on the other, I reply that this parliament has nothing to do with that. All we have to do is to consider whether it is necessary to have a shorter day. I shall not take up the time of the house by quoting from magazines and books, but I could present a great deal of evidence to prove that there is an almost universal call for a shorter working day. It was stated that it will demoralize production. Are we willing to admit that it will demoralize production especially when it was proven last year that we could produce as much with a shorter day than we can under present conditions? Then, there is the question of the unemployed, and it will be admitted by all that we want to make more work so that those who are now unemployed may have something to do. But, it may be said, if you agree that we can produce as much in a short hour day as in a long one, how is it possible that we are going to give work to the unemployed? I answer by giving greater purchasing power to a man than he has at the present time. Is it not reasonable to believe that if a man is not working his purchasing power is diminished, while if you give a man a chance to work it will create a demand for larger production because he will have more means and therefore greater purchasing power. If you give more leisure time to those who now work such long hours you will give them a chance to better their condition. Is it not a fact that as soon as we improve our condition we are anxious to get a little better living. This is a perfectly legitimate desire on the part of everybody and therefore by improving the conditions of the workingman you are increasing his purchasing power and consequently increasing the need of greater production. Over production? During the great financial depression of last year, or the year before, it was said in the papers and in other places that labour was to a certain extent responsible for that great financial depression? I would like to ask any member of this House if the workers were not as steady at their work then as they were before? They were, but notwithstanding that we had depression. When depression comes over-production comes as a result of it. During the depression to which I have referred the stores were full of goods from top to bottom and every man in the country was wearing as many clothes as he was before. There was over-production because there were too many hours of labour in the different industries. With the improved methods and machinery that we now have at our disposal there is liable to be over-production, especially during good times when, in the large industries, people are sometimes working night and day. They believe they will make money by doing this. But, if they believe that they can make more money by increasing the hours of work they make the greatest mistake of their lives, because they are over-producing, and when the market is full of goods they are obliged to close our doors. If they close the door of an industry for two or three months the purchasing power of men

who are idle for a space of time is not the same as it would be if they were working steadily. The shortening of the hours of labour would to some extent solve the difficult problem of the unemployed. I am ready to thank the government for having appointed a Minister of Labour who can devote all his time and energy to the study of labour questions, and the fact that the labour people of this country have asked for the creation of such a portfolio for years and years past shows the necessity for it. When the Minister of Labour takes part in the debate to-day I hope he will be able to assure us that the eight hour day movement will be recognized by the government. Now, a couple of years since the hon. member for Hants brought before the House a resolution asking this government to aid in the prevention of the white plague. Is it not well known to the medical men of this country that it is in the large industrial establishments that the white plague starts, and very often finishes? Would not one of the best means of preventing the white plague be to give the workingmen of Canada a chance to breathe the pure air of Heaven? How often is it that you see labour men go to the country for a few weeks or even a few days in the summer, by the lake shore, or the sea shore or in the forest; it is very seldom indeed they can afford to get a day's vacation. If we shorten the hours of labour we will enable the working people to enjoy some of the privileges which Providence has placed at the disposal of human beings, and I am sure hon. gentlemen will agree with me that this is all the more important in regard to factories where female and child labour is employed. Further, I think that if any gentleman in this House study the conditions of labour in America and Europe as well as in Canada, they will come to the conclusion that ninety per cent of the people are not clothed as they ought to be. I shall practice what I preach and be brief in my remarks, and in conclusion, I hope that the Minister of Labour will have something to say in favour of this measure, and that it will not be pushed along on the road to the cemetery as a good many similar measures have been. I beg to move the second reading of this Bill.

Mr. A. C. MACDONELL (South Toronto). I agree with the hon. gentleman (Mr. Verville) that this is an extremely important measure, but at the same time I have to remark that the hon. gentleman himself has not been wonderfully active in promoting the best interests of the Bill. I made a short examination of the previous fates of this Bill and I find that it was first introduced by the hon. gentleman (Mr. Verville) on the 11th of December, 1906, when he said:

The object of the Bill is to establish an eight hour day upon all public works throughout the country. It is not my intention to discuss the merits of the Bill at the present time as they will be discussed on the second reading. The Bill as it stands has no effect on wages to be paid on public works.

Then the Bill was read the first time, and the last time for that session. The Bill was again introduced by the hon. gentleman on the 14th of February, 1908, when it was read a first time, and that was the end of it. Then we come to last session when the hon. gentleman (Mr. Verville)—the Bill having been introduced previously—on the 27th of April, 1909, very shortly before the close of the session, moved:

That order 35 of the Public Bills and Orders for the second reading of Bill (No. 22) respecting hours of labour on public works be now called for the purpose of it being discharged on the Order Paper.

Mr. AMES. Why does the hon. gentleman wish the order discharged?

Mr. VERVILLE. Because its discharge will enable me to bring the matter before the House this session in another form. The question as to the hours of labour on public works is, I consider, of considerable importance at the present time.

The Bill then made its exit for the third time and was not again introduced as a Bill or in any other form that session. Now, Mr. Speaker, this question is before the people of this country as it is before the people of the neighbouring republic, and as a humble member of this House I think parliament should dispose of it in some businesslike manner. The American Congress has been dealing with this question for a great many years, and Bills have been introduced and discussed. I have in my hand a copy of what I think was the last Bill introduced during the session of 1904, and I see by a recent utterance of the president of the United States that he has declared his intention of in some way having the matter dealt with at the approaching session of Congress. One reason why I say this present Bill should be dealt with by parliament is that if you look at its contents you will find that its name is a misnomer. The hon. gentleman (Mr. Verville) has persistently called it 'an Act respecting the hours of labour on public works,' but as the Bill is submitted to the House it contains provisions of the most drastic nature. It is not a Bill regulating the hours of labour upon public works of the country, and if it were I think there are many hon. gentlemen in this House who would be willing to go some distance to regulate the hours of labour which the government would permit on its works or which it would allow its contractors to exact. I believe that such a proposition would be favourably considered by a great many members in this House, but the Bill sub-

mitted by the hon. gentleman (Mr. Verville) is not designed to carry out that object. As a matter of fact this Bill as it is worded—as any gentleman of the legal profession will see if he reads it—would prohibit the government or the contractors for the government from going into the markets of the world to purchase any material whatsoever which was produced under a system which required the workmen who produced it to work more than eight hours a day. The government might make a contract to purchase uniforms in one department or to purchase groceries in another department, and if any of the work on any of the component parts of any articles the government so purchased were not confined to an eight hour day, then the whole contract would be void, and no matter how much value was given to the government under it, the contractor would not be able to recover one dollar, and the result would be disastrous. In other words, the Bill before the House would void and vitiate every contract the government might make for the purchase of materials, provided that any of the articles so purchased had been turned out of a shop or factory in which work of more than eight hours a day had been exacted. Now, that is altogether impossible and not at all in the interest of those who are asking for this legislation. The American Act has been drawn with much more care. That Act on more than one occasion has gone to a select committee of the House of Representatives, and an immense mass of testimony has been taken by that committee on the prospective operation of the Act. There have been at least, as I have found, two commissions on the subject. The report of the last commission, appointed during the year 1904, I hold in my hand. It is entitled:

Eight Hours on Government Work—Hearing before the Commission on Labour of the House of Representatives on the Bill H.R. 4064, intituled, a Bill Limiting the Hours of Daily Service of Labourers and Mechanics Employed upon Work done for the United States, or for any Territory, or for the District of Columbia or for Other Purposes.

The Bill is a very much more modified form of legislation of this nature than the Bill before this House. I will not burden the House by reading it, as it is somewhat lengthy. After dealing with the main features of the legislation intended to be enacted, it provides that the Act shall not extend to the following matters:

Nothing in this Act shall apply to contracts for transportation by land or water, or for the transmission of intelligence, or for such materials or articles as may usually be bought in open market, whether made to conform to particular specifications or not, or for the purchase of supplies by the government, whether manufactured to conform to particular specifications or not. The proper officer on behalf of the United States, and territory, or the district of Columbia may waive the provisions and stipulations in this Act during time of war or a time when war is imminent, or in any other case when in the opinion of the inspector or any other officer in charge any great emergency exists. No penalties shall be imposed for any violation of such provision in such contract due to any emergency caused by fire, famine, or flood, by danger to life or to property, or by other extraordinary event or condition.

The American Bill also gives the contractor the right of appeal first, to the head of the department under which the work is being done; and, secondly, to the executive government or to one of the courts of the country. So that in the American Act there are not only various exceptions, which seem to me, at first sight, to be reasonable, but also provision for an appeal in case any person considers himself aggrieved under the operation of the Act. The matter in my opinion is entirely for the government to deal with. Perhaps the hon. gentleman who has introduced the Bill may indulge the hope that it will have a better fate than the resolution which was introduced into this House a few days ago by the hon. member for South Wellington (Mr. Guthrie). Be that as it may, the government should, in my opinion, grapple with this question. We all in this House sympathize with labouring men. At the same time, this is a matter that has to be proceeded with cautiously and prudently, or it will revolutionize the condition of the country. It is a matter on which, in my opinion, this House is not well enough informed at the present time to deal with. The American Congress on more than one occasion found it convenient to refer the question to a select committee to obtain evidence and make recommendations thereon. On the other side of the line they are still in that stage; and it seems to me that if this matter were dealt with in a similar way, so that the various interests affected might get their views before parliament or a committee of parliament, a Bill might de drafted which would in a reasonable way meet the demands, so far as they are just, along this line. If the government chooses to refer the Bill to a committee, before whom all parties and all interests affected will be heard and considered, I for one will back them up. It is not going too far, at this stage in our history, I think, to advance the matter to that extent. If that were done, the matter, in some concrete form and intelligible manner, could be brought before the House and dealt with. It is not in such shape, in my opinion, at present. The Bill is altogether an impossible one; but the practice might be carried into certain of the public works of the country, with proper safeguards, after having the

hearing I suggest. If that were done, it seems to me we would have the matter advanced, and no harm could come to any interest. It is not an expensive matter. The committee could be confined to hearing evidence on this point, and could report at this session.

Mr. J. W. EDWARDS (Frontenac). There are one or two features of the Bill introduced by the hon. member for Maisonneuve (Mr. Verville) to which, in the interest of the people I represent, I wish to draw attention. The proposition to reduce the hours of labour on government works to eight hours a day will, in my estimation, undoubtedly have an effect on other labourers. I can imagine that as soon as the system was introduced on government work, labourers working on other jobs would in a short time be agitating for an eight hour day also. That seems to me only reasonable. But the point to which I wish to direct the attention of the House is that this will undoubtedly affect the agricultural classes. It is well known that one of the great problems in Ontario and the older provinces is that of getting farm labour. We also know that it is utterly impossible to have an eight hour day on the farm. It seems to me, therefore, that the passage of a Bill of this kind could not fail to have the effect of increasing the difficulty which farmers now experience in obtaining the labour they need so very much.

As regards the plea made by the hon. member for Maisonneuve (Mr. Verville), on which he grew particularly eloquent, that of giving opportunity to the labouring men to breathe the pure air of heaven, I might say that his argument only applied to a part of the population, because, according to the principle laid down very clearly and decisively by the Minister of Finance not later than yesterday, none but Grits, so far as government work is concerned, need apply, so that the pure air of heaven, though it might be given to Grit labourers under this Bill, would still be denied to any who happened to be of the Tory persuasion.

Another feature to which I would call attention is this. This measure must inevitably interfere with labour in large manufacturing concerns. Suppose it should pass and be applied to government contracts, if the government contracted with a large cement firm for some thousands of barrels of cement, is it not likely that the men employed by that firm would make a demand that they should be given the eight hour day, inasmuch as the work they were doing was to supply a government contract? That is all I have to say in connection with this Bill except this, that I cannot agree with the hon. member for Maisonneuve (Mr. Verville) that a man will do as much in eight hours as in nine. Carry that out to its logical conclusion, and it will mean that a man will do just as much in one day as in two. In any event there is a feeling throughout the country that men employed in government work, do not kill themselves, that they take things comparatively easy, and there is also the impression that in many cases men are employed on government works a few months before the elections, and employed solely to get their votes. I might refer, as an instance of this, to the facts in connection with the construction of the Newmarket canal, on which the number of men employed was very considerably increased just previous to the last election. In conclusion I would repeat that the passage of a measure such as this would make the obtaining of farm labour still more difficult than it is to-day, and that is my chief reason for addressing the House on the subject.

Mr. HUGH GUTHRIE (South Wellington). This is a public Bill which will have a very direct influence on a very large number of people in this country should it become law, and while, generally speaking, I am in favour of any proposal tending to shorten the hours of labour, I am afraid that my hon. friend from Maisonneuve (Mr. Verville) has gone rather far in the measure he has introduced. During the past four or five years I have given this matter much consideration. I have discussed it to some extent with various representative bodies in my riding; and so far as the Bill is limited in its application to public works, in the strictest sense of the term—the erection of buildings or works of that nature—I think we might fairly give the system a trial and see what would be its effects. It would practically apply only to the building trades. I cannot see that any great harm would follow. In the city of Guelph where I reside, in all the building trades now they have the nine hour day. It is not so many years since they had the ten hour day, and the nine hour day has come about without legislation, and I do not think that it has injuriously affected the hours of labour in the factories or on the farms in that county. In that respect I do not think the Bill will have any such effect as my hon. friend fears, but as has been pointed out by the hon. member for South Toronto (Mr. Macdonell), it goes much further than government contracts and will embrace every kind of contract. One can well understand what difficulty would be created should the Bill pass in its present form. Take a contract for the supply of clothing or furniture to the government. A manufacturer tenders and is awarded the contract. That contract will not occupy his whole staff, probably only a small portion, and, under this Bill, that contractor would have one portion of his men working eight hours and another nine or ten hours. I can see difficulties of that kind, but I would like to see the Bill

more limited in its scope and have the experiment tried on public works, properly so-called.

I agree with the hon. member for South Toronto (Mr. Macdonell) that we do not know enough of the subject to legislate on it intelligently. I have read the many reports of investigations and commissions which have taken place in the United States during the past five or six years. They are very voluminous documents. Manufacturers from all parts of the United States were summoned to express their views, the transportation magnates, the heads of all the labour organizations, appeared before that commission, and yet I do not believe that in the United States they have got any way near a satisfactory conclusion up to the present. If we are going to proceed with this measure—and I think it is entitled to the same consideration as every other public Bill—it should be referred to a special commission with power to examine the various interests to be affected. The Bill is entitled to fair consideration and the House is entitled to the fullest information before being asked to pass on the strict terms of the measure itself.

Mr. MIDDLEBRO. The promoter of this Bill wants to reduce the hours of labour from ten to eight. But suppose I am a government contractor and this Bill becomes law, and I am paying my men $2 a day for a ten hour day. Under the provisions of this Bill, I would have to shorten the day to eight hours and I would reduce my wages to $1.60 per day. How would the hon. gentleman meet a case of that kind?

Mr. VERVILLE. I do not believe that we have any right to deal with the question of wages. There is nothing in the Bill that speaks of wages. If it should become law, it would be up to the employer to pay whatever he believed right, and it would be up to the men to insist on being paid what they deemed just.

Mr. A. S. GOODEVE (Kootenay). I listened with great interest to the speech of the hon. member for Maisonneuve (Mr. Verville) in introducing this Bill. I have read also the hon. member's remarks on introducing a similar Bill last session. The hon. member has gone to a good deal of trouble in carrying out research upon this question, and in bringing before the House facts concerning the hours of labour. In the province of British Columbia, in the year 1901, we dealt to some extent with this question in relation to the mines. Then, as now, there was the struggle between the two great parties interested, the employer on one side and the workmen on the other. But we were fortunate in that we introduced then an eight-hour law, and I am glad to be able to testify here that the results of the operation of that law have been eminently satisfactory. I can state from personal knowledge that, up to the introduction of the Eight Hour Bill, in that portion of the country with which I am most familiar, the mining district of the Kootenay, only a small percentage of the labouring men owned their homes, or, apparently, took any interest in their homes. Any one familiar with that district at that time is aware that the homes of miners were usually shacks and the occupants paid little attention to the improvement of the surroundings, or of the home itself. Since the introduction of this eight hour law, that has been greatly changed. A large number of miners have purchased and now own their own homes and are active in improving their surroundings. They have a certain amount of daylight at home, which, under old conditions, they could not have. With the ten hour day in the mines, it meant practically twelve hours, as any one will understand. Men had to rise long before daylight in the morning to get to their work, and they usually did not return until after dark. It was generally said, and very truly, that the men hardly saw their families in daylight from one end of the year to the other. Since the introduction of the eight hour law that has been changed. The effect has been a marked change in the men of the mining district, as I have described. That is an argument that ought to be of weight with the House. Surely, in this advanced age, with our great improvements in machinery and our rapid advance in many lines of economic improvement, the labouring men should have some share in these improvements and the benefits to be derived from them. It has been said that the adoption of such a measure as is here proposed would lead to shortening the hours of labour in other avocations, and it is inferred that it would be detrimental to the agricultural interests. I venture to think the conditions of work in agriculture are altogether different from those of the classes of labour to which this measure is intended to apply. Their harvest makes special demands upon those engaged in agriculture, and during certain seasons they naturally work from daylight till dark. But, during a considerable portion of the year, they have time for recreation and improving their minds. This Bill, if I understand it aright, is meant primarily to apply to those engaged in labour under factory conditions or in the building trades. I have listened with pleasure to the arguments of the hon. member for South Toronto (Mr. Macdonell). Speaking as a layman, it seems to me that the hon. member's argument carries considerable weight. It is right and wise that, in a case of this kind,

we should carefully consider all the circumstances and get all the light possible. I would not undertake to dispute the arguments advanced by the hon. member for South Toronto and the hon. member for South Wellington (Mr. Guthrie), who are, of course, well informed on the legal aspects of this question. On the contrary, I think it would be in the interest of the Bill itself that we should move very carefully. Should any mistake be made, instead of advancing the interests of labour, which, of course, is the object sought by the introducer of the Bill, the very purpose in view might be defeated. Therefore, I think the suggestion made by these gentlemen was a very wise one—that we should carefully weigh all the facts in this case, so that when we place a measure of this kind on the statute-book it may be one that we are sure will be of advantage to working men generally and will be accepted by all fair-minded men as promoting the best interest of all classes.

Mr. JOSEPH TURCOTTE (Quebec). (Translation). Mr. Speaker, the matter which has been brought to the attention of the House suggests a few remarks. In the first place, I notice that this Bill which, on a previous occasion, was submitted to the House but at the time did not reach the committee stage, is this year introduced earlier. That is an improvement which I am happy to note and which, I think, portends a better outcome to this proposed legislation.

It has been contended by opponents of the measure that its enforcement would be objectionable. For instance, it has been alleged that, should this Bill be carried, it would result in serious inconvenience to contractors on government public works now under contract, as said contractors could no longer expect a ten-hour day on the part of their men, but only an eight-hour day. They would thus find themselves in a disadvantageous position, since they would get only eight hours' work for ten hours' pay. That may be so, but let me say that there are precedents to legislation of this kind, and I have no hestitation in saving that to my mind this is a desirable change.

We have in the civil service, for instance, men whose work is pretty much, if not entirely, the same as that carried on by men engaged in commercial and industrial pursuits; nevertheless, we find that their hours of work are different, that their day's work is much shorter than in the case of people doing such outside work. Now, who thinks of complaining of this? Nobody, to my knowledge. True, the government official may be called upon to do more work, to show greater efficiency, to expend greater energy, to bring greater powers to bear on his work, and that may justify the requirement of shorter hours from him. We are satisfied with shorter hours from our government officials, but we require from them greater concentration of the mind and more rapid work.

Now, I think that this precedent to be found in the management of the various departments, might well have its counterpart in manual occupations. For I understand that the hon. member for Maisonneuve (Mr. Verville) voices here the views of the working classes in general, of men in all the various trades and handicrafts. Considering that an exception is made in favour of the civil servant, why should not a similar measure of relief be extended to that class of people who, while getting a living through what is actually manual labour, are performing duties quite similar to those of some public servants. As a matter of fact, I take it that there is a close connection between the mental work carried on in various departments, and the manual labour effected on behalf of those same departments.

I understand that this Bill is not taken exception to on strictly technical grounds; at any rate, I am not aware of any contention to that effect. Now, is such legislation desirable? That is a moot question under many skies. Experiments have been made and in some cases have turned out favourably, as stated by the honourable member who preceded me. Why should we not undertake ourselves some such tests? I stated a precedent, there are others. It is known that the men in the service of the Department of Marine at Quebec work nine hours a day in summer and eight hours in winter. Of course, there is a cut in the wages in winter time. That is a practical application of the system advocated by the hon. member for Maisonneuve. In all business and industrial establishments in Quebec, the working hours are from seven or eight o'clock in the morning to five or six o'clock in the evening. However, in the government workshops the men work eight hours only, and nobody finds fault with the practice. So, I am satisfied that, if no exception can be taken on technical grounds to the stand of the hon. member for Maisonneuve, the government should put his system to a practical test with a view of drawing conclusions. Several hon. members who have spoken previously against this proposal, are to my mind more anxious to forward the interests of employers rather than those of the working men. Fundamentally, it is always the same story; the unceasing struggle going on between labour and capital, between the employed and the employer. There are certain views which are held tenaciously by the employer and which the latter strives to uphold. But there is also the viewpoint of the workingman, which he is equally entitled to hold, and

which his representatives in this House are in duty bound to protect as far as possible.

I am satisfied this Bill does not contain a single provision inimical to the public interest, on the other hand, it extends relief to a numerous class of our people. Besides, I am satisfied that the hon. member for Maisonneuve when vindicating in this House the rights of labour, is in complete sympathy with the labouring classes. I know that he is a member of some powerful labour associations, he having been for some time one of their most prominent and active officers, and when he raises his voice in this House it is their sentiments he expresses, he is the true exponent of the views of labour.

Now, one more consideration should not be lost sight of. As we are aware, laws should not have for their object to safeguard the interests of one class exclusively, and I believe that legislation as it is makes rather for the protection of employers. Some attention should be given to the working classes. Should we not do something towards relieving them from over-exertion, and too much misery, should we not strive to improve their moral and physical conditions? Such is the view which I take, and I object to the dilatory proposal made by the hon. member for South Wellington (Mr. Guthrie), who suggests the opening of a protected investigation, the effect of which would be the postponement of the settlement of this question if not indefinitely, at least to such a date when likely all of us would have disappeared from parliament before having been given in the meantime an opportunty to vote on the question. By referring the Bill to the Committee of the Whole the object we have in view will be attained. There shall we consider it, and subject it to a fair criticism, sufficient at any rate to enlighten the government and justify them in trying an experiment which shall give results of an instructive character. It will always be an easy matter to change the law if experience shows that it is in opposition to public interest. However, as already stated, that experiment has been tried in one department, I mean in the Department of Marine at Quebec, where the men are required to work only eight hours per day at certain seasons, and that experiment has given satisfactory results. They are of a nature to induce us to vote in favour of this Bill, and accordingly lay down as a rule that men employed in public works shall not be required to put in more than eight hours work a day. That is, to my mind, what should be done.

Mr. E. N. RHODES (Cumberland). I have given more or less attention to the subject of an eight hour day, even before I became a member of this House, and the result of my reading, together with direct experience of the conditions of labour, have led me into a position of absolute sympathy with the movement of the labour men to secure what is known as a uniform eight hour day. I approve of the principle of an eight hour day, and of the movement which has been inaugurated by organized labour in this and other countries to secure an eight hour day. The objections that have been offered to this measure to-day have been largely technical, legal objections. The hon. member for South Wellington (Mr. Guthrie), while in favour of an eight hour day on government buildings alone, is not in favour of this measure, because he says it goes too far. He, in common with many other hon. gentlemen, go upon the assumption that an eight hour day would mean that you would only get eight-tenths as much work in a given space of time. I think hon. gentlemen forget the fact that for years this eight hour day has been in force in various countries. They have it in British Columbia; in Victoria the eight hour day is practically universal. I have in my hand a very excellent work entitled 'Eight hours for work,' written by Mr. John Rae, M.A., published by MacMillan and Company, and I think this is the work from which the hon. member for Maisonneuve (Mr. Verville) obtained the material for his speech last session. At the end of the book, I find a chapter entitled 'The eight hour day in Victoria,' and the author quotes figures tending to show the effect of the introduction of the eight hour day there. If the House will permit me, I would like to read two short extracts showing the effect of such a day in operation in Victoria. Speaking from the figures, he says:

> They show the utter folly of the assumption, so much pressed by the more ignorant advocates of an Eight-hours Bill, that the shortening of the day of labour has the necessary, certain, and uniform effect of abolishing the unemployed.
>
> On the whole the reduction of the working day to eight hours has had no very sensible influence on the numbers of the unemployed in Victoria any more than on the rate of wages, and both these circumstances point to the conclusion, to which other and more direct evidence also conducts, that shortening the day has exercised but very inconsiderable effect on the amount of the workmen's production. A shortening of hours has always two immediate effects—it improves the mettle of the masters, and it improves the mettle of the men. The masters set themselves at once to practise economics of various sorts, to make more efficient arrangements of the work, to introduce better machinery or to speed the old, to try the double shift and other expedients to maintain and even augment the production of their works. The men return to their toil in better heart after their ampler rest, reinvigorated both in nerve and muscle, and make up in the result sometimes in part,

sometimes wholly, by the intensity of their labour for the loss of its duration. Victorian experience shows the recoupment almost completely.

One other short paragraph, showing his conclusion as to the effect of the eight hour day in Victoria:

Altogether, the more we examine the subject the more irresistibly is the impression borne in from all sides that there is growing up in Australia, and very largely in consequence of the eight-hours day, a working class which for general morale, intelligence, and industrial efficiency is probably already superior to that of any other branch of our Anglo-Saxon race, and for happiness, cheerfulness, and all-round comfort of life has never had its equal in the world before. For all this advantage, moreover, nobody seems to be a shilling the worse. It is truly remarkable how immaterial apparently has been the cost of the eight-hours day in Victoria. Look for the effects of it where you will, they still ever elude your observation. Wages have not fallen, wages have not risen, production has not fallen except in certain trifling cases; prices have not risen except again in certain trifling instances; trade has not suffered, profits have not dwindled (or we should have heard croaking), the unemployed have not vanished, not so much as shrunk in any perceptible degree ; the working classes—the great body of the nation—have an hour more to call their own, that is all.

Now, I may say that organized labour has gone to the various provincial legislatures in this country asking for an eight hour day within the province, and they are invariably met with the reply: We cannot enact an eight hour day for this province, because our employers would be compelled to produce goods under an eight hour day in competition with the employers of other provinces who work under a ten hour day ; and for that reason we cannot grant your demand; were, however, all the other provinces to enact an eight hour day, we would be very happy to grant your demand. The represeentative of organized labour comes to the House of Commons and presents a Bill. Unfortunately, owing to the limitations imposed upon this House by the British North America Act, we are not able to enact a comprehensive measure, and, therefore, we say to the representative of organized labour: You must go back to the provincial legislatures, there is the place to get your legislation. I may say that so far as this Bill is concerned, even if it had the effect which the interpretation placed upon it by the hon. member for South Toronto (Mr. Macdonell) would produce, I am prepared to vote for it. I believe if that measure were adopted this country would be not one whit worse off economically; while the introduction of an eight hour day throughout the Dominion of Canada would have the effect of bringing up a class of labouring men such as those described by this author in Australia. So strongly do I favour this measure that, in spite of the objections that have been urged against it, I shall be pleased to vote for it as it stands.

Mr. C. A. MAGRATH (Medicine Hat). I have no intention to take up the time of the House in speaking on this measure. I was not present last session when the Bill was discussed; I was not approached in any way for or against it at that time. There is a principle, however, involved in this Bill that we must face, we cannot evade it. I listened to the remarks of the hon. member for Kootenay (Mr. Goodeve) and was pleased to hear what he had to say. I endorse what he said; I am a supporter of the principle underlying this Bill and am prepared to vote for it. It is a question we have got to face in this country, and the sooner we deal with it in a fair and honourable way the better it will be for the country. There are two features connected with it that appeal to me. We hear much said about the conservation of our natural resources in this country, but the conservation of health is one of the most important things to which we can devote our attention, and this Bill affects health. It also has a bearing on the question of the unemployed. It may effect the profits of some of our industrial concerns, but as between the conservation of health and the diminution of unemployment on the one side and maintaining the profits of capitalists on the other side, I am in favour of it, of looking after the interests of the workingmen, and allowing a few dividends to be diminished.

Mr. SPROULE. I made a few observations on this Bill when it was discussed before the House last time, and I wish to repeat them, or some of them now. Looking over the Bill, as far as my judgment enables me to determine, it is quite impracticable. It is a Bill which never could be put into operation without any amount of trouble as the result. Under a portion of the Bill, any institution that was turning out goods which it had contracted to supply the government would be compelled to grant its men an eight hour day. The Bill aims at that, it seems to me, if it aims at anything. If that be the case, it appears to me that it would bring about no end of trouble. But there is another reason why I oppose it. While I think that in many avocations of life eight hours a day is ample, and more than enough, for any labourer to work, in other lines he can work eight, nine or ten hours, and neither do himself any injustice nor his health any injury. In mining, when a man has to go under ground, eight hours is a fairly long day, but if you are working out in the open

air where you have conditions of a health-giving nature, open air and good surroundings, and working at an occupation which is not too severe, a ten-hour day is not an unreasonably long day, and I think there is no injustice done either to the individual or to his physical or mental vigour in expecting him to work that length of day. If all could obtain a living by doing the same thing, that is, work eight hours a day, it might strengthen the argument that you should only allow men to work eight hours a day. But, the strain of life is so great and the demands upon the resources of one's labour so exacting that many are obliged to work ten, eleven or twelve hours a day in order to supply themselves and those dependent upon them with the necessaries of life. Suppose that these people were engaged on government work, you would say to them that they shall not be allowed to earn what they could, or what their physical powers would enable them to earn, or what the demands upon their resources would require them to earn. Therefore, they must stint themselves in some lines because of the effect of this Bill. I say it is wrong. Then, there is another feature of it. If you bring the provisions of this Bill into operation in regard to public works, what will be the result? Go to the city of Toronto, or to the town of Collingwood, if you like, and there are public works going on; maybe there is a post office or a customs house going up, harbour works going on, or perhaps there is an armoury being built. Labouring men who can get employment on these government works, receive, say $2 a day, and work for only eight hours a day on one of these pubilc work will not labour in any other line in these places, refuse to work 10 hours a day. Therefore you make it almost impossible for men in other lines of life to get labour and have the labourers work the reasonable number of hours which is supposed to bring a fair return to the contractor. They cannot get men. You can go farther. You can go to the farming community around these places. You cannot employ labourers to go out and work on the farm ten and sometimes eleven or twelve hours a day and accept the same wages as the man who is only working 8 hours a day; or if you can get labourers to take the wages they will only want to work eight hours a day. I know that it is very troublesome for the farmers around our towns and villages, where there are factories with shorter hours of labour and paying equally as high wages, to obtain labourers. But, there is another phase of the question which has attracted my attention several times. The agricultural classes of this country represent about fifty per cent of the whole population. There are about 3,500,000 people depending upon agricultural pursuits for their sustenance and they are obliged to work long hours. No man can successfully run a farm if he is only working eight hours a day. It has been said that they may work longer during the busy season but that most of the time they can take it easy. The up-to-date enterprising farmer is just as busy with his work every day in the year as he is during harvest and haying. He is always overcrowded with work instead of having too little to do. Therefore, he is obliged to work long hours. He cannot pretend to run his farm and work only eight hours a day. There are farmers who are obliged to work twelve, thirteen, fourteen, fifteen or even sixteen hours a day during the busy season of seeding, haying and harvest. I have known them to do that over and over again and for what? —to pay for the implements that are made in the factory where, if this Bill becomes law, the men who make these implements will work only eight hours a day. It is an injustice to the farmer. It is unfair, unreasonable and improper, and it will strike at the great agricultural class just as much as it will at any other class of the community. The factories that are turning out threshing machines, binders, reapers, mowers, seeders, and all such agricultural implements will be obliged to give an eight hour day just as soon as this Bill passes. But the farmer cannot have an eight hour day because he is obliged to work longer hours. He has, therefore, to contend with the difficulty that he meets in the hiring of labour, and he is also confronted with the difficulty that he is obliged himself to work very long hours to pay for the productions of men who do not work as many hours in the day as he does. The farmer cannot get men to work for him to-day.

I admit, speaking from the standpoint of medical observation and examination, that there are those who advocate what is called the ideal division of time. What is that?—that humanity shall labour eight hours, sleep eight hours and have eight hours for rest and recreation during the 24 hours of the day and night. Three times eight make twenty-four hours the length of the day. That is an ideal division of time, but where, in any capacity of life, can that ideal division of time be carried out? Is it not the fact that the conditions we have to contend with in our individual capacities and our environment determine the number of hours during which we are compelled to work? There is such a great demand upon the production of our labour or what we make out of our labour, in one case than in another. Therefore, we are obliged to work longer hours to supply that demand or else those dependent upon us will suffer. So you find that in the various lines of work many are obliged to work longer hours to support them-

selves and their families, and if they were not permitted to do this they would suffer in consequence. The hon. member for Kootenay said that they had tried the eight hour day system in British Columbia and that while people predicted trouble from it the system was working all right now. Well, I was in British Columbia immediately after that law came into force and in every mining district I visited I was told that mining operations were literally paralyzed by it. For two years after its passage the mining operations of that country were a failure and many engaged in the industry had to go out of business. That is bound to be the case until an adjustment takes place between what is paid a man working eight hours this year and what was paid the same man working ten hours the year before. I say you cannot establish to the mind of any intelligent man that a working man will do as much in eight hours as he will do in a ten hour day. Of course I recognize that a man may work 10 hours in one kind of labour and not be overworked while in other branches a man may work only eight hours and be overworked, if you are going to try to even it up by a levelling system of eight hours a day you are certainly bound to do an injustice to some classes of labour. There are employers of labour in this country who themselves are obliged to work more than eight hours a day and more than 10 hours a day, and if he expects his employees to do as he is doing he is inflicting no injustice upon them. Now, we are apt to be too much afraid to deal with a question of this kind as we think it ought to be dealt with for fear it will work mischief against us when we come before our electors. I like to see a man with enough moral courage to do what he conscientiously believes to be right regardless of consequences. I believe that the men who are supporting this Bill are supporting it from conscientious convictions, but I believe also that if many hon. gentlemen expressed their opinion of this measure as freely as they do on other measures there would be very strong argument advanced against this Bill.

Hon. MACKENZIE KING (Minister of Labour). I am sure that the workingman of this country owe a debt of gratitude to the hon. member (Mr. Verville) for having brought to the attention of this House a Bill which has occasioned such an interesting discussion on this important subject. The Bill is entitled 'An Act respecting hours of labour on public works,' but the discussion has been almost entirely on the broad question of the hours of labour generally. And so far as that broad question is concerned I have no doubt we all feel that anything that can be done towards shortening the hours of toil for the great masses who labour, will be of advantage not only to the working classes themselves but to the whole community. I cannot agree with the hon. member for Frontenac in his contention that men cannot produce such effective work by working shorter hours as they can by working excessive hours. The hon. gentleman carried his argument to an extreme when he said that if the reduction of the hours of labour were carried down to the last point it would mean that there would be no work done at all. Well, you can take the reverse of that argument and you can as well contend that if you extend the hours of labour beyond the endurance point, the workingman could not accomplish anything at all because of bodily fatigue. In these days when industrial processes are carried on by great natural powers, by electricity, by water, by steam, the intensity of labour has become tremendously heightened. And, in considering the question of shortening the hours of labour we must bear in mind not only the duration of labour but the intensity of labour as well. One hour's work on a machine that is going at high speed may take more out of a man than six hours at an occupation where his energies are not taxed to the same strenuous extent. I think I may safely say that the whole history of labour legislation in respect to shortening the hours of labour bears out the view that on the whole the shortening of the hours has been of immense benefit not only to the working people but to the industries themselves.

This question of shortening the hours of labour is primarily for the consideration of the provincial legislatures which have within their jurisdiction the enactment of laws respecting the hours of labour, the factory laws, the laws respecting mines, and cognate subjects; but, the discussion of the subject in this parliament is bound to be reflected in future legislation by the provinces and the general expression of opinion in this chamber that the shortening of the hours of labour is a good thing in itself will, we may hope, bear fruit. It has been pointed out that this Bill purports to do one thing, when in fact it does another. That is entitled 'An Act respecting the hours of labour on public works,' but that it goes further and deals with every conceivable kind of contract in which the government of Canada can be concerned. It is well that the House should understand that clearly before it pronounces on the measure. I believe myself that while the measure is intended by the hon. member (Mr. Verville) to relate only to public works, as a matter of fact it goes very much further than he intended. So far as this question has a bearing upon ameliorating the ordinary everyday life of the working people I submit that we should

in this parliament, so far as we have the power—and we have certain powers in regard to contracts let by the government—we should do all that we can to further that end. I believe in the principle that the machine should be the slave of man and not man the slave of the machine; I believe that a man should have not merely an opportunity to live but that he should have an opportunity to live happily; and that he cannot have if he is oppressed by excessive hours of labour. We were told by the hon. member for Cumberland (Mr. Rhodes) that even if this measure had the effect which the hon. member for Toronto (Mr. Macdonell) said it had, he was prepared to vote for it. Now, the hon. member for Toronto (Mr. Macdonell) said that the measure was altogether impossible and therefore the position of the hon. member for Cumberland amounts to this, that he is prepared to vote for a measure which is altogether impossible. Well, Sir, I am not prepared to vote for any measure of that kind. I do not believe in trying to humbug the working people of this country.

Mr. RHODES. I rise to a question of privilege. I said nothing which could by any stretch of imagination be considered as humbugging the labouring men of this country, and I object to that language coming from the minister. I mean to stand by every word I said in this House with respect to this measure. What I meant was that if this measure has the effect of causing the eight hour day to be introduced generally, then I am heartily in favour of it, because I believe in the eight hour day as a matter of principle.

Mr. KING. I am just taking the hon. gentleman's words as I put them down, and as I think a reference to 'Hansard' will show that he gave them. The words were: 'Even if this measure has the effect which the hon. member for South Toronto says it will have, I am prepared to vote for it.' Every hon. member knows that the hon. member for South Toronto said that the Bill was altogether impossible.

Mr. MEIGHEN. The hon. member for South Toronto, in describing the measure as impossible, described its effect. Referring to the effect of the Bill, he said that it extended to cases where men had contracted to supply goods to the government. The hon. member for Cumberland (Mr. Rhodes) referred to the effect, not the characterization of the Bill.

Mr. KING. I am quite prepared to leave it to the House to decide what the hon. member for South Toronto meant when he referred to the Bill as altogether impossible. The impression which I certainly got, not only from that particular remark, but from the whole tenor of his speech, was that he, like myself, was prepared to support a measure which would really do something effective, but that he was not prepared to stand up in this parliament and say that he would support any measure when in his heart of hearts he felt that it would really do no good to the people on whose behalf it was proposed. And, in view of what has been said this afternoon, I feel that we cannot consider too carefully the question as to whether this measure is likely to do what the hon. gentleman who has introduced it hopes that it may do.

In so far as the Bill relates to the hours of labour on public works, I would like to point out that this government has already taken considerable steps towards meeting the object which the promoter of this Bill has in view. In 1900, the Hon. Mr. Mulock, now Sir Wm. Mulock, introduced into this House a resolution in favour of the payment of fair rates of wages to working men engaged on public works and the enforcing of the hours of labour current in the district where the work is carried on. Since that time the government has endeavoured to see that that resolution has been faithfully and fully carried out; and in all its contracts the government has caused to be inserted a clause requiring the contractor to pay fair rates of wages and to give the workingmen employed by him the hours of labour current in the district where the work is carried on. The government has not relied simply on the safeguard of a general provision of this kind, but has appointed special officers, known as fair-wage officers, whose duty has been to go to the locality where any public work is to be carried on and prepare in advance a schedule of rates of wages and hours of labour, to which the contractor is required to agree before the contract is awarded.

Mr. HUGHES. May I ask if that is the case on all public works of the government?

Mr. KING. I understand that it is.

Mr HUGHES. Quite the contrary. I can give you the cases. For instance, right in the town of Lindsay, on the government work of building the locks there, the men are not paid even the ordinary street wages.

Mr. KING. If that is the case, I am unable to understand how the representative of that district has allowed that condition of affairs to go on and never brought it to the attention of the government.

Mr. HUGHES. I will answer the hon. gentleman when he is through.

Mr. KING. Every member of this House knows, or ought to know, that that resolution was passed, and every member of this House knows, or ought to know, that it is part of his duty to his constituents to see that if a resolution passed by this House is

not being carried out, the department which is responsible for the work shall be notified and be given the opportunity of looking into the matter; and I say, without fear of contradiction, that during the 8 years that I was deputy minister of the department and the short time that I have been privileged to be the Minister of the Department, no case has been brought to the attention of the department of alleged non-observance of this resotion which has not yet been fairly and fully investigated. I would ask hon. gentlemen to look at the annual report of the Department of Labour as presented to this House, in which, at page 132, they will find a statistical table of fair wage schedules prepared by the Department of Labour for departments of the government during the period from July, 1900, to March, 1907, inclusive. In that table they will find that the Department of Labour prepared during that period a total of 1,477 fair-wage schedules which have been inserted in contracts awarded by this government from the Atlantic to the Pacific. The total number prepared altogether is much larger than this. These schedules have not only been inserted in the contracts, but have been published in the 'Labour Gazette', so that the workingmen on whose behalf they have been inserted in the contracts would have an opportunity of seeing them and making sure that they were being paid the rates of wages specified. There have been some cases of contractors failing to pay the rates of wages which the schedules call for, and in all such cases which has been brought to the attention of the department the contractors have been obliged to pay the difference to the men. The difference has been deducted in the first instance by the department which awarded the contract, and has been paid to the men. So that the government has not been neglectful of the purpose which the hon. mover of this Bill has in mind. But to take the step which he suggests is to go a good way beyond what up to the present time has been thought by this House to be advisable.

The Bill as introduced suggests no regard for existing conditions in any industry unless those conditions happen to be such that the eight hour day is already in force. Before a step of the kind proposed is taken, I think it would be well for this House to be fully informed as to its effect. I fear that if this Bill were passed in its present form, it would give rise to a good many serious complications. The hon. member for North Grey asked the hon. mover of the Bill whether in cases in which workingmen were to-day working 10 hours for a certain wage, if this Bill became law, they would be prepared to work eight hours for eight hours pay or would want 10 hours pay for eight hours work. The reply of the hon. mover of the Bill was that it was up to the employer to say what he would pay and up to the men to see what they could get. I do not agree with my hon. friend. It is up to this House to tell all parties concerned what an Act of this kind means when it is on the statute-book, and to leave no doubts in any man's mind as to what his privileges or his restrictions are under it. For that reason, if for no other, I think it is desirable that the House should have fuller information than it has at present on a measure which is likely to give rise to such serious complications. In the building trade there are a large number of men who have agreements with their employers. These agreements have been the result of negotiations during a long series of years. They have been effected in many instances, only after serious strikes or lock-outs, and they represent understandings between the employers and the men as to the conditions of employment. Some of these agreements are for three years, some for five years and some for other terms, and it seems to me that the effect of this measure upon agreements of that kind is another feature which should receive our most serious attention before we take any final action. If, for instance, one of its effects would be that contractors would say to their workingmen: We do not wish to enter into an agreement with you, because we may have to change its terms in virtue of this legislation—if that would be one of its effects, it would be most unfortunate indeed. I do not say that such a consequence would necessarily follow, but I think that, on behalf of the workingmen themselves, that contingency should be clearly understood.

It seems to me desirable also that this House should know the extent to which the eight hour or nine hour or ten hour day is already in existence in different parts of the country. I have here a document which contains a mass of information on that subject, prepared by one of the fair wage officers of the Department of Labour. It gives a record of the hours of labour in the building trades and the different other trades in Canada; and I find that in almost every part of the country, there is a difference in the hours of labour, as compared with other localities, depending largely on the circumstances of the locality or of the particular province in which the work is being carried on. In some cases these differences are the result of climatic or other considerations. In some districts men work a shorter day because they can work the whole year round, and in others they work a longer day because they have not the same opportunity throughout the whole year to carry on their calling. Therefore before enacting legislation to determine arbitrarily the hours of work, we should give the men who are to be affected an oppor-

tunity of expressing their views. Under the circumstances, having regard to the desire of the hon. gentleman himself (Mr. Verville), that this Bill be not sent to the cemetery, as has been the fate of other measures, the best thing we can do is to refer it to a special committee of this House, before which all parties concerned will have an opportunity of being heard. I would suggest therefore to my hon. friend that he should consider the advisability of having this Bill referred to a select committee, and I would suggest this not that the Bill may be side-tracked in any way but, to use the words of my hon. friend, in order to save it from going to the cemetery, as I fear it would, should a vote be taken now, judging by the discussion we have had.

Let me give another reason or two why I think it desirable that this measure should be referred to a special committee. My hon. friend from South Toronto (Mr. Macdonell) has spoken about legislation in the United States upon this subject, and he had in his hand a report of one of the select committees of the American House of Representatives. But that is only one of a half a dozen select committees which have dealt with similar measures across the line. As far back as 1862, the government of the United States enacted a measure very similar to the one now proposed, but what was the effect of that legislation? Whatever may have been the reasons which promoted Congress to pass it, this at least was the effect. Year after year the workingmen were continually representing to Congress that the measure was meaningless and useless, and session after session Congress appointed select committees to find out why it was impossible to make the measure what Congress hoped it would be. We would do well to profit by their experience. It would be well to have the reports of the different committees appointed by Congress laid before a special committee of this House so that they might be considered. I might point out further that in Nova Scotia there is at present a commission inquiring into a number of questions affecting the working classes. One is the question of the eight hour day, and it would be very much to the advantage of this House to have the finding of that commission on that subject. Further I think it would be an advantage to the House to have the opportunity of ascertaining what the fair wage officers of the department who have been preparing these schedules during the past eight or ten years, think would be the effect of a measure of this kind. For these reasons I hope my hon. friend will not press this measure but will agree to have it referred to a select committee, in order that all parties, both workingmen and employers, may have the opportunity of being heard, and in order that this House may have a further opportunity of doing something on behalf of the workingman in whose interests we are invited to legislate.

Mr. SAM. HUGHES (Victoria). By the courtesy of my hon. friend from Cape Breton (Mr. Maddin) and inasmuch as I shall not be able to be present for some time after eight o'clock, I would ask to be given the opportunity of making a reply to the question of the hon. member for North Waterloo (Mr. King) as to why the member for the district (Victoria and Haliburton) did not report this matter. I might point out to him that the member for the district is not one of his fair wage officers and is not in the pay of the Labour Department, thank Heaven. I might also point out to him that the member for the locality did draw the attention of the House and of the Minister of Labour to the matter last year—not that I objected to it in any sense whatever, because I do not believe in this doctrine of putting that clause in these contracts. On the contrary, I think that a contractor should be at liberty to get his labour at whatever price he can and engage that labour for periods depending on the duties to be performed. But what had these fair wage officers of the hon. gentleman done for the labouring men? A young gentleman has been put at the head of the Labour Department, promoted over the stalwarts of the party who have been doing its work for years—and I am sure the Finance Minister will agree with me in that statement—and I want to point out an insignificant circumstance in connection with this department of his. There was a labour organization in the town I represent, (Lindsay), which became defunct. There were considerable funds in the treasury when it broke up, and under its constitution the officers of that association were empowered to dispose of these funds on following out a certain well disposed procedure. Were they permitted to do so? Oh, no. A gentleman by the name of O'Donoghue—possibly known to the Minister of Labour—appeared on the scene and undertook to take charge. And into whose hands did he seek to put the disposal of these funds? Into the hands of that horny handed son of toil Senator McHugh.

Mr. KING. May I ask the hon. gentleman to which O'Donoghue he refers?

Mr. HUGHES. I think there is only one.

Mr. KING. Does the hon. member mean——

Mr. HUGHES. I mean the O'Donoghue. I mean the gentleman who, in season and out of season, has been making himself the tool of the Department of Labour for the benefit of the Liberal party; who grinds axes for that party up and down the country wherever he can. This gentleman appears on the scene. And to whom did he

entrust the disposal of this fund? Why, to that horny-handed son of toil, Senator McHugh.

Mr. KING. I would point out to the hon. member that Mr. O'Donoghue has nothing to do with the Department of Labour.

Mr. J. W. MADDIN (South Cape Breton). I am in favour of the principle of an eight hour day for the labouring classes. But I would like to point out that while the Bill now before us, on its face and by its title, purports to be an Act respecting the hours of labour on public works, it is an entirely different measure in its effect. The first section of this Bill reads:

> Every contract to which the government of Canada is a party, which may involve the employment of labourers, workmen or mechanics, shall contain a stipulation that no labourer, workman or mechanic in the employ of the contractor or subcontractor, or other person doing or contracting to do the whole or a part of the work contemplated by the contract, shall be permitted or required to work more than eight hours in any one calendar day——

And so on. It was pointed out by the hon. member for South Wellington (Mr. Guthrie) that this Bill was likely to bring about the anomaly of some men in a workshop employed on government work working for eight hours a day while others in the same shop would be working for ten hours, and this, he said, might breed discontent. I cannot see, from a reading of the Bill, that such a condition could possibly arise. Under the Bill as I read it, the government contractor is not allowed to employ any one, whether on government work or any other work, for a period of more than eight hours in the twenty-four. The Bill does not restrict the hours of labour to eight for those in the employ of the contractors who are on government work, but it says that 'no labourer . . . . in the employ of the contractor or sub-contractor' shall be so employed. If after the word 'sub-contractor' were added 'on the contract' one could understand that this Bill aimed at making the eight hours applicable to work done on the government contract. But as the Bill stands now, this case might arise: In some great industrial establishments, say a steel works, if the owner entered into a contract to furnish steel rails to the government, then, under this Bill, he could not employ his coachman, or the help round his own home, for more than eight hours a day. It seems to me that, as it stands at present, the Bill is impracticable. Let me point out for a moment the effect it would have, for instance, in the case of a certain industry in the riding which I have the honour to represent. We have there the works of the Dominion Iron and Steel Company which owns a line of steamships which carry iron ore from Wabana and dolomite and limestone from Bras d'Or Lakes. If this Bill were in force, and the Dominion government should buy some steel rails from the Dominion Iron and Steel Company—they bought $29,000 last year—then when one of the company's boats left Wabana for the port of Sydney with a cargo of iron ore, at the conclusion of an eight hour day they would have to drop anchor or seek the shelter of a port till next morning; or, a vessel coming from Marble Mountain with a cargo of dolomite would be obliged to do the same thing. Thus the Bill is impracticable to the employer and impracticable to the employed. I submit that the hon. member for Maisonneuve (Mr. Verville) might well act on the suggestion offered by the hon. member for South Toronto (Mr. Macdonell) and have this Bill referred to a committee with power to alter it and have it made practicable in operation.

Now, with regard to the general principle of an eight hour day, I wish to take issue with my hon. friend from East Grey (Mr. Sproule) who says that it is ridiculous, preposterous, and declares that it cannot be successfully demonstrated to him that a man can accomplish as much work in eight hours as in ten. I may say to the hon. member that the product is not the result alone of the time devoted to the labour but also of the skill and the vitality put into it by the workman. For instance, in the coal mines of Nova Scotia within recent years, they have introduced coal-mining machines which are worked by compressed air at a very high pressure. The air is taken in from the reservoirs at the pit bottom at about 900 pounds pressure to the square inch. It is conducted through the mines and used on these machines. A man is stretched out on his stomach at full length, grasping the handles of this powerful machine, weighing, perhaps, nine hundred or a thousand or even twelve hundred pounds, working, as I have said, at heavy pressure and pounding with a pick on the working face. There is a recoil that shakes and vibrates every part of the anatomy of the man operating the machine. It has been stated on apparently good authority that a man's working life devoted to the operating of such machinery, even at eight hours per day, is only five or six years on the average. People of high-strung, nervous dispositions operating machinery of this kind would break down more quickly than those less nervously constituted.

Mr. SPROULE. May I ask the hon. member: Is not that exactly what I said? In some lines of life eight hours would be a long day, but in others it would not be a long day.

Mr. MADDIN. That is what the hon. member for East Grey (Mr. Sproule) said at one point of his remarks. But he said

also that no man could convince him that the same amount of work could be accomplished in eight hours as in ten.

Mr. SPROULE. In ordinary lines of work—and I still stick to it.

Mr. MADDIN. However, the research of those who have devoted attention to this matter has led to conclusions on the subject. It has been stated by some manufacturers that they thought it was the last hour that gave them their profit, but they have discovered that it was the last hour that registered their loss—that their workmen had lost the vim and vitality with which they had pursued their labours earlier in the day, and that the last hour was carried on at a loss which seriously interfered with the profits of the employer. There is one instance which I will recommend to the hon. member for East Grey. The Messrs. Holden, of Bradford, England, the largest wool combers in the world, who have mills in France running 72 hours a week and mills in England running 56 hours a week, find that they can comb wool more cheaply in England than in France, though they pay higher wages for the short day in England than for the long day in France, and employ exactly the same machinery in both cases.

As pointed out by the Minister of Labour, this question is not a new one, it has been discussed from time to time in various countries throughout the civilized world. I was surprised to hear the Minister of Labour say that this was a matter upon which the House had very little information, and that consequently the House was not in a position to deal intelligently with it. Why, Sir, it is only the other day, in discussing the resolution on technical education, that the Minister of Labour pointed out that his department had taken the greatest care to gather statistics and data with regard to technical education, and that he had at his fingers end this data. I submit that, familiar as he is with the history of the eight hour question from 1862 in the United States, and for the last ten years since he has been Deputy Minister of Labour in Canada, with the knowledge that this proposed legislation was first introduced into this House on the 11th of December, 1906, almost three years ago to-day. One would have thought that his department would have the necessary information to enable this House to deal intelligently with the subject. The subject has been agitated by labour organizations throughout this country for the last thirty years, and by labour bodies in a very active manner within the last ten or fifteen years. It is a matter with which the Department of Labour should be quite familiar, especially in view of the fact that they have had such ample notice.

Now, Mr. Speaker, let me point out that the government has introduced in public contracts a fair wages schedule insisting that the hours of labour on government contracts shall be those current at the place of employment, and this was granted at the request of organized labour. Now, it is not sufficient for this government to say, when labour asks for an eight hour day: Oh, never mind that, we will think it over, and we will gather information; we gave you a fair wages schedule and insisted on current hours of labour under government contracts. Why, Mr. Speaker, what contractor could hope to obtain anything else but current hours of labour under his contract? If a contractor undertakes to erect a public work at Vancouver or at Sydney, can he hope to obtain any other than the current hours of labour at Vancouver or at Sydney, and would it not follow that those would naturally be the hours of labour, whether they were embodied in the government contract or not? The same with regard to a fair wages schedule. The wages that obtain in Victoria and obtain in Sydney are well known to the trades in those places, and contractors seeking for workingmen in those places will find it difficult to get such labour at a lesser schedule, even if there were no fair wages schedule in government contracts.

With regard to the applicability of this Bill in its present form, I do not feel like supporting it in all its details. It seems to me, Mr. Speaker, that from the point of view of that part of Nova Scotia from which I come, it would not be in the best interests of labour, nor would it be in the best interests of the industries there to adopt this Bill in its present form. This government bought from the different coal mines of Nova Scotia last year, for the use of the Intercolonial alone, coal to the value of nearly $1,750,000. I must say that whilst practically an eight hour day obtains amongst the miners of that province who are employed at the working face, it would be impracticable, almost physically impossible, for any of the coal mining companies in Nova Scotia to furnish coal to the government under the provisions of section 1 of this Bill as it stands at present.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. MADDIN. Some reference was made during the course of this debate to the suggestion that this Bill savoured of class legislation, that it was unfair to the farmer who was obliged to work very long hours. My hon. friend from East Grey (Mr. Sproule) took occasion to say that farmers, to his knowledge worked twelve, fourteen and sixteen hours per day. That will be con-

ceded by any one familiar with the duties of the farmers, but when it is borne in mind that the farmer is not thusly engaged every working day in the year, one will at once note an important difference. During wet weather, whilst a good many of the farmers find employment indoors for most of their time, there is nothing to prevent, and nothing does prevent large numbers of farmers from folding their arms, sitting at the window, and looking out upon their broad acres while they are making from $20 to $50 a day. Then again, during the winter months, after the farmer has harvested the products of the soil and has laid away for himself a caddy of Macdonald's tobacco, a chest of tea and other things necessary for a severe winter, he is in an entirely different position from the man who is at the beck and call of his master for ten hours during every working day throughout the whole year. Furthermore, the farmer is his own master and on such days as he does not feel like working, or is ill, he may either work for a short time or lie off at his own discretion for the rest of the day. His crops require to be harvested and of necessity they must be got in immediately, but during the intervals between seed time and harvest and harvest and seed time he has ample time to recuperate and ample leisure for all the purposes of an ordinary man's life.

This legislation is altogether experimental in so far as this Bill is concerned. It is proposed by the Bill to have an eight hour day applied to work on government contracts. This, I submit is an experimental piece of legislation which should be undertaken by the government. Whether or not it would be wise for this country to introduce this legislation generally is a matter which inquiry would reveal. But the experiment has been tried in other countries and has been found to be successful. There are objections raised to it but whether these objections are of such a substantial character as would warrant this government in turning down legislation of this kind remains to be seen. The question may be raised as to how this measure would affect competition in certain classes of manufactured goods. A manufacturer, for instance, says: I cannot manufacture these goods on the basis of an eight hour day because my competitors across the line in the United States, or in Germany, France or Switzerland, are employing people for twelve, fourteen and sixteen hours a day and in some of the markets that compete with my products the same manufacturers would have to submit to no regulations in regard to child labour or the labour of women and it would therefore be unfair to compel the manufacturer in this country to compete on an eight hour day basis if his competitors in other countries enjoyed a longer working day and employed a cheaper class of labour. However, Mr. Speaker, that is a matter for inquiry on the part of the government. It was found that in the production of cutlery in England under an eight and nine hour day the English manufacturer was able to produce his goods and to compete in the market with the German manufacturer who employed child labour and who employed labourers for twelve and thirteen hours per day. It is evident that there are some classes, at least, of labour, where an eight hour day is practicable. It is for this government to select those classes of labour. There are again instances in which perhaps an eight hour day is not practicable. But, Mr. Speaker, to say that this is provincial legislation, that it is not within the province of this parliament to enact legislation dealing with an eight hour day, is to evade the real object of this particular Bill. This Bill does not seek to make a universal eight hour day but seeks only to recognize the eight hour day in connection with government works. It is experimental and should be inquired into by the government. They should be prepared to blaze the trail, set the example to the provinces and to employers of labour to see to it that the toiling classes get an opportunity of experimenting with the application of a workable eight hour day system. How can this be obtained? I submit that here and to-night this House can resolve itself into committee, take this Bill up and amend it in such a way as to make it a practicable Bill, a Bill that would warrant hon. members on both sides of the House supporting it, so that it would be of some practical use to the people in whose interests it is presented to this House.

There is one other phase of this matter which I propose to deal with. At the meeting of the Trades and Labour Council, held from September 20 to 24, in the city of Quebec last year, at which meeting the hon. member for Maisonneuve (Mr. Verville) presided, the parliamentary secretary, Mr. O'Donoghue, solicitor of the council, making a report on the 22nd, spoke in reference to the eight hour Bill as follows:

> Mr. Verville introduced a Bill to provide for an eight-hour day on government contracts. The Bill stood while I was endeavouring to prevail on the government to make it a government Bill and thus insure its passage into law. I further endeavoured to secure enough supporters to at least make certain of a division on the second reading. The absence of the Hon. Mr. King, and illness in the family of the then Minister of Labour, Hon. Mr. Lemieux, were other causes that contributed to the delay. Finally, when it was determined to push the Bill, it had become tied up on the Order Paper and the only thing that could be done was to have the order discharged so that a discussion could be had on the merits. Through the courtesy of the Prime Minister this was done, and the subject was duly ventilated on May 7. Mr. Verville presented the resolution in a very forcible and able speech,

his efforts being ably seconded by Mr. G. A. Turcotte (Nicolet), Mr. Joseph Girard (Chicoutimi et Saguenay), Mr. J. D. Taylor (New Westminster), and Mr. A. B. Crosby (Halifax).

Hon. Mr. Lemieux said:

He found that there were some very grave difficulties in the way. In nearly all states of the American commonwealth there exists, he said an eight hour law, but it has been limited to certain industries. As drawn, he would not support the Bill, but he declared it was legislation that was worth studying and investigating. An eight hour law on government contracts, he argued, would be in conflict with provincial legislation as it stands. We could only pass such legislation as regards government works, because individual contracts come within the definition of 'civil rights' which are under the exclusive jurisdiction of the provinces.

Further on this parliamentary correspondence says:

It is quite apparent that the Hon. Mr. Lemieux was not able to give to the subject the study it deserved or he would not have spoken as he did. In the first place the delegates will recall that on several occasions the hon. gentleman declared himself fully in accord with our demand in this regard and stated that all we had to do was to convert his colleagues. If the hon. gentleman thinks the Bill is class legislation, he cannot fairly be in favour of it, whether in its present form or in any other.

In conclusion. this gentleman says:

The debate served a useful purpose at all events in showing what we have to meet when the Bill is next introduced. While the opposition jeered at the honesty of purpose of Mr. Verville, it is worthy of note that the Hon. Mr. Borden did not speak in favour of the Bill nor did others of the opposition except those mentioned above.

Mr. Speaker, I wish to say with regard to this parliamentary report of the parliamentary solicitor of the trades and labour council; this man who is nothing more nor less than a political henchman for the Grit party and has been serving in that capacity in connection with that body for some time now; I wish to characterize his public statement to the trades and labour council as a falsehood. He says: 'I, however, endeavoured to secure enough supporters to at least make certain of a division on the second reading,' and in connection with that statement I wish to point out that five members are enough to bring about a division on any question before the House, and I say that I have come in personal contact with and have spoken to no less than 64 Liberal-Conservative members in this House who were never spoken to by Mr. O'Donoghue with regard to that legislation. Notwithstanding that there were a number of members on this side of the House not only willing but anxious to support an eight hour day, this gentleman undertakes to tell the delegates at the Trades and Labour Council that the Liberal-Conservative party jeered at it, while at the same time he becomes the apologist for the ignorance of the Minister of Labour on the subject. Then he goes on to speak of the courtesy of the Prime Minister, and he remarks that the Hon. Mr. Borden did not speak in favour of the Bill. What about the other 210 members who did not speak in favour of the Bill; he has nothing to say about that. I say, Mr. Speaker, that the Trades and Labour Council or any organized labour body in Canada which seeks legislation from this parliament, if they are sincere about it and will play fair they will always receive from the Liberal-Conservative party courtesy and fair consideration for their demands. But, Sir, I protest against being misrepresented in the Trades and Labour Council or any other trade organization by this parliamentary representative of theirs.

Now, this Bill has been on the Order Paper for at least four sessions, and it would seem to me that Mr. O'Donoghue has let the cat out of the bag when he tells the delegates that he used his utmost endeavours to have the government adopt it as a government measure and thus ensure its passage. Why did he not take the trades and labour council into his confidence and tell them what success his efforts met with. But, if Mr. O'Donoghue does not care to reveal that secret of his, I, for my part want to know to-night what is the attitude of the Department of Labour and of the government towards the adoption of the eight hour day on government works. It is the duty of the government to give this House an answer to that question, yes or no. Are we to suppose that a department of government whose sole function, judging by its past record, has been to compile statistics is not able to tell parliament—after having had this Bill staring them in the face for four years—whether this Bill can be put into practical shape or not. It is the duty of the government to grapple with this important question and to grapple with it now. It is a question that is deeply interesting not only to employees but to employers as well, and I say that the proper thing to do is for this House now to resolve itself into Committee of the Whole and to consider the Bill clause by clause and legislate on it. This is experimental legislation and it is the duty of the government to carry on such an experiment. In the different colonies of Australia they have experimented with the eight hour day more thoroughly than anywhere else in the British empire and under the eight hour system which prevails in the greater part of the Australian commonwealth, they have

developed strong men, virile men, men with imperial ideas, men who, when it comes to voting for national defence or contributing to the mother country talk of Dreadnoughts. I may say, Mr. Speaker, that as the Bill now stands I would not vote for it, but I believe that it can be made workable and the time to do it is here and now to-night. Let the government grapple with the Bill now and don't let them send it to that committee graveyard whence so many Bills of this character have been consigned.

Mr. D. D. McKENZIE (North Cape Breton). When this Bill was introduced I did not think it was going to take a political turn, and I did not quite expect that the hon. member for Cape Breton (Mr. Maddin) would wax so warm and so eloquent from the party standpoint in regard to it. I know a good deal about labour and labouring men. I do not profess to be so familiar with the doings of the Trades and Labour Council as the hon. member (Mr. Maddin), but I do not think he has much reason to blame the council or its representatives if they do come to a certain conclusion in respect to the attitude of the Conservative party in this country towards labour legislation. If the hon. gentleman (Mr. Maddin) personally had 18 years or 24 years out of 40 years of experience in dealing with any legislative body and during the whole of that time he failed in getting one line of legislation in the interest of labour, he would not be to blame, any more than the Trades and Labour Council is, if he came to the conclusion that he had nothing to hope for from that quarter. That, Sir, is the history of the Conservative party in respect to labour in this Dominion. The Conservatives had 18 years of continuous control in this country; the conditions with regard to labour during those 18 years were just the same as they have been before and since and it can be truly said that although the labour men continuously asked for relief, the Conservative party never did anything to improve their condition.

My hon. friend from South Cape Breton has nothing to complain of, in the face of that record, if labouring men generally have no confidence in the party to which he belongs. If anything has been said which he regards as harsh, it is only due to the reputation which that great party has earned for itself. My hon. friend admits that this Bill cannot go very far as remedial legislation for the workingmen of this country. The class of people with which this Bill undertakes to deal is an infinitesimely small fraction of the working people of this country, that is, the people who work on government contracts or who are in the employ, directly or indirectly, of the government. They are a class of people from whom we hear no complaints. I have never heard any complaints from men employed by the government, either in offices or on public works, that their hours were too long or their conditions arduous or uncomfortable. For that reason, I do not think this legislation is at all necessary for that class of people. The only good purpose this Bill serves is that it brings this question straight before this House and gives the members an opportunity to express their opinion respecting it. It is the principle at stake, and it is the assertion of that principle by the members of this House that is of value. It is admitted that this House has not the power to pass legislation on this subject that will be of use to the workingmen of this country generally, and I do not think there is much use of going about it piecemeal and passing legislation which will merely deceive and mislead workingmen. After we go back to our constituents, if this Bill passes in its present form, we shall be asked: Haven't you passed an eight hour law? We shall have to tell them that we have not; therefore, they will be deceived, because they will think we have, when we have not. It is better to be straight and honest with these people and tell them that we have no jurisdiction to pass a uniform law for all the provinces. I think we should have a uniform law on this subject throughout the Dominion, and the only way in which that can be brought about is by means of a conference of the governments of the various provinces. This government would be doing a great service to the workingmen of this country if they would exercise whatever influence they possess in bringing together the governments of the various provinces and inducing them to agree upon legislation which, although enacted by the separate provinces, would be uniform in its effects throughout the Dominion.

Now, this question is not new in the province from which I come. It was discussed in the legislature of Nova Scotia in 1904, the last year that I had the honour of being a member of that body. The different workingmen's organizations, particularly the Provincial Workingmens' Association, which was the only organization in Cape Breton at that time, met the government and discussed with them the pros and cons of the question. No decision was reached at that time, but since then the government of Nova Scotia has undertaken to deal with the question in a thorough and business-like manner. I find that an Act was put upon the statute-book of Nova Scotia in April, 1908, which provides:

1. The Governor in Council is authorized to appoint a commission of three members whose duty it shall be to inquire into and report upon the economic effect of a limit to a working day for the workmen employed in the

various industries in the province of Nova Scotia, with especial reference to the effect of such limitation upon the following matters: (a) production, (b) wages, (c) employment, (d) export trade, (c) Canadian industries, regard being had to the different conditions obtaining in different districts, of amount and cost of production.

2. The commissioners shall have all the powers of a commission appointed under chapter 12 of the Revised Statutes, 1900, 'Of Inquiries concerning Public Matters.'

The government of Nova Scotia has taken a proper and systematic way of dealing with the question. That commission was appointed nearly two years ago, and has been inquiring into this question during the last 18 months at least. I hope that at the next session of the Nova Scotia legislature we shall have from that commission a report of value to the whole country, reaching a conclusion on this difficult and complex question. It would not be of any use to jump at passing an Act in this House that would bring no practical good. The discussion on this Bill is, however, of great value. I am delighted to hear from a member from British Columbia who has had to deal experimentally and practically with this question, the hon. member for Kootenay (Mr. Goodeve). It is worth a good deal to this House to have the opinion of a gentleman who has gone through the experimental stage of this question and is prepared to stand up in this House and say that in British Columbia the eight hour system has proven itself satisfactory. There is no reason why, if it has been satisfactory in British Columbia, it should not be satisfactory in every other province of the Dominion. Expressing my own opinion, which may have to be modified to some extent after we hear the conclusions of the commission to which I have referred, who have had a much better opportunity than I have had to form correct conclusions; but, speaking for myself, I am in favour of the principle of the eight hour day, and I regard any favourable expression of opinion that may be obtained from this House as an advancement of that principle. But I think we are courting a difficulty if we send this Bill in its present form to a committee. I cannot see what a committee could do with it. They could not reject the Bill altogether, for that would mean rejecting the principle involved. They could not adopt it, for that would lead to difficulty with no compensating result. I think a resolution of the House approving of the principle of an eight hour day is about all we can get out of this Bill as it stands at present. The hon. member for South Cape Breton says that it would interfere with the work on ships in connection with the Dominion Coal Company and the Dominion Iron and Steel Company. I do not think it would go that far. So far as work on ships is concerned, it would be just as bad to enact a ten hour law as an eight hour law.

Mr. D. D. McKENZIE.

Ships and shipping are operated under an entirely different law. This Bill, whether passed or not, would not interfere with the Shipping Act and the articles of the seamen under which ships are operated. In the county of Cape Breton we have, I suppose, more labouring men, in the true sense of the term, than any other county in Canada. We have on the island of Cape Breton some 9,000 workingmen, who can be really called workingmen, and possibly 95 per cent of those are in the county of Cape Breton. Therefore, when the hon. gentleman and myself undertake to talk about an eight hour day law, we ought to talk about something that will be of practical benefit to the large number of people we have the honour to represent. But so far as this Bill is concerned, I do not regard it as being of any benefit to the people from the labour standpoint. It is only to benefit those working on government contracts, and I do not think they are in need of any sympathy from me; but whenever my hon. friend or any other hon. gentleman will introduce a Bill—if such a Bill can properly be introduced in this House—that will be of benefit to the workingmen and that will give them an eight hour day, I shall be quite willing to support it, and will support it, in every legitimate way. However, as it is conceded that this is a matter within the jurisdiction of the provinces, I do not think there is much use in our discussing it except in the expectation that our view will be of great benefit to the different provincial legislatures in enabling them to reach a conclusion favourable to the eight hour day.

Mr. MADDIN. I would like to explain to my hon. friend from North Cape Breton (Mr. McKenzie) that this Bill would apply to shipping, being enacted by the same body as makes the Merchants Shipping Act and seamen's regulations. The Bill says:

Every contract to which the government of Canada is a party, which may involve the employment of labourers, workingmen or mechanics, shall contain a stipulation that no labourer, workman or mechanic in the employ of the contractor——

It does not say employed on that particular job——

—shall be permitted or required to work more than eight hours in any one calendar day.

That in effect repeals the Shipping Act, and would make it necessary for a vessel to drop her anchor wherever she might happen to be at the end of eight hours.

Mr. BEATTIE. I have a good deal of sympathy with the object of the Bill, but it does not go far enough. If the mover of this measure would include all the workingmen, I should be happy to support it,

but, in its present shape, it would only give relief to one out of a thousand. If the hon. gentleman will make his Bill apply to workingmen in general, it will have my support.

Mr. A. B. CROSBY (Halifax). Last session a resolution was submitted to the House, which has been referred to to-night, and I may say that on that occasion I was very much disappointed in the mover of that resolution, the hon. member for Maisonneuve (Mr. Verville). I was very much disappointed at the manner in which he brought it up. We are asked to pass a Bill applicable, not to the workingmen throughout the Dominion, but only to those employed on government contracts and government construction work; but, of course, when lawyers take any measure in hand they can always make it look either like five cents or five dollars, as they think best, and every one of them puts a different construction on it. As I understand this Bill, it is intended to bring about an eight hour day on all government construction work. The hon. gentleman who has just sat down (Mr. McKenzie) said that the Conservatives had never done anything for labour. Well, if any one would look over the hon. gentleman's record, he will not find that he has ever done anything for the workingman. The hon. member for Frontenac (Mr. Edwards) drew our attention to the declaration of the Minister of Finance, who expressed himself distinctly in favour of no one going on government work except Liberals; but I tell the hon. gentleman we are going to have a change very soon. I believe we shall have it before this Bill goes through. The hon. Minister of Labour (Mr. McKenzie King) said that my hon. friend from Cumberland (Mr. Rhodes) was prepared to vote this Bill through, no matter what happened. But if I understood the hon. member for Cumberland properly, he was in favour of the Bill and would vote for it if it compelled every man, who made a government contract, to establish the eight hour day system in his works. That is what I understood the hon. gentleman to say, but I do not think that any one has any other desire than to deal with this Bill on its merits as it affects public works. We have had a great deal of talk about the eight hour day and the nine and ten hour day, and the twenty-four hour day. In fact, the labouring man works for twenty-four hours, so they say, and never stops. When we had a twelve hour system, we had double shifts, but a man had to work twelve hours and keep the machinery going all the time. Now, if we adopt the eight hour day, we can have three shifts in the twenty-four hours. There is no trouble keeping the machinery going all the time; but this Bill does not refer to any thing outside the construction of government work. We are told by the Minister of Labour (Mr. King) that this is a measure which must be dealt with by the local legislatures. Just think of our sending a Bill to a local legislature and asking that legislature to enact an eight hour day solely for the public works of Canada. The Bill is one which should be dealt with by this parliament, and we must deal with it. It has come here to stay. First we had the 12 hour day, which was cut down to 10 and then to 9, and I would like to ask any body if he regrets any one of these changes. We were met with the same cry when we talked about limiting the employment of child labour and preventing a child from going to work under 14 years. When that was proposed, those who opposed it said that the children would be so well educated they would not go to work at all. Now, in our province—we always lead in those matters—we have that condition, and what is the result? Everybody is happy, and the children of the workingman are educated. There has never yet been a reform in connection with labour which has not met with the opposition of the employers. It is not because he gets down and figures out how it is going to do him harm; he only thinks that it will do him harm. But it will not do him any harm. Why should we have this one or that one telegraphing: Don't let that Bill go through? Are they all government contractors? Have they all got a pull with the government? Some certainly say that they have a pretty strong pull, but I do not know about that. But we have nothing to fear. This is a Bill that it is the duty of this parliament to deal with. We are asked how will this Bill operate with regard to factories? Why, it will be just the same as in the employment of clerks and book-keepers under present conditions. The government have a civil service whose duties are essentially those of accountants, book-keepers and clerks. These people work from three to five hours a day, I think; will any man say that when a private employer engages a book-keeper or clerk he must allow him the same hours as those of the civil service? If not, why should it be supposed that when a private employer engages a labourer or stonemason he will have the same hours as a similar workman in the employ of the government? We have heard a good deal about the farmers in this connection. The hon. member for South Cape Breton (Mr. Maddin) spoke about that. Why, the farmer gets a return for every hour he works; in fact, his farm is making money for him even when he sleeps. The farmer has his sowing season and his reaping season, but part of the year he can sit in his easy chair. The

workman has to work every day or starve. If anything happens to him and lays him off for a few days, he does not get anything for the time so spent. If he is sick and is laid up for a week or two, he does not call in a doctor, for he would never recover if he did—if he does recover, the doctor keeps him in hot water a good while. I am surprised to hear the hon. member for East Grey (Mr. Sproule) talking as he does about the farmer, for that hon. gentleman generally gives us good advice, and I am glad to follow his advice on nearly all occasions. But, as I have shown, there is no comparison between the farmer and the workman; we are all working for the farmer, and even the weather works for him when he is asleep. I am surprised that the hon. member for East Grey is not more considerate of his own profession by improving the position of the workman so that the doctor may have a better chance of having his fees paid.

Mr. SPROULE. How about the farmer when he has a crop failure?

Mr. CROSBY. He never has a crop failure—the government always fixes that. Even if things do go wrong with him, the government always sees to it that he has enough for the winter. But the workman has no one to protect or help him, except a few of us here who are going to do what we can for him.

I stand by the principle of this Bill as I read it. I do not wish to quibble, or twist, or turn by sending the Bill here or sending it there. Of course, if we cannot deal with the Bill before this House, I will not oppose sending it to a committee. We have enough lawyers here to spoil any Bill, but I am willing to take hold of the Bill with some other laymen and put it in shape so that the working people and the country generally will be satisfied with it.

Mr. RALPH SMITH (Nanaimo). The discussion this evening has resolved itself into a debate on the general question of the eight hour day. That is a principle, I believe, that the large majority of this House will regard very favourably. There has been considerable experience of the eight hour day not only in Canada, but in some other countries. In Australia, they have general laws regulating the hours of labour, not only for government employees, but for the general industries of the country, which laws have worked with very great satisfaction. My hon. friend from Kootenay (Mr. Goodeve) has reminded hon. members that in British Columbia we have very important legislation in relation to the eight hour day. Our law applies to certain industries only—coal mining, metalliferous mining and smelting. The people of British Columbia generally believe that that legislation has worked to the general interest of these enterprises as well as to the benefit of the province as a whole. It is true, as my hon. friend from East Grey (Mr. Sproule), says in answer to the hon. member for Kootenay, there was some little trouble with regard to maintaining the same standard of wages for eight hours as had been maintained under the ten hour system. Of course, that disorganized the industries for some time. But now and for some years the law has worked satisfactorily. The coal miners of British Columbia had an eight hour day before there was legislation on the subject. But we on the Pacific coast are liable to be affected by American influence, and the miners of British Columbia were afraid that with the introduction of American capital into the coal mining of that province the influence of those concerned might possibly add to the length of the working day. The miners considered that it would be wise to make provision by law that eight hours should be a working day in mines. That was done, so that we now have had for some years an eight hour law at the coal mines and in the smelting works which has operated very satisfactorily in that province. The principle of an eight hour day has always been difficult of general application. I think the hon. member for Grey (Mr. Sproule) was quite right when he sought to discriminate between industries, in showing the difficulty of operating an eight hour day in all industries alike, inasmuch as a man can do as much work in six hours in some industries as he can do in ten or eleven hours in other industries. So I think to that extent my hon. friend is quite right.

In England they have sought to legislate on this question, and last session they passed for the first time a law regulating the hours of labour in mines for all persons, restricting the hours to eight hours a day. Thirty-five years ago they passed a law in England relating to factories and mines, and dangerous employments for women and children, and it has worked with great satisfaction. Personally I would support an eight hour law if it could be made practicable. There is great difficulty, however, in having absolute equality in the hours of labour in all industries, and when we come to consider certain employments, my contention is that it is impossible for men to do their best for any longer period than six or seven or eight hours a day. In other employments, perhaps, a man could work with advantage a longer number of hours.

But the principle of an eight hour day which seems important to me is the opportunity that it gives to men generally to appropriate the benefits of education. It seems to me that when we discuss the economic results of the reduction of hours on production, we forget the effects it would

have on men themselves, at least in certain employments. As I have said, there is no doubt that men can usually produce more in a shorter number of hours than they can by working ten hours a day. There is no doubt about that principle, for the reason that when men get the benefit of shorter hours, they are in a position to take advantage of the social and educational conditions in which they may find themselves. So the economic loss in reduced hours is overbalanced by the greater strength and efficiency of the workers. So I think the general principle of the eight hour day is well settled in the minds of people everywhere. The trades unions have done more for themselves by a reduction of hours than they have done by anything else. In England where the hours of labour are the shortest in the world, shorter than in Germany, shorter than in the United States, and I believe in some trades shorter than in Australia, they have an eight hour law; and all the benefits of that condition of things in England have been brought about by a strong and intelligent organization amongst the workmen themselves.

Now, in the course of his remarks, my hon. friend from Cape Breton (Mr. Maddin) made one or two statements that I wish to refer to. He remarked that the Minister of Labour had suggested that it was necessary to have a select committee to collect evidence before dealing with this question. Now I agree with that position entirely. But my hon. friend complained that the Labour Department ought to have been in possession of such evidence already. Now, Sir, I assume that the minister's answer to that position would be that he wants a committee to study the evidence he already has in his possession. The minister may have that evidence, no doubt has the evievidence, but it is impossible for every member of this House to have that evidence. I have not the evidence, for instance; but we ought all to have it in order to study it before legislating on this question. I do not see that any harm can come from a complete and thorough investigation of this question. Now I want to say how far I am prepared to go on the question of regulating the hours of the public servants in this country. My hon. friend from Halifax (Mr. Crosby) says that the government have already brought the hours down three or four a day. My understanding is that the Civil Service has been put on the basis of an eight hour day, that instructions are posted up in the departments insisting that the civil servants shall come to their office at nine o'clock in the morning and work until five in the afternoon, which, of course makes an eight hour day.

Mr. CROSBY. I did not refer to the Civil Service as regards their working hours, I only referred to them to establish a comparison between their hours and the hours of men working for private individuals. Nobody expects that men in private industries should work no longer hours than the civil servants. I did not reflect upon the Civil Service hours at all.

Mr. RALPH SMITH. I did not say my hon. friend was reflecting on the Civil Service, but his remarks will carry their own reflection. If I understood my hon. friend correctly, he said more than once that under this government civil servants worked only three or four, and not more than five, hours a day. My understanding is that some months ago regulations were posted up in the departments insisting that the employees should come to their work at nine in the morning and stay till five in the afternoon. I mention that to show that the government has accepted the principle of an eight hour day in the Civil Service at Ottawa. I believe that the government should be a model employer. The government represents the people of this country, and if the people generally are in favour of the principle of an eight hour day, there can be no objection to the government carrying out that principle with their own servants. I believe every man in the employ of the government, especially those engaged in mechanical operations, should only work eight hours a day.

Now I want to look at this Bill and see whether it is possible to accomplish the object aimed at by the Bill in its present form. I want to say that I do not believe we ought to pass legislation in this House that cannot be made practicable in its operation. I do not think it is possible under all circumstances to operate the principle of this Bill. I am strongly in favour of an eight hour day for all government employees, and I am in favour of the government establishing all over this country the best possible conditions for their employees, as they have done by the fair wage principle. I agree with that absolutely, but I do not think that the proposal of my hon. friend would accomplish the object which he professes to have in view. I believe that his intention is good, I believe my hon. friend wants to do something to improve the conditions of labour in this country, and I think that he is right in seeking the assistance of the government to bring about that object. But the very worst thing my hon. friend can do is to propose legislation to this parliament which this parliament cannot possibly pass.

In looking over the Bill one must see that it is impossible for this government to determine that in every contract that the government enters into it must regulate the hours of labour not only of the men employed on that particular government contract but regulate the hours of labour for the whole business which is being operated by the man who has the contract with the gov-

ernment. Let me give this illustration: Suppose that a grocer doing business in the city of Victoria, perhaps to the extent of $10,000 a month, fills a contract for supplying groceries to a government steamer in the harbour of Victoria to the extent of $100 a month; that grocer would be compelled to carry on his business on the principle of the eight-hour day. The Bill ought to provide for these important effects of its operation. All the systems of transportation having contracts with this government must operate on the principle of the eight-hour day. All subsidized steamers and steamers having contracts with the government to carry the mails from Liverpool to Montreal must carry on their operations, under the principle of the eight-hour day. All systems of transportation having contracts with the government must be operated under the principle of the eight hour day if these contracts are to be maintained, because the Bill provides that wherever there is a contract with the government the whole business of the contractor must be carried on under the principle of the eight-hour day. I believe that my hon. friend has the best of intentions and motives in presenting this legislation, but it is utterly impossible for this parliament, however well disposed it might be, to carry out the principle of this Bill worded as it is. Therefore, I am strongly in favour of the Bill going to a committee. There is another thing that I would like to say. I believe that the effect of this legislation, if it were put in operation, especially in some parts of the country, would be to reduce the wages of men who are employed on government contracts. Let me give my hon. friend an illustration: Suppose that carpenters and stonemasons in Quebec and Montreal work ten, eleven or twelve hours a-day. I believe they do because the province of Quebec is farther behind in social legislation than any other part of this Dominion. My hon. friend, of course, for some time, has been bringing his influence to bear upon the legislature of Quebec which has the general legislation with respect to hours of labour affecting public business in its own hands, but there is no place in Canada where men work as long hours as they do in Quebec. Suppose that the general hours of labour and business of stonemasons, bricklayers or carpenters in the city of Montreal numbered ten or eleven a-day, that under this Bill you put up a building and the contractor was obliged to employ his men on the eight-hour day principle. We must remember that the wages and conditions under government operation are regulated by the principle that the wages must be the standard wages of the district and the conditions and hours must be the standard conditions and hours of the district. If carpenters are employed in Montreal at $2.50 a-day for ten or eleven hours and the conditions of the district have to determine the conditions under the government contract then the government itself in its own labour department would be compelled to reduce the wages so as to meet the general conditions applicable to work of this kind. I think the application of this Bill would really reduce the wages of labour to men who were employed on government contracts. I think the discussion has been important, but I think this Bill is impossible. I am prepared to support the principle that the government ought to give their own employees an eight-hour day and ought to use all the influence they can to regulate the hours of labour on government contracts, but I do not think the object that my hon. friend has in his mind can be accomplished by this Bill. I therefore strongly recommend to him the suggestion of the Minister of Labour that a committee be selected from which we may be able to have a Bill before this House which will be practicable and thus bestow some benefit on the workingmen of this country as far as those employed by this government are concerned.

Mr. G. H. COWAN (Vancouver City). Mr. Speaker, with a great deal of what the last speaker (Mr. Ralph Smith) has said I am prepared to agree. With his declarations of sincerity in regard to the principle of an eight hour day I am prepared to agree. But, I would venture to say that his logic is a little astray when he tells this House and the country that he is an avowed advocate of the principle of the eight hour day, and when that principle goes up against a grocer in Victoria who happens to believe in the principle of a ten hour day, he tells us that this is a difficulty in the way, that it is the lion in his path. For my part I have this amount of courage that if I believe that the principle of the eight hour day is correct I am prepared to say that everything in the way of the adoption of that principle must give way. If that grocer in Victoria—I thought he was in Vancouver, but he is in Victoria—being a contractor for the government, adopts a different principle from that which the speakers here to-night have been declaring they believed in, then it is up to that favorite government contractor to abandon his ten-hour principle and adopt the eight-hour principle. I regret that my hon. friend the Minister of Labour (Mr. King), in whose sincerity I have not one particle of doubt and of whose careful study of this question I have personal knowledge, has dropped into exactly the same fallacy. He tells us, as does the hon. member for Nanaimo, that he will allow the great labour population of Canada to be denied their rights because some contractor will be

obliged to change his system of labour employment in his factory or other industry.

Mr. KING. Will the hon. gentleman kindly inform the House what statement I made that enables him to draw such an inference? I am not aware of having made any statement which would warrant an inference of that kind.

Mr. COWAN. I think that the report of my hon. friend's speech will show that I have drawn an exact and accurate inference from his remarks. I hope that I am mistaken because I would be sorry to find the Minister of Labour, with the responsibilities of office upon him, stand up in his place in this House and declare that he is in favour of a principle but he is not in favour of carrying out that principle because it would interfere with those who disbelieve in the principle and act in a different way. I hope I will find that I have made a mistake. But, I know that I have made no mistake in regard to the hon. member for Nanaimo. He has given an instance. A grocer in Victoria has a contract with the government. That grocer has one principle of employment different from the eight hour principle. It would demoralize the system of employment and therefore we must deny the labouring men of Canada their rights. I am sorry I cannot agree with my hon. friend from Nanaimo (Mr. Ralph Smith) in that position. I do think too that the Minister of Labour fresh and young and full of enthusiasm and actuated I believe by a single and sincere desire to advance the cause of labour—

An hon. MEMBER. Oh.

Mr. COWAN. Yes, I am prepared to give every member of this House the largest measure of credit in the matter of motives, but I am not prepared to give the Minister of Labour credit for a single attempt to-day to crystallize in the statutes of Canada any provision for the betterment of labour. Had there been a case made out for referring this to a special committee I would have been content to reserve my judgment on the sincerity of the gentlemen who advocate such a course, but not one particle of argument has been advanced to indicate that there is the slightest necessity for any evidence, which is not already within the knowledge of the House, in support of the case. I say that this Bill should get its second reading and go to the Committee of the Whole. I hope therefore, just to test the courage and sincerity of the members of this House in facing what I am prepared to admit is a difficult question, that the member for Maisonneuve will continue to press that his Bill be dealt with now.

Mr. J. D. REID (Grenville). I am sorry to have to disagree with my hon. friend (Mr. Cowan). I believe that when he has been here a session or two he will not have the opinion he now has as to the sincerity of the government when they make a motion of this kind. Our experience during the past week is enough to satisfy us on that point. When the resolution of the member for South Wellington (Mr. Guthrie) was put on the Order Paper I thought it was placed there at the instance of the government in order that they might get some credit for it, but we found the Minister of Labour moving an amendment which practically side-tracked the issue for the balance of the session. Now we have another Bill introduced by the member for Maisonneuve. That same Bill was introduced last session by the same gentleman, and the session before, but every time it appeared on the Order Paper the influence of the government was brought to bear on the hon. member for Maisonneuve and he was afraid to move the Bill in the House and take a division on it. This year he wants the Bill pressed but the Minister of Labour gets up and says: Oh, he agrees with the principle, he is in favour of it, but yet he wants to side-track it. He tells us he wants the labouring men of this country to believe that he is in favour of the eight hour day, but he wants a special committee to examine into the question, and that is the last you will hear of the Bill this session. Is that fair to the labouring men of this country. We all understand the Bill and the Minister of Labour understands it as well as anybody else, but the truth is he is afraid to come out fair and square on the issue. I think the time has come for every man in this House to show his colours and declare whether he is in favour of the Bill or not. I shall vote for the Bill, and I refuse to have it side-tracked at the instance of the government. Let the government come out honourably and show the labouring people whether they are in favour of this measure or not. I do not hesitate to say to the labouring men from the Atlantic to the Pacific that the action of the Minister of Labour so far as this Bill is concerned is a fake from the beginning to the end, and that the minister is acting in opposition to the interests of the labouring men of Canada.

Mr. EMMANUEL DEVLIN (Wright). I wish to offer a few remarks which I hope will be construed as I want them to be, as fully sympathetic to the cause of labour. It has been my good fortune to have had considerable experience, not altogether in a practical way, but to have come into contact with the labouring classes, and I feel that no man in this House is actuated by sentiments more favourable towards the labouring classes than I am. I have listened to the hon. member for Maisonneuve (Mr. Verville, and I want to say right

away that I am heartily in favour of the eight hour day. I feel that the labouring classes of this country should not be called to work harder even than hon. gentlemen sitting on the opposite side of the House. I believe that the labouring classes should have the same fair treatment that capital receives in this country. I would like to see the Bill go one step further, if it were possible, and regulate the wages which the labourer would receive under government contracts when their day's labour is cut down to eight hours. After reading the Bill over several times, I see that the contractor who assumes a contract with the government of this country shall be forced to regulate the hours of labour, and he is left free to deduct from the poor labourer's wages an amount corresponding to that reduction of hours. I do not think it is in the interest of labour that such legislation should be enacted, and I speak most sincerely when I say that I believe no hurried action should be taken in this matter. I believe that the suggestion of the Minister of Labour and the suggestion of the member for Nanaimo, as representing labour in this country, to refer the Bill to a special committee for further study should be accepted. I think that every consideration ought to be given to this Bill and that it should be the duty of that special committee to study all the questions involved so that the labouring men of this country shall not receive lower wages because of the shortening of the hours of labour.

Mr. GEORGE H. BARNARD (Victoria, B.C.). Mr. Speaker, I have listened with a great deal of interest to the debate on this Bill and with more than ordinary interest to the speech of the hon. member for Nanaimo (Mr. Ralph Smith). While that hon. gentleman was making his speech, I could not help thinking how he would have graced the position of Minister of Labour. It may be provincialism to a certain extent, but in my opinion he is the man who, both by training and by natural ability, was entitled to the position; but I can quite understand that the province of British Columbia could by no possibility expect to have two members in this government. With regard to this Bill, everybody seems to be in favour of the principle of it, but nobody seems to want it to go through. I think there should be very little difficulty in straightening out the Bill. If the hon. member who introduced it would be willing to have it amended in committee in such a way as to meet the objections which have been raised, there is no reason why it should not pass its second reading, and for my part, if he chooses to press his motion to a vote, I am prepared to support him. With regard to the speech of the hon. Minister of Labour, he sought to make a little trouble for the hon. member for Cumberland (Mr. Rhodes); but the hon. member for Cumberland was at least definite in what he wanted to say, while I doubt if anybody knew just what the views of the Minister of Labour were on this question when he got through. His position reminds me somewhat of an undertaker who, a short time ago, while away on a visit, was asked what his calling in life was. After hesitating a moment, he said: 'I follow the medical profession.' It seems to me that the Minister of Labour has undertaken the role of undertaker to the government, for this is the second time in seven days that we have seen him bury a Bill which I am inclined to think in his inmost heart he believed to be right. I am in favour of this Bill.

Mr. ERNEST ROY (Dorchester). Mr. Speaker, I am a new member of this House and am not very familiar with parliamentary procedure; but I cannot understand the statement of one hon. member on the other side of the House, that the Minister of Labour has not the courage to adopt the principle of this Bill. If I understand the procedure of parliament correctly, when a minister proposes to refer a Bill to a select committee, it is understood that the principle of the Bill will be adopted, for the second reading of the Bill has to take place before it can go to a committee. I think it is understood by every hon. member that the Bill in its present form must be modified before it is passed. I think the Bill should be referred, not to a standing committee of this House, but to a special committee, which would be in a better position to obtain the information necessary to pronounce on the Bill. Therefore, I think the position taken by the hon. the Minister of Labour is the proper position to take on the Bill.

Mr. R. L. BORDEN. Mr. Speaker, before dealing with the matter with which we are immediately concerned, I would like to correct a very grave misapprehension on the part of my hon. friend from North Cape Breton and Victoria (Mr. MacKenzie), who has declared that no legislation in the interest of labour was ever passed by a Conservative administration. I want to tell my hon. friend, and I am surprised that he is ignorant of it, that the most important measure ever passed in the interest of labouring men in Canada was passed by the government of Sir John A. Macdonald. But for that legislation men combining to strike to-day in Canada would be criminals in the eyes of the law. A Conservative member of parliament, the late E. F. Clarke, for many years a respected and honoured member of this House, was in jail in the city of Toronto under the law as it was before Sir John A. Macdonald brought in the Act which gave labouring

men the right to strike without subjecting themselves to a criminal prosecution.

Mr. BRODER. It was George Brown who put him in jail.

Mr. R. L. BORDEN. Yes, but we need not go into matters of detail. My hon. friend the Minister of Labour has spoken on this question. It is a question that has been before parliament for four years. One would have supposed that a government responsible for all the legislation that goes through parliament, as every government under modern conditions is, would have taken up this subject. I do not know whether the hon. Minister of Labour concurs with the statement made by the hon. member for Nanaimo that the government at present have all the information necessary on this subject. Am I to infer that my hon. friend the Minister of Labour concurs in that statement?

Mr. KING. The government has a great deal of very valuable information, but I think it would be of decided advantage to the House to have an investigation.

Mr. R. L. BORDEN. My hon. friend is rather non-committal. It seems to me that the question resolves inself into this. The government either have or have not the information; if they have not, there have been four years during which this matter has been mooted more than once in parliament, and one would have thought that in that time they would have appointed a royal commission to obtain the necessary information, as was done by the government of Nova Scotia two years ago. When the question was first mooted in parliament four years ago my hon. friend was deputy Minister of Labour. Where have been his affections for the labouring men of this country during these four years? But there is another very curious circumstance in connection with this matter. The government are to-day acting in absolute reversal of the position they took in 1907, when they brought in a so-called Conciliation Act. I asked at that time, by a resolution which I moved at the beginning of the session, and afterwards on the third reading of that Bill, that all matters touching disputes between employers and employees should be referred to a committee of this House in order that both sides might be heard. I took the ground then, which I am prepared to stand by to-day, that in these matters it is only fair that both sides should be heard before legislation of such great importance should be dealt with by parliament. What was the answer at that time? It was that the government had all the information in their possession. I have the words of the Minister of Labour of the day, Hon. Mr. Lemieux, under my hand He said:

I therefore believe that, at the present time, with the information we have before us, with the reports of the Royal Commission of 1903, with the monthly reports which we receive from our correspondents from all parts of Canada, and with the ample reports that are presented to this House by the Labour Department, it is quite unnecesary to appoint a Committee of this House to take evidence in connection with this Bill.

My hon. friend from Nanaimo was at that time very strongly in favour of the position the government took, that there was no need to appoint a commission or to have any hearing before a commission. My hon. friend, I remind him in all kindness, takes a different stand to-night. He says that although the information is there, we should have a special committee for the purpose of passing on it and reporting to this House. I would ask my hon. friend if that is a good arugment to-day, why was it not a good argument in 1907? I urged that very argument myself in 1907, but I did not succeed at that time in securing the ear of my hon. friend, because I had the misfortune of seeing him vote against me, both on the motion I made in the early part of the session, and on the motion I made on the third reading of that Bill.

This subject, as my hon. friend from Medicine Hat (Mr. Magrath) has truly said, is one that must be met. In common with every member of this House, I am disposed to give the most sympathic consideration to every measure that will improve the condition of the labouring men in this country. We want our labouring men to live and prosper under fair conditions so that, as has been well said to-night, we shall have a strong virile population, not doomed to work to the last limit of their physical strength, or to compete on unfair conditions with the pauper labour of any other country. We ought to give every possible consideration to their claims in this regard and I am disposed to do that. The question is one which must not be shelved by any proposal to submit it to a committee. I am willing that it should go before a committee for exactly the same reasons that I gave when I asked for a special committee on the Conciliation Act of 1897. I think that Act should have gone before a committee in order that both sides might have been heard; and had that course been followed, there would have been infinitely less dissatisfaction with that measure and it would have worked out infinitely better and have been very materially improved. I am disposed to send this Bill to a committee of the House, not in order that it be shelved—because we must have a satisfactory understanding from the government that it will not be shelved—but in order that employees and employers may be heard, and in order that any information in possession of the government—if they have any, if they have had enough

interest in the subject to collect information—shall be put before the committee, and in order that the committee, after giving a fair hearing to all parties, may make a report to the House. Under the circumstances I would accept the proposal, on the distinct understanding from the government, that the committee will meet at once and expedite its work and bring back a report to the House to be dealt with before the end of the session.

Mr. VERVILLE. I am very proud indeed to have brought this question before the House this afternoon and especially to find that it has excited so interesting a debate. This is probably the first time we have had so much discussion on the hours of labour, and many hon. gentlemen on both sides have expressed themselves, in different fashions, in favour of a shorter working day. As I said on moving the second reading of the Bill, my intention was not to make any extended remarks myself, but to obtain the views of others, and to my great satisfaction. I have heard a great deal more than I expected. Some remarks have been made regarding farm labour but there is no comparison whatever between farm labour and that which is dealt with in this Bill. We have also heard it argued that men could not do as much work in eight hours as in ten. Well, we heard that same argument every time a proposition was made to reduce the hours. Not very long ago men worked twelve hours a day. Then the day was reduced to ten hours, and no one will say that the same amount of work is not done in the ten hours as formerly was done in the twelve. The same result will follow a reduction to eight hours. Experience has proved that the longer day is not productive of more work. We have had some question about the working of the fair wage law. Well, I acknowledge that it has done a great deal of good for the labouring classes, but as regards the hours of labour, we have no body but ourselves to thank for their reduction, because what gain we have made has been achieved only after very hard struggling. I heard the hon. member for London say that he would favour a Bill which would apply generally.

Mr. BEATTIE. That is quite right.

Mr. VERVILLE. I heard the hon. gentleman say the same on the public platform.

Mr. BEATTIE. I introduced an eight hour Bill here in 1898.

Mr. VERVILLE. There would be no use in any one introducing such a measure in this House because it would be beyond our jurisdiction, and it was for that reason I have not brought in a Bill of that nature. The arguments which have been urged this afternoon against this Bill are exactly the same as were advanced in other countries on similar occasions. In 1847, in England, when the ten hour law was before the House, exactly the same arguments were used against it. In 1856 and 1857, when that question was brought up in Australia, we had the same arguments over again. The plea was always that if you shorten the hours of labour, you will reduce the sum of the work done. However, I am gratified to know that we have made a considerable step in advance, and if the government will promise that this measure will not be shelved, I am quite willing to refer it to a special committee. I am willing, if the Bill receives its second reading, to make a motion to have it referred to a special committee. We will then have affirmed the principle of the Bill, and it will be for the government to see that no obstacle is allowed to prevent the committee from getting through with its deliberations. I would like to have before that committee those men who are strongly opposed to any reduction in the number of hours in the labouring day while at the same time they are quite willing to reduce their own hours of labour to three or four. I would like to meet these men before the committee. I would like also to have some of the labour men come before that committee and express their views, and then let the committee compare notes, and I am sure we shall win because we are on the right side. If the Bill be given a second reading, its principle will then be adopted, and if the government will give a chance to the committee to get to work right away, we shall have their report before the session is over and be in a position to enact legislation which will materially improve the condition of the working class.

Motion agreed to.

Bill read the second time.

Mr. VERVILLE. I desire to move the reference of the Bill to a special committee as suggested. I move:

That the said Bill be referred to a special committee consisting of Messrs. King, Macdonell (Toronto), Smith (Nanaimo), Staples, Prowse, Marshall and Verville.

Mr. J. D. TAYLOR (New Westminster). It seems to me that, before the House assents to the adoption of that motion, we should have some assurance from the Minister of Labour (Mr. King) that he expects the committee to make a favourable report on the Bill. Having passed the second reading and adopted the principle of the Bill, I think we are entitled to have a committee that is known to be favourable to the measure, and that the committee to whom it is referred should not be expected to say whether we shall adopt such a Bill or not, but to perfect the Bill, because, as has been stated by hon. members here to-night,

in its present shape the Bill is not workable. I think we are entitled to a declaration from the government as to what they expect from this committee, for, though the motion has been moved by the hon. member from Maisonneuve (Mr. Verville) it is upon the government that the responsibility rests, and if the government do not know what to expect from that committee, I think it is their business to find out. We ought not to take this step in the dark.

I would like to say, while on my feet, that some hon. members have taken what seems to me a most extraordinary position as to why this matter is before us. The question is not one of pity for or sympathy with the employees of contractors who are working for the government. It impresses me rather in this way: This is supposed to be a government of the people; a very large proportion of the contributors to this government are the organized workingmen who believe in the eight hour day; these people simply come to their servants in this House and ask them to see to it that in the expenditure of their money on contracts carried on for the Dominion government, a provision shall be inserted that the principle which they hold so dear shall not be violated. I think that is a reasonable request, and that having passed the second reading of this Bill we should not entrust it to any committee unless we have some assurance as to the attitude of the committee towards the Bill.

Mr. KING. The hon. member (Mr. Taylor) has made what seems to me a most extraordinary proposal. He suggests that I should give him an assurance how this committee will report. I fail to see what other meaning can be put upon his words than that he feels that members of this House who are selected as a committee are not prepared to report to this House honestly, straightforwardly and intelligently on the evidence that is brought before them.

Mr. J. D. TAYLOR. I object to the hon. gentleman (Mr. King) putting any sinister interpretation on my remarks. I spoke very plainly, as I usually do, and without any meaning other than was plainly expressed in my words.

Mr. KING. The hon. member objects to my interpretation of his words, but he has only himself to blame for giving us words that are capable of such an interpretation. I cannot see how any member of the House could suggest that any one can tell this House, before the committee listens to any evidence with regard to a measure, how that committee is going to report. I think the position will be self-evident to every hon. member. I do not think there is any member of the House other than the hon. member (Mr. J. D. Taylor) himself who would think of asking for such an assurance.

Mr. A. MEIGHEN (Portage la Prairie). We have had the great privilege of listening to two addresses on this subject from the Minister of Labour (Mr. King), and at the close of the second address I think that every hon. member is as much in the dark as he was at the first of the debate as to what the policy of the government is in regard to this Bill. We may have learned a great deal about the principle of the eight hour day and about many features of the Bill, but I can state one thing that we have not learned in the course of the debate, and that is the policy of the government. If I understood the question and remarks of the hon. member for New Westminster (Mr. J. D. Taylor), what he wanted from the Minister of Labour was a clear statement of the policy of the government with regard to this measure. The hon. member for Dorchester (Mr. Ernest Roy) contends—and, in a measure, rightly contends—that when this House passes the second reading of the Bill, it adopts the principle of the Bill, and he further goes on to explain that the Minister of Labour has endorsed the principle of this Bill. Now if the principle of the Bill is something that can be taken as endorsed by the speech of the Minister of Labour, then I, for one am utterly at a loss to see any principle whatever in the Bill. Throughout the course of his address, the Minister of Labour expressed antagonism to the general principle and to the extended adoption of the principle of the eight hour day.

Mr. KING. Would the hon. member (Mr. Meighen) kindly give to the House any statement of mine from which he can draw such an inference.

Mr. MEIGHEN. Will the hon. minister (Mr. King) state that he is in favour of the absolute, unequivocal adoption of the eight hour day throughout Canada?

Some hon. MEMBERS. Oh, oh.

Mr. KING. I did not hear the question.

Mr. MEIGHEN. Will the hon. minister state that he and his government are in favour of the absolute, unequivocal adoption of the eight hour day throughout the country?

Mr. KING. If any member of this House will introduce a measure which will make possible the eight hour day to the advantage of the working people of this country, a Bill which it will be within the jurisdiction of this House to pass——

Some hon. MEMBERS. Oh, oh.

Mr. KING——he will find this government ready to support any measure of that

kind. The hon. gentleman knows very well that the provincial legislatures have the power to enact laws in regard to the hours of labour generally.

Mr. MEIGHEN. The minister, I can see, was even less successful than he was before. The House will understand one thing, and that is the extreme capaciousness of his ifs in the answer he gave me. Now on various other grounds the Minister of Labour objected to this Bill. He objected to it because it would extend the principle of the doctrine of an eight hour day into fields into which it was never intended to move at all, it would extend the principle of an eight hour day into factories where it could not be universally adopted. The ingenuity of the minister was taxed to the extreme to find objections to this Bill, but all the while he was engaged in pious affirmations of what is known vaguely as the principle of the Bill. While the Minister of Labour succeeded, with the support of his followers behind him, in talking this Bill to that bourne, to that graveyard, from which few if any travellers return, he certainly succeeded in talking the principle of the Bill into a black and hopeless eternity. Now, Mr. Speaker, I must say that I agree with my hon. friend from Grenville (Mr. Reid) as opposed to the statement of the hon. member for Vancouver (Mr. Cowan), that I am not impressed very much with the sincerity exhibited so far in this House by the Minister of Labour. It seems to me that, instead of living up to the expectations of this country in regard to sincerity, he has rather invaded the field of the Minister of Public Works, and will soon share with him the unenviable reputation of being the arch jollier of this generation. So far as I am concerned, and I think those on this side of the House will coincide with me, I would like another speech from the Minister of Labour, and I would like him definitely to answer the question put to him by the member for New Westminster (Mr. J. D. Taylor), and let us know once and for all where the government stand on the question of whether they are prepared to adopt an eight hour day for labour on government works.

Mr. SPEAKER. Is the House ready for the question? I do not think this amended motion is drawn in the way it should be.

Mr. VERVILLE. I wish it to read as follows:

That Bill (No. 21) be referred to a special committee consisting of Messrs. Mackenzie King, Smith (Nanaimo), Macdonell, Prouse, Staples, Marshall and Miller, said committee to have power to send for persons, papers and records, to swear witnesses, to examine them under oath, and to report from time to time.

Amendment agreed to.

Mr. KING.

ELECTIONS ACT—AMENDMENT.

Mr. MACDONELL moved the second reading of Bill (No. 22) to amend the Dominion Elections Act.

Hon. A. B. AYLESWORTH (Minister of Justice). Before the second reading of the Bill is carried, I would like to point out exactly what it proposes to do. It is in two respects an entire reversal of what has been the practice under our Dominion Elections Act for several years. The first proposition of the Bill is to repeal three sections of the present law, which require the making of a deposit of $200 by every candidate. That, of course, is simply a question of policy, of expediency. For myself, I think the present law has worked well, and that it would be a great pity to change it. The requirement of a deposit of $200 was introduced into our Election Act some years ago to meet a difficulty which I am sure every one who has followed the history of elections in this country must have seen, either in his own constituency, or in other well known instances in different parts of the country. Continually men were being nominated who had no sort of chance of being elected, who frequently had some ulterior motive rather than any real intention of going to the polls, or any hope of being elected. Perhaps it was to prevent an election by acclamation; perhaps it was to embarrass, to keep at home, the candidate who was undoubtedly likely to be returned, but who, for some reason, it was thought had better not be free to go anywhere outside his own constituency. Now, I do not mean to say for a moment that the requirement of making a deposit of $200 will prevent that sort of thing, or put an end to it; but I do think it exercises a useful check, and that it would be a decidedly retrograde step to return to the old order of things, when any one who could get the necessary signatures to his nomination paper, could put the country to the expense of an election. An election is an expensive thing, not only to the candidate, as I fancy every one of us knows to his cost, but it is an expensive thing to the country; and in many cases, I think, if we had more elections by acclamation the parliament of Canada and the Dominion of Canada would be none the worse off. As I have said, men were, under the old condition of things, frequently nominated for some purpose of embarrassing the opposite candidate, or preventing an election by acclamation. All sorts of reasons for it existed. I am old enough to remember, what I have no doubt my hon. friend who introduced this Bill cannot remember, but I remember very well a distinguished gentleman in the city of Toronto, some 30 odd years ago, who, whenever there was

an election, a general election or a by-election anywhere in that section, managed to obtain a nomination for himself. He did not generally receive more than a dozen or 20 votes in the whole constituency, and it was a standing joke which nobody could understand. But I have heard that this gentleman had the fortune to have some wealthy relatives in the old country, and the nomination regularly at each election was an admirable excuse to elicit their sympathies and their financial aid. Now, while the necessity for a deposit of $200 may not prevent that sort of thing altogether, it certainly acts as a wholesome check, and I should be for my part entirely opposed to returning to the old order of things when there was no check.

Now the other proposition in this Bill —there are just the two—is again to reverse our present law absolutely and go the full length in the other direction. Under our present law, when the seventh day after nomination day would fall on a statutory holiday, the voting is to take place, not on that holiday, but on the following day. The present law negatively declares that the voting is not to take place on the holiday. This Bill proposes to repeal this provision of the present law and declare affirmatively that the day on which the poll is taken shall be a public holiday throughout Canada. My hon. friend does not explain on the face of this Bill what he would do in the case of a by-election. I do not know if he has thought of that. He does not say whether he would have the voting day a public holiday anywhere else than in the riding or not. But, upon principle, my idea is that the present condition of things is much better than the new condition which my hon. friend would bring about by this Bill. The reason for the present law, postponing the voting day until the day following if the seventh day would fall upon a general holiday, is, I think, very plain. It is in the interest of the preservation of peace and good order at an election. Every one knows that a holiday is very likely to lend itself to other purposes than those of peace and good order, and what necessity there is for the change, I cannot understand. It is an ancient principle, crystallized in the shape of a hymn that I used to be familiar with, that Satan finds some mischief still for idle hands to do, and I am well satisfied that if we had the voting day throughout the country a general holiday we should only have dozens and dozens of people upon the streets who otherwise would be at their work, and go a long way toward getting back to the old order of things when election day would be a day of riot, mischief making, noise and disturbance in every direction instead of an election being the peaceful, orderly business-like proceeding that it has come to be in Canada. With all respect I would say to my hon. friend that I think that both of these propositions would be mistakes and that this House ought not to give the Bill its second reading.

Mr. MACDONELL. Mr. Speaker, perhaps I had better have spoken before the hon. Minister of Justice (Mr. Aylesworth) so as to explain my reasons for introducing this Bill. If I had done so I might possibly have made it unnecessary to go into the matter even at the comparatively short length that he did go into it. My idea in introducing this Bill is to keep in touch with what I believe to be the democratic spirit of the day. I will deal with the two amendments as they appear in the Bill and, firstly, with the question of the deposit, because the Minister of Jusctice has not quite correctly interpreted the effect of the Bill as I had intended it. In regard to the deposit, dealing with the matter historically, I find that the first consolidation and revision of the Election Act after confederation, as far as I have been able to ascertain, took place in the year 1874. On that occasion the question of the deposit by candidates was considered and the law then was that the candidates should deposit $50. The statute of 1874, chap. 7, sec. 19, provides that:

A sum of fifty dollars to be paid to the returning officer at the time the nomination paper shall be filed with him.

That continued to be the law until the next revision and consolidation of the Election Act which took place in 1882. On that occasion the matter was very much debated in the House of Commons and there were several propositions before the House. One was to keep the deposit at $50, another was to eliminate the deposit entirely, and a third was to raise the deposit to $200. On that occasion I find that the Hon. Edward Blake, whose opinion I quote for the benefit of hon. gentlemen opposite, spoke as follows, as will be found at page 264 of the debates of the House of Commons, 1882:

But much may, on the other hand, be said against the proposition to increase that deposit to $200. I have never favoured, much, any deposit at all. I have always thought that we were trenching upon very dangerous ground when we proposed to create impediments in the way of a fair expression of opinion by the people at the polls by bringing forward candidates. . . . But, I must say that I feel personally hostile to the increase of the deposit. I think that we ought not to increase the difficulties in the way of a presentation of as many candidates as five and twenty electors choose to nominate for the consideration of the people at any election.

That was then the number required to sign the nomination paper.

The hon. gentleman (Mr. Ives) says that this measure is, in the whole, a measure in case of intending candidates. I do not think

so. I think that the provision of so substantial a deposit as $200 is a provision which will very often prevent contests when it would be hardly desirable that there should be contests. . . . I hope that if the Bill passes this House, the amount of the deposit will be reduced to the old figure.

Mr. GRAHAM. What was the amount of the deposit?

Mr. MACDONELL. It was $50 from 1874 to 1882. In 1882 it was raised by the Bill then presented to $200, and it has stood at that figure ever since. My desire is to make it unnecessary to have any deposit. Long since the property qualification has been removed. No progressive nation requires any property qualification and very few require a deposit at election time. The idea seems to be to remove all barriers as far as possible to entry to the House of Commons of whomsoever the people shall select irrespective of any money consideration. I think that is a fair deduction to take from the words of the Hon. Mr. Blake which I have just read. It seems to me that there should be no impediment placed across the floor of the House of Commons of a financial nature against any person whose nomination paper is signed by the required number of duly qualified electors. The deposit is not a very large matter, it is true, but it is the sum of $200. The Minister of Justice has referred to the danger of a multiplicity of candidates by making it easy for persons to run who are not seriously candidates, but who interject themselves into the campaign without any hope of success. Long since the province of Ontario has abolished any deposit in regard to provincial elections. There is no deposit necessary to be made in Ontario, and yet it has not been found that it has the tendency of increasing the number of candidates who present themselves at the polls. I think there is no greater number presenting themselves at the provincial elections than there is at Dominion elections. There is no occasion for such a thing, it is simply an ancient impediment to entry into parliament. The minister and I apparently cannot agree on the principle of the thing, but I do think I will have his concurrence in the statement that elections fairly won have been upset by some neglect of the mere technicalities surrounding the making of this deposit. I think that the hon. member for Durham (Mr. Thornton) after being duly elected to the House on one occasion would not be allowed to take his seat because the deposit was put up in the shape of a marked cheque instead of legal tender. So far as I have been able to find, I do not think any such financial restriction exists in any other country. A candidate in England is not required to put up a deposit.

Mr. AYLESWORTH. Would the hon. gentleman give me any instance in which elections have been set aside in this country for irregularities in connection with the making of the deposit; I do not remember any.

Mr. MACDONELL. I mentioned the case of Durham.

Mr. AYLESWORTH. I beg to say that that election was set aside for corrupt practices.

Mr. MACDONELL. No; the Minister of Justice must be referring to an election prior to that.

Mr. SPROULE. It was set aside because a marked cheque was put up for the deposit, instead of cash.

Mr. AYLESWORTH. I am referring to the election in which there was a question as to the return as between the present member for Durham and his opponent. That election went to trial at Cobourg and the election was voided and a new election ordered on account of a corrupt practice by an agent.

Mr. THORNTON. I beg to say that statement is not correct.

Mr. MACDONELL. I thought I was right.

Mr. GRAHAM. It is fair to the Minister of Justice to say that he says he knows whereof he speaks as he was in the case.

Mr. MACDONELL. There were two Durham cases, one was as the Minister of Justice points out, and one was as the hon. member for Durham has pointed out.

Mr. AYLESWORTH. I do not know whether there is a misunderstanding between the hon. member and myself on the subject, but there was but one election, one voting; there were two petitions with respect to that election and the result of the trial of the two petitions which took place before the same two judges was as I have stated. I appeared as counsel at that time for the petitioner and sought to obtain a new election and a new election was ordered on the proving of a clear case of bribery by an agent. The question as to the regularity of the deposit was not considered by the learned judges and the case was not carried to an appeal but a new election was had.

Mr. THORNTON. Mr. Speaker, I happen to know something of the case referred to by the Minister of Justice. I say most emphatically there was not one word in the deliverance of the judges in connection with that case that said the judgment was voided on account of corrupt practices; not one sentence not a single word from beginning to end.

Mr. MACDONELL. I think that bears my statement out. There were two cases,

the Minister of Justice has referred to one, and I am referring to another.

Mr. GRAHAM. Let us get it straightened out; would my hon. friend tell us what year it was and we will get the record.

Mr. THORNTON. In the general election of 1900 there were two candidates in the field, myself and my opponent Mr. Beith. I had a clear majority of 42 and the returning officer refused to declare me elected because my deposit was made by a marked cheque instead of in bills as required by law. West Durham was vacant for one whole session of this parliament because of the refusal of the returning officer to declare the candidate having the most votes elected. The question came up in this House time and again. It was declared by the Hon. David Mills (Minister of Justice) that it was the clear duty of the returning officer to declare the candidate having the most votes elected. Sir Wilfrid Laurier made the statement on the floor of the House and so did every one else who had any authority to speak on the subject. West Durham was vacant one whole session of this House because the returning officer refused to declare the candidate having the most votes elected. The seat was declared vacant, not because of corrupt practices on the part of the candidate or any of its agents, because in the deliverance of the judges which I have in my possession, there is not one syllable that says that the seat was vacated because of corrupt practices on the part of the candidate or any of his agents, and the statement made by the Minister of Justice is incorrect.

Mr. SPROULE. And the law about the deposit was afterwards amended.

Mr. AYLESWORTH. I understood the hon. member from Durham stated that the decision of the judges contained nothing with reference to corrupt practices. I beg to say that is an entire mistake; the election was voided solely and only upon the ground that corrupt practices were proven.

Mr. THORNTON. I challenge the Minister of Justice to produce the deliverance of the judges on that occasion and if there is one syllable in the deliverance of the judges on that occasion to the effect that they vacated the seat on account of corrupt practices I will immediately vacate the seat I hold for Durham.

Mr. SPROULE. How could the seat be vacated on account of corrupt practices when the returning officer refused to return any one?

Mr. FIELDING. The records will show; there is evidently a misapprehension somewhere.

Mr. MACDONELL. No member was returned and there could be no unseating. The Minister of Justice must have another occasion in his mind altogether and that is the only way I can explain his lack of memory. As I have said, Mr. Speaker, I can find no precedent in the laws of other countries for this deposit. The abolition of this deposit had been asked for by public bodies and by democratic bodies throughout this country. The Minister of Labour will no doubt bear me out that the Trades and Labour Congress of Canada have frequently asked for the removal of this impediment in the way of a free entry into this House of any man who chooses to be a candidate. It is for the members of this House to say whether or not there is to be a barrier placed at the door of the House of Commons to collect a toll of $200 before a man can be a candidate. Is it worth while; what is the reason for it? It is an ancient provision. Originally it went to the returning officer for the election expenses, and now if the candidate does not poll one-half as many votes as the successful candidate it goes to the revenues of the country. I do not think the revenues of the country should be supplemented from any such source as that. Now, with regard to the day of votation being a holiday I do not think the Minister of Justice did me justice or treated me with courtesy in the manner in which he referred to that feature of the Bill. My idea in bringing this amendment to the attention of the House is to prevent corruption and it has nothing to do with making election day a day of jollification.

This Bill does not provide for a holiday in cases of by-elections. It simply provides that the day set apart for a general election throughout Canada shall be a public holiday, which as we know, takes place only once in four or five years. I propose this amendment because I believe the present system, under which the polls are open only from nine to five, produces an immense amount of corruption. The hours of polling are so limited that the man who has the means of engaging vehicles and getting out the vote, gets it out. I believe there would be much less corruption if the whole day were a public holiday. What opportunity have the working people to record their vote between the hours of nine and five? They go to work at six, seven or eight o'clock at the latest, long before the polls are opened, and do not leave their work until after five, so that the only opportunity they have of voting is between twelve and one, and it is that hour that is taken advantage of by the candidate with money and vehicles at his disposal to bring the voters from factories and workshops to the polls. All other countries whose election laws I have been able to examine either make election day a holiday or hold

the election on Sunday. The latter is the case in some European countries. In France, in Germany, and I think in Belgium, the voting takes place on Sunday; in Denmark there is a half-holiday. In the United States 33 of the states make election day a public holiday. In Illinois the polls are open from 5.30 a.m. to 9 p.m. In England they are open, I think, until nine o'clock at night. In other countries they open as early as six or half past six in the morning. In these countries every man is given a chance to poll his vote, whereas in Canada, unless a man is prepared to leave his work and lose his pay for the time he is absent, he has no opportunity to vote unless he can do so at the noon hour; and we know that in large cities it is often impossible for a man to go to the polling place and get back to his work, besides eating his meal, in the hour. If the government object to making election day a holiday, I am willing that the Bill should be amended to provide that the polls shall open earlier in the morning, so as to give the working classes and the people generally a chance to vote; because there are a large number of people not belonging to what are ordinarily called working people, clerks and others, who find it difficult or impossible to leave their employment during the present polling hours. Then, there is sometimes a disposition on the part of certain employers of labour to prevent their employees voting unless they vote as they wish them to. There is a great deal of intimidation of this kind, and I think to make election day a holiday or to have the polls open earlier would afford all people a chance to vote on an independent basis. If it is too much to make the whole day a holiday, let the Bill be modified in some such way as I have suggested. There is nothing very revolutionary in this. The amendments I propose are along the line of giving the men on the street a fair chance with the capitalist and the large employer. I can do no more than bring these matters to the attention of the House. I have done it to the best of my ability consistent with brevity. I hope the Minister of Justice will reverse his decision with regard to these matters, just as I believe he will reverse his opinion when he refers to the record and finds that the hon. member for Durham is correct in what he has said.

Mr. AYLESWORTH. To justify the statement I made a few minutes ago with reference to the Durham election, the election trial in question took place, according to the certificate of the judges, on the 7th and 8th of June, 1901. There were two petitions, one by Charles Jonas Thornton claiming the seat and the other by Charles Burnham against Charles Jonas Thronton to set aside the election and have a new one ordered. The judgment, to be found on the second page of the journals of this House for 1902, states:

The said petition, by reason of certain preliminary objections and an appeal thereon to the Supreme Court of Canada, was never at issue until the 10th day of May, 1901, and was tried before us at the town of Cobourg on the 7th and 8th of June, 1901, whereupon having heard the evidence adduced, and the petitioner having abandoned his claim to have the said Robert Beith declared to have been elected, we determined and adjudged that Wm. L. Gerrie, an agent of the said respondent, Charles Jonas Thornton, at the said election had been guilty of corrupt practices at the said election, but without the knowledge or consent of the said Charles Jonas Thornton; whereupon the said Charles Jonas Thornton, abandoned his claim to be declared to have been elected.

Mr. THORNTON. I made the statement a moment ago, with reference to the deliverance of the judges in that case, Judges Falconbridge and Street, that they did not say that the seat was vacated because of corrupt practices on the part of myself who was a candidate in that election. I repeat that statement, and I will produce to this House, inside of the next week, the deliverance of the judges as certified to by the official stenographer of the court. If my statement be incorrect, I will do what I said I would a few moments ago—vacate my seat, on condition that if it is correct, then the Minister of Justice will vacate his seat.

Mr. SAM HUGHES. In the Durham election, the hon. member, (Mr. Thornton) received the majority of votes legally cast. It was found out that his agent, Robert Loscombe, had placed in a marked cheque instead of the cash as required by law, and on that technicality, Mr. Thornton was denied the right to take the seat which was his by a majority of the votes cast. These are the facts.

Mr. AYLESWORTH. I beg to move that the Bill be not read now the second time, but this day six months.

Mr. C. J. DOHERTY (Montreal St. Anne's). I would like to detain the House just a few minutes to place before it some considerations, which, I think, if the hon. gentlemen will give them thought, will lead them to conclude that this Bill deserves much more serious consideration than has been given it within the last few minutes. It seems to me that the reasons advanced by my hon. friend from South Toronto (Mr. Macdonell) in support of his proposition, ought in themselves to carry conviction; but there are also perhaps larger and wider considerations which might be invoked in its favour.

It seems to me that the two propositions in this Bill deserve the support of this House, not perhaps so much because of what they will themselves effect, if carried

into law, as because they will serve as beginning of improvements to our election system and tend to remove what constitutes in the public mind a very false impression of what really an election should be. There can be no doubt that there is an impression in the public mind that an election is an operation whereby two or more gentlemen, anxious to become members of this House, throw themselves into a struggle in which they are prepared to expend their money, their efforts, their eloquence and arguments for the purpose of attaining positions for themselves. That is an impression entirely the reverse of the conception of what an election ought to be, namely, an operation by which the people calmly and quietly select the men who, in their judgment, are best qualified to represent them and to legislate to the best advantage of this country. That false conception is in a measure due to the very provisions of the law this Bill seeks to amend. What is this requirement of a deposit of $200 but the announcement that an election to this House is something which must cost money to the candidate or which must at all events expose him to the loss of money. In other words, that no man, who is not sufficiently anxious to get into this House, to spend $200 or, at the very least, to be willing to bet $200 that he can get half as many votes as the candidate opposed to him, can under any circumstances be entitled to represent any constituency in this country, and that no body of electors, no matter how anxious they may be that a certain individual should be their representative, shall be entitled to vote for him unless he is sufficiently anxious or has sufficient confidence in the result to bet $200, or unless his electors are sufficiently confident of his election to make themselves the bet of $200. Unless the condition be fulfilled, they shall be debarred from voting for the man of their choice. This put the candidate in a position which, it seems to me, no candidate ever should occupy, of seeking favour at the hands of his electors, seeking something for himself that he is willing to pay or risk his money for; whereas the real fact is, and, it seems to me, ought to be so understood, that the man who comes forward consents to place his services at the disposition of his fellow-citizens and fellow countrymen and does not seek at their hands something for himself. I am compelled to admit that the impression is widespread that every man who is willing to serve his fellow-citizens as a member of this House is out seeking for the position and wanting it for himself. Any thing that can be done to remove that impression, I think, might well be done. And I believe the abolition of this deposit of $200 required of the candidate would be, at all events, a help in doing away with that very false and very erroneous impression.

It is said that the purpose of this deposit is to prevent people who have no possible chance of being elected from presenting themselves and putting the constituency to the trouble and turmoil and the country to the expense of an election, as well as putting the opposing party to such expense as he may incur. But may I humbly suggest that there may be a better method found to protect the country and the constituency against these consequences than this requirement of a deposit of $200. The law now says to every qualified person: If you are anxious enough to have a chance of becoming a member of parliament to put up $200, go ahead and put the constituency and country to the expense and the constituency to the turmoil and agitation of an election contest. In other words, the measure of a man's right to present himself in desperate circumstances is whether his anxiety to get into parliament is great enough to make him risk $200. I would like to suggest that a fairer test, and as effectual a check, would be an increase in the number of persons required to nominate a man for the position of member of this House. It is a very rational proposition that a man should not be entitled to provoke an election where there is a manifest, or, at all events, a strongly presumable, impossibility of his succeeding or even of coming as near to success as polling half the votes of his opponent. But is it a reasonable way to decide whether there is such an impossibility to say: 'If you are willing to risk $200 on it, you may come forward? This makes the right to come forward, as I say, depend upon the anxiety of the individual to have the chance to get in. Why not make the permissibility of a man coming forward and provoking an election contest depend upon whether or not he can produce reasonable evidence of a desire on the part of some considerable portion of the electors that he should be elected? I am not suggesting that we should require a majority or anything approaching a majority. But surely, in a constituency of eight or ten thousand electors, it would be a more reasonable thing to say that a man should not come forward as a candidate unless he can show at least 100, or 150, or 200 electors in that division desiring him to come forward, than to say that he can come forward if he has $200 to bet on the chance of his being elected. This would prove as effective a check to ill-advised candidature, if I may use the word. Surely, the man who will come forward with his nomination signed by, let us say, one per cent of the electors, would be in a better position to say he had reasonable ground for provoking a contest than the man who has no

other reason to advance than that he is willing to bet $200 that he will get at least half as many votes as his opponent. I do not say that it is not desirable to prevent unnecessary contests, but here is a means of preventing unnecessary contests ready to the hand of legislators if they will adopt such a provision as I suggest. It would have another advantage; it would go further in carrying home to the minds of the electors that an election was not an effort of a man to get himself elected, and involving at the very outset, at the behest of the law, his putting up money for the opportunity. Is not the country in a peculiar position in reproaching an individual elector who expects something from the candidate in return for helping him to get elected, when itself says that a man shall not be a candidate unless he takes the chances of paying the country $200? It seems to me the first provision of this Bill merits the most serious consideration, and for my part I have no hesitation in saying that it is a measure, which, in my judgment, would be a distinct improvement on the law as it stands. I think I might fairly call—did I desire to do so—for the support of the hon. member (Mr. Miller) who the other day introduced a Bill for the prohibition of race-track gambling. Why here is an election Act that requires that every candidate should be a gambler. The Minister of Justice (Mr. Aylesworth) the other day gave us a number of instances of acts that amounted to gambling. Can you call it anything else than a bet when a candidate is called upon to put down $200 on the condition that if he gets half as many votes as his opponent he shall receive back his money, but shall forfeit it otherwise? What is the operation but a bet on the part of the candidate that he will get half as many votes as his adversary, the country taking the dignified position of standing up and saying, 'I bet you, you can't do it.'

Now with regard to the second proposition, I think it can be supported by reasons resting on the same basis. The reason we have heard urged against it is the danger that if you create a public holiday the people may use it for purposes other than that which was intended, and may indulge in disorderly practices, upon the principle that Satan finds mischief for idle hands to do. Now that would be rather a dangerous principle to carry to its logical conclusion. What are we going to do with the Sabbath day? What are we going to do with all our statutory holidays? Is there any reason to fear that on this particular holiday Satan will be particularly busy? I would not like to suppose that the experience of the Minister of Justice in elections leads him to the conclusion that it is a day when Satan gets in his finest work. But it seems to me that to say that you do not dare to give the people of this country a public holiday on election day because they would abuse it, is a very weak reason in face of the positive reasons in support of this Bill advanced by the hon. member for South Toronto (Mr. Macdonell). Now I would like to add one other reason, and it is based on the same general principle which leads me to support the first proposition of this Bill, and that is that the declaration of a public statutory holiday by the governing power would be a measure notifying the whole people that their country looks to them to give one day to the performance of what is the most important civic duty that each one of us owes to his country. Surely, if for nothing else than to bring home to the people their duty in an election, it would be worth while that this government should say to them: We expect you to give that day to the performance of the duty of selecting a man to represent you; you shall not go about your ordinary avocations, you shall not treat your private business as of greater importance than your public duty, you shall not wait until somebody sends a wagon after you, until half a dozen people run after you, and bring you up in state to the polls. No, the election of a member to represent you is a duty you owe to your country, and you shall give this one day to the performance of that duty. It seems to me that such a provision would remove one of the disadvantages under which working men frequently suffer, as has been eloquently pointed out by my hon. friend from South Toronto, and it would furthermore remove an excuse which men frequently offer for abstaining from the performance of that duty. We all know the excuses which men give for refusing to go to the polls. I hardly think it will be denied that, except under very exceptional circumstances, such men are failing to perform a duty which they owe to their country. I would take away from that class of men all excuse, such as their business interest, the necessity of pursuing their daily avocations. This proposition would place those men in a position where they would be forcibly made to understand that they must give up a day to this work, it would deprive them of all excuse of refusing to do their duty by going to the polls. Sir, I think these two propositions, if carried into law, will help the attainment of a far-reaching result, namely, the result of bringing home to the people of this country the conviction that casting a vote in an election is a duty they owe to the country, and of removing the widespread belief that an election is but an opportunity extended to certain persons of aggrandizing themselves by spending their money in deposits or otherwise, to induce people to go and vote. It is because I believe those two propositions carried into law would be steps

in the direction of producing that result, that I shall vote against the amendment, and in favour of the measure proposed by my hon. friend from South Toronto.

Mr. E. BRISTOL (Centre Toronto). I believe it would be very much to the interest of this country that the Bill introduced by my hon. friend from South Toronto (Mr. Macdonell) should be passed into law. I do not propose to speak at length in its favour, inasmuch as my hon. friend from South Toronto and my hon. friend from Montreal (Mr. Doherty) have very ably presented strong considerations which should induce this House to pass the Bill. I cannot, however, refrain from saying that I believe a refusal on the part of this House to abolish the deposit is really a restraint on the discussion of public issues at elections. There are in every country a great many matters of public interest which, in the first instance, have not many converts; there are many men who wish to advance ideas with which at the moment the general public do not agree. There is no logical reason, in my judgment, why such men, if they have a sufficiently signed petition, should not be permitted to place their names before the public, and to address the public on such issues as they believe of national importance. I believe, therefore, it is in the public interest there should be the fullest opportunity given to men who receive a reasonably signed nomination of expressing their views, and receiving the votes of their fellow-citizens. I do not see that the public are in any way injured. I do not see how any one can reasonably oppose the proposition. I would think that hon. gentlemen opposite would have been moved to a more favourable consideration of this measure when they were reminded that in the province of Ontario they had placed such a law on the statute-book of that province, and when moreover they remember the views of their former distinguished leader, the Hon. Edward Blake. With reference to the second part of the Bill, it seems to me that the argument, if you can call it such, of the Minister of Justice is an insult to the intelligence of this House. To suggest that a public holiday should not be given for the performance of the most important duty that the people have to perform every five years, namely, the election of members of the House of Commons, to suggest that a public holiday should not be given because it might end in riot and drunkenness, is, I affirm, an insult to the intelligence of the people of this country. That might have applied in the old days of open voting, when bars were in full swing, and barrels of beer were all around. But people have advanced during the last forty years, both in temperance and in intelligence. I quite agree with my hon. friend from Montreal (Mr. Doherty) that every opportunity should be given on this particular day for the expression of public opinion, and for every citizen to take part in a national election. We are talking about compulsory voting in this country. We have been making complaints that people do not go to the polls. Surely it would be in the national interest to give the public every opportunity of going to the polls before we try such legislation as compulsory voting. Is not this a measure in the right direction? Is it not a measure in the interest of the people of Canada? It is easy enough for the rich man to go and vote, it is easy enough for a great many members of the community to go and vote, but in the great cities and in the northern districts it is a difficult and expensive matter for poor people and workingmen to go to the polls. I can only say that I believe that if the Bill of my hon. friend from South Toronto became law, it would tend to decent elections, it would tend to greater interest in the elections, and I think the very fact that one day in five years was set aside as a national holiday for the purpose of electing members to this House would be of great public importance and of great advantage to the people of Canada and to Canada itself.

Mr. KING. I rise to ask a question of the hon. member who has introduced this Bill. The Bill proposes that election day should be on a public holiday. Is it intended that employers of labour shall be required to pay their men their wages?

Mr. MACDONELL. My idea would be to declare it a public holiday the same as any other holiday allowing the people to vote and stand by whatever arrangements may be made according to the laws of the different provinces.

Mr. KING. My hon. friend gives no guarantee that wages will be paid on that day?

Mr. BRISTOL. Are wages paid on Labour Day or on a government holiday?

An hon. MEMBER. No.

Mr. MACDONELL. Workmen would certainly get paid the same as they are paid for Labour Day or Dominion Day or any other public holiday.

Mr. MEIGHEN. The only observations I have to make are in regard to the controversy that took place in the House a few moments ago between the hon. Minister of Justice (Mr. Aylesworth) and the hon. member for Durham (Mr. Thornton). I have made it my business, since that controversy took place, to look up the records and I shall endeavour to state what the facts are simply from the records and absolutely impartially. An election took place in 1900 in West Durham in which the hon.

member for Durham received the larger number of votes. But he was not declared elected by the returning officer on account of the reason which he stated to the House.

Mr. TALBOT. Mr. Speaker. May I ask if this question is in order?

Mr. SPEAKER. It is a question of relevancy, but if the House is willing that the debate should go on I shall not rule it out of order.

Mr. MEIGHEN. I quite recognize that it is scarcely relevant but I thought the House would desire to see the matter cleared up. The returning officer, having refused to declare my hon. friend from Durham elected, he entered an action in the High Court of Justice asking for a mandamus compelling the returning officer to declare him elected. That action is styled Charles Jonas Thornton vs. Thomas Bingham, the returning officer, and the report of the judgment is given at page 3, Votes and Proceedings, 1902. The judgment is given by Mr. Justices Falconbridge and Street. The petition of the hon. member for Durham was dismissed by these justices and they decided that he could not compel the returning officer to have him declared elected by reason of the fact that he had not put up his deposit. No mention whatever is made in the judgment of corrupt practices. Another action was also entered in the courts of justice and I think that possibly my hon. friend from West Durham has had the two confused. Another action was entered by one Charles Burnham, who evidently was a voter, against Charles Jonas Thornton and Thomas Bingham. That action was entered asking that Mr. Thornton's opponent, Mr. Beith, be declared elected on the ground that Mr. Thornton was not legally a candidate, he having put up a marked cheque in place of money with his nomination papers. The petition asked for a mandamus to compel the returning officer to declare Mr. Thornton's opponent elected on this ground. The petitioner went further, however, and alleged the alternative ground, that, if the judges found that Mr. Thornton's nomination papers were in order, his election should be declared void for corrupt practices. The judgment is given at pages 2, Votes and Proceedings, 1902, and in that judgment it was stated that there was no election:

> And we further report that at the said election neither the said Charles Jonas Thornton nor the said Robert Beith was returned as elected, and that the said election was and is void.

But, in the course of the judgment, and this is evidently what the Minister of Justice referred to, corrupt practice was said to have been proved on the part of one W. L. Gerrie but without the knowledge or consent of Mr. Thornton. That election was not declared void on account of corrupt practices, so that I think the Minister of Justice will have to concede that he was wrong in that regard. The corrupt practices are referred to in the judgment as having been committed by one Gerrie, agent of Mr. Thornton, without the latter knowledge or consent. They simply say 'whereupon the said Charles Jonas Thornton abandoned his claim to be declared to have been elected' and then they add that on account of no one having been returned elected the election was null and void. I have stated it as clearly and as fairly as I could.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, I see no reasonable objection to this Bill and it seems to me that there is very much to commend it to the judgment of the House and the country as well. In the first place it has been asked for by very respectable classes of the community. The patrons of industry, representing the great agricultural class, have passed resolutions more than once asking the government to make this amendment to do away with any deposit by a candidate when he is running for election. I think that their views ought to be entitled to some consideration. Have the government given us any strong grounds in favour of putting up a deposit of $200 or is there any strong justification why it should be done? But, in addition to the patrons of industry, I notice that the labour unions all over the country have also passed resolutions favouring the abolition of the $200 deposit in elections. Surely the hon. Minister of Justice (Mr. Aylesworth) can hardly say that it is defensible to give these important elements a slap in the face by moving the six months hoist. It is not very courteous to them to say the least. But, he can reckon with them. It is not my funeral, it is his own and I am quite willing to leave the matter with him. The minister, the other night, gave us a splendid address on gambling and betting. What is the situation here? The hon. member for Montreal, St. Anne (Mr. Doherty) made an allusion which was very fair, but if I were to elaborate it a little more I would say that the government become the bookmaker in this respect, and, therefore, are gamblers on a race, the only difference being that this is a human race instead of a horse race. The government, through the Minister of Justice, say: We will bet you $200 that you cannot get half the vote that the successful candidate gets and if you believe that you can and put up the money the government act as the book-maker and stakeholder. The Minister of Justice tells us that if he had the power he would do away with all gambling, but here is evidence that he does not practise what he preaches. I always thought there was another argument in favour of the proposal

to make election day a public holiday and that is that it would result in minimizing the possibility of purchasing votes. The poor man does not want to leave his business on voting day, in the first place because he may offend his employer and in the second place if he leaves his work he will be losing a portion or the whole of his day's wage. It is a very strong temptation to induce that man to take compensation for the time he has lost in going to the polls, which of course is corruption. If you had a public holiday on votation day this temptation would be done away with and at the same time you would give the labouring men of this country an opportunity to exercise their franchise without any personal loss to them. There is a good deal in the argument of my hon. friend from Montreal (Mr. Doherty) that if election day were a public holiday the citizens of Canada would be likely to appreciate the importance of what they are doing on that day and enter into the election of their representative with more vim and more enthusiasm.

Mr. PROULX. Does not my hon. friend (Mr. Sproule) think that if you made election day a public holiday a great many people would be disposed to travel on that day instead of staying at home to vote? If you adopt such legislation as that you would have to incorporate with it the principle of compulsory voting.

Mr. SPROULE. There are a great many people who favour compulsory voting, and one of the strongest arguments against it always has been that it would compel a man to lose his day's wage to go to vote.

Mr. MARTIN BURRELL (Yale-Cariboo). I wish to protest against the evident desire of the Minister of Justice to give this Bill the six months hoist. We had before us a Bill at an earlier stage of this day's sitting regarding the eight hour day, which gentlemen on the other side professed to favour in principle, but the details of which they did not agree with, and so the government referred that Bill to a select committee for the purpose of selecting its best features and submitting them for the opinion of the House. Now, there is a good principle in the Bill we are now discussing and why should the government propose to murder it by giving it the six months hoist. There may be details in the Bill which we cannot assent to, but there are certainly good principles in it and why the other Bill should be sent to a special committee and this Bill knifed by the six months hoist, is something that I do not see the logic of. I must confess that my mind is open with regard to the question of the deposit, and I think there is a great deal to be said for and against it, but it does seem to me that the proposal to abolish it deserves more consideration than a cold six months hoist. Then, with regard to the principle that on election day there should be a holiday to give every voter a reasonable opportunity to exercise his franchise, I do not think any man can say that principle is not worthy of acceptance. In the province of British Columbia we keep the polls open until seven o'clock at night in order to give every man who is employed in business or in the mills or in the mines a fair opportunity to exercise his franchise. As was pointed out by my hon. friend (Mr. Doherty) what is the good of our boasting as we do about the sacred right of the franchise and the triumph of democracy, when we do not really try to make it sacred by emphasizing the vital importance to every man of the step he is about to take when he casts his vote. We talk about a holiday, in every truth it would be a holy day, if we could impress upon the mind of every voter the great national importance of electing men who would legislate for the welfare of the country. My hon. friend from Toronto (Mr. Macdonell) has stated that he was willing to have his Bill amended in its details so long as the principle incorporated in it were adopted by parliament, and in view of that I shall be glad to record my vote against the proposal of the Minister of Justice to give this Bill the six months hoist.

Hon. W. S. FIELDING (Minister of Finance). One or two hon. gentlemen seem to think that when we follow the well established rule of the House in moving that a Bill be read six months hence, it is something in the way of an insult to somebody. Why should it be regarded as an insult to any body if the House follows an old established rule in this respect?

Mr. BRISTOL. What I said was that the reasons given by the Minister of Justice were an insult to the intelligence of the people of the country, and I repeat it, because the reason given by the Minister of Justice against having election day a public holiday was that it would result in riot and drink. If the government wishes to shelve the consideration of this measure by moving the six months hoist I do not consider that would be an insult to any body and I did not say it was.

Mr. FIELDING. There is nothing easier than to answer an argument of your opponent by saying it is an insult to the intelligence of the House. But I never found there was much argument in a statement of that character and I do find that those who use it are generally those who are not noted for advancing a sensible argument. I have listened with pleasure as I always do to the hon. member for St. Anne (Mr. Doherty) who gave us a moderate, and from his point of view, a well reasoned speech

on this subject. With all that he said as to the desirability of establishing a higher conception of the relations between the candidate and the electorate I am most heartily in sympathy. It is a misfortune that at times many of the electors fail to realize what is the true position of the candidate and that the candidate is treated as one who has some personal gain to serve. If I thought there was anything in this Bill to bring about that higher and better conception in the mind of the electorate of the position of a public man, I should most heartily give it my approval, but I have not been able to see that my hon. friend from St. Anne (Mr. Doherty) made his point good with reference to that particular phase of the question. One hon. gentleman has stated that the principle of this Bill is all right and that the details can be fixed up in committee. There are just two principles in this Bill and it so happens that both of them are regarded as objectionable by hon. gentlemen who have spoken on this side. The first principle is the abolition of the deposit, and you could not fix that up in committee. It is a question of whether or not it is right or wrong to have a deposit. I am afraid I am growing a little Conservative. I am afraid I am beginning to have more regard for the thing that is. I said the other day that there was a time when I used to think there were a thousand and one things which should not be, but as I grow older I am beginning to believe there is a reason for the thing that is established and if we look for that reason closely we are sure to find it. I have no doubt that the men of former days who in this parliament pronounced in favour of the principle of a deposit—not an extravagant deposit—were actuated by the highest sense of propriety and I am inclined to think, after the discussion that has taken place to-day, that their reasons were good then and are good now. It has been said by some that the $200 deposit is a kind of a penalty, but that is not the right way to look at it. It is not a penalty. If a man can get but a very moderate proportion of the votes of the electorate, the $200 is paid back to him, and that as a rule happens. There are but few cases, after all, in which a man loses his deposit. That there should be something to prevent frivolous elections is surely a principle that members on both sides will accept. It is a question of method. The hon. member for St. Anne's (Mr. Doherty) suggests as a substitute that we should require a requisition signed by a small number of voters, say 150 or 200, on the part of a candidate. I would ask my hon. friend to think a little further over that. Take a great constituency like that which he represents; what are 200 votes in proportion to the total electors? And if it turned out that a candidate did not receive any more votes than the 150 or 200 on the requisition, is it reasonable that that great constituency should be put to the trouble and worry and expense of an election merely to gratify the vanity of a man who, it is perfectly clear, has no considerable following in the community? If he has any considerable following, he will have no difficulty in getting the $200. I doubt if there has ever been a case of a bona fide candidate representing any considerable interest in a constituency who failed to get the $200; and in a very few cases in which a man has lost his deposit, I think hon. gentlemen, if they look at each individual case, will say that he was a foolish man to run, that he did not represent any great interest or sentiment, and that there was no need of his butting in and putting the community to the expense and trouble of an election. So I think the $200 deposit is good, and I do not think the suggestion of my hon. friend from St. Anne put so moderately and argued so forcibly, would quite meet the case. Then with regard to the proposal of a holiday on election day, the Minister of Justice ventured to suggest that it might possibly be abused. My hon. friend from Toronto Centre (Mr. Bristol) says that is an insult to somebody, and another hon. member says, what about the Sabbath—should it not be a holiday for fear it would be abused? Let us recognize the fact that the average elector is a bit different on election day from what he is on the Sabbath day. The Sabbath does not as a rule excite the average man; but we all know that in the field of party strife a considerable proportion of the electors are stirred up and excited on election day. So I think there is reason for regarding the Sabbath as not a holiday of the same kind. Then, there is the other view, that there are a great many people who do not take the keenest interest in politics, but who love a holiday, and if you gave them a holiday, they would go out of town instead of staying to vote. The hon. member for East Grey says that under the present arrangement a man cannot get away to vote, because if he went he would lose one or two hours. If he cannot afford to take two hours to vote, how could he afford to take a whole holiday? It is not reasonably conceivable that the average employer is going to pay his workmen on that day when they are absent.

Mr. SPROULE. Do they not do it on Labour Day?

Mr. FIELDING. There may be some generous, large-hearted men who do it, but they are not bound to do it, and I do not think the average employer does it. So I think the result would be that the average workman would lose his day's pay and

would have no substantial advantage in return. The hon. member for South Toronto, in his argument, introduced a new feature and one that would commend itself, I think, to members on both sides. He went beyond this Bill and said that the hours of voting were insufficient. If my hon. friend can show that the workingmen of the country are for that reason denied the opportunity of voting, let him introduce a Bill on that subject, and I hope it will find favour in the House.

Mr. MACDONELL. Then, why not let this Bill go to the committee, and there introduce an amendment lengthening the hours of polling instead of making the day a holiday?

Mr. FIELDING. Because this Bill has no relation to the hours of polling. It deals with a holiday, but does not propose to change the hours of polling.

Mr. MACDONELL. That portion of the Bill deals with the opportunity of voting. I ask that a day be set apart as a general holiday for that purpose. If that is not in accord with the views of the government, let the opportunity of voting be given by extending the hours of polling.

Mr. FIELDING. I do not quite see the connection between the two. The holiday is one question, the hours of voting another question, and the deposit another question. The Bill deals with the deposit and the holiday, but it does not touch the question of the hours of voting. I say that if it be found by experience, especially in our larger cities, that the present hours of voting are insufficient, and my hon. friend can show that there is need of some further extension of the time, I for one will be in hearty sympathy with that; and in opposing the Bill in its present form, I would not be understood as being opposed to that part of his speech.

Mr. CROSBY. This Bill is one in which I am interested, but it does not seem to be well understood. The Minister of Finance says we need not have very much sympathy for the man who loses his deposit. We had a case in the county of Cumberland only a few weeks ago, where the Liberals and Conservatives each nominated a candidate and the labour party nominated a candidate. This man polled 1,300 votes, a sufficient number to elect him in many constituencies, but he lost his deposit. Will the Finance Minister say that he should have lost his deposit, after having been solicited to run by a fair number of electors, and having contested a fair and honest election?

Again speaking of a holiday for the purpose of permitting workingmen to poll their votes, there are lots of men who have other men in their employ, and who may be influenced by the political leanings to let a certain portion of them vote and hold others back. But if the election day were declared a public holiday—and as there is only a general election once in four years nobody could be hurt—every man would have an equal chance to poll his vote. All the workingmen are asking for this, and there is no need for our standing up to tell them they do not know what they want. They want to be in a position, when the day comes, to poll their votes independent of their employers. We know, as a general thing, that men who are employing labour to a large extent, will try and influence the votes of their employees; and if they cannot get them to vote as they please, they will keep them at work so as to prevent them from voting at all

Hon. G. P. GRAHAM (Minister of Railways). I have a good deal of sympathy with my hon. friend from South Toronto (Mr. Macdonell) because I had something to do with getting a measure through in the Toronto legislature to give workingmen full opportunity to vote. I am free to admit that in my county I have never found the large employers of labour objecting in the slightest to a man going to cast his ballot. In the manufacturing establishments in the town of Brockville—and there are several large ones—not one man in the last twenty years was ever prevented from voting, no matter what his politics or the politics of his employers. The time has gone by when employers dare interfere in that way and they do not do it, so that I think we are raising a bugaboo when we speak of employers not giving their men time to vote. I have always opposed the principle of a holiday on polling day. We know that in elections there are people who sometimes induce men to get away from a constituency; and if they have a holiday they will be the more easily induced to leave the night before and not return in time to vote. Whereas, if working for their employers, they will not want to lose any time and will hesitate before going away. There is another reason. We close the hotels on polling day for a very good reason, but is it fair to say to all men in business, no matter what kind of business, that they must close because there is an election on. Is it fair to say that on polling day all business must stop in the constituency? Is it fair to proclaim the election day a public holiday and enable the employees to go out and close up the business establishments, no matter what the rush may be? What my hon. friend wants is that every man shall have time to poll his vote, and I think that can be got in a much less drastic way. Let me read the Ontario Act in that respect. I must admit that I am not sure to what

extent this House might have jurisdiction to say to an employer: You must let your employee off certain hours in the day. We could proclaim a general holiday perhaps, but I am not sure that we have jurisdiction to interfere in a contract between employers and employees, but the provincial government surely has. Let me read the Act now in force in the province of Ontario, which I submit works well and accomplishes all my hon. friend from South Toronto desires in the way of giving the men opportunity to vote:

On the day of the polling the voting shall commence at nine o'clock in the forenoon, and shall finish at five in the afternoon of the same day, and the votes shall be given by ballot.

A voter entitled to vote within a city or town shall, on the day of polling, for the purpose of voting, be entitled to absent himself from any service or employment in which he is then engaged or employed, from the hour of noon in the day time to the hour of two of the clock next thereafter, and a voter shall not, because of his so absenting himself, be liable to any penalty, or suffer or incur any reduction from the wages or compensation to which, but for his absence, he would have been entitled; provided that if so required by the person in whose service or employment the voter is so engaged or employed, the voter so absenting himself shall, at some other time during the same or the following week, employ himself in and about such service or employment for one hour or more than the hours of the usual and ordinary day's work or service otherwise required to be performed by him.

This protects the employer and the employee as well, and the workingmen of Ontario have accepted it as a fair arrangement. If my hon. friend will introduce a Bill along these lines, I would endeavour to assist him, so far as the principle is concerned, in putting the measure through the House.

As to the $200 deposit, I adhere to the older custom and law on the statute book, that there should be some substantial deposit before a man places himself in the hands of the public asking for their support. For example, take a seat that becomes vacant, perhaps in this House, through some extraordinary reason. Let me call your attention to one seat which was vacated a few years ago because the hon. gentleman, and he is a most hon. gentleman—I refer to the then member for Hastings (Mr. Corby)—because it was found in some committee that his firm had a contract with the government without his knowledge. On the fact becoming known to him he immediately resigned his seat in a most honourable manner. It would be easy, in such a case, for some mischievous person to put that riding to the whole expense of an election if he were not called on to make a deposit. On the other hand, the deposit does not debar any responsible man from running. Let us take the other view. Hon. gentlemen who are in municipal politics, in which every one can run, will agree that they know of instances where men have been put up to run merely for fun. Men have signed petitions asking men to run who did not vote for them, but simply wanted them to run to annoy some one else. The hon. member for St. Anne thinks that a large number of signatures would meet the case, but can he not recall to mind instances where men have been asked by petition to run even for parliament, and the same men have signed both petitions merely as a friendly act?

Mr. SPROULE. There is no deposit in Ontario politics, were there are more candidates in the local elections in some constituencies than in the Dominion elections, where a deposit of $200 is required?

Mr. GRAHAM. I am not prepared to say that there are. Still that would be no reason why we should remove what we consider a safeguard for this House.

Mr. SPROULE. But it would be an example showing that the hon. minister's argument does not hold good in practice.

Mr. GRAHAM. It might be to my hon. friend (Mr. Sproule) but it is not to me. I say again, the law has worked no hardship to any person. I do not believe there is any man in Canada who ought to run for parliament, whom the people of Canada wish to see run for parliament, who has been debarred from running on account of the deposit. I see many reasons why we should retain this provision of the law.

Now, a word on another line. I do not think that hon. members ought to feel aggrieved because a portion of the House declares that it does not approve the Bill and cannot conscientiously vote for it. This is a world in which we have our differences. In my experience, before coming to this House, I have withdrawn a Bill time after time though I had my heart set on it, because the leader of the government said: You cannot put it through. And I have pressed other Bills and had them defeated. But I did not think I had any grievance merely because the majority did not agree with me on the measures I proposed. In conclusion, let me say that if my hon. friend will introduce a measure to give the workingmen a longer time at noon to vote, especially in the large centres, I shall be heartily in accord with it. But I cannot support this measure, for I have opposed the holiday suggestion in the Ontario legislature for reasons that seem to me good. And I think my reasons are good against doing away with the deposit.

Mr. GEO. GORDON (Nipissing). I am surprised at the attitude of the Minister of Justice (Mr. Aylesworth) on this Bill. For, though I was not here at the time, I understand that he fathered an Act which would lead to the conclusion that he was very much impressed with the requirements of Northern Ontario. The provisions of this Act are admirably adapted to the requirements of Northern Ontario, and I do not see why the hon. minister should not try to have it put through. In the district of Nipissing, as the hon. Minister of Justice well knows, there are a great many camps in which men are working miles away from a polling booth. And I am told that you would not have had the pleasure of listening to me here to-night had it not been that in the last election certain parties held back men from going to the polls to vote. I think the Minister of Justice should allow a chance to be given to New Ontario to send a supporter of his here after the next election. I am not saying that that is the case, but I am told that it is so. If we give a holiday to the electors of Northern Ontario on election day, the vote will be increased by probably from 1,000 to 2,000 men being able to get out to the polls who are not able to get out under present circumstances. The Minister of Finance (Mr. Fielding) stated that if one or two hours longer were required for the purpose of enabling men to turn out and vote, he would be in favour of such a proposition. But I would point out that in the case I refer to, one or two hours would not be of much use; you would require to have the whole day. With regard to the abolition of the deposit, I may say that I am in favour of that also, because it would meet the requirements of New Ontario, as most of us up there find it difficult to get the $200 to put up. We have many intelligent workingmen who would likely enter into the race, and, as I always like to see a free-for-all race, I would like to see all given an opportunity to enter. And, if you will abolish the deposit next time, you will see a different kind of race from those we have ever had.

Mr. WM. THOBURN (North Lanark). I have been wonderfully impressed by the remarks of hon. members on both sides. But I have to acknowledge that I am not convinced by the arguments made by most of the hon. members on this side in reference to the Bill. The case was very clearly put by the Minister of Railways (Mr. Graham) in relation to municipal elections. I have had a good deal of experience in municipal elections, and I have no hesitation in saying that if the law were such that candidates in such elections had to put up a deposit, we should have better councils, not only in the province of Ontario but in the whole Dominion, than we have to-day. I have known many cases of men being put up, as the Minister of Railways says, just for fun, and put up so often that the best men in the municipalities would not allow themselves to be offered in opposition to such men in the municipal elections. For that reason, I perfectly agree that the deposit should be put up by candidates in parliamentary elections. In fact, when the thing was mentioned here to-night, I said that instead of abolishing the deposit, I would be in favour of increasing it.

Now, as to the public holiday: it is just a question in my mind whether the great working classes of this country would be in favour of such a Bill, for it means that the working class must lose a day's wages. According to my experience, a great majority would be in favour of earning a day's wages rather than make it a public holiday. I have heard it stated here tonight that the Trades and Labour Council demanded that election day should be made a holiday. I am not aware of it. In the town in which I have the honour to live, I have never heard such a thing as the men wanting election day declared a public holiday.

Mr. SPROULE. The hon. member (Mr. Thoburn) misunderstood me. I said that they passed resolutions in favour of doing away with the deposit of $200—both the labour unions and the patrons of industry.

Mr. THOBURN. I think some hon. member said that.

Mr. MACDONELL. Let me point out to the hon. member that at an interview held with the government on the 12th day of January, 1909, at Ottawa, by the Trades and Labour Congress of Canada, represented by their duly accredited officers, this request was made by them.

Abolition of the $200 deposit in election contests, and proclamation of election day as a compulsory legal holiday.

Mr. THOBURN. Well, I do not know that this government has any right to pass a law making election day a public holiday until we have some greater demand for it by the great working classes of this country. It will entail not only a loss to the labouring classes, but a loss to the employers of labour in all large manufacturing industries. I am perfectly in accord with the idea of lengthening the time for polling; but from my standpoint I do not see the necessity of either the abolition of the deposit or the proclamation of a public holiday for election purposes.

Mr. BEATTIE. I am sorry to have to differ with some of my friends on this side of the House. But I have had some experience with these election deposits, and I would be sorry to see the present law wiped away. On two occasions candidates have been brought up against me. On the

first occasion a petition was hawked around, and a dollar collected here and a dollar there, to enable the candidate to make a deposit. The man just got enough to take the field, and I think he came within a very few votes of losing his deposit. At the last election the same thing happened again. A petition was hawked around the town, and a few dollars were subscribed here, and a few there, to enable the man to take the field against me. To-day I do not know where that man has gone to, I have not heard of him since. But he did save his deposit. As for the second proposition, I have seen a poll standing open for half an hour at a time and no voter cast registering. If the poll was kept open until two o'clock in the morning you would still find a few voters standing around waiting for some one to give them a dollar for their vote.

Mr. MACDONELL. My hon. friend from London who has just addressed the House, according to his own statement, has no grievance against this Bill, because he admits that on each occasion he won the election. He complains that the deposit was raised by men going about the town and collecting a dollar here and a dollar there to enable his opponent to take the field, still my hon. friend admits that he was not hurt. My hon. friend from Lanark (Mr. Thoburn) agrees with the deposit, and would apply the principle to municipal elections. Now I had hoped to receive some encouragement from the Minister of Railways and Canals, knowing as I do the part he took in the Ontario legislature, and with his knowledge of the statutes of that province, both as regards the extension of hours for voting on election day, and the abolition of the deposit. I can only attribute his changed attitude to the position taken by the Minister of Justice. The government has not attempted to take the strong and drastic stand on this matter which has been suggested by the Minister of Justice. The Minister of Finance let the Minister of Justice down half way, and then the Minister of Railways let him down the whole way. The Minister of Finance referred to the excitement on election day. Now I would like to point out to the Minister of Justice, what he knows, that on election day all the hotels are closed by the law of the province of Ontario. His insinuation that the people would become riotous on that occasion is certainly a reflection on the character of the people of Ontario, and as a member from that province I strongly dissent from his statement that if they were allowed a public holiday they would abuse it. Now I may point out that this request has been made to the government by two strong and influential labour bodies in this country, men who are authorized to speak for the labouring classes. I had hoped that on this occasion the Minister of Labour would have contributed to this debate, and his failure to do so will surely be commented upon, both inside and outside this House. My sole object in bringing this matter to the attention of the House was to improve the election law, to simplify it, to remove the obstacle of the deposit, which to my mind is the last relic of a financial qualification to parliament. I have endeavoured to do away with it, and the responsibility for its maintenance must rest upon the government and the Minister of Justice.

Mr. GRAHAM. And several friends of my hon. friend.

Mr. MACDONELL. Well, the government are moving in the matter and it is their motion that we are now going to vote on. I had hoped that something better would come out of it. The Minister of Railways offers some small means of encouragement but I do not know whether he was in the House when I made my few opening remarks. What I said then and what I say now is that I merely suggest a public holiday for the purpose of having the election day purified, and, as far as possible, to remove corruption. I expressed my willingness then and I repeat it now to make any reasonable amendment to this Bill. I would be willing to adopt the Ontario system setting apart two hours for voting or to adopt any other reasonable plan by which the public can obtain a better opportunity of polling their votes on election day. However, with the government must rest the responsibility for the decapitation of this Bill. If the government are serious in their desire to facilitate voting on election day then let the Bill go to the committee and make the amendment that the Minister of Railways was kind enough to say that he would vote for. That, however, does not appear to be the intention of the government.

Amendment (Mr. Aylesworth), agreed to.

INDUSTRIAL DISPUTES ACT AMENDMENT.

Mr. MACDONELL moved the second reading of Bill (No. 23) to amend the Industrial Disputes Investigation Act, 1907. He said: The hon. Minister of Labour (Mr. King) has some amendments to consider in connection with the Industrial Disputes Act which may conveniently be considered at the same time with the amendments which are contained in this Bill and as I am anxious to advance the Bill to the committee stage I move the second reading with the understanding that it shall be allowed to stand until the Minister of Labour is prepared to consider this Bill and his own amendments.

Mr. KING. The hon. gentleman has correctly stated the position, and I am entirely agreeable to what he proposes.

Motion agreed to, Bill read the second time and House went into committee thereon.

Progress reported.

SECOND READING.

Bill (No. 24) to amend the Railway Act—Mr. Macdonell.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. What business will be taken up to-morrow?

Mr. FIELDING. My hon. friend the Minister of Marine and Fisheries (Mr. Brodeur) will take up the Water Carriage Bill and if the opportunity comes the House will be moved into supply, my hon. friend the Minister of Inland Revenue (Mr. Templeman) beginning his estimates, and my hon. friend the Minister of Customs (Mr. Paterson), if further opportunity presents itself, will follow.

Mr. LENNOX. Would the Minister of Finance be kind enough to state whether he proposes to deal with the Budget on Tuesday?

Mr. FIELDING. Yes, it is our expectation that the Budget will come on Tuesday.

Motion agreed to, and House adjourned at 12.10 a. m. Friday.

HOUSE OF COMMONS.

FRIDAY, December 10, 1909.

The SPEAKER took the Chair at Three o'clock.

REPORT PRESENTED.

Report of the imperial defence conference. with additional papers relating to Australia and New Zealand.—Mr. Brodeur. He said: This is the same document as the one that was brought down a few days ago, except the reports of the proceedings of the conference of Australia and New Zealand with the admiralty, which were not included, but which were asked for by the hon. member for North Ontario (Mr. Samuel S. Sharpe), and the hon. member for North Toronto (Hon. Geo. E. Foster).

RAILWAY ACT AMENDMENT.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 66), to amend the Railway Act. He said: Mr. Speaker, the Bill which I wish to introduce is almost identical with the Bill which I introduced last year, with this exception, that I have added a clause providing that all railways doing business in Canada after the first of July, 1910, shall report to the Dominion government the names and employment of all men in their employ who work over 12 hours on any day, or an aggregate of 84 hours in any week. The Bill provides that this clause shall apply only to trainmen, despatchers, operators, and any others who have anything to do with the management or running of trains. The object of this—and I believe it will be welcomed by the railways—is to assist in the prevention of a great many accidents which are due to the lengthy hours despatchers and others are sometimes employed. I have had a number of complaints from different men of the long hours they have to work: but you can readily understand that if these complaints were looked into by the railway authorities, the men who make the complaints might be militated against by their employers, whereas if the railways are obliged to make a report, that is public property. I feel much more strongly than I did last year, that there should be a public official representing the people of Canada, not the railway corporations or the municipalities, but the man of moderate means who has a grievance which he wishes to lay before the Railway Commission and is not in a position to do so on his own behalf. Since I introduced the Bill of last year, a number of cases have been brought to my attention in which an official of that kind would have been of great service to the people of Canada. With your permission, Mr. Speaker, I will hand into 'Hansard' the remarks which I made in introducing the Bill of last session.

Mr. SPEAKER. I am afraid that will be exceeding the custom of the House.

Mr. LEWIS. Then, with your permission, I will refer hon. members to the page of 'Hansard' in which those remarks appear, so that any who desire to read the facts which I laid before the House last year may do so. They are on page 3362, on March 26, 1909.

Motion agreed to, and Bill read the first time.

CHRISTMAS ADJOURNMENT.

Sir WILFRID LAURIER moved:

That when this House adjourns on Friday, the 17th instant, it stands adjourned to Wednesday, the 12th January next.

Motion agreed to.

RULES OF THE HOUSE.

Sir WILFRID LAURIER moved:

That a special committee of seven members be appointed, with instructions to carefully examine the rules of the House, to report what changes in their opinion might be adopted with the view to simplify, accelerate and expedite its business; and that the said committee be composed of Sir Wilfrid Laurier, Mr. Brodeur, Mr. Pugsley, Mr. McKenzie, Mr. Borden, Mr. Haggart (Lanark), and Mr. Taylor (Leeds).

Mr. R. L. BORDEN. Will the right hon. gentleman allow that to stand until Monday as I had not noticed it in the Votes and Proceedings.

Motion allowed to stand.

WATER CARRIAGE OF GOODS.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) moved second reading of Bill (No. 25) respecting the water carriage of goods. He said: The most important feature of the Bill is that concerning a clause which is to be found in many Bills of lading, providing that the ship owners will not be liable in cases of fault or negligence on their part. This contracting out of liability seems to me absolutely contrary to the principles of our laws. Some years ago we passed legislation preventing railway companies from doing this and declaring that any such clause would be considered illegal. I may say that similar legislation to the one we are now introducing has been passed in Australia and is also in force in the United States, and the present Bill is taken mostly from the provisions of that passed by the Australian parliament. Some of its provisions are also in conformity with those of the Bill passed in the United States. True no such legislation exists in England, but the tendency at least in this country has been to disregard as much as possible the clauses in Bills of lading I have referred to. It ought not to be necessary for me to dwell at any length on the principle of the Bill. It is one which certainly ought to commend itself to the favourable consideration of this House. Let me draw attention to one of the clauses in the Bill of lading of a prominent shipping line:—

It is further expressly agreed that the goods named herein are shipped and carried at the sole risk of the shipper or owner thereof, and that the ship owner shall in no case be responsible for any loss or damage thereof, or in any wise relating thereto, whether such loss and damage arise, defects or insufficiency, either before or after shipment, in the hull of the said steamer, or in her machinery, or boilers or refrigerating chambers, machinery or in any part of the refrigerating apparatus, or in any material, or the supply or use thereof used in the process of refrigeration, and whether such loss or damage however arising, be caused by the negligence, default, error of judgment of the pilot, master, officers, engineers, mariners, refrigerating engineers, or other servants of the ship owner or persons for whom they are responsible or by negligence in stowage.

Here is another clause:—

Hook marks or injury from hooks, stowage or contact with or smell or evaporation from any other goods or from live stock or their excretion, however caused. * * * *

In this case it is provided also that there shall be no liability. It is provided also that if the goods should be delivered to some other person than the ones mentioned as being those to whose order the goods should be delivered, there will be no liability. I may say, however, to the credit of the ship owners as a rule that they do not take advantage of those extraordinary provisions. But possibly in some cases some companies, not quite so reputable, might not fail to take advantage of them. And it is possible that a company, who would be absolutely responsible in ordinary cases for the negligence of its officers and servants, might contract itself out of any liability arising from such negligence. Therefore it seems to me that we should provide that such clauses in a Bill of lading should be absolute illegal. This is the law which exists in Australia and the United States. I might add that in the province of Quebec, there is in its Civil Code a proviso almost similar to the one I am now introducing. That provision has been working satisfactorily and is in accord also with section 284 of the Railway Act. That section says:—

The company, shall, according to its powers: (b) Furnish adequate and suitable accommodation for the carrying, unloading and delivering of such traffic.

And subsection 7 of the same section says:

Every person aggrieved by any neglect or refusal of the company to comply with the requirements of this section, shall, subject to this Act, have an action therefor against the company, from which action the company shall not be relieved by any notice, condition or declaration, if the damage arises from any negligence or omission of the company or of its servants.

Current jurisprudence also tends to declare that the responsibility for accidents, not only when negligence is established against the shipowner or carrier, but in other cases also is upon the carrier. That is, the onus probandi in such cases rests upon the person against whom the action in damages is taken. The general principle of law is that one is not responsible unless it be proven that the accident or damage is due to his thought, fault or negligence. But, while this principle may

have been not only sound but applicable before the present industrial development, yet, under present conditions, as shown by cases recently decided by the Supreme Court, the onus probandi rests upon the person using the appliances which are the cause of the accident. For it is extremely difficult in ordinary cases for the person aggrieved to prove that the accident is due to the negligence of the carrier. The courts have been giving to that disposition of the law the most liberal interpretation and have held the carrier responsible, not only when negligence has been proven, but when the presumption of negligence has been more or less well established. Thus the tendency of the law is more and more in favour of holding responsible the persons or companies to whose care goods are entrusted for transportation. But, in the case of shipowners, the carriers go so far as to contract themselves out of their liability even for damages due to their own negligence or fault. This is certainly a step contrary to the ordinary principles of the law, or, at least, of the jurisprudence that is now being established in this country. It seems necessary to guard against such contracts and to enact a provision to make it impossible for these parties to contract themselves out of these liabilities, and for that purpose to declare such conditions of the contract to be illegal. That is the main object of this Bill. I may say that a measure on this subject was introduced in the Senate two years ago and was fully discussed there. An opportunity was given for interested parties, shipowners and others, to be heard. The result of the Senate's deliberations was a Bill which is almost word for word the one now before the House. Last year this Bill was passed again by the Senate, but, unfortunately, it reached this House too late to be considered. I believe it came to us just at the end of the session, and, as some objection was taken to it, it could not be passed. This year, I thought I would take charge of the Bill and submit it to the favourable consideration of this House. I entirely agree with the work done by the Senate, and I am very glad to say that the work is a good guide for us in this case, and we could not do better than follow the principles which they accepted last year, and which I am sure they will accept this year also. The other day we received in the department a letter from a shipowner who asked to be heard on the subject of this Bill. I think it is only fair that an opportunity for hearing should be afforded to those interested, and with that view, if the Bill passes its second reading, I intend to propose that it be referred to the Committee on Marine and Fisheries for that purpose.

Motion agreed to, and Bill read the second time.

On motion of Mr. Brodeur, Bill was referred to the Select Standing Committee on Marine and Fisheries.

SUPPLY—FISHERIES COMMISSION.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. GLEN CAMPBELL (Dauphin). Before you leave the Chair, Mr. Speaker, I desire to ask a question of the Minister of Marine and Fisheries (Mr. Brodeur). I would like to know when the report presented by the Fisheries Commission that sat in Manitoba and the Northwest a little while ago will be brought before the House. I placed a question on the Order Paper, and in answer to that question the minister said that the report would be brought down as soon as it came into his hands. I understand that the report was placed in his hands about ten days ago, and I am anxious to see it.

Mr. BRODEUR. I received that report last week and gave instructions to have it sent to the printers at once to be printed, in order to lay it before the House.

Mr. CAMPBELL. When may we expect it?

Mr. BRODEUR. In a few days, I hope. As soon as it is printed, I will bring it down.

NATIONAL TRANSCONTINENTAL RAILWAY—RESIGNATION OF MR. LUMSDEN.

Mr. R. L. BORDEN. I desire to direct the attention of the Prime Minister (Sir Wilfrid Laurier) to the very great delay in having the documents connected with the resignation of Mr. Lumsden laid before the House in printed form, and so made available for all the members. I repeat what I have already said in that regard—that, considering the importance of these documents, considering that they relate to a matter connected with the expenditure of $150,000,000, and $200,000,000, the government ought to have laid these documents in printed form upon the table of the House on the very first day of the session. Instead of that, there was delay until they could be moved for, and since they were moved for there has been the additional unnecessary delay of waiting for them to be printed while the House is sitting. I moved for the papers at once, and they were ordered to be printed almost as soon as they were brought down. It is now a little more than four weeks since the session opened, and these papers are not yet available. The answer of the Prime Minister to representations on

this subject has been that the printing of these papers is within the power and control of this House. The House does not do its own printing, but resorts to a department of the government to have its printing done. The House has done all it could do in connection with the matter by ordering that the papers shall be printed. Yet most extraordinary and unusual delay has taken place so that we shall not have these documents available for any intelligent work until two months after the opening of the session. I think that that is a very regrettable state of affairs. If delays of this kind unnecessarily prolong the session upon which we have entered, I desire to say in advance that it is not the fault of hon. gentlemen on this side of the House, but it is the fault of those who are responsible for the administration of affairs, and who have lamentably failed in their duty in that regard.

INTERCOLONIAL RAILWAY—IMPURE WATER ON PASSENGER TRAINS.

Mr. J. B. BLACK (Hants). Before you leave the Chair, Mr. Speaker, I would like to draw the attention of the Minister of Railways (Mr. Graham) to the quality of the water supplied to the Intercolonial railway at Montreal, which is dangerous to the life and health of passengers travelling on its trains. Montreal is suffering from a very severe epidemic of typhoid fever, and the water supply of the city is without doubt, and is acknowledged to be, a source of danger. The milk of that city is also said to be contaminated, and the contamination may properly be traced to the water. In travelling on that train I made inquiries in the dining car, where the water came from, and I was told by those in charge that the water tank was filled from the water service of the city of Montreal. Now, if the citizens of Montreal are willing to put up with a municipal council that quenches their thirst on poisonous fluid, that is no reason why an innocent traveller on the Intercolonial should suffer in his health or in his life from this contaminated water. I am not talking of unrealities, but of a sad and actual reality. Many cases of typhoid have been contracted in this way from the impure water served to travellers. The Intercolonial is not the only railway that has been asked to supply its passengers with harmless water, and there has been more than one case where an order to give pure water has not been fully complied with, and when it has been found—I am not now referring to the Intercolonial—that the dining cars were furnished with pure water, while the ordinary passengers' lavatories and washrooms were supplied with impure water. Now it is as dangerous for a man to clean his teeth with water loaded with typhoid bacillus as it is to drink typhoid water. Many a man is carried to his death by merely having cleaned his teeth by water full of typhoid bacillus. A case of typhoid contracted on a railway between Montreal and Quebec or between Montreal and Hamilton may not develop for a week or two, perhaps in Cape Breton or perhaps in Vancouver, and the victim wonders where he contracted the typhoid. To show that I am not an alarmist, I want to read a quotation from Thursday's Montreal 'Star':

> The typhoid situation is now serious.
>
> Hospitals are too full to accommodate all fever patients who apply.
>
> The following is the record of cases at the leading hospitals to-day:—
>
> | | |
> |---|---|
> | Royal Victoria Hospital.. .. .. .. | 66 |
> | General Hospital.. .. .. | 40 |
> | Western Hospital.. .. .. | 20 |
> | Notre Dame.. .. .. | 22 |

Since this was published I find by the 'Star' of yesterday and the 'Star' of to-day that the epidemic is growing worse and worse. People are told to boil the water. Well, that is a straw in catching at which many a man drowns. Drinking boiled water is safe, but eating off dishes and with spoons, knives and forks that have been washed with unboiled water, though the water may be warm, still renders one liable to contract the disease. I am not here pleading for the citizens of Montreal, they have put up with contaminated water for many years; but I am pleading for the unsuspecting traveller who, when he sees the innocent looking water supplied in the dining car, thinks he is drinking the pure fluid, whereas he is frequently drinking disease and in many cases death. This is an easy thing to remedy, and it is only a just thing to ask; and I am sure it will only be necessary to draw the attention of the Minister of Railways to this matter to have the danger removed so far as the Intercolonial is concerned. But I am sure a complete remedy will not be found unless there is a thorough investigation made and a thorough remedy applied, because the average railway servant and the average individual do not comprehend the danger of drinking typhoid water. I do not know that I have any right to complain on behalf of other railways, but there is no harm in drawing their attention to the fact that many of them are filling their tanks to supply their passengers with the vile water supply of Montreal.

Mr. GRAHAM. The question my hon. friend has brought to the attention of the House is certainly a very important one, particularly as travellers on the Intercolonial are only allowed to drink water. On the other railways they can dilute the water if they like, and perhaps destroy the

microbes. I thank my hon. friend for having called my attention to this matter, and I will immediately make an investigation.

REPRESENTATION OF QUEBEC EAST AND OTTAWA.

Mr. A. MEIGHEN (Portage la Prairie). I desire to offer for the consideration of the House an amendment to the motion to go into Supply. The amendment only affirms a principle laid down in the rules of the House which the House has followed in the past, and which it is well to conserve for future use. It will be remembered that on the first of the present month I called the attention of the hon. the First Minister to the position that he then and still holds in occupying the two seats of Quebec East and the city of Ottawa. I asked at that time for your ruling as to whether the right hon. gentleman, in continuing to hold the dual position as representative of these two seats, was committing a breach of the rules of the House. The following day you ruled that the right hon. the First Minister was not committing such a breach of privilege. I am quite prepared to admit, as I do by the amendment in my hand, that so far as your ruling on that point is concerned, the House can not question it. I have no recourse and consequently I do not purpose by this amendment to reverse the ruling which was given by Mr. Speaker on the 2nd of December last. I desire, however, that my words in that regard shall not be misconstrued. I wish to state that I admit only that we are bound by the conclusion reached by Mr. Speaker in relation to this particular case. I do not wish to be understood as saying that we are any further bound. We have concluded in the present case that the right hon. the First Minister is not committing a breach of privilege and therefore, by reason of the fact that we are so concluded by the rule of the House, I cannot now and do not now challenge that ruling. But, Sir, in the course of the reasoning by which you arrived at that conclusion, certain principles were stated which I think were erroneously stated, and which I think it is to the advantage of the House to reaffirm. In the course of that ruling it was stated, among other things, that sessional orders of the House of Commons of Great Britain and Ireland such as were in force on the 1st day of July, 1867, were not within the meaning of the word 'rules' as used in Rule 1 of the House of Commons of Canada. That, I think, was an error and, to reaffirm what I said before, while we are concluded as to the application, correctly or incorrectly, of that rule in the present instance, we are in no way precluded from the use and enjoyment of the rule in time to come. That is to say, while it may or may not be misconstrued in an individual case, it still is of use in this House and its reaffirmation under the present circumstances is advisable. I therefore feel that before going any further I should offer to the House the amendment to the motion for Supply which I propose to move. It is as follows:

That in the judgment of this House, sessional orders of the House of Commons of the United Kingdom of Great Britain and Ireland in force on the first day of July, 1867, are within the meaning of the words 'rules, usages and forms of proceedings,' as contained in rule 1 of the rules of the House of Commons of Canada.

In supporting that amendment, I desire first of all to refer to the use of the word 'rules' and the word 'orders' in the standard authority of this House, Sir John Bourinot's work on parliamentary procedure. It will be found by a reference to Bourinot at pages 303-4-5-6 and 7, that the words 'rule' and 'order' are used practically interchangeably; no distinction is drawn between them, sometimes the word 'rule' is used, sometimes the word 'order,' each in reference to the same subject, each in denomination of the same distinctive idea. There is no distinction drawn, the one means the other, and the other means the one, in so far as they both are used to refer to regulations and proceedings in the House of Commons. I do not think it necessary to quote individual sentences from Bourinot. A reference to the pages I have cited will clearly show any member that no distinction is drawn between the two words.

Now then, is there any distinction under the English practice? I desire in this case to be more specific, because fortunately the English authorities on this question are very clear, and I affirm that it is absolutely impossible for any hon. gentleman, approaching this subject in a reasonable attitude, to come to any other conclusion than that sessional orders and all orders that form the basis of procedure, or the regulation of procedure, are included within the meaning of the word 'rules.' I refer now to Redlich on the procedure of the House of Commons, volume 2, at page 5, and I regret that in order to make myself perfectly clear it will be necessary for me to read a considerable part of what that authority says on this subject. Perhaps, that it may be grasped more clearly, I should indicate the course of his reasoning. He urges that there are three classes of orders, all embraced within the meaning of the word 'rule.' There are, first of all, standing orders; secondly, sessional orders, and thirdly, another class which are not denominated correctly by either of the other terms and which are not given in their

promulgation in the first instance, either short or long duration. This third class of orders, it will be seen, are embraced within the meaning of the word 'rule.' In the opening of that argument Redlich draws a distinction between the word 'order' as used in the specific instance in reference to a specific case and the word 'order' as properly termed, a regulation which has an abstract reference. He says the word 'order' is used in two senses. It might mean a concrete direction as to what is to be done in a particular case or it might describe an abstract formulation of a rule as to the business of the House. In the first sense, an order is the commonest act of the House of Commons, the motive power of all its actual, positive work. We have nothing to do with orders of the House in this sense, we are only concerned with orders which are abstract regulations. As to what orders are abstract regulations, he says:

The mark which distinguishes orders of the second kind is their laying down general rules which are conceived as more or less permanent. Such orders, each of which is at first quite independent and revocable at any moment, after the ground they cover has reached a certain extent, constitute a connected body of formulated law upon matters of procedure. As we have already seen, from the beginning of the 17th century the House of Commons has shown considerable activity in this kind of autonomous legislation. In the course of time the constant repetition of certain well-tried orders, as opposed to special, temporary regulations, has led to the recognition of standing orders as a separate class of rules. Standing orders are regulations which have been expressly declared to be intended to bind all future parliaments, although the right is reserved of repealing them at any future time by a simple decision of the House.

In addition to the standing orders of a second category of procedure rules known as sessional orders has grown up.

I wish to repeat that sentence, and when I do so every member will see that it settles the whole point in controversy.

In addition to the standing orders a second category of procedure rules known as sessional orders has grown up.

So how are sessional orders to be anything else than procedure rules?

These comprise regulations which the House expressly renews at the beginning of each session, making the principles contained in them binding for the duration of its currency. The number of sessional orders has never been large, and several of them by constant repetition, session after session, have practically become standing orders. There are also a number of rules not belonging to either of the foregoing classes, never expressly endowed with either short or long duration, which by virtue of continuous practice, have acquired the force of customary law. For more than 50 years it has been usual for the procedure, regulations and forms of all three kinds to be collected from time to time in a hand-book under the editorship of the Clerk of the House for the time being; it is laid by the Speaker on the table of the House, and may, therefore, be regarded as an official statement.

So that these three classes of procedure rules, standing orders, sessional orders and the other class of orders, constitute themselves with nothing else the procedure rules of the House of Commons of England. One class is just as much a portion of the procedure rules as another. They are all embodied in what is known as the official statement binding on the House of Commons of England. Now, I ask the hon. members of this House, by what authority we can dismember that official statement and say that one class only is a procedure rule and the other is not? By what authority can we tear limb from limb what is expressly laid down as the basis, and the comprehensive precise basis of the procedure rules of the House of Commons of England? It is a matter of some importance that we get the whole benefit of our rules; that we be not robbed at any time of the real benefit of the rules of our House. If it is to be laid down that sessional orders are not included in the word 'rules' it may be a more serious matter for this House than perhaps we would at first anticipate. By the simple means of passing rule I of the rules of this House the Commons of Canada gained by one stroke the whole advantage of centuries of experience of the British House of Commons. They acquired the advantage of all the rules that that House had got together throughout centuries of the hardest experience, just such experience as we otherwise would have had to undergo. It is therefore I conceive, of great importance that we should not lightly throw away the benefit of any of our rules, more particularly that salutary rule I of this House. Now, Sir, what would result if this House were to lose the benefit of rule I? What would be the result if this House for all time were to be guided by the rule that sessional orders were not rules of the British House. I would like any hon. gentleman in this House to show me by what authority for nine years in the House of Commons strangers were kept out of this House at the instance of Mr. Speaker, if not by virtue of a sessional order of the House of Commons of England. I would like any hon. member to show me by what authority even up to the present day strangers can be kept from blocking the thoroughfares to this House if not by the authority of a sessional order of the House of Commons of England. I would like also any hon. gentleman to tell me by what regulations we are governed in the printing of our Votes and Proceedings if we do not

have the benefit of sessional orders that were in force in England on the 1st of July, 1867. And the most distinct and the most apparent loss we suffer is in respect to the very dilemma that we are placed in as to which I put the question to Mr. Speaker on December 1st last—the situation that by virtue of having lost sessional orders we find ourselves in the absurd position of being made to say for all time any hon. member may sit for one, for two or for twenty seats, throughout the whole period of a parliament in this country. I do not need to go any further. I only purpose making such remarks as I conceive to be absolutely necessary to make clear that we must reaffirm what I think was misconstrued in the course of the reasoning by which the decision of December 2nd was arrived at. I regret it was so arrived at but we are bound by it and I bow with respect to that decision. However, let us not be bound by the reasoning that led to it; let us not lose the benefit of the salutary position that this House has always enjoyed, let us reaffirm it to-day. I therefore beg to move seconded by Mr. Marshall:

That Mr. Speaker do not now leave the Chair for the House to go into Committee of Supply, but that it be resolved—

That in the judgment of this House sessional orders of the House of Commons of the United Kingdom of Great Britain and Ireland in force on the 1st day of July, 1867, are within the meaning of the words 'rules, usages, and forms of proceeding' as contained in rule I of the rules of the House of Commons of Canada.

Hon. A. B. AYLESWORTH (Minister of Justice.) Mr. Speaker, the question which has been raised by the hon. gentleman (Mr. Meighen) is one which properly would have been brought up upon the pronouncing of your ruling of a week ago if an appeal had thereupon been taken from the chair and the question had been presented whether or no the chair should be sustained. For some reason that course was not taken. I cannot undertake to guess why that was not done. One would have supposed that to be the ordinary, the proper and the regular course to have taken under such circumstances. But the whole manner in which this question is presented to the House for consideration seems of unusual character. It will be remembered that it was brought up originally as a question of privilege and that in spite of your ruling that it did not properly so arise, the hon. gentleman persisted in pressing the point and discussing it as a matter of privilege.

Mr. MEIGHEN. Excuse me. If the Minister of Justice will refer to 'Hansard' he will find that Mr. Speaker made no such ruling as he has now stated to the House the Speaker did make.

Mr. AYLESWORTH. If the hon. gentleman refers to 'Hansard' I think he will find that my statement is absolutely and literally correct, but whether or no that is the case is of little consequence. The matter was brought up in the manner I have described, and the hon. the Speaker took time to consider his ruling in regard to it, and whatever may have been the form in which the question was presented for his consideration he considered it upon its merits and he pronounced his best judgment in regard to it. That judgment stands unquestioned; there was no challenge of it whatever. It was received in the silence and by the acquiescence of this House, and the House upon its being pronounced proceeded at once to other business. Now, the question is renewed in the form of an amendment to the motion to go into supply, and it is so renewed notwithstanding that upon the Order Paper there is a government notice of a motion for a committee to examine carefully the rules of the House and to report what changes in their opinion might be adopted with a view to simplify, accelerate and expedite its business, and notwithstanding the fact also that legislation to deal with this very subject has been introduced to this House and stands in the shape of Bill (No. 60) upon the Public Bills and Orders. And if any one wished to take exception to the course which has been pursued in making this motion to-day I venture to think, Mr. Speaker, that one so objecting would have been entitled to your ruling in his favour if he took the position that the course which the hon. gentleman (Mr. Meighen) has taken to-day was entirely out of order, because it deals solely and only with the subject matter of a Bill already upon the Order Paper and standing for consideration. But however irregular the course may be, which is taken to bring forward this question, the question might quite as well be dealt with now as at any time; and I venture to submit, Mr. Speaker, that the ruling you pronounced on this subject on the 2nd of December is in every respect correct and is one which ought to be supported and not overturned by the action of this House. The whole question is within a very narrow limit. I cannot pretend, and I do not want any one to suppose that I pretend, to think myself in the least degree a parliamentary authority, or to speak in the light of experience or of knowledge other than any one can have from reading our rules on the subject; and I want to speak of the matter solely and entirely in view of the language of that rule. I start from the position which I suppose is common ground that this is a case not expressly provided for in our parliamentary rules on the subject. Unless that common ground exists there is no room for

discussion at all. But assuming it to be a case not provided for in our existing rules, the question then narrows itself to whether or not the practice followed in England on the subject is introduced into this country by the first of our general rules, which provides for such cases as are not expressly mentioned here. That rule prescribes that in cases not provided for the rules, usages and forms of proceeding of the House of Commons of the United Kingdom which were in force on the first day of July, 1867, shall be followed.'

Now, the first thing that any one would think of, it seems to me, in entering upon an inquiry upon this subject would be whether or not there was in force on the first of July, 1867, a rule of this character in England. You called attention, Sir, to that feature of the case in the considered ruling which you delivered on the 2nd of December inst. I understood the reference which you made in that ruling to the question whether or not the imperial parliament was then in session to be by way of illustrating the temporary character of the sessional orders which were under discussion by you. In some quarters I have seen during the last week criticisms of the ruling which you then pronounced upon the ground that is was based on that technical consideration. I certainly did not so understand it; and, reading it, I fail to see how any one could think that the consideration of whether or not the sessional order in England was in force on the first of July, 1867, was in any degree the foundation of Mr. Speaker's decision in this House a week ago. But the fact that that inquiry necessarily falls to be made is of the utmost significance. It shows at once that the sessional order which is passed at the beginning of the session and which expires with the session is of temporary character, and is not at all on the same footing as a general parliamentary rule which endures from session to session and from parliament to parliament until it is revoked or varied. Our own rule calls attention in the most distinct manner to that very difference. In its opening statement that 'in all cases not provided for hereinafter or by sessional or other orders,' three different things are collated: provided for hereinafter is one; provided for by sessional orders is another; provided for by other orders is a third. Those three different things are put in marked contra-distinction to the 'rules, usages and forms of proceeding' which immediately afterwards are mentioned. The very wording of our general rule No. 1 points in the most distinct manner to the fact that there is some difference between a general rule, usage, or form of proceeding; and a sessional order. If one looks at Bourinot on the subject, one finds immediately what is the distinctive and essential character of a sessional order. At page 309, paragraph 4, he deals with sessional orders and resolutions, and he says, to read three sentences:

> The House passes, in the course of every session, certain orders or resolutions, which are intended to have only a temporary effect on its proceedings, or to regulate the business of the session. These orders generally relate to the times of adjournment, the arrangement of business, or the internal economy of the House, or to the presentation of certain papers in subsequent sessions. Up to the session of 1876, certain resolutions relative to the offer of money were formally proposed and agreed to at the commencement of every session, but when the rules were revised that year, these resolutions were placed among the permanent orders.

Does not every word of that mark the distinction between a mere sessional order, a temporary thing that may or may not apply to any subsequent session, and something which takes the place of a general rule or parliamentary practice which continues in force by reason of its own strength until it is either revoked, amended or in some way got rid of? The sessional order expires with the session. For instance, the resolution which from time to time we see passed as to the order of business on a Wednesday or on a Monday, as the session goes on towards its end; the resolution that the House shall have forenoon sessions or that it shall sit on Saturday—things of that sort are of an ephemeral character, I might almost say —are mere orders or resolutions for the doing of business in that particular session, and unless repeated have of course no force or effect in any subsequent session. And so, Mr. Speaker, I venture to think that your reference to the fact that it had not been made to appear to you whether or not the British House of Commons was in session on the first of July, 1867, was a very significant and pregnant reference. If the House was not in session on that day, the whole question falls to the ground without more ado. There could not be any sessional order in force on that day, and there is no need to inquire further. If the House was in session on that day, the matter could not be quite disposed of on that ground, and accordingly you did not propose to dispose of it on that ground; but you faced the question squarely on the assumption that the House of Commons was in session on the first of July, 1867, and you proceeded to inquire whether or not on that assumption a sessional order of the House of Commons which may have been passed for the session of 1867 could be held to have been introduced into this country by our rules.

Assuming then that a sessional order upon the subject of a member entitled to one or the other of two or more seats, being required within any limit of time to select which of those seats he would

hold—assuming that a sessional order upon that subject was passed by the British House of Commons in the session of 1867, and that the British House of Commons was in fact in session upon the 1st of July, 1867, the question is simply whether or not, under the language of our general rule, such a sessional, temporary, evanescent order was introduced into the practice of this parliament. What is the language of rule 1? According to it, the things which were introduced into the present practice of this parliament are not the sessional orders, but the rules, usages and forms of proceeding of the English House of Commons as they stood on the 1st of July, 1867. Under which one of these three heads does a sessional order fall? Is it a rule, a usage or a form of proceeding? I confess that I awaited with considerable interest the discussion of this matter by the hon. gentleman, to know under which of those three heads he would contend a sessional order was included. He could scarcely argue that it was a mere form of proceeding. The term 'form of proceeding' surely means something entirely different. I had thought that possibly his argument would have been that it was included under the word 'usage'. That word is, perhaps, of somewhat elastic meaning, but I should suppose it includes something which was not put into any form of words, some such thing as the ancient traditional usage or custom which every member of the House of Commons in this country or in England exercises, if he pleases, to sit in his seat with his hat on notwithstanding that the House is in session and the Speaker in the chair, or the usage which exists in England, but not here, of taking a particular point of order seated and with the hat on. Usages of that kind, which rest on custom or tradition, cannot be described in any set form of words. It is not urged, however, that this question is governed by the introduction into this parliament of the usages of the British parliament, but the argument is that it falls under the phrase rules of the English House of Commons. But take the language of our rule 1 itself, and you will find the clearest and most distinct line of opposition and contrast drawn between the rules which are introduced and the sessional or other orders which are mentioned in the line before as things which govern cases not provided for expressly. The contrast is marked. The nature, the substance of the thing itself demonstrates that a sessional order is, as Bourinot points out, something very different from a permanent rule of the House which does not expire at prorogation but continues from session to session and from parliament to parliament. I certainly could not, in such light as I have on the subject, come to the conclusion that your ruling, Mr. Speaker, given a week ago, was erroneous.

Mr. MADDIN. I wish to say with regard to this question that so eminent an authority on parliamentary procedure as Redlich says, in Vol. 2, page 6, referring to rules of parliamentary procedure:

> In addition to the standing orders, a second category of procedure rules, known as sessional orders, has grown up.

Can there be any doubt, in view of this high authority, that a sessional order is a parliamentary rule? The ordinary rules of the House and sessional orders are all rules of parliamentary procedure according to this eminent authority.

> These comprise regulations which the House expressly renews at the beginning of each session, making the principles contained in them binding for the duration of its currency. The number of sessional orders has never been large, and several of them, by constant repetition, session after session, have practically become standing orders.

In a foot note which indicate those referred to are the following:

> (1) Double election returns; (2) exclusion of peers from voting; (3) prohibition against interference of peers in elections; (4) bribery at elections; (5) tampering with witnesses; (6) false evidence given to the House or one of its committees; (7) direction to the police to keep the passages to the House clear; (8) regulations as to printing the votes and proceedings; (9) regulations as to printing the journal.

I wish to point out that if rule 1 of our orders were not so construed as to include the sessional and standing orders, this House has no authority to patrol and police its corridors. The only authority for our doing this is the sessional orders which were in force in England on the 1st day of July, 1867. We have followed those orders with regard to other matters heretofore, and it was only within recent years that we made rules regarding the printing of the Votes and Proceedings and regulations regarding the printing of the Journals. And it was only in recent years that we passed an Act dealing with false evidence given the House or one of its committees. Up to that time we had absolutely no authority in those matters except the sessional and standing orders in force in the British House of Commons on the 1st of July, 1867, and I submit, with all due deference to so eminent an authority as the Minister of Justice, that the sessional and standing orders enforced in England on the 1st of July, 1867, are rules to which this House, under rule 1, is subject.

Mr. R. L. BORDEN. I have very little to add to what has been said on this subject. The argument of my hon. friend the

Minister of Justice amounts simply to this, that in determining whether or not a rule of the British House of Commons is a rule within the meaning of the statute and of our standing orders, you must look, not to the language of the rule, but to the probable length of its duration. That is the test fixed by my hon. friend. The Minister of Justice contends that it is not the character of the order that determines whether or not it is a rule, but the question whether or not it shall remain in force one, two or three sessions, or indefinitely. I need not appeal to lawyers, I appeal to every layman as to whether that is common sense. Every one will realize that it is not. Neither, in my humble opinion, is it common law. Why, every one of the rules, every one of the standing orders of the imperial House or our House, with very few exceptions, might be put into the form of sessional orders and the business of that House carried on exactly as it is to-day. Yet the Minister of Justice, in that case, would stand in this House and seriously declare that the British House of Commons had no rules—for that would be the direct result of the argument he has addressed to the House this afternoon. I would like to ask the Minister of Justice this: If these sessional orders, so-called, were limited in their duration, not by one session but by three, four or five sessions, would he still contend that they were not rules? I must confess that I am unable to apprehend the argument of the hon. gentleman. To say that the character of a rule is to be determined, not by its nature, but by the limit of its duration—well, if I might be permitted to use a common expression, I would say that that was the limit itself.

Mr. Speaker, does the Minister of Justice realize that some of the most important legislation in Great Britain to-day, the most vital, that in connection with the all-important subject of the defence of the empire, is passed every session? And if any man asks him what the law of Great Britain, is, for example, with regard to mutiny, would he tell that man that Great Britain has no law at all on that subject, because the Mutiny Act is limited in its duration and is passed every year? Yet that was exactly the argument of the hon. minister this afternoon. The Minister of Justice says that in his opinion the subject is not open to argument. I agree with him entirely, but in a sense absolutely the contrary of that which he had in mind.

Sir WILFRID LAURIER. I have been a good many years in parliament, and I have realized by long experience that the law of parliament is far more difficult and far more intricate than my hon. friend the leader of the opposition (Mr. R. L. Borden) and my hon. friend from Portage la Prairie (Mr. Meighen) seem to think. The law of parliament is full of difficulty; it is a maze in which it is very easy to lose one's way. Parliamentary authorities vary very much in their interpretation of the rules. It is a matter of notoriety that, in England, the best minds in parliament, the most eminent men who have ever sat there, have been found arguing on one side and on the other of questions that have arisen in connection with these matters. The whole law of parliament is, in its origin, the arbitrary regulations of the House of Commons—and I use that word 'arbitrary' in no offensive sense, rules which have been established from time to time. Some of these rules are temporary in their nature, while some are permanent. I confess that it is difficult not to realize that there is a distinction between a temporary and a permanent rule. The very names are different—some are called rules and others are called by other names, as usages, sessional orders, and so on. I apprehend that the average member of the House will have some difficulty in coming to the conclusion that Mr. Speaker, who gave to this question the best judgment he could bring to bear upon it, was wrong. But it would be difficult for the average member to say that the Minister of Justice, an authority in law, was wrong. And I may say that it would be difficult for any one to say that the hon. leader of the opposition, in his view of the matter, is wrong—he is a good lawyer. All this only shows the difficulty of coming to a conclusion on such a question. When this matter was brought to his attention, Mr. Speaker gave to it his best consideration and judgment. He reviewed the facts and authorities and came to the conclusion that there was no such rule of the House as was contended for by my hon. friend from Portage la Prairie. I dare say it is difficult to say who was right and who was wrong. The ruling of Mr. Speaker may be right or it may be wrong. In fact, Mr. Speaker himself did not pretend to say finally that he was right, but intimated that the subject was full of difficulties and suggested what he thought would be the proper course for the House to follow. Let me call the attention of the House again to the ruling of Mr. Speaker:

> My ruling is, therefore, that there is nothing in the rule of this House requiring a member who has been returned for more than one constituency to elect within any prescribed time for which of such constituencies he will sit. But, in my opinion, it is eminently desirable that some definite rule and practice on the subject should be established.

And he went on to say:

> The House has a Standing Committee for the purpose of considering such questions—the Committee on Privileges and Elections—and I will suggest that at an early date the

matter should be considered by the House, or by the committee, with a view to the fixing of a definite period within which such election is to be made.

Now, I would ask hon. members on either side, is not that a most common sense dealing with such a question? Who is the member, on that side or on this, who will undertake to say that the argument of my hon. friend the Minister of Justice was wrong, or will undertake to say that the argument of the leader of the opposition was wrong, or that the ruling of Mr. Speaker was wrong? It seems to me that, under the circumstances, the suggestion made by Mr. Speaker was the right one—that the Committee on Privileges and Elections, which is composed of leading members of the House, those who are supposed to have the best knowledge of these questions, should deal with the subject. I think that every member will have no hesitation in saying that he would rather not take it upon himself to assert that Mr. Speaker was wrong in his ruling, and that the rule spoken of by the hon. member for Portage la Prairie was actually in existence. I would suggest to my hon. friend (Mr. Meighen) not to press his motion to a division. I have placed on the Order Paper a notice of motion for a committee of the House to revise the rules of the House, and of course the subject now under discussion will be one of the matters to be looked into by this committee, should it be appointed.

Mr. W. B. NORTHRUP (East Hastings). The question now before the House is certainly a most interesting one from at least two standpoints. If we consider for the moment the party, politically speaking, who have proposed the question, and the party, politically speaking, who oppose the question, we must surely think that the party in power have travelled a tremendously long distance since they prided themselves on being 'democrats to the hilt.' One would hardly believe it possible, even in this western hemisphere, with all the enterprise and progress that we claim, that the Reform party would be the party found questioning the right of the people to secure representation in parliament. The Minister of Justice (Mr. Aylesworth) has referred to some matters on which we might agree. I suppose it will be admitted that we can agree on this, that no member sits in this House as the representative of Ottawa, or as the representative of Quebec, or any other locality, but that under our parliamentary system, inasmuch as all the people cannot assemble within the halls of parliament, the country is divided into certain districts, each one of which sends a representative to Ottawa to represent, not that district, but the whole people of Canada. Therefore, if this be true—and I hesitate not to say will not be questioned as a matter of law—it follows that every person in Canada, from the Atlantic to the Pacific, is deprived of his proper representation in this House when, although the law says that there shall be 221 representatives, the Prime Minister says there shall be only 220. Now, we come to consider this case thoroughly understanding that, from some cause or other, the people of this country are being deprived of one representative, and as it has not been alleged, even by the Prime Minister, that the rights depend not on a member holding two seats as against his holding three or more, then the principle which is being contended for by the Minister of Justice and the right hon. Prime Minister (Sir Wilfrid Laurier) is that, if the government in power were able to carry all the seats in the country by running a few men to hold a number of seats each, they might sit here as a House of Commons although they might be only a half or a quarter the number provided by the law, and they might sit for a full term of five years and the people would have no remedy or redress—nay, Sir, they would not even have ground of complaint concerning what some would think an outrage on their rights.

It would be bad enough in all conscience if the old Tory party had been thus endeavouring to trample on the rights of the people, but for the Reform party, a Reform party of the most progressive continent and the most progressive country in that continent, to endeavour thus to trample on the rights of the people, is indeed somewhat remarkable. I was pleased to see that the right hon. gentleman who leads this House did not himself endeavour to support the argument of the Minister of Justice. The right hon. gentleman, although he is occupying these seats during the whole of last session and so far this session, has no other justification than to put a motion on the Order Paper appointing a committee of the most eminent men selected from both sides of the House, to revise the rules, and the implication comes in that in terms surely there must be something wrong in the rules. Now, if everything was right and proper, if everything was satisfactory, why should these need to revise the rules? Do they intend to improve them on the ground that they are not quite right and proper? But if one is to understand the right hon. gentleman, as I think he may fairly be understood, his whole remarks were to this effect: A lamentable state of affairs existed, and I am in possession of —I won't say stolen goods—but if any hon. gentleman can suggest any way within a reasonable time, without any inconvenience, by which I can get rid of part of the goods, I am prepared to bow to their decision. Now when we look at this matter

as a question in which the government party is depriving a part of the people of their proper representation, I think we may go a step further and see on what grounds they claim so to deprive the people. When this matter first came before the House and the point was raised the Speaker, after first reading the rule, said:

> In the imperial parliament the matter under consideration is dealt with by sessional orders which are renewed by the House of Commons from session to session, and which expire at prorogation.

Now here is the point:

> The sessional order on the subject which was, presumably, passed by the Imperial House in 1867 may or may not have been in force on the 1st day of July in that year, depending on whether the House was then in session or had been prorogued before that date.

There is no doubt in the world, nobody will dispute, that if the imperial House was not in force on the 1st of July, 1867, then this rule would not apply, and could not be invoked. But one would have thought that the Minister of Justice, in referring to this matter, might have given the case sufficient attention to find out whether the imperial House was in session at that date. Surely it is not a difficult matter to visit the library, which is near at hand, where he could have found volumes to show whether it was in session or not. He could have found the 'Hansards' of the imperial House of that date, and the Journals of the House, which would have supplied him with the necessary information. So, unless we are deceived by the books placed in our hands in the parliamentary library, the imperial House was in session on that date; and if it was, why lose so much time in discussing this simple question? Then, Sir, the next point the Minister of Justice makes, in reading this rule, is that the sessional orders are different from all other orders. Of course they are different; a pink apple is different from a green apple and yet one may be just as much an apple as the other. A sessional order is different from a permanent order, and I sincerely trust the Minister of Justice was enlightening his own side of the House, and not pretending that he was enlightening the members on this side of the House. But the point is not whether there is a difference between a sessional order and a permanent order, but the point is, when you come to read the rule, what is the meaning of certain words in that rule? If we can agree on what is meant by one of our own rules, then we need not bother about the difference between a sessional order and a permanent order. No one will differ from me in this reading of the rule. Now I propose to read the rule, eliminating the various words that have no reference at all to the question before us, and I fancy that no one will say that I am not reading the rule fairly, it being understood that I am eliminating no material words:

> In all cases not provided for hereinafter by sessional orders, the rules of proceeding——

Now what is the meaning of the phrase 'rules of proceeding'? Because if provision is made by sessional orders, and if we are dealing with rules of proceeding, then the argument of the Minister of Justice falls to the ground. Now what is the meaning of the words 'rules of proceeding'? It is true that this clause reads: 'The rules, usages and forms of proceeding'. But I imagine nobody will dispute the grammatical meaning of the words as I read them at first. Now when we come to find out the meaning of the words 'rules of proceeding', let us look at Redlich, than whom no higher authority exists. We are trying to find out the meaning of the words 'rules of proceeding'. Redlich says:

> In addition to the standing orders, a second category of procedure rules known as sessional orders, has grown up.

Now we go a step further. We have on the one hand the Minister of Justice trying to interpret the rules of proceeding, and on the other hand we have the procedure rules. He did not pretend to distinguish between rules of proceeding and procedure rules; and if they meant one and the same thing, as surely they do, then Redlich will say that procedure rules are known as sessional orders, and if procedure rules are known as sessional orders, it cannot be monstrously absurd to call sessional orders procedure rules. And if procedure rules mean the same as rules of proceeding, then they comply with the very words of the rule we are discussing as one of the rules and orders of this House. Now look at another authority, May, perhaps no better authority could be found, and I read on page 148:

> At the commencement of each session both Houses agree to orders and resolutions, which are renewed from year to year.
>
> The operation of orders or resolutions of either House of which the duration is undetermined, is not settled upon any certain principle. By the custom of parliament they would be concluded by a prorogation; but many of them are, as part of the settled practice of parliament, observed in succeeding sessions, and by different parliaments, without any formal renewal or repetition.

So, Sir, we find that not only are sessional orders within the meaning of the rule particularly, but we find that sessional orders are in many cases observed as being part of the settled practice of parliament, and observed in succeeding sessions and by different parliaments, and without any formal renewal or repetition. Now when we get that far we begin to find

that the difference between sessional orders and other orders may not by any means be the same as the Minister of Justice imagines. And I am sure, Sir, the members on this side of the House, if they cannot agree with all the Minister of Justice has said, at least will be quite ready to agree with his introductory remark that he did not pretend to have any familiarity with constitutional law or the procedure of houses of parliament.

In this same work, May, at page 148, is an illustration of what I have just read, of sessional orders becoming practically permanent orders and being held to be binding, not only in successive sessions, but in successive parliaments without any re-enactment. Some 15 or 20 examples of this occurring in England are given. Take, for example, the rule that the Speaker cannot take the chair if 40 members are not present. That rule came into existence on the 6th of January, 1640, and was the law in England up to the date of the publication of this 11th edition of May's Parliamentary Practice, in the year 1906. I shall not take up the time of the House in reading other examples. The hon. member for Portage la Prairie has shown this House that under English procedure the right hon. gentleman who leads this House is wrongfully depriving the people of Canada of one of the seats to which they are entitled. I know that some of the representatives of the smaller provinces would not consider it a grievance if the seat which to him is so contemptibly insignificant should be given to one of these provinces. Nova Scotia, New Brunswick or Prince Edward Island would rejoice if the seat were allotted to them. I trust the right hon. gentleman will see that in setting such an example as this, a blow is being struck not merely at the parliamentary reputation of the people, not merely at the rights of the people, but at the position, at the dignity of this House. We hear it said continually that our courts and judges are entitled to the most profound respect, and a man either in this House or elsewhere will always feel a tremendous sense of responsibility in attacking our judiciary; but the same men who speak in this way of our judges will say that the highest court in the land is the court of parliament. If one of our judges should go wrong—and it is the proud boast of Canada that we have never yet had the necessity of impeaching a judge—it would be considered a national disgrace by every Canadian. Then what are we to think if in the highest court of Canada, composed of those who make the laws for others who thus observe them, we find that by the right hon. gentleman who by such an overwhelming majority leads and governs that House, the law of the land is broken.

Hon. JOHN HAGGART (North Lanark). Mr. Speaker, the question before us is a ruling of yours the other day in which you laid down certain principles and rules in reference to the interpretation of rule 1 of our House. The statement of the right hon. the Prime Minister and the wording of your ruling, I consider to be an invitation to the members of this House to express their opinions as you were not very decided in your ruling. That is a sufficient justification of the action of the hon. member for Portage la Prairie (Mr. Meighen) in bringing up the motion. Look at the absurd position we would be in if we followed the interpretation of the Minister of Justice in reference to this question. He says that sessional orders which were in force in England in 1867 are not in force in Canada unless they are incorporated in an Act of parliament. Are we to pass an Act of parliament bringing into force every sessional order which is in force in the British House of Commons in order to amend our own rules? The rules of the House of Commons of Canada, as I have always heard them interpreted here, are the practice, the procedure and the sessional orders which were in force in England in 1867. These were the governing principles, these were the rules to govern us, yet according to the Minister of Justice, unless we re-enacted these rules, placing them on our statute-book, they would not be in force here. We have always gone on the assumption that they were in force in Canada. The hon. minister says that Mr. Speaker might have ruled out this motion as there is a notice on the Order Paper of a Bill for a committee to amend the rules of the House, and that so we are debarred from discussing the rules. Did you ever hear of a more absurd thing than that? The rules of procedure of parliament are not to be discussed because some member puts upon the Order Paper a Bill to amend the procedure of the House! In this way any hon. member could prevent discussion of any subject by placing a notice on the Order Paper in reference to it, and so having premature discussion ruled out of order. The question before us is one of exceeding importance. The reputation of the people in the House of Commons is a matter which we must guard in the strictest manner. Why does not the right hon. gentleman select his seat? It has been the practice ever since parliament was constituted, from 1867 down to the present day, when there was a judgment of the court, that the party should select his seat within a certain time. Is it possible that there is no law or rule governing us here in reference to that particular question? I have been associated with the committees having charge of the revision of the rules of

the House for a long time, and if the opinion of the Minister of Justice is correct we have been sadly derelict in our duty, for we have made no provision for this case. The Prime Minister must be of the same opinion, because he could not so neglect his duty if he thought that we were not relying on these English sessional orders and privileges to guide and rule this House as I think they do until the present moment.

We are not attacking your opinion or ruling, Mr. Speaker, on this question. As the Prime Minister said, you were a little doubtful in reference to the matter and would like to be advised by the House. You suggested that the question be left to the Committee on Privileges and Elections. When you made that suggestion, why did not the government refer the matter to the Committee on Privileges and Elections? They evidently left the matter to the House. There is no doubt at all that the sessional rules which were in force in England in 1867 are the rules which govern the procedure in this House.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). It has been the custom in the past that any proposal to amend the rules of this House should be properly examined into by a committee, and that is a very salutary procedure. If there is any doubt about the rule now in question before the House, it seems to me that the proper procedure would have been for my hon. friend (Mr. Meighen) to ask for a special committee for the purpose of revising the rules in the line of his contention. The right hon. the leader of the government has given notice of a motion for a special committee to revise the rules of the House, and it seems to me that it would have been well for my hon. friend (Mr. Meighen) to bring before that committee the interpretation which he seeks to put on rule 1. It would appear to me, however, that the question which the hon. gentleman raises is in reality a question of privilege. We have a statute which regulates who shall sit as a member of this House and who shall not. It is not left to a rule of procedure to say who shall sit in this House, it is a statutory matter.

Mr. SPROULE. If there was a sessional order which said that two men could not sit for the same seat, would not that rule determine the question without any statute?

Mr. BRODEUR. In my judgment the question of the qualification of a member to sit in this House is a statutory matter.

Mr. SPROULE. Then why don't they have such a statute in England? In England that question is regulated by a sessional order and not by statute.

Mr. HAGGART.

Mr. BRODEUR. We have not adopted the same procedure in Canada with regard to that matter, and my hon. friend from Dauphin (Mr. Campbell) understanding the principle which guides us has introduced a Bill declaring what shall be done by those that have been elected by more than one constituency.

Mr. CAMPBELL. Does the hon. minister then say that my method is better than the method suggested by the Speaker in his ruling?

Mr. BRODEUR. I do not say that the amendment proposed in the Bill of the hon. member (Mr. Campbell) is a good one, but I say that in introducing such a Bill he has followed the proper procedure. Such a question is to be determined, not by a rule of the House, but by the statute concerning the House of Commons. That statute provides, when the members come to take their seats in the House of Commons, whether they have a right to sit here or not, and the rules of the House are intended to determine the manner of our proceedings after the members have established their right to sit. My hon. friend from Dauphin (Mr. Campbell), in the procedure adopted by him in introducing his Bill, has shown a knowledge of correct procedure which commends itself to those who have studied the question.

Mr. MEIGHEN. Does not the hon. minister realize that the affirmation of this resolution covers all the sessional orders that were in force in England on the 1st of July, 1867, and that the Bill of my hon. friend (Mr. Campbell) only refers to one of them?

Mr. BRODEUR. I am dealing now with the form of procedure. The question of the standing orders of this House is a most important one, and one which should be dealt with after it has been considered by a committee of this House which can give it mature judgment and deliberation. There is no standing rule as to the manner in which we should make our rules, but Bourinot and May and all the parliamentary authorities lay it down that no rules of the House should be amended until they have been considered in committee.

Mr. MEIGHEN. I am not asking for any amendment to the rules of the House.

Mr. BRODEUR. But, my hon. friend is seeking to put an interpretation upon a rule of the House, and whether he is right or wrong in his view, it should first have full and mature consideration by a committee of this House.

Mr. R. L. BORDEN. Is the hon. minister aware that the most important change ever made in the rules of the British

House of Commons was made without any reference whatever to a committee?

Mr. BRODEUR. To what does the hon. gentleman refer?

Mr. R. L. BORDEN. I am referring to the first closure resolutions which were moved in the House by Mr. Gladstone and which were not referred to a committee.

Mr. BRODEUR. I think my hon. friend is right in that respect. It was passed by the House almost unanimously and without any great debate; but he must admit that the procedure we have followed in this House, when we have made or amended any of our rules, has been to refer those rules to a committee to be fully considered.

Mr. R. L. BORDEN. I am not criticising that practice at all. I was simply saying that it was something departed from, and I did not consider this to be a proposal to amend the rule.

Mr. BRODEUR. It amounts to the same thing.

Mr. R. L. BORDEN. Allow me to make myself clear. Suppose, for example, that there had been an inadvertent decision denying the right of a man to move an amendment on going into Supply, and on the day alter some hon. member should declare that according to the rules and usages of the British House of Commons or of this House no hon. member has the right to move an amendment to Supply. This is precisely of the same nature.

Mr. BRODEUR. I cannot admit that. The interpretation which my hon. friend wants to put upon the first of our rules is a most important one, and before the House passes judgment upon it, I think it should be fully considered by a committee of this House or by the full House in committee. That has been our procedure in the past. Let us consider for a moment what the declaration is which we are called upon to make:

> That in the judgment of this House the sessional orders of the House of Commons of the United Kingdom of Great Britain and Ireland in force on the first day of July, 1867, are within the meaning of the words, 'rules, usages and forms of proceeding,' as contained in rule 1 of the rules of the House of Commons of Canada.

I say this is a most serious declaration. What are we asked to embody in it? We are asked to embody rules which for forty years this parliament has not been supposed to put in force. I think, before we incorporate in our rules the important declaration made in this motion, we should inquire a little to find out how far we would be going by such a declaration. My hon. friend may be right in his interpretation of the law; but at the same time is it advisable to adopt a sweeping declaration of that kind without having a committee of this House to investigate fully how far it would carry us? I may say that I do not think the procedure which my hon. friend is following is the proper procedure, and for this reason. My hon. friend knows that when a decision has been rendered by the Speaker, that decision stands as final unless there is an appeal from it. Rule 18 says:

> The Speaker may permit debate of the point of order before rendering his decision, but such debate must be strictly relevant to the point of order taken. The Speaker shall decide upon the point of order, which decision shall be subject to appeal to the House, but without debate. If there be no appeal, the decision of the Chair shall be final.

If I remember rightly, my hon. friend himself raised the question the other day, and appealed to the Speaker for a decision. A decision was rendered by the Speaker, and that was final unless an appeal was taken from it.

Mr. R. L. BORDEN. What was the point of order Mr. Speaker decided?

Mr. BRODEUR. I understand that my hon. friend brought before Mr. Speaker the point that a member of this House had no right to sit for two seats—that he had to make a declaration within a certain period, according to the rule that was in existence in the House of Commons of England in 1867.

Mr. R. L. BORDEN. Does my hon. friend think that was a point of order within the meaning of the rule?

Mr. BRODEUR. My hon. friend called the Speaker's attention to that, and the Speaker decided that that rule was not in force; and I say that when the Speaker puts an interpretation upon a rule of this House and there is no appeal to the House from his decision, that becomes the judgment of the House. In this case my hon. friend is asking us to make a most important declaration, embodying in our rules all the sessional orders of the parliament of the United Kingdom that were in force on the first of July, 1867.

Mr. R. L. BORDEN. It is not even that. It is only those which deal with matters not expresssly provided for in our own rules.

Mr. BRODEUR. Of course our rules are not very extensive, they are not nearly as extensive as those existing in England. At all events, my hon. friend is asking us to declare that all the rules and sessional orders passed by the parliament of the United Kingdom from 1801 to 1867 should form part of our rules of procedure. This is a most important declaration; we do not know where it would land us; and before

deciding such a question, I think it should be referred to a committee of the House to investigate how far it would take us.

Mr. MEIGHEN. Will the minister say whether standing orders are within the meaning of the rule?

Mr. BRODEUR. Yes, I think so.

Mr. MEIGHEN. Does not his argument apply equally to those, and would not a committee of this House be equally necessary to decide what a standing order would lead to?

Mr. BRODEUR. I must say to my hon. friend that I have not given that question very much consideration. I do not claim to know everything about that. While I have given some study to the rules of the House, I must admit that I do not know them all and am liable to make mistakes. At the same time I would not be prepared to declare offhand whether a sessional order did or did not form part of the rules of this House. I should make considerable distinction between standing orders and sessional orders. My own opinion is that although the standing rules of the British House of Commons form part of our rules, their sessional orders must not be applied in the same way. Possibly after studying the matter more carefully, I may come to a different conclusion; but for the time being I am strongly of the opinion that the sessional orders of the British House of Commons in force on the 1st of July, 1867, do not form a part of our standing orders.

Mr. MEIGHEN. Has the hon. minister any authority which says that a sessional order is not a rule?

Mr. BRODEUR. I say that the sessional orders of the British House of Commons should not be considered as part of our rule No. 1, because what is there contemplated is, not the rules which were in existence in England one, two or three sessions, but the standing rules which had been in existence for years and which were considered almost as important as the privileges themselves. That is the construction I would put upon rule No. 1. When my hon. friend asks us to declare that all the sessional orders of the British House of Commons form part of our rules, he is embarking on very dangerous ground and may find himself, after giving the matter more consideration, entirely mistaken. He may find that such a decision would incorporate in our procedure, rules which parliament never intended to form part of our standing rules. That is my view and I am sure the hon. gentleman will be well advised, under the circumstances, not to press his motion.

Mr. CROTHERS. If I understand rightly the argument of the hon. gentlemen opposite, they contend that there is no law, order or precedents in this country requiring a man who has been elected for more than one constituency to resign one of these seats at any time during the parliament for which he was elected. That in itself would strike the people, it seems to me, as a very startling proposition. It simply amounts to this, that a man might be returned for two or three or ten constituencies and sit for them all during a whole parliament, and that there is no law, constitution, order or rule requiring him to resign all but the one seat. I have here Bourinot's parliamentary procedure, a work which is accepted generally as indisputable authority in matters of this kind. Just listen for one moment to what he says on page 245:

> In case a member is returned for two constituencies, he must make his election for which of the places he will serve by formally resigning his seat when the House is in session. This election may be made by a member from his place in the House or in the usual legal communication to the Speaker.

If that authority be good (and as such it is quoted by you, Mr. Speaker, almost daily), the contention of hon. gentlemen opposite is erroneous, and by inference the sessional order of the British House of Commons, in force on the 1st of July, 1867, are included in the words 'rules, usages and forms of procedure' mentioned in rule 1. Otherwise there is no ground for Bourinot's statement that a member elected for several constituencies must select one and resign the others. If the sessional orders of the British House of Commons, as they existed on the 1st of July, 1867, do not govern this case and are not included in our rule No. 1, then Bourinot had no ground for making the statement I have just read.

Further in section 1 of chapter 41 of the Statutes of Canada, 1907, it is provided that the House of Commons shall consist of 221 members. But if one member may represent two seats, then the House does not consist of 221 members but only of 220, and the right hon. gentleman who should be the last man to violate the constitution, has been representing two seats in this House in defiance of section 1 of chapter 41 Statutes of Canada, 1907.

There is a provision that where a member's seat is contested, he cannot resign until the suit is disposed of. But the protest against the right hon. gentleman for one of the seats in Ottawa was disposed of in June last. It is perfectly clear what the duty of the right hon. gentleman then was. Can there be any doubt about it? Is there any layman or lawyer who would not say that it was the duty of the right hon. gentleman, when that case was

disposed of, to elect whether he should sit for one of the seats in Ottawa or for Quebec East, for both of which he had been elected. So that since the month of June last the right hon. the Prime Minister has been violating the constitution of this country. This House should by law consist of 221 members, but we are short of that number because the right hon. gentleman is occupying two seats, and all this trouble has arisen simply because he has failed to do his duty. In fact we seem to have reached the stage when no right of the people in this country is too sacred to be sacrificed to the necessities of political exigencies by the party now in power.

I submit that there is no getting away from the statement I started out with, if Bourinot is right in saying that a man elected for more than one seat must select one and resign from the other, then the sessional orders in force in England on the 1st of July, 1867, must be applicable here.

House divided on amendment (Mr. Meighen).

Amendment negatived.

Motion agreed to, and House went into Committee of Supply.

Excise—salaries of officers and inspectors of excise, &c., to provide for increases depending on the results of excise examinations, $439,000.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue). The total increase in the excise branch of the department is $4,599.95, due to increases in the salaries of officers and inspectors, with probably some slight additions to the staff, and to the increase of the amount for extra duty at distilleries. The increases total $14,599.95. As against these, there are decreases of $10,000, making a nett increase, as stated, of $4,599.95.

Mr. BLAIN. How many new officers?

Mr. TEMPLEMAN. I do not think we have the list of the new officers, but as the country develops, and the work of the department increases, additions to the staff are necessary. The number of officials in the outside service is steadily increasing with the increase of business and of the revenue.

For extra duty at large distilleries and other factories, $12,000.

Mr. J. A. CURRIE. How many men are employed under this vote?

Mr. TEMPLEMAN. There is an increase of $2,000 in this vote, required in connection with new distilleries which, the department believes, are likely to be established during the coming year. This is for overtime for our officers at the distilleries.

Mr. BOYCE. Where are the new distilleries to be established?

Mr. TEMPLEMAN. We have heard that one is likely to be established at Montreal. There was also some discussion about the establishment of a distillery at Winnipeg. Provision has to be made by this extra vote so that, if these new establishments do come into existence, we shall have money to pay the officers who must be appointed in connection with their operation.

Mr. J. A. CURRIE. As I understand it, this item is for extra labour at distilleries that have not yet been established and which are not certain to be established. Does not the minister think that a hazy item to ask the House to vote?

Mr. TEMPLEMAN. The vote is for $12,000, which is $2,000 of an increase over the current year. The whole of the $10,000 voted last session has been expended in paying officers at distilleries for overtime. We have reason to believe that the number of distilleries may be increased. We are simply taking provision for the payment of officers in that case.

Mr. J. A. CURRIE. The item last year was voted for the same purpose?

Mr. TEMPLEMAN. Yes.

Mr. CROTHERS.

Mr. J. A. CURRIE. Are there any new distilleries established since last year?

Mr. TEMPLEMAN. No.

Mr. J. A. CURRIE. And a vote was given last year by this House for extra time for officers in the minister's department in case that they should need to be employed in a new distillery, and as I understand, $10,000 was taken up. Is not this another method of getting around the law, and adding additional money to the salaries of officials in the department?

Mr. TEMPLEMAN. No, this is not an attempt to get money to increase the salaries of our officials. These salaries are determined by the Civil Service Act, and we could not increase them in this way if we desired to. I have a memorandum before me explaining this duty pay:

This duty pay was established by order in council of December 20, 1880, and was granted on the ground that the high rates of duty charged have increased the responsibilities of the officers, that the straight salaries paid them were obviously less than the qualifications necessary for the effective performance of such duties should command.

This duty pay is not to be considered as an addition to the officer's salary, as it pertains to the survey, not to the man. Officers receiving such duty pay are subject to removal to other surveys wherever the exigencies of the service so require. Their hours are likewise long, being from 7 a.m. to 6 p.m. The duty pay is given under authority of the schedule to the Civil Service Act.

Mr. LANCASTER. Did I understand the hon. gentleman to say that none of this extra money voted last year was expended at all? I thought he said they established no new distilleries.

Mr. TEMPLEMAN. My hon. friend did not understand me to say that, I said that the $10,000 voted last year had been expended. It is for the probable increase of work in the coming year that we are asking for this vote.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 28) respecting the Campbellford, Lake Ontario and Western Railway Company.—Mr. Fowke.

Bill (No. 31) respecting the Kamloops and Yellow Head Pass Railway Company.—Mr. Burrell.

Bill (No. 32) respecting the Nicola, Kamloops and Similkameen Coal and Railway Company.—Mr. Burrell.

Bill (No. 35) respecting the South Ontario Pacific Railway Company.—Mr. Nesbitt.

Bill (No. 37) respecting the Walkerton and Lucknow Railway Company.—Mr. Donnelly.

Bill (No. 38) respecting the West Ontario Pacific Railway Company.—Mr. Nesbitt.

Bill (No. 42) respecting the Edmonton and Slave Lake Railway Company.—Mr. Cash.

SECOND READINGS.

Bill (No. 58) respecting the Montreal, Ottawa and Georgian Bay Canal Company.—Mr. McGiverin.

Bill (No. 59) respecting the Saint Maurice Valley Railway Company.—Mr. Mayrand.

SUPPLY.

House in Committee of Supply.

Excise—for extra duty at large distilleries and other factories, $12,000.

Mr. BLAIN. I see in the Auditor General's Report at page J—18 an item of $1,448.66 paid to 14 special officers of this department. I assume that these men were paid about $100 per annum each for special services at Windsor, Ontario. I would like to ask the minister what duties these men performed, at whose recommendation they were appointed, and what special qualifications they have for such duties.

Mr. TEMPLEMAN. That is the expenditure under this vote. These officers are our regular supervising excise officers, who are assigned to special services largely or altogether in connection with distilleries. Their duties are very exacting, very important and their hours very long. Each officer in charge of a distillery has to be on duty from seven o'clock in the morning until six o'clock in the evening. Their long hours and their responsible duties entitle them to some consideration over and above their regular salaries, which are fixed by the Civil Service Act, and therefore for these extra services they are paid the duty pay which has been paid by the department for 35 years. It is because this work is increasing somewhat that we are asking for $2,000 more this year than we asked for last year.

Mr. BLAIN. On whose recommendation are these officers appointed, do they undergo any examination, and have they any special qualifications for this kind of work?

Mr. TEMPLEMAN. All the officers of my department have to undergo the Civil Service examination before they can be appointed permanently. If an officer is put in temporarily, it is only with the understanding that he will pass the examination at the first available opportunity. All these excise officers who are in charge of distilleries and receive this extra duty pay have passed up from one grade to another and have passed the examination for promotion required by the department. They are nearly all very old officials.

Mr. BLAIN. I would like to know whether the doctrine laid down by the Finance Minister so clearly the other evening is applied to my hon. friend's department, and whether these are political rewards to these men. The Finance Minister stated that the policy of the government was to give offices to their own political supporters.

Mr. FIELDING. Not exactly. What I said was that if they did, I did not see why my hon. friend should complain.

Mr. BLAIN. I accept the explanation, but what I want to know is whether, in the appointment of officers of this kind, my hon. friend the Minister of Inland Revenue, applies the policy laid down by the Finance Minister, namely, that where an office is vacant and he can find a supporter of the government to fill it, it will go to him in preference to a Conservative, no matter what may be the qualifications of the latter.

Mr. TEMPLEMAN. The Department of Inland Revenue does not follow the practise my hon. friend has mentioned, that is, if a vacancy occurs in the position of a first or second-class excise officer, a new man will not be put directly in that position. In the Inland Revenue Department that would be impossible. Our special class officers, our first or second-class officers, are all men who have risen from the ranks after long service and who have passed, not only the original entrance examination, but the promotion examinations as well. They must have a knowledge of the details and the workings of the office, and I cannot remember any new men having been appointed to such office under my tenure of that department. Take for instance in the case of distilleries, the officer must be competent to see that the revenue of the government is properly safe-guarded, and to do that he must have had some experience in a lower branch, so that new men are not put in these positions at all.

Mr. BLAIN. What about the new men appointed?

Mr. TEMPLEMAN. They are appointed to the lower grades at $500 a year and are very seldom given an appointment to a higher grade.

Mr. BLAIN. My hon. friend has answered many unasked questions, but he has failed to measure up the question I put to him. What I want to know is whether, when my hon. friend makes an appoint-

ment in his department, whether it be to a minor or a more important grade, he follows the policy laid down by the Finance Minister, that to the victor belong the spoils or, in other words, that these new men must be supporters of the party.

Mr. TEMPLEMAN. As regards the appointment of new officials, we accept men who are qualified to fill these lower vacancies, and other things being equal we give the preference, of course, to our political friends. The appointments are very few indeed, and those are to the lower grades, and the offices in such grades are hardly worthy of acceptance, as $500 per year is not a great inducement to outsiders to take them. We do not put new appointees over the heads of officers in the department, but where a man is recommended to me by a political friend, and we have the assurance that he is competent, we most unquestionably give him the preference.

Mr. BLAIN. How are the recommendations made?

Mr. TEMPLEMAN. Personally, verbally, in writing and in many ways by members of parliament and others. There is no particular system, but I generally satisfy myself that the applicant is fit for the position. I have very frequently indeed sent the name of the party recommended to the collector of Inland Revenue in that particular district and asked him to advise me confidentially if the applicant is fit to be appointed to the service.

Mr. BLAIN. That is very frank, and I wish to compliment the Minister of Finance upon his influence in the cabinet. That influence seems to reach out to all these departments. His colleague has been very frank in admitting that these new appointments he has mentioned are given to party supporters and that no Conservative need apply. That is the policy of the government clearly announced. I was afraid there might be some disagreement in the cabinet, but all the ministers seem to think alike on that subject, and the country will understand that this government, which came into office with so many professions of a higher standard of politics, has reached the point that no new appointments can be made to his department except to a government supporter.

Mr. FIELDING. My hon. friend has been here all these years, and if he has only made that discovery now, he is somewhat duller than I took him to be. The only exception I take to his remarks is where he attributed to me the phrase 'to the victor belongs the spoils.' I never used the words in that particular sense which he applies to them, and in which they are understood by our friends across the border where they mean a great deal more than the meaning I would give them. The question to determine is, first, what these spoils are. I would not consider that an office already held by a respectable Conservative was a spoils that must be got rid of. But if a vacancy occurred in the public service and there was a good Liberal capable of filling the place, and if we passed him over and gave the place to one of my hon. friend's friends, then we ought to be turned out.

Duty pay to officers serving longer hours at other than special survey, $1,500.

Mr. TEMPLEMAN. This is on the line of the last vote. It is to enable the department to pay duty pay to deserving officers engaged at other than special survey on account of their long hours and attendance, and in some cases the character of their work. These officers serve from 7 a.m. to 6 p.m., and this vote is paid to officers in the bonded manufactories.

Mr. J. A. CURRIE. This service is a technical service to a large extent. Have any men been appointed to this service since the minister took office who have not passed the Civil Service examination, and if so, how many?

Mr. TEMPLEMAN. There have been appointments made to deputy collectorships where the appointees have not passed the examination, the law not requiring that they should. All temporary appointees are expected to pass an examination, and they are not put on permanently and do not receive the annual increment of five per cent of salary until they do pass. It is quite true that in the outside service quite a number of men in the lower ranks have not yet passed the examination. Almost every time an examination is held a large number of our officers go up and try; some pass, and some fail and try again; some of them probably will never pass the examination. Some of them are very good officers and trustworthy men. I think perhaps out of 300 or 400 officers, 50 or 60 have not passed the examination.

Mr. J. A. CURRIE. Does this item cover those men in the service supervising what is known as the blending of liquors?

Mr. TEMPLEMAN. This item has no reference to what my hon. friend mentions. It refers to duty pay to officers in charge of bonded manufacturing establishments, for the manufacture of vinegar for instance, where officials have to be present from early in the morning till late at night. It is responsible work, and this extra pay is for services rendered. It attaches to the

office rather than to the man, it is not a portion of his salary at all.

Mr. J. A. CURRIE. I have heard that repeated several times. But I want to ask the minister if he has not special officers in charge of the manufacture of blended liquors, and what are the regulations in his department in that respect?

Mr. TEMPLEMAN. There is no such thing.

Mr. J. A. CURRIE. What machinery has the minister got for enforcing the statute that covers the case of blending and the licensing of blenders?

Mr. TEMPLEMAN. I suppose my hon. friend is referring to the compounding of liquors?

Mr. J. A. CURRIE. Yes.

Mr. TEMPLEMAN. It is nearly the same thing. There are licenses issued to a number of firms to compound liquors. As my hon. friend knows, all this liquor is duty paid before they can compound it. The only interest the department has is to collect the revenue.

Mr. J. A. CURRIE. I understand they use liquor in vinegar factories.

Mr. TEMPLEMAN. That is not compounded.

Mr. J. A. CURRIE. I am well aware it is not compounded, but it is used in some instances. A vinegar manufacturer can purchase his alcohol duty paid and manufacture vinegar from it. I suppose the department has seen fit to place officers in charge of these factories to see that that law is not violated.

Mr. TEMPLEMAN. In a bonded manufacture such as a vinegar factory we have officers. They manufacture in bond. Of course, the alcohol is converted into vinegar, and our officers see that the revenue is safeguarded. But that is a different thing altogether from the compounding of alcohol. In that case the liquor is duty paid beforehand, so that the revenue could not possibly be defrauded.

Mr. J. A. CURRIE. I do not wish to delay the minister; but I understand that there is a great deal of fraud committed in connection with the blending of liquor under licenses issued by the department. I understand that blenders buy cheap alcohol, that they mix all kinds of material with it, and manufacture so-called corn liquors which they sell throughout the country. For instance, a large quantity of what they call Scotch whisky is sold in this country, which is really manufactured by these people; also Egremont Mint and Benedictine are sold as foreign liquors, though they are manufactured by our Canadian vendors out of alcohol and other specific mixtures. They have brands upon them of firms supposed to be located in France, and Portugal, and in Scotland. Now that really constitutes a fraud on the public, a greater fraud even than the sale of unlicensed liquor. If a manufacturer wishes to put up Canadian whisky in bottles, he must place a seal on it, and of course that is done in bond. But have any steps been taken by the department to look into this matter, and have any representations been made to them on that question? We see reports in the newspapers of men dying from the effects of partaking of liquor which contains chloral hydrate and other drugs. No doubt the hon. minister saw the item in the papers with regard to Fort William and the northwest section of Ontario generally. Does not the minister think that some steps should be taken to meet cases of this kind, prevent adulteration and put a stop to the fraudulent marking of liquors with the names of manufacturers, or alleged manufacturers, in other countries?

Mr. TEMPLEMAN. I am inclined to think that the fraudulent marking of alcoholic beverages would come under the Criminal Code. It has nothing to do with the Department of Inland Revenue.

Mr. J. A. CURRIE. If a man were to put on goods manufactured in Canada the label of, let us say, Lea and Perrin, I suppose that would be a fraud. But if he were to put on the name of some suppositious manufacturer in Glasgow or Birmingham, would that be a fraud?

Mr. TEMPLEMAN. It would not be an offence against the Inland Revenue Act, but it might be against the Criminal Code. I am not familiar enough with the penalties under the Criminal Code in relation to false markings to say whether misrepresentation of that kind would be counted a fraud or not, but I assume it would be. With regard to the purity of whisky, it is a fact that during last summer the Department of Inland Revenue made large collections of liquors as sold over the bar in many places in Ontario and even in Manitoba where statements were made that impure or poisonous stuff was sold over the bar. Analyses were made, and in almost every instance the report of our chemist was that nothing of a deleterious nature —nothing more deleterious than the whisky itself; nothing of a poisonous character —was added. Rarely anything more than alcohol or water was found to have been contained in any of the samples. For myself, I have very grave doubts about these reports concerning poisonous liquors

being sold. I read the despatch in the newspapers relating to what happened at Fort William or Port Arthur. The offence of adulteration there referred to does not come under the Inland Revenue law. It may be possible that some foolish saloon man, thinking he could make cheap beverages, would try to doctor it up with noxious drugs. But we cannot be held responsible for that. The offence would be punishable no doubt, under the Criminal Code. The purity of liquor, if it is ever going to be dealt with, I suppose will have to be determined by standard to be decided upon by the officers of the Inland Revenue Department in connection with the standards for foods, upon which, as a matter of fact, the department is at present engaged.

Mr. J. A. CURRIE. I have looked over the returns published by the department in connection with this collection of liquors to which the minister has referred, and I notice that there is an absence of deleterious products ; but I notice also that there is a pretty constant addition of twenty-five per cent of water to the liquor sold throughout the country. Does not it occur to the minister that it would be wise, in the interest of his department and for the increase of the revenue, if some method were devised by which the sellers of liquors of that description could be punished? It would appear that it is possible to secure twenty-five per cent more revenue which now the hotelkeeper and middle-man are taking.

Mr. TEMPLEMAN. The department cannot be defrauded in that way. Our excise duty is based on the measured proof gallon, and this must be paid when it leaves the bonding warehouse after being purchased by private parties, of course they can put in what they like. They may sell it at proof, or at fifty per cent under proof—just as weak as they can deceive the public into taking. But there is something in the point that the hon. member (Mr. Currie) makes. I suppose there should be a standard of strength for whisky. If we establish a standard providing that there should be so much alcohol and so much water, then if there be more water, that would be a violation of the law and punishable as such. The question is, what can we do? The temperance men will say that the lower you put the standard the better—the more water there is in the whisky the less harm it will do. But we are grappling with the question of fixing a standard for foodstuffs of all kinds and for drinks, including alcoholic drinks, and we hope, before many weeks, to be able to submit a set of standards under which the Adulteration of Foods Act may be better enforced. That is, of course, an enlargement of the subject actually under discussion. But I hope to fix standards for foodstuffs and liquors.

M. TEMPLEMAN.

Mr. J. A. CURRIE. I do not wish to delay the committee, but I would like to ask another question. There is an impression abroad in this country that the Scotch whisky sold here is the product of the old pot still. It is sent into this country by Scotch distillers and sold as Scotch whisky. Now, the minister is aware that there has been considerable agitation and, in fact, litigation, in the old country over the question of what constitutes Scotch whisky. But it has been shown, apart altogether from the question of whether all Scotch whisky is the product of the pot still or of the fractional still, that there is such a thing as real Scotch whisky which is the product of the Scotch still which was known before the fractional or silent still was brought into use. All the whisky made in Canada is the product of the silent still, and the distilleries here are required to mature their product, I understand, for three years before it is sold to the public. But here is where the trouble comes in: A distiller in Scotland or England who manufactures with the silent still turns out exactly the same product as our own distillers, and, by simply reducing the strength of that spirit, putting in some flavouring matter, to give it the flavour of Scotch whisky—such as wine or a touch of pyrogallic acid to give it a smoky smell and taste—he is allowed to ship that stuff into Canada and sell it in this country within thirty days of the time it leaves the still. Whilst the very same product manufactured in Canada by the very same process, without the addition of these flavouring extracts, is required to be held in bond three years. Would it not be fair that some steps should be taken by the Excise Department to stop the importation of any hard spirits such as whiskies which have not been matured for the same length of time in bond in this country as Canadian made spirits are matured? This liquor is manufactured abroad, by men who run these silent stills, from refuse of all kinds, beet root refuse, potatoes and everything of that kind, while in Canada we compel the distiller to adopt a very high standard. The foreign distiller has an advantage any way because he can manufacture cheaper than the Canadian, and the very fact that his liquor is imported gives it an additional value, the consumer paying the duty. Will the minister investigate this, and may we expect any reform in the immediate future?

Mr. TEMPLEMAN. The importation of Scotch or any other whisky does not come within the province of the Inland Revenue Department. The Customs Department deals with it.

Mr. J. A. CURRIE. You should not allow the Minister of Customs to encroach on you, to run in his stuff in opposition to yours.

Mr. TEMPLEMAN. It is quite true that the alcohol made in Canada is matured for two years before it is permitted to be sold. That regulation was made many years ago, I believe at the request of the manufacturers of alcohol in Canada. I do not know the motive in making it; it may improve the quality of the whisky. This requirement is maintained because the distillery men wish it, not because the department is particularly anxious to continue the two year period of maturing. We have no control over the manufacture of whisky in Scotland. There would, however, appear to be an unfair competition when liquor a month old from Scotland competes with Canadian liquor kept in bond for two years to mature. I do not know whether the Canadian is any better than the other; although I have sampled both, I am not a judge. I freely admit that there is an apparent hardship upon the Canadian distillers, but they have never made any representations to the department in that regard. Within the last month or two the compounders have made certain representations regarding labelling and mixing. Certain features of the question are now under consideration of the department. My hon. friend will see that the Excise Department has nothing whatever to do with imposing any conditions upon liquor imported into Canada.

Travelling expenses, rent, fuel, stationery, &c., $90,000.

Mr. COWAN. Is the matter of fixing a standard for milk under the consideration of the department?

Mr. TEMPLEMAN. Yes, I think it is practically ready.

Mr. COWAN. What would you mean by a standard?

Mr. TEMPLEMAN. I presume we would lay down a percentage of butter fat, solids, &c., below which no cream or milk could be sold.

Mr. COWAN. How soon do you expect that standard to be ready?

Mr. TEMPLEMAN. The chief chemist of the Inland Revenue Department has been working on this question for many months because there are many articles to be considered. He is at present in consultation with two other expert chemists from Toronto and Montreal, in order to arrive at a standard in each case. I understand that the standards are very nearly completed and will be ready for approval by the government within a month or two.

Mr. GEO. TAYLOR. How much of this vote was for travelling expenses and how are the travelling expenses made up?

Mr. TEMPLEMAN. The Auditor General's Report will state the amount of travelling expenses. The travelling expenses, of course, are the expenses of our district inspectors in the first place. We have some six or seven district inspectors, each of whom travels over his district four times a year. Then, the collector of each collecting district inspects all the subdivisions within his district and the travelling expenses of these officials accounts for the larger part of the expenditure.

Mr. TAYLOR. You have an item of $60 for car tickets in Ottawa. Do these high salaried officials at Ottawa get street car tickets as well?

Mr. TEMPLEMAN. It is customary to allow street car tickets to the departmental officials who have to travel considerable distances to warehouses. For instance, the officers go over to Hull and it is thought to be more economical to give them street car tickets than to establish an office there.

Stamps for imported and Canadian tobaccos, $85,000.

Mr. GOODEVE. From whom are these stamps obtained?

Mr. TEMPLEMAN. These stamps are all printed in the bank note establishment on Wellington street under a contract made by the Finance Department for the printing of postage stamps and all stamps used by the government.

Mr. GOODEVE. Are tenders called annually for this work?

Mr. TEMPLEMAN. I understand that the contract runs for a number of years.

Mr. GOODEVE. Does the minister know if a contract has been let by tender during the last 10 or 15 years?

Mr. TEMPLEMAN. I know it does not go back 15 years.

Mr. HENDERSON. There has been a change within 15 years because prior to the present government coming into power it was a Canadian firm that had the manufacturing of the stamps. It is only since the present government came into power that an American firm has been given the work.

Mr. TEMPLEMAN. I understand they got the contract because their tender was the lowest, but that matter is in the Finance Department. I am not familiar with it.

Mr. GOODEVE. Is the government considering the question of having an establishment for printing stamps in connection with the mint?

Mr. TEMPLEMAN. No, and if they take my advice they wont consider it for

one moment. The idea of connecting the mint with the printing of stamps is rather a curious combination of industry. The work done by the Wellington street firm is very excellent and very superior and in my opinion no better bank note printing is done on the continent of America or anywhere else in the world. I think it would be a great pity if the government undertook to do work of that kind. It is done much better and much cheaper than the government could do it.

Mr. GOODEVE. Does the minister not know that the government of the United States took away the contract from this very same company, and that they are now printing their stamps in connection with their mint and saving a very large sum of money thereby.

Mr. TEMPLEMAN. I do not think the printing of stamps can be done in connection with the United States mint although it probably may be done by the government printing establishment in Washington.

L. A. Frechette, for special translation, $100.

Mr. TEMPLEMAN. This is the same vote every year.

Mr. GEO. TAYLOR. What do we get for it?

Mr. TEMPLEMAN. There are circulars issued by the department and Mr. Frechette has done the work of translating them.

Mr. GEO. TAYLOR. Is he an officer of the department?

Mr. TEMPLEMAN. No. He was the French translator of the House of Commons. I understand that he has been superannuated, and therefore I will move that the name be struck out of the vote.

Mr. GEO. TAYLOR. My hon. friend had better strike the item out. Surely he has in his department clerks who understand French and can translate these circulars.

Mr. TEMPLEMAN. We have in the department several French clerks who are very excellent clerks; but my hon. friend knows that to be a good translator a man requires to be pretty highly educated in both languages, and I do not know that any of these clerks are highly enough educated to do this work.

Mr. TALBOT. I think it is high time the Minister of Inland Revenue appointed a few French Canadians in his department to do this work.

Mr. LANCASTER. Is it the policy of the government to superannuate men who can still work, or men who have done service and cannot work any longer? If this gentleman has been superannuated, how is it that he is not left to spend the rest of his days in rest, but is to be employed in doing this work?

Mr. TEMPLEMAN. This is not a vote for superannuating any person. It is for paying for a small amount of translation required by the department.

Mr. LANCASTER. I am not objecting to the amount, but to the principle of employing to do work a man who has been superannuated on the ground that he is past work.

Mr. TEMPLEMAN. I understand that Mr. Fréchette has been superannuated since these estimates were printed, and for that reason I have moved to strike out his name so that the money can be paid to any one.

Provisional allowance of not more than $150 each to officers in Manitoba and provinces west thereof whose salaries from any government service do not exceed $1,000, $5,000.

Mr. TEMPLEMAN. This is a vote we have taken for several years to pay these officers something extra on account of the greater cost of living in the west.

Mr. GEO. TAYLOR. How much was paid out on this account last year?

Mr. TEMPLEMAN. $4,178.75.

Mr. GEO. TAYLOR. Is this sum voted to the minister so that he can pick out his political friends and donate $150 to each of them, and leave the poor Tories to go dry, or does he give it to all the officers?

Mr. TEMPLEMAN. All the officers in the four western provinces, without regard to politics, receive from this vote a small amount, ranging from $25 to $100 according to salary. The smaller the salary a man receives the larger the sum he gets out of this vote.

To enable the department to supply methylated spirits to manufacturers, the cost of which will be recouped by them, and to pay for rent, light, power, freight, salaries, &c., $50,000.

Mr. TEMPLEMAN. Last year the amount expended for this purpose was about $40,000. This year we are reducing the vote by $10,000.

Mr. GEO. TAYLOR. I see that $3,305 was paid to J. P. Wiser & Sons of Prescott, for non-potable spirits. Are these methylated spirits?

Mr. TEMPLEMAN. That is precisely what this vote is for. We purchase non-potable grain alcohol from all the distillers, but principally, I think, from the Gooderhams, of Toronto. With this we mix wood alcohol to produce the methylated spirits sold by the department, and we get the money back with a slight profit.

Adulteration of food and the administration of the Act respecting fertilizers, fraudulent marking and commercial feeding stuff, $30,000.

Mr. TEMPLEMAN. This is the usual vote.

Mr. COWAN. How much is expended in British Columbia for salaries of inspectors and others?

Mr. TEMPLEMAN. The amount is very little indeed. The inspectors of foods are officers of the department, who are appointed at very small sums, ranging from $100 to $200 and in some cases $300. They perform certain services when requisitioned, such as purchasing samples for the analyst. There is one in Vancouver and another in Victoria. In addition the provincial health officer has a retaining fee from the department of $400 as public analyst.

Mr. COWAN. Is one inspector in Vancouver sufficient?

Mr. TEMPLEMAN. One might do for the whole province.

Mr. COWAN. Is the minister aware that the amount of milk alone sold in the city of Vancouver would require the services of five inspectors? Does he know anything about the prosecutions for the adulteration of milk in Vancouver?

Mr. TEMPLEMAN. The Department of Inland Revenue, under the Adulteration of Foods Act, has nothing to do with the prosecution of people for the selling of impure milk. That is a municipal matter. There is scarcely a city in the Dominion which has not by-laws in that connection and inspectors, and the department does not infringe upon municipal jurisdiction.

Mr. COWAN. Where do the municipalities get their power to pass their by-laws with regard to the adulteration of milk?

Mr. TEMPLEMAN. In the Adulteration of Foods Act.

Mr. COWAN. In what section?

Mr. TEMPLEMAN. I cannot say offhand but my hon. friend is a lawyer and must know. Every municipality has the power to appoint inspectors, and many have done it.

Mr. COWAN. I would have thought that as the subject has been dealt with here, the jurisdiction would be vested in this parliament.

Mr. TEMPLEMAN. Under clause 10 of the Adulteration of Foods Act, municipalities may appoint inspectors, but even in addition to that, if I remember rightly, the municipalities can protect themselves. They have jurisdiction with regard to hygienic conditions in dairy establishments and stables and that sort of thing, and I am inclined to think that, under the provincial law, the municipalities can be delegated that power. However, I would not care to enter into a legal controversy with my hon. friend who for years has been the solicitor for the municipality of the city of Vancouver. I would refer him also to section 13 of the Adulteration of Foods Act, which gives further power of the same kind.

Mr. COWAN. I do not seek to enter into a legal discussion with the minister, but am merely drawing his attention to the fact that the machinery of the Act is exceedingly cumbersome. Not only is the substantive part of the Act insufficient to protect the public, but the machinery is inadequate and complicated. I was going to suggest that it would be desirable to fix a standard for milk and that the machinery of the Act should be improved, because at present it is impossible to get a conviction under it.

Mr. TEMPLEMAN. I am disposed to agree with my hon. friend that the Act can be improved, and I think that the first thing to do is to provide a standard. If we had a fixed standard for all food stuffs, we could enforce the Act much more effectively. That is a matter the department has under consideration.

Mr. COWAN. I am suggesting not only that the department should fix the standard, but that it should improve the machinery of the Act. For instance, the public, in order to reach the halls of justice, must go through the portals of your inspectors.

Mr. GEO. TAYLOR. The minister comes before us this year, as in other years, and asks for money which, as at present used, is wasted or worse than wasted. He pays his inspectors to go about the country and buy samples of various articles. These samples are sent to Ottawa and analysed, and the results are published in a bulletin. The bulletin shows that three-quarters of these articles are adulterated. Yet no body is prosecuted, because there is no standard and the minister will not fix a standard. Practically every family in this country is using adulterated foods which are sold in the stores generally. The minister knows this, for the facts are before

him in his own bulletin. But it is the same old story—they have not fixed the standard and we cannot enforce the Act. I hold that we should not vote another dollar for this service until the minister says that any man who sells adulterated food will be prosecuted by the officers of the department.

Mr. COWAN. There are two things absolutely necessary in order to make that Act workable; one is the fixing of a standard and the other is the taking away from the inspectors of the power to shelter the guilty. I am not charging that they actually shelter the guilty, but what I do say is that the public cannot go directly into the courts and secure the enforcement of the Act except under onerous conditions. If these were changed, the machinery would be more workable.

Mr. TEMPLEMAN. I think the results of the analyses of the collection made all over the country and the publication of the results have been good. The publicity thus given to the facts and also the prosecutions that have taken place and the imposition of penalties, so far as they have been imposed, have had a very good effect upon the purity of food-stuffs actually sold in Canada. I have here a memorandum showing the percentage of adulteration for ten years past, and in every case there is a considerable reduction in the percentage. For instance, in maple sugar the percentage of adulteration went down from 45 per cent in 1905 to 13 per cent in 1908; in maple syrup from 82 per cent to 13 per cent in the same period. In milk, the percentage below standard in 1890 was 22 per cent. It has varied year by year, going down as low as three or four per cent, but last year it was ten per cent. I have another memorandum showing the results of the analysis of a number of samples covering a very large variety of articles. I will not weary the House by reading it, but I may say that the result is exceedingly encouraging indeed, there being a far less percentage of adulteration in all lines to-day than there was even five years ago. I think this good result is, in a measure at all events, due to the enforcement of the Adulteration of Foods Act through the collection of samples and the publication of the bulletins.

Mr. G. TAYLOR.

Mr. LENNOX. Would the minister repeat what he said about prosecution; I did not hear it.

Mr. TEMPLEMAN. Last year, a large number of prosecutions were entered against parties found guilty of adulteration or of having sold adulterated goods. These are the samples referred to in the bulletin.

Mr. J. A. CURRIE. How many prosecutions were there?

Mr. TEMPLEMAN. I do not know how many actions, but I have here a statement of the amount paid in. This is what we have done: Where a dealer sold goods not up to a standard, we submitted to him that he should pay the cost of the analysis of the sample. In most cases, we found that the party with the adulterated goods in his possession was not the guilty party, but probably an innocent trader. And that, by the way, is one of the defects of the Act—we do not at all times reach the men who are guilty of the adulteration. So, in the case of adulteration of goods bought at a grocery store, for instance, we have said to the dealer: If you pay the costs the department has incurred up to the present time, we will not prosecute.

Mr. J. A. CURRIE. Has the minister prosecuted any?

Mr. TEMPLEMAN. In cases which I have before me, arising all over the country from the Atlantic to the Pacific, sums of from $12 to $19 were paid by some thirty or forty different people. There were a great many other prosecutions.

Mr. J. A. CURRIE. While the hon. member has the papers before him, will he read the names of the parties prosecuted?

Mr. TEMPLEMAN. I will hand my hon. friend (Mr. J. A. Currie) the list.

Some hon. MEMBERS. Read it.

Mr. TEMPLEMAN. These are not the names of one-quarter of those against whom actions were entered, and who paid penalties of from $12 and, in one case, up to $66——

These amounts are the amounts that the department offered to accept in lieu of prosecuting. We thought then and think still that the penalty then imposed was quite sufficient. There is still in the Justice Department a large number of cases for prosecution.

Mr. COWAN. That is the mystery of the case, why these amounts were paid. A man is guilty of selling adulterated food, that is, he has committed an offence, not against the department but against the public, and an analysis is made at the expense of the government inspector. The accused is brought up; some times he is brought before the man who has the patronage in the district, and sometimes to the inspector; he is brought up, and that is all. He is told: Now, if you pay the analyst so much, and the lawyer that is engaged in the matter so much, we will hush it up. Now, the minister has failed to show any cases of conviction. Again, if the minister wishes to make that Act useful, let him call on his department to do away with the machinery which puts the guilty man in the power of the inspector. I am not charging that any particular inspector has abused that power, but I come very near it, and I say that the figures the minister has read out show that these men, guilty of a crime against the public, are brought, not into the courts of justice—the only place where justice can be done to the public in case of an offence against the public—but into the office of some good Liberal lawyer, or bad Liberal lawyer, if you will; and he is told that if he will fork out $5, say to the analyst, and something to the lawyer, and something for somebody else, amounting perhaps to $82, as the minister says in one case, why, he can go scot free. The crime is condoned in the lawyer's office, not in court, for he never gets there. That is our experience all over Canada, at least on the coast, that this Act is not workable. The inspector has to shove his face into the prosecution, he is charged with the duty of enforcing the Act, and instead of chasing the guilty man into court, he chases into some private office and settles with him. I submit again that the minister has proven by his own figures that the machinery of that Act is in bad need of amendment. I would ask the minister if he has any cases of conviction?

Mr. TEMPLEMAN. Yes, lots of them. I think my hon. friend is not as familiar with the mode of procedure under the Adulteration of Food Act as he ought to be. The inspector, who has been roundly abused by my hon. friend as shielding the guilty, has little or nothing to do with the enforcement of the Adulteration of Food Act. As a matter of fact, I have always thought that the title of inspector

of food is a misnomer. Under the Adulteration of Food Act the inspector is simply a clerk in the excise office, and receives from us a small salary, $100 or $200 a year in addition to his regular salary for the purpose of collecting samples, when he is advised by the chief chemist. He goes to a grocery store, or any other place, and he buys a sample, and divides it into three parts. He seals these in the presence of the dealer, leaves one sample with the dealer, and sends another to the head office in Ottawa. That is all he has to do; he is a witness, therefore, that that particular article was bought from that particular grocer. He puts his seal on it; and the sample sent here is analysed. Now, the inspector disappears altogether from the scene until there is a prosecution, when he is a witness to this fact only, that this is the sample of the butter, it may be, or the pepper, or whatever article that he bought from that particular dealer; that is all he has to do. He does not initiate proceedings, he has nothing to do with the prosecution, he has nothing to do with the settlement. The department in Ottawa, after these samples are analysed and adulteration is found to exist, places the matter in the hands of the Justice Department, and from that time until a settlement is reached the Inland Revenue Department has nothing more to do with the matter. My hon. friend has been unfair in his reflections upon the inspectors. They are our agents simply for the purpose of collecting samples for analysis. I am free to admit that the Adulteration of Food Act needs improvement, and I hope we will improve it. Certainly the first thing to do is to provide a standard of food, so we will not fail. One reason why in the last few years we have not prosecuted to a finish as much as we formerly tried to do, and why we accept the payment of the expenses of the department rather than go on and prosecute, is because in a prosecution, I think in the city of Montreal, the judge refused to convict because there was no standard. I imagine that another judge would follow that precedent and refuse to convict where there was no standard. I do not know that there is any more information I can give my hon. friend from Vancouver (Mr. Cowan). I have said frankly that I think the Adulteration of Food Act ought to be improved, and I trust will be improved this session.

Mr. COWAN. Will the minister go further and admit that it is not a desirable mode of enforcing that Act that I, for instance, who might wish to prosecute for an offence under the Act, would have to go to the inspector and make a deposit of $25.

Mr. TEMPLEMAN. My hon. friend cannot do that under the present Act. The inspector has nothing to do with that and never received a deposit, as far as I am aware.

Mr. J. A. CURRIE. A deposit is required in certain cases under the Act before a private individual can prosecute.

Mr. COWAN. The Act provides that if upon analysis an article is found to be adulterated the person at whose instance the analysis is made may prosecute the offender upon making a deposit of $25 with the collector of Inland Revenue.

Mr. TEMPLEMAN. That is not the inspector.

Mr. COWAN. It is the same thing, you have said that the officers of your department are your inspectors. It works out in the same way; I cannot get a prosecution unless I put up security. But if you commit a common law offence, an assault, I can lay an information and prosecute you. why is the distinction made?

Mr. TEMPLEMAN. The clause referred to is a provision whereby any person can prosecute, and I think that the provision requiring a deposit is very proper. Where there is adulteration the department carries on prosecutions and has done so to a very large extent, but there is also that provision that if a private individual desires to prosecute by making the deposit, I presume to cover the preliminary expenses, he is privileged to do so. While the provision is a proper one, I do not think it has been taken advantage of by any person.

Mr. COWAN. I take issue with the minister there, any man who has to do with the actual business of prosecuting offenders would disagree with him. As that Act is framed it is in the mind of the public that they have nothing to do with the enforcement of the Act. It is in the hands of the government and the local heelers are quick to catch on to that and get out of it whatever fees they can, so that there is a settlement and no conviction. I doubt if there could be a conviction because there is no fixed standard, but even if you had a standard the prosecution would lose its way in some government office and the case would never reach the court under that provision because there is an embargo placed on the public prosecuting under that Act.

Mr. C. A. WILSON. There may be something in what the hon. member has said about the framing of this Act in relation to prosecutions. I have had some experi-

ence as an attorney in the city of Montreal. The hon. member has asked for cases of conviction. In 1906 or 1907 when the Minister of Inland Revenue (Mr. Brodeur) held the portfolio of Inland Revenue, I was charged by this government to prosecute in five cases of adulteration, three of maple syrup, and two of butter. In the maple syrup prosecutions I secured three convictions and the defendants were fined $20. There was doubt in the mind of the magistrate about the working of the Act, especially in the absence of a Canadian standard. We acted upon an American standard and another provision of the Act under which we had to refer to a pharmacopeia, French or British, I do not remember exactly. Mr. Small, who was prosecuted, appealed to the Court of Appeal, criminal side. The case was argued before Mr. Justice Trenholme, who kept it en deliberè for a year; the appeal was allowed, the conviction quashed and a report made to the government to that effect. If I remember the argument advanced by Mr. Cotton, a very able lawyer for the defence, he objected to the provision of the law that the certificate of the analysis is prima facie evidence that has to be rebutted by the person accused. He also based his argument on the absence of a standard. After consultation with the gentleman who was acting as chief analyst in Ottawa just after the death of Mr. Macfarlane, we came to the conclusion that in order to do justice to the people of our community, many samples of maple syrup would have to be gathered from different points. In order to make it uniform or perhaps have different standards according to the different soil, land, or maple trees in the different provinces. The other two cases in which I was engaged were cases of the sale of oleomargarine. Both of the accused were found guilty and fined $20 and costs. So I am glad to be in a position to inform my hon. friend (Mr. Cowan) that convictions were secured. I think the department concluded that some amendment should be brought into force which would make the Act more workable.

As to the adulteration of milk, my hon. friend is aware that we have special legislation in Quebec which empowers the different towns and cities to pass by-laws on this question. The city of Montreal, for instance, has passed a by-law and almost daily in the report of the recorder's court you read items in the campaign against these offenders, against any Act, federal, provincial or municipal. They are very severely prosecuted and I do not see any reason to complain of the working of this Act. My impression is that the clause quoted by my hon. friend which enables the municipalities to take advantage of this Act, offers to those communities which are not populous enough to have a city charter an opportunity to pass by-laws for the proper inspection of the articles of food that are sold to the public.

Mr. COWAN. The hon. gentleman (Mr. Wilson) cannot cite a single case in which a private individual has been prosecuted to conviction, and he admits that in the absence of a fixed standard the Act is practically ineffective. The fact is that the Dominion government is playing dog in the manger. This statute does not fix the standard and should the provincial government legislate along the same lines and a prosecution be entered under the Dominion statute then the courts would say that the federal parliament having already exercised jurisdiction the provincial Act is ultra vires. This proves beyond doubt that the fixing of a standard by Dominion statute is an absolute necessity.

Mr. SEXSMITH. Does this item cover the expense of the analysis of the samples of food and of the fertilizers sent in for registration under the Act of last year?

Mr. TEMPLEMAN. When samples are sent in for registration they have already been analysed by the manufacturers, but this will cover the expense of the samples sent in by the people to be analysed at the laboratory.

Mr. SEXSMITH. What progress is being made in the registration under the Act of last year?

Mr. TEMPLEMAN. Very good progress. I think most of the manufacturers are registered now and the Act will go into force by the first of the year.

Mr. GEO. TAYLOR. The minister told us that when these samples are analysed and found adulterated he hands the case over to the Department of Justice. It seems to me that that is the end of it. I would like to know any manufacturer who has been prosecuted in connection with these adulterated food stuffs that are bought in the grocery stores.

Mr. TEMPLEMAN. When the chemist finishes his analysis and adulterations are found the case is sent to the Department of Justice as the hon. gentleman says.

Mr. GEO. TAYLOR. And that is apparently the end of it, because I have never heard of a case where the manufacturer or the seller of adulterated food has been prosecuted. It is time that the law should be put in force. It is all nonsense to hand the case over to the Department of Justice and let it remain hung up there when the proper course would be to institute these prosecutions at once and stop the sale of these adulterated articles.

Salaries, weights and measures inspection, $76,000.

Mr. STANFIELD. What revenue is received from the inspection of weights and measures?

Mr. TEMPLEMAN. $8,000.

Mr. SEXSMITH. Sometimes people complain that they are charged too much for this inspection. What charges have the inspectors a right to make?

Mr. TEMPLEMAN. There is a fixed tariff established by order in council.

Mr. BLAIN. Are the self-computing scales now so generally in use subject to the inspection of the department?

Mr. TEMPLEMAN. All scales that are used for buying and selling must be inspected.

Mr. SEXSMITH. Is the inspector allowed to charge for the cartage of the weights from the store to the station or wherever he is going to make the test and back again?

Mr. TEMPLEMAN. We pay all transportation charges, but the cartage charges from one store to another are borne pro rata by the different parties whose scales are inspected.

Mr. BLAIN. I am informed that there are a great many self-computing scales in use in the country that have not been inspected by the department. I assume that a specially trained officer would be required to make a proper inspection of scales of that kind.

Mr. TEMPLEMAN. We have no reason to suppose that there are any scales anywhere in the country used for weighing products that are sold that are not regularly inspected. I am advised that the mechanical work of inspecting one scale is pretty much the same as that of inspecting another. Instructions are sent out by circular from the department to the inspectors informing them fully as to the best method of inspecting.

Salaries of gas and electric light inspectors, $40,000

Mr. STANFIELD. I understand that the law is that if you own the meter you have to pay for the inspection, but if you rent the meter the company that rents it to you pays for the inspection. Is that so?

Mr. TEMPLEMAN. Yes.

Mr. STANFIELD. I would suggest that the law be changed to make the company pay for all the inspections.

Mr. TEMPLEMAN. It is the owner of the meter, whether a company or a private individual, who pays for the inspection.

Mr. G. TAYLOR.

Mr. STANFIELD. That is not fair to the consumer, because he buys the meter from the company.

Rent, fuel, travelling expenses, postage, stationery, &c., for gas and electric light inspection and the purchase and repairs of instruments, $25,000.

Mr. TEMPLEMAN. This is an increase of $4,000, due to the increasing number of plants all over the country. Every small town now is having its own electric light, and the expense of inspection has increased considerably. We employ only qualified electricians as inspectors.

Inspection of export of electric power, $1,500.

Mr. TEMPLEMAN. The chief electric inspector has to proceed to places where electric power is generated and make an inspection and report. He made an inspection, for instance, and spent considerable time at Fort Francis and also at Niagara Falls.

Mr. GEO. TAYLOR. Do we get any revenue from this?

Mr. TEMPLEMAN. The only revenue we get is the $50 license paid by the companies that export electricity.

Mr. GEO. TAYLOR. Why should the government look after the export of electrical power without getting some profit?

Mr. TEMPLEMAN. We have had the Act several years and do not get any profit out of it.

Mr. GEO. TAYLOR. These are private companies engaged in the business, and we should charge them sufficient license to cover the expense of administering the law.

Mr. TEMPLEMAN. I imagine that the object of the Act is, if deemed advisable, to restrict the export of elecric power or at all events to regulate it. We have it within our power to give permission to export or refuse that permission, as we think best in the public interest. It is necessary that our chief inspector should visit the different places and see what power is being developed and how much exported. We have to administer the Act and pay the expenses of adminisetering it.

Mr. GEO. TAYLOR. We ought to charge a higher license so that the Act will be self-sustaining and not be a drag on the country. These private companies are making money, and we certainly should make them pay a sufficient license to meet expenses. How often has the inspector to visit these places where the power is exported?

Mr. TEMPLEMAN. At least once a year.

Mr. GEO. TAYLOR. And does that cost $1,500?

Mr. TEMPLEMAN. No, we did not spend quite a thousand dollars last year.

Mr. GEO. TAYLOR. Why then ask for $1,500?

Mr. TEMPLEMAN. The expense next year may be a little more than last.

Mr. GEO. TAYLOR. Did it cost $1,000 to send an inspector once to these two places, Fort Francis and Niagara Falls?

Mr. TEMPLEMAN. And New Brunswick.

Mr. GEO. TAYLOR. How long was he at each place? Did each of these three visits cost $300?

Mr. TEMPLEMAN. I am told that it took about a month altogether to make the trips.

Mr. GEO. TAYLOR. He is paid a salary as well, and this is for expenses?

Mr. TEMPLEMAN. Yes, purely expenses.

Mr. GEO. TAYLOR. And that officer spends $900 on travelling expenses in one month?

Mr. TEMPLEMAN. The deputy minister informs me that he made a trip to London, England, to attend the international convention of electricians, and the expenses of that trip were charged to this item.

Mr. GEO. TAYLOR. What right had the minister to send an inspector to England and charge his expenses against this item? He should ask for a special vote or take it out of miscellaneous expenses. In any event there is no need to vote $1,500 this year unless the minister contemplates giving him another trip to the old country.

Mr. TEMPLEMAN. We could get along with $1,000 if it were worth while changing the estimate.

Mr. GEO. TAYLOR. If the minister took a sum of money and gave an officer a trip to England unauthorized by parliament, we ought not to trust him with $1,500. If we deduct the trip to England, $100 each should pay the expenses to these three places.

Mr. TEMPLEMAN. The chief electrical engineer who attended the convention in London, was authorized to do so by order in council. It was a very important convention for the purpose of fixing the standard electrical union.

Mr. GEO. TAYLOR. It was all right to send him there for information, but he was not sent there in connection with the export of electrical power and his expenses should be charged to some other vote. The minister admits that his expenses will cost some $200 or $300 and is asking $1,500. The item should be reduced to $500. That surely should pay the cost of visiting three places in the year, one trip to each place. He is asking for money which he does not know how to spend unless by giving some officer a trip to England and charging the expenses to this vote. The council had no right to authorize this man to go to England and charge his expenses to a vote when the House did not agree to it. I move that the item be reduced to $500.

Mr. TEMPLEMAN. I frankly admit that after the explanation given me by the deputy minister and the chief electrical engineer, $1,000 will do.

Inland Revenue Department—minor revenues, $500

Interior Department — ordnance lands — salaries and expenses, $1,655.

Mr. TEMPLEMAN. These minor revenues are collections, such as administering the Ferries Act, advertising for tenders for ferries, and printing law stamps to be used in the Yukon. The other item does not concern the Inland Revenue Department, that is revenue collected by the Interior Department.

Mr. GEO. TAYLOR. Why are these two items mixed up?

Mr. TEMPLEMAN. I cannot explain as to the Interior Department, it is only one of the minor revenues.

Mr. GEO. TAYLOR. The Minister of the Interior should make an explanation of this item. I do not see why the items should be mixed in this way, charging part of the expenditure of the Interior Department to the Inland Revenue Department. We had better separate them.

Mr. TEMPLEMAN. This vote has been taken for years, these items have been bracketted together, and I do not think either of them was ever discussed before.

Mr. GEO. TAYLOR. We would like to know what this money was spent for, and the Minister of the Interior is not here to tell us.

Mr. PATERSON. Then we will have to let it stand.

Customs—salaries and contingent expenses of the several ports in the Dominion, including pay for overtime of officers, notwithstanding anything in the Civil Service Act, $1,875,000.

Mr. GEO. TAYLOR. Now I appeal to the Minister of Finance, we have done a good day's work, and it is time to adjourn. Both the leader of the opposition and the ex-minister of finance are absent, and there are very few members in the House.

Mr. FIELDING. I think the absence of these gentlemen indicates that they were content to let things run.

Mr. PATERSON. This is an increase—

Mr. GEO. TAYLOR. I appeal to the Minister of Finance that it is time to adjourn.

Mr. PATERSON. When my hon. friend is present, nothing will go through that should not go through. We have our officers here now, and it would be very inconvenient to if we were obliged to bring them here another day.

Mr. GEO. TAYLOR. We have done a fair day's work, and owing to the absence of the leader of the opposition and the ex-Minister of Finance who is out of the country, I do not think that we should be asked to vote this large sum.

Mr. PATERSON. If these items don't go through to-night they will have to wait until January.

Mr. GEO. TAYLOR. You don't require this money until after the 31st of March. I again appeal to the Minister of Finance. The Minister of Labour has advocated an eight hour day for the government service, and we have already passed the limit.

Mr. PATERSON. We have only passed three items to-day. But if the hon. gentleman will say that the leader of the opposition and the ex-Minister of Finance wish to be present why of course we shall have to wait.

Mr. GEO. TAYLOR. I say that the ex-Minister of Finance wants to be present for all the items.

Mr. FIELDING. In that case, if my hon. friend is determined not to go on with the public business, I move that the committee rise, report progress and ask leave to sit again.

Some resolutions reported.

REPORT PRESENTED.

First annual report of the Civil Service Commission.—Mr. Murphy.

Mr. FIELDING moved the adjournment of the House.

Mr. GEO. TAYLOR. If we get through private members business on Monday, will the government go on with the estimates?

Mr. FIELDING. We will continue with the ministers who were on the programme this evening for estimates.

Motion agreed to, and House adjourned at 11 p.m.

Mr. FIELDING.

HOUSE OF COMMONS.

MONDAY, December 13, 1909.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 67), respecting the Improved Paper Machinery Company.—Mr. Worthington.

Bill (No. 68), respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 69), respecting the Prince Albert and Hudson Bay Railway Company.—Mr. Neely.

Bill (No. 70), to incorporate the Toronto Central Terminal Company.—Mr. Harris.

OFFENCES AGAINST THE PERSON.

Mr. E. N. LEWIS (West Huron) moved for leave to introduce Bill (No. 71) respecting assaults and offences against the person. He said: The purpose of this Bill is explained by its title. I have added to it the provision of the Bill which I introduced last year relating to homicide by hunters in the woods. I cannot explain this clause more clearly than by using the words of an editorial in the Ottawa 'Citizen':

> Hunting is a sport. Homicide is a crime. When a keen or careless sportsman in the bush sees something that he thinks is a deer, he fires at it, and subsequently discovers that he has killed a man. If he had seen his target properly he would have known beyond doubt whether it was a deer or a man. Not seeing it properly, he is not sure which it is, but he deliberately takes the chance of killing a man rather than miss shooting a deer. In other words, he does not give the human being the benefit of the doubt. If he gave the deer the benefit of the doubt, and it got away, he would lose about ten dollars' worth of venison. If he gave the man the benefit of the doubt, the life of a human being would be saved. Any hunter who will run the risk of killing a human being rather than risk losing ten dollars' worth of venison deserves to be in the penitentiary. Therefore, the 'Citizen' thinks that the Bill of Mr. Lewis, M.P., to amend the Criminal Code should pass.

The other clauses of the Bill refer to assaults upon women and to punishment of tramps. I have here small items from newspapers from many parts of Canada. I may just mention some of them: A despatch from Barrie, 'Young farmer committed on charge of criminal assault'; from Stratford, 'Stratford girl attacked; Cries frightened the man and he fled;' from London, 'Frightened to death by a tramp;' from Winnipeg, 'Another brute;' from Winnipeg, 'Tinsmith arrested; charged with criminal assault upon a child;' from Vancouver, 'Fiendish murder of a

seven-year-old.' This Bill proposes heavier punishment for such offences. How often, when a man is arrested for stealing—even if he has only stolen something to eat—the offender gets from three to five or even ten years. I have before me a newspaper item about a man getting fifteen years for breaking into a car in the city of Victoria. Here is another about a man who got three years for sending indecent post cards. But the man who assaults a child of five years gets only three months. This Bill proposes to punish the wrong doer in such cases in such a way as to prevent the recurrence of such crimes.

Another clause has to do with what may be called a custom in this country which leads more to crimes by tramps than any other. In Ontario, at least, it is quite common for a magistrate before whom a prisoner is brought for having no visible means of support, to allow the man to go on the condition that he moves to another county. And in how many cases is that productive of crime? Take the case of the horrible murder committed in the city of Stratford, for which the criminal has just paid the last penalty; within the three weeks before that crime was committed that man had been arrested four times and had been allowed to go on condition of going into another county. The Bill empowers the magistrate, in the case of a man arrested the second time as a vagrant, to send him into confinement under indeterminate sentence as a dangerous character to be at large.

And, Mr. Speaker, in view of the information contained in the newspapers to some items of which I have already referred, and many others which I have collected, I would ask your permission to say to the government that, in my opinion this Bill and others relating to criminal law should be referred to a committee for consideration. It is twenty years since the Criminal Code was really revised. I would suggest that the Committee on Privileges and Elections, which is a large committee with little to do, a committee composed of lawyers, experts in the enforcement of the criminal law, should have its power enlarged so that it may take into consideration this question of our Criminal Code and the amendments proposed thereto. In accordance with this purpose, it might be called the Committee on Privileges, Elections and the Criminal Law.

Motion agreed to, and Bill read the first time.

THE SAVING OF DAYLIGHT.

Mr. LEWIS moved for leave to introduce Bill (No. 72) respecting the saving of daylight. He said : This is the Bill which I introduced last year, and which was considered and favourably reported by a committee of this House. I wish to say that of all the replies we have received, from one end of the country to the other, by boards of trade and by councils, we have had only one objection advanced against the provision of this Bill. When the Bill was first brought up in the imperial House it was laughed at; but it was brought up again, and on the second occasion the House saw fit to appoint a committee of nine members to examine the Bill, and that committee reported absolutely in its favour It has come before the imperial House again, and the imperial House has found one or two reasons, on the eve of an election, why it would not be suitable for England. But those reasons do not apply to this country, and in England they are only thought to apply to the city of London and other large cities, in so far as it might affect theatres and the milk trade. Now, Sir, I contend that if this Bill were passed by this House it would operate one of the most beneficent revolutions in Canada, and after the people had tried it three months it would be absolutely impossible to repeal it. Millions of dollars would be saved to the people now expended on artificial light, and the benefit to public health would be incalculable. The heads of the great railways of this country, the Canadian Pacific railway and the Grand Trunk, are of the opinion that this Bill would be an incalculable benefit to them; because, if you take the records of the railways themselves, you will find that many, many thousands of dollars loss and many fatal accidents occur which would not occur if the trains were run to a larger extent by daylight, and they would be able to finish their journeys almost entirely by daylight. Now, Sir, I ask the government to appoint a committee to examine this Bill, and I think I may venture to say that there is not an hon. gentleman within the sound of my voice, who has examined and clearly understands this Bill, who is not entirely in favour of it.

Motion agreed to, and Bill read the first time.

INTEREST ACT—AMENDMENT.

Mr. MILLER moved for leave to introduce Bill (No. 73) to amend the Interest Act. He said: This Bill is substantially the same as the Bill I introduced a short time ago.

Motion agreed to, and Bill read the first time.

CANADA SHIPPING ACT—AMENDMENT.

Mr. EDWARDS moved for leave to introduce Bill (No. 74) to amend the Canada Shipping Act. He said: The Bill which I am asking the permission of this House to introduce is identically the same as the

Bill I introduced last session. It is designed to do away with the discrimination which at present exists against Ontario vessel owners, and it seeks to amend the Canada Shipping Act by introducing the word 'Ontario'.

Motion agreed to, and Bill read the first time.

CRIMINAL CODE—AMENDMENT.

Mr. HARRIS moved for leave to introduce Bill (No. 75) to amend the Criminal Code. He said: The object of this amendment is to make it a specific offence for a chauffeur, or any one else other than the owner of an automobile, to use said automobile without the consent or permission of the owner. This is a practice which is becoming altogether too common in Canada, and during the past season many instances of this kind have occurred, causing danger to life and property. In New York state they have passed an amendment similar to this, and I think the Bill I am introducing will commend itself to all the members of this House.

Motion agreed to, and Bill read the first time.

HARLAND AND WOLFF, SHIP BUILDERS.

Mr. MONK. Before the orders of the day are called, I wish to ask the government if they have any information about a report of Mr. Clark, an expert sent out to this country by Harland and Wolff to investigate the conditions of ship building. According to some of the newspapers, he has made a report, and it has been brought to the knowledge of the government. If so, I think it very desirable that the House of Commons should see it, and I would ask the government to let us have that report upon the table of the House.

Sir WILFRID LAURIER. The Minister of Marine and Fisheries (Mr. Brodeur) is not in his seat to-day. I do not know if he has received such a report; so far as my information goes, no such report has been received by him. The minister will be here the day after to-morrow, and I will ask him about it.

COMBINATIONS IN RESTRAINT OF TRADE.

Mr. SPROULE. Before the orders of the day are called, I would like to inquire of the government when they intend to introduce the Bill mentioned in the speech from the Throne rendering more effective the present legislation respecting combinations which unduly enhance prices?

Sir WILFRID LAURIER. I cannot give any information to-day. The matter is under consideration.

Mr. EDWARDS.

QUESTION OF PRIVILEGE.

Mr. CAMPBELL. Before you leave the Chair, I rise to a question of privilege. I see in an article in the 'Standard' of December 11, that I have criticised the hon. the Minister of Agriculture for neglecting the duties of his department. I criticised him to some extent. I suggested to the House that it should look into the possibilities of this department in assisting the farmer. I criticised the hon. gentleman to this extent that I thought he had not done enough for the farmers, that he had allowed the money of Canada to be expended, for the Militia Department, for instance, that ought to have been expended for the Department of Agriculture. This article goes on to say that the Department of the Minister of Agriculture is one department that had never been criticised for jobbery or anything of that kind. Now, I will make the charge against the Minister of Agriculture that there is no department in the government where, in certain seasons, so much grafting exists as in his department.

OTTAWA NORTHERN AND WESTERN RAILWAY COMPANY.

House in committee on Bill (No. 34) respecting the Ottawa Northern and Western Railway Company.—Mr. McGiverin.

On section 1: time for construction of railway extended.

Mr. GRAHAM. Mr. Chairman, you will remember that at the last sitting of the committee the amendment that was made to this Bill by the Railway Committee went wrong in redrafting. The amendment made by the committee has now been drafted in accordance with the motion of the committee, and I think you will find it quite clear.

Mr. DEPUTY SPEAKER. The clause as proposed reads as follows:

The Ottawa, Northern and Western Railway Company may, within two years after the passing of this Act, construct and complete the railway extensions and branches authorized to be constructed by section 1 of chapter 84 of the statutes of 1899, and by section 1 of chapter 72 of the statutes of 1900, and shall within the said two years expend thereon, including the expenditure already made, an amount equal to 15 per cent of its capital stock, and if the said railway extensions and branches are not so commenced and the said expenditure is not so made, or if the railway extensions and branches are not completed and in operation within five years after the passing of this Act, then the powers of construction conferred upon the said company by parliament shall cease and be null and void as respects so much of the railway, extensions and branches as then remain uncompleted.

Mr. TURRIFF. That is not the amendment that passed the Railway Committee. In the amendment that passed the Railway Committee the 15 per cent was to be new expenditure.

Mr. GRAHAM. No, after full discussion, it was understood that the 15 per cent was not to be new expenditure. The committee decided to put in a clause which we inserted in a couple of Bills last year, providing that they shall expend an amount equal at least to 15 per cent of the capital stock, including the expenditure already made.

Mr. TURRIFF. All I can say is that if we decided in the committee to adopt a clause that was not read, but which had been adopted upon one or two previous occasions, many of those did not understand it in that way, because the matter was discussed in the committee and it was decided that in renewing the charter they were to begin operations within two years and 15 per cent of the capital stock of the company was to be expended during that time, not including what had already been expended. If you include what already has been expended you might as well not pass this clause at all, for the simple reason that many years ago a considerable portion of the railway was built and that would cover the 15 per cent.

Mr. SPROULE. The clause passed the committee just as it has been read, because I remember distinctly calling attention to the fact that they commenced the railway long ago and that the expenditure then made would cover the proposed new expenditure.

Mr. BARKER. I understood it to pass in the committee just as the minister says. It was very clear to me at the time, and I have no doubt at all that what the minister says is absolutely correct.

Mr. LENNOX. I recollect it as the minister states it. All the same, the contention of the hon. member for Assiniboia (Mr. Turriff) is what a good many of us contended for last year and what I have no doubt will be right. But, as a matter of fact, the other day, after it was discussed, it was determined to have it in the form in which it now is. We would be doing a good deal better if we did follow what we adopted last year on one or two occasions when we inserted a provision in the form now suggested by the hon. member for Assiniboia.

Mr. G. V. WHITE. I agree with the hon. member for Assiniboia (Mr. Turriff). As he has pointed out, some 80 odd miles of this road have been already built and there only remains about 16 miles to be built; so that, everybody realizes that more than 15 per cent has already been expended on the road.

Mr. GRAHAM. This road consists of a long stretch that is not yet completed. There is one link to connect Pembroke, but that is only a small portion of the uncompleted part of the railway. That is the part that would appeal to the town of Pembroke, but the charter itself covers a very large mileage outside of that link. The hon. member for Pontiac (Mr. Hodgins) pressed very hard to have the committee say that this piece at least should be completed within one year. After a great deal of discussion I made the suggestion that we insert the clause as it now appears before the committee. The promoter of the Bill accepted that and it was passed by the committee.

Mr. HODGINS. Does that apply to all the unconstructed parts of the line?

Mr. GRAHAM. Yes.

Mr. HODGINS. It is not possible that within two years the Canadian Pacific railway can construct the different branches that their charter calls for. I still feel, as I stated in the committee, that it would be better to confine that 15 per cent to the branch between Waltham and Pembroke. I think that would meet the wishes of the people who are concerned, and that it would also be in the best interests of the country.

Section as amended agreed to.

Bill reported, read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 46), to incorporate the Pine Pass Railway Company.—Mr. W. H. White.

Bill (No. 45), respecting the Phoenix Assurance Company, Limited.—Mr. Macdonald.

QUESTIONS.

GRAND TRUNK PACIFIC BRANCH LINES.

Mr. ARMSTRONG:

How many charters for branch railway lines have been granted to the Grand Trunk Pacific Branch Lines Company; and how many of said lines are at present under construction, where located, the extent of line built on each and whether operated or not?

Hon. G. P. GRAHAM:

1. (a) 22, 5 on the Eastern division, 17 on the Western division.

(b) Three.

(c) Two, in Saskatchewan. One in Alberta.

(d) Twenty-five miles on one, thirty-five on another, twenty-five on the third.

(e) Three are being operated.

WARSHIPS ON GREAT LAKES.

Mr. J. A. CURRIE:

Referring to the terms of the Rush-Bagot convention of April 29, 1817, and the agreement between Great Britain and the United States (after stating the establishment that would be by each nation in the future maintained there), that all other armed vessels on the lakes should be forthwith dismantled, and that no other vessels of war shall be there built or armed:—

1. Have any representations been made to the imperial government to have this clause modified so that war vessels can be built on the Great Lakes and sent through the canal for armament on the Atlantic coast?

2. If not, is it the intention of the government to make such representation?

Sir WILFRID LAURIER:

1. No representations have been made to the questions.

2. It is not the intention of the government to make any such representations as no condition has yet arisen which would make it desirable to do so.

EXCURSION TRAIN FROM TRURO TO TATAMAGOUCHE.

Mr. STANFIELD:

1. Did a special excursion train leave Truro for Tatamagouche via Stellarton on September 13, 1909.?

2. If so, what were the total receipts and expenditures of the same, and was there a guarantee put up before the train left Truro? If so, how much, and by whom? If no guarantee was put up, on whose authority did train leave for destination?

3. Has the department collected such guarantee?

Mr. GRAHAM:

1. Yes.

2. Total receipts were $154.80, expenses, $66.35. The cost of the train was guaranteed by Mr. Pearson and the train authorized by the chairman of the board.

3. The train earnings having exceeded the cost, the guarantee was complied with.

LANDS FOR NAVAL DEFENCE.

Mr. SCHAFFNER:

Are there any lands in Canada available for defraying cost of the naval defence? If so, what is the amount and where situated?

Hon. FRANK OLIVER. Chapter 58 of the Revised Statutes sets apart certain lands for naval purposes. The list is contained in the statute.

LACHINE CANAL DISMISSALS.

Mr. VERVILLE:

1. What was the reason for the dismissal of Demers, Bouchard, Tanguay, Crevier, Gariépy, Tellier, Latranche, Pagé, Mayrand, St. Jean, Savard, De Bellefeuille, Drapeau, Larivée, on the Lachine canal under the supervision of Denis O'Brien?

2. What were the reasons for the reinstatement of Savard and De Bellefeuille, Drapeau and Larivée?

3. What were the reasons for the dismissal of Savard and De Bellefeuille the second time?

4. How long before the general dismissal of the men above mentioned was Wm. O'Brien promoted to be assistant carpenter?

Mr. GRAHAM:

1. The necessity of keeping within limits of the appropriation; about 40 other employees, besides the carpenters had to be laid off, at the same time and for the same reason.

2. Some urgent works had to be done at Seignieurs Street Bridge; Savard and De-Bellefeuille were taken on to do it, the work only lasted a few days. Savard left of his own accord, before the work was fully completed, as he found the weather too cold. Drapeau was taken back on the 24th September last. Larivée was not laid off but kept on as spare man to work on locks, bridges and road repairs.

3. The work given them to do was completed.

4. In May, 1907, as handy man with carpenters, and promoted to assistant carpenter, 4 months before laying off the men.

DOUGLAS FIR FOR LACHINE CANAL.

Mr. VERVILLE:

1. How many feet of Douglas fir lumber, used for lock doors is now in possession of the department on Lachine canal in a proper state to be used?

2. How many feet that is not proper to be used for new work or repairs is now on hand?

3. Is it the intention of the department to order any more? If so, what will be the quantity and from whom?

4. How many lock doors are to be made during this winter by the department?

5. How many lock doors are to be repaired, and is all this work new and repairs to be done by the department?

Mr. GRAHAM:

1. 3,980 feet of lock gate timber.

2. None.

3. Some of the material is already ordered for the coming year, as it takes from two to three months to bring it from British Columbia. The J. T. Marchand Lumber Company are supplying this timber, under their contract accepted by the department.

4. The carpenters that have been retained will be employed on one pair of gates, inso far as the balance of the appropriation will permit.

5. None will be repaired until April, 1910. All works on the Lachine canal lock gates are to be done by the repair staff of the canal.

RIDING MOUNTAIN TIMBER RESERVE.

Mr. ROCHE:

1. Have all the squatters withing the Riding Mountain timber reserve been removed?

2. If not, how many are still residing within the reserve? If any, is it the intention to remove all of them?

Hon. FRANK OLIVER:

1. No.
2. (a) One. (b) Yes.

AIRSHIPS FOR MILITARY DEFENCE.

Mr. THOS. CHISHOLM:

1. Has the government given any consideration to the advisability of developing the construction of aeroplanes or dirigible airships in Canada in connection with military defence?
2. What steps, if any, does the government propose to take for this purpose?
3. Has the government taken into consideration the advisability of granting assistance to persons in Canada who have already made some progress along this line?
4. Generally, what information has the government to give to the House in connection with this subject?

Sir FREDERICK BORDEN:

1. Yes.
2. The matter is being closely followed, but no definite action has been decided upon.

3 and 4. The government is being largely guided by the action of the War Office, in England, in this respect. It is thought that the question has hardly reached the stage that it is desirable for the Dominion government to spend money in assisting inventors, but all reasonable facilities will be afforded to persons, possessing satisfactory credentials, in the way of giving the use of government land for the purpose of experiment.

VICTORIA IMMIGRATION BUILDING.

Mr. BARNARD:

1. What was the total cost of the immigration building at Victoria, British Columbia?
2. What is the annual cost of up-keep?
3. When was the building completed, and what number of immigrants have used the building since completion?
4. What is the nationality of such immigrants?

Mr. GRAHAM:

1. $84,738.30, including site.
2. It is hardly possible at this stage to give a definite answer to this question, as it depends upon the number of inmates in the building; the building, if occupied to its fullest capacity, would cost, for lighting, about $1,200 per annum and, for heating, about $250 per annum.
3. (a) The building is virtually completed.

3. (b) and 4. To be answered by the Departments of Interior and of Trade and Commerce.

QUEBEC SUPERIOR COURT.

Mr. NANTEL:

1. Before the Superior Court of the province of Quebec, sitting at Montreal, for the district of Montreal, how many cases were standing en délibéré, before the judges of the said court on the 1st day of December, 1909?
2. How many of these cases were en délibéré before each of the said judges, respectively?
3. Outside of the cases above mentioned, how many were there at the date aforesaid of pending cases inscribed, waiting their turn on the roll for the district of Montreal?

Hon. A. B. AYLESWORTH. The government has no information on this subject. The matter is entirely within the jurisdiction of the provincial authorities.

WINDSOR BRANCH RAILWAY.

Mr. RHODES:

1. Is the section of railway from Windsor Junction to Windsor, Nova Scotia, known as the Windsor branch, under lease? If so, to whom, on what terms, and for what length of time?
2. Can the lease be terminated by either party? If so, on what condition?
3. Upon what terms is the Dominion Atlantic railway granted running rights over the International railway from Windsor Junction.

Mr. GRAHAM:

1. Yes, under agreement dated December 13, 1892, to the Windsor & Annapolis Railway Company. Limited (name changed to Dominion Atlantic Railway company. Canada 1894, chap. 69). The company to have the exclusive use of buildings, appurtenances and other conveniences (not including rolling stock and tools for repairs) in use thereon at the time of the agreement, attached to the branch between Windsor Junction and the junction of such railway with the then Windsor & Annapolis at or near Windsor. The company to employ their own station agents, booking clerks, switchmen and other servants for the management of its traffic. The government maintain the railway and works. The company to pay monthly one-third of the gross earnings from all traffic carried by the company over the branch. Term for 21 years from January 1, 1893.
2. The agreement may be terminated by the government upon failure of the company to operate between Halifax and Annapolis.
3. Under the agreement above mentioned the company to have use to the extent required for its traffic of the railway, appurtenances and other conveniences as lie between terminus at Halifax and Windsor Junction (both inclusive) not including machine shops or other buildings and appliances for repairs of rolling stock, together with any extension into Halifax, to be made after date of agreement. The company to employ their own booking clerks, carting agents, and such other staff as may be necessary for the booking, collecting and handling of the company's own traffic. The company to maintain the railway and its works. The company to pay the government, monthly, one-third of the gross earnings from all traffic carried by the company over the railway.

Term 21 years, from January 1, 1893. Agreement may be terminated by the government upon failure of the company to operate between Halifax and Annapolis.

FRONTENAC COUNTY MILITARY CAMPS.

Mr. EDWARDS:

1. How many acres of land in the township of Pittsburg, county of Frontenac, are held by the government for military purposes?

2. Where and from whom were these lands acquired, and what price was paid in each case?

Sir FREDERICK BORDEN:

Situation of Land.	Acreage.	From whom purchased.	Date of acquisition.	Price paid
1. Point Frederick (Old Dockyard) including Royal Military College Grounds.	57·0	Crown Reserve, set aside by letters patent by General Haldimand and Lt. Governor Hamilton.	Sept. 11, 1783 May 22, 1785	Nil.
2. Fort Frederick and adjacent land.	8·5	Crown Reserve, set aside by letters patent by General Haldimand and Lt. Governor Hamilton.	Sept. 11, 1783 May 22, 1785	Nil.
3. Fort Henry and Barriefield common.	556·0	Crown Reserve, set aside by letters patent by General Haldimand and Lt. Governor Hamilton.	Sept. 11, 1783 May 22, 1785	Nil.
4. Cedar Island, tower and glacis .	23·0	Crown Reserve, set aside by letters patent by General Haldimand and Lt. Governor Hamilton.	Sept. 11, 1783 May 22, 1785	Nil.
5. Part of lot 20, western addition of township of Pittsburg.	125·505	Robert McDonald and wife	July 6, 1844	Not known.
6. Part of lot 21, western addition of township of Pittsburg.	102·0	R. D. Cartwright and wife by deed of exchange.	Mar. 20, 1840	Nil.
7. Front part of lot 16, western addition of township of Pittsburg.	4·5	Bought by Admiralty from Richard O'Connor, R.N. (consolidated statutes, cap. 37) ...	Aug. .., 1812	Not known.
8. Addition to rifle range, Kingston .	165·40	Bought from Messrs. Milton, Brooks and Kelly.....	1908 and 1909.	$9,445.
9. " " ..	188·89	Bought from Messrs. T. Sibbett, H. Milton, F. Cammick, Gillespie, R. Baillie .	1909....	Under expropriation.

THE DECENNIAL CENSUS.

Mr. BOYER:

Is it the intention of the government to have the decennial census taken during the present year?

Hon. SYDNEY FISHER:

No. The Census and Statistics Act provides that a census shall be taken in the year one thousand nine hundred and eleven, (on a date in the month of June) to be fixed by the Governor in Council, and every tenth year thereafter.

FIELD ARTILLERY ARMAMENT.

Mr. CURRIE:

1. What is the reason for the re-armament of the whole field artillery, as stated to be the intention of the department in P—94 of the report of the militia council?

2. What kind of guns are being replaced by Q.F. 18 pr. guns?

3. In what particular are the Q.F. 18 pr. guns considered better than the guns they are replacing?

Mr. GRAHAM.

4. How many guns have been replaced, and what use does the government propose to make of the guns so replaced?

Sir FREDERICK BORDEN:

1. To keep up to date by acquiring a more powerful weapon. The artillery of all field armies is now armed with quick firing guns.

2. 12-pr. B. L. guns.

3. Increased rate of fire, increased range, increased shell power, shields to cover detachments.

4. Thirty-two. The example of the imperial army will be followed by utilizing these guns for positions where rapidity of fire and increased power of projectile are not so essential as in a mobile field army.

The remaining four Q. F. 18-pr. guns have been distributed for instructional purposes.

COBOURG HARBOUR IMPROVEMENTS.

Mr. THORNTON:

1. What amount has been expended on Cobourg harbour during each of the years 1907, 1908 and 1909?

2. What contracts have been made by the government for improvements and repairs during the past three years?

3. What amount is involved in each of these contracts?

4. Will the contracts already let finish up all the improvements contemplated by the government?

5. When will the work be completed?

Mr. GRAHAM:

1. In 1907-8	$ 25,590 34
1908-9	34,616 84
1909-10	54,669 80
Total	$114,876 98

2 and 3. Dredging was performed during the above-mentioned years, under contract with W. E. Phin, at a total cost of $56,-024.02. A contract, in the sum of $139,000, has been entered into with the Randolph Macdonald Company, Limited, of Toronto, for the construction of two breakwaters.

4. Yes.

5. Construction of breakwaters to be completed on the 18th of August, 1910.

WALKERVILLE POST OFFICE.

Mr. WILCOX:

1. Does the government contemplate the placing of any appropriation in the supplementary estimates for the erection of a post office at Walkerville?

2. If so, what is the amount of such contemplated appropriation?

Mr. GRAHAM. The matter is under consideration.

NORTHWEST LANDS.

Mr. WALLACE:

Are townships 52, 53 and 54, range 15, west of the 5th principal for sale? If so, what are the terms? If not, are they open for homesteading?

Mr. OLIVER. The above townships are not for sale. They are open for homesteading, with the exception of part of township 54, which is within a timber berth.

DEPORTATION OF IMMIGRANTS.

Mr. C. A. WILSON:

How many persons have been deported from Canada to their respective countries since the passing of the Act for the deportation of undesirable immigrants and since the passing of the Act 6-7 Edward VII., chapter 19, amending section 2 of the Immigration Act, chapter 93 of the Revised Statutes of Canada, 1906?

Mr. OLIVER:

Rejected at port of landing	4,896
Deported after admission	3,606
Total	8,502

JUVENILE OFFENDERS.

Mr. C. A. WILSON:

How many children under 16 years of age have been brought before the criminal tribunals of Canada, and condemned, during the five years preceding the 30th day of September, 1909, in the different provinces and territories of the Dominion, but more particularly in the capital of each of the provinces and the city of Montreal?

Mr. FISHER. The government has no information on this subject except in the returns for statistical purposes to the Department of Agriculture. All the returns for the year ended 30th September, 1909, have not yet been received by the department. The figures for the five years previous thereto are as follows, for indictable offences:

—	1904.	1905.	1906.	1907.	1908.	Total in 5 Years.
Prince Edward Island	2	2	4	5	5	18
Nova Scotia	66	42	25	48	38	219
New Brunswick	14	16	22	16	28	96
Quebec	124	205	194	230	227	1,029
Ontario	389	431	383	499	661	2,363
Manitoba	81	75	116	148	117	537
Saskatchewan	4	3	1	3	26	51
Alberta			4	1	9	
British Columbia	14	24	33	54	43	168
Yukon	3	3	.....	.....	.....	6
Total of Canada	697	800	782	1,004	1,204	4,487

The returns as to summary convictions group the offenders without regard to age.

Prosecutions for criminal offences are in the hands of the provincial authorities.

SPEEDY TRIAL ACT.

Mr. C. A. WILSON:

1. How many cases have been heard and judgment given in the cities of Montreal and

Quebec, respectively, under the Speedy Trial Act, each year from the 30th day of September, 1898, to the 30th day of September, 1909?

2. How many trials by jury have been heard and judgment given by the Court of the King's Bench, criminal jurisdiction, in the cities of Montreal and Quebec, respectively, each year during the same period?

Mr. AYLESWORTH:

1. The government has no information on this subject.

2. Prosecutions for criminal offences are in the hands of the provincial authorities.

MILITARY TOPOGRAPHICAL SURVEYS.

Mr. WORTHINGTON:

(a) What amount has been expended to date by the Department of Militia and Defence upon topographical work, and (b) what area has been surveyed and mapped out?

Sir FREDERICK BORDEN:

(a) $142,666.25.

(b) Area completely surveyed, 17,000 square miles; area prepared for taking of topography (controlled), 4,565 square miles; area of sheets lithographed and issued 7,276 square miles.

MILITARY CLERKS.

Mr. WORTHINGTON:

1. Is the government aware that men are said to be enlisted to be military clerks without having to pass any examination as to their qualifications, and that such clerks are being paid upon enlistment at a rate two hundred and thirty dollars in excess of the minimum rate for subdivision B, third division, in the Civil Service of Canada, appointments to which are only to be had by competitive examination?

2. Is the government aware that such clerks get an increase at a rate of seventy-three dollars per annum after three months' service?

3. If so, why are such high rates paid to military clerks for ordinary clerical work?

Sir FREDERICK BORDEN. I would suggest that the words 'said to be' in the first paragraph be struck out, as I do not suppose the hon. gentleman intends to base his question on gossip. If the hon. gentleman consents to that, the answer is as follows:

1. As far as the Militia Department is concerned, the individuals employed in subdivision 'B', 3rd division Civil Service, have not the military knowledge or experience to perform the work carried out by military staff clerks, who are non-commissioned officers with previous military service and special qualifications, and also older men. They have to undergo three months' probationary service before being finally approved. The men of the corps are liable to be drafted wherever their services may be required, and are also available for active service. Each man has to provide himself with uniform, &c., out of the salary he receives. The military staff clerk has not the opportunity of reaching a higher grade than that of sergeant-major, and after twenty years' service would not receive as high a salary as the maximum of 3rd division subdivision 'A' Civil Service.

2. Yes. This is not an increase for three months' service, but is the rate laid down after probationary service has been completed and no further increase can be paid until after three years' service.

3. It is considered that the class of man required could not be obtained for a lower salary, and men frequently leave because they are able to better themselves in civil life.

SUCCESSOR TO THE LATE SENATOR FERGUSON, P.E.I.

Mr. FRASER:

Is it the intention of the government to fill the vacancy in the Senate caused by the death of the late Senator Ferguson, Prince Edward Island, before the end of the present session?

Sir WILFRID LAURIER. I hope so.

CANCELLATION OF LAND GRANT TO PEACE RIVER COLONIZATION AND LAND DEVELOPMENT COMPANY.

Mr. MONK:

1. Has the grant of lands in the Northwest by the Crown to the Peace River Colonization and Land Development Company, under order in council of the 27th, July, 1900, as amended by order in council of the 8th July, 1904, been cancelled? If so, when?

2. What were the reasons for said cancellation?

3. Has the said grant of said lands, or any part of them, been renewed in favour of any other grantees?

4. If a new grant of said lands in whole or in part has been made, in favour of whom, at what date, and on what conditions has said new grant been made?

Mr. OLIVER:

1. Yes. by order in council of the 3rd September, 1909.

2. Conditions of the grant were not complied with, as the company did not locate the required number of settlers on the lands reserved within the prescribed time.

3. No.

4. Answered by No. 3.

WOOL AND YARNS—EXPORTS AND IMPORTS.

Mr. SEXSMITH:

1. What was the quantity of worsted and woollen yarns imported into Canada during each year from 1900 to 1909, inclusive, the number of pounds and the value for each year?

2. What quantity and value of wool was imported into Canada each year from 1900 to 1909, inclusive?

3. What quantity and value of wool was exported from Canada during each year from 1900 to 1909, inclusive?

4. What is the total value and quantity of wool produced in Canada during each year from 1900 to 1909, inclusive?

Mr. PATERSON:

1. The quantity and value of woollen and worsted yarns imported into Canada during the fiscal years from 1900 to 1909, inclusive, was as follows:

Fiscal Years.	Yarns, woollen or worsted, costing 30 cts. per lb. or over, imported by manufacturers of woollen goods.		Woollen and worsted yarns, n.o.p.		Yarns, woollen or worsted, imported by manufacturers of braids, cords, tassels, &c., and mohair yarn.	
	Lbs.	$	Lbs.	$	Lbs.	$
1900	546,536	257,654	298,971	121,289	63,583	28,368
1901	503,608	240,424	318,817	138,838	102,138	30,602
1902	650,767	283,538	446,969	166,074	238,540	26,292
1903	948,263	435,484	1,006,930	286,142	45,641	19,004
1904	1,155,020	504,708	500,544	187,731	78,218	35,613
1905	1,421,015	639,198	333,287	172,590	66,151	29,359
1906	1,554,524	753,468	285,419	160,102	54,898	26,891
1907 (9 mos.)	1,134,468	579,271	170,969	109,549	42,929	20,987
1908	2,048,857	1,097,648	336,624	183,335	53,949	26,516
1909	1,695,556	878,860	324,507	179,188	36,619	14,841

2. The quantity and value of wool imported into Canada during the fiscal years from 1900 to 1909, inclusive, was as follows:

	Wool, not further prepared than washed.	
	Lbs.	$
1900	8,054,669	1,574,834
1901	8,574,605	1,292,895
1902	10,360,738	1,374,054
1903	7,994,704	1,239,998
1904	7,339,369	1,319,735
1905	7,617,211	1,553,431
1906	6,311,837	1,489,268
1907	3,928,791	853,152
1908	6,129,216	1,407,274
1909	5,683,948	1,042,662

3. The quantity and value of wool exported from Canada during the fiscal years from 1900 to 1909, inclusive, was as follows:

	Lbs.	$
1900	2,213,863	420,776
1901	1,152,661	197,581
1902	1,973,772	302,245
1903	2,527,450	382,935
1904	1,836,566	315,207
1905	2,004,559	425,939
1906	1,505,384	368,679
1907	1,290,130	346,230
1908	1,956,987	473,306
1909	1,137,099	210,614

MILITIA—PAY AND ALLOWANCE REGULATIONS, &c.

Mr. WORTHINGTON:

1. Are the pay and allowance regulations of the militia so construed as to admit of officers entitled to engineer pay, for the days they are employed on the duties of their corps, drawing the same for Sundays and holidays when they are not so employed?

2. Is engineer pay issued to non-commissioned officers and men for Sundays under the same conditions as issued to officers?

3. Is the issue of artillery pay subject to the same limitations as to employment, leave, and absence on account of illness, as those of engineer pay and corps pay? If so, under what article of the pay regulations? If not, why not?

4. Is corps pay issued to officers of the permanent army service corps and Canadian ordnance corps for Sundays and holidays when not employed on the duties of their corps, and is it issued to non-commissioned officers and men for such days under the same conditions as to officers? If not, why not?

Sir FREDERICK BORDEN:

1. Engineer officers are considered to be employed on Sundays and holidays and they are, therefore, permitted to draw engineer pay continuously, except when absent on leave or sickness in excess of thirty days in the year.

2. No.

3. No. Because the regulations for issue of artillery pay are different to those prescribed for engineer and corps pay. The regulations governing all such rates of pay being made, as far as possible, to conform to the regulations in force in the British army.

4. Corps pay to officers of Canadian permanent army service corps and Canadian ordnance corps is issued under the same regulations as engineer pay. See reply to 1.

The conditions, as regards issue of corps pay to non-commissioned officers and men of these corps, are different to those governing issue to officers, as it is considered desirable, as far as possible, to conform to the regulations in force in the British army.

EXPENDITURES FOR PREVENTION AND SUPPRESSION OF CONTAGIOUS DISEASES.

Mr. MILLER:

1. What amount of money has been expended by the government in each of the

past five years for the prevention and suppression of contagious diseases in horses, cattle, sheep and swine, and what has been the expenditure for each of said classes of animals?

2. What amount of money has the government expended in each of the same years for the prevention and suppression of contagious and other diseases of human beings, including as well as other expenditure the money spent for quarantine, and the annual grant to the Canadian Anti-Tuberculosis Association?

Mr. FISHER:

1. The total expenditure is as follows:

1904-5	$190,253 27
1905-6	421,993 50
1906-7	276,667 99
1907-8	320,538 10
1908-9	325,385 29
	$1,534,838 15

The expenditure consists largely of the salaries and travelling expenses of the inspectors who deal with all classes of animals, and no apportionment among the different classes is made. The compensation, however, for animals slaughtered under 'The Animal Contagious Diseases Act' is as follows:

—	Horses.	Cattle.	Hogs.	Total.
	$ cts.	$ cts.	$ cts.	$ cts.
1904-5	53,009 39	1,568 00	7,032 73	61,610 12
1905-6	265,114 15	1,632 00	6,531 11	273,277 26
1906-7	119,857 24	.....	1,566 67	121,423 91
1907-8	111,139 58	.....	2,624 00	113,763 58
1908-9	77,405 14	.....	8,307 44	85,712 58
Totals	626,525 50	3,200 00	26,061 95	655,787 45

There has been no compensation for cattle since the fiscal year 1906-7, the department having demonstrated that the Pictou cattle disease, the only disease affecting cattle for which compensation is given, is not a contagious disease.

2. 1904-5 $114,473 65
1905-6 111,754 76
1906-7 86,988 64
1907-8 154,841 52
1908-9 125,935 54
$593,994 11

MAIL CONTRACT WITH CAPT. NOONAN.

Mr. EDWARDS:

1. Has Captain Noonan, of Kingston, a contract for carrying the mail?

2. If so, what post offices are served under his contract, and what pay does he receive for such service?

Sir WILFRID LAURIER:

1. Yes.

2. Manotick, Kars, Burritt's Rapids, Merrickville, Smith's Falls, Rideau Ferry, Kilmarnock, Portland, Westport, Newboro', Chaffey's Locks, Jones' Falls, Seely's Bay, Brewer's Mills, Washburn, Kingston Mills. $600 per season.

MAIL CONTRACT BETWEEN RIVER HEBERT AND MINUDIE N.S.

Mr. RHODES:

1. Who has the contract for carrying the mail between River Hebert and Minudie, Nova Scotia, and was the contract let by tender? If so, what are the names of the several persons who tendered, the amount of each tender, and what is the term of the contract?

2. Who held the previous contract, what was its time of duration, and what was the contract price?

Sir WILFRID LAURIER:

1. William Baird. The contract was let by tender. The contract is for four years from 1st October, 1909.

List of Tenders.

William Baird $290 00 per annum.
L. E. Brien 349 00 " "
Chas. Melanson 375 00 " "

2. Loring E. Brien from 1st November, 1901, to 30th September, 1905, and renewed from 1st October, 1905, for a further period of four years to 30th September, 1909. The contract price was $249 per annum.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Copy of the correspondence exchanged since the 1st of January, 1908, between the medical examiners of immigrants and the Superintendent of Immigration, respecting the inspection of immigrants.—Mr. Paquet.

Copy of all instructions to J. O. Lewis, Indian agent at Selkirk, regarding the delivery of patents to Indians entitled to same, in connection with the surrender of St. Peter's reserve.—Mr. Bradbury.

Return showing a list of the free mail delivery routes which have been established in Canada, including the port of departure and the place of arrival, the length of each, the number of houses on each route, and the number of boxes on each route.—Mr. Armstrong.

Copy of all correspondence had between the Post Office and Public Works Departments, together with all reports and other documents relating to the necessity of providing adequate post office accommodations in the city of Lethbridge.—Mr. Magrath.

PREVENTION OF TUBERCULOSIS.

Mr. GEO. H. PERLEY (Argenteuil) moved:

That in view of the encouraging results which have come from the money already spent in disseminating information regarding tuberculosis and of the interest which the people of Canada are taking in this question, and also in view of the great saving in life which has been brought about in other countries by practical work in this connection, this House is of the opinion that parliament should now take more active steps to further lessen the great suffering and mortality caused by this disease.

He said: My reason for bringing up this question separately from that of general public health, the subject of a resolution introduced in the House last session, is that the disease to which my resolution refers causes more deaths in this Dominion than all of the directly contagious diseases, and also that it is one which it is peculiarly proper that this government and parliament should deal with, inasmuch as it is widespread throughout all the provinces of the Dominion and can only be properly dealt with the Dominion authority. I would therefore ask the kind consideration of all members of this House to this question, and particularly of those who are doctors in medicine, for as a layman I feel considerable difficulty in speaking on this subject. My reason for speaking is that I feel that this is one of the great questions of our day and generation and one in which we can accomplish a great deal of good.

I do not propose to enter into details or any lengthy explanation concerning the nature of this disease. It is too well known amongst us, particularly in its commoner form of consumption of the lungs. We all know that some years ago it was supposed to be hereditary, and also to be practically incurable. We now know that it is not inherited; we also know that many cases, in fact I may say the greater proportion of cases, can be cured if taken at the proper time. We also know that the children of consumptives have not necessarily to have this disease, since it is not inherited, but it may be contracted afterwards. This disease is caused by a living germ, one that is directly contagious and easily communicated. At the same time, fortunately for us, the disease may be prevented by destroying the sputum of the patient. But the great danger at present is from the ignorance of the patient who is at home or on the streets. To-day the great object is to get at the source of the contagion. To show that it is easy to prevent this contagion, we have only to call attention to the fact that it is now stated that the place in which any one is least likely to contract consumption is in a properly organized sanatorium. This disease of tuberculosis is curable to a large extent if taken in time, and there have been many efforts made in this direction of late years. In some countries they have established sanatoria, but in Canada this is properly a subject for the provincial governments to take up. In other countries they use to a large extent the open air treatment in inexpensive shacks, where the cost is not very large, and where very good results have been obtained. We are making progress along those lines in many directions, and we are learning by experience. But although much has been done to relieve suffering and to prevent the spread of this dread destroyer of humanity, and although I am glad to see that a large number of people are taking an interest in this question, at the same time the fight is really only just begun. Dr. Woods Hutchinson, who is a well known writer on bacteriology, has made the following declaration before the Tuberculosis Exhibition held in New York last fall:

> Tuberculosis can be stamped out in New York city within ten years. Ten thousand lives a year can be saved from its ravages. A winning fight can be started within a year.

This is the opinion of an expert, and if this can be done in New York city, how much more easily it can be done in this Canada of ours, where fortunately at the present time we have no such large cities as New York. Conditions here are such that it is very much easier for us to fight the disease than it is in an overgrown city. During the last few years, more and more interest has been taken in the question of fighting this dread disease of tuberculosis, and the great work has been carried on in almost every country in the world. In 1906 an international congress was held at the Hague at which sixteen countries were represented. Last year an international congress was held at Washington in the United States, at which was represented almost every country in the world. An official report of that congress has been made, but it covers many volumes, and I do not propose to quote from it here. There is, however, a magazine published in New York called the 'Charities,' and on its front page it is called a 'Weekly journal of philanthrophy and social advance.' I would like to quote extracts from that magazine to show the nature of the work that was done in Washington last fall, and the good results that have flowed from it. On page 185 of this magazine we read:

> From the opening felicitations of Argentina and Austria Monday morning, to the reluctant farewells of Switzerland and Uruguay on Saturday the Tuberculosis Congress showed an intensity and diversity of interest that it would have been difficult to anticipate.
>
> Official delegations from thirty-three nations; a registration of over six thousand members; an attendance sufficient to throng the corridors of the Congress building, pack the section meetings, and tax the hotels of Washington; an exhibit by 438 contributors; and a million and a half sheets of abstracts of papers, printed in Spanish, German, French and English—are a few suggestive statistical items.

On page 204:

> Of much more practical and popular interest, for instance, was the exhibit of the work being done in Ireland, by the Women's National Health Association, under the direction of the Countess of Aberdeen. Here was shown how, in the incredibly short period of fourteen months, a whole nation had been aroused to the importance of the problem of eradicating tuberculosis, and by means of a campaign of popular education, on the 'Ameri-

can' plan, tremendous strides were being made against the disease.

The keynote of all the American exhibits was 'prevention' rather than statistics or cure. They emphasized the fact that the relief from this plague must come through social and economic progress, as much as through medical agencies. The improvement of living conditions and the popular dissemination of knowledge regarding sanitary and other preventive measures are agencies which strike at the source of the disease, and these are the factors which are emphasized all through the American exhibits. Travelling tuberculosis exhibitions, popular illustrated lectures, and the wide distribution of leaflets of information are effecting a revolution in the popular mind regarding tuberculosis.

You will notice that this extract states again that the key note was prevention. That is what we are advocating here; we are asking this government to give a sufficient sum each year to teach the people how to prevent this dread disease. Again we read in this magazine, on page 172:

In the moving of the exhibit from Washington to New York, figures of impressive size are once more given out. The bulk of the exhibit is measured in carloads, in more than a thousand of packing cases, in hundreds of exhibitors from four continents, and in tons of freight. The tuberculosis exhibit of 1908 equals in bulk the circus of a generation ago, when circuses first moved from town to town by railroad.

Governor Hughes and Mayor McClellan took part in the programme of the opening night and there will be other special programmes for physicians, for the state, for the city and for neighbouring cities in New York and Long Island and New Jersey. The first folder announcing the exhibit will reach 25,000 homes and others following it will, it is planned, penetrate into every tenement in the city. Where thousands saw the exhibit in Washington hundreds of thousands will view it in New York.

So we say it is only reasonable that this government should develop a system of somewhat the same kind, in order to teach the people by travelling exhibits the danger of this disease and the way of combatting it. Now, to show the practical success that has attended this work, and the effect it is having in reducing the number of deaths, and in inspiring us with a hope that we may be able in future to extinguish the disease altogether, I wish to give a few figures. In England, Dr. William Parker, of the Westmoreland Consumptive Sanatorium, gives the following figures of actual results:

Deaths per Ten Thousand.

1851-55..	28·05
1861-65..	25·27
1871-75..	22·18
1881-85..	18·30
1891-95..	14·62
1896-1900...	13·23

Mr. PERLEY.

You will notice how the percentage reduces regularly in each term of five years, and it is estimated that if this decrease continues the disease will have entirely disappeared by 1940. I ask why we cannot expect to accomplish such a result in this country when we consider that such a result has been obtained in other diseases—in the matter of leprosy, which was taken up by the Dominion government many years ago. In Denmark the fight against this disease was begun in 1895. According to Dr. H. T. Bulstrode the mortality rate in Copenhagen was 34·2 per ten thousand in 1870-4, and it fell to 16·6 in 1899-1901. It was less than one-half in 1901 what it was in 1874. In other towns of Denmark it fell from 25·2 per ten thousand to 13·1 per ten thousand. They have made a special effort in Germany to fight this disease and they have a great many ways and methods of doing it. I do not propose to weary the House with many figures concerning it, but I simply wish to put on record the statement of Dr. Moeller regarding the sanatorium at Belzig that he is able to report from 12 to 15 per cent of absolute cures; 30 to 35 per cent of marked improvements, and 35 to 40 per cent of improvements; showing that in that sanatorium nearly 80 per cent have obtained considerable benefit. With regard to the general mortality in Prussia from tuberculosis, we find that in 1876 of every ten thousand persons there 30·95 per cent died of tuberculosis, in 1886 30·14, in 1896, 22·07 and in 1901, 19·54 per ten thousand. So much benefit has been obtained from this treatment that the German insurance societies have, in many cases, taken the matter up and have spent their own good money as they thought it would pay them to do so. According to the reports I find that from 1893 to 1901 they treated 5,814 persons of whom 1,228 died, 3,955 are now earning their own living and 630 could not afterwards be traced. I find that Dr. Saar reported to the Washington congress that in the German army tuberculosis has been diminished by 42 per cent during the last 20 years simply by careful medical inspection and systematic precautions. Last year Dr. Phillip, an eminent authority on this subject, was here from Edinburgh and he stated that the measures taken in Edinburgh to prevent this disease had resulted in a reduction of 42 per cent in deaths in the ten years from 1897 to 1906. We know that right here in Ottawa very good work is being done. We have in this city a local association in which there are many men and women who have given a good deal of their time and money to assist in fighting this disease. What is the result? This association began in the year 1904 and during the last six years the deaths from tuberculosis have been as follows:

1903	142
1904	114
1905	101
1906	104
1907	95
1908	107

In other words they have fallen, in the last six years from 142 to 107. In the same period the city has kept growing, as we all know. It is estimated now that it has a population of about 80,000, whereas, six years ago there were only 60,000. Taking the percentages of deaths we find that the ratio has fallen from 23·67 for every ten thousand people to 13·37. In other words the deaths in this city are proportionately much less than they were six years ago. The number of cases taken care of outside the homes of the patients by this association in 1905 was 17; 1906, 41; 1907, 74; and 1908, 89. I give these figures out of fair play to the society in Ottawa. It has done much good work and one of the reasons why I am pleading with this government to increase its grant to the Canadian association is because the effect of the local work has been so good. This local association in Ottawa has arranged for an excellent system of visits by nurses, and it has also made arrangements for giving free the advice and services of the medical profession at two different places in this city. At the present time it is building a large hospital for advanced cases of tuberculosis out near the experimental farm. This building is nearly finished and we expect to have it open in about a month. I think that the members of the local association would be very glad if members of parliament would take enough interest in it to go out, either by the street car or walking, some afternoon and see the building which has been put up on the outskirts of the city for the care of advanced cases—of those unfortunate people who have hitherto had no place to go and who have been a source of contagion to their families and neighbours. I have here an extract from a report of Dr. Law, the medical health officer for Ottawa for the year ending 31st October, 1908. He says:

EXTRACTS FROM THE REPORT OF DR. LAW, MEDICAL OFFICER OF HEALTH, OTTAWA, FOR THE YEAR ENDING OCTOBER 31, 1908.

Six years ago scarlet fever held second place in the list of infectious diseases mortality with 50 deaths. This year it is in last place with but 2 deaths. (Population 6 years ago about 60,000 against 80,000 now).

Tuberculosis still maintains its proud supremacy as a life destroyer, apart from the sorrow and suffering it entails on the bereaved ones, many of whom are brought from comfort to poverty through the loss of the household's provider after a long exhausting and expensive illness.

Contrasting the mortalities from these two diseases and the respective measures for controlling them I do not think it will be denied that, if as efficient measures were provided for the fight against tuberculosis as are provided for scarlet fever and the latter disease were accorded the inadequate provisions meted out for tuberculosis, in 6 years the relative position of these two diseases in the mortality list would be reversed.

I read this as an expression of opinion from the health officer of the city of Ottawa who is an expert on this subject and who states that he has no doubt that tuberculosis could be eradicated from our midst as easily as scarlet fever if the proper precautions were taken. Five years ago I had the honour of bringing this question before this House, and at that time a unanimous resolution was passed regarding it. At the same time it was brought up in the Senate and practically the same resolution was unanimously passed there. Up to that time the Dominion government had given $2,000 per annum to the Canadian Association for the Prevention of Tuberculosis. Some two years ago, after we had brought the matter to the attention of the government in several ways, the annual grant was raised to $5,000 per annum. This money was placed in the hands of the Canadian Association for the Prevention of Tuberculosis and was used by that association for the purpose of educating the people, disseminating information regarding this disease, its prevention and cure, and trying to stir up municipalities and provinces to take their share in this great work.

It has sometimes been said to me that we ought to raise money by private subscription to assist the Canadian association; in fact an important member of this government spoke to me privately about this some time ago. I am anxious to press upon the government that it would be exceedingly unwise for us to attempt to raise funds by private subscription to support the Canadian association. The Canadian association is entirely for the purpose of disseminating information by pamphlets and lectures and in any other way that it can in order to teach the people how they can protect themselves from this disease and how it can be cured. Any one who is willing to give money to help on this fight will give it to his local association. The Canadian association stirs up the people to put up a fight against this enemy. That necessitates the building of sanatoria or the establishment of local associations, a system of nurses, &c., in the different cities, all of which costs a great deal of money, and if the Canadian association arouses the people to the necessity of these steps it is accomplishing what it is established for. I claim that this government ought in all reason to make a grant sufficient to enable the Canadian association to do what is necessary to teach the people how to protect themselves or else

that this government should take hold of the question under the director of public health as a part of the work of that department of government. A good deal has been accomplished by this Canadian association which has now been in existence for several years. The hon. member for South Grey (Mr. Miller), who was last year president of this association, will be able to tell you all about it. As far as I am able to judge, the people are waking up regarding this important question, they are organizing locally in many places in Canada and they are being taught to work to help themselves in preventing this disease and in curing it when it has been contracted. The hospital which is being erected in Ottawa is costing between $45,000 and $50,000. This money has been raised entirely by private subscription. The City of Ottawa has undertaken to maintain this hospital but contributes nothing towards the building or its equipment. A small grant is given by the Ontario government to assist in building such a hospital and of the balance I am proud to say that the ladies of Ottawa have raised quite a sum by a fair which they held in the drill hall a couple of years ago to which all classes of the community contributed and in which the household of the Governor General especially took an interest. The balance of the money which has been contributed by citizens of Ottawa I have had the pleasure and privilege of collecting. Already there is talk in Ottawa of attempting to establish a sanatorium for incipient cases. That will have to be in the country somewhere, but we all hope we will be able to arrange for it after the hospital for the advanced cases is firmly established.

I wish to press on the government that this Canadian association is purely for the purpose of disseminating information by lectures and pamphlets, and also to urge on the provincial governments and municipalities local action in this matter. The association now has a medical lecturer and unless the federal grant is increased we will not be able to keep up the work of sending out pamphlets and also to keep this lecturer on the road all the time as he ought to be. I ask that this government either take the matter in hand themselves or else give a sufficient grant to the Canadian association to enable it, with the greatest economy, to do the necessary work in this direction.

I have laid before you some of the results of this work, I have shown you how the mortality has decreased where proper precautions have been taken and how the work of the Canadian association here has led to the establishment of our hospital in Ottawa

My hon. friend from South Grey (Mr. Miller) will tell you later on of other things that have been done through the instrumentality of the Canadian association. I ask what possible objection there can be to this government granting sufficient money each year to this association to carry on this work properly. I can see no objection whatever. Five years ago when this matter was brought up, a question was raised as to the propriety of this parliament doing anything, under the British North America Act. Even if that were a valid objection it would remind one of the action of a foolish man who was so careful of the rights of his neighbours that when his house was on fire he refused to jump out of his window because by doing so he would be committing a technical trespass on his neighbour's property. The argument that this would be an encroachment on the British North America Act would be as unreasonable as that. But Sir, fortunately there is nothing in the British North America Act to prevent this parliament from taking action. It is true that under the British North America Act the sanatoria and hospitals are placed under the jurisdiction of the provinces. But public health as such is not mentioned in the British North America Act; in other words, it is under the Dominion and the provinces jointly. I need not go into this question in detail. It was discussed at a considerable length five years ago, when it was shown that in the early years of the Dominion there was on the statute-book a Public Health Act, under which action could be taken by the Dominion government to any extent that it saw fit. That Act was eventually repealed, but not because it was regarded as beyond our jurisdiction. The government has already acknowledged that it has a perfect right to give money for this purpose, by granting $5,000 per annum. If the government can grant $5,000 it can grant $10,000 or $20,000 or whatever sum may be required to assist the fight against this dread disease. The hon. Minister of Agriculture this afternoon gave the amounts expended in protecting the human race from disease as against the amounts expended for protecting cattle and other animals. Where is the authority for this government expending such large sums of money in protecting cattle from disease? I fail to find it mentioned in the British North America Act. I did not catch the figures given by the minister this afternoon; but the expenditure in the four years from 1904 to 1907 inclusive in protecting the health of animals was stated last year, in answer to a question of mine, to have been $1,209,000; and this year the hon. minister of Agriculture has on the Order Paper a Bill entitled An Act to Prevent the Introduction or Spreading of Insects, Pests and Diseases Destructive to Vegetation, under which he is authorized 'to make regulations for the granting of

compensation for any crop, tree, bush or other vegetation or containers thereof so destroyed'. If this government can take such good care of the vegetable crops of this country, it seems to me that it ought to be able to grant assistance to protect human life from disease.

The humane considerations ought to be quite sufficient to justify action in this matter, and I apologize for suggesting the financial loss to the country resulting from tuberculosis. There are differences of opinion as to the amount of the loss from the death of each person. On this point Dr. Irving Fischer of Yale tells us:

The cost to the United States of every consumptive who dies is $8,000. That does not mean his sickness only and his funeral expenses. It includes the money he would have earned with the average 'expectation of life' in the working years of which he is deprived, and adds to that the support of his family, which usually must be undertaken by some one else. Even conservative estimates rate the deaths from tuberculosis in 1906 at 138,000. A simple calculation, and we find that the United States lost in actual money used up, plus working power destroyed, $1,100,000,000 during that year.

I do not place the actual loss as high as that, yet I must acknowledge that Dr. Irving Fischer knows a great deal more about it than I do. It is estimated that in Canada from 8,000 to 10,000 die annually from this disease. I have statistics only from the provinces of Ontario and Quebec, which contains about 4,000,000 people, for the year 1907. These show that the total deaths in that vear were: in Ontario, 33,502; in Quebec, 29,007; total, 62,509. Of these the deaths from tuberculosis were: in Ontario, 2,530; in Quebec, 2,884; a total of 5,414 in the two provinces. According to these figures, I estimate that in the Dominion of Canada from 8,000 to 10,000 people die of tuberculosis every year, and of these all the experts are agreed that we ought to be able to save fully half. To say nothing of the misery and suffering and trouble caused by this fell disease, think of the immense money loss which this Dominion suffers thereby. If Canada loses from 8,000 to 10,000 people annually from this disease, there must be in the country from 40,000 to 50,000 people suffering from it. Estimating each life as worth $1,000, a most moderate estimate, and the loss resulting from the inactivity of the patient during the years he is ill at $1,000 more, that makes $2,000 for each life lost from this disease. On this basis this country loses from $16,000,000 to $20,000,000 annually from these deaths. Does this not furnish a strong reason, on the money basis alone, why this government should provide any reasonable amount required for the purpose of teaching the people how to protect themselves from this great annual loss? Why, Sir, ordinary common sense should teach us that such prodigious waste ought to be stopped if at all possible, and I am glad to be able to say that in this case we know that it is possible.

This government spends large sums of money in bringing immigrants into this country. This year we have $915,000 in the estimates for this purpose, and we know that some of this money is wasted. I am not casting any reflection upon the immigrants when I say, what every one knows, that our own people in Canada are of more value to us than the newcomers; and would it not pay us better to spend some money in saving our own people? The expenditure on immigration is supposed to be partly as an advertisement, to show what a fine country we have. I ask, would any advertisement be so good for Canada as to show not only that we have a climate in which we can cope successfully against this fell disease, but that we have a people and a government wise enough to take advantage of their opportunities and to put up a fight against it?

When this question was under discussion five years ago, the hon. Minister of Agriculture remarked that no one had suggested how the government could spend money on this object without trespassing on the rights of the provinces. This is a simple question. The provinces are building sanatoria and hospitals, and this parliament has not only the right but the duty to spend money in fighting this disease in any other way. For instance, this government could promote the dissemination of information by means of pamphlets or lectures. We have already had one lecturer at work a part of the time, but there is room in this broad Dominioin for a man to be at work every day in the year, promoting the formation of local associations to build hospitals and fight this disease in the various cities and towns.

It has been suggested in some quarters that an official physician should be appointed by the Dominion government, to take cognizance of this disease, to keep statistics concerning it, and if considered wise, later to arrange a system of inspection and registration. Of course, this appointment would come under the authority of the Dominion if they saw fit to make it. Then, there is one way in which we could help a great deal in fighting this disease, in a practical every-day way, and that is in connection with railways and steamboats. No steps have been taken, so far as I know, by any authority to try to keep down the contagion in these public conveyances. That is a matter that would naturally come directly under the authority of this government. Then, we have this magazine from which I have read. I wonder if there is any reason why this government should not have such a publi-

cation which could be distributed throughout this Dominion, giving facts and figures with regard to this disease, as well as other matters of a kindred nature in order to teach people something which they ought to know for their own protection. Then a public exhibition such as that concerning which I read as having been held in New York and which was afterwards used as a travelling exhibit in many parts of the United States, is a homely, every-day way of teaching the people how to prevent this disease and how to cure it. That is something that would certainly come absolutely within the authority of the Dominion government, something with which the provinces would have nothing to do. The provinces have plenty to do, and so have the municipalities, but this general work ought to be done by the Dominion government.

I merely mention these things to show that there are many ways in which the hon. Minister of Agriculture can spend money in this good work without even technically violating the British North America Act. I am not wedded to any particular plan or method, but I feel strongly that this government should take prompt and serious action, in whatever direction it thinks best, to help the people to fight this grim enemy. In the session of 1905, a joint committee of the Senate and House of Commons brought in a report on this matter indicating what further steps should be taken to suppress tuberculosis in this country. The committee had held several meetings, and on July 13, 1905, I had the honour to present its report in this House. That report was discussed here, and adopted, except that, at the suggestion of the government section 7 was struck out, which section, if I remember well, provided for a grant of money. In this report, as passed, section 8 reads as follows:

> Your committee further suggests that unless the Dominion government feels prepared to take hold of the matter itself, a conference should be held at as early a date as possible between the federal and provincial authorities for the purpose of determining the best action which should be taken in the premises.

That report was passed unanimously. But no conference has been held. And, without finding fault too severely with the government for not carrying out this report, I submit that it would have been wiser had this conference been called. What we want is to get everybody working on this problem. If we have the conference—and I would urge the government to call one—it could not but be productive of good.

I do not wish to weary the House with this matter. I do not think there is a greater or more important question before the country to-day, and I believe that if the people thoroughly understood it this parliament would be forced to spend every cent that was required to put up a good hard fight against this disease. I hope that the discussion of this resolution will help the public to understand this question. I trust that our friends of the press will give it space in their papers, not on my account, but on account of the vitally important interests involved. This is not, in any sense, a local question.. This disease is spread all over the Dominion, and people suffering from it move from one section to another. The number of deaths caused by it is so great that the need of fighting it is imperative. And we must get the help, not only of those individuals who are willing to help, not only of the municipalities, but also the great strength of this Dominion government must be brought to assist if the fight is going to be a success. We know that our climate is as favourable to the cure of this disease as any other, if the disease is taken in time. And I am glad to say that, through the information that has been disseminated throughout the country during the last few years, the people are beginning to understand the question, they are waking up to the difficulties involved, and also they are learning to feel that it is perfectly possible to destroy this disease altogether if we make a united effort. At this time the Dominion government has a large revenue. It is making great expenditures, some of which are criticised by those of us who sit on this side of the House. It seems to me that here is a case in which the government can make a grant which no one will criticise, but with which every one will be satisfied, and which will accomplish much good for the people of the whole Dominion. I do not suggest in any way that this government should take in hand the building of sanatoria or hospitals of any kind, but I do feel that they should spend sufficient money to teach the people of this country how to prevent and cure this disease. I do not think that any practical or theoretical objection would be raised to the spending of this money to protect ourselves and our children. And I say in conclusion that this parliament represents the common sense and wisdom of this Canada of ours, and if we do not put up a proper fight against this scourge of our day and generation, we shall be held responsible before the world of public opinion for neglect of a plain duty.

Mr. H. S. BELAND (Beauce) (Translation). Mr. Speaker, the question of the prevention and cure of tuberculosis has been considered in this House on several previous occasions. The hon. member for Argenteuil (Mr. Perley) alone has already had on the order paper two resolutions in

reference to this matter. My hon. friend from Hants (Mr. Black) also took the matter up, though in another form, two years ago. However, to my mind, a question such as this cannot be often and too carefully considered, and too great pressure cannot be brought to bear on the government in this connection.

Already, on a previous occasion, I have clearly expressed my views, both as a physician and as a representative of the people, on this very live question. There is too much force and eloquence in the grim and cold facts or statistics submitted by the hon. member to make it necessary that I should dilate at any length on the sufferings brought about by the scourge of tuberculosis. After what has been so clearly and so neatly stated by the mover of the resolution, it only remains for me to approve of the conclusion laid down in regard to the grant in favour of the anti-tuberculosis association.

Indeed it would be regrettable were Canada, a leader in so many branches of industrial and commercial activity, to sadly lag behind when confronted with a social and economical problem of such importance. All civilized countries have realized what enormous losses result from the spread of tuberculosis, and have applied preventive and curative measures of the greatest efficiency.

The Dominion government has made a good beginning, but it behoves all members of this House who like myself belong to the medical profession to make official quarters ring with the necessity, in the country's interest, of preventing the spread of tuberculosis, and particularly of tuberculosis of the lungs.

I am of opinion, as previously stated, that a certain amount should be deducted from the items appropriated directly or indirectly towards forwarding immigration, and an equal amount spent towards the prevention and cure of tuberculous diseases. To my mind, more value should be attached from our country's standpoint, to saving the life of one Canadian snatched from the grip of tuberculosis, than to securing an immigrant from foreign shores, whatever his worth.

In short, Mr. Speaker, we have before us a question of the greatest import both from the economical and humanitarian standpoint; and I trust that the government, desirous of forwarding the best interests of the country, will find their way to granting a still larger appropriation to the men who have assumed the task of putting a stop, in this country, to what is sometimes termed the white plague.

Mr. J. B. BLACK (Hants). This is a subject that ought to give, and I have no doubt does give, every member of this House both interest and pleasure. It is a question for humanity, one of those subjects in which one side of the House will not disagree with the other, but in which we all unite for humanity's sake. And the pleasantest part is that such an interest and such an initiative is being shown by the laymen. It has not been left to the medical profession alone to do this work, but the laymen, in many instances, have outstripped the medical profession in their earnest work for the protection of the lives of our people against this sad destroyer. I would express my appreciation and gratitude for what this government has done year by year in fighting this disease. I regard this matter in no spirit of fault-finding, complaining or scolding, but rather in a spirit of gratitude for what has been done; and I believe we shall be, in the future, under a still greater debt of gratitude to the government, for I am sure they will respond to the request of the Anti-tuberculosis Association for some greater grant than has been given in the past.

I think it is right, in asking for a greater grant than we have had in the past, to review what has been done with the grants that have been given. Have we been doing good work? Have we been expending this money as it should have been expended? Let us see what has been done. For one thing, literature, in plain language that the unlearned might understand and that all might read, has been scattered broadcast all over Canada. This has been a great means of teaching the people how to protect themselves against this disease. Over and above that, we have a lecturer who goes all over Canada lecturing to the people on this subject. I think this is one of the most interesting and profitable means of combatting this dread disease. At present the travelling lecturer of the association is a medical gentleman of culture, an expert in discussing the prevention of tuberculosis, a man who has the ability to stand on the platform and interest the general public in the question. I believe that up to the present time he has gone over many portions of Canada. Speaking for my own province of what the lecturer has done, I may say that I had the great pleasure of arranging for him a series of meetings from Windsor to Yarmouth, where there were crowded houses at every meeting, where not only the educated, the intelligent and the cultured assembled to listen, but where the common people heard him gladly; and I think that was the most promising part of it. Not alone is information imparted by the lecturer, but in each place that the lecturer visits, an association is formed for the prevention of tuberculosis, and in many cases active working committees are formed for the spread of knowledge how to prevent tuberculosis. More than that, local medical men are giving lectures in their own communities and

in neighbouring communities. There are very few medical men, I hope there are none, who cannot stand up and intelligently instruct an audience in the details for the prevention of this disease, so far as those details are known to-day.

I may say that over and above what has been said in regard to tuberculosis, over and above the spread of knowledge how to prevent this disease, the enlightenment has not ended there, but it has gone beyond the bounds of the object first intended, and the knowledge of the prevention generally of all disease has been spread throughout the country. People have learned, not only how to prevent tuberculosis, but in learning how to prevent that they have also learned a better mode of living. More sunlight is entering the homes of our people, more fresh air is entering their houses, and a more sensible mode of preparing and eating our food is being adopted, while a better knowledge of hygienic laws has been spreading all over the country. Now the question is being asked, if we can prevent tuberculosis, why can we not prevent other diseases? Interest has been awakened all over this continent, and in many parts of Europe, not only in the prevention of tuberculosis, but in the prevention of other diseases as well. This of course is beyond what was intended by the anti-tuberculosis association, but it is a fact that the good work has gone beyond the bounds that were first measured out for it by the society. In the United States the light has spread abroad so much that men of wealth are devoting their means to the prevention, not only of tuberculosis, but of other diseases. We read in the newspapers an announcement that Mrs. Russell Sage has donated a million dollars in aid of the campaign against tuberculosis. That would have been an astonishing thing ten or fifteen years ago, but it shows how public interest is being aroused, and how men of means are turning their attention to this philanthrophic work. We also read that Mr. John D. Rockefeller has promised that he will give a million dollars to combat the hook-worm, which is a very destructive disease in the southern states, and that Mr. Andrew Carnegie will give a like amount towards battling pellagra, which is another disease carrying off many thousands in the southern states. Thus you will see that from the point where the anti-tuberculosis association began, the good work has gone on until it is spreading all over this continent and all over the world.

But this is only a sample of what has been done. Since the anti-tuberculosis societies have got to work the question has been asked over and over again, not only, how can we prevent that disease, but how can we prevent other diseases, how can we save human life? For instance, attention is now turning strongly toward the prevention of the slaughter of the innocents, the alarming and unnecessary deaths of little children, not only from tuberculosis but from ignorant care. There is nothing probably in Canada that is so decimating little children as ignorance in feeding them. The death rate among children in Canada is greater than any other death rate, and we might class the various diseases almost under one head, ignorance in feeding. There are every year over 31,000 deaths of little children under five years of age. According to statistics in Canada, there are more deaths of children under five years of age, that is, more people die under five years of age, than die from the fifth to the fiftieth year. Much is being done through the interest awakened by the anti-tuberculosis association to prevent the enormous destruction of life in little children. In the city of New York a renowned philanthrophist, Mr. Nathan Strauss, has established milk depots to furnish pasteurized milk, in many cases for nothing, in many cases at cost price, to every one who wants it, and the health department of New York claim that he has reduced infant mortality in New York one-half.

I have a clipping here from a Montreal paper of March, 1907. This is just an average statement that I happened to run against. In March, 1907, in Montreal, in one week, there were 114 deaths; of these 114 deaths 103 were of children under five years of age. That is a terrible and unnecessary slaughter. The Guelph, Ontario, health officer reports 110 per thousand children died there against 11 per thousand of total deaths. That is an awful thing, but unfortunately, it is true. In Paris, so anxious have they become to save the lives of children, that they not only send out instructions to mothers how to feed and care for their children, but they have established depots all over the city where poor mothers, those below the poverty line, may go and have all the food they want to eat as many times a day as they please. The only requirement is that she is a mother and is nursing her babe. The French government appreciate the necessity of preserving the lives of their people and they have taken this step amongst the poorest. All over the city of Paris they have established these depots for the feeding of nursing mothers. The same care is being taken in other countries as well.

Mr. BLAIN. May I ask the hon. gentleman if he has any statistics along the line of the free distribution of milk or the distribution of milk at cost price in the Dominion of Canada?

Mr. BLACK. No, we have nothing of the kind in Canada.

Mr. BLAIN. I may say that something of the kind is being done pretty extensively in Toronto now.

Mr. BLACK. I know that Toronto is taking steps in that direction but we have no statistics from that city. I am speaking of these things as the result of the light being spread by the anti-tuberculosis associations of the country. I want to show that they have gone beyond what they first intended, fortunately, and that the whole world is being educated up to the prevention of disease. Prevention, prevention, everywhere! That is something that has been done and it is a grand record. We have to thank our government for what they have assisted us in doing in Canada. Another question would be: Is this a paying investment? The government gave us last year $5,000. Have they got interest for their money? I think, from the local knowledge that many of us have, and judging from the local work done that the government have not only received good interest for their money but have received compound interest. Not only do I believe that they have received compound interest but I believe that the debt of $5,000 has been paid and that the government are deeply indebted to the anti-tuberculosis association of Canada. I want to repeat that I believe that not only has this investment been a good one but I believe that in the matter of dollars and cents, in saving wage earners, in saving people to help to build up this country, the government of Canada—the people of Canada—are indebted to the anti-tuberculosis association for the great work they have done. I hope the government will not only give twice $5,000 this year but that they will increase the grant each year. I think we have shown that a great work has been done and I think we have shown that it is a grand investment for the government. What more should be done? I think that, in consideration of what they have done in checking the spread of tuberculosis, in consideration of the great good they have done not only in the fighting of this disease but in the spreading of knowledge for the prevention of other diseases, the government acknowledge their duty to the country to send out information instructing the people how to protect themselves. It has been stated by the gentleman who moved this motion that the government have expended a great deal of money in preserving the lives of domestic animals. They have and I think every dollar has been well spent. Half a million was spent last year, or the year before, and I do not think any body will find any fault with it or will say that it was not a profitable investment yielding good interest. But, if the government feel the responsibility of protecting and preserving the lives of domestic animals, surely the government must feel their responsibility in preserving the lives of the people, and I think the time has come when the government should, in a more systematic way, take up this question of public health, either by forming a bureau of public health, which, I believe, is the proper course, or by starting in the direction of teaching the people how to preserve the public health. The hon. gentleman who moved this motion laid considerable stress upon the work done in publishing pamphlets and circulating them all over the country. Why not the government appoint a special agent to publish pamphlets on the prevention of other diseases? Why not teach communities that there is no need of having typhoid fever? Why not teach municipalities that it is a disgrace to have typhoid fever? Why not teach the people that small-pox, typhoid fever, measles, scarlet fever, whooping cough and all diseases of that class are unnecessary and preventable? We have fairly driven small-pox out of Canada. We have driven typhoid out of many communities. We have lessened the death rate of all these diseases and no one will gainsay the reasonable possibility of driving out of this country all these preventable diseases if the proper steps were taken. Would it not be money well invested if $5,000 or $10,000 were expended in distributing pamphlets all over Canada instructing the people how to preserve their health and how to prevent these diseases? The day has long gone by when the old verdict 'died by the visitation of God' is indulged in. We know that people die in many instances when there is no necessity of their dying. Of course, all men have to die, but the unnecessary loss of life among the wage earners and producers at the producing time of their life is immense. Would it not pay the government, would it not be a good investment, casting aside all the humanitarianism of it to adopt some systematic mode of teaching the people how to save their own lives? As the previous speaker (Mr. Perley) has said, we expend a lot of money in bringing immigrants into this country and we do that rightly, every one will commend the exertions of the government in bringing people into Canada, for we need them; but how much more sensible, how much better, to save the lives of our own people? Thirty-one thousand infants die every year, one-half of whom, according to expert evidence, might be saved; and I think that is a small proportion, more than one-half might be saved. Add to that the tens of thousands who die of typhoid or other diseases in middle life or earlier manhood. Think of all this enormous loss which is being permitted without an effort on the part of the government to stop it, yet we are spend-

ing money in bringing foreigners in to take the places of those who die.

It is sometimes said that this is the work of the provincial governments. I do not know where that theory has come from. I have looked over the British North America Act and find nothing there to justify it. When that Act was framed, very little progress had been made in state sanitation, in state medicine in public health. I think the first active organized step taken on this continent was a state society or board of health formed in Massachusetts when I was a student in college in 1863. Only two references to public health occur in the British North America Act. One defines what the provinces are to do and the other what is within the jurisdiction of the Dominion. The Dominion has quarantine and the establishment and maintenance of marine hospitals. To the provincial government is allotted the establishment, maintenance and management of hospitals, asylums, charities, eleemosynary institutions in and for the province other than marine hospitals. There is no further reference to public health. In the United States form of government anything that is not expressed as belonging to the federal government goes to the state government. In Canada the exact opposite prevails, what is not mentioned as belonging to the provinces, belongs to the federal government. Therefore, I maintain it is the duty of the federal government to take such steps as will protect the health of the people. At the same time there it no necessity of interfering with the rights and the work of the provincial governments. The federal government is doing many things for the benefit of its people that are also being done by the provincial governments, and I do not know that they ever clash. Both are doing their work in agriculture and in many other things. To advance this constitutional difficulty seems like shirking a duty, like hunting for an excuse, like the argument that the Levite might have used when he found the poor fellow wounded and suffering by the wayside. He might have said: I belong to a tribe whose duty it is to perform religious ceremonies only; I am not here to attend to the fallen, it it not my work, the man probably has friends or relatives somewhere—and so he passed by on the other side. How much better for the government to take the course of the samaritan who came along that way. I think he was a country doctor, by the way, because he was poor and had only a few coppers in his pocket, but he had a big heart in his body and he took up the poor fellow, he did not wait to say: This fellow may not be deserving and it is not my place to look after him anyway, he probably has friends somewhere. He assisted him as far as he was able with first aid to the wounded and then took him to the first hotel he came to. Like many another country doctor he had not much to pay his board, so he ran his face for the man's board for several days until he might come back again. How much better for the government to take that course, helping in this great cause of humanity.

I have no doubt this is coming, I have no doubt we will have the government of Canada, as well as the local governments, taking hold of this great work of assisting the people to preserve their lives. I hope this question will be discussed during the evening session, I hope that not only every medical man in this House will support the member for Argenteuil in his resolution, but that as many laymen as medical men will urge this thing and not forget that there are other diseases besides tuberculosis, in preventing which this government should assist.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

Mr. W. J. ROCHE (Marquette). Mr. Speaker, the resolution introduced into the House to-day by the hon. member for Argenteuil (Mr. Geo. H. Perley) is one of somewhat similar nature to other resolutions that have been introduced into this House on more than one occasion in the past. There is no need of an apology, however, on this score for its introduction on this occasion. The widespread and far-reaching importance of the topic is surely sufficient justification for its engaging the attention of the members of this House; and in my opinion, until the ultimate object shall have been attained, it cannot be introduced too frequently. I take it that the primary object of the state is the welfare of the people, which should include not only their moral and intellectual, but also their physical welfare; and, Sir, the disease that Oliver Wendell Holmes has rightly termed the white plague, that carries off annually about a million of the population of this world, and that is preventable as well as curable in its incipient statges, is surely of sufficient importance to engage the serious attention of the people's representatives. One of the greatest obstacles that has to be overcome in the fight against tuberculosis is the apathy of the people, and a discussion in the parliament of our country, if properly presented to the public, for which we must of course rely upon the press—though I fear, from the appearance of the press gallery just now we are not going to have that duty very well performed on this occasion, should contribute to no small extent in overcoming

this apathy and in renewing interest in what is undoubtedly a national problem. In fighting against tuberculosis we are not fighting against an unknown or mysterious foe. The nature of this disease is now fully known, and if we apply in Canada the same efforts that have been applied successfully in other countries, there is no reason why we should not expect equally good results. It is not only the very high mortality resulting from the disease, carrying off as it does the pick and flower of our Canadian manhood and womanhood, that makes it such a dire enemy of humanity, but also the large proportion of our people who are invalided through its ravages. I think I am within the mark when I say that from five to eight times the number of people who die from the disease are rendered invalids by its ravages. It has been pointed out this afternoon that we are spending close on $1,000,000 annually for the purpose of bringing in immigrants from other countries to our shores; and I think it takes on the average one-fourth of all the immigrants who come to us to replace those of our people who are rendered invalid by tuberculosis. I think it would pay us very much better as an investment to look after the health of our own people and save their lives, than to bring in immigrants, many of them from countries where this disease abounds, to become a constant menace to our own citizens. I am not deprecating the expenditure of a reasonable amount of money for immigration purposes; but I recognize that the immigrants cannot equal the home-grown variety, those born and bred in Canada, British subjects by birth, and accustomed from infancy to our laws and institutions.

I wish to refer very briefly to the character of the work that is being carried on in some other countries, and to the good results obtained. For instance, in Germany, which is one of the most advanced countries in the fight against tuberculosis, the state has recognized that it has a duty to perform, and by means of wise legislation it has so improved the condition of the labouring classes that this disease has been cut down 40 per cent or more in a little over a quarter of a century. The insurance societies have undertaken an important part of the work. They have founded societies for the construction of sanatoria, which is the most modern method of treating the disease, and have popularized other institutions for the purpose of teaching the masses the nature of the disease. Germany has a very large industrial population, and the workshop is one of the commonest places for the propagation of this disease if proper sanitary precautions are not adopted. It is estimated that 75 per cent of those who die of tuberculosis in Germany are of the wage-earning classes. A few years ago 37 of the insurance societies of Germany combined to allocate a capital of £2,000,000 sterling for the purpose of equipping sanatoria for the treatment of those of their own classes who were affected with tuberculosis, and these societies, after investigation, came to the conclusion that it paid them much better to cure consumption than to subsidize it, as they were doing with the large amount of money they paid out to the heirs of those who died from the disease. In addition to building these sanatoria, the insurance societies have spent £6,650,000 for the purpose of constructing well ventilated and sanitary dwelling houses for the labouring classes who are their clients. The result has been that of those treated in the sanatoria of these societies fully 70 per cent have been returned to their homes and their work as economic cures. By that I mean those who having had their cases diagnosed in the early stage of the disease, have sought treatment in the sanatoria, and, after being there for a few months only, have been able to return to their work, whereas if they had neglected the disease in its incipient stage, they would not have in all probability been able to pursue their avocations. In 1907 the insurance societies of Germany had erected for the working classes no less than 87 sanatoria with a capacity of 8,422 beds. These are thrown open to the working classes, and they receive treatment in the shape of plenty of fresh air, wholesome food and repose. 30,000 working people—men, women and children—are thus treated annually. I have stated that in Germany the state recognizes that it has a duty to perform in this matter. The chief duty which the state there has performed has been to adopt legislation to improve the condition of the working people. Some years ago there was placed on the statute book the Workingmen's Compulsory Insurance Act, under which every workman over 16 years of age, whose wage does not amount to more than £100 per annum, is compelled to insure. The Act covers three varieties of insurance: first, against sickness; second, against accidents; and third, against invalidity and old age. The workingman is not required to pay the whole cost of the insurance. In the case of sickness the workingman contributes two-thirds and the employer one-third of the weekly contribution; in case of accident, the employer pays the whole; and in the case of invalidity and old age, in which class is included tuberculosis, the workingman and the employer pay equal parts. The workingman and the employer pays equal contributions, and then the state comes in with a pension of two pounds ten to every person who is insured under the inability clause. The state, the employer, and the workman recognize they owe a joint debt, and by contributing together

they leave no insured man dependent upon charity, who suffers from a chronic disease which renders him unfit to do his work. The result of this compulsory Insurance Act has been that in twenty years, from 1885 to 1905, close on £200,000,000 has been paid out under this Act to insured members amongst the working classes in Germany who because of ill-health were unable to sustain themselves and their families. By virtue of this law 13,000,000 German subjects have been insured. The reason they adopted this compulsory Insurance Act was that upon an examination of the inability statistics it was found that of those engaged in mines, metallurgy, and the building trades, fully fifty per cent of the invalids under thirty years were suffering from tuberculosis. Hon. members of the House will see that anything that tends to improve the condition of the working classes from a sanitary point of view will lead to a reduction in the death rate, as it has done in Germany. The result of the good working of this compulsory Insurance Act was set forth in a statement by the German Minister of the Interior a short time ago when he said:

> If Germany has experienced vast industrial expansion, possibly unequalled by that of any other country in the world during the same time, it is chiefly due to the efficiency of its workers and the efficiency of its workers has been largely brought about through legislation of recent years to provide a tolerable standard of life for the working people and so far as possible to guarantee their physical condition.

The German empire believes that anything it can do, it is its duty to do towards improving the health of the people, because they believe that even from the commercial standpoint, healthy workmen give the best returns to the state. They have as well in Germany compulsory notification, and every medical man in attendance on a case of tuberculosis is compelled by law to notify the proper authority so soon as he has made a diagnosis. That is not confined to the medical men; it is also a compulsory duty on the keepers of boarding houses and hotels, and public institutions such as the asylums and jails. This in brief is an outline of the work they are carrying on in Germany. A word with regard to what is being done in Ireland. Some years ago the death rate from tuberculosis in Ireland was considerably lower than in either England or Scotland, but Ireland did not keep abreast of the spirit of the times as the sister countries did and the result has been that at the present day the death rate in England and Scotland has been so materially reduced that it is now less than the death rate in Ireland. Through the efforts of some public spirited citizens in Ireland they are now carrying on a propaganda of education which is likely to lead to results as satisfactory as those obtained in other countries. They have a national health association for educative purposes, and they have itinerant tuberculosis exhibitions. These exhibitions move from place to place; the disease is explained by those who are posted on it. Under the auspices of this association addresses have been delivered to large gatherings of the people by the Lord Lieutenant of Ireland, by the Countess of Aberdeen (who has taken a great interest in the work and who has put herself at the head of the movement), by the Chief Secretary for Ireland, and by our own Dr. Osler, who is now a professor at Oxford and who is lending his support to the propaganda. In Ireland, in one year out of 74,000 deaths, no less than 12,000 were from tuberculosis, showing the wide spread nature of the disease and the great field which the National Health Association of Ireland has to exploit. The result of these tuberculosis exhibitions has been thus far that the people are becoming educated to the true danger of the disease and stimulated to zeal in all matters pertaining to sanitary measures. Their houses are better ventilated; they are not hermetically sealed as many of them were in the past, and the farmers and dairymen of Ireland are applying in a large degree the tuberculin test to their cattle. It is estimated that fully thirty per cent of the milch cows in Ireland have been affected with tuberculosis. How can we expect that a young population will grow up healthy if there is a contaminated milk supply? England is one of the foremost nations in the fight against tuberculosis, and they have adopted in England what they have not got in some other countries, namely, sanatoria for incipient cases, as well as public hospitals for the advanced stages of the disease. In order to contend against this disease scientifically it is absolutely necessary to segregate as much as possible those in the incipient stages from those in the advanced stages of the disease. In England, in 1899, under the presidency of His Royal Highness the Prince of Wales, the National Association for the Prevention of Tuberculosis was established, and its work is largely of an educative character. Special hospitals have been erected for the cure of this disease in its advanced stages as well as sanatoria for those afflicted with the disease in its incipient forms. All these methods have reduced the death rate in England fully fifty per cent in half a century. England has also improved her sanitary laws. Mr. Gladstone legislated to provide for the better housing of the working people, workshops are now inspected and sanitary precautions are taken which have redounded to the physical welfare of the people. But there is one sad feature in con-

nection with the history of tuberculosis in England, and that is that while the death rate from tuberculosis amongst adults has decreased fully fifty per cent, on the other hand the infantile mortality from the disease has increased twenty-seven per cent during the same period. That is a sad feature, and the explanation is due to the contaminated milk supply. In England, until recently, they have had no inspection of byres such as they have had in Norway, Sweden and Denmark, and the result is that from the contaminated milk, infants under one year get abdominal tuberculosis, which is the cause of the very high mortality amongst the infants. This shows the great necessity for a rigid inspection of our dairies as well as our abbatoirs and slaughter houses so as to guard against a contaminated milk and meat supply.

In Belgium, they have a national league for the prevention of tuberculosis whose chief seat is at Brussels. They have branch associations in each province. This is carried on, as in the association in England and other parts of the world, for educational effect. Amongst other good laws, they have in that country a rigid inspection of dairies and abattoirs, both public and private, to guard the people against being supplied with contaminated milk or meat. In Prussia, they have reduced the death-rate fully 30 per cent during the past twenty-five years by wise precautionary legislation. In France, they have a society for the prevention of tuberculosis. They enlist the assistance of experts and those who are in a position to teach others, who, as in England, go from town to town instructing the people as to the nature of the disease and as to the measures that they should take to prevent its spread. In Norway they take such interest in the question that they have voted 40,000 crowns to publish a popular work on tuberculosis as a means of disseminating information on the subject among the masses. And they have set aside 2,000 crowns as a fund to be used in defraying the travelling expenses of physicians and others who desire to study the management of sanatoria. So, in all these countries, they are carrying out united and intelligent work to stamp out the disease. Coming nearer home, let me refer to what has been done in the city of New York. That city, as we all know, is the dumping place for the immigration coming into the United States, so that if they had not the best preventive and regulative legislation, we might look for an exceedingly high death-rate in that city. And, some years ago that was the case. But, in New York, within the past thirty or thirty-five years, they have reduced the mortality from tuberculosis by fully 40 per cent. They have sanatoria for the treatment of tuberculosis, and they have compulsory notification as in Germany. In Canada, in recent years, we have not been standing still. In the province of Nova Scotia—and I give that province credit for leading the way—they have a provincial sanatorium for the treatment of consumption. A similar institution exists in British Columbia, erected not long ago at Kamloops. They are now erecting one in Manitoba which will be completed within the course of next month. And the province of Ontario, I believe, has more than one, some of a public and some of a private character. So, our provinces are not seeking to evade their responsibilities in grappling with this disease. There is one way of carrying on this work, which I am glad to say, is adopted in some of our cities, and that is the compulsory inspection of school children. There you will find tuberculosis, in the form of swollen glands and so on, the disease establishing itself before the parents of the children are aware of it. By making known the condition to the parents, steps can be taken to prevent the ravages of the disease. Not only is it wise to have a compulsory inspection of school children, but the school is a splendid place in which to carry on educational propaganda on this subject. I was glad to learn that in the city of Winnipeg, a short time ago, no less than thirty-three medical men joined in making visits to every school in the city and gave lectures to the children on habits and hygiene. The youthful mind is an impressionable mind, and anything inculcated therein will be retained and become of service in the future life of the child. But, we should have something more. I am glad to say, we have a more rigid inspection of our immigrants than we formerly had. But, unless it has been recently established, there is no inspection of the immigrants before they reach this country. Put yourself in the position of an immigrant. He comes, let us say from some country of southern Europe, and, with his family, he takes ship to cross the ocean to Canada. On reaching our shores he is subjected to inspection and by reason of the fact that he has tuberculosis he is sent back to the country from which he came, torn, it may be, from his family, and put to all the misery of separation and to great trouble and expense as well. If the immigrants were inspected prior to going on the ocean, all this trouble, sorrow and expense would be avoided. Besides, a more rigid inspection carried on on the other side of the water with a view to making a selection of those who are to come to live amongst us would redound greatly to the advantage of Canada. There should also be a rigid inspection of settlers' effects. We all know that settlers' effects may carry the germs of infectious diseases, including tuberculosis, and rigid inspection and disinfection of settlers' effects would have excellent results.

Now, we have heard a great deal about the British North America Act standing in the way and preventing us from taking up this work as a Dominion work. I think that argument has been effectually disposed of by the hon. members who preceded me. This British North America Act is held up as a bugaboo, it is treated as an excuse for us to unload our responsibilities, or a portion of our responsibilities, upon the provincial authorities. I do not see why we should allow this to scare us away from our duties, or why we should plead it as an excuse. Illustrations have been given here to-day of the way in which the officials of this government act in concert with those of the governments of the several provinces in matters relating to education. Now, education is a subject that is relegated solely to the control of the provinces by the British North America Act, but consider such a matter, for instance, as the education of the farmer. Go to a meeting of a farmers' institute, and there on the same platform you will find a Dominion government official from one of the experimental farms who is there to assist in educating the farmer in the best way to carry on some of the many operations of the farm, and also some professor sent out under the auspices of the provincial authorities to carry on the work of education. These two officials work together, there is no clashing of authority, no question is raised by the provincial authorities that the Dominion government must keep off its preserve and must leave education wholly to the provinces. They are only too glad to share their responsibility. The Minister of Agriculture (Mr. Fisher) will know full well that a few years ago the question of looking after the health of animals was, in some provinces at least, wholly in the hands of the provincial authorities. But a mutual understanding was arrived at between the officials of the Minister of Agriculture and the officials of the provinces and this was handed over to the Dominion government, though, prior to that time, it had been thought a matter wholly within the jurisdiction of the province. The leader of the opposition (Mr. R. L. Borden) referred to cases in which assistance was given by this government to railways working under provincial charter. And so we could go on giving illustration after illustration to show that there has been invasion of the provincial domain without objection from the provincial authorities. This fight against tuberculosis should be a national affair. There will be no jealousy, no cry of provincial rights or anything of that nature from the provincial governments if the Dominion government desires to come in and lend a helping hand. We hear it stated that the Dominion government should not build sanatoria or hospitals. That may be very true. But the Dominion government can render assistance to such institutions in operation. There are to-day at least two hospitals that are managed under civic authority—those at Winnipeg and St. Boniface—that receive money grants from the Dominion parliament. Why? Because immigrants are brought in by the Dominion government and dumped in the city of Winnipeg, and the Dominion authorities do not think it right or fair that the whole expense of treating and looking after those immigrants who need hospital care should devolve upon provincial or civic authorities. The Dominion recognizes that it has a duty to perform, and so it aids these hospitals by money grants year after year. We are carrying on a propaganda in the provinces to-day. They are doing good work by means of distribution of literature and by lectures. In this and other ways, many of the provinces are doing their full duty. Besides, we have our medical associations, and, philanthropists as they always are, the medical men are discharging their duty in the matter by getting out pamphlets on the disease and having them widely distributed. The good done by the central anti-tuberculosis association has been referred to by the hon. member for Argenteuil (Mr. Perley). It is a good work. I think $5,000 is entirely too small a sum to enable that board to discharge the functions that they have been trying to discharge during the last two years, at any rate I would certainly favour an increased amount for the central association. But, in addition to all this, we require the united and hearty co-operation of the Dominion government. If we do not wish to go into the sanatoria business ourselves—and I am not urging the government to do so at the present time—we would assist those sanatoria now in operation by giving them grants according to population of the hospitals or by giving grants outright as they do in the case of the Winnipeg and St. Boniface hospitals.

There are many things this government might do in addition to improving sanitary conditions. I will refer to one of them, and I have already refered to it when speaking on this subject in years past. I think we ought to have a Dominion laboratory in this country where our young men could enjoy the opportunities for experimentation that are afforded in other countries. Is it not rather humiliating to think that in a nation like Canada, her young men have to go abroad to find under a foreign flag a scope for their talents, where they are enabled to experiment in the preparation of serums, anti-toxins, and such drugs which we have to import from England, or Germany, or the United States? If we were alive to our own duty we should provide scope for our own young men, and we would

have the serums manufactured within the confines of our own country. I commend these few remarks to the House, and especially to the Minister of Agriculture. I trust the Dominion government will grapple with this question with a little more vigour than they have shown in the past. While I commend them for what they have done in the past, I think that a much wider field lies open before them full of opportunities, and I would urge upon them to take into their serious consideration this subject with a view of meeting more fully than in the past the urgent demands of the country in this matter.

Mr. F. L. SCHAFFNER (Souris). I do not intend to take up much time in discussing this subject. One splendid feature of the debate so far is that the speeches have been so short; that is a plan which I very much favour in the discussion of all subjects. I think we are indebted to the hon. gentleman (Mr. Perley) who introduced this motion, and who introduced the same subject four or five years ago. I propose in my remarks to look at the subject from a little different point of view than that from which other hon. gentlemen have chosen to regard it. I do not think any medical man, or any layman, need make an apology to this House for taking up some time in discussing this great question. My hon. friend from Argenteuil made many pertinent remarks, but none was more pertinent than when he said that if the people of this country were familiar, as they should be, with the ravages of this disease, the government would be compelled to act. I think that is an absolute fact. When we realize that in Canada to-day there are from 50,000 to 60,000 people affected with tuberculosis, and that from 10,000 to 12,000 are dying annually, the subject assumes tremendous importance. Especially do we become impressed in view of the well established fact to-day that tuberculosis is not only a preventable disease, but it is a curable disease. I know it is very difficult to make the people believe that, it will be difficult to make many members of this House believe it. Any medical man in this country who has practised for some time will tell you that when a patient comes to us for physical examination with the slightest idea that he is affected with tuberculosis, it takes a good deal of courage on our part to give the patient a straight diagnosis. We have always felt in our practice that once we declare the patients to be tubercular, or to have consumption, as the term is, they pretty nearly always abandon hope; there is no question about that. Now, if medical science has done nothing more than to restore hope in the breast of the patient, it has certainly done a great deal already, for any physician is ready to admit that hope is one of the greatest aids we have in the medical profession.

Now, Mr. Speaker, it may seem a strange thing to say that tuberculosis is curable, or that it is preventable. But that is a fact established centuries ago. In the first centuries the best medical men held that this disease was contagious, that it could be communicated from one person to another; they went further, and they said that the best means of curing it was fresh air. Now we have got but very little beyond that state of affairs to-day. I think there is no medical man in Canada who pretends to prescribe medicine now to his tubercular patients; he advises them to live out of doors, and that is the reason why the idea of the sanatorium has arisen and has taken so much extension. They went further in olden times, and we find that in the fifteenth century they used means which we do not often use to-day, but which we should use to a greater extent than we do. If a patient died of tuberculosis or consumption, as it was then termed, the clothing and the bed-clothing had to be destroyed. Now certainly that is an evidence of the belief that tuberculosis is preventable or curable. The question then arises in our minds, how is it that, if this belief has been prevalent during all those centuries, we have not made more progress in our treatment of the disease? In regard to the sanatoria in Canada, I think perhaps we have done as much as most other countries, considering that we are a new country. I remarked a little while ago that from 50,000 to 60,000 people in this country were affected with tuberculosis, and yet in spite of all that the provinces have done, they have only beds for about 500 patients. I have a list of the provinces, but I will not read it. It is enough to say that in the whole Dominion there are only beds for about 500 patients.

Now it is established that the treatment patients receive in the sanatorium is the only kind that holds out much hope for them as a cure of tuberculosis. What is to become of all the others? And just at that point comes in the work of the association of which my hon. friend who introduced this motion was talking to-day, in connection with the education of the people. He has given you a pretty clear idea of what that association is doing in an educational way. I just refer to that to point out that we have only provided for 500 persons and to ask what we are going to do for the rest. I have had a little experience with tuberculosis and I have looked into the experience of some of the best men of this country. I say that splendid results can be achieved outside of a sanatorium. The same kind of treatment is required inside and outside of a sana-

torium. Persons should be instructed to sleep outdoors, to sleep on the verandah. I live in a fairly cold country and some people may say: Surely your patients cannot sleep outdoors in Manitoba? I have patients with whom I have achieved great success in my own practice. I might also refer you to Dr. Bell, one of the best bacteriologists of this country, an honest man, and he cures a great many patients by having them sleep, during even this winter, on the verandah. That is one point that this association should impress upon the people. They should instruct them that if they cannot go to a sanatorium they can take the same kind of treatment. I have very carefully read the speech that the hon. Minister of Agriculture (Mr. Fisher) made five years ago on this subject and for fear that I may misquote him I want to refer to a few sentences which he used. I wonder if he has read over this speech carefully since he made it. It is in the minister's department that this matter is placed and I would like to have more faith that the minister is in earnest in connection with this great question, but I look upon this speech of his as more the speech of the politician than of the statesman, as trying to evade the question by having recourse to the British North America Act, trying to get all out of that Act that can be got out of it in connection with this most important subject. He says:

I would point out that up to the present time no scheme has been put forward by those who are interested and who form this association which they could lay before the government or before parliament to indicate in what way such work as that might be improved, extended or rendered more effective.

If he had any excuse along that line when he spoke before, I think the hon. gentleman who introduced this motion to-day has taken that excuse from him, and I just wondered when my hon. friend was speaking what kind of a speech he would make to-night in reference to that point. They may not have done all they could. I am of the opinion that there are too many academic speeches on this as on many other subjects, and I want to get down to practical facts. I think, in the short time at my disposal, that I can show the minister that, notwithstanding how hard and fast the British North America Act may be, there are lines along which this government can act and do as much good as if the British North America Act in this respect was wide open.

It is quite possible that the association for preventing the spread of tuberculosis may be able to provide that information. . . . It would be impossible, I think, for me or any other member of the government to decide or to say what we ought to do or what we could do until some detail of a scheme of the kind were laid before parliament and before the government, but we think that it would be in the interest of the people at large that those who are to-day giving their attention to this work should turn their attention most particularly to devising something which might be done under the authority and through the intervention of this parliament.

I think that the hon. gentleman who introduced this motion has made that right.

To the Dominion is given by the British North America Act the establishment and maintenance of quarantine and the establishment and maintenance of marine hospitals.

The Minister of Agriculture will go no further than that. Well, let us take him at his word. But, before I refer to that, a contrast was drawn in the House this afternoon between those countries that have adopted the outdoor treatment for the cure of tubercular patients and those countries which have paid no attention to outdoor treatment. In England, in 1891, about 22½ people in ten thousand died of tuberculosis. To-day in England they cure about fifty per cent of the patients, and instead of having 22½ deaths in ten thousand they have about half that number. Portugal, which has done very little for the relief of its people in this connection and which has a population of 4,500,000, loses about 20,000 people annually from tuberculosis. I do not think it is necessary for me to call the attention of the Minister of Agriculture to any other instances. There are two bald cases. One has adopted the outdoor treatment and the results are apparent. I believe that this government have a duty to perform no matter what view they take of the British North America Act, and I am going to refer to a few of the ways in which that duty can be carried out. Tuberculosis to-day is considered to be a contagious disease which can be communicated from one to the other. I admit that there is perhaps too much stress laid upon the question of the sputum or that which the tubercular patient spits out and which, becoming dry, is disseminated and breathed in by other people. No doubt that is the most prominent way of communicating the disease, but there are many other ways. When a patient coughs, the moisture which is discharged into the atmosphere, certainly is a means of contagion. Living in ill-ventilated rooms, poor food, insufficient clothing, anything that reduces the constitution of the individual, is a means of inducing tuberculosis. My hon. friend from Marquette (Mr. Roche) referred to the milk supply. That is a more important question than this country has yet realized. We have found that tubercular bacilli are not affected very much by the gastric juices of the stomach. The bacillus still remains in such a condition that it is able to do a great deal of damage

to the child or person who has drunk it. It seems to be absorbed into the glandular system. While the results along that line are not very clear there is still a great deal of opinion that we contract tuberculosis from eating the meat of tubercular animals. My hon. friend from Grev (Mr. Miller) asked a question along that line, and I may be anticipating what he wishes to demonstrate by saying that this government have spent more in guarding animal life than they have on humanity. I do not care how much they spend in protecting domestic animals from disease, if in all cases the money is spent judiciously and to the best advantage; but I believe that we should take even more pains than we have bestowed on the cattle we import into this country in the protection of human life. In relation to cattle we have to-day the tuberculin test, by which we may ascertain absolutely that the food of which we partake is free from tuberculosis. Having that test, money is no consideration; at any cost we must be sure that our food, our meat and milk are free from tuberculosis.

But let us for a moment consider other methods by which the federal government can do great work in preventing tuberculosis. It has been said that if we are to grapple with this great subject we need an intelligent people, expert physicians and wise governments. Look to-day at the army and navy, where you have intelligent official superintendence of the health of men. Fewer cases of tuberculosis develop in the army and navy of Great Britain than in any other set of men. Why? No man can enter either the army or navy until he passes a satisfactory physical examination by a medical man and he is examined from time to time after enlisting; he must be physically healthy or he is not permitted to remain a member of the army or navy. Let our government apply that same principle in every department of its administration, and I am not sure that it will not do as much to prevent tuberculosis as all the sanatoria of this country are doing to-day. Take, for example, the opportunity that lies before the government in the prevention of tuberculosis among Indians. We have in Canada to-day about 375 bands of Indians with a population of about 110,000. Every one knows that the Indian is four times as susceptible to tuberculosis as the white man. In the west the Indians generally wander over the country, in Ontario they live a more settled life and in Ontario they do not spread the disease to the same extent as in the Northwest. A little is being done for the Indians, but very little. Surely the British North America Act does not prevent the Minister of the Interior from having his officials ascertain who among the Indians are affected with this disease and seeing that they are segregated or kept from the other Indians, so that they are not spitting over the prairies with the chance that the sputum will be licked up by animals, absorbed into the glands and cause tubercular beef.

Let us look at the great department of the post office of this country. No other department of the government comes so closely in contact with the people as the Post Office Department. There is scarcely a person in Canada who does not have something to do with letters or papers handled by the post office. There are to-day almost 4,000 clerks in the post office of Canada. No one of these officers who handles the mails should be permitted to discharge his duties without having passed a physical examination for tuberculosis just as he would have to do in the Militia Department. There is great danger of the mail bags becoming contaminated with tubercular bacilli. At every station great bags of mail too heavy to be carried, are thrown from the mail car and dragged along and across the platform. Perhaps just before the mail bag is thrown on the platform a tubercular patient may have spat on the platform—and I am almost afraid to say that one tubercular patient can expectorate seven billion tubercular bacilli in one day. Tubercular patients are not confined to bed in the earlier stages and in the small towns, as they have not much to do, they are likely to be found around the station at train time, so that this danger is a very real one. I would suggest to the government that they should have disinfecting stations for mail bags on the Atlantic and on the Pacific coast and also at one or more central points. It may be said that the mail is inside the bags, but as this economical government keeps patching these bags year after year and in sending them for repairs pack nineteen bags in one bag, the outside of each of these bags may contaminate the containing bag. Surely the British North America Act would not prevent these simple precautions in the Post Office Department, the disinfecting of mail bags and the physical examination of the men and women who handle the mail that goes into the families of different countries.

I am about to make a statement which I believe to be exceedingly important, but which I hesitate to make for fear of being suspected of unfair criticism. I may say, by way of preface, that I know very few civil servants in this country and that in the statement I am about to make I have no reference to any particular case. We have heard a great deal about isolating tubercular patients. We isolate small-pox and scarlet fever patients and we will never get rid of tuberculosis until we look on it just as we do on small-pox and scarlet

fever. I am told that in the departments in Ottawa there are tubercular patients. If persons suffering from tuberculosis are likely to do harm on the farm, how much more harm are they likely to do where a great number of young men and young women, at the very age when they are most susceptible to this disease, are brought into contact with each other in their daily work. I am told that there are quite a few persons in the Civil Service of this town who are afflicted with tuberculosis in an advanced stage. If that condition of affairs exists, I say, with all sympathy for those who are afflicted, that it is a condition of affairs that should be remedied at once. If these civil servants are not in a position to take care of themselves, the government should do something for them; and I am prepared to support the expenditure of any amount of money for this purpose, for money is no object in dealing with this great problem. But these persons should not, because they are poor or are deserving of our sympathy, be allowed to mingle from day to day with young men and young women who are free from that disease. This is another direction in which the British North America Act does not prevent the Minister of Agriculture working.

I am not going to discuss the Immigration Department. The Minister of the Interior is not here, and I do not want to say anything to which he would not have an opportunity to reply; but I have reason to believe that all the tuberculosis patients are not turned back, but a good many come in.

I feel that there is no subject that more deserves the attention of this House than this very question I have tried to suggest some methods by which the government could improve the present condition of affairs. I am strongly of the opinion that we should have in this country a bureau of health as a separate department. There is no other department so important. It seems strange that up to the present time the great country to the south of us has not had a bureau of health; but I am glad to observe that President Taft realized the importance of the subject and proposes that the United States shall have a bureau of health under a separate minister. Whether or not Canada could go just that far today I am not prepared to say, but I believe that is what we should aim at. The provinces are doing a great deal in this matter, and I am pleased to have a couple of photographs to show the Minister of Agriculture and other members of the government what the province of Manitoba is doing in this work. We shall have completed in about a month an institution with 50 beds.

Now, this motion says:

That this House is of the opinion that parliament should now take more active steps to further lessen the great suffering and mortality caused by this disease.

I do not think I have said one word tonight outside the scope of that motion, and I would like to impress on every member of this House that he cannot do a better work for the people—and surely we are here to work in the best interests of the people—than to plead with his constituents to see that something is done in connection with this very important subject.

Mr. H. H. MILLER (South Grey). Mr. Speaker, I rise to take part in this debate for the sole and only purpose of acquainting this House with the work that has been done by the Canadian Association for the Prevention of Tuberculosis; in doing that, I do not wish to conceal the fact that my desire is to influence this government to make a larger grant to that association. I have been interested in and connected with the work of the association for several years, and it has been deemed to be due to this government, which has made an annual grant to the association for some years past, and due to this parliament that a fairly full account should be given of the manner in which the association has expended that money. The Canadian Association for the Prevention of Tuberculosis was founded in 1899 at the instance of Lord Minto, then Governor General of Canada. In the early days of the association, its income was very small, and it could only attempt small things. In 1902 this government made a grant to the association of $1,000. In the following year the association engaged as its secretary the Rev. Dr. Moore, a Presbyterian minister who was greatly interested in the subject, a man of culture, tact and good judgment. Dr. Moore has continued in the service of the association as its secretary, and perhaps to no one person is due more than to him the success which has attended its efforts. For some time after Dr. Moore was engaged as secretary, the greater part of the work of the association was done by and through him. His time was employed in part in the circulation of literature, which was mailed from the central office in Ottawa, and in part in delivering lectures throughout the Dominion. I do not think the association could have found any man within or without the medical profession whose lectures would have attracted more attention, aroused greater interest, provoked more inquiries or disseminated more information than the lectures given by this gentleman. I know this from reports which I have heard of his lectures and from having listened to one of his lectures myself. From those lectures much good has resulted.

In 1903 the Canadian government increased the grant of $1,000 to $2,000 and continued for some years after 1903 to give the increased sum per annum. In 1908

and 1909 the government was generous enough and wise enough to give the association an increased grant yearly of $5,000. These donations enabled the association to extend its work and the splendid results attained were soon apparent all over the land. In addition to the lectures delivered by Dr. Moore, and the circulation of literature, the association prepared articles and reports for the newspapers, and I desire to express the thanks of the association to the newspaper press of Canada for the liberal and prominent space they gave to these reports and articles. From the establishment of the association in 1899 to the present day, nine general annual meetings have been held, eight in Ottawa, which is the headquarters of the association, and the last one in Hamilton, Ontario. At each of these meetings addresses on the subject of tuberculosis, the best means of combatting it and preventing it, have been addressed by eminent medical men, most of them gentlemen who because of their special experience were peculiarly fitted to discuss the subject intelligently. Among the medical men who have addressed these annual gatherings have been Dr. Knopf of New York, Dr. Ravanel of Philadelphia, Dr. White of Pittsburg, Professor Adami of Montreal, the present president of the association, Drs. Richer and Laberge of Montreal, Dr. Sir James Grant and Dr. Bryce of Ottawa and Dr. Sheard of Toronto. The annual reports of the association have contained the addresses delivered by these eminent medical men together with a full report of the criticisms, notes and suggestions made by other medical men who were present at these gatherings. The annual general meetings of the association show clearly the awakened interest in this important subject throughout the Dominion for they have always been well attended by prominent medical and public spirited citizens from all over Canada. These annual reports have been mailed each year to persons who were known to take an interest in the subject and to great numbers of others who have written to the secretary requesting copies. Since 1899 when the association was established, fifty-five branch associations have been formed in different parts of Canada and there is no doubt at all but that these fifty-five associations were organized very largely through the influence of the parent organization in whose behalf I speak to-night. Last winter Dr. Pagé of Quebec was instrumental in calling a public meeting which was attended by prominent citizens and as a result a local association was formed in the ancient capital. Since 1891 seven sanatoria have been erected in Canada, due largely to the interest awakened in the subject by the Canadian association for the prevention of tuberculosis. Free dispensaries have been established in Winnipeg, Toronto, Hamilton, Montreal, Ottawa and Halifax. A great deal of literature has been distributed by the association and this literature has been written in plain English, which the lay people can understand. This literature has I believe taught the people who read it the best methods of stamping out the disease, of preventing contagion and infection, and taking care of the unfortunate patients. Here are some samples of this literature: Here is a little pamphlet entitled 'Consumption—treatment at home, and rules for living,' this is an English publication written by H. Wassen Trowe, M.D.; here is another little pamphlet entitled 'Social and medical diseases by A. J. Richer, M.D., Montreal,' here is a paper written by Sir James Grant, upon our children; here is a leaflet that has been widely circulated, entitled 'How to prevent consumption'; another entitled 'Inspection of milk and meat'; another entitled 'Inspection of schools and school children'; another entitled 'consumption, its cause, treatment, and prevention.' Literature of this kind printed in the English and French languages has been circulated so persistently that including the literature now on hand it will amount to 7,000,000,000 pages. This literature has been systematically circulated and those employed in distributing it take the voters' lists of the municipalities as the mailing lists from which to make the distribution. So great has been the interest taken by the people of the country generally in this literature that in advance of the mailing many applications have been coming in from all over Canada asking the secretary to send literature. Many hundreds of letters have been received from all parts of the country expressing appreciation of this literature and the thanks of the recipients. The head office of the association in Ottawa has been a general information bureau; people in every province of the Dominion have been constantly writing to the secretary for all kinds of instruction. Letters have come from the individual patient wanting to know how to regulate his diet and his habits of living; letters have come from friends, members of whose families have been afflicted, and letters have come from communities who contemplate the building of sanatoria asking for plans and estimated cost and such details. All of these letters have been promptly and carefully replied to. Lecturers of the association have lectured not only at public meetings specially called for the purpose, but at medical associations, normal schools, colleges, the senior departments of public schools, teachers associations, farmers gatherings and all kinds of public assemblies. The lecturer of the association at these gatherings has been a most welcome guest and has been most carefully listened to. Dr.

Valin, professor of Hygiene of Laval university is now engaged by the association to lecture on tuberculosis in the French tongue throughout the province of Quebec.

In 1908, our association was fortunate in securing the services of Dr. George D. Porter. Dr. Porter was engaged by the association as associate secretary and travelling lecturer. The experiences of Dr. Porter's own life have peculiarly fitted him for the work in which he is now engaged. He is not only an enthusiast, but an expert, and not only an expert, but an enthusiast—the right man in the right place.

Mr. BLACK. Hear, hear.

Mr. MILLER. The hon. member for Hants says: 'Hear, hear.' He has heard Dr. Porter within the last few months and knows whereof he speaks in approving that gentleman's work. So great was the interest of Dr. Porter in the work of the association, so well does he realize the necessity of this work, that for several months he gave his services to the association entirely without charge. And the association was glad to avail themselves of his services without pay simply because there was not a dollar in the treasury with which to pay him. However, from every quarter comes high praise of Dr. Porter's work. I desire to read a very short extract from the Charlottetown 'Guardian' of November 18 last. This newspaper gives prominence to a long report of a meeting addressed by Dr. Porter. The heading is 'Charlottetown will fight white plague; a subordinate anti-tuberculosis league formed last night at a meeting which was addressed by Dr. Porter, who held the close attention of his audience.' One paragraph of this report says:

On the platform were his Honour the Lieutenant Governor, Premier Haszard, Dr. McLaughlin, Dr. Yeo, Dr. McNeill, Rev. G. J. McLellan, Rev. Maurice McDonald, L. J. Miller and others.

This shows that the most influential and prominent people of the city listened with great interest to Dr. Porter, and, after hearing his lecture, organized a local association. I want to point out to you that not only were the people benefited who listened to Dr. Porter's words, but those who read the newspapers had the benefit of a careful and full report and thus received the information he gave. The Charlottetown 'Patriot' of November 12 says:

It is pleasing to note that Dr. Porter, the energetic associate secretary of the Canadian Society for the Prevention of Tuberculosis, is meeting with large and interested audiences in his tour through our own and the other maritime provinces. . . . The meetings at Mount Stewart and Souris, held on Wednesday and last night, were largely attended, the audience following closely Dr. Porter's plain, convincing talk. Dr. Porter to-night speaks at Montague and to-morrow night at York.

I find an account of the meeting addressed by Dr. Porter at Guelph. And, while at Guelph, by invitation of President Creelman of the Ontario Agricultural College, Dr. Porter had the opportunity of addressing the students there. In Woodstock, by invitation of the principal, Mr. McNeil, he addressed the students of the college. And by invitation of the newly formed league in Galt, he returned in February and gave a public address upon tuberculosis. Let me read a letter written by Dr. Porter himself to Dr. Adami, the president of the association:

November 23, 1909.

Prof. J. George Adami,

331 Peel Street, Montreal, Quebec.

Dear Doctor Adami,—I have much pleasure in submitting a brief report of the work which I have been engaged in this fall.

I have held twenty-two public meetings, addressed five different colleges and normal schools, and assisted in organizing six societies (Charlottetown, New Glasgow, Windsor, Fredericton, Moncton, and one for the three counties—Pictou, Guysborough and Cape Breton), and have met with an encouraging response from the medical profession, the press and the public in this work, the average attendance being about 300 at each meeting.

In New Brunswick, the Premier was present at a meeting in St. John, and evinced much interest in the work. His government contributed recently $20,000 towards some provision for cases in that province. Dr. Walker and myself had the privilege of bringing the work before the Presbyterian Synod while it was meeting in St. John.

In Halifax, Premier Murray has also been much interested in the work. The league which was recently organized there by Dr. McCreay, of Montreal, is in a flourishing state and they are actively engaged in an educational campaign as well as in looking after a number of needy cases.

In Prince Edward Island, where eight meetings were held, both His Excellency the Governor General and the Premier expressed themselves in public as to the necessity of educating the public and in making provision for suitable cases.

I must mention the splendid series of five meetings which were arranged for me by Dr. Black, M.P., of Windsor, in the southwest portion of Nova Scotia (Windsor, Wolfville, Digby, Annapolis and Yarmouth).

At a meeting in New Glasgow a local league was formed and also a league for three counties (Pictou, Guysborough and Cape Breton), which is composed of the medical men and the authorities of the Francis Xavier College, of which Dr. McPherson was made honorary president. Under the auspices of this league, an active campaign of education is to be undertaken. They have invited me to address some dozen meetings this coming month as a help towards arousing public interest.

Altogether the work in the maritime pro-

vinces and Prince Edward Island is very promising.

In the meantime, I have the honour to be
Yours very truly,
GEORGE D. PORTER.

Now, I have been connected with the work of this association only for the last two or three years. I feel that some mention ought to be made and some credit given to the persons who have borne the brunt of the work of the association, those who formed the organization and have since helped in carrying on the work. I realize that, with my partial knowledge of the work, should I attempt to mention the names of those who are most entitled to credit in the early times of the association when it often met with discouragements—for those were days when the public interest was not manifested in the subject as it is to-day—I should omit some names perhaps as well worthy of our thanks as those whom I shall mention. Yet I desire to name some to whom the thanks of this whole Dominion are due for the time and the talent and energy that they have devoted to the work of the association. I have already stated that the association was instituted at the suggestion of the Earl of Minto. To him is due, therefore, a very large measure of credit for what has been accomplished. His Excellency Earl Grey, our present Governor General, has been and is the honorary president of the association. He has not been a mere figurehead, but has taken an active, intelligent and helpful interest in the work. He has been personally present at some of the annual meetings, has delivered addresses and has shown his sympathy in many ways, has also given many useful hints that have been of real help to the association. The association has had no better, warmer, or more consistent friend than Hon. Mr. Fisher, the Minister of Agriculture. His time has been so fully taken up with other things that it has not been possible for him to be present at all the meetings of the association, yet he has kept himself informed of what is doing, has kept constantly in touch with the work and has given the association valuable advice and information and has been indeed a real friend. I may mention also Mr. Courtney, who was treasurer of the association and is now honorary treasurer. He laboured faithfully and well in the interests of the association. I would recall also the name of Senator Edwards, one of the earlier presidents of the association. I am not well acquainted with the work which Senator Edwards did, because he has not, since I became connected with the association, taken an active part, as I understand he did in the early days. The association has had no more ardent, practical, consistent friend than Mr. Geo. H. Perley, M.P., the mover of this resolution. I will also mention the names of Sir James Grant, of Dr. Small, of Mr. Manuel, of Dr. Montizambert and of Dr. Rutherford. All these gentlemen have aided very materially to bring about the success that has attended the efforts of the association. These men, you will observe, are all of the city of Ottawa, the head office of the association is in Ottawa; it is then a matter of necessity that the persons who take a prominent part and bear the brunt of the routine work are men resident of the city. But I would call your attention to this further fact, that Drs. Daniel, Black and Schaffner, and Mr. Barker, members of this House of Commons, are on the executive of the association; and while they have not attended all the meetings they have attended many of the executive meetings of the association. The association had the benefit of their knowledge, the benefit of their suggestions, and they have been exceedingly helpful. Then I point out that prominent medical men, and prominent public spirited men outside the profession, from one end of Canada to the other, have been very helpful indeed to the work of the association, helpful by their correspondence and the suggestions they have made by correspondence, and by attending the annual meetings, and exceedingly helpful to the association by carrying on field work in the localities in which they respectively live. I want to say that the work of the association has not been a local work, it has been a work extending from ocean to ocean, a work extending from the United States border line away to the far north, farther north than the white man has yet chosen permanently to reside.

It has been a work carried on in both French and English, and many lectures have been delivered in both French and English. The literature of the society has been printed in both languages. The aim, the object of the association has been to enlighten the ignorant and to help the poor. When I say to enlighten the ignorant, I mean to enlighten those who have been ignorant of the great facts concerning this dread disease. I would say that the aim of the association has been to help the poor. The association has helped the rich as well as the poor, but in this as in every other case those most needing help have been the poor who, because of their poverty have been unable to help themselves.

The question may well be asked, the question has been asked: Why has not the work of the association been carried on by private subscription? Sir, it is just as easy to answer that question as it is to ask it. It was, I think, well answered by the hon. member for Argenteuil who moved the resolution, when he said that the aim of the central organization is to promote the establishment of branch associations. The moment you establish a branch as-

sociation you establish a centre to which of necessity must be contributed all the funds that can be gathered in that locality for carrying on the local work. The hon. member for Argenteuil has given an instance of that as relating to the work in the city of Ottawa, where local public spirited men have contributed liberally and generously to the construction and maintenance of a hospital in the city, and to other work carried on within the city. It is not possible for every local association to build a hospital or sanatorium, but in the smaller local communities, in the smaller villages and towns, in rural centres where local associations are formed, it will be their duty to see that every consumptive patient within their territory is practically taken care of in their own homes where they may be provided with proper medical care, with proper nursing, with proper food, where they lack either means or intelligence to obtain that food for themselves. It will be the work of the local associations in such places to see that sputum cups are provided, and that every possible means is taken by proper sanitary regulations in order that there may not be contagion and infection carrying the disease to others as well as to those already affected.

Sir, it has been pointed out that this government has expended over a million and a half dollars in the last five years in preventing and stamping out disease in domestic animals. No one has found fault with that, no one will. It has been a very important work, properly and well carried out. But, Sir, if it is a praiseworthy work to expend a million and a half in five years to cure diseases of horses, cattle, sheep and swine that are in the barnyards, it is at least as important and much more important to spend large sums for the cure of men, women and children who are in the dwelling houses. I want to say to you, Mr. Speaker, and I want to say to this government, that every single dollar that has been given by the government to the association has been economically, wisely and carefully spent. It has surprised me to see how exceedingly careful the expenditure of every single dollar was weighed and considered before the expenditure was ventured upon.

It may be said that if this association depends, as I admit that it does depend, almost entirely, one might say entirely, upon the government for its income—it may be said that it is really a government undertaking, and some may say, as I have heard some say around me to-night, that if the government provides the whole amount, the government might as well take over the work. But I wish to say that even though we admit that it is really and substantially the work of the government, yet I say that the work is being better carried on, more economically carried on, than it could possibly be carried on by any department of the government. Why? Because this work being carried on by a private association receives the gratuitous assistance, the gratuitous aid of clever, earnest and zealous men, aid which the government could not obtain gratuitously, and that is a very important consideration.

Further, let me say that gentlemen interested in the association recently approached the railways of the country and asked them to provide free passes for carrying to and fro the lecturers of the association; and I want to convey the thanks of the association to the railway companies for their generosity. The Canadian Pacific railway, the Grand Trunk railway, the Canadian Northern Railway Company and the Intercolonial railway have cheerfully and readily given free passes to the lecturers of the association. This effects a considerable saving that would not have been effected, and would not have been asked, and if asked would not have been granted, had the government been carrying on the work.

Now, Sir, in conclusion let me read to you this resolution recently passed at an executive meeting of the association. The resolution passed within the last week or ten days is as follows:

> That the association finds it quite impossible to carry on its work as it would like to do and feels that it ought to do, with its present small revenue. The association has endeavoured to send out over the whole Dominion, suitable literature, in the French language in the French districts, and in English throughout the remainder of the Dominion. And also to keep in the field continuously a medical lecturer, and other medical lecturers for portions of the year. The association has been much encouraged by the undoubted evidences of the splendid success of its work to date, and respectfully requests the parliament of Canada to largely increase this year the annual grant which they have been good enough to make to the association.

Now, Sir, in conclusion I have to thank the government on behalf of the association for their liberality, for their generosity in years that are past, and at the same time to ask the government, to ask parliament, to increase the grant this year from $5,000 to at least $10,000. The hon. member who placed this resolution on the Order Paper, in the last part of it, uses these words:

> This House is of the opinion that parliament should now take more active steps to further lessen the great suffering and mortality caused by this disease.

I think, although I have no authority to speak for him, that the mover of the resolution and that the Canadian Association for the Prevention of Tuberculosis will accept it as carrying out of the meaning

in this resolution if the government will be liberal enough to grant the association, for the present year, the sum of $10,000

Mr. E. PAQUET (L'Islet). (Translation). Mr. Speaker, my hon. friend for Argenteuil (Mr. Perley) deserves the thanks of this House and of the people of Canada at large.

I trust this House will not share the opinion that parliament should take more determined steps to still further reduce the great sufferings and the number of deaths caused by consumption. Yes, it is our duty to make the most strenuous efforts to reduce the rate of sickness and death caused by tuberculosis in our country. Canada loses 8,000 lives every year by that dreaded disease, while 40,000 persons are suffering with it in the various provinces of the Dominion. Allow me in view of these alarming figures to read an important page concerning the work that is being done in the state of Rhode Island to stay the progress of tuberculosis:

Despite its wealth, its strength and its prosperity, is the American nation in a position to throw absolutely away every year the sum of $430,000,000?

This is the question which is put to the public by the Rhode Island Anti-Tuberculosis Association. According to secretary Wallace Hatch, the white plague means to the nation an annual loss of $430,000,000.

This loss of money and the still more deplorable loss of thousands of lives each year will be stopped as soon as the anti-tuberculosis associations which are at work in the whole extent of this country have succeeded in teaching the people at large the essential facts relating to the cause, the treatment and the prevention of this terrible disease.

The brightest future is confronting the workers in Rhode Island. They announce a very effective work already begun and to be pursued. The state board of health and those of the leading cities are doing inestimable service to the cause. Education boards are opening schools of instruction. Hygienic rules are printed in the text books and doctors are permitted to address the pupils in schools.

Manufacturers on the other hand are contributing to the great popular movement of educating the masses by including in the pay envelopes printed rules on hygiene, by posting up useful informations in their shops and by recommending to their sick employees to report to local or nearby associations. Lectures are also delivered to the workingmen.

Ministers of the church lend their influential and benevolent support to the movement in their respective pulpits.

Many more private and public organizations do their utmost to help the authorities.

Every year this great regenerating movement in the United States which is intended to snatch the white race from this plague that strikes at the country's vitals and open up every year so many thousands of graves for youthful victims is making immense progress. The future of the nation is at stake. The work will only stop when the last man, the last woman, the last child in the country will have intimately identified himself with it, and when the last track of tuberculosis has for ever vanished from the American soil.

We must for the sake of humanitarianism and in the interest of the people of Canada follow that wise advice and we will be able thereby to maintain our nation to the fore among the other nations of the world We join in the generous work accomplished by our elder brothers. Our doctors attended the anti-tuberculosis congress held at Washington in September, 1908. Medical men and the public at large in the city of Montreal are not indifferent to modern progress, and they endeavour to battle against the fearful foe. I read the following lines in the "Union Médicale du Canada" of December 1, 1909:

On November 29, 1902, a number of gentlemen prominent in the world of finance, industry and commerce, as well as in the professions, informed on the one hand with the means employed in the various countries for the prevention of tuberculosis and on the other, feeling justly alarmed at the ravages of the disease in our city, founded in a public meeting held under the patronage or his Excellency the Governor General of Canada an association for the protection of the people against consumption. . .

Then the "Union Médicale" shows the happy results which crowned the efforts of those real philanthropists. Quebec city has also organized an anti-tuberculosis association, but this government must not remain idle. Here is what Dr. Rousseau said at the medical congress held at Three Rivers:

The government cannot remain indifferent in presence of the greatest social evil which exists. We do not expect them to do all that is to be done but we do expect them to do their share of educating work. Their imperative duty consists in spreading information and helping every anti-tuberculosis movement.

The rector of Laval University at Quebec, wishing to help in fighting the awful disease, invited Dr. Rousseau, in March, 1909, to deliver a lecture at the University on the nature of tuberculosis and the conditions in which it will develop. Allow me to read the last page of his lecture:

You cannot think nowadays of insolating the consumptive, of tearing him violently away from his surroundings before his sad death.

But let assistance be tendered them; let some guidance, some help be extended to them in the fulfilment of their arduous duties towards their kindred and towards society; either in a sanatorium, in a hospital or in their own homes, properly isolated, let them find conditions of comfort and safety which are not generally available to such patients. That is what we are in a position to do and what we should do; there lies the way out, provided generous contributions are forthcoming.

But we prefer dickering, dilly-dallying in the hope perhaps, a vain hope for the time being at any rate, that some great cure, some anti-tuberculosis serum will be discovered, though there is not the least foreboding of such a discovery.

Now, when there are available to us efficient means of protection, it is unfair and unwise on our part to neglect them and be content with beseaching the medical profession to effect some wonderful discovery for our protection. Thus are we courting sad disappointment. Wealth, indeed, is more frequently met with than genius.

The government of the province of Quebec has appointed a royal commission to look into the means of preventing the spread of tuberculosis. I anticipate satisfactory results from the findings of that commission. However, if we are truly anxious of wiping out all traces of tuberculosis from our Canadian soil, we should close our doors to tuberculous immigrants. To attain that great object, to meet the wishes laid down in the resolution introduced by my hon. friend from Argentueil, we should adopt better methods of inspection as regards immigrants. Men in good standing attach great importance to the medical examination as now effected at the shipping port. What reliance should we put in such inspection?

In the month of August, 1906, inspector B. Smith, of the Ontario charitable institutions (Report for 1908, page 16) noticed on a steamer a poor tuberculous immigrant who could hardly walk. Of course, such an immigrant, on the verge of death, could not be admitted. He was deported by the authorities and died on reaching Glasgow. If the steamship company's medical officer had thought of casting an eye on that poor man, he would not have permitted him to board the ship. Disease was fast carrying away that immigrant, heartbroken and disappointed as he was. The whole system is a downright mockery. I have evidence from the best sources to uphold me in this. According to Doctor D. Pagé, immigrants at the shipping ports in Europe are subjected to a superficial examination only. According to Dr. Bryce, the inspection effected at the shipping ports does not differ from the ordinary routine of the steamship companies.

The Immigration Act provides that all persons suffering from contagious or infectious diseases shall be excluded. Consumption of the lungs which represents the last phases of tuberculosis, should certainly be included among the diseases of a contagious and infectious character. The laws of the United States specially mention tuberculosis, and rightly so. Now on May 10, 1909, the hon. member for Lennox (Mr. Wilson), requested that the Minister of the Interior should make provision for the exclusion of tuberculous immigrants. The hon. minister's answer was rather startling: 'We all admit, he said, the advisability of excluding those who are suffering from tuberculosis, but its diagnosis is a difficult matter at its various stages, and we would be imposing on the department a task which they could not fulfil in a satisfactory manner.' I deplore this woeful expression of opinion, this extraordinary stand on the part of the minister.

As regards the greater number of immigrants sent to Canada by charitable associations, the trade carried on, the air breathed in the factories, the overcrowding in tenements, poor ventilation, scarcity of light and suitable food are so many factors concerning which the authorities should exert the closest supervision. The proportion of people affected or dying from tuberculosis in British cities, whence thousands of immigrants come to Canada, is very high. Such immigrants should be submitted to a very searching examination of the respiratory organs.

In 1906, at the meetings of the anti-tuberculosis association, Dr. Pagé submitted an interesting paper on tuberculosis from the standpoint of immigration. He showed how dangerous was the situation and tried to indicate a remedy. Indeed the members of the association at once appointed a committee to interview the hon. Minister of the Interior. The latter promised to take the most energetic steps towards excluding tuberculous people. Notwithstanding which, on May 10, 1909, the hon. minister refused to include tuberculosis in the list of diseases entailing exclusion.

Tuberculous immigrants are coming in. Dr. Pagé, in the course of the civil service investigation spoke as follows: 'A certain number of tuberculous immigrants may escape our attention. The disease is difficult to diagnose at its inception, and we have not enough time at our disposal to make the required examination'. Such a startling statement points to the absolute insufficiency of our system of medical inspection. In the crusade we are waging against this most disastrous disease, it is to the government we must appeal for guidance and help.

The hon. Minister of the Interior taking heed of the progress of scientific discovery, should lay down as a rule the exclusion of tuberculous immigrants. He should increase the number of our medical inspectors at all large ports. He should promptly adopt a system whereby these medical men would be in a position to carry on careful examinations with the object of detecting any incipient case of tuberculosis. I am aware that the diagnosis of that disease is not always an easy matter. Certain forms evolve insidiously, and little by little leave an impress on the organism. However, tuberculous people cannot readily escape detection by competent physicians, provided

the latter have enough time allowed them to permit a thorough investigation. In March, 1908, Dr. Bryce seems to think that the difficulties in the way of diagnosing cases of tuberculosis were sufficient to excuse the introduction of tuberculous immigrants into Canada. He even went so far as to quote high medical authorities with a view to proving that such diagnosis in a great many cases can be obtained only at an advanced stage of the disease. The stand taken by Dr. Brice seems to me most regrettable as regards the selection of immigrants. According to the most renowned clinicians, the diagnosis of incipient tuberculosis can be obtained by a series of clinical symptoms and phenomena following the injection of tuberculine. At the very outset, that is in the stage of primary development of the tubercles, the physician who undertsands auscultation is in a position to diagnose a case of tuberculosis. Through the use of the microscope and a knowledge of bacteriology, and by means of the X rays, cases of that disease may be diagnosed at the outset. The possibility of detecting incipient cases of tuberculosis imparts great practical interest to the examination of immigrants. We are sadly at fault when admitting tuberculous immigrants into Canada. Not only is there danger of contaminating the present generation of Canadians, but also of transmitting this tuberculous taint to future generations.

An incomplete, insufficient medical examination is apt to give the worst results. Tuberculous immigrants begin by contaminating some of their fellow-travellers on board ship. Then they contaminate people with whom they live in Canada, and imperil the health and existence of the whole community. Previous to 1904 there existed no systematic inspection of immigrants. The government then recognized the necessity of medical intervention with a view to ascertaining what immigrants were possessed of sufficient brains to understand the working of our institutions and live in harmony with our people, while helping on our national progress. That was a step in advance; however, legislation is still very imperfect. If we really have at heart our country's welfare, we are bound to improve our methods of inspection, in such a way as to exclude all tuberculous immigrants.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, I would not address the House at this late hour were it not that by remaining silent I might be misunderstood as either opposed to the resolution or not sufficiently interested in one of the most important subjects that can at any time engage the attention of the Canadian parliament. The knowledge that medical men have of the ravages of this disease and the possibility of curing hundreds of thousands of cases, in addition to relieving the sufferings of a very large number, lengthening their lives and minimizing the danger of their presence amongst others, is such that no medical man can be indifferent to this very important question. There is equally good work open for us to do, whether it is by education, by hygiene, by prophylaxis, which is preventing, or by providing better food for the people. It is sufficient to engage the philanthropic attention of the best minds, not only of the medical profession to-day, but of any class of people in the community. It is said: How can we, the Canadian parliament, assist in this good work? It is claimed by some that it is not within our province to assist this work. This association aims purely at the dissemination of information. When has parliament disclaimed its right to give assistance in disseminating knowledge? Never. Since I came into the Canadian parliament or so far as I am aware before that time, it has never been claimed that it was unconstitutional or improper for this parliament to aid in the dissemination of information. We give money for the dissemination of information in a great many lines outside of that which claims our attention to-night. Many years ago we accepted the principle and voted yearly $2,000 for the purpose of publishing a health magazine, or a bureau of statistics and health for the purpose of dealing with sanitary subjects. That was kept up for many years under Dr. Playter, and I do not think any one complained at the giving of that amount of money nor was it considered that there was not an ample return to the country for its expenditure. I claim that parliament can spend money for any purpose it likes, there was no interference with our right either in the British North America Act or any other Act. We can subsidize anything we desire, we can give money for any purpose we wish. We subsidize the building of railways by money grants, we give money to steamships, we vote money to employ lecturers to instruct the farmers with reference to diseases of plants, grain, fruit and all vegetable diseases. No one objects to this nor does any one say it is wrong. We give aid to lectures to the farmers with regard to the diseases of animals, and why can we not as well vote money to disseminate information with regard to what is above all these others in importance, the health of our people. If we vote money for these purposes in relation to plants and animals, why can we not do it in the interest of the great human family? It is said that from 8,000 to 10,000 die annually of this disease in Canada. If we can do anything to lessen that number, surely a donation of money is not out of place. We may lessen the death rate by disseminating knowledge, teaching the peo-

ple how to prevent and combat that disease. If you educate people so that they will understand how to prevent consumption, how to care for themselves by better hygienic surroundings when affected by it, how to isolate themselves, you will go a long way towards lessening the death rate from consumption. But we can go further and educate the people to care for themselves from a sanitary and dietetic point of view, teaching them the value of fresh air and of favourable surroundings. To my mind if we gave instead of $4,000 or $5,000, a couple of hundred thousand, not one word of complaint would be heard in the country. But we must do more than educate, we must prevent it if possible. It has been said that the Indian cannot bear civilization, he dies off when you civilize him. What is meant by civilization? Taking him out of the wigwam, removing him from his outdoor life, and placing him in a close sealed house. The result is that consumption carries off thousands of Indians, and if the Indians were compelled to live in the same kind of lath and plaster house that the white man lives in it would be only a few years until they would be wiped out. Why is it so few Indians die when living a nomadic life? Because the fresh air, by vitalizing the blood, prevents the development of the bacilli favourable to tuberculosis in the human economy.

We must check consumption by supplying pure food. We must go beyond the disease among human beings and secure immunity from the disease in animals as well. In a report of the United States Department of Agriculture for 1905, I find some statistics bearing on this which are of importance to us. We eat a great deal of beef and pork in this country. The United States Department of Agriculture state that out of 25,000,000 hogs slaughtered in one year in the United States, 217,000 were affected with tuberculosis. Out of 6,000,000 cattle 11,000 were affected with tuberculosis but out of 8,000,000 sheep only 27 were so affected. That is only one sheep in every 295,550 was affected with tuberculosis whilst amongst the cattle there were 555 in every 291,000 and amongst the hogs there were 2,390 affected with tuberculosis in every 291,000. Ought not this to teach us a very important lesson—that we are eating very much of that kind of meat which has in it the greatest elements of danger to the human family, and that of the three kinds of meat, mutton and lamb are what we should prefer if we desire to avoid that danger. We must attack this disease not only by education, but by building up a stronger and more vital physical constitution in the people, because the stronger the constitution the less liable it will be to the inroads of the disease. This is the reason for the importance of supplying the human family with good food, whether it is butter, meat, cheese or milk, in all of which the tuberculosis bacillus is found. The fact that thousands of infants are fed on milk which is largely tuberculous means that if these children grow up to manhood and womanhood they will have less vigorous constitutions to resist the disease than those who have been fed on pure food. How important it is, therefore, that we should attack tuberculosis in the dairies and in the herds of cattle and swine as well as in the human economy. In all of these directions we should spend money freely. A few years ago I asked the Minister of Agriculture if he had made any calculation of how long it would take to eradicate tuberculosis from the herds of our country. I do not remember what his answer was, but one who knew whereof he spoke said that we could eradicate it in a few years if we were willing to pay enough money to do the work. How valuable this would be to the many thousands of young children who live largely or chiefly on milk. This subject is too important to be set aside by any quibbles about our constitutional rights under the British North America Act. That Act does not stand in the way of our doing our duty in this matter. We build marine hospitals which will harbour tuberculosis patients as well as others. We can grant money for technical education to the farmer and the horticulturist. Why can we not grant money to educate the men who look after the health of the human family? In my judgment we can do it, and I hope the Minister of Agriculture will give the House an intimation to night that the government have reached the conclusion that there is a valuable work in this matter that can and should be done, and that towards that work they are prepared to give adequate assistance.

Hon. SYDNEY FISHER. Mr. Speaker, let me first congratulate the proposer of this resolution not only on the manner in which he has presented a complex and important question to the House, but also on the untiring enthusiasm and industry which he has displayed for many years past in presenting the question to the public of Canada as well as to the House. I also wish to join with my hon. friend from Grey in saying a word of praise and congratulation to the members of the Canadian Association for the Prevention of the Spread of Tuberculosis. The gentlemen who have been engaged in this work have been doing sometimes a very discouraging and sometimes, as it appeared to be, a thankless work. But they have persisted in their efforts, until at last I think they have been able to show a measure of success which calls for the recognition and gratitude of the people of the country. In speaking on this question, let me at once, in response

to the appeal of my hon. friend from Grey, say that I wish to support the resolution, and I hope the House will adopt it with unanimity so as to show to the people of the country that this House fully realizes the importance of and entirely sympathizes with every method that can possibly be adopted for stamping out this very dangerous malady. I am prepared to say that as no new step is asked of us by the present motion, I believe the government will be ready to recognize the appeal of the House and ask for further aid for the Canadian association. In doing this we are adopting no new plan or taking no new step which might bring us into conflict with the constitution or with the provincial authorities. I am glad that on this occasion the debate has taken that course. I am glad that we are not asked, as we were on a former occasion, to do something that we could not see our way to doing. My hon. friend from Souris (Mr. Schaffner) quoted some remarks of mine made five years ago. Well, I have no objection to my remarks being quoted, although five years have passed, but I would like to point out to my hon. friend that I was then discussing a totally different proposition. We were then being asked to grant aid for the establishment of sanatoria in Canada—to do something which by the British North America Act is in definite words relegated to the provincial authorities. I do not wish to discuss to any great extent the question of the British North America Act, but I must confess that I am not as prepared to trespass upon the special purview of the provincial authorities as my hon. friend from Argenteuil seems to think we ought to be. I do not consider that the illustration which he gave of the man in the burning house offending against a technical ordinance was a good one, because the question of the powers relegated by the British North America Act to the provincial authorities and to this parliament respectively is in no sense technical.

When that Act was drawn up those things which were more local in their character were placed under the control of the provinces and those things which were of a more general nature were entrusted to this parliament. I have no hesitation in believing that the framers of that legislation, after careful consideration and study, have given good reason for the disposition of the items in that Act. Under these circumstances I hesitate to undertake to overstep the bounds of the authority of this parliament and to enter the provincial sphere. The question of education and the question of the action of my own department has been cited here to-night, but I would point out to my hon. friend from Marquette (Mr. Roche) that when the Agricultural Department undertakes to deal with agricultural subjects it is not dealing with what is technically called education. Education as I understand it in the terms of the British North America Act, is the education of the youth of the country, and not the giving of information to the grown people who are engaged in our various industries, agriculture among the number. The department over which I have the honour for the moment to preside has not in any way undertaken the education of the young people of the country by means of schools or colleges. What it has done is to conduct experiments in agriculture and to place the results of these experiments before the people for their benefit. There is a well-defined difference between that sort of work and the education of the youth. I would say, further, that the work of the Department of Agriculture is very similar to the work of the association for the prevention of tuberculosis, and I am, therefore, quite at one with the movement to have this government grant any reasonable request for circulating information calculated to check the spread of disease. I am glad to know that the provinces have fully recognized their responsibility in regard to hospitals or sanataria. Several of the provinces have already established these hospitals and my friend from Souris (Mr. Schaffner) has sent me photographs of a very beautiful and I am sure complete and well equipped sanatorium at Ninette, in Manitoba. I know that the province of British Columdia has established a sanatarium and I think the province of Nova Scotia has done something of a similar character. My hon. friend from L'Islet (Mr. Paquette) told us that the government of the province of Quebec has not yet established a sanatorium, but that it has appointed a commission to investigate tuberculosis and to furnish information as to how that province may best deal with this dread disease. The provinces, therefore, are meeting their responsibilities in this respect and I do not think it would be at all advisable for this parliament to overlap the work they are doing or to try to duplicate it. Let me say a word with regard to what we are doing in reference to the health of animals. Some hon. gentlemen have drawn the conclusion that we are spending much more money on the health of animals than we are for the health of the human being, but I would like to say here at once that every cent spent in Canada for the health of animals is really spent for the health of the human being. We are looking after the animals because we want to ensure that the human being may be certain that the meat he eats, the milk he drinks and the products of the animal which he consumes shall be wholesome. Of course, the regulations in regard to the treatment of animals for disease are very much more simple than they could

possibly be in the case of the human being, because, in the public interest, we can slaughter diseased animals where that becomes necessary. Of the money expended in the last few years in connection with the health of animals, about $700,000 has been paid as compensation for animals slaughtered, and that for the purpose of seeing that disease is not spread which is inimical to the human being. It is true that the Department of Agriculture deals with quarantine, but when you compare the money spent for the health of animals with the money spent for the protection of the health of the human being, you must eliminate from the former the large sums which are paid as compensation for the animals killed. Even in that view I reiterate that the money spent in connection with the health of animals is spent for the benefit of the health of the people of the country and not primarily or essentially for the protection of other animals against disease. Let me say that I do not believe there is any other country which can to-day present such a clean bill of health for its domestic animals as Canada can. In this connection I feel it my duty to take up the cudgels in defence of the Canadian cow. There is a tendency abroad to lay pretty nearly all the tuberculosis in the country to tubercular milk. Well, I have made a good deal of investigation and I have studied the question carefully, and from the information I have been able to get I am prepared to say that not 10 per cent of the tuberculosis in Canada can in any way be traced to the consumption of tubercular milk. There is the tuberculin test which can be applied to animals and that will test the presence of tuberculosis in any form in any part of the animal, but we have shown conclusively from experiments that the milk from a tuberculous animal in numberless instances contains no active germ of tuberculosis which could possibly communicate tuberculosis to any human being who drinks it. There is this unfortunate fact, however, in connection with the tuberculin test, and it is the chief weakness of the test, that while the test almost absolutely shows whether there is any tubercle in the animal it does not show where the tubercle is nor the extent of the tubercle, and especially it does not show whether the tubercle in the animal can affect the purity of the milk or on the other hand the presence of disease germs in it.

Under these circumstances, while the tuberculin test does place any animal that reacts to it under suspicion, and though that animal may have in its udder and in its milk the germs of tuberculosis which may infect the person consuming that milk, the fact that the animal reacts to the tuberculin test is absolutely no proof whatever that its milk will be dangerous to a person drinking it. Personally, I would not drink the milk of any animal that reacted to the test because I would wish to spend my money rather upon safeguarding myself than in the purchase of cheaper milk that was not so safeguarded. At the same time it would be the height of folly, and I think it is to-day a mistake for people to believe or expect that the animals should be slaughtered simply because they have reacted to the tuberculin test. I state this with a full sense of my responsibility in so doing. I say it because I have studied the question for many years and because I have had experience of the disease in my own barns and my own herds, and I have seen the effect of it in other herds. Also, I have been in charge for thirteen years of the experiments of the scientific veterinaries who have examined into this question continuously ever since I entered office as minister. I wish to say further that, at present, we are trying to find some method, some sensible, practical method, not too extreme, not unnecessarily severe on the owners of stock, by which we can deal with tuberculosis among cattle, among cows especially.

Mr. SPROULE. Does not the minister think he should attach more importance to the danger of drinking milk that may be infected with tuberculosis? What does he make of the experiments of Senator Edwards? Senator Edwards took calves from cows affected with tuberculosis and, from the first, gave them pure milk from other cows, and, as I understand the matter in discussing it with the senator, not in one case did he find the tuberculosis present in the young animal. Is it not likely that milk is one of the means by which the disease is transferred from the dam?

Mr. FISHER. I think the hon. member has misunderstood me. I said that personally I would not drink the milk of any animal that reacted to the tuberculin test. That animal is under suspicion. But I know, from abundant experiments, that the milk of a great many animals that react to the tuberculin test does not contain the germs of tuberculosis. If the milk does contain the germs of tuberculosis, of course it is dangerous; but the fact that a cow reacts to the tuberculin test is absolutely no proof that her milk will contain tuberculosis germs. Do not let me be misunderstood. I do not wish people to cease trying to remove tuberculosis from the cows of the country. I think that every means ought to be taken to accomplish that object, so long as we step on sure ground. But to undertake the slaughter of innumerable animals without being perfectly sure that their slaughter is necessary for the health of human beings would be folly and a wrongful waste of a great asset of the people of Canada.

I was going to say, when I was interrupted, that at a meeting of the North American Veterinary Association last summer, Dr. Rutherford, the chief veterinary officer of my department was present, and he secured the appointment of a joint committee of American and Canadian veterinary surgeons, which committee is to meet, I think, this week in Buffalo for the purpose of trying to elaborate a practical, sane treatment of cows for the purpose of minimizing tuberculosis in our herds. I hope and believe that a scheme will be elaborated by that body of men, probably the best experts on that question to be found anywhere, and that it will be able to present shortly to the department at Washington and to my own department a scheme for practical steps to further reduce tuberculosis.

Now, I began a few minutes ago by saying our herds were healthy, that we have not a very large percentage of cattle or swine in Canada affected by tuberculosis, and hardly any sheep so affected. We have had, for some years past, a very strict system of inspection of all the meat packing establishments in Canada which are engaged in the export trade. Our veterinary surgeons have carefully examined every animals carcass taken into these establishments, and the percentage of rejections and condemnations for tuberculosis is so small as to justify absolutely what I have said. I have not before me the exact figures, but my recollection is that in the case of cattle the rejections are less than two per cent, and in the case of hogs less than five per cent. The animals slaughtered in these establishments come in from all over the country, without any inspection before they arrive, and without any selection, and yet only a few of them are condemned for tuberculosis. Every carcass in the slightest degree affected by tuberculosis is condemned. Under these circumstances, I think I am justified in saying that the animals of Canada are exceptionally healthy and that the danger of communicating tuberculosis through food is not great. I have further the opinion of doctors and others who have discussed it with me that not ten per cent of tuberculosis is contracted through drinking any milk in Canada.

Now, let me say one or two things in regard to the requests made of us. I think it was my hon. friend from Argenteuil (Mr. Perley) who spoke of the good we could do in the way of registration and notification. That is a matter, I think, purely local and municipal, and we can hardly entertain it or deal with it. I am glad that in this debate there has been no suggestion, as there was in former debates on the subject, that we should undertake to build or aid the building of sanatoria. It is true that years ago when this question came up I objected to our undertaking the work, and I am glad that the whole tone of the debate to-day has justified that stand. The whole debate to-day shows that the matter is now regarded as one coming within the domain of provincial authority.

I desire to pay a tribute to the high order of this debate. The medical gentlemen have given us a great deal of very valuable information, information which I think ought to be placed before the public. I do not think the association can do any better work than to distribute all over Canada copies of the 'Hansard' containing this debate. My hon. friend from Marquette (Mr. Roche) interested me a great deal with the information he gave us as to what is being done in Germany. I will say this for the continental nations of Europe, that in dealing with the welfare of their people they are very thorough, they go to the root of things, and do not hesitate to pass rules and regulations which we would consider somewhat drastic, and perhaps which western peoples would not like to submit to. I believe this association has done a great deal in stirring up the people to the necessity of vigorous effort in combatting the disease of tuberculosis. I agree with the hon. member for Grey (Mr. Miller) that it is better that this work should be done by an association of citizens rather than by a department of the government. I cordially admit what the hon. member for Grey has said, that the association has spent their money wisely, carefully and economically. I congratulate the members of the association on their administration of the money that has been entrusted to them by parliament, and I have no doubt they will expend with equal wisdom and economy any further funds that may be granted them.

There is another point I would suggest, although it is a matter coming under the domain of the provincial authorities, and that is the problem of dealing with tuberculosis in public schools. That is a very serious problem indeed. It is certainly a hard thing to say that tubercular children must be excluded from the public schools. That cannot be done in any community without proper provision being made to secure to such children just as good an education outside the school as they could obtain within it. At the same time, it must be recognized that their presence is a menace to the health of other children, and as I say, it is one of the most painful problems that confronts us in connection with this disease. I believe, however, that in the erection and enlargement of our public schools, if more attention were paid to ventilation, more cubic air space were provided, as we know that plenty of fresh air

is extremely essential to the health of children, a great deal of danger would be removed, at any rate the danger would be minimized and, the general health of the pupils would be improved. Ill ventilation, over crowding, shutting out of the school room the cool fresh air of Canada, which is one of the best heritages we have, all these things contribute to the spread of tuberculosis among children.

Now if the House will bear with me, I would like to relate an experiment which we have been conducting with cattle, and it affords a lesson which might be of use to human beings. About four years ago the herd of cattle on the Nappan experimental farm contracted tuberculosis. It spread very rapidly through the barns, and in a few months practically all the animals were affected with tuberculosis. Dr. Rutherford wished very much to try an experiment with regard to the outdoor treatment of the animals. We brought the herd up here, and established them across the river in an isolated place nearby, where we kept them out of doors altogether for four years. Every animal was diseased when it came here. We added to the herd some other healthy animals, but no one of the healthy animals contracted the disease. Of the calves that were born to the diseased animals, born out of doors in healthy surroundings, and fed on their mothers' milk, not one was diseased. They are to-day healthy animals. I have no doubt whatever that the spread of tuberculosis amongst the dairy herds of this country is almost entirely due to the confinement in which these herds are kept, and that better ventilation of stables, byres more cleanly kept, with more sunshine and more light, would contribute more than anything else to the eradication of the disease from the herds. Of course these conditions are equally necessary, if not more necessary, to human beings. They are necessary in public buildings, they are necessary in private buildings, in schools perhaps first of all, and in all public buildings belonging to the government. One hon. gentleman spoke about what we should do in regard to our public service. I sympathize with that view. The Civil Service Commission created a couple of years ago had that very question under consideration and no doubt in the near future an improvement may be made in that matter as regards the Civil Service. I will close by saying that I hope the House will pass this resolution unanimously. I can assure the House that the government is quite disposed to do all it can within its sphere in order to strengthen this campaign against tuberculosis.

Mr. PERLEY. As no one else wishes to speak, I may say that I appreciate highly the way in which this resolution has been received. I need hardly say I had no intention of treating the British North America Act with disrespect, or lightly, in any way; certainly I desire to live up to it as much as any other member of this House. I was only arguing that what we wished to have done would not in any way interfere with it, either technically or otherwise. With regard to sanatoria, and the remarks of the Minister of Agriculture five years ago, I simply call attention to the fact that the resolution of five years ago made no mention of sanatoria, it was merely an academic resolution.

Mr. FISHER. But the debate did.

Mr. PERLEY. It was an academic resolution, but I think that certain hon. gentlemen mentioned the building of a sanatorium. I quite acknowledge that under the British North America Act it would not be wise for this government, at the present time, at all events, to take any steps in that direction. I do not ask for it. I am very glad that the government has accepted this resolution and I simply conclude with the hope, after the kind words the Minister of Agriculture has spoken on this subject, that we may expect in the supplementary estimates a reasonable increase in the grant for this important work.

Motion agreed to.

Mr. FISHER moved the adjournment of the House.

Mr. SPROULE. I suppose the budget to-morrow?

Mr. FISHER. The budget.

Motion agreed to, and House adjourned at 11 p.m.

HOUSE OF COMMONS.

TUESDAY, December 14, 1909.

The SPEAKER took the Chair at Three o'clock.

THE SAVINGS BANK ACT—AMENDMENT.

Mr. G. BOYER (Vaudreuil)—(Translation)—moved for leave to introduce Bill (No. 76) to amend the Savings Bank Act. He said: The object of the Bill is to promote the opening of branches of banks in the rural municipalities, namely, to empower the Postmaster General to cancel the existing savings banks in the localities where they are already established and where the funds deposited in those savings banks would be sufficient to warrant a bank in opening a branch on a similar basis as the branches established elsewhere.

Motion agreed to, Bill read a first time.

THE CANADA SHIPPING ACT—AMENDMENT.

Mr. G. BOYER (Vaudreuil)—Translation)—moved for leave to introduce Bill (No. 77) intituled: 'An Act to amend the Canada Shipping Act.' He said: The object of the Bill is to enlarge the power of the Minister of Marine in granting certificates of competency to masters and mates of ships trading on the inland waters of Canada.

Motion agred to, and Bill read first time.

AMENDMENT OF RULES OF THE HOUSE.

Sir WILFRID LAURIER moved:

That a special committee of nine members be appointed, with instructions to carefully examine the rules of the House, to report what changes in their opinion might be adopted with the view to simplify, accelerate and expedite its business; and that the said committee be composed of Sir Wilfrid Laurier, Mr. Brodeur, Mr. Pugsley, Mr. McKenzie, Mr. Carvell, Mr. Borden (Halifax), Mr. Haggart (Lanark), Mr. Barker and Mr. Doherty.

He said: I do not think this motion requires any explanation. There seems to be a general opinion on the part of the members of this House that our rules can be improved in some particulars; and, after a conference with the hon. leader of the opposition (Mr. R. L. Borden), I propose this committee of nine members to consider the rules with a view to amendment.

Mr. R. L. BORDEN. I see no objection whatever to the appointment of this committee and to some revision of our rules. I do not know that there is anything in present conditions that especially calls for amendment. I do think that some time might be saved in our proceedings, particularly in the answers to questions. Sometimes we take up an hour or even an hour and a half with answers to questions which are inaudible to about nine-tenths of the members of the House and are not really available to any member until next day. I think that our rules might be well amended in this respect. On the other hand, I do not believe that any amendment of the rules will avoid what is sometimes called waste of time. In a deliberative assembly composed of over 200 members, there will be a certain waste of time so long as human nature remains what it is; no revision of the rules will prevent it. We must also remember that parliament is a place for debate and discussion, as its very name implies. It is proper that every member of the House should have reasonable opportunity to discuss any matter that he thinks is in the public interest. It would be very undesirable to bring about any condition of affairs in which that would not be practicable. So far as the working of the present rules is concerned, I would point out that last session, which occupied exactly four months and in which a considerable amount of work was done is proof that under the rules as they are at present, the House of Commons has done and can do its work within a reasonable time. However, for the reasons I have given, and especially in view of certain amendments which I think might properly be made, I concur in the motion of the Prime Minister.

Mr. W. F. MACLEAN (South York). I hope that this committee will in no way attempt to interfere with the liberties of parliament, and especially with the liberties of individual members of this House. In the United States to-day, we see that the popular chamber has lost its liberties, and has passed under the domination of a speaker who is now known as a czar, and consequently that chamber, which should have been the model chamber throughout the world as a place of debate, has lost its prestige and its power, that power having passed to another body. I do not wish to see a repetition of that history in this country. We have revised our rules to a certain extent with the result that business has been facilitated. I am glad to see business facilitated, but I put in a protest now against any interference with the liberty of this House and the right of free discussion. It is a great right, and if we once part with it we may not get it back. The liberties of this House have always been upheld—at least, so I have read—by the Liberal party, and I hope that that party will be the last to in any way interfere with those liberties. Let us simplify the rules if we can, let us make shorter speeches if we can, let us have questions answered in some other way. For instance, petitions that are presented might just as well be put into a receiving basket on the table; I have seen 15 minutes of good time occupied in presenting petitions. The reading of petitions and all those things could be eliminated, and in that way facilitate business. But I do trust that this House will preserve every liberty of free discussion and of raising questions, and that they shall not be parted with in any respect.

Mr. FOSTER. I would ask the Prime Minister if this has any wider range than simply taking up the present rules and revising them. Does it go so far as to inquire into the making of any improvements with reference to the work of the committees of the House, as to their number, and the like of that? An intimation made by the Prime Minister some time ago when another question was being debated here, would lead me to think he had that in view. I wish at this stage to say, that whilst I have no

objection to any elimination of what is useless in the House, any abbreviation of what now may be somewhat too lengthy, I for one have no idea at all of submitting without protest to any of the well defined liberties of this House as a parliamentary body being infringed upon.

Mr. HUGHES. It is true that on going into Committee of Supply every member may raise any subject in order and discuss it. But going into Committee of Supply is a very irregular procedure. So far as I am concerned, I heartily concur in all that has been said as to the necessity of preserving liberty of debate in this House, and I would impress upon that committee the view I hold, at all events, and I think it is in the interest of parliamentary procedure and of the country at large, that there should be an opportunity on any occasion, even though the House be not going into Committee of Supply, to discuss freely matters relevant and important to the country. I trust that in revising the rules there will be no attempt to curtail the liberty of debate, or to hamper members from expressing in a proper manner the views they may wish to utter concerning the welfare of the country.

Mr. SPROULE. Rumours have been prevalent for some time past in the government press that the government intended to revise the rules of the House at an early date, and to introduce what is known as the closure. I would like to ask the First Minister if that is the intention in this revision of the rules. I would like to say that so far as I can judge the temper of parliamentarians generally, they regard the freedom of debate as one of the dearest rights of the representatives of the people, and if any attempt is made under the guise of amending the rules to prevent the freest discussion of all public questions, I can only say that in my judgment the government will invite a good deal of trouble.

Sir WILFRID LAURIER. I can assure my hon. friend (Mr. Sproule) that the government has no intention of using the majority now supporting it in this House to curtail any of the rights and privileges of members of this parliament. We prize them as highly on this side as hon. gentlemen do on the other side. I propose that the rules of the House be referred to this committee in order to have a discussion upon them, particularly by those minds in the House who I think are the most entitled by their long experience to give a practical opinion. If it had been the intention to introduce at once what my hon. friend calls curtailment of the privileges of parliament, we might have done it as it has been done in England, though I do not think it was a curtailment of the privileges of parliament. There is such a thing as abusing the privilege of debate, as there is of abusing everything else. In asking for a committee of this kind, we want to have a discussion on the subject with a view to arriving at a unanimous conclusion on such matters as we can, though there may be some other matters as to which we may not agree. But when we come to the discussion of the report of the committee, it will be time enough for the House to make up its mind.

Motion agreed to.

EXPULSION OF A CANADIAN FROM GERMANY.

Mr. BURRELL. I desire to invite the attention of the Prime Minister to a despatch which appears in the Ottawa 'Free Press' of yesterday:

A despatch to the New York 'Herald' from Dresden says:

The Canadian colony here wants the British minister resident to make representations in the Scott case. Mr. Scott, who was a Canadian student, was expelled from Saxony after paying a fine for an alleged attack upon a peasant. Mr. Scott said he acted in self defence, but he paid the fine. The order of expulsion was in the nature of an alternative—leaving or going to prison.

Freiberg students, when the order of expulsion was issued, telegraphed the London Foreign Office, asking what could be done, to which the reply came:

'Consult the British Consul at Leipsic, who is in charge of the Freiberg district.'

Up to the present no single official step in the shape of a protest has been made. Mr. Scott had to leave on Wednesday morning. Mr. Irvine Roberts, of Toronto, a solicitor now here, says British subjects appear to be absolutely without protection in Germany because the consuls are German themselves and are disinclined to prejudice themselves by strong action. An American citizen could not be so arbitrarily expelled without a vigorous 'kick' from Washington.

Then we have another despatch to the Canadian Associated Press, which appears this morning to the following effect;

Berlin, Dec. 13.—A Canadian student, G. S. Scott, Toronto, having received notice of expulsion from Saxony after being convicted of inflicting serious bodily injury on a peasant, some fellow students appealed to the British Foreign Office to intervene. The British of Cologne and Dresden also entered a protest, but the British Consul General says he has received no information enabling him to intervene.

Now, Mr. Speaker, if the press reports I have read are substantially correct, I think the case is well worthy the attention of this government. Some of us personally have had occasion to take knowledge of the bureaucratic methods in operation in Dresden, particularly, and in other German states, where a man can hardly invite

a friend to come and see him without the whole transaction being bared to official eyes. It is a singular fact in connection with this despatch, that in looking up the Foreign Office list, I find that something like fifty per cent of the consuls general and vice-consuls are German, and in the particular case referred to, the consul general at Berlin is Paul von Schwabach and at Leipsic Baron von Tauchmitz. Now, we are accustomed in Canada very frequently to assert our pride of birth and our dignity as a Canadian state, and also to assert sometimes very strongly the foremost position we occupy in the councils of the empire. We had a little while ago a very dramatic recital——

Mr. SPEAKER. The hon. gentleman has no privilege at this time to discuss a question.

Mr. BURRELL. Then I ask the privilege. I was just going to remark that we had a very dramatic recital of an episode that occurred in Rome, given to us the other day by the Prime Minister, and which bears on this very subject; because if it is a fine thing to be protected by the British flag in Rome, I think Canadian citizens have just as good a right to be protected in any other foreign country. I trust the government will look into this matter.

THE AUDITOR GENERAL'S REPORT.

Mr. R. L. BORDEN. I would ask the Prime Minister when we may expect the second volume of the Auditor General's Report. It is desirable that it should be placed on the table of the House this week, if possible, in order that it may be available before the Christmas vacation.

Mr. FIELDING. The matter was brought up in a meeting of the Public Accounts Committee recently when the Auditor General was present, and he told us that he did not think it would be possible to produce it before the recess. At my request it was then arranged that if the volume could be procured before recess, copies of it should be immediately sent to all the members of the Public Accounts Committee. I am afraid that is about the best we can do under the circumstances, though I very much regret that the volume is not before the House.

Mr. GEO. TAYLOR. It should be sent to each member of the House as well as to each member of the Public Accounts Committee.

Mr. FIELDING. The request came from the Public Accounts Committee, but I shall see that the Auditor General is requested to see that all the members receive it.

PRIVILEGE—REPRESENTATION OF QUEBEC EAST AND OTTAWA.

Mr. CAMPBELL. The right hon. the First Minister (Sir Wilfrid Laurier) stated to the House that no one yet had asked him to resign either of his seats. I would like to ask if, since he made that statement, any one has asked him to resign?

Sir WILFRID LAURIER. No, Mr. Speaker, so far nobody has asked me to resign.

WAYS AND MEANS—THE BUDGET.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Ways and Means for raising the Supply to be granted to His Majesty. He said: At the last session of parliament, Mr. Speaker, circumstances obliged me to submit a budget which, not to use a stronger word, was not in all respects a very cheerful one. Perhaps it was because Ministers of Finance everywhere about that time found themselves in strenuous circumstances. Perhaps it was because it was my thirteenth budget and good luck could hardly be hoped for at such a time. However that may be, it is agreeable to me to be able to round out the baker's dozen under happier conditions and to come back once more to the old familiar story of general employment and prosperous trade, increasing revenues, liberal surpluses and generous appropriations for the public service.

The last fiscal year—1908-9—as we call it—the fiscal year ended on the 31st March last, was certainly not a very good year for Canada. There had been a financial depression in the autumn of 1907, a depression which was almost world-wide, and which, in the case of the republic to the south of us, became a financial panic. It would have been too much to expect that we could escape entirely the effects of that financial depression. We did feel it in Canada to some extent—happily to a much less extent than in the case of our neighbours to the south, but still we did experience it to some extent in Canada. It began to show its effect upon our revenues in the closing period of the fiscal year, but the earlier part of the year was one of such great prosperity that, on the whole, the revenue proved to be a very excellent one; indeed, it was a record year. But, when we came to the new fiscal year beginning on the first of April, 1908, a year which ended on the 31st March last, we found that our revenues were very seriously affected. The revenue for the previous year, that which we call a record year, represented the great sum of $96,054,505.81. But, when we came to close the year 1908-9 we found that we had received a total rev-

enue of only $85,093,404.35. There was thus a decline in the year's revenue of $10,961,-101.46, or nearly $11,000,000, or to put it in another form, the falling off in the revenue amounted to 11¼ per cent. The revenue for the year was a little more than half a million of dollars greater than my estimate. The expenditure chargeable to income was $84,064,232.38. This was over $1,000,000 in excess of my estimate. I estimated the surplus at $1,500,000. The actual surplus was $1,029,171.97.

YEAR 1908-1909—CONSOLIDATED FUND.

	Actual	Estimated Budget Speech, April 20, 1909.	Greater than Estimate.	Less than Estimate.
	$ cts.	$ cts.	$ cts.	$ cts.
Revenue	85,093,404 35	84,500,000 00	593,404 35	
Expenditure	84,064,232 38	83,000,000 00	1,064,232 38	
Surplus	1,029,171 97	1,500,000 00	.....	470,828 03

A statement of the sources of our revenue will be interesting for the moment, as showing wherein the failure took place. In customs there was a decrease of $10,130,474.80, and in excise there was a decrease of $844,-383.66. The post office continued its career of prosperity and had an increase of $293,-737.07. When other departments fail somewhat we are always able to turn to the post office and note the happy change that has taken place. In former years there was high postage, limited accommodation and heavy deficits. In recent years there is cheaper postage, more generous accommodation and always a liberal surplus. In the case of the Dominion lands we had an increase of revenue of $269,634.73. Miscellaneous revenues showed an increase of $93,793.97, and railways showed a falling off of $643,408.77. The chief decline, of course, was in customs. There was a falling off in excise and diminished business led to a diminished traffic on the railways, and in consequence diminished receipts.

SOURCES OF REVENUE.

Source.	Amount.	Increase, 1907-8.	Decrease, 1907-8.
	$ cts.	$ cts.	$ cts.
Customs	47,413,336 45	.....	10,130,474 80
Excise	14,937,768 02	.... ..	844,383 65
Post office	7,401,623 93	293,737 07	....
Dominion lands	2,153,254 61	269,634 73	....
Railways	8,891,187 43	.. ....	643,408 77
Miscellaneous	4,296,233 91	93,793 97	..... .
	85,093,404 35	657,165 77	11,618,267 23
			657,165 77
Net decrease			10,961,101 46

Or a decrease of 11·4 p. c. as compared with 1907-8.

Coming now to the expenditure, we find that the total expenditure for the year 1908-9, chargeable to income, was $84,064,-232.38. This was an increase of $7,422,780.79 over the expenditure of the previous year. These increases were principally in the following departments:

Public works chargeable to income	$3,578,857 07
Interest on public debt	630,987 35
Civil government	1,194,849 45
Legislation	392,718 30
Miscellaneous	626,150 44
Ocean and river service	320,583 57
Post office	586,456 66

The item with reference to civil government was partly an increase and partly a rearrangement of charges which were transferred to the civil government item. The increase in the item of legislation included the expenses of a general election. The increase in miscellaneous included a grant of $300,000 to the Battlefields Commission and a grant of $100,000 for the relief of the sufferers by the earthquake in Italy.

Our revenue being $85,093,404.35 and our expenditure chargeable to income being $84,064,232.38, it left a surplus of $1,029,-171.97.

Coming now to the question of capital and special charges for the year 1908-9 we find they were as follows:

CAPITAL AND SPECIAL CHARGES AND INCREASE OF DEBT 1908-9.

National Transcontinental railway	$24,892,351 23
Quebec Bridge	6,424,781 00
Railways capital	4,529,052 72
Canals capital	1,873,868 45
Public Works capital	2,832.295 29
Dominion Lands capital	797,746 74
Militia capital	1,243,071 54
Total capital expenditure	$42,593,166 97

To these must be added the following special charges—

Railway subsidies	$1,785,887 39
Bounties	2,467,306 95
Charges of management loan account	1,854,488 41
Various transfers	221,311 50
Total	$48,922,161 22

Deducting from this the—		
Surplus of..	$1,029,171 97	
Sinking fund... ..	1,922,525 20	
Refunds..	1,044 72	2,952,741 89
Increase of debt..		$45,969,419 33

That was the largest increase of debt that has taken place in any year since I have had the honour of dealing with the finances of the country. I had estimated that the net debt would be increased during the year by $46,000,000; the actual increase was $45,969,419. The Transcontinental railway and the Quebec bridge represent of this debt $31,317,132.23. The remainder of the increase of the debt was caused by other expenditures on capital and special account. In former years we had been able to provide for most expenditures of that kind out of our income, but last year, with a falling off of $11,000,000 in our revenue, it was not possible to provide for these without some addition to the public debt.

Coming now to the current fiscal year 1909-10, I am glad to be able to have a more cheerful story to tell. There are still three and a half months of the year to run and the books of account do not close until some considerable time after the end of the fiscal year, so that it is difficult to make more than an approximate estimate at the present stage. It is, however, gratifying to us all to know that the unfavourable conditions of the former year have passed away. There has been a very gratifying recovery; we have been blessed with abundant harvests; in almost every department of labour in which our people are engaged there has been increased activity; we have recovered the lost ground in our revenue and we are now moving forward to even higher records. The revenue for 1909-10—that is the current year—to December 1, was $64,656,509.92, which represents an increase over the revenue for the corresponding period of the previous year of $9,541,282.75. Thus in eight months we have gained nine and a half million dollars of revenue over the figures of the corresponding period of the past year, which represents an increase of about $1,200,000 per month. The revenue for the last four months of the previous year amounted to $29,978,177.18. If we assume that we shall receive for the remainder of this year the same amount as we received during the corresponding period of last year this will make our revenue for the entire current year $94,634,687.10. But we may reasonably assume that there will be some further increase during these remaining four months, just what the amount of that increase may be is a point upon which I would speak with some caution. Hitherto in our comparisons between the present year and the next proceding year we have been comparing the figures of to-day with the lean period of a year ago, but about this time last year the business began to improve. The last months of the preceding fiscal year were months showing some improvement, and therefore we can not expect that during the remaining four months (or rather three and a half months) of the year, there will be as rapid increase as we have observed during the eight months. At all events there will undoubtedly be some increase. For the remaining period of the year, up to the 31st March—being four months as in the figures I present and about three and a half months actually from to-day—I propose to allow for an increase of $2,800,000. On that basis our revenue for the current year will approximate $97,500,000, or nearly one and a half million dollars better than the record year of 1907-8. I think my estimate is a safe one. It may be too conservative; it is quite possible that during the remaining four months of the year we shall make a greater increase than that I ventured to anticipate. It is quite possible that we shall come near the one hundred million dollar mark during the present year, but I do not think it is safe to estimate quite that at present.

Coming now to the question of our expenditure during the current year; it will be remembered that in view of the falling off in our revenue and the general check that had occurred in the business of the country, at the last session of parliament we severely pruned our estimates and appropriations, and many meritorious works which we would gladly have dealt with under more favourable conditions had to be laid aside.

Our expenditure on consolidated fund for the year 1908-9 was a little over $84,000,000. I estimate that in the current year the expenditure chargeable to income will not exceed $81,000,000. That is to say, we shall have a reduction of expenditure chargeable to income in the present year of $3,000,000 as compared with the figures of the preceding year. And, so, as respects the finances of this year the dominant note of the budget must be in the first place a large increase in revenue and in the second place a very substantial reduction in expenditure.

With a revenue of $97,500,000, which as I have stated is on a conservative basis, and an expenditure chargeable to income of $81,000,000, I estimate that there will be a balance this year, by way of surplus, amounting to sixteen and a half million dollars. I shall not be surprised if the expenditure proves to be a little less and the revenue somewhat more, which, of course, would give us a somewhat larger surplus.

Now, we come to the question of the capital and special expenditure during the

current year. There was voted by parliament for capital services during this year $30,484,739.54, and the corresponding appropriation for the preceding year 1908-9 was, $43,372,488.33. This shows a very large reduction in our appropriations. Of the capital appropriation for the current year 1909-10 the sum of $20,000,000 was assigned to the National Transcontinental railway, and we have reason to believe that that amount will all be spent or substantially so. Of the balance of appropriations of that class namely, $10,484,739.54, it is expected that probably $10,000,000 will be spent. We must then add railway subsidies, bounties, and other special charges which I estimate at $5,500,000.

Thus, the total capital and special charges for the year would amount to $35,500,000. The estimated reduction on consolidated fund expenditure is $3,064,232; the estimated reduction on capital and special expenditure is $13,422,161, so that our total expenditure of this year as compared with the expenditure of the previous year will show a reduction of $16,486,393.

The capital and special expenditure of the year will probably amount to $35,500,000. If we deduct from this our surplus of $16,500,000 and sinking funds, $1,250,000, making $17,750,000, this will represent an increase of debt at the close of this current year, if my estimate is correct, of $17,750,000. This will be $2,250,000 less than our expenditure on the Transcontinental railway. May I repeat here a remark I made in the last budget speech I had the honour to deliver, as indicating the financial policy which we hoped to pursue during the year. I then said:

> We think that our aim ought to be—and we shall endeavour to accomplish it as far as possible—to provide out of our revenue during the year now opening for all the ordinary expenditure and for a considerable part of our capital expenditures, if possible even for all of them. There is one work as to the wisdom of borrowing for which there can be no question, and that is the Transcontinental railway. If we can succeed in keeping down our borrowing for new work during the coming year to the sum which we wish to expend on the Transcontinental railway, I am sure we shall have a very good statement to present. I do not know that we can accomplish this, but it is to be our aim, and I am sure that if for the work of the year we have to borrow any sum in excess of that required for the Transcontinental railway it will not be very large.

I am glad to be able to say that the aim which we then set forth has been reached. We shall provide, as we believe, because we are dealing with a year not yet closed, out of our income for all the ordinary expenditure, for all the capital and special expenditure other than the Transcontinental railway, and we shall also be able to provide out of our revenue two and a quarter million dollars towards the National Transcontinental railway expenditure. Thus while we shall spend $20,000,000 on the Transcontinental railway we shall only add seventeen and three quarter millions to the net debt of the country. Putting it in another form, if we did not have this large and exceptional work to deal with, we would, within the year, reduce our public debt by two and a quarter million dollars.

Mr. SPROULE. What about the surplus of one year building it?

Mr. FIELDING. That was a pipe dream of my hon. friend.

Mr. FOSTER. The hon. member (Mr. Sproule) does not smoke.

Mr. FIELDING. Then he and I do not contribute much to the revenue in that direction. I hope he makes it up in some other way.

Turning now to the year 1910-11, as we call it in our accounts, the year beginning on the 1st of April next, hon. gentlemen will observe that it is quite far away and it will be difficult for us to attempt any close estimates. All I would care to say as respects that year is that we are very hopeful that we shall be able to repeat the policy of the present year with respect to keeping down the increase of debt. With the improvement in our revenues we have, of course, properly made more generous provision for the public service, but we hope and believe that the increasing revenues will justify that, and we look forward with strong expectation, as far as we can deal with matters so far in the future, that our year's operations will enable us to provide out of revenue for our ordinary expenditure and for that portion of our capital and special expenditure outside the Transcontinental railway. I think it is a fair ground for us to take that in the case of a great national work like the National Transcontinental railway and the Quebec bridge, now virtually a part of the Transcontinental railway, it is not unreasonable that we should expect to go on the money market and borrow, but that not only for our ordinary expenditures, but also for smaller expenditures of a capital character, we should endeavour to make provision out of our ever-increasing revenue.

Mr. R. L. BORDEN. Reckoning up to the end of the fiscal year on which we have just entered, that is the year ending March 31, 1910, what will be the total expenditure on the National Transcontinental railway?

Mr. FIELDING. The Transcontinental road, including the Quebec bridge, now virtually a part of it, will represent at the close of this fiscal year, $58,391,263.94.

Mr. R. L. BORDEN. Is that to March 31, 1909, or March 31, 1910?

Mr. FIELDING. That will be at the end of the last fiscal year and will not include the expenditure of the current fiscal year.

Mr. R. L. BORDEN. My question related to the current fiscal year.

Mr. FIELDING. We are spending this year $20,000,000.

Mr. R. L. BORDEN. That would amount then to about $78,000,000 up to the end of the current fiscal year, ending March 31, 1910?

Mr. FIELDING. Yes.

Mr. FOSTER. Is it intended to complete the building of the Transcontinental railway at the time already stated, that is at the end of 1911, or is it proposed to go slower? Is any provision to be made for the construction of the Hudson's Bay railway?

Mr. FIELDING. The estimates before parliament include a sum for the further survey of the Hudson Bay railway route. They do not at present include any sum for construction. If it be determined that the matter is advanced to a sufficient point to call for a vote for construction, that vote will have to come in the supplementary estimates. As to the completion of the Transcontinental railway, I think we have everything to gain by pushing it to completion. The Minister of Railways will have to deal with that at a later stage, but I think we shall rush that as quickly as possible and for that reason we are taking a very liberal estimate of $27,000,000 for the coming fiscal year.

Mr. R. L. BORDEN. Has the hon. gentleman made any estimate of what amount will be required after the conclusion of the present fiscal year to complete and discharge all our obligations in respect of the National Transcontinental railway?

Mr. FIELDING. I have not included it in this statement, but the Minister of Railways (Mr. Graham) will have a statement at a later stage which will deal with that as with Transcontinental affairs generally.

With regard to the revenue for the coming fiscal year, I think we need have no hesitation in saying that if we do not reach the $100,000,000 mark during the current year, we shall certainly do so in the coming year, and I believe that with the large and increasing revenue we will be able to provide for our ordinary expenditure and for that portion of our capital expenditure which does not refer to the National Transcontinental railway. I would not like to speak with too much confidence on that item, as it is in the future, but at all events that is the policy I would desire to pursue if the finances will enable us to do so.

It will be observed that in the estimates for the coming year we have transferred from capital account to income account several items which for a number of years have been charged to capital account. One of these items is in regard to arms and ammunition for the militia. It has been customary, under both governments, to charge that item to capital account. In like manner, Dominion lands have been charged to capital account. I think the objection to that system may most strongly be taken in the case of Dominion lands, for we charged the expenditure in connection with the lands to capital account, while the entire receipts have always been taken into the general income for the year. In both these cases we have been following the practice of the past. I think in these cases it will be well to make a change, certainly in the case of Dominion lands. No particular reference that I am aware of has been made to that in the past and our method of dealing with these items has been precisely the same as that of preceding governments.

It will also be observed that in the appropriation we are taking for naval expenditure the charge is to be made against income. I do not wish to discuss that branch of the public business to-day, for that comes later in the hands of another minister; but it will be admitted, I think, that if we should charge the construction of ships to capital account, charging to income only the annual interest thereon and a reasonable sum for depreciation, we might justify ourselves in doing so. However, as this expenditure, which will be quite a large one, will be distributed over several years, I think we may properly charge it to income. The expenditure of the year will be charged to the revenue of the year, and we shall not be obliged to add anything to the public debt on that account.

Mr. FOSTER. Do I understand the hon. gentleman to say that he proposes to charge to current account the construction of naval vessels?

Mr. FIELDING. That is my proposal in the estimates for the coming year. Of course, if we had to propose the whole cost of these vessels in one year, it would be a sum which our income would not bear; but as the expenditure will necessarily have to be distributed over several years, I think it is proper to charge it to income from year to year.

Mr. FOSTER. The principle is the same.

Mr. FIELDING. The principle is exactly the same.

Mr. FOSTER. While my hon. friend has been listening to better counsels in this matter, has he come to a conclusion to adjust the bounties as well?

Mr. FIELDING. I am glad my hon. friend has called attention to that. We have discussed from time to time the question of charging these bounties to capital account. My hon. friend is probably aware of the view which I have expressed from time to time, that the bounty is on all fours with the payment of railway subsidies, which in the time of my hon. friend as well as in our time have been charged to capital or special expenditure. When you pay a railway subsidy to the Canadian Pacific, the Grand Trunk, the Canadian Northern, or any other railway company, you have nothing to show for your money. The railway belongs to the company. Nevertheless we charge the subsidy to capital. If you pay bounties for the temporary assistance of a great industry, you have nothing immediately to show for your money. The property is the property of the company, and the bounty has gone into the treasury of the company, as in the case of the railway subsidy. But you believe that good has come to the country through the development of its trade and commerce, and that is the justification of the bounty.

Mr. FOSTER. How about steamship subsidies?

Mr. FIELDING. I have never been able to regard steamship subsidies as merely temporary, for they go on from year to year. The theory of our bounties is that they are temporary aids. It is true, they have lasted somewhat longer than some of us expected; but they stand in the same relation to the country as railway subsidies. In neither case have you any visible property to represent the money paid, but in both cases you get your return in the general development of trade.

Sometimes these bounties are spoken of as if they had some relation to the question of a surplus or a deficit. Speaking generally, they have no such relation, except as to the volume of the surplus. In all the years that we have charged these bounties to capital or special account, except one, they would not have affected the question of a surplus or a deficit. The one exception was last year, when the surplus was a small one, and when, if we had charged the bounties to income, we would have had a deficit of $1,400,000. But if you take all the years in which we have paid bounties, the surpluses aggregated $131,088,259, whereas the bounties during the same period have amounted to only $18,822,751. Therefore while in one year the payment of the bounties out of income would have affected the question of a surplus, if you take the whole period, it would not have affected the question of a surplus at all. The chief bounties on iron and steel will expire on the 31st of December, 1910, that is, the bounties on pig iron, iron puddled bars and steel ingots. There is a bounty on wire rods which is not limited in time. There is a bounty on lead, which is limited to a term of years, and there is a bounty on oil which is not limited. The chief bounties, however, are those paid to the iron and steel industry, and these will expire on the 31st of December, 1910. There is a provision in the Act that bounties for electric smelting may be extended for two years longer. When the bounties were last readjusted, we were assured that parties were about engaging in electric smelting, and as it would take some time to erect their plant, they asked for an extension of a couple of years, and it was granted. As no action has been taken under that provision of the Act, I take it that the chief bounties on iron and steel will expire next year. Thereafter the bounties paid will not be very large, and whether we shall then charge them to income or to capital or special account, may be a matter to be fairly considered at that time.

In this connection, I would like to invite the attention of the House to the question of what these bounties have accomplished. I know that with some excellent citizens of Canada the idea of bounties is not popular. More than once I have met people of the very best class who shake their heads over the idea. I think, however, that it can be clearly shown that the treasury of Canada has not lost one dollar from the payment of bounties. The iron and steel industries which have been established in the country have undoubtedly had a great effect in the development of the trade in Canada. Just how far the influence of a steel industry is felt may be a matter of debate. I have no doubt that hon. gentlemen have found many cases where business has been influenced favourably a long distance from the location of an iron and steel plant; I have found such cases myself; and it must be remembered that in all the principal trade centres of Canada vast quantities of goods have been purchased and sold to these steel ports, as I may describe them. The cities of Toronto, Montreal, Quebec, Halifax and St. John will all testify that their merchants have sold great quantities of goods to these steel making ports. The duties on these goods have been paid at Toronto, Montreal, Quebec, Halifax and St. John, as the case may be. It is not possible to measure just what these duties have amounted to, but they would not have been paid if there had not been the consumers of these goods at the steel ports. I do not think it is too much to say that millions of dollars have been paid into the Dominion treasury in that way at ports far removed from the steel ports themselves; and in considering what the government have received in return for the bounties, it would be well to bear that in mind. But

suppose we put that aside, let us look at the condition of the revenue at the steel ports themselves. These I take to be Sault Ste. Marie, in Ontario, Sydney, North Sydney and Sydney Mines in Nova Scotia, Glace Bay Mines, which supply the coal to the Sydney plant, New Glasgow, Nova Scotia, and Hamilton, Ont. Now, Hamilton was an important city before the steel industry was established. Undoubtedly, Hamilton would have made very considerable progress even had there been no steel plant at that place. Let us frankly admit that. But it must be admitted also that the steel works at Hamilton have had much to do with the development of the trade of that port. Qualify as you will the figures I am about to give as respects Hamilton, yet I think that all hon. members will agree that, as respects every other point which I have named, the increase in business is due directly to the development of the iron and steel industry. Every one of these communities was a small community before the steel business began; every one has grown to be a large and important community under the influence and development of the iron and steel business. I have here a statement showing the collections of customs revenue for two periods of ten years. The first period is that from 1890 to 1899, a period during which some steel bounties were paid but during which the industry was in its infancy, and not very much progress had been made, except at New Glasgow, and even at that period New Glasgow had contributed very largely to the revenue by reason of her steel operations. We compare that period of ten years with the next ten years ending June 30, 1909:

COMPARATIVE STATEMENT of Customs Revenue received at the following Ports during the ten years 1890 to 1899 both inclusive, and for the ten years from 1900 to 1909, both inclusive.

Ports.	Years 1890 to 1899, June 30.	Years 1900 to 1909, June 30.
	$ cts.	$ cts.
Sault Ste. Marie, Ont.	219,763 06	2,012,066 13
Sydney, N.S	153,115 50	1,645,759 22
North Sydney, N.S. and Sydney Mines, N.S.....	192,548 97	455,320 32
Glace Bay, N.S.....	31,976 66	469,663 49
New Glasgow, N.S...	398,578 24	479,020 76
Hamilton, Ont.....	6,712,584 26	11,648,381 80
	7,708,566 69	16,710,211 72
Increase during years 1900 to 1909.....	9,011,645 03	
	16,710,211 72	

Now, let us compare the amount paid in bounties with this increase in customs duty:

Amount of bounties paid on pig iron, puddled bars, steel, manufactures of steel and wire rods during the ten years 1900 to 1909, both inclusive, $13,377,268.

Amount of increase of customs revenue at the above ports during the same period, $9,011,645.

Thus we see that nearly all that has been paid in bounties came back in revenue through the various ports I have named. Qualify that a little, if you like, respecting Hamilton. On the other hand, consider the supplies purchased in Toronto, Montreal, Quebec, St. John, Halifax, that passed into consumption in these ports in which the iron and steel industry is established, and I believe I am justified in saying that every dollar that the people of Canada have paid out to the iron and steel business by way of bounties has been brought back directly to the public treasury in increased duties due to the stimulation of business.

Mr. MIDDLEBRO. Has the hon. minister any figures showing that the employees of these steel industries have come from countries outside of Canada? If not, how does he make it out that there has been an increase in the customs duties?

Mr. FIELDING. If, for instance, it can be shown that the employees of these industries came from the town the hon. member (Mr. Middlebro) represents and others, and that, as a consequence, the business of those towns decayed, there would be something in his argument. But if the business of his town has prospered and there is so much new business at Sydney, Sault Ste. Marie and these other places, I confess I do not see the force of his contention.

Mr. MIDDLEBRO. I think it should be the other way; unless the hon. minister (Mr. Fielding) can show that this increase is due to additional population coming from outside countries, he has not established his case. A man will eat and wear as much in one place as in another, and to move him from one place to another does not mean an increase of business.

Mr. FIELDING. As a matter of fact, a great proportion of these employees have come from other countries.

Mr. MIDDLEBRO. Has the minister any figures on that point?

Mr. FIELDING. I have not; but I know, as a matter of fact, that a very large percentage of the people employed in the steel industries at Sydney has come from outside countries.

Mr. MIDDLEBRO. I would grant that—

Some hon. MEMBERS. Order.

Mr. FIELDING. I have no objection; I desire to hear the hon. member.

Mr. MIDDLEBRO. I would grant to the hon. minister that if he could show that the increase of employees due to the steel business represents an increase of our population from outside points, his argument is tenable; but, if they come from other portions of the country, we have a right to assume that they would have eaten and worn as much where they were as where they are, and consequently would have contributed as much to the revenue.

Mr. FIELDING. But if a man came from Owen Sound to Sydney to work in the steel industry, he left work at Owen Sound and somebody came in to do that work. For my hon. friend to prove his case, he would have to show that other parts of Canada were suffering in order that the iron and steel industry might prosper.

Now, I desire to say a word with regard to the increase of our debt. Up to June 30, 1896, the net debt of Canada was $258,497,432.77. The net debt on March 31, 1909, was $323,930,279.17, an increase in twelve and three quarter years of $65,432,846.40. During the same period, we expended on the Trancontinental and on the Quebec bridge, as previously stated, $58,391,263. So that, apart from that large undertaking —and I think we are justified in treating that as something exceptional—the increase of our debt is only $7,041,000, and that too in the face of the fact that last year we had a falling off in our revenue of $11,000,000.

Now, there is another aspect of our finances which is worthy of a moment's consideration. I refer to the charges for what we call capital and special account and the manner in which these charges have been met. Speaking generally, we might say the charges which are deemed to be on capital and special account, are of an exceptional nature which, perhaps, would justify the borrowing of money if necessary. We ought not to borrow money for our current account, we ought to pay our way; but, for anything in the way of permanent improvements or capital expenditure, if necessary, the Minister of Finance may well justify the borrowing of money. Of course it is desirable that we should provide for all we can without borrowing.

Now, I desire to show how far we have been successful in providing for that class of expenditure without borrowing. During the twelve and three-quarter years to which I have referred, the twelve and three-quarter years of this government, we have spent on capital and special expenditures such as I have been describing, $212,602,818.33; and during that time we have added to the debt of the country only $65,432,846. That is to say, of these capital and special expenditures we have borrowed but a very small porportion, and we provided of the $212,602,818, no less than $147,169,971 out of our own revenue; that is to say, that out of our revenue we not only provided for all our ordinary expenditure, but during that whole twelve and three-quarter years we provided for more than 69 per cent of our capital and special charges out of revenue, without resorting to borrowing, without going into debt.

Now, let us see what was the record of our predecessors—I do not say this for the purpose of finding fault, but it is a fair comparison. In the period from 1878 to 1896, similar charges, those called capital and special, had to be met to the amount of $167,166,252; and during that period the net debt of the country increased by $118,135,362. Mark the figures: Capital and special expenditure, $167,166,252; increase of debt, $118,135,362. So that all our hon. friends who preceded us were able to provide for expenditures of that character out of revenue, was $49,030,889; that is to say, that while we have been able to provide for expenditure of that kind out of revenue to the extent of 69 per cent, they only provided it to the extent of 29 per cent. Our predecessors had to add nearly 70 per cent of that class of expenditures to the debt of the country, while we have added only 30 per cent of that class of expenditures to the debt.

Now, one may make another comparison along the same lines. There are certain big public works which the government have sometimes to provide for, and which have to be lifted out of the common calculation. The late government had to provide for the Canadian Pacific railway; we have to provide for the Transcontinental railway and the Quebec bridge. I propose to eliminate from the two accounts these large and exceptional works, to leave out, in the case of my predecessors, the expenditure on account of the Canadian Pacific railway, and to leave out in our case the expenditures on account of the Transcontinental railway and the Quebec bridge, and what do we find? Leaving out the Canadian Pacific railway, from 1878 to 1896, our predecessors provided for 42 per cent of their capital and special expenditure out of their revenue; while we have provided for similar charges, leaving out the Transcontinental and Quebec bridge, not 42 per cent, but more than 95 per cent, out of the revenue of the country.

Mr. J. D. REID. Could the hon. the Finance Minister tell us how much taxes were collected from the people during the eighteen years from 1878 to 1896, during the 10 years from 1897 to 1907?

Mr. FIELDING. No, I cannot tell at this moment. But I can tell the hon. gentleman that the rate of customs taxation is

less now than it was in the former period; and that the only difference between my hon. friend and myself on that question is that while he wants to raise the taxation of the country, we are desirous of keeping it down. Now, the debt of a country is only a burden in proportion to the number of shoulders that have to carry it. Sometimes people speak of the growing debt of Canada, without stopping to consider, as they should, other elements of the growing time. The debt of Canada must be considered in proportion to the population of Canada. I have here a statement—I have submitted it on a previous occasion, but I have now brought it down to date; it is a statement showing the net debt of Canada for every year from 1891 down to the present time, including the current year, and giving the estimated population for the current year. It also shows the population of Canada as shown from year to year by our census officers. While our general census is taken only once in ten years, as respects our western provinces it is taken more frequently, and from year to year an estimate is made of our population by qualified census officials; so that we receive from year to year a statement of the population of the country which is approximately correct.

NET DEBT PER CAPITA.

Year.	Population.	Net Debt.	Net Debt per Capita.
1891.. ..	4,844,366	$237,809,030 51	$49 09
1892.. ..	4,889,266	241,131,434 44	49 15
1893.. ..	4,935,748	241,681,039 61	48 96
1894.. ..	4,983,903	246,183,029 48	49 40
1895.. ..	5,003,839	253,074,927 09	50 57
1896.. ..	5,086,061	258,497,432 77	50 82
1897.. ..	5,141,508	261,538,596 46	50 87
1898.. ..	5,199,267	263,956,398 91	50 77
1899.. ..	5,259,491	266,273,446 60	50 62
1900.. ..	5,322,348	265,493,806 89	49 88
1901.. ..	5,413,370	268,480,003 69	49 59
1902.. ..	5,537,500	271,829,089 62	49 08
1903.. ..	5,712,190	261,606,988 87	45 79
1904.. ..	5,890,066	260,867,718 60	44 29
1905.. ..	6,091,136	266,224,166 60	43 70
1906.. ..	6,323,557	267,042,977 75	42 23
1907.. ..	6,655,904	263,671,859 96	39 61
1908.. ..	6,863,500	277,960,859 84	40 49
1909.. ..	7,145,040	323,930,279 17	45 33
1910.. ..	7,450,990	*341,680,279 17	45 85

*Estimated.

So upon authority of the census officers of Canada, I am able to state that on the 31st day of March, at the close of the current year, by the best judgment they can bring to bear, the population of Canada will be 7,450,990. Now, if we apply these figures to the net debt of the country, we have this gratifying result, that while in 1891 the net debt was $49.09 per capita, and while it had increased in 1896 to $50.82, it began to diminish after the first year of Liberal administration, when it was $50.87; and from that point down, the figures have always been less than they were in 1896. And to-day, although in the last year we did add $46,000,000 to the debt of the country, although in the present year we shall add upwards of $17,000,000 to the net debt, yet if these figures are correct, on the 31st day of March, 1910, the net debt of Canada per head will be, not $50.82 as it was in 1896, but it will be $45.85. So, Mr. Speaker, if due regard be had to the growth and progress of Canada, the increase of debt is exceedingly small; and even with the very material sums which we have to add on account of the National Transcontinental railway, we are still in the happy position of seeing that the growth of the population and resources of Canada is faster than the growth of our public debt.

Mr. LAKE. Before the minister passes from the debt, may I ask to what extent the bonds of the Grand Trunk Pacific and other railways have been guaranteed up to the present time?

Mr. FIELDING. The amount is set forth in the Public Accounts. I could not give it to my hon. friend immediately, but if he will turn to the report in the Public Accounts he will find the figures there set forth.

Mr. LAKE. For last year?

Mr. FIELDING. The last blue-book contains the latest statement. If my hon. friend, on looking it up, finds it to be insufficient, I will be happy, if he will mention it to me, to see that he is put in possession of the information. I do not wish to burden the House with many statistical tables. There was a time when the budget speech was a somewhat ponderous affair, but I have endeavoured to have regard to the time and patience of the House. But, I thought a few statistics might be given to show the rapid recovery that has taken place after the check that came upon the business of the country a year or two ago. The total trade in 1908-9, as compared with 1907-8, declined to the extent of $79,524,364. Of that imports declined $61,029,917 and exports $18,494,447. An early recovery, I am glad to say, is going on and quite rapidly. For the seven months to the 31st October, 1909, being the last date for which we have the customs statistics, the total trade of all kinds exceeded that of last year by $48,400,000. Of this $34,553,278 represents imports and $13,847,219 exports. At the same rate of progress for 1910 the total trade of the current year will probably exceed that of the record year of 1907-8, when the total trade was $650,000,000.

A brief reference might also be made to the deposits in the chartered banks, merely to indicate the restoration of our financial

equilibrium. Ten years ago the deposits in the chartered banks of Canada amounted to $250,000,000. They increased rapidly and on the first September, 1907, these deposits amounted to $590,000,000. Then, under the influence of the depression which had come, they began to drop and they did drop for several months. Then they began to increase and as a result on the 31st October, 1909, the bank deposits amounted to $731,806,000, or three times nearly what they were only ten years ago.

The immigration figures are also very gratifying. I am going over these very briefly because I do not wish to weary the House with many statistics. It is hardly necessary to say that a steady influx of population is one of the important things for our country, especially our western country, which offers the greatest attractions to immigration. In the year 1908-9 there was a considerable falling off in immigration. In 1907-8 the number of immigrants was 262,469, while in the next year—1908-9—it was only 146,908, showing a decrease of 115,561. A very noticeable feature of the immigration that year was that the falling off was almost entirely in British and continental immigration. There was no falling off in the United States immigration. The movement of the tide once was setting southwards; the tide is now moving northward and even in the year of depression the immigration from the United States did not fall off. In 1907-8 the immigrants from the United States numbered 58,312 while in 1908-9 they numbered 59,832. There was a very slight increase in the number. But the returns for the present year are very encouraging indeed. Comparing the tables for the ten months of the present calendar year with those for the ten months of the previous year we find that there has been an increase of 26,824. The number of British immigrants is slightly less than in the previous year, the number from the continent is about the same and the number from the United States appears to be steadily increasing.

We have naturally desired to extend our trade relations with other countries. In that connection I might call the attention of the House to the steps that are being taken with a view to the encouragement of better trade relations between Canada and the West Indies. We have long had a considerable trade with the West Indies and at one stage it was deemed advisable that we should grant the British West Indies the benefits of our preferential tariff. So far we have not received any return of any kind. The British government have not failed to notice the desirability of establishing closer trade relations between the various branches of the empire, and it was arranged some months ago that a royal commission should be appointed by His Majesty for the purpose of inquiring into the best methods of improving the trade relations between the British West Indies and Canada. The chairman of that commission is Lord Balfour of Burleigh, a very eminent British statesman, with whom are associated Sir John Dickson Poynder and Sir Daniel Morris, and upon that commission were placed two members of the Canadian government—the Minister of Customs and the Minister of Finance. We have held a series of rather interesting meetings in various parts of Canada, the effect of which, I am sure, will be to enable the British commissioners to understand the question from the Canadian point of view. At the next stage the inquiry moves to the West Indies. It was the desire of the commissioners that we should join them there at a very early date, but we felt that our first duty was to the parliament of Canada and we had to ask that the meeting of the commission might be postponed. The British members of the commission will meet in Jamaica at an early date in January and will then proceed south. If the business of this parliament should be sufficiently advanced to enable my hon. friend the Minister of Customs and myself to absent ourselves we hope to be able to join the commission in the Island of Barbados about the middle of February, but that, of course, will depend entirely upon the condition of the business of the Canadian parliament.

Mr. HUGHES. Is the scope of this commission limited to British colonies, or is it to take in the South American republics?

Mr. FIELDING. It is limited to the British West Indies, because what we hope will be the result of it will be a preferential tariff in the British West Indies in favour of the products of Canada and, of course, that could not be arranged with foreign countries. It is, of course, too early for us to say much as to that, but we may hope that as a result of the inquiry Canada will receive a preference in the markets of the West Indies.

Mr. R. L. BORDEN. Are the Canadian commissioners going to the West Indies?

Mr. FIELDING. This is our difficulty: The British commissioners proposed when they were here that we should go with them, but we had to say, that, having regard to our parliamentary duties, we could not go at once. At the first meeting which, I think, will be held at Jamaica about the middle of January, we shall not be able to be present. They will hold some further meetings and they have placed us under some sort of bonds to join them in the Island of Barbados on the 15th of February, or thereabouts. Whether or not we shall be able to go depends on the progress of business in this House.

Our treaty with France has now passed through its various parliamentary stages; it has received the approval of the French Chambers; it has received the approval of the parliament of Canada, and nothing remains now but the formal exchange of ratifications which may take place at Paris. We do not know at what date that may take place. Still, it is our desire that the ratifications may be exchanged as soon as possible, so that we will be able to receive the degree of increased trade that we expect to receive from that convention. We are aware that other nations are anxious to deal with us along somewhat similar lines. It has not escaped our notice that the German empire is also anxious now to approach Canada in a good spirit. It is an occasion when we need not dwell too much on what has happened in the past. We are aware that Germany is disposed now to enter upon negotiations with us, and we are also aware that there are two other European nations which are anxious to enter into trade relations with Canada. I refer to Italy and Belgium. In due course negotiations will have to be entered upon with these countries with the view of arriving, if possible, at some friendly understanding with them. Reference has sometimes been made in the House, and more particularly outside of it, to the disadvantage which Canada is said to suffer from the fact that the benefits of the French treaty have to go to certain other countries which give us nothing in return. At all events that is the way it is expressed. It is said that certain countries, by virtue of most favoured-nation treaties, made many years ago, are entitled to the benefits of this French treaty though they give us nothing in return.

There is a tendency to treat these favoured-nation treaties as something disadvantageous to Canada. I hesitate to accept that view. We do receive some substantial thing in return for the benefits we extend to these countries; we receive the guarantee that no other country will ever receive better terms than Canada receives, and that is of the utmost importance to us. No country is going to give Canada a monopoly of its trade. We may by a convention with any country receive some advantage for the time being, but every country will naturally claim its right to make a treaty with any other country. All that any country can reasonably ask from another country is that it shall be guaranteed the best terms that are given to others. Now, suppose we had no favoured-nation treaties; suppose we had none of these old treaties which we sometimes now complain of, what might happen? Let us take the case of one of the great nations which enjoys the benefit of one of these treaties. Austria-Hungary has an old treaty with Great Britain containing the most-favoured nation principle and by virtue of that treaty we are obliged to give to Austria-Hungary all the benefits of the French treaty, and it is often too hastily assumed that we get nothing in return. But, if there was no such treaty, Austria-Hungary would be free to make an arrangement with our neighbours to the south and to admit the products of the United States into her markets on more favourable terms than she would admit the products of Canada. Then, Canada would be obliged to make a special treaty with Austria-Hungary if she could, and she might or might not be able to come to terms. But while the most-favoured nation treaty remains in operation we have the assurance that neither the United States nor any other competitor of ours can receive any advantage in the markets of Austria-Hungary that will not at the same time come to us. Surely, that guarantee of the best terms that will be given to any foreign nation is something worth while as a return for the concessions we give.

Mr. R. L. BORDEN. Do I understand the Minister of Finance to suggest that our market in that respect is increased by the provisions of the French treaty?

Mr. FIELDING. No, but if there was no such treaty and if we were to impose on the products of Austria-Hungary higher rates than we impose on the products of France, Austria-Hungary would naturally proceed at once to penalize us. The conditions that we have are such that at all times whenever any concession is granted by Austria-Hungary to any other nation we get the full benefit of it, and I really cannot see that we can expect more. I seriously think that it is a valuable concession that we thus obtain because it removes any necessity for our worrying over our relations with Austria-Hungary. The same would be true of the other countries, many of them not very important, which have the benefit of these favoured-nation arrangements.

There is one other country with which we have very close commercial relations. Of course our closest relations are with the mother country, which is our great market, but that comes to us so naturally that we hardly speak of it at all; we know we have our most valuable market in the mother country and our people appreciate it. There is, as I say, another great country with which we have close commercial relations and that is the United States. There has been some anxiety, perhaps some unnecessary alarm, in the mind of some of our Canadian people as to possible friction arising in consequence of the recent tariff legislation in the United States. But, after reading the most admirable message of

President Taft to Congress, a few days ago, I think that we can all feel that the United States government have a very correct appreciation of what is due to other countries, and to Canada particularly. I think the terms in which President Taft addressed Congress on that subject give us abundant assurance that he and his cabinet are desirous of continuing the close and friendly relations which prevail between the republic and Canada, and we for the present are not going to assume that there is any cause for anxiety as to any friction arising between the two countries.

We are approaching the time when we shall want to issue a gold coinage in Canada. That will necessitate some change in our Currency Act, and a measure dealing with that branch of our affairs will be brought forward at an early date. In the meantime I avail myself of the opportunity to present some information and to answer inquiry with respect to the operations of the Ottawa branch of the Royal Mint. It is well known that the objects we had in view in establishing the mint, were, first, we desired to make our coins in Canada, and secondly, we were influenced to some extent by the desire to have the gold of the Yukon and the Canadian provinces brought through Canada rather than sent away to the United States. It is said that trade follows the flag, and there are others who say that trade follows the gold, and if this be true, then, if you keep your gold in your own commercial channels you will influence your trade. Perhaps parliament had that in mind when both sides agreed it was desirable to establish a mint. Now, the mint will show a very handsome profit, but let me also say frankly that we could make a greater profit by having no mint; we could make a greater profit by having our coins made in the old country. But, the same reason which leads us to desire to make other things in Canada leads us to desire to make the coins of Canada within our own boundaries. We could save money by having our Dominion notes printed in England, but it was thought well some years ago to stipulate that they should be printed in Canada at an establishment erected within sight of the parliament buildings. Having provided that our note currency shall be made in Canada it was but a step in advance to say that our metallic currency should be made here as well. We have established what is called the Ottawa branch of the Royal Mint. There is the advantage in having it a branch of the Royal Mint that we shall be able to coin sovereigns which we could not do if it were purely a Canadian mint. Another thing is that it has enabled us, in the construction and equipment of the building, to have the great advantage of the skill and experience of the Royal Mint officials, which has given us a better building and equipment than we possibly could have obtained without the assistance of these gentlemen.

In connection with our mint there comes up the question of the deportation of foreign coins. A large proportion of the silver currency in Canada is foreign, chiefly American, and as there is a substantial profit on the coinage of silver, the presence of this large volume of American silver currency in Canada means that the profit on that finds its way into the treasury of the United States. We have, therefore, thought it desirable to take steps towards the exportation of American silver coins from Canada. Unfortunately, there is no reciprocity with regard to this silver coinage circulation. An American silver coin will be taken almost anywhere in Canada, but a Canadian silver coin will not generally be accepted in the United States, except perhaps along the frontier where there is considerable freedom of interchange. Now, if our American brethren were circulating a lot of Canadian coins and we were circulating a lot of American silver the deal would be square.

Mr. FOSTER. If we got into their $80,000,000 silver it would be more than square.

Mr. FIELDING. Yes, if we will assume that an equal amount was being circulated in both countries. The fact is that while in any part of Canada you may be handed an American silver coin over the counter, once you get away from the boundary in the United States you will never come across such a thing as a Canadian silver coin in the transaction of business. We have thought it wise that we, the people of Canada, the treasury of Canada, should have the profit on the silver currency used in Canada. So we have taken steps to export the American coins. It has sometimes been suggested that we should prohibit the use of this coin. That would be a great mistake. There are points along the boundary where it is a great convenience to take the coins of one side or the other, and any attempt to interfere with their right to do so, would probably be embarrassing. So we do not interfere with that practice. Of course these foreign coins are not legal tender, but they pass freely. We have made an arrangement with the banks whereby they export all the American coin that comes to them to the United States. As that coin is removed from the country, naturally a market is created for our own coin and that gives increased employment to the mint and increased profit to the treasury.

Mr. FOSTER. How do you keep it out?

Mr. FIELDING. You cannot keep it out, it will come back again, and where it comes back in the way of legitimate trade, while

perhaps it is not wise to encourage it, it is better to export it than to prohibit it.

Mr. FOSTER. Does it come in any other way than in legitimate trade?

Mr. FIELDING. No, I think not; I think it is the passing to and fro along the boundary to some extent and then the large number of American visitors who come in every year, who are gladly welcomed—we hope more will come—all bring some coins with them, and to prevent in any way the free use of these coins would cause embarrassment. We do not propose to do so, but we say as soon as this coin comes in we will send it out, and we can afford to do it. We pay a small commission of three-eighths of one per cent to the banks for exporting it, this being only enough to pay them for the handling of the coin. I do not look upon the commission as a great inducement to the banks, but I look to them as good, patriotic Canadian citizens, to feel it to be their duty under this arrangement, not for the commission, but for the higher purpose, to see that whatever American coins come into a branch bank, shall not be paid out over the counter, but shall be retained and sent out under the arrangements that we have made.

Mr. FOSTER. Will the minister say to what points the banks sent them?

Mr. FIELDING. They may send it to and port in the United States, and on evidence that they have exported it and delivered it to a bank outside of Canada we accept the certificate and pay the small commission upon it.

Mr. FOSTER. Does the minister know the yearly cost of deportation and the quantity deported?

Mr. FIELDING. We had an arrangement several years ago which expired by lapse of time. We renewed it by order in council of the 2nd of June, 1909, and since that date there has been exported $432,865 on which we have paid a commission of three-eighths of one per cent.

We also make use of the mint for recoining worn silver currency. For some years we have been endeavouring to make the paper currency of Canada cleaner than in former years and I think we have succeeded, although perhaps the banks are still open to some criticism in that respect. It will be observed as a rule that the paper currency of Canada is now fairly clean. Having presented to our people a cleaner paper currency, we thought we should give them silver currency in better condition. There has been a large amount of worn silver currency in Canada, some of it quite thin and smooth. It is not a proper currency for circulation, but it has passed freely. A gets it and gives it to B and so on and the banks have paid it out over their counters. We think we may properly call in that currency and recoin it. This involves a small loss, because the friction caused by passing of the coinage diminishes its weight. However, the loss is quite small and we are able to give our people a fresher, cleaner and better currency, and I think they will approve of that.

I said that the mint is authorized to coin British sovereigns. It has done so to a small extent. It has a very small refining plant which enables it to do a little work along this line, and a number of people have presented gold which they desired to be converted into British sovereigns. That has been done, the mint receiving a fair payment for its services.

The actual expenditure in the construction of the mint, including site and buildings, up to November 30, 1909, has been $547,796.33.

It is estimated that for the refinery now under construction and its equipment a further expenditure of $67,000 will be required.

The estimated complete cost of the mint is $605,047.

The mint has been in operation for nearly two years, since January 2, 1908. In the first calendar year it coined 4,877,027 pieces. These included 636 British sovereigns coined for the owners of gold in the manner I have already mentioned.

In the eleven months of the present calendar year the mint coined 6,862,982 pieces. This included 13,161 British sovereigns coined under the conditions I have mentioned.

Parliament makes a grant of $75,000 per annum for maintenance. In 1908 this was more than sufficient, the outlay being only $71,997.32. The present year will absorb the whole annuity, and in view of the increasing amount of work the mint is required to do, it is likely the annuity will have to be enlarged.

The cost of operation has been:

1908..	$71,997 32
1909 (11 months)..	61,729 52

The total cost of operation for one year and eleven months has thus been $133,-726.84.

The revenue of the mint during the same period, including payment for all services rendered, amounts to $405,565.68.

The profits have thus been $271,838. This handsome balance will, of course, pay interest on the cost of construction and still leave a large sum to the credit of the mint. But, of course, as I pointed out, while we have this large profit on the operation of the mint, we could have had our coins made in the old country and have made a larger profit out of them. The judgment of the House, irrespective of party, was that we should have a Canadian mint. It is

one of the advancing steps of our Canadian nationality, and I believe it has met with the approval of the community at large.

Mr. FOSTER. Would the minister tell us how much it would have cost Canada to have had that same coinage made under the old system?

Mr. FIELDING. I have not made the calculation, but we certainly could have had our coins made much more cheaply in that way. We could also have had our notes made much more cheaply in England than in Ottawa, but just as the former government adopted the policy of having notes made in Ottawa, we have carried that policy a step further and have provided a mint for the making of coins here.

Mr. FOSTER. I wish the minister would give a calculation of just what the difference would be?

Mr. FIELDING. I would be glad to give it, but in my judgment, and I think in the judgment of the House and of the country, it will not affect the argument. We all knew when we established the mint that we could have our coins made much more cheaply in England, but we elected to have them made in Canada.

Mr. FOSTER. Because the minister does not think it affects the argument, does he consider that the information should not be given?

Mr. FIELDING. Certainly not. Of course this is a matter of opinion.

Mr. HUGHES. The minister to that extent believes in the national policy of the Conservative party?

Mr. FIELDING. Probably it is time that somebody believed in it, because I believe that the Conservative organs are repudiating it.

We have no tariff changes to propose on this occasion. It is not because we have entered a claim that the tariff is perfect. I have no doubt that wherever you have a customs tariff necessarily as full and intricate as ours has to be, there will be room for criticism, and certainly always room for demands for changes. But we are of the opinion that it is not in the best interests of the business of the country that there should be frequent changes. We believed that frequent tariff changes must have a disturbing influence on the business of the country and we wished to have it generally understood that where there has been a general revision of the tariff, as we had only two years ago, the government would not be disposed to make changes unless the need for them was very urgent indeed.

There is in our Tariff Act a provision which is alluded to in His Excellency's speech from the Throne; that is, the provision with regard to combines. Those who were in the House in 1897 may possibly remember that when the combine clause, as it is commonly called, was first presented to parliament, it proposed that in any given case where it should be established to the satisfaction of the Governor in Council that a combine existed for enhancing prices the Governor in Council should thereupon, upon their own motion, reduce the tariff on the article in question. It was in that form that the resolution was first submitted to this House, but afterwards it was represented to us that that seemed to be a dangeros power for the government to take to itself. At that time industrial establishments were possibly more sensitive than they are now as to the effect of the tariff. After consideration, that clause was so modified as to require a reference to a judicial commission to determine whether or not there was a combine enhancing prices; and only after that finding by the judicial tribunal was the government free to make a reduction in the tariff by executive act; and in that amended form the law passed. It is sometimes complained that because of the modification then made, the machinery of that combine clause is too slow and ineffective. It is said that the government have not provided sufficiently for the payment of the expenses to encourage people to take advantage of the clause; that too much is left to the individual and too little financial responsibility is put upon the public treasury. We are willing to meet this criticism. We shall at an early day propose a measure dealing with that subject, and its purpose will be chiefly to meet the criticism to which I have referred. It will provide that the government—not hastily or recklessly, because large interests are involved and must be considered—if there is a reasonable prima facie case that a combination exists for unduly enhancing prices, may provide all the expenses for conducting the inquiry, including the payment of counsel. That is the substance of the change, which will be proposed at a later stage.

With regard to the loans maturing, on the first of January next what is known as the 4 per cent Canada reduced loan of £6,443,136 falls due. This was originally a 5 per cent loan issued by the province of Canada in 1860 and renewed on the first of July, 1885 for 24½ years at 4 per cent. To meet this at maturity and to provide funds for our large requirements a loan of £6,500,000 of 3½ per cent stock at 98½ per cent was issued in London on the first of July last. An option was given to the holders of the 4 per cent reduced bonds and stock maturing on the first of January next to receive an equivalent amount of the new loan, and a cash payment of the equivalent of the difference between the

value of the loan issued and the value of the maturity on the first of January. The amount converted of the Canada reduced stock into the new loan was £1,847,418. In addition, some £2,000,000 of the 4 per cent reduced loan was held in its own sinking fund, leaving £2,498,749 to be repaid in cash in London on the first of January. The proceeds of the loan that I have just referred to will enable us to pay this amount. There is a further loan of £4,000,000 at 4 per cent issued in 1885, redeemable between 1910 and 1935 on the government giving six months' notice. As this is a 4 per cent loan, it was the intention of the government to avail itself of the option of redemption, and accordingly to give six months' notice on the first of January next. It would be good business to replace a 4 per cent loan by one bearing a lower rate of interest. But in view of the present disturbed condition of the money market, and I may add also the political disturbance, we have thought it advisable to postpone the giving of that notice until the first of July next. Further, on the first of October, 1910, a £1,500,000 4 per cent loan of 1875, guaranteed by the imperial government, falls due. In addition to these, there are two amounts of treasury bills, one of £1,000,000 falling due on the first of February, 1910, and another of £500,000 falling due on the first of July, 1910. In the ordinary course arrangements will have to be effected for meeting these obligations. As I have said before, the financial and other disturbances which have affected the money market in London have rendered it inexpedient for the present to undertake any such large operations by way of long term loans. It has accordingly been deemed wiser to adopt the expedient of short term bills, and negotiations have been carried on with the view of providing £3,000,000 for a period of six months on the security of treasury bills from the first of January next. The operation has been effected at the rate of 3½ per cent per annum. This will enable us to pass through the period of disturbed conditions in England, due to some extent to the high bank rate and to some extent to the political situation, and we shall then have time to consider whether it will be expedient to issue a permanent loan.

Mr. W. F. MACLEAN. Are the treasury bills issued in London or here?

Mr. FIELDING. In London. I have endeavoured, Mr. Speaker, to present concisely what I regard as the chief facts and figures necessary to the consideration of our financial position. I cannot hope that all I have said will be received with universal approval in this House, because I know that we look at some of these matters from different points of view; but as we have all the same good purpose in view, that of promoting the welfare of Canada, I am sure that we shall unite in expressing our satisfaction with the happy and prosperous condition of affairs in Canada today. It must be a gratification to every good citizen to see so many favourable signs in the outlook of our country. The check which came upon us a year or two ago may have served a good purpose. Happily it has proved but temporary; happily it has not remained with us; and already there is a rapid recovery. We have, as we all know, a country of magnificent resources. We have known it long; but we have needed two things—population and capital. Both of these things are now coming to Canada. Population is coming from all quarters of the earth. It is coming in a very large degree from the neighbouring republic, and we rejoice in the character of the immigrants that country is sending back to Canada. Population is coming also from the old world. We can well rejoice that this long desired growth of population is coming to us. We have also desired capital, and that is coming to us too. There never was a time when there was more interest in Canadian affairs throughout the world than there is to-day, or a greater willingness on the part of capitalists to invest in Canada. This is Canada's growing time. We have had growth in population, growth in wealth, growth in Canadian unity, growth in national status in the eyes of the world, growth in our sense of responsibility as citizens of a great empire. In all this growth we have reason to rejoice. But, what is better than all, we feel that this is but the beginning of greater things to come. To us as trustees of the Canadian people has been given the duty of moulding the destinies of the Canadian Dominion at a time when it has a formative character. Let us see to it, in the midst of our party strife, that at all times there rises above all the dominant note of a patriotic desire to do whatever is possible to promote the progress, prosperity and happiness of the Canadian people.

Hon. GEORGE E. FOSTER (North Toronto). Mr. Speaker: With the concluding remarks of the Finance Minister (Mr. Fielding), I find myself, as I am sure do all hon. members on this side, in complete accord. It is a fact that sometimes party differences are exaggerated and party spirit leads to a one-sided and even unfair presentation of matters before the House. But when, apart from these things, we come to contemplate the larger questions of country and of empire, I hope that we may always be in a position to reciprocate the sentiment that has fallen from the lips of the Minister of Finance. I notice that the hon. Minister of Finance appeared a little more cheerful when he rose to present his bud-

get speech this year than on a similar occasion last year. Circumstances have somewhat changed, and what was presented to his mind last year, as being to a certain extent allied with doubt and uncertainty has partly cleared away. The hon. gentleman has had a respite, I hope it will be long continued. The country has had a respite from a comparatively short period of stringent finance and disturbed trade. I only hope that the Minister of Finance and the government with him, will improve the lesson taught by that even short period of financial stringency and will incline their hearts more to businesslike and economical administration of the country's affairs in the future.

Now, I am not going to follow the Minister of Finance through all the somewhat lengthy remarks which he has made, consisting very largely of tables of figures, but I shall endeavour to touch on a few of these points by way of passing remark. Reduced to colloquial language, the year 1909 may be described somewhat in this way: The trade fell off a little over $67,000,000; the revenue fell off about $11,000,000; the expenditure increased by $21,000,000, $7,500,000 on consolidated fund account and $13,500,000 on capital account; the surplus, which was counted on as being $1,500,000, fell to $1,000,000. At that time, the old method of charging bounties to capital interposed in favour of the Minister of Finance. The amount paid in bounties was $2,500,000, and this being charged to capital, he was enabled to count a surplus of $1,000,000. Had that, the amount paid in bounties, been paid out of revenue, as it was under the preceding government, the minister would not have had a surplus of even $1,000,000, but would have had a deficit of $1,500,000. It is significant that, although there had been previous monitions given in good time and somewhat strongly to the business men of the country and to every chancellor of an exchequer, the Finance Minister amongst other, warning them of what was approaching and would certainly come, we find the astounding fact that the estimates of Canada, provided by the Minister of Finance himself and his government, were the largest in the history of Canada, and that the expenditure came to the sum of $133,000,000, which is a little more than three times what it was in 1896 and high-water mark of public expenditure in this country. That is a significant comment upon the extraordinary way in which the minister settled himself to meet the storm which was to break—he did it by larger estimates, increased imposts (counting as imposts what is taken out of the pockets of the people) and increased expenditure. That, I think, was not a reasonable way. The minister might have added to the financial strength of this country very materially if he had done as every business man in the country did, as the chancellor of every exchequer that I know of did, as any prudent business man would do—curtail in the face of the storm that was yet to come and so save in that way what he could of the strength and credit of the country's finances. That he did not do. As a result, of that same year, there was an addition to the public debt of $46,000,000, the largest addition to the public debt which this country has ever seen, and which might have been cut in two—yes, might have been diminished even more than that by reasonable and not at all impossible economies in the administration of the finances by the Minister of Finance himself.

When we come to the year 1910, trade is gaining, the revenue is increasing; the expenditure—we do not quite know whether that will exceed or not. The Finance Minister professes to believe that it will not; I hope his prognostications in this respect will prove true. But, at least, there will be very heavy expenditures. Last year, there were large borrowings by the Minister of Finance, amounting to £25,000,000 or £26,000,000 for which this country went into the market within a very limited time. this year also borrowings will take place; and the result of last year's borrowings, the way in which and the time at which they were carried on, the result of the utter lack of any prudent foresight a year or a year and a half before, was that, whereas Canada's credit had so improved that her borrowing rate had declined to 2·8 per cent in 1897, the cost now has gone up to very nearly 5 per cent, a point beyond the average cost during the first fifteen years of the administration of the financial affairs of this Dominion.

When we come to 1911, the Minister of Finance has very little to say. The main estimates call for $127,000,000. There are to be additional borrowings; what these may amount to we do not know. Besides the additions to the debt of last year and of this year, there will be another addition in 1911.

Well, what, after all, has saved the Finance Minister? Has it been the exercise of any very great prudence of his own? Has it been the display of extraordinary skill and capacity in the management of the finances? Has it been any intrinsic merit from a business point of view of the administration of the government itself? Not in any sense, not in the least. What has saved the government and what has saved the country was pointed out by a gentleman who is not a Minister of Finance or the leader of the party, who is not at all a partyman in the position in which he makes the utterance. The vice-president and manager of the Bank of Montreal, in a very few sentences, hit the

nail exactly on the head. What has intervened, and what has brought about the change, and what has set this government and the Finance Minister on their feet again so far as the business of this country is concerned? Why, it has simply been the work and the product of the farmers of this country. The vice-president of the Bank of Montreal pointed out that in 1900 the product of the Northwest amounted to 32,000,000 bushels, in 1907 it had risen to 160,000,000 bushels, in 1908 it was 232,000,000 bushels, and in 1909, 313,500,000 bushels, That is the explanation of the whole matter; that explains exactly how the shortcomings and blunders of the administration have been, if not entirely offset, minimized and mitigated to the exceeding great relief of the country itself. There is an increase of 81,000,000 bushels in the Northwest alone in a single year. That is worth at least $50,000,000, and maybe more. The prices that are obtained this year were never better, and the increased prices received for the product, interjected into the veins of business, is what has really regenerated this country, and set us on again to a period of, we hope, continuous prosperity.

Now what particular praise and what particular honour are due to the administration for that? These increased products have come from the northwest provinces. We are not without memories—who was it that purchased and opened up that country? Who was it that put the first great transcontinental railway through that country, and so made possible transport facilities, and a habitation and a working place for the farmer? And where were these gentlemen in that period? To-day they are reaping the harvest, I do not object to that; thank God that the harvest is as generous as it is. But let no one run away with the idea that because this help has suddenly come as a manna from Heaven to these gentlemen in their great straits, therefore some mighty skill, some deep inborn ingenuity, some most powerful and wonderful exercise of business talents is what has lifted the country up and sent it again on its way rejoicing. For those farmers, what have these gentlemen done? Do not their clothes cost them more than they did under the old regime? Do they not have to pay more for their lumber for every shack and every house they build? Is not their hardware more costly to them than it ever was before? And when they come to the labour which has to help them to till their fields, when have they had to pay so much for it as they do at the present time? As to grain prices, of course the government can do nothing. In what sense then has this government's administration helped to lift the country out of the slough of despond, and bring it into the blessings of the promised land? So I say it is the innate quality and virtue of the soil of the northwest, it is the strong arm and the business head of the farmer in the northwest, it is the co-operation, with these as a sub-stratum, of the keen business intellect, and the ability of the business men of our country, it is the application of the skill and brawn of the artisan in our factories and our industries, to which is due the prosperity of this country, in spite of the extravagances and in spite of the laches of the government since they assumed the administration of affairs.

As to the debt, the hon. gentleman said very little. Perhaps there is not a great deal to say, perhaps it was best that he kept on very quiet ground in that respect; for if he had not, he would have been easily reminded of what these gentlemen promised to do when they were in the shades of opposition, and what they have failed to do since they came into power. Where is the reciprocity with the United States that the hon. gentleman was going to get six months after he attained power? Where is the approach to free trade, the goal to which my right hon. friend had declared he had set his face with great determination, and from which he would not recede until he had attained it? Where is the goal of free trade as it is in England under the administration of this Paul the Apostle, who but a few years ago was a raging Saul of Tarsus, going up and down, finding fault with and denouncing the policy of protection from one end of Canada to another? My right hon. friend, after the homily which was preached to him today, the strongest I have heard in this House in a great many years, I suppose still has his face pointed towards the goal of free trade as it is in England, with no possibility of getting nearer to it within his natural life.

Well, Sir, we were to have many other things. We were to have a market open for us everywhere. What markets have they opened to us? Some markets have been closed to us, in others the rates have been raised upon us. No foreign market in the world has yet been opened to us by this aggregation of all the talents in the thirteen years during which they have been in power. If it can be named, let it be named. Some of our own sisters, the sub-nations of the empire, have granted us, as we have granted them, certain preferential privileges; but outside of that, there is not a nation in the wide world, outside of treaties which had been made before, into which any ingress has been given by these gentlemen for the products of our country.

Oh, yes, there is the French treaty, not yet operative, but soon to go into operation. But the burden of the fat cattle which the Prime Minister a year ago

shouldered into this House with great pride and pomp, when he appealed to the farmers of this country as to what the French treaty would do for them, the burden of fat cattle has been dumped, the stockers are the only ones that are left, and they will have a jolly time geting into the French market, over a tariff of anywhere from $15 to $20 per head, and the uncertainty as to what interpretation of the tariff may be made by those who have the sole regulating power as to the entrance of our cattle into French ports. So we have not got very much from that. But we have loaded ourselves with $200,000 a year for a steamship subsidy to be paid to vessels running between this country and France; that is in ten years $2,000,000 which my hon. friend the Finance Minister did not take into account, and which has to be provided for.

Well, there are some other things that have not been done. The state of trade between the United States and Great Britain and Canada, remains unrectified. That condition of things was very severely censured by my right hon. friend the Prime Minister and his coadjutors in the olden times. They told us that it was neither patriotic nor loyal that we should be buying more from the United States than we were buying from Great Britain, and selling less to the United States than we bought from the United States. They loudly called for a tariff which would rectify that and put us in a better position. How do we stand to-day? In 1908 we bought from the United States $204,000,000 worth. They bought from us $90,000,000 worth, wherein the balance of trade aggregated the sum total of $114,000,000. In 1909 the unfavourable balance was reduced to $85,000,000, but the trade is now going up, and, as it goes up, the adverse balance with the United States will also increase. On the other hand, Great Britain bought from us a much larger amount than she sold to us, and gave us last year a favourable balance of trade of $55,500,000. Any one sees that the balance of trade which is favourable in the case of Great Britain, has to go to the extent of $55,500,000 to pay the adverse balance of trade against us from the United States, and it will still leave from $50,000,000 to $60,000,000 to be paid for in some other way. The point I wish to make is that these hon. gentlemen have not rectified that grave condition of things which they censured in our time, but that under their administration it has been enlarged and aggravated to the degree which I have stated. To-day there is an adverse balance of trade with France of $5,000,000, with Germany of $4,500,000, with South America of $1,000,000, and with the West Indies of $3,500,000. The total balance of trade against us in 1908 was $104,000,000. It was reduced last year, because there were less imports, to $45,500,000. Now, though I am not going to say that Canada ought to be and that it is imperatively necessary that she should be always in a position of having a favourable trade balance, I say that when, under any administration and its policy, you have an adverse balance continually increasing, something is wrong in connection with that trade policy and it ought to be the duty and endeavour of the government to so arrange its policy that this adverse balance should be made as small as possible, that it should be reduced instead of constantly advancing.

My hon. friend said that they had not raised the rate of duties. His favourite response always is: Oh, you are the party of high duties; we are the party of low duties. With the preachment of the Minister of Finance to-day in advocacy of bounties, the highest form of protection, the hon. Minister of Customs (Mr. Paterson) who still, I think, believes that we have a revenue tariff in this country—at least, he takes occasion to reiterate it each year—will find it very difficult indeed to persuade his constituents that under the leadership of the Finance Minister the day of free trade has not for ever passed away in this country. Well, what about that immense reduction of duties? Here are just some facts taken from the reports of the ministers themselves. From 1879, when the protective tariff was introduced, until 1896, when the Liberal-Conservative government went out of power, the average rate of duty on dutiable goods coming into this country was 28·35 per cent. In 1909 the average rate was 27·46 per cent. So it is a fact that in the last year of grace, under the administration of these hon. gentlemen who have so lowered the duties—to listen to themselves—their duty is 27·46 per cent, as against an average of 28·35 per cent from 1879 to 1896. But taking into account, as I have a right to do, the bounty which is a special form of protection and which they take out of the treasury of the country, I find that in 1909 they have a rate of 28·72 per cent, and so they have actually reduced the rate of duty exactly 89-100ths of one per cent from the average of 1879-1896.

Now, I agree with my hon. friend in his statement with reference to the nature of the message which was sent to Congress a little while ago by President Taft. It was a reasonable message, it was a statesmanlike message, it was a message which gave, I think, to all countries the right to believe that whilst President Taft and his cabinet remain in power there will be no seeking for trouble with reference to the matter of discriminatory and compensating duties. I do not think a message could

have been fairer than his was on that point, and I quite agree with the Finance Minister in his characterization of what we may conclude from a perusal of it. At least, we will hope that it shall not be made an instrument of even menace to us in Canada. It remains, however, that the United States tariff, outside of President Taft entirely, has already penalized Canada with reference to her exports of both pulp and paper and has done that because of the conserving policy of the provinces of Ontario and Quebec which are looking to the preservation of their forests. So much then in reference to the United States, although this fact remains, and we might just as well state it, that the tariff of the United States, as compared with the tariff of Canada, does not give to Canada that fair trade to which she is entitled.

There is another situation in the trade point of view which is extremely interesting at the present time. That is the situation in Great Britain. I am not going to discuss British party politics for a single moment, but I think it is well for us to keep a few facts in mind. It is not more than five years ago, certainly not more than six years ago, that the right Hon. Joseph Chamberlain first promulgated his view, and a view not entirely and completely formed at that time, of what he thought might be or ought to be the fiscal relations of the mother country with the different parts of the empire and of the different parts of the empire with each other. Not more than five or six years ago did that idea receive the countenance and support of a first rate British statesman. Five or six years ago a first rate British statesman promulgated that idea in the face of a free trade England which had been free trade for forty or fifty years, and there did not then seem to be any great probability that such an idea would prevail. But five or six years have passed and what do we find. So rapid has been the change in public opinion, so rapid the progress of events. so strongly has the question of empire and the treatment due to the different parts of the empire taken hold of the people of Great Britain and the empire, that to-day the South African colonies give a preference to the mother country, New Zealand gives a preference to the mother country, Australia gives a preference to the mother country, Canada gives a preference to the mother country, and we have at the present time in the mother country itself, one of the great historic political parties entering into an electoral contest in which the first plank in their platform is tariff reform, with the avowed purpose of using it to give to the colonies preferential treatment. That marks a rapidity of movement and change in the fiscal ideas of the mother country and the empire which one would scarcely have ventured to prophesy a few years ago. And whether the Unionists or the Liberals are successful in the coming election—and I do not suppose any one wishes to hazard an opinion as to which it will be—I do not think it is going too far to say that the time is appreciably near when the policy of Great Britain will be one which will enable her to give to the colonies a measure of preferential treatment in return for the measure of preferential treatment which the colonies have given to her. Now, while I have every sympathy with the Minister of Finance in his endeavour, if he makes an honest endeavour, to advance the trade of Canada with other countries, I think it will be wise to be very careful in these different negotiations that we do not tie our hands unnecessarily so as to make it more difficult for us to enter into that kind of partnership with the mother country, which, when the change comes in her fiscal policy which will enable her to do so, she will offer to us. Have we not everything to gain locally by an entrance into the markets of Great Britain on a preferred basis. It is not necessary for me to more than ask that question; no one will dissent. Not only have we locally much to gain but as believers in and lovers of the empire we know that the empire has much to gain by uniting its scattered Dominions more closely together.

In the way of evoking greater sympathy and greater practical interest, in the way of uniting more closely all the members of the empire one to the other and each to all we have very much to gain. Therefore I say that it is well that the Minister of Finance and the government should go slowly in making any entangling alliances for trade with other countries until at least we get more light upon what may take place in the future in Great Britain. Of course it may be said that we make these treaties subject to abrogation on certain notice, but it is equally true that it is more difficult to give notice of abrogation than it is to enter into a commercial treaty in the first place. Now, some people ask the question: Do you mean to say that any power exists which can make a tariff for Canada outside of the parliament of Canada itself, and are you willing to go into any arrangement of that kind. The question may be fairly answered in this way: There is no body which can make a tariff for Canada outside of the parliament of Canada itself, but that did not bar the parliament of Canada itself from giving preferential treatment to Great Britain, and to Australia, and to the West Indies, and to New Zealand, and neither will it bar the parliament of the United Kingdom, from giving to Canada or Australia or New Zealand or any other of the over-seas Dominions a preferential entrance into her market. There-

fore, the question of having to submit to some outside authority before you can have the advantages of preference is altogether visionary. Each component part keeps its absolute autonomy and independent power of deciding what its tariff shall be, each looks over the field and as its circumstances allow and its sympathies and its interests direct it gives to the other member of the family a preferred entrance in whatever manner it may deem wise. I do not know that any imperial preference man; I have never heard of one yet who has advocated that under present conditions any other method of fixing the tariffs under a preference shall be resorted to than that which I have just mentioned, and it certainly takes away all objections on the ground of autonomy. So much with reference to matters of trade.

Now, I was going to criticise the Minister of Finance a little with reference to financial matters, but I am not sure that it will do any good. Any way he may say that the horse has gone and that there is no use of now locking the stable door. That is true, but a man who loses something valuable because of not having locked the door is very apt to see that his doors are afterwards kept secure so that the loss shall not be repeated. It is in that view that I want to bring to the attention of the Minister of Finance very briefly some things which he did not do and some things which he failed to do and some things which he actually has badly done in reference to this financial flurry which we have had. What then did he do? He knew as well as any man in Canada—he should have known better than any man in Canada—long before the latter part of 1907 and the first part of 1908 that this financial stress was coming upon the world and he should have taken two methods and employed both of them; first he should have anticipated by making his provision for the tremendous obligations which he had entailed upon himself and, secondly, he should have reduced his current expenditures and should have initiated a period of economy a year before he did at the very least. In those two ways, by making provision in time before the hurry and the strenuous condition of the market put him in the very worst position, and the other by not making extraordinary estimates but rather resorting to economical and less extravagant estimates he should have prepared to meet the stringency. In those two points I think the minister failed. As a result what took place? The minister says he has not damaged the credit of the country. I do not think that intrinsically the country has been struck a fatal blow in that respect, but this much is true that the Finance Minister, by his methods, has not improved the financial condition of the country. That he has not improved it is easily proved by the two facts to one of which I have alluded with respect to his loans. In the first place, he has paid and has been for the last year and a half paying the highest interest on loans that has ever been paid in the history of Canada. He has reversed the downward trend arising from the better condition of Canadian finances and Canadian business which showed from 1870 down to 1894, and reached the low figure of 2·88 per cent in 1897. He has reversed that and his rates have climbed until now he is getting very little money at 3½ per cent and is paying very close to 5 per cent for most of the money that he has borrowed of late and that he will likely borrow in the future. In the second place, see the extraordinary methods to which he had to have recourse in order to get his money. It is a fact that the loans from 1879 to 1894 on the British market made by Canada amounted to £26,943,000, while those made from 1897 to 1909 amounted to £20,831,398. The brokerage that was paid by Finance Ministers for the former loans amounted to £55,718. The commission paid on these loans amounted to £214,916. That was under the old times when Canada's credit was not supposed to be as good as it might be now with the great development of this country. The Finance Minister from 1897 to 1909 has gone into the British market for £20,831,398, £6,000,000 less than the preceding figure which I have mentioned. On that he has paid a brokerage of £60,988, and a commission of £347,330. He has paid more in brokerage, on a less quantity borrowed, by £5,270, and he has paid more in commission, on a less quantity borrowed, by £132,414. Added together he has paid $685,000 more for less borrowings than the amounts paid from 1879 up to 1894. And this, too, although he has during the later period had the advantage of a much more favourable brokerage contract made with the Bank of Montreal in 1892. That, I say, is an excessive increase, and the fact that he has had to raise his loans by such extraordinary payments is, I think, a very good argument to show that he did not find Canada's credit just as easy and as well established as he would try to make us believe. The following table will illustrate the above, it being borne in mind that 1897-1909 were Liberal government years:

Years.	Amount borrowed.	Brokerage paid.	Commission paid.
1879-1894	£26,943,000	£55,718	£214,916
1897-1909	20,831,398	60,988	347,327
Excess paid by Liberal government..		£ 5,270	£132,411

Total excess, brokerage and commission, $685,000.

There is no necessity of making a laboured criticism of the minister. That, I think, shows exactly in a nutshell the difficulties that he encountered, and I think I have given very plainly the reasons for which he encountered those difficulties. Will the minister and his colleagues having been given this respite through the grace of the farmers and of Providence, take any lessons and learn to guide their conduct by the experience of the past? I am afraid they will not. The Minister of Finance to-day indicated his intention of soon having, if he could, $100,000,000 revenue—and spending it all. He gave out the cheering news to his expectant supporters that he could now afford to be a little more free in the matter of general expenditures, and I noticed that that evoked a corresponding cheer. But I noticed that the Minister of Finance did not say a word to indicate that he intended to carry out what he hinted at last year and what was very strongly impressed on him from this side of the House, that in times of buoyant revenue he might well take pattern by the Chancellor of the Exchequer in Great Britain, and lay aside a certain amount each year for the extinguishment of the public debt, that when things were prosperous and the treasury was full and the revenues were buoyant it was a good time to strengthen the reserves of the country by laying aside something as a sinking fund and to diminish our vast debt. To-day we are carrying a debt of $325,000,000. Next year that will be still larger, and the year after that larger than before, and it does seem to me to be a fair point to take that out of abundant revenues something should be done in order to diminish the public debt, give confidence to the lenders in the old country and at least make our acknowledgment of an obligation to pay the principal as well as to pay the interest on our borrowings. The country will also have to borrow during the succeeding year. I find that in 1910, some $38,500,000 are to be met in maturing loans; $14,000,000 of this will be covered by sinking funds which will leave about $24,000,000 or $25,000,000 to be borrowed. That is for maturing debt alone, and to that must be added the borrowings for the Grand Trunk Pacific railway, whatever they may be, and I shall touch that subject later. In 1911, $8,555,000 has to be met as a maturing loan, and will have to be borrowed. In 1912, $30,500,000, and in 1913, $8,000,000 have to be met in the way of maturing loans. All that is in addition to what may be necessary to be borrowed for the completion of the Grand Trunk Pacific railway. The Finance Minister in his statement of debt made very little, if any, allusion to the obligations which Canada is under. My friend from Qu'Appelle (Mr. Lake) by a question brought the minister's attention thereto.

The minister, however, set little store by it, for he did not consider it sufficiently important to make it an item in his budget. But it is true that Canada is under obligations, and increasing obligations in this respect. I find that for the Canadian Northern there are bonds of £1,923,287 at 3 per cent guaranteed, and for the same railway £1,622,586 at 3½ per cent, principal and interest, and, £5,200,000 is already guaranteed for the Grand Trunk Pacific; but, considering that we have to provide for a guarantee of 75 per cent of the whole cost of the Mountain Division, this obligation, before it is ended, will amount to a very large sum; and, although the Finance Minister, may not think so, into whatever market he goes, not only will the revenues and the expenditures and the public debt be taken into consideration, but every obligation that the government is under is scanned as well, and scanned zealously, and goes to make up the estimation of the credit of the country.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

SECOND READINGS.

Bill (No. 61) respecting the Canadian Northern Railway Company.—Mr. Cash.

Bill (No. 62) respecting the Esquimalt and Nanaimo Railway Company.—Mr. R. Smith.

Bill (No. 63) respecting the Manitoba and Northwestern Railway Company of Canada.—Mr. Cash.

Bill (No. 64) respecting the Ottawa Valley Railway Company.—Mr. Ethier.

WAYS AND MEANS—THE BUDGET.

Mr. FOSTER. I wish now to make a few remarks, Mr. Speaker, on the subject of expenditures, a matter in which, probably more than in any other, this government has made dangerous progress and has shown a disposition to completely go back upon all the professions its party made in their days of opposition with regard to principles, methods and conditions of expenditure. In making these remarks on the expenditures of the government, one cannot go so much into particulars as he would like; therefore I will confine myself to some general points. What first strikes us is the startling increase in expenditures from 1897 up. The Minister of Finance, this afternoon, in comparing the two administrations in relation to expenditure went on to show that the percentage of general expenditures provided for out of current revenue by the present government was greater than that provided for by the preceding government during their terms of office. It ought not to have

been difficult for the Finance Minister to give a very good reason therefor. His own accounts were before him and a mere glance at the columns would have shown him that the present government has taken from the people by means of taxation about twice as much as did the preceding government. This government, therefore, had nearly twice as much revenue at its disposal, and if they made just about the same proportionate charges to current revenue, the percentages which were mentioned by the Finance Minister would just about establish equality. In the twelve and three-quarter years during which this administration has been in power, it has taken $618,000,000 in taxation from the country. In the last twelve and three-quarter years of the preceding administration they took only $340,000,000. That is, the present administration has taken nearly double the amount in taxation that their predecessors did, and on the same principle and rule, they would disburse a much larger amount for what the minister calls capital and special expenditure. But the Minister of Finance spoke also of the conditions of the debt, and I would like to recall his attention and that of the House to a point which I made in a preceding debate. During the incumbency of the Liberal-Conservative government, $118,000,000 was added to the public debt. Of that, $10,000,000 was incurred in adding a very valuable asset to this Dominion in the form of 7,500,000 acres of land in the west at about $1.50 an acre. If you count the $118,000,000 of addition to the debt on the one side, you must look on the other side also and consider the assets. Now, the assets that represent debt in the Dominion of Canada are not, as a rule, productive. Many of them, instead of being productive, are the very opposite; they are wasting assets; they are continually depreciating and requiring not only the payment of interest on the first investment, but the cost of upkeep and maintenance. In this case, an asset of real value was added to the country in the form of 7,500,000 acres of land which, if it had been reserved to this day would, counted at the moderate price of $8 per acre, represent a value of $60,000,000. That, when pointed out, any fair-minded man would take into consideration. And, in connection with that, let me ask what live asset of any similar value has the present government added to the resources of this country by the addition of any similar, or even greater, amount to the public debt? They have been often in haste to get rid of the lands of this country by selling them at remarkably small prices to favourites of the government. Here was a case in which the land was bought for the Dominion, and has remained and remains to this day as an asset, an asset which has greatly increased in value, and it represents certainly at a moderate calculation the amount which I have named.

The expenditure of this country in 1896, for all purposes, was $41,000,000; in 1897 the expenditure was $43,000,000 a very slight addition; but in 1909 the expenditure has gone up to the enormous sum of $133,000,000, a little more than three times the expenditure of 1896. It is altogether easy, and just as futile as easy, to say that the expenditure increased because the country has grown. The country is growing, and the country's expenditure must grow. But here is a growth in expenditure which exceeds all corresponding growth in population, or in any other way that you may mention. It is an inordinate increase in expenditure. When you come to the column which represents the expenditures of the Liberal-Conservative party, you will find that in 1873, to commence with that date which was about the time the Liberal government came into power, the expenditure was $39,000,000. In 1880 when the Liberal Conservatives were again in power, the total expenditure was $34,000,000. Now from 1880 to 1896 were periods of growth, of expansion, of building large public works, and it takes in the beginning and the completion of the first transcontinental railway, namely, the Canadian Pacific railway. And yet if you run through the columns of figures, you will find that the total expenditure keeps along in the thirty and forty millions. In 1880, as I have said, it was $34,000,000; in 1887, $41,000,000, and from 1887 to 1896, the average total expenditure was only $42,000,000. The great works which had to be undertaken and carried out, in the way of the enlargement of the canals, in building the Canadian Pacific railway, in construction of the Soo canal, and in subsidizing and building other branch lines of railway, all that was undertaken and carried out, and yet the absolute total expenditure for all purposes only increased from $34,000,000 in 1880 to an average of $42,000,000 from 1887 to 1896.

Now there is no parallel between that and the expenditure by this government. The Finance Minister says, we are also building a transcontinental railway. So you are, and you have paid out to end of the financial year some $51,000,000 for it. But do not forget the fact that the Liberal-Conservative government built the Canadian Pacific railway, in so far as public aids were given, and that this increased the total expenditures by $62,500,000. but this government has increased the total disbursements from $43,000,000 to $133,000,000 in twelve and three-quarter years. Therefore, there is no possible parallel between the two.

Let me put it in another way. From confederation up to the present date the Do-

minion of Canada has expended 1,985 million dollars. All the previous governments up to 1897 expended 1,063 millions of that; this present government, in its twelve and three-quarter years, has expended 922 millions. That is to say, in twelve and three-quarter years this government has spent to within 70 millions an amount equal to what the whole Dominion of Canada spent in the preceding 29 years. Is not that going it some? It is a startling thing when you come to look at the figures; 922 millions in twelve and three-quarter years, 1,063 millions in the 29 preceding years. But great expenditures necessitate great taxation, great income, or that combined with great borrowings. So what is the record to-day with regard to taxation? This, that as regards receipts, 1,672 millions have been gathered from the Canadian people since confederation, 828 millions of this have been gathered in twelve and three-quarter years by this government, 844 millions was gathered in 29 years by all the governments preceding this. So this present government has gathered from the country, taking out of the pockets and earnings of the people, within 8 million dollars as much as was taken out of the pockets of the people for the 29 preceding years.

Now if you take the twelve and three-quarter years, what has been the average of population? Five and a half million people in twelve and three-quarter years has handed over to this government 828 million dollars, or an average of 65 millions per year. Now the Minister of Finance may make his divisions and calculations with regard to the net debt, and set forth how much it is per head. That proves nothing. The point is: What are you taking out of the individual taxpayer of this country? What are you taking out to-day? $11 to $12 per head, whereas in 1896 we took out a little less than $5.50 per head. This money you took out is money that comes from the man's earnings, it is so much abstracted from his capital. There ought to be no reason in the world for taking it except that it is absolutely necessary that the aggregate of the people of this country should be governed and, that they should pay for it. Yet you have taken this immense amount of money, $65,000,000 per year during the last twelve and three-quarter years, or a total of 922 millions, and in addition to that are the borrowings you have provided for.

Now when any man looks around, goes through the books, looks around this country and asks what we have got for the 922 millions of expenditure in twelve and three-quarter years, he finds it difficult to answer that question. What have we got that stands and is useful to this country, and is either productive or stimulating? What have you? It is a debated question as to whether the Grand Trunk Pacific, as regards the portion from Lake Superior junction to Moncton, is a stimulant to this country, or will be productive within very many years. But even that represents to the end of the present financial year only $51,000,000. What have you to show for the $922,000,000 less the $51,000,000, that has been spent in the twelve and three-quarter years? We cannot escape from the conviction that millions of it have been worse spent than wasted. We are in no condition to absolutely prove this, thanks to the repressive system of the government. By a mistake the government appointed a commission which went a little beyond its contemplated duty and lifted the lid in one of the departments. It showed a department without business methods, with the grossest extravagance and with a lack of conscience. Arguing from that this side of the House pressed for an investigation in other departments. Why not? The other departments are the stewards of the people, managing the money of the people. Was there any reason at all why the people should not know how that money had been used, how these stewards had managed? If they had managed wisely, if they had expended that money properly, the people would have seen that they had done so and would have praised them. What did the government fear? And yet with absolutely similar conditions, this side of the House and the people of the country were debarred entirely from auditing, in any kind of a fair way of examination by independent parties, the $922,000,000 which has been expended by this government in twelve and three-quarter years. Now, Sir, I wish to say a little more as to special expenditures. I take public works. The public works of this country, during the Liberal-Conservative administration, had expended upon them an average of $2,000,000 per year. When this government came into power, for a few years it made an expenditure of about $4,000,000 per year. Then a change took place and I am going to ask the House, in the first place, to listen to a table, which will be printed in 'Hansard,' as to the progress of expenditures on consolidated fund account in all of the departments and then make a few more extended remarks in reference to one or two of these departments. The table is as follows:

CONSOLIDATED FUND EXPENDITURE.

—	1896.	1909.	Increase.
Miscellaneous.	$	$	p. c.
Administration of Justice	758,270	1,240,364	63
Agricultural and Statistics	210,877	1,403,569	665
Civil Government	1,396,628	3,283,265	135
Fisheries	427,250	951,728	123
Geological Survey	52,668	247,659	370
Immigration	120,199	972,326	700
Quarantine	95,247	121,665	30
Indians	880,408	1,307,245	50
Legislature	904,687	1,543,327	70
Light Houses, &c.	466,057	2,721,801	500
Mail and Steamship Subsidies	534,916	1,684,683	200
Militia	1,136,713	5,221,644	360
Ocean & River Service	181,451	1,201,804	560
Pensions	86,080	191,532	120
Public Works	1,299,768	12,300,184	850
Scientific Institutions	81,669	553,921	570
Collection of Revenue.			
Customs	896,332	1,994,951	122
Dominion Lands	119,908	548,607	357
Inspection Staples	2,576	160,184	6,000
Post Office	3,665,011	6,592,386	175
Public Works	159,460	625,034	280
Railways and Canals	3,725,609	10,780,125	190

PUBLIC WORKS EXPENDITURE, CONSOLIDATED FUND.

	Miscellaneous.	Collective Revenue.	Total.
	$	$	$
1896	1,299,768	159,460	1,459,228
1909	12,300,184	625,054	12,925,218
Increase	11,000,416	465,574	11,465,990
" p. c.	850	280	785

Average Expenditure 1873-1883		$ 1,300,000
" "	1883-1900	2,000,000
" "	1900-1904	4,000,000
" "	1905	6,765,000
" "	1906	7,484,715
" "	1908	8,721,326
" "	1909	12,300,000

In eight and three-quarter years, $57,000,000 have been expended on miscellaneous public works alone. I say that this expenditure is inordinate. It is indefensible and you cannot point with your finger to the compensatory advantages, to the compensatory product of stimulus or of use to warrant the expenditure of this amount of money. Not only are we startled by the great increase in these expenditures, but, Sir, there are other things that might be said about this expenditure on public works. It applies to a great many expenditures but particularly to the expenditure on public works. In the first place there is no plan upon which these expenditures are made. There is no setting down by a competent authority, or competent board, and taking into account the amount of money it would be wise to spend, taking into account the needs of the services for which alone the money should be spent, taking into account the localities which are to be served and in the line of precedent. There is no such thing as that at all. No country in the world proceeds to its expenditure upon public works on the haphazard and secret plan on which this Dominion of Canada proceeds. There is absolutely no publicity in the matter. It is a matter between the candidate, or the person pressing for the expenditure and the minister who has charge of the expenditure. The expenditure is warranted by the government before the House or any body else outside of it has any knowledge of the thing at all.

Once the government comes down with these estimates it is impossible in 99 cases out of 100 to change an estimate in the least. In the United States, where we think they have been pretty extravagant, no congressman can get an appropriation for public works by simply going to a minister and buttonholing him. He has to submit his resolution that it is wise to have a public building built in a certain place; he has to substantiate that before a responsible committee and that committee has the oversight of the whole amount that is to be expended during any one year. Congressman A or Congressman B does not get $20,000 for a post office by going to the minister and persuading him to put it in the estimates; he has to go before the committee, which has the examination into all the appropriations for all public buildings, and which considers the reasons for the expenditure and then decides what amount of money will be expended at any particular place. Then and not till then does it go into the estimates. But worse than all that, we had a singular instance in this House the other day; worse than I have ever known it before; we had a proposal which was well understood and heard by the Minister of Finance who to-day prided himself upon being a trustee for the people and of sitting here in that capacity. What was this proposal? It was to spend $20,000 or $25,000 of the people's money. What for? For a post office. What was the postal revenue of the place? $700 in the year all told. The question was asked of the Minister of Public Works: Has the Postmaster General asked for it? The answer was:

No. The Minister of Public Works buttonholed by somebody puts in an appropriation of $20,000 or $25,000 for what he calls a post office in a place where to-day there is a postal revenue of $700 annually, and where the present postal accommodation is rented for exactly $38 a year. And when the Minister of Public Works is questioned he admits that no post office authority has told him that they need a post office in that place to carry on their business. Is not that a perfectly outrageous way of proceeding? Is there any other sane legislative body in the world that would do that kind of thing? Who should be the judge of the necessity for a post office? The post office authorities themselves and nobody else. The post office authority is absent in Europe, his officers are present here, but neither he there nor one of his officers here has ever signed a scrap of paper asking for the erection of a post office in that town. There was another proposition brought into the House by the Minister of Public Works to build a new examining warehouse in the city of Quebec. It was to cost about $500,000. He wanted a vote of $50,000, he thought it would be best to change off the old and get a new site and if so this $50,000 was to go towards the building. The Minister of Public Works proposed to get a vote of $50.000, which would authorize him to proceed to spend if he thought it was best, $500,000 for a customs building. The Minister of Customs came into the House and it was brought out in the course of the questioning that the Minister of Customs had never asked for this building, that he absolutely knew nothing about it, except that the old building had had a fire in it and that it must be repaired in order that his men could do their work. These are not isolated cases, they are pattern cases. Over and over again this session and last we have cornered the Minister of Public Works in his appropriations for buildings, and we have had him admit time and again that the Minister of Customs never asked for this and the Postmaster General never asked for that, and the departmental administrator knew nothing about it. And when he was brought to book the Minister of Public Works justified the action by saying that every country seat ought to have a building costing from $20,000 to $25,000. Well, the meaning of that plainly is that the government is not erecting public buildings for the use of the service but for patronage purposes, sticking up one in every county town whether it is necessary or not. That is the system upon which this immense expenditure in the Public Works has grown up chiefly, until it is to-day $12,000,000 under the administration of the present minister. Does not this House think that before a public building is erected the departmental head of the department which requires the use of it ought to express an opinion upon its necessity? Does not the House think there ought to be some board which would take all these matters into consideration and appropriate these moneys for public buildings? Look at the iniquity of putting up a $25,000 building somewhere in the country where there is a yearly revenue of not more than $700, and not asked for by the Postmaster General, and not required for the needs of the postal service. What does it mean? It means that the trustee Minister of Finance sitting yonder allows to be taken out from under his key where he has it in charge $25,000 of the people's money for a mere matter of paltry petty patronage; that is what it means, nothing more and nothing less. On the other hand you have a city like Lethbridge, which has a postal revenue of $20,000 and more, which has absolutely no decent place where people can get their mail matter, and yet there is no post office building there, good or bad, and there is no proposition to put one there. But, because the member representing Lethbridge happens to be on this side of the House he must go chasing around for ever looking for the just rights of his city. Well, neither the member for Lethbridge should have to chase around looking for suitable accommodation for the postal service in his city nor should the other man get a post office in his village for patronage purposes, but, when such buildings are necessary in the public interest the Minister of Public Works and the Postmaster General should consult together and decide first that the building was necessary, and in the second place, the kind of building suitable for the conditions of the public service in that particular place. Where are we to come out at if we keep going along in this way? One can learn much by keeping his eyes and his ears open in this House. I heard a minister state in the House the other day that $27,700 was expended for a piece of dredging and he believed there was more dredging to be done there which meant more cost. What are you getting? A channel from five to eight feet deep. Who is using it? One gasoline launch and one steam vessel—but there was a great paucity of information as to what particular amount of business that gasoline launch and that steam vessel were carrying on. There will be probably $40,000 or $50,000 of the people's money for which those gentlemen are trustees expended for what reason? Any broad purpose of commerce? No, I venture to say expended where no men of a corporation would dare to expend the money which was given to them by their shareholders

and justify it to their shareholders when they met them. I could go on and give examples of that kind of thing for hours upon hours. Examples of this are in our estimates through and through, they are in our public accounts and have been for years. I think this thing ought to be mended, that the government itself, for very shame's sake, ought to provide some business-like method of constructing its public works and ought to at least have a consultation of the heads of the departments that are nominally and in practice to be served by the construction of these works. As an example we may take a little item for dredging for which some $42,000 or $45,000 have been paid. This is for a little place down in New Brunswick, a portion of a small lake. I believe they got five feet of navigation, perhaps more. I know the place well, and no business man will go there and tell you that you should have spent one red cent upon dredging in that locality, it is absolutely thrown away, given to a friend of the government—and to a friend of the government who puts his money in large quantities into the support of the government and the support of organs which support the government. I am willing to make this challenge to the Prime Minister, to pick out any three business men, add to them an expert, send them down there and let them report to him; and I am willing to stake my reputation that their report will be that no trustees of the people's money who have a proper regard for their duties would have allowed a single dollar of that kind of expenditure. Will the government take the challenge? But I turn off from that very fertile subject, I hope we shall hear more about it before this session is over, and I come to anotner point.

If there is one thing that these hon. gentlemen pride themselves on more than another it is their business management of the affairs of this country. I have heard them boast that their management is a business management, and I have heard their supporters boast, sometimes, thinking it to be true, that their course of administration in a business point of view was a marvel of business ability and of business methods. I want to adduce just a few examples of what these gentlemen have undertaken and of what they have done and what they have failed to do—just one out of maybe a hundred pertinent examples that might very well be called to mind.

First let me take their management of the Yukon Territory and ask whether it has been a very brilliant phase of their administration? These gentlemen came into the possession of an awakened and partly explored Yukon. They entered upon its administration and declared in this House over and over again, that they were going to make the Yukon pay for the Yukon, dollar for dollar, and would make it even a source of revenue. Let us go to the record and see what happened. In 1901 this government had a revenue of $1,993,982 from the Yukon and made an expenditure of $1,254,156, leaving a surplus for that year of $739,826. From 1894 to 1900 there had accumulated a surplus in the Yukon management of $940,769. That is, at the end of 1901 this government had a surplus of $1,680,595 in their hands as a result of the previous management and previous conduct of the Yukon. What happened afterwards? Come down to this present year, take the whole of the operations from 1894 to 1909 and you find that the total net deficit amounts to $2,236,367. Taking all that came in and all that went out they have expended in the Yukon $2,236,367 more than they received since 1902. But in 1901, they had a surplus of $1,680,000. From 1901 to 1909 they got rid of that surplus and they landed in a deficit such as I have named so that they got away with $4,916,962 in their management of the Yukon in eight years. Is that brilliant management? You had about 30,000 or 38,000 people there in 1901. How many have you to-day? Eight thousand—I think I would be nearer if I said 5,000. You had an income in gold of $22,700,000. What have you now? Two and a half millions or two and three-quarter millions, something like that. Yet the very last year of your administration there, whilst you got a revenue of $572,650, you took care to spend $837,015 and made a deficit that last year of $264,365. Is that brilliant business management? It costs to-day, according to the figures I have read, nearly $170 per head of the people of the Yukon to administer it for a single year.

Let us take another instance. There was the Stickeen-Teslin railway arrangement. This government entered into a straight and fast contract just on the eve of the assembling of parliament. Parliament looked into that contract, parliament did not approve of it and held it up. Force was strong enough to put it through this House, but force was not strong enough to put it through the Senate. As a result it did not go through parliament, and after the government got their majority in the Senate they did not attempt to put it through. What happened? They had to pay $282,323 to Mackenzie & Mann for breach of contract or for damages. That money went out from the hands of these trustees and what good ever came to the country from it? Wouldn't it have been better if they had brought the proposition down and threshed it out in the House before they made the hard and fast contract which bound them in the end to pay these dam-

ages? Was that brilliant management on the part of a board of trustees? Then there was the Drummond Counties railway. Their own minister came to this House with the sanction of his colleagues, and told this House: 'I can buy the Drummond Counties railway for $2,100,000 or a little more.' This House questioned the justice of the payment; the other House not only questioned it, but examined into it, and held it up for a year. The next year their own minister, with their sanction, bought the same property under better conditions for $800,000 less than he wished us to pay for it the year before. Was that brilliant trusteeship? If the shareholders had not got in on that transaction we would have been out from $800,000 to $1,000,000 more than we are.

Then there comes the Quebec bridge. This is fresh in the minds of all. The Quebec bridge, from the very moment of its inception, was known to be on a great line of traffic, a most important link between the north and south shores of the St. Lawrence, between the great west and the farther east. What happened? To the company which never put in more than $200,000 of stock, which only paid up a fraction of that, until and after it was forced to years later by the government, they made advances and loans of nearly $7,000,000. They omitted the slightest precautions of having proper supervising engineership. The bridge fell down one fine day, and some 75 people were drowned. The government woke up. They woke up in two ways. In the first place, they paid to this company, which gambled on the prospect of making a lot of money out of the transaction, by controlling a line that was necessary, and terminals which were to be added to it. They paid them back in full all the stock they had subscribed for. They paid them five per cent for the time they subscribed for the stock until they got their money. They then added ten per cent of a bonus, so that they would not have any wounded feelings, pocketing the $7,000,000 of loss. They then brushed up and looked into the matter in a businesslike way, and since then they have spent $100,000 on examination and engineering, owing to the loss occasioned by their failure to supervise and provide proper engineering ability at an earlier stage. They now have found out that what their company had passed as sufficient foundations for the Quebec bridge are not sufficient, and a $2,000,000 contract is invoked for better piers, new abutments and better foundations. There is $9,000,000 gone before you commence your superstructure. What that will cost I do not know; but putting it at $5,000,000, that makes up an expenditure of $14,000,000, of which over $7,000,000 is an absolute loss—why? Because the work was begun and carried out in a fashion that no trustees for any estate or corporation would have descended to for a single moment.

Then there was the Newmarket canal, which is a euphemism for the Aylesworth ditch. There are the trustees—they face me now. The trustees are taking a million and a quarter of the moneys of the estate for which they are trustees and are putting it into the Aylesworth ditch. No water, little population, no traffic—an absolute waste, and the worst kind of a waste, because it lies in plain, open sight. If they wanted to make a spectacle like that, why didn't they do it away from the settled portions of the country, where it would not have been seen every day by people who travel? In the bottom of his heart the Minister of Railways is ashamed of it. The Prime Minister, who is the head trustee, has never deigned to show what is to be carried on that canal when a million and a quarter of money is to be put into it. They have been challenged over and over again, and yet none of them has the backbone to stand up now, before more than $300,000 has been spent, and say: ' we made a mistake, we have sunk $300,000, but, by George, we will not sink the other $900,000.' Whilst in the west, I took an automobile trip down the Red river to see a very notable, noted, or notorious work, called the St. Andrew's lock. There you have a very fine work. The total cost of it, I believe, is to be over $600,000.

Mr. BRADBURY. A million and a half.

Mr. FOSTER. Six hundred thousand dollars has been spent now.

Mr. BRADBURY. Over a million.

Mr. FOSTER. It is worse than I thought it was. Supposing we put it at a million or a million and a quarter. Has the Prime Minister ever seen it?

Sir WILFRID LAURIER. I have not had that privilege.

Mr. FOSTER. Has the Prime Minister ever inquired into it?

Sir WILFRID LAURIER. Yes.

Mr. FOSTER. That is a very weak reply. The Prime Minister is head trustee for the people of Canada. Will he now justify his conduct as head trustee for the people of Canada in sinking a million and a quarter of money in the St. Andrew's locks? Of that amount, $200,000 is for a highway bridge, for which no vote was ever taken, and that bridge lies there in its naked steel splendor, thirty-five or forty feet up in air from the road on either side. I want to ask the Prime Minister, as head trustee for the people of Canada, to tell me to-night if he can get any three business men in the city of Winnipeg to put within his hand any justification, on the traffic

that exists at present or on the business which may be expected in the near future, for the expenditure of a million and a quarter of money on that work? It is one of the finest pieces of concrete masonry and steel that I ever saw; but where is the business to come from? It is an absolute waste of public money at the present time. Was that brilliant work, when the head trustee himself does not know a thing about it? Who does know? Somebody; and somebody ought to have told it.

Take another example on a rather different line. Was it a particularly brilliant piece of business when these trustees of Canada's state took it into their heads one fine day to sell 250,000 acres of Saskatchewan valley land—

Some hon. MEMBERS. Oh, oh.

Mr. FOSTER. The Prime Minister (Sir Wilfrid Laurier) laughs. That shows how serious a question he considers this to be—for $1 an acre, one-half in scrip? What was the plea offered to the House to justify selling for that small amount? That it was arid land, nearly desert, and not fitted for settlement. I passed through that region this summer. Of all the regions in the west, you will not pick out many that, over a greater length and breadth, comprise such good lands as these, lands of greater production, greater fertility.

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. I am glad to hear the applause; repeat it please—or actually yielding larger crops. Along that line I conversed with one man who had raised 30,000 bushels, and he told me that his neighbour probably had 5,000 more than he had. Now, these hon. gentlemen opposite say: 'Hear, hear, hear, hear'. But is it within the range of possibility that lands that five years ago, were desert and unusable for cultivation, have changed their quality and capabilities and have suddenly blossomed into fertility? If so how does it come about? There have been dry and partly desert lands that were made to blossom like the rose by the application of the principle of irrigation. But no irrigation was applied to these lands, the soil was just as good when the sale was made as it is to-day. And on the records are the opinions of the government's own trusted employee, there to be read for all time, that that land was good land and that if experimented upon it would prove itself to be good land. When the land was sold, these records were before the minister who made the sale. And the land was not even put up at auction, but was sold at private sale for $1 per acre, partly scrip. And to-day the value would average, along the length and breadth of this tract, probably $10, $15, even $20 an acre. There was at least $2,000,000 which should have been an increment to the public treasury, absolutely squandered by these trustees.

Well, is it necessary to mention the 'Arctic', with its expenditure up to the present time of $400,000 with its large feeding operations, its great stowage capacity, the quantity of words that have been used about it contrasted with the minimum of benefit that has come from it?—and the reminder of it ever before us in the form of an extraordinary tablet put up somewhere between here and the library, commemorating the adventures of one Captain Bernier.

And what shall we say of the Port Colborne arrangement?—and now I would like the attention of the Minister of Railways (Mr. Graham) for fear I would go wrong. As I read the record the Department of Public Works spent on that work $904,459, and the Railways and Canals Department spent $1,700,000 besides. If these figures be correct, we find that the country has there an investment of over $2,600,000. Will any one tell me what is going on at Port Colborne by virtue of that expenditure of $2,600,000 of the people's money? I am wrong if I did not hear an intimation not long ago from the Minister of Railways himself—it may have been in this House—that the time had come when the Welland canal should be deepened, that it was a necessary work and must be done. And when asked whether Port Colborne would be of much use there after, I think his answer was what it self-evidently would be. But what purpose, in the production or transport of this country, is now being fulfilled by Port Colborne which would justify $2,600,000 of the people's money being put into it? At ten per cent, which is a small allowance in the case of such works for interest and depreciation, this represents a burden of $260,000 a year upon the people. But it is manifest now that the thing was built before all the circumstances and conditions were taken into account. And, as it stands, is it a particularly brillant achievement for this government? I hope it may pay for its cost and its maintenance, but that it has paid up to the present time, or ever will pay, is, I think, exceedingly doubtful.

Let us then, come to the Intercolonial. Now, the Intercolonial is above ground, not to be washed away by the sea or its roadbed taken from it except at the will of the government itself. There it is and there it has been for years. From 1893 to 1896, under Liberal-Conservative rule, the net deficit on that road was $25,354, an average of $6,438 per year. The capital expenditure in that period of four years was $981,485, an average of $245,371. This government comes in and takes hold of the Intercolonial. They have men of business capacity among them and know how to manage railways, they are a business govern-

ment. And what is their record? From 1897 to 1903, the net deficit of the Intercolonial was $350,303, an average of $50,040. In 1904, the deficit was $900,751. From 1905 to 1909, the net deficit was $2,330,000, an average of $446,000 a year. In that time, $33,100,000 has been expended on capital account, an average of $2,550,000 a year. The last year of its operation has shown a deficit of over $800,000. This is shown more clearly in tabular form:

I. C. RAILWAY.

Deficits and Capital Expenditure.

Years.	Net Deficit..	Average per Year.	Capital Expenditure.	Average Capital Expenditure per Year.
	$	$	$	$
1893-96.	25,345	6,438	981,485	245,371
1897-03.	350,303	50,040		
1904....	900,751	900,751	33,100,000	2,550,000
1905-09.	2,230,000	446,000		

This period of 1897 to 1909 we have described to us in panegyrics of praise by the Minister of Finance no later than this afternoon. It marks the highest level of Canadian development, trade and prosperity. Yet, during that high-water-mark, this Intercolonial railway has been so mismanaged that it had eclipsed all its previous records for deficits and all previous records for capital expenditure. The deficit is of the enormous amount I have mentioned. What is the trouble? It certainly is not brilliant management. But there is another point to be taken into account as illustrated by the following table:

I. C. RAILWAY.

Statement of Capital Cost, Carrying Interest, Deficit and Total Burden.

(12¾ Years Liberal Administration.)

Year.	Capital Cost.	Interest on Capital Cost at 4 p.c.	Deficit. for Year.	Total Burden for Year.
	$	$	$	$
1897....	50,000,000	2,000,000	59,940	2,059,940
1909....	81,540,000	3,261,600	800,952	4,062,552
Increase in 12¾ years.	31,540,000	1,261,600	741,012	2,002,612

In 1897 when these gentlemen took hold of the railway, it had cost up to that time $50,000,000. The burden of carrying it at four per cent interest was therefore $2,000,000; the deficit that year was $59,940. The burden upon the people therefore was $2,059,940 that year. Now this government has been in up to 1909, and what happens in 1909? The cost of the railway is $81,540,000 on capital account; four per cent interest on that is $3,261,600; the deficit, $800,952; the total burden, $4,062,552. Does it not startle you when you think about it?

Now what happens in Australia? A paragraph in the press of to-day says that in Australia, where the government owns the roads, a sparser population by far, many more difficulties, yet the earnings this last year were over $20,000,000; the net revenue was $8,600,000. They paid all interest, all pensions, all running expenses, and put $1,143,837 to the credit of the railway in the consolidated fund.

Mr. GRAHAM. If the hon. gentleman will give the Intercolonial the Australian rates and conditions, we will give him a surplus of more than $1,000,000 a year.

Mr. FOSTER. The matter has been in the absolute management of this government from 1897 onward. What kind of a plea is it for the minister to rise now and say: If we had done so and so, we might have had so and so. They were free as the trustees of the people's property they were managing that road, and this is the way they have managed it. But it is not all because the rates are not as high as the rates are in Australia. I bring the Prime Minister, the head trustee, as witness. What does he say in the city of Toronto? He says we have had good Ministers of Railways on both sides of the House, and there has always been a deficit. Why? Because the system under which it is managed is vicious. It is not the fault of the minister, it is the fault of this system. Yet with plenary power these gentlemen have managed that road from 1897 to 1909, and they have not changed the system. I will tell the minister where his deficit comes in, or I will give him an authority to which he will pay attention. He cannot discuss the authority in the way of disparagement, it would not be proper, neither do I think it would be just. Here is a gentleman who knows and who says:

The Intercolonial is administered by the members for the different counties through which the road runs, or rather by the election workers of those counties. Patronage is the real cause of the deficit under all regimes. In the first place, the member is besieged and he in turn lays siege to the minister. If such and such a one does not get a situation he is sure to lose 25 votes or more in such and such

a parish. Those who know anything, and have taken part in electoral contests, realize quite well that a great number, most, in fact, of those who seek to obtain these situations have never been able to make their way in business, or to make their way in the world. There are perhaps exceptions, but it is the general rule. Then there are the contracts, the purchases—

For instance, the Lodge purchases, the Pearson purchases, the Merwin purchases, and all that kind of purchases.

—the tariffs, all of which are regulated from a political point of view. Last year, for instance, (1904), we had the general elections, and they must have cost the Intercolonial at least $500,000.

Who is the author? J. Israel Tarte. Does the Prime Minister scout that author?

Sir WILFRID LAURIER. When did Mr. Tarte say that?

Mr. FOSTER. In 1905, when I believe he was a trusted colleague of my right hon. friend.

Sir WILFRID LAURIER. No, he was not at that time.

Mr. FOSTER. Had he just been turned out? Was my right hon. friend just then in a mode of disciplining ministers who had an unfortunate penchant for stating the honest truth? Men like the Minister of Customs were going around saying we had a revenue tariff; men like the Prime Minister were declaring that we were on the road to free trade as they have it in England; men like the Finance Minister were half and half, always apologizing, always in the line of defence. But Mr. Tarte was honest. He said to his colleagues, you know you are practising protection, is it a sin for me to tell the people that we are? Do you so discount and disparage honesty as to make me a deceiver before the people? I will not do it, I will tell the truth. He told the truth, and he ceased to be a member of the cabinet; he was disciplined. Yet to-day Mr. Tarte has his revenge. If his spirit seeks these halls, and if that spirit understood the fervid and suppliant speech of the Minister of Finance this afternoon, his argument for the righteousness of bounties and the efficiency of payments of that kind, then at least Mr. Tarte has his revenge.

Now suppose we go a little further. From 1897 to 1909 the net deficit has been $3,481,000 under this government and besides they have added $33,000,000 capital expenditure. But this does not take in the Prince Edward Island Railway. The Prince Edward Island railway has a record much the same, although not to so large an extent.

The following tables are illuminating:

P. E. I. Railway.

Statement of Capital Cost, Carrying Interest, Deficits and Total Burden.

Year.	Capital Cost.	Interest at 4 p.c.	Deficit.	Burden.
	$	$	$	$
1897....	3,740,000	149,600	87,046	236,606
1909....	8,259,033	331,360	89,010	420,370
Increase in $12\frac{3}{4}$ years.	5,559,033	181,760	1,964	183,764

P. E. I. Railway.

Statement of Deficits and Capital Expenditure.

Years.	Net Deficit.	Average Deficit.	Capital Expenditure.	Average Capital Expenditure.
	$	$	$	$
1893-96.	294,500	73,600	Nil.	Nil.
1897-09.	989,720	76,100	4,508,461	347,000

In brief, the deficit from 1897 to 1909 on the Prince Edward Island railway has averaged $76,100 per year. The capital expenditure has been $4,508,461, an average of $347,000 each year. The capital cost of the road was $3,740,000 in 1897; the interest on it at 4 per cent would be $149,600, the deficit was $236,606. In 1909 the capital cost was $8,259,033, the interest $331,360, the deficit was $89,001, the burden $420,370, showing the same sinister gain in the burden of that railway under the management of the Minister of Railways.

Now if we ask ourselves why it is that the Intercolonial cannot be made to pay, is there anything in its circumstances that prevents it? Look at the Intercolonial. It passes through a well populated country. It has on its line, commencing with Sydney and Halifax, the towns in Nova Scotia, with St. John and the towns along the north shore, coming up into Quebec, and making its terminus in the city of Montreal, favoured with population, favoured with business which, taken in connection with its tourist capabilities, certainly make it a road which ought to pay at least its working expenses, and the improvement put upon it. No interest paid, no dividend paid, $33,000,000 of capital expenditure and a deficit of $3,481,000—even under these conditions of no interest and no dividend. It is

simply a plain matter of business management. It can be made to pay, only this government does not seem to be working in that line. Then, what has happened? Not content with running the Intercolonial railway in that way, these gentlemen have come down and they have pledged $26,900,000 of the people's money to build a parallel and competing line of railway from the city of Quebec down to Moncton. What is your $26,900,000 railway going to do there? Going to take through traffic? What does the Minister of Railways say?—we cannot make the Intercolonial railway pay because we cannot hitch it on to the through traffic. But the way to make it pay is to establish a competing line and put $26,900,000 of the people's money into that competing line ! That is one way to make it pay. Would the trustee of an estate manage the estate in that way? I do not believe it and I do not believe that the people in this country have yet got down into their minds the extravagant, aimless, unbusinesslike way in which this government that pretends to business management, has been carrying on the affairs of this country.

If the House will bear with me a minute more I would just like to touch the Grand Trunk Pacific, which is the last child of my right hon. friend and a boy whom he expects to grow up, live for ever, and bestow constant praises upon his parent. I think I do not hazard any statement that is extreme when I say that the manner in which the government went into the construction of this railway did not argue foresight, business management or common prudence. What engineering or other knowledge had they of a large portion of the route which they determined by drawing a line on the map was to be followed by that railway. In reference to the Quebec-Moncton section, what necessity in the world was there for putting $26,900,000 of money there instead of taking $8,000,000 or $10,000,000 and putting the present Intercolonial railway in a first-class position, quite sufficient to carry all the traffic that would follow in the wake of this development? But, if there is one thing more than another in which these trustees have failed in their duty to their stockholders it is in this that their information was so faulty that it deceived their stockholders. The chief trustee and his lieutenant the Finance Minister, came before this House and the people of the country and declared that you could build that section of the road from Moncton to Winnipeg for $51,000,000, or a little more. Is there any doubt about that? When the Prime Minister was questioned as to how he knew that, what information he had, he said they had mountains of information and he pledged his word to the people that that was a fair calculation of the cost. I have put some questions on the Order Paper. I have, the result of those questions here from the Minister of Railways and Canals and they show that from Winnipeg to Lake Superior Junction the total expenditure will be $20,984,690, that from Lake Superior Junction to Quebec, $66,473,171 is the estimated expenditure, of which twenty-seven and a third millions have been already spent. That makes $87,457,361 from Winnipeg to Quebec. Then from Quebec to Moncton the total cost, as given by the Minister of Railways and Canals, most of it spent, some estimated, is $26,935,902, which makes in all, $114,393,763, which is the latest estimate after half of the expenditure has been made, or may be a little more as the total cost of that portion of the line. Contrast that with your $51,000,000, which was estimated by the right hon. gentleman and by the Minister of Finance and put forward in circular form to the shareholders and stockholders and upon which circular information shareholders and stockholders voted them the power to carry out the expenditure. Is that brilliant management? is it honest management? I am talking about honesty in this way, that before a trustee or director will commit his stockholders to a large expenditure he should regard it as his bounden duty to know the ground upon which he stands. Did these gentlemen know the ground upon which they stood, did they take any pains to find out the ground upon which they stood? Because they did not they mislead their shareholders and stockholders and I say it was not honest treatment in the true sense of the word which demands that before you draw your shareholders into an investment you must exhaust all proper measures for getting information upon which your plan is presented to them. Well, Sir, that is not all the cost. I am not going into the calculation of interest, but it strikes any one that the interest calculated by the Minister of Finance and adhered to by the Prime Minister on their small computation of the cost will be doubled and more than doubled on this actual fulfilment of the cost; so that you have to add probably three times as much for interest as you would have had to on the lesser computation of cost. Then you have the Quebec bridge, which has to be considered now as part of the line, and at least $14,000,000 will be necessary for that, which makes the cost of that connection from Winnipeg to Moncton $128,800,000. To this add several millions for terminals at Quebec and Winnipeg. I ask the business men of this country whether they consider that this is brilliant, businesslike administration? It would be sufficient in a company to have these directors succeeded quickly by others and I am not sure that it would not go even much farther than that. One thing I noticed when I was in the West, and it is this: There is a whole area of country up there

that they call the two-track country. What does it mean? The Prime Minister, when he advised his directors and shareholders to go into that project told them that this was to open up new territory, to use his own words at Winnipeg, it was to plunge into new territory: what it really means is that from Winnipeg to Edmonton and, maybe some distance beyond, lines of railway cross and intercross for hundreds of miles and you never are practically out of sight of the Canadian Northern or the Canadian Pacific railway and in many cases you can drop a pea from your car window on to the track of the Canadian Pacific railway. There is an extensive country into which the farmers are rushing to use their brawn and their muscle to till the soil, and there are two railroads with elevators here and elevators across the street, a double set of railroads and a double set of elevators, and no competition notwithstanding that. What an outrageous thing it is that when that section of the country was absolutely provided for by lines of railway already running, or existing under charter and being built, that Canada should have spent millions upon millions of dollars in paralleling lines of transport which were already quite sufficient for the country through which they passed, to the neglect of other equally fertile country which is without a mile of railway. And to the latest day of Canadian history, as in a less degree no man will pass by the Newmarket canal without curling the lip of scorn, so Sir, there is one monument which is certain for all time to my right hon. friend—it is the fact, that when he had large power, and large confidence, and the people's money in his hand, in that great northwest which longs for new avenues of transportation in territory not served by railways, he had seen fit to parallel for 800 miles or more existing lines of railway. Is that business management? And, in view of all these things which I have mentioned and which are but one hundredth part of what one might mention, I put it to the House, and I put it to the people of the country, whether it is not time for a change?

Mr. H. H. MILLER (South Grey). We have had to-day the statement of the Finance Minister, from which we learn that the surplus that now may well be estimated for the present year is $16,500,000, that the expenditure has been reduced to the extent of as nearly as may be the same amount, that the addition to the public debt has been $17,500,000 and only that, notwithstanding that $20,000,000 have been expended this year on the Transcontinental railway. We have the statement of the Finance Minister to-day that the net public debt of Canada is now, not $50·82 as in 1896, but $45·85, a decrease per capita of $4·97. That, Sir, is a most satisfactory statement, it is a statement upon which we may well congratulate the Minister of Finance and his colleagues in the cabinet, who are indeed a trust company, who realize that they are, as the member for North Toronto has said, a trust company; not a Union Trust Company, but a real honest, well managed trust company having at heart the good of the people they represent. I say, Sir, that the people of this country will offer their congratulations to the Minister of Finance to-day, and it is not the first time he has deserved congratulation. He has gotten into the habit of offering to us, year by year, such welcome financial statements as we have just heard from him. When I say that he has acquired the habit of giving us such financial statements, it reminds me of one of Harry Lauder's popular songs in which the singer represents himself as going home to his good wife under the influence of too much Mountain Dew, and the wife began to upraid and scold him, and she said: 'Mon, its gettin to be a habit wi ye;' and the reply was: 'Na, its no a habit, its a gif.' And so I say that with the Finance Minister these prosperous budget speeches are not so much a habit as a gift. Not only has the Minister of Finance the gift of presenting such statements, but he has the much higher gift of so regulating and conducting the financial affairs of Canada as to bring about and maintain the conditions which make it possible for him to deliver such a statement, year after year. The member for North Toronto has endeavoured to assail that statement, to detract from its value and to lessen its influence upon the people of Canada. The member for North Toronto is clever. With all the cunning of an Indian juggler, with all the keen imagination of a poet, with all the inventiveness of the author of Gulliver's Travels, with the ability to paint words as none other but he can, he has endeavoured to detract from that financial statement and from its true value. But facts are stubborn things, and the facts which the Minister of Finance has given us to-day cannot be controverted and their influence cannot be lessened in the mind of the people even by the remarks of such as the member for North Toronto. The words of that hon. gentleman have fallen harmless as the smallest sized bird shot as we hear it pattering down from the rocky walls of an impregnable fortress or from the impregnable sides of an ironclad; his words have made as little impression as the clapping of the desks by the ever too ready auditors who sit behind him. I was much interested in the speech which was delivered by the hon. member (Mr. Foster) to-night. I heard it last year I heard it again this year; it is indeed becoming familiar. In his remarks last year the hon. member (Mr. Foster) was exceedingly

sarcastic and he accused the Minister of Fnance of lacking in boldness and courage. I quote from 'Hansard' of the 20th of April last:

He (Mr. Fielding) is hopeful. He gives a wonderfully precise forecast for that year. Here we are already in the year 1909-10 and yet the only forecast the Minister of Finance can give us is that he hopes there will be a reasonable percentage of increase in the revenue over that of last year, while with reference to the expenditure he did not even hazard a guess as to what it would be. Former Ministers of Finance have been a little more daring than that; they have at least, when they were near the end of a year, made what they considered a forecast of both revenue and expenditure and they put their forecast to the test.

The hon. member (Mr. Foster) in these words accuses the Minister of Finance of a lack of daring. Well, the Minister of Finance (Mr. Fielding) is an exceedingly modest man considering the long series of successes he has had; he is not given to boasting even of what he has done, let alone what he expects to do; he is not given to hazarding wide guesses. The hon. member for North Toronto (Mr. Foster) has well said that former Finance Ministers have been a little more daring. We know, Sir, you and I know, the people of this country know, at least one former Finance Minister who was much more daring in the way of prophesy and hazarding guesses. He loomed up large as a lion when making a prophesy at the beginning of the year, but at the end of the year when he was explaining why the prophesies had not been fulfilled he became rather of the size and the gentle disposition of the household kitten. The hon. member for North Toronto (Mr. Foster) speaking again last year said:

It would have seemed befitting in a Finance Minister who was careful and prudent to have made his provision when the danger was coming, to have drawn his sail when the storm was about to burst.

I do not blame the hon. member for having been rather mistaken in his guess last year. I do not blame him under the circumstances for seeing signs of a storm, but what does seem strange is that this year he should have repeated the word and have alluded to a storm. Wild fancies as to what may happen are one thing, and halucinations that possess a man as to what has happened are quite another thing. The storm about to burst? Where, Sir, has been the storm? Where on the ocean of Canadian finance has there been any great troubling of the waters, and has it not all been a tempest in the little brain of the hon. member for North Toronto? Storm, Sir! Where has there been the snapping or the breaking of a mast? Where has there been the rending of a single sail, the loss of a single anchor? Not a man overboard, not an ounce of cargo lost, the sea to-day as smooth as glass, the sun shining brightly and not a cloud in the financial or commercial sky of Canada.

Talking about finances, I find that the public debt of the United States at the end of 1907 was $878,596,755 and at the end of 1908 it had increased to $938,132,409, an increase in one year of over fifty-nine and a half million dollars. That was at the end of 1908. What progress is being made in the United States to-day? I read this article from the 'Weekly Times' of London, of November 5, an extract from a letter written by their Washington correspondent:

Two and a half months ago the Payne tariff came into effect, but already it is clear that the new rates will fall far short of extinguishing the deficit for the current fiscal year. From the beginning of the year—July 1—to October 27 the deficit on ordinary expenditures and disbursements amounts to $26,000,000, a reduction of only $13,000,000 on the unusual deficit for the same period last year, although it must be remembered that the Payne law came into effect only on August 5, and that the minimum rates under the special treaties continues in force. The customs receipts have been increasing, but ordinary disbursements are also increasing. For the current year up to October 27 the disbursements were $241,425,000 against $227,702,000 for the same period last year. Moreover, the customs receipts are expected to show a decline next month. As the working balance of the treasury is only $27,000,000, a prolongation of the deficit is expected soon to compel a recourse to a loan to meet current expenses.

So that in that great republic to the south of us, having an area not larger than ours, having a population ten times as great as ours, having had large capital and a population of the same blood as ours to develop their resources, even at this day they have to make a loan to meet current expenses.

I think it is a matter of congratulation that we have received the statement we have heard to-day. The hon. member for North Toronto says that last year in place of having a surplus of a little over $1,000,000, if the bounties had been charged to revenue there would not have been a surplus but a small deficit. This the Finance Minister frankly pointed out and stated in his address. The hon. member for North Toronto contends that these bounties ought to be charged to revenue, although the Finance Minister has well and logically argued that if subsidies to railways are properly chargeable to capital account, as they have always been under this government and the preceding government, upon the same principle these bounties ought to be charged to the same account. I do

think myself, and I say frankly, that it would be better if both railway subsidies and bounties were charged to revenue account. But I want to know whether if the system of bookkeeping were changed in that respect our friends on the other side of the House and their supporters would be frank enough, would be honest enough to explain the difference in the method of bookkeeping to their electors as they went among them during a campaign. I doubt if they would.

Almost tragically the hon. member for North Toronto says: What has saved the Finance Minister? The Finance Minister has not been in any very particular danger. What has saved the country? Neither has the country been in any great danger since 1896. But listen to the reply of the hon. member for North Toronto to his own question. He says that the farmers have saved the Finance Minister and have saved the country. To a large extent he is perfectly right, to a large extent the farmers have saved the country. But they do not deserve all the credit; the sailors, the fishermen, the miners, the lumbermen, the factory hands, all deserve some share of the credit, and were it not for the farmers and these other men who toil we would not have, admittedly, the country we have to-day. The hon. member, and this is a repetition of the old story, has asked over and over again who purchased and opened up the great Northwest? We admit that the northwestern country was purchased by a Conservative government. We admit that during the regime of the Conservative party the Canadian Pacific railway was run through that northwest country to open it up. We give them all the credit to which they are entitled for the purchase they made of that northwestern country, and we give them such credit as they are entitled to for the building of the Canadian Pacific railway. We are told, they were told, at the time they were undertaking the building of that road, that it could be built more cheaply, that other people were willing to build it at that very time at a lower price, at a less cost, and without the villainous arrangement as to taxation that was coupled with the bargain they made. They took the dearer rather than the cheaper bargain, and we have been paying for it ever since, and as far as taxation is concerned will pay for it, I suppose, while the world lasts. Yet they are entitled to a degree of credit. Sir, who put the farmers in that country? Our friends opposite purchased the country and then left it lying almost a waste. To whom is due the credit of developing that country? I claim that this government deserves the credit for putting into that great western country the very farmers of whom the hon. member spoke to-night, I think I can prove it by his own words. Talking of the Yukon he says: When you went to the Yukon you found 38,000 people there; to-day you have a population of 5,000—and he blamed the government. Sir, if the government are to blame because the population of the Yukon is less to-day than it was, then on the same reasoning they are entitled to credit because the population of the Northwest has increased so greatly. But he says the farmer who grew the grain, who saved the country, has to pay a great deal more for the clothes he wears, for the lumber he buys, for the labour he employs.

Now, let us take the hon. gentleman for once at his word. The farmers have to pay more for the clothes they wear; what does the manufacturer of the clothes say to that—does he object? The farmer has to pay more for the lumber he buys; does the sawmiller object? The farmer has to pay more for the labour he employs; does the labourer object? Accepting the argument of the hon. gentleman, that this government is to blame for increasing the prices the farmer has to pay, by this very act this government has enabled the manufacturer of clothing and the manufacturer of lumber to get better prices for the goods they sell, and has enabled the farm labourer to get better wages. What kind of a man does the hon. member for North Toronto think the Canadian farmer is? How big does he think is the heart of the average Canadian farmer? The Canadian farmer—the hon. member for North Toronto will not, I am sure, deny it—is receiving to-day larger prices for his horses, his cattle, his hogs, his wheat, and his dairy products, than the farmers of this country ever received before, since Columbus discovered America. The farmer is able to pay higher prices for the goods he buys, and is able to pay a reasonable wage, as in the old Tory days he never was able to do. And the Canadian farmer is not only able to pay higher wages, but is large hearted enough to be willing to pay them to the man who helps him in his work. What is the government doing for the farmers who have been taken into that country? It has provided transportation; it has surveyed the lands of the northwest; it has provided post offices and mail routes; it is helping to develop the mines and minerals of the country; it is attempting to preserve the forests and to practice reforestation; it has established experimental farms. This government has not only taken the farmers into that country but is providing for them while they are there.

The next question the hon. gentleman raised was the balance of trade between this country and the United States. In his conclusion he forgot and omitted one important item, that is, the $60,000,000 of cold

cash that American farmers alone have taken into that western country during the last seven months, and he has forgotten the probably $60,000,000 more in farm stock and household goods which they have taken with them.

The hon. gentleman next advised the government not to tie their hands, in order that they might be able, when the time comes, if it does come, to accept a preference at the hands of the mother country. If this was given as a word of caution and advice, we take it in the spirit in which it was given. If it was rebuke, it was one that we were not entitled to, because one of the conditions of the French treaty is that it may be cancelled at any time upon twelve months' notice.

The hon. gentleman endeavoured to make a point against the Finance Minister because the government of Canada is paying to-day a higher rate of interest than it paid some years ago. That is no evidence of carelessness or bad financing for the price of money and the rate of interest rises and falls as does the price of wheat. If the hon. member could prove, as he did not attempt to prove, that Canada is paying to-day a higher rate of interest than other countries similarly situated, he would have made out his case.

The hon. gentleman next accused the govenment of wasting money because of the payment of underwriters for underwriting government loans. As to that. I quote from the Colonial Office journal, published in England, for July of the present year. The editors of that journal, who are well acquainted with the various systems of finance, say:

> It is the practice now-a-days on the issue of colonial loans and others of a like kind to get them underwritten. The underwriters, in consideration of a commission, which is usually 1 per cent, undertake to take so much of the loan as is not subscribed for by the public. Governments would, of course, not sacrifice 1 per cent, if they could get money without employing underwriters, but experience has shown that on the whole they gain by doing so. Only a very small part of a loan is applied for by the real public at the time of issue. The ordinary investor buys stocks and shares at a moment when he has money available, which is not often; it is the professional who examines the morning newspaper and makes use of the few hours, which are often all that is allowed, to come to a decision and send in his application. If the issue is readily taken up so that the price is likely to go to a premium, the list must be closed early, as otherwise on the news getting about a vast number of applications would be sent in with the object of getting advantage of the premium, and this would be unfair to the genuine applicants. The result is that the success depends practically on the view which the market takes of the deal, and this is largely a matter of the influence of the financial houses interested.

So that upon this high authority we find that the system now in vogue by all governments requiring to borrow is that of the employment of underwriters, as has been done by the hon. Minister of Finance.

The hon. member for North Toronto complained that we are not in this country creating a sinking fund to meet our maturing loans, as is done in England. If it were possible to have such a sinking fund, I would be very glad, but it is not fair to argue that Canada, a new and undeveloped country of large extent, has the same opportunity to create a sinking fund that is possible in an old, well developed, wealthy country of small area like Great Britain

The hon. member next sang the old song about this government taking more in taxation from the people of Canada than the preceding government did, saying that this government took $11 a head while the old government had taken only $5.50. The hon. member has already stated that this government has raised the wages of workingmen and the prices received by manufacturers. And in that he is quite correct; a workman to-day is just as easily able to obtain $1.50 per day of wages as under the old Conservative rule, he was able to obtain $1 a day. Therefore, he receives—the hon. member said because of the action of this government—about $150 more in wages in a year than he did under the old regime. And he has to pay $5.50 more according to the hon. member in yearly taxation. Well, he has made a fairly good bargain; he has made about $144.50 through having this government in power instead of continuing the old government. It is an old argument, one that has often been made and will often be made again, that this government takes more in taxation out of the people than the other government did. But the hon. member (Mr. Foster) admits—he did not admit it cheerfully but merely because he had to, nor did he admit it to the extent that the facts justify—that this government, leaving out the question of bounties, is exacting a lower rate of duty than the former government did. If a man to-day goes to any store to make a purchase, he finds that the goods have been subject to a lower duty than the same goods under a former government. And, Sir, does this government compel any man to buy two coats where formerly he bought only one or to buy two pair of shoes where formerly he bought only one? But, because as the hon. member has stated, that man receives higher wages and so is able to buy his wife a dress that, in the old days, he could not think of buying, or is able to buy a suit of clothes for himself more than he formerly bought, he, by that transaction, voluntarily contributes more largely to the revenue of the country.

I have said that the hon. member (Mr. Foster) delivered much the same speech to-night as he did a year ago. He used one argument exactly the same as that he gave last year. In calculating the increase of the debt under the Conservative party from 1878 to 1896, he said we ought to deduct from the total the price of 7,500,000 acres of land that they got back from the Canadian Pacific Railway Company. Now, I am perfectly willing to allow the hon. gentleman that credit. He has given us to-night the same argument exactly that he did a year ago, with the exception, that a year ago he began that part of his speech by saying that the Conservative party from 1886 to 1896 increased the public debt by $35,000,000; to-night he says that from 1879 to 1896 they increased the public debt by $118,000,000, otherwise, the speeches were the same. His argument being the same, let me read to the House the argument I then made in reply: I quote from last year's 'Hansard':

The hon. member for North Toronto admitted that the Conservative party in ten years from 1886 to 1896 had increased the public debt by $35,000,000. But then he argued that while they had increased the public debt by $35,000,000, for $10,000,000 of that they had received 7,500,000 acres of land, and he said if that 7,500,000 acres be worth $3 an acre, it makes a total of $22,000,000 to be deducted from the $35,000,000 by which they had increased the debt.

I say I am perfectly willing to admit that, But let me go further:

But he maintained that the land was worth more than $3 an acre, he said: 'If you calculate its value at $6 an acre, it makes $45,000,000 which will exceed the whole addition to the public debt.'

I am willing to admit that also.

I am perfectly willing that the hon. member should make that argument, I am perfectly willing to accept his figures and his statement, but I would ask him, were he here, where the lands came from that they purchased for $10,000,000. He would state that the 7,500,000 acres was part of 25,000,000 acres that the Conservative government had given to the Canadian Pacific railway for nothing at all. I would say to him: I am perfectly willing that you should give your party credit at $6 an acre for the 7,500,000 acres you thus obtained, but if I do you must be willing to be charged at the same rate with the 46,000,000 acres that your government gave away while in power to persons other than actual settlers, and so while I credit you with $42,000,000, I charge you with $276,000,000, and I do not think the hon. member would make the account look any better for his party.

I said then, Sir, that, on his own reasoning, I would charge his party with 46,000,000 acres of land making a total of $276,000,000; but, Sir, the price of land has gone up. To-night, the hon. gentleman fixes the price at $8 per acre. On that basis, I should have to charge him for the 46,000,000 acres $368,000,000. Now, I suppose, if the hon. member lives for another twenty years—and I hope he will, for he is, I think, the greatest asset that we on this side of the House have—he will come to charge us for that 7,500,000 acres of land, I suppose $50 an acre. If he does, on his own reasoning, I shall have a very large account indeed to charge to the Conservative party.

The hon. member next—I think I am not unparliamentary when I say—had the nerve to talk about the land that this government had given away to parties other than actual settlers. I might have expected that from some body else who did not know any better, who did not know the history of the Conservative party and what they had been guilty of, but I hardly expected it to come now from the hon. member from North Toronto. Why? Because, in the eighteen years that they were in office, his government gave away land to persons other than actual settlers representing a total of 46,000,000 acres, and at the same time they gave to the actual settler only 7,900,000 acres, or a little more than we have given to the actual settler in the first seven months of the present year. The hon. member next spoke of the investigation that took place in the Marine and Fisheries Department. That too is an old story, often repeated and often to be repeated no doubt. He told of the iniquity and corruption that had been discovered by the investigating commission. It is true the commission said there was corruption in connection with the Marine Department. They said there had been corruption in connection with the Marine Department ever since confederation and for every one of the three hundred and sixty-five days of every one of the eighteen long years during which the Conservative party had been in power.

An hon. MEMBER. So they are growing worse.

Mr. MILLER. My hon. friend has not read the report or he would not say that. But the commissioners did give the present Minister of Marine and Fisheries credit for making an honest effort to improve the condition of affairs in his department, a credit which these gentlemen did not give to any minister who had preceded him. The hon. gentleman said they wanted to go into all the departments and they were not permitted. Sir, we have a Public Accounts Committee before which any charge can be taken and investigated. What has been the custom of our friends on the other side? To make a charge, and they always took care that it was a serious charge, they always took care to make it loudly, they always took care to advertise it all over Canada as soon as they had made it, and

before it had been investigated; but when the Public Accounts Committee met and they had an opportunity to investigate their charges they had so wrongly made and so wrongly circulated before they were investigated, when I say they were given an opportunity to investigate, they had other business, oftentimes they did not even attend the sittings of the committee, they threw up their hands, and said in effect that they had accomplished all their purpose when they made their charges and got them in the newspapers.

The hon. member then speaks of a certain place where some $40,000 has been spent in dredging for the accommodation of one launch and one little steamer, and that, he said, was a piece of political rascality, of political iniquity. Sir, I do not know that we can come hastily to that conclusion. If there is a place where any considerable number of people live, they may be humble people, they may not have much political influence, they may be poor fisher folk, they may be poor tillers of the soil, but if that one steamer and that one launch is the only means they have of getting to market, or of communicating with the outside world, then I say that that expenditure is justified. This is a government that has spent a great deal of money in endeavouring to benefit every class of people, those who till the soil, those who go to sea in their fishing boats, and those who dig minerals in the mines.

I suppose we will not for a long time hear the last of the Quebec bridge. Now what are the facts? The Quebec bridge was built, and the Quebec bridge fell down. The Quebec bridge was built according to plans and specifications that were drawn up by men who were recognized and generally admitted to be the best bridge building engineers on the American continent, or in the world. The engineers who drew the plans and who drew the specifications for the Quebec bridge, were recommended to this government by whom? By Mr. Schreiber, the government engineer, a gentleman who was the faithful employee of the Conservative government by whom he was appointed, and who has continued, I believe, to be the faithful employee of this government. When that bridge collapsed, what did the world say, what did the engineering world say? They said: This is a matter of great concern to us, this is a matter of great concern to every man in the engineering profession. That bridge, they said, was planned by men that we believed to be experts, by men whom we believed to be the very best bridge engineers in the world, and if that bridge, built according to their plans and specifications, has collapsed, it simply means this, that that gigantic bridge, a very long bridge, much longer than most of the bridges that had hitherto been built, was wrongly designed, why, it means that our whole theory of bridge building is at fault, our engineers are wrong, we will have to revise our plans and adopt new methods. No blame, Sir, can be attached, and no blame will be attached by men who are acquainted with the facts, to this government for the misfortune which befell the Quebec bridge. Such charges as that are only made in the absence of any real and true grounds of complaint.

The Newmarket canal is characterized as the Aylesworth ditch. I am sorry the hon. member for North Toronto (Mr. Foster) is not in his seat. We used to know that as the Newmarket canal. Upon a certain occasion the member for York, the present hon. Minister of Justice (Mr. Aylesworth) gave the hon. member for North Toronto perhaps the greatest castigation ever received by any man in this House, and ever since then this canal has been known as the Aylesworth ditch. It is not a public work of any less value because you call it by any such name as that, it does not lessen the importance of the work. Now, Sir, there was vigorous cheering, there was vigorous desk pounding to-day, when the hon. member mentioned the Newmarket canal. Sir, I venture to say that not one man in twenty of those who sit behind the hon. member and who cheered him, ever saw that canal or know a single thing about it. I talked to a man to-day who was telling me, and I am sure honestly, what he thought. He said that that Newmarket canal would be of very great advantage to the section through which it runs. For my part I do not know anything about it. I say frankly, Sir, that I am just as ignorant of the Newmarket canal, of its method of construction, of the country through which it runs, or the way in which it will answer the purpose for which it is intended, as the majority of the members who applauded my hon. friend.

Then the building of the St. Andrew's lock was criticised. I do not know anything about the St. Andrew's lock except what I have been told. And I wonder how many members on the other side of the House know anything about the St. Andrew's lock. But I am told by a man who knows much more about it than the hon. member for North Toronto, that the building of the St. Andrew's lock opens up to the city of Winnipeg 350 miles of waterway.

Sir, when in the most harrowing terms, the member for North Toronto was picturing some of the sins and iniquities of this government, I almost felt like believing him for a moment. I do not often feel that way when he goes on a tirade of that kind. But when he mentioned the Saskatchewan Valley Land Company, and found the fault he did, I said: Well, any intelligent man who would tell that story over again and

endeavour to get this House or the people to take any stock in it, is scarcely entitled to any credence. There was one member, the hon. member for West Toronto (Mr. Osler) who, I noticed, although a close political friend of the member for Toronto, did not applaud very vigorously when the Saskatchewtn Valley Land Company was mentioned. What are the facts, recounting them briefly? Nobody regarded that part of the country given to the Saskatchewan Valley Land Company as being of any value. My hon. friend from West Toronto considered it to be of no value, and would not accept it as part of a land grant to which his company was entitled. The government sold the land to the Saskatchewan Valley Land Company, and on what conditions. They said: We will sell you this land at a very low price per acre, but only on condition that you will place settlers upon it, a certain definite number per township, on the lands that we so sell to you. Now, Sir, we are giving away lands in the west for nothing to people who will come and settle upon them. The hon. member for West Toronto was one of the chief stockholders in the railway that ran through that tract of land, and I understand that for a stretch of sixty miles there was no railway station on that line. Why? Because the owners of the railway said: Nobody can cultivate that soil with any profit, nobody will settle upon it, it will never yield a crop, and it would not pay us to put a railway station there. When they were pressed to do so by the Saskatchewan Land Company they said: We will, on condition that you pay the salary of our station agent; and only by that means was a railway station established. With what success did the government endeavour to settle that country? With this degree of success that they brought into that country, at very great expense and with the exercise of a great deal of energy, people who understood how to till and cultivate such soil. With what result? The hon. member for North Toronto admits that to-day that country blossoms like the rose, that to-day that country, once a barren district in which nobody had any confidence, is now one of the most fertile parts of the northwest; and, Sir, that it is admitted generally by the people of the west that one of the very best and most enterprising acts of this government, one of the acts of this government attended with the very best results, was the sale of that land upon the terms upon which it was sold to the Saskatchewan Valley Land Company. We have it upon the evidence of the hon. member for North Toronto that it is now good land, that it is now fertile and productive, and I say, Sir, that the hon. member for North Toronto is no mean judge of northwest land, because in his day he has bought and sold northwest land to a large extent. The people in that neighbourhood, knowing the history of that transaction, knowing the land and knowing what has been made of the land, have sent to this House members to support, not the party of the hon. member for North Toronto, but the party that is sitting behind the Premier and the Minister of Finance to-day.

The hon. member for North Toronto made some tart remarks about the Intercolonial railway. I will not say anything in defence of the Intercolonial railway tonight, because, in the first place, I do not think it is necessary and because, in the second place, I believe that before very long the hon. Minister of Railways and Canals (Mr. Graham) will present a report to this House that will be as displeasing and as discouraging to the hon. member of North Toronto as it will be satisfactory and pleasing to the people of this country. I recommend the hon. member for North Toronto to go to the library, take down 'Hansard' and read from a debate that took place in this House some years ago respecting the Intercolonial railway in which he will find the words of his former leader, Sir Charles Tupper, to the effect that the Intercolonial was never intended to be a paying road and was never expected to be.

Now, I want very shortly to speak of some of the things that have been and are being done by the several departments of this government, or, at least, by one or two of them for the benefit of the people of Canada. I want to speak for a moment of the forestry work that is being prosecuted by the Department of the Interior. The Forestry branch was established in 1899. The first appropriation that this government made for the work was in the years 1900-1 and the appropriation in that year was $10,000. That appropriation has grown from year to year until last year and the year before the appropriation was $100,000. In this forestry work the department employs a staff of about forty people. In the United States, for carrying on the same kind of work, they employ permanently a staff of about 2,000 people and their annual appropriation has risen until at this date it is $4,640,000. The forestry branch is endeavouring to ascertain the extent of the forest wealth of our country, and it is preserving the forest from fire through the efforts of the fire rangers and by enlisting, through the missionaries of the country, the sympathies of the Indians. They are also assisting in the reforestation of the western country, and in the reforestry of the western country there are difficulties to be met with that are not known to us in the east; in the first place, the comparatively light rainfall, in the second place, the exposure of young trees to great winds and storms, and in the third place, the

compactness and hardness of the soil. Notwithstanding these difficulties the department last year gave away to 2,010 applicants, 2,570,000 trees for planting. The applications for this year are largely in excess of those of last year, and from the time of the founding of this forestry branch 14,500,000 trees have been given away free to settlers of the west for planting upon western plains. I call your attention, Mr. Speaker, to the changes in the regulations for the sale of timber as made in the month of December, 1907. By these new regulations it is enacted, first, that every sale of government timber shall be by auction, second, that there shall be a cruising and survey of every limit before it is put up for sale and, in the third place, that there shall be the fixing of an upset price. The form of the timber license provides that the licensee, first, shall not cut trees less than ten inches in diameter at the stump; second, shall leave seed trees as directed by the forestry officers; and third, shall dispose of the debris as instructed.

Now, let me say a word as to the iron and steel bounties. It was, last summer, my privilege and pleasure to visit Nova Scotia and New Brunswick. I confess that I had not been particularly in love with the payment of bounties. The iron and steel bounties have averaged, I believe, a little over $1,000,000 a year for the time this government has been in power, making about 15 or 16 cents for each person in Canada per annum. When in Nova Scotia I availed myself of the opportunity of seeing large iron and steel works in different parts of the province. I had the opportunity of going through one of the large works, conducted by a director of the company, and when I saw the works in operation, and when I saw the effect of the works, I will readily admit that I was glad that this government had encouraged the iron and steel industries by the payment of bounties. I realized that the men who, at great risk, had put a wealth of capital and a wealth of intelligence and enterprise into those great industries were indeed helping to a considerable degree in the building up of the nation. I realized that the lusty workmen in these factories, who were pouring the molten metal, who were shaping large masses of iron under steam hammers, who were rolling it into greater lengths and turning it in their great lathes were assisting to utilize and develop the natural resources that a generous Creator had placed upon, under and convenient to Canadian soil intending them to be used for and by the Canadian people. As I saw large thriving towns and growing cities that had before the establishment of these industries been sleepy villages, fishing hamlets and market centres for the small surrounding district of farming country I realized that a great deal had been done by the building up of these industries. As I saw these workmen engaged in large numbers in these works it occurred to me, as it would to any one, that these men must be fed and clothed, that these men were buying the boots and shoes, the cottons and woollens that were being made at the benches and upon the looms of other Canadian factories. I realized that these workmen must be fed from the product of Canadian farms and Canadian pastures, and I realized too that these workmen buying that which they had to buy and these manufacturers importing that which they had to import must be adding largely to the customs revenue of the country. Perhaps I was influenced a little bit in looking favourably upon the iron and steel bounties by words that had been uttered by the hon. member for North Toronto and which I read in the 'Hansard' of 1894. The hon. gentleman said:

> On the one hand the duties on iron have been and are relatively high, on the other hand there is the patent fact that unless there be a sufficient inducement in the way of protection or bounty given for the manufacture of iron it will be impossible in this country as it has been found impossible in all other countries ever to rise from the production of raw ores which abound in this country, to an independent and self contained manufacture of the larger portion of the iron needed for the consumption of the country.

I possibly have been influenced to some extent by these words of the hon. member (Mr. Foster) and Sir, while I was glad that the iron and steel bounties had been paid, when I saw recently in the newspapers that one of these companies whose works I had seen had declared a stock bonus of 20 per cent, and when I read the words of the general manager of one of these companies which I shall quote, I came to the conclusion that the time had now come when the iron and steel bounties ought no longer to be paid. Sir, I do not want the people of this country to be prejudiced, I do not want the people of this country to too hastily draw conclusions because of the payment of a 20 per cent stock bonus, I want it to be understood that this 20 per cent stock bonus was in the place of annual dividends which had been withheld and not paid. But notwithstanding that the stock bonus was only the equivalent for honestly earned reasonable dividends yet when I read the words of Mr. Cantley, the general manager of the Nova Scotia Steel and Coal Company, I came to the conclusion which I have already referred to. Referring to his company Mr. Cantley said:

> It is already in an unusually advantageous

position having its own iron ore and the coal and being in no way dependent upon any other concern. The company's output of coal was larger than ever this year and the deposit both of coal and iron ore at Wabana are practically inexhaustible. Everything in connection with our property is encouraging and with the improvements in finances the company can go ahead and work out its own destiny to greater advantage than if it were in a merger.

I take these words from the 'Monetary Times' of December 4, 1909, which publishes the annual address of the general manager at the last meeting of this company. Now, Sir, the Nova Scotia Iron and Steel Company are not, I fancy, in any different position than the other iron and steel companies of the Dominion. I think the language used by Mr. Cantley is language that no man need be ashamed of; it is the language of a man who has self reliance and self dependence. I believe that a man who at the annual meeting of this company can say: 'We are now in a position to work our own destiny independent of any merger' will be willing to say: 'We are now in a position to work out our own destiny without any iron or steel bounties from any government.' And Sir, I trust when the term expires, as it will expire next year, for the payment of iron and steel bounties that it will not be renewed. Unless I change my mind more than I think I will, I shall be utterly opposed to their renewal.

We have made a treaty recently with France. As to the commercial advantages to be derived from that treaty I will say but little because it is a matter that has been already fully discussed. There is one thing I do wish to say to the farmers of this country, and when I say it I am simply repeating what has been stated by the 'Farm Journal' published at Winnipeg. That journal has referred to the considerable benefit which will accrue to the farmers of Canada from the negotiations of the French treaty, and it does not speak of it in terms of praise because of the advantages for the shipment of stockers or fat cattle, but it says that the manufacturers of agricultural implements in Canada will be so largely helped by that French treaty, and their trade will be so increased and extended that they will put up much larger factories with greater capacity, giving a greater output, and that having that increased capacity and output, as a consequence the price of agricultural implements all over Canada will be largely decreased.

But, Sir, it is not so important because of the trade advantages that are likely to accrue, although there will be trade advantages, but it is because we always receive an indirect benefit when we make a trade treaty with any other nation in as much that we get their friendship. And if we suffer no material loss I think it is worth while to make such a treaty with our neighbours whomsoever they may be even if the only good result to us is the good will of the persons with whom we treat. Sir, we have made a treaty with France; I trust that when that treaty has been gotten well out of the way that this government will be willing to embrace the first opportunity of making a treaty with Germany. I believe we will derive advantages from the French treaty, but I also believe that our advantages would be still greater from a German treaty; greater because Germany is not such a great agricultural nation as France, that it is more of a manufacturing nation, that it will consume more of our products. In that respect a reasonable trade treaty with Germany would help us even to greater advantage than a treaty with France. Sir, I am not in any way blaming the government, there certainly can be no blame attached to it, for the imposition of the German surtax. There was nothing else for them to do under the circumstances. But if Germany is now willing, as we are told she is, to approach this government in a friendly way and ask for closer trade relations, I trust the Canadian government will not be reluctant to meet them. When we were discussing the French treaty one gentleman on the other side of the House objected because of a knitted goods factory at some place, and another hon. gentleman opposite objected because of a glove factory at some other place. Sir, if we are to regard ourselves as nation builders, if we are to regard ourselves as trustees having the development of a great country in our charge, we must look at these matters from a broader point of view. Such views may be all right to be held by members of a municipal council if the area of the municipality is not too great, but these are not the views that ought to be entertained by nation builders.

In considering a proposed German treaty and the conditions existing as between Germany and Canada I desire to make some reference to an article in the 'Empire Review' for November, 1909, edited by Sir Clement Kinloch-Cooke. After explaining and describing the conditions as they are to-day between Germany and Canada, the editor says:

There can be no doubt that the trade between the two countries has materially suffered by the altered conditions, and in the best interests of Canada it is unfortunate that the tariff committee of the association of Canadian manufacturers have reported against the remission of the surtax on German manufactures. Obviously the line for Germany to take is to withdraw the reprisals and then for Canada to withdraw the surtax. If this were done the position would revert automatically to the status quo. It appears Germany is willing to do her part but the tariff

committee do not see their way to accept the olive branch, giving as their reasons,—

Now follows, in quotation marks, the resolution of the Tariff Committee of the Manufacturers' association:

that the feeling amongst Canadian manufacturers against the negotiation of a tariff treaty with Germany has of late been strengthened by reason of the strong anti-German sentiment manifested in England and that from an imperial point of view it would certainly be unfortunate if at this juncture Canada were to strengthen the hands of Britain's most dreaded commercial rival by granting concessions which would be the means of transferring to that rival trade which is now being enjoyed by the mother country.

The comment of the editor is as follows:

But unsound as the commercial side of their policy is, the reference to 'the strong anti-German sentiment manifested in England' is still more unsound. There is no strong anti-German feeling here in the sense that is implied in the tariff committee's report. A section of the press and of the public are, it is true, still opposed to all things German, but the opposition politically is fast dying out. Commercial antagonism there must always be, but if Canada is to wait until all commercial jealously disappears before coming to terms with Germany she will postpone her arrangement till the Greek Kalends. If I might offer a suggestion to the Canadian government, it is this: 'Agree with your adversary quickly,' and leave all question of anti-German sentiment in this country out of your calculations.

We are now an important and a somewhat influential part of the British empire and I suggest that this government, not in any undignified way, but in a thoroughly business way, let it be known to Germany that we prefer trade rather than battles. If we do that I think it may have some influence in continuing peace rather than in bringing war. When we speak of a trade treaty with Germany, our friends on the other side of the House will say, as they said of the French treaty: What will the United States say. Sir, I was surprised to find our friends on the other side of the House ask such a question as that. I remember reading of men who were sent many long centuries ago to investigate a situation and to report, and on their return they said:

And there we saw the giants, the sons of Anak, which come of the giants and we were in our own sight as grasshoppers, and so we were in their sight.

If our friends on the other side are bound that before they make any bargain with any nation, they must obtain the censent of the people and government of the United States, then I say to them that so long as a people regard themselves as grasshoppers in their own sight they will be sure to be regarded as grasshoppers in the sight of the other fellow.

One thing more and I have done, and that is to refer shortly to the question of immigration. I shall not quote long figures, not even the figures I have prepared. I shall not speak so much as to the number of immigrants coming into the country just now, but rather as to the character of the immigrants we have received. I observe, Sir, that last year and for the first seven months of this year—and I think there is no change in that respect from the years preceding—more that seventy-five per cent of the immigrants we have received in Canada have been from Great Britain, Ireland and the United States. A large number of the remainder of the immigrants who have come here have been from the northern portion of Europe, from Germany, Sweden, Norway, Holland, and other portions of northern Europe, whose people are as good a class of immigrants as can be got to come to any country. I have said that the immigrants who have gone into the United States have been of an altogether different and inferior class. I say this because we have repeatedly heard it argued in this House that the United States have been getting a better class of immigrants than we in Canada because of the greater care that has been exercised by the people of the United States in the selection of their immigrants.

I wish to read shortly from an article in the 'Popular Science Monthly' by Dr. Albert Alleman, of Washington, District of Columbia. He says:

The people of the 13 colonies, the builders of the American union were almost exclusively of the Anglo-Saxon race. The immigration which set in after the war of independence and continued during the greater part of the nineteenth century, was composed of people not dissimilar from those early colonists. They came from the British Isles, Scandinavia, Germany and the smaller Teutonic countries. But during the last twenty-five years the number of immigrants from those regions has steadily decreased and has now sunk to very small numbers, while the immigration from Italy, Hungary, Greece and Russia has increased from year to year during the same period of time, and, of late years, has assumed truly enormous proportions.

Again in the same article, he says:

Broadly speaking we have two great classes of immigrants, those that came before about the year 1885 and those that came after that year. The native home of the former was northwestern Europe and the bulk of them belongs to the so-called Teutonic, or Scandinavian, or the northern blonde race; the latter came from the Mediterranean basin and eastern Europe, and present a number of racial types.

Later in the same article, he says:

About the middle of the ninth decade of the last century,—

That would be about 1885.

—an entirely new immigration began to set in. The new arrivals came from southern and

eastern Europe, from Italy, Greece, Hungary, Bohemia, Russia. Hailing from an entirely different region of Europe, they differ completely in their racial characteristics from the earlier immigration.

Here is sufficient evidence that Canada in the last twenty-five years has been receiving a class of immigrants vastly superior in every way to the immigrants who have, in the same time, been going into the United States.

A word as to the immigration from Japan. We all remember the great turmoil that was raised in this House and out of it a couple of years ago because of the great influx of Japanese immigrants. At the last election, in a certain section of this country, people were stampeded against the government of the day because of the fear of a yellow peril, which fear has since been shown to be purely without reason. The number of immigrants coming from Japan into Canada in 1907-8 was 7,601; in 1908-9, it was 495; and for the first seven months of 1909-10, only 186. It will therefore be seen that the fears of the people who were influenced to vote against this government in the last election because of the Japanese immigration and the failure of this government to stop it, were entirely groundless and these people will surely have learned the lesson that they had better in future trust the statements of the government rather than—I was going to say—the fabrications of our friends on the other side of the House. The immigration from the United States in 1908-9 was 59,832. In the first seven months of this year it was 65,755, or 6,000 more in seven months of this year than in the whole twelve months of last year. While this American immigration is a matter on congratulation for us, it is a matter over which the American people are very much alarmed. I was reading a few days ago an article in the Breeders 'Gazette' of November 24, 1909, a leading agricultural paper published in Chicago, in which it is said:

An extraordinary gathering was the Land Congress in Chicago last week. The farm was the keynote, the farmer the man of the hour. Governors, senators, congressmen, land commissioners, scientific agriculturists, dry farmers, railroad immigration agents and others responded to the call in surprising numbers.

Again further on:

It was a notable gathering and not the least valuable of its influences is that directed against the loss of our farming population to Canada.

The 'Country Gentleman,' a leading agricultural paper published in Albany, New York, in its issue of November 25, last, says:

60,000 Americans went to Canada last year and took with them $60,000,000 to buy wheat lands in Canada.

In its issue of December 2, 1909, the same paper says:

The American emigration to the Canadian Northwest, after having some time ago aroused attention, has begun to excite alarm; and an association has been formed in Chicago to check it, with the motto, 'Why go to Canada' The immediate occasion for concern is the announcement that the northward current has continued to flow this year all through the fall, instead of letting up as usual. In August, September and October 13,781 American settlers arrived in Winnipeg, 48 per cent more than were received in those three months of 1908. It is said that 500,000 Americans have crossed the border in the last ten years.

Referring to the motto of that Chicago congress, 'Why go to Canada?' I ask myself the question: Why do these American citizens, the very cream of the American farming population, and why do men in such large numbers from Britain and from the best parts of Europe, come to Canada? They come to Canada, in the first place, because of the natural advantages, the cheap lands we have to offer. They come, in the second place, because of the confidence they have in Canadian laws and the way in which we enforce our laws. They come in the third place, because this government, the Minister of the Interior, his deputy, the superintendent of immigration, and the Interior Department generally, have advertised in the most businesslike way the advantages which our country has to offer. So I say again that this government is entitled to the credit of bringing into the country the farmers who, the hon. member for North Toronto says, have saved the government and the country. Again I congratulate the Finance Minister upon the splendid budget which he has been able to present to-day and the splendid conditions which have enabled him so to do.

Mr. SPROULE moved the adjournment of the debate.

Motion agreed to, and debate adjourned.

On motion of Sir Wilfrid Laurier, House adjourned at 11 p.m.

HOUSE OF COMMONS.

WEDNESDAY, December 15, 1909.

The SPEAKER took the Chair at Two o'clock.

PRIVATE BILLS.

FIRST READINGS.

Bill (No. 78) respecting the Edmonton, Dunvegan and British Columbia Railway Company.—Mr. Douglas.

Bill (No. 79) respecting the Hamilton, Waterloo and Guelph Railway Company.—Mr. Harris.

Bill (No. 80) to incorporate l'Institut de Notre-Dame des Missions.—Mr. W. M. Martin.

Mr. J. D. REID. As I understand this 12th report, it is a report allowing the application of the company seeking incorporation as the St. Lawrence Power Company to be put through without the proper notice having been given. Am I right in understanding that?

Mr. SPEAKER. I am informed that the report of the examiner of petitions will go to the Committee on Standing Orders.

REGULATION OF HORSE RACING.

Mr. WALLACE moved for leave to introduce Bill (No. 81) to regulate horse racing.

Sir WILFRID LAURIER. Explain.

Mr. WALLACE. This is a Bill dealing with horse racing in Canada. The object of this Bill is to limit the length of race meetings in Canada, which will stop gambling at least to a certain extent. We do not desire at all to interfere with the legitimate sport of horse racing, and this Bill does not interfere with it, but there are many race tracks at which race meetings are held for forty, fifty or sixty days. These tracks are not being operated for the sport of it at all but for the gambling end of it. We want therefore to limit horse racing to thirty days in the year divided between fifteen consecutive days in the spring and fifteen days in the fall there being a proviso that between spring and fall meetings there must be an interval of at least forty days.

Motion agreed to, and Bill read the first time.

QUESTIONS.

APPOINTMENT OF MR. WILLIAM CULLUM.

Mr. BARNARD:

1. Has William Cullum been appointed an inspector of boilers under section 572 of the Canada Shipping Act? If so, what was the date of his appointment?

2. Did the said William Cullum before his appointment receive a certificate from the Board of Steamboat Inspection, as required by section 573 of said Act?

3. If so, what was the date of such certificate, and by whom was it signed?

Hon. L. P. BRODEUR:

1. Yes, June 1, 1908.

2 and 3. Yes, as the result of an examination held by the Board of Steamboat Inspection at Victoria, British Columbia, in March, 1898. The Chairman of the board, Mr. E. Adams, issued his certificate on May 12, 1908, that Mr. Cullum was qualified under the Act.

TONNAGE TAX ON CANADIAN VESSELS.

Mr. J. A. CURRIE:

1. Have any representations or complaints been made to the government relative to the imposition of a tonnage tax upon Canadian ships operating on the Great Lakes entering United States ports?

2. What is the amount of this tax, by what law imposed, and how collected?

3. Was there any reciprocal arrangements as to freedom from any tax of this kind in force until this year? If so, when was this arrangement made, the nature of it, and by whom?

4. Does this tax abrogate the arrangement made also as to the reciprocal free use of the canals?

5. Is it the intention of the government to impose a similar tonnage tax upon United States ships trading on the Great Lakes to Canadian ports?

Mr. BRODEUR:

1. No.

2. Two cents per registered ton, not to exceed in the aggregate ten cents per ton in any one year. This tax is imposed by section 36 of the new United States tariff and is collected by the collector of customs at the port of entry.

3. Yes, under the authority of an order in council of the 21st of November, 1884, application was made to the United States government for the abolition of all tonnage tax on vessels entering a port in the United States from any port in the province of Ontario. On the 31st January, 1885, president Arthur issued a proclamation exempting vessels arriving at a port in the United States from any port in the province of Ontario, from the tonnage tax of three cents per ton, not to exceed fifteen cents in any one year.

In consideration of the privileges enjoyed by the Ontario vessels in ports of the United States, the collection of Harbour Masters' fees from United States vessels arriving at ports in the said province was waived by the Dominion government.

4. No.

5. The collection of the fees imposed under section 862, of the Canada Shipping Act, which has been waived since 1885, was resumed on 1st December, 1909.

PERMANENT FORCE—ENTERTAINING ALLOWANCES.

Mr. WORTHINGTON:

1. Are there any regulations governing entertaining allowances for the officers of the permanent force? If so, in what manner are

such allowances made, and to what officers?

2. Has the officer commanding Quebec district been entitled to or in receipt of such allowance? If not, why not?

Sir FREDERICK BORDEN:

1. No regulations on the subject. Entertaining allowance is granted to the following officers and messes:

The officer commanding maritime provinces command, Halifax.

Royal Canadian Garrison Artillery mess, Quebec.

Royal Canadian Mounted Rifles mess, Winnipeg.

The allowances at Halifax and Quebec have been granted in consequence of the necessity arising for entertainment of British and foreign men of war, and in view of the fact that, prior to the garrison at Halifax being transferred from the imperial government to Canada, the officers commanding received similar allowances.

At Winnipeg, owing to the very few officers in the mess, it is impossible for them to maintain their position in a proper manner without some assistance.

2. The officer commanding Quebec command at Montreal is not in receipt of an entertaining allowance, and it is not considered necessary at that station.

PERMANENT FORCE—SCHOOLS OF INSTRUCTION.

Mr. WORTHINGTON:

1. What is the establishment of the royal schools of military instruction, below mentioned, and how many certificates have been issued from each, during the last financial year, to officers, non-commissioned officers and men, of the active militia, respectively: Royal School of Cavalry, Toronto; Royal School of Cavalry, St. John; and the Royal School of Instruction, Winnipeg. Royal School of Artillery:—Horse and Field Branch, Kingston; Heavy Branch, Quebec; Coast Defence Branch, Halifax; Coast Defence Branch, Esquimalt; Royal School of Infantry, London; Royal School of Infantry, Toronto; Royal School of Infantry, Quebec; Royal School of Infantry, Fredericton; Royal School of Infantry, Halifax, and the Canadian School of Musketry, Ottawa?

2. How many provisional schools of instruction were formed during the last financial year, and how many certificates were issued therefrom?

3. What amount was paid out on account of provisional schools of instruction during the period above mentioned to officers, instructors, etc., of the permanent force, lodging and subsistence of members of the active militia attending such schools for instructions, respectively?

Sir FREDERICK BORDEN:

1. The establishment of the separate units of the permanent force which constitute the schools of instruction, in addition to performing the other duties allotted, by law, to the permanent force, and the number of certificates issued is as follows:

—	Establishment.	Certificates granted.	
		Officers.	N. C. O. and Men.
Royal School of Cavalry, Toronto	90	44	9
Royal School of Cavalry, St. John.	95	34	17
Royal School of Instruction, Winnipeg	90	129	118
Royal School of Artillery, Kingston	285	21	81
Royal School of Artillery, Quebec	197	5	10
Royal School of Artillery, Halifax	411	8	27
Royal School of Artillery, Esquimalt	80	2	6
Royal School of Infantry, London	75	35	34
Royal School of Infantry, Toronto	85	58	11
Royal School of Infantry, Quebec.	80	73	39
Royal School of Infantry, Fredericton	80	19	14
Royal School of Infantry, Halifax.	600	22	50
Canadian School of Musketry, Ottawa	....	15	32
Schools of Signalling	....	28	203

2. There were, in addition, 28 provisional schools of instruction conducted at various local centres by the Royal Schools of Instruction above mentioned during the last financial year, from which a total of 606 certificates were granted.

3. Permanent force—

Officers and men—lodging and subsistence	$1,402
Active militia—	
Officers and men—lodging and subsistence	1,814
Horses and forage	4,936
Total	$8,152

ESTABLISHMENTS OF CANADIAN MILITIA.

Mr. WORTHINGTON:

1. Are the establishments of the Canadian militia, including the permanent force, fixed annually by the Governor in Council?

2. If so, are they based upon the appropriation made by parliament for the period concerned?

Sir FREDERICK BORDEN:

1. Yes.

2. They are based on the appropriation voted by parliament, but provision is also made in the establishments for the authorization of new units to anticipate the growth of the force.

THE ROSS RIFLE.

Mr. WORTHINGTON:

1. Are any Ross rifles Mark I, at present on issue to any corps of active militia, or to any

rifle clubs? If so, to what corps and clubs, and how many?

2. In view of the defects discovered in Mark I, does not the government consider that a serious set-back might be given to the developing cadet system by any issue to cadets of rifles of that pattern?

3. How many Ross rifles Mark I, were accepted from the manufacturer?

4. In view of its defects, and the fact that it is widely considered unsafe for use, does not the government consider that it would be sound policy to scrap the issue and write it off the books entirely?

5. In view of the difference in length of barrel, weight, attachment of barrel and receiver, twist of rifling, change in pattern of locking bolt and safety catch, trigger action, bayonet attachment, and backsight, will the government explain the process through which any previous pattern of Ross rifle was converted into the pattern known as Mark II**?

6. Did the contract for the supply of 500 rifles Mark II** call for their conversion from any pattern already manufactured, or did it call for the manufacture of 500 new rifles at an increased cost over existing contract rates, against which cost an allowance would be credited for such parts of the Mark II pattern as could be utilized in the manufacture of the Mark II**?

Sir FREDERICK BORDEN:

1. List of changes No. 255, published with general orders, May 1, 1909, authorized the issue of Ross rifles Mark I. to selected units, rifle associations and cadet corps, to be designated. These rifles have been issued in accordance therewith, and they are expected to be all issued during the ensuing calendar year.

2. No serious defects have been shown to exist in Mark I. rifle, and the only danger of a 'set-back' in the growth of the cadet movement consists in such unfair and persistent attacks upon the rifle as are involved in questions of this kind.

3. 9,000.

4. Such slight defects as were found to exist have been remedied, and the allegation that the rifle 'is widely considered unsafe for use' is not believed to have any foundation in fact. Any such impression, however, that may exist is largely due to the persistent efforts of the hon. member to discredit the rifle. To do what the hon. member apparently proposes would be both wasteful and ridiculous.

5. The process to which the hon. member alludes has been simply one of evolution such as many other service rifles have undergone.

The present British service rifle, for example, differs from the original Lee-Metford rifle in length of barrel, weight, nature and twist of rifling, pattern of safety catch, trigger action, method of loading, bayonet attachment, pattern of backsight, pattern of foresight, clearing rod, magazine, attachment of barrel to stock, cover for barrel, and many other details too numerous to mention.

6. Contract called for conversion from existing pattern, viz., Mark II.

Mr. MONK. I rise to a question of order. I notice that in the answer given by the hon. minister he went beyond the purport of the question by alleging that the disrepute attaching to this rifle was due to the efforts made by my hon. friend (Mr. Worthington) who put the question. I believe, Mr. Speaker, that is quite out of order, and I would ask that that part of the answer be expunged.

Sir FREDERICK BORDEN. Then I would ask that the question be eliminated. The hon. member who put the question—I did not take exception to his doing so—has made certain statements as to the alleged fact that defects existed and that in the public mind the rifle is considered unsafe for use. These allegations are possibly improper in a question, but I answered according to the law of scripture that we are bound to answer a fool according to his folly.

Mr. MONK. If the question was out of order exception should be taken to it, but the answer certainly was out of order.

Mr. WORTHINGTON. If there is anything out of order about it it is certainly the answer. If any one can tell me how you can build a Mark II rifle into a Mark II** when the length of the barrel is an inch and a half longer in a Mark II** and the rifle much heavier, I would like to know it. The only process of conversion is by giving an order for 500 new rifles and paying for these rifles and charging the difference up to the country.

Mr. SPEAKER. If the point of order is insisted on I will look into the matter. The rule is of course, that no argument of any kind and no allegation can be put into a question. I am under the disadvantage of not having seen this question until it went on the Order Paper.

Mr. MONK. What about the answer?

Mr. SPEAKER. If the question is irregular and is ruled out of order there would be no answer.

DRILL HALLS OR ARMOURIES.

Mr. WORTHINGTON:

In the construction of drill halls or armouries, or the leasing of sites for camps of instruction, in how many and what instances have municipalities, regiments, or individuals, contributed to the cost of the same in the way of concessions, sites, or moneys, and to what amount since 1904?

Sir FREDERICK BORDEN. As the information required by the question is

lengthy I would ask the hon. member to move for a return.

Mr. SPEAKER. The question stands as notice of motion for a return.

MILITIA INSPECTION PAY.

Mr. WORTHINGTON:

Are the rates of inspection pay fixed by article 43, Pay and Allowances for the Militia, drawn by officers of the permanent force appointed inspectors of cavalry, artillery, infantry and signalling, during the periods employed on inspection duties only, or for all days on which they draw regimental pay and command pay?

Sir FREDERICK BORDEN:

Inspection pay is paid to inspectors of cavalry, artillery and signalling for every day they hold these appointments.

There are no inspectors of infantry.

PEACE RIVER LAND COMPANY.

Mr. MONK:

1. Have the lands which form part of the grant by the Crown to the Peace River Colonization and Land Development Company, been disposed of in any way, or are said lands in the possession of the government without any reservation whatever?

2. Have the said lands or any of them been dealt with in any way since the cancellation of the grant to the Peace River Colonization and Land Development Company?

Hon. FRANK OLIVER:

1. Several homestead entries have been granted within the tract, otherwise the land is in the possession of the government without reservation.

2. No; except in so far as homestead entries may have been granted.

SUTHERLAND RIFLE SIGHTS.

Mr. WORTHINGTON:

1. Has delivery been made of any of the 36,000 sights contracted for by the government with the Sutherland Rifle Sight Company, the period for which was extended from March 15, 1908, to September 15, 1909?

2. (a) If so, how many, and (b) what payments, if any, have been made thereon?

3. Does the contract price for such sights include the placing of the same on the rifles?

4. (a) If not, by whom is the work of changing the sights to be done, and has any contract been made therefor? (b) If not, what is the estimated cost?

5. If delivery of sights has not been made, has the time been further extended, or has the contract been cancelled?

6. Has any other sight been contracted for or taken into consideration?

7. If so, what is the proposed cost of the sight, and placing the same on rifles, and by whom are sights to be supplied and work of changing sights on rifles to be done, including all expenses incidental thereto?

8. Has any offer been made by the Ross Rifle Company in this connection? If so, of what nature, and the cost?

Sir FREDERICK BORDEN:

1. Yes.

2. (a) 35,000.

(b) The entire quantity delivered has been paid for. Total payment $42,000.

3. No.

4. (a) Regimentally, or by the armourers of the Canadian Ordnance Corps.

(b) At no expense to the public.

5. Answered by 1 and 2.

6. No other sight has been contracted for, but the department has constantly under consideration sights which are submitted to it by inventors.

7. Answered by 6.

8. No.

DOMINION GOVERNMENT STEAMERS.

Mr. SINCLAIR:

1. What is the name, cost, date of construction, place of construction, and gross tonnage of each of the steam vessels now owned by the Dominion government?

2. What are the names of those built in Canada?

3. Were they all thrown open to Canadian competition? If not, what ones were thrown open?

4. In each case that was open to Canadian competition, what was the difference between the lowest Canadian tender and the price paid?

5. In each case where a contract was made with a builder for the construction of any of said steam vessels, what was the month and day when each of said contracts were signed, and when each of the said contracts called for delivery of vessels?

6. What price would each of the said steam vessels have cost if the government in each case had paid the current Canadian customs duty chargeable on vessels constructed outside of Canada?

Hon. WM. PUGSLEY. As this question involves the preparation of a good deal of information I would ask my hon. friend to put it as a motion for a return.

Mr. SPEAKER. Stands as a notice of motion for a return.

WATERWAYS TREATY.

On the order:

For a copy of all correspondence, reports, documents and papers not already brought down touching the treaty with the United States of America, known as the Waterways Treaty, or any modification thereof.—Mr. Borden.

Mr. R. L. BORDEN. I presume the government still desires this to stand.

Sir WILFRID LAURIER. Yes.

RULES OF THE HOUSE.

Mr. E. N. LEWIS (West Huron) moved:

That in the opinion of this House it would be in the public interest and facilitate busi-

ness for the answers to all questions put by members under rules 36 and 38 to be submitted in writing without being read. That Wednesdays after six o'clock p.m., be taken up with consideration of the estimates.

He said: If I am not encroaching on the work of the committee appointed by the House to consider the rules, I may say that the people of the country as well as a great many members who are now listening to me are strongly in favour of the procedure that the questions should be answered in writing, published in 'Hansard,' and not read in the House, or any change which will shorten the sessions. It is well known that very seldom are the answers heard by those who are any distance from Mr. Speaker, and as a rule the members know they can get it in the 'Hansard' next morning and so they do not listen. In the Imperial House of Commons, on whose rules ours are based, they have such a rule as I now propose, in force for a number of years. If any hon. gentleman desires that a question should be answered orally then an asterisk is placed before the question on the Order Paper, but otherwise the answers are given in writing. Last Thursday there was an hour and ten minutes of the time of the House absolutely lost in answering questions and reading petitions. I contend, Sir, that five minutes before six, for the good of the subject which an hon. member wishes to have introduced, is worth an hour afterwards, because what is said after six o'clock, is very seldom taken note of by the press of this country as their columns are filled up by that time. I hold Sir, that the press of the country is the cradle that rocks the idea into shape. It has been said that I pay to much attention to editorials in the press, but I wish to say here that I do not believe that any one can pay enough attention to the importance of the press. They are the brainiest men in the country and they have studied for years the feelings of the people. From one end of Canada to the other, the press on both sides of politics has discussed this matter in leading editorials, some a column in length, and all in favour of a revision of the rules. In Redlich's study of the British constitution, the only real authority on legislative procedure and a very able work—I am sorry the author was not an Englishman—it is stated that the understanding of the rules is that it shall not be made a party matter, but as something due to the country. The purpose of that part of the motion that Wednesday after six o'clock should be devoted to the estimates is that while those who are not concerned in the estimates set down for that evening could still devote it to social purposes, the time of the country would not be lost.

Sir WILFRID LAURIER. Mr. Speaker, there are two suggestions made in the motion of my hon. friend, and I suppose that he will agree with me that since only yesterday the House adopted a committee for the purpose of revising our rules, it would be preferable that this motion should be sent to that committee instead of being dealt with by the House. So far as I am concerned, I think there is a good deal to be said in favour of my hon. friend's first suggestion, that is, that the answers to questions should not be read in the House. But there may be some answers which, for the purposes of public convenience, should preferably be given orally to the House, those to which it is desirable that public attention should be drawn or as to which the country would like to be informed. In that way the information would very likely get into that cradle of which my hon. friend has spoken. With regard to taking up the estimates on Wednesday evening, this would involve a departure from the present rule, which was adopted at the time of the last revision some years ago, making Wednesday evening a free evening. I think the members of the House have been rather in favour of that change; the freedom given to them on that evening has been very much appreciated. I do not know whether we would meet the sense of the House if we departed from that rule and forced the House to sit on Wednesday evening. If the House sat, I do not know exactly what my hon. friend means—whether that the House should mechanically take up the estimates without members having the privilege which they now have of bringing up any question or moving an amendment on the motion to go into Supply. Is that the meaning of my hon. friend?

Mr. LEWIS. Yes.

Sir WILFRID LAURIER. I am not aware whether this would be acceptable to the House or not. That privilege is more for the protection of the opposition than the government. If we sat on Wednesday evening, I do not know that the government would have any objection to taking up the estimates without an opportunity being given to move an amendment; but this is a question which particularly concerns hon. gentlemen opposite.

Mr. R. L. BORDEN. So far as I am concerned, I would be entirely opposed to any such proposal as that which I gather is the intention of the hon. member for West Huron (Mr. Lewis), in the latter part of his motion; I am speaking of the last paragraph of this resolution. There would be no object in doing any such thing unless the privilege of bringing up public matters for discussion on the motion to go into Supply were abused. I do not think any hon. member of this House will say that that privilege has been abused or

is abused at the present time. To adopt a rule of mechanically going into Committee of Supply would cut off a safeguard and a privilege that has been sacred to parliament for eight hundred years, and it ought not to be taken away without very grave reason. So far as the other part of the resolution is concerned, with regard to the mode of answering questions, I am entirely in accord with what I understand to be the object of the hon. gentleman and what I understand to be the view of the Prime Minister. There are certain questions which it is desirable in the public interest to answer orally, perhaps not a very great number. With regard to that, the English practice might very well be adopted in this House. I concur entirely in the view the Prime Minister has expressed, that, as a committee has been constituted to revise the rules of the House, the motion of my hon. friend from West Huron should go to that committee, which will no doubt take it into consideration. I am very glad that my hon. friend from West Huron, although I am not able to concur in one of his proposals, has bestowed some attention on this matter, and I have no doubt that the result of his investigations will contribute something of value. I presume there will be no objection on the part of the committee which has been constituted to hear my hon. friend or any other hon. member who desires to make that committee acquainted with his views concerning the lines on which a revision of the rules should proceed.

Hon. W. S. FIELDING. If the hon. member for West Huron has in mind the doing away with the Wednesday evening recess, I must certainly, speaking entirely for myself, take the strongest exception to such a proposal. I plead guilty to having had most to do with the bringing about of that change. I was not on the committee, but took the trouble to go to several members of the committee to urge that it should be brought about. I am thoroughly persuaded that it has worked well. I think it is in the interest of the business of the House that there should be one evening of the week when members are free to engage in social affairs, to entertain or be entertained, or to rest if they wish to rest. I am certain that the exceptions taken at the beginning of that new rule were not well taken, and I venture to believe that in the light of experience the House will agree that it is wise to retain the Wednesday evening recess. This is a hard-working House, that is, to the members who are willing to work. Between the work of the committees and the work of parliament, every man who does his duty here will do it quite as well if he has the Wednesday evening recess. It is certainly in the interest of good relations between the members, it is in the interest of many things that make, I think, for the advantage of our parliamentary institutions, that the Wednesday evening recess should be retained, and I do make this personal appeal to the committee that they will not agree to abolish that Wednesday evening recess without the very fullest consideration.

As to the question generally, I think the committee should give some consideration to the point whether our questions are not too broad, too long and too cumbersome. Very many questions put on the Order Paper might, I think, properly be ruled out of order, but we on this side of the House do not wish to take that point. Many questions ask for information which an hon. member could get for himself by walking into the library or asking a sessional clerk to compile it. Many questions are long, they call for long answers and again and again ministers occupy ten minutes in reading an answer to a question. The proper procedure for obtaining information of an extended character is not by a question but by a motion for a return. Again, I think very many questions travel away beyond the line of what is the proper business of the House. I only make these remarks to suggest that the gentlemen who are on that committee may consider whether they cannot keep the questions within better bounds, and I think that if that were done my hon. friend would find that the time occupied would be much less than it now is.

Mr. J. G. TURRIFF. Mr. Speaker, no doubt there is a great deal in what the Minister of Finance has just said about the Wednesday evening recess. At the same time, there is a large number of members of the House who feel that if the House sat on Wednesday evening greater progress would be made with the work, and there is a large number of members who come from very long distances to attend the session here in Ottawa to whom getting home a week or two earlier is a matter of very considerable importance. A number think that many members might devote Wednesday night to social entertainments but there would still be plenty of members left to go on with the business of the House. On Monday nights,and more especially on Friday nights a number of members are away, but at the same time the business goes on and very good progress is made, very often better progress perhaps than if all the members were present to take part in the discussion, because if there is anything that we are troubled with on both sides of the House, it is the tendency to long speeches. I am glad to notice that in the last year or two there seems to be an improvement, and the members generally are speaking more

shortly than a few years ago. It seems to me, however, that if the House would sit on Wednesday nights it might be an advantage, and I trust that when the committee come to revise the rules they will give this question their full consideration and see if it is not possible to revert to the old practice of sitting on Wednesday night. Of course as to what business should be taken up, I think it would be better if we just went on in the ordinary way, rather than confine the work of that special evening to Supply. That, however, is a matter that could easily be decided on later. As to the other part of the proposition that the answers to questions be handed in in written form, I am sure there can be no two opinions on it. Just this session we have seen a great deal of valuable time wasted in reading answers that very few members could hear and would have to read in 'Hansard' anyway. I trust that at least that part of the resolution will be carried out.

Mr. F. D. MONK. I agree with the Minister of Finance that it would be a great pity to obliterate the weekly half holiday, if I may so call it; but it seems possibly it might with advantage be changed to another day. It has often occurred to me that if we could stop at six o'clock on Friday it would be better.

An hon. MEMBER. Then you would have to eat fish dinners.

Mr. MONK. I find the provision of fish in Ottawa is very generous and I would be satisfied to get on with a fish dinner if the House did not sit on Friday night. I think that, without abolishing the half holiday, it might be changed to advantage.

I rose particularly to refer to a remark of the Finance Minister as to circumscribing the field of questions. I would be sorry to see the committee, that is doubtless going to perform a useful work, place any limit on questions. Some of them may appear to be useless, but they have always held in England, since the mode of questions existed, that the utmost latitude should be accorded and as a matter of fact one is surprised at the number and the strange character of the questions that are sometimes put in England. Members there have been known to ask why the walks about the parliament grounds were not cleaned, why the corridors of the House are not properly swept and a large number of other questions which may appear to the casual observer to be useless; but in spite of that no attempt has been made to circumscribe the field of questions. I hope that this committee will find some means of limiting discussion, without, of course, coming to the question of closure, which was brought about in England by extraordinary circumstances that have no reason to exist in this country. With that reservation, it seems to me that we might advantageously keep along the line of the English rules in regard to discussion and the division of the work. Some years ago I remember that this question was amply discussed in this House on a motion by Mr. Charlton, which I warmly seconded then. The right honourable the Prime Minister (Sir Wilfrid Laurier) expressed the hope when that motion was presented to the House that we would ourselves, with time, correct the abuses that existed then. Experience seems to have proved that without a change in the rules those abuses cannot be eliminated. I therefore hope that this committee will take up the work seriously and make some improvement in our mode of deliberation.

Mr. GLEN CAMPBELL. I certainly believe in having an evening of rest in the middle of the week. Members of the House are obliged to work harder than perhaps any other class in the community and we have nobody agitating for an eight hour day to govern our work. I think, Sir, if the hon. member who introduced this motion would introduce a measure of some kind to make compulsory the attendance of members during the time we now sit, it would merit a great deal of consideration, and I certainly would do everything I could to support it.

Mr. J. P. TURCOTTE (Quebec County) (Translation). Mr. Speaker, this is a question of much interest especially as regards the younger members of the House. Judging from certain statements which have been made, it seems evident to me that our predecessors here were more diligent workers than we are. It may be that conditions existing at the time favoured them in that respect. However, it would seem to me that this resolution, which has for its purpose to devote Wednesday evenings more particularly to a discussion of the estimates, is somewhat unusual, and would tend to revolutionize an order of things which has been in existence for some time, and at any rate ever since I have been occupying a seat in this House.

We should not devote Wednesday evenings to a study of the estimates, but to the fulfilment of certain social functions which in a certain sense are just as necessary and just as important as the discussion of the estimates. Members of the House are not very well acquainted with one another. As a matter of fact, it is not through the at times acrimonious discussion of Bills that we are likely to arrive at a just estimate and appreciation of one another. Some more appropriate place of meeting is required. I have the honour to belong to a race whose traditions of amiability and sociability are well known and appreciated

throughout the world. And it would be no matter of surprise to me were it to be shown that this interruption of warfare on Wednesday evenings was initiated at the suggestion of some compatriot of mine. For it has always been understood among peoples of latin race, and especially among people of French origin that diplomacy has not the floor of parliament for its only vantage ground, but that there are other places and other means at its disposal whereby rancour may be mellowed down and harmony and conciliation enthroned in its place.

Now, I believe that these special meetings of Wednesday nights held outside this Chamber, though still within the precincts of parliament, have oftentimes afforded an opportunity to hon members to understand one another more thoroughly and gain a better appreciation of their various artistic and social accomplishments in the course of conversations and exchanges of views which would have been out of question during a regular sitting of the House. That is what makes me say that it would be a mistake to do away with these social confabs of Wednesday evenings.

There is still another reason, it is this. We have not the training of our predecessors as regards parliamentary practice. That should not be lost sight of, considering that the difficulty of grasping all that is going on here is constantly increasing. Of course, old parliamentarians are familiar with the workings of government; they are in a position to expedite their business in much less time than we the newcomers could do. It requires more than the ordinary tension of mind to go over the innumerable orders appearing on the Paper, to keep up with the work carried on by the committee and follow the protracted discussions which go on from day to day and are taken down in the official reports. Add to that the daily correspondence, the calls to be made in the various departments, and you will acknowledge that the task imposed upon us is a heavy one. It seems that the old members should take all that into account and show some sympathy for us. For all these reasons, I consider the mid-week holiday a very desirable thing and which should not be done away with.

That viewpoint of the question should appeal to members who live more through the mind than through the heart, for I think that good legislation must be the outcome of a co-operation of both.

Mr. W. M. MARTIN (Regina). Mr. Speaker, I rise to express myself as favourable to the resolution which has been placed on the Notice Paper by the hon. member for West Huron (Mr. Lewis). The first part of the resolution says:

That in the opinion of this House it would be in the public interest and facilitate business for the answers to all questions put by members under rules 36 and 38 to be submitted in writing without being read.

I cannot see what objection any member of the House can have to that part of the resolution. For I know, from my personal experience here, that very few of us hear the answers of the questions, but have to read them in 'Hansard' afterwards. A large amount of time would be saved almost every day by having these answers handed in and printed for the benefit of hon. members and of the country generally. With respect to the latter part of the resolution——

That Wednesdays after six o'clock p.m. be taken up with consideration of the estimates.

——from my observation during the short time that I have been here I do not think I am exaggerating when I say that at least one-third or one-half the time of the House is taken up in Committee of Supply. I cannot see, personally, why a large part, or the whole, of these estimates could not be referred to some smaller committee to be dealt with, and only the contested items taken up in the House. I would not urge that if I thought it would interfere at all with the liberty of criticism on the part of opposition members. Every contested item could be reported to the House, and, in that way, everything in the estimates that it is desired to discuss in the House could be brought before the House in exactly the same way as it is to-day. A great deal of the time now taken up in the discussion of the estimates might be used more advantageously for ourselves and for the people if devoted to some other purpose. With respect to the Wednesday evening sitting, I would favour the taking up of some estimates or other government business during the evening. I come from a place far distant from Ottawa—not so far it is true as other members of the House come—and there are a great many of us to whom two or three weeks at home in our own private business would be a great advantage. There are many wealthy men in the House of Commons, and also a large number who have been here for many years and to whom it has become second nature to be here, and these men do not seem to care how the sessions are prolonged. But I think I voice the sentiments of the members who have to come from a long distance when I say that we do not want to be here any longer than we can help. We want to remain here long enough to assist the government in transacting the necessary business, and when that is over we want to go home. Speaking as one of the younger members, I have no hesitation in supporting this

resolution, and I believe I shall be supported in my expression of opinion by other members who reside a long distance from Ottawa, and to whom, as I have said, two or three weeks at the end of the session is worth something in their private business.

Mr. LEWIS. What I intended in the latter part of that resolution, although, perhaps, not so clearly expressed as it might be, was to do away with the Wednesday evening holiday and use the time for the work of the House. We come down here to work, we do not come for social purposes; and Wednesdays and Thursdays are the only two days of the week when most of the members are here.

Mr. FIELDING. Why not take another evening?

Mr. LEWIS. Take Friday evening if you like. I speak without political animus; it makes no difference who are on the treasury benches. The fact is that the main part of the estimates is left until Friday night when there is almost no one here. And, without taking away the rights of the opposition in any way, if Wednesday evening were taken up with the work of this House, it would shorten the session considerably. Starting in November, and ending before Easter, we should have only one holiday for the men from a distance to wait through. Circumstances are changing in Canada. We have more and more members coming from places distant from Ottawa and this fact should not be lost sight of. I say here openly, and no man can confute my statement, that we take up a longer time doing the work of this country than is occupied in similar work in any other country in the world. The Imperial House, upon which this House is patterned, takes less time than we do, and we have nine provinces each with its legislature doing a great deal of business which is absolutely done by the one parliament in England.

There is another matter that we should not lose sight of. While we are only seven millions of people, the questions that come before us are more important not only to ourselves but to the world, than the many questions coming before the legislature of the great country to the south of us or before the parliament of the mother country. The reason is that we are the last great country of the world; we are founding a nation; our work is not for ourselves alone, it is pregnant with futurity, and we cannot tell what will be the outcome of the proceedings of this House. It is easy to understand that a great manufacturing concern, let us say, can be brought into successful operation only by some great genius, but when it is once set in operation it can be run by any sound business man. Great Britain, the United States and other great countries are each like a great manufactory that has been brought to efficient operation; ordinary business men can manage their affairs. But we here are laying the foundation; our country is yet in the embryo stage. We have the greatest uninhabited arable territory of any country in the world, and we are directing the affairs of that territory not only for the present generation but for a mighty population of the future, our own descendants and those of others who are yet to come to Canada from other lands. It is of the utmost importance that we should have here in this parliament the best men of Canada. But, if we take up eight months, as the Toronto 'Globe' stated, in doing work which could be done in six weeks, we cannot get the best men of the country to come here. I am not finding fault with one side or the other. Some people say that the difficulty is in the obstruction of the opposition and some say that it is in the delay of the government. I do not believe that, except in some instances, either of these things is the real cause. The real cause is in the procedure into which we have drifted from time immemorial. We have not made changes to meet our changed condition. In the mother parliament they do make changes some of which are applicable to this country and some are not. I ask, if any evening of the week is to be taken up with social duties, let it be Monday or Friday when many members are not here. Sir, I am informed that this motion cannot be referred to the committee of which the Prime Minister (Sir Wilfrid Laurier) has spoken. I ask leave to withdraw it on the understanding that the matter be brought before the committee and given due consideration there.

Motion withdrawn.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all papers, letters, telegrams, documents, petitions, reports and correspondence with reference to, or in any way concerning the appointment of a government weigher at Montreal.—Mr. Armstrong.

For a return showing a list of all experts, technical advisers, and special officers generally, engaged by the government in connection with the naval defence programme and its execution, giving names, special qualifications, duration of engagement and rate of remuneration, as well as the total amount expended to date under the above; also amounts expended to date for articles, books, instruments and objects of all kinds in connection with said naval defence programme—Mr Monk.

For a return showing: At what places in the several provinces armouries and drill halls have been erected, and when they were erected; the total cost of the site in each case, and when and from whom purchased; the

contract price of each building, and to whom and when the contract was awarded; the total cost of each building; in what places armouries and drill halls are being constructed at present, and the cost of the site, from whom and when purchased, the estimated cost of the building in each case, and to whom, when and at what price the contract was awarded, and the names of places other armouries and drill halls are to be built by the government in the near future.—Mr. Edwards.

For a copy of the pay sheets of the employees on the Lachine canal under the supervision of Denis O'Brien for the months of May, June, July, August, September, October and November.—Mr. Verville.

For a return showing the names of the two hundred and twenty-one members of the House of Commons, as provided for in 6-7 Edward VII, Dominion Statutes, 1907, chapter 41, section 1, excepting only such seat or seats as have fallen vacant.—Mr. Campbell.

NORTH ATLANTIC TRADING COMPANY.

Mr. F. D. MONK (Jacques Cartier) moved:

For a copy of petition of right and pleas offered in defence in the case of the suit of the North Atlantic Trading Company vs. the King, in the Exchequer Court, and of all the correspondence as well as reports and petitions which led up to the government granting a fiat to the suppliant; and a copy of all letters having reference to the said claim now sued upon from the time of the final payment in the said North Atlantic Company.

He said: The North Atlantic Trading Company has always had a great fascination for members of this House who sat in the previous parliament, because there is a mysterious element in the history of that company or association. The government entered into a contract with the North Atlantic Trading Company on the 28th of November, 1904. I will not go into the details of that contract, because it is in a sense irrelevant to the object of this motion. But I may say generally, for the information of members of this House who were not in the last parliament, that under the terms of that contract the company known as the North Atlantic Trading Company undertook, under conditions that are set out at length in the petition of right which it has made in the Exchequer Court, to bring to this country immigrants from different parts of Europe, particularly the north western part, from Germany, German Switzerland, Finland, Holland, Scandinavia and parts of Russia. Under the terms of that contract the company was to receive $4 per head for every immigrant, farm hand or domestic servant, and half that sum for children. Now after the company had begun the performance of that contract, questions arose in this House as to how far the company was carrying out its obligation, and whether we were justified in paying to the company the very large sums of money which they received during succeeding years up to the date of the cancellation of its contract. Who were the members of that company? What was the company? Strange to say, in spite of the strenuous efforts made in committees of this House and before parliament itself, after the company had received over $300,000 in bonuses and for other causes resulting from the contract, we never were able to find out who were the members of that company or with whom we were dealing. What requires to be emphasized is the fact that the government at all times, and even on the eve of the cancellation of the contract which the company admittedly was not performing to the satisfaction of the country, even then the information which members of this House sought for was steadfastly refused by the government and in the committees of investigation. That is probably what aroused the curiosity of the House and of the country, and explains the natural curiosity which arises at the present moment when we find that after having paid nearly $400,000 to the company, and made what was alleged to us in this House was a final settlement in payment of what was due that company under the contract, a payment of over $36,000, here, when we thought we had buried for good and all that company which had left such a painful impression upon this House and the country, we find that the company is alive and well, and has obtained permission of the government to sue the government for a sum exceeding $70,000 for damages resulting from the cancellation of the contract, which my hon. friend the Minister of the Interior told us when the last payment of over $30,000 was under discussion, was a final payment to the company under the terms of the contract, and was approved by the Department of Justice.

This gives one justification for saying that we will be haunted by that company and its claims until some other government succeeds this one. You cannot lay the ghost of the company by any form of exorcism that I know of. It cannot be laid with bell, book or candle. The ghost must be a Ruthenian or Scandinavian one, but certain it is that we cannot get rid of the claims of the company even by making a substantial payment after the cancellation of the contract and observing all the formalities which would seem to be necessary to rid us of what was deemed by the House and the Minister of the Interior at the time an incubus and a deception upon the country itself. I have stated that information was refused when we investigated the payments made to the company. The House, under the direction of the right hon. the First Minister, I am constrained to say, strengthened and upheld our own public servants connected with the Department of

Immigration, whom we had summoned from Europe, brought here from England, and of whom we asked, as representing the taxpayers of this country—a very natural question: Who are the people to whom we are making these payments which we desire to investigate? The question was put in two of the important committees of this House. I put it myself to Mr. Smart, the Deputy Minister of the Interior, in the Immigration Committee, and Mr. Smart, who admitted that he was well aware of the names of the parties constituting this company, positively refused to give the information. He was upheld by the chairman of the committee, the matter was brought before the House, and here my right hon. friend, knowing himself from confidential communications, no doubt, who the members of the company or syndicate were, made the extraordinary offer of communicating these names privately to the leader of the opposition, but refused to uphold the right for which we contended that we, representing the taxpayers of Canada, were entitled to know with whom the government had been dealing and was dealing then. The same thing happened in the Committee on Public Accounts where the payments were under revision. There the question was put, if I mistake not, by my hon. friend on my left, the hon. member for Hamilton (Mr. Barker). At any rate, the question was put to whom?—to Mr. Preston, the superintendent general of immigration in Europe, who knew all about this syndicate, this company, this party of contractors, having organized them himself, and he—a very strange public officer having that mild appearance referred to by the poet of the man who fearlessly scuttled ships and cut throats—positively refused to give the information asked for, and I remember particularly his coolly telling my hon. friend from East Grey (Mr. Sproule), in either one or the other of these committees, because the question was put in both of them: You may be a very good watchdog, but you will not find out who the members of that syndicate are. Who were the members of that syndicate? We do not know. We never were able to discover, and at the present moment the government, in pleading to the action brought in the Exchequer Court, declares that it ignores who the members of the syndicate are. That is one of the allegations of the plea. Yet the right hon. gentleman, Mr. Preston, questioned in both committees that I have referred to, and Mr. Smart, then Deputy Minister of the Interior, who was in Europe at the time of the organization of the syndicate, and who seems to have taken an active part himself in the organization of that syndicate, knew who the members of the syndicate were. All the circumstances surrounding the organization of that syndicate gave rise to suspicion and seemed to indicate something which was altogether irregular, but at the time these matters were being probed before the committees here, the government cabled to the Canadian High Commissioner in London in regard to this syndicate and we found out that we were dealing with a company intended to shelter the real interested parties, a company that Mr. Preston, if you please, the superintendent general of immigration, the main actor in the organization of this scheme of immigration, had incorporated, not in London, not in the countries where he was going to operate, but in one of the Channel Islands —the Island of Jersey. He had incorporated a company with a small capital, composed of, I believe, his son-in-law, or his father-in-law, a hotel clerk and a bar-keeper or livery stable keeper, but both he and Mr. Smart told us in the committees that these were in reality prête-noms, the shadows of the real interested parties and that these real interested parties refused to give their names. They were upheld in what we contended at the time was a rebellious position as public servants, but they were upheld by the vote of the majority of this House. On the other hand, it now appears from the plea of the government, and also from the allegations of this petition of right that that company, incorporated under the circumstances I have indicated, the Island of Jersey, really never was the actual company in this scheme of immigration at all, but that the promoters of the scheme formed a commercial association whose business place was in the city of Amsterdam, and I am led to believe by such parts of the pleadings as I have read that the contention is to-day that if you have settled, you have settled with the wrong party. You may have dealt with the Jersey association, but in reality the real party entitled to be paid and entitled to claim damages for an amount exceeding $70,000 is the Amsterdam legal partnership with whom you now have to settle. Which of the two is it with whom we have settled? To whom have we made payment? Who are the parties really entitled to claim? Even at this late date when I thought we had gotten rid of that company, these are matters upon which we should like to be reassured by the Minister of the Interior. I find at page 1928, volume 1, 'Hansard,' 1907, that my hon. friend from North Toronto (Mr. Foster) asked as to the amounts paid to the North Atlantic Trading Company as shown in a return to an order of the House dated November 28, 1906. The question he put was:

> Are there any accounts still unadjusted or any claims for compensation. If so, what are they and for what amount?

In that question my hon. friend (Mr. Foster) referred to a return in reply to a

motion made by my hon. friend from Lennox and Addington (Mr. Wilson) on the 9th of January, 1907, from which it appears that even at that date we had paid to this company over $306,000, and to that question the reply of the Minister of the Interior was:

Yes, there is under adjustment the balance of an account amounting to $31,804.18, on account of 6,536 immigrants.

Well, that account was adjusted and it seems to have given rise to a controversy which the House will find in the Auditor General's Report for 1908, volume 2, page K—103. I may say that we appear to have paid in the year 1908 to the North Atlantic Trading Company, as a balance, not $31,804. but the sum of $36,901.50, and referring to that payment the Auditor General writes to the deputy Minister of the Interior under date of September 10:

I am in receipt of your application of the 6th inst., for the issue of a payment in favour of the Bank of Montreal, for letter of credit cheques issued by your department during the month of November, 1907. On examination of the cheque list I find that immigration cheque No. 1322 was issued on November 29 in favour of the North Atlantic Trading Company, for $36,901.50, in final settlement of their claim. Before passing your application I would be pleased to have the vouchers in support of this payment.

The deputy Minister of the Interior replies to Mr. Fraser, the Auditor General. stating that this sum of $36,900 was a final adjustment of all claims under the contract. I do not wish to detain the House unduly. There are in the 'Hansard' debates of last parliament a great number of references to the manner in which this company acted and as to its inadequacy to the fulfilment of the task we had expected it to perform. There is a long discussion as to the absolute right of the House to obtain the information which under the ruling of the majority was refused us. I do not wish to recall that discussion, but what I wish to point out particularly is that when the contract was cancelled the Minister of the Interior announced in the House, that he had been advised by the Department of Justice that he had an absolute right to cancel the contract. The minister was asked at the time by the hon. member for Lennox and Addington (Mr. Wilson) if he was fortified by the opinion of the Department of Justice and he said he was and that he had that opinion in writing and was ready to lay it on the table of the House. We expected many useful changes in regard to immigration when the present Minister of the Interior took over the department, and we have his statement that the company was unsatisfactory and that it was time we should cease dealing with it in any way. Then, after the payment had been made and in answer to several questions put in different shape by my hon. friend from Lennox and Addington (Mr. Wilson) we had the statement of the minister that we had finished with this company. But, last summer it appears anew upon the scene and it finds that it can chisel the ratepayers of this country out of another large amount for damages by a claim, which in the opinion of the Minister of the Interior had no existence whatever at the time he cancelled the contract and finally settled with the company. What is the explanation of this? In order to obtain a fiat the suppliant must have presented a petition of right and as I understand it, a fiat is not given by the government unless it finds there is some justifiable ground for granting it and that the petitioner has really some valid right to urge. I believe the matter is then referred preliminarily to the Department of Justice. Did the suppliant in this instance obtain from the Department of Justice an opinion at variance with the previous one given by that department: that the cancellation was unduly made, and that we had no right to cancel that contract although it is laid down in express terms in the contract that we had the absolute right to cancel it if we found it was unsatisfactory. I must assume that the Minister of Justice found there was a prima facie case and therefore advised the Crown to grant a fiat. The Crown did grant a fiat and now we have a suit for over $70,000 damages pending over the country. I think we must watch that suit with the very greatest care because, having obtained according to the contention we made at the time, large sums of money from the public treasury, which this company, mysterious and unknown, was not entitled to, I think we are in a fair way to see a renewal of these depredations and I hope we will take the proper means to prevent them.

Hon. A. B. AYLESWORTH (Minister of Justice). If the object of my hon. friend (Mr. Monk) had been to obtain information or to secure examination of the papers referred to in his notice of motion there was no difficulty about his attaining that object by moving his motion in silence, as there is no objection in the world to the production of any or all of the papers referred to. But, from the fact that it has not pleased the hon. gentleman to take that course I cannot come to any other conclusion than that the principal object of putting this notice of motion upon the Order Paper was to discuss again the old question of the names of the shareholders of this North Atlantic Trading Company. I am free to say, so far as I am concerned, that I do not know, and I have not the slightest interest or the slightest curiosity to know, who those people are. I do not think it makes the slightest difference to any man in this

country, whether he is a member of this House or not, and I think the hon. gentleman will find the effort to arouse interest in that question rather a failure when we consider the extent to which that struggle was made prior to and in the course of the elections of a year ago. The people of this country have had this question debated and discussed from every platform, in every schoolhouse, and in every newspaper, and they have expressed their opinion of it by the verdict they gave at the polls.

Now, we have here an ordinary business contract, which was entered into some five years ago between the Minister of the Interior representing the Crown, on the one part, and an ordinary incorporated company, on the other part. I am not discussing, and, in view of the terms of this resolution or of the question presented by the remarks of the hon. gentleman, I do not see that it is in the least degree pertinent to discuss, the policy of that business arrangement. That has already been fully enough debated pro and con in this House. I am not discussing whether or not it was a good contract, if it had been carried out in accordance with its terms. The question which the hon. gentleman has again raised in his remarks, is the composition of the company—the names of the individuals who form it. Well, I venture to think that the composition of that company is of no more concern to any man in this country than the composition of any other business or trading company. The hon. gentleman is himself a lawyer; but whether he were a lawyer or not, every business man understands that once a company is incorporated there is brought into being a new legal entity—artificial, but none the less actually existing—which is absolutely apart from the individuals who may from time to time compose it, and which makes its contracts, binding upon such property as the company owns, irrespective of who the stockholders from day to day or from month to month may be; and I conceive that it is of no more interest to any body, except as a matter of political curiosity, who the shareholders in the North Atlantic Trading Company may be, than it is who the shareholders in the Canadian Pacific Railway Company may be. The shareholders in the North Atlantic Trading Company may change in number or in individuality from day to day, just as readily as the shareholders in any other incorporated company; so that the individuals who composed that company at the time of entering into this contract five years ago, may be and probably are, not one of them, the individuals who composed that company when application was made for leave to present a petition of right, suing the government for damages in connection with that contract. The hon. gentleman has told us a good deal with reference to the proceedings in the action which has been taken; and the remarks which he has made demonstrate very distinctly that he needs no examination of the pleadings, as is asked for by this motion, to furnish hon. members with any information which he does not already possess. Those documents are filed among the records of the court; they are open to any one who chooses to pay a trifling fee of a few cents to examine them; copies may be had by any one who is sufficiently interested in the matter to ask for copies from an officer of the court. They are in every sense of the word public documents upon the files of a court, and there was no need, so far as obtaining information is concerned, to ask that they be brought down to this House in the shape of a return. There is not the slightest objection to making a set of copies and laying them on the table, and there is no objection to discuss, if it is in the public interest to do so, either here or elsewhere, the averments on either side, made by the parties to the suit. The application for leave to present a petiton of right with respect to this contract was made in the ordinary course by the North Atlantic Trading Company, alleging itself to be a company regularly and duly incorporated, presenting its application to the Secretary of State. The Secretary of State, in accordance with routine, referred the application to the Department of Justice, in order that the Minister of Justice, as His Majesty's Attorney General for Canada, should pass upon the question and make a recommendation to His Excellency the Governor General as to whether or not that petition of right should be acceded to. The hon. gentleman says that the company, or those who were entitled to be paid under this contract, have already been paid the amount due them, and that there appears to have been some mistake on the part of the government in having paid the wrong people. If the hon. gentleman has read, as I presume he must have read, the framed petition, if he has attended to what the cause of action and claim is, he will readily have seen that it has not the slightest reference to the payments which have already been made, but that on the contrary the claim is in respect of unliquidated or unascertained—so far as the amount is concerned—damages occasioned to the company, according to its assertion, by reason of the fact that the contract was ended before the expiration of the full time for which it was entered into. The contract called for payment to the company of a certain sum for each immigrant brought to this country through or owing to the exertions of the company. When the contract was terminated by the Minister of the Interior, the company made its claim for a certain amount in respect to each immi-

grant which it had brought, crediting the amount which it had received from time to time, and claiming payment of the balance.

The amount of that balance was ascertained and was adjusted satisfactorily, so far as amount was concerned, between the Department of the Interior and the company; the amount agreed upon was paid and received by the company, and there was an end of any claim in respect of moneys earned under the contract. This petition of right, this action which has been brought by the company, concerns an altogether different thing. The company having received from the government the amount which they claimed to have earned, and there being no dispute between the company and the government in respect of the amount of that claim, the company took the position that as a matter of law, upon the true meaning of the contract, the government had no right to terminate it before the expiration of the full number of years for which it had been entered into. That was a question of law upon the language and provisions of the contract in regard to which different men may have different opinions. The Department of Justice gave to the Department of the Interior their opinion, whatever it may be worth, that the legal right to terminate the contract existed, and that the government was not responsible for damages for having put an end to that contract before the full term of years for which the contract had been entered into had expired. The company's lawyers took a different view: the company was advised by its legal agents that upon the true construction of the contract there was no right to put an end to it until the expiration of the full term of years had taken place and the company, taking that position after it had received payment of all the moneys which it had actually earned under the contract, claimed payment of unearned moneys as damages by reason of the fact that they had, as they contended, not been permitted by the government to complete their contract to the full end of the term.

What would my hon. friend have? A petition of right is presented; the Attorney General is called upon to say to His Excellency whether or not His Excellency should endorse that petition with his fiat that right be done. Was I to take on myself to settle that question because I have a strong opinion about it in my own mind, and because looking at it as a lawyer would with the best judgment he was able to bring to bear upon the question, I was of the opinion that that claim would not succeed in the courts? It would be an intolerable state of things if a man who had a valid legal claim or a claim which he thought was valid, a claim which his legal advisers told him in their opinion would succeed in the courts, should be refused the right to litigate that claim because the Department of Justice thought a good defence to that claim existed. Accordingly this claim, being one that, to say the least of it, is an arguable one, a claim which the legal officers of the company assert the company in their opinion possesses, I gave my advice or recommendation to His Excellency, that the matter ought to be litigated. I have seen no reason to change that opinion. I think that I would have been entirely wrong if I had arbitrarily said to this company or to any company under the like circumstances, that I refused to permit them to bring their complaint before the courts of the country for decision. The company then, having obtained, upon my recommendation, the fiat of His Excellency, filed in the Court of Exchequer its petition of right, claiming damages for what it alleged to be a breach of contract. To that petition of right the department filed its statement in defence, setting up reasons which, in our judgment, afforded an answer to the claim and apparently those reasons were considered by the legal advisers of the company to be at any rate formidable, because they then, for the first time, took the position in their reply to the defence of the government, that they were desiring to sue not for the benefit and in the name of the company incorporated, but in the name of an individual syndicate of co-adventurers. That is the present position of the suit. We have answered that, if this suit is not brought by the incorporated company and for the benefit of the incorporated company, it is not brought by the entity with whom the government entered into a contract, it is not brought by the legal entity to which alone was given the fiat permitting a suit to be brought and, taking that objection, the legal proceedings have been ever since at a standstill. What the result of these legal proceedings may be, no man is able to foretell and I am not desirous of discussing. I have taken the legal position which I think is the correct one. I think that the statement in defence which was filed by the Department of Justice on behalf of the government was felt by the advisers of the company to be a complete and perfect answer, and that this latest shift in the position has been a desperate effort on the part of those who were advising the company to better their position if by this complete departure from the attitude they had previously taken, they may possibly be able to do so. It does not appear, as my hon. friend has stated it does, by the pleadings in this action, that the government has made a mistake and settled with the wrong person. There is nothing in the pleadings in this action which would give warrant to any such statement or argument; quite the con-

trary. The payments which were made on the part of the government in settlement of the claim for moneys earned were made to the company which asked for them, were made to the company with which the government had entered into its contract. Those payments could not lawfully be made to any person else and the company is very far from claiming that those moneys which were so paid were paid to the wrong person nor is anybody else claiming that these moneys which were so paid, will have to be paid over again. Nobody is taking that position and the idea that the hon. gentleman has presented in that regard is entirely an imaginary one for which not the slightest foundation in fact exists. The whole situation is that which I have described. The company came as a company and plainly stated it was the incorporated company which was desiring to sue the government and leave was given to that company and to nobody else to bring that suit. Thus far, at any rate, nobody else has asked permission to sue, nobody else has endeavoured to make any claim in respect of this contract upon the government. And, so far as I am concerned, I am quite unable to see how there would exist any pretense for any person else than the incorporated company making any claim whatever in respect to this transaction. It is quite correct, as the hon. gentleman has stated, that the Department of Justice advised the Minister of the Interior, before he put an end to this contract, that, under the terms of the agreement, he had a legal right to take that course. The Department of Justice, I may say, is still of that opinion. That is the question to be determined in this suit, and it may possibly be—I may say may very possibly be—that the Department of Justice has made a mistake as to the law, just as any other lawyer may make a mistake. I have never found any lawyer infallible in giving an opinion on a question of law. But, although I say that with absolute sincerity, I am not at all of opinion that in this case any error was made in the advice which we gave to the Department of the Interior, that there did exist the legal right to put an end to this contract in the way in which an end was put to it. I am of opinion, therefore—whatever that opinion may be worth—that this action which has been brought by the company will not succeed. If I am wrong in that respect, it is only another instance of not a few which I have known in which a legal gentleman has been mistaken. That, however, is the position of this matter so far as the litigation is concerned. I may say that I know, personally or officially, very little else about the matter. This was a contract entered into before I became a member of this House; it was in existence when I took charge of the Department of Justice; the dealings with it, so far as the Department of Justice is concerned, have been of the ordinary business character in advising another department of the government as to its legal rights under an existing contract. And, in dealing with that matter and in giving that advice, from first to last, this subject has been dealt with and that advice has been given without the slightest regard to or the slightest thought of who the individual men might or might not be who are interested in this company.

Mr. S. BARKER (East Hamilton). The Minister of Justice (Mr. Aylesworth) tells us that it is of no moment to this country, and not even a matter of curiosity to him, who may or may not have been members of the syndicate that he speaks of as The North Atlantic Trading Company. Now, I think that if there was one thing that was brought out clearly before the committee it was that there was no corporation, no company in existence until Mr. Preston formed one in the Island of Jersey, as the hon. member for Jacques Cartier (Mr. Monk) has mentioned. The people who entered into these contracts with the government were a syndicate, a number of ticket sellers, not a corporation. It was never pretended that they had formed themselves into a company. And, although the Minister of Justice may have thought that it is of no moment, not even a subject of curiosity, I think it is a matter of moment to the people of this country, and will certainly be a subject of curiosity to hon. members on this side, whether, from the very outset, two gentlemen connected with the Department of the Interior were or were not in collusion with that syndicate to reap part of the rewards that the syndicate were getting to the extent of hundreds of thousands of dollars. That is not a subject to be treated lightly, I think, in the way the Minister of Justice seeks to treat it; it is a genuine subject of inquiry and one that, perhaps, may have a bearing on this litigation. There were two men particularly connected with the negotiation of this contract with the syndicate. One was Mr. Preston who represented the Department of the Interior in England and the other was no less a gentleman than the deputy minister of the Interior. Both of these gentlemen were in England when the bargain was made; both of these men knew who the persons were that formed the syndicate, and both have persistently refused to tell who these people were. Why is that? It was not a company such as had been spoken of; as I have said, it was simply a combination of a few agents, ticket-sellers on the continent, who were making a good thing out of the very valuable contract with them which had been made by Mr. Preston and Mr. Smart. Now, what is the connection

of Mr. Preston with the syndicate? When he was brought from England to give evidence, he persistently refused to tell us who the persons were. He refused at the last moment to tell us anything, and to this hour we do not know from him one word about these people. Mr. Preston found, toward the latter part of the life of that syndicate, that the inquiry was getting very warm, that we were asking here who formed this company. Mr. Preston's difficulty was a rather serious one when asked who formed the company, for there was no company at all. So, Mr. Preston prepared himself for investigation here by getting his son-in-law, who was a solicitor in London, and, I think, his father-in-law also, and a hotel-keeper and two or three clerks, to lend their names to an application in the Island of Jersey to form this corporation, the only corporation that exists. He did all this off his own bat, apparently, and carefully concealed his connection with the business. It was not until after persistent demands in the committees of this House that we induced the government to telegraph Lord Strathcona for the names of the people concerned, and then for the first time we found out that the only corporation that existed under the name of the North Atlantic Trading Company was a company formed in the Island of Jersey by these relatives or connections of Preston and their clerks, and that about £100, apparently, was all the money that had been put up. That came out at the last moment; and I think it was a fair subject of inquiry, even for the Department of Justice, to ascertain how far this Mr. Preston was in collusion with these people. If he was not in collusion with them, and they with him, why did he form the corporation and cover this thing up? Surely, that is a proper subject of inquiry and the government ought to know the whole truth to defend themselves against this claim that is made upon the country.

I will not take up time by going over all the evidence that was got with great difficulty out of Preston, but I will say a word or two about the deputy minister. Mr. Smart was with Preston in making this arrangement with the syndicate. Mr. Smart was the gentleman in the department who settled the accounts and passed the claims of this syndicate for the great sums of money which they received. Mr. Smart left the government service, throwing up a large salary and an honourable position to enter the service of the company. He was asked: Had he been in correspondence with the members of that syndicate while he was still in the government service, and he admitted he had been. He was asked if that correspondence led to his employment by the syndicate, he admitted that it had. He was asked to produce his letter books containing that correspondence, and he told us that the books were burned. I mention these few facts—I am not going to take up time by going over the whole story, it is a very long one. But I ask the members of this House whether, where two officers of the Department of the Interior had such relations with the syndicate, are not those relations a subject to be thoroughly investigated in the course of these legal proceedings?

Mr. R. L. BORDEN. One or two words before the motion is put. Although it is quite true, as the Minister of Justice has said, that the pleadings in this case are of record in the courts and may be inspected by any hon. gentleman; still it is a very proper thing that they should be laid upon the table of the House in order that the House may be seized, in the first place, of the nature of the claim, and in the second place, of the nature of the defence which the government has put in to that claim. I do not observe, in looking over a copy of the statement of claim which I have under my hand, that the Minister of Justice is quite accurate in his description of the nature of the claim. The company does not, so far as I am able to understand, take the ground that the government had not a right to cancel the contract by notice; but the company does take the ground that there was no information in the possession of the government to justify them in giving that notice; in other words, that the reason assigned by the government for the cancellation of the claim in the notice which the government gave was a false reason, and was false to the knowledge of the government at the time it was put forward, and that for that reason the cancellation of the claim was in law, null and void. That is in effect the statement made by this company. But in their claim filed in court I do not observe any statement denying the right of the Crown, under proper conditions, to cancel the claim under the terms of contract. Quoting from the statement of claim I observe this:

4. The said notice of 14th April, 1906, was given and the decision of the Minister of the Interior therein referred to was taken without any previous notification or intimation to the suppliant that it was failing, or had failed to carry out its obligations under the said agreement of November 28, 1904, and without giving the suppliant any opportunity of defending itself against the charge of having failed to carry out such obligations.

5. The decision so taken by the said Minister of the Interior to cancel the said agreement was taken ex parte and without any investigation being made by the said Minister of the Interior, to satisfy himself that the suppliant was failing to carry out its obliga-

tions, and the said Minister of the Interior had before him no evidence or information establishing or tending to establish that there was or had been any failure on the part of the suppliant to carry out its obligations under the said agreement.

6. On the contrary, ever since the execution of the said agreement of the 28th November, 1904, until the said notice of cancellation was sent to the suppliant on the 14th of April, 1906, the suppliant had in fact carried out and fulfilled all its obligations under the said agreement, and had expended in the carrying out of the work called for by the said agreement more money than it had actually covenanted to expend under the terms of said agreement.

7. The decision of the said Minister of the Interior was not a bona fide exercise of the powers conferred on him by clause 12 of the said agreement, but it was unreasonable, unfounded, capricious and unjust, and the action of the said minister in that regard and in the cancellation of the said agreement by the said notice of 14th April, 1906, was against the principles of natural justice and was illegal, null and void.

That in short amounts to this, that the reason put forward by the government in its notice cancelling the contract was not a true reason, but it was false, to the knowledge of the government at the time it was put forward, and therefore, being contrary to natural justice, was null and void in law, and that the contract was never properly cancelled. So I cannot agree with the statement of my hon. friend the Minister of Justice of the effect of the pleadings in this case.

Now that the Minister of Justice says that this was an ordinary company, just like any other company, and to be treated just as any other company would be treated, in respect of any contract entered into by that company with the Crown. 'It was an ordinary company.' Let us look at one or two circumstances in regard to it. In the first place, it undertook, by the terms of its contract, to make a yearly expenditure of between $15,000 and $20,000, and it had a cash paid up capital of about $243. In the second place, as has been observed by my hon. friend from Hamilton (Mr. Barker), it was composed of a hotel keeper and three or four clerks, got together by a solicitor closely in touch with a prominent official of this government, and was incorporated in the Island of Jersey, I think, where such incorporations can, under the law, be carried out without too much publicity; and in the third place—mark this in connection with the assertion of the Minister of Justice that this was an ordinary every day company, that this was an ordinary every day contract—that company entered into this contract with the government of Canada six months before that company had any corporate existence. The Minister of Justice regards this as an every day affair. By his own pleading put upon record in the Exchequer Court of Canada, he sets out that the corporate seal of the company purported to be attached to that contract, and the company purported to enter into that contract in January, 1904, when, as a matter of fact, that company did not acquire any corporate existence, or become incorporated, until June following. Yet my hon. friend the Minister of Justice says that this is an every day contract, and an every day company and that there is nothing in all these circumstances which should excite the curiosity of any member of this House, or call for any special information to be brought down in connection with the contract. Sir, there never was a more extraordinary and outrageous condition of affairs in connection with any government contract than that which has been disclosed and admitted upon the floors of this House in connection with this very contract. The Minister of Justice, if he knows anything at all about the matter, ought to be the very first one to admit that.

He tells us that the fiat was granted in this matter because there was an arguable case, because the company's advisers believed, although the Minister of Justice did not believe, that that company had a valid claim against the government of Canada. I would like to ask my right hon. friend the Prime Minister if that is the principle upon which this government has acted in the past since it came into power in 1896? My right hon. friend and every member of the cabinet, knows that this is not the principle upon which they have acted in many cases. I can recall to the attention of my right hon. friend ten or twelve cases at least in which a fiat was asked against the government of Canada, and under very similar conditions, except that the contracts were in those cases ordinary every day contracts for the carriage of mails —I can tell my right hon. friend that although the legal advisers of those men whose contracts had been cancelled by the government under a similar reservation of power contained in the contract itself, believed they had a valid claim, we vainly pressed session after session upon the floor of this House that these men should have the right to bring the Crown into court and to have the courts of the country determine whether the government possessed the right to cancel that contract. And because those contracts happened to have been made before 1896 the government refused then, and has refused up to the present time, to those men the right to implead the government in the courts of this country, and to have it determined by the courts whether they had just cause of action against the Crown. But they had a very different regard for the North Atlantic Trading Company, a much more tender regard. As soon as the North

Atlantic Trading Company come to the Minister of Justice and to this government with their claim for $71,000 for damages, although they had been paid $36,000 which we were assured across the floor of this House was paid to them in full, a fiat is granted, while other men, to whom I have alluded, under circumstances which would better justify the granting of a fiat by the government of Canada, have still gone without justice, and have gone, as far as I am aware, without any opportunity whatever to make good their claims in the courts of this country. It cannot, therefore, be possible, under these conditions, for the government, or the Minister of Justice, or any other minister of the Crown to say that the North Atlantic Trading Company has been treated as every other suppliant has been treated, because the reverse is the case and the reverse can be proved from the records of 'Hansard' and from the records of the Department of Justice.

Hon. FRANK OLIVER (Minister of the Interior). I am sure that the country, as far as its memory of the question that is now before the House is concerned—I mean the question as it has been discussed, not as it has been asked—will think that this parliament has very little to do on this day of the year, in this important session, in spending its time discussing a matter which has been the subject of discussion during so many previous sessions of parliament and during so many sittings of the Public Accounts Committee, a matter of business that has been dead and buried for three years, a question which is now before the Department of Justice and before the courts for settlement, even after the motion has been agreed to on the part of the government. However, the subject has been understood. I think, by the country, and now the position, as it appears to me, is something like this: An Englishman, a very large man, was subject to chastisement very frequently by his wife who was a very small woman, and being asked why he permitted such a little woman to thrash him, the large man replied: It pleases she, and it doan't 'urt oi. If it pleases our friends opposite to discuss the North Atlantic Trading company, session after session and month after month, I can assure them that it does not hurt us.

Mr. R. L. BORDEN. No, because you pay the damages out of the public treasury.

Mr. OLIVER. My hon. friend might wait until these damages are paid before he makes this assertion. His assertion is of a like kind with that of my hon. friend who sits behind him (Mr. Monk) who declared to the House in good set terms that this company was to-day suing the government for the balance of payments due. The company is not suing the government for the balance of payments due. The government has paid every dollar that the company claimed for work done and holds receipts for these payments. The government has not paid any damages to the company, and we believe that the Department of Justice is sound in its advice that the government will not have to pay a cent of damages to the company.

My hon. friend who asks the question, said that we were not likely to be rid of the ghost of this North Atlantic Trading Company for an interminable period. Might I say I do not think it is a ghost that we are in danger of, it is merely the mania that possesses the hon. member for Jacques Cartier. If we have had dealings with the North Atlantic Trading Company, and if we have ceased business relations with the North Atlantic Trading Company, surely this House has something more important to concern itself with than questions surrounding the North Atlantic Trading Company, or the question of who composed the company or who did not compose the company. However, as I have no doubt the hon. members who have already addressed the House have done so with the view of instructing their followers who are more recently in the House than themselves, with regard to this question in order to be sure that they shall be aware of all the facts surrounding it, perhaps I may take the opportunity of giving some of the facts as well for the information of these gentlemen and of the country at large.

The contract with the North Atlantic Trading Company was entered into on the part of the government for the purpose of directing emigration from Europe to Canada. I do not know whether my hon. friends will agree that that was a desirable object or not.

Mr. CAMPBELL. From what part of Europe, may I ask?

Mr. OLIVER. If my hon. friend (Mr. Campbell) will keep his hat on and bide his time he will know.

Mr. CAMPBELL. Perhaps I ought to feel belittled by the remark of the hon. gentleman, but I do not. I took my hat off in courtesy to the hon. gentleman.

Mr. OLIVER. The contract was entered into with the North Atlantic Trading Company in connection with emigration to Canada, and I ask the House if that was or was not a proper and a desirable object to be achieved? We might just as well divide on that point here and now. On this side of the House we believe the object was desirable, that it was a proper object, and in so far as it has been achieved by means of the contract entered into with the North Atlantic Trading Company and other

means, I believe the government is entitled to credit and not to blame, and I believe that the Dominion of Canada has reaped many, many millions of dollars of advantage from these efforts on behalf of emigration to Canada.

Mr. CAMPBELL. May I ask the hon. gentleman a question?

Mr. OLIVER. Yes.

Mr. CAMPBELL. Was it embodied in the contract that the immigrants should be from Galicia?

Mr. OLIVER. It was not embodied in the contract that the immigrants should be from Galicia; it was embodied in the contract that they might be from Galicia.

Mr. CAMPBELL. Does the minister remember his speech in the House in which he reflected on the Galician immigrants?

Mr. OLIVER. The minister remembers very well that he said in the House and out of the House on many occasions and is prepared to say on as many more occasions that there are immigrants who come to Canada who are more desirable, from many points of view, than the Galicians.

Mr. CAMPBELL. The minister surely does not take in as one of these occasions that he now refers to, the eve of an election when he was expecting 2,000 Galicians to vote for him?

Mr. OLIVER. Mr. Speaker, the minister has never had any occasion to alter the views that he has expressed in this House in regard to the different value of different classes of immigrants coming to this country. If I might take the liberty of making a reflection, it is not my custom to vary my arguments to my audience as I have no doubt it is my hon. friend's. If it is of interest to the House, I will say that I have nothing to take back of anything I ever said in this House or out of this House in regard to immigration. I hope my hon. friends opposite understand my position. I said that the purpose of the government was to promote immigration from Europe to Canada, and that the contract was entered into with that purpose in view, and as a part of the general immigration scheme of the government. The country has benefited to the extent of many millions of dollars as the result of the government's general policy of which this was a part. I see my hon. friend from North Toronto (Mr. Foster) in his place, and I remember very vividly that yesterday he told the Minister of Finance that the financial management of the affairs of this country was disgraceful, but that what really saved the situation was the fact that production had increased so stupendously. I suppose my hon. friend (Mr. Foster) will admit that the reason of that increase of production is the increased number of people in the country. I have the hon. gentleman as a witness, and he is as good a witness as I want, in support of the assertion I have just made.

Mr. FOSTER. Don't quote me in favour of the North Atlantic Trading Company.

Mr. OLIVER. I have quoted the statement of my hon. friend made only yesterday that the prosperity of the country and the success of the Minister of Finance was due to the increased production of grain, and I think I may say of western grain. Now, that increase in the production of western grain was as surely and as definitely and as perfectly the result of the immigration policy of this government as any one thing can be the result of any other thing. Therefore, we have no apologies to offer for our efforts on behalf of immigration. Now then, as to the propriety of the special efforts that were made and the reasons for them. There are countries in Europe which are just as anxious to keep their people at home, to prevent them from leaving, as we are to get them. Amongst these are countries whose people it will be admitted by every one are as desirable settlers as the people of our own country in every particular, except that they are not the people of our own country, and I will admit that is an important particular. I speak for instance, of Germany and Switzerland and Scandinavia. These were the countries to which the government desired to direct its efforts, outside of Great Britain, France and Belgium, in which countries there was no restriction on our carrying on an aggressive emigration campaign. An agreement was entered into with the North Atlantic Trading Company, whereby, in consideration of payments made to the company on immigrants brought to Canada, the company was to use its efforts through its agencies in Switzerland, Germany and Scandinavia, to secure immigrants for Canada. There is certainly one feature of the bargain that no fault can be found with and that is the feature of payment by results. The North Atlantic Trading Company was paid on the immigrants they landed in Canada, these immigrants having passed an inspection to the satisfaction of the government. If they did not land the immigrants they did not get any payment. Surely that is a fair businesslike arrangement. The work of the North Atlantic Trading Company was carried on for some years, but I suppose that even the friends of the company who are now arguing their case so eloquently and so ably from the benches on the other side will admit that even the North Atlantic Trading Company may not in all particulars have lived up to all its agreements

or fulfilled the expectations which the government had with regard to it. As a matter of fact, when I had the honour of taking charge of the immigration department and after the arrangement with the North Atlantic Trading Company had continued for some years, it appeared to me that the company was depending for its revenue rather upon the movement of people from countries where the emigration was occasioned from causes existing within these countries, than upon efforts made in the countries where such reasons did not exist. In other words, they were depending for their revenues upon the people who were the easiest to move and they were not making due exertions to move the people from countries whence emigration was desirable. but where it was not so easy to accomplish. My hon. friend the leader of the opposition read from the pleadings of the company which assert—and he gives all the publicity of 'Hansard' and all the weight of his position as a leader of a party in this House, and all the backing of his party behind him to strengthen the contention of the company against the government before the courts—that this was done without consideration on my part.

Mr. R. L. BORDEN. I beg my hon. friend's pardon; I merely pointed out, in answer to the Minister of Justice, that the issue upon the pleading was not as he stated, but was an entirely different issue. I said nothing in support of it and nothing against it. The matter is before the courts and must be determined there.

Mr. OLIVER. I said that my hon. friend placed before the country with all the weight and strength of his position as a leader of a party in this House, all the publicity that 'Hansard' can give his statement and all the backing that a political party can give that statement: the assertion that this contract was cancelled by me or on my advice without due consideration and contrary to the facts.

Mr. R. L. BORDEN. I beg my hon. friend's pardon, I made no such statement at all. I simply read the pleadings in reply to an observation of the Minister of Justice, for the purpose of showing what the issue was. I made no assertion on my own part at all.

Some hon. MEMBERS. Retract.

Mr. OLIVER. I did not say my hon. friend made an assertion.

Some hon. MEMBERS. Oh.

Mr. OLIVER. I did not intend to say he made an assertion, but I said he gave the statement publicity and I think he will have to admit that is so. Now, I want to say that this contract was not cancelled without due consideration, and so far as the Department of the Interior is concerned it is prepared to stand by and maintain the correctness of the reasons given for the cancellation of the contract, and I am giving them to the House fully and frankly. We believe that the company was depending upon what was easy and was not making due exertions in what was hard. It was from Germany, Switzerland and Scandinavia that we particularly desired immigrants, and we believed we were not getting that proportion of people from these countries that we were entitled to under the contract, and because we were not satisfied with the way in which the company were carrying out their contract we terminated it. If we were mistaken in that, and if the company shall be able to establish that it has suffered damages because of the improper cancellation of the contract, I am sure that a great deal of the credit will be due to the attitude of our friends on the other side, who from the very beginning have taken the ground, first, that the government dare not cancel the contract, and next, that it had not the right to cancel the contract. As to whether or not the government had a right to cancel the contract, that will be decided in due course in the courts.

Mr. R. L. BORDEN. Is it correct that the contract was entered into six months before the company was incorporated?

Mr. OLIVER. I was not minister at that time, and cannot answer my hon. friend's question; but, as the matter has been under question in the House and has been before the Public Accounts Committee during several sessions, I am sure that my hon. friend is well acquainted with the facts, whatever they may be. If the company succeed in the case, they will be entitled to give a fair measure of credit to our friends on the other side, who have fought their battles so ably and so well. But I want to call the country's attention to this point, that the greater part of the argument of our friends on the other side was that the government dare not cancel the contract because they were tied up with the company. The slander has been suggested again here to-day, that officials of the government were improperly connected with this company.

Mr. CAMPBELL. Well, tell us the names of the company.

Mr. OLIVER. I do not know the names of the company.

Mr. CAMPBELL. Why don't you?

Mr. OLIVER. Because it is none of my business, nor of my hon. friend's either.

Mr. CAMPBELL. It is mine.

Mr. OLIVER. Then my hon. friend must find out for himself.

Mr. CAMPBELL. I am asking for information.

Mr. OLIVER. I am giving all the information I have.

Mr. FOSTER. That is not much.

Mr. OLIVER. It is true, it is not much, but it is enough. The suggestion was made session after session that the government dare not cancel the contract, because members of the government were involved in it. It has been suggested to-day that officials of the government were improperly involved in the contract. But I ask our hon. friends to remember that the government did cancel the contract, and that the privilege of suing the government for damages, the government was not afraid to let them sue.

Mr. GEO. TAYLOR. To give them a chance to get some more money.

Mr. OLIVER. The North Atlantic Trading Company is entitled to every dollar the government owes it. If an illegal act was done by the government, if the company's rights were trespassed upon, it is entitled to justice the same as any other institution or individual.

Mr. BLAIN. If the government found that the company were not fulfilling their contract, why did not the government compel the company to fulfil it?

Mr. OLIVER. Because the government could not compel the company to fulfil it. I suppose my hon. friend has employed a labouring man to do some work. If he found the man inefficient, did he compel him to do the work? He cancelled his contract with him; that was the only thing he could do. He could not compel him to do the work. And we could not compel the North Atlantic Trading Company to do this work; but we could cancel the contract and could cease paying them money for work that in our estimation was not satisfactorily done; and that is what we did.

Mr. FOSTER. He might have retained the man's baggage in that case, but you did not know whose baggage to retain in this case.

Mr. OLIVER. We did not retain any baggage. I do not understand the allusion.

Mr. BARKER. If the company had not done their work satisfactorily, and claimed $31,000 to wind up, why did you give them $36,000?

Mr. OLIVER. The government did not pay them $36,000, when they demanded only $31,000. The government paid them the amount of their claim as agreed upon, after careful consideration on behalf of both parties.

Mr. BARKER. Although they had not done the work.

Mr. OLIVER. They had done the work, but they had not done it satisfactorily; and exercising our right in that connection, we cancelled the contract.

Mr. CAMPBELL. If the hon. gentleman has a field of hay and he hires a man to cut it, and the man does not cut it, does he pay him?

Mr. OLIVER. No.

Mr. CAMPBELL. That is exactly the position of the government. They entered into a contract, and the other fellow did not carry out his part of it, and they paid him to get rid of him.

Mr. OLIVER. I suppose my hon. friend has hired men to cut fields of hay. If a man cut the hay, he paid him; but if he did not cut it satisfactorily——

Mr. CAMPBELL. I fired him as high as Gilderoy's kite.

Mr. OLIVER. He would do exactly what the government did; he would pay the man for the hay he cut, but he would not hire him to cut any more. The government cancelled the contract, and asked for no other consideration at the hands of this company than it would require in any other business transaction. So far as we are concerned, we deal with this matter from start to finish as an ordinary business transaction, and we know nothing else in it or about it.

There is one other side to this question which I wish to put before the House. In the judgment of the government, the company was not living up to its contratct; we were warranted in cancelling it; we did cancel it; and, as a result, from that day to this the government has not been able to put forth any immigration effort in the countries of Germany, Switerland or the Scandinavian peninsula, and as a consequence we have not received from these countries the immigration that we very much desire and that would be very greatly to the benefit of this country if it were received.

Mr. U. WILSON. Did you ever try?

Mr. OLIVER. Yes we have tried; I need not go into details, I can give them at some other time. As a matter of fact that is the position that under the restrictive laws of Germany, Switzerland and the Scandinavian peninsula, it is not possible to carry on immigration work as it is carried on in some other countries, and as a consequence of the cancellation of the North Atlantic Trading Company contract, Canada has not been carrying on any immigration work in those countries since that time.

Mr. R. L. BORDEN. Does the minister say that these unknown persons possess a monopoly in respect of immigration from those countries?

Mr. OLIVER. No, but I say that the government of Canada cannot send agents into Germany to promote immigration into Canada; they cannot do that in Switzerland and I am advised they cannot do it in either Norway or Sweden. That being the case, we are not carrying on the immigration effort in those countries, we would desire to carry on. The North Atlantic Trading Company was in a position to carry on immigration work in those countries and this government was not in a position to be held to account for what they did.

Mr. OSLER. Was there not a provision in the contract that the incorporators should not in any shape or way do anything unlawful in promoting immigration where there was a restriction? The only inference from the minister's words is that the government deliberately entered into a contract with responsible people on the face of it, to do what was absolutely illegal for the government to do in regard to a friendly nation.

Mr. OLIVER. If that is the inference to be drawn from my remarks I can only say I did not wish that inference to be drawn. If I may explain a little further I think my hon. friend will agree that that inference is not warranted. While I am not acquainted with the personnel of the North Atlantic Trading Company, my understanding of the matter is that it was an association of what are called booking agents, operating in the European countries which I have mentioned. A booking agent in Europe works under a license, he is licensed to sell transportation. He sells transportation for such lines as he can secure agencies for. He gives bonds to the government of the country in which he operates which ensure that that country shall have due supervision over his operations. Inasmuch as his business is to sell transportation and is authorized and licensed to do so, it is within his power, without contravening the law of the country in any degree, to say to the man who comes to buy a steamship ticket to take him across the ocean: You ought to go to Canada rather than to the Argentine or to Brazil or to some other country. I hope I have made my point clear that the agreement with the North Atlantic Trading Company was not an agreement in contravention of the laws of the countries in which that company operated but it was an agreement with people who were licensed by the laws of those countries to carry on the business of selling transportation and by that agreement we enlisted their services on behalf of Canada as against other countries to which they were also authorized to sell transportation.

Mr. MACDONELL. Then how was it that Mr. Smart, in giving evidence said that if the names of the persons composing that company were known, a large number of suicides would be committed.

Mr. OLIVER. I am not responsible, of course, for what Mr. Smart said, and I am not responsible for my hon. friend's understanding of what he said. I am rather inclined to think there must have been some misunderstanding on his part. It must be clear, however, that in a country where the laws are absolutely restrictive against immigration, but where booking agencies are licensed, while it might not be against the law for booking agents to take a bonus from one country as against another country it might be against the administration or the policy and might put these booking agents at a disadvantage in their own country; and it was to protect them against that feature of the case that it was desirable that their names should not be divulged. That is my understanding of the case, a perfectly fair and legitimate understanding. It is, I firmly believe, according to the facts; and all the ideas which our hon. friends have built up around this question have no more foundation than the idea that the government dared not cancel the contract.

Mr. HUGHES. Is the minister aware that these booking agents have an organization and have an arrangement with the steamships sailing to the various parts of the world from these European ports by which a certain proportion of immigrants are allotted to each steamer and that the payment of the bonus by Canada would have no influence on the proportion of immigrants sent to Canada by these agents?

Mr. OLIVER. No, I am not aware of that fact, and I would be rather inclined to doubt it. I know there is what is practically a steamship combine. I do not know what the arrangements are in regard to that, but I do know that since the cancellation of the North Atlantic Trading Company agreement, immigration from the especially desirable countries I have mentioned has unquestionably fallen off, but I cannot say more than that on that point.

Mr. R. L. BORDEN. I thought the minister said it had fallen off before and that that was the reason he cancelled it.

Mr. OLIVER. My reference in that particular was to Norway and Sweden in regard to the immigration from which countries we paid a special grant of $5,000. I am speaking now of Germany and Switzerland, two other countries with much larger population and nearer to immigration effort, and I say in regard to these countries, Germany and Switzerland, the immigration

has, if my information is correct, decreased since the cancellation of the North Atlantic Trading Company contract.

Mr. HUGHES. Has not emigration from Germany decreased to other countries, the Argentine, Brazil and the United States in a greater proportion than to Canada?

Mr. OLIVER. I could not answer that question, I am not famliar with the facts.

As the question of bonus payment has been up many times, and as I am satisfied the House has a misunderstanding in regard to it, I think it might as well be brought out in this connection that the bonus was paid to an association of licensed booking agents operating in European countries whose laws were such as to prevent direct emigration effort on the part of the government of Canada. The contract entered into was not in contravention of the laws of these countries, but it may have been such as to render the booking agents who were a party to that arrangement liable to the displeasure of the authorities as contravening, not the law, but the policy of their countries. This would be to them a very serious business disadvantage. It surely must be evident that if a man is making his living by selling transportation, he is interested in promoting transportation, and, if he gets $5 per head more on people who go to one country, he is going to use his efforts at publicity towards sending the emigrants to that country as against a country for emigration to which he receives no bonus. By the contract with the North Atlantic Trading Company, and by the arrangements that we have in Great Britain with the booking agents, we secured the active efforts of these men whose business it is to promote transportation towards immigration to this country. But, by the cancellation of the agreement with the North Atlantic Trading Company, that arrangement was cut off, and we have not been able to carry on an effective propaganda in those countries since.

Mr. GLEN. CAMPBELL (Dauphin). The Minister of the Interior (Mr. Oliver) and myself have one thing in common, we both come from the west; but I must say that his idea of the west and its interests and possibilities have been widened out in my mind by his speech. He certainly wandered from Dan to Beersheba and back again; he has talked of everything under the sun but has made no argument in the particular matter before us that ought to be considered by this House. He spoke of the matter of the North Atlantic Trading Company as being a dead issue, a matter that has been threshed out for years in this House, and, before the Public Accounts Committee. The hon. minister seems to hold that any matter which has been brought before the Public Accounts Committee and has reached the kind of settlement that it gets in that committee is satisfactorily settled so far as this House is concerned. I want to tell the hon. gentleman that I was in the Public Accounts Committee last year when the chief solicitor—shall I call him?—or legal adviser, or defending lawyer, of the government, said that the committee was not there to hear the rights or the wrongs of the case, that the committee was there playing the political game and he was there for the government playing it. And yet because the case of this North Atlantic Trading Company was more or less bruited before the committee, the hon. gentleman is satisfied. I want to tell him that we on this side were never satisfied nor was the country. He may have been satisfied because the government was in a measure whitewashed in the eyes of the people who did not understand the methods that were being operated in that committee. If this be a dead issue why is this claim of $71,000 put forward? Dead men are supposed to tell no tales; they certainly do not bring claims. The hon. minister was asked two or three times to tell the names of the people who composed this company; he does not know; the government pretends to this House that it does not know; and a man who used to have a prominent position in one of the departments here went the length of saying, when he was on oath, that were the names of these men disclosed suicides would occur. I say it is a pity the names were not disclosed, because if the business of these people was so nefarious that on the disclosure of it they would commit suicide, it would have been for the good of the country and the world that that disclosure should be made. The hon. minister refers to the class of immigration that came in under this company. I asked with regard to the Ruthenian immigration. He seems satisfied that the Galicians came in vast numbers into Manitoba and what were then the Northwest territories. And he was well satisfied, in the late elections, that these people were in the country as electors. In the country from which they came they had no voice in public affairs, and, coming here, they understand nothing about the duty that goes with the franchise and are controlled by men, as far as my experience goes, vitiated men who lead them astray and they vote, as it were, in flocks. The minister himself knows that what I say is absolutely true. He need not wag his head as much as to say he does not agree with me, because I can give him an instance in which he recognized the fact that these people can be controlled by a vitiated influence. He recognized the fact to this extent, that the law was subverted so that a man who had been put by this government in charge of the Ruthenians

and Galicians coming into Edmonton district and had afterwards been found guilty of stealing from these people and condemned under the law to serve a sentence of years, was allowed out before that term expired and was utilized by my hon. friend (Mr. Oliver) as his forerunner, as it were, among the Galicians, to round them up and get them to vote for himself and his candidates. He knows that that is true. I refer to the case of Wagner——

Mr. OLIVER. I do not wish to interupt the hon. member (Mr. Campbell), but, as he says that I know this to be true, I must give an answer, and the only answer I can give is that I know that it is not true.

Mr. CAMPBELL. I thought the hon. gentleman knew what was going on in his constituency when it came to election time. But I am quite satisfied to accept his statement that he did not know what was going on and what is well known to every man in the part of the country from which he comes. The hon. gentleman (Mr. Oliver) as it were, clapped the Minister of Finance on the back because the immigration policy has been conducive to the settlement of the northwest. He knows, away down in his heart, that the only reason why the northwest has settled up in the way it has done is the fertility of its soil. The immigrants who drifted in for one reason or another were so successful in that country that they wrote to their friends in the south and elsewhere, and told them what could be accomplished in the northwest, and their friends came up and helped to fill the country. That is the only reason that the country is filling up at its present rapid rate. The hon. gentleman also said in his remarks—it was rather difficult to follow him because, as I say, he wandered from Dan to Beersheba—that the Conservative party pretended that the government did not dare to make any change in the contract or to abrogate it in its entirety. I think that statement was made before the present Minister of the Interior took charge of the department. The hon. gentleman also said that owing to the abrogation of the arrangement with the North Atlantic Trading Company, immigration from Northern Europe had nearly or entirely ceased, and that they were no longer able to get immigrants from Norway, Sweden and other countries in northern Europe. I think that is a very poor argument. Those people from northern Europe, he knows very well, and I know very well, are the best class of settlers we can get, outside of our own Canadians, and the Canadians who have gone into the United States. Surely, Sir, the Minister of the Interior is making a very lame excuse when he tells us that because a company formed, according to Mr. Smart, of men who would commit suicide if their names were known, had their agreement cancelled and went out of business, therefore his department could not carry on successfully an immigration policy in northern Europe. He must think that this country offers no attraction to immigrants except the inducements put before them by the North Atlantic Trading Company; he must think that western Canada is played out. That country offers the same advantages to-day that it ever did, and is not dependent and never was dependent upon the advertisement of the North Atlantic Trading Company.

Now, with regard to the Ruthenians who are largely responsible for the presence of the Minister of the Interior in this House, and who are found in large numbers in my constituency, I would like, if I had time, to read to this House the opinions expressed of them by the present Minister of the Interior before he took charge of that office. When they first began to come into this country he looked upon them from a very different standpoint to the one he holds to-day. He said that when the Ruthenians came into a country to settle, they were a detriment to the country from all points of view, that their presence depreciated the value of the lands, that other people did not like to procure homesteads in their neighbourhood. Now, Sir, I want to tell the minister that I have many of these Ruthenians as my neighbours. I am only a western farmer myself, and my nearest neighbours are Galician farmers, and they are as good settlers as any other settlers that come into our country. They mostly belonged to the peasant class in Galicia, and excellent farmers they make too. The trouble with regard to the immigration policy of the department, as administered by the Minister of the Interior and his officials, is that they have not paid sufficient attention to the kind of Galicians they have brought out. They have brought out men who, in their own towns at home, were mere loafers, and were already a detriment to the towns where they lived in Galicia. For that reason perhaps some of the undesirable ones have given a bad name to the Galicians who have settled in the neighbourhood of towns like Winnipeg. But I am able to bear testimony to the fact that in my neighbourhood the Galician farmers have proved to be a splendid class of settlers. Although they were put upon lands that were practically unfit for any man to live on, bush lands, lands that were stony and undrained, yet they have, by their industry, developed those lands and have shown that even under disadvantageous conditions, they are a hardy and industrious class of people, and are prospering as well as any other class of people in that country. They are inter-marrying with the Canadian people, and in a couple of genera-

tions from now, I have no doubt that their children will become thorough Canadians, and no man will be able to tell, on meeting them, that they were not of British or Canadian ancestry. I have only to say in conclusion that since the Minister of the Interior has spoken in favour of this North Atlantic Trading Company, it is up to him surely to tell this House who were the members of that company.

Mr. W. B. NANTEL (Terrebonne) (Translation). Mr. Speaker, three conclusions of some importance are the unavoidable outcome of this discussion. In the first place, I think that if the hon. Minister of the Interior had played the part of a busines man he would certainly have settled that claim and secured a receipt in full when paying over to the company that amount of $36,950. A mere country dealer under similar circumstances would have thought of protecting himself against any future action of the company in that connection and secured a receipt in full, instead of the ordinary receipt.
