MATHEMATICAL PRIZE.

The Anne Molson Prize of about \$64, the surplus arising from the Anne Molson Medal fund, is offered for competition to Students of the Fourth Year in April, 1871, at the B. A. Honour Examinations.

5. NATURAL HISTORY AND GEOLOGY.

B. A. HONOUR COURSE.

Students entering for Honours must have passed creditably the examinations in Elementary Chemistry, Zoology, Botany and Experimental Physics; and should know the elements of Drawing. Students entering for practical purposes will be required only to satisfy the Professor of their fitness for the studies of the class.

Candidates for Honours will be expected to attain such proficiency as to be able to undertake original investigations, in some at least of the subjects of study.

The Lectures will include :--

1. An advanced course in General Geology and Paleontology, in connection with which the Students will be required to read Dana's Geology and Owen's Paleontology.

2. Methods of observation and of conducting Geological Surveys. Applications of the science to Mining, Engineering and Agriculture.

3. Canadian Geology, in connection with which the Students will read Logan's Report of the Geological Survey of Canada, and Dawson's Acadian Geology.

4. Practical Paleontology and determination of species; with books of reference from the College Library, and specimens from the Museum.

5. Excursions for Field work will be undertaken when practicable.

In addition to the above, the Student will be examined in any two of the following subjects:—

1. The Systematic part of Botany, as in Gray's "Text Book" and "Manual," and specimens illustrative of these books from the Museum.

2. Owen's Lectures on the Invertebrate Animals, and specimens illustrative thereof from the Museum.

3. Dana's Mineralogy, and specimens illustrative thereof from the Museum.

§ XI. LIBRARY, MUSEUM, APPARATUS AND OBSERVATORY.

I. THE LIBRARY.

The Library of the Faculty of Arts contains about 6,000 volumes of standard works, selected with especial reference to the wants of Professors and Students, and open to their use during the Session.

The most important addition recently made to the Library is the "Redpath Historical Collection" consisting of 761 volumes of the more rare and valuable works relating to English History; and a collection of 255 volumes in Classical Literature presented by Mr. C. Alexander.

(The above statement does not include the Library of the Medical Faculty, which contains upwards of 4,000 volumes.)

II. THE MUSEUM OF NATURAL HISTORY.

1. **ZOOLOGY.** In this department the Museum contains a general collection of type specimens, illustrating the Orders and characteristic Genera of the Animal Kingdom, the whole arranged and labelled in such a manner as to correspond with the College course on the subject. There are also the following special collections:—

The Carpenter Collection of Shells, being the general collection of Dr. Philip P. Carpenter, presented by him to the University, and shortly to be arranged in a separate room.

The Carpenter Collection of Masatlan Shells.

The Couper Collection of 2,400 Canadian Insects.

Collections of Canadian Fresh water and Land Shells.

2. **BOTANY.** The Herbarium consists of the Collection of the late Dr. Holmes, of Montreal, presented by him to the University; and with the additions recently made to it, affording a nearly complete representation of the Flora of Canada. There are also collections of European, Arctic and Alpine Plants, and of specimens of Woods, Fungi, &c.

3. **GEOLOGY AND MINERALOGY.**—The general collection consists of a series of the characteristic Fossils of all the great geological periods, with additional suites of specimens, illustrating in greater detail the formations represented in Canada. There is also an extensive collection of Rock specimens, and collections are being formed representing the principal Mineral Regions of Canada.

The Mineralogical Cabinet consists principally of the "Holmes Collection," containing about 2,000 specimens of Canadian and Foreign Minerals. A large portion of these are displayed in glass cases for the use of students, under the arrangement of Dana's Manual of Mineralogy.

All of the above Collections are used to illustrate the lectures, or are open to the inspection of students, who are also entitled to access to the large and valuable collections of the Natural History Society of Montreal.

III. PHILOSOPHICAL APPARATUS.

The value of the Apparatus is above \$4000. Of this more than two thousand dollars' worth has been lately added by means of a personal subscription amongst some of the Governors. The collection is now very valuable for purposes of illustration in the departments of Mathematical and Experimental Physics. Besides instruments to illustrate Mechanics, (Statics and Dynamics) and Optical Instruments, such as Microscopes, a Telescope, Sextant, &c., there is a good collection for Hydrostatics and Pneumatics, another for Heat, and a very full collection for Magnetism and Electricity, (Statical and Dynamical) including Electro-magnetism, Magneto-electricity, Diamagnetism, Thermo-electricity, the Measurement of Electric Resistance, &c. The collection for Light, from Duboscq of Paris, besides apparatus illustrative of the common phenomena of optics, includes the best instruments for exhibiting on a large scale with the aid of the electric light the phenomena of Interference, Diffraction, Polarization and Double Refraction. There is a good collection for Sound (made by Koenig). The apparatus for Dynamical Electricity and Heat has been made by Messrs. Elliot Brothers, of London, makers of the apparatus used by the Committee on Electrical Standards of the British Association for the Advancement of Science.

IV. CHEMICAL LABORATORY.

The Laboratory is furnished with the Apparatus, Specimens and Chemical Reagents necessary to illustrate the class-lectures in Chemistry; and is also fitted up with all the necessary appliances for the work of a class in Practical Chemistry and for Chemical Analysis.

V. METEOROLOGICAL AND MAGNETIC OBSERVATORY.

The Basement of the Building is devoted entirely to the observations on Terrestrial Magnetism.

The Ground Story and Leads are the portion of the Building devoted to Meteorological observations.

The Transit tower is for the purpose of giving time to the City, and to the Ships in the Harbour, and is connected by Electric Telegraph with a "Time Ball" at the wharf. Connection by Electric Telegraph having also been established between the Observatory and the Government Buildings at Ottawa, mean time is transmitted daily at noon, and made known there by the firing of a Cannon.

The principal Meteorological Instruments are:—Thermometers for determining the Temperature of the Air; Barometers for ascertaining the atmospheric pressure; Psychrometers for the purpose of determining the Elastic force of Aqueous Vapour, the relative Humidity and Dew Point; Instruments for recording the Solar and Terrestrial Radiation; Rain and Snow Gauges for indicating the amount and duration of Rain and Snow; Ozonemeter for recording the amount of Ozone.

The direction and velocity of the wind are registered by a modification of Dr. Robinson's Anemometer.

Observations on Storms, Auroras, Haloes and other Natural Phenomena which mark the variation of Climate are duly recorded.

The Instruments in the Basement of the Building are for determining the Magnetic Elements; and consist of, (1) a Declinometer for measuring the Declination or Variation of the Magnet; (2) a Unifilar Magnetometer consisting of an apparatus for deflection and vibration, for ascertaining the horizontal Magnetic force; (3) an Inclinator or Dip-needle (No. 39 used in the Magnetic Survey in Great Britain) for showing the Inclination or Dip. From these observations are reduced the absolute value of the Magnetic Elements.

The Observatory is under the supervision of Professor Smallwood, M.D., LL.D., D.C.L.
